PREFACE

The task of writing a second edition of a book on intellectual property law brings with it a number of challenges. In part this is because a lot has changed since the first edition of this text was published. The most important of these changes include the complete overhaul of UK design law, the establishment of the Community design rights, and the implementation of the Information Society Directive in the United Kingdom. We have also taken account of jurisprudential developments in the other fields where there has been less legislative change. These include the House of Lords' decisions in *Designers Guild* and *NLA v. Marks & Spencer*, the *Pension Benefits* decision at the EPO, the ECJ's burgeoning, if inconsistent, case law on trade marks (including the *Sieckmann*, *Libertel*, *Linde*, *Baby-Dry*, *Doublemint*, *Gofkid*, and *Fitnessworld* decisions), and the impact that human rights has had on the law of confidentiality. We have also tried to accommodate the expanding body of critical literature that has developed in the last couple of years (which has served to enrich and enliven many aspects of intellectual property law).

Another challenge that we have had to face arises because the law in this area changes rapidly and (so it seems) constantly. While we have attempted to take on board imminent changes, there are a number of changes on the horizon that readers should be aware of. These include the implementation of the EPC 2000 (which will replace the EPC), the likely development of a Community Patent, the appeal to the House of Lords in the *Kirin Amgen*, as well as the implementation of the *Droit de Suite* Directive. Perhaps the most important challenge relates to the decision as to the material that is included and excluded in an intellectual property law textbook. While there is a large amount of material that most people would expect to see in an intellectual property textbook, there are some areas where there is less agreement. This might be the case, for example, with geographical indications of origin, which we have dealt with in some depth. In part this is a reflection of the economic and cultural importance of this topic. Another reason for including this material is that geographical indications of origin may extend beyond food and agriculture to deal with other subject matter (such as indigenous creations). A related problem concerns the extent to which we should include material from 'outside' of intellectual property law: a decision that depends on how we define intellectual property law in the first place.

In writing the second edition we have accumulated a number of debts. In particular we would like to thank Rebecca Day, Christian Fahey, Jay Sanderson, and Michelle Russell for their valuable research assistance. We would also like to thank Tanya Aplin, Robert Burrell, Jonathan Griffiths, Michael Handler, Stephen Hubicki, Simon Malynicz, Mustafa Safiyuddin, and Leanne Wiseman for reading and commenting on chapters. Their comments were invaluable. We would also like to thank Johnson Okpaluba, Priyanka Sinha, and Hiroyuki Takatsuka for pointing out errors in the first edition. For help in obtaining permission to use various images, we would like to thank Sarah Abbott, Jeanette Arnold, Alex Cameron, Tony Catterall, Roger Edwards, Guy Farmer, Charters McDonald-Brown, Ian Morris, and Johnson Okpaluba. We would like to thank the staff at OUP (particularly Kate Whetter) for their help and forbearance. We would particularly like to thank Clair Milligan and Leanne Wiseman for their patience, tolerance and on-going support.

INTRODUCTION

1 INTRODUCTION

Intellectual property law regulates the creation, use, and exploitation of mental or creative labour.¹ The term ‘intellectual property’ has been used for almost one hundred and fifty years to refer to the general area of law that encompasses copyright, patents, designs, and trade marks, as well as a host of related rights.² Intellectual property law creates property rights in a wide and diverse range of things from novels, computer programs, paintings, films, television broadcasts, and performances, through to dress designs, pharmaceuticals, genetically modified animals and plants. Intellectual property law also creates rights in the various insignia that are applied to goods and services from FUJITSU for computers to ‘I CAN’T BELIEVE IT’S NOT BUTTER’ for margarine. We are surrounded by and constantly interact with the subject matter of intellectual property law. For example, you are reading a copyright work bearing Oxford University Press’s trade mark and a picture by Barbara Kruger which is protected by copyright. You are probably sitting on a chair protected by design rights and marking the book with a pen the mechanism for which has, at some stage, been patented. Alternatively you may be typing notes into a computer, which no doubt has parts (such as the mouse) which are protected by patents and design rights (in the shape of the product as well as the semi-conductor chip topographies inside).

While there are a number of important differences between the various forms of intellectual property, one factor that they share in common is that they establish property protection over intangible things such as ideas, inventions, signs, and information. While there is a close relationship between intangible property and the tangible objects in which they are embodied, intellectual property rights are distinct and separate from property rights in tangible goods. For example, when a person posts a letter to someone, the personal property in the ink and parchment is transferred to the recipient. If the recipient is pleased with the letter, they can frame it and hang it on the wall; if they are unhappy with the letter they can burn it; or, if it is a love letter, they might store it away in which case it will pass under the recipient’s will when they die. Despite the recipient having personal property rights in the letter as a physical object, the sender (as author) retains

¹ According to Art. 2, para. viii, WIPO Convention (1967) ‘Intellectual property’ includes ‘the rights relating to—literary, artistic and scientific works—performances and performing artists, photographs and broadcasts—inventions in all fields of human endeavour—scientific discoveries—industrial designs,—trade marks, service marks, and commercial names and designations—protection against unfair competition and all other rights resulting from intellectual activity in the industrial, scientific literary or artistic fields.’

² See Sherman and Bently, 95–100.

intellectual property rights in the letter.³ The author will be the first owner of copyright in the letter, which will enable them to stop the recipient (or anyone else) from copying the letter or from posting it on the Internet.

For many, the fact that intellectual property rights are separate from the physical objects in which they are embodied may be counter-intuitive. For example, if someone owns a recipe book, why should they not be able to photocopy a couple of recipes to send to a relative? Similarly, if someone owns an animal or plant, should they not be able to buy and sell seeds from the plant, or offspring of the animals? Or if someone purchases bottles of perfume in Singapore, should they not be able to sell them in the United Kingdom? One of the consequences of intellectual property rights being separate from property rights is that the legal answer to these questions might well be 'no'.⁴ As rights over intangibles, intellectual property rights limit what the owners of personal property are able to do with the things which they own.

While the law has long granted property rights in intangibles, the law did not accept 'intellectual property' as a distinct and (relatively) non-controversial form of property until late in the eighteenth century.⁵ In granting property status to intangibles the question arose as to how and where the boundary lines of the intangible property were to be determined. That is, once it was accepted that the law should grant property rights over intangibles, the question arose: how was the object of the property to be identified and its limits defined? While in real and personal property law, questions of this nature are answered by reference to the boundary posts and physical markers of the objects in question,⁶ one of the defining features of intangible property is that these reference points do not exist. As a result, each area of intellectual property law has been forced to develop its own techniques to define the parameters of the intangible property. These include schemes of deposit and registration techniques of representation (such as the patent specification and claims), statutory rules and legal concepts such as the requirement of sufficiency of disclosure (in patent law),⁷ and the originality requirement (in copyright law).⁸

One fact that will become apparent as we look at the various forms of intellectual property law is that they share a similar image of what means to 'create' (or produce), for example, a book, a design for a car, or a new type of pharmaceutical. More specifically, it is commonly assumed that it is an individual, rather than a God, machine, a force of nature, or a muse that creates ideas, information, and technical principles. It is also assumed that the act of creation occurs when an individual exercises their mental labour to manipulate the underlying raw material.

³ Commercial practices frequently operate in apparent ignorance of the distinction: see R. Deazley, 'Collecting Photographs, Copyrights and Cash' [2001] *EIPR* 551 (describing, and doubting, the legitimacy of certain claims to copyright ownership of photographs used by the press).

⁴ J. Litman, 'Consumers and the Global Copyright Bargain' [1998] *IPQ* 139, 145. ('The copyright statute is a law that most people, at least in the United States, don't believe in, that is, they don't believe copyright law says what it says'.)

⁵ It was not called intellectual property until midway through the nineteenth century.

⁶ And Latin maxims such as *cujus est solum, ejus usque ad coelum et ad infernos* (the owner of soil is presumed to own the airspace above and the matter below as far as the centre of the earth).

⁷ Which effectively means that the property claimed must correspond to the invented subject matter: see Ch. 20.

⁸ See Sherman and Bently, 25, 153–5, 185–93.

Another fact that will become clear as we progress through the book is that intellectual property law is highly politicized. On the one hand there are groups who represent existing (or putative) right holders which have tended to argue that the existing laws provide inadequate protection: that, for example, the threshold for patent protection for genetically modified biological material is set too high, that copyright and patent protection need to be explicitly extended to cover multimedia works and software, that trade marks owners are not sufficiently protected against cyber squatters who acquire related domain names, and so on. At the other extreme, there are a range of groups who oppose stronger intellectual property protection: whether they be representatives of the developing world, consumers and users of intellectual property (such as home tapers, digital samplers, appropriation artists, 'netizens', and librarians), defenders of free speech, classical liberal economic theorists, competition lawyers, postmodern theorists, ecologists, or religious groups. While there is a tendency to caricature such debates about intellectual property as battles between good and evil, there are many shades of opinion between these extremes that deploy a diversity of more nuanced arguments.⁹

While anyone reading recent commentaries on music on the Internet or the legal status of genetically modified plants and animals may be led to think otherwise, intellectual property law has a long and rich history. Despite this, intellectual property has only recently become part of the typical law school syllabus (although textbooks or treatises have existed since the middle of the nineteenth century). In part, the growing interest in intellectual property may be attributed to the fact that in the last decade or so, intellectual property law has come to be widely viewed as an area of primary economic and social importance.

The remainder of this chapter provides an introduction to some topics that impinge upon all areas of intellectual property law. After looking at some of the justifications that have been given for the grant of intellectual property rights, we explain the key international and regional structures that are central to an understanding of British intellectual property law.

2 JUSTIFICATIONS FOR INTELLECTUAL PROPERTY

Legal and political philosophers have often debated the status and legitimacy of intellectual property.¹⁰ In so doing, philosophers have typically asked 'why should we grant intellectual property rights?' For philosophers, it is important that this question is answered, since we have a choice as to whether we should grant such rights. It is also important because the decision to grant property rights in intangibles impinges on traders, the press and media, and the public.¹¹ Moreover, because the conventional

⁹ See, e.g. A. Thierer and C. Crews, *Copy Fights: The Future of Intellectual Property in the Information Age* (2002).

¹⁰ For a useful collection, see A. Moore (ed.), *Intellectual Property: Moral, Legal and International Dilemmas* (1997).

¹¹ In *A v B* [2003] QB 195, 205 para. 11 Lord Woolf CJ observed that 'any interference with the press has to be justified'. For emphasis on free speech, see P. Drahos, 'Decentring Communication: The Dark Side of Intellectual Property', in T. Campbell and W. Sidurski (eds.), *Freedom of Communication* (1994); J. Waldron, 'From Authors to Copiers: Individual Rights and Social Values in Intellectual Property' (1993) 68 *Chicago-Kent LR* 841. For emphasis on the relationship between intellectual properties, identity and alterity, see R. Coombe, *The Cultural Life of Intellectual Properties: Authorship, Appropriation and the Law* (1998).

arguments which justify the grant of private property rights in land and tangible resources are often premised on the scarcity or limited availability of such resources, and the impossibility of sharing, it seems especially important to justify the grant of exclusive rights over resources—ideas and information—that are not scarce and can be replicated without any direct detriment to the original possessor of the intangible (who continues to be able to use the idea or information). As we will see, philosophers have not always found intellectual property rights to be justified,¹² and there are now many commentators who doubt that all intellectual property rights are justified in the form they currently take.

The justifications that have been given for intellectual property tend to fall into one of two general categories. First, commentators often call upon ethical and moral arguments to justify intellectual property rights. For example, it is often said that copyright is justified because the law recognizes an author's natural or human rights over the products of their labour.¹³ Similarly, trade mark protection is justified insofar as it prevents third parties from becoming unjustly enriched by 'reaping where they have not sown'.

Alternatively, commentators often rely upon instrumental justifications that focus on the fact that intellectual property induces or encourages desirable activities.¹⁴ For example, the patent system is sometimes justified on the basis that it provides inventors with an incentive to invest in research and development of new products,¹⁵ or an incentive to disclose valuable technical information to the public, which would have otherwise remained secret.¹⁶ Similarly, the trade mark system is justified because it encourages traders to manufacture and sell high-quality products. It also encourages them to provide

¹² A. Plant, 'The Economics of Copyright' (1934) *Economica* 167; S. Breyer, 'The Uneasy Case for Copyright: A Study of Copyright in Books, Photocopies and Computer Programs', 84 *Harvard LR* 281; R. Brown, 'Advertising and the Public Interest: The Legal Protection of Trade Symbols' (1948) 57 *Yale LJ* 1165 (on trade marks); N. Kinsella, 'Against Intellectual Property' (2002) 15 *Jo. Libertarian Studies* 1. Different theories may work better for different intellectual property rights: L. Paine, 'Trade Secrets and the Justifications of Intellectual Property: A Comment on Hettinger' (1990) 19 *Philosophy & Public Affairs* 247; *Sirena*, Case C-40/70 [1971] *ECR* 69 (the ECJ admitted that the interests protected by industrial property merited a higher degree of protection than trade marks.)

¹³ Universal Declaration of Human Rights Art. 27(2); Article II-17 (3) of the draft European Constitution (18 Jul. 2003) CONV 850/03; Charter of Fundamental Rights of the European Union, (7 Dec. 2002), Art. 17. For a critical assessment of such claims, see P. Drahos, 'Intellectual Property and Human Rights' [1999] *IPQ* 349. On the theoretical basis of these claims, see J. Hughes, 'The Philosophy of Intellectual Property' (1988) 77 *Georgetown LR* 287 (exploring application of Locke and Hegel); A. Moore, *Intellectual Property and Information Control: Philosophical Foundations and Contemporary Issues* (2001) (rejecting utilitarian argument and favouring a version of Lockean theory); W. Gordon, 'Property Right in Self Expression' (1993) 102 *Yale LJ* 1533. On desert, see L. Becker, 'Deserving to Own Intellectual Property' (1993) 68 *Chicago-Kent LR* 609. The ethical justifications provide an important basis for the claims of indigenous peoples over their traditional knowledge: see, e.g. M. Spence, 'Which Intellectual Property Rights are Trade-Related?', in Francioni, F. and Scovazzi, M. (eds.), *Environment, Human Rights and International Trade* (2001), 279–80 (describing the claims to inclusion of such rights in the TRIPS framework as based on commutative justice).

¹⁴ For an overview, see E. Hettinger, 'Justifying Intellectual Property Rights' (1989) 18 *Philosophy & Public Affairs* 31; F. Machlup and E. Penrose, 'The Patent Controversy in the Nineteenth Century' (1950) *J Economic History* 1, 10 ff; T. Palmer, 'Are Patents and Copyrights Morally Justified?' (1990) 13 *Harvard J Law and Public Policy* and reprinted in A. Thierer and C. W. Crews, *Copy Fights: The Future of Intellectual Property in the Information Age* (Washington DC: Cato Institute, 2002).

¹⁵ For an example, see W. Landes and R. Posner, 'An Economic Analysis of Copyright Law' (1989) 18 *J Legal Studies* 325.

¹⁶ For a different, but nevertheless influential, instrumental argument see E. Kitch, 'The Nature and Function of the Patent System', *J Law & Economics* 265 (incentive to exploit).

information to the public about those attributes.¹⁷ Instrumental arguments are typically premised on the position that without intellectual property protection there would be under-production of intellectual products. This is because while such products might be costly to create, once made available to the public they can often be readily copied. This means that (in the absence of rights giving exclusivity) a creator is likely to be undercut by competitors who have not incurred the costs of creation. The inability of the market to guarantee that an investor in research could recoup its investment is sometimes called 'market failure'.

These justifications are examined in more detail in the introductory sections dealing with copyright, patents and trade marks.¹⁸

3 INTERNATIONAL INFLUENCES

One of the defining characteristics of intellectual property rights is that they are national or territorial in nature. That is, they do not ordinarily operate outside of the national territory where they are granted.¹⁹ The territorial nature of intellectual property rights has long been a problem to rights holders whose works, inventions, and brands are the subject of transnational trade. Throughout the nineteenth century, a number of countries that saw themselves as net exporters of intellectual property began to explore ways of protecting their authors, designers, inventors, and trade mark owners in other jurisdictions. Initially, this was done by way of bilateral treaties, whereby two nations agreed to allow nationals of the other country to claim protection of their respective laws. Towards the end of the nineteenth century a number of (largely European) countries entered into two multilateral arrangements: the Paris Convention for the Protection of Industrial Property of 1883 and the Berne Convention for the Protection of Literary and Artistic Works of 1886. While the detail of these treaties is left for later chapters, it is worth observing here that both treaties adopted as their central criterion of protection the principle of 'national treatment'. The principle of national treatment is fundamentally a rule of non-discrimination. This provides that a member state of the Paris and Berne Union (country A) must offer the same protection to the nationals of other member states (say country B) as country A gives to its own nationals. The beauty of the principle of national treatment is that it allows countries the autonomy to develop and enforce their own laws,²⁰ while meeting the demands for international protection. Effectively, national treatment is a mechanism of international protection without harmonization.

While the principle of national treatment provides rights owners with some protection in other jurisdictions, it only offers a partial solution. One problem that national treatment fails to address is that where a country A requires registration as a prerequisite for protection, for the right holder in country B to protect their creations in country A, they must endure the time and cost of registration. One of the goals of international

¹⁷ See, e.g. W. Landes and R. Posner, 'The Economics of Trademark Law' (1988) 78 *TMR* 267.

¹⁸ See below pp. 32–7, 327–9, 699–702.

¹⁹ On the ability of UK courts to decide issues of infringement of foreign intellectual property rights, see Ch. 47.

²⁰ Although this is usual, it is not a necessary consequence of national treatment: see Ch. 47.

intellectual property law since the end of the nineteenth century has been to reduce the inconvenience caused by registration. In the copyright field, this was achieved by requiring members of the Berne Union to grant copyright protection without the need for formalities (such as registration). In the field of trade marks, a mechanism was developed whereby a national trade mark owner could make an ‘international registration’ which would take effect almost automatically in designated countries.²¹ A similar procedure for international application for patents was not developed until 1970.²²

The expansion of international arrangements for the protection of intellectual property has continued over the last century. Over this time, the Paris and Berne Conventions have been revised on a number of occasions, their membership has expanded (particularly as former colonies achieved independence), and a number of new treaties have been formulated. Most of these treaties have been developed and are supervised by the World Intellectual Property Organization (WIPO), which has its headquarters in Geneva.²³ It continues to be the main forum for the development of new intellectual property initiatives at an international level.

Early intellectual property treaties were largely established between countries with a shared interest in recognizing such rights (even if arrangements often implicated colonies which had quite different interests). For a long time, countries such as the USA, USSR, and the People’s Republic of China remained outside the treaty arrangements, often believing that as ‘net consumers’ of intellectual property, recognition of the rights of foreigners would work against their national economic interests. The persistent refusal of the USA to protect British copyright owners in the nineteenth century was a cause of great annoyance. While more acceptable arrangements were made in the twentieth century, the USA did not join the Berne Convention until 1988.

By the 1980s, the USA had realized that it was a net producer of intellectual property-based goods and, along with the EC and Japan, began to advocate for higher levels of intellectual property protection on a global basis. Frustrated by the difficulties encountered under the traditional treaty arrangements,²⁴ the developed countries began to employ tactics that were much more aggressive than had hitherto operated at WIPO.²⁵

²¹ The Madrid Agreement concerning the International Registration of Marks 1891. (However, given that trade mark procedures remained a matter for national law, this system proved unattractive to some countries, including the UK.)

²² The Patent Co-operation Treaty. Discussed at pp. 344–5, 349, 365–6 below.

²³ WIPO, a specialized agency of the UN, was established by a treaty signed in Stockholm on 14 July 1967 (replacing ‘BIRPI’, the body which supervised the Berne and Paris Conventions). See K. Pfanner, ‘World Intellectual Property Organization’ (1979) 10 *IIC* 1. The most important treaty falling outside WIPO supervision is the Universal Copyright Convention of 1952, which operates under the auspices of UNESCO. K. Idris, ‘WIPO and the Rule of Law in a Changing World’ (1999) 61 *The Review* 11.

²⁴ The frustrations of the developed world can be traced back to 1967 with the Stockholm Protocol to the Berne Convention: H. Sacks, ‘Crisis in International Copyright: The Protocol Regarding Developing Countries’ (1969) *J Business Law* 26. This was compounded by the failure to revise the Paris Convention between 1980 and 1984: K. Beier, ‘One Hundred Years of International Cooperation: The Role of the Paris Convention in the Past, Present and Future’ (1994) 15 *IIC* 1; Opinion 1/94 (1994) *ECR* I 5267, 5294. Yet more disappointment followed WIPO’s failure to combat copyright piracy: see M. Blakeney, ‘Intellectual Property in World Trade’ (1995) 3 *International Trade Law Review* 76 (which provides a concise overview of the origins of TRIPS). See also K. Beier and G. Schricker (eds.), *GATT or WIPO?* (1996).

²⁵ See E. Uphoff, *Intellectual Property and US Relations with Indonesia, Malaysia, Singapore and Thailand* (1991). In addition, the US Semiconductor Chip Protection Act 1984 heralded a return of reciprocity, rather than national treatment, as a technique for recognition of foreign entitlements: non-US nationals could not

More specifically, in the 1980s the US Government started to take advantage of its trading power to threaten trade sanctions against countries that did not offer sufficient protection to American intellectual property rights owners.²⁶ Frustrated by the experience of WIPO-controlled treaty negotiations, the USA also sought to bring intellectual property protection within the General Agreement on Tariffs and Trade system (GATT).

The GATT was formed after the Second World War with a view to stabilizing and liberalizing trade conditions on a worldwide basis. In 1986, a new round of negotiations begun which included 'Trade Related Aspects of Intellectual Property Rights' (or TRIPS) on the agenda. When compared with WIPO negotiations, the TRIPS negotiations had a number of advantages. First, it brought intellectual property rights within a broader framework, thus making it clear to the parties that although it may not have been in their interest to accept stronger intellectual property standards, these would be offset by other advantages elsewhere.²⁷ Secondly, as non-Governmental Organizations (NGOs) and other organizations are largely excluded from the treaty process, the GATT negotiations are conducted in a more streamlined manner between countries. The negotiations that began in 1986 were concluded in 1993,²⁸ and became part of the World Trade Organization agreement signed in Marakesh in April 1994. There are 146 parties to the Agreement.²⁹

The TRIPS agreement covers all the main areas of intellectual property.³⁰ For the most part, it requires members of the WTO to recognize the existing standards of protection within the Berne and Paris Conventions.³¹ It also demands substantive protection for rights neighbouring copyright,³² trade marks,³³ geographical indications,³⁴ designs,³⁵ patents,³⁶ topographies of integrated circuits,³⁷ and undisclosed information.³⁸ Perhaps

obtain the benefit of the 1984 Act unless similar laws were in place in the claimant's country. Japan and the EC responded by enacting equivalent laws.

²⁶ Most notoriously, under 'Special 301' of the Omnibus Trade and Competitiveness Act of 1988, *Pub L*, No. 100-418, 102 *Stat* 1176-9 the US Trade Representative conducts an annual audit, placing countries which fail to give adequate and effective protection on a 'watch list', followed (currently in the case of the Ukraine) by sanctions (the withdrawal of trade privileges). For annual reports and current watch lists see www.ustr.gov. The European Community also applied retaliatory measures against countries with inadequate intellectual property protection, under Council Regulation (EEC) No. 2641/84 of 17 Sept. 1984 on the strengthening of the common commercial policy with regard in particular to protection against illicit commercial practices *OJ L* 252/1 and Council Regulation (EEC) No. 4257/88 of 19 Dec. 1988 applying generalized tariff preferences for 1989 in respect of certain industrial products originating in developing countries *OJ L* 375/1.

²⁸ Opinion 1/94 [1994] *ECR I* 5267, 5269 (describing the Uruguay round as '[t]he most complex negotiations in world history').

²⁹ China became a party in December 2001.

³⁰ See Beier and Schriker; D. Gervais, *The TRIPS Agreement—Drafting History and Analysis* (2nd edn. London, 2003); C. Arup, *The New WTO Agreements: Globalizing Law Through Services and Intellectual Property* (2002); P. Drahos, 'Global Property rights in Information: The story of TRIPS at the GATT' (1995) *Prometheus* 6; J. Reichman, 'Universal Minimum Standards of Intellectual Property Protection under the TRIPS Component of the WTO Agreement' (1995) 29 *The International Lawyer* 345. M. Spence, 'Which Intellectual Property Rights are Trade-Related?' in Francioni, F. and Scovazzi, M. (eds.), *Environment, Human Rights and International Trade* (2001) 279-80 (attempting to locate a principled basis to justify the scope and content of TRIPS and permit its coherent development, and arguing that TRIPS Art. 7 fails to provide such a basis).

³¹ TRIPS Art. 2(1), Art. 9.

³² TRIPS Art. 14.

³³ TRIPS Arts. 15-21. For a conclusion that the TRIPS agreement covers trade names, see *EC v. US*, WTO/DS176/AR.

³⁴ TRIPS Arts. 22-4.

³⁵ TRIPS Arts. 25-6.

³⁶ TRIPS Arts. 27-34.

³⁷ TRIPS Arts. 35-8.

³⁸ TRIPS Art. 39.

the most significant difference between TRIPS and the existing treaties is in the detailed provisions on enforcement of intellectual property rights in Part III. Prior to TRIPS matters of procedure, remedies, and criminal sanctions had largely been left to national law.

TRIPS has had an important impact on the general development of intellectual property law since it came into force on 1 January 1995.³⁹ As the procedures of enforcement through the International Court of Justice are cumbersome, little could be done where a country ratified but did not comply with an intellectual property treaty. However, as a result of TRIPS being part of the WTO Agreement, if a country fails to bring its laws into line with TRIPS, another member may complain to the WTO and set in motion a so-called 'dispute resolution procedure'.⁴⁰ This involves initial consultations between the parties, followed by the establishment of a panel of three experts that produces a report that the parties either accept or appeal. Where a successful complaint has been made against a nation, it is usually required that the relevant laws are amended so as to comply with the TRIPS agreement,⁴¹ though the possibility exists for the parties to the dispute to reach an alternative arrangement.⁴² The consultation procedures have been invoked over twenty times, and—perhaps surprisingly—most of the disputes have been between developed countries,⁴³ rather than between developed and less-developed countries.⁴⁴ There have been Panel Reports in only six disputes,⁴⁵ three of which were subject of

³⁹ Developed countries were granted a transitional period of one year, developing countries 5 years. The WTO has been called a 'global regulatory ratchet in place for intellectual property, which for the time being is being worked by a technocratic elite': P. Drahos, 'Intellectual Property and Human Rights' [1999] *IPQ* 349, 370. Although TRIPS has had little direct impact on UK law, in general because the standards embodied in the Agreement reflect pre-existing European standards, it has been frequently referred to in cases interpreting UK (and European) legislation: see, e.g. *IBM/Computer program product T-1173/97* [1999] *OJEP* 609 (referring to TRIPS Art. 27); *S. v. Havering Borough Council* (20 Nov. 2002), para. 11; *Libertel Groep BV v. Benelux MerkenBureau*, Case C-104/01 [2004] *FSR* (4) 65 (ECJ).

⁴⁰ TRIPS Arts. 63–64; Understanding on Rules and Procedures Governing the Settlement of Disputes. The detailed rules of procedure are currently under review, with a May 2004 deadline.

⁴¹ Procedures exist for determining a time-scale, if necessary by way of arbitration.

⁴² As occurred in *EC v. US*, WT/DS 160 (where, following Panel Report that US violated TRIPS Art. 13, the EC accepted compensation in lieu of change in US law). It has been observed that agreements of this sort enable those who are rich enough to buy themselves out of compliance with TRIPS standards, and that this, in turn, undermines the moral force of the TRIPS agreement.

⁴³ See, e.g. *US v. Japan*, WT/DS 28 (retrospective rights for sound recordings); *US v. Portugal*, WT/DS 37 (patent term); *EC v. Japan*, WT/DS 42 (retrospective rights for sound recordings); *US v. Ireland*, WT/DS 82 (copyright enforcement); *US v. EC/Denmark*, WT/DS 83/1 (enforcement, provisional measures); *US v. Sweden*, WT/DS 86/1 (enforcement, provisional measures); *EC v. Canada*, WT/DS 114 ('regulatory review' and 'stockpiling' exceptions to pharmaceutical patents); *US v. EC/Greece*, WT/DS 124/1 (enforcement of film copyright); *US v. EC/Greece*, WT/DS 125/1 (enforcement of copyright in relation to Greek TV stations); *Canada v. EC*, WT/DS 153 (EC supplementary protection certificates breach TRIPS Art. 27 on non-discrimination between technologies); *EC v. US*, WT/DS 160 (public playing of music); *US v. EC*, DS 174 (geographical indications, beer); *US v. EC*, WT/DS 176 (US legislation on Cuban confiscations); *US v. Canada*, WT/DS 179 (patent term); *Australia v. EC*, WT/DS 290 (geographical indications).

⁴⁴ *US v. Pakistan*, WT/DS 36, *US v. India*, WT/DS 50, *EC v. India*, WT/DS 79 (all on protection of pharmaceutical patent rights pending full recognition); *US v. Argentina*, WT/DS 171 (pharmaceutical patents); *US v. Argentina*, WT/DS 196, (on patents/confidential test data); *US v. Brazil*, WT/DS 199 (local working of patents, compulsory licences); *Brazil v. US*, WT/DS 224 (discrimination in patents).

⁴⁵ *US v. India*, WT/DS 50 (holding that India failed to provide a suitable set of procedures regarding filing of patent applications relating to pharmaceuticals, and granting exclusive marketing rights, largely affirmed on appeal); *EC v. India*, WT/DS 79/1 (largely following WT/DS50), *EC v. Canada*, WT/DS 114 (holding that Canadian exception to patent protection allowing 'stockpiling' prior to expiry of patent term breached

appeals.⁴⁶ Although there are aspects of the process that might be thought to need improvement,⁴⁷ so far the enforcement machinery has been effective without any need to resort to trade sanctions.

Although TRIPS is the single most important development in international intellectual property law of the last thirty years, it does not appear to have permanently eclipsed the role of WIPO. Indeed, not long after the Marakesh Agreement was signed, two new intellectual property treaties were formulated and agreed through WIPO: the 1996 WIPO Copyright Treaty and the 1996 WIPO Performers and Phonograms Treaty. These reincorporated the Berne-plus elements of TRIPS into an exclusively intellectual property environment, as well as adding new TRIPS-plus elements. Other WIPO initiatives will continue to play a significant role in international intellectual property law (albeit now in tandem with the WTO).

Although the intellectual property instruments that have been developed at the international level have occasionally recognized the peculiar needs of the developing and least developed countries (most notably in terms of transitional periods),⁴⁸ the globalization of intellectual property standards has largely been a process whereby the wish-lists of various developed-world lobby groups are inscribed into public international law.⁴⁹ One notable exception to this is found in the 1992 Convention on Biological Diversity (CBD), which recognizes the rights of the (indigenous) peoples who preserve biological resources to share in the benefits arising from the commercial exploitation thereof.⁵⁰ This has prompted further calls for greater protection for traditional intellectual resources of the developing world; notably plant culture, medicinal products, and indigenous folklore.⁵¹ Recent years have also witnessed growing resistance to the wholesale imposition of IP standards on the developing world.⁵² Most importantly, the Ministerial declaration at the

TRIPS, but finding 'regulatory review' exception compatible with TRIPS Art. 30); *US v. Canada*, WT/DS 170 (Canada's patent term of 17 years from grant violated TRIPS Art. 33, affirmed on appeal); *EC v. US*, WT/DS 160 (holding that 'business' exemption, but not 'home-style' exemption, to liability for public playing of music from broadcasts, violated TRIPS Art. 13); *EC v. US*, WT/DS 176 (US law on Cuban confiscations mostly related to ownership of trade marks, an issue not covered by TRIPS; largely affirmed on appeal).

⁴⁶ *US v. India*, WT/DS 50 (overturning Panel's finding on extent of requirements of TRIPS Art. 70.8, but finding India in violation nevertheless); *US v. Canada*, WT/DS 170 (affirming Panel's finding that Canada's patent term based on grant violated TRIPS Art. 33), *EC v. US*, WT/DS 176 (overturning a number of Panel findings, as regards scope of TRIPS, national treatment, and most favoured nation standard, but largely affirming that US law on Cuban confiscations concerned 'ownership' of trade marks, a matter for Member States).

⁴⁷ One problem is the possibility of successive actions by different complainants over identical issues, as occurred in *US v. India*, WT/DS50 and *EC v. India*, WT/DS 79.

⁵¹ See V. Shiva, *Protecting our Biological and Intellectual Heritage in the Age of Bio-piracy* (1996).

⁵² See, e.g. V. Shiva, *Protect or Plunder? Understanding Intellectual Property Rights* (2001). For a more general exploration of the appropriateness of imposing western legal concepts on other cultures, see R. Burrell, 'A Case Study in Cultural Imperialism: The Imposition of Copyright on China by the West', in L. Bently and S. Maniatis, *Intellectual Property and Ethics: Perspective on Intellectual Property*, Vol. iv (1998).

Doha review of TRIPS in December 2001 acknowledged the primacy of the right to life and health over the protection of intellectual property rights.⁵³ Moreover, the UK government established a Commission on Intellectual Property Rights which investigated the relationship between intellectual property rights and ‘development’, health, and food-security, and proposed that such considerations be integrated in national and international policy-making.⁵⁴ While such acknowledgment of the different position and interests of developing countries is a welcome development, a number of commentators have observed a parallel trend for further ‘ratcheting up’ of standards through bilateral trade negotiations (particularly between the US and developing world countries).⁵⁵ The progressive geographical extension of higher standards for intellectual property rights through such trade arrangements raises the spectre of further norm-setting in the multi-lateral arena. Indeed, Ministers agreed at the meeting in Doha to negotiate the establishment of an international registration system for geographical indications of wines and spirits, and to provide higher levels of protection for names of agricultural products.⁵⁶

4 REGIONAL INFLUENCES

If an understanding of some of the basic aspects of international intellectual property is important for students of intellectual property law, familiarity with European Union law is essential. This is because the majority of developments in UK intellectual property law over the last thirty years have had their origin in the European Community and, since the Maastricht Treaty came into force in 1993, the European Union. Moreover, any future legal developments are likely to stem from, or at least be directed through, the Community/ Union.

Although the European (then ‘Economic’) Community was established by the Treaty of Rome 1957 (hereafter ‘The Treaty’), this has been amended by the Treaty on European

⁵³ WTO, Declaration on the TRIPS Agreement and Public Health (20 Nov. 2001) WT/MIN(01)/DEC/2. See above at pp. 345–6.

⁵⁴ See Commission on Intellectual Property Rights, *Integrating Intellectual Property Rights and Development Policy* (2002). The Commission was established by the Secretary of State for International Development in 2001 to consider how intellectual property rights regimes could be designed to benefit developing countries, to reduce poverty and hunger, improve health and education, and ensure environmental sustainability. See also, Royal Society, *Keeping Science Open: The Effects of Intellectual Property Policy on the Conduct of Science* (2003) (recommending that developing countries should not be required to implement tranches of legislation until their level of development is such that the benefits of implementation outweigh the disadvantages, though without giving an indication as to how this could be calculated). For a defensive response to these reports, see S. Crespi, ‘Intellectual Property Rights Under Siege’ [2003] *EIPR* 242. See also C. May, ‘Why IPRs are a Global Political Issue’ [2003] *EIPR* 1.

⁵⁵ See, e.g. Commission on Intellectual Property Rights, *Integrating Intellectual Property Rights and Development Policy* (2002), 162–4. For a recent example, see Ch. 17 of the US–Chile Trade Agreement, requiring implementation in Chile of standards well-above those in TRIPS. An EU–Chile Agreement, while less ambitious, also contains TRIPS-plus obligations: see Council Decision of 18 Nov. 2002 on the signature and provisional application of certain provisions of an Agreement establishing an association between the European Community and its member states, of the one part and the Republic of Chile, of the other part [2002] *OJ L* 352/1, esp. Art. 170.

⁵⁶ See below at p. 963.

Union of Maastricht (hereafter 'TEU'),⁵⁷ the Treaty of Amsterdam, and most recently the Treaty of Nice.⁵⁸ The Amsterdam Treaty introduced a consolidated version of the Treaty establishing the European Community (hereafter 'EC'), operative from 1999.⁵⁹ In its initial conception, the Community focused on the goals of achieving a customs union, a single market, and avoiding the distortion of competition within that market.⁶⁰ More recently the aims of the Community (and Union) have broadened to include the promotion of research and technological development and the flowering of the cultures of the member states.⁶¹ The Charter of Fundamental Rights of the European Union, proclaimed on 7 December 2000, is another possible influence on intellectual property within Europe.⁶²

In its early years, European intervention into British intellectual property law largely came through two avenues. First, the judicial interpretation of the Treaty of Rome produced various doctrines that limited the operation of national intellectual property laws in the Community. In addition, the Commission also played a role in policing various competition law aspects of the Treaty that had an impact on intellectual property law. However, for the last fifteen years or so, most of the important interventions have been legislative in nature. In particular, there have been moves to centralize the administration of intellectual property rights and to harmonize national laws. As a result, it is not possible to describe British intellectual property law in any sensible way without constant reference to various European Council and Parliament Directives and Regulations, to the decisions of the Court of Justice and the Court of First Instance (interpreting both the EC Treaty and various directives and regulations),⁶³ the regulations and decisions of the

⁵⁷ The TEU is important for intellectual property rights partly through its provisions recognizing fundamental rights as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms (Art. 6, TEU, formerly Art. F) and on police and judicial cooperation in criminal matters (Arts. 29-30 TEU, formerly Art. K.1).

⁵⁸ In force from 2003. Article II-17(3) of the draft European Constitution provides that 'intellectual property shall be protected'. (18 Jul. 2003) CONV 850/03.

⁵⁹ In the latter document, many of the important provisions were renumbered. In this textbook, following the lead of the European Court of Justice, we will refer to Articles of the Treaty of Amsterdam as Art. X EC, and refer to corresponding provisions in parentheses (formerly Art. X of the Treaty). In some cases even this format will be confusing, because some provisions of the initial Treaty of Rome were 'renumbered' by amendments in 1992. The most important of these for our purposes is Art. 12 (formerly Art. 6 of the Treaty (as amended), and prior to that Art. 7 of the Treaty) (non-discrimination).

⁶⁰ Art. 2 EC (formerly Art. 2 of the Treaty) sets out the tasks of the Community as being to establish 'a common market and economic and monetary union' and 'by implementing common policies and activities . . . to promote throughout the Community a harmonious, balanced and sustainable development in economic activities'. Subsequent provisions explain that the Community must prohibit restrictions on the import or export of goods, remove obstacles to the free movement of goods, persons, service, and capital; introduce a system ensuring that competition in the internal market is not distorted. Art. 3 EC (formerly Art. 3 of the Treaty).

⁶¹ Note also Art. 5 EC (formerly Art. 3b of the Treaty) ('subsidiarity'). The flowering of cultures is elaborated in Art. 151 EC (formerly Art. 128).

⁶² See Craig and De Búrca, pp. 358-69. Note the influence of the European Union's Charter of Fundamental Rights on the Advocate General's opinion in *Netherlands v. European Parliament and Council* [2001] ECR I-7079 (para. 197). On the legal status of the charter, see A. Menéndez, 'Chartering Europe: Legal status and Policy Implications of the Charter of Fundamental Rights of the European Union' (2002) 40 *JCMS* 471. Presumably, the Charter may obtain legal status when directly referred to by legislation: see, e.g. Council Regulation (EC) No. 1/2003 of 16 Dec. 2002 on the implementation of the rules on competition laid down in Art. 81 and 82 of the Treaty [2003] *OJ L* 1/1, Recital 37.

⁶³ The Court of Justice has jurisdiction to give preliminary rulings concerning the interpretation of the Treaty. Where any question arises before a court of tribunal of a member state then it may refer the question

Commission, as well as various intellectual property-granting offices (such as the Office of Harmonization in the Internal Market and the Community Plant Variety Office). Indeed, a high profile judicial figure has asked whether national intellectual property rights have become ‘a moribund anachronism’.⁶⁴

4.1 FREE MOVEMENT OF GOODS AND THE INTERNAL MARKET

In the 1970s and 1980s, much of the influence of European Community law on British intellectual property law was a consequence of the interpretation of Articles 28 and 30 EC (formerly Articles 30 and 36 of the Treaty). These two provisions reflect the desire to establish an ‘internal market’, that is a single European market with no internal frontiers or national barriers to trade. To this end, Article 28 EC (formerly Article 30 of the Treaty) prohibits ‘quantitative restrictions’ on trade and provisions ‘having equivalent effect’.⁶⁵ While the use of intellectual property rights to prevent the importation of goods from one Community country into another would be a ‘quantitative restriction’, Article 30 permits such restrictions where they are necessary to protect industrial and commercial property. This is conditional on the fact that such restrictions do not ‘constitute a means of arbitrary discrimination or a disguised restriction on trade between member states’.⁶⁶

While Articles 28 and 30 EC appear to be contradictory, the two provisions were reconciled by permitting the maintenance and use of different national intellectual property laws, while simultaneously limiting the negative effects of the territorial nature of such rights through the so-called ‘doctrine of exhaustion’.⁶⁷ Initially this was dressed up to appear as if it only invalidated the exercise of intellectual property rights, while preserving their existence (so as not to contravene Article 30).⁶⁸ Later, the concept of the existence of the right was refined in terms of its ‘specific subject matter’⁶⁹ and the ‘essential function’

to the Court under Art. 234 EC (formerly Art. 177(2) of the Treaty). If the court or tribunal is one against whose decision there is no judicial remedy under national law, that court or tribunal must refer the matter to the Court of Justice: *Chiron v. Murex* (No. 3) [1995] *All ER* 88.

⁶⁴ H. Laddie, ‘National IPRS: A Moribund Anachronism in a Federal Europe?’ [2001] *EIPR* 402, 407 (arguing that intellectual property rights are an anachronism but regretting that they are not yet moribund, and advocating the adoption of Community-wide rights and Community courts, in particular to prevent forum-shopping). See also W. Kingston, ‘What Role Now for National Patent Offices?’ [2003] *EIPR* 289.

⁶⁵ Art. 49 EC (formerly Art. 59 of the Treaty) makes similar prohibition on restrictions on freedom to provide services.

⁶⁶ Note also Art. 295 EC (formerly Art. 222 of the Treaty).

⁶⁷ In this context, the national and territorial nature of the rights refers to the essential separateness and distinctiveness of each right—for example, the idea that a copyright owner in France and the UK has two separate French and UK copyrights. It was thought to follow from this that consent to distribution in France could in no way affect the exercise of the separate UK copyright. The doctrine of exhaustion does not change the distinctness of the two national rights (so, for example, each might be assigned separately to different persons). Rather, it limits the scope of each national law where the rights are in common control.

⁶⁸ H. Cohen Jehoram, ‘The Ideal Standard Judgment: An Unheeded Warning’ [1999] *IPQ* 114. The distinction between existence and exercise was developed in the context of Art. 81 EC (formerly Art. 85 of the Treaty) in *Etalabissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-6/65 [1966] *ECR* 299; *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55 and C-7/80 [1981] *ECR* 147.

⁶⁹ In *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] *ECR* 1147 (Art. 30 derogations are limited to the purpose ‘of safeguarding rights which constitute the specific subject matter of this property’).

of the right. However clothed, the doctrine of exhaustion is best seen as a judicial and political compromise that allows the free movement of goods within the Community. This is despite the fact that national intellectual property rights enable intellectual property rights-owners to interfere with the free movement of goods.

In a nutshell, the doctrine of exhaustion prohibits an intellectual property right owner from utilizing their rights to control the resale, importation, or exportation of any goods that have been placed on the market in the Community by or with their consent. For example if A, who has acquired a patent in France and the United Kingdom over a particular machine, sells a machine in France, A cannot use their UK patent rights to prevent importation of the machine into the United Kingdom. This is based on the idea that the 'first sale' gives the intellectual property owner the reward that constitutes the 'specific subject matter'⁷⁰ of the right. It is irrelevant that the patentee expressly prohibited the purchaser from reselling the machine or exporting it. This is because it is the consent to first sale that is important.⁷¹ As the doctrine of exhaustion facilitates the 'parallel importation' of goods within the Community, it operates to minimize price differentials for identical goods between countries in the Community.⁷²

The doctrine of exhaustion of rights only applies to the right to control distribution (resale, export, or import). It does not apply to the right to rent, perform or show a (copyright) work in public where the 'specific subject matter' of the right allows the owner to control each and every use (for it is through charging for each use that the essential function of the right is achieved).⁷³ The case law of the ECJ has elaborated this general principle in a range of subsequent cases. Rather than rehearse the detailed reasoning, the resulting principles can be summarized as follows:

- (a) The principle of exhaustion applies to all types of intellectual property.⁷⁴
- (b) Consent by the intellectual property right owner includes the consent of person or persons legally or economically dependent on the proprietor (e.g. a licensee or subsidiary).⁷⁵
- (c) Consent by the intellectual property right owner does *not* include the consent of a person who is an independent assignee of the right (or who happens to be the holder of a right that once had a 'common origin'). For example, the owner of copyright in countries A and B may assign the copyright in a particular work in country B. If the new owner of the right places works on the market in country B, the owner of copyright in country A

⁷⁰ *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] ECR 1147 (defining the specific subject matter of patents and trade marks). Note also the discussion of the concept by Advocate General Gulmann in *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808 (the Magill Case).

⁷¹ *Dansk Supermarked A/S v. Imerco A/S*, Case C-58/80 [1981] ECR 181.

⁷² *Deutsche Grammophon GmbH v. Metro GmbH*, Case C-78/80 [1971] ECR 487.

⁷³ *Warner Bros. v. Christiansen*, Case C-158/86 [1988] ECR 2605 (rental); *Coditel SA v. Cine Vog Films SA* (No. 1), Case C-62/79 [1980] ECR 881 (public performance).

⁷⁴ See, e.g. *Deutsche Grammophon GmbH v. Metro GmbH*, Case C-78/80 [1971] ECR 487; *Music Vertriebs Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55 and Case C-57/80 [1981] ECR 147; *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79.

⁷⁵ *Deutsche Grammophon GmbH v. Metro GmbH*, Case C-78/80 [1971] ECR 487 (subsidiary); *Keurkoop BV v. Nancy Kean Gifts BV*, Case C-144/81 [1982] ECR 2853.

(being independent) has not exhausted their rights in country A.⁷⁶ Although assignments of this nature will often be void as illegitimate agreements to divide up the market (and contrary to Article 81 EC),⁷⁷ where the assignments are valid the exception to the principle of exhaustion leaves open the possibility that intellectual property rights may restrict the free movement of goods. This can only be rectified by harmonized rules (such as the Community trade mark) that forbid separate assignments of national rights.⁷⁸

(d) National intellectual property rights may be used to prevent the further circulation of pirated, counterfeit, and other illicitly manufactured goods which by definition have not been placed on the market in the Community with the right-holder's consent.

(e) Where intellectual property rights subsist in country A but not in country B (where A and B are both in the Community), and goods are legitimately placed on the market by parties unconnected with the right holder in country B, the right owner has not consented to the marketing of those goods and as such will not have exhausted their rights. The right-holder can therefore prevent importation into and distribution of the goods in country A.⁷⁹

(f) Where intellectual property rights subsist in country A but not in country B (where A and B are both in the Community), and goods are legitimately placed on the market by the right holder (or parties connected with the right holder) in country B, the right owner will have been taken to have consented to the marketing of those goods and so have exhausted their rights.⁸⁰

(g) Where intellectual property rights subsist in country A but are subject to a compulsory licence (i.e. any person may exploit the intellectual property right on payment of a fee), the rights are *not* exhausted when goods are manufactured under such a licence. Here, the intellectual property right owner will be able to use national laws to prevent importation into country B.⁸¹

(h) Where goods have been marketed in the EC by the intellectual property right holder (or with their consent), the right of the owner of the goods to resell might permit behaviour (such as advertising) that overrides other aspects of the proprietor's intellectual property rights.⁸²

⁷⁶ *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] 1 ECR I-2789. This reversed *Sirena*, Case C-40/70 [1971] ECR 3711 and *Hag I*, Case C-192/73 [1974] ECR 731.

⁷⁷ Whether the agreement is treated as market sharing will depend on the context, the commitments, the intention of the parties, and the consideration provided. See *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-58/64 [1966] ECR 299 (assignment void). But in *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] 1 ECR I-2789 the assignment had been prompted by the assignor's financial difficulties.

⁷⁸ H. Cohen Jehoram, 'The Ideal Standard Judgment: An Unheeded Warning' [1999] *IPQ* 114.

⁷⁹ *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79. For the limits of this see *Commission v. French Republic* C-23/99 [2000] ECR I-7653.

⁸⁰ *Merck & Co. v. Stephar BV & Exler*, Case C-187/80 [1981] ECR 2063 (marketing of drug in Italy when patent protection was not available); *Merck & Co. v. Primecrown*, Joined Cases C-267/95 and C-268/95 [1996] ECR I-6285 (affirming *Merck v. Stephar*).

⁸¹ *Pharmon v. Hoechst*, Case C-19/84 [1985] ECR 2281 (import into the Netherlands of drugs manufactured under compulsory licence in the UK); *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55/80 and C-57/80 [1981] ECR 147. One problem with this effect is that it may undermine compulsory licences which are intended to induce voluntary licensing arrangements, since the latter (but not the former) will be treated as exhausting the intellectual property owner's rights.

⁸² *Parfums Christian Dior SA v. Evora BV*, Case C-337/95 [1998] 1 CMLR 737; *Norwegian Government v. Astra Norge SA*, E1-98 [1999] 1 CMLR 860.

(i) Where goods have been marketed in the EC by the intellectual property right holder (or with their consent), but the goods have subsequently been altered, a series of specific rules have been developed that define when a resale is legitimate. These are considered later, in the context of trade marks.⁸³

(j) Where goods have been marketed *outside* the EC by the intellectual property right holder (or with their consent), the principle of exhaustion has no application. In the absence of harmonization, it is for member states (and where there has been harmonization, the ECJ) to determine the effects of such marketing.⁸⁴

Although the doctrine of exhaustion of rights has reduced some of the disruption that national intellectual property laws pose to the internal market, it has not provided a complete solution. This is because the national intellectual property laws of the member states can vary significantly. Since the principle of exhaustion comes into effect when the right owner consents to goods being placed on the market, that consent will not exist where a third party makes and distributes goods in a country where the right does not exist or has lapsed.⁸⁵ It is largely for this reason that the Commission set about to harmonize intellectual property laws in Europe.

4.2 COMPETITION RULES

The second way in which European initiatives have exerted an influence over British intellectual property law is through the rules on competition contained in Articles 81 and 82 EC (formerly Articles 85 and 86 of the Treaty). These provisions are designed to prevent anti-competitive agreements and practices, as well as abusive conduct by monopolies. These provisions impact on intellectual property law in a number of ways. Articles 81 and 82 EC are both couched as prohibitions and thus automatically render void arrangements between ‘undertakings’ which meet the specified criteria (or in the case of Article 81 are not exempted by Article 81(3)).⁸⁶ In certain cases, they also provide the basis for an action for damages,⁸⁷ a ground for applying to the Commission for a compulsory licence to exploit an intellectual property right,⁸⁸ and a defence (a so-called ‘Euro-defence’) to an action for infringement of intellectual property rights.⁸⁹ Articles 81 and 82 EC are both

⁸³ See below at pp. 929–40.

⁸⁴ *EMI Records v. CBS United Kingdom*, Case C-51/75 [1976] ECR 811 (stopping importation of copyright works from the US); *Polydor and RSO Records v. Harlequin Record Shops and Simons Records*, Case C-70/80 [1982] ECR 329 (stopping importation of copyright works from EFTA countries); *Sebago and Ancienne Maison Dubois et fils SA v. GB-Unic SA*, Case C-173/98 [1999] CMLR 1317. See below at pp. 940–5.

⁸⁵ *Bassett v. SACEM*, Case C-402/85 [1987] ECR 1747; *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79.

⁸⁶ Art. 81(2). This might be a significant penalty where a patentee has carefully calculated the terms of the licence, only for it later to be held to be void.

⁸⁷ In the UK, either before a Court, or the Competition Appeal Tribunal: Competition Act 1998, s. 47A (introduced by the Enterprise Act 2002, s. 18).

⁸⁸ *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808.

⁸⁹ Whether abuse can be used as a defence is a controversial issue. See *Chiron Corp. v. Organon Teknika* [1993] FSR 324; [1994] FSR 202; *Intel v. Via Technologies* [2003] FSR 574 (para. 115). Following the implementation of the Enterprise Act 2002, two other penalties are available as from 20 June 2003 in serious cases: criminal penalties as regards dishonest ‘horizontal agreements’ (Enterprise Act, Part 6) and Directors disqualification (Enterprise Act, s. 204).

enforced by the European Commission, and from May 2004, by national competition authorities (in the United Kingdom, the Office of Fair Trading, and on appeal from a finding of infringement or rejecting a complaint, the Competition Appeal Tribunal).⁹⁰ If an undertaking is found to have been acting anti-competitively, the European Commission has the ability to impose serious fines, whether the behaviour was intentional or negligent.⁹¹

Article 81 prohibits ‘all agreements between undertakings . . . and concerted practices which may affect trade between member states and which have as their object or effect the prevention, restriction or distortion of competition’. As the term ‘undertakings’ has been interpreted liberally, Article 81 potentially applies to agreements concerning the licensing and assignment of intellectual property rights,⁹² whether between competitors or parties at different levels of distribution (for example, exclusive distribution agreements). Article 81 goes on to outline certain practices, such as price-fixing and market-sharing, which will normally be prohibited. In other cases, a conclusion that the agreement has an anti-competitive effect depends on the actual conditions in which the agreement would function, including the economic contexts, the products covered by the agreement and the structure of the market.⁹³

Even though the Treaty is not meant to prejudice the rules in member states governing the system of property ownership,⁹⁴ the European Commission and the European Court of Justice have had little hesitation in applying Article 81(1) to agreements involving intellectual property rights. According to the Court, interference with intellectual property rights is justified on the basis that it ‘does not affect the grant of those rights but only limits their exercise to the extent necessary to give effect to the prohibition under [Art. 81]’.⁹⁵ Article 81 also applies to institutions and arrangements for the collective administration of rights: a common feature of copyright exploitation.⁹⁶

⁹⁰ Council Regulation (EC) No. 1/2003 of 16 Dec. 2002 on the implementation of the rules on competition laid down in Art. 81 and 82 of the Treaty [2003] *OJ L* 1/1, Art. 5. This Regulation sees a ‘modernisation’ and de-centralization of the enforcement of European competition law, with the European Commission operating as part of a ‘European Competition Network’ of national authorities. In general, the European Commission will enforce cases involving practices or agreements that affect at least three member states.

⁹¹ Council Regulation No. 17/62 of 6 Feb. 1962: First Regulation Implementing Arts. 85 and 86 of the Treaty *OJ Sp Ed* 1962 No. 204/62 p. 87, reg. 15(2) fines of up to 1 million Euro or 10% turnover in the preceding business year. Council Regulation No. 1/2003, Art. 7 (empowering the Commission to impose behavioural or structural remedies which are ‘proportionate’ and necessary to bring the infringement to an end); Art. 23(2) (fines of up to 10% turnover in the preceding business year); Art. 24 (periodic penalties of up to 5% of average daily turnover per day). Competition Act 1998 (giving OFT power to impose penalties of up to 10% turnover for up to 3 years).

⁹² e.g. *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-583sh64 [1966] *ECR* 299. (German manufacturer G appointed French company C as exclusive distributor in France. C had registration of GINT mark in France. The ECJ agreed with the Commission’s view that the agreement was contrary to Art. 85, including the agreement allowing C to register the mark in France.) Minor agreements are excluded: Commission Notice on agreements of minor importance which do not fall within the meaning of Art. 81(1) EC [2001] *OJ C* 368/13 (agreements between firms who are not competitors as falling outside of Art. 81(1) if the market share held by each of the parties does not exceed 15% on any of the relevant markets affected by the agreement).

⁹³ *European Night Services v. Commission*, T-374/94 [1998] *ECR* II-3141.

⁹⁴ Art. 295 EC (formerly Art. 222 of the Treaty).

⁹⁵ *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-58/64 [1966] *ECR* 299. Cf. *Panayiotou v. Sony Music Entertainment* [1994] *EMLR* 229.

⁹⁶ See below at pp. 267–70, 284–9.

Given the potential breadth of Article 81, it is important to note that Article 81(3) allows for Article 81(1) to be 'declared inapplicable' in a number of circumstances.⁹⁷ Such exemptions must 'contribute to improving the production or distribution of goods or to promoting technical or economic progress, while allowing consumers a fair share of the resulting benefit'. The European Commission has issued a number of such 'block exemptions' in the form of Commission Regulations, the most important relate to 'technology transfer agreements', 'R&D agreements', and 'vertical agreements'.⁹⁸ These block exemptions enable operators to be confident that their agreements are exempt (though the benefit of a block exemption may be withdrawn as regards an individual agreement), and may also be treated as 'guidelines' even for agreements that fall outside the scope of the block exemption. In other situations, operators will have to form their own judgments as to whether agreements are exempt. (The possibility for obtaining individual exemption through a notification system, which became an unacceptable administrative burden, has been abolished from May 2004.)⁹⁹

Article 82 EC prohibits an undertaking from abusing a dominant position. This prohibition has primarily affected intellectual property law in two ways. First, it provides a basis to regulate collective organizations that administer intellectual property rights on behalf of owners and which occupy a dominant position in the market. To prevent abuse, organizations in a dominant position are only able to impose obligations and restrictions that are necessary to achieve their legitimate aims.¹⁰⁰ Second, Article 82 provides a remedy for misuse or abuse of intellectual property rights. On one reading of Article 82, it is possible to argue that as intellectual property rights confer monopoly rights, they necessarily place owners in a dominant position for the market covered by the intellectual property right. On this basis, all activities carried on by intellectual property right holders would need to be scrutinized to ensure that they were not abusive. However, the European Court of Justice has declined to use Article 82 in this way. Instead, the Court has made it clear that ownership of an intellectual property right does not of itself confer dominance in a market. As a consequence, a refusal to license an intellectual property right only constitutes an abuse of a dominant position in exceptional circumstances.¹⁰¹

⁹⁷ Regulation no. 19/65/EEC.

⁹⁸ TTR; VRR; Commission Regulation No. 2659/2000 for R&D Agreements [2000] *OJ L* 304. The TTR, scheduled to lapse on 31 March 2006 is currently under review, and is likely to be replaced in 2004: Commission Evaluation Report on the Transfer of Technology Block Exemption Regulation No. 240/96. See below at pp. 556–7, 560.

⁹⁹ Formerly, where there had been no notification to the Commission and an agreement fell outside the scope of a block exemption, the national court could not authorize an agreement: Regulation 17/62 of 6 Feb. 1962: First Regulation Implementing Arts. 85 and 86 of the Treaty *OJ Sp Ed* 1962, No. 204/62, 8, Art. 9. If faced with such a situation the court was forced to seek information from the Commission or refer the case to the ECJ. See Notice on Cooperation between National Courts and the Commission in Applying Arts. 85 and 86 EEC [1993] *OJ C* 39/6. However, the system of prior notification became unworkable, and has now been abolished. From 1 May 2004, Article 81(3) is directly applicable by the courts of member states: Council Regulation No. 1/2003, Art. 1(2), Art. 6, Recital 4. The Commission may still produce block exemptions, may make decisions withdrawing the benefit of such exemptions in individual cases (Art. 29), or finding that Arts. 81 or 82 are inapplicable to individual cases (Art. 10).

¹⁰⁰ These are discussed below at pp. 284–9. *Re GEMA (No. 1)* [1971] *CMLR* D35; *Belgische Radio en Televisie (BRT) v. SABAM*, Case C-127/73 [1974] *ECR* 313.

¹⁰¹ Thus, it was not an abuse for a designer and manufacturer of automobiles to refuse to license its intellectual property rights to persons wishing to manufacture replacement parts for vehicles. *AB Volvo v. Erik Veng (UK)*, Case 238/87 [1988] *ECR* 6211; *CICRA v. Regie Nationale des Usines Renault*, Case C-53/87 [1988]

4.3 CENTRALIZATION AND HARMONIZATION

While the doctrine of exhaustion has reduced the impact of national intellectual property rights on the completion of the internal market, it has been unable to guarantee that barriers to trade would not arise where national laws differed in terms of substance or duration. Consequently, it soon became apparent that to achieve the holy grail of an internal market, some level of harmonization would be necessary. There are three relevant ways in which the Community is able to harmonize national laws.¹⁰²

The Council is able to issue directives for the approximation of the laws of member states 'as directly affect the establishing and function of the common market'.¹⁰³ Under this process a Commission issues a proposal and then consults with the European Parliament and Economic and Social Committee. To be passed, a proposal must be approved unanimously by the Council. The Council is also able to adopt measures (not just directives) 'for the approximation of the provisions laid down by law, regulation or administrative action in Member States which have as their object the establishment and functioning of the internal market'.¹⁰⁴ Typically, this process begins with a Commission proposal,¹⁰⁵ which must be approved by the Council and the European Parliament. As only a qualified majority of the Council must support the proposal it is not necessary to have the unanimous approval of all the member states. Third, if action by the Community is 'necessary to attain, in the course of the operation of the common market, one of the objectives of the Community, and this Treaty has not provided the necessary powers, the Council shall, acting unanimously on a proposal from the Commission after consulting the European Parliament, take the appropriate measures'.¹⁰⁶ This provision may only be used where no other provision of the Treaty gives the Community institutions the necessary power to act.¹⁰⁷ It has usually been the basis for the establishment of Community offices.¹⁰⁸

Community involvement with intellectual property can be divided into four stages. In the 1970s, the focus of attention was on the establishment of a Community patent system, that is a system in which a single patent would be granted for the whole of the Community, enforceable in Community patent courts. To this end, in 1975 the Community Patent Convention was agreed to at an intergovernmental level between the (then nine)

ECR 6039. However, an abuse of dominant position was found where a broadcasting organization which generated programme schedules in which copyright was held to subsist, refused to license a newspaper to publish those schedules on a weekly rather than daily basis, *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] *ECR* 808 (the Magill Case). Subsequent decisions have sought to identify the basis to the Magill Case, but as yet have proved inconclusive: *Oscar Bronner v. Media Print*, Case C-7/97 [1998] *ECR* I-7791; *Tierce Ladbroke v. Commission*, T-504/93 [1997] *ECR* II-923; *IMS Health Inc v. Commission*, T-184/01R (CFI) [2002] 4 *CMLR* 58; *NDC Health Corporation and NDC Health GmbH*, Case C-481/01P(R).

¹⁰² See Craig and De Búrca. ¹⁰³ Art. 94 EC.

¹⁰⁴ Art. 95 EC (formerly Art. 100A of the Treaty). See *Netherlands v. European Parliament and Council*, Case C-377/98 [2002] *OJEP* 231; [2002] *FSR* 575 (ECJ) paras. 13–29 (Biotech Directive was properly based on Art. 100A).

¹⁰⁵ The Protocol on the Application of the Principles of Subsidiarity and Proportionality states that the Community should legislate only to the extent necessary and that, in general, directives should be preferred to Regulations, and framework directives preferred to detailed measures (para. 6). It also requires the Commission to consult widely before proposing legislation (para. 9). Such consultation is usually by way of issuing Green Papers and holding meetings of 'interested parties'.

¹⁰⁶ Art. 308 (formerly Art. 235 of the Treaty).

¹⁰⁷ *Commission v. Council*, Case C-45/86 [1987] *ECR* 1493, para. 13.

¹⁰⁸ e.g. *CTMR*, Recital 4.

member states. However, the political will to introduce the scheme never materialized.¹⁰⁹ In part this was because in 1973 a separate instrument for the granting of patents, the European Patent Convention (EPC), had been agreed to between states (a number of which were then outside the EC). As such, there was little urgency to implement the distinct (though linked) Community patent. Despite attempts to revive the Treaty through a 1989 Protocol in Luxembourg,¹¹⁰ it is only in the last couple of years that a real will for a single Community patent regime has emerged. This has taken shape in the form of a Commission proposal to introduce a Community patent by way of a Community Regulation.¹¹¹ In the meantime, the existence of the European Patent Convention has limited the ability of the Community to harmonize national patent laws. The reason for this is that all member states are parties to and therefore bound by the EPC. At the same time, they cannot amend the Convention without the assent of the non-EC participants. In the two fields where Community action has taken place, the proposals have been made to appear as if they leave the EPC untouched. The two Regulations on Supplementary Protection Certificates are worded so as to avoid appearing to be extensions of the patent term.¹¹² Similarly, the Directive of the European Parliament and Council on the Legal Protection of Biotechnological Inventions, which attempts to harmonize patent law for biological inventions, is presented as a Directive to harmonize the 'interpretation' of existing provisions of the EPC, rather than amending or modifying those provisions.

In the 1980s, attention turned to the harmonization of trade mark law. The first part of a two-pronged strategy was to approximate national trade marks laws. This was eventually completed by way of a directive.¹¹³ The second prong saw the establishment of a single office that granted Community trade marks enforceable in the courts of member states designated as Community Trade Mark Courts. The Community trade mark was introduced by way of a Council Regulation, and in 1996 the Office of Harmonization in the Internal Market was established in Alicante, Spain.¹¹⁴ As the substantive rules of the Regulation are virtually identical to those of the Directive, appeals of decisions of the Office of Harmonization to the OHIM's Boards of Appeal, the Court of First Instance and the ECJ offer valuable guidance to national authorities.

At the end of the 1980s, the third wave of harmonization began when the Commission set out to harmonize a number of aspects of copyright law.¹¹⁵ The need for action arose because the different levels of copyright protection in different member states was seen to constitute a potential barrier to trade.¹¹⁶ In contrast with the approach taken to trade marks, the Community passed a series of seven Directives each harmonizing particular aspects of copyright law (especially relating to areas of technological change). In so doing, the Commission also aimed to set the standard of protection to be given to creators at a 'high level'.¹¹⁷

The 1990s also witnessed Community intervention in relation to a number of the so-called *sui generis* intellectual property rights. A Community Plant Variety Regulation

¹¹³ Trade Marks Directive. ¹¹⁴ See below at pp. 766, 779–84. ¹¹⁵ See below at pp. 43–52.

¹¹⁶ It was also motivated by the prompting of the ECJ, e.g. in *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] *ECR* 79.

¹¹⁷ e.g. Duration Dir. Recital 10.

established a Community Office in Angers, France. In contrast to the strategy in relation to trade marks, no harmonization directive was passed regulating national law.¹¹⁸ A directive was also passed relating to the harmonization of the law relating to designs which was followed by a Regulation introducing a Community Registered Design (to be issued by the Office of Harmonization in the Internal Market), and a Community Unregistered Design Right.¹¹⁹ The latter, available since April 2002, is the first Europe-wide, unitary right to be granted automatically, rather than after application to an office. Finally, the Commission has put forward a proposal to harmonize the law on utility models. If adopted (though there now seems a lack of political will to do so) this would require member states to supplement patent protection with a system for issuing a second tier of rights for inventions that will be available for a shorter term and more readily than patents.¹²⁰

Given the breadth of European intervention in intellectual property law, it is not surprising that a number of challenges have been made to particular European initiatives. In most cases, such challenges must be brought by national governments before the Court of Justice.¹²¹ National courts do not have the power to declare acts of the Community institutions to be invalid.¹²² If past experiences are much to go on, it seems that attempts to set aside Community legislation are unlikely to be successful.¹²³

4.3.1 Implementation

In the UK, directives have been implemented through the introduction of new statutes (as with the Trade Marks Act 1994), or more commonly by amending existing statutes by way of statutory instrument.¹²⁴ When implementing directives, the UK government has tended to rewrite the (often abstract) provisions used in the directives into the language that is more commonly found in British statutes. Unfortunately, such rewriting can make interpretation doubly difficult, and a number of UK judges have made adverse comments about this practice.¹²⁵ Unlike the case with directives, regulations do not need to be implemented into national law to be effective.¹²⁶ However, where national procedures need to be established (as with the Regulations on Supplementary Protection Certificates), some action must necessarily follow.

If a government fails to implement a directive or implements it partially or tardily, the Commission may commence an action against that member state before the ECJ.¹²⁷

¹²⁶ Art. 249 EC (formerly Art. 189 of the Treaty).

¹²⁷ See, e.g. *Commission v. United Kingdom*, Case C-30/90 [1992] ECR I-829 (UK compulsory licence provisions incompatible with Treaty); and *Commission v. Ireland*, Case C-212/98 (25 Nov. 1999) (failure of

Moreover, pending implementation, a number of consequences may follow automatically.¹²⁸ First, in accordance with general principles of European law, the provision has a direct effect ‘vertically’ on state bodies, including rights-granting bodies such as the Patent Office or Trade Marks Registry. This direct effect only applies where the provision is clear and unconditional.¹²⁹ Second, the national courts must interpret existing national law in line with the unimplemented provisions of a directive: a consequence sometimes referred to as ‘indirect effect’.¹³⁰ Where this is not possible, individuals are not able to rely on the unimplemented provisions to bring an action against other private bodies: there is no ‘horizontal’ direct effect. While in these circumstances private individuals may not get the remedy they would have been entitled to if the directive had been implemented, they are not left without a course of action. This is because if a private individual has suffered damage as a result of a government’s failure to implement a directive, the member state may be required to compensate the individual. For this to occur, the claimant must show that the object of the directive was to create rights, that the scope of rights is identifiable, and that failure to introduce such rights caused the damage.¹³¹

4.3.2 Interpretation

When interpreting provisions that are intended to give effect to a European directive, not surprisingly the directive will be a critical aide to interpretation. For the uninitiated common lawyer, European directives may seem strange since they are often formulated in relatively vague language. In such cases, the provisions should be interpreted purposively.¹³² While the text of the directive remains critical, particular attention should be given to the Recitals at the front of the directive, since these often provide specific examples explaining what a clause is intended to cover.

The material available to assist in the interpretation of a directive will be different from the material that is used to interpret British statutes. Whereas it is possible to look to Hansard when interpreting (purely) UK law, when considering the implementation of a European directive, what is said in the British Parliament will be of little assistance (except

Republic of Ireland to implement the Satellite Directive); *Commission v. Ireland*, Case C-213/98 [2000] ECDR 201 (failure of Republic of Ireland to implement the Rental Directive); *Commission v. Ireland*, Case C-13/00 (19 Mar. 2002) (failure of Ireland to implement the Paris Act of Berne and thus failure to fulfil its obligations under Art. 300(7) EC and Art. 5 of Protocol 28 of the European Economic Area of 2 May 1992).

¹²⁸ See Craig and De Búrca, 202–27.

¹²⁹ *NV Algemene Transport en Expeditie Onderneming van Gend Loos v. Nederlandse Administratie der Belastingen*, Case 26/62 [1963] ECR 1. These conditions have been whittled away, so the question may well now be whether the provision is capable of being applied by a court to a specific case: *H. J. Banks & Co. v. British Coal Corporation*, Case C-128/92 [1994] ECR I-1209, 1237 (Advocate General Gerven). For an example, see *Mister Long Trade Mark* [1998] RPC 401 (TM Dir. Art. 13).

¹³⁰ *Marleasing v. La Comercial Internacional de Alimentacion*, Case C-106/89 [1990] ECR I-4135; *Silhouette International Schmied GmbH & Co. KG v. Hartlauer Handgesellschaft mbH*, Case C-355/96 [1998] CMLR 953, 979; *Webb v. EMO Cargo* [1992] 2 All ER 43; [1995] 4 All ER 577.

¹³¹ *Francovich v. Italian Republic*, Joined Cases C-6, and 9/90 [1991] ECR I-5357 (paras. 31–45); *R v. Secretary of State for Transport, ex p. Factortame* [1999] 3 CMLR 597.

¹³² *Re Adidas AG*, Case C-223/98 [1999] 3 CMLR 895 (under Community law legislation is to be interpreted by reference to the wording taking into account the context and object of the legislation); *SA Société LTJ Diffusion v. SA Sadas C-291/00* (17 Jan. 2002) [2003] ECR I-02799 (AG, para. 18); *Ansul v. Ajax*, Case C-40/01 (11 March 2003), para. 26.

possibly as regards the implementation of optional aspects of European legislation).¹³³ Instead, attention must be paid to the European ‘travaux préparatoires’, such as Commission proposals.¹³⁴ In exceptional cases it may be helpful to refer to the so-called ‘Agreed Statements’, that is to the minutes of what was agreed between the Commission and the Council.¹³⁵

When interpreting British law implementing a directive, it may be important to take account of decisions of other European courts.¹³⁶ Occasionally decisions given by the courts of member states before the adoption of the directive may provide some indication of what the directive was intended to achieve. Where a directive is meant to correspond to pre-harmonized law in one jurisdiction, the decisions of that jurisdiction may carry special weight.¹³⁷ While the judgments of the courts of member states as to the meaning of a directive may be helpful, there is no obligation to follow the interpretation of the first court to interpret a directive. Decisions of the courts of all member states are meant to be equally authoritative.

Ultimately, the question of the way a directive (or regulation) is to be interpreted is decided by the ECJ.¹³⁸ The Court is assisted by one of the eight Advocates General, who make reasoned submissions in order to assist the Court. The Advocate General’s opinion may be a useful interpretative tool to resolve doubts over a decision of the ECJ. In some situations, particularly in relation to appeals from the Boards of Appeal of the OHIM, hearings are initially to the Court of First Instance (from whence appeals can be heard by the ECJ). Given the enormous workload of the ECJ, it seems likely (and desirable) that a specialist chamber of the Court of First Instance (with a limited possibility for further

¹³³ *British Sugar v. Robertson* [1996] *RPC* 281, 292 (no room for the application of *Pepper v. Hart* or the *White Paper*). Cf. R. Burrell, H. Smith, and A. Coleman, ‘Three-dimensional Trade Marks: Should the Directive be Reshaped?’, in N. Dawson and A. Firth (eds.), *Trade Marks Retrospective: Perspectives in Intellectual Property*, vol. 7 (2000) 137, 160 n. 5.

¹³⁴ S. Schönberg and K. Frick, ‘Finishing, Refining, polishing: on the use of travaux préparatoires as an aid to the interpretation of Community legislation’ (2003) 28 *ELR* 149, 156–7 (observing that such documents have frequently been used in the interpretation of the regulations creating ‘supplementary protection certificates’ and on the registration of ‘geographical indications.’)

¹³⁵ Schönberg and Frick, 164–7. In relation to the TM Dir., see *Libertel Groep BV v. Benelux MerkenBureau*, Case C-104/01 [2004] *FSR* (4) 65 (para. 25) (ECJ) (noting that the Minutes specifically acknowledge that they should not be used in interpretation). For the general proposition that ‘declarations recorded in minutes . . . cannot be used for the purposes of interpreting a provision of Community law where no reference is made to the content of the declaration in the wording of the provision in question’, see *VAG Sverige AB*, Case C-329/95 [1997] *ECRI*-2675 (para. 23) and *Antonissen*, Case C-292/89 [1991] *ECRI*-745, [1991] 2 *CMLR* 373 (para. 18). For British objections to use of such minutes where they are not public documents, see *Wagamama v. City Centre Restaurants* [1995] *FSR* 713, 725.

¹³⁶ e.g. in *Philips Electronics NV v. Remington Consumer Products* [1999] *RPC* 809, 820–1 reference was made to the Swedish decision in *Ide Line Aktiebolag AG v. Philips Electronics NV* [1997] *ETMR* 377; and in *Premier Brands UK v. Typhoon Europe* [2000] *FSR* 767 reference was made to a number of German decisions.

¹³⁷ But for them to do so there must be solid evidence of the relevant legislative intention: *Wagamama v. City Centre Restaurants* [1995] *FSR* 713, 725. In *British Horseracing Board v. William Hill* [2002] *ECDR* 41 the Court of Appeal acknowledged that a different understanding of the Database Directive from that of Laddie J at first instance prevailed in Scandinavian countries, and noted that the latter’s understanding may be significant given the fact that the Directive was said to be influenced by the so-called ‘Nordic catalogue rule’. The Court of Appeal therefore referred the case to the ECJ.

¹³⁸ One controversial issue concerns when ‘interpretation’ permitted under Art. 234 EC ends, and determination of facts—a matter for the national courts—begins. See, generally, Craig and De Búrca, 472–3, and in the context of intellectual property, *Arsenal v. Reed*, Case C-206/01 [2002] *ECRI*-10273; *Arsenal FC plc v. Reed (No. 2)* [2003] 1 *CMLR* 13; [2003] 1 *All ER* 137 (CA).

appeals to the ECJ) will be established sometime in the future. Until that time, the final word on the meaning of Community provisions is left to a tribunal that is clearly less than comfortable with intellectual property law.

4.4 EXTERNAL RELATIONS

Another way in which the European Community is involved in intellectual property law is through the role it plays in negotiating and signing treaties. The Community's treaty powers are set out in Article 133 EC (formerly Article 113 of the Treaty), as amended by the Treaty of Nice in 2003.¹³⁹ This gives the Community the exclusive power to enter into treaties with respect to common commercial policy, a notion which is expressly extended to the negotiation and conclusion of agreements relating to 'the commercial aspects of intellectual property'. Article 133(7) of the amended text continues to allow the Council, after consulting the Parliament, to enter into treaties relating to intellectual property.¹⁴⁰ To date the Community has entered into a number of intellectual property related treaties. For example, the Community is now a party to TRIPS and has entered into bilateral agreements with Morocco, Tunisia, and Australia for the protection of denominations of wine.¹⁴¹ In addition, a Council decision has been taken to accede to the WIPO Copyright Treaty and WIPO Performers and Phonograms Treaty.¹⁴²

4.5 EUROPEAN ECONOMIC AREA

To understand intellectual property law in the United Kingdom, it is important to be familiar with the European Economic Area (EEA). This is an initiative entered into between the EC and certain satellite countries who are members of the European Free Trade Area (EFTA). In 1994, the majority of the countries then in EFTA decided to enter into a joint EC-EFTA initiative and form the European Economic Area.¹⁴³ The countries that joined the EEA from EFTA undertook to join various international conventions,¹⁴⁴ to implement domestic provisions on the free movement of goods (similar to those in Articles 28 and 30 EC), on competition (equivalent to Articles 81 and 82), and a raft of EC

¹³⁹ In a case concerning the powers of the Community to enter TRIPS, the European Court of Justice held that Art. 113 (as it then was) did not cover treaties relating to intellectual property rights, except insofar as they related to border measures, *Opinion 1/94* [1994] *ECR* I 5267, 5316. The TRIPS Agreement was entered into by the Community (under implied powers) and member states: *Opinion 1/94* [1994] *ECR* I-5267. See generally Craig and De Búrca, 127–131.

¹⁴¹ Under Art. 133. Council Regulation (EEC) No. 482/77 of 8 Mar. 1977 [1977] *OJ L* 65/1; Council Regulation (EEC) No. 3618/87 of 30 Nov. 1987 [1987] *OJ L* 3618/87; Council Decision 89/146/EEC of 12 Dec. 1988 [1989] *OJ L* 56/1.

¹⁴² Council Decision 2000/278 of 16 Apr. 2000, *OJ* 2000 *L*89/6. Note Text of Proposed Council Decision on Madrid Protocol (8 Apr. 2003).

¹⁴³ Although the EFTA countries at one time included Austria, Finland, and Sweden, they have since acceded to the EC. The EFTA countries that are parties to the EEA are: Iceland, Norway, and Liechtenstein. The only remaining EFTA country, Switzerland, refused to join the EEA.

¹⁴⁴ Indeed member states agreed to adhere to these Conventions, and the Court ruled that Ireland had failed to do so in *Commission v. Ireland*, Case C-13/00 (19 Mar 2002) (ECJ).

directives (including those on trade marks and copyright).¹⁴⁵ These provisions are enforced by the 'EFTA Surveillance Authority' and the 'EFTA Court'.¹⁴⁶ In return, the EC agreed to extend its provisions to the EEA countries. As a result where the term 'Community' or 'common market' are used in provisions falling within the EEA, they refer to the territories of the contracting parties.¹⁴⁷ Moreover, the doctrine of exhaustion and the jurisprudence of the ECJ on Article 28 EC explicitly apply to goods placed on the market in the EEA.¹⁴⁸

4.5.1 'Europe agreements'

Increasingly, 'European' intellectual property law is having an ever-expanding significance outside of the EU. In part, this was promoted by the Treaty of Nice, which paved the way for a number of countries to join the Community on 1 May 2004.¹⁴⁹ In addition, the EC has entered into 'Europe Agreements' with so-called 'candidate countries'.¹⁵⁰ The agreements, which aim to establish a free-trade area, contain a number of provisions in relation to intellectual property.

The EC also operates a number of initiatives and has agreements with many satellite countries. The EC has also entered into 'Euro-Med Association Agreements' with countries of the South and East Mediterranean,¹⁵¹ 'Partnership and Co-operation Agreements' with countries in Eastern Europe and Central Asia,¹⁵² and 'Stabilisation and Association Agreements' with Balkan states (such as Croatia and Macedonia).¹⁵³

Typically these agreements include prohibitions on 'quantitative restriction on imports and measures having equivalent effect', as well as competition provisions similar to Articles 81 and 82 EC. The agreements usually also require the contracting party to apply to become parties to (or if already parties, to affirm their commitment to) various intellectual property treaties such as the European Patent Convention, the Union for the Protection of Plant Varieties the Rome Convention, the Madrid Protocol, the Berne and Paris Conventions, the Madrid Agreement, and the Patent Cooperation Treaty. They also require states to implement the Community 'acquis' so as to approximate its laws on intellectual property with those of the EC. The implementation of these standards is monitored, and the Commission reports have frequently emphasized the importance both

¹⁴⁵ Agreement on the European Economic Area *OJ L* 001, 3 Jan. 1994, 3. See esp. Arts. 11, 13, 53, 54. On the implementation see the AIDA (Acquis Implementation Database) at www.efta.int/structure/Surv/Databases/AIDA.

¹⁴⁶ See www.efta.int. There have been few decisions of the EFTA court of interest in intellectual property: *Mag Instrument v. California Trading Co.*, E2-97 [1998] 1 *CMLR* 331 discussed at p. 941 n. 163; *Paranova v. Merck*, Case E-3/02 (8 Jul. 2003).

of implementation in law and practice, in particular insisting on training of law enforcement bodies and the judiciary on intellectual property matters.

4.6 NON-EUROPEAN UNION REGIONAL INITIATIVES

Finally, it is important to note that there are a number of European initiatives that are independent of the European Community/Union which relate to intellectual property law. One of the most important is the 1973 European Patent Convention (EPC). The EPC established a single central office for the granting of bundles of national patents in Munich. The EPC is a treaty independent of the European Union, and includes all the member states of the EU, the EEA, as well as a number of non-EEA countries such as Switzerland and Turkey.¹⁵⁴

The Council of Europe, a political organization founded in 1949 comprising forty-five European countries, has also had an impact on intellectual property. While the Council of Europe is largely concerned with the promotion of democracy and human rights, it has undertaken a number of initiatives in the field of intellectual property. The Council supervises certain treaties, including treaties on patents (relating to formalities required for patents, international classification of patents, and the Strasbourg Treaty on the Unification of certain points of substantive law on patents for inventions) and copyright (in particular requiring recognition of the rights of broadcasting organizations), and the protection of authors where their works are broadcast across frontiers.¹⁵⁵ The Council also makes certain recommendations to governments (for example on copyright law and reprography),¹⁵⁶ as well as being a forum for discussion.

The European Convention on Human Rights, a treaty signed in 1950 under the aegis of the Council of Europe, requires contracting parties to recognize certain rights such as fair trial (Article 6), privacy (Article 8), freedom of expression (Article 10) and property (Article 1 of the first Protocol). Alleged failures to comply with the Convention are justiciable before the European Court of Human Rights (Article 19). Until recently the impact of the Convention on British intellectual property law was limited to cases of breach of confidence and remedies. The Convention has also had little impact on domestic courts. However, with the coming into force of the Human Rights Act 1998 in October 2000, arguments based on the Convention have become more frequent and the jurisprudence of the Court more relevant.¹⁵⁷

¹⁵⁴ See p. 330 n. 29.

¹⁵⁵ e.g. the Convention on the Unification of Certain Points of Substantive Law on Patents for Inventions (1963) ETS No. 47 (the UK ratified the Convention which came into force in 1980); European Agreement on the Protection of Television Broadcasts (1960) ETS No. 34 and Protocol (1965) ETS No. 54, Additional Protocol (1974) ETS No. 81, and Additional Protocol (1985) ETS No. 113 (the UK ratified this Treaty in 1965); European Convention on Transfrontier Broadcasting (1989) ETS No. 132 (which the UK ratified in 1993) (defining, e.g. the act of broadcasting).

¹⁵⁶ Recommendation no. R(90)11 of the Committee of Ministers to Member States on Principles Relating to Copyright Law Questions in the Field of Reprography (adopted by the Committee of Ministers on 25 Apr. 1990 at the 438th meeting of the Ministers' Deputies).

¹⁵⁷ For arguments based on ECHR, Art. 6(2) (presumption of innocence), see the discussion of criminal liability for trade mark infringement in *R v. Johnstone* [2003] FSR (42) 748; for arguments based on ECHR, Art. 8 (privacy) see chs. 43–5; for arguments based on ECHR, Art. 10, see, e.g. *Levis v. Tesco* [2002] 3 CMLR 11; [2002] ETMR (95) 1153 (rejecting an argument for international exhaustion), *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368; [2002] RPC 235; *Confetti Records v. Warner Music UK* [2003] FMLR (35) 790 (para. 161) (rejecting argument that ECHR Art. 10 requires a narrow reading of moral rights).

PART I
COPYRIGHT

2

INTRODUCTION TO COPYRIGHT

1 INTRODUCTION

In British legal parlance, 'copyright' is the term used to describe the area of intellectual property law that regulates the creation and use that is made of a range of cultural goods such as books, songs, films, and computer programs.¹ The intangible property protected by copyright law is distinctive in that it arises automatically and usually for the benefit of the author.² Various rights are conferred on the owner of copyright, including the right to copy the work and the right to perform the work in public.³ ('Work' is the term used in British law to describe the various objects that are protected by copyright.) The rights vested in the owner are limited, notably in that they are not infringed when a person copies or performs a work that they have created themselves. The rights given to a copyright owner last for a considerable time: in many cases for seventy years after the death of the author of the work.⁴ The basic framework of British copyright law is largely to be found in the Copyright, Designs and Patents Act 1988,⁵ as amended, most significantly to implement European Community directives.

This chapter provides an outline of certain background matters that will make the following chapters easier to follow. We begin by looking at some of the concepts that we will encounter in the following chapters. We then turn to look at the history and functions of copyright law, as well as international and European influences on British copyright law.

2 'COPYRIGHT' AND 'DROIT D'AUTEUR'

Many factors shape the way we view British copyright law. To some, it may appear as an unnecessary restriction on their ability to express themselves. For others copyright law provides the means to protect investment and labour. More generally the image we have of British copyright law is shaped by the way we think it relates to other legal regimes. On the one hand, British copyright law is often seen as a gift that was bequeathed to colonial

¹ For an analysis of various other perspectives on copyright, see P. Goldstein, 'Copyright' (1990–1) 38 *Journal of the Copyright Society of the USA* 109.

³ See Ch. 6.

⁴ See Ch. 7.

⁵ Certain related rights, such as the 'publication right' and the 'database right', are found in statutory instruments.

countries. At the same time British copyright law (and its ‘unruly colonial children’) is seen to be distinct from the ‘copyright law’ that exists in other countries. Most famously, common law copyright is said to be distinct from and in many ways in opposition to the civil law *droit d’auteur* system (of France). While there is now a growing body of literature that questions the accuracy of these portrayals,⁶ nonetheless these caricatures have had and undoubtedly will continue to have an impact on the way the law develops.

The common law copyright model is said to be primarily concerned with encouraging the production of new works.⁷ This is reflected in copyright law’s emphasis on economic right, such as the right to reproduce copies. Another factor that is said to typify the copyright model is its relative indifference to authors. This is said to be reflected in the fact that British law presumes that an employer is the first owner of works made by an employee, the paucity of legal restrictions on alienability, and the limited and half-hearted recognition of moral rights.⁸ In contrast, the civil law *droit d’auteur* model is said to be more concerned with the natural rights of authors in their creations. This is reflected in the fact that the civil law model not only aims to secure the author’s economic interests, but also aims to protect works against uses which are prejudicial to an author’s spiritual interests (in particular through moral rights).

3 AUTHOR’S RIGHTS AND NEIGHBOURING RIGHTS

While British copyright law abandoned the formal distinction between different categories of works with the passage of the 1988 Act, nonetheless an informal distinction is still drawn between two general categories of subject matter. More especially a distinction is drawn between what are known as ‘authorial works’ and ‘entrepreneurial works’ (or ‘neighbouring rights’). This reflects the distinction drawn in many legal systems between ‘author’s rights’ and ‘neighbouring rights’. Author’s rights refer to works created by ‘authors’ such as books, plays, music, art, and films. In contrast, neighbouring rights (which are sometimes called ‘related rights’ or ‘*droits voisins*’) refers to ‘works’ created by ‘entrepreneurs’, such as sound recordings, broadcasts, cable programmes, and the typographical format of published editions. The rationale for differentiating between these two categories of subject matter lies in the facts that neighbouring (or entrepreneurial) rights are typically derivative, in the sense that they use or develop existing authorial works; that they are a product of technical and organizational skill rather than authorial skill; and that the rights are initially given not to the human creator, but to the body or person that was financially and organizationally responsible for the production of the material.⁹

Vaver, ‘The Copyright Mixture in a Mixed Legal System: Fit For Human Consumption?’ [2002] *Juridical Review* 101.

⁷ For a classic statement see A. Sterling, *World Copyright Law* (1999), para. 16.06.

⁸ See below at pp. 123–6, 272–9, and Ch. 10.

⁹ For a general discussion see W. Grosheide, ‘Paradigms in Copyright Law’ in Sherman and Strowel, 223 (identifying two extremes thus: ‘One is the view that traditional copyright law must be purified and updated; the other is the notion that copyright is an integral part of intellectual property law, and that a more liberal and unorthodox approach to copyright law should be adopted’).

4 HISTORY

The history of copyright is a complex, subtle, and rich subject. Depending on one's interest it is possible to highlight many different themes and trends. For example a history of copyright could look at the gradual expansion of the subject matter and the rights granted to owners, the role that copyright law plays in shaping the notion of authorship, or the impact that copyright has on particular cultural practices. Most histories of British copyright law tend to focus on the origins of copyright, which are usually traced back to the 1710 Statute of Anne, or occasionally to the practices developed in the sixteenth century to regulate the book trade.¹⁰ In this section we limit ourselves to a brief chronological account of some of the more important political and legal events that frame and shape the current law.

While aspects of copyright law have a long history, copyright law did not take on its modern meaning as a discrete area of law that grants rights in works of literature and art until at least the mid-nineteenth century.¹¹ Moreover, it was not until the passage of the 1911 Copyright Act that copyright law was rationalized and codified into the type of modern, abstract, and forward-looking statute that concerns us here. The 1911 Act was also important insofar as it abolished common law copyright in unpublished works and also repealed the plethora of subject-specific statutes that existed at the time. In their place the 1911 Act established a single code which conferred copyright protection on a number of works (whether published or not, and including many previously unprotectable works such as works of architecture, sound recordings, and films).¹² In most cases, protection lasted for fifty years after the death of the author of the work.¹³ At the same time, the 1911 Act abandoned all requirements concerning formalities (in particular the need for registration with the Stationers' Company). Infringement was also expanded to include translations and adaptation as well as reproductions 'in a material form'.¹⁴

Following a review by the Gregory Committee in 1952, the 1911 Copyright Act was replaced by the 1956 Copyright Act.¹⁵ This extended the scope of copyright to encompass sound and television broadcasts, as well as typographical formats of published editions. Along with sound recordings and films (which were now recognized as having copyright in their own right), these new rights were placed in a special category in Part II of the 1956

¹² Films were protected as 'photographs', without prejudice to copyright in the dramatic works embodied in films. Sound recordings were deemed to be musical works: CA 1911 s. 19.

¹³ Literary, dramatic, musical, and artistic works other than photographs, which received a term of fifty years from making.

¹⁴ CA 1911 s. 1(2).

¹⁵ Report of the Gregory Committee on the Law of Copyright (Cmnd. 8662, 1952).

Act.¹⁶ The 1956 Act was amended on a number of occasions, primarily to take account of new technologies such as cable television and computer software.¹⁷ A further periodic review by the Whitford Committee in 1977 proposed a general revision of the 1956 Act.¹⁸ After further negotiations and refinement, these proposals led to the passage of the Copyright, Designs and Patents Act 1988.¹⁹

The 1988 Act substantially reorganized the statutory regime. In particular, it removed the distinction between 'Part I works' and 'Part II subject matter'. This was achieved by treating films, sound recordings, and broadcasts (along with the authorial works) within a single general category of 'copyright works'. In many cases, these changes were not intended to alter the substantive law.²⁰ However, the rights given to copyright owners were expanded significantly (notably by the introduction of a distribution right and a rental right). At the same time, the Copyright Tribunal was established to ensure that copyright owners did not exercise their rights in an anti-competitive manner.²¹ The 1988 Act also introduced a new category of non-assignable 'moral rights' for authors.²² Performers' rights, which were formerly dealt with under special Acts, were also included within the 1988 Act (where they are protected separately under Part II.)²³ The 1988 Act also created a new automatic form of short-term protection for designs, known as the unregistered design right.²⁴

Although the 1988 Act forms the basis of contemporary copyright law, it has been amended on a number of occasions since it came into force in August 1989. In most cases, these amendments were made to give effect to obligations imposed by European Community directives. As we will see, while the Community has stopped short of a wholesale approximation of copyright law, a series of specific interventions has altered the contents of the 1988 Act to such an extent that a recodification of national law would be desirable. In particular, two new rights related to copyright, which are currently found in statutory instruments (namely the database right and the publication right) could usefully be incorporated into the statutory regime, as could the meaning of 'information society service provider' (for which one has to consult an EC Directive and its annex).

5 JUSTIFICATIONS

The existence of copyright in a particular work restricts the uses that can be made of the work. For example, a person who purchases a book in which copyright subsists cannot legally photocopy the book. Similarly a person who buys a protected CD cannot legally make a tape of that CD for a friend. As well as being inconvenient and/or expensive, copyright has the potential to inhibit the public's ability to communicate, to develop ideas,

¹⁶ CA 1956 ss. 12–16.

¹⁷ Cable and Broadcasting Act 1984 (adding cable programmes to protected subject matter); Copyright (Computer Software) Act 1985 (establishing copyright protection for computer programs). The Design Copyright Act 1968 sought to remedy certain problems in relation to copyright protection for designs.

²⁴ See Ch. 30.

and produce new works. For example, in order for a person to parody a song it will normally be necessary for them to reproduce a substantial proportion of the lyrics and the music from the song. In the United Kingdom, this would usually require the permission of the copyright owner, who in the circumstances may be reluctant to grant permission.

Because copyright law has the potential to inhibit the way people interact with and use cultural objects, it is important that we constantly reassess its legitimacy. More specifically, we need to ask whether (and why) copyright is desirable. In this context it is important to note that not everyone thinks that copyright is a good thing.²⁵ In fact, with the advent of the Internet, there are many who think that copyright unjustifiably stifles our ability to make the most of the new environment,²⁶ that it impinges upon the public domain.²⁷ Others consider that while some aspects of copyright are justifiable, others are not. Typically the argument is that copyright law has gone too far.²⁸ In response to these copyright sceptics or critics, three basic arguments are used to support the recognition (and further extension) of copyright: natural rights arguments, reward arguments, and incentive arguments.²⁹

5.1 NATURAL RIGHTS

According to natural rights theorists, the reason why copyright protection is granted is not because we think that the public will benefit from copyright. Rather, copyright protection is granted because it is right and proper to do so. More specifically, it is right to recognize a property right in intellectual productions *because* such productions emanate from the mind of an individual author. For example, a poem is seen as the product of a poet's mind, their intellectual effort and inspiration. As such it should be seen as their property, and copying as equivalent to theft. Copyright is the positive law's realization of this self-evident, ethical precept. However, at this point, natural rights theorists divide as to exactly what it is about origination that entitles an author to protection. Some, particularly those associated with the European traditions, explain that works should be protected because (and insofar as) they are the expressions of each particular author's personality.³⁰ On the assumption that a work created by an individual reflects the unique nature of them as an individual, the natural rights arguments require that we allow the creator to protect the

²⁵ For an early example see the minority report of Sir Louis Mallet, *Report of the Royal Commission on Copyright*, C 2036 (1878) 24 *PP*. More recent attacks have been associated with the Austrian school of free-market liberal economics, e.g. A. Plant, 'The Economics of Copyright' (1934) *Economica* 167.

²⁶ In fact, it is commonly argued that widespread illegal copying on the Internet can be explained by reference to the fact that the public is not persuaded by the rationales offered for copyright: J. Garon, 'Normative Copyright: A Conceptual Framework for Copyright Philosophy and Ethics' (2003) 88 *Cornell LR* 1278, 1283–5. However, other accounts of these practices are emerging: see L. Strahilevitz, 'Charismatic Code, Social Norms & the Emergence of Co-operation on the File-Swapping Networks' (2003) 89 *Virg. Law Rev* 505 (examining social psychology of peer-to-peer).

²⁷ For a general discussion of the public domain see (2003) 66 *Law and Contemporary Problems* (Special Edition on the Public Domain).

²⁸ S. Trosow, 'The Illusive Search for Justificatory Theories: Copyright, Commodification and Capital', (2003) 16 *Canadian Journal of Law and Jurisprudence* 217.

²⁹ For an overview, see M. Spence, 'Justifying Copyright' in D. McLean and K. Schubert, *Dear Images: Art, Culture and Copyright*, 388 (2002).

³⁰ For personality theory based on Hegel see J. Hughes, 'The Philosophy of Intellectual Property' (1988) 77 *Georgetown LJ* 287.

work (from misattribution, modification, or unauthorized exploitation) because it is an extension of the persona of its creator. In the words of an ancient aphorism, ‘to every cow its calf’. A second version of natural right theory, strongly represented in the US literature, has tended to found itself on labour. Drawing on Locke’s idea that a person has a natural right over the products of their labour, it is argued that an author has a natural right over the productions of their intellectual labour.³¹

Critics of natural rights theories of copyright take a number of different positions. Some simply reject the idea of ‘natural rights’. Others criticise the assumptions within the theory, for example that a natural right in labour justifies a natural right in the product of mixing labour and unowned resources. Some criticize the extension of natural rights theories to copyright, challenging the idea of individual creation of ideas, emphasizing the social (or ‘intertextual’) nature of writing and painting.³² If works are seen less as the products of individual labour or personality, and more as reworkings of previous ideas and texts, the claim to ownership seems weak. Another critique questions why it is that a natural right in the products of one’s labour should justify recognition of anything more than a right over the manuscript or immediate creation. A final argument criticizes natural right theory on the ground that it provides no normative guidance as to the specific form of copyright law.³³

5.2 REWARD

According to reward arguments, copyright protection is granted because we think it is fair to reward an author for the effort expended in creating a work and giving it to the public. Copyright is a legal expression of gratitude to an author for doing more than society expects or feels that they are obliged to do. In a sense, the grant of copyright is similar to the repayment of a debt. (Although the language of reward often appears when discussing ‘incentive’ theory of copyright, it differs from incentive theory: in reward theory proper the reward is an end in itself, in incentive theory the reward is a means to an end.)

Critiques of reward theory tend to pose two questions. First, they ask, do the circumstances in which copyright protection is granted correspond to the circumstances in which people deserve rewards? One answer is that a reward is only deserved where someone has done something they felt was unpleasant and they would not otherwise have done. If this is the case, copyright does seem to make far too many rewards. As we will see, copyright’s threshold is set at a very low level and thus catches works which are created for their own sake such as letters, holiday photographs, and amateur paintings. A second account sees

³¹ On Locke and labour, see J. Hughes, ‘The Philosophy of Intellectual Property’ (1988) 77 *Georgetown LJ* 287; A. Yen, ‘Restoring the Natural Law: Copyright as Labour and Possession’ (1990) 51 *Ohio St LJ* 517; W. Gordon, ‘A Property Right in Self-Expression: Equality and Individualism in the Natural Law of Intellectual Property’ (1993) 102 *Yale LJ* 1533.

³² S. Shiffren, ‘Lockean Arguments for Private Intellectual Property’, in S. Munzer (ed.), *New Essays in the Legal and Political Theory of Property* (2001) (disputing the idea that intellectual works are more susceptible to Lockean arguments than tangible objects); P. Drahos, *The Philosophy of Intellectual Property* (1996), ch. 3.

³³ J. Garon, ‘Normative Copyright: A Conceptual Framework for Copyright Philosophy and Ethics’ (2003) 88 *Cornell LR* 1278, 1299–1306.

the reward as being deserved where the person invested labour (irrespective of their ulterior motives or the pleasure or pain of labouring).³⁴

The second criticism questions the nature of the reward: why should a person be granted an exclusive right? There are other systems of reward (such as the Booker Prize) that have fewer social and economic costs. The usual answer is that copyright allows the general public to determine who should be rewarded and the size of that reward: the more copies of a book that are purchased, or the more a record is played on the radio, the greater the financial reward that accrues to the copyright owner.³⁵ Consequently, a property right is often the best way to ensure that the reward is proportional to the public's appreciation of the work.

5.3 INCENTIVE-BASED THEORIES

In contrast with the natural rights and reward theories, the third argument for copyright is not based on ideas of what is right or fair to an author or creator. Rather, it is based on an idea of what is good for society or the public in general. The incentive argument presupposes that the production and public dissemination of cultural objects such as books, music, art, and films is an important and valuable activity. It also presupposes that without copyright protection, the production and dissemination of cultural objects would not take place at an optimal level. The reason for this is that while works are often very costly to produce, once published they can be readily copied. For example, while this textbook took a considerable amount of time and energy to write, once published, it can be easily and cheaply reproduced. Consequently, in the absence of copyright protection, a competitor could reproduce Bently and Sherman's *Intellectual Property Law* without having to recoup the expense of its initial production. In so doing they could undercut Oxford University Press. According to the incentive argument, if Bently, Sherman, and Oxford University Press were not given any legal protection, *Intellectual Property Law* would never have been written or published—and the world would have been a commensurably poorer place. The legal protection given by copyright is intended to rectify this 'market failure' by providing incentives that encourage the production and dissemination of works. In short, copyright provides a legal means by which those who invest time and labour in producing cultural and informational goods can be confident that they will not only be able to recoup that investment, but also to reap a profit proportional to the popularity of their work.³⁶

Utilitarian arguments for copyright are commonly met with three criticisms. Some

³⁴ British copyright law has often employed a variant of reward theory. For example see *Designers Guild v. Williams* [2001] FSR 11, para. 2 (HL), Lord Bingham said that the 'law of copyright rests on a very clear principle: that anyone who by his or her own skill and labour creates an original work of whatever character shall, for a limited period, enjoy an exclusive right to copy that work. No one else may for a season reap what the copyright owner has sown'. See also *Walter v. Lane* [1900] AC 539, 545 per Earl of Halsbury LC (It would be a 'grievous injustice' if 'the law permitted one man to make profit and to appropriate to himself the labour, skill, and capital of another'), 551 (Lord Davey).

³⁵ Thus Bentham argued that 'An exclusive privilege is of all rewards the best proportioned, the most natural, and the least bothersome': *A Manual of Political Economy*, in J. Bowring (ed.), *The Works of Jeremy Bentham*, iii (1843) 31, 71.

³⁶ W. Landes and R. Posner, 'An Economic Analysis of Copyright Law' (1989) 18 *J. Leg Stud* 325; W. Gordon, 'An Inquiry into the Merits of Copyright: The Challenges of Consistency, Consent and Encouragement Theory' (1989) 41 *Stan LR* 1343.

question whether an incentive is really necessary for much production, and certainly there are plenty of examples of practices of creation and dissemination of works that do not depend on the existence of copyright.³⁷ Others, admitting the need for an artificial incentive to rectify the market failure, question whether the grant of an exclusive property is the appropriate incentive.³⁸ After all, exclusive properties impose costs on people who wish to use the work, costs of policing rights and enforcement on owners and transaction costs on those who seek permissions.³⁹ In some cases, in fact, exclusive rights are replaced by payments from general taxation (as with the Public Lending Right discussed in Chapter 13), thus ensuring that authors are provided with an incentive but that the costs associated with exclusive rights are minimized. Even if we accept that exclusive rights are the optimal form of incentive, because they bring about contractual transactions in which the parties value particular uses of works, the third problem with the utilitarian approach is deciding exactly what incentive is optimal. What should a copyright owner be able to prevent another person from doing and for how long?

5.4 THE PLACE OF JUSTIFICATIONS

There is a large body of literature criticizing, developing, and refining these three justifications. There is not room here to recount and assess this literature further. Nevertheless, it is worth noting a number of points about the ways these theories are marshalled in support of legal arguments relating to copyright. It is often said that a natural-rights-based justification for copyright inevitably produces a different conception of copyright from that which results from an incentive argument. More specifically, it is argued that a natural rights conception of copyright leads to longer and stronger protection for authors (and copyright owners) than an incentive-based conception. This is because a natural rights argument for copyright is assumed to result in a form of property that is perpetual and unqualified.⁴⁰ In contrast, an incentive-based argument only justifies the grant of the minimum level of protection necessary to induce the right-holder to create and release the work. While there is an element of truth in these arguments, they should not be overstated. The reason for this is that the copyright law that operates in the United Kingdom today is a product of a range of different factors, only a few of which could be said to have been influenced by the justificatory theories.⁴¹

³⁷ S. Breyer, 'The Uneasy Case for Copyright: A Study of Copyright in Books, Photocopies and Computer Programs' (1970) 84 *Harvard LR* 281 (emphasizing, in particular, the incentives provided by lead-time, and possible use of contractual methods such as subscription).

³⁸ R. Hurt and R. Schuchman, 'The Economic Rationale for Copyright' (1966) 56 *Am Econ Rev* 421 (suggesting private patronage and government support).

³⁹ See *Eldred v. Ashcroft* (2003) 123 *S Ct* 769, 804 ff (Breyer J. in the US Supreme Court explaining the costs imposed on the public from extension of the term of copyright). For an argument that copyright diminishes diversity, see G. Pessach, 'Copyright Law as a Silencing Restriction on Non-Infringing Materials: Unveiling the Scope of Copyright's Diversity Externalities' (2003) 76 *S Cal LR* 1067.

⁴⁰ See *Millar v. Taylor* (1769) 4 *Burr* 2303, 98 *ER* 201, 218–22 (Aston J), 252 (Mansfield CJ).

⁴¹ Most important is the prevailing understanding of the processes of 'authorship': where 'authorship' is understood in its 'romantic' sense as the outpouring of the soul, so that the resulting work is the unique product of its author, no doubt a natural right justification does lead to a maximalist conception of copyright. In contrast, where the processes of authorship are perceived as processes of a combination of existing texts, of bricolage, and collocation, a natural rights approach might only justify a short-term and a highly qualified 'property' in the resulting work.

Although the various theories have relatively distinct philosophical pedigrees, when they have been employed in support of various claims little if any attention is given to such niceties. Instead, the three arguments are typically deployed side by side. In fact, in most cases where a claim is made for the legal protection of works not previously protected (such as television formats) or the expansion of the rights conferred by the law in respect of such works, one can reasonably anticipate that the three types of justification will be used. While it is understandable that lobby groups use (or abuse) the various justifications to further their ends, more problems arise when people begin to believe the rhetoric and assume that copyright law is determined and shaped by these philosophical ideals.⁴²

6 INTERNATIONAL INFLUENCES

One of the constant themes in the history of British copyright law is that it has been influenced by foreign and international trends and developments. While the sources may have changed, contemporary law is no different.⁴³ There are a number of international treaties that impact upon British copyright law.⁴⁴ Here, we will limit ourselves to the five most significant treaties. These are the Berne Convention, the Rome Convention, TRIPS, the WIPO Copyright Treaty, and the WIPO Performances and Phonograms Treaty.

6.1 BERNE CONVENTION (1886–1971)

The most important international influence on the development of UK copyright has been the Berne Convention on the Protection of Literary and Artistic Works. The Berne Convention was drawn up in 1886 as a small treaty allowing for mutual recognition of rights amongst a few largely European countries. Since then, the treaty has been revised on a number of occasions,⁴⁵ and the membership expanded to 151 states.⁴⁶

In its earliest form, there were two key provisions of the Berne Convention. The first was the adoption of the principle of national treatment. This meant that with certain exceptions a country of the Union should not discriminate between its own nationals and those of other countries of the Union.⁴⁷ For example, under the principle of national treatment,

⁴² J. Litman, *Digital Copyright* (2001) 77 ('In the ongoing negotiations among industry representatives, normative arguments about the nature of copyright show up as rhetorical flourishes, but, typically, change nobody's mind'); G. Austin, 'Copyright's Modest Ontology—Theory and Pragmatism in *Eldred v. Ashcroft*' (2003) 16 *Can. JL & Juris* 163 ('the realities of intellectual property lawmaking are such that there are few instances where theory dictates the formulation and development of positive law').

⁴³ Under the powers conferred by the International Copyright Act 1844 (7 & 8 Vict. c. 12) Britain had begun to build bilateral arrangements with other countries for mutual recognition of copyrights.

⁴⁴ Also important are the Universal Copyright Conventions (last revised at Paris in 1971); the Geneva Convention on Phonograms of 1971; and the Convention Relating to the Distribution of Programme-Carrying Signals Transmitted by Satellite, Brussels, 21 May 1974.

⁴⁵ The last revision was at Paris on 24 Jul. 1971, and amended on 28 Sept. 1979.

⁴⁶ As of 15 Oct. 2003. The Convention applies to all works in which copyright has not expired at the time of accession to the Convention: Berne Art. 18.

⁴⁷ Berne Art. 5(1). These are to be enjoyed by authors who are nationals of one of the countries of the Union, for their works, whether published or not; and authors who are not nationals of one of the countries of the Union, for their works first published in one of those countries: Berne Art. 3. The exceptions to national treatment relate to (i) copyright terms which exceed the Berne minimum, Art. 7(8); (ii) copyright in applied art; and (iii) *droit de suite*, Art. 14 ter(2).

French law was obliged to confer the same rights on a British author as it conferred on French authors. In addition to the principle of national treatment, the Berne Convention has long required that the ‘enjoyment and exercise’ of copyright in the works of the Convention should not be ‘subject to any formality’. This means that registration or notices cannot be made prerequisites for protection.⁴⁸ Because international protection is to be automatic, there is no need for international bureaucratic regimes to simplify registration processes.

Over time the Berne Convention has come to demand that members of the Union provide certain minimum standards of protection to copyright owners and authors. These include the right to reproduce the work,⁴⁹ to perform the work publicly,⁵⁰ to translate the work,⁵¹ to adapt the work,⁵² and to broadcast the work.⁵³ Members of the Union are also to give authors (rather than copyright owners) the moral rights of attribution and integrity.⁵⁴ In recognition of the need for the public to be able to utilize works without payment, there is limited scope for members of the Union to create exceptions.⁵⁵ In relation to the reproduction right, these exceptions must satisfy the so-called three-step test. This requires that all exceptions must be limited to certain special cases, not conflict with a normal exploitation of the work, and not unreasonably prejudice the legitimate interests of the author.⁵⁶ Moreover, protection is to last at least for the life of the author, plus fifty years thereafter.⁵⁷

6.2 ROME CONVENTION (1961)

The coverage of the Berne Convention is limited to literary and artistic works, which include cinematographic works.⁵⁸ It does not include provisions for the protection of performers, producers of sound recordings, broadcasters, publishers, and many others. Despite several attempts to expand the coverage of the Berne Convention to include performers and sound recordings, these were resisted.⁵⁹ The various authors’ societies

⁴⁸ Berne Art. 5(2). For consideration as to whether the requirement of assertion of the right of attribution complies with this, see below at pp. 325–6.

⁴⁹ Berne Art. 9 (countries to recognize the exclusive right of authorizing the reproduction of works ‘in any manner or form’); Art. 9(3) specifically states that a sound or visual recording is to be considered a reproduction.

⁵⁰ Berne Art. 11 (for dramatic, dramatico-musical, and musical works); Art. 11 ter (public recitation and communication of literary works).

⁵¹ Berne Arts. 8 and 11(2) (translation); Art. 12 (adaptations, arrangements, and other alterations); Art. 11 ter (2) (communication of translations).

⁵² Berne Art. 12 (authorizing adaptations, arrangements, and other alterations of their works); Art. 14 (cinematographic adaptation).

⁵³ Berne Art. 11 bis.

⁵⁴ Berne Art. 6 bis. See Ch. 10.

⁵⁵ Minor exceptions are permitted in accordance with the understandings expressed at various conferences but these must be *de minimis*: see WTO Panel Report, WT/DS/IEOR June 2000. Compulsory licences are permitted under Art. 11 bis (2) and Art. 13 (mechanical copying).

⁵⁶ Berne Art. 9(2). Note also Art. 10(2) (use by way of illustration in publications for teaching); Art. 10 bis (use for reporting current events).

⁵⁷ Berne Art. 7. Certain exceptions are possible relating to cinematographic works, pseudonymous and anonymous works (where a 50-year minimum operates), and photographic works and works of applied art insofar as they are protected as artistic works (where a minimum of 25 years operates).

⁵⁸ Berne Art. 14 bis.

⁵⁹ e.g. at the Rome Revision in 1928. Opponents included France and Hungary: see Ricketson, paras. 15.40–54.

opposed the inclusion of such works within the Berne Convention on the grounds that they are non-creative and derivative in character,⁶⁰ and that recognition of performers' rights might reduce the royalties available for authors.⁶¹ Similar arguments were also used to oppose the introduction of sound recordings into Berne (though additional arguments were made that sound recordings are properly seen as industrial, not literary or artistic,⁶² and that there are difficulties in identifying an author of a sound recording).⁶³

Eventually, it became clear that international recognition of the rights of phonogram producers, performers, and broadcasters would need to be sought under a separate instrument. In 1961 an international agreement on these 'neighbouring rights' was reached at the Rome Convention⁶⁴ (which now has seventy-six signatories).⁶⁵ Like the Berne Convention, the central principle of the Rome Convention is national treatment: national treatment must be provided to performances that take place in a contracting state or which are embodied on protected sound recordings or carried by a protected broadcast; to sound recordings produced by national of a contracting state, fixed in a contracting state or first published in a contracting state; and to broadcasts where the broadcasting organization is situated in a contracting state or the broadcast is transmitted from a contracting state.⁶⁶

The Rome Convention also requires that phonogram producers, performers, and broadcasters be granted certain substantive rights. For performers these are relatively limited, being largely restricted to matters relating to 'bootlegging' (that is, the fixation of their unfixed performances without their consent), the broadcasting of their unfixed performances without their consent, and the duplication of any such recordings which have been made illicitly.⁶⁷ Notably, contracting states are not required to give performers rights to control the reproduction, distribution, or public communication of legitimately made recordings of their performances. (As a result there is no requirement, for example, that performers be paid when films are shown at a cinema.) The protection that is given is to last for twenty years from the first fixation of the performance, or if it has not been fixed twenty years from the date when the performance took place.

Producers of phonograms and broadcasting organizations received better treatment. Producers of phonograms are to be granted the right to prevent the reproduction of those recordings for twenty years.⁶⁸ Broadcasting organizations are to be given exclusive rights,

⁶⁰ So are translations, adaptations, and films, though these are protected under Berne.

⁶¹ On so-called 'cake theory' see Ricketson, paras. 15.52–3.

⁶² Ricketson, para. 6.76 (arguing that explanation for inclusion of photographs and films but exclusion of sound recordings and broadcasts from Berne is best explained by the historical fact that when claims to include the former were made the idea of separate neighbouring rights regimes had not developed).

⁶³ The making of a recording is typically a collective exercise and protection is sought by corporate authors. However, so is the making of a film. For a comparative account, see G. Boytha, 'The Intellectual Property Status of Sound Recording' (1993) 24 *IIC* 295. Note, in particular, that the USA did not give protection at a Federal level until 1971, with the Sound Recording Amendment Act of 15 Oct. 1971.

⁶⁴ International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations.

⁶⁵ As of 15 Oct. 2003. Though significantly not the USA, as a result of its refusal to give broadcasting organizations copyright.

⁶⁶ Rome Art. 4 (performers); Art. 5 (phonograms); Art. 6 (broadcasts). National treatment is defined in Rome Art. 2.

⁶⁷ Rome Art. 7. Note also Art. 19.

⁶⁸ Rome Art. 10. If formalities are required, they are complied with by using the 'P' symbol: Rome Art. 11.

for a minimum of twenty years from when a broadcast took place, to authorize or prohibit the rebroadcasting of their broadcasts, the fixation of their broadcasts, and the reproduction of fixations of their broadcasts. Broadcasters were also given the right to control the showing of television broadcasts in places accessible to the public (against payment of an entrance fee).⁶⁹

The three divergent interests that coexist in the Rome Convention gave rise to one further and important compromise. This was that contracting states are to confer a right to a *single* equitable remuneration when phonograms are broadcast or played in public.⁷⁰ This right to remuneration must be provided either to the performers whose performances are embodied on phonograms or on the producers of phonograms or both. This means that broadcasters, nightclubs, restaurants, etc. must pay a single fee to play sound recordings. It is left to the contracting states whether the beneficiary of the right is to be the performer or the phonogram producer, or both.

Contracting states are permitted to make these rights subject to defences as regards private use, news reporting, ephemeral recordings, and teaching and scientific research,⁷¹ as well as the same kind of limitations as are provided for literary and artistic works under the Berne Convention.⁷²

6.3 TRIPS

The third important international development that impacts upon British copyright law is TRIPS.⁷³ There are a number of provisions in TRIPS that relate to copyright. The most important of these is that members must implement Articles 1–21 of the Berne Convention (but not Article 6 bis dealing with moral rights).⁷⁴ One of the consequences of this is that disputes over compliance with Berne can now be considered by the WTO.⁷⁵ While the TRIPS Agreement does not require member states to adhere to the Rome Convention, Article 14 of TRIPS contains substantively similar provisions to Rome (though the term of protection in such cases is substantially longer under TRIPS).⁷⁶

In addition, the TRIPS Agreement contains certain ‘Berne-plus’ features, as regards various aspects of copyright. Some of these are responses to new technologies that have given rise to new sorts of works and new modes of distribution. For example, under TRIPS, protection must be given to computer programs as literary works within the Berne Convention,⁷⁷ and to compilations of data or other material which by reason of the

⁶⁹ Rome Art. 13; Art. 14, see Ricketson, paras. 15.41 ff.

⁷⁰ Rome Art. 12. This can be excluded under Art. 16.

⁷¹ Rome Art. 15(1).

⁷² Rome Art. 15(2).

⁷³ See above at pp. 7–9.

⁷⁴ TRIPS Art. 9(1).

⁷⁵ As has occurred in the WTO Dispute Panel Report on US limitations on the public performance right. WT/DS160/R (15 Jun. 2000). According to TRIPS Art. 14(6) the provisions on neighbouring rights in performances and phonograms apply to existing works: the WTO Dispute Resolution procedure was used to induce Japan to comply with this requirement: WT/DS22 and WT/DS 48.

⁷⁶ TRIPS Art. 14. The term of protection for performers and producers of phonograms is extended to 50 years from fixation of the performance or the date of the performance: Art. 14(5). As regard broadcasts, Art. 14(3) requires that broadcasting organizations are to have right to various rights (to prohibit the fixation, reproduction of fixations and re-broadcasting of broadcasts, and communication to the public of the same), but a derogation provides that ‘Where Members do not grant such rights to broadcasting organizations, they shall provide owners of copyright in the subject matter of broadcasts with the possibility of preventing the above acts, subject to the provisions of the Berne Convention (1971)’.

⁷⁷ TRIPS Art. 10(1); see also, WCT Art. 4.

selection or arrangement of their contents ‘constitute intellectual creations’.⁷⁸ Reflecting the impact of new modes of distribution, members must (in most cases) give copyright owners the right to authorize rental of computer programs, cinematographic works, and phonograms.⁷⁹ Other provisions flow from more general concerns as to the nature of copyright protection. In particular, copyright is defined generally as covering ‘expressions’ and *not* ideas or methods.⁸⁰ Moreover, TRIPS requires that *all* limitations and exceptions (rather than the right to reproduction as in Berne) must satisfy the three-step test.⁸¹

6.4 WIPO COPYRIGHT TREATY (1996)

In December 1996, two treaties were agreed at Geneva: the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty.⁸² In part, these grew out of the frustration at the inability to produce a revised version of the Berne Convention and subsequent attempts to produce a ‘Protocol’ to the Berne Convention (possibly incorporating the rights of record producers and performers within a single treaty). Both treaties are intended to supplement the existing Conventions to reflect, in particular, technological changes and changes in practice.⁸³

For the most part, the WIPO Copyright Treaty (WCT), which came into force in 2002,⁸⁴ repeats many of the extensions effected in the TRIPS Agreement,⁸⁵ though importantly the WCT places them back under the supervision of the WIPO. Some of these are extended. For example, contracting parties must provide copyright owners with the exclusive right of distribution of fixed copies that can be put into circulation as tangible objects.⁸⁶ In addition, contracting parties must provide copyright owners whose works are embodied in phonograms (not just those in computer programs or cinematographic works) with the exclusive right to authorize the commercial rentals of those fixed copies.⁸⁷

The WCT also embodies three provisions that reflect the so-called ‘digital agenda’. (In essence these are responses to concerns raised by copyright owners about new digital communication technologies.)⁸⁸ First, as part of the ‘communication right’, contracting parties must provide copyright owners with the exclusive rights to make their works available to the public in such a way that members may access the work from a place and at a time individually chosen by them.⁸⁹ (This is intended to cover, for example, the placing

⁷⁸ TRIPS Art. 10(2). ⁷⁹ TRIPS Art. 11, Art. 14(4).

⁸⁰ TRIPS Art. 9(2). ⁸¹ TRIPS Art. 13.

⁸² J. Reinbothe and S. von Lewinski, *The WIPO Treaties 1996* (2002); M. Ficsor, *Copyright and the Internet* (2002); D. Saunders and B. Sherman (eds.), *From Berne to Geneva* (1997).

⁸³ WCT Art. 1 defines the Treaty as a ‘special agreement’ within Art. 21 Berne.

⁸⁴ There were 51 signatories and as of 4 Nov. 2003 there were 43 ratifications.

⁸⁵ Art. 2 WCT is on a par with TRIPS Art. 9(2); Art. 4 WCT is on a par with TRIPS Art. 10(1); Art. 5 WCT is on a par with TRIPS Art. 10(2); Art. 10 WCT is on a par with TRIPS Art. 13; Art. 14 WCT is on a par with TRIPS Art. 41.

⁸⁶ WCT Art. 6; ‘Agreed Statement’ concerning Arts. 6 and 7.

⁸⁷ WCT Art. 7. Note the qualifications in Art. 7(2)–(3).

⁸⁸ The Preamble recognizes ‘the profound impact of the development and convergence of information and communication technologies on the creation and use of literary and artistic works’. Note the Agreed Statement concerning WCT Art. 1(4) which defines reproduction to include the storage of a work in digital form in an electronic medium.

⁸⁹ WCT Art. 8. Note also the ‘Agreed Statement’ annexed to the treaty stating that the mere provision of physical facilities for enabling or making a communication does not in itself amount to a communication.

of a work on a web site that can be accessed by the public.) Second, contracting parties must provide adequate legal protection against the circumvention of ‘effective technological measures’ used by authors to protect their rights.⁹⁰ Third, contracting parties must provide adequate remedies to those who tamper with ‘rights management information’, that is information used to facilitate the identification or exploitation of those works.⁹¹

6.5 WIPO PERFORMANCES AND PHONOGRAMS TREATY (1996)

Although the WIPO Performances and Phonograms Treaty (‘WPPT’) was intended to supplement the Rome Convention, it only contains provisions relating to rights of performers and phonogram producers, and *not* broadcasters.⁹² The WPPT upgrades the position of performers whose performances are embodied on phonograms. However, largely as a result of the resistance of the American film industry, it does little for actors. Under the WPPT, contracting parties must confer rights on all performers against bootlegging equivalent to those in the Rome Convention. This is upgraded from ‘the possibility of preventing’ to an exclusive right.⁹³ Performers in the music industry (whose performances have been ‘fixed in phonograms’) are to be given three extra rights. First, they are to be given rights to control various acts in relation to fixations of their performances, that is the reproduction, distribution, rental, and making available of copies of such fixations.⁹⁴ Second, where there is public performance or broadcasting of such fixations, contracting states are to ensure that performers receive a share in the remuneration that is paid.⁹⁵ Third, contracting states are to confer moral rights of attribution and integrity on the performers of ‘live aural performances or performances fixed in phonograms’.⁹⁶ The upshot of this is that while recording artists and musicians will get rights which are equivalent to those given to authors, actors, and other individuals whose performances are embodied in films/audiovisual works, will be confined to the right to prevent first fixation (etc.) without their consent.

The WPPT also extends the rights given to producers of phonograms. Contracting states are not only to confer on the producers of phonograms the right to control reproduction, but also the exclusive right to control the distribution, rental, and making available of copies of phonograms.⁹⁷ The WPPT also requires certain action for the benefit of *both* performers and phonogram producers. In particular, the WPPT replicates the three provisions of the WCT on the digital agenda, that is, the ‘making available’ right, the requirements relating to technological measures of protection, and the provisions on rights management information. The Treaty also provides that contracting states may only create exceptions and limitations to the rights of performers or phonogram producers if those limitations pass the three-step test.⁹⁸

⁹⁰ WCT Art. 11.

⁹¹ WCT Art. 12.

⁹² The WPPT entered into force on 20 May 2002 (Pursuant to Art. 29: 3 months after deposit by 30 states of their instruments of accession of ratification). There were 50 signatories and as of 15 Oct. 2003 there were 42 ratifications to the WPPT.

⁹³ WPPT Art. 6.

⁹⁴ WPPT Arts. 7–10.

⁹⁵ WPPT Art. 15.

⁹⁶ WPPT Art. 5.

⁹⁷ WPPT Arts. 11–14.

⁹⁸ WPPT Art. 16.

7 EUROPEAN INFLUENCES

In the last decade or so, European initiatives have had an important and growing impact on British copyright law.⁹⁹ This is because various European directives now prescribe in some detail when and in what manner member states must (and often may) recognize intellectual property rights in this field. As we saw in Chapter 1, the need for harmonizing legislation arose because, despite the efforts of the European Court of Justice (notably through the doctrine of exhaustion),¹⁰⁰ differences in national laws relating to copyright and related rights operate to produce barriers to trade within the internal market. Perhaps the clearest example of this was in the decision in *EMI Electrola GmbH v. Patricia Im-und Export*.¹⁰¹ This grew out of the fact that because of differences in the terms of copyright in sound recordings in Germany and Denmark,¹⁰² the sound recording rights in songs by Cliff Richard had expired in Denmark but not in Germany. Patricia attempted to import the records from Denmark (where the records were lawfully available) back into Germany. The European Court of Justice held that even though the copies were lawfully marketed in Denmark (because the copyright had expired there), the German right-holder was entitled to prevent the importation of the recordings into Germany where copyright continued to subsist. This was because as the copyright owner had not consented to the marketing of those copies in Germany, they had not exhausted their rights. The Court observed that 'in the present state of the Community, characterized by an absence of harmonization, it is for national legislatures to specify the conditions and rules for such protection'. Such restrictions are justified by Article 30 EC (formerly Article 36 of the Treaty) if the period of protection is inseparably linked to the existence of the exclusive rights.

By the time of the *Patricia* decision, the Commission had already decided that if the plan for an internal market free from barriers was to be made good, then certain aspects of copyright had to be harmonized. The first step in the harmonization programme was the publication of the Green Paper, *Copyright and the Challenge of Technology*.¹⁰³ This set out a basic plan to harmonize specific areas of copyright, particularly those relating to new technologies. Given that it was widely believed that national copyright traditions were very different, it was decided that the wholesale approximation of copyright law was impossible. In the light of comments on the Green Paper,¹⁰⁴ the Commission expanded its proposals in 1990.¹⁰⁵ The subsequent decade has seen the formulation and passage of a

⁹⁹ For an outline of earlier Community activities, see J. Pardo, 'Highlights of the Origins of European Union Law on Copyright' [2001] *EIPR* 238.

¹⁰⁰ *Deutsche Grammophon v. Metro*, Case C-78/80 [1971] *ECR* 487.

¹⁰¹ Case C-341/87 [1989] *ECR* 79. See also *Warner Bros v. Christiansen*, Case C-158/86 [1988] *ECR* 2605 (rental right).

¹⁰² Both countries granted terms of 25 years but from differing starting dates, Denmark favouring fixation and Germany publication.

¹⁰³ Interestingly, it had been the subject of discussion as early as 1980: S. von Lewinski, 'EC Proposal for Council Directive Harmonizing the Term of Protection of Copyright and Certain Related Rights' (1992) 23 *IIC* 785, n. 1.

¹⁰⁴ The Green Paper received a luke-warm reception. See A. Francon, 'Thoughts on the Green Paper' (1989) 139 *RIDA* 128; M. Moller, 'On the Subject of the Green Paper' (1989) 141 *RIDA* 22 (1989); G. Shricker, 'Harmonization of Copyright in the EEC' (1989) 20(4) *IIC* 466, 475.

¹⁰⁵ *Follow Up to the Green Paper*, 17 Jan. 1991 COM (90) 584 Final.

series of directives on software, cable and satellite broadcasting, rental and lending, and 'neighbouring rights', the duration of copyright, databases, the resale royalty right, and copyright in the 'information society'. While each of these directives concerned itself primarily with a specific aspect of copyright (that is a specific type of subject matter or a specific right), the Directive on copyright in the Information Society concerned a series of rights and exceptions applicable to virtually all copyright works. Consequently, this directive is widely regarded as heralding a shift from 'vertical' harmonization to 'horizontal' harmonization. While we look at these directives at appropriate points in the following chapters, it may be useful to outline their key features here. Before doing so, it may be helpful to highlight some of the themes that are beginning to develop in the European legislation, some of which have been interpreted as representing a step towards a coherent European copyright policy.¹⁰⁶

One notable trend is that the directives consistently distinguish between two categories of works: 'copyright' which means authorial works falling under the Berne Convention; and 'related rights' (specifically not 'neighbouring rights') which means various rights of performers, phonogram producers, the producers of the first fixations of films, and broadcasting organizations. The related rights given to producers of the first fixations of 'films' by various Directives are important in that they are not confined to audiovisual or cinematographic works, but also extend to other moving images (such as films of sporting events).

Another notable aspect of the directives concerns the way they manage the (supposed) differences between the different legal regimes (copyright and *droit d'auteur*). Given that the directives are largely the result of lobbying and horse-trading between interest groups and member states, it is not surprising that the end-results are a hybrid mix of concepts taken from both the *droit d'auteur* and copyright law.¹⁰⁷ For example, there is recognition of an unwaivable right to 'equitable remuneration' for the authors of works which are the subject of rental and lending. This corresponds to similar (though more general) provisions in French and German law guaranteeing author's proportionate remuneration.¹⁰⁸ On the other hand (much to the disappointment of some French commentators), computer programs are recognized as literary works.¹⁰⁹ In addition, where a computer program is made by an employee in the course of employment, the economic rights are given to the employer, rather than to the employee.¹¹⁰ In some ways, the form that the directives have adopted is a return, at least from the British perspective, to the openly hybrid nature of intellectual property statutes in the nineteenth century.

Another trend that is apparent is that while the need for harmonization arose because variations in the law of member states posed a potential barrier to trade, the Commission has tended to harmonize 'upwards'. That is, the EC has tended to strengthen the protection given to copyright owners. The most obvious example of this was the decision to increase the term of copyright to the term of life plus seventy years which existed in Germany, rather than ask that the German term be reduced to life plus fifty (which was the

¹⁰⁸ Rental Dir., Art. 4.

¹⁰⁹ Software Dir., Art. 1.

¹¹⁰ *Ibid.*, Art. 2(3).

term then used by many member states). While the strengthening of protection has sometimes been explained in terms of legislative convenience, it also suggests that it is at least an implicit agenda that aims to maximize copyright protection. This can be detected in Recital 10 to the Duration Directive which says that ‘these rights are fundamental to intellectual creation . . . their protection ensures the maintenance and development of creativity in the interests of authors, cultural industries, consumers and society as a whole’.¹¹¹ Another example of the strengthening of the position of rightholders has been the progressive restriction of the defences or exceptions that member states are able to use in their laws.¹¹² This is particularly noticeable in the Database Directive where the option of a ‘private use’ defence is excluded where the database is in an electronic form, and where use in scientific research is confined to uses for ‘non-commercial purposes’.

Another notable, and possibly growing trend, is that the directives adopted in the name of harmonization have only a very limited harmonizing effect. In fact, there are many situations where the directives tolerate a level of difference between the laws of member states. For example, in relation to subject matter, member states are expressly permitted to protect non-original photographs, and critical and scientific publications of works which have fallen into the public domain.¹¹³ Although there is a some degree of prescription, member states have flexibility as regards specifying who are the co-authors of cinematographic works.¹¹⁴ Member states are sometimes permitted to confer greater rights on rightholders than those specified in the directives,¹¹⁵ and occasionally (as with the lending right) to derogate from the standards set by the directives.¹¹⁶ There are also permissive clauses in relation to defences,¹¹⁷ presumed transfer of rights,¹¹⁸ and the kinds of collective licensing regimes required.¹¹⁹ The details of ‘transitional provisions’, are also largely left to member states.¹²⁰ Moreover, as the case law on transitional provisions in the Term Directive, and that on the concept of ‘equitable remuneration’ makes clear, the harmonizing directives often offer loose, open-textured concepts around which member states must formulate specific rules, within certain limited parameters.

Another notable trend that is apparent from the directives is that the Commission is developing a series of conceptual solutions that may ultimately form the basis for a harmonized law. The most obvious example of this is in relation to the notion of originality, which we discuss in Chapter 4. By harmonizing the originality requirement in an

identical manner for computer programs, photographs, and databases, the Commission has set upon a single European standard, namely that works should only be protected where they are their author's 'own intellectual creations'.¹²¹

With these general points in mind, we now outline the main features of the seven Directives.

7.1 COMPUTER PROGRAMS DIRECTIVE (1991)

The first European initiative in the copyright field was the Computer Programs Directive, which had to be implemented by 1 January 1993.¹²² The Computer Programs Directive addressed the question of whether computer programs should be protected by copyright, patents or a *sui generis* right. Fearing that the member states might have responded differently, the Commission sought a swift and unified response. After consulting with interested parties, it was decided that computer programs should be protected by copyright. This is reflected in the fact that the Directive requires member states to protect computer programs as literary works under the Berne Convention. To ensure that this operates as a matter of substance as well as form, the Directive also harmonized the criteria of protection. Prior to the Directive, there were wide divergences as to what member states required of computer programs before they could be regarded as original, with German law setting the level of originality at a particularly high level. Ultimately, the Directive requires member states to protect computer programs as long as they are original in the sense that they are their author's own intellectual creation.

The Computer Programs Directive also goes some way to harmonizing the protection member states must give to computer programs. More specifically, the Directive requires member states to confer certain rights on the owners of copyright in computer programs, including the right to control temporary reproduction, the running and storage of the program, the translation or adaptation, distribution or rental of programs;¹²³ as well as certain liabilities for 'secondary infringers'.¹²⁴ The Directive also requires member states to recognize certain exceptions to the exclusive rights. Negotiations over these exceptions caused intense and acrimonious lobbying in Brussels. Ultimately, the Directive requires member states to enact four exceptions. First, as regards acts done by a lawful acquirer of a program which are necessitated by use of the program for its intended purpose. Second, to allow the making of back-up copies. Third, to permit the studying and testing of the program. Fourth, and most controversially, to permit—in very limited circumstances—the decompilation of programs.¹²⁵

One final provision in the Computer Programs Directive of interest concerns the way it allocates the ownership of copyright. In the case of programs that are made by employees in the course of their employment, the Directive requires member states to allocate the copyright in such programs to the employer.¹²⁶

¹²⁶ Ibid., Art. 2(3). See Ch. 5.

7.2 RENTAL DIRECTIVE (1992)

The Rental Directive is in two parts, one part dealing with the specific issues of rental and lending, the other dealing with related rights.¹²⁷ The second part comes as close to the codification of copyright as any of the European Directives. Most of the provisions in the Directive had to be implemented by 1 July 1994.¹²⁸

Chapter 1 of the Directive was drafted in response to the increasing economic importance of home rental as a source of revenue for copyright owners. Some member states had decided to confer a rental right, and some had adopted provisions relating to the public lending of works. The Directive attempts to avoid the development of divergent approaches by harmonizing the law relating to rental and lending.¹²⁹ It requires member states to confer on authors (of works within the Berne Convention), performers, phonogram producers, and film producers the exclusive right to control the rental and lending of copies (or in the case of performers, fixations) of their works.¹³⁰ However, member states are given a number of options: sometimes in derogation from the exclusive rights. The most important of these is the option not to recognize an exclusive right to authorize 'public lending' if authors receive remuneration of some sort for such lending.¹³¹ Member states may also exempt certain establishments from the payment of remuneration for lending.¹³²

Chapter 1 of the Directive also includes some interesting provisions on the ownership of the rental right. The Directive recognized the need for creators to obtain an 'adequate income as a basis for further creative and artistic work'.¹³³ As a result, a fiercely debated provision requires member states to confer on authors and performers an 'unwaivable right to equitable remuneration' when copies of films or phonograms are rented.¹³⁴ In turn, it was decided that this required further definition of who is the author of a cinematographic or audiovisual work (a matter on which there are wide divergences under the laws of different countries).¹³⁵ The Directive requires that member states recognize that the 'principal director' is one of the authors of such a work.¹³⁶

Chapter 2 of the Rental Directive requires member states to confer various rights on performers, producers of phonograms, broadcasters, and cable distributors (in addition to the rental and lending rights conferred by Article 2). *Performers* are to be given the

¹²⁷ The Rental Directive emerged in part in response to the European Court of Justice's decision in *Warner Bros. v. Christiansen*, Case C-158/86 [1988] ECR 2605. For background see G. Reinbothe and S. von Lewinski, *The EC Directive on Rental and Lending Rights and on Piracy* (1993).

¹²⁸ Rental Directive, Art. 13. On implementation, see Commission, *Report from the Commission to the Council etc on the Public Lending Right* COM (2002) 502 final (12 Sept. 2002).

¹²⁹ In *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] ECR I-1953, 1978–80 (paras. 21–2), the ECJ held that the Directive was legitimate despite its impact on the freedom to pursue trade because it effected an objective of general interest pursued by the Community and did not constitute a disproportionate and intolerable interference impairing the very substance of freedom to pursue a trade.

¹³⁰ Rental Dir., Art. 2(1). Rental and lending are defined in Art. 1. Note also Recital 13. See Ch. 6.

¹³¹ Rental Dir., Art. 5(1). See below at pp. 139–40, 211, 316–17.

¹³² *Ibid.*, Art. 5(3). See below at pp. 211, 214.

¹³³ *Ibid.*, Recital 7. ¹³⁴ *Ibid.*, Art. 4. See below at pp. 278–9.

¹³⁵ In the original proposal this was left as a matter for member states. The provision originated in an amendment to the proposed Directive by the European Parliament Committee on Culture.

¹³⁶ Rental Dir., Art. 2(2). Reiterated in Duration Dir., Art. 2(1). See below at pp. 118–20.

exclusive right to authorize or prohibit the fixation,¹³⁷ broadcasting, or communication to the public of their unfixed performances.¹³⁸ They are also to be given the right to control the direct or indirect reproduction and distribution of fixations of their performances.¹³⁹ Performers are also granted the right to share in the remuneration paid for the right to broadcast or play in public phonograms embodying their performances.¹⁴⁰ In turn, *phonogram producers* are to be given the exclusive right to authorize or prohibit the direct or indirect reproduction, and the distribution of their phonograms.¹⁴¹ They are also given a right to share in remuneration paid for the right to broadcast or play in public phonograms embodying their performances.¹⁴² *Broadcasting organizations* are to be given the exclusive right to authorize or prohibit the fixation¹⁴³ of their unfixed broadcasts;¹⁴⁴ the direct or indirect reproduction and distribution of fixations of their broadcasts; or the rebroadcasting or communication to the public of their broadcasts.¹⁴⁵

Part 2 also requires member states to confer similar rights on the producers of first fixations of films. In the European schema, 'first fixations of films' is a category of related rights over and above the category of 'cinematographic and audiovisual works', which covers all fixations of moving images. A film of a football match, for example, would be a first fixation of a film, even though it might not be a cinematographic work. The producers of these fixations are to be granted the exclusive right to authorize or prohibit the reproduction and distribution of their films.¹⁴⁶

7.3 CABLE AND SATELLITE DIRECTIVE (1993)

The third European initiative, the Cable and Satellite Directive, was a response to technological developments. The Directive required member states (by 1 January 1995) to recognize that copyright and related rights include the right to authorize communication to the public by satellite.¹⁴⁷ The Directive does not harmonize these rights. Instead it requires member states 'to ensure that when programmes from other member states are retransmitted by cable in their territory the applicable copyright and related rights are observed'. The Directive indicates that the rights recognized must be full property rights and that statutory licensing schemes must be abolished by 31 December 1997. The Directive limits the ways in which the rights may be administered. The Directive requires that the right to grant or refuse authorization to a cable operator who wishes to retransmit a broadcast shall only be exercised through a collecting society.¹⁴⁸ This does not apply,

¹³⁷ Rental Dir., Art. 6(1). See below at pp. 294–5. The reproduction right was repealed and replaced by Info. Soc. Dir., Art. 2.

¹³⁸ Ibid., Art. 8(1).

¹³⁹ Ibid., Art. 7(1); Art. 9. The ECJ has declined to give guidance on what amounts to equitable/remuneration, leaving it to member states to determine, though seemingly reserving the right to say when member states get it wrong: *Stichting ter Exploitatie van Naburige Rechten (SENA) v. Nederlandse Omroep Stichting (NOS)*, Case C-245/00 (6 Feb. 2003) See below at pp. 295–6.

¹⁴⁰ Ibid., Art. 8(2). See below at pp. 295–6.

¹⁴¹ Ibid., Art. 7(1); Art. 9.

¹⁴² Ibid., Art. 8(2). See Ch. 6.

¹⁴³ Ibid., Art. 6(1).

¹⁴⁴ Ibid., Art. 8(1).

¹⁴⁵ Ibid., Art. 7(1); Art. 9(1); Art. 8(1). See Ch. 6.

¹⁴⁷ Satellite Directive, Arts. 2 and 4. (It also permits member states to require 'collective administration' of

some such rights, but only in the case of simulcasts of terrestrial broadcasts.)

¹⁴⁸ Satellite Dir., Art 9(2), Art 10. For British implementation see CDPA s. 144A. Note the criticism of the German implementation which requires cable operators to pay rightholders an equitable remuneration,

however, where the rights are owned by broadcasting organizations. The right of the broadcaster to prohibit retransmission of its own transmissions can be exercised independently.¹⁴⁹

The most notable feature of the Directive concerns the definition of the place where the communication takes place. Prior to the Directive, different jurisdictions responded differently to the question of whether a satellite broadcast takes place in the country where the broadcast originated, the country from which the signals are sent, the satellite itself, or the countries where the signal can be received (this is known as the ‘footprint’). Opting for the simplest solution, the Directive requires member states to treat a satellite broadcast as taking place where the signals are introduced. This is the simplest solution because permissions to broadcast the various works to be included in a satellite broadcast are only required from the copyright owners in the country of introduction.¹⁵⁰

7.4 DURATION DIRECTIVE (1993)

The Duration Directive was adopted in response to the *Patricia* decision, which made it clear that varying terms of protection posed a hurdle to the completion of the internal market.¹⁵¹ Prior to its adoption, most member states granted copyright protection for a period of fifty years after the author’s death. However, some countries granted a sixty-year *post mortem* term and Germany a seventy-year term. Preferring to harmonize upwards, the Duration Directive required member states, by 1 July 1995, to grant a term of protection for copyright works (including original photographs) lasting for the life of the author plus seventy years.¹⁵² In the case of cinematographic works, the duration is seventy years from the death of the principal director, author of the screenplay, author of the dialogue, and composer of music.¹⁵³ Terms of protection for related rights (including broadcasting organizations and film producers) are to be based on a fixed fifty-year term.¹⁵⁴ However, where the country of origin of the work is a third country, and the author is not a Community national, these terms of protection are to be restricted so that the terms expire in the EEA no later than their date of expiry in their country of origin.¹⁵⁵ The Directive also requires member states to grant a new right, called the ‘publication right’, where previously unpublished works in which copyright has expired are published for the first time.¹⁵⁶

thereby precluding the possibility of cable operators dealing with only broadcasting organizations, and broadcasting organizations dealing with the collecting society: COM (2002) 430 final (July 26, 2002) p. 5.

¹⁵⁶ Duration Dir., Art. 4. See below at pp. 159–60.

7.5 DATABASE DIRECTIVE (1996)

The Database Directive, which member states were obliged to implement by 1 January 1998, attempts to harmonize the laws of copyright in the field of databases.¹⁵⁷ It also requires member states to introduce a new *sui generis* right in non-original databases. This was seen to be necessary to sustain investment in the production and exploitation of electronic databases equally throughout the Community. While digital technologies had enhanced the potential of databases, differences in national laws (particularly as to originality) meant that databases were probably only protected by copyright in a few member states. This presented the possibility of distortions within the internal market. The Directive attempts to remedy this problem by requiring member states to ensure that their copyright laws protect *some* databases. It also requires that member states introduce new *sui generis* rights to protect other databases (no matter how mundane the arrangement of the material). In a sense, the two-tiered system recognizes that copyright only protects the selection or arrangement of materials, whereas the database right protects the collection and verification of the materials themselves.

The Directive requires member states to grant copyright to 'original databases'. A 'database' is defined rather vaguely as a collection of independent works, data or other materials arranged in a systematic or methodical way and individually accessible by electronic or other means.¹⁵⁸ A database is only original where 'by reason of the selection or arrangement of their contents' the database constitutes the author's own intellectual creation.¹⁵⁹

Member states are to give the owner of copyright in a database the exclusive right to reproduce the database, to translate it, to adapt, arrange or alter it, distribute it, and communicate it to the public.¹⁶⁰ Member states must provide a defence to the lawful user of a database who commits acts that are necessary to access the contents of the database and to use those contents normally.¹⁶¹ A limited list of optional defences is also prescribed.¹⁶²

The Directive also requires member states to introduce a new *sui generis* right (which is reviewed in Chapter 13). For the moment it is worth observing that the database right arises where the maker of a database has made a substantial investment in either the activities of obtaining, verifying or presenting the contents of the database. The maker of such a database is to be granted a right to prevent extraction or reutilization of the whole or substantial parts of the database. In certain circumstances, they also prevent the systematic extraction and/or reutilization of insubstantial parts.¹⁶³ Member states may subject the database right to certain limited defences and exceptions as regards private use of non-electronic databases, use for illustration of teaching and in non-commercial scientific research, public security, and administrative or judicial procedures.¹⁶⁴ This right is to last for fifteen years from completion of the database or its publication, and a new right can arise where there is a substantial new investment in an existing database.¹⁶⁵

¹⁶⁴ Database Dir., Art. 9.

7.6 ELECTRONIC COMMERCE DIRECTIVE (2000)

The EC Directive on Certain Legal Aspects of Electronic Commerce in the Internal Market aims to promote electronic commerce within the European Union, that is the provision of goods and services online. As such, it encompasses matters such as electronic contracts, unsolicited communications, and codes of conduct which are outside the scope of this text. However, a number of Articles impact upon intellectual property more directly, probably the most important of which concern the liability of service providers. As we will see, important questions arise as to whether people who provide the infrastructure and facilities for electronic communications become liable for the actions of those to whom their services are provided.¹⁶⁶ Articles 12–15 of the Directive differentiate between situations where services are mere conduits and where they are involved in caching and hosting. The E-Commerce Directive requires member states to provide that a mere conduit is not liable, except under a ‘prohibitory injunction’ for information transmitted on the network. Moreover, a provider shall not be liable for ‘caching’, that is the automatic, intermediate, and temporary storage of information, as long as it complies with a series of conditions. Finally, the Directive states that a provider shall not be liable for ‘hosting’, that is storage of information at the request of a recipient, provided the provider does not have actual knowledge that the activity is illegal and, as regards claims for damages, is not aware of facts or circumstances from which illegal activity is apparent; or upon obtaining such knowledge or awareness, acts expeditiously to remove or disable access to the information.

7.7 INFORMATION SOCIETY DIRECTIVE (2001)

By far the most significant of the Community initiatives dealing with copyright is the Information Society Directive: often referred to as the Copyright Directive.¹⁶⁷ This Directive has its origin in the Green Paper, *Copyright in the Information Society*¹⁶⁸ and the 1996 *Follow Up*.¹⁶⁹ According to one commentator, it was ‘one of the most intensively debated proposals in recent EU history’.¹⁷⁰ The Directive is intended to implement the two WIPO Treaties agreed in Geneva in 1996. However, the Directive goes much further in responding to the perceived changes brought about by digital technology to the environment in which copyright law operates. As Recital 5 says:

¹⁶⁶ See below at pp. 149–51.

See also M. Hart, ‘The Copyright in the Information Society Directive: An Overview’ [2002] *EIPR* 58 (‘the number of interests engaged in active lobbying on this proposal has been striking’); B. Hugenholtz, ‘Why the Copyright Directive is Unimportant and Possibly Invalid’ [2000] *EIPR* 499 (describing ‘the unprecedented lobbying, the bloodshed, the vilification, the media propaganda, and the constant hounding of EC and government officials’).

technological development has multiplied and diversified the vectors for creation, production and exploitation. While no new concepts for the protection of intellectual property are needed, the current law on copyright and related rights should be adapted and supplemented to respond adequately to economic realities such as new forms of exploitation.

As well as introducing a 'making available right' and controls over technological measures of protection and rights management information,¹⁷¹ the Directive harmonizes the reproduction and distribution rights, and attempts to limit the number and scope of the exceptions (or defences) that a national regime can operate.¹⁷² The Directive was adopted on 22 May 2001 and had to be implemented by 22 December 2002. The UK complied with that obligation on 31 October 2003.¹⁷³

7.8 RESALE RIGHTS DIRECTIVE

A number of European countries currently offer artists the right to participate in the resale value or profits from the resale of their works. This is known as the *droit de suite* or artist's resale royalty. In the 1990s, the Commission took the view that variations in national laws could affect the operation of the art market. To ensure that this did not happen, the Resale Rights Directive was introduced in 2001.¹⁷⁴ The Directive must be implemented by 2006. The UK, which has a substantial art market but no resale right, strongly resisted adoption of the Directive. While the UK was unable to prevent the Directive being adopted, it did succeed in diluting some of the provisions. The Directive is discussed further in Chapter 13.

8 THE FUTURE

Although the British copyright legislation has been amended on a number of occasions over the last ten years, further reforms are required in order to ensure that the UK complies with international and regional obligations. The first relates to the implementation of Article 5 of the WIPO Performers and Phonograms Treaty, which recognizes moral rights for performers. The process of reform was set in place when the Copyright Directorate of the Department of Trade and Industry embarked on a consultation process in 1999.¹⁷⁵ The second task is the implementation of the Resale Royalty Rights Directive. In addition, it is to be hoped, though not expected, that Parliamentary time will be made available for the passage of a Copyright Act which incorporates previous amendments (thereby removing doubts that have been raised about their validity), places the publication right and database right within the statutory schema, and codifies the law so that it is more comprehensible. In an era where members of the public are more directly involved with works protected by copyright, copyright owners are increasingly dependent of the

public's knowledge of, and compliance with, the law. Given this it is even more pressing that the problems with the existing law be remedied.

8.1 INTERNATIONAL CHANGES

At the international level, WIPO has embarked on a number of initiatives that involve or relate to copyright law. The first area of activity is in relation to audiovisual performances: a topic that was largely excluded from the 1996 Copyright Treaties because of opposition from US-based interests.¹⁷⁶ A diplomatic conference was held in Geneva in December 2000 with a view to adopting either a treaty or a protocol to the WPPT. While the parties were in agreement about nineteen of the twenty proposed paragraphs, they were unable to reach final agreement.¹⁷⁷ In particular, they were unable to reach agreement as to whether the rights acquired by producers should arise by operation of law or by agreement. This issue was discussed at an ad hoc Informal Meeting on the Protection of Audiovisual Performances in Geneva in November 2003. To date there have no formal proposals for a diplomatic conference. As such, it seems that it may be some time before we see any movement in this area.

The second area where WIPO is active is in relation to indigenous culture.¹⁷⁸ In reflection of the fact that many indigenous cultures do not draw a rigid line between art and science in the way that Western cultures often do, WIPO's activities extend beyond copyright to include patents, trade marks and other related rights. While many of the copyright related problems have been resolved, there are still a number of issues that need resolution. These include community moral rights, fixation, duration, and ways of protecting against the usurpation of indigenous style.

Another area where WIPO is active is in relation to databases. When WIPO began work on copyright reform in the 1990s, there were plans for three treaties (dealing, respectively, with changes to copyright, performances and phonograms, and databases). However, only two of the three treaties were passed: the third proposed treaty on databases was left on the table.¹⁷⁹ Given the criticisms of the EU Database Directive and that the United States has, despite concerted attempts, been unable to produce legislation in this field,¹⁸⁰ it is unlikely that anything comparable to the original draft would be acceptable. The most likely outcome is a treaty that requires contracting parties to protect databases from misappropriation, but leaves the means of protection to member states.

The fourth area of possible international reform is in relation to copyright protection for broadcasting organizations.¹⁸¹ It was agreed at a meeting in November 2003 that a

consolidated text of treaty proposals would be discussed at a meeting in June 2004. It is expected that the meeting will decide whether or not to schedule for a diplomatic conference. As with the other WIPO treaties, these initiatives were prompted by a desire to update international copyright standards to bring them into line with the 'information age'. More specifically, the proposed treaty will deal with the problem of piracy of broadcasts, particularly of digitized pre-broadcast signals. The proposed treaty will also deal with problems created by Internet streaming (which is now an important means for distributing content that is protected by copyright). Undoubtedly, it will also be used as an attempt to lever stronger and longer protection for copyright owners.

8.2 EUROPEAN INITIATIVES

While the European Commission has harmonized many areas of copyright law, there are still some possible candidates for future reform: these include the harmonization of moral rights, copyright contracts, and collective administration.¹⁸² While many of the copyright reforms initiated by the Commission have proved to be difficult, it is likely that these remaining topics will be particularly problematic.¹⁸³ In part, this is because these are areas where the differences between different member states are most marked. They are also areas of copyright law which are closely intertwined with other areas of national law such as contract law and labour law. As such, reform will invariably be caught up in broader debates. Early studies on moral rights and copyright contracts indicate that there is little support for harmonization of these matters on the Continent, because of fears that the laws would be made less author-protective.¹⁸⁴ There are a number of other piecemeal issues that may be addressed in the future. For example, while certain works have to be recognized under the existing Directives, the Commission has not yet looked at the way works are defined more generally (including issues such as TV formats) nor at fixation. In addition, there has been only partial harmonization of 'originality' and 'qualification' (in the context of the resale royalty right).

There are also murmurings amongst the more ambitious or federally inclined about the possible codification of European copyright law. In one version of events, this would consist of a Community Regulation that consolidates both the existing Directives and the jurisprudence of the ECJ into a single text. It would also fill in gaps and allow for enforcement through nominated Community copyright courts. The potential advantages of such a change are self-evident. A code would be simpler, insofar as it consists of a single law,

¹⁸² Info. Soc. Dir., Recital 17 ('It is necessary, especially in the light of the requirements arising out of the digital environment, to ensure that collecting societies achieve a higher level of rationalisation and transparency with regard to compliance with competition rules'); Resale Rights Directive, Recital 28 ('Member states should ensure that collecting societies operate in a transparent and efficient manner').

¹⁸³ See, e.g. M. Walter, 'Updating and Consolidation of the Acquis: The Future of European Copyright', Report of the Commission meeting Santiago de Compostela, June 2002 (proposing harmonization of moral rights, as well as general application of the unwaivable right to equitable remuneration); Stamatoudi, at 276 (advocating harmonization of moral rights, compulsory licensing, technological systems of protection, collecting societies); Kamina, at 57 (stating that 'there is plenty of room for further harmonization' and suggesting possible work on collecting societies or licensing bodies, enforcement, collective bargaining agreements and copyright contracts).

¹⁸⁴ A. Strowel, M. Salokannel, and E. Derclaye, *Moral Rights in the Context of the Exploitation of Works Through Digital Technology* (2000); B. Hugenholtz and L. Guibault, *Study in the Conditions Applicable to Contracts Relating to Intellectual Property in the EU* (2002) (suggesting harmonization would be 'premature').

rather than a series of national laws. If drafted correctly, it would remove inconsistencies between the existing Directives. Such a code would also be more user-friendly insofar as it enables rights to be enforced in a single action across Europe. Despite these attractions, it is unlikely that it will be introduced, at least in the near future. The first and most obvious reason for this is that there is no legal basis for full codification. As long as intervention is based on the need to avoid restrictions on the Internal Market, there are places where the Community legislature cannot reasonably go. Second, even in areas where intervention is justified, there are political difficulties that would need to be overcome. So far the tendency in European legislation has been to harmonize at a higher level, revealing a policy that favours owners over users. As yet, there is no coherent policy that takes account of the relationship between authors and owners, or authors and users: two of the other limbs of the copyright triangle.

3

SUBJECT MATTER

1 INTRODUCTION

This chapter examines the subject matter protected by copyright law. In contrast with some other jurisdictions where the subject matter protected by copyright is defined by statute in broad and open-ended terms,¹ the 1988 Act provides a detailed and exhaustive list of the types of creations protected by copyright law. In order for a creation to be protected by copyright it must fall within one of the following eight categories of works: (1) literary works, (2) dramatic works, (3) musical works, (4) artistic works, (5) films, (6) sound recordings, (7) broadcasts, (8) published editions (or typographical works).

Before looking at the categories of subject matter in more detail, it is necessary to make some preliminary points. The first is that as the 1988 Act provides an exhaustive list of the protected subject matter, there is little opportunity for the courts to recognize new forms of subject matter, other than through the creative interpretation of the existing categories. The closed nature of the categories, especially when combined with the fact that the UK has no law of unfair competition, has meant that at times copyright has been ‘stretched to give protection to creative talents and activities the protection of which was never in the contemplation . . . of those who from time to time have been responsible for the framing of the successive statutes’.² On other occasions, the fact that the list is exhaustive has led to the exclusion from UK copyright law of ‘works’ which would be protected in countries operating a non-exhaustive system. This was graphically illustrated in the case of *Creation Records*. Here, as preparation in the production of the cover for Oasis’s album ‘Be Here Now’, (see Fig. 3.1) Noel Gallagher arranged for a series of objects (a Rolls Royce, a motor bike, a clock) to be placed around a swimming pool. This collection of ‘artistically’ distributed objects was then photographed by the claimant, and the photograph used as the album cover. However, a photographer from the defendant newspaper was also present, and took a photograph of the scene. When the newspaper published this photograph, and offered to sell posters of the scene, the record company sought an interim injunction alleging infringement of its copyright. The claim based on copyright failed because the scene did not fall within the meaning of any of

the (then) nine (now eight) categories of protected works: in particular, it was not an artistic work, nor a dramatic work.³

A notable feature of the 1988 Act is that all of the subject matter that is protected by copyright are called 'works'. This is in contrast to the 1956 Copyright Act where a distinction was drawn between Part I 'works' (literary, dramatic, musical, or artistic works) and Part II 'subject matter' (sound recordings, films, broadcasts, and typographical arrangements). It is also in marked contrast to the position in civil law systems, such as in France, which distinguish between 'author's rights' (*or droit d'auteur*) and 'neighbouring rights' or entrepreneurial works (*droit voisins*). Author's rights typically cover literary, dramatic, musical, and artistic work, whereas neighbouring rights are afforded to sound recordings,

³ *Creation Records v. News Group* [1997] EMLR 444 (interim relief was, however, granted on the basis of breach of confidence. See below pp. 1020–1).

broadcasts, and performers.⁴ This distinction is also reflected in the International Conventions: with the 1886 Berne Convention protecting ‘author’s rights’ and the 1961 Rome Convention protecting ‘neighbouring rights’. Under EC law, ‘neighbouring rights’ are usually classed as ‘related rights’. While the 1988 Act may have jettisoned the distinction between works and subject matter other than works, it should not be assumed that all works are treated the same. Indeed, as will become apparent in the following chapters, the conditions under which rights are granted as well as the scope, nature, and duration of those rights differ, sometimes considerably, between different classes of works. It is also important to note that although British law may have abandoned the formal distinction between authorial works (literary, dramatic, musical, and artistic works) and entrepreneurial works (sound recordings, films, broadcasts, and typographical works),⁵ nonetheless copyright law treats these two broad categories differently. While there are problems with this distinction, notably now that films occupy a space somewhere in between the two categories, it provides a useful way of describing the subject matter of copyright.

It should also be noted that the legal categories do not necessarily correspond to the objects commonly associated with copyright law. Instead, individual tangible objects may embody a number of different copyright works. For example, a book or newspaper might contain a literary work, an artistic work, and a typographical arrangement;⁶ a song may consist of literary and musical works (the lyrics being a literary work); and a CD might contain a sound recording, a musical work, and a literary work. While the legal categories do not necessarily correspond to the objects protected by copyright, in most cases there have been few problems in matching a particular creative act to one of the protected categories. In some cases, however, the question has arisen as to whether it is possible for a particular creation to fall within two categories simultaneously. This question arose in *Electronic Technique v. Critchley*⁷ when Laddie J was called upon to consider whether a circuit diagram could simultaneously be a literary work and an artistic work. Laddie J said that although it might be possible in theory to say that a single piece of creative effort may ‘give rise to two or more copyrights in respect of the same creative effort’, nonetheless ‘there are compelling arguments that the author must be confined to one or the other of the possible categories’. However, other judges have taken a different view.⁸ While it is still unclear whether the same creative effort can simultaneously give rise to both a literary work and an artistic work, in *Norowzian v. Arks (No. 2)* the Court of Appeal accepted that the maker of a film may simultaneously produce two copyright works: a film copyright in the fixation and a dramatic work in the ‘cinematographic work’.⁹

With these general points in mind, we now turn to look at the eight types of works recognized by copyright law.

⁴ The division of subject matter into ‘authorial’ and ‘entrepreneurial’ works is based upon a belief that copyright for authors is the pure form and should not be conflated or equated with rights given in return for investment. See above, p. 30.

⁵ e.g. as to the requirement of originality (see Ch. 4) or the concept of reproduction (see pp. 133–7, 179).

⁷ [1997] FSR 401.

⁸ *Anacon Corporation v. Environmental Research Technology* [1994] FSR 659 (Jacob J suggesting that a circuit diagram is both a literary and artistic work). Surely a poem in a particular shape could be an artistic work as well as a literary work: *Sandman v. Panasonic UK Ltd* [1998] FSR 651.

⁹ [2000] EMLR 67. Criticized in Copinger (Supp), 9–10.

2 LITERARY WORKS

Literary works have been protected from unauthorized reproduction since at least 1710.¹⁰ Literary works are defined in section 3(1) to mean ‘any work, other than a dramatic or musical work, which is written, spoken or sung, and accordingly includes (a) a table or compilation (other than a database), (b) a computer program, (c) preparatory design material for a computer program, and (d) a database’.

It is important to note that literary works are not limited to works of literature, but include all works expressed in print or writing (other than dramatic or musical works).¹¹ It is also important to note that protection is not limited to words, but also includes things such as symbols and numerals. The scope of the subject matter protected as a literary work is enhanced by the fact that a work will be protected irrespective of the quality or style of the creation in question: copyright law does not pass judgment over the standard of the work. As a result, the types of things that will be protected as a literary work include novels by Salman Rushdie, poems by Ted Hughes, lyrics by Courtney Love, as well as advertising slogans, railway timetables, and examination papers.¹² The fact that literary works include works that are spoken means that spontaneous conversations, interviews, and the like may also be protected (although, as we shall see, copyright does not subsist in a spoken work unless it is recorded).

For the most part, there have been few problems in deciding what is meant by a literary work. Where problems have arisen, the courts have tended to rely on the test set out in *Hollinrake v. Truswell* where it was said that to qualify as a ‘book’ under the Literary Property Act 1842, the creation must afford ‘either information and instruction, or pleasure, in the form of literary enjoyment’.¹³ While this was not intended to provide a comprehensive or exhaustive definition,¹⁴ it provides useful guidance as to where the boundaries of the category are to be drawn.

Most of the cases where the meaning of literary work has arisen have been concerned with works that afford information or instruction. These cases have made it clear that for a work to provide information or instruction, it must be capable of conveying an intelligible meaning.¹⁵ In line with the principle that protection should not be dependent upon the quality of the work, the courts have been willing to accept a very low threshold when considering whether a work ‘conveys an intelligible meaning’. For example, in one case it was accepted that sequences of letters set out in grids published in a newspaper provided information as to whether a reader had won or lost a bingo game and, as such, were literary works¹⁶ (see Fig. 3.2). In order for a work to ‘convey an intelligible meaning’ it is not necessary that the work be understood by the general public; it is sufficient if the work

¹⁰ The Statute of Anne 1710 and the Literary Copyright Act 1842 used the term ‘book’. However, since 1911 the statutes have referred to literary works.

¹¹ *University of London Press v. University Tutorial Press* [1916] 2 Ch 601.

¹² *Ibid.*

¹³ (1894) 3 Ch 420. The Court of Appeal held that a cardboard sleeve chart (i.e. a representation of a sleeve designed for a lady’s arm with certain scales or measurements on it, intended for practical use in dressmaking) was not a ‘book’ within the 1842 Act. Under the CDPA such a work would almost certainly be treated as an artistic work.

is understood by a limited group with special knowledge. Thus a telegraphic code has been held to be a literary work, even though the words of the code were meaningless in themselves.¹⁷ It has also been held that ciphers, mathematical tables, systems of shorthand, and Braille catalogues convey meaning and as such qualify as literary works.¹⁸ One of the few situations where works have been held not to provide information or instruction is where the work is meaningless or gibberish.¹⁹ Another situation where a work fails to provide information is where it is an invented name. For example, it was held that the word *EXXON*, which had been created to act as a company name, conveyed no information and hence was not protected as a literary work. (Although, as we will see, there may have been other grounds for this decision.)²⁰

In contrast to informational works, there has been little discussion as to what is meant by works that 'provide pleasure in the form of literary enjoyment'. The need for a work to provide literary enjoyment and pleasure seems to suggest a qualitative test. If so, it would run counter to the widely accepted principle that the quality of the literary work is not to be taken into account when deciding whether a work should be protected.

With these general points in mind, we now turn to look in more detail at the types of

¹⁷ *D. P. Anderson v. Lieber Code Company* [1917] 2 KB 469.

thing that are protected as literary works. After looking at names and titles (which are not protected), we turn to look at tables and compilations, computer programs, preparatory material for computer programs, and databases.

2.1 NAMES, TRADE MARKS, AND TITLES

Despite the fact that names and titles are expressions in writing or print (and are often traded for substantial amounts of money), the UK (like most countries) refuses to protect them as literary works.²¹ Thus, invented words such as EXXON (which had been invented by Esso Petroleum as a trade name),²² titles of game shows such as ‘Opportunity Knocks’,²³ or song titles such as ‘The Man Who Broke the Bank at Monte Carlo’²⁴ have been held not to be protected by copyright as literary works.

Two different reasons are used to account for the exclusion of names or titles from copyright. Sometimes, it is said, though not without some criticism,²⁵ that these matters are not ‘literary works’ at all. This is because although names and titles are in writing, they do not afford ‘information, instruction or pleasure of a literary kind’. It was on this basis that the Court of Appeal held that EXXON was not a literary work.²⁶ In other cases, the tribunals focus on the fact that names and titles are not ‘original’. That is, the courts refuse protection because the title is not the result of a substantial amount of labour, skill, and judgment, or is itself not ‘substantial enough’. It was on this basis that ‘The Lawyer’s Diary’ and ‘The Man Who Broke the Bank at Monte Carlo’ were held to be unprotected.²⁷ This latter approach leaves room for the possibility that some creative titles may still qualify for copyright protection, particularly lengthy titles which are a product of substantial labour, skill, and judgment.²⁸

There are a number of policy reasons why names and titles may be excluded from protection as literary works by copyright law. Perhaps the main reason for not protecting

²¹ See R. Stone, ‘Copyright Protection for Titles, Character Names and Catch-phrases in the Film and Television Industry’ [1996] *Ent LR* 178. For related regimes see R. Stone, ‘Titles, Character Names and Catch-phrases in the Film and Television Industry: Protection under the Trade Marks Act 1994 and Alternative Registration Systems’ [1997] *Ent LR* 34.

²² *Exxon Corp. v. Exxon Insurance* [1982] *RPC* 69.

²³ *Green v. Broadcasting Corporation of New Zealand* [1989] *RPC* 469, 472, 475, 490 (CA of New Zealand).

²⁴ *Francis Day and Hunter v. 20th Century Fox* [1940] *AC* 112 (copyright in the song ‘The Man Who Broke the Bank at Monte Carlo’ was not infringed by the performance of a motion picture of the same title). See also *Dick v. Yates* [1881] *Ch* 6 (no copyright in ‘Splendid Misery’).

²⁵ For criticisms of this rationale see Dworkin and Taylor, 21–2; J. Cullabine, ‘Copyright in Short Phrases and Single Words’ [1992] *EIPR* 205, 208.

²⁶ *Exxon Corp. v. Exxon Insurance* [1982] *RPC* 69.

²⁷ *Rose v. Information Services* [1987] *FSR* 254 Hoffmann J (there was too slight a degree of skill and labour); *Francis Day and Hunter v. 20th Century Fox* [1940] *AC* 112 (not substantial enough). In *Sinanide v. La Maison Kosmeo* (1924) *LTR* 365 protection was refused to the advertising slogan ‘youthful appearances are social necessities, not luxuries’ by reference to the principle *de minimis non curat lex*. Cf. *Weldon v. Dicks* [1878] *Ch* 247 (‘Trial and Triumph’ protected—but almost certainly no longer good law: see, Copinger, para. 21–20, 970 n. 84).

²⁸ In *Francis Day and Hunter v. 20th Century Fox* [1940] *AC* 112, the Privy Council indicated that if a title was extensive and important enough it might be possible for a title to be protected. For cases of protection see *Lamb v. Evans* [1893] 1 *Ch* 218 (headings in trade directory protected) and *Shetland Times v. Dr Jonathan Wills* [1997] *FSR* 604 (arguable that newspaper headline of eight or so words (‘Bid to save centre after council funding cock up’) was protected because it was designedly put together for the purpose of imparting information).

names and titles relates to the general inconvenience that would arise if someone was able to control the way certain words and phrases were used. It would be inconvenient—indeed absurd—if business commentators and political activists could not refer (e.g. in broadcasts, newspapers or campaign literature) to the oil conglomerate by using the term EXXON without gaining prior permission. Another reason for refusing protection to names and titles as literary works under copyright law is that it is unnecessary to do so, given that they are adequately protected by passing off, trade mark law,²⁹ and artistic copyright.³⁰

2.2 TABLES AND COMPILATIONS (OTHER THAN DATABASES)

Section 3(1)(a) of the 1988 Act specifically states that literary work includes ‘tables or compilations (other than a database)’.³¹ As a part of the reforms made to accommodate the Database Directive, section 3 was amended as of 1 January 1998 to add the rider that tables and compilations no longer includes databases. At the same time, the definition of literary work was amended so as specifically to recognize databases as a separate type of literary work.³² The reason why databases were placed in a separate category was to enable the 1988 Act to impose a different requirement of originality on databases from that applied to tables and compilations.

Prior to these amendments, a wide range of subject matter had been protected as compilations. This included football pools coupons,³³ a leaflet conferring information about herbicides,³⁴ TV schedules,³⁵ directories listing the names and addresses of solicitors,³⁶ a compilation of computer programs,³⁷ a timetable index,³⁸ trade catalogues,³⁹ and street directories.⁴⁰ As we will see, a database is defined in very wide terms. As a result, it is possible that most if not all of the subject matter previously protected as compilations

²⁹ The corollary of this is while a person is usually free (as far as copyright is concerned) to appropriate names and short titles, care must be taken to ensure that the use of such a title cannot be seen as passing off or a trade mark infringement. The claimant in *Exxon* succeeded in their passing off claim: [1982] RPC 69, 75 (Graham J), but nevertheless appealed on the copyright issue.

³⁰ ‘*Karo Step*’ Trade Mark [1977] RPC 255 (a pictorial mark may be an artistic work); *Auvi Trade Mark* [1995] FSR 288 (High Court, Singapore); *Hutchinson Personal Communications Ltd v. Hook Advertising Ltd* [1996] FSR 549 (logo consisting of inverted ‘R’ with a dot assumed to be protected by copyright); *News Group v. Mirror Group* [1989] FSR 126 (masthead from *The Sun* newspaper).

³¹ Berne, Art. 2(5) (collections of literary or artistic works); TRIPS Art. 10(2); WCT Art. 5 (compilations of data or material).

³² CDPA s. 3(1)(d).

³³ *Ladbroke v. William Hill* [1964] 1 All ER 465, 471. Lord Evershed said that the coupon is ‘a compilation in the sense that it is made up by putting together in writing (that is, in print) a number of individual items or components’. See also *Football League v. Littlewoods* [1959] Ch 637 (fixture lists); *Greyhound Services v. Wilf Gilbert (Staffs) Ltd* [1994] FSR 723 (advance programme of greyhound races).

³⁴ *Elanco v. Mandops* [1980] RPC 213.

³⁵ *Independent Television Publications v. Time Out* [1984] FSR 64.

³⁶ *Waterlow Directories v. Reed Information* [1992] FSR 409; *Waterlow Publishers v. Rose* [1995] FSR 207 (suggesting such a work might be protected even though it has no identifiable author). See also *Kelly v. Morris* (1866) LR 1 Eq 697.

³⁷ *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275 (comprising 335 program files, 171 record layout files, and 46 screen layout files was held to be a compilation).

³⁸ *Blacklock v. Pearson* [1915] 2 Ch 376.

³⁹ *Purefoy v. Sykes Boxall* (1955) 72 RPC 89.

⁴⁰ *Kelly v. Morris* (1866) LR 1 Eq 697.

would now be protected as databases.⁴¹ If this is the case, it will leave little or no room for ‘tables and compilations’ in the future.

2.3 COMPUTER PROGRAMS

After considerable debate at both national and international level over whether computer programs should be regulated by copyright law, patent law or by a *sui generis* regime, it was decided in the 1980s that computer programs ought to be protected as literary works.⁴² This position is now well entrenched in European and international intellectual property law.⁴³ In line with these trends, the 1988 Act protects computer programs as literary works.⁴⁴ While the 1988 Act does not define what is meant by a computer program,⁴⁵ it is clear that it includes source code,⁴⁶ assembly code, and object code. It is also clear that computer program is not synonymous with software. On this basis it has been held that the definition of computer program includes instructions permanently wired into an integrated circuit (that is firmware).⁴⁷

2.4 PREPARATORY DESIGN MATERIAL FOR COMPUTER PROGRAMS

To bring British law into conformity with the EC Software Directive, preparatory design material for computer programs is now included within the general definition of literary works.⁴⁸ It has been suggested that this is an inappropriate way of implementing the Directive and that preparatory design material should be treated as part of a computer program.⁴⁹

⁴¹ It has been suggested that a collection of sentences put together to form a new sentence is a compilation but not a ‘database’ because the individual elements are not ‘individually accessible’: Stamatoudi, 77. For a systematic analysis, see E. Derclaye, ‘Do sections 3 and 3A of the CDPA violate the Database Directive? A Closer Look at the Definition of a Database in the UK and its Compatibility with European Law’ [2002] *EIPR* 466 (giving example of a shopping list as a collection which is not a database because it is not arranged systematically or methodically and a table of contents in a book as a collection where the individual elements are not ‘independent’. Derclaye also attempts to argue that by affording protection to such ‘near-databases’, UK law is incompatible with the Directive).

⁴² The judiciary were willing to accept that software was protected under the CA 1956: *Gates v. Swift* [1982] *RPC* 339–40; *Sega Enterprises v. Richards* [1983] *FSR* 73 (‘assembly code’ was a literary work); *Thrustcode v. WW Computing* [1983] *FSR* 502 (literary copyright is capable of subsisting in a computer program).

⁴³ Software Dir.; TRIPS Art. 10(1); WCT Art. 4.

⁴⁴ CDPA s. 3(1)(b). The Copyright (Computer Software) Act 1985 had declared only that computer programs were to be considered as literary works.

⁴⁵ WIPO model provisions on Protection of Computer Software (1978) defined computer program as a set of instructions expressed in words, codes, schemes or in any other form, which is capable, when incorporated in a machine-readable medium, of causing a computer—an electronic or similar device having information processing capacities—to perform or achieve a particular task or result. See also Green Paper, Copyright and the Challenge of Technology COM (88) 172 final, 170. A similarly vague definition has been adopted in the USA: see 17 USC s. 101. (A ‘computer program’ is a ‘set of statements or instructions to be used directly or indirectly in a computer in order to bring about a certain result.’)

⁴⁶ *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] *FSR* 275.

⁴⁷ Software Dir., Recital 7.

⁴⁸ For background see *ibid.* For implementation, see Copyright (Computer Programs) Regulations 1992 (SI 1992/3233), operative from 1 Jan. 1993.

⁴⁹ Software Reg., reg. 3. For commentary, see S. Chalton, ‘Implementation of the Software Directive in the UK’ [1993] *EIPR* 138, 140; A. Meijboom, in A. Meijboom and H. Jongen (eds.), *Software Protection in the EC* (1993), 8.

2.5 DATABASES

As we mentioned earlier, in order to comply with the Database Directive the definition of literary works was amended from 1 January 1998 to introduce ‘databases’ as a distinct class of literary works.⁵⁰ A database is defined very broadly as ‘a collection of independent works, data or other materials which (a) are arranged in a systematic or methodical way, and (b) are individually accessible by electronic or other means’. It seems that the definition is broad enough to cover most if not all of material previously protected as tables and compilations (though preparatory documents suggest that the definition may exclude collections of three-dimensional objects).⁵¹ Since the requirement of ‘systematic or methodical’ arrangement is generally thought only to exclude random arrangements,⁵² ultimately, the scope of the subject matter protected as databases will depend on how the concepts of ‘independent works’ and ‘individual accessibility’ are interpreted.⁵³ It has been suggested that elements are ‘independent’ if they are ‘complete on their own’, and that they are not ‘individually accessible’ if they ‘make sense and perform their intellectual and commercial function only when . . . in . . . sequence’.⁵⁴ Applying such a definition, the poems in a book of poems by the same poet are ‘independent’ and ‘individually accessible’ and thus constitute a database. It is more difficult to say whether the data on a map will be considered to be ‘independent’ or ‘individually accessible’.

A database does not include a computer program used in the making or operation of databases accessible by electronic means,⁵⁵ or presumably a compilation of programs. It should be noted that a computer program might itself be or include a compilation of information and hence be a database. In so far as a computer program incorporates parts that fall within the definition of a database, it seems that these components may be independently protected as databases (whether under copyright or the *sui generis* database right). For example, if program interfaces can be characterized as databases, they may be protected by either copyright or the *sui generis* database right. The fact that a computer program may be protected both as a literary work and by the database right may have a number of important consequences. As the defences available in relation to the database right are less extensive than those offered by copyright, the overlap may undermine the defences to copyright infringement specially tailored for computer programs. In particular, it is possible that the copyright defence that allows decompilation of programs for the purpose of ascertaining interface information may be rendered redundant.

One question that has arisen in this context is the extent to which a multimedia work as a whole (as distinct from the sound, pictures, text, and moving images of which it is made up)

⁵⁰ CDPA s. 3(1)(d).

⁵¹ Explanatory Memorandum, Com (93) 464 final_SYN 393, 41. In *Football Association Premier League Ltd v. Panini UK Ltd* [2004] FSR (1) 1 (paras. 25, 29) Chadwick and Mummery LJ suggested that an album for stickers of football players (the stickers being artistic works) was a compilation, but it is probably a database.

⁵² Stamatoudi, 93; Derclay, [2002] *EIPR* 466, 468–9.

⁵³ Davison, 72 (one part of definition which may provide a limitation on the breadth of the definition is requirement that materials be ‘independent’).

⁵⁴ Stamatoudi, 90, 102. See also Derclay [2002] *EIPR* 466, 469 (“‘independent’ means that an element makes sense by itself; its meaning does not depend on another element, another piece of information’); Davison, 72, suggesting that the element must have ‘a stand-alone function to play in terms of informing or entertaining people.’

⁵⁵ Database Dir., Art. 1(3). See also J. Reichman and P. Samuelson, ‘Intellectual Property Rights in Data?’ (1977) 50 *Vanderbilt LR* 51, 132.

can be protected as a database. While individual elements may be protected by copyright, the question has arisen as to whether all the elements combined together can be protected by copyright as a database.⁵⁶ While there are doubts about whether multimedia works could be protected as compilations (this was because it is unclear whether the protection afforded to compilations is confined to compilations of *information* or to compilations of *literary works*),⁵⁷ this problem does not arise in relation to databases. This is because databases are defined, seemingly without restriction to the type of material, as a collection of ‘works data or other materials’. While it may seem odd that a compilation of artistic works or sound recordings is protected as a literary work,⁵⁸ this conclusion now seems unavoidable. Nevertheless, it is at present unclear whether or when elements of a multimedia work can be regarded as ‘individually accessible’. It has been argued that this criterion requires that items can be lifted out of the multimedia work rather than merely be made to appear on the screen. If so, many multimedia works may not be protected as databases.⁵⁹

3 DRAMATIC WORKS

The next general category of works that are protected by copyright is that of dramatic works. The 1988 Act does not define what a dramatic work is, except to state that it includes a work of dance or mime.⁶⁰ However, it is relatively clear that dramatic work includes the scenario or script for films, plays (written for the theatre, cinema, television, or radio),⁶¹ and choreographic works.⁶²

For a creation to qualify as a ‘dramatic work’, it must be a ‘work of action’ that is ‘capable of being performed’.⁶³ While the courts have not yet fully explored what is meant by a ‘work of action’, it is clear that it does not include static objects, sets, scenery, or costumes⁶⁴ (though these might be protected as artistic works⁶⁵). It has been said that a

⁵⁶ See Stamatoudi, ch. 5.; S. Beutler, ‘The Protection of Multimedia Products through the European Community’s Directive on the Legal Protection of Databases’ [1997] *Ent LR* 317 treating the Directive as the main way of protecting multimedia works, and pointing out that the effectiveness of the Directive to protect multimedia works will be dependent upon its interpretation.

⁵⁷ See Stamatoudi, 75–8 (arguing that failure to do so would have meant non-compliance with Berne).

⁵⁸ See *Football Association Premier League Ltd v. Panini UK Ltd* [2004] *FSR* (1) 1 (para. 32) Mummery LJ (giving examples of compilations made up of artistic works); *Kalamazoo v. Compact Business Systems* (1985) 5 *IPR* 213. One effect could be that a compilation of sound recordings would achieve much longer protection under copyright as a database than a single sound recording.

⁵⁹ Stamatoudi, 98–102. ⁶⁰ CDPA s. 3(1).

⁶¹ *Green v. Broadcasting Corporation of New Zealand* [1989] *RPC* 469, 493.

⁶² The fixation of such a work can be in writing ‘or otherwise’ and may accordingly be, for instance, on film. Where a dramatic work is recorded on a film, the film must contain the whole of the dramatic work in an unmodified state: *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67 (dance recorded on film held unprotected because the film had been drastically edited, and so was no longer a recording of the dance).

⁶³ *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67, 73 (CA).

⁶⁴ *Creation Records v. News Group* [1997] *EMLR* 444 (finding no arguable case that a photo shoot is dramatic work, since scene was inherently static, having no movement, story, or action).

⁶⁵ See *Shelley Films v. Rex Features* [1994] *EMLR* 134 (seriously arguable that film set prepared for film ‘Mary Shelley’s Frankenstein’ was a work of artistic craftsmanship). Cf. *Creation Records v. News Group* [1997] *EMLR* 444 (no arguable cause of action that arranging objects for photo shoot for record sleeve was a work of artistic craftsmanship or collage because the composition was intrinsically ephemeral and its continued existence was to be in the form of a photographic image).

film will usually be a dramatic work where there is 'cinematographic work' on the film.⁶⁶ In some limited circumstances a work of action might include sports such as gymnastics or synchronized swimming.⁶⁷

The requirement that to be a dramatic work the subject matter must be 'capable of being performed' initially operated in a restrictive manner. In the *Hughie Green* case,⁶⁸ Green was the originator and producer of a talent show called 'Opportunity Knocks', a programme which followed a particular format: certain catchphrases were used, sponsors introduced contestants, and a 'clapometer' was used to measure audience reaction. Beyond this, the content of the show varied from show to show. The Broadcasting Corporation of New Zealand broadcast a television talent quest that was similar to 'Opportunity Knocks' in that the title and catchphrases were the same. It also used a clapometer, as well as the idea of using sponsors to introduce customers.⁶⁹ Green's action for copyright infringement against the Broadcasting Corporation of New Zealand failed, primarily because he was unable to show that the programme was a dramatic work. In part, this was because when looked at as a whole, the show lacked the specificity or detail for it to be performed. In particular, the Privy Council said that the scripts only provided a general idea or concept of a talent quest, which was not capable of being protected. The Privy Council also held that the features of the programme that were repeated in each show (namely the format or style of the show) were not dramatic works. The reason for this was that a dramatic work must have sufficient unity for it to be capable of being performed.⁷⁰ On the facts it was held that the particular features which were repeated from show to show (the format) were unrelated to each other except as accessories to be used in the presentation of some other dramatic performance.⁷¹

The failure of the Privy Council to protect television formats in the *Hughie Green* case prompted a number of (unsuccessful) attempts to have formats recognized by British law.⁷² The proponents of format rights appealed to the usual moral and economic

⁶⁶ *Norowzian v. Arks (No. 2)* [2000] EMLR 67. (In the view of Buxton LJ such a construction went some way towards ensuring compliance with Art. 14 bis of the Berne Convention which specifies that a cinematographic work must be protected 'as an original work' and that the owner of copyright therein 'shall enjoy the same rights as the author of an original work'. Nourse LJ said he reached his conclusion without reference to the Convention.) One problem with defining the scope of 'dramatic work' by reference to 'cinematographic works' is that the latter seems to refer merely to a technique of production: see Stamatoudi, 133.

⁶⁷ Although a film of a sporting event may be a work of action, it is probably not an 'original' dramatic work, being a mere recording of actions. Kamina argues that in order to be a dramatic work, an audiovisual work must convey a story and therefore concludes that documentaries could be protected but doubts whether newsreels or television productions of sports matches would be: Kamina, 72–4.

⁶⁸ *Green v. Broadcasting Corporation of New Zealand* [1989] RPC 469, 477 (scripts could not constitute dramatic works because they could not be acted or performed, which is the essence of drama) (CA of New Zealand); [1989] 2 All ER 1056 (Privy Council).

⁶⁹ *Green v. Broadcasting Corporation of New Zealand* [1989] RPC 469, 478, 480, 493.

⁷⁰ Cf. *Ladbroke v. William Hill* [1964] 1 All ER 465 where copyright was held to exist in pools coupons even though the matches changed each week.

⁷¹ *Green v. Broadcasting Corporation of New Zealand* [1989] RPC 469, 477; [1988] 2 NZLR 490, 497 (New Zealand Court of Appeal); cf. *Television New Zealand v. Newsmonitor Services* [1994] 2 NZLR 91 (High Court of Auckland) (TV news programme made up of unscripted and unchoreographed interviews and discussions was not a dramatic work).

⁷² See 'Programme Formats: A Further Consultative Document' [1996] Ent LR 216; R. McD. Bridge and S. Lane, 'Programme Formats: The Write-In Vote' [1996] Ent LR 212. After the consultation exercise in 1996 a decision was made to neither support nor introduce legislation to give specific copyright protection to television and radio programme formats. There seem to be no plans to reconsider the matter.

arguments to support their case. In particular it was argued that formats require creative input similar to that involved in existing copyright works. It was also argued that failure to protect formats is not only unjust, but also fails to provide sufficient incentives to television producers. Those opposed to format rights noted the problems of defining what a format is, the anti-competitive effects and the costs of such rights, as well as the potential for nuisance litigation.⁷³ The opponents of format rights favour leaving the developers of formats to the remedies offered by passing off,⁷⁴ and breach of confidence.⁷⁵

While formats are not protected to the extent that some would like, the need for *sui generis* format protection is less pressing as a result of the Court of Appeal decision of *Norowzian v. Arks*.⁷⁶ This is because in this case the Court of Appeal liberally interpreted the requirement that a dramatic work must be 'capable of being performed' to include performances by artificial means, such as the playing of a film.⁷⁷ Consequently a cartoon may be a dramatic work. In this decision, the Court of Appeal was called upon to decide whether a Guinness advertisement (which featured an actor dancing while a pint of Guinness was being poured) had infringed copyright in an earlier film *Joy* (which the advertisement copied). To answer this question it was necessary to determine whether *Joy* was a dramatic work.⁷⁸ One of the notable features of *Joy* was that it utilized a particular editing technique known as jump-cutting (this is done by cutting segments out of the film to produce a series of artificial effects). One of the consequences of this was that the finished film contained a series of movements that could not be performed by an actor.⁷⁹ At first instance it was held that as the (artificial) dance shown on the edited film could not be performed, the film did not embody a dramatic work. (If the film had shown all the movements of the actor it would have been protected.) However, on appeal it was held that the film itself was a dramatic work. The Court said that as it was possible for the film to be played, it was therefore 'capable of being performed'.

4 MUSICAL WORKS

The next category of works protected under the 1988 Act is that of 'musical works'. A musical work is defined to mean 'a work consisting of music exclusive of any words or action intended to be sung, spoken or performed with the music'.⁸⁰ Thus, the words and the music of songs and similar works are treated as the subject matter of distinct

⁷³ Mr Mellor, Standing Committee F, IV Hansard, 8 Mar. 1990, cols. 1293–4.

⁷⁴ The New Zealand Court of Appeal unanimously rejected the claim as to passing off because of lack of sufficient goodwill in New Zealand. *Green v. Broadcasting Corporation of New Zealand* [1989] RPC 469, 474, 480–1, 488–9. The British show had never been broadcast in New Zealand, and the goodwill relied on was that of former British residents living in New Zealand.

⁷⁵ Lord Sanderson of Bowden, Hansard (HL), 26 July 1990, cols. 1718–19.

⁷⁶ *Norowzian v. Arks* (No. 2) [2000] EMLR 67, 73.

⁷⁷ *Ibid.*

⁷⁸ Note that the argument on appeal was not that there was copyright in the dance as a dramatic work (recorded on film), but that the film was not merely a 'record' of a dramatic work but was itself a dramatic work: *ibid.*

⁷⁹ That is, the finished film owed as much to the editing technique as to the dance that was filmed.

⁸⁰ CDPA s. 3(1). Sheet music was held to be covered by the term 'book' in the Statute of Anne: see *Bach v. Longman* (1777) 2 Cowp 623, but that merely conferred a right to print and reprint the music. See R. Rabin and S. Zohn, 'Arne, Handel, Walsh, and Music as Intellectual Property: Two Eighteenth-Century Lawsuits' (Apr. 1995) 120 *Journal of the Royal Musical Association* 112.

copyrights. A song therefore consists of both a musical work and a literary work: the tune and lyrics respectively.

There has been very little discussion in the UK as to what is meant by ‘music’, though it is normally understood to include melody, harmony, and rhythm.⁸¹ Consequently the contribution made by a drummer in a rock band to a song was recognized as part of the musical work.⁸² How the courts would react to more *avant garde* work, such as ‘silences’ is more difficult to predict. According to a newspaper report it was recently claimed that the group, *The Planets*, had infringed copyright in a work by John Cage, entitled ‘4 minutes 33 seconds’, a work of silence. Apparently, the basis for the claim was that *The Planets* included sixty seconds of silence on its recording, and a member of the group claimed that this was an improvement on Cage’s effort—because they had achieved in sixty seconds what he accomplished in 273! The case was settled, with Cage apparently being paid a five-figure sum.⁸³

5 ARTISTIC WORKS

The fourth category of works protected by copyright is artistic works.⁸⁴ The first artistic works protected by statute were ‘engravings’ (1735). These were followed by calico designs (1787), sculptures (1798 and 1814), drawings, paintings, and photographs (1862), and works of artistic craftsmanship (1911).⁸⁵ The various artistic works are now collected together in section 4(1) of the 1988 Act which contains a detailed list of the types of subject matter that are protectable as artistic works. These are divided into the following three categories:⁸⁶

- (a) irrespective of artistic quality, a graphic work (including painting, drawing, diagram, map, chart or plan, engraving, etching, lithograph, woodcut, or similar work), a photograph (excluding a film), a sculpture, or a collage;
- (b) a work of architecture, being a building or fixed structure or a model therefore; or
- (c) a work of artistic craftsmanship.

⁸¹ Some countries have defined music. For example, Canadian law formerly defined music as any combination of melody and harmony or either of them, printed or reduced to writing or otherwise graphically reproduced. This definition was described as ‘unnecessarily limiting’ in that it excluded elements such as rhythm and timbre from protection. In particular, such limited definitions may have negative effects for the protection of traditional music. See J. Collins, ‘The Problem of Oral Copyright: The Case of Ghana’ in S. Frith (ed.), *Music and Copyright* (1993), 149 (arguing that rhythm is an equal component with lyrics and melody in African music).

⁸² *Stuart v. Barrett* [1994] EMLR 448 (this rendered him a co-author).

⁸³ *The Independent*, 22 June 2002.

⁸⁴ See S. Stokes, *Art and Copyright* (2001); A. Barron, ‘Copyright, Art and Objecthood’, 277 in D. McLean and K. Schubert (eds.), *Dear Images: Art, Copyright and Culture*, 331–51 (2002) (describing affinities between judicial approaches to defining art in technical materialist terms and those of modernist commentators, observing that this leads to a law which includes items which have no creativity and exclude ones which do, so that ‘copyright law’s conception of the artistic work now faces a crisis of credibility’).

⁸⁵ The 1735 Act was amended by Acts in 1766 (7 Geo. 3 c. 38) and 1776 (17 Geo. 3 c. 57). The Sculpture Copyright Act of 1798 was amended and expanded in 1814 (54 Geo. 3 c. 56); Fine Art Copyright Act 1862 (25 & 26 Vict. c. 68). On the latter, see L. Bently, ‘Art and the Making of Modern Copyright Law’, in D. McLean and K. Schubert (eds.), *Dear Images: Art, Copyright and Culture*, 331–51 (2002).

⁸⁶ CDPA s. 4(1).

5.1 GRAPHIC WORKS, PHOTOGRAPHS, SCULPTURES, AND COLLAGES

The first subcategory of artistic works, which is set out in section 4(1)(a), includes graphic works, photographs, sculptures, and collages. It is important to note that the material contained in section 4(1)(a) is protected irrespective of artistic quality. This ensures that once a creation falls within a particular category of works, copyright protection is not contingent on the work reaching a certain aesthetic standard. As a result, the task of having to decide what is good or bad art and all the associated problems are thus avoided. More controversially, the decision that copyright law should not concern itself with the artistic quality of these types of works has been used to expand the *types* of subject matter (as distinct from the *quality* of subject matter) protected as artistic works. While few would have problems with Marcel Duchamp's Readymades (for example, his famous urinal) being protected as an artistic work, more problems arise when objects exclusively used for industrial purposes to achieve commercial ends are protected as artistic works. For a period of time, a fear of making aesthetic judgments (when combined with a degree of formalism) led the courts to provide such protection. In recent years, however, the courts have been more willing to use a general sense of what is meant by art to limit the scope of protectable works.

5.1.1 Paintings

Graphic works are specifically defined in section 4(1)(a) to include 'paintings'. For the most part, there have been few problems in determining whether something is a 'painting' and thus whether it qualifies as an artistic work. One of the few situations where this was not the case was in *Merchandising v. Harpbond*,⁸⁷ where it was argued that the facial make-up of the pop star Adam Ant was a painting and thus protected by copyright. The Court of Appeal rejected this submission, Lawton LJ remarking that it was fantastic to suggest that make-up on anyone's face could possibly be a painting. He held that a painting required a surface and that Adam Ant's face did not qualify as such, noting that '[a] painting is not an *idea*: it is an object; and paint without a surface is not a painting' (see Fig. 3.3).⁸⁸

The reasoning of Lawton LJ seems odd, for it is difficult to see why Adam Ant's face is less of a surface than a piece of canvas. The decision could however be justified on the ground that a painting must be intended to be permanent. If so a tattoo would be protected, but dramatic or cosmetic make-up would not.⁸⁹ Equally, since the make-up in question consisted of two broad red lines with a light-blue line running from nose to jaw, it is arguable that the work did not satisfy the criteria of originality.⁹⁰ Alternatively, the decision could be seen as a case of merger of idea and expression (where no protection is granted).⁹¹ At the end of the day, however, it seems that the reason why Adam Ant failed was because the traditional image of a painting as a framed canvas to be hung on a wall prevailed.

⁸⁷ [1983] FSR 32.

⁸⁸ [1983] FSR 32, 46.

⁸⁹ *Davis v. Wright Health Group* [1988] RPC 403 may lend support to such a view. Cf. *Metix v. Maughan* [1997] FSR 718, 721.

⁹⁰ Laddie *et al.*, paras. 4.20 and 4.37, favours the rationalization based on originality.

⁹¹ Cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

Fig. 3.3 The defendant's poster in *Merchandising Corp v. Harpbond* (created by Mr. Langford)

5.1.2 Drawings

The next type of subject protected as an artistic work under section 4(1)(a) is drawings. In addition to sketches of people and landscapes that we expect to be classified as drawings, protection has been granted to the drawing of a hand on a how to vote card,⁹² typeface design,⁹³ architects' plans (as distinct from actual buildings), and sketches for dress designs.⁹⁴ Because protection is granted 'irrespective of artistic quality', copyright in drawings has been widely used to protect industrial designs.⁹⁵ Thus drawings of exhaust pipes,

⁹² *Kenrick v. Lawrence* (1890) 25 QBD 99.

⁹³ *Stephenson Blake & Co. v. Grant, Legros & Co.* (1916) 33 RPC 406.

⁹⁴ *Bernstein v. Murray* [1981] RPC 303.

⁹⁵ D. Booton, 'Framing Pictures: Defining Art in UK Copyright Law' [2003] *IPQ* 38 (criticizing the 'technical' approach of the courts to defining drawings, which focuses on how the artefact was made and arguing that a distinguishing characteristic of literary works is that they are capable of being notated in a form which defines all the constitutive properties of such works, so that circuit diagrams, architects' plans, and engineering drawings are not artistic but literary).

boxes for storing kiwi fruit, and the like have been protected.⁹⁶ Importantly, such protection has frequently prevented the copying of the (three-dimensional) designed artefact itself. As we will see later, section 51 of the 1988 Act has reduced the significance of copyright in drawings for three-dimensional designs, other than for designs for artistic works.⁹⁷

5.1.3 Engravings

Engravings were first protected by copyright in 1735. For the most part, the way the law has developed since then has provided few surprises: protection being granted to etchings, aquatints, woodcuts, lithographs, and the like. In the last twenty or so years, however, a range of somewhat surprising objects have been protected as engravings.⁹⁸ For example, in *Wham-O v. Lincoln Industries* the New Zealand Court of Appeal held that both the mould from which a frisbee was pressed and the frisbee itself were protected, because the mould was made by cutting onto a surface and so was any engraving and the frisbee itself was a print from the engraving.⁹⁹ Despite subsequent doubts being expressed by the Australian Federal Court¹⁰⁰ about the reasoning in *Wham-O*, it was recently followed in *Hi-Tech Autoparts v. Towergate Two Ltd.*¹⁰¹ In that case Judge Christopher Floyd QC held that copies of the claimant's rubber floor mats for cars could not be sold by the defendant on the grounds that the moulds used in the production of the mats and the mats themselves, were engravings. The moulds had been made by cutting a series of concentric circles, to a depth of 1/16th inch and the bevel angle of 45 degrees, into flat plates. In so holding, the Judge placed particular emphasis on the fact that the statute requires engravings to be protected 'irrespective of their artistic quality'. Floyd J also rejected the defendant's argument that the plates were models for the purposes of sculpture rather than engravings, stating that he did not think it was possible to limit the skill and labour of the engraver to that only concerned with the flat surface, excluding work on the interior.

5.1.4 Photographs

Although photographs were protected by copyright shortly after photography was invented in the 1840s,¹⁰² copyright law has never been completely comfortable with

⁹⁶ *British Leyland v. Armstrong* [1986] RPC 279; *Plix Products v. Frank Winstone* [1986] FSR 92 (NZ).

⁹⁷ See below at pp. 662–6.

⁹⁸ In *James Arnold v. Miafern* [1980] RPC 397, it was held that the term engraving not only covered the articles made from a block but also the block itself. See also *Martin v. Polyplas* [1969] NZLR 1046 (coin is an engraving).

⁹⁹ [1985] RPC 127.

¹⁰⁰ *Greenfield Products v. Rover-Scott Bonnar* (1990) 17 IPR 417; (1991) 95 ALR 275 (Fed. Ct. Australia). Pincus J declined to hold that the drive mechanism of a lawnmower was an engraving. As Pincus J stated that 'engraving' does not cover shaping a piece of metal or wood on a lathe, but has to do with marking, cutting or working the surface—typically the flat surface—of an object. In *Talk of the Town v. Hagstrom* (1991) 19 IPR 649, 655, Pincus J qualified the suggestion that an engraving must be on a two-dimensional surface.

¹⁰¹ *Hi-Tech Autoparts Ltd v. Towergate Two Ltd* [2002] FSR 254 (treating plates for the production of rubber mats as engravings); *Hi-Tech Autoparts Ltd v. Towergate Two Ltd (No. 2)* [2002] FSR 270 (treating rubber mats stamped from plates as engravings).

¹⁰² 1862 Fine Art Copyright Act. See Ricketson, paras. 6.33–43 (protected under Berne since 1886, enumerated since 1948). In contrast, Edelman has described how French law was caught out by the emergence of photography in the mid-nineteenth century: B. Edelman, *Ownership of the Image* (1979); J. Gaines, *Contested Culture: The Image, the Voice and the Law* (1992), ch. 2.

photographs,¹⁰³ primarily because they seem to be ill-suited to the paradigm of the ‘original’ and the ‘copy’.¹⁰⁴ Photographs are defined in the 1988 Act as ‘a recording of light or other radiation on any medium on which an image is produced or from which an image may by any means be produced, and which is not part of a film’.¹⁰⁵ The definition is broad enough to include digital photographs (where there is no film). Individual frames from a film are not treated as photographs.¹⁰⁶

5.1.5 Sculpture

Sculptures were one of the earliest kinds of artistic works to be protected from reproduction. The recognition of copyright in sculptures in 1798 is notable because it took ‘copyright’ (insofar as such a concept existed at that time) out of the realm of printing (books, engravings, or calico printing) to cover reproduction more generally.

When most people think about sculptures, they may think of a work by Henry Moore displayed in the Tate Gallery, or a statue of Queen Victoria in a town square. While it will come as no surprise to learn that these would qualify as sculptures, it might come as a surprise to learn that for the purpose of copyright law that in *Wham-O Manufacturing v. Lincoln* the New Zealand Court of Appeal held that the wooden model which was used as a mould to make the frisbees was ‘a sculpture’. However, the Court declined to hold that the frisbee itself was a sculpture, since it was created by injecting plastic into a mould and was thus not the expression of a sculptor’s ideas.¹⁰⁷

In recent years, the courts have construed the term sculpture more restrictively.¹⁰⁸ For example, in *Metix v. Maughan*¹⁰⁹ Laddie J said that ‘sculpture’ should be construed narrowly.¹¹⁰ He added that ordinary usage of the term refers to a three-dimensional work made by an artist’s hand. Consequently, Laddie J held that the argument that moulds for making functional cartridges in the shape of double-barreled syringes were protected as sculptures had no prospect of success. Laddie J noted that none of the evidence indicated that the creator regarded himself, or was regarded by anyone else as an artist.¹¹¹ While his aspect of Laddie J’s reasoning has been rightly criticized because it contradicts the

¹⁰³ The question of what was an ‘original photograph’ was treated as problematic in *Graves Case* (1869) *LR* 4 *QB* 715 and the idea of the ‘author’ of a photograph was grappled with in *Nottage v. Jackson* (1883) 11 *QB* 627, 630 per Brett MR (holding that the author of the photograph was the person who was the effective cause of the picture, that is, the person who superintended the arrangement).

¹⁰⁵ CDPA s. 4(2). Whether something is a photograph may also be important because of CDPA s. 30(2) and CDPA s. 62.

¹⁰⁶ *Spelling Goldberg Productions v. BPC Publishing* [1981] *RPC* 283, 288, 297, 298, 300 (single frames from Starsky and Hutch were not photographs but part of a film under CA 1956). See Kamina, 92–4.

¹⁰⁷ *Wham-O v. Lincoln Industries* [1985] *RPC* 127, 157.

¹⁰⁸ In *J. & S. Davis (Holdings) v. Wright Health Group* [1988] *RPC* 403, it was held that a cast for dental impression trays was not a ‘model or cast intended for the purposes of sculpture’ since the cast was made in plasticine and was thus not intended to be permanent. *Metix v. Maughan* [1997] *FSR* 718, 721.

¹⁰⁹ [1997] *FSR* 718, 722.

¹¹⁰ A similar interpretation of the term was adopted by Falconer J in *Breville Europe v. Thorn EMI* [1995] *FSR* 77, 94 when he said that the term ‘sculpture’ was to be given its ordinary dictionary meaning. Despite this, Falconer J concluded, rather surprisingly, that copyright would protect scalloped-shaped moulds that were used in toasted sandwich-makers as sculptures.

¹¹¹ D. Booton, ‘Framing Pictures: Defining Art in UK Copyright Law’ [2003] *IPQ* 38, 63 (noting, with approval, a convergence between Laddie J’s approach and an ‘institutional approach’ to the definition of art).

statutory requirement that sculpture be protected ‘irrespective of artistic quality’,¹¹² the judge’s conclusion that the moulds were unprotected seems justified on the basis that the ordinary notion of sculpture requires that the maker be concerned with shape and appearance rather than just with achieving a precise functional effect.

While the legal understanding of ‘sculpture’ is by no means confined to the works of those who exhibit in art galleries, not all three-dimensional works exhibited in art galleries and attributed to artists will necessarily qualify as sculptures. In *Creation Records* (the *Oasis* record cover case—see Fig 3.1), Lloyd J held that the collection of a series of objects around a swimming pool was not itself a sculpture.¹¹³ He explained that he could not see how ‘the process of assembling these disparate objects together with the members of the group can be regarded as having anything in common with sculpture . . . No element in the composition has been carved, modelled or made in any of the other ways in which sculpture is made . . .’. This conclusion leaves unclear the position in relation to so-called *objets trouvés*, and other situations where artists ‘create’ artistic works from found material: famous examples being Duchamp’s urinal, Carl André’s bricks, Damien Hirst’s shark, or Tracy Emin’s bed.¹¹⁴ It is by no means obvious that these fall within Laddie J’s definition of sculpture as a three-dimensional work made by an artist’s hand.

5.2 WORKS OF ARCHITECTURE

The second subcategory of artistic works listed in the Act is ‘works of architecture’: section 4(1)(b). A work of architecture is defined in the 1988 Act as a building or a model for a building.¹¹⁵ In turn, a building is defined as including ‘any fixed structure, and a part of a building or fixed structure’. It should be noted that copyright also exists in the architect’s plans as drawings.

One question that has arisen is whether buildings include things such as greenhouses, Portakabins, and swimming pools that are built off-site.¹¹⁶ The main obstacle to protection is that a building is defined as a *fixed* structure.¹¹⁷ While this was apparently intended to prevent ships from being protected as works of architecture, the status of articles which are not fixed when they are created, but which are intended to be subsequently fixed or permanently placed, is unclear. In an Australian case, the Supreme Court of the Northern Territory held that a plug and mould used for manufacture of pre-cast fibreglass swimming pools were protected by copyright.¹¹⁸ Explaining that there was no single test for what is a building, Mildren J said that a number of factors needed to be considered. These

¹¹² *Hi-Tech Autoparts v. Towergate Two Ltd* [2002] FSR 254 (para. 48) (Judge Floyd QC).

¹¹³ *Creation Records v. News Group* [1997] EMLR 444.

¹¹⁴ In *Creation Record v. News Group* [1997] EMLR 444, Lloyd J referred to the issue of whether copyright subsisted in Carl André’s bricks, by saying he would distinguish Mr Gallagher’s composition as being ‘ephemeral’, that is, put together solely to be the subject matter of a number of photographs and disassembled as soon as those were taken. Perhaps Lloyd J was suggesting that a work of sculpture is a three dimensional artefact *either* made by an artist’s hand *or* intended to have a permanent existence as an object of art.

¹¹⁵ CDPA s. 4(1)(b). Copyright protection for works of architecture was first introduced under the 1911 Act; most probably to give effect to the Berlin Revision of the Berne Convention. Ricketson, paras. 6.31–2.

¹¹⁶ See also *Half Court Tennis* (1980) 53 *Federal Law Report* 240 (half-size tennis court made of concrete slab with posts was a work).

¹¹⁷ CDPA s. 4(2) (but note the provision says ‘building’ *includes* ‘any fixed structure’).

¹¹⁸ *Darwin Fibreglass v. Kruhse Enterprises* (1998) 41 IPR 649.

included the size of the structure, its proposed use, whether it is fixed or portable, and its degree of permanence. As a result he concluded that while neither the plug nor the mould were buildings, the pools were. This was despite the fact that the pools were manufactured off-site and were capable of being removed.

In contrast to other types of artistic works, there is no requirement that architectural works (and works of artistic craftsmanship) should be protected ‘irrespective of artistic quality’. This seems to suggest that when deciding whether subject matter qualifies as an architectural work (or as a work of artistic craftsmanship) we should consider whether the work is a work of architecture (or artistic craftsmanship); and if so, whether it is sufficiently artistic. While, the courts have accepted that a work of artistic craftsmanship must by its very nature be sufficiently artistic to attract copyright, the position in relation to architectural works is less clear. If buildings are only protected if they are artistic, it is unlikely that designs for things such as swimming pools would be protected.¹¹⁹ One factor that suggests that for a work to qualify as a work of architecture it must also be ‘artistic’ is that, in contrast to section 4(1)(a), there is no explicit statement that such works are to be protected ‘irrespective of artistic quality’. However, this interpretation is difficult to reconcile with the legislative history. While under the 1911 Act a work of architecture had to satisfy a qualitative threshold in order to be protected, this was removed under the 1956 Copyright Act. This would suggest that under the 1988 Act the legislature intended that there was no need for a work of architecture to be ‘artistic’ for it to be protected. Unfortunately, the Act is ambiguous.

5.3 WORKS OF ARTISTIC CRAFTSMANSHIP

The final category of artistic works listed in the Act is ‘works of artistic craftsmanship’: section 4(1)(c). The legislative origins of this category of works, which first appeared in the 1911 Copyright Act, are obscure.¹²⁰ Works of artistic craftsmanship cover creations such as handcrafted jewellery tiles, pots, stained-glass windows, wrought-iron gates, hand-knitted jumpers, and crocheted doilies. In order for a work to fall within this category, it is necessary to show that the work is ‘artistic’ and that it is a work of ‘craftsmanship’. We will deal with each in turn.

5.3.1 The requirement of ‘artistic quality’

A work will only qualify as a work of artistic craftsmanship if it is ‘artistic’: that is, if it has an element of real artistic or aesthetic quality.¹²¹ This approach is unusual in copyright law because it requires the courts to consider whether the work satisfies the qualitative

¹¹⁹ In *Darwin*, Mildren J assumed there is no requirement of artistry: *ibid*.

¹²⁰ In *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64 Lord Simon said that ‘when Parliament, in 1911, gave copyright protection to “works of artistic craftsmanship” it was extending to works of applied art the protection formerly restricted to works of the fine arts, and was doing so under the influence of the Arts and Crafts movement’. That movement, which dated from the 1860s and was led by William Morris, emphasized the importance of handicraft techniques in the applied or decorative arts, restoring the handicraftsman to his creative role in society. However, Lord Simon argued that, given the context, the choice of the word ‘craftsmanship’ rather than ‘handicraft’ was a deliberate indication that the provision was not to be limited to handicraft or exclude products of machine production.

¹²¹ *Cuisenaire v. Reed* [1963] VR 719, 730; *Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77, 78, 81, 85, 86, 96; *Merlet v. Mothercare PLC* [1986] RPC 115 and *Bonz Group v. Cooke* [1994] 3 NZLR 216, 222.

threshold of being artistic. The question of what is meant by a work of *artistic* craftsmanship was discussed by the House of Lords in *Hensher v. Restawile Upholstery*.¹²² As the defendants conceded that the claimant's prototype of a mass-market upholstered chair was a work of craftsmanship, the only question to be determined was whether the chair was a work of *artistic* craftsmanship. While all their Lordships agreed that the chair was not artistic, they all differed in their explanations as to why.

Lord Reid said that objects could be said to be artistic if a person gets 'pleasure or satisfaction . . . from contemplating it'. As a result, Lord Reid said that the test to decide whether a work was artistic was whether 'any substantial section of the public genuinely admires and values a thing for its appearance and gets pleasure or satisfaction, whether emotional or intellectual, from looking at it'. Lord Reid noted that 'looking nice appears to me to fall short of having artistic appeal'. While the intention of the author that the resulting product is artistic may be important, Lord Reid indicated it was neither 'necessary or conclusive'. Since there was no evidence that anyone regarded the furniture in issue as artistic, Lord Reid concluded that the prototype was not protected by copyright.

Lord Morris said that in this context, the word 'artistic' required no interpretation. However, he acknowledged that as the question of whether a particular artefact was artistic was a matter of personal judgment, courts might be faced with differences of opinion. Because of this, Lord Morris said that a court should look to see if there was a general consensus of opinion 'among those whose views command respect'. The views of the artist and the person acquiring the object might act as pointers as to whether something is artistic. However, the question was ultimately one for the court, guided by evidence (particularly of specialists). Since the most favourable thing that had been said about the prototype chair was that it was distinctive, Lord Morris was content to conclude that it was not artistic.

Lord Kilbrandon said the question whether something was a work of art depended on whether it had come into existence as the product of an author who was consciously concerned to produce a work of art. For Lord Kilbrandon, this must be judged from the work itself and the circumstances of its creation. A work did not become a work of art as a result of the opinions of critics, or the public at large. As a consequence, expert evidence was irrelevant. Instead, it was for the judge to determine whether the author had the 'desire to produce a thing of beauty which would have an artistic justification for its own existence'. Since in the case in hand the objective was to produce a commercially successful chair, it was not a work of artistic craftsmanship.

In deciding whether a craftwork was artistic, Viscount Dilhorne explained that this was really a question of fact for the court to answer. As such, he declined to elaborate much further on the meaning of artistic. He did say, however, that a work would not be artistic merely because there was originality of design, but that it could be artistic even if it was functional. Viscount Dilhorne said that while expert evidence and public opinion would be relevant, in the end it seems that Viscount Dilhorne preferred to act on his own intuition as to what was a 'work of art'. However, since no witness had described the chair as a work of art, he said that this was not even a borderline case: the prototype was not protected by copyright.

Lord Simon took a rather different approach from his colleagues, insofar as he

¹²² *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64.

emphasized that it was the craftsmanship rather than the work that must be artistic. Lord Simon also said that the fact that the work ‘appeals to the eye of the beholder, giving him visual pleasure’ was irrelevant. Examples of ‘artistic craftsmen’ included hand-painters of tiles, the maker of stained-glass windows, and wrought-iron gates, but not ‘plumbers’. Lord Simon said that many craftsmen fell into an intermediate category: some of their products being the result of artistic craftsmanship, while others were the product of craftsmanship. In making the decision as to whether a particular object was created by a person who was an ‘artist craftsman’, Lord Simon took the view that ‘the most cogent evidence is likely to be either from those who are themselves acknowledged artistic-craftsmen or from those who are concerned with the training of artist-craftsmen—in other words, expert evidence’. Lord Simon added, however, that the crucial question was ‘the intent of the creator and its result’. Like the other Law Lords, he found the application of his test to the facts relatively easy: none of the experts had regarded the settee as exhibiting anything more than originality of design and appeal to the eye. The settee was an ordinary piece of furniture, and not an example of artistic-craftsmanship.

Given the ‘different and apparently irreconcilable’ tests employed in *Hensher*, it is not surprising to find that there has been little consistency in subsequent case law as to the approach to be taken when assessing ‘artistry’.

In *Merlet v. Mothercare*,¹²³ where Walton J had to decide whether a baby’s cape made by Madame Merlet was a work of artistic craftsmanship, Walton J said that the majority in *Hensher* had held that the relevant question in determining whether a work was artistic was whether the object in question was a work of art.¹²⁴ However, given the warning not to exercise a value judgment, he concluded that in the first instance the question is whether the artist-craftsman intended to create a work of art. If the intention was present and the creator had not ‘manifestly failed’ in this regard, then the work was a work of art. As Madame Merlet had not set out to create a work of art, but instead had utilitarian considerations in mind (she hoped the cape would shield her son from the rigours of the climate when visiting her mother in the Scottish Highlands), Walton J concluded that the baby cape was not a work of artistic craftsmanship. In contrast, in *Vermaat v. Boncrest*, Evans-Lombe J seems to have declined to follow *Merlet* and instead adopted a new test which required that for a work to be artistic there had to be evidence of creativity.¹²⁵ The case concerned a design of a patchwork bedspreads and whether this was a work of artistic craftsmanship. Evans-Lombe J referred approvingly to the view of the New Zealand High Court that the question of whether a work was of artistic craftsmanship could not depend purely on the intention of the creator: the finished work must have some artistic quality in the sense of being a produced by someone with creative ability and having aesthetic appeal.¹²⁶ Applying that test of artistry to the facts, the judge held that though the designs were ‘pleasing to the eye’ they did not exhibit the necessary requirement of creativity.

If the judgment in *Vermaat* undermined Walton J’s attempt in *Merlet* to resolve the question of when a work of craftsmanship is ‘artistic’, yet more confusion has been created by the rather incoherent judgment of Rimer J in *Guild v. Eskandar*.¹²⁷

¹²³ *Merlet v. Mothercare* [1986] RPC 115. The Court of Appeal (at 129 ff) only considered issues relating to infringement of copyright in Mme Merlet’s drawings.

¹²⁴ *Ibid.*, 125–6 citing Viscount Dilhorne, Lord Simon, and Lord Kilbrandon.

¹²⁵ *Vermaat v. Boncrest* [2001] (5) FSR 49.

¹²⁶ *Bonz Group v. Cooke* [1994] 3 NZLR 216.

¹²⁷ *Guild v. Eskandar* [2001] (38) FSR 645.

Here the question was whether the claimant's wide, square-shaped designs for a cardigan and sweater were works of artistic craftsmanship. Initially, Rimer J purported to follow *Merlet*, and found that there was no evidence that the claimant regarded herself as an artist or intended to create a work of art: she chose the design because it appealed to her, and she therefore believed it would appeal to others. If he had been rigorously following *Merlet*, that should have been an end of the investigation. However, Rimer J went on to consider whether the garment 'can fairly be regarded as satisfying the aesthetic emotions of a substantial section of the public'.¹²⁸ (He may have done so purely out of deference to Lord Reid in *Hensher*, or just in case a different criterion was applied on appeal, but the case is unsatisfactory for failing to explain the reasons or this examination.) The judge took account of the conflicting expert evidence, but ultimately concluded the garments were not works of art. This was in spite of the fact they had been displayed in the Victoria and Albert Museum, Rimer J explaining that they were exhibited as examples of developments in fashion (rather than because anyone regards them as works of art).

Clearly, the decisions in *Vermaat* and *Guild* have done little to clarify when a work of craftsmanship is to be treated as artistic. Further guidance from a higher court would be welcome indeed.

5.3.2 The requirement of 'craftsmanship'

As well as showing that the work is artistic, it is also necessary to show that it is a work of 'craftsmanship'. In *Hensher v. Restawile* Lord Simon defined a work of craftsmanship as presupposing 'special training, skill and knowledge' for its production. He also said that it implied 'a manifestation of pride in sound workmanship'. A rather different definition was provided by Lord Reid, who referred to a work of craftsmanship as 'a durable, useful handmade object'. Lord Reid seemed to suggest that if the defendant had not conceded that the prototype was a work of craftsmanship, he would not have been inclined to that view. This was because the prototype, which was a flimsy, temporary, knock-up which had subsequently been destroyed, was better described as a 'step in a commercial operation' with no value of its own rather than as a work of craftsmanship.¹²⁹ While wooden rods (used to teach addition and subtraction to children) have been held not to be products of craftsmanship,¹³⁰ knitting and tapestry-making have been held to be a craft;¹³¹ knitting and tapestry-making have been treated as crafts: and the baby's cape in *Merlet v. Mother-care* was said to be 'very much on the borderline'.¹³²

One problem with the courts' failure to provide a helpful definition of craftsmanship is that it is unclear whether the work needs to be handmade to be protected. In *Hensher v. Restawile*, Lord Reid and Viscount Dilhorne suggested that craftsmanship implied that the

¹²⁸ *Guild v. Eskandar* [2001] FSR (38) 645, 700.

¹²⁹ *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77.

¹³⁰ *Cuisenaire v. Reed* [1963] VR 719 (Supreme Court of Victoria); *Komesaroff v. Mickle* [1988] RPC 204, 210 (Supreme Court of Victoria) (while assembling picture windows and dispensing into them chosen amounts of selected sands, liquid, and a bubble-producing substance might be artistic, there was no craftsmanship in performing those acts).

¹³¹ *Bonz Group v. Cooke* [1994] 3 NZLR 216 (NZ High Court) (a case approved by the English High Court in *Vermaat v. Boncrest* [2001] FSR (5) 49).

¹³² [1986] RPC 115, 122.

work was handmade.¹³³ In contrast, Lord Simon said that ‘craftsmanship’ could not be limited to handicrafts, nor was the word ‘artistic’ incompatible with machine production.¹³⁴ The approach of Lord Simon was recently followed by the Federal Court of Australia in *Coogi Australia v. Hysport International*.¹³⁵ There, Drummond J held that the stitch structure of a fabric made up of different yarns (used to make jumpers), which was constructed in such a way as to produce a mixture of textured surfaces—some flat, some rolled, some protruding—was a work of artistic craftsmanship. Drummond J said that the way the designer had used the stitch structures and colour to produce an unusual textured and multi-coloured fabric meant that the design was artistic. This was so even though the design was mass-produced and had been formulated on a computer, rather than using traditional craft techniques.¹³⁶ As regards the issue of mass-production, Drummond J reviewed the authorities and found that he preferred Lord Simon’s approach in *Hensher v. Restawile*. To hold otherwise, he said, would be to import a Luddite philosophy into copyright legislation which was enacted against a background of modern industrial organization and was intended to regulate rights of value to persons in the area of activity. As Drummond J’s approach presents a realistic and workable approach to this issue, hopefully it will be followed in the United Kingdom.¹³⁷

Another aspect of the notion of artistic craftsmanship that has proved to be problematic is whether the requirements of artistic quality and craftsmanship must emanate from the same person. In *Burke v. Spicer’s Dress Designs*¹³⁸ Clauson J suggested as much when he said that a woman’s dress was not a work of artistic craftsmanship because the artistic element (the sketch of the dress) did not originate from the person who made the dress (the dressmaker).¹³⁹ However in *Bonz Group v. Cooke*¹⁴⁰ the New Zealand High Court held that hand-knitted woollen sweaters depicting dancing lambs and golfing kiwis was a work of artistic craftsmanship: the handknitters being craftspersons and the designer an artist. Tipping J observed that:

there are some passages in the authorities that suggest that it is essential that the same person both conceive and execute the work. For myself I do not regard that as being

¹³³ *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77 (Lord Reid), 84 (Viscount Dilhorne: made by hand and not mass-produced).

¹³⁴ *Ibid.*, 90. ¹³⁵ (1999) 157 ALR 247 (Fed. Ct. of Australia).

¹³⁶ ‘There is no necessary difference between a skilled person who makes an article with hand-held tools and a skilled person who uses those skills to set up and operate a machine which produces an article. Such an article can still be a work of craftsmanship even though the creator has used a highly sophisticated computer-controlled machine to produce it, if nevertheless it is a manifestation of the creator’s skill with computer-controlled machinery, knowledge of materials and pride in workmanship’. For similar reasoning in relation to computer-related literary works, see Whitford J in *Express Newspapers v. Liverpool Daily Post* [1985] FSR 306.

¹³⁷ The fact that a design is created without using traditional ‘craftsmanship techniques’, or is intended to be mass-produced, may be a factor. See e.g. *Guild v. Eskander* [2001] FSR (38) 645, 700 (finding sample garments, made both by machine and as prototypes for mass production, not to be works of craftsmanship) (not considered on appeal at [2003] FSR (3) 23).

¹³⁸ [1936] 1 Ch 400, 408.

¹³⁹ This approach is consistent with the views of Lord Simon in *George Hensher Ltd v. Restawile Upholstery (Lancs)* [1976] AC 64 to the effect that a work of artistic-craftsmanship is the work of a person who is an ‘artist-craftsman’.

¹⁴⁰ *Bonz Group v. Cooke* [1994] 3 NZLR 216 (High Court of New Zealand). See also *Spyrou v. Radley* [1975] FSR 455; *Bernstein v. Sydney Murray* [1981] RPC 303; *Merlet v. Mothercare* [1986] RPC 115, 123–4.

necessary. If two or more people combine to design and make the ultimate product I cannot see why that ultimate product should not be regarded as a work of artistic craftsmanship.¹⁴¹

While the rejection of the requirement that artistry and craftsmanship come from the same person is welcome, *Bonz Group v. Cooke* raises problems in determining who is the author of a work of artistic craftsmanship. Where a work is created by collaboration between artist and craftsman, a court is likely to treat them as co-authors. However, in *Bonz* itself the court treated the company as the copyright owner, even though the craftsmen were unidentified outworkers (and thus possibly not even employees). Perhaps that was a case where the craftsmen were merely executing the detailed designs of the artist: if this is true, it seems strange that the existence of craftsmanship is a prerequisite for protection, but does not even confer a claim to co-authorship. Another possibility is that, in the absence of collaboration such as to give rise to co-authorship, the craftsman is to be regarded as the author, since they give expression to the artistic ideas.

6 FILMS

Moving pictures were first produced towards the end of the nineteenth century. Initially, films were only indirectly protected in the UK as series of photographs¹⁴² or as dramatic works.¹⁴³ At an international level, films were gradually recognized as the subject matter of authors' rights protection.¹⁴⁴ UK law recognized cinematic 'films' as an independent category of subject matter in the 1956 Act,¹⁴⁵ and conferring first ownership on 'the maker' thereof.¹⁴⁶ Under the 1988 Act, films are defined to mean a recording on any medium from which a moving image may be produced by any means.¹⁴⁷ This broad definition encompasses celluloid films and video recordings or disks, as long as they produce

¹⁴¹ *Bonz Group v. Cooke* [1994] 3 NZLR 216, 224 (High Court of New Zealand). This passage was approved and applied by Evans-Lombe J in *Vermaat v. Boncrest* [2001] FSR 49 (though he held that there was no sufficient 'creativity' to render the work one of artistic craftsmanship).

¹⁴² Films were registered as series of photographs at the Stationers' Company, as required under the Fine Art Copyright Act 1862, but from 1911 this became unnecessary.

¹⁴³ Copyright Act 1911, s. 35(1). For a systematic account, see Kamina, ch. 2. For theoretical reflections, see A. Barron, 'The Legal Properties of Film' (2004) 67 MLR 177.

¹⁴⁴ Article 14 of the Berlin Revision of Berne in 1908 required that cinematographic productions be protected as literary or artistic works if 'by the arrangement of the acting form or the combination of the incidents represented, the author has given the work a personal and original character'. Such works are now listed in Art. 2(1) of the Paris text, and assimilation is further provided in Art. 14 bis.

¹⁴⁵ CA 1956, s. 13. See more generally, M. Salokannel, 'Film Authorship in the Changing Audio-visual Environment', in Sherman and Strowel, ch. 3 (it was only with the rise of the notion of the 'director as author' (or *auteurism*) that copyright law came to embrace films as copyright subject matter on a par with literary and artistic works).

¹⁴⁶ CA 1956, s. 13(4), (10) (defining maker in terms similar to the definition of producer in CDPA, s. 178). Prior to the amendments in 1996, copyright in films was treated in a similar manner to that in sound recordings and broadcasts, with the producer being designated as the sole 'author'. Films now have a hybrid status under CDPA s. 9(2)(ab) which gives the principal director joint authorship with the producer of films made on or after 1 July 1994.

¹⁴⁷ CDPA 5B(1). Cf. CA 1956, s. 13(10) and *Spelling Goldberg Productions v. BPC Publishing* [1981] RPC 283 (stating that film has three characteristics: a sequence of images, recorded on material, capable of being shown as a moving picture).

'moving images'.¹⁴⁸ Multimedia products may sometimes be protected as films,¹⁴⁹ though it has been doubted whether recording which generate text, such as teletext would be covered.¹⁵⁰

The EC Duration and Rental Directives, which required directors to be recognized as authors, distinguishes between cinematographic works and related rights in mere fixations, so-called 'films' or 'videograms'.¹⁵¹ This approach has not been followed in the UK where the 1988 Act only acknowledges one copyright work, a film. Provisions are made for circumstances where there is no principal director, nor any author of screenplay, dialogue or music.¹⁵² Moreover, there is no requirement under UK copyright law that films be original, as is the case with literary, dramatic, musical, and artistic works. However, it has now been accepted that films which would be 'cinematographic works' under the Berne Convention are also 'dramatic works' under UK copyright law.¹⁵³

The soundtrack accompanying a film is treated as part of the film. As we will see, there is no reason why such a soundtrack would not also qualify as a sound recording. This leads to a potential problem of overlap. Section 5B(3) clarifies the position by stating that (i) references to the showing of a film include playing the film soundtrack to accompany the film and (ii) references to playing a sound recording do not include playing the film soundtrack to accompany the film. Consequently if a cinema wished to show a film which included a soundtrack, the cinema would only need to obtain rights clearances from the owner of copyright in the film.¹⁵⁴ In contrast, where the soundtrack is played without the moving images, for example on a jukebox in a pub, it is only necessary to obtain the consent of the right-holder in the sound recording of the soundtrack.¹⁵⁵

¹⁴⁸ See Kamina, 88–91 (in particular, considering whether a computer program which produces images on a screen which can appear to move is a film, and arguing that there must be something in the nature of a pictorial work).

¹⁴⁹ M. Turner, 'Do the Old Legal Categories Fit the New Multimedia Products? A Multimedia CD Rom as a Film' [1995] *EIPR* 107; T. Aplin, 'Not in Our Galaxy: Why Film Won't Rescue Multimedia' [1999] *EIPR* 633; Stamatoudi, ch. 6, esp. 126–51 (arguing that few multimedia products would be audiovisual works, since moving images rarely form the main element, and objecting in any case to the artificiality of interpreting a multimedia work as a recording which produces moving images); Kamina, 92 (suggesting that the definition of film as 'a recording' might afford protection to multimedia works in which moving images form only a limited part). Despite these criticisms, the biggest problem with relying on film copyright to protect multimedia works derives from the narrow scope of protection given by film copyright. In some cases, a multimedia work might be a dramatic work, and thus benefit from 'thick' protection: Kamina, 79.

¹⁵⁰ Stamatoudi, 111.

¹⁵¹ See above p. 44; below at pp. 118–20.

¹⁵² CDP A s. 13B(9). For an argument that this fails to implement the Directives see P. Kamina, 'British Film Copyright and the Incorrect Implementation of the EC Copyright Directives' [1998] *Ent LR* 109.

¹⁵³ *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67. For criticism, see T. Rivers, 'Norowzian Revisited' [2000] *EIPR* 389 (arguing that the case creates problems identifying the author).

¹⁵⁴ See also P. Kamina, 'The Protection of Film Soundtracks under British Copyright after the Copyright Regulations 1995 and 1996' [1998] *Ent LR* 153.

¹⁵⁵ CDP A s. 5B(2)–(3).

7 SOUND RECORDINGS

Sound recordings were first given protection under the 1911 Copyright Act where they were protected as musical works.¹⁵⁶ It soon became apparent that sound recordings were fundamentally different from musical works. The change of attitude was summed up in *Gramophone Company v. Stephen Cawardine*¹⁵⁷ where Maugham J considered the creative contribution to the gramophone record 'Overture to the Black Domino'. He said:

[I]t is not in dispute that skill, both of a technical and of a musical kind is needed for the making of such a record as the one in question. The arrangement of the recording instruments in the building where the record is to be made, the building itself, the timing to fit the record, the production of the artistic effects . . . combine together to make an artistic record, which is very far from the mere production of a piece of music.¹⁵⁸

These sentiments are now reflected in the 1988 Act, where sound recordings are defined to mean '(a) a recording of sounds, from which the sounds may be reproduced', or '(b) a recording of the whole or any part of a literary, dramatic or musical work, from which sounds reproducing the work or part may be produced, regardless of the medium on which the recording is made or the method by which the sounds are reproduced or produced'.¹⁵⁹ It thus covers vinyl records, tapes, compact discs, digital audiotapes, and MP3s which embody recordings. The definition also seems to encompass digital instructions embodied in electronic form which produce sounds. In a different legal context (that of licensing places of entertainment), it has been held that 'recorded sounds' can include CD-ROM embodiments of Musical Interface Digital Interface (MIDI) instructions (rather than data in wave form) which cause a sound module or synthesizer to generate sounds.¹⁶⁰

As the definition of sound recording requires that there be 'sounds', it appears to exclude a single sound from protection (even though a considerable amount of production work may go into its recording).¹⁶¹ Interesting questions have also arisen as to how the limits of a sound recording are to be determined. We review these issues when we look at copyright infringement.¹⁶² Because sound recordings exist irrespective of the medium on which the sounds are recorded, a soundtrack of a film is a sound recording. However, the soundtrack of a film will also be treated as part of the film insofar as the soundtrack 'accompanies' the film.¹⁶³ The effect of this is the public showing of a film and its soundtrack only requires the consent of the owner of copyright in the film.¹⁶⁴ In contrast, where

the soundtrack is played without the moving images¹⁶⁵ this would only require the consent of the holder of rights in the sound recording.¹⁶⁶

8 BROADCASTS

Broadcasts, whether of sounds or images, were first included as copyright works in the 1956 Copyright Act. Subsequently, they were deemed to be suitable subject matter of protection by neighbouring rights at the 1961 Rome Convention.¹⁶⁷ The decision to extend copyright protection to broadcasts marked an important change in copyright law. In contrast with art, literature, films, and recordings, a broadcast is essentially the provision of a service which involves a communication: it is not the creation of a thing, but an action. This is because broadcasts are not fixed or embodied (though they can be), they are ephemeral acts of communication. This means that a broadcast does not protect any fixed entity *per se*. Instead, what are protected are the signals which are transmitted. In a sense copyright law recognizes the value in the act of communication itself, as distinct from the content of what is being communicated.¹⁶⁸

Provision was made for protection of cable programmes from 1 January 1985.¹⁶⁹ This differentiated treatment was carried through into the 1988 Act, as enacted, which recognized two categories of subject matter: a ‘broadcast’, which referred to a wireless transmission, and cable programmes. This differentiation has been abandoned, as of 31 October 2003 with cable programmes being assimilated within a broadly defined concept of ‘broadcast’. Doubts will almost certainly be expressed as to the validity of these amendments to the primary Act by way of delegated legislation: the following paragraphs, however, assume the changes are allowed to stand.¹⁷⁰

In its amended form, a broadcast is defined as an ‘electronic transmission of visual images, sounds, or other information which—(a) is transmitted for simultaneous reception by members of the public and is capable of being lawfully received by them, or (b) is transmitted at a time determined solely by the person making the transmission for presentation to members of the public’.¹⁷¹ This definition merely requires that the transmission

¹⁶⁵ CDPA s. 5B(3)(b).

¹⁶⁶ Contrast the current position with the position under the 1988 Act as initially enacted where ‘sound recordings’ and ‘films’ were mutually exclusive. This meant that the showing of a film in public required the consent of both the copyright holder in the moving images and the copyright owner of the soundtrack.

¹⁶⁷ Rome Art. 3(f), Art. 6, Art. 13, Art. 14, Art. 16(1)(b). TRIPS Art. 14(3). The UK is also party to the European Agreement of 1960 on the Protection of Television Broadcasts. Broadcasts were not the subject of the recent WIPO Treaties.

¹⁶⁸ On the question of what amounts to a ‘work’ in this context, see the Australian High Court decision in *TCN Channel Nine v. Network Ten* [2004] HCA 14 (11 Mar. 2004), where the majority held that in the case of a broadcast the work is the individual programme transmitted).

¹⁶⁹ Cable and Broadcasting Act 1984, s. 22, adding CA 1956, s. 14A. Although diffusion services existed in 1956, they merely relayed BBC and ITA broadcasts to subscribers in areas where the signals were weak.

¹⁷⁰ The criticism would be that they are not justified by European Communities Act 1972, s. 2(2). The Copyright Directorate viewed the changes as necessary to implement Info. Soc. Dir. Art. 3 (communication to the public right). However, while that justified altering CDPA s.20 on ‘rights’, it is not obvious how it justifies altering CDPA s. 6 which deals with works.

¹⁷¹ CDPA s. 6(1) (as amended by SI 2003/2498, reg. 4). Perhaps the amendments were influenced by the definition of broadcast contained in Directive 89/552/EEC *OJ L 298/23* (17 Oct. 1989) Art. 1 (‘television broadcast’ means the initial transmission by wire or over the air, including that by satellite, in unencoded or

be 'electronic',¹⁷² being indifferent otherwise as to the means of transmission, the route taken, or the form of the signals.¹⁷³ The definition therefore covers transmissions both by wire ('Cable TV') and wireless (e.g. 'free to air' broadcasts), terrestrial and satellite transmission, and analogue and digital broadcasts. The definition by referring to the transmission of 'visual images, sound, or other information' is also broad enough to cover systems which transmit different forms of content, such as radio, television, and other broadcasts (such as teletext). It also takes into account the forms of broadcasting which may be directly received by individuals or may be received by subscribers who obtain a decoder.¹⁷⁴

While the definition of broadcast is deliberately broad, it was readily appreciated that this breadth was likely to confer protection on some subject matter for which it was neither needed nor desired.¹⁷⁵ Two alternative criteria limit the definition further: to constitute a broadcast the transmission be 'for simultaneous reception by members of the public' (and capable of being lawfully received) or be made 'at a time determined solely by the person making the transmission for presentation to members of the public'. Moreover, a new section 6(1A) excludes from broadcasts 'any Internet transmission', though with three (not insubstantial) exceptions.

The limitation of broadcasts to transmissions *for* simultaneous reception 'by members of the public' excludes from protection transmissions between individuals, such as telephone calls, faxes or e-mails, as well as transmissions on private networks (such as company 'intranets'): these are not for reception by members of the public. The requirement that the transmission be 'capable of lawful reception' reinforces the exclusion of private communications from the definition of broadcast because the interception of such a transmission would be illegal under the Interception of Communications Act 1985.¹⁷⁶ The requirement of 'simultaneous reception' too, excludes transmissions where the individual recipient decides the time of the transmission, as with on demand services,¹⁷⁷ or

encoded form, of television programmes intended for reception by the public. It includes the communication of programmes between undertakings with a view to their being relayed to the public. It does not include communication services providing items of information or other messages on individual demand such as telecopying, electronic data banks and other similar services'.

¹⁷² Defined in CDPA s. 178 as 'actuated by electric, magnetic electro-magnetic, electro-chemical or electro-mechanical energy'.

¹⁷³ The Copyright Directorate refers to this as a 'technologically neutral definition': *Consultation on UK Implementation of Directive 2001/29/EC on Copyright and Related Rights in the Information Society: An Analysis of Responses and Government Conclusions*, para. 3.6. The definition of wireless telegraphy in CDPA s. 178 had excluded transmission by microwave energy between terrestrial fixed points: the new definition of broadcast has no such exclusion.

¹⁷⁴ That is, any encrypted broadcast, whether terrestrial or by satellite relay, is 'lawfully' received if decoding equipment has been made available through the person transmitting it in encrypted form. CDPA s. 6(2).

¹⁷⁵ Copyright Directorate, *Consultation on UK Implementation of Directive 2001/29/EC: An Analysis of Responses and Government Conclusion*, para. 3.6 (explaining its attempt to exclude on-demand services from the definition of broadcast on the basis that the subject matter transmitted is usually protected under other headings).

¹⁷⁶ Rather surprisingly this might mean that foreign encrypted broadcasts, such as satellite broadcasts, where there is no authorized distribution of decoders in the UK, are unprotected because they are not capable of lawful reception in the UK. This would be a breach of Art. 6(1)(b) of the Rome Convention, and is best avoided by treating the definition as covering broadcasts which are capable of lawful reception in the country at which the signals are primarily targeted.

¹⁷⁷ Many web sites are probably not for 'simultaneous reception' in that the transmitter intends that the site can be accessed at any time the user desires. Is a web site which is updated on a daily basis, the new version

interactive database services (such as *Lexis* or *Westlaw*). The alternative criteria, that the transmission be at a time determined solely by the person making the transmission 'for presentation to members of the public' is designed to cover transmission for playing or showing, as where a football game is beamed back to the away team's stadium.¹⁷⁸ It also covers what is frequently referred to as 'narrow-casting': such as transmission to shops for presentation to the public.

The scope of the definition of broadcast is confined further by excluding 'any Internet transmission', but this exclusion is subject to three exceptions of its own. No definition is provided for an 'Internet transmission' but the better view is that the Internet is not confined to the 'worldwide web.' E-mails to news groups and web sites are therefore, generally, excluded from protection as 'broadcasts' (though there may be protection as literary or artistic works).¹⁷⁹ A non-interactive on-line database service (formerly thought to be a cable programme service, and its contents therefore protected as cable programmes)¹⁸⁰ would also be excluded. In contrast, an information service through telecommunications networks to subscribers to certain mobile phone services is probably a broadcast.

Having said that, the amendments have sought to leave protected as broadcasts 'Internet transmissions of a conventional broadcast character' through three exceptions to the exclusion of 'Internet transmissions' from the definition of broadcasts. First, section 6(1A)(a) clarifies that the exclusion of 'Internet transmissions' does not encompass 'a transmission taking place simultaneously on the Internet and by other means.' This means that web sites which transmit sounds and images simultaneously with broadcasts—all the BBC radio stations, for example, are accessible from the BBC's web site—remain protected broadcasts.

A second provision allows for broadcasts to include an Internet transmission which is a 'concurrent transmission of a live event'. The term 'concurrent' implies that the Internet transmission must occur at the same time as the 'live event', so would seem to cover Internet transmission of a cricket match or sounds of a pop concert. The provision refers to transmission *of a* live event and so would not treat as a broadcast a transmission of *commentary* on a live event. News group e-mails of progress at the latest international copyright convention would not, therefore, be a broadcast; nor would the commentary on a football match (unless the commentary were itself treated as an event). Whether the courts will interpret 'live event' to cover transmissions of the 'Big Brother' house (even where these were not being broadcast on TV), awaits to be seen: an approach which refuses to discriminate will end up treating all live web-cam feeds into web sites as broadcasts.

being transmitted at 8 a.m. each morning for 'simultaneous reception'? Probably it does not matter, as it is excluded under CDPA, s. 6(1A) as an Internet transmission.

¹⁷⁸ Copyright Directorate, *Consultation on UK Implementation of Directive 2001/29/EC: An Analysis of Responses and Government Conclusion*, para. 3.9 (explaining requirement that timing be determined by the person making the transmission as designed to exclude on-demand services from the definition of broadcast).

¹⁷⁹ *Ibid.* (explaining the exclusion as a response to user groups who were concerned that web sites would be protected and that exceptions, such as research and private study, would therefore be unavailable). In these respects, the decision in *Shetland Times v. Dr Jonathan Wills* [1997] FSR 604 that a web site is protected (then, as items included in a cable programme service) is no longer good law.

¹⁸⁰ *Dun & Bradstreet v. Typesetting Facilities* [1992] FSR 320.

A third saving indicates that an Internet transmission is not excluded from the definition of broadcast if it is 'a transmission of recorded moving images or sounds forming part of a programme service offered by the person responsible for making the transmission, being a service in which programmes are transmitted at scheduled times determined by that person'. This means that a person who wishes to set up a conventional style of broadcast service, solely utilizing the Internet to distribute the programme service, does gain protection for the broadcasts.

9 PUBLISHED EDITIONS

The final category of works that are protected by copyright is 'typographical arrangements of published editions'. This category of works was first introduced in the UK in 1956, and remains largely a peculiarity of the British, and British-influenced, copyright systems (having no corresponding international regime).¹⁸¹ A 'published edition' means 'a published edition of the whole or any part of one or more literary, dramatic or musical works'.¹⁸² In *Newspaper Licensing Association v Marks & Spencer*, Lord Hoffmann held that 'the "edition" is the product, generally between covers, which the publisher offers to the public'.¹⁸³ In this context, the copyright in the published edition protects the typographical arrangement, that is, the overall appearance of the page or pages. This protects the publisher's skill and investment in typesetting, as well as the processes of design and selection that are reflected in the appearance of the text.¹⁸⁴ There is no requirement that the published edition must be a previously unpublished work. It therefore covers modern editions of public domain works (such as the complete works of Shakespeare), and prohibits the reproduction of the layout (but not the work itself). It should be noted that the concept of reproduction of a typographical arrangement is extremely narrow, being restricted to facsimile reprography. Consequently, the reproduction of the material contained in a published work will not infringe this limited copyright where a different layout is employed. It has been suggested that typographical arrangements may also be protected as 'photographs'.¹⁸⁵

¹⁸¹ CA 1956 s. 15. See *Report of the Copyright Committee* (Cmd. 8662), paras. 306–10.

¹⁸² CDPA s. 8(1). Cf. Art. 5 Duration Dir. which permits member states to create a publishers' right in critical and scientific works which have fallen into the public domain.

¹⁸³ *The Newspaper Licensing Agency Ltd v Marks and Spencer plc* [2003] 1 AC 551, 558; [2001] 3 WLR 390 (Lord Hoffmann) (holding that whole newspaper was the 'edition').

¹⁸⁴ *Ibid.* (para. 23) ('It is not the choice of a particular typeface, the precise number or width of the columns, the breadth of margins and the relationship of headlines and strap-lines to the other text, the number of articles on a page and the distribution of photographs and advertisements but the combination of all of these into pages which give the newspaper as a whole its distinctive appearance. . . . The particular fonts, columns, margins and so forth are only, so to speak, the typographical vocabulary in which the arrangement is expressed').

¹⁸⁵ *Laddie et al.*, paras 9.4–5 (but observing that such a photograph may lack originality). See also *Sterling and Carpenter* (1986), para. 244 (publishers have copyright in photographic plates used in printing process).

4

CRITERIA FOR PROTECTION

1 INTRODUCTION

In order for a work to be protected by copyright, it is necessary to show that as well as falling within one of the eight categories of works listed in the Act, that the work also satisfies the particular requirements that are imposed on it. As we will see, the requirements that need to be complied with vary, sometimes considerably, between different categories of works.

(i) The *first* general requirement for copyright to subsist is that the work must be recorded in a material form. As we will see, this only applies to literary, dramatic, and musical works.

(ii) The *second* requirement that must be satisfied for protection to arise is that the work must be 'original'. It should be noted that this only applies to literary, dramatic, musical, and artistic works. In contrast, there is no need for entrepreneurial works (sound recordings, films, broadcasts, and typographical arrangements) to be 'original' for them to qualify for protection. Instead the 1988 Act declares that copyright only subsists to the extent that such works are not copied from previous works of the same sort.¹

(iii) The *third* requirement that must be satisfied for a work to be protected, which applies to all works, is that it is necessary to show that the work is sufficiently connected to the UK to qualify for protection under UK law.

(iv) The *fourth* requirement is that the work is not excluded from protection on public policy grounds. Occasionally the courts have said that works which are immoral, blasphemous, or libellous or which infringe copyright will not be protected.

We will deal with each of these requirements in turn.

2 RECORDED IN MATERIAL FORM

There is no requirement that a work be registered for copyright protection to arise. Instead, the right arises automatically. However, the 1988 Act provides that copyright does not subsist in literary, dramatic, and musical works 'unless and until' the works are

¹ CDPA ss. 5(2), 6(6), 7(6), 8(2).

'recorded in writing or otherwise'.² This is usually referred to as the requirement that the work be recorded in a material form. The fixation or recording of creative ideas carries with it many benefits. Perhaps the most obvious legal benefits are evidential. While evidence that has not been recorded in some way is admissible, the law has always preferred evidence that is fixed (written, taped, or filmed) to oral evidence. The reduction of ideas to a material form also increases the probability that a work may continue to be accessible beyond the death of its author.

In many cases, there is no need for any special rules to be made to ensure that a work is recorded. The reason for this is that in the case of artistic works,³ works of artistic craftsmanship,⁴ sound recordings, films, and published editions, expression ordinarily takes place in a recorded physical form. That is, it is impossible for someone to create, say, a sound recording or a film in a way in which it is not fixed. This is not the case, however, in relation to literary, dramatic, and musical works which can be expressed in ways in which they are not fixed or recorded: literary works can be spoken, musical works sung, and dramatic works performed. To remedy this, section 3(2) of the 1988 Act states that copyright does not subsist in literary, dramatic or musical works unless and until they are recorded, in writing or otherwise (for example, on film).⁵ Writing is defined to include any form of notation or code 'regardless of the method by which, or medium in or on which, it is recorded'.⁶

There is no requirement that broadcasts be fixed or embodied in any particular form. Thus, broadcasts are protected whether or not the Broadcasting Authority makes a permanent version of them. Arguably, the ephemeral nature of broadcasts makes them one of the most intangible of all forms of intellectual property.

The requirement that literary, dramatic, and musical works be recorded is rarely a serious impediment to copyright protection. The reason for this is that the fixation requirement will be satisfied even if the recording is carried out by someone other than the creator (with or without their permission),⁷ whether the recorded form is in the claimant's hands, or has subsequently been destroyed.⁸ Given that when someone infringes copyright they will normally have reproduced the work, and that parties unconnected with the creator can carry out the requisite recording, this means that in most cases the work will in fact have been recorded.

One question that has arisen in relation to the fixation requirement concerns works that change form (such as databases or works of kinetic art).⁹ While works that continually

² CDPA s. 3. This is deemed to be the time when the work is 'made': CDPA s. 3(2).

³ There is an area of uncertainty in the case of artistic works that are not fixed, such as a display of coloured lights. It could be argued that since fixation is not specifically required by the CDPA for artistic works that such a display could be protected (though, *quaere* under what sub-category of CDPA s.4). If so, live televising of the display would infringe. The point remains to be decided by the courts. It has been stated that an ice sculpture, though not permanent, is protected: *Metix v. Maughan* [1997] FSR 718, 721.

⁴ But cf. *Komesaroff v. Mickle* [1988] RPC 204 (a device consisting of a mixture of sand, liquid, and bubble-producing substance did not qualify as a work of artistic craftsmanship).

⁵ CDPA s. 3(2). This clarifies any doubts that may have existed under the 1956 Act that recording on tape was not sufficient.

⁶ CDPA s. 178.

⁷ CDPA s. 3(3).

⁸ *Lucas v. Williams & Sons* [1892] 2 QB 113, 116; *Wham-O Manufacturing Co. v. Lincoln Industries* [1985] RPC 127, 142-5 (CANZ); *Davis (Holdings) v. Wright Health Group* [1988] RPC 403, 409.

⁹ In *Komesaroff v. Mickle* [1988] RPC 204 King J held that a device consisting of a mixture of sand, liquid, and bubble-producing substance did not qualify as a work of artistic craftsmanship. The device, when moved,

change form may give rise to problems in other respects, it seems that as long as a work is recorded it will be protected, even though it may subsequently change form.

3 ORIGINALITY: LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

Perhaps the most well-known requirement that must be satisfied for copyright protection to arise is that the work be ‘original’. It should be noted that this only applies to literary, dramatic, musical, and artistic works.¹⁰ In contrast, there is no need for entrepreneurial works (sound recordings, films, broadcasts, and typographical arrangements) to be original for them to qualify for protection. Instead the 1988 Act declares that copyright only subsists to the extent that such works are not copied from previous works. (We look at this in the following section.)

While the originality requirement has been a general statutory requirement since 1911,¹¹ it is very difficult if not impossible to state with any precision what copyright law means when it demands that works be original. This uncertainty has been exacerbated by the fact that as part of the harmonization of copyright law in Europe, a new concept—that of the *author’s own intellectual creation*—is now used in the United Kingdom to determine the originality of databases and arguably also computer programs and photographs. In what follows, therefore, we need to distinguish carefully between the traditional British conception of originality, and the European one.

While we will explore the differences between the British and European conceptions of originality below, both conceptions share a number of characteristics. In both British and European conceptions, ‘originality’ is concerned with the relationship between an author or creator and the work. That is, originality is not concerned with whether the work is inventive, novel, or unique.¹² While the novelty requirement in patent law focuses on the relationship between the invention and the state of the art, the originality examination is primarily concerned with the relationship between the creator and the work. When copyright says that a work must be original, this means that the author must have exercised the requisite intellectual qualities (in the British version *labour, skill, or effort*, in the European ‘*intellectual creation*’) in producing the work.¹³ More specifically, in determining whether a work is original, copyright law focuses on the input that the author contributed to the resulting work.¹⁴ Consequently, a person who writes a film script based on an original

produced pretty patterns. King J held that: ‘It must be possible to define the work of artistic craftsmanship on which she bases her action, and this can be done only by a reference to a static aspect of what has been referred to by counsel as a “work of kinetic art”’.

¹⁰ CDPA s. 1(1).

¹¹ Though the requirement was introduced for paintings, drawings, and photographs by the Fine Art Copyright Act 1862.

¹² As Peterson J said in *University of London Press v. University Tutorial Press* [1916] 2 Ch 601, ‘The word original does not in this connection mean that the work must be the expression of original or inventive thought . . . The originality which is required relates to the expression of the thought. But the Act does not require that the expression must be in an original or novel form, but that the work must not be copied from another work—that it should originate from the author’.

¹³ Lord Reid in *Ladbroke v. William Hill* [1964] 1 All ER 465, 469.

¹⁴ To use Benjamin Kaplan’s terminology in *An Unhurried View of Copyright* (1965), the test in copyright is psychological, whereas in patents it is historical.

story recounted by Homer in *The Odyssey* produces an 'original' work even though the story and characters have been widely known for thousands of years.¹⁵

The originality requirement sets a threshold that determines when material falling within the definition of literary, dramatic, musical, or artistic work is protected by copyright law.¹⁶ Nevertheless, the policy-basis for the threshold requirement has never been made clear. It certainly excludes from protection trivial works, the creation of which involves little labour, skill, or effort. As we will see, the European conception of originality may well set the threshold higher,¹⁷ excluding works which are merely the product of labour alone.¹⁸ The originality requirement also functions to limit the duration of protection by preventing existing works from being the subject of further copyright protection in the absence of some additional contribution. Since this function could be achieved by requiring that the work must not already exist (as is the case with entrepreneurial works), it seems that the originality requirement is intended to do something more. What this is, however, is unclear.

In addition to operating as a threshold, originality may be important in establishing whether a person has infringed copyright. This is because a person will not infringe copyright if they merely copy elements which are not original in the claimant's work. That is, deciding what is original in a claimant's work plays an important role in ascertaining whether a substantial part of a work has been taken by the defendant. (However, it should be noted that the fact that a person creates an original work does not mean that they are not infringing copyright in work they have drawn on.¹⁹ This is because, as we see in Chapter 8, infringement depends on what a person has taken from a copyright work, the effort that such a person adds is irrelevant.)

3.1 THE BRITISH CONCEPTION OF ORIGINALITY

It would be foolish to claim that the case law developed since 1912 (or carried over from earlier jurisprudence) has defined clearly the circumstances in which a literary, dramatic, musical, or artistic work will be treated as original. Much of the case law seems inconsistent, and according to one commentator 'the dividing line between original . . . works, and

¹⁵ *Christoffer v. Poseidon Film Distributors* [2001] ECDR 481.

¹⁶ Originality has also played an important role in deciding whether new classes of works (photography in the nineteenth century and more recently Aboriginal art) ought to be protected by copyright law. There is also a possibility that the growing judicial suspicion about the over-extension of copyright may mean that originality comes to be used as a way of restricting the scope of the subject matter protected by copyright law.

¹⁷ Given that many such countries have an 'open' list of works protected by copyright, the 'originality' requirement does the job of delimiting the sphere of copyright in those countries (a role performed in the UK by the list of 8 works in CDPDA s. 1).

¹⁸ See J. Ginsburg, 'Creation and Commercial Value: Copyright Protection of Works of Information' (1990) 90 *Columbia LR* 1865 (in the context of US law, doubting whether copyright should be confined to works exhibiting traces of personality, given the social value of works which are a product of 'sweat of the brow'.) But as regards databases in Europe, an attempt is made to meet this objection through the *sui generis* right: see Ch. 13.

¹⁹ See *Wood v. Boosey* (1868) LR 3 QB 223, 229; *Redwood Music v. Chappell* [1982] RPC 109, 120; *ZYX Music GmbH v. King* [1995] 3 All ER 1, 9–11; cf. *Ashmore v. Douglas Home* [1987] FSR 553 (Judge Mervyn Davies denied copyright protection to part of a play which was derived from an existing copyright play on the grounds that the former was 'infringing material').

unoriginal . . . works, remains an uncertain and shifting one'.²⁰ In part these difficulties arise because originality 'must depend largely on the facts of the case and must in each case be very much a question of degree'.²¹

As we explained above, when British copyright says that a work must be original, this means that the author must have exercised the requisite *labour, skill, or judgment* in producing the work.²² However, while the phrase 'labour, skill, or judgment' may be a useful label by which to describe the traditional British test of originality, it should be noted that it is a form of words that is not used with great precision (and thus should not be viewed as if it were a statutory phrase). Sometimes the courts use the phrase disjunctively, referring to labour, skill, *or* judgment,²³ sometimes cumulatively as labour, skill, *and* judgment.²⁴ On other occasions the words work, capital, effort, industry, knowledge, taste, ingenuity, experience, or investment are used.²⁵ This looseness may be criticized on the basis that it leaves the law uncertain, particularly as regards whether works which are only a product of labour (so called 'sweat of the brow' works) are original. But the truth is that this is a question whose economic and legal importance has only become paramount with the advent of electronic databases. In the past, the distinction between labour and skill was less momentous (and, indeed, the line drawn between labour and skill was less obvious).

Before looking at the notion of originality in more detail, it will be helpful to make a few preliminary points.

3.1.1 Preliminary points

(i) The first point to note is that in most cases the requisite labour, skill, and effort that is needed for a work to be original will be exercised in the way the work is *expressed*: in the way the paint is applied, the words are chosen and ordered, ideas executed, or the clay moulded. That is, in assessing originality, British law is concerned with the originality of expression rather than ideas.²⁶

(ii) However, while the originality with which we are concerned is originality of expression, the courts have accepted that the originality of a work may arise in the steps preceding the production of the work (in the *pre-expressive* stage).²⁷ That is, the labour that confers originality on a particular work may arise in the selection of the subject matter or the arrangement of the image that comes to be embodied in the painting. In other cases, such as with respect to literary compilations, the courts will consider the footwork

²⁴ *Ibid.* 473f per Lord Evershed; *Interlego v. Tyco* [1988] *RPC* 343, 371.

²⁵ *Ladbroke v. William Hill* [1964] 1 *All ER* 465, 475 per Lord Hodson ('work, labour and skill'); 478 per Lord Devlin ('skill, industry, or experience'); 480 per Lord Pearce ('labour or skill or ingenuity or expense'); *Macmillan v. Cooper* (1923) 93 *LJPC* 113 (Lord Atkinson) ('labour, skill and capital').

²⁶ *University of London Press v. University Tutorial Press* [1916] 2 *Ch* 209.

²⁷ On another reading, three different factors have been taken into account: the relative importance of each depending on the subject matter in question. In certain situations, the courts have considered the *quality* of the labour. In other situations the courts have focused upon the *quantity* of labour that has been invested in the creation of the work. Where the labour is expended on a pre-existing work, the courts have paid attention to the *effect* that the labour has on the underlying work.

involved in discovering the information,²⁸ or the selection or choice of the materials that are later embodied in the work. This was made clear in *Ladbroke v. William Hill* where the question arose as to whether football pools coupons (which listed matches to be played and offered a variety of bets arranged in sixteen categories) were original compilations.²⁹ On the basis that the expressive form of the coupons inevitably followed from the prior commercial decisions as to the bets which should be offered, the appellants argued that the coupons were not original. The House of Lords rejected these claims.³⁰ According to Lord Reid, it was artificial to divide the inquiry up, on the one hand into the commercial decisions about which bets to offer and, on the other, the form and arrangement of the table. The selection of wagers and their presentation was so interconnected as to be inseparable. Consequently, when considering originality, it is inappropriate to dissect the labour, skill, and judgment into pre-expressive and expressive stage: both elements should be taken into account to determine whether the threshold had been reached.³¹

(iii) It is important to appreciate that the question of whether a work is original often depends on the particular cultural, social, and political context in which the judgment is made. In part this is because originality turns on the way the labour and the resulting work are perceived by the courts. One of the consequences of this is that what is seen as original may change over time. A good example of this is provided by photography. When invented in the 1840s, photography was seen as a non-creative (and non-original) mechanical process whereby images were produced by exposing chemically sensitive materials to light. In the late nineteenth century, however, photography came to be seen as an artistic activity. As a result, photographs came to be seen as creative and thus potentially original works.³² Similar changes recently occurred in relation to the artistic works of Australian Aboriginals.³³

The historical specificity of the originality examination means that we must be careful as to the conclusions we draw from earlier decisions. This can be seen for example, if we look at the 1900 decision of *Walter v. Lane*.³⁴ In this case it was held that a newspaper

²⁸ For example in *Kelly v. Morris* (1866) 1 *Equity Cases* 697 the author 'needed to make time consuming enquiries and to write down the results with painstaking accuracy'.

²⁹ [1964] 1 *All ER* 465, 469 (Lord Reid); 477 (Lord Hodson); 479 (Lord Devlin); 481 (Lord Pearce). See also *Football League v. Littlewoods* [1959] *Ch* 637, 656; *Bookmakers' Afternoon v. Gilbert* [1994] *FSR* 723.

³⁰ Note, however, *Ladbroke v. William Hill* [1964] 1 *All ER* 465, per Lord Evershed, at 472, who considered the task of expressing the wagers a distinct one involving 'considerable skill, labour and judgment'.

³¹ Two points are worth adding. The first is that there must be limits to the relevance of pre-expressive work. One such limit may be where pre-expressive work is provided by someone else, but is not sufficient to render that person a co-author. In these circumstances, such pre-expressive work cannot count towards the originality assessment. Another is where the pre-expressive labour is unconnected to the production of the work, as where a person selects products they are going to sell and then produces a catalogue. In such cases, it seems, pre-expressive work cannot contribute to the originality of the catalogue: *Purefoy Engineering v. Sykes Boxall & Co* (1955) 72 *RPC* 89. See also *Ladbroke v. William Hill* [1964] 1 *All ER* 465, 477 per Lord Hodson; 479 per Lord Devlin (one of objects of pre-expressive labour should be production of work); 481 (Lord Pearce) ('if the work was done with no ultimate intention of a compilation'). The second point is that to the extent that pre-expressive labour confers originality, so its appropriation may be infringement: see below, pp. 168–75.

³² B. Edelman, *Ownership of the Image: Elements for a Marxist Theory of Law* (1979); J. Gaines, *Contested Culture: The Image, The Voice and the Law* (1992).

³³ See B. Sherman, 'From the Non-original to the Aboriginal', in Sherman and Strowel.

³⁴ *Walter v. Lane* [1900] *AC* 539. This was decided under the 1842 Act and there was no specific requirement of originality, it has been treated as being 'undeniably good law'. See *Express Newspapers v. News UK* [1990] *FSR* 359 (Browne-Wilkinson V-C).

report of an oral speech was protected by copyright because the reporter exercised considerable labour, skill, and judgment in producing a verbatim transcript of the speech. More specifically, the court said that the reduction to writing of the words of a person who spoke quickly was an art requiring considerable training. It is possible that changes since 1900, notably the spread of simple tape-recorder technology, may mean that the transcription of a speech will no longer be treated as labour that gives rise to an original work.³⁵

(iv) The next point to note is that the originality threshold has been set at a very low level. It may come as a surprise for some to learn that the courts have accepted as original such things as railway timetables and exam papers (which were drawn from the stock of knowledge common to mathematicians, produced quickly, and included questions similar to ones which had been previously asked by other examiners).³⁶ One of the consequences of the originality standard being set at a low level is that there have been relatively few instances where subject matter has been excluded on the basis that it was non-original. Most of the problems that have arisen have been in relation to tables and compilations, derivative works (that is, works which incorporate material copied from another source), and industrial designs.

3.1.2 Determining whether a work is original

As we explained above, when copyright says that a work must be original, this means that the author must have exercised the requisite *labour, skill, or effort* in producing the work. However, not all ‘labour, skill, and judgment’ will give rise to an original work. The problem facing us is to try and explain coherently when a work is original, and when it is not. In part these difficulties arise because the effort, skill, or judgment which is needed to confer originality on a work cannot be defined in precise terms. This is because originality ‘must depend largely on the facts of the case and must in each case be very much a question of degree’.³⁷ As a result, it is very difficult to explain originality in terms of any overarching principles or rules. While a number of equally plausible accounts could be given of the British concept of originality,³⁸ perhaps the best approach is to look at originality in terms of the types of work in question. To this end we will look at the way the courts approach originality in relation to the following types of works:

- (i) new works,
- (ii) derivative works,

³⁵ For a comparable argument that the labour, skill, and effort that was required to create a photographic reproduction of an art work was much greater in the 1860s than today, so that such a work should not necessarily be regarded as original today, see R. Deazley, ‘Photographing Paintings in the Public Domain: A Response to Garnett’ [2001] *EIPR* 179, 181.

³⁶ *University of London Press v. University Tutorial Press* [1916] 2 *Ch* 209. Although widely referred to, Peterson J’s comment that the work ‘should originate from the author’ offers limited assistance when differentiating original and non-original works in the difficult cases of derivative works, compilations and computer-generated works.

³⁷ *Macmillan v. Cooper* (1923) 93 *LJPC* 113 (Lord Atkinson).

³⁸ It may well be that there is no single British concept of originality, but that different tests apply to different categories of work, for example, that the originality requirement operates differently in relation to artistic work from the way it operates in relation to literary work. Indeed, in *Interlego v. Tyco Industries* [1989] *AC* 217 Lord Oliver said it would be ‘palpably erroneous’ to apply the test of originality developed in relation to literary compilations in *Ladbroke v. William Hill* [1964] 1 *All ER* 465, namely that originality was dependent upon the degree of skill, labour, and judgment involved in preparing the compilation, to art works.

- (iii) tables and compilations,
- (iv) computer-generated works.

3.1.3 New works

The first situation we wish to consider is where a ‘new’ work is created.³⁹ In particular we wish to consider the situation, for example, where inspired by a particular event a person sits down at their desk and writes a poem or a song. As in these circumstances the work clearly emanates from the author, there are unlikely to be any problems in showing originality. In the words of Peterson J in *University of London Press*, such works are original because they originate with the author and are not copied.⁴⁰

The one exception to this principle is where the labour is trivial or insignificant and the result is trivial or insignificant. A possible example is the case of *Merchandising Corporation v. Harpbond*,⁴¹ where face-paint was held unprotected by copyright. While (as we saw in the previous chapter) protection was refused on the rather unsatisfactory basis that the work was not a painting, the decision was justifiable on the basis that the work was a trivial outcome of an insignificant amount of labour.⁴² Another example of a work held non-original on the basis of insignificant labour involved the routine application of a formula to produce forecast dividends on greyhound races was not sufficiently original.⁴³ Yet other examples can be found in the case law on titles and advertising slogans, also discussed in Chapter 3. Titles, such as ‘The Lawyer’s Diary’ involve too trivial an amount of labour to be regarded as original.⁴⁴

However, in many cases the courts have been prepared to accept that even very simple works can be original. This was in effect the position in *British Northrop* where it was argued that drawings of things such as rivets, screws, studs, a bolt, and a length of wire lacked originality because they were too simple. In rejecting the argument, Megarry J said that he would be ‘slow to exclude drawings from copyright on the mere score of simplicity’ or on the basis that they were of elementary or commonplace objects.⁴⁵ This reluctance to exclude simple abstract works probably reflect a desire to ensure that works of abstract artists, such as Mark Rothko, which may be extremely simple, are regarded as original. Equally, even short poems such as haiku would be regarded as original.⁴⁶

³⁹ The distinction would doubtless be unsatisfactory to someone who views all works as derivatives, as ‘inter-texts’ which draw on and refer to pre-existing works. While we accept that works are never created *de novo*, we have used the term ‘new works’ and ‘derivative works’ as convenient labels with which to describe distinct judicial approaches taken to works which do not draw directly on the expressive form of existing works (new works) and those which do (derivative works).

⁴⁰ *University of London Press v. University Tutorial Press* [1916] 2 Ch 209.

⁴¹ *Merchandising Corp. of America v. Harpbond* [1983] FSR 32.

⁴² This may be what Lawton LJ when he said a ‘painting is not an idea’.

⁴³ *Greyhound Services v. Wilf Gilbert (Staffs)* [1994] FSR 723.

⁴⁴ *Rose v. Information Services* [1987] FSR 254; *Sinanide v. La Maison Kosmeo* (1924) LTR 365. Perhaps the *Exxon Corp. v. Exxon Insurance* decision is explicable as a case where, even though the labour was extensive, the result was too trivial to be regarded as original.

⁴⁵ *British Northrop v. Texteam Blackburn* [1974] RPC 57, 68. See also *Karo Trade Mark* [1977] RPC 255, 273. An example of a non-original artistic work would be a straight line drawn with a ruler.

⁴⁶ In some cases, where the resulting work is regarded as sufficiently creative, the work may be very small: *Kipling v. Genatosan* (1917–23) MacG CC 203 (extract of four lines from poem ‘If’).

3.1.4 Derivative or copied works

The next type of creation that we wish to consider are the so-called derivative works, that is works which are derived from or based upon pre-existing works (whether or not they are protected by copyright). Obvious examples of such works are translations, abridgments, and new editions. Copyright law has long recognized that it is important that authors should be rewarded not just for creating new works, but also for building upon existing works. However, for a derivative work to be treated as original, copyright law seems to have imposed three hurdles. First, the labour expended must be of the right kind. Second, the effort must bring about a material change in the work. Third, that change must be of the right kind.

Before examining these, it is worth re-iterating that copyright may subsist in a derivative work even though it may infringe copyright in the existing work.⁴⁷ That is, a derivative work may be both original and infringing. In such a situation, any copyright that is acquired in a derivative work will be distinct from and subordinate to the copyright in any prior original work which is incorporated into it. Provided that the original work is still apparent in the new version, both the maker of the new version and any third-party copier will need the licence of the copyright owner of the original.

(i) *The labour must be of the right kind.* As Lord Oliver said in *Interlego* ‘only certain kinds of skill, labour and judgment confer originality’.⁴⁸ Consequently, a person may exercise a considerable amount of labour yet the resulting work will not be original if the labour is of the wrong kind. This would be the case, for example, where there is a direct or slavish copy of another work or where a work is photocopied.⁴⁹ While the tracing or copying of drawings, especially technical drawings, requires patience, skill, and labour, as Lord Oliver said in *Interlego*, ‘copying *per se*, however much skill or labour may be devoted to the process, cannot make a work original’.⁵⁰ More specifically, he said a ‘well-executed tracing is the result of much labour and skill but remains what it is, a tracing’.⁵¹ It is clear that the reason why tracing and photocopying do not produce original works is not that there is no labour. Rather, it is that it is not the right type of labour.⁵²

In some cases, the courts have suggested that for labour, skill, and judgment to be relevant it must not be mechanical or automatic, but must exhibit some ‘individuality’. In *MacMillan v. Cooper* the Privy Council held that a reduction of Plutarch’s *Life of Alexander* from 40,000 to 20,000 words so that it was suitable for use in schools was not original. An important factor in the finding that the selection was *not* original and thus not protected by copyright was that the process of selection was motivated by a desire to cut down the work so that it was merely shorter and more readily mastered and to exclude material

⁴⁷ *Redwood Music v. Chappell* [1982] RPC 109, 120; *ZYX Music GmbH v. King* [1995] 3 All ER 1, 9–11.

⁴⁸ *Interlego v. Tyco Industries* [1989] AC 217, 268 (Lord Oliver).

⁴⁹ *British Northrop v. Texteam (Blackburn)* [1974] RPC 57, 68 (a drawing which is simply traced from another drawing is not an original artistic work); *Rexnold v. Ancon* [1983] FSR 662, 664 (improbable that copyright would be given to a mere tracing); *Davis (Holdings) v. Wright Health Group* [1988] RPC 403, 409 (casts made from models are not original) and 412 (tracing not original).

⁵⁰ *Interlego AG v. Tyco Industries* [1989] AC 217, 263.

⁵¹ *Ibid.*, 262 (‘it takes great skill, judgment and labour to produce a good copy by painting or to produce an enlarged photograph from a positive print, but no one would reasonably contend that the copy painting or enlargement was an “original” artistic work in which the copier is entitled to claim copyright’).

⁵² *The Reject Shop v. Robert Manners* [1995] FSR 870, 876.

which was of an indecent or indelicate character and unfit for schoolchildren.⁵³ To this end passages from the original were merely omitted at various points. Such a process did not require ‘great knowledge, sound judgment, literary skill or taste to be brought to bear upon the translation’.⁵⁴ There had, no doubt, been effort expended in making the reduction but the Privy Council contrasted it with a (hypothetical) original abridgment, by explaining that the (hypothetical) process of abridgment would have required some form of ‘learning, judgment, literary taste and skill’.⁵⁵ That is, it lacked what the courts saw as the necessary skills to qualify for protection. Quoting from an early edition of Copinger’s *Treatise on Copyright*, the Privy Council said that ‘the act of abridgment is an exertion of the individuality employed in moulding and transfusing a large work into a small compass . . . Independent labour must be apparent, and the reduction of the size and work by copying some of its parts and omitting others’ does not do this.⁵⁶ In contrast, the Privy Council said that the reduction of the *Life of Alexander* from 40,000 to 20,000 words was non-original because it lacked the ‘exertion of the individuality employed in moulding and transforming a large work into a small compass’.

MacMillan v. Cooper seems to set a surprisingly demanding standard for the types of labour, skill, and judgment that are relevant. It can be contrasted with *Walter v. Lane* (though the Privy Council saw no inconsistency with that decision).⁵⁷ In this case it was held that a newspaper report of an oral speech given by Lord of Rosebery, transcribed by a reporter from the talk, was protected by copyright. This was because the reporter exercised considerable labour, skill, and judgment in producing a verbatim transcript of the speech. More specifically, the House of Lords said that the reduction to writing of the words of a person who spoke quickly was an art requiring considerable training.⁵⁸ Lord James of Hereford explained that ‘from a general point of view a reporter’s art represents more than mere transcribing or writing from dictation. To follow so as to take down the words of an ordinary speaker, and certainly of a rapid speaker, is an art requiring considerable training, and does not come within the knowledge of ordinary persons’.

One question that remains unanswered in this context is whether the digitization of a work (with no other changes) is sufficient to confer originality on the resulting work. For example, would the digital scanning of a novel or the creation of a digital database from non-digital sources give rise to an original work? Some commentators have suggested that the translation of a work into a digital format (in the case of a literary work, from a ‘typographical character to numerical token’)⁵⁹ may give rise to an original work. While

⁵³ However, the appellant had added marginal notes, an introduction and a chronological table. The Privy Council held that these were well chosen, neatly condensed, sufficiently copious and accurate and must have required literary skill, taste, labour, and judgment.

⁵⁴ *MacMillan v. Cooper* (1924) 40 TLR 186.

⁵⁵ *MacMillan v. Cooper* (1923–4) 40 TLR 186, 187.

⁵⁶ *Ibid.*

⁵⁷ *Walter v. Lane* [1900] AC 539. This was decided under the 1842 Act and there was no specific requirement of originality, it has been treated as being ‘undeniably good law’. See *Express Newspapers v. News UK* [1990] FSR 359 (Browne-Wilkinson V-C).

⁵⁸ The court also noted that considerable skill had to be invested in learning shorthand and that judgment was exercised in deciding how to convert spoken words and performance to written sentences, with suitable grammar. On the skills of the journalist see *Walter v. Lane* [1900] AC 539, 551–2 (Lord Davey); 554 (Lord James of Hereford).

⁵⁹ Laddie *et al.*, para. 20.67 suggest that it was akin to the copyright protection given to the speechwriter in *Walter v. Lane* [1900] AC 539.

there can be no doubt that the process of digitization does produce a product which is different, in the light of *MacMillan*, it is doubtful whether the labour is of the sort which can render the outcome original.

(ii) *The effort must bring about a material change in the work.* Second, labour, skill, and judgment must have been applied to pre-existing materials so as to bring about a *material change* to the raw material. More specifically, the labour, skill, and capital must have imparted to the product 'some quality or character which the raw material did not possess, and which differentiates the product from the raw material'.⁶⁰ In so doing the law ensures that any copyright that is acquired in a derivative work is distinct from the original work that is incorporated into it.

In some situations, originality has been denied where the labours of a creator fail to bring about a material change in the resulting product. That is, while the efforts of the author may have led to a change in the resulting product, the change (thus the labour) is not regarded as sufficient to confer originality on the resulting work. Conversely, where the change is material, the work will be original. This approach has been used to confer originality on new editions,⁶¹ compilations, anthologies, translations,⁶² adaptations of pre-existing materials,⁶³ as well as arrangements of music,⁶⁴ and engravings. In all these cases, the labour of the author not only produced a change, it also produced what was taken to be a 'material change' in the raw material. The difficult question is deciding when such a transformation has occurred.

In *Interlego v. Tyco*, the Privy Council was called upon to decide whether there was copyright in drawings for the children's building blocks known as *LEGOBRICKS*.⁶⁵ After Lego's patents and designs in the bricks expired in 1975, Lego sought to retain its monopoly over the bricks by claiming that copyright existed in drawings produced in 1973. As these drawings were based upon earlier drawings, the question arose as to whether the alterations made in 1973 were sufficient to produce an original artistic work. The major differences between the drawings concerned the sharpening of the outer edges of the tubes on the brick, changes in tolerances, and increase in the radii on the outer edges of the knobs on the bricks from 0.2 to 0.3 mm.

While the Privy Council recognized that these changes were technically significant and the result of considerable labour and expertise, they denied that there was copyright in the

⁶⁰ *MacMillan v. Cooper* (1924) 40 TLR 186, 188; (1923) 93 LJPC 113 (a passage described in *Interlego* as 'perhaps the most useful exegesis' on the issue of originality).

⁶¹ *Black v. Murray* (1870) 9 MacG CC 341, 355. Lord Kinloch held that to create copyright in a new edition, alterations must be extensive and substantial; additional notes must be not superficial or colourable, but impart to the book a true and real value over and above that belonging to the text. Although as has been explained in the discussion of *Walter v. Lane*, there was no requirement of originality under the Literary Property Act 1842, decisions thereunder have often been cited in the context of works created after 1911.

⁶² *Byrne v. Statist Co.* [1914] 1 KB 622; *Cummins v. Bond* [1927] 1 Ch 167.

⁶³ *Warwick Films v. Eisinger* [1969] 1 Ch 508 (book comprising large extracts from court transcripts was original because of editorial work, addition, and omission of material, etc.).

⁶⁴ *ZYX Music GmbH v. King* [1995] 3 All ER 1 (appeal dismissed: on other grounds [1997] All ER 129) (transformation of ballad into disco or dance track was original arrangement). See R. Arnold, *Performers' Rights* (1997), 171–4. But note *Hadley & Others v. Kemp* [1999] EMLR 589 (contributions of performers not relevant when assessing originality).

⁶⁵ *Interlego v. Tyco Industries* [1989] AC 217.

later drawings.⁶⁶ The mere fact that the drawing took skill and labour to produce did not necessarily mean that it was therefore an original drawing. As Lord Oliver explained, '[t]here must in addition be some element of material alteration or embellishment which suffices to make the totality of the work an original work'.⁶⁷

This decision can be usefully contrasted with *Macmillan Publishers v. Thomas Reed Publications*.⁶⁸ The case turned on whether the publication of a number of small, local charts that contained an outline of the coastline as well as relevant information (such as depth soundings, buoys, and geographical features) were original. More specifically, the question arose as to whether the charts were original, given that they were drawn from and based upon Admiralty charts. The High Court held that the labour used in producing the simplified charts involved the appropriate level of work and skill and transformed the charts sufficiently for the resulting work to be original.

It should also be noted that the requirement that the labour needs to produce a materially different work for it to be original is unnecessary where the same author produces a series of drawings or drafts.⁶⁹ As Nourse LJ explained:

What the Copyright Act requires is that the work should be the original work of its author. If, in the course of producing a finished drawing, the author produces one or more preliminary versions, the finished product does not cease to be his original work simply because he adopts it without much variation, or even if he simply copies it from an earlier version. Each drawing, having been made by him, each is his original work.⁷⁰

In effect, the Court of Appeal indicated that no material change is required in situations where there are a series of drafts *by the same author*. It should be noted, however, that this exception to the rule that a derivative work must involve a material change if it is to be original has no application where there are different authors at each stage.⁷¹

(iii) *The change must be of the right kind.* Another situation where an author may exercise a considerable amount of labour and the work not be original is where the type of labour used does not correspond to the type of work for which protection is sought. This can be

⁶⁶ Lord Oliver was happy to find that these drawings were not original. Otherwise, Lego would have been able to maintain a perpetual monopoly by continually revising the picture. This type of behaviour, he noted, had been disapproved of by the House of Lords in *Coca-Cola Co. Trade Mark Application* [1986] 1 WLR 695. It seems that Lord Oliver overlooked the fact that the pre-1973 works were not protected by copyright and therefore that a competitor was free to copy pre-1973 drawings (or models based on upon pre-1973 drawings).

⁶⁷ *Interlego v. Tyco Industries* [1989] AC 217. This leads to the rather bizarre conclusion that good reproductions are denied copyright but poor ones have sufficient visually significant variation. This was explicitly stated by Lord Oliver [1989] AC 217. For further discussion, see Laddie *et al.*, para. 4.42.

⁶⁸ [1993] FSR 455. Mummery J explained, 'On originality I find that this is a case where sufficient work and skill have been done; both in the creation of the simplified form of a work, showing the outline of the coast and geographical features, and in the compilation of selected information, such as depth soundings, geographical features, buoys and so on'.

⁶⁹ Moreover, it has been held that where a drawing was made from a three-dimensional functional design, such a drawing would be original if there was a continuous design process between the creation of the three-dimensional functional object and the subsequent creation of the two-dimensional drawing copying the three-dimensional object. *Murray Engineering v. Nicholas Cesare* (1997, unreported).

⁷⁰ *LA Gear v. Hi-Tech Sports* [1992] FSR 121, 136 (Nourse LJ).

⁷¹ *Biotrading and Financing Oy v. Biohit* [1996] FSR 393, 395 (not sufficient merely to be owner of copyright in earlier drawings if later ones which are relied upon are not significantly different). Cf. *Rexnold v. Ancon* [1983] FSR 662 (summary judgment refused in similar circumstances).

seen in *Interlego*.⁷² As noted, the major differences between the 1973 drawings and the earlier ones from which they were derived concerned the sharpening of the outer edges of the tubes on the brick, changes in tolerances, and increase in the radii on the outer edges of the knobs on the bricks from 0.2 to 0.3 mm. Of the changes made, only the first was shown pictorially, the others by letters and figures. While the Privy Council recognized that these changes were technically significant they were not sufficient to render the work original because in the case of artistic works the change must be *visually significant*. That is, to confer copyright the skill and labour must produce a change which is relevant to the category of work in question. On the facts it was held that as the changes made to the drawings were primarily to the written specifications, this was not an alteration of visual significance.⁷³ As such, the drawings were not original. If this principle is applied in other contexts, it may have important ramifications for forms of appropriation art; that is where artists focus on the meaning rather than the visual appearance of the work.⁷⁴

3.1.5 Tables and compilations (other than databases)

In this section, we consider the way in which the originality of tables and compilations has been approached. As we explained earlier, as a result of the Database Directive a new European standard of originality now applies for databases. The consequence of this is that the following analysis is now only applicable to a very narrow category of works, namely, tables and compilations (other than databases). However, the following analysis is helpful in two other respects. First, an understanding of the way the originality of tables and compilations has been dealt with in the past in the UK is helpful in understanding the nature of the changes effected by the Directive.⁷⁵ Second, and more importantly, the case law on originality of compilations indicates the confused and inconsistent approaches taken by the British courts.

Over time the courts have used two different and largely inconsistent approaches when determining whether tables and compilations are original. While the approaches are similar insofar as they focus upon the labour exercised in the creation of the work, they differ in terms of the *type* of labour that is needed for the work to be original. In some cases, originality arises through the application of the appropriate skill, labour, and effort in the creation of the work (the *quality* of the labour used in creation of the work). More controversially, originality can also arise through the application of a sufficient amount of routine labour (the *quantity* of the labour used in creation of the work). We will deal with each in turn.

(i) *Quality of the labour*. The originality of tables and compilations may arise through the application of the appropriate skill, labour, and effort in the creation of the work (the *quality* of the labour used in creation of the work). It seems that the requisite labour may

⁷² *Interlego v. Tyco Industries* [1989] AC 217.

⁷³ *Interlego v. Tyco Industries* [1989] AC 217, 268 (Lord Oliver). Cf. *Interlego AG v. Croner Trading* 25 IPR 65 (Fed. Ct. Australia). Visually significant variations have been held to include changes of shape but not mere changes of scale: *Drayton Controls v. Honeywell Control Systems* [1992] FSR 245, 260.

⁷⁴ See B. Sherman, 'Appropriating the Postmodern: Copyright and the Challenge of the New' (1995) 4 *Social & Legal Studies* 31 and McLean & Schubert (eds.), *Dear Images* 405; P. Anderson, 'On the Legal Limits of Art' (1994) *Arts & Entertainment LR* 70.

⁷⁵ In addition, tables and compilations which are databases and which existed prior to 27 Mar. 1996 retain copyright if they passed the British test of originality then operative, even though they would now fail the European test: Database Regs, SI 1997/3032, reg. 29.

be employed either in the way the information to be included in the compilation is *selected*, or the way that information is *arranged*. For example, if we take the case of an edited collection, originality may arise as a result of the way the authors to be included in the volume are selected, or through the way the chapters are organized.

Given that tables and compilations are similar to derivative works (a list is, after all, made up from pre-existing materials), the comments made above about the originality of derivative works apply here. Looking at the question negatively, it seems that a table or compilation would not be original where the selection and arrangement is directly or slavishly copied from another work. Another situation where a compilation would lack originality is where the resulting work is a consequence of a mechanical, automatic or formulaic process. The position would be the same where the material to be included in a compilation was selected automatically. In *Cramp v. Smythson*, Viscount Simon suggested that the making of a chronological list which is 'automatic and only requires painstaking accuracy' would not, of itself, be original.⁷⁶ The reason for this is that the making of a chronological list requires no element of 'taste or selection, judgment or ingenuity'.⁷⁷ On this basis it seems that where a list is organized alphabetically, it would not give rise to an original work (although originality may arise through the quantity of labour used in creating the compilation).

(ii) *Quantity of the labour*. In certain situations the courts have accepted that the mere exercise of a substantial amount of routine labour may give rise to an original work.⁷⁸ For example, where a compiler spends a considerable amount of time and effort creating a chronological list of television programmes or an alphabetically ordered list of lawyers,⁷⁹ the resulting work will be original. That is, even though in creating the table or compilation the author may not have exercised the appropriate quality of labour, the work may nonetheless still be original if the process of compilation involves a sufficient level of (mundane) labour.

Where there is insufficient labour (and originality does not arise through the exercise of requisite qualitative skill, labour, and effort), the resulting work will not be original. For example, where the process of compilation involves little effort or judgment and the effect is commonplace, the work will not be treated as original. Thus the selection of seven tables at the front of a diary, consisting of things such as days and dates of the year, tables of weights and measures, and postal information,⁸⁰ was held by the House of Lords to be non-original. Similarly, in another case a compilation of a local timetable showing a selection of trains to and from a particular town that was made from official railway

⁷⁶ In relation to indisputable facts (such as when the sun rises or sets), it was said that there is 'no room for taste or judgement. There remains the element of choice as to what information should be given': all that a table can do is state the facts accurately: *Cramp v. Smythson* [1944] AC 329, 336 (Viscount Simon).

⁷⁷ *Football League v. Littlewoods* [1959] Ch 637, 654. Though in this case, Upjohn J. *obiter* at 656 would have accepted that the expenditure of labour requiring painstaking hard work and accuracy would suffice.

⁷⁸ *Ladbroke v. William Hill* [1964] 1 All ER 465, 478 (Lord Devlin).

⁷⁹ *BBC v. Wireless League Gazette Publishing Co.* [1926] Ch. 433; *Independent Television Publications v. Time Out* [1984] FSR 64; *Waterlow v. Reed* [1992] FSR 409; *Dun & Bradstreet v. Typesetting Facilities* [1992] FSR 320. *Blacklock v. Pearson* [1915] 2 Ch 376 (list of railways stations in UK).

⁸⁰ *Cramp v. Smythson* [1944] AC 329 (Viscount Simon LC) ('commonplace information which is ordinarily useful and is . . . commonly found prefixed to diaries'). See also *Waylite Diary CC v. First National Bank* [1993] EIPR D-242 (no copyright in diary pages which lacked quality of individuality sufficient to distinguish the work from the merely commonplace).

timetables was held to be non-original.⁸¹ In these circumstances the difficult question is knowing how much labour needs to be exercised for the resulting work to be original.⁸²

The willingness to accept that a substantial amount of routine labour may give rise to an original work is usually explained in terms of the fact that defendants ought not to be able to avail themselves of the labour and expense which a claimant invested in the production of a work.⁸³ Instead of asking whether the work is original and thus protectable, where the courts have focused on the quantity of the labour exercised in the creation of the work they have tended to start from the premiss that any labour or effort that a claimant exercised in the production of work ought to be protected (so long as it reaches the requisite quantitative threshold). This is reflected in the maxim: 'what is worth copying is prima facie worth protecting'.⁸⁴ One issue that has yet to be answered in this context, to which we will return shortly, relates to the impact that the new standard of originality which is now to be applied to databases (namely, an author's own intellectual creation) will have upon these decisions.

The position in the United Kingdom where the exercise of non-creative labour can give rise to an original work can be contrasted with the position in other jurisdictions such as Germany (where case law suggests that there is a requirement of some minimal degree of creativity) and France (where originality is said to require 'the imprint of the author's personality' on the work or an intellectual contribution). The UK position is also at odds with the position in the USA where, as the Supreme Court pointed out in the *Feist* decision, a work must have at least a minimal degree of creativity to be protected.⁸⁵ In relation to the question of the originality of a white-page telephone directory, the Supreme Court held that since facts were not created, the names and numbers were not themselves 'copyrightable'. Moreover, while the collection might have been original had the selection or arrangement involved some minimal creativity, as the directory in question had been selected by area and arranged alphabetically, it did not meet that minimum threshold.⁸⁶

⁸¹ *Leslie v. Young* [1894] AC 335.

⁸² See *Cramp v. Smythson* [1944] AC 329; *Greyhound Racing Association v. Shallis* [1923–8] MacG CC 370; *Total Information Processing Systems v. Daman* [1992] FSR 171 (linking of three computer programs was not a compilation). Cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 290.

⁸³ *Weatherby and Sons v. International Horse Agency and Exchange* (1910) 2 Ch 297, 303–5; *Waterlow Directories v. Reed Information Services* [1992] FSR 409.

⁸⁴ *University of London Press v. University Tutorial Press* [1916] 2 Ch 601 (Peterson J). This can be justified on the basis that if a person copies an existing work, that person has demonstrated that the work incorporated skill or labour since otherwise it would not be worth copying. If the aphorism were taken at face value, it would prevent defendants from asserting that they were entitled to copy the claimant's work on the basis that it was not original.

⁸⁵ *Feist Publications v. Rural Telephone Service Co.*, 499 US 340 (1991).

⁸⁶ The *Feist* approach has been explicitly rejected in Australia, in *Desktop Marketing Systems Pty Ltd v. Telstra Corporation Ltd* (2002) 119 FCR 491, with the Federal Court of Australia affirming that laborious collection of data was sufficient to render the telephone directory an 'original literary work'. *Feist* has also been rejected in Canada, with the Supreme Court decision in *CCH Canadian Ltd v. Law Society of Upper Canada* [2004] SCC 13 (4 Mar. 2004) (holding that copyright subsisted in headnotes of judicial decisions) stating that imagination or creative spark was not a necessary element of originality but that skill and judgment was (para. 16). At the same time, however, the Supreme Court of Canada stated that labour alone would not usually suffice to demonstrate originality and that the skill and judgment required to produce the work must not be so trivial that it could be characterized as a purely mechanical exercise. The Supreme Court was opposed to granting copyright purely on the basis of labour so as to safeguard the 'public domain' and prevent authors from being overcompensated for their work.

It should be noted that routine labour has only been used to confer originality on the resulting work in the UK in a limited number of situations. In particular, it has only been applied to a limited category of works: largely to tables and compilations of things such as maps, guidebooks, street directories, dictionaries, works, and selections of poems.⁸⁷ More specifically, the cases which have accepted that originality can arise through the exercise of a sufficient degree of labour have tended to focus on the amount of labour exercised in the *selection* of materials to be included in tables and compilations: that is, they take place in the pre-expressive rather than the expressive stage.⁸⁸

3.1.6 Computer-generated works

Prior to the passage of the 1988 Act, there was some uncertainty as to the status of computer-generated works; that is, to works created by translation programs, search engines, and the like. In part, the 1988 Act resolved this uncertainty by providing that a literary, dramatic, musical, or artistic work attracts copyright protection even where it has been generated by computer in circumstances where there was no human author.⁸⁹ While these changes were useful insofar as they clarified that creations generated by a computer could be classified as works, they said nothing about how the originality of such works was to be determined. The particular problem that arises with computer-generated works is that it is difficult to see how the existing criteria of originality, which focuses on the relationship between the author and the work, can be applied to computer-generated works which, by definition, have no readily identifiable author.⁹⁰

Given that computer-generated works are protected where there is no human author, the question arises: what is the test for originality that is to be applied to such works? One possible test would be to ask whether the work was produced as a result of the independent acts of the computer. That is, is the work original in the sense that it was 'not copied'? Alternatively, a court might say that originality exists where the computer has produced a work which is different from previous works (i.e. it is novel). It has also been suggested that the courts ought to ask the hypothetical question: if the same work had been generated by a human author would it have required the exercise of a substantial amount of skill, labour, and effort? If yes, then the computer-generated work would be original.⁹¹

3.2 EUROPEAN ORIGINALITY: DATABASES, PHOTOGRAPHS, AND COMPUTER PROGRAMS

As we noted in Chapter 2, a process of partial harmonization of copyright law is taking place within Europe. The Software and Database Directives require that a computer

⁸⁷ *Macmillan v. Cooper* (1924) 40 TLR 186, 189.

⁸⁸ *Cramp v. Smythson* [1944] AC 329, 330.

⁸⁹ CDPA s. 9(3), 178. Cf. *Payen Components South Africa v. Bovic Gaskets* (1996) 33 IPR 406, 411 (Supreme Ct. of South Africa) (distinguishing between 'computer-generated' and 'computer-assisted' works). Apparently the issue of such works was considered in the USA as early as 1965. See A. Miller, 'Copyright Protection for Computer Programs, Databases and Computer-Generated Works: Is Anything New since CONTU?' (1993) 106 *Harvard LR* 977, 1042 ff (describing the issue as copyright's next 'battlefield' but arguing that the problem remains conceptual for the moment because there will be identifiable human authors for the foreseeable future).

⁹⁰ As regards computer-generated computer programs and databases, the EC standard should apply so that presumably no copyright protection is available.

⁹¹ Laddie *et al.*, para. 20.63.

program or database can only be protected by copyright where it is the 'author's own intellectual creation'.⁹² A similar test was also introduced for photographs in the Duration Directive.⁹³

3.2.1 Databases

In implementing the Database Directive, the UK Database Regulations explicitly amended the originality requirement of the 1988 Copyright Act in relation to databases to include the new criterion of the 'author's own intellectual creation'.⁹⁴ In particular, section 3A(2) says that 'a literary work consisting of a database is original if, and only if, by reason of the selection or arrangement of the contents of the database the database constitutes the author's own intellectual creation'.

The position in the United Kingdom under the revised law is similar to the old law in that the originality of the database may arise either through 'the selection or arrangement of the contents of the database'. It should be noted, however, that the new criterion does not appear to permit a court to take account of creativity in the *creation* of information included in the database. Thus an organization which spends time carefully thinking about what television programmes to broadcast and at what times they should be broadcast will not obtain copyright protection for listing so produced. This is because the 'intellectual creation' lies not in the selection or arrangement of the contents, so much as in their creation. (In other words, the European standard seems to require a court to distinguish more rigorously than British courts have hitherto been accustomed, between pre-expressive and expressive aspects in the creation of a database.)

The extent to which the new law will differ also depends on the way 'an author's own intellectual creation' is interpreted by the courts. At present it is difficult to predict how this phrase will be interpreted. It has been widely assumed that the new EU standard is higher than the prior British standard of originality.⁹⁵ There is some suggestion that a quantitative criterion as well as this qualitative criterion of originality should apply.⁹⁶ However, someone familiar with the common law might find it difficult to see how the phrase differs from the words used by Peterson J in *University of London Press v. University Tutorial Press*.⁹⁷ There is some indication of the intended standard in Recital 17 of the Duration Directive. This explains that a photograph will be original 'if it is the author's

⁹² Software Dir., Art. 1(3) ('a computer program shall be protected if it is original in the sense that it is the author's own intellectual creation. No other criteria shall be applied to determine its eligibility for protection': Database Dir., Art. 3(1)).

⁹³ It is arguable that this European standard is also required of photographs by Art. 6 of the Duration Dir., which states that photographs which are original in the sense that they are the author's own intellectual creation shall be protected in accordance with Art. 1. No other criteria shall be applied to determine their eligibility for protection.

⁹⁴ CDPA s. 3A(2), introduced by Databases Regs. 1997, SI 1997/3032, r. 6.

⁹⁵ Davison, 15–16.

⁹⁶ *British Horseracing Board v. William Hill* [2001] ECDR 257, 269 (Laddie J) (an inference from Database Dir., Recital 19 which states that the compilation of several recordings of musical performances on a CD does not meet the conditions for copyright protection).

⁹⁷ [1916] 2 Ch 601, 608. C. Millard, in H. Jongen and A. Meijboom (eds.), *Copyright Software Protection in the EC* (1993), 239. Because the phrase can be interpreted as requiring no change for any particular EC country, Karnell calls it a 'chimera': G. Karnell, 'European Originality: A Copyright Chimera', in *Intellectual Property and Information Law* (Kabel et al. ed., 1998), 201–9. While this may be true in the short term, the ECJ will eventually decide on the standard that prevails.

own intellectual creation reflecting his personality'. Whether this will be used in relation to databases is yet to be seen.

While the courts may use the new standard as a way of rethinking the law in relation to originality, for the most part the new standard will probably not lead to different results. In particular, where the originality derives from the quality of the labour used in either the selection or arrangement of the database, it is still likely to be regarded as an author's intellectual creation. The one area where the new definition may lead to a change is where originality arises through the mere exercise of routine labour; that is, where the *quantity* as distinct from the quality of the labour is used in the creation of the database. Where all an author has done is to exert a considerable amount of effort in the creation of a database, it is difficult to see how this, on its own, could be seen as an 'intellectual creation', especially one which reflects the author's personality. As a result it is possible that the previous decisions which accepted that the exertion of a sufficient amount of routine labour could confer originality on tables and compilations may no longer be good law for databases (though it might be for tables and compilations other than a database).⁹⁸ If so, the United Kingdom will come closer to the position of other EU countries. It will also lead to a similar position in UK law as *Feist* produced in the USA.

3.2.2 Computer programs

In implementing the Computer Programs Directive the government did not consider it necessary to amend the 1988 Act in relation to originality.⁹⁹ As was the case before the Directives, such works are protected if they are 'original'. The fact that no changes were made to the standard of originality for computer programs seems to suggest that it was thought that the position in the United Kingdom prior to the implementation of the Directives was already similar to the position required under the Directives. Nevertheless, the language of the 1988 Act should be construed as far as possible to be consistent with international obligations,¹⁰⁰ so the originality computer programs in the United Kingdom should now be read in light of the EU standard of an author's own intellectual creation.

Accordingly, it seems that elements in a computer program which are dictated by the function the program is to perform or by economic necessity are probably not-original.¹⁰¹ To impose a test of author's own intellectual creation upon computer programs may also mean that commonplace routines used by programmers would not be protected.

3.2.3 Photographs

The position with respect to photographs is more complicated. This is for two reasons. First, the law on originality of photographs prior to the Directive was unclear.

⁹⁸ As explained below, pp. 297–301, absent fulfillment of this criterion, the material data may be protected by a *sui generis* right.

⁹⁹ Cf. Germany which introduced sec. 69(a) into its copyright law explicitly repeats the wording of the Directive. G. Schricker, 'Farewell to the "Level of Creativity" in German Copyright Law?' (1995) 26 *IIC* 41.

¹⁰⁰ *Von Colson and Kamann*, Case 14/83 [1984] *ECR* 1891.

¹⁰¹ See G. Dworkin, 'Copyright Patents or Sui Generis: What Regime Best Suits Computer Programs?' in H. Hansen (ed.), *International Intellectual Property Law and Policy* (1996) 165, 168; J. Drexler, *What Is Protected in a Computer Program?* (1994), 96–7 (emphasizing that the European standard was a direct reaction to the German *Inkassoprogramm* decision, and the standard adopted is consistent with the copyright approach of treating originality as requiring the independent creation of an author, though not mere 'sweat-of-the-brow').

Second, even after the Directive, it is difficult to know whether the traditional British test of originality must be employed, or whether the Act implicitly adopts the European one.

Prior to the adoption of the Duration Directive, little judicial guidance had been given in the United Kingdom as regards the exact circumstances in which photographs would be regarded as original.¹⁰² While there was little doubt that protection would be granted to more 'artistic' photographs (where there may be considerable effort in selection of the material to be photographed and the way the photograph is executed in terms of light, angle, exposure),¹⁰³ doubts existed over the originality of routine snapshots, as well as the originality of photographs of pre-existing artistic works. Although, in *Graves' Case*, Blackburn J held that a photograph of an engraving of a painting was an 'original photograph' and therefore protected under the Fine Art Copyright Act 1862, doubts had been raised as to the usefulness of this case as an authority today, given that the technological apparatus for taking photographs is so much more developed (and thus the act of taking photograph so much easier).¹⁰⁴

As regards snapshots, no judicial guidance had been provided as to whether pointing a camera and pressing the button was sufficient 'labour, skill and effort' to justify protection. It was possible to claim that in such circumstances the photograph 'originated with the author' and so should be treated as original (applying the *University of London Press* case). Moreover, it was argued, if someone wished to copy a photograph, is that not sufficient reason to treat it as original? On the other hand, it is clear that copyright does not protect the products of trivial effort. What could be more trivial than a snapshot?

As regards photographs of pre-existing works, doubt was cast on the usefulness of the authority in *Graves' Case* by *Interlego v. Tyco*. As we have seen, Lord Oliver was dismissive of the idea that labour in the process of copying could confer originality. If an artist gets no copyright by making a faithful copy of a painting, it was asked, how could a photographer be said to create an original work where they expended much less labour or skill in photographing a painting? On this basis, in the US case *The Bridgeman Art Library Ltd v. Corel Corp*, an American judge (Justice Kaplan) found that *under UK law* a photograph of a public domain painting is not entitled to copyright because it is not an original work.¹⁰⁵ The US decisions, which are not binding on UK courts, concluded that a photograph which attempted to duplicate another work was the equivalent of a photocopy, and thus is not protected by copyright because there is no visually significant embellishment to render the photograph an original work. However, it has been trenchantly argued that it is wrong to apply the dicta in *Interlego v. Tyco* in this way, and there would certainly be serious

¹⁰² In *Graves' Case* (1869) LR 4 QB 715 Blackburn J held that a photograph of a painting was an 'original photograph' but noted the difficulty involved, explaining, '[t]he distinction between an original painting and its copy is well understood, but it is difficult to say what can be meant by an original photograph. All photographs are copies of some object'. It should be noted that, in contrast with the position in relation to protection of books under the Literary Property Act 1842, photographs, drawings, and paintings were only protected under the Fine Art Copyright Act 1862 if they were 'original'. *Graves' Case* therefore remains relevant.

¹⁰³ K. Bowrey, 'Copyright, Photography and Computer Works: The Fiction of an Original Expression' (1995) 18 *University of New South Wales LJ* 278.

¹⁰⁴ R. Deazley, 'Photographing Paintings in the Public Domain: A Response to Garnett' [2001] *EIPR* 179, 181.

¹⁰⁵ *The Bridgeman Art Library Ltd v. Corel Corp* (1998) 25 *F Supp* 2d 421, 36 *F Supp* 2d 191.

economic implications for museums and art galleries if this were ultimately found to be the law.¹⁰⁶ In *Antiquesportfolio.com v. Rodney Fitch & Co Ltd*,¹⁰⁷ it was held that copyright subsists in simple photographs of three-dimensional objects because the taking of such photographs involves judgment—the positioning of the object, the angle from which the picture is taken, the lighting and focus. It seems likely therefore that, despite *Interlego*, the British courts would, applying the traditional originality test, treat photographs of existing (albeit two-dimensional) paintings in the same way. The labour and skill of photography produces a material change in the work, by converting it from paint on canvas, to the flat representation of a photograph. In so doing, the photographer employs various skills, which can be described as more than skills in the mere process of copying.

The position after the Duration Directive is even more unclear. This is because the Directive itself allows for two courses of action, and it is unclear which of these courses the United Kingdom has taken. As mentioned, the Directive requires original photographs to be protected by copyright if they meet the European originality criterion (that is, they are their ‘author’s own intellectual creation’). However, the Directive allows member states to give protection to non-original photographs (i.e. ones which are non-original in the European sense). In so far as the traditional (UK) standard of originality is lower than the (European) standard in Article 6(1) (and Recital 17) of the Duration Directive, this allows the United Kingdom to maintain its lower standard: that is, to protect photographs which are ‘non-original’ (in the European sense). The difficulty with interpreting the British law lies in the fact that the legislature said nothing about this issue when implementing the Directive. That is, after 1 January 1996, UK law only protects ‘original’ photographs, but it is unclear whether by that it means ‘original’ in the British sense or ‘original’ European sense.

As things stand, the most obvious way to interpret the originality requirement in the 1988 Act so that it complies with the Duration Directive with respect to photographs is to interpret the word ‘original’ as referring to the European standard. That is, as requiring the photograph to be an author’s own intellectual creation reflecting his or her personality. However, it is quite plausible to argue that the lack of any transitional provisions applying to photographs made prior to January 1996 suggests that the old standard, i.e. the tradition British standard, is intended to apply. That is, that when UK law protects ‘original’ photographs it protects photographs that are original in the European sense, and takes advantage of the derogation also to protect photographs which are non-original in the European sense, but original in the British sense.

The conclusion matters. Under the Directive, an original photograph is one which is the author’s own intellectual creation, ‘reflecting his personality’. It seems unlikely that photographs of existing painting or sculptures (at least when done purely to produced a

¹⁰⁶ See, e.g. K. Garnett, ‘Copyright in Photographs’ [2000] *EIPR* 229. Cf. R. Deazley, ‘Photographing Paintings in the Public domain: A Response to Garnett’ [2001] *EIPR* 179 (arguing that *Graves’ case* is inapplicable in the light of *Interlego*), S. Stokes, ‘Graves’ case revisited in the USA—*The Bridgeman Art Library v. The Corel Corporation*’ [2000] *Ent LR* 104; S. Stokes, ‘Photographing Paintings in the Public Domain: A Response to Garnett’ [2001] *EIPR* 354 (in fact, a response to Deazley, arguing for copyright in such works to protect the labour and skill of the photographer); R. Deazley, ‘Copyright; Originality; Photographs; Works of Art’ [2001] *EIPR* 601 (responding to Stokes); S. Stokes, ‘Graves Case and Copyright in Photographs: *Bridgman v. Corel*’, in D. McLean and K. Schubert (eds.), *Dear Images: Art, Copyright and Culture*, 109 (2002).

¹⁰⁷ [2001] *FSR* 345; [2001] *ECDR* 51.

faithful impression of these artefacts) could be said to reflect a photographer's personality. However, as already noted, such photographs may well be original in the traditional British sense.

4 ENTREPRENEURIAL WORKS: 'NOT COPIED'

Unlike the case with literary, dramatic, musical, and artistic works, there is no requirement that films, sound recordings, broadcasts, or published editions be original. Instead, the 1988 Act provides that copyright does not subsist in a sound recording, a film, or a published edition to the extent that it is itself copied from a previous work of the same kind.¹⁰⁸ In relation to broadcasts, the Act provides that copyright does not subsist to the extent that it infringes copyright in another broadcast.¹⁰⁹ One of the consequences of this is that entrepreneurial works will be protected irrespective of whether or not the author exerted mental skill, labour, or effort in the creation of the work. This means that if a video recorder or tape recorder is turned on and left on a table, the resulting film or sound recording would be protected.¹¹⁰

It has been suggested that the reason why a lower standard is applied to entrepreneurial works than to authorial works relates to the nature of the rights which are granted.¹¹¹ In relation to authorial works, the scope of the rights is more expansive than with entrepreneurial works. As a result, it is more important that the law monitors the types of authorial works that are protected. Conversely, in the case of entrepreneurial works where protection is thin, there is less of a need to monitor the subject matter protected. This does not mean, however, that it is not necessary to regulate the types of subject matter protected as entrepreneurial works. In particular, to have allowed such works to be protected with no threshold requirement would have created the undesirable position that rights in entrepreneurial works could have continued in perpetuity. The reason for this is that in the absence of some limitation, every time someone copied an entrepreneurial work they would have obtained a fresh copyright in the 'new' work. This problem is avoided in the 1988 Act by ensuring that entrepreneurial works are only protected to the extent that they are not copied.

For the most part these provisions are relatively straightforward. However, three issues remain unsettled. The first is whether a compilation of parts of sound recordings (such as a 'megamix') would be protected as a separate sound recording?¹¹² On one view, if the megamix is compiled from pre-existing recordings, then nothing is protectable. The reason for this is that each pre-existing element is excluded on the basis that it is copied from another sound recording. However, if such an approach were to be followed it would lead to the bizarre result that the absence of a notion of originality in respect of entrepreneurial works means the threshold of protection is higher than with respect to authorial works

¹⁰⁸ CDPA ss. 5A(2), 5B(4), 8(2).

¹⁰⁹ CDPA ss. 6(6).

¹¹⁰ Kamina, 96–9 (the only films that benefit from the absence of an originality requirement are recordings of security cameras and fortuitous films).

¹¹¹ Laddie *et al.*, para. 6.13.

¹¹² P. Theberge, 'Technology, Economy and Copyright Reform in Canada', in S. Frith (ed.), *Music and Copyright* (1993), 53.

(where collections of materials are protected as database, tables, and compilations).¹¹³ Perhaps the better view is that a compilation of sound recordings ought to be protected as a sound recording, on the basis that the compilation is more than the sum of its parts.

The second question is whether in the process of digitally remastering an old work, the resulting work would be protected. Where no change is made to the contents of the work, it is difficult to see how the digital version of the work could be protected by copyright, since the recording is copied from existing recording of sounds. Would the position be any different if in the process of remastering an old recording it was cleaned of unnecessary noise and interfering sound? It seems that the way this question will be answered depends on the way the phrase 'to the extent that' is construed.¹¹⁴

Another question that has arisen is whether the recent introduction of a provision to the effect that the producer and principal director are the creators of a film means that films are now to be treated as authorial rather than entrepreneurial works (or indeed as some sort of hybrid). In turn this might suggest that to be protected a film must be original.¹¹⁵ Weighing against this, however, is the fact that the provisions dealing with duration provide that a film may lack a director yet still attract copyright.¹¹⁶ Given this (and the express language used in the Act), it seems that films will not be subject to the originality requirement.

5 IS THE WORK 'QUALIFIED'?

In order for a work to be protected in the United Kingdom, it is necessary to show that the work is suitably 'qualified'.¹¹⁷ That is, it is necessary to show that the work is sufficiently connected to the UK to qualify for protection under UK law. UK law withholds protection from works that fail to establish a sufficient connection to the United Kingdom. In essence the requirement that the work be qualified helps to balance the protection offered to British authors in other jurisdictions with the protection given to foreign authors in the United Kingdom. Once a work qualifies, British law applies the principle of national treatment. That is, UK copyright law generally treat foreign works as it does those of British authors.¹¹⁸

¹¹³ It might be the case that a 'megamix' would indirectly create an original musical work or that the process of digitization creates an original literary work.

¹¹⁴ Laddie *et al.*, para. 6.13 (sound recording); para. 7.30 (films); Kamina, 98–9 (noting that the film producers' copyright required under the Rental and Duration Directives refers to the *first* fixation).

¹¹⁵ The existing understandings of the originality requirement developed from judicial interpretation of the notion of 'authorship' in a period when there was no express requirement of originality. See, e.g. *Walter v. Lane* [1900] AC 539.

¹¹⁶ The Act specifically makes provision for circumstances where there is no principal director, author of screenplay, dialogue, or music, by limiting the copyright term to 50 years from the year in which the film was made. See CDPA s. 13B(9).

¹¹⁷ For further details, see Laddie *et al.*, ch. 5.

¹¹⁸ But see pp. 154–5 for an exception to this concerning duration (applying shorter term in country of origin).

5.1 CONNECTING FACTORS

The benefits of British copyright law have been extended to cover a vast array of works created by foreign authors or published in foreign countries.¹¹⁹ Given that British law effectively provides universal protection, the task of determining whether a particular work is protected under British copyright law is unnecessarily complex.¹²⁰ While in some situations this complexity may be avoided through the use of statutory presumptions,¹²¹ in most situations it is a task that needs to be undertaken.

There are three connecting factors which enable works to qualify for copyright protection (sections 154–6). These are by reference to (i) authorship, (ii) country of first publication, and (iii) place of transmission. A work qualifies if it satisfies *any* of these three factors.¹²² Once a work qualifies for copyright protection, British copyright law does not discriminate between it and a work created by or first published in the United Kingdom, with one exception.¹²³

5.1.1 Qualification via authorship

Section 154(1) provides that a work qualifies for copyright protection if at the ‘material time’ the author of the work was a ‘qualifying person’.¹²⁴

In order for a work to qualify for protection, it is necessary that the author be connected to a relevant country at the ‘material time’.¹²⁵ For unpublished literary, dramatic, musical, and artistic works, the ‘material time’ is the date when the work was made. Where the work has been published, it is the author’s status at the date of first publication that is decisive; or, if the author died before publication, their status at the date of death.¹²⁶ By contrast, the material time for other types of copyright works does not change; it is the personal status of the ‘author’ of a sound recording or film at the time of its making or the organization broadcasting a transmission, at the date of transmission; and, for typographical format, the publisher at publication that is relevant.¹²⁷ Since a work may take a considerable time to make, section 154(4)(a) provides that in the case of an unpublished literary, dramatic, musical or artistic work the making of which extended over a period of time, the ‘material time’ is ‘a substantial part of that period’. Rather oddly, no such provision exists for films.

To qualify under section 154, it is necessary to show that the author was a ‘qualifying person’. There are three ways in which this can be achieved. First, a person will be a

¹¹⁹ In international parlance, these are referred to as the connecting factors (the *points d’attachement* or the *Anknüpfungspunkt*).

¹²⁰ Laddie *et al.*, paras. 5.10, 5.146–50.

¹²¹ See *Microsoft Corp. v. Electro-wide* [1997] FSR 580, 594.

¹²² Where created before 1 Jun. 1957, a published work could be protected only on the basis of first publication and not by virtue of personal status: CA 1956, Sched. 7, para. 1.

¹²³ In the light of the requirements of the Duration Directive, the application of *the rule of the shorter term* to works which have as their country of origin a non-EEA state. CDPA ss. 12–14. This may have a more startling impact than has sometimes been assumed: see pp. 154–5.

¹²⁴ This may make determination of authorship important. In *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 the court had to determine whether the author of a film made under restrictive conditions in China was a Hong Kong company that initiated and organized the making of the film, in which case the film qualified for protection under s. 154, or whether the author was the Chinese national carrying out the detailed making of the film, in which case the film did not qualify for copyright protection.

¹²⁵ CDPA s. 154(4).

¹²⁶ *Ibid.*

¹²⁷ CDPA s. 154(5).

‘qualifying person’ if they can show that they are a British citizen, national, or subject; a person within certain categories of the 1981 British Nationality Act; or a person domiciled or resident in, or a body incorporated in, part of the United Kingdom.¹²⁸ The concepts of ‘domicile’ and ‘residence’ are not defined in the Act. It seems, however, that ‘domicile’ refers to the country where a person makes their permanent home. In contrast, the concept of ‘residence’ is more flexible, simply demanding some degree of continuity to the country in question. A person can be a resident of more than one country, though a person will not be a resident if he or she is a casual visitor.¹²⁹

Second, a person will qualify if they can show that they are an individual domiciled or resident in, or a body incorporated under the law of, a country to which the law has been ‘extended’.¹³⁰ In this context it should be noted that ‘extension’ refers to the fact that Her Majesty by Order in Council is given the power to extend the 1988 Act to other territories, including the Isle of Man, the Channel Islands, and any colony.¹³¹ Along with the power of ‘application’ (discussed below), ‘extension’ is a technique that it used to protect works that originate from outside of the United Kingdom. While no such orders have been made under the 1988 Act, orders made under the equivalent section of the 1956 Copyright Act continue to operate,¹³² most notably in Gibraltar, Bermuda, and the Falkland Islands.¹³³ The effect of such orders is not simply to protect subject matters with a relevant connection to those countries in the United Kingdom: protection is also afforded in those countries to works protected in the United Kingdom.¹³⁴ As the power to extend the 1988 Act permits the extension to be ‘subject to such exceptions and modifications as may be specified’, each order needs to be considered individually.

Third, a person will be qualifying if they can show that they are a citizen or subject of, and individual domiciled or resident in, or a body incorporated under a law of a country to which the Act has been ‘applied’.¹³⁵ Section 159 empowers Her Majesty by Order in Council to ‘apply’ the copyright sections of the 1988 Act to other countries. This may be done either so as to let authors connected to such countries, works first published in such countries, or broadcasts sent from such countries to qualify for protection in the United Kingdom. Moreover, such ‘applications’ may be subjected to exceptions and modifications as are specified or confined to certain classes of cases specified in the Order. The power to make such Orders is restricted to ‘Convention countries’, other member states of the EEC, or to countries which give adequate protection to the owners of copyright in respect of the class of works to which the Order relates.¹³⁶

¹²⁸ CDPA s. 154(1)(a). ¹²⁹ Laddie *et al.*, paras 5.60–1.

¹³⁰ CDPA s. 154(1)(b); British Nationality Act 1981, s. 51. ¹³¹ CDPA s. 157; *Bermuda*, SI 2003/1517.

¹³² They continue to operate because of CDPA, Sched. 1, para. 36.

¹³³ *British Indian Ocean Territory*: SI 1984/541; SI 1987/2200; *British Virgin Islands*: SI 1962/2185; 1985/1988; *Cayman Islands*: SI 1965/2010; *Falkland Island and Dependencies*: SI 1963/1037; 1987/2200; *Gibraltar*: SI 1960/847; 1985/1986; 1987/2200; *Hong Kong*: SI 1972/1724; 1979/910; 1987/2200; 1990/588; *Montserrat*: SI 1965/1858; 1985/1987; 1987/2200 *St. Helena and Dependencies*: 1963/1038. Many Orders made in respect of other colonies which have become fully independent territories have been revoked. The Copyright (Status of Former Dependent Territories) Order, SI 1990/1512 lists territories to which the 1956 Act is deemed to have extended immediately before 1 Aug. 1989: Antigua, Dominica, Gambia, Guyana, Jamaica, Kiribati, Lesotho, St Christopher, Nevis, St Lucia, Swaziland, and Tuvalu. Pending revocation, these countries continue to be treated as qualifying, under previous extension orders.

¹³⁴ Laddie *et al.*, para. 5.82. ¹³⁵ CDPA s. 154(1)(c).

¹³⁶ CDPA s. 159–60. Under CDPA s. 160, the Order may limit protection by virtue of first publication in respect of works from a country which does not adequately protect British works.

Where a work has been jointly authored, the work qualifies for copyright protection if any of the joint authors is qualified. However, the non-qualifying author is ignored when considering issues of first ownership¹³⁷ and duration.¹³⁸ Consequently, if one joint author qualifies and another does not, the qualifying owner alone will be first owner.¹³⁹ Similarly, copyright in a co-authored literary work expires seventy years after the death of the last qualifying co-author.¹⁴⁰

5.1.2 Qualification by first publication

A work may also qualify for protection if it is first published in the United Kingdom or in another country to which the Act has been 'extended' or 'applied'. (These concepts were discussed above.)¹⁴¹ A work is published when copies of the work are issued to the public¹⁴² or, in the case of literary, dramatic, musical, and artistic works when the work is made available to the public through an electronic retrieval system.¹⁴³ It does not include: performing a literary, dramatic, or musical work; exhibiting an artistic work; issuing specified types of copies of such works;¹⁴⁴ playing or publicly showing a sound recording or film; or communicating to the public any work.¹⁴⁵

If a work is to qualify for protection by publication, the publication must be authorized by the author.¹⁴⁶ The 1988 Act provides that publication does not include merely colourable publications which are not intended to satisfy the reasonable requirements of the public.¹⁴⁷ The threshold for protection is very low. At a minimum, if a work attracts no interest, the mere fact that a few copies have been made available for sale will suffice.¹⁴⁸ Publication takes place wherever the publisher invites the public to acquire copies¹⁴⁹ and

¹³⁷ Under CDPA s. 11. ¹³⁸ Under CDPA s. 12.

¹³⁹ But the non-qualifying author can, it seems, claim moral rights and therefore should be named on the work and the work should not be subjected to any derogatory treatment without their consent.

¹⁴⁰ CDPA s. 154(3). ¹⁴¹ CDPA s. 155(1). ¹⁴² CDPA s. 175.

¹⁴³ CDPA s. 175(1). There is also a definition of 'commercial publication': CDPA s. 175(2). Note also the differences in the concept of publication employed in relation to the 'publication right': see Related Rights Regulations, SI 1996/2967, r. 16.

¹⁴⁴ CDPA s. 175(4)(a)–(b). Publication of an artistic work does not include issuing copies of a film depicting such a work, nor copies of graphic works or photographs representing a sculpture, a work of artistic craftsmanship, or a work of architecture. However, the construction of a building is the equivalent of publishing the architectural work that it embodies: CDPA s. 175(3).

¹⁴⁵ CDPA s. 175(4). But an electronic retrieval system may still serve to publish literary, dramatic, musical, or artistic works even if it operates by way of broadcasting: CDPA s. 175(4)(a)(ii), (b)(iv).

¹⁴⁶ CDPA s. 175(6) (no account shall be taken of any unauthorized act); s. 178 (defining unauthorized act where no copyright subsists). Joint authors are not specifically dealt with, but probably all must consent before a publication is authorized.

¹⁴⁷ CDPA s. 175(5).

¹⁴⁸ *Francis Day & Hunter v. Feldman* [1914] 2 Ch 728 (placing six copies of music in retail showroom was publication, so that the work attracted UK copyright protection). In contrast, in *Bodley Head v. Flegon* [1972] 1 WLR 680, Brightman J said he thought it unlikely that underground publication was enough since it intentionally disregarded the requirements of the public. That case concerned whether Solzhenitzyn's work *August 1914* had been first published in France or Russia. It was claimed (by the defendant) that publication had occurred in Russia illegally by way of 'samizdat'. However, the court found no evidence to support the claim.

¹⁴⁹ In *British Northrop v. Texteam* [1974] RPC 57 Megarry J held that a work was issued to the public when reproductions of the work were put on offer to the public. That offer could be sale or gift. The place of first publication is where the offer is made, not where copies are received.

may take the form of gift, hire, and sale.¹⁵⁰ Since publication consists in offering reproductions to the public, it seems that anything that amounts to a reproduction will suffice.¹⁵¹

To qualify for protection, the work must be *first* published in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’. The fact that publication first occurs in a non-qualifying country will not matter, so long as that work is published within thirty days in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’.¹⁵² It should also be noted that films that have been released commercially under conditions of restricted distribution may well not have been published, since copies will not have been made available to the public.¹⁵³

5.1.3 Qualification by place of transmission: broadcasts

A broadcast qualifies for protection if it is made or sent from a place in the United Kingdom, a country to which the Act ‘extends’ or ‘applies’. In the case of satellite broadcasts, the broadcast is made where the signals are introduced.¹⁵⁴

6 EXCLUDED SUBJECT MATTER

Although a work may be recorded in material form, be original and sufficiently connected to the United Kingdom, in some circumstances the courts may nonetheless refuse to recognize copyright for policy reasons. It appears that copyright protection will not be granted for obscene, blasphemous, or immoral works. This can be seen from *Glyn v. Weston Film Feature*¹⁵⁵ where Younger J refused to grant an injunction for infringement of copyright in the claimant’s dramatic work, *Three Weeks*, which he described as a ‘sensual adulterous intrigue’ and condemned on the ground that it advocated ‘free love’. Younger J said, ‘it is clear that copyright cannot subsist in a work of a tendency so grossly immoral as this’.

For some time it had been thought that *Glyn* and the other cases where copyright had been denied to obscene, blasphemous, libellous, irreligious, or misleading works.¹⁵⁶ were

¹⁵⁰ *British Northrop v. Texteam* [1974] RPC 57.

¹⁵¹ *Merchant Adventurers v. Grew* [1973] RPC 1; *British Northrop v. Texteam* [1974] RPC 57. Doubted in *Laddie et al.*, paras. 5.30–2.

¹⁵² CDPA s. 155(3). A publication in the UK or any other country is not to be treated as other than first publication by reason only of earlier publication elsewhere if the latter occurred within a stated period of the former. For works published after the 1956 Act took effect, this period is 30 days; for those published before, it is 14 days (CDPA s. 155(3), Sched. 1, para. 35). The decisive date for UCC countries is 27 Sept. 1957. In other cases it is presumptively 1 Jun. 1957. For the second publication to be treated as a relevant first publication by virtue of these rules, it must be published in the UK or a country that was at that time treated as a Convention country by an operative Order. If that country is a member of the Berne Convention, it is not relevant to ascertain whether it subscribes to the Rome, Brussels, or Paris Acts of the Convention. For further details, see *Copinger and Skone James on Copyright*, para. 3–19.

¹⁵³ Cf. *Bodley Head v. Flegon* [1972] 1 WLR 680.

¹⁵⁴ CDPA s. 156(1). ¹⁵⁵ [1916] 1 Ch 261.

¹⁵⁶ One difficulty with the *Glyn* decision is that it is by no means clear when a work is immoral. Generally the criminal law restricts circulation of obscene works—works which are likely to deprave and corrupt. Immorality appears to be a wider test. It is certainly difficult to believe that a work which advocated free love would today be denied copyright. In *Stephens v. Avery* [1988] Ch 449, in the context of breach of confidence, Browne-Wilkinson V-C stated that he thought the *Glyn* exception should not apply in the absence of public consensus that the work in question was immoral.

the products of less enlightened times and, as such, would no longer be followed.¹⁵⁷ However, in *AG v. Guardian (No. 2)*¹⁵⁸ the House of Lords cited *Glyn* with approval. In that case Peter Wright, a former security services agent, had written a book (called *Spycatcher*) about the various operations of the service. Importantly, in writing the book Wright breached the duty of confidence he owed to the Crown. The House of Lords held that Wright would not be able to bring a copyright infringement action because of the ‘disgraceful circumstances’ in which the book was written.¹⁵⁹ As well as citing *Glyn* with approval, the Lords extended the scope of the immorality exclusion beyond the content of the work to include the circumstances in which the work was created.

While the House of Lords affirmed the continued existence of the public policy exclusion, there is still some doubt as to the exact effect of immorality. It is unclear whether it means that there is no copyright in the work at all,¹⁶⁰ or that equity will not enforce the copyright.¹⁶¹ The way this question is answered might be important given that if there is no copyright, presumably all contracts that purported to deal with the copyright would be void.

The effect of the public policy exclusions is somewhat paradoxical. As the denial of copyright to obscene works effectively places them in the public domain, this may increase the speed and breadth of circulation. If dissemination is deemed to be undesirable, the denial of copyright seems to be counterproductive. (It may also stimulate public interest in the work.) Presumably, other reasons have motivated the courts. The approach taken by the courts is consistent with the view that the primary concern of copyright is to encourage creation rather than to control dissemination. Denying copyright will (supposedly) remove the incentive to produce obscene works.

As we have seen, a derivative work that infringes copyright in the work on which it is based can be original. In such circumstances the question arises as to whether an original but infringing work should be denied protection on grounds of public policy. With one or two exceptions,¹⁶² the courts have generally been willing to enforce copyright in derivative works even though they infringe.¹⁶³ This has been explained on the basis that if protection were denied to such works it would lead to a substantial injustice. As Goff J said:

¹⁵⁷ In *Chaplin v. Frewin* (1966) 1 Ch 71 the Court of Appeal said that it thought the book in question was worthless from a literary point of view as well as being blasphemous but nowhere suggested that the work should for that reason be deprived of copyright. It thus appeared that the doctrine in *Glyn* could no longer be viewed as sound law.

¹⁵⁸ [1990] 1 AC 109.

¹⁵⁹ At the same time they appeared to take the view that the Crown had copyright in Wright’s book or that Wright held copyright in the book on trust for the Crown. This is a little difficult to square with the proposition that there was no copyright in the work.

¹⁶⁰ In *Glyn*, Younger J said there was no copyright in the work.

¹⁶¹ In *Spycatcher* the House of Lords simply stated that Wright would not be allowed to enforce his copyright. The assertions that Wright held copyright on trust or that copyright rested in the Crown suggests that the House of Lords may have interpreted *Glyn* as a case where the remedy of an injunction was withheld rather than copyright denied.

¹⁶² e.g. *Ashmore v. Douglas Home* [1987] FSR 553. (Judge Mervyn Davies denied copyright protection to part of a play which was derived from an existing copyright play on the grounds that the former was ‘infringing material’).

¹⁶³ See *Wood v. Boosey* (1868) LR 3 QB 223, 229; *Chappell v. Redwood Music* [1982] RPC 109, 120; *ZYX Music GmbH v. King* [1995] 3 All ER 1, 9–11; *Ludlow Music Inc. v. Williams* [2002] FSR (57) 868, 886 (paras. 39–40).

It is understandable that the owner of copyright should be entitled to restrain publication of an infringing work; but the idea that he should be entitled to reap the benefit of another's original work, by exploiting it, however extensive such work might be, however innocently it might have been made, offends against justice and commonsense.¹⁶⁴

¹⁶⁴ *Chappell v. Redwood Music* [1982] *RPC* 109, 120.

5

AUTHORSHIP AND FIRST OWNERSHIP

1 INTRODUCTION

A considerable amount has been written about authorship and the role it plays in copyright law. It has become clear from these discussions that the concept of authorship which operates in copyright law is not the same as is used in many other fields.¹ One explanation for this relates to the particular role that the author plays in copyright law. More specifically it is because in copyright law, the author acts as a focal point around which many of the rules and concepts are organized. For example, as we have just seen, the status of the author helps to determine whether a work qualifies for protection. Where relevant, the labour that an author expends in creating a work will also influence whether the resulting work is original. In other situations, the duration of many types of works is determined by reference to the lifespan of the author. Similarly, the moral rights that are recognized in the United Kingdom attach to the author of the work in question.

In this chapter we explore two closely related themes. First, we look at the concepts of authorship, as it is understood in copyright law. In turn, we look at one of the most important consequences that flow from being named as author of a work: namely, first ownership of copyright and the various exceptions to this general rule.

2 AUTHORSHIP

The author of a work is defined in the 1988 Act as the person who creates the work.² Special provisions deal with the situation where more than one person is involved in the creation of a work.³ While to describe the creator of a painting or a sculpture as an ‘author’ may jar, few problems arise in ascertaining who is the author of most literary, dramatic, musical, and artistic works.⁴ This is because in relation to the traditional categories of

¹ Sometimes it is more expansive, including those whose effort might not reach the creative levels of literary authorship. See, e.g. *Walter v. Lane* [1900] AC 539.

² CDPA s. 9(1). For comparative analysis, see J. Ginsburg, ‘The Many Faces of Authorship: Legal and Interdisciplinary Perspectives’ (2003) 52 *De Paul LR* 1063.

³ See below at pp. 120–2.

⁴ For consideration of the question of whether an amanuensis is an author, see *Donoghue v. Allied Newspapers* [1938] Ch 106. But note that a spiritual medium who transcribed messages from the spiritual world was author of the work: *Cummins v. Bond* [1927] 1 Ch 167 (Eve J held that the medium ‘had exercised sufficient skill, labour and effort to justify being treated as author’).

literary, dramatic, musical, and artistic works there is a general consensus as to who of the various people involved in the production of a work is to be treated as the creator or author of the work.

More problems arise, however, in relation to entrepreneurial works and computer-generated works. In part, this is because the concept of authorship does not sit comfortably with the way we tend to think about such works. That is, we do not normally think of a sound recording, a typographical arrangement, or a broadcast as having an author, even in the broad sense in which it is used in copyright law. In these circumstances, it is important to appreciate that the 'author' is an artificial construct, a legal fiction, which is used to allocate rights. This can be seen in the fact that in relation to sound recordings, broadcasts, and typographical arrangements, the 'author' is (effectively) defined as the person who made the work possible (as distinct from the creator). In the case of a literary, dramatic, musical, or artistic work that is computer-generated (which by definition has no author) the 'author' is 'the person by whom the arrangements necessary for the creation of the work are undertaken'.⁵

In its dealings with entrepreneurial works, British copyright law has tended to concentrate on the person who made the arrangements necessary for the making of the work (the entrepreneur). In contrast, civil law systems have tended to focus on the persons who made creative contributions to the work. This difference has long been seen as an important point of contrast between the two systems.⁶ As a result of attempts to harmonize copyright law in Europe, this difference is slowly being undermined. In part, this is because one of the consequences of the process of harmonization is that civil law conceptions of authorship have been introduced into British law.⁷ A prelude to this occurred with moral rights, where the director was recognized as having a status equivalent to the author of a literary, dramatic, musical, or artistic work. More recently, the notion of the principal director as joint author of a film has also been introduced into UK law.⁸ One of the consequences of these changes is that films now occupy a hybrid position in between authorial and entrepreneurial works.

One of the key differences between copyright and most other forms of intellectual property is that copyright protection arises automatically, without the need for formality or registration. While this may be advantageous to authors, it generates some unexpected problems. In particular, while with patents, registered designs, and trade marks the identity of the creator of the intellectual property and, in turn, the nature of the property are clarified by the process of registration, with copyright this has to be achieved by other means.⁹

The task of determining who is the author of a work is made easier because the 1988 Act sets out a series of statutory presumptions as to who is the author of a work. Section 104 provides that the name that appears on a literary, dramatic, musical, and artistic work as published or on the work when it is made shall be presumed to be the author. Section 105 establishes similar presumptions with respect to sound recordings, films, and computer

⁵ CDPA s. 9(4), 178.

⁶ A. Strowel, *Copyright et Droit d'Auteur: Convergences et Divergences* (1993) 320–89.

⁷ Note, however, that under the 1911 Copyright Act, UK law conferred copyright in cinematographic works as 'dramatic works' to their authors, and after *Narowzian v. Arks* (No. 2) this may again be the case. Civil law systems have, occasionally, treated the 'producer' as the author of a film: see Kamina, 132–3.

⁸ CDPA s. 9.

⁹ See Sherman and Bently, 182–5.

programs.¹⁰ The upshot of these presumptions, which only operate in civil matters, is that the burden of proof is placed on the person claiming that someone other than the 'named' author is the true creator of the work in question.

2.1 AUTHORSHIP OF LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

The author of literary, dramatic, musical, or artistic work is the person who creates it.¹¹ No further guidance is given in the 1988 Act as to what this means. The only exception to this is to be found in section 3(2) which indicates that the author need not necessarily be the person who fixes or records the work (although this will usually be the case).¹² The lack of statutory guidance as to the way the author is to be construed in this context does not matter that much given that there are few problems in identifying who is the author of a literary, dramatic, musical, or artistic work.

Having said that, problems have occasionally arisen in determining whether a person involved in the production of a literary, dramatic, musical, and artistic work is to be regarded as an author (or creator). The way this question is answered is similar to the way the originality of a work is determined. Basically, in order for someone to be classified as an author, it is necessary for them to be able to show that the labour, skill, and effort that they contributed to the work is of the *type* that is protected by copyright: that is, that it would be sufficient to confer originality on the relevant work.¹³ The upshot of this is that it is unlikely that a stenographer, an amanuensis, or a person who merely photocopies or traces a work would ever be considered as an author.¹⁴ This is because the labour expended in relation to the work fails to bring about a (material) change in the resulting work. However, if the person exercised a degree of creative labour in producing the work, even if only a very small amount, it is more likely that they will be treated as an author. This can be seen, for example, in *Cummins v. Bond*¹⁵ where it was held that a spiritualist who produced 'automatic writing' dictated to her from beyond the grave at a seance was the author of the resulting work. As the spiritualist exercised great speed in writing down the messages and used great skill in translating the spiritual communication given in an 'unknown tongue' into 'archaic English' it was held that she had exercised sufficient skill, labour, and effort to justify her being treated as author. Similarly, in *Walter v. Lane*, the House of Lords held that a reporter who took a shorthand report of a speech had exercised sufficient skill to be treated as author of the resulting report.¹⁶

As we saw in relation to the originality requirement, the mere fact that a person expended labour in the creation of a work will not necessarily mean that the resulting work is original (or that the person is an author) if it is the wrong type of labour. This means that although a person may play an important role in the production process,

¹⁰ CDPA s. 105.

¹¹ CDPA s. 9(1).

¹² CDPA s. 3(2).

¹³ As the type of labour that confers originality is the same as that which enables someone to be classified, in copyright law terms, as an author, reference should be made to the earlier discussions on this topic.

¹⁴ Nor can the contribution consist merely in the (recording) of a dictation-according to *Donoghue v. Allied Newspapers* [1938] 1 Ch 106.

¹⁵ [1927] 1 Ch 167. See also *Leah v. Two Worlds Publishing* [1951] 1 Ch 393 Vaisey J.

¹⁶ [1900] AC 539.

they may still not be treated as an author. In the case of a book, for example, while the copy-editor, the jacket designer, and the typesetter all play an important role in giving shape to the final product, they will not be treated as authors of the resulting literary work.¹⁷ (Although it is possible to imagine situations where the efforts of a copy-editor may be such that they might be treated as a joint author.) Similarly, while copyright law has few problems in categorizing the person who wrote a play as the author of the play, in one case it was held that a person who had suggested the title, the leading characters, a few catchwords, and the scenic effects for the play had not contributed sufficiently to the play to justify them being treated as a joint author.¹⁸

Where the contribution made by someone is at an abstract level, such as the idea for a play or a book or a structure of a computer program, they are unlikely to be treated as an author of the resulting work. The more specific the contribution, however, the more likely it is that the person in question will be treated as an author. Consequently, in one case it was held that a person who developed an idea for a house design that he had explained in detail (both verbally and through sketches) to a technical draftsman was joint author of the plans that the draftsmen subsequently produced.¹⁹ Similarly, a political figure who dictated his memoirs to a friend, read every word, and altered parts of the manuscript was held to be joint author of the resulting book.²⁰

2.1.1 Computer-generated works

In the case of literary dramatic, musical, or artistic works that have been computer-generated,²¹ the creator is 'the person by whom the arrangement necessary for the creation of the work are undertaken'. While the meaning of this provision has yet to be tested, it seems that it might include the person who operates the computer, as well perhaps as the person who provides or has programmed the computer.²²

2.1.2 Unknown authorship

In certain situations, it may not be possible to ascertain who is the author of a literary, dramatic, musical, or artistic work. This may be because the name of the author is not attached to the work and it is not possible to ascertain authorship by other means. In other cases, an author may wish that their works be published anonymously, under a false name or a pseudonym. As the author acts as the focal point around which many of the rules of copyright are organized, this creates a number of potential problems. To remedy this, the 1988 Act includes the notion of 'unknown authorship'. A work is a work of unknown authorship if the identity of the author is unknown and it is not possible for a person to

¹⁷ A technician expending skill and labour in testing software, detecting bugs and providing information to de-bugging was likened to a proofreader and therefore was not a joint author since he did not contribute to the authorship of the software as such: *Fylde Microsystems v. Key Radio Systems* [1998] FSR 449.

¹⁸ *Tate v. Thomas* [1921] 1 Ch 503.

¹⁹ *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818.

²⁰ *Heptulla v. Orient Longman* [1989] FSR 598 (Indian High Court).

²¹ The term is defined in CDPA s. 178 as referring to the situation where a work is created by a computer in circumstances such that there is no human author of the work. Where a work is created merely with the assistance of a computer, it is therefore clearly not a 'computer-generated work.'

²² In *Express Newspapers v. Liverpool Daily Post* [1985] FSR 306 Whitford J held that the author of computer-generated bingo sheets was the programmer of the computer. It is not clear whether this would be the position under the 1988 Act. See above p. 60, Fig. 3.2.

ascertain his or her identity by reasonable inquiry.²³ While in this situation the author remains the first copyright owner, since it is impossible to know when the author of such a work died, the duration of copyright is limited to seventy years from the date when the work was first made available to the public (or seventy years from when the work is made, if it is not made available before the expiry of that period).²⁴

2.2 ENTREPRENEURIAL WORKS: STATUTORY AUTHORS

As we mentioned earlier, authorship does not sit comfortably with the way we tend to think about entrepreneurial works. Any potential difficulties in having to identify who is the author of, say, a broadcast or a sound recording are resolved by section 9(2) which defines who is the author of each of the different entrepreneurial works.

2.2.1 Sound recordings: the producer

Section 9(2)(aa) provides that the author of a sound recording is the 'producer'.²⁵ In turn, the 'producer' is defined as the 'person by whom the arrangements necessary for the making of the sound recording are undertaken'.²⁶ In most cases, the 'producer' of a sound recording will be the record company. This may change, however, where a sound recording is produced cooperatively, or where non-traditional modes of distribution (such as the Internet) are used. The question of what is meant by 'the producer' is discussed in more detail in the next section.

2.2.2 Films: the producer and the principal director

When the 1988 Act was enacted,²⁷ for the purposes of determining authorship, films were treated in a similar fashion to sound recordings: the author was defined as 'the person by whom the arrangements necessary for the making of the film are undertaken'. As had been the case under the 1956 Copyright Act, films were treated as entrepreneurial works. In

²³ CDPA s. 9(4), (5). ²⁴ CDPA s. 12(3).

²⁵ CDPA s. 9(2)(aa). This section, which took effect from 1 Dec. 1996, was introduced by the Copyright and Related Rights Regulations (SI 1996/2976). This replaced s. 9(a) which stated that 'in the case of a sound recording or film, the person by whom the arrangements necessary for the making of the recording or film are undertaken'.

²⁶ For works made between 1 Jun. 1957 and 1 Aug. 1989, 'the person who owns the first record (disc, tape or roll) embodying the recording at the time the recording is made' (the maker) is the owner: CA 1956 s. 12(8). In relation to pre-1957 works, 'the owner of the original plate upon which the sound recording were recorded is deemed to be the author', CA 1911 ss. 5(1), 19(1). Cf. Rome Convention, Art. 3(c); Geneva Convention, Art. 1(b) (both defining the producer of a phonogram as the person or the legal entity which first fixes the sounds of a performance or other sounds). WPPT Art 2(d) refers to 'the person or legal entity who or which takes the initiative and has the responsibility for the first fixation'.

²⁷ CDPA s. 9(2)(ab); the status of the authorship of a film will differ depending on when the date of the film was made. Prior to the 1956 Act, films were not recognized as a distinct category of work, but the elements (photographs, sound recording, and dramatic works) of the film were protected instead (in much the same way as multimedia works are now). This position under the 1956 Act and under the 1988 Act, prior to the amendments in 1994, were the same. That is, the author of the film is 'the person by whom the arrangements necessary for the making of the film are undertaken'. However, films begun before 1 Jul. 1994, but completed thereafter are treated as made when completed: Related Rights Regs., r. 25(2). Furthermore, it is not an infringement of any right which the principal director has by virtue of these Regulations to do anything after commencement in pursuance of arrangements for the exploitation of a film made before 19 Nov. 1992: Related Right Regs., r. 36(2).

order to bring UK law into line with the EU Duration Directive, the 1988 Act was amended. The upshot of this is that the authors of a film made on or after 1 July 1994 are the producer and the principal director of the film. The principal director and producer are treated as joint authors, except where they are the same person.²⁸ The recognition of the principal director as author of the film marks an important change in the way films are treated by British copyright law from films being treated as a type of entrepreneurial work, to films being treated as a hybrid of entrepreneurial and authorial works.

The 'principal director' is not defined in the 1988 Act. Some guidance as to what is meant by this term is provided by section 105(5) which states that where a film bears a statement that a particular person was the director (or principal director) of the film, this shall be presumed to be correct until the contrary is proved.²⁹ Section 105(6) adds that where a person is named as the director of a film, this shall be presumed to mean that he or she is the principal director.

The 'producer' of a film is defined as 'the person by whom the arrangements necessary for the making of the film are undertaken'.³⁰ This is the same definition as is used to describe the producer of a sound recording. The question of whether a person is a 'producer' of a film or a sound recording is a question of fact.³¹ For the most part, there will be few problems in determining who is the producer of a film or a sound recording. Most questions regarding the allocation of ownership of copyright will be dealt with contractually. Problems may arise, however, because the production of sound recordings and films frequently involves the input of a range of different people: many of whom may lay claim to having helped to organize and facilitate the making of the sound recording or the film. Although the term 'producer' is used to define who is the creator, it should be noted that the courts have emphasized that there is a distinction between someone who 'makes' a recording and someone who 'makes the arrangements for the production of a recording': it is the latter rather than the person who actually records or makes the sound recording or film (the person who operates the recording system) who is the author.³²

The notion of the 'producer' presupposes that at the core of the production process there is a person (or more often a company) that coordinates, controls, and organizes the production of the work.³³ It seems that to be a 'producer' a person must exercise some degree of direct (organizational) control over the process of production.³⁴ If a person operates at the periphery of the process, such as the person who merely commissions the making of the recording or merely provides the finance for a film or a sound recording, he or she will not be regarded as a producer. If this were not the case, banks and other lending institutions would qualify as authors. However, provision of finance may be one of the

²⁸ CDPA ss. 9(2)(ab) and 10(1A). ²⁹ CDPA s. 105(5).

³⁰ CDPA s. 178. However, it is unclear whether the term 'principal director' will be treated as narrower than the term 'director' when used in relation to moral rights.

³¹ *Beggars Banquet Records v. Carlton TV* [1993] EMLR 349, 361; *A & M Records v. Video Collection* [1995] EMLR 25, 29.

³² *Adventure Films v. Tully* [1993] EMLR 376; *A & M Records v. Video Collection* [1995] EMLR 25; *Bamgboye v. Reed* [2004] EMLR (5) 61, 84 (para. 77). Kamina says that the definition of producer 'certainly excludes purely creative contributors, including the film director': Kamina, 139.

³³ See also *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 (film made under restrictive conditions in China was produced by organizer outside of China). For examples of situations (home movies, wedding videos) where it is difficult to say who, if anyone, is the 'producer' see Kamina, 140.

³⁴ *Adventure Films v. Tully* [1993] EMLR 376.

organizational matters that, in combination with others, amount to the ‘necessary arrangement’.³⁵

2.2.3 Broadcasts

In the case of sound and television broadcasts, the author is the person who makes the broadcast.³⁶ Where a person receives and immediately retransmits a broadcast, the author is the maker of the original broadcast rather than the person who relays it.

2.2.4 Typographical arrangements

The author of a typographical arrangement of a published edition of a work is the publisher.³⁷

2.3 JOINT AUTHORSHIP

Collaborative research and creation is often a fruitful and productive way for authors to work.³⁸ Copyright recognizes this mode of creation through the notion of joint authorship. A number of important consequences, such as the way the work can be exploited, flow from a work being jointly authored.³⁹ While joint authorship is normally associated with literary, dramatic, musical, and artistic works, it is possible for all works to be jointly authored. As we saw earlier, the 1988 Act specifically provides that films are treated as works of joint authorship between the principal director and the producer, unless they are the same person.⁴⁰ The 1988 Act also extends the concept of joint authorship to a broadcast ‘where more than one person is taken as making the broadcast’, namely, those ‘providing’, or taking ‘responsibility’ for the contents of the programme and those making the ‘arrangements necessary for its transmission’.⁴¹ No special definition of joint authorship is applied to sound recordings, or published editions.

In cases other than those special circumstances where joint authorship is deemed, a general principle applies: a work is a work of joint authorship if it is ‘a work produced by the collaboration of two or more authors in which the contribution of each author is not distinct from that of the other author or authors’. A work is one of joint authorship if it satisfies three conditions.

(i) First, it is necessary to show that each of the authors *contributed to the making of the work*. The test for whether a person has contributed to the creation of a work is the same test as is used to determine whether someone is an author of a work: in the case of

³⁵ Ibid. *Beggars Banquet Records v. Carlton TV* [1993] EMLR 349 (arguable claim that person who provided finance and arranged access to venue where event was filmed was a person who made arrangements); *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 (person had undertaken the arrangements necessary for the production of the film when it initiated the making of the film, organized the activity necessary for making it, and paid for it).

³⁶ CDPA s. 9(2)(b). ³⁷ CDPA s. 9(2)(d).

³⁸ For a discussion of collaboration in the context of universities and the role of copyright, see A. Monotti (with S. Ricketson), *Universities and Intellectual Property: Ownership and Exploitation* (2003).

³⁹ A joint owner (or other co-owner of copyright) can sue an infringer independently and can also bring an action against another co-owner.

⁴⁰ CDPA ss. 9(2)(ab) and 10(1A). Note, however, that the general scheme applies to determine authorship, or co-authorship, of the ‘dramatic work’: on which, see Kamina, 141–53.

⁴¹ CDPA s. 10(2), cross-referenced to s. 6(3).

authorial works, that is, whether the labour they expended in producing the work was sufficient to confer originality on the resulting work.⁴² While to be a joint author it is necessary for an author to have contributed to the work, joint authorship does not require that the respective contributions be in equal proportions.⁴³ However, it does require the contribution to be of the right kind: a contribution to the words of a song will normally give rise to joint authorship of the literary work, but not of the music; and a contribution to the ‘performance’ of a piece of music will not render the performer a co-author of the musical work.⁴⁴

(ii) The second requirement that must be satisfied for a work to be one of joint authorship is that the work must have been produced through a process of *collaboration* between the authors. This means that when setting out to create a work, there must have been some common design, cooperation, or plan that united the authors (even if only in a very loose sense).⁴⁵ So long as the authors have a shared plan of some sort, there is no need for them to be in close proximity for them to collaborate. Indeed, it is possible for the collaboration to take place over long distances (a practice made much easier because of e-mail).⁴⁶ There is no additional requirement that the parties must have intended to create a work of joint authorship.⁴⁷

The upshot of the second requirement is that although two people may work on the same project, unless there is a shared goal they will not be classified as joint authors. This means, for example, that where one person writes a poem and another person translates it into another language, the author of the original poem would not be a joint author of the translation. Similarly, where a musician arranges a pre-existing musical work, the author of the original musical piece would not be able to claim joint authorship over the subsequent work: instead, there would be separate copyrights in the two pieces.⁴⁸

(iii) Third, for a work to be jointly authored the respective contributions must not be

⁴² In one case, a classically trained musician who acted as orchestral arranger for a rock band was held to be joint author of a number of arrangements which included orchestral passages linking the verses and choruses; with respect to one song, where the contribution comprised merely a piano accompaniment, the court held it was ‘only just’ sufficient to qualify: *Godfrey v. Lees* [1995] EMLR 307, 325–8. See also *Fylde Microsystems v. Key Radio Systems* [1998] FSR 449 (suggestions not sufficient); *Robin Ray v. Classic FM* [1998] FSR 622. However, in music cases the courts seem to have required the contributions to be significant when viewed from the point of view of the work as a creative totality: adding drums or even a saxophone solo in a way which was just what was expected was not sufficient: *Hadley v. Kemp* [1999] EMLR 589.

⁴³ Joint authorship will usually be presumed to lead to equal shares, but this may be varied either by the court, where it feels comfortable evaluating the contributions (as in *Bamgboye v. Reed*, [2004] EMLR (5) 61, 86 (para. 85) or according to the agreement of the parties: *Beckingham v. Hodgins* [2003] FSR 238, 249 (equal shares); *Peter Hayes v. Phonogram Ltd* [2003] ECDR (11) 110, 123 ff (agreement as to size of share).

⁴⁴ *Peter Hayes v. Phonogram Ltd et al.* [2003] ECDR (11) 110, 128; *Hadley v. Kemp* [1999] EMLR 589, 643. See R. Arnold, ‘Are Performers Authors?’ [1999] EIPR 464.

⁴⁵ *Levy v. Rutley* (1871) LR 6 CP 583; *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818, 835.

⁴⁶ *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818, 835.

⁴⁷ *Beckingham v. Hodgins* [2003] FSR 238, 249.

⁴⁸ *Chappell v. Redwood Music* [1981] RPC 337. Cf. *Godfrey v. Lees* [1995] EMLR 307, where the claimant who provided orchestral arrangements of Barclay James Harvest’s existing songs was treated as a co-author; and *Beckingham v. Hodgins* [2003] FSR 238 where the session musician who added an introduction to the song ‘Young at Heart’ was held to own 50% of the copyright in the new arrangement. It seems that where the author of a song collaborates in a new arrangement thereof, they acquire co-ownership of the arrangement even where they contribute nothing new.

distinct or *separate* from each other. In more positive terms, this means that the contributions must merge to form an integrated whole (rather than a series of distinct works).⁴⁹ For example, if the contributions of two authors merged in such a way that no one author is able to point to a substantial part of the work and say 'that is mine', the authors would be joint authors. If, however, one author wrote the first four chapters of a book and the other author wrote the remaining six chapters, instead of the resulting book being a joint work, the respective authors would have copyright in the particular chapters they wrote.⁵⁰ In relation to a more difficult set of facts, it has been held that, where one person added an introduction to the music of a song, this introduction was not 'distinct' because it was 'heavily dependent' on the rest of the tune and because, by itself, it would 'sound odd and lose meaning'.⁵¹

3 FIRST OWNERSHIP

Authorship and ownership have long been closely intertwined in copyright law. Indeed one of the notable features of the 1710 Statute of Anne was that it recognized authors as first owners of the literary property they created. This basic formula is repeated in the 1988 Act which declares that the author of a work is the first owner of copyright.⁵² The rule that copyright initially vests in the author is, however, subject to a number of exceptions. The first and most important concerns works made by employees.⁵³ Exceptions also exist in relation to Crown copyright, parliamentary copyright, and to works created by officers of international organizations.⁵⁴ Judicially created exceptions also exist where a work is created in breach of a fiduciary duty or in breach of confidence.

Before looking at these in more detail, it is important to note that although the author is usually the first owner, it is possible for an author to assign his or her copyright to third parties. This means that the question of who is the copyright owner at any particular point of time will depend upon what has happened to the copyright since it was first created. Since valid agreements can be made in relation to the transfer of future copyright, it may be that when copyright arises, the first owner of copyright under the statutory scheme is immediately divested of their rights in favour of an assignee. It is also important to note that, while the law recognizes that a person other than the author may be first owner, the question of who is the author remains a distinct one (and an important one). A work made by an employee author, for example, has a duration dependent on the life of the author (i.e. the employee) even if first ownership vests in the employer. Equally, issues of qualification and moral rights are determined by reference to authorship (not first ownership).

⁴⁹ In this respect, the British notion of co-authorship differs from that of the United States, Belgium, and France where separable but interdependent elements can form joint works, such as songs, operas, and motion pictures. In France, for example, the author of a novel which is used as the basis of an audiovisual work is treated as an author of the audiovisual work.

⁵⁰ CDPA s. 10(1).

⁵¹ *Beckingham v. Hodgens* [2003] FSR 238, 248. In any case, the introductory fiddle music was repeated a number of times elsewhere in the arrangement. Cf. *Hadley v. Kemp* [1999] EMLR 589, where Park J suggested that a saxophone solo in the middle of Spandau Ballet's 'Gold' might be a distinct work.

⁵² CDPA s. 11(1).

⁵³ CDPA s. 11(2).

⁵⁴ CDPA s. 11(3).

3.1 WORKS CREATED BY EMPLOYEES

Section 11(2) of the 1988 Act provides that in the absence of an agreement to the contrary, where a literary, dramatic, musical, or artistic work or a film is made in the course of employment, the employer is the first owner of any copyright in the work. While employees retain moral rights in the works they create, these are subject to a number of limitations.⁵⁵

Critics have suggested that by granting first ownership of works made by employees to employers, British law fails to provide creators with sufficient additional incentives to create. It is also said that British law also fails to acknowledge the natural rights which employee-authors have in their creations. In so doing, it is said that British law fails to follow the underlying rationales for copyright. In response to arguments of this sort, it is suggested that while employers may not create works, they provide the facilities and materials that enable the act of creation to take place. In so doing, they make an important contribution to the production of new works. It is argued that granting first ownership to employers encourages employers to invest in the infrastructure that supports creators. As employers are often in a better position than employees to exploit the copyright in a work, it is also suggested that it makes more sense to give copyright to employers than to employees. Another argument in favour of giving ownership to employers is that in the absence of a provision that formally granted first ownership to employers, employers would require employees to assign their copyright to them. As section 11(2) achieves what would otherwise happen in practice, it thus serves to reduce transaction costs. In response to the argument that in granting first ownership to employers, employees are not properly rewarded for their creative efforts, it is suggested that employees are rewarded through other means, such as pay, continued employment, and promotion.⁵⁶

However problematic the arguments in favour of granting first ownership of employee works to employers may be, they have dominated policy changes that have been made in this area. In particular, while under the Copyright Act 1956 employee journalists presumptively shared copyright with the newspapers, this 'anomaly' was removed in the 1988 Act.⁵⁷ As a result, under the current law copyright in all works made in the course of employment belong to the employer (unless there is an agreement to the contrary).

For an employer to be first owner of copyright it is necessary to show that (i) the literary, dramatic, musical, artistic work, or film was made by an employee; (ii) the work was made in the course of employment; and (iii) there is no agreement to the contrary.⁵⁸ We will deal with each of these in turn.

3.1.1 Who is an employee?

An employee is defined in the 1988 Act as a person who is employed under a contract of

⁵⁵ CDPA s. 79(3) and s. 82.

⁵⁶ Whether a scheme, such as that which exists under the Patents Act, providing for extra reward for particularly successful works should be implemented was considered by the Whitford Committee.

⁵⁷ More specifically, under the previous law, copyright in a work made by an author in the course of employment by the daily or periodical press presumptively vested in the employer for purposes of its publication in the newspaper or periodical. CA 1956 s. 4(2).

⁵⁸ While the 1988 Act introduced changes on point, effective from 1 Aug. 1989, the initial ownership of copyright continues generally to be determined by the law in effect when the materials in question were made. CDPA, Sched. 1, para. 11.

service or apprenticeship.⁵⁹ A contract of service is frequently distinguished from a contract for services. In general, it is easy to determine whether someone is an employee or not. However, there are many different sorts of work relationship, some of which are less easy to designate as employment relations. In such situations the courts tend to focus on whether there is the so-called 'irreducible minimum' necessary to give rise to an employment relation: namely 'mutuality of obligation' and 'control.' If these two factors are present the relationship might be one of employment: if they are not present, it is not. However, these factors are not of themselves conclusive. The court will examine all other relevant aspects and provisions to establish whether they are consistent with a contract of service.

(i) *'Mutuality of obligation'*. In an employment relation the employer undertakes and is bound to provide work and pay, the employee to provide their labour. In other sorts of relationship there is not necessarily such mutuality. Consequently, if no such mutuality exists, there is no employment.⁶⁰ So, for example, an arrangement whereby an artist carries out work for an advertising agency will not amount to an employment relationship if the agency is free to offer any work to others, and the artist is free to refuse the work requested by the agency (for example where the artist is working on a job for another agency).

(ii) *Control*. The second aspect of the irreducible minimum is that one party (the employer) must be capable of exercising control over the other (the employee).⁶¹ The more control one party is able to wield, the more likely it is that the parties are in an employment relationship. The control test is regarded as relevant even though there are many professions ('from surgeons to research scientists') where a person has a considerable amount of freedom, but nonetheless is ordinarily regarded as an employee. In these circumstances the courts have stressed that the question of whether someone is an employee depends on whether there is 'sufficient framework of control'. Thus even where a person is not under a great degree of supervision, they may still be an employee.⁶²

If the irreducible minimum is present, the tribunal will then consider all other factors. One important, but not determinative consideration is the descriptions used (such as 'independent contractor'). Other factors which suggest that someone is not an employee include the fact that they have a great deal of responsibility, provide their own equipment, hire their own helpers, take financial risks, have other commitments, and have the opportunity of profiting from the tasks they perform.⁶³ The courts will also look at the way financial arrangements between the parties are organized as a way of determining whether someone is an employee. Factors which indicate that someone is an employee include the fact that they are paid wages; that income tax deductions are made on the 'pay-as-you-earn' basis; and that both parties contribute to pension schemes and make national insurance payments.⁶⁴

⁵⁹ CDPA s. 178. ⁶⁰ *Carmichael v. National Power plc* [1999] 4 All ER 897 (HL).

⁶¹ *Ready Mixed Concrete (South East) Ltd v. Minister of Pension and National Insurance* [1968] 2 QB 497; *Montgomery v. Johnson Underwood* [2001] ICR 819.

⁶² See *Stephenson Jordan v. McDonald & Evans* (1952) 69 RPC 10, 22 (Denning LJ).

⁶³ *Robin Ray v. Classic FM* [1998] FSR 622.

⁶⁴ In *Lee Ting Sang v. Chung Chi Keung* [1990] 2 AC 374, the Privy Council approved of the 'indicia' approach in *Market Investigations v. Minister for Social Security* [1969] 2 QB 173, without referring to the 'irreducible minimum'. See also *Todd v. Adams and Chope* [2002] 2 Lloyd's Rep 293 (CA, refusing to find an employment relationship where there was sharing of profits and losses of fishing trips).

3.1.2 Was the work made in the course of employment?

In order for an employer to be first owner of copyright, it is also necessary to show that the work was made in 'the course of the employment'. Even if an author is an employee, if the work was not created in the course of employment, the author retains ownership of copyright. The question of whether a work has been made in the course of employment will depend on the particular circumstances of the case in hand.

An important factor which has influenced the courts when determining if a work has been made in the course of employment is whether the making of the work falls within the types of activities that an employer could reasonably expect or demand from an employee. In turn, this depends on the scope of the employee's duties. This can be seen, for example, in *Stevenson Jordan v. MacDonald*,⁶⁵ where the question arose as to whether an accountant or his employer (a firm of management consultants) owned copyright in a series of public lectures the accountant had given about the budgetary control of businesses. Morris LJ noted that the employer had paid the expenses of the lecturers, that the employee-accountant could have prepared the lectures in the company's time, used its library, had the lectures typed up by company secretaries, and that the lectures were a useful accessory to his contracted work.⁶⁶ Nonetheless, Morris LJ found that since it was not shown that the accountant could have been *ordered* to write and deliver the lectures, they were not created in the course of his employment. As such, the copyright belonged to the employee rather than to the employer.

Similar reasoning was also applied in *Noah v. Shuba*.⁶⁷ This was a copyright infringement action in relation to a book called *A Guide to Hygienic Skin Piercing*, written by the claimant, Dr Noah. During the proceedings it was argued that when Dr Noah wrote the guide he was employed as a consultant epidemiologist at the Public Health Laboratory Service. As such, the copyright vested in his employer.⁶⁸ While there was no doubt that Dr Noah was an employee of the Public Health Laboratory, it was less clear as to whether the guide had been written in the course of his employment. Dr Noah discussed his work with colleagues, made use of the services of the Public Health Laboratory Service library and had the manuscript typed up by his secretary. In addition, the guide was published by the Public Health Laboratory Service at its own expense. Nonetheless, Mummery J held that the guide had not been written in the course of Noah's employment. An important factor that influenced this decision was that Dr Noah had written the draft at home in the evenings and at weekends.

It should be pointed out that the mere fact that a work is made at home or that the employee makes use of their personal resources does not necessarily mean that it will fall outside the scope of the employee's duties. Ultimately, the question of whether a work is made within the course of the scope of employment depends upon the contract of employment. This can be seen in *Missing Link Software v. Magee*,⁶⁹ where the question arose as to whether copyright in software written by an employee outside of work time

⁶⁵ *Stevenson Jordan v. MacDonald & Evans* (1952) 69 RPC 10. However, a journalist who wrote a confidential memorandum to colleagues about a possible article was acting in the course of her employment: *Beloff v. Pressdram* [1973] 1 All ER 241.

⁶⁶ In *Byrne v. Statist* [1914] 1 KB 622, a journalist made a translation to be used in the newspaper in his own time: this was not in the course of his employment.

⁶⁷ [1991] FSR 15.

⁶⁸ *Noah v. Shuba* [1991] FSR 14.

⁶⁹ [1989] FSR 361.

and on his own equipment was made in the course of his employment and thus owned by his employer. The claimant company argued that since they had employed the defendant to write programs of the kind in dispute, similar programs, even if written in his spare time, were created in the course of his employment. The court held that although the employee had written the software in his own time and on his own equipment, nonetheless it was not unarguable that as it fell within the scope of the tasks he was employed to carry out, the computer programs were created within the course of his employment.

3.1.3 Agreements to the contrary

Finally, it should be noted that the copyright in works made in the course of employment will not be treated as belonging to the employer where there is an agreement to the contrary. Such an agreement may be written or oral, express, or implied.⁷⁰

In some cases, such agreements have been implied from custom. For example, in *Noah v. Shuba* Mummery J said that if the skin piercing guide had been written in the course of Dr Noah's employment, he would nonetheless have implied a term into Dr Noah's contract that the copyright remained with the employee.⁷¹ The reason for this was the long-standing practice of the Public Health Laboratory Service of allowing its employees to act as if they owned copyright in their works: they allowed employees to assign copyright to publishers, claim royalties, and with respect to the case itself, did not assert that they owned copyright. This decision has important ramifications where employers allow employees to act as if they own copyright (whereas in fact they may not).

3.2 CROWN COPYRIGHT

Another exception to the general rule that the author is the first owner relates to works governed by Crown copyright. Where a work is made by an officer or servant of the Crown in the course of their duties,⁷² copyright in the work belongs to the Crown and not to the author of the work.⁷³

3.3 PARLIAMENTARY COPYRIGHT

Where a work is made under the direction or control of the House of Commons or the House of Lords, the respective House owns copyright therein.⁷⁴ Such parliamentary copyright lasts for fifty years from the year in which the work was made. All Bills introduced into Parliament attract parliamentary copyright, but this ceases on Royal Assent, withdrawal, or rejection of the Bill.⁷⁵

⁷⁰ As we will see there is a general requirement that assignments of copyright be in writing. However, such formality is unnecessary with respect to the agreement reversing the presumption of initial ownership, which can be oral or implied. But to refer to a relationship as not being one of employment was not an implied agreement that copyright was to vest in the employee: *Robin Ray v. Classic FM* [1998] FSR 622.

⁷¹ *Noah v. Shuba* [1991] FSR 14. ⁷² CDPA ss. 163, 164.

⁷³ CDPA s. 163. It lasts for 125 years from when the work is made or 50 years from its commercial publication. Crown copyright also exists in all Acts of Parliament and Measures of the General Synod of the Church of England.

⁷⁴ CDPA s. 164. The Government of Wales Act 1998, Sched. 12, has added to this list: 'any sound recording, film, or live broadcast of the National Assembly for Wales which is made by or under the direction or control of the Assembly'.

⁷⁵ CDPA ss. 165–7.

3.4 INTERNATIONAL ORGANIZATIONS

Where a literary, dramatic, musical, or artistic work is made by an officer or employee of an 'international organization',⁷⁶ the organization is the first owner of the resulting copyright.⁷⁷

3.5 COMMISSIONED WORKS AND EQUITABLE ASSIGNMENT

Another exception to the general rule that the author is first owner arises, in limited circumstances, where a person commissions someone to make a work. Under the Copyright Act 1988, copyright in a commissioned work belongs to the author of the commissioned work.⁷⁸ However, in certain circumstances the courts may infer that an independent contractor is subject to an implied obligation to assign the copyright to the commissioner. This may give rise to a trust with respect to the copyright in the commissioned work, and render the commissioner the equitable owner. A good example is provided by *Griggs v. Raben Footwear*, where Griggs, distributors of DR. MARTEN'S AIRWAIRS, in 1988 commissioned the advertising agency, Jordan, to produce a logo for it.⁷⁹ Evans, who did freelance work for Jordan, produced the logo and was paid at his standard rate of £15 an hour. Nothing was said about copyright in the logo. In 2002, Evans purported to assign copyright in the artistic work to Raben Footwear, an Australian competitor of Griggs. In response, Griggs brought an action seeking a declaration that it was beneficial owner of copyright, and an assignment of legal title. Peter Prescott QC, sitting as Deputy High Court judge granted the relief sought. He held that while Evans was the author, and first owner of the legal title, an agreement that copyright was to belong to Griggs was to be implied. Such an agreement was necessary to give business efficacy to the arrangement, under which it was clearly contemplated that Griggs would be able to use the logo and stop others from using it.⁸⁰ This could only be achieved if the implied agreement was to assign the copyright or give a perpetual exclusive licence (and the latter solution would be less convenient for Evans).

Implied agreements to assign have also been found where a choreographer undertook to arrange certain dances for the Russian ballet;⁸¹ a design of a trade mark was

⁷⁶ This means an organization the members of which include one or more states CDPA s. 178.

⁷⁷ CDPA s. 168.

⁷⁸ Under the 1956 Act, a party commissioning a photograph, portrait, or engraving for value presumptively acquired copyright in that work: CA 1956 s. 4(3), Sched. 8, para. 1(a). When this position was changed in the 1988 Act, commissioners of photographers and films for private and domestic purposes were 'compensated' with the so-called 'moral' right of 'privacy': CDPA s. 85. The right covers issuing of copies of the work to the public, its exhibition in public, and its communication to the public.

⁷⁹ *R. Griggs Group v. Raben Footwear* (2 Dec. 2003) [2003] EWHC 2914. This decision is remarkable in two respects. First, because the implied assignment is in favour of a third party, Griggs, rather than the design company, Jordan. The more orthodox (if artificial) view would be that there are two implied agreements: one between Jordan and Evans, and another between Griggs and Jordan. The distinction would have been important if, for example, Jordan had decided the logo supplied by Evans was unsuitable. Second, the agreement to assign is implied in this case even though Evans did not know of the use intended by Griggs, Evans thinking the use was for point-of-sale only. The judge seems to have ignored this on the ground that Evans was 'indifferent' to the use, and had he known he would have accepted the more extensive use without charging a different fee.

⁸⁰ para. 57.

⁸¹ *Massine v. De Basil* [1936–45] MacG CC 223.

produced;⁸² a person upgraded a previous version of a computer program;⁸³ and a person arranged for the making of a sound recording.⁸⁴ These decisions amount to judicial variations of a clear legislative scheme. Clearly, the judges are looking at transactions after the event, and are motivated by gut feelings of justice to prevent opportunistic behaviour by creators. However, the impact of the decisions is to undermine a clear scheme which is designed both to achieve certainty in transactions and to protect authors. It does so by requiring parties to allocate ownership through written assignments and in so doing requires those acquiring rights to specify what they want, thus giving authors an opportunity to reflect upon whether they wish to transfer all those rights. Under that scheme, the penalty for those commissioners who fail to organize their legal rights properly, is that they risk having to bargain for them later. The courts, by repeatedly responding to their sense that rights should follow money, remove this ‘penalty’ and, with it, undermine the goals that the statutory scheme aims to achieve. The better view is that these cases should be confined to their specific facts.⁸⁵

3.6 BREACH OF CONFIDENCE

It also seems that copyright in works that are created in breach of a fiduciary duty or in breach of confidence will be held on constructive trust for the person to whom the duty was owed.⁸⁶ The same may be true of works made ‘in circumstances involving the invasion of legal or equitable rights of the [claimant] or breach of the obligation of the maker to the [claimant]’.⁸⁷

4 HARMONIZATION

Questions of authorship, and the position of employed authors, are matters on which there has been little harmonization. As we have already noted, the issue was tackled, but only partially, in relation to films, by stating that the director is to be regarded a one of the authors of a cinematographic work. The only other harmonization has been in respect of the position of authors who create computer programs while employed: the Computer Programs Directive requires that the employer exclusively shall be entitled to exercise all economic rights in programs so created. Although differences in the rules operated by

⁸² *Auvi Trade Mark* [1995] FSR 288; *R. Griggs Group v. Raben Footwear* (2 Dec. 2003) [2003] EWHC 2914.

⁸³ *Flanders v. Richardson* [1993] FSR 497, 516–19, Ferris J held that where a computer program was improved in circumstances where there was an acceptance or understanding that the plaintiff owned all the rights in the program, the court would hold P to be the copyright owner. (Ferris J relied on *Massine v. De Basil* [1936–45] MacG CC 223.)

⁸⁴ *A & M Records v. Video Collection* [1995] EMLR 25.

⁸⁵ e.g. *Saphena Computing v. Allied Collection Agencies* [1995] FSR 616, distinguishing *Warner v. Gestetner* [1988] EIPR D-89.

⁸⁶ *AG v. Guardian (No. 2)* [1990] AC 109, 263, 276. In so far as the constructive trust analysis is adopted there is no obvious reason why the analysis should be restricted to cases of breach of duties owed to the Crown. See *Ultraframe UK v. Clayton (No. 2)* [2003] EWCA Civ 1805 (director held unregistered design rights on trust for company). See below at pp. 1049–51.

⁸⁷ *Australian Broadcasting Corp v. Lenah Game Meats Pty. Ltd* (2001) 208 CLR 199 per Gummow and Hayne JJ at paras. 101–2 and per Callinan J at para. 309.

member states may lead to different conclusions as to who is an author or owner of a particular copyright work, it seems unlikely that the Commission will attempt harmonization in the near future. This is because these rules raise thorny political issues which go well-beyond the field of copyright, in particular touching on national traditions as regards labour relations.

6

NATURE OF THE RIGHTS

1 INTRODUCTION

This chapter is concerned with the rights that the law confers on the copyright owner. The scope of these rights is important insofar as it determines the types of activities which, unless done with the copyright owner's consent, amount to an infringement of the owner's copyright.

One of the most consistent themes in the history of copyright law is that the types of activities that have fallen within the copyright owner's control have steadily expanded. For example, the 1710 Statute of Anne conferred on authors and proprietors of books the limited right to 'print and reprint' those books. In the early nineteenth century, the copyright owner's monopoly as regards musical and dramatic works was extended to cover not only the reprinting of the work, but also the public representation of the work. In 1911, the reproduction right was expanded from the right to print and reprint to the right to 'copy', which included copying in different dimensions. The same reforms conferred the right to 'adapt' a work, that is, a right to prevent translation and conversion into dramatic forms of literary works and arrangements of musical works. With the advent of broadcasting, the copyright owner's right was interpreted as covering broadcasting, and in 1956 a specific broadcasting right was added to the copyright owner's rights. Since then, further rights to distribute, rent, and lend copies have also been added, and the 'broadcasting right' has been transformed into a right to communicate a work to the public.¹ While the copyright owner is able to control the use that can be made of the work in many circumstances, there are still some that do not fall within the owner's control. If we take the case of the rights in a book, for example, the copyright owner is not able, at least yet, to control reading, browsing, or resale of the book.

For the most part, the rights have developed in a piecemeal way in response to external pressures: notably to technological change. As well as producing a complicated and illogical system of rights, the cumulative and reactionary way in which the rights have developed has also led to a degree of overlap between the rights.² While the expansion of the rights granted to the copyright owner has continued with the implementation of the Information Society Directive,³ there have been growing signs that members of the judiciary are becoming suspicious about the over-expansion of copyright and the dangers that

¹ As from Oct. 31, 2003 as a result of Copyright and Related Rights Regulations 2003 SI 2003/2498 implementation of Info. Soc. Dir., Art. 3.

² e.g. between the right of reproduction and the right of adaptation.

³ Copyright and Related Rights Regulations 2003 SI 2003/2498.

this poses for users and consumers of copyright.⁴ What effect this will have upon copyright infringement is yet to be seen, though it may mean that the tendency to interpret the rights in favour of copyright owners may decline.⁵

The primary rights that are currently granted to copyright owners are set out in sections 16–21 of the 1988 Act. Anyone who carries out any of these activities, or authorizes someone else to carry out these activities is liable for primary infringement. This will not be the case, however, if the defendant has the permission of the copyright owner or can show that the activity falls within one of the defences available to them. While the nature of the rights which are granted varies according to the type of work in question, these include the exclusive right to:

- (1) copy the work (reproduction right);
- (2) issue copies of the work to the public (distribution right);
- (3) rent or lend the work to the public (rental or lending right);
- (4) perform, show, or play the work in public (public performance right);
- (5) communicate the work to the public;
- (6) make an adaptation of the work, or do any of the above acts in relation to an adaptation (right of adaptation);
- (7) authorize others to carry out any of these activities.

It should be noted that the particular rights that are granted to copyright owners vary depending on the type of work which is protected.⁶ In particular, while the right of reproduction and the right to issue copies of the work to the public exist in relation to all types of works, the other rights only apply to certain types of subject matter. For example, the performing right applies to all works except artistic works and typographical arrangements; the right to communicate the work to the public applies to all works except typographical arrangements; and the right to make an adaptation of a work only applies to literary, dramatic, or musical works. Care must be taken to check which rights a copyright owner is given by the 1988 Act.

One of the key features of the restricted activities found in sections 16–21 is that they are based on a notion of strict liability. This means that the state of mind of the defendant is not relevant when determining whether an infringement has taken place. As such, it does not matter if a defendant knew that the work was protected by copyright or that the claimant owned the work. Nor does it matter that the defendant incorrectly believed that they had permission to copy the work. All that matters, at least in relation to primary infringement, is that the defendant copied the claimant's work. It should be noted that

⁴ H. Laddie, 'Copyright: Over-Strength, Over-Regulated, Over-Rated?' [1996] 5 *EIPR* 253; A. Mason, 'Developments in the Law of Copyright and Public Access to Information' [1997] *EIPR* 636.

⁵ On previous tendencies to interpret rights broadly in favour of authors see, e.g. *Gambart v. Ball* (1863) 14 *CB (NS)* 306; *Harms v. Martans* [1927] 1 *Ch* 526, 534; *Messenger v. BBC* [1927] 2 *KB* 543, 548–9.

⁶ The rights are, as we will see, ultimately divisible according to convenience. Thus terms such as 'mechanical rights' and 'synchronization rights' have no place in CDPA s. 16. The mechanical copyright refers to a musical copyright owner's right to make a sound recording and is simply an example of the reproduction right. The synchronization right refers to the right to incorporate a record into a film soundtrack.

Table 6.1 Rights

Works	To copy the work (s. 17)	To issue copies of the work to the public (s. 18)	To rent or lend the work (s. 18A)	To perform or show the work in public (s. 19)	To communicate the work to the public (s. 20)	To make an adaptation (s. 21)
Literary, dramatic, and musical	×	×	×	×	×	×
Artistic	×	×	×	NO	×	NO
Film	×	×	×	×	×	NO
Sound recordings	×	×	×	×	×	NO
Broadcasts	×	×	NO	×	×	NO
Typographical	×	×	NO	NO	NO	NO

while the defendant's innocence is not a relevant factor in determining whether they have infringed copyright, it may be relevant when damages are being determined.⁷

In addition to the primary rights set out in sections 16–21, the 1988 Act also provides copyright owners with the ability to protect against secondary infringements (sections 22–6). A defendant may be liable for secondary infringement if, in the commercial exploitation of copies or articles specifically adapted to make copies, the defendant knew or had reason to believe that the copies were or would be infringements when made.⁸ We deal with secondary infringement in Chapter 8.⁹

2 THE RIGHT TO COPY THE WORK: THE RIGHT OF REPRODUCTION

The first and most well-known right given to copyright owners is the right to copy the work (section 17).¹⁰ The right to copy the work is the oldest of the rights granted to owners of copyright. While the right applies to all works, the scope of the right varies depending on the type of subject matter in question. Having said that, one factor that is common to all works is that infringement takes place whether the copy is permanent, transient, temporary, or incidental to some other use of the work.¹¹ This means a person

⁷ CDPA s. 97(1). See below at pp. 1101–2.

⁸ CDPA ss. 22–4, 27. See Laddie *et al.*, ch. 10.

⁹ See below at pp. 185–9.

¹⁰ It is called the 'crown right' by Reinbothe and von Lewinski, *The WIPO Copyright Treaties 1996* (2002) 312. For an argument that it should be jettisoned, in favour of a general right to control commercial exploitation, see J. Litman, *Digital Copyright* (2001), 180 ff.

¹¹ CDPA s. 17(6). See Information Society Directive, Arts. 2 and 5 (certain temporary acts are to be deemed to be non-infringing).

will infringe (absent a defence) when they reproduce a copyright work on a computer screen, or store it in computer memory, as much as when they copy the work from disk to disk. Activities associated with the Internet, such as 'framing' (taking material from one site and placing it on another, though re-framed with the latter's get-up) will be straightforward cases of copying. So will unauthorized acts of up-loading on to sites, or downloading from peer-to-peer systems like Napster. The problems posed by the Internet for copyright holders are, in essence, ones of detection and enforcement rather than absence of liability.

2.1 LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

When the 1710 Statute of Anne first granted copyright to books, the right was limited to the right to print and reprint copies of those books. Within a relatively short period of time, it became clear that if the rights of the copyright owner were limited to situations where the work was copied identically, it would undermine the value of the property. It would, for example, fail to protect an owner against someone making minor changes to the work (thus rendering the 'copied' work non-identical). In order to protect against such uses, the scope of copyright protection was expanded to include non-identical or 'colourable' copying. Even so, the emergence of new practices of replication, use, and distribution of works (which were often but not always linked to new technologies) has repeatedly given rise to doubts about what amounts to a reproduction. Some of these doubts were resolved in a straightforward manner. For example, photographic reproduction was readily treated as equivalent to reprinting.¹² On other occasions, however, it has been more difficult to accommodate the new uses within the existing conceptions of reproduction. For example, at the turn of the century it was held that a phonographic record was not a copy of sheet music for the purposes of the Literary Property Act 1842.¹³ Similarly, the courts have held that the making of *tableaux vivants* (which is the practice of performers dressing up as characters from paintings so as to produce a 'live version' of the painting), did not amount to an infringement of the copyright in the painting.¹⁴

The 1988 Act attempts to minimize these kind of difficulties by using a technologically neutral concept of reproduction. This is reflected in the fact that in relation to literary, dramatic, musical, and artistic works, copying means 'reproducing the work in any material form'.¹⁵ This means that as well as protecting owners against identical copying of the work (such as where a book is reprinted), a defendant may still infringe where they make a non-identical copy of a literary, dramatic, musical, or artistic work. In these instances the question arises: how different from the 'original' work can a copy be and still infringe?

The 1988 Act provides some guidance in this matter. It states, for example, that reproduction includes storing the work in any medium by electronic means. This means that the storing of a work on a computer amounts to a reproduction in material form. In relation to artistic works, the 1988 Act indicates that a person will reproduce a work if

¹² e.g. *Gambart v. Ball* (1863) 14 CB (NS) 306; *Boosey v. Whight* [1900] 1 Ch 122, 123.

¹³ *Newmark v. The National Phonograph Company Ltd* (1907) 23 TLR 439.

¹⁴ *Hanfstaengl v. Empire Palace* [1894] 2 Ch 1; but after 1911 see *Bradbury Agnew v. Day* (1916) 32 TLR 349.

¹⁵ CDPA s. 17(2).

there is a change of dimensions. This means that a photograph of a sculpture, and the making of a car exhaust pipe from a design drawing will be reproductions.¹⁶

Beyond the specific examples listed in the 1988 Act, the question of how different a copied work can be from the 'original' work and still infringe is a question decided by the courts on the particular facts of the case. It is clear that a photocopy of a book,¹⁷ an engraving of a painting, a painting of a photograph, and a sound recording of a song are (potentially) reproductions.¹⁸ Beyond this, it is impossible to predict in advance the exact point at which the translation of a work from one format into another will be treated as a 'reproduction'. It seems highly likely that the conversion of a work into digital form—from symbols perceptible and understandable to the senses into series of ones and noughts—will be treated as a reproduction.¹⁹

While copyright owners are protected against change of form in a wide variety of situations, nonetheless there are limits to the scope of the protection. In particular, the courts have stated that in order to infringe, the derived form must be 'objectively similar' to the copyright work.²⁰ The requirement of objective similarity means that to infringe, the relevant part of the defendant's work must be a copy or representation of the whole or part of the original work.²¹ The question of whether the defendant's work is objectively similar to the copyright work has arisen in two situations: both concerned with infringement of literary works.

The first is where the copyright work consists of *instructions* of how to make or do something. While literary copyright in the instructions will be infringed if the instructions are photocopied or are repeated in different words,²² the copyright will not be infringed where someone follows the instructions. Thus a person will not infringe the literary copyright in a recipe if they follow the instructions and bake a cake to the recipe.²³ This is because what is protected is the literary effort in creating the recipe as a work of information and not the cake *per se*. Similarly, a person who knits clothes according to a knitting guide does not infringe copyright in the guide.²⁴

The need for objective similarity is also important where the copyright work *describes* something. As with instructional works, the key issue here is when is a description

¹⁶ CDPA s. 17(3).

¹⁷ *Norowzian v. Arks* [1998] FSR 394, 398 ('copying of a book is not restricted to simply photocopying the pages from the book but extends to writing the work, retyping it any form whatsoever, dictating it into a tape machine or any other means of reproducing the work in a material form').

¹⁸ *Bauman v. Fussell* [1978] RPC 485. However, it has been held that where someone follows the instructions on a knitting pattern so as to make up a jumper was not a reproduction. This was because the pattern and jumper were not objectively similar.

¹⁹ *Autospin (Oil Seals) v. Beehive Spinning (A Firm)* [1995] RPC 683, 698. (If a literary work precisely defines the shape of an article, copyright may be infringed by making the article or copying it.)

²⁰ *Francis Day Hunter v. Bron* [1963] Ch 587, 623.

²¹ *Brigid Foley v. Ellor* [1982] RPC 433 (Megarry VC).

²² *Elanco v. Mandops* [1980] RPC 213. See also *M. S. Associates v. Power* [1988] FSR 242 (interlocutory proceeding for alleged infringement of computer program).

²³ *Davis (J. & S.) Holdings v. Wright Health Group* [1988] RPC 403, 414. *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 698.

²⁴ *Brigid Foley v. Ellor* [1982] RPC 433 ('there is no reproduction of the words and numerals in the knitting guides in the knitted garments produced by following the instructions'). *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 701. (No infringement of the claimant's charts for calculating the dimension of oil seals to make such oil seals.)

replicated? While copyright in the literary work will be infringed if the work is photocopied, the position is less clear where someone makes or uses the object that has been described in a two-dimensional format. The problem has become acute with developments in computer-aided design (CAD) which means that it is now 'possible to define any shape in words and letters. Therefore a design in a drawing can be defined equally accurately in non-graphic notation. In fact many three-dimensional articles are now designed on computers. A literary work consisting of computer code therefore represents the three-dimensional article'.²⁵

The question of the protection available to a descriptive literary work was considered by Pumfrey J in *Sandman v. Panasonic*.²⁶ This was a copyright infringement action brought in respect of two circuit diagrams that were included in an article published in the journal *Wireless World*. The claimant argued that the copyright that existed in the two-dimensional literary work was infringed when it was made into a three-dimensional circuit diagram and incorporated into amplifiers, CD players, radio tuners, and cassette decks.

Pumfrey J began by noting that the chief problem confronting the claimant was Lord Oliver's comment in *Interlego* that protection for change of form from 2D to 3D was limited to artistic works. On the strength of this Pumfrey J said that there may appear to be 'no way out of this difficulty, if one accepts that a literary-work is two-dimensional'. Pumfrey J went on to say, however, that 'I suspect that the proper answer is that the circuit itself is a reproduction because it still contains all the literary content of the literary work, albeit in a form which would require analysis for it to be extracted'.²⁷ That is, Pumfrey J accepted that in certain circumstances a two-dimensional literary work that described something could be reproduced in a three-dimensional form.

Two points are pertinent here. The first is that it is necessary to distinguish between factual and non-factual descriptions. The reason for this is that it is much more likely that a (factual) description written by an engineer would be protected than a description written by a novelist or a poet. It is unlikely that the copyright in a novel that describes a particular scene will ever be infringed when someone draws it.²⁸ The second is that it seems that a literary work that describes something will only provide protection against a 'reproduction' of the work where the description is very detailed. Thus, someone may infringe where they make a three-dimensional article from a data file in a computer (a literary work) which *precisely defines* the shape of the article.²⁹ By limiting protection to situations where the object is precisely defined, this means that the problem of inhibiting creation in the same area is avoided.

2.2 SOUND RECORDINGS AND FILMS

The definition of 'reproduction' used in relation to films and sound recordings is narrower than in relation to literary, dramatic, musical, and artistic works. As we saw earlier, entrepreneurial works (which are seen more as the products of investment rather than

²⁵ *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 698.

²⁶ [1998] FSR 651. ²⁷ *Sandman v. Panasonic UK* [1998] FSR 651.

²⁸ Laddie *et al.*, para. 7–38. ²⁹ *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 701.

creativity) are given a 'thinner' protection than is given to authorial works.³⁰ This is reflected in the fact that the scope of the reproduction right is inextricably linked to the way the particular work is defined.³¹ In relation to sound recordings, the subject matter is defined as the 'recording of sounds from which the sounds may be reproduced'.³² Consequently, what is protected in relation to sound recordings is not the content *per se*—the song, storyline, plot, or language—or the music or lyrics (which are protected, if at all, as authorial works). Instead, copyright protects the recording of these sounds.³³ Similarly, because a film is defined as a recording on a medium from which a moving image may be produced, the courts have held that film copyright protects the recording of the image (rather than the image itself).³⁴

One of the consequences of reproduction being defined very narrowly is that copyright in a sound recording of a speech is not infringed where a person transcribes the speech. Similarly, copyright in a film is not infringed when somebody writes a description of the film, or stages a play replicating events in the film. Moreover, there is no reproduction where a person re-records contents of a similar nature or style to those embodied on the claimant's (film or sound) recording.³⁵ Likewise, the reshooting of a film sequence (in which not a single frame of the copyright film had been included) was held not to be a copy for the purpose of the 1988 Act.³⁶ This is the case even if the second film closely resembles and imitates the claimant's copyright film, or reproduces the essential features of that film.³⁷ Similarly, copyright in a sound recording is not infringed where a person remakes (or 'covers') the same song or records the same song performed in a similar style (a.k.a. 'sound-alikes').³⁸ However, it should be noted that while an entrepreneurial copyright will not be infringed where a new recording of identical or similar sounds or images is made, this might infringe copyright in an underlying work such as the music, lyrics, or screenplay,³⁹ or violate some other intellectual property right.⁴⁰

Having observed that the reproduction right in relation to films and sound recording is confined to the reproduction of the recording, it should be noted that the recording will be treated as having being reproduced even though the recording medium has changed (as long as the particular sounds or images embodied on the claimant's recording are replicated). For example, a reproduction occurs where a person makes a tape recording of a CD, records a film on a digital camcorder, or uploads or downloads a sound recording from the Internet. Even though the Act does not specify that copying of a film or sound recording includes storing it by electronic means, the better view is that it does.⁴¹

³⁰ It is important to remember that the narrow protection given to entrepreneurial works is balanced by the fact that protection arises irrespective of whether or not the work is original.

³¹ This is not the case with photographs, where the copyright extends to the content or arrangement, not just the 'recording': *Creation Records v. News Group Newspapers* [1997] *EMLR* 444, 450.

³² CDPA s. 5A(1)(a).

³³ In the case of broadcasts the definitions refer to the transmission or sending of visual images, sounds or other information; CDPA ss. 6(1).

³⁴ CDPA s. 5B(1).

⁴¹ *Copinger*, paras. 7–95 and 98.

2.3 BROADCASTS

The 1988 Act provides little guidance as to what it means to copy a broadcast. However, it is clear that the making of an audiotape of a radio broadcast or a videotape of any image forming part of a television broadcast would amount to a reproduction of the broadcast (as well as the contents of the broadcast, be they sound recordings, films, or other works). In contrast with some jurisdictions, UK law does not differentiate between the first fixation and other reproductions of broadcasts.⁴² Following the logic of entrepreneurial copyright it seems that the reproduction of a broadcast only protects the information, sound, and images sent through particular signals. Thus, a person would not infringe if they summarized a broadcast, or described its contents. Similarly, the right to copy the broadcast would not be infringed if someone broadcast exactly the same sound recordings in the same order as was used by another broadcaster.

2.4 TYPOGRAPHICAL ARRANGEMENTS

The scope of the reproduction right in relation to typographical arrangements is very narrow. This is because copying of a typographical arrangement means making a facsimile copy of the arrangement.⁴³ Although 'facsimile' is defined to include enlargements and reductions,⁴⁴ it seems to be confined to reproduction by way of reprography, photocopies, digital scanning, faxing, and little more. Retyping a work in a different font is a sure way of avoiding infringement of copyright in the typographical arrangement.

3 ISSUING COPIES OF THE WORK TO THE PUBLIC: THE DISTRIBUTION RIGHT

The owner of copyright in all categories of work is given the right to issue copies of the work to the public (section 18). This is commonly known as the 'distribution right'.⁴⁵ Section 18 explains that issuing copies of a work to the public means:⁴⁶

- (a) the act of putting into circulation in the EEA copies not previously put into circulation in the EEA by or with the consent of the copyright owner; or
- (b) the act of putting into circulation outside the EEA copies not previously put into circulation in the EEA or elsewhere.

The distribution right is given in respect of the issuing of each and every copy (including the original).⁴⁷ As such it needs to be distinguished from a right to make the works available to the public for the first time (that is a 'publication' or 'divulcation' right of the kind previously recognized in UK law). Essentially the distribution right is a right to put tangible copies (which have not previously been put into circulation) into commercial

⁴² Cf. Rental Rights Dir., Art. 6 (fixation), Art. 7 (reproduction of fixations).

⁴³ CDPA s. 17(5). ⁴⁴ CDPA s. 178.

⁴⁵ The 1988 Act has been amended twice in this regard to implement the Software Dir., Art. 4(c) and the Rental Rights Dir., Art. 9. No amendments were thought necessary to implement Database Dir., Art. 5(c) or Info. Soc. Dir., Art. 4 (which, in turn, implements WIPO Copyright Treaty, Art. 6).

⁴⁶ CDPA s. 18(1). ⁴⁷ CDPA s. 18(4).

circulation.⁴⁸ Once copies are in circulation (at least where the first circulation was consensual), the right no longer operates. As the right of distribution does not include 'any subsequent distribution',⁴⁹ copyright owners cannot control resale.⁵⁰

It is important to note that the distribution right incorporates certain geographical distinctions. In particular, the distribution right was drafted to recognize the principle of Community-wide exhaustion. That is, once tangible copies have been placed on the market in the EEA, a copyright owner cannot utilize national rights to prevent further circulation within the EEA.⁵¹ The corollary of Community-wide exhaustion was that there was no 'international exhaustion'. This means that the distribution right can be used to prevent importation of copies of the work into the EEA. Community exhaustion is maintained because the act of issuing is deemed not to include 'any subsequent distribution, sale, hiring or loan of copies previously put into circulation . . . or any subsequent importation of such copies into the UK or another EEA State'.⁵² Consequently, if a copy is put on the market in the Netherlands and then imported into and sold in the United Kingdom, the importation and sale in the United Kingdom does not infringe the issuing right. This might even be the case if the copy placed on the market in the Netherlands is an infringing copy. (However, in these circumstances the importation may constitute a secondary infringement.) In contrast, since there is no international exhaustion, the issuing right may be invoked to prevent the parallel importation into the United Kingdom of copies marketed outside the EEA by or with the consent of the relevant copyright owner.⁵³

There are number of aspects of the scope and nature of the distribution right that are uncertain. It is unclear when in the chain of distribution a copy is issued to the public.⁵⁴ On one view, a copy will be issued to the public (and thus require the copyright owner's authority) when it is first sold from a manufacturer to a wholesaler. Thereafter, further sales will not require authorization. On another view, a copy will be issued to the public when a copy reaches the hands of a member of the public. Under this approach, the relevant act would occur when the retailer sold a copy of the work to a consumer. The wording of section 18 is ambiguous and can support either interpretation, though EC legislation which section 18 is supposed to implement suggests that distribution takes place on first sale or other transfer of ownership.

Another point of uncertainty arises with regard to the subsequent circulation of legitimate copies put on the market in breach of the issuing right. This can be seen if we take a situation where copies of a book are sold to a book club at reduced rates on the condition

⁴⁸ The Rental Rights Dir., Art. 9(2) and the Software Dir., Art. 4(c) refer to exhaustion on 'first sale', whereas CDPA s. 18 refers to 'putting into circulation'. Info. Soc. Dir., Art. 4(2) refers to 'first sale or other transfer of ownership in the Community'. The question of whether CDPA s. 18 covers intangible copies is of importance as regards uses on the Internet: see, e.g. *Godfrey v. Demon Internet* [1999] EMLR 542.

⁴⁹ CDPA s. 18(3)(a).

⁵⁰ This corresponds with the idea of exhaustion of rights. Note, however, proposals for a resale royalty right: see Ch. 13.

⁵¹ Info. Soc. Dir., Art. 4(2).

⁵² CDPA s. 18(3).

⁵³ Issuing implicitly includes such 'importation' as a result of the proviso to s. 18(3)(b), which having excluded importation into the UK or another EEA state from the concept of issuing, provides that the exclusion does not apply so far as the issuing concerned is issuing in the EEA of copies not previously put into circulation in the EEA by or with the consent of the copyright owner. Such liability for parallel importation, in contrast with importation as an act of secondary infringement, is not dependent on knowledge. This would apply, *a fortiori*, if the copies being imported from outside the EEA were infringing.

⁵⁴ J. Phillips and L. Bently, 'Copyright Issues: The Mysteries of Section 18' [1999] EIPR 132.

that they are only to be sold to members of the club. If in breach of the agreement, the books are sold to a retailer, the question arises as to whether the copyright owner can prevent sales by that retailer? The way this question is answered depends on when the issuing was deemed to have occurred, if at all. If the books were put into circulation when the books were sold to the book club, no remedy is available. However, if the issuing occurred when the book club sold the books, the liability of the retailer depends upon whether the issuing right also applies to sale to the public. This would be on the ground that at that stage the books would not have been put into circulation in the EEA 'by or with the consent of the copyright owner'.

4 RENTAL AND LENDING RIGHTS

While subsequent distribution of copies of the work is not generally within the copyright owner's control, the owner of copyright does have the right to control the rental and lending of the work. When the 1988 Act was first enacted, it provided a limited right to control the rental of copies of sound recordings, films, and computer programs.⁵⁵ No such right was given in relation to literary, dramatic, musical, or artistic works. However, as a result of amendments implementing the Rental Rights Directive,⁵⁶ copyright in literary, dramatic, or musical works, as well as artistic works (other than works of architecture or applied art)⁵⁷ are granted an exclusive right to rent and lend copies of such works to the public (section 18A). The rental right is not exhausted by the first sale of copies of the work.⁵⁸

Rental and lending both involve the making of the original or a copy of a work available for use on terms that it will or may be returned.⁵⁹ The distinction between rental and lending is that the act of rental involves a commercial advantage, whereas lending does not. More specifically, rental is defined as making the work available 'for direct or indirect economic or commercial advantage'. In contrast, lending occurs where there is no such advantage.⁶⁰ It has been suggested that rental not only includes rentals of the sort familiarly operated by video rental stores, but also where videos were lent to hotel guests. It has also been suggested that an organization will indirectly derive a 'commercial advantage' through sponsorship (for example with a commercially sponsored library such as Wellcome Institute's library) and hence be involved in rental, not lending.⁶¹

⁵⁵ Prior to that there was no rental right: see *CBS v. Ames* [1981] *RPC* 407, 428.

⁵⁶ See J. Reinbothe and S. von Lewinski, *The EC Directive on Rental and Lending Rights and on Piracy* (1993).

⁵⁷ Rental Dir., Art. 2(3). Apparently these were excluded because it was thought that the rental right would then cover rental of housing, cars, etc.

⁵⁸ *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] *ECR* I-1953; *Foreningen Af Danske Videogramdistributører v. Laserdisker*, Case C-61/97 [1999] 1 *CMLR* 1297.

⁵⁹ CDPA ss. 18A(2), 18A(6), 182C(2) (performers). Contrast the terms of Rental Dir., Art. 1 'making available for use, for a limited period of time'. Note that it only applies to material copies.

⁶⁰ Recital 16 of the Software Dir. defined 'rental' as the making available of a computer program for use, for a limited time, and for 'profit-making purposes'. During formulation of the Rental Rights Dir. this formula, along with others defining rental as making available 'against payment' were rejected.

⁶¹ See Reinbothe and von Lewinski (1993), 40; cf. J. Griffiths, 'Copyright and Public Lending in the United Kingdom' [1997] *EIPR* 499.

Lending means ‘making a copy of the work available for use, on terms that it will or may be returned, otherwise than for direct or indirect economic or commercial advantage, through an establishment which is accessible to the public’.⁶² The right does not cover loans between private individuals. This is because lending is only prohibited when it is made ‘through an establishment which is accessible to the public’. Lending does not become a rental, at least as regards loans between establishments accessible to the public, where payment does not go beyond what is necessary to cover the operating costs of the establishment.⁶³

The Rental Rights Directive and the 1988 Act both contain a number of limitations to the rental and lending rights.⁶⁴ Neither covers the making available of a copy for public performance, playing or showing in public, or broadcast. As Recital 13 explains, where a cinema owner rents a film from a film distributor that is to be shown to the public, this falls outside the scope of the rental right.⁶⁵ The exclusion also seems to cover a variety of other commercial practices, such as the rental of jukeboxes and possibly also the rental of sheet music.

In a similar vein, neither rental nor lending covers situations where a work is made available for the purposes of exhibition in public. As a result, the owner of a painting does not need to seek permission from the copyright owner before lending the work to an art gallery for public display. Moreover, the rental and lending rights do not cover situations where a work is made available for on-the-spot reference. It has been suggested that this will exempt situations where magazines are made available in waiting rooms.⁶⁶ Finally, lending does not cover the making available of a work between establishments that are accessible to the public. This means that ‘inter-library loans’ are permissible.⁶⁷ Special exemptions apply to the lending of works by educational establishments,⁶⁸ and for the lending of *books* by public libraries (if the book is eligible to fall within the Public Lending Right Scheme).⁶⁹ In addition, copyright in *any work* is not infringed by the lending of copies of the work by a ‘prescribed’ library or archive that is not conducted for profit.⁷⁰

5 THE RIGHT TO PERFORM, SHOW, OR PLAY THE WORK IN PUBLIC

The fourth right conferred on a copyright owner is the right to perform the work in public (section 19). This right, which is usually known as the ‘performing right’, was first introduced by statute to protect owners of copyright in dramatic works in 1833.⁷¹ This was because as the primary way dramatic works are exploited is by way of performance, if the protection given to dramatic works was limited to the reproduction right, this would have been inadequate. In order to be consistent, the performing right was also extended to

⁶² CDPA s. 18A(2)(b). ⁶³ CDPA s. 18A(5). Reflecting the Rental Rights Dir., Recital 14.

⁶⁴ *Ibid.*, Recital 13.

⁶⁵ But this act was long ago held to amount to authorization of infringement: *Falcon v. Famous Players Film Co.* [1926] 2 KB 474.

⁶⁶ See Griffiths [1997] *EIPR* 499, 500. ⁶⁷ CDPA s. 18A(4). ⁶⁸ CDPA s. 36A.

⁶⁹ CDPA s. 40A; Rental Rights Dir., Art. 5. This was the most hotly contested issue during the passage of the Directive. See Ch. 13.

⁷⁰ CDPA s. 40A(2). ⁷¹ See *Russell v. Smith* (1848) 12 QB 217, 236.

musical works and literary works in general. Today, section 19(1) of the 1988 Act provides that performance of a work in public is an act restricted by the copyright in a literary, dramatic, or musical work; and section 19(3) states that the playing or showing of the work in public is an act restricted by the copyright in a sound recording, film, or broadcast. There is no performing right for artistic works (and hence no right to authorize the public exhibition of the work),⁷² or for typographical arrangements.

'Performance' is defined to include the delivery of lectures, addresses, speeches, and sermons; as well as 'any mode of visual or acoustic presentation of a work, such as by means of a sound recording, film, or broadcast.'⁷³ It has been held that a performance of a musical work or sound recording takes place where it can be heard.⁷⁴ Presumably, a performance of a film takes place where it can be seen. Where the performance is live, it should be fairly obvious who is responsible for the performance. Where more artificial means of delivery are employed (for example where copyright-protected music embodied in a sound recording is played by way of a radio in a restaurant), the person who infringes is not the broadcaster,⁷⁵ or the person who supplied the radio apparatus. Rather it is the person who operates the radio.⁷⁶ It seems that it is a publican, rather than a customer, who operates a jukebox and is liable if the public performance is not authorized.

In order to infringe, the performance must be carried on 'in public'. There are many situations where it is clear that a performance is in public: a performance at the Brixton Academy, the Royal Albert Hall, a West End theatre or cinema, or in a public house would normally all be to the public. Beyond these examples, however, what is meant by 'in public' is less clear.⁷⁷ Over time, three different conceptions of the 'public' have been used in the case law.

In some cases the concept of the public is understood according to the character of the audience.⁷⁸ In this context a distinction is drawn between a section of the general public (which have no other unifying theme other than the desire to see the performance), and a group of people who share a private or domestic link. For example, the residents of a hospital or a nursing home are bound together by a link that distinguishes them from the general public, namely, that they reside at a particular location. Consequently, in *Duck v. Bates*,⁷⁹ the Court of Appeal held that copyright in the play *Our Boys* was not infringed when an amateur dramatic club performed it at Guy's Hospital for the entertainment of the nurses. This was because it was held to be a domestic performance, not a performance

⁷² But see moral right of attribution. In *Hanfstaegl v. Empire Palace* [1894] 2 Ch 1 it was held that copyright was not infringed by performing an artistic work in the form of a *tableaux vivant*. This may, however, be a reproduction: *Bradbury Agnew v. Day* (1916) 32 TLR 349.

⁷³ CDPA s. 19.

⁷⁴ *PRS v. Camelo* [1936] 3 All ER 557 (the playing of a radio in the defendant's lounge infringed the performing right in the songs played on the radio because the radio could be heard in the neighbouring restaurant).

⁷⁵ CDPA s. 19(4). Cf. *PRS v. Hammond's Bradford Brewery Co.* [1934] 1 Ch 121, 139.

⁷⁶ *PRS v. Hammond's Bradford Brewery Co.* [1934] 1 Ch 121 (CA) (a person performs a musical composition when they cause it to be heard); *Messenger v. BBC* [1927] 2 KB 543, 548.

⁷⁷ *Jennings v. Stephens* [1936] 1 Ch 469, 476, 481 (the words are probably incapable of precise definition); *Harms v. Martans* [1927] 1 Ch 526, 530. M. F. Makeen, *Copyright in a Global Information Society: The Scope of Copyright Protection under International, US, UK, and French Law* (Kluwer, 2000), 148 ('no problem in contemporary copyright law appears to have been debated more extensively or intensely').

⁷⁸ *Jennings v. Stephens* [1936] 1 Ch 469, 476, 479; *PRS v. Harlequin* [1979] 2 All ER 828, 833.

⁷⁹ (1884) 13 QBD 843.

to which the public or any portion of the public was invited. Using a test of this sort, a performance in a shop,⁸⁰ before members of a club,⁸¹ or in a hotel lounge⁸² would be a performance to a 'section of the general public' (so long as anyone could enter the shop, join the club, or enter the hotel lounge). However, using the same test, it is unlikely that a performance at a dinner party,⁸³ or to students at a boarding school,⁸⁴ would be treated as a performance to a 'section of the general public'. In these cases, the audience is linked by personal connection, residence, or employment.

Another test that has occasionally been employed to determine whether a performance is in public effectively ignores the public or private nature of the performance and focuses, instead, on whether the performance is motivated by financial considerations.⁸⁵ If the performance is run for profit, it is likely to be 'in public'. The rationale for this is that otherwise the performer or organizer of the performance could be unjustly enriched by the performance (at the expense of the person who owned copyright in the works that were performed).⁸⁶ Thus, in *Harms v. Martans* the Court of Appeal held that performance of the musical work 'That Certain Feeling' at the Embassy Club to an audience of 150 members and fifty guests was a performance in public. Lord Hanworth MR suggested that the critical considerations were whether the defendants' activities were for profit;⁸⁷ who was admitted; and where the performance took place. Since the members paid a substantial subscription and an entrance fee, were the sorts of people who would pay to go to a public theatre to hear a performance, and the club paid the orchestra to perform, the performance was 'in public'.

A third test has focused upon the copyright owner's monopoly. Under this approach, a performance is 'in public' if it is made to or before 'the copyright owner's public'. This test, which first emerged in the 1930s in the judgments of Lord Greene MR, later came to be quite widely adopted. In *Jennings v. Stephens*⁸⁸ the performance of a play *The Rest Cure* by the members of a Woman's Institute without charge and without guests was held to be a performance in public. Greene LJ said:

[T]he expression 'in public' must be considered in relation to the owner of the copyright. If the audience considered in relation to the owner of the copyright may properly be described as the owner's 'public' or part of his 'public', then in performing the work before that audience he would in my opinion be exercising the statutory right conferred upon him.⁸⁹

This test has been used to hold that the playing of the BBC's music broadcasts to 600 workers in a factory infringed the performing right. The factory owner claimed that the audience was not a 'section of the public'—a reasonable view given that the common bond was work, not a desire to listen to music. However, Lord Greene MR held the

⁸⁰ *PRS v. Harlequin* [1979] 2 All ER 828.

⁸¹ *Harms v. Martans* [1927] 1 Ch 526, 537 (emphasizing that there was an invitation to the general public to become members of the club).

⁸² *PRS v. Hawthorns Hotel (Bournemouth)* [1933] Ch 855.

⁸³ *Jennings v. Stephens* [1936] 1 Ch 469, 481.

⁸⁴ *Ibid.*, 483.

⁸⁵ *Harms v. Martans* [1927] 1 Ch 526, 532–3.

⁸⁶ Some statutory support for this approach can be found in the defence provided by CDPA s. 67 (as amended) and 72 as regards the free public showing of a broadcast.

⁸⁷ A factor treated as of minimal significance in *Ernest Turner Electrical Instruments v. PRS* [1943] 1 Ch 167, 173.

⁸⁸ [1936] 1 Ch 469.

⁸⁹ [1936] 1 Ch 469, 485.

performances were ‘in public’, because to hold otherwise would have meant that the value of the monopoly given by the statute would have been substantially ‘whittled down’.⁹⁰ This test seems difficult to justify, since it is surely the case that most copyright owners would want to extend their monopoly as widely as possible and would therefore claim that all performances were before their ‘public’.⁹¹

While doubts uncertainties exist over the relationship between the three tests,⁹² it should be clear that, historically, the notion of public is defined expansively, so as to favour the copyright owner. For the moment, copyright owners and their collective representatives seem content with the limits set by the courts. These make it clear that performances in places which are open to the public (from hairdressers’ salons to hotel lounges) are performances in public. The cases also make it clear that performances before substantial numbers of people not connected by family or domestic ties, will be in public. The consequences of the different approaches to defining the public now remain only to be felt in marginal case (such as the case of playing music in the office of a small family firm, or at a wedding reception).

With regard to the infringement of the performing right, it is important to bear in mind that there are a number of related acts of secondary infringement. These are considered in Chapter 8.

6 THE RIGHT TO COMMUNICATE THE WORK TO THE PUBLIC

The exclusive right to communicate a work to the public arises with respect to literary, dramatic, musical, and artistic works, sound recordings,⁹³ films, and broadcasts.⁹⁴ The right, which was recently introduced to implement the Information Society Directive,⁹⁵ is distinguished from public performance or playing or showing in public (section 19) by the fact that the public is not present at the place where the communication originates.⁹⁶ So, converting sounds into electronic signals and broadcasting them so that they can be received and heard on a radio is a communication to the public (rather than a public performance). In contrast, operating the radio so the sounds can be heard in a public place would be public performance (but not communication to the public).⁹⁷

⁹⁰ *Ernest Turner Electrical Instruments v. PRS* [1943] 1 Ch 167 (Lord Greene MR).

⁹¹ See *PRS v. Harlequin Record Shops* [1979] 2 All ER 828, 834.

⁹² Indeed, the courts have rarely acknowledged that the tests applied vary or are incompatible.

⁹³ In the case of sound recordings, when exercised by a collecting society, the right consists only of an entitlement to equitable remuneration: ss. 135A–H.

⁹⁴ CDPA s. 20.

⁹⁵ Copyright and Related Rights Regulations 2003 SI 2003/2498 implementing Info. Soc. Dir., Art. 3, itself implementing WCT, Art. 8, WPPT Art. 14.

⁹⁶ Info. Soc. Dir., Recital 23.

⁹⁷ The distinction between broadcasting and public performance has not always been maintained. Soon after the emergence of radio broadcasting in the 1920s, it was successfully argued that the BBC had infringed the ‘performing right’ when it broadcast a private performance that was capable of being received on wireless receivers: *Message v. BBC* [1927] 2 KB 543, 548–9. Later, a specific ‘broadcasting right’ was conferred on copyright owners by the 1956 Act. This was retained in s. 20 of the CDPA, as enacted, and has been included, in amended form, in the new s. 20. Broadcasters are given immunity from liability for public performances that result from the broadcasts by CDPA s. 19(4). The relationship between ‘communication in public’ and

In its British implementation, the communication right is confined to ‘electronic communication’, and is said to include ‘broadcasting’ and ‘making available’. While a broadcasting right has been expressly conferred on copyright owners in the United Kingdom since 1956, the ‘making available’ right has its roots in the WIPO Copyright Treaty of 1996. We consider each separately.

6.1 BROADCASTING

As we saw in Chapter 3, a ‘broadcast’ is defined as an electronic transmission of visual images, sounds, or other information for simultaneous reception by the public or which is made for presentation to the public, but excludes ‘Internet transmissions’.⁹⁸ As we have already observed, this covers digital, analogue, terrestrial, and satellite transmissions, but not the placing of a work on a web site. The definition of broadcast covers the forms of satellite broadcasting which may be directly received by individuals or may be received by subscribers who obtain a decoder.⁹⁹ The relaying of a broadcast by reception and immediate retransmission constitutes a separate act of broadcasting.¹⁰⁰

The person who makes a broadcast is either the person transmitting an item, such as a programme, where that person has responsibility for its contents, or the person providing the item for transmission who ‘makes with the person transmitting it the arrangements necessary for its transmission’.¹⁰¹

Because of the potential transnational nature of broadcasting, it has long been acknowledged that it is important to ascertain where a particular broadcast takes place.¹⁰² A person wishing to make a broadcast needs to obtain consents from copyright holders of works included in the broadcast, but only as regards those copyrights that are operative in the territory in which the broadcast occurs. However, when a signal is sent or uplinked to a satellite (from place A) and is then beamed back to earth over a large reception area or ‘footprint’ (places A, B, and C), there are at least two possible territories where the act of broadcasting might be thought to take place. On the one hand, it could be said that the broadcast occurs from the place where the signal was sent (the emission or introduction theory). Alternatively, it might be thought that the broadcast occurs in the places where it is received (the reception or communication theory). In the face of conflicting national decisions on this issue, it became clear in the late 1980s that it was necessary to harmonize the law in this area. Two contrary concerns dominated the decision as to the choice of the place of broadcast. On the one hand, the simplest answer and the one that facilitated

‘communication to the public’ is explored in comparative, historical context by M. F. Makeen, *Copyright in a Global Information Society: The Scope of Copyright Protection under International, US, UK, and French Law* (2000).

⁹⁸ CDPA s. 6(1). The definition of broadcast is the same for infringement as that used to define broadcasts as works capable of being protected by copyright.

⁹⁹ That is, any encrypted broadcast, whether terrestrial or by satellite relay, is ‘lawfully’ received if decoding equipment has been made available through the person transmitting it in encrypted form: CDPA s. 6(2).

¹⁰⁰ CDPA s. 6(5)(a). However, special rules apply to retransmissions of broadcasts from another EEA member state: CDPA s. 144A. These provide that, aside from rights of broadcasting organizations with regard to their own transmissions, only collecting societies may exercise rights to authorize cable retransmissions of broadcast works. Where such arrangements have not been made, the licensing body is treated as mandated to exercise the right.

¹⁰¹ CDPA s. 6(3).

¹⁰² See Makeen, *Copyright in a Global Information Society* (2000) ch. 4.

satellite broadcasting was that the country of broadcast was the country of uplink. However, it was feared that this would lead to satellite uplink facilities migrating to countries where copyright protection was weak, and that copyright owners would thus be best protected if consent was required in all countries where the signal could be received. In the end a compromise was reached. The country of introduction is treated as the relevant place only where the standard of copyright protection is satisfactory. Accordingly, section 6 of the 1988 Act defines the place of wireless broadcasting as the place where the broadcaster introduces programme-carrying signals into an uninterrupted chain of communication, including any satellite relay.¹⁰³

6.2 THE RIGHT TO MAKE THE WORK AVAILABLE

The second element of the communication right is the exclusive right to make the work 'available to the public . . . by electronic transmission in such a way that members of the public may access it from a place and at a time individually chosen by them'. In contrast to the broadcasting right, which is premised on the idea of simultaneous reception, 'making available' encompasses individual communications to persons who are members of 'the public'. A Recital to the Information Society Directive explains that the right will cover interactive on-demand transmissions,¹⁰⁴ such as 'video-on-demand' services and so-called 'celestial jokeboxes'. But the new right should also be assumed to cover most Internet transmissions (other than broadcasts) where a person places a work on a web site because members of the public can access the work 'from a place' (their terminal, whether it be in their office, home, or on their mobile telephone) and 'at a time' chosen by them.¹⁰⁵

Presumably, case law on the meaning of 'public' in section 19 will be of persuasive value in defining 'members of the public' for section 20 (at least until the ECJ decides it is ready to elaborate a Community concept of the public). There may be an infringing act if access to a site requires some formality, such as registration, as those who register may be thought analogous to residents at a hotel or diners in a restaurant. Equally, there may be an infringement by placing a work on a private intranet, such as a closed university site: as already noted, the existence of a common employment relation has not been thought enough, under British case law, to render a grouping domestic in character.

Although the infringing act is the making available (rather than the accessing of the work), neither the Directive nor the British implementation explains *where* the act takes place. One candidate is the place where the individual up-loads the work on to a web site; a second, the location of the server; a third, the place or places from which it can be accessed; a fourth, the territory where the public at which the work is targeted are located. This difficult issue will need to be resolved.

A further issue that will need to be confronted before long is which ancillary acts

¹⁰³ CDPA s. 6(4). These provisions reflect amendments in the Rental Regs., to give effect to the Cable and Satellite Directive, chs. I and II. CDPA s. 6 is subject to the safeguard rules in CDPA s. 6A, which operates in cases of transmissions from places outside the EEA. The addition of the word 'wireless' was added by the 2003 Info. Soc. Regs., SI 2003/2498 reg. 4(c).

¹⁰⁴ Info. Soc. Dir., Recital 25.

¹⁰⁵ On which see J. Reinbothe and S. von Lewinski, *The WIPO Treaties 1996* (London: Butterworths, 2002) pp. 108–11. See also Irish Copyright and Related Rights Act 2000, s. 40(1)(a) (defining making available explicitly to include the making available of copies of works 'through the Internet').

constitute distinct infringing communications: in particular, is hyper-linking to a work itself a 'making available'? Although it might be arguable that hyper-linking makes a work available to a new public (as, for example, where a link is made from an intranet onto the worldwide web), and thus might be seen as an act which the copyright owner should be empowered to control,¹⁰⁶ the better view is that the 'making available right' is not an appropriate mechanism by which to protect a content-holder's interest in controlling access to different audiences (or its different publics). Most hyper-linking simply makes it easier to locate (and, if desired, access) works which are already available to the public, and it would be unduly constraining to require all links to be authorized.¹⁰⁷ In those relatively rare situations where a link enables broader access to a site than was originally authorized by a content-owner, the rules dealing with circumvention of access controls should provide ample protection.

7 THE RIGHT TO MAKE AN ADAPTATION OF THE WORK

The copyright owner of literary, dramatic, or musical work is given the exclusive right to make an adaptation of the work.¹⁰⁸ The owner of copyright in artistic works, sound recordings, and films is not given an adaptation right. The adaptation right is restrictively defined and is not to be confused with a general right to control all derivative works, such as that recognized by copyright law in the USA.¹⁰⁹ The adaptation right includes the right to do any of the other restricted acts in relation to an adaptation, including the right to make an 'adaptation of an adaptation'.¹¹⁰ Consequently it is not only a restricted act to make an adaptation, but also to reproduce an adaptation in any material form, issue copies of it to the public, perform it in public, or broadcast it. As it is not possible to draw a clear line between an adaptation and a reproduction, in many cases the same act might be both a reproduction and an adaptation.¹¹¹

7.1 MEANING OF ADAPTATION

Adaptation is defined differently for literary works, dramatic works, computer programs, databases, and musical works. We must deal with each in turn. In relation to *literary or dramatic* works, adaptation means a translation (such as a translation into French), or a dramatization of a non-dramatic work (such as where a novel is turned into a screenplay or ballet or, after *Norowzian v. Arks*,¹¹² a film). The adaptation right in a literary or dramatic work will also be infringed where the story or action is conveyed wholly or

¹⁰⁶ In *Shetland Times v. Willis* [1997] FSR 604 case it was found to be arguable that a newspaper web site which was linked to another web site, had thereby included items (the headline of the article) in a cable-programme service. The basis for the decision has been swept away by the 2003 amendments.

¹⁰⁷ Litman, *Digital Copyright* p. 183 ('the public has always had, and should have, a right to cite'); A. Strowel and N. Ide, 'Liability with Regard to Hyperlinks' (2001) 24 *Col-VLA J L & the Arts* 403, 425.

¹⁰⁸ Implementing, for the most part, Berne, Arts. 8 and 11(2) (translation); Art. 12 (adaptations, arrangements, and other alterations); Art. 11 ter(2) (communication of translation).

¹⁰⁹ And in this respect seems narrower than Berne, Art. 12.

¹¹⁰ CDPA s. 21(2).

¹¹¹ CDPA s. 21(6).

¹¹² [2000] FSR 363.

mainly be means of pictures (such as a comic strip). As regards dramatic works, adaptation means a version of a dramatic work that is converted into a non-dramatic work (such as the conversion of a film into a novel). In relation to musical works, an adaptation is defined as an arrangement or transcription of the work.¹¹³

Although an adaptation is only made when it is recorded in writing or otherwise, the public performance or broadcasting of an adaptation will infringe even if at that stage the adaptation has not been recorded in writing or otherwise. Consequently, an amateur dramatic group whose public performance is based on a novel, will almost certainly infringe the adaptation right. This is because in so doing the group will have adapted the novel by converting it into a dramatic work. Equally, the broadcast of someone translating a text from a foreign language into English will infringe, even though the translator has not made a written version of the translation.

The adaptation right also applies to computer programs and databases. In relation to computer programs, an adaptation means an arrangement or altered version of the program or a translation of the program.¹¹⁴ In these circumstances, translation includes the conversion into or out of a computer language into a different computer language or code.¹¹⁵ In relation to databases, adaptation means an arrangement or altered version of the database or a translation of it.¹¹⁶

8 AUTHORIZATION

As well as being given the right to carry out the restricted activities, the copyright owner is also given the right to authorize others to do any of the restricted acts.¹¹⁷ When this right was introduced in the Copyright Act 1911, it was said to be superfluous and tautologous: the exclusive right to do an act implicitly carried with it the right of authorization.¹¹⁸ However, it soon became clear that the term 'authorize' extended the copyright owner's rights to cover the acts of persons in some way associated or affiliated with an infringement. It was said that 'authorize' meant, to sanction, countenance, or approve,¹¹⁹ or alternatively, to grant or purport to grant to a third person the right to do an act.¹²⁰ The latter formulation has now received the approval of the House of Lords. In order to amount to authorization, the person to whom 'authority' has illegitimately been granted must in fact commit an infringing act.¹²¹ However, the person giving the authorization (in contrast with the person to whom authority is given) need not be located in the UK.¹²²

¹¹³ *Francis Day v. Bron* [1963] 1 Ch 587, 611 (adaptation and translation must be deliberate).

¹¹⁴ CDPA s. 21(3)(ab). ¹¹⁵ CDPA s. 21(4); Software Directive, Art. 4(b).

¹¹⁶ CDPA s. 21(3)(ac); Database Dir., Art. 5(b).

¹¹⁷ CDPA s. 16(2). The 'authorization' right needs to be compared with the general principles of joint-tortfeasance described in Ch. 47. Acts which are 'authorizations' will often also be acts which amount to joint tortfeasance, but there is such a degree of uncertainty surrounding the case law (particularly after the narrow interpretation given to authorization in *CBS v. Amstrad* [1988] 2 All ER 484) that it remains impossible to estimate how far the tort of authorization extends beyond joint tortfeasance.

¹¹⁸ *Falcon v. Famous Players* [1926] 2 KB 474, 495–6; *PRS v. Caryl Theatrical Syndicate* [1924] 1 KB 1, 12.

¹¹⁹ *Falcon v. Famous Players* [1926] 2 KB 474, 491. ¹²⁰ Ibid.

¹²¹ *Nelson v. Rye and Cocteau Records* [1996] FSR 313, 337.

¹²² CDPA s. 16(2), in contrast with s. 16(1) is not explicitly confined to 'acts' of authorization within the UK: *ABKCO Music & Records Inc. v. Music Collection International* [1995] RPC 657.

The concept of authorization has been applied in two distinct ways. First, it has been used to expand the network of potential liability beyond vicarious liability. This has typically occurred in relation to the performance of copyright works.¹²³ Given that performers often do not have a lot of money, copyright owners have attempted to sue the parties who hired the performers. While the principle of vicarious liability made this relatively straightforward where the performer was an employee,¹²⁴ copyright owners argued, for example, that where a person hired a band (which infringed copyright), the hirer was liable for ‘authorizing’ the infringing performance. These attempts proved to be relatively successful where the hirer was aware of the songs which the band would perform, or did nothing to control the repertoire performed. In both cases the hirer was deemed to have authorized the infringements.¹²⁵ However, where a warning was given to the performers and the infringements were by way of spontaneous encores of which the hirer had no prior knowledge, the mere hiring of the band was held not to be an authorization.¹²⁶ In one case, an attempt to make a managing director liable for authorizing the infringing performance of a band was unsuccessful where the director had taken no interest in the content of the performance and was out of the country when it took place.¹²⁷

The concept of authorization has also been applied where a person manufactures or supplies merchandise that enables or facilitates infringement (usually by copying). In these circumstances copyright owners have argued that where a person makes facilities available in the knowledge that they will probably be used to infringe, this is equivalent to ‘authorizing’ infringement. Thus it has been asserted that a person who supplies films to a cinema, who sells blank tapes to the public when renting out records,¹²⁸ makes photocopying equipment available in a library,¹²⁹ or manufactures tape-to-tape machines should be treated as having authorized the resulting infringements. Similar arguments are currently being used in relation to the activities of Internet Service Providers and others who make space available on the Internet which carry infringing works.

Questions of this nature arose in *CBS Songs v. Amstrad*,¹³⁰ where the House of Lords defined the term ‘authorize’ restrictively. Amstrad manufactured and marketed a double-speed twin-tape recorder, which was sold by Dixons. The advertisement which Lord Templeman described as ‘hypocritical and disingenuous’ boasted that the model ‘now features hi-speed dubbing enabling you to make duplicate recordings from one cassette to another, record direct from any source and then make a copy and you can even make a

¹²³ But note also, e.g. *Pensher Security Door Co. v. Sunderland CC* [2000] RPC 249, 278–9 (door designs).

¹²⁴ *PRS v. Mitchell & Booker (Palais de Danse)* [1924] 1 KB 762 (applying a ‘control’ test).

¹²⁵ *PRS v. Bradford Corporation* (1921) [1917–23] MacG CC 309, 312–13, 314. If the hirer specified particular songs were to be performed, and those performances infringed copyright, the case would be even stronger: see *Standen Engineering v. Spalding & Sons* [1984] FSR 554; *Pensher Security Door v. Sunderland CC* [2000] RPC 249, 278–9 (commissioner specifying infringing design).

¹²⁶ *PRS v. Bradford Corporation* [1917–23] MacG CC 309, 314.

¹²⁷ *PRS v. Cyril Theatrical Syndicate* [1924] 1 KB 1.

¹²⁸ *CBS Inc v. Ames Records and Tapes* [1981] 2 All ER 812 (a record library which lent out records and sold cheap blank tapes did not infringe).

¹²⁹ *Moorhouse v. UNSW* [1976] RPC 151, 159 (High Court of Australia) (university authorized infringement of copyright by providing a self-service photocopying machine without adequate warning about copyright). Cf. *CCH Canadian v. Law Society of Upper Canada* [2004] SCC 13.

¹³⁰ [1988] 2 All ER 484.

copy of your favourite cassette'. An asterisk drew attention to a footnote warning that the recording and playback of certain material was only possible with permission. It also referred the user to the relevant legislation. The British Phonogram Industry (BPI), which represents various owners of copyright in musical and literary works and in sound recordings, claimed that Amstrad had authorized infringement of copyright in BPI's sound recordings.¹³¹

The House of Lords held that neither the sale of the equipment nor the advertisement thereof amounted to an authorization. Lord Templeman said that an authorization means a grant or purported grant, express or implied, of the right to do the act complained of.¹³² The House of Lords held that while the machinery enabled a person to copy lawfully or unlawfully, this did not constitute an authorization.¹³³ Lord Templeman said that it was crucial that the footnote had warned that certain types of copying required permission and that Amstrad did not have the authority to grant that permission. In short, the Lords held that there was no authorization because it was up to the operator whether to infringe or not: Amstrad in no way purported to possess the authority to give permission to copy records.

With each new wave of technological advance in equipment for recording and copying (such as MP3 and Napster software), as well as the provision of facilities supplying copyright material, the question arises as to whether the manufacturer or supplier authorizes infringement. In deciding when such activities amount to authorization, it is critical to recall the emphasis in *Amstrad* placed on the fact that the device could be used for both legitimate and illegitimate purposes and that the manufacturer was unable to control the user's decisions. It is fair to say that a manufacturer will be able to avoid liability for authorization in any case where (a) it is possible to envision a legitimate use of the copying facility and (b) the advertisement of the product makes it clear that the user will need to obtain permission for some copying activities.

9 LIABILITY OF INTERNET SERVICE PROVIDERS

One issue that has caused particular concern is the position of those who provide services and facilities that facilitate infringement on the Internet.¹³⁴ These people, who effectively provide the hardware and infrastructure for the new information society, include multinational enterprises who provide the cables for communication, as well as others who provide access to the web through local 'servers', who run bulletin boards and web sites where others can post information, and who provide temporary access to the net at Internet cafés. At one stage, it became fashionable to suggest that the difficulties with rights-holders policing their own rights were so great that some of these service providers should incur liability where infringing material was found on sites which they controlled. The argument ran that these persons were in the best position to supervise and inspect

¹³¹ Their Lordships also considered and rejected a number of related claims as to joint tortfeasance. See below at pp. 1061–4.

¹³² [1988] 2 *All ER* 484, 493.

¹³³ *Ibid.*, 492.

¹³⁴ WCT, Art. 8. Note also the 'Agreed Statement' annexed to the Treaty stating that the mere provision of physical facilities for enabling or making a communication does not in itself amount to a communication.

their cyber-premises, and like the owner of a place of entertainment, should be liable for infringements which occurred on their 'premises'.¹³⁵

The European Commission decided to pre-empt the development of diverse national responses to these issues through a harmonizing Directive, but took the view that since service providers could incur liability on a number of bases (defamation, copyright, obscenity, etc.) the issue fell outside the remit of the Information Society Directive. Instead, harmonization was provided for in Articles 12–15 of the EC Directive on Electronic Commerce, which requires member states, by 17 January 2002, to confer an immunity on such providers except in certain limited situations.¹³⁶ These parallel, in large part, the so called 'safe harbours' introduced into US law by the US Digital Millennium Copyright Act.¹³⁷

British implementation took place in the Electronic Commerce (EC Directive) Regulations 2002.¹³⁸ For Internet and related service providers, law adjacent to copyright law introduces three general immunities from liability, whether it be for the infringement of copyright or the violation of any other right.¹³⁹ The immunities in all cases excuse liability for damages, for any other monetary remedy, and for any criminal sanction, but they do not prohibit injunctive relief.¹⁴⁰

The beneficiaries of these immunities are so-called information-society service providers, that is, any service which is normally provided for remuneration and which operates at a distance by electronic means and at the individual request of a recipient of the services. It would cover, therefore, most commercial Internet Service Providers, but would not cover Internet cafés, whose services are not provided at a distance. The immunities apply to 'mere conduits', 'caching', and 'hosting', as follows:

9.1 MERE CONDUIT¹⁴¹

Where the service provided is the transmission in a communication network of information provided by a recipient of the service or is the provision of access to a communication network, the service provider is exempted from liability where it did not initiate the transmission, select the receiver of the transmission, and did not select or modify the information contained in the transmission.¹⁴²

¹³⁵ Info. Soc. Dir., Recital 59.

¹³⁶ Electronic Commerce Dir. The European Council Directive on Certain Legal Aspects of Electronic Commerce in the Internal Market is aimed generally at promoting electronic commerce within the European Union, that is the provision of goods and services on-line, and so encompasses many matters such as electronic contracts, unsolicited communications, codes of conduct, etc., outside the scope of this book.

¹³⁷ Online Copyright Infringement Liability Limitation Act, Title II of the Digital Millennium Copyright Act, Pub. L. No. 105–304, amending Ch. 5 of Title 17 USC. In contrast with the DMCA no provision is made for the benefit of information location tools. For commentaries, see A. Yen, 'Internet Service Provider Liability for Subscriber Copyright Infringement, Enterprise Liability and the First Amendment' (2000) 88 *Geo LJ* 1883. For comparisons, see V. McEvedy, 'The DMCA and the Ecommerce Directive' [2002] *EIPR* 65.

¹³⁸ Electronic Commerce (EC Directive) Regulations 2002, SI 2002/2013 in force on 21 Aug. 2002.

¹³⁹ Electronic Commerce (EC Directive) Regulations 2002, SI 2002/2013.

¹⁴⁰ Electronic Commerce Reg. 20(1)(b).

¹⁴¹ Cp. s. 512(a) of the US Copyright Act 1976 providing the 'conduit' safe harbour in US law. It defines a 'service provider' as 'an entity offering the transmission, routing or providing of connections for digital online communications, between or among points specified by a user, of material of the user's choosing, without modification to the content of the material sent or received'.

¹⁴² Electronic Commerce Reg. 17.

9.2 CACHING

Where the service provided is the transmission in a communication network of information provided by a recipient of the service, the service provider shall not be liable if the information is the subject of 'automatic, immediate and temporary storage' and if the following conditions are satisfied: (1) the service provider provides storage for the sole purpose of making more efficient onward transmission of the information to other recipients of the service upon their request; (2) the service provider does not modify the information; (3) it complies with the conditions on access to the information; (4) it complies with rules regarding the updating of the information; (5) it does not interfere with the lawful use of technology, widely recognized and used by the industry, to obtain data on the use of the information; and (6) it acts expeditiously to remove or disable access to the information, so stored, upon obtaining actual knowledge of the fact that the information at the initial source of the transmission has been removed from the network, or access to it has been disabled, or a court has ordered such removal or disablement.¹⁴³

9.3 HOSTING

Where the service provided consists of storage of information provided by a recipient of the service, the service provider shall not be liable for storage where it has no actual knowledge of unlawful activity or information and is not aware of facts or circumstances from which it would have been apparent to the service provider that the activity or information was unlawful; or, upon obtaining such knowledge or awareness, it acts expeditiously to remove or disable access to the information.¹⁴⁴

9.4 INJUNCTIVE RELIEF

Section 97A of the 1988 Act (which implements Article 8 of the Information Society Directive) imposes an important counterweight to those immunities. This confers a power on the High Court to issue an injunction against a service provider where that person has actual knowledge of another person using their service to infringe copyright. In assessing whether the service provider has the appropriate knowledge, the Court is directed to take account of any notice received by the service provider under regulation 6(1)(c) of the Electronic Commerce Regulations 2002. Right-holders are in a position to apply for an injunction against intermediaries whose services are used by a third party to infringe a copyright or related right. While the immunities given by the Electronic Commerce Directive prevent financial liability, if the service provider is informed of the illegal acts, thereafter it seems they must take action to stop them continuing or face injunctive relief.

¹⁴³ Electronic Commerce Reg. 18. Cf. s. 512(b) of the US Copyright Act 1976 (as introduced by the DMCA).

¹⁴⁴ Electronic Commerce Reg. 19. Cf. s. 512(c) of the US Copyright Act 1976 (as introduced by the DMCA). Note the 'notice and take-down' and 'put-back' procedures.

7

DURATION OF COPYRIGHT

1 INTRODUCTION

The question of the appropriate period of protection that ought to be granted to copyright works has long captured the attention of policy makers, legislatures, judges, and commentators. For example, the central question of the literary property debate of the eighteenth century was whether common law literary property protection should be perpetual.¹ Similar debates have arisen at many other times during the history of copyright law. While these debates have always been shaped by the particular circumstances under discussion, they are similar in that they have attempted to mediate between the private interests of owners and the interests of the public in ensuring access to creative works.² That is, they have attempted to coordinate and balance the various interests that coexist in copyright law. Another common feature of these debates is that whenever the question of duration has arisen, the length of protection has always increased rather than decreased. For example, literary works were initially protected for fourteen years under the 1710 Statute of Anne. After great debate, the 1842 Literary Copyright Act extended the term of copyright in books to forty-two years, or the author's life plus seven years.³ In 1911, this was extended to a life plus fifty-year term. As a result of the EU Duration Directive, the term of protection was recently increased to the life of the author plus seventy years.⁴

Before looking at duration in more detail, it is important to note a number of things. The first is that the period of protection changes depending on the type of work in

¹ That is the debates preceding and surrounding *Millar v. Taylor* and *Donaldson v. Beckett* (1774) 2 *Brown's Prerogative Cases*; Cobbett's *Parliamentary History* xvii, 954. See, e.g. A. Birrell, *Seven Lectures on Copyright* (1898); B. Kaplan, *An Unhurried View of Copyright*, 1–25 (1967); L.-R. Patterson, *Copyright in Historical Perspective* (1968); M. Rose, *Authors and Owners* (1993); D. Saunders, *Authorship and Copyright* (1992); Sherman and Bently, ch. 1.

² For an overview of policy considerations, see S. Ricketson, 'The Copyright Term' (1992) 23 *IIC* 753. The arguments were extensively ventilated in the US literature surrounding *Eldred et al. v. Ashcroft* [2003] 123 *S Ct* 769 in which the US Supreme Court held (Stevens J and Breyer J dissenting) constitutional Congress's extension of copyright for extant works to life plus seventy years. Of the more startling contributions, see W. Landes and R. Posner, 'Indefinitely Renewable Copyright' (2003) 70 *University of Chicago LR* 471 (proposing a system of indefinitely renewable copyright, the requirement of renewal ensuring most works fall into the public domain, the possibility of indefinite renewal ensuring sufficient incentive to exploit the work).

³ C. Seville, *Literary Copyright Reform in Early Victorian England* (1999).

⁴ Duration Directive. See W. Chernaik and P. Parrinder (eds.), *Textual Monopolies* (1997); N. Dawson, 'Copyright in the European Union: Plundering the Public Domain' (1994) *NILQ* 193; S. Lewinski, 'EC Proposal for Council Directive Harmonizing the Term of Protection of Copyright' (1992) 23 *IIC* 785; A. Silvestro, 'Towards EC Harmonization of the Term of Protection of Copyright and so-called Related Rights' [1993] *Ent LR* 73.

question. This is a reflection of the fact that different interests and policy issues arise with different categories of works. The way in which the term of protection is calculated also differs depending on the type of work in question. In relation to most literary, dramatic, musical, and artistic works, copyright subsists throughout the life of the author, and for a fixed term (currently seventy years) that is calculated from when the author dies (*post mortem*). In the case of entrepreneurial works and certain types of authorial works (such as those of unknown authorship), the protection is a fixed term which is calculated either from when the work is *made* or *published*. The term is calculated from the end of the year in which a particular event occurs.⁵

Harmonization of copyright laws in Europe has had an important impact upon the duration of copyright in the United Kingdom. When the 1988 Act was first enacted, the length of protection for literary, dramatic, musical, and artistic works was for the life of the author plus fifty years. In relation to sound recordings, films, and broadcasts, the period of protection lasted for fifty years from the making of the work. The duration for typographical arrangements was limited to twenty-five years from the year in which the edition was first published.

As a result of the EU Duration Directive the length of protection for literary, dramatic, musical, and artistic works in the United Kingdom was increased as of 1 January 1996 from the life of the author plus fifty years, to the life of the author plus seventy years.⁶ The term of protection offered to films also changed as a result of the Directive. Under the 1988 Act (as enacted), where films were treated as entrepreneurial works, films were given a fixed term of protection. As a result of the move towards harmonization of copyright in Europe, films are now treated more as authorial works.⁷ This is reflected in the fact that the period of protection offered to films now depends on the life of the principal director, author of the screenplay, author of the dialogue, and the composer of music specifically created for use in the work. No changes were needed to be made to broadcasts,⁸ and typographical arrangements. Some minor changes have also taken place in relation to sound recordings.⁹

In implementing the Duration Directive, member states were required to apply the new terms to all works and subject matter that were protected in at least one member state on 1 July 1995. As it turned out this meant that not only was the copyright in many works extended but also that the copyright in some works which had previously expired had to be revived.¹⁰ For example, the United Kingdom copyright in a work by a British author who died in 1935 and which had been first published in the United Kingdom, would have

⁵ CDPA s. 12(2). The Duration Directive expresses this as calculating matters 'from the first day of January of the year following the event which gives rise to them'. Duration Dir., Art. 8.

⁶ Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297). The length of protection is greater than that which is required in the WIPO Copyright Treaty, Art. 1(4) and the TRIPS Agreement: Art. 9 TRIPS.

⁷ In fact the position is more complicated. Art. 3(3) of the Directive also provides that the rights of the producer of first fixation of a film are to last 50 years after fixation or after the fixation was lawfully published. These are distinct from the rights of the owner of copyright in a cinematographic or audiovisual work.

⁸ Duration Dir., Art. 3(4).

⁹ The Copyright and Related Rights Regulations 2003/2498 reg. 29 amends CDPA s. 13A(2) to implement the Information Society's amendment to the Duration Dir., Art 3(2). Transitional provisions are made by regs. 30–39.

¹⁰ Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297), especially r. 17.

lapsed on 1 January 1986; but would have been revived from 1 January 1996, since the work would have been protected in Germany on 1 July 1995.¹¹ The Directive also obliged member states when implementing the reforms ‘to adopt the necessary provisions to protect in particular acquired rights of third parties’.¹² Acts done pursuant to arrangements made before 1 July 1995 at a time when copyright did not subsist in the work are treated as not infringing any revived copyright in a work.¹³ In all cases, the revived copyright is treated as ‘licensed by the copyright owner, subject only to the payment of such reasonable royalty or other remuneration as may be agreed or determined in default of agreement by the Copyright Tribunal’.¹⁴

As well as extending the period of protection given to many works, as of 1 January 1996 the Duration Directive also changed the way duration is calculated for works originating from outside the EEA. Prior to the introduction of the Directive, British law provided the same level of protection to works published in the United Kingdom as those published elsewhere. This principle changed, however, under the Duration Directive which only requires that the extended period of protection be offered to works originating from within the EEA. The period of protection given to works of non-EEA origin, that is to works not originating in the EEA or without an EEA author, is the same as that which the work would receive in the country of origin.¹⁵ That is, the Duration Directive is based on a notion of ‘comparison of terms’ rather than national treatment.¹⁶ This means that where a work is first published in Australia¹⁷ and the author is not a national of an EEA state, the work is only protected in Europe for only fifty years after the death of the author (because that is the duration of Australian copyright law).¹⁸

However, it has been observed that the implementation of the ‘comparison of terms’ rule in the United Kingdom may be more far-reaching than the Directive was generally thought to have intended.¹⁹ This is because section 12(6) (like sections 13A(4), 13B(7), 14(3)) refers to the duration of copyright as being ‘that to which the work is entitled’ in the country of origin. A literal interpretation requires reference therefore not only to duration in the country of origin, but also whether copyright subsists at all in that country: after all, if there is no copyright in the work in its country of origin, it is difficult to say the work is ‘entitled’ to copyright for any length of time. The impact would be to deny

¹¹ *Land Hessen v. G. Ricordi & Co*, Case C-360/00 [2002] ECR I-5089 (ECJ).

¹² Duration Directive, Art. 10. See also Recitals 26 and 27. For discussion by the ECJ of the Italian transitional provisions see *Butterfly Music Srl v. Carosello Edizioni Musicali e Discografiche Srl* C-60/98 [1999] ECR I-3939, [2000] 1 CMLR 587 (holding that the Italian legislation satisfied the criterion of legality imposed by the Directive, and did not defeat the intention of the Directive. The ECJ approved the fact that the Italian provisions permitted those who had reproduced and marketed phonograms during the period when copyright had expired to continue distribution for three months after the copyright revived, the Court saying ‘a provision of that kind, which must necessarily be transitional in order not to prevent the application of the new term of protection of copyright and related rights on the date laid down by the Directive, that being the Directive’s principal objective’: para. 28. See J. Phillips, ‘The Butterfly that Stamped’ [1999] *Ent LR* 189; B. Lindner, ‘Revival of Rights v. Protection of Acquired Rights’ [2000] *EIPR* 133; L. Ubertazzi, ‘The “Butterfly” Case or EC Term of Protection Directive and Transitional Law’ [2000] 31 *IIC* 142.

¹⁴ *Ibid.*, r. 23, r. 24.

¹⁵ On what is a country of origin see CDPA s. 15A. In relation to sound recordings, and broadcasts, the Act refers to the author of a work being ‘a national of an EEA state’: CDPA s. 13A(4), s. 14(3).

¹⁶ Duration Dir., Recital 22, Art. 7.

¹⁷ CDPA s. 15A(2).

¹⁸ CDPA s. 12 (6).

¹⁹ As observed by Mustafa Safiyuddin, of Little & Co, Mumbai.

copyright to works which were unprotected in the country of origin, for example, because they fell outside any list of subject matter, or failed to reach that country's originality threshold. UK implementation, thus interpreted, would take the comparison of terms rule and transform it into something akin to a rule of reciprocity (and thus incompatible with the Berne Convention). The Directive, in contrast, states that copyright 'shall expire on the date of expiry of the protection granted in the country of origin'. The use of the term 'expiry' suggests that the rule is not directed at conditions of subsistence. The preferable view is that section 12(6) should be read as only dealing with expiry of term: in cases where works are not protected in the country of origin, but would meet British requirements for subsistence, the section should be understood as requiring British law to give such works protection until such time as protection of a work *of that sort would* expire in the country of origin.

2 LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

Subject to the exceptions listed below, copyright in a literary, dramatic, musical, or artistic work expires seventy years from the year in which the author of the work dies.²⁰ Thus, where an author of a book died in 1990, the copyright in the book would expire in 2060. If a literary, dramatic, musical, or artistic work is jointly authored, the seventy-year *post-mortem* term of copyright is calculated from the year in which the longest surviving author dies.²¹

In discussions about copyright duration, the question is often asked: why not have fixed terms for all works? A number of justifications have been given as to why the 'life-plus' term should be used to calculate the duration of authorial works. It has been suggested, admittedly without any real evidence, that since authors will be providing for their next of kin, the life-plus protection provides authors with incentives to create up until their death. Another explanation given as to why the life-plus formula is used is that it overcomes the problems that often arise in determining when a work was made or published. While the date of an author's death is easily ascertained from public records, it is often difficult to determine when something was created. A final reason for using the life-plus formula is that it avoids the complications that would otherwise arise in calculating duration when an author makes revisions to a work during their lifetime. Under the life-plus test, all works fall into the public domain on the same date.

2.1 EXCEPTIONS TO THE TERM OF LIFE PLUS SEVENTY

The general rule that the duration of literary, dramatic, musical, and artistic works is life plus seventy years is subject to the following exceptions: computer-generated works; Crown copyright; parliamentary copyright and international organizations; artistic works used in designs; works of unknown authorship; unpublished works not in the public domain.²²

²⁰ CDPA s. 12(2).

²¹ CDPA ss. 3(1), 12(4).

²² Prior, perpetual copyrights under past law end in 2040. Contrast, however, the curious exception for J. M. Barrie's *Peter Pan*: CDPA, Sched. 1, para. 13, and Sched. 6, respectively.

2.1.1 Computer-generated works

Where a literary, dramatic, musical, or artistic work is computer-generated, the duration of protection lasts for fifty years from the end of the year when the work was made.²³

2.1.2 Crown copyright

Crown copyright in a literary, dramatic, musical, or artistic work lasts for 125 years from the year in which the work was made. If the work is published commercially within seventy-five years from the year it was made, then copyright lasts for fifty years from the date it was commercially published.²⁴

2.1.3 Parliamentary copyright and international organizations

Parliamentary copyright lasts for fifty years from the year in which the work was made.²⁵ Where an international organization is the first owner, copyright also lasts for fifty years from when the work was made.

2.1.4 Artistic works used in designs

Copyright in artistic works which have been used in designs of industrially produced articles lasts for twenty-five years from the year in which such articles are first legitimately marketed.

2.1.5 Works of unknown authorship

As we saw earlier, in certain situations it may not be possible to identify the author of a particular work. Given that with works of unknown authorship, there is no identifiable author whose death can help set the duration of protection, copyright law is forced to use other trigger points to calculate duration. In these circumstances, the 1988 Act provides that copyright in a literary, dramatic, musical, or artistic work of unknown authorship lasts for seventy years calculated either from the year of creation or, if during that period the work is made available to the public, from the year it was made available.²⁶ If the author's name is disclosed before the seventy-year term lapses and before the author's death, this disclosure will have the effect of extending the term of copyright to the author's life plus seventy years.²⁷

2.1.6 Unpublished works not in the public domain

Section 17 of the 1911 Copyright Act conferred protection on unpublished literary, dramatic, and musical works and engravings for fifty years from the date of publication. This meant that so long as the works remained unpublished the copyright term was unlimited. The 1988 Act removed this possibility by specifying that copyright in works which were

²³ CDPA s. 12(7).

²⁴ CDPA ss. 163(3), 164, 165(3), 166(5). International organizations initially acquiring copyright in a work may enjoy it for 50 years from making or longer if specified by order: CDPA s. 168(3).

²⁵ CDPA s. 165(3)

²⁶ CDPA s. 12(3). The requisite 'making available to the public' includes the following acts if authorized: publishing, performing in public, and communicating the work to the public, in the case of literary, dramatic, and musical works; and exhibition in public and inclusion in a film shown in public, or a communication to the public, in the case of artistic works: CDPA s. 12(5).

²⁷ CDPA s. 12(4). Before 1996, absent identification of an author, an anonymous or pseudonymous work obtained a term of 50 years from the year of first publication.

unpublished at the author's death and remained so until 1 August 1989, was to last for a fixed period of fifty years from 1 January 1990, that is, until 31 December 2039.²⁸

3 FILMS

Under the 1956 and 1988 Acts (as enacted), where films were treated as types of entrepreneurial works, protection was limited to fifty years, normally calculated from the year of release.²⁹ The Duration Directive required recognition of both copyright in the first fixation of a film for fifty years, and copyright in the 'cinematographic or audiovisual work' for which the term was to be seventy years from the year of the latest death among four categories of persons: the principal director, the author of the screenplay, the author of the dialogue, or the composer of music specially created for and used in the film.³⁰ Subsequent British attempts at implementation rather unwisely ignored the distinction, preferring to extend the copyright in 'film'—the section 5B copyright—to seventy years from the death of these four persons.³¹ Where the identity of these four individuals is unknown, the term of protection is seventy years from the year in which the film was made.³² Alternatively, if during that period the film is made available to the public, copyright expires seventy years from the end of the year in which the film was first made available.³³ Foreseeing potential problems in identifying when such copyright expires, the Duration Regulations also introduced a new exception to allow a film to be copied at a time when it is reasonable to assume that copyright has expired.³⁴

Not long after this attempted implementation, the Court of Appeal recognized that cinematographic works benefit from copyright not merely as films but also as dramatic works.³⁵ While this decision moved British law some way towards compliance with international and regional obligations, it also exposed further the oddness of the British attempt to give effect to the Duration Directive. This is because the term of copyright in the cinematographic work as a dramatic work is left to be determined by reference to the life of the 'author'. In British law, this might well include the director and authors of scripts for the film (as long as they do not exist before the film-making process) and possibly the editors or director of cinematography, but it is highly unlikely to include the

²⁸ CDPA, Sched. 1, para. 12(4). A work published after the author's death, but before 1 Aug. 1989, obtained a term of 50 years from publication: CDPA, Sched. 1, para. 12(2). Under the 1956 Act, a work unpublished at the author's death continued in copyright until 50 years after first publication: CA 1956, ss. 2(3), 3(4). In some cases, certain acts, such as performance in public, had the same effect as publication. For some works unpublished on 1 Aug. 1989, the relevant copyright will have been extended by the recent increase in the term of copyright. For example, if an author died in 1988 leaving unpublished manuscripts (which remained unpublished in 1990), the effect of the changes made in 1990 was that copyright lasted until 31 Dec. 2039. However, as a result of the increase in the duration of copyright to life plus 70 years copyright will be extended to 31 Dec. 2058.

²⁹ CDPA s. 13 (as enacted).

³⁰ Duration Dir., Art. 2(2).

³¹ CDPA s. 13B(2). Each category may include more than one member, but unidentified members do not count: CDPA s. 13B(3), (10).

³² CDPA s. 13B(4)(a), (10).

³³ CDPA s. 13B(4)(b), (10). The requisite 'making available to the public' includes the following acts if authorized: showing in public or communicating to the public: CDPA s. 13B(6).

³⁴ CDPA s. 66A.

³⁵ *Norowzian v. Arks (No. 2)* [2000] FSR 363.

composer of music. If normal principles were to be applied, the term of protection would be unlikely to be that required by Article 2(2). If the legislation is not amended, it is not unlikely that a court will be faced with the choice of applying these normal principles, and acknowledging failed implementation, or reading the term 'author' in this context as being open-textured enough to take its meaning from the Directive. Moreover, once a post-mortem term is acknowledged to exist in relation to the cinematographic work as a dramatic work, the wrong-headedness of extending the term of the section 5B film copyright is apparent. If the section 5B copyright is to reflect the Directive's demands in relation to related rights in the first fixation of a film, the period should be confined to fifty years from the making of the fixation.³⁶

4 ENTREPRENEURIAL WORKS

As entrepreneurial works have no readily identifiable author, the period of protection is calculated using different trigger points.³⁷

4.1 SOUND RECORDINGS

For sound recordings, copyright expires fifty years from the end of the year in which it is made. If during that period the sound recording was published, copyright expires fifty years from the year of such publication. If during the fifty years from making the work is not published but is made available to the public by being played in public or communicated to the public, copyright expires fifty years from the year of communication or playing in public.³⁸ The maximum duration of copyright in a sound recording thus appears to be 100 years (which should be available where a work is made and published or communicated to the public fifty years later).

4.2 BROADCASTS

The duration of broadcasts is fifty years from when the broadcast was first made.³⁹ Where the author of a broadcast is not a national of an EEA state, the duration of copyright is that to which the broadcast is entitled in the country of which the author is a national (provided that the period of protection does not exceed fifty years).⁴⁰

4.3 TYPOGRAPHICAL ARRANGEMENTS

For typographical arrangements of published editions, copyright expires twenty-five years from the year of first publication.⁴¹ This right should be distinguished from the

³⁶ Duration Dir., Art. 3(3). See Kamina, 123.

³⁷ For transitional provisions see CDPA, Sched. 1, paras. 12(2)(d)—(e), (5), (6).

³⁸ CDPA s. 13A(2) (as amended by SI 2003/2498, with transitional provisions in regs. 30–32, 36–9) implementing Duration Dir., Art. 3(2) (as amended by Info. Soc. Dir.). Note that an original collection of recordings would constitute a database and therefore be protected as a literary work.

³⁹ CDPA s. 14(2).

⁴⁰ CDPA s. 14(3).

⁴¹ CDPA s. 15.

publication right conferred on the publisher of a previously unpublished work in which copyright has expired, which also lasts for twenty-five years from publication.⁴²

5 MORAL RIGHTS

In the United Kingdom, moral rights of integrity and attribution subsist as long as copyright subsists.⁴³ The right to object to false attribution is less extensive, only lasting for twenty years after the author's death. In some other countries moral rights are capable of operating in perpetuity. The Duration Directive made no attempt to harmonize the duration of moral rights and was expressed to be without prejudice to them.⁴⁴

6 PUBLICATION RIGHT IN WORKS IN WHICH COPYRIGHT HAS LAPSED

In order to give effect to Article 4 of the Duration Directive, a new property right equivalent to copyright, called a 'publication right' was introduced in the United Kingdom.⁴⁵ The right is granted without formality to any person who after the expiry of copyright protection, publishes for the first time a previously unpublished literary, dramatic, musical, or artistic work or film. This new right lasts for twenty-five years from the end of the year in which the work was first published.

In order to have the right, a publisher must publish a public-domain literary, dramatic, musical, or artistic work or a film for the first time.⁴⁶ The right is only acquired where the work is previously unpublished. It should be noted that publication in this context has a special meaning.⁴⁷ When determining whether the work is previously unpublished, no account is to be taken of any unauthorized act done at a time when there is no copyright in the work. An unauthorized act means an act done without the consent of the owner of the physical medium in which the work is embodied or on which it is recorded.

The publication right that vests in the publisher is only available 'after the expiry' of copyright protection.⁴⁸ This means that the publication right is unlikely to be of great significance in the United Kingdom for some time. This is because of the dual effect of the changes made as regards unpublished works in the 1988 Act and the other changes made to the copyright term introduced to give effect to the Duration Directive. The effect of these transitional provisions is that the publication right is currently restricted to unpublished artistic works other than engravings.⁴⁹

⁴² Related Rights Reg. 16(6). See below at pp. 159–60. ⁴³ See Ch. 10.

⁴⁴ Duration Dir., Art. 9. The extension might therefore be *ultra vires*. ⁴⁵ Related Rights Reg. 16.

⁴⁶ The publication right does not arise from the publication of a work in which Crown copyright or parliamentary copyright subsisted: Related Rights Reg. 16(5).

⁴⁷ It includes any making available to the public and, in particular, includes the issue of copies to the public; making the work available by means of an electronic retrieval system; the rental or lending of copies of the work to the public; the performance, exhibition or showing of the work in public; or communicating the work to the public: Related Rights Reg. 16 (as amended).

⁴⁸ *Ibid.*

⁴⁹ For an elaboration of the reasoning that leads to this conclusion, see Copinger, paras. 17–30–32.

Another consequence of limiting the availability of the publication right to cases where copyright has expired is that it may exclude works in which copyright has never subsisted. Since the majority of existing unpublished works received statutory copyright protection in 1911, it will normally be possible to resolve the question of whether a work ever enjoyed copyright protection without too much difficulty (although problems exist in relation to artistic works). It seems that no statutory copyright existed in unpublished paintings, drawings, and photographs created before 1862 by an artist who died before 1855, nor in unpublished sculptures created prior to 1 July 1862.⁵⁰

While the publication right may supplement existing rights given to publishers in their typographical arrangement of published editions, it differs from these rights in three regards. First, the publication right is only available for the first publication of a previously unpublished work. Second, while the new publication right may apply where the publication relates to an artistic work, the typographical arrangement right is not relevant in such circumstances. This is because the right in typographical arrangement is confined to 'a published edition of the whole or any part of one or more literary, dramatic or musical works'.⁵¹ Third, the publication right is much more extensive than the right to prevent facsimile copying of a typographical arrangement.

A work qualifies for a publication right⁵² only if the first publication occurs in the European Economic Area and the publisher of the work at the time of first publication is a national of an EEA state.⁵³ Publication has a more extended meaning than that discussed in relation to copyright. Where two or more people jointly publish a work, it is sufficient if any of them is a national of an EEA state. No provision is made for the extension of the publication right so as to recognize equivalent rights for foreign publishers, where the country of publication provides reciprocal rights to publishers in the EEA.⁵⁴

⁵⁰ For background, see Sterling and Carpenter, para. 2A.01.

⁵¹ CDPA s. 8(1).

8

INFRINGEMENT

1 INTRODUCTION

The aim of this chapter is to explore copyright infringement. We begin by discussing ‘primary’ infringement, that is the activities of those involved in infringing the copyright owner’s exclusive rights (which we described in Chapter 6). We then discuss the statutory provisions which render accessories—whether before or after the act of primary infringement—liable for assisting in the making or distribution of infringing copies or the giving of infringing performances. These liabilities are referred to as ‘secondary infringements’.

Before examining ‘primary’ infringement in detail, it is worth observing that while there has been a great deal of norm-setting in relation to the rights of the copyright owner, the question of what amounts to copyright infringement has not generally been the subject of much international or regional harmonization. The relevant tests of infringement have largely been developed locally, and for the most part by the judiciary.¹ Having acknowledged that British law on infringement has taken its own course, it is worth noting two recent developments. First, the rule that copyright does not protect ideas has found its way into both regional and international arrangements.² Second, regional harmonization initiatives seem to require that copyright infringement be found to occur where ‘any part’—as opposed to any ‘substantial part’—of a work is reproduced.³ Quite what impact, if any, these two developments will have on British case law is difficult to predict.

¹ While infringement analysis in the UK may use concepts, such as ‘substantiality’ and ‘idea-expression’, similar to those used elsewhere, British applications of these concepts are distinct. Consequently, although case law from the United States has sometimes been referred to, the British courts have doubted its relevance. Contrast *John Richardson v. Flanders* [1993] FSR 497, 527 (Ferris J, finding useful US case law on infringement in relation to computer programs, especially the abstraction-filtration-comparison approach adopted in *Computer Associates v. Altai* (1993) 23 IPR 385); with *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 289 (Jacob J, finding US case law unhelpful, and pointing out the different statutory basis for US decisions).

² TRIPS, Art. 9(2) (copyright protection shall extend to expressions and not to ideas, procedures, methods of operation, or mathematical conceptions as such); WCT, Art. 2. However, TRIPS and the WCT set minimum standards, so presumably, a country may protect ideas: TRIPS, Art 1(1); Gervais para. 2.99; Reinbothe and von Lewinski, *The WIPO Copyright Treaties* (2002), 22–3. The Software Dir., Art 1(1) states that ‘ideas and principles which underlie any element of a computer program . . . are not protected by copyright’. This is an obligatory requirement, but has not been expressly implemented in the UK.

³ Database Dir., Art. 5; Software Dir., Art. 4(a); Information Society Dir., Art. 2(1). No alteration of the British statute was seen to be necessary.

2 PRIMARY INFRINGEMENT

In an action for primary infringement, the onus falls upon the claimant to show on the balance of probabilities that:

- (i) the defendant carried out one of the activities which falls within the copyright owner's control;
- (ii) the defendant's work was *derived* from the copyright work ('causal connection'); and
- (iii) the restricted act was carried out in relation to the *work* or a *substantial part* thereof.⁴

3 RESTRICTED ACTIVITIES

The first question that needs to be asked in considering whether copyright in a work has been infringed is whether the defendant carried out one of the activities that falls within the copyright owner's rights. This topic was discussed in Chapter 6.

4 A 'CAUSAL CONNECTION'

The second matter that needs to be proved in order to establish infringement is that the defendant's work was *derived* from the claimant's work.⁵ That is, it is necessary to show that there is a causal link between the work used (i.e. reproduced, issued, rented, performed, communicated, or adapted) by the defendant and the copyright work. This means that unlike the case with patents, copyright law does not protect a copyright owner against independent creation. It is important to note that it is not necessary for the defendant's work to be derived directly from the original of the work;⁶ it is possible for a defendant to infringe where they base their work on a copy of the work. It is also important to note that it does not matter if the intermediate reproduction is itself a legitimate or a pirated copy.⁷ This means, for example, that where a person copies a three-dimensional object (such as an exhaust pipe), they may infringe the copyright in the drawings on which the three-dimensional object was based, even though they have never seen the drawings.⁸

Whether a defendant's material was derived from a claimant's copyright work is a matter of fact, and it is for the claimant to persuade the tribunal that this has occurred. In order to do so, the claimant may use different forms of evidence. First, and most convincing, is direct evidence that the defendant utilized the claimant's work in producing

⁴ CDPA s. 16(3).

⁵ See e.g. *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683 (failure to show a causal chain). As we saw at pp. 131–2 above the knowledge of the defendant is not important in determining whether an act of primary infringement has taken place, but see also pp. 149–51 above.

⁶ CDPA s. 16(3)(b).

⁷ CDPA s. 16(3).

⁸ *British Leyland v. Armstong* [1986] AC 577 (production of replacement exhaust pipes for claimant's cars indirectly copied the claimant's original drawings).

their own. For example, an ex-employee may be able to give evidence that they were asked to produce something similar to the claimant's work; or a third party may have witnessed the appropriation. Indeed, a defendant may in some circumstances admit that they drew upon the claimant's work.

However, such direct evidence is often unavailable. In these circumstances, the courts have sometimes been willing to infer derivation. In order to persuade a court to infer copying, a claimant will typically rely on similarities between the works, coupled with evidence that the defendant had access and opportunity to copy the copyright work. A court is likely to accept that there is a causal connection between the two works if the similarities are very numerous, or so individual,⁹ that the possibility of their having been independently conceived by the defendant is implausible.¹⁰ Even if the shared elements are less individual or numerous, an inference of derivation may be drawn where a claimant can positively demonstrate the defendant's familiarity with the copyright work.¹¹ Where such an inference of copying has been established by a claimant, the onus then shifts onto the defendant to prove that they created the work independently.¹² In order to do so, a defendant may claim that the similarities between the two works can be explained by factors other than copying. For example, a defendant may attempt to show that the similarities are attributable to the fact that the two works were inspired by the same source,¹³ that both works were constrained by the functions they perform,¹⁴ or, less plausibly, to chance.¹⁵ Such claims are likely to be undermined by evidence that the defendant has been engaged in similar acts of copying on previous occasions.

This process of inference can be well illustrated by the House of Lords' decision in *Designers Guild v. Williams*.¹⁶ The claimant had produced its fabric design, named *Ixia*, in 1994. The design was impressionistic in style, made up of roughly drawn pink and yellow stripes with flowers scattered haphazardly across the stripes (see Fig. 8.1). The fabric was made available in shops from September 1995. A year later the claimant discovered that the defendant was selling fabric with a design called *Marguerite*, also based on vertical stripes in alternating colours and with flowers and associated stalks and leaves scattered

⁹ *Billhöfer Maschinenfabrik GmbH v. Dixon & Co.* [1990] FSR 105, 123 (Hoffmann J, observing the paradox that it is 'the resemblances of inessentials, the small, redundant, even mistaken elements of the copyright work which carry the greatest weight' in proving derivation). See also *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 159 (Lord Hailsham); *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 298 (proving derivation via the inclusion in the defendant's program of spelling mistakes and redundant code from the claimant's program).

¹⁰ *Designers Guild v. Russell Williams* [2000] 1 WLR 2416, 2425 per Lord Millett.

¹¹ At this stage, key factors include the relative age of the claimant's work, and how widely distributed it had been: *Francis Day v. Bron* [1963] Ch 587 (where, on facts, derivation not established).

¹² *Designers Guild v. Russell Williams* [2000] 1 WLR 2416, 2425 per Lord Millett; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 297; *Stoddard International v. William Lomas Carpets* [2001] FSR 848, 857–8.

¹³ *Harman v. Osborne* [1967] 1 WLR 723, 728 (plays about the Charge of the Light Brigade may have been created independently but in the absence of an express explanation by the defendant, Goff J granted an interim injunction).

¹⁴ *Catnic Components v. Hill and Smith* [1982] RPC 183, 222 (CA, affirming Whitford J); *Kleeneze Ltd. v. D.R.G. (UK) Ltd* [1984] FSR 399, 401 (both designs relied on same concept, but beyond that similarities were attributable to functional considerations or were commonplace).

¹⁵ *Francis Day v. Bron* [1963] Ch 587, 615–6 (per Willmer LJ, accepting similarities in two musical pieces were a result of coincidence).

¹⁶ *Designers Guild v. Russell Williams* [2000] 1 WLR 2416.

across the stripes (see Fig. 8.2). There were, however, several differences between the two designs, and the defendant denied that *Marguerite* had been copied from *Ixia*, asserting that its designer had developed it from her own *Cherry Blossom* design. Nevertheless, Judge Lawrence Collins QC inferred from the evidence that *Marguerite* in fact had been derived from *Ixia*,¹⁷ a finding which the House of Lords approved. First, the judge found that there were seven similarities between the two designs.¹⁸ Both designs were based on stripes with scattered flowers; both were in an impressionistic style, showing brushwork; in both the stripes had rough edges; in both the petals were executed in a similar way; in both the stripes showed through some of the petals; in each, the flower heads comprised a ‘strong blob’; and in each the leaves were in two shades of green. The judge concluded that these similarities went ‘far beyond the similarities which would be expected simply from both being based on an impressionistic style or from both being based on a combination of stripes and scattered flowers and leaves’. Second, the judge found that the designer of *Marguerite* had had an opportunity to copy *Ixia*, since she was at a trade fair in 1995 where the *Ixia* design was exhibited. Third, the judge rejected the defendant’s own account of how she came to produce the *Marguerite* design, finding her story unconvincing. Consequently, he found that the defendant’s design was derived from the claimant’s.

One factor that has been useful in proving derivation is the fact that the infringing work contains the same mistakes that occur in the original work. In these circumstances it is assumed that the reason why the same mistakes appear in the two works is that they are

Fig. 8.1 The claimant’s *Ixia* design, created by Helen Burke

¹⁸ [1998] FSR 803, 815.

Fig. 8.2 The defendant's *Marguerite* design, created by Jane Ibbotson

copies of each other. Where works involve low levels of innate individuality, in order to assist in the task of proving derivation, copyright owners sometimes place incorrect or false information in their works. For example, the creators of a telephone directory may include a number of false names and addresses in the directory. Similarly, computer programs may contain lines of meaningless code. Where this incorrect or meaningless information appears in a defendant's work, it is very difficult for them to argue that they created the work independently of the copyright work.¹⁹

In most cases, the process of copying will be a conscious act. In some cases, however, the courts have been willing to accept that the process of derivation may occur at a subconscious level.²⁰ While a defendant may honestly not recall having seen or heard the copyright work, the courts seem open to the argument that the defendant subconsciously copied from the copyright work. This is particularly the case in relation to songs where catchy, even annoying, tunes embed themselves in the subconscious. The acceptance of subconscious copying provides the courts with a way of rationalizing the implausibility of

¹⁹ *Waterlow Directories v. Reed Information* [1992] FSR 207; *Waterlow Publishers v. Rose* [1995] FSR 409.

²⁰ *Francis Day v. Bron* [1963] Ch 587. According to Willmer LJ, at 614, to establish subconscious copying it must be shown that the composer of the offending work was familiar with the work alleged to have been copied. Cf. Upjohn LJ, at 621–2 (leaving the issue of whether a different test applied for subconscious copying undecided). In this case there was not sufficient material from which such an inference could be drawn. See also *E. Gomme Ltd v. Relaxateze* [1976] RPC 377 (requiring high degree of familiarity for subconscious copying); *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 432.

independent creation with the conflicting evidence of a defendant who claims that they cannot remember having any contact with the work.²¹

5 THE WORK OR A SUBSTANTIAL PART THEREOF?

The third and final question that needs to be asked in an infringement action is whether the restricted act has been carried out in relation to the *work* or a *substantial part* thereof. The basic approach was set out by Lord Millett in *Designers Guild*.²²

Once the judge has found that the defendants' design incorporates features taken from the copyright work, the question is whether what has been taken constitutes all or a substantial part of the copyright work. This is a matter of impression, for whether the part taken is substantial must be determined by its quality rather than its quantity. It depends upon its importance to the copyright work. It does not depend upon its importance to the defendants' work, as I have already pointed out. The pirated part is considered on its own . . . and its importance to the copyright work assessed. There is no need to look at the infringing work for this purpose.

This question of substantiality is the most difficult aspect of copyright infringement. In principle, in order to answer this question it is necessary to ask two subsidiary questions:

- (1) what is the work for the purposes of infringement; and
- (2) has the defendant's utilized the whole of the claimant's work or a substantial part thereof?

5.1 WHAT IS THE WORK FOR THE PURPOSES OF INFRINGEMENT?

Logically, the first task that arises when determining whether the defendant has utilized the whole or a substantial part of the copyright work is to ascertain the limits of the copyright work. To determine what the work is, it is necessary first to determine the parameters of the work, and then to differentiate the protected from non-protected elements of the work. We will deal with each of these in turn.²³

5.1.1 What are the parameters of the work?

In many situations the parameters of the work will not be in dispute. This would be the case, for example, where a person photocopies all of a book, or they copy all of a computer program. Where a work is divisible into smaller elements the question may arise as to whether the 'parts' should be treated as separate and distinct works. If we take the case of a book, for example, while it is clear that the book as a whole is a copyright work, what of the chapters, pages, paragraphs, sentences, or words that are included in the book? The

²¹ *Francis Day v. Bron* [1963] Ch 587, 619 (per Upjohn LJ); *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 432; *Elanco Products v. Mandops* [1980] RPC 213, 227 (CA) (where similarities were so remarkable there must have been deliberate and conscious copying).

²² *Designers Guild v. Williams* [2000] 1 WLR 2416, 2426.

²³ The task of identifying the work is made easier because the claimants will specify in their statement of case the parameters of the work as well as the parts of the work that they believe have been infringed. While not definitive, this provides a useful starting point for demarcating the scope of the work.

decision as to the size of the copyright work may have an important bearing on the outcome of an infringement action. The reason for this is that the question of whether something is 'the whole or a substantial part' of something else depends on what it is being judged against. In this case, that something else is the copyright work.²⁴

The question of how the parameters of the work are to be determined was considered by Judge Laddie QC in *Hyperion Records v. Warner Music*.²⁵ This was an application for summary judgment brought by Hyperion Records who owned copyright in a sound recording of the medieval chant, *O Euchari*. The chant, which was five minutes eighteen seconds long, appeared on the album 'A Feather on the Breath of God'. Hyperion Records alleged that their copyright had been infringed when the electronic-pop band, *The Beloved* copied (or sampled) eight notes from *O Euchari* and incorporated them into their record *Happiness*.

While it was clear that the song *O Euchari* was a work, Hyperion Records argued that the eight notes sampled by *The Beloved* also formed a distinct copyright work in their own right.²⁶ If this was accepted, it would clearly have been an infringement as 100 per cent of the 'work' would have been taken. Judge Laddie QC rejected the argument saying that 'I do not accept that all copyright works can be considered as a package of copyright works, consisting of the copyright in the whole and an infinite number of subdivisions of it'. He added that 'if the copyright owner is entitled to redefine his copyright work so as to match the size of the alleged infringement, there would never be a requirement for substantiality'. More specifically, Judge Laddie did not accept that it was legitimate 'to arbitrarily cut out of a large work that portion which has been allegedly copied and then to call that the copyright work'.²⁷ While Judge Laddie held that the eight notes sampled by *The Beloved* could not be treated as a separate work, this did not mean that in other circumstances a recording of eight notes could not be a copyright sound recording: it is possible that it could. The reason for this was that a particular aspect of a larger work might be treated as a separate work if it has a discrete, natural, or non-artificial shape. Thus, a day's footage on a film that is 'a discrete product of the film-maker's art' may be treated as a distinct work. Presumably the results of a recording session, as distinct from the final product, would also attract separate copyright protection.²⁸

²⁴ In the past, statutory definitions have helped give guidance as to the parameters of the work. For example, under the 1842 Copyright Act, 'book' was defined as 'every volume, part or division of a volume . . . separately published'. However, the abstract categories in CDPA s. 1(1) provide no such guidance. See also Sherman and Bently, 192–3 (explaining that for many intellectual property rights 'representative registration' helps define the parameters of the work, and noting this is not the case with copyright).

²⁵ *Hyperion Records v. Warner Music* (1991, unreported). See also, *Spelling Goldberg Productions v. BPC Publishing* [1981] RPC 283 (Buckley LJ); *Merchandising Corporation v. Harpbond* [1983] FSR 32, 39 (Walton J: it was not open to a claimant to select certain parts of a sketch and say each part had a separate copyright therein).

²⁶ They also argued that the whole track was the work and that the defendant had reproduced a substantial part thereof.

²⁷ It is not always in the copyright owner's interests to define the work in this way. Where a defendant has taken small helpings from a number of separate publications there may be benefits from asserting that the separate publications were in fact one. See, e.g. *PCR v. Dow Jones Telerate* [1998] FSR 170, 183 (Lloyd J rejecting claimant's argument that its two articles should be taken together for the purpose of determining whether a substantial part).

²⁸ Note the correspondence in the definition of sound recording with the notion of a musical work, in CDPA s. 5(1)(b). This may suggest that the parameters of a sound recording are defined by the parameters of a musical work: *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551, 557–8 (para. 11)

Judge Laddie's judgment provides us with some useful assistance in undertaking the (much neglected) task of defining the parameters of the work. In addition to focusing on whether a particular item can be seen as 'natural' or 'non-artificial', it seems that other relevant considerations would include: the intention of the creator; the level of interdependence or independence of the units concerned; and the commercial form in which the work is to be published or made available.²⁹ Given that one consequence of recognizing small units as discrete copyright works is potentially to increase the level of protection,³⁰ a useful starting point should be that where a work has been published, the form in which the work is first issued is presumed to determine the parameters of the work.

5.1.2 The depth of protection

As we explained in Chapter 6, the protection given to entrepreneurial works is limited to the form in which the work is fixed (e.g. in the case of a film, the specific images; or in the cases of a sound recording, the specific sounds recorded). One of the consequences of this is that the only question that arises in relation to entrepreneurial works is whether a substantial part of a work has been taken. In relation to authorial works, however, the protection extends beyond the specific form in which the work is recorded to include other aspects of the work. For example, the protection afforded to a literary work, such as a novel, may extend beyond reproduction of the printed words on the page to include copying of the story line, plot, and characters that form part of the novel.

In some cases, the non-literal elements of the work may take the form of more abstract or general ways of describing the literal aspects of a work. As Learned Hand said in the well-known American decision of *Nichols v. Universal Pictures Corporation*, '[u]pon any work, and especially a play, a great number of patterns of increasing generality will fit equally well, as more and more of the incident is left out'.³¹ Thus, at its most specific, a play may consist of the words of the script. At a more abstract level, it may consist of the plot or story line. The play may also be described very generally as a tragedy or a comedy. (It should be noted that the very general aspects of the work may not be protected on the basis that they are 'ideas'.) While thinking about a copyright work as if it consisted of a series of levels of abstraction may be useful in certain instances, in other situations the non-literal elements of a work cannot be described in these terms. In these cases the non-literal elements are better seen as aspects of a work that are not visible on looking at the

per Lord Hoffmann (a sound recording of one musical work is by definition different from the recording of another, even if they are issued on the same CD.).

²⁹ This will be the primary factor in relation to copyright in the typographical arrangement of a published edition: *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551 (HL). Here the issue was whether the copyright in the typographical arrangements in a number of the newspapers had been infringed by copying and distributing individual articles. As a result the House of Lords was called upon to consider whether the NLA had typographical copyright in each of the individual articles in the newspapers or only in each newspaper as a whole. The House of Lords held that 'the frame of reference for the term "published edition" is the language of the publishing trade' and therefore that 'the edition is the product, generally between covers, which the publisher offers to the public'. Thus, each edition of the newspaper rather than each article benefited from the typographical copyright.

³⁰ For an example of an exceptional case where it was in the interests of the claimant to define the parameters of the work expansively, so that the defendant's individually *de minimis* takings might be regarded as substantial, see *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401.

³¹ *Nichols v. Universal Pictures Corporation* (1930) 45 F (2d) 119, 121.

surface of the work: this is particularly the case in relation to computer programs.³² Given this, perhaps the best way to understand the scope of protection potentially available beyond the surface of the work is to provide some examples.

In relation to *literary and dramatic works*, as well as the words on the page (the literal aspect of the work), the non-literal elements of a novel or play (which may be protected by the copyright therein) may include the plot,³³ the story line,³⁴ as well as the incidents and themes.³⁵ While the issue has not really been addressed in the United Kingdom, it is less likely that the characters of a novel or play will be protected. As we explain below, the non-literal elements of a literary work do not include the general ideas that may have informed or underpinned a work. In relation to *computer programs* copyright protection potentially extends beyond the object and source code of the program to include non-literal elements such as the structure or architecture of the program,³⁶ as well as the sequence of operations, functions, and interfaces that are used in the program.

There have been fewer decisions defining what is protected in relation to *musical works*. However, it seems that protection might include the melody, phrasing, or rhythm; the time; or the suggested orchestration.

The question of the scope of protection available for artistic works was considered in *Krisarts SA v. Briarfine*.³⁷ The defendants commissioned a Mrs Gardner to paint scenes and views such as the Houses of Parliament with Westminster Bridge in the foreground, the Tower of London, Windsor Castle, and so on. In so doing they showed Mrs Gardner picture postcards of the scenes they wanted her to paint. The defendants also gave Mrs Gardner prints taken from M. Legendre's paintings. While there was no accusation of slavish copying, many of the paintings were taken from the same view and the same angle as M. Legendre's paintings. As such, the question arose as to whether there was any copyright in the view or angle that a painter adopts. While Whitford J stressed that other painters should not be prevented from painting the same scenes, he did accept that there could be certain elements of the scenes that were 'distinctive' enough to warrant being protected.³⁸ As he said:

When one is considering a view of a very well-known subject like the Houses of Parliament with Westminster Bridge and part of the Embankment in the foreground, the features in

³² Most literary copyright works involve both literal matter (the exact words of a novel or computer program) and varying levels of abstraction (plot, more or less detailed of a novel, general structures of a computer program). *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 302.

³³ *Harman Pictures v. Osborne* [1967] 1 WLR 723, 728; *Rees v. Melville* [1914] MacG CC 168. In relation to literary works, the taking of a plot of a novel or play can certainly infringe—if the plot is a substantial part of the copyright work: *Designers Guild v. Williams* [2001] 1 WLR 2416 (HL); *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 291.

³⁴ *Corelli v. Gray* (1913) 29 TLR 570; *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 697; *Kelly v. Cinema Houses* [1914] MacG CC 168.

³⁵ *Corelli v. Gray* (1913) 29 TLR 570; *Rees v. Melville* [1911–16] MacG CC 168. Cf. *Norowzian v. Arks* [2000] FSR 67, 74, 76 (rhythm and pace, theme, and editing style were not subject of copyright).

³⁶ 'Architecture' may also be used to describe what Jacob J in *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 292, 302 called program structure. *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 133–4. See generally, M. Shaw and D. Garlan, *Software Architecture: Perspectives on an Emerging Discipline* (1996).

³⁷ [1977] FSR 557.

³⁸ While Whitford J was not willing to reach a final decision on copyright infringement, he was sympathetic to such a finding.

which copyright is going to subsist are very often the choice of viewpoint, the exact balance of foreground features or features in the middle ground and features in the far ground, the figures which are introduced, possibly in the case of a river scene the craft on the river and so forth. It is in choices of this character that the person producing the artistic work makes his original contribution.³⁹

In the light of this, Whitford J held that it was arguable that Mrs Gardner's use of M. Legendre's work was sufficiently substantial to amount to infringement of copyright. While it is highly unlikely that the style used by an artist could be protected (style being the equivalent of an idea), it has been suggested that 'if the "feeling and character" of the claimant's work has been taken this will be a relevant, but not conclusive, consideration'.⁴⁰

5.1.3 Distinguishing the protected parts from the non-protected parts

Although the scope of the work may extend well beyond its literal appearance, in most cases there will be certain parts of a work that are not protected. In order to ascertain whether infringement has occurred, therefore, it is necessary to distinguish the protected parts of the work from those parts that are not protected (which form part of what is sometimes called the 'public domain'). The reason for this is that when deciding if a copyright work has been infringed, copyright law is only concerned with the protected parts of the work.⁴¹ The problem is knowing how the line is to be drawn between the protected and non-protected parts of the work. Given the diverse nature of the subject matter protected by copyright, it is not surprising that the aspects of the work that are potentially protected vary considerably between the different categories of works.

Three principles are used to divide a work the part that is protected by copyright law and the unprotected parts that are free to be used by all. The first flows from the fact that protection is only granted over the parts of a work that are relevant to the type of work in question. The second is that copyright law only provides protection over those parts of the work that ensure that the work is original. The third is that copyright does not protect the 'ideas' that lie behind or inform a work.

(i) *Irrelevant elements.* The only elements of a work that are protected are those which are relevant to the type of work in question.⁴² This means that the way a work is classified may influence the aspects of a creation that are protected. For example, because there are two copyrights in a song, one relating to the lyrics and one to the music, a claim to infringement must be made out distinctly in relation to one or other. That is, evidence of copying of the music will not make an insubstantial taking of the lyrics any more substantial: it is simply not relevant to the claim.

For the most part, there are few problems in ascertaining which aspects of a particular creation are relevant to the type of work in question, though as we observed in Chapter 3, certain difficulties have arisen in differentiating between literary and artistic aspects of functional works, such as circuit diagrams. Another situation where a strict differentiation

³⁹ [1977] FSR 557, 562.

⁴⁰ Copinger, para. 7–82 citing *Bauman v. Fussell* [1978] RPC 485; *Brooks v. Religious Tract Society* (1897) 45 WR 476.

⁴¹ *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 (Lord Pearce); *Warwick Film v. Eisenger* [1969] 1 Ch 508.

⁴² *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131.

may prove unsatisfactory is in relation to maps: while strictly speaking maps are ‘artistic works’ the courts have, rightly, considered them not just visually but as compilations of information.⁴³

(ii) *Non-original elements.* Another factor that separates the public and the private elements of a copyright work is the requirement of originality (discussed in Chapter 4). This is because a person will only infringe if they appropriate a part of the work upon which an author’s original skill and labour had been expended.⁴⁴ This means that the copying of an unoriginal part of the work is not an infringement.⁴⁵ This can be seen if we consider the situation where a person compiled a list of the names of Arsenal supporters living in Australia. If the originality of the compilation lay in the way the information was arranged, third parties would not be able to make use of the way the names were organized. They would, however, be able to make use of the information (if, for example, they scrambled the list). Alternatively, if the originality of the compilation stemmed from the selection of the material (but not its arrangement), third parties would not be able to make use of the information (although they would not be prevented from independently compiling the list themselves).

The correspondence between originality and what needs to be taken for a person to infringe can also be seen in *Kenrick v. Lawrence*.⁴⁶ This case concerned the copyright protection available for a rudimentary drawing of a hand pointing to a square on a ballot paper to be used by illiterate voters. In considering this issue, the court said that ‘the degree and kind of protection given must vary greatly with the character of the drawing, and that with such a drawing as we are dealing with the copyright must be confined to that which is special to the individual drawing over and above the idea—in other words, the copyright [in the case at hand] is . . . [of] extremely limited character’.⁴⁷ As such, while the court held that the drawing was protected by copyright, it also said that as the level of skill, labour, and effort that was used in creating the work was minimal (it was a simple, functional work), nothing short of an exact literal reproduction of the drawing would constitute an infringement. The upshot of this is that where the originality is thin, the scope of protection will be correspondingly thin. The principle that copyright protection is ‘thinner’ where the originality is ‘thinner’ may go some way to explain statements of courts that a copyist may legitimately take greater amounts of technical or historical material than would be permitted in the case of a work of fiction.⁴⁸

⁴³ *Geographia Ltd v. Penguin Books Ltd* [1985] FSR 208.

⁴⁴ *Designers Guild v. Williams* [2000] 1 WLR 2416, 2431 (Lord Scott, approving as useful a test suggested by Laddie *et al.* asking whether the infringer incorporated a substantial part of the independent skill, labour, etc. contributed by the original author in creating the copyright work); *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131 (copyright law protects the relevant skill and labour expended by the author on the creation of the work); *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 697; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

⁴⁵ *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 (Lord Pearce); *Bowater Windows Ltd v. Aspen Windows Ltd* [1999] FSR 759, 781–2 (holding redrafted version of an 8-page sales ad not to infringe copyright in the document on which it was based because any literal similarity existed only in respect of aspects of the document which embodied a negligible amount of skill and labour and because no claim could be made to originality in the basis of the document); Laddie *et al.*, paras. 4.1, 8.35.

⁴⁶ (1890) 25 QBD 99.

⁴⁷ *Kenrick v. Lawrence* (1890) 25 QBD 99, 104.

⁴⁸ *Ravenscroft v. Herbert* [1980] RPC 193, 205–6 (while the court based its view on a notion of implied licence, we prefer the view that copyright is ‘thinner’ in such cases).

It is important to recognize that a great deal of care needs to be taken when differentiating between original and non-original aspects of a work. Although in some situations, the work as a whole can be dissected and non-original aspects ignored for the purposes of the infringement analysis, such 'dissection' carries with it a potential danger. This danger arises from the fact that originality can be provided not merely from labour and skill in the creation of new, original, material, but also from the collation or collection of pre-existing, non-original, material. A process of dissection can cause a tribunal to overlook the creativity involved in such collation or arrangement. In other words, dissection may cause a tribunal incorrectly to treat the whole as merely the sum of its parts. However, if a defendant takes a number of elements from the claimant's work, each of which might individually be non-original, there may well nevertheless be a taking of a substantial part of the labour and skill involved in collating the material.⁴⁹ This can be seen from the different positions of the Court of Appeal and House of Lords in *Designers' Guild v. Williams*. The Court of Appeal found that various elements of the claimant's design were unoriginal, and this led it to hold that the defendant had merely reproduced the idea of stripes and flowers, which was not a substantial part. As the House of Lords pointed out, in overturning this finding and re-instating the finding of the High Court, the error involved in this analysis was that the originality of the claimant's design lay in the composition of the design as a whole. As Lord Hoffmann stated, 'the exercise in dissection . . . dealt with the copied features piece-meal instead of considering, as the judge had done, their cumulative effect'. Likewise, Lord Scott described the approach whereby the constituent features of the rival designs were isolated from the whole and compared with one another as 'wrong in principle', because the claim related to altered copying of the claimant's design as a whole.⁵⁰

(iii) *Non-protection of ideas*. Another factor which enables the public and the private elements of a work to be distinguished derives from the long-established principle that copyright protection is not granted to the ideas which are embodied in or which may have inspired the work.⁵¹ In more positive terms this means that third parties are able to make whatever use they wish of the ideas that are contained in a copyright work. Thus it is not an infringement for someone to take the ideas or concepts 'behind' a painting, a book, or a computer program and incorporate them into their own work. In this context it is important to note that 'idea' is a shorthand expression that covers an array of different things such as the ideas which prompted the work (to explore the impact of copyright law on artists); the subject matter of the work (a book on intellectual property law);⁵² or the general style in which the work is created (a cubist painting).⁵³

⁴⁹ On the relationship between unoriginal works and the context in which they are taken see *Biotrading & Financing v. Biohit* [1998] FSR 109, 122.

⁵⁰ [2000] 1 WLR 2416, 2421 (Lord Hoffmann), 2434 (Lord Scott).

⁵¹ The dangers of copyright protection of ideas were recognized in the eighteenth-century discussions of common law property, in particular *Millar v. Taylor* (1769) (1774) 2 Bro PC 129 and *Donaldson v. Beckett*, *Cobbett's Parliamentary History* xvii, 954. The principle that there can be no copyright in an idea has been described at the highest level as 'trite law': *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 160 (Lord Hailsham), 165 (Lord Salmon). The non-protection of ideas has been recognized in international treaties: see TRIPS Art. 9(2); WCT Art. 2; Software Dir., Art. 1(2).

⁵² *Kenrick v. Lawrence* (1890) 25 QBD 99, 102 ('mere choice of subject matter can rarely if ever confer upon the author of a drawing an exclusive right to represent the subject').

⁵³ *Norowzian v. Arks* [2000] FSR 67, 74, 76 (no copyright in film-editing style).

Sometimes, the principle that copyright law does not protect ideas is referred to as the idea-expression dichotomy. This is usually taken to mean that what is protected is not an idea but its expression. In so far as the dichotomy implies that copyright predominantly protects the mode of expression used by the author, rather than their ideas, the dichotomy is not inaccurate. It is unhelpful, however, in that it wrongly suggests that copyright protection is limited to the form or expression used by the author and that copyright does not protect against change of form nor against non-literal copying.⁵⁴ For as we noted earlier, copyright law will protect many of the ideas expressed in a work. As Lord Hoffmann explained in the *Newspaper Licensing Agency* case, copyright infringement 'is sufficiently flexible to include the copying of ideas abstracted from a literary, dramatic, musical or artistic work, provided that their expression in the original work has involved sufficient of the relevant original skill and labour to attract copyright protection'.

In *Designers Guild v. Williams*, Lord Hoffmann reviewed the case law on idea and expression, and concluded that it supported two quite distinct propositions. The first is that a copyright work may express certain ideas which are not protected 'because they have no connection with the literary, dramatic, musical or artistic nature of the work'.⁵⁵ Lord Hoffmann said this would be the case with a literary work which described a system or invention. Although the work would be protected, copyright would not entitle the author to claim protection for their system or invention as such. He gave, as a specific example, the case of *Kleeneze Ltd v. DRG (UK)*, in which Whitford J found there had been no infringement of copyright in the claimant's drawing of a letterbox draught-excluder where the defendant had merely taken the concept of the draught-excluder.⁵⁶ The other proposition is that certain ideas expressed by a copyright work may not be protected because, although they are ideas of a literary, dramatic, or artistic nature, they are not original, or so commonplace as not to form a substantial part of the work. Lord Hoffmann gave the example of *Kenrick & Co. v. Lawrence & Co.*, which we have already discussed. In that case copyright subsisted in the drawing of a hand, but such copyright would not enable the copyright owner to object to other people drawing hands, if in so doing all that was reproduced was the idea. As Lord Hoffmann explained, '[a]t that level of abstraction, the idea, though expressed in the design, would not have represented sufficient of the author's skill and labour as to attract copyright protection'.

Lord Hoffmann's articulation of the rule that ideas are unprotected is helpful in that it recognizes that the vagueness of the concept of 'idea' is likely to lead to misinterpretation of the nature and scope of the exclusion. In fact, the exclusion is a relatively narrow one, and does not encompass everything that might be referred to, in common speech, as an idea. However, his attempt to pin down the rule that copyright is not infringed by the use

⁵⁴ For a warning about the use of this aphorism see *Designers Guild v. Williams* [2000] 1 WLR 2416, 2422 (Lord Hoffmann); *Ibcos Computers v. Barclays Mercantile Finance* [1994] FSR 275 (Jacob J).

⁵⁵ [2000] 1 WLR 2416, 2423.

⁵⁶ [1984] FSR 399. The example is problematic for a number of reasons. First, because Whitford J's judgment is couched mainly in terms of whether there had been 'copying'. Second, because the claimant's work had two components: Berry's idea and Snow's drawing which embodied the idea, and the decision merely found indirect copying of Berry's idea, not direct copying of Snow's labour. The case would stand better for the proposition that there cannot be copyright in ideas for new functional products (because there are public policy reasons for promoting competition in that domain, as well as a specific intellectual property regime, patents).

of some ideas is open to the criticisms that it lacks clarity,⁵⁷ is incomplete,⁵⁸ and (by collapsing the rule on the non-protection of ideas into a rule on originality, rather than acknowledging its basis in public policy) may produce an unduly limited account of the exception. Failing to acknowledge that the rule is based in public policy suggests that if general ideas embody substantial labour and skill they will benefit from protection (unless they are ‘unconnected’ with the work). This would be a novel, and undesirable, outcome.⁵⁹ The exclusion of ‘ideas’ from the scope of protection is an important judicial technique that is used to reconcile the divergent interests of copyright owners against the interests of users, creators, and the public more generally. These interests include, but are by no means confined to: the public interest in ensuring that new works can be made dealing with the same topic, or subject matter;⁶⁰ the public interest in ensuring that copyright protection does not undermine the free use of functional ideas (other than those protected by designs);⁶¹ the desirability of allowing multiple works using the same techniques of production (again subject to the limitation of patent law); the public interest in free expression; and particularly the free dissemination of political and economic ideas and historical facts.⁶² The rule on non-protection of ideas is thus primarily directed at leaving free from monopolization the building blocks of culture, communication, creativity, and expression.⁶³ It can be no surprise, then that given the potential variety of influences, the application of the rule has been somewhat unpredictable. Moreover, in an era where there

⁵⁷ In particular, his speech leaves unclear what kind of connections make ideas part of the protected elements.

⁵⁸ Lord Hoffmann’s account seems to be incomplete, in that it omits techniques, methods, or style, matters which are usually considered unprotected: *Harman v. Osborne* [1967] 1 WLR 723, 728 (‘There is no copyright in ideas or schemes or systems or methods: it is confined to their expression’); *Norowzian v. Arks* [2000] FSR 67, 74, 76 (no copyright in film-editing style).

⁵⁹ There is an abundance of US literature: W. Landes and R. Posner, ‘An Economic Analysis of Copyright’ (1989), 12 *J Legal Studies* 325 (explaining idea-expression dichotomy in terms of law and economics); A. Yen, ‘Restoring the Natural Law: Copyright as Labour and Possession’ (1990) 51 *Ohio State LJ* 517, 552 (arguing that the idea-expression dichotomy is informed by natural law doctrines of possession, which recognize certain things as being inherently incapable of possession and suggesting that copyright statutes should be interpreted correspondingly, so that copyright protects only ‘the most concrete and obvious facets of a work’); A. Yen, ‘A First Amendment Perspective on the Idea/Expression Dichotomy and Copyright in a Work’s ‘Total Concept And Feel’ (1989) 38 *Emory LJ* 393 (emphasizing role and limitations of dichotomy in protecting freedom of speech); J. Litman, ‘The Public Domain’ (1990) 39 *Emory LJ* 965 (explaining the law’s reluctance to protect ideas information, short phrases, simple plots, themes, stock scenes, and utilitarian solutions to concrete problems on the ground that they are difficult to trace); S. Vaidhyathan, *Copyright and Copywrongs: The Rise of Intellectual Property and How it Threatens Creativity* (2001) (arguing that the distinction has been steadily collapsing and that it is crucial that we rediscover, reinvent, and strengthen the idea-expression dichotomy).

⁶⁰ *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 418–9 (‘If the idea were protected at law that would prevent any subsequent person using that idea producing a variant. That would give the originator of the idea a very wide monopoly and not one contemplated by law’).

⁶¹ *Kleeneze Ltd v. DRG (UK) Ltd* [1984] FSR 399 (permitting defendant to take idea of letterbox draught excluder, and recognizing desirability of competition in production of articles which fulfill the same function).

⁶² *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368, 1379; [2002] RPC 235 (Lord Phillips MR, discussing relation between copyright and freedom of expression, and noting that there will rarely be a conflict between them because ‘only the form of the literary work is protected’ so copyright does not normally prevent the publication of the information conveyed by the literary work. Understood in this way, the rule cannot be limited to the general or abstract ideas or facts).

⁶³ *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 418–9 (referring to common stock of architectural ideas which everyone is free to use).

is increased international norm-setting in the definition of the rights of the copyright owner, the non-protection of ideas represents one of the few avenues by which the courts can take account of the individual circumstances and merits of particular decisions.

5.2 HAS THE DEFENDANT TAKEN THE WHOLE OR A SUBSTANTIAL PART OF THE COPYRIGHT WORK?

Once the protected elements of the work have been identified, it is then possible to consider what the defendant has taken from the copyright work and ask whether the defendant has used the whole or a substantial part of the claimant's work.⁶⁴ Identical copying (that is, copying in an identical form of the totality of the claimant's work—sometimes referred to as 'piracy') raises no analytical problems, and thus in the absence of an exception (on which see Chapter 9) a finding of infringement follows inevitably. Consequently, we say nothing further about such copying. Copyright law, however, has long recognized that protection ought not to be limited to situations where the defendant uses an exact copy of the work.⁶⁵ The reason for this is that if copyright protection is limited to situations where identical copies of the work were used, plagiarists would be able to escape infringement simply by making minor variations to the copied work.⁶⁶ Copyright law therefore provides protection not just where the whole work has been used but also where a defendant has used a substantial part of the protected aspects of the work. In extending protection from identical copying to copying of 'any substantial part' of a work, the law enables a copyright owner to control situations where a defendant takes *part of a work* (e.g. where half of a book is photocopied or a sample of a sound recording is copied); and where the defendant *changes the form of the work* (e.g. where a play is translated from English into Spanish, or is converted into a film).⁶⁷ This move from protecting only against identical copying to protecting partial copies or copies of the substance of a work, inevitably has required the courts to make difficult value judgments.

While it seems eminently defensible to protect a copyright work against 'colourable variations', the term 'substantial'—introduced for the first time in the 1911 Act—has allowed the courts to expand the scope of protection much further than the mere coverage of substantially competing works.⁶⁸ The term is one with a 'wide range of meanings' and

⁶⁴ As Lord Millett emphasized in *Designers Guild v. Williams* [2000] 1 WLR 2416, 2425, copyright infringement does not involve a work for work comparison. Rather it is important to focus on what the defendant derived from the claimant's work.

⁶⁵ Thus, in the case of a book as well as protecting the surface of the text (the printed words), copyright law also protects the intangible property that lies behind or, more accurately, is represented in the text.

⁶⁶ As should be clear, the circumstances in which someone infringes copyright are different from the circumstances in which someone might be regarded as a 'plagiarist'. For discussions of the distinction, see S. Green, 'Plagiarism, Norms, and the Limits of Theft Law: Some Observations on the Use of Criminal Sanctions in Enforcing Intellectual Property Rights' (2002) 54 *Hastings LJ* 167, 200–202; L. Stearns, 'Copy-wrong: Plagiarism, Process, Property and the Law' (1992) 80 *California LR* 513, 525 ff.

⁶⁷ These two situations are sometimes referred to as cases of 'fragmented literal similarity' and 'comprehensive non-literal similarity', or as 'literal copying' and 'altered copying'. See, e.g. *Designers Guild v. Williams* [2000] 1 WLR 2416, 2431 per Lord Scott, following Laddie *et al.*

⁶⁸ CDPA s. 16(3). The term 'substantial part' was first introduced in CA 1911 s. 1(2). The term had however been used in case law prior to 1911 (where taking was contrasted with 'fair-use' of a work).

the courts have preferred those at the lower end of the range.⁶⁹ This is not the place for an historical review of the case law, but it can be said that there has been a discernible shift towards allowing a copyright owner to control ever-smaller uses and re-uses of their works. In the not too distant past, the courts often took the view that a person would only infringe where the part taken was an essential, vital, or important part of the work.⁷⁰ In recent years, however, tribunals have been willing to find infringement as long as the defendant's use is not of an 'insignificant' or *de minimis* part.⁷¹ Indeed, in an important speech by Lord Bingham (with whom all the other Lords agreed) in *Designers Guild*,⁷² the concept of substantiality has been treated implicitly as leaving beyond the scope of the copyright owner's monopoly only trivial, valueless, and insignificant elements of the work. More specifically, his Lordship explained section 16(3)'s reference to a substantial part as the law 'realistically recognising that no real injury is done to the copyright owner if no more than an insignificant part of the copyright work is copied'. In our view, this tendency to treat the test of whether the defendant has used a substantial part as merely a test of whether a taking is more than *de minimis* involves an unjustified and undesirable extension of the copyright holder's rights. We therefore proceed on the orthodox basis, that is that for a defendant to be held to have infringed it is necessary to show that they have used a substantial part of the claimant's copyright work, that is, an important part of that work.

5.2.1 When is a part important?

The question of whether a restricted act carried out in relation to part of a work amounts to an infringement always depends on the facts of the case. In particular, the question of whether a copyright work has been infringed depends primarily on the nature of the claimant's work, and on what has been taken by the defendant. While the evidential nature of the infringement inquiry means that each case will depend on its facts, it is possible to make some general comments about the way that importance is likely to be judged. In essence, the fate of a defendant depends on the relative *importance* of the part that is taken.⁷³

(i) *Types of evidence.* The first and most general point is that the question of whether a part is important and thus substantial is decided by the courts.⁷⁴ In many cases, particularly those involving more technical or esoteric subject matter, the courts may rely on expert evidence from computer programmers, musicologists, choreographers, and other

⁶⁹ *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 268 per Peter Gibson LJ (citing Lord Mustill in *R v. Monopolies and Mergers Commission, ex p. South Yorkshire Transport Ltd* [1993] 1 WLR 23, 29); at 286–7, per Mance LJ.

⁷⁰ *Hawkes & Sons v. Paramount Film Service* [1934] 1 Ch D 593, 606 (Slesser LJ) (where the defendant's broadcast of part of the claimant's song, while not prolonged, was held to be 'a substantial, vital and essential part').

⁷¹ *Designers Guild v. Williams* [2000] 1 WLR 2416, 2418 (Lord Bingham). See also *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 268 per Peter Gibson LJ (substantiality describes something 'more than de minimis, something considerable in amount; that is, of an amount to make it worthy of consideration'); at 287, per Mance LJ (specifically rejecting argument that substantial part meant the 'essential part', saying it set the test too high).

⁷² [2000] 1 WLR 2416, 2418.

⁷³ *Sillitoe v. McGraw-Hill Book Co. (UK)* [1983] FSR 545, 549–50; *Hawkes & Sons v. Paramount Film Service* [1934] 1 Ch D 593, 605–6 (CA).

⁷⁴ *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 302.

specialists as to the relative importance of the part.⁷⁵ At the end of the day, however, it is for the court to decide whether the part taken is important. Although, the focus of the tribunal should be on whether the part taken was important to the copyright work, in reaching a determination a court will inevitably be influenced by the surrounding circumstances (including: the way the claimant's work was created; the nature of the work, for example, whether it is a work of information or fiction; the relationship between the parties, in particular, whether they are in competition; the conduct of the parties, in particular whether the defendant has copied merely to save itself expending effort; the reason why the part was taken, for example, whether it has been used for the purposes of parody; and whether the use is degrading).⁷⁶ In addition, the tribunal is likely to be influenced by its understanding of the functions of copyright law, its approach to the legitimacy of copyright, and its general perceptions of the work and the part used.⁷⁷

(ii) *Importance to claimant's work.* The next point to note is that the relative importance of the part taken is judged in terms of its importance to the copyright work and not the defendant's work.⁷⁸ The reason for this is that the test imposed by the statute is whether the part used by the defendant is a substantial part of the *claimant's* copyright work, not whether it is a substantial part of the *defendant's* work.⁷⁹ This has two consequences. First, it means that it does not matter that the part taken forms an unimportant part of the defendant's work, nor that the defendant has expended considerable labour, skill, and effort themselves. The contributions of the defendant in transforming a copyright work have been regarded as largely irrelevant, the court preferring merely to attend to what the defendant has taken.⁸⁰ Translations and abridgments, however valuable, have for more than a century been regarded as infringements.⁸¹ Equally, in the case of copying of elements of an artistic work (as with that of *Ixia* by *Marguerite* in *Designer's Guild*: Figs. 8.1 and 8.2), it is a matter of no relevance to a finding of substantial taking that the defendant's work gives off an overall different impression than the claimant's. For the same reason (most) parodic uses of copyright works are regarded as infringements, irrespective of the

⁷⁵ *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95. The evidence assists the court to form a view about the nature of the skill and labour involved in a particular work: *The Newspaper Licensing Agency Ltd. v. Marks and Spencer plc* [2003] AC 551 (para. 21).

⁷⁶ *Laddie et al.*, para. 4.55.

⁷⁷ This can be seen in the way data division of a program (which defines the nature and structure of the files used by the program) were construed. In *Total Information Processing* [1992] FSR 171, Judge Baker likened the data division to a table of contents of a book, which he said would be unlikely to be protected as part of a book. Cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 303.

⁷⁸ *Designers Guild v. Russell Williams* [2000] 1 WLR 2416, 2420, 2426.

⁷⁹ *Warwick Films v. Eisinger* [1969] 1 Ch 508; *Hyperion Records v. Warner Music* (1991, unreported). (The 'importance of the copied part to the defendant's recording is a poor guide as to whether or not it is a substantial part of the work from which it was taken', particularly where the recordings were in different styles.)

⁸⁰ It was not always so: courts previously took into account any effort the defendant had made in transforming the work into another work: if a transformation was substantial, as with a translation or abridgment, there would be no finding of infringement, e.g. *Gyles v. Wilcox* (1741) 2 Atk 141.

⁸¹ D. Vaver, 'Abridgments and Abstracts: Copyright Implications' [1995] EIPR 225. R. Burrell, 'Reining in Copyright Law: Is Fair Use the Answer?' [2001] IPQ 361, 365 ff. (pointing out that even cases such as *Gyles v. Wilcox* can be seen as pro-copyright owner, given the statutory starting point).

parodist's skill or the social value accorded to parody.⁸² The second consequence of focusing on whether the part is important to the claimant's work is that if it is not, then in principle it does not matter whether the part is used repeatedly in the defendant's work (as often happens with the digital sampling of musical works).

(iii) *Substantiality a qualitative criterion.* While the use of the term 'substantial' suggests that importance should be judged in terms of the amount taken, the inquiry is as much concerned with the *quality* as the *quantity* of the part taken.⁸³ Indeed, in two recent decisions Lord Hoffmann went further, saying that the question of substantiality is a matter of quality *rather than* quantity.⁸⁴ So long as a part is qualitatively an important part of the work as a whole, even a very small part of a work may be a substantial part.

(iv) *Assessing quality.* To say that the issue is one of quality leaves open how quality is to be determined. In *The Newspaper Licensing Agency Ltd. v. Marks and Spencer plc*, Lord Hoffmann provided some guidance, when he stated that the qualitatively important parts of a work were to be identified 'by reference to the reason why the work is given copyright protection'.⁸⁵ He explained that in the case of literary copyright, copyright is conferred (irrespective of literary merit) upon an original literary work, and it followed that the quality relevant for the purposes of substantiality is the 'literary originality' of that which has been copied.⁸⁶ In the case of an artistic work, Lord Hoffmann said, it is the 'artistic originality' of that which has been copied—which primarily relates to the visual significance of what has been copied.⁸⁷ In relation to typographical arrangements, it is the labour

⁸² *Glyn v. Weston Feature Film* [1916] 1 Ch 261; *Joy Music v. Sunday Pictorial Newspapers* (1920) [1960] 2 QB 60 (both suggesting that the defendant's effort is relevant, and if sufficient, parodies are non-infringing); *Williamson Music v. Pearson* [1987] FSR 97, 107; *Schweppes v. Wellington* [1984] FSR 210 (suggesting that what the defendant added is irrelevant, so issue is whether defendant has taken a substantial part, which will usually be the case with parodies—though it was not so on the facts in *Williamson Music*). The killing off of this 'nascent exception for parodies' is characterized by Burrell as 'cavalier': Burrell, *ibid.*, 376. See also Laddie *et al.*, para. 3.142 and 4.62 (arguing that there is still room for the courts to indulge the parodist, and suggesting a test based on injury to the economic interests of the copyright owner); M. Spence, 'Intellectual Property and the Problem of Parody' (1998) 114 LQR 594; E. Gredley and S. Maniatis, 'Parody: A Fatal Attraction?' [1997] EIPR 339.

⁸³ *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 276 (Lord Reid), 283 (Lord Evershed, not just physical amount but substantial significance).

⁸⁴ *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 559 (para. 19); *Designers Guild v. Williams* [2000] 1 WLR 2416, 2422. See also per Lord Millett [2000] 1 WLR 2416, 2426; *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 288 per Lord Hodson; *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 152 (Lord Wilberforce), 159 (Lord Hailsham).

⁸⁵ *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 559. Later he reiterated that 'the purpose of the copyright is something which can be taken into account in deciding the kind of skill and labour which will attract protection'. Ascertaining parliamentary intention was relatively easy in relation to 'typographical arrangements', but may be less easy in relation to other works.

⁸⁶ At times the courts come dangerously close to analysing quality in aesthetic terms, and thus breaching the 'principle of non-discrimination' which they attempt to apply in the context of determining subsistence. In *Chappell v. D. C. Thompson* [1928–35] MacG CC 467, where four lines from a twenty-line poem ('Her Name is Mary') were taken, the importance of the part was judged in terms of its literary merit. The lines—'Her name is Mary/The sweetest name I know/And she's the one that I will love/For ever and a day' were held not to be a substantial part of the poem. This can be contrasted with *Kipling v. Genatosan* [1923–8] MacG CC 203 where it was suggested that four lines which formed the crescendo of Kipling's thirty-two-line poem 'If' were a substantial part of the poem.

⁸⁷ In *Billhöfer Maschinenfabrik v. T. H. Dixon & Co.* [1990] FSR 105 Hoffmann J (as he then was) said that the question of whether part of an artistic work is substantial depends upon the importance of the particular dimensions and spatial arrangements depicted.

and skill invested in choosing the presentation and layout (as opposed to the particular words and images published in the edition) that is protected.⁸⁸

(v) *Quality of entrepreneurial works.* It seems that the same approach is taken in assessing what amounts to a substantial part of an entrepreneurial work as in the case of any other work. A number of commentators had suggested that it was not possible to speak in a meaningful way about the ‘important’ part of an entrepreneurial work, contending that the quality of the entrepreneurial work will not change throughout the work.⁸⁹ For example, it was argued that while a three-second sample that contains the hook of a song may be an important part of a musical work, it does not necessarily follow from this that the way the three seconds were recorded will be any different from the way the rest of the song was recorded.⁹⁰ Indeed it is more likely that the quality of the sound recording will be the same throughout the recording than change from part to part. Following the decision of the House of Lords in *Newspaper Licensing Agency*, it is evident that the same general approach is taken *at least* in relation to typographical arrangements as in relation to literary, dramatic, musical, and artistic works. However, while the decision applied only to typographical arrangements, leaving the position in relation to sound recordings, films, and broadcasts undecided, the better view is that the House of Lords decision applies to all such works.

(vi) *Photographs of films.* In assessing substantiality in relation to films, account needs to be taken of a special statutory provision. Section 17(4) of the 1988 Act states that copying in relation to a film or television broadcast includes making a photograph of the whole or any substantial part of *any image* forming part of the film or broadcast. This means that where someone takes a photograph of a single image from a film and reproduces it on a T-shirt, a poster, or a web site they would infringe.⁹¹

(vii) *Importance to audience.* It is sometimes said that the importance of the part is judged from the point of view of the person to whom the work is addressed.⁹² For example, in dealing with an infringement action brought in 1934 in relation to the copying of twenty-eight bars from the well-known military march called ‘Colonel Bogey’, the Court of Appeal concluded that the part was substantial because anyone hearing the part taken

⁸⁸ *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551. However, it is not always easy to determine exactly which labour and skill is ‘relevant’ because each category of works accommodate a whole variety of different genres—‘literary works’ include novels, poems, tables and compilations, computer programs; ‘artistic works’ include realist and abstract paintings and drawings, as well as engineering drawings and maps; and so on. In turn there are potentially a wide variety of types of relevant skill and labour.

⁸⁹ *Laddie et al.*, paras. 7.59 (films), 9.20, 8.37 (broadcasts) (typographical arrangements). It had been suggested that in this context a ‘substantial part’ simply means any part of the work so long as it is not so small as to be trifling or insignificant: *Laddie et al.*, para. 7.59.

⁹⁰ Moreover, a substantial part of a newspaper protected by copyright as a ‘literary work’ may well not be a substantial part of the ‘typographical arrangement’: *Nationwide News v. Copyright Agency Ltd* (1996) 34 IPR 53, 71.

⁹¹ Although the existence of this provision indicates that the legislature is happy, on occasions, that copyright protection extends to very small parts of works, it should be recognized, first, that this was done in response to the existence of a market for film stills for use in posters; and second, that the express provision only covers infringement by copying. The sub-section should not be read as a green light to those seeking to transform the meaning of ‘substantial part’ into ‘non-de minimis part’.

⁹² *Billhöfer Maschinenfabrik v. Dixon* [1990] FSR 105; *Francis Day & Hunter v. Bron* [1963] Ch 587, 623.

would recognize it.⁹³ It was also the part by which the march was chiefly known and the cause of its popularity. In *ITP v. Time Out*, the court held that in copying part of the claimant's compilation of television and radio programmes, *Time Out* (a weekly listings magazine) reproduced a substantial part of the copyright work.⁹⁴ The court stressed that a key factor in finding that the part taken was important and thus substantial was that *Time Out* had concentrated on the peak viewing times and on the programmes which occurred at irregular times. In essence, *Time Out* took the parts of the TV listings that were of most value to users. A similar approach was adopted in *Express Newspapers*. In considering whether the copying of the small sequences (two sequences of five letters and a twenty-five letter grid) from an original work of somewhere between 700 and 750 different sets of grids and five-letter sequences (which was used in a newspaper game), the court said that the part was substantial because it was 'the only part of the work that on that day will be any matter of consequence to anybody'.⁹⁵ (See Fig. 3.2.)

While this approach to the determination of the importance of a part is not necessarily wrong, it should be noted that it may be misleading. It is unobjectionable in those cases where the audience's view is founded on an appreciation of the relevant labour, skill, judgment, or craftsmanship that has gone into the work. For example, in the 'Colonel Bogey' case, the decision could as easily have been articulated in terms of the fact that the part taken was that which was most musically original. Similarly, although in the *Time Out* decision Whitford J emphasized that the parts were important because they related to the peak viewing times, his decision might have been justified by treating the taking of the 'irregular scheduling' as a substantial part because more skill and labour was required in scheduling the irregular programs than the regular ones: Whitford J had earlier treated the labour, skill, and judgment in choosing the programme times as well as compiling the list as 'relevant' to the literary originality of the schedules.

Focusing on audience evaluation or commercial importance is, however, potentially misleading because the audience to whom the work is addressed might be interested in parts of the works which involve little *relevant* labour, skill, or investment. The key inquiry is that stated by Lord Hoffmann: the importance of a part of a work is to be judged in terms of criteria that are relevant to the type of work in question. In contrast, the mere fact that part of a work becomes commercially significant or that there is a market for it should not matter when deciding whether the part is substantial. For example, if a closed circuit camera situated in a fixed position records incidents in a car park, while the incidents or personalities recorded may hugely affect the commercial value of parts of the tape, they in no way affect the qualitative importance of any part for copyright purposes.⁹⁶ If we consider exactly what the relevant labour, skill, and judgment invested by the creators was in the *Express Newspapers* case, we might wonder whether the conclusion that there was

⁹³ *Hawkes & Sons v. Paramount Film Service* (1934) 1 Ch D 593, 609 (CA); *King Features v. Kleenman* [1941] AC 417.

⁹⁴ [1984] FSR 64, 74.

⁹⁵ *Express Newspapers v. Liverpool Daily Post & Echo* [1985] FSR 306, 311. See also *PCR v. Dow Jones Telerate* [1998] FSR 170.

⁹⁶ In the case of a sound recording, it seems on this basis it would be wrong to treat the part of which embodies the most distinctive, unusual, or catchy sounds as automatically representing the important part of the sound recording. This is because those parts may reflect, for example, the musical work, performance, and so on, rather than labour, skill, and judgment in creating the recording itself.

infringement was properly justified on the ground that the particular day's grid was the most important part of the claimants' respective work.⁹⁷ It seems that the court, no doubt motivated by a desire to prevent 'unfair competition', stretched copyright too far.

(viii) *Importance of ideas.* One of the chief difficulties caused by Lord Hoffmann's holding that the qualitatively important parts of a literary work were to be identified by reference to the 'literary originality' and the important parts of an artistic work by reference to 'artistic originality', is that the case law on 'originality' (described in Chapter 4) hardly comprises an uncontroversial or settled body of law.⁹⁸ One key difficulty it raises is knowing to what extent labour, skill, and judgment in producing ideas, information, or making commercial decisions which precede the creation of the work itself can be treated as part of the 'literary or artistic originality'. In the context of determining originality, we saw that the House of Lords in *Ladbroke v. William Hill* had said that the court should not dissect labour, skill, and judgment in deciding what bets to offer from the labour, skill, and judgment in creating the coupon thereafter.⁹⁹ If this general proposition also carries weight when determining literary or artistic originality for the purpose of deciding whether a part is important and thus whether there is infringement, we are a short step away from concluding that the important parts of a copyright work may be those that incorporate the ideas or carry the information that have taken the most labour or skill to produce (rather than express).¹⁰⁰ And yet, in *Catnic v. Hill & Smith*, (in a passage which received the approval of the Privy Council in *Interlego v. Tyco*), Buckley LJ has said that importance may be judged by how far a part contributes to conveying information, but not to the importance of the information which it helps to convey. What is protected is the skill and labour devoted to making the work not the skill and labour devoted to developing some idea or invention communicated or depicted in the work.¹⁰¹ In due course, the courts will be forced to confront this apparent conflict. If current trends persist, it is likely that they will reject the *Catnic* approach, which requires too subtle an analysis, and favour the stronger protection that application of *Ladbroke* would produce.

(ix) *Functional importance.* A similar difficulty has arisen in relation to determining the importance of parts of functional works. Here, the courts have held that while a part may be important to the functioning of the work, if it is not also significant in terms of the originality of the work it will not be substantial. In the case of an artistic work this means that while a part may be important to the functioning of a work, if it is not visually important then it will not be a substantial part. This can be seen, for example, in *Johnstone Safety v. Peter Cook* where the Court of Appeal had to consider whether a relatively small but functionally important feature of a sectional design of a plastic traffic cone which enabled the cones to be conveniently stacked was a substantial part of the drawing. Ralph

⁹⁷ Whitford J was of the view that a good deal of labour had gone into ensuring the grids produced enough winners to be attractive, but not so many as to render the game hopelessly uneconomic. In fact, the claimant had developed a computer program, and then checked that the grids were acceptable. Perhaps the case can be said to be one where there was a substantial taking from a quantitative point of view.

⁹⁸ A further question is whether the European harmonization of originality in relation to computer programs, databases, and photographs (described at pp. 101–6) affects the substantiality inquiry.

⁹⁹ [1964] 1 WLR 273.

¹⁰⁰ *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 163 (Lord Hailsham) (all information embodied in the design drawings could be considered when deciding if there was infringement).

¹⁰¹ *Catnic Components v. Hill and Smith* [1982] RPC 183; *Interlego v. Tyco* [1989] AC 217, 265.

Gibson LJ said that the fact that the feature was functionally important did not make it 'more potent' for demonstrating that a substantial part had been reproduced. As the feature had 'no substantial significance in the visual image of the artistic work' it was not a substantial part of the work.¹⁰² Nevertheless, while 'functional importance' of a part is not the test, it does not follow that a part taken from an artistic work is only substantial if it is of visual significance to a layman. In the case of design drawings for a car exhaust system, the salient features were not to be assessed by the visitor observing the exhaust pipe mounted on a plinth at the Tate Gallery. Instead, they were to be judged by an engineer wanting to make an exhaust pipe to fit under a car.¹⁰³ Presumably, this person is in the best position to assess the labour, skill, and judgment that the author has invested in the drawings in question.

The relation between functional importance and 'substantiality' has also arisen where a small part of a computer program is copied. In these circumstances it is sometimes pointed out that the program will not function or will not function properly without the part.¹⁰⁴ Given that 'every part of a computer program is essential to its performance' it has been suggested by some commentators that every part, however small, should be treated as a 'substantial part' of the program.¹⁰⁵ This approach has been rejected in the United Kingdom.¹⁰⁶ The reason for this is that it applies the wrong criterion to test whether the part is important.¹⁰⁷ While it may be clear that the functional importance of part of a computer program is not a relevant consideration when deciding whether the work has been infringed, it is not yet clear which aspects of a computer program will be relevant.

(x) *The part must itself be capable of being protected.* In some cases the courts have suggested that a part will not be substantial if the amount that is taken would not itself attract copyright.¹⁰⁸ This can be seen in *Francis Day & Hunter* where the owners of copyright in the song 'The Man Who Broke the Bank at Monte Carlo' brought an infringement action against a person who made a film of the same name. In response Lord Wright said that the 'copying which is complained of is the use of the title, and that is too unsubstantial on the facts of this case to constitute infringement'.¹⁰⁹ In other words, Lord Wright thought there was no copyright in the title by itself. A similar approach was adopted in the parody case of *Williamson Music v. Pearson* where the only parts left in the defendant's parody of the claimant's song 'There is Nothin' Like a Dame' were the words 'we got', which were repeated several times. Judge Baker QC held that the words were not a substantial part of

¹⁰² *Johnstone Safety v. Peter Cook* [1990] FSR 161, 178. See also *Rose Plastics GmbH v. William Beckett & Co* [1989] FSR 113, 123 (substantial importance from point of view of operation was not same as substantial part of artistic work, which depended on visual significance).

¹⁰⁸ *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 per Lord Pearce; *Designers Guild v. Williams* [2000] 1 WLR 2416, 2423 per Lord Hoffmann (second interpretation of idea-expression rule); *Merchandising Corp v. Harpbond* [1983] FSR 32, 47 per Lawton LJ.

¹⁰⁹ *Francis Day & Hunter v. 20th Century Fox* [1940] AC 112, 123–4.

the copyright work, noting that ‘in themselves the words would not be copyright as a literary work’.¹¹⁰ While the rule that a part will not be substantial if it would not itself attract copyright may be uncontroversial, it would be dangerous to infer from these cases a different proposition, namely, that if the amount taken could itself have constituted a protected work, then it necessarily follows that the amount taken is substantial.¹¹¹ Such a proposition would fail to take account of the importance of the part taken to the claimant’s work as a whole: indeed, it would involve ignoring the rest of the claimant’s work.

(xi) *Repeated takings.* In certain situations the question has arisen as to whether the taking of an insubstantial part of the copyright work over a period of time amounts to the taking of a substantial part of the work. This question arises in two situations. The first is where a defendant regularly takes insubstantial amounts from a *single copyright work*. For example, while a student may not infringe the copyright in a 300-page textbook if they copied five pages, what of the situation where over the course of an afternoon the same student went to a photocopy machine twenty times and photocopied a different five-page section each time? While the copying of five pages may not amount to an infringement, what of the copying of 100 pages? The second scenario is where copyright works are created regularly and the defendant consistently takes insubstantial amounts from different works. For example, would it be an infringement for an evening newspaper to reproduce regularly an insubstantial amount taken from daily financial reports of foreign markets that appeared in a morning paper?

As regards the first situation, that is where a defendant regularly takes insubstantial amounts from a single *copyright work*, the court in principle must decide whether there are a number of takings or only one: a person will infringe if the acts can reasonably be seen as a single act, and the cumulative taking is ‘substantial’.¹¹² Relevant factors would presumably include whether the taking were used for the same purpose, and the time frame in which the activities took place. Beyond those limited situations where a series of acts could be interpreted as a single act, it seems the courts recognize a broader doctrine of ‘repeated systematic copying from the same work’. Although Laddie J had observed that ‘the concept of infringement by taking small and regular amounts was problematical’,¹¹³ the Court of Appeal in *Newspaper Licensing Agency v. Marks & Spencer plc* stated that such systematic copying could be infringement.¹¹⁴ (The issue was not discussed in the House of Lords). The Court of Appeal found support for its view from a case where a defendant was held to infringe copyright in the fixture lists for the football season, because it had copied a part of the list every two weeks.¹¹⁵ Nevertheless, the comments in *NLA* were

¹¹⁰ [1987] FSR 97, 107. After some early cases suggesting a different test for infringement by way of parody, this case confirmed that no special rules apply.

¹¹¹ Cf. Laddie *et al.*, para. 4.45 (arguing that if the part taken could have stood on its own as an original work, the defendant’s work ‘is a plagiarism’).

¹¹² *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401, 410.

¹¹³ *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401, 410.

¹¹⁴ *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 269 (para. 33) per Peter Gibson LJ. See also 288–9 (para. 108) (Mance LJ).

¹¹⁵ *Football League Ltd v. Littlewoods Pools Ltd* [1959] Ch 637 (whether such fixture lists would now be protected by copyright depends upon whether, as a result of the selection of arrangement, they could be said to be their author’s own intellectual creation). Perhaps this would be the most satisfactory explanation for *Express Newspapers v. Liverpool Daily Post & Echo* [1985] FSR 306 (which, as we saw earlier, is otherwise problematical).

obiter, and the Court gave no indication as to when (or why) copying would be treated as 'systematic'.¹¹⁶

In contrast, where there is repeated copying of insubstantial parts from a series of the claimant's works there can be no finding of infringement (despite certain nineteenth-century cases to the contrary).¹¹⁷ Dismissing those authorities on the basis of the different statutory terms, Peter Gibson LJ said, 'I do not understand how in logic what is an insubstantial part of a work can when aggregated to another insubstantial part of another work become a substantial part of the combined work'.¹¹⁸ Here the only issue is whether in each case the claimant can show some use of a substantial part of the individual works.¹¹⁹

5.2.2 Judicial and practical responses to the complicated inquiry

Having set out a structured approach suited to a rigorous analysis of copyright infringement, we should conclude our discussion of primary infringement with three points.

First, it should be noted that courts have not always been as rigorous or structured in their analyses as we suggest is necessary in the preceding account. In most cases, in fact, the court does not examine the nature of the claimant's work, rather taking for granted the boundaries of the work and that the work as a whole is protected. In these cases, the court will merely go straight to the second issue, the substantiality of the taking.¹²⁰ In yet other cases, the court will not even examine the second, substantiality, issue with any rigour. In some such cases, the court will utilize the 'rough practical test', that 'what is worth copying is worth protecting'.¹²¹ This might be justified where there is an indication that the defendant has deliberately copied, from which the court can at least draw an inference that the defendant regarded the material it had appropriated as 'worth taking' and, therefore, embodying original skill and labour.¹²² In other circumstances, in particular where the issue of derivation has been determined through a process of inference from multiple similarities between the defendant's material and the claimant's work, the court may

¹¹⁶ Indeed, the fixture list case could have been an example of a single act, given that there was a pre-conceived course of action.

¹¹⁷ *Cate v. Devon Constitutional Newspaper* (1889) 40 Ch D 500; *Trade Auxiliary v. Middlesborough* (1889) 40 Ch D 425. There is a possibility of infringing *sui generis* database right: see Ch. 13.

¹¹⁸ *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 269, 288.

¹¹⁹ *PCR v. Dow Jones Telerate* [1998] FSR 170, 183 (Lloyd J rejecting claimant's argument that its two articles and the defendant's three articles should be taken together for the purpose of determining whether a substantial part).

¹²⁰ *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

¹²¹ *University of London Press v. University Tutorial Press* [1916] 2 Ch 601, 610. In *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273 the House of Lords misread Peterson J's dictum (which was directed at the issue of the originality of mathematics exams) and treated it as if it was concerned with substantial taking.

¹²² As Laddie J said in *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, a belief that taking was blatant led courts, sometimes with almost evangelical fervour, to apply the commandment 'thou shalt not steal'. The test has been criticized by the lower courts on the ground that where the test is used, the tribunal relinquishes the task of asking whether the work has been infringed according to the rules of copyright law and focuses instead on the mere fact that the work has been copied. In so doing, all that a claimant has to show to establish infringement is that their work has been copied. For criticisms, see *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 289 (Jacob J, test 'proves too much'); *Hyperion Records v. Warner Music* (1991, unreported) (Judge Laddie QC, saying test 'goes too far'); *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131 (Pumfrey J, test 'proves too much').

simply regard further inquiry as superfluous. This was the view of the majority of the House of Lords in *Designers Guild*. For example, Lord Bingham there observed that ‘while the finding of copying did not in theory conclude the issue of substantiality, on the facts here it was almost bound to do so’. Lord Millett, too, agreed that while the issues of copying and substantiality are treated as separate questions, in some circumstances, ‘the answer to the first question will almost inevitably answer both, for if the similarities are sufficiently numerous or extensive to justify an inference of copying they are likely to be sufficiently substantial to satisfy this requirement also’.¹²³

Second, as should be clear, the factual nature of the infringement inquiry means that it is often difficult to state in advance when a particular work may be infringed. This uncertainty is particularly problematic for bodies such as libraries who deal with copyright works on a day-to-day basis and who need to provide advice as to the types of uses which are permissible. Faced with this uncertainty, it is not surprising that standards and protocols have been formulated in many industries that set out in a clear and readily quantifiable manner the type of copying that is permissible. Perhaps the most well-known example is the rule of thumb that 10 per cent or one chapter of a book may be copied. Similar standards have also been formulated to deal with the digital sampling of musical works and are currently being formulated in the multimedia industries. While these standards do not take account of the qualitative nature of infringement, they do provide an important and workable way of dealing with a difficult issue.

Third, and finally, as should be clear from the foregoing, the courts have recently interpreted the rules on primary infringement in a way that leaves little scope for unauthorized utilization of copyright protected material. Those parts of a work which are not protected (as unoriginal, or as ideas) are defined increasingly narrowly. At the same time, the courts are willing to treat virtually any appropriation as substantial (and pay no attention to the way the material comes to be used). These trends reflect a widely-held judicial understanding of copyright law as intended to protect all contributions of labour, skill, and judgment. Copyright works are protected by the courts with a zeal that seems to reflect a belief that the work is the absolute, despotic dominion of the copyright owner. Yet, if we reflect on the dominant justification for copyright, namely that copyright is intended to provide the minimum incentive necessary to the production of new works, such an approach seems problematic.

6 SECONDARY INFRINGEMENT

In an attempt to inhibit the negative impact that illegal acts have upon copyright owners, copyright law recognizes that it is not enough merely to provide remedies against those who copy or perform the copyright work. Instead, copyright law recognizes that it is also necessary to provide owners with protection against those who aid and abet the primary infringer. Such accessorial infringement is known as *secondary infringement*.

¹²³ [2000] 1 *WLR* 2416, 2418 (Lord Bingham), 2426 (Lord Millett), 2435 (Lord Scott). Lord Scott put the proposition more forcefully still, stating that in cases of ‘altered copying’, ‘[i]f the similarities between the two works were sufficient to justify the inference that one had been copied from the other, there was, in my judgment, no further part for the concept of substantiality to play’.

There are two important differences between primary and secondary infringement. The first relates to the scope of protection. Primary infringement is concerned with people who are directly involved in the reproduction, performance, etc. of the copyright work. In contrast, secondary infringement is concerned with people in a commercial context who either deal with infringing copies, facilitate such copying, or facilitate public performance. The second difference between the two forms of infringement relates to the mental element that the defendant must exhibit in order to infringe. As we explain below, the state of mind of the defendant is not formally taken into account when deciding whether an act of primary infringement has occurred. In the case of secondary infringement, however, liability is dependent on the defendant knowing or having reason to believe that the activities in question are wrongful.¹²⁴

6.1 TYPES OF SECONDARY INFRINGEMENT

Secondary infringement can be divided into two general categories. First, those who distribute or deal with infringing copies once they have been made; and second, those who facilitate copying by providing the equipment or means that enable the copying to take place.

6.1.1 The distribution of infringing copies

The first general category of secondary infringement is concerned with people who deal with infringing copies of the work in a commercial context. To this end, sections 22 and 23 of the 1988 Act provide that the copyright in a work is infringed by a person who without the licence of the copyright owner:

- (1) *imports* an infringing copy into the UK otherwise than for their private and domestic use,¹²⁵
- (2) *possesses* an infringing copy in the course of business,¹²⁶
- (3) *sells or lets for hire*, or offers or exposes for sale or hire an infringing copy,
- (4) in the course of business *exhibits* in public or distributes an infringing copy,¹²⁷ or
- (5) *distributes* an infringing copy, otherwise than in the course of a business, to such an extent as to affect prejudicially the copyright owner.

Section 27(2) provides that an article is an ‘infringing copy’ if its making constituted an infringement of the copyright in the work in question.¹²⁸ In the case of imported copies, infringing copy also includes ‘notional infringements’, that is copies which if they had

¹²⁴ CDPA ss. 22–4, 27. See Laddie *et al.*, ch. 19.

¹²⁵ CDPA s. 22.

¹²⁶ Business is defined in CDPA s. 178 as including a ‘trade or profession’. In *Pensher Security Doors v. Sunderland City Council* [2000] *RPC* 249, 280–2, Aldous LJ held that (i) the letting of flats by a local authority was a ‘business activity’, and (ii) that the council possessed infringing copies (in the case security doors which infringed the claimant’s copyright in its design drawings) ‘in the course of’ that business even though there was no intention to distribute the infringing copies. This was because possession of the doors was an integral part of the business of letting the flats and thus not ‘incidental’ to the business.

¹²⁷ An art gallery carries on business even though certain paintings are not for sale: *Pensher Security Doors v. Sunderland City Council* [2000] *RPC* 249, 282.

¹²⁸ But note the many situations in which the making of a copy is not infringing because of the existence of a defence, but the statute requires the copy be treated as an infringing copy when subsequently dealt with in specified ways: CDPA s. 27(6) referring to s. 32(5), s. 35(3), s. 36(5), s. 37(3), s. 56(2), s. 63(2), s. 68(4), and s. 141.

been made in the United Kingdom would have infringed copyright at the time of making, or would have constituted a breach of an exclusive licence agreement relating to the work.¹²⁹ This provision has proved to be problematic.¹³⁰ Its significance has been reduced, however, by the extension of liability for primary infringement to include the issuing of copies, including the importation of copies from outside the EEA. Liability for secondary infringement by importation remains important in cases of importation from one EEA state to another: however, this right is subject to the Treaty of Rome and the principle of exhaustion.¹³¹

6.1.2 Providing the means for making infringing copies or performances

The second general category of secondary infringement is concerned with people who facilitate copying. This occurs, for example, where someone provides the equipment or the means that enables the copying to take place. There are a number of different situations where the provision of the means for making infringing copies or performances will amount to a secondary infringement.

Section 24(1) provides that a person is liable for infringement where they supply an article that is specifically designed or adapted for making copies of the copyright work. More specifically, section 24(1) provides that copyright in a work is infringed by a person who without the licence of the copyright owner (a) makes, (b) imports into the United Kingdom, (c) possesses in the course of business, or (d) sells, or lets for hire, or offers or exposes for sale or hire *an article specifically designed or adapted for making copies of that work*.

It should be noted that section 24(1) states that the article must be *specifically* designed or adapted for the purpose of copying. This means that it is not enough that an article, such as a photocopier or a tape-to-tape recorder, has the potential to copy. Rather, for the section to operate the article must be specifically designed for the copying of a particular work. This would be the case, for example, where someone makes a template or a mould of a copyright work that is used to create infringing copies.

Special provisions are also made for people who *transmit the work* without the appropriate permission. Section 24(2) states that copyright in a work is infringed by a person who without licence transmits the work by means of telecommunications system (such as a fax). It does not apply, however, to communications to the public. As with all forms of secondary infringement, infringement is dependent upon the defendant 'knowing or having reason to believe that infringing copies of the work will be made by means of the reception of the transmission in the UK or elsewhere'.

Where the copyright in a literary, dramatic, or musical work is infringed by a performance at a 'public place of entertainment',¹³² any person who gave permission for that place to be used for the infringing performance is also liable for infringement. This does not

¹²⁹ CDPA s. 27(3), Sched. 1, para. 14(3).

¹³⁰ Described by Laddie *et al.*, para. 19.16 as 'far from straightforward'. One question that has been debated is who does the hypothetical making—the maker abroad, the importer, or someone else. See W. Rothnie, *Parallel Imports* (1993), 199–241. Laddie *et al.* argues that the identity of the maker is not in issue, what is in issue is the purpose which the importation is intended to fulfill.

¹³¹ CDPA s. 27(5). See above at pp. 12–15, 43–6.

¹³² Defined in CDPA s. 25(2) to include premises occasionally used for public entertainment.

apply, however, where the defendant gave permission on reasonable grounds that the performance would not be infringed.¹³³

Special provisions also apply to those who facilitate an infringing performance. Section 26 deals with the situation where copyright is infringed by a public performance or by the playing or showing of the work in public by means of apparatus for (a) playing sound recordings, (b) showing films, or (c) receiving visual images or sounds conveyed by electronic means. In these situations, the following people will infringe:

- (i) The person who *supplies the apparatus* which enables the act of primary infringement to take place is liable for infringement. This covers someone who supplies equipment to play records or show films. Infringement here is conditional on the fact that where an apparatus is normally used in public, the defendant did not reasonably believe on reasonable grounds that it would be used to infringe copyright.¹³⁴
- (ii) An occupier of premises who gave permission for an apparatus to be brought on to the premises will be liable if they knew or had reason to believe that the apparatus was likely to be used to infringe copyright.¹³⁵
- (iii) A person who *supplies a copy* of a sound recording or a film will be liable if they knew or had reason to believe that the copy was likely to be used to infringe copyright.¹³⁶

Finally, it should be noted that special rules, analogous to provisions on secondary infringement, apply where persons do various acts that facilitate access to or duplication of works that have been protected by technological measures. We deal with these in detail in Chapter 13. For the moment we merely need to note that these rights cover (i) acts which circumvent technological measures;¹³⁷ (ii) the manufacture and distribution of devices either 'primarily designed, produced, adapted . . . for the purpose of enabling and facilitating' circumvention, or 'promoted, advertised or marketed' for that purpose and ones having 'only a limited commercially significant purpose or use other than to circumvent';¹³⁸ and (iii) the provision of services for the purpose of enabling or facilitating circumvention. Distinct, and narrower provisions apply where the measures protect computer programs.¹³⁹

6.2 ACTUAL OR CONSTRUCTIVE KNOWLEDGE

One of the notable features of secondary infringement is that liability is dependent on the defendant 'knowing or having reason to believe' that the activities in question are wrongful. That is, liability is dependent on the defendant having either actual or constructive knowledge. The question of whether a defendant has the requisite knowledge is decided objectively.¹⁴⁰ As such, it does not matter that the defendant may not have believed that the

¹⁴⁰ Cf. Laddie *et al.*, paras. 19.4 ff. (arguing that a subjective element is appropriate, at least in cases where the defendant is in possession of contradictory information).

act in question was wrongful. All that matters are the conclusions a reasonable person would have reached in the circumstances.

The question that needs to be asked is whether the defendant knew or had reason to believe that they were dealing with or helping to facilitate the creation of an 'infringing copy' of the copyright work. In answering this question, the courts have stressed that the defendant must be in a position where they are able to evaluate the information that is given to them.¹⁴¹ This means that they must be given a reasonable period of time to consider the information.¹⁴² It also means that the information that they are given must be sufficiently detailed as to the nature of the work in question: general allegations about infringement will not suffice.¹⁴³ The courts have also said that it is *not* enough for the facts to lead a reasonable person to suspect the relevant conclusion.¹⁴⁴ Although it will enhance the claimant's case where the defendant is supplied with a copy of, or given reasonable access to, the copyright work, the circumstances of the case may be such that the reasonable defendant could have 'known' about the wrongful nature of their activities without ever having seen the copyright work.¹⁴⁵

¹⁴¹ *LA Gear v. Hi-Tec Sports* [1991] FSR 121, 129 (action for infringement of copyright in the drawings of its shoes by importation of infringing copies. Since the claimant had sent the defendants a letter and copies of the drawings, they had reason to believe these were infringing copies).

¹⁴² The normal period is often 14 days. Cf. *Monsoon v. Indian Imports* [1993] FSR 486.

DEFENCES

1 INTRODUCTION

In this chapter we look at the exceptions that a defendant may rely upon when sued for infringement of copyright. Most of these exceptions are found in Chapter III of Part 1 the 1988 Act (where they are referred to as permitted acts). As Laddie J said, Chapter III ‘consists of a collection of provisions which define with extraordinary precision and rigidity the ambit of various exceptions to copyright protection’.¹ In addition to the exceptions in the 1988 Act the courts have also developed a number of common law defences that a defendant may rely upon when sued for infringement of copyright.

The exceptions examined here provide that certain acts that might otherwise constitute an infringement of copyright do not incur liability. The exceptions only come into play once a claimant has established that copyright has been infringed. Where this occurs, the onus of proof falls on the defendant to prove that one of the exceptions applies.²

Given that the exceptions span a wide variety of activities, it is not surprising that they perform a number of different roles. In some cases, the exceptions promote and encourage the creation of works. This is particularly the case where the permitted use transforms the original work in some way. In other cases, the exceptions overcome the market failure that arises where an economically optimal use would not occur for one reason or other. This occurs, for example, where the dealing is so small that the transaction costs of formulating an agreement outweigh the value of any licence that may be negotiated between the parties.³ In other cases the defences are intended to protect other non-copyright interests, such as the protection of privacy and free speech.⁴ In other cases the exceptions prevent monopolies from being abused⁵ and help to preserve material that is culturally and historically valuable.⁶ Some of the defences encourage the parties to enter into collective licences.⁷

¹ *Pro Sieben Media v. Carlton UK Television* [1997] EMLR 509.

² Rather surprisingly, given that the defences derogate from property rights, there does not appear to be any consistent process of interpreting copyright exemptions strictly against the defendant.

³ W. Gordon, ‘Fair Use as Market Failure’ (1982) *Columbia LR* 1600. CDPA s. 30 (criticism or review), s. 59 (public recitation), ss. 57, 66A (difficulty locating author), s. 60 (abstracts), s. 74 (sub-titling), s. 35 (recording of broadcasts for education), s. 36 (educational copying).

⁴ See, e.g. CDPA s. 29 (private study), s. 70 (home taping).

⁵ CDPA s. 50B (decompilation), s. 73 (cable retransmission).

⁶ CDPA s. 61 (folksongs), s. 75 (archives).

⁷ CDPA s. 35 (recording of broadcasts for education), s. 36 (educational copying), s. 60 (copying of abstracts), s. 66 (compulsory licensing of lending of works), s. 74 (sub-titling for hard of hearing etc), s. 143 (certification).

As the 1988 Act reminds us, the mere fact that an activity falls within one of the permitted acts does not mean that it does not contravene some other legal right.⁸ An obvious example being breach of contract. In recent years questions have arisen as to whether the law should limit a person's ability to contract out of the exceptions.⁹ So far, British copyright law has taken a piecemeal approach to these issues, and the various provisions which prevent contracting-out are examined in their particular contexts.¹⁰ A related problem is that raised by the interface between the exceptions to copyright and technological measures of protection. If a person cannot take advantage of a defence because of the application of access or copy control mechanisms, can that person legally circumvent the measure in order to do so? So far, the UK legislature has answered this question with a clear 'no', leaving users deprived of the ability to utilize some of the exceptions with the possibility of applying to the Secretary of State. These provisions are reviewed in Chapter 13.¹¹

For the most part, the exceptions to copyright protection available in the UK have largely been unaffected by international influences. Under the Berne Convention,¹² members of the Union are permitted to create exceptions to the exclusive rights, in limited circumstances.¹³ In particular, exceptions to the reproduction right must satisfy the so-called 'three-step test'.¹⁴ According to this test, all exceptions must (i) be limited to certain special cases, (ii) not conflict with a normal exploitation of the work, and (iii) not unreasonably prejudice the legitimate interests of the author. As TRIPS requires that *all* limitations comply with the three-step test, the test has become more important.¹⁵ Indeed, in a notable decision it was held by the Dispute Panel that a provision of US law which allowed certain establishments to play or show publicly works which were received from broadcasts violated the 'three-step test'.¹⁶ Although the United States has not been able, as yet, to amend its law to comply with the Report, it has agreed to compensate European copyright holders for the losses they have incurred.¹⁷ With the entry into force of the WIPO Treaties, the same test is to be applied to the additional rights required to be recognized, such as the distribution right and the right to make the work available to the

public.¹⁸ The WPPT extends the application of the ‘three-step’ test to the exceptions from rights in phonograms.¹⁹

The three-step test sets general parameters to the freedom of national legislatures to create exceptions: in contrast, European Community developments have had a more pronounced impact upon the copyright exceptions available in the UK. The Software, Databases, Rental and Information Society Directives require member states to operate certain exceptions,²⁰ and limit the circumstances in which other exceptions may be granted.²¹ The Information Society Directive, in particular, contains one mandatory exception as regards transient or incidental acts of reproduction²² and a huge list of optional defences, many covering the analogue environment.²³ The list is exhaustive: member states may not maintain any other exceptions.²⁴ The defences listed in the Directive are subject to the three-step test.²⁵

Finally, the European Convention on Human Rights, and the jurisprudence of the Strasbourg Court, appears to offer an important backdrop for the interpretation of a number of the defences (especially after the Human Rights Act 1998 came into force in October 2000).²⁶ As mentioned in Chapter 2, Article 10 of that Convention confers a freedom of expression, limitations to which must be ‘necessary in a democratic society’. In *Ashdown v. Telegraph*, the Court of Appeal acknowledged that Article 10 considerations were to be taken into account, firstly, in the process of interpreting the existing exceptions; secondly, in the formulation of remedies; and thirdly, if necessary, in the formulation of a judicial ‘public interest’ exception to copyright.²⁷

2 FAIR DEALING

Of the various permitted acts in Chapter III, perhaps the most significant (in terms of their scope) are the fair-dealing defences that are found in sections 29 and 30.²⁸ These provide that a person will not be liable if they can show:

¹⁸ WCT, Art. 10.

¹⁹ WPPT, Art. 16. TRIPS, Art. 13 is not specific about exactly which rights to which it applies: in that it is part of ‘section A’, it might be thought also to be applicable to phonograms. However, because it comes before Art. 14(2), which requires Members to give reproduction rights to phonogram producers, and this is qualified by Art. 14(6), the more obvious interpretation is that Art. 13 only affects Berne rights, and the Rental Right in Art. 11. See also Rome, Art. 15(2) (permitting certain exceptions).

²⁰ Software Dir, Arts 5 and 6; Database Dir, Art. 6.

²¹ Rental Dir., Art. 10, especially At 10(3) (three-step test, added by Info. Soc. Dir., Art. 11); Software Dir., Arts. 5 and 6; Database Dir., Art. 6.

²² See above at p. 222–3.

²³ Info. Soc. Dir., Art. 5. Early proposals contained a very limited catalogue of exceptions, reflecting the limited concerns of the Directive with the ‘information society’.

²⁴ See Info. Soc. Dir., Recital 32. The Directive divides the exceptions into two categories: five that relate to the reproduction right, and fifteen that relate to both the reproduction right and the communication right. Member states are also able to extend the exceptions to cover distribution of copies ‘to the extent justified by the purpose of the authorized act of reproduction’. Defences relating to public performance, e.g. in CDPA s. 34, are unaffected.

²⁵ *Ibid.*, Art. 5(5).

²⁶ R. Burrell, ‘Defending the Public Interest’ [2000] *EIPR* 394.

²⁷ *Ashdown v. Telegraph Group Ltd* [2002] *Ch* 149, 167 [2001] 3 *WLR* 1368; [2002] *RPC* 235 (para. 46).

²⁸ These defences were first introduced in the CA 1911 s. 2(1)(a).

- (1) fair dealing for the purposes of research or private study, section 29(1) and (1C);
- (2) fair dealing for the purposes of criticism or review, section 30(1); or
- (3) fair dealing for the purpose of reporting current events, section 30(2).

Before looking at the three defences, we wish to make some general comments about fair dealing.

2.1 'DEALING'

It is important to note that all that is meant by dealing is that the defendant has made use of the work. Dealing does not imply that there has to be some sort of transaction between the parties.²⁹

2.2 PURPOSE

One of the notable features of UK copyright law is that fair dealing is only permitted for the purposes specifically listed in the 1988 Act. This means that the dealing must be fair for the purpose of research or private study, criticism, or review, or the reporting of current events. As such, it is irrelevant that the use might be fair for a purpose not specified in the Act, or that it is fair in general. Thus, the fact that it may be impracticable for a commercial organization to circulate and distribute articles cut from a newspaper does not make the photocopying of the articles fair. Instead, it makes it a reason to seek an appropriate licence.³⁰ The restricted approach adopted in the UK should be contrasted with American copyright law which has a general defence of *fair use* such that if the court is satisfied that the use is fair, then there will be no infringement.³¹

In thinking about whether an alleged infringer falls within one of the purposes listed in the 1988 Act, it is important to note two things. The *first* is that the courts have construed the specific purposes liberally.³² As such, the first hurdle (namely that the dealing falls within one of the purposes in the 1988 Act) has been relatively easy to satisfy. The *second* point relates to the standpoint of interpretation that will be adopted when deciding the purpose for which the work was used. At first glance the language of the statute seems to suggest that the test for determining the purpose of the dealing should be decided according to the subjective intentions of the alleged infringer. However, as Aldous LJ pointed out in *Hyde Park*, when deciding the purpose of the dealing, it is not necessary 'for the court to put itself in the shoes of the infringer of the copyright'.³³ Instead, a more objective approach ought to be adopted. This ensures that the court does 'not give any encouragement to the notion that all that is required is for the user to have sincere belief, however misguided, that he or she is criticizing a work or reporting current affairs'.³⁴

²⁹ Copinger, paras. 9–06–07.

³⁰ *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369 (para. 18).

³¹ Copyright Act 1976 (US) s. 107. For a careful argument that the restrictive approach of British law would not necessarily change were a fair use defence adopted, see R. Burrell, 'Reining in Copyright Law: Is Fair Use the Answer?' [2001] IPQ 368.

³³ *Hyde Park Residence v. Yelland* [2000] EMLR 363 (para. 21).

³⁴ *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 620.

2.3 THE DEALING MUST BE FAIR

Once a defendant has shown that their dealing falls within one of the purposes listed in the 1988 Act, they must then show that the dealing was fair. The determination of whether a dealing is fair is a question of degree and impression.³⁵ While it is not possible to provide precise guidelines as to when a dealing will be fair, it is possible to identify a number of factors that may influence the way this question is answered. It should be noted that the relative importance of each of these factors will vary according to the case in hand and the type of dealing in question. Moreover, now the Human Rights Act 1998 is in force, as As Lord Phillips MR stated, '[i]t is . . . essential not to apply inflexibly tests based on precedent, but to bear in mind that considerations of public interest are paramount'.³⁶ Where 'freedom of expression' is affected, this may require the courts to place less weight than had previously been the case on factors such as whether the work was unpublished, or the commercial purpose of the dealing, and more weight on factors, not previously to the fore, such as the political importance of the contents of the copyright work, whether the subject matter is at the margins of copyright, and perhaps even how old the work is.³⁷

2.3.1 Is the work unpublished?

Where the dealing takes place in relation to a work that has not been published or made widely available to the public, this will weigh against the dealing being fair. In fact, in the case of fair dealing for criticism or review, the defence is specified to be unavailable if the work has not been previously 'made available' to the public.³⁸ In other cases, particularly that of reporting current event, the fact that a work has not been published will certainly stand against a defendant.³⁹ In this respect, it is likely that the weight a court gives to the fact that a work is unpublished will vary according to the nature of the work in question: carrying more weight in relation to private letters than it would be for official reports that revealed matters of public importance.

2.3.2 How the work was obtained

The method by which the copyright material has been obtained has also been a factor in determining whether the dealing is fair.⁴⁰ It is less likely for a dealing to be fair if the dealing relates to a work that is leaked or stolen, than a work that is obtained legitimately.⁴¹

³⁵ *Hubbard v. Vosper* [1972] 2 QB 84.

³⁶ *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 173 (para. 71).

³⁷ J. Griffiths, 'Copyright Law After Ashdown—Time to Deal Fairly with the Public' [2002] *IPQ* 240 (critical of Court of Appeal's recourse to existing case law establishing 'factors' on this basis); M. Birnhack, 'Acknowledging the Conflict Between Copyright Law and Freedom of Expression under the Human Rights Act' [2003] *Ent LR* 24, 33 (to similar effect). On the relation between the age of copyright and 'fair use' under US law, see J. Liu, 'Copyright and Time: A Proposal' (2002) 101 *Michigan LR* 409; J. Hughes, 'Fair Use Across Time' (2003) 50 *UCLA LR*.

³⁸ CDPA s. 30(1), (1A) (as amended to give effect to Info. Soc Dir. Art. 5(3)(d)). Cf. Lord Denning, *Hubbard v. Vosper* [1972] 2 QB 84, a result which would now have to be justified on the basis of the public interest.

³⁹ *Hyde Park v. Yelland* [2000] *EMLR* 363, 378 (para. 34) per Aldous LJ (it is 'difficult to imagine that it could be fair dealing to use a work that had not been published nor circulated to persons for the purpose of . . . newspaper reporting'). But cf. *CCH Canadian v. Law Society of Upper Canada* [2004] *SCC* 13 (para. 58).

⁴⁰ *Beloff v. Pressdram* [1973] 1 *All ER* 241.

⁴¹ *Beloff v. Pressdram* [1973] 1 *All ER* 241; *Queensland v. TCN Channel Nine* [1993] *IPR* 58 (Sup. Ct. of Qld.); *British Oxygen v. Liquid Air* [1925] 1 Ch 383. Cf. *Time Warner v. Channel 4* [1994] *EMLR* 1.

2.3.3 The amount taken

The quantity and quality of what is taken will be a crucial factor in deciding whether a dealing is fair. As Lord Denning MR said in *Hubbard v. Vosper*, you ‘must consider the number and extent of the extracts’ and ask are ‘they altogether too many and too long to be fair?’⁴² This is because lengthy and numerous extracts or extracts of the most important parts of a work will reduce the expected returns to the copyright owner. By focusing on the quantity and quality of what is taken, the courts have recognized that fair dealing should not undermine the role copyright plays in encouraging creativity. In general, therefore, the defence will only apply where part of a work was taken. Nevertheless, the courts have acknowledged that in some cases, such as where the work itself is short, it may be fair to reproduce the whole work.⁴³

2.3.4 Use made of the work

Another factor that may influence the decisions as to whether a dealing is fair is the use that is made of the work in question. In some instances, it may be possible to reproduce someone else’s work without comment or analysis and it be a fair use. However, a use is more likely to be fair if the defendant can show that they have added to or re-contextualized the part taken. That is, a defendant will have a stronger case if they can show that the dealing was transformative.⁴⁴ This is particularly the case with fair dealing for criticism or review.

It seems that the fact that a defendant derives a *commercial benefit* from the dealing will weigh against them when attempting to show that the dealing was fair. (Indeed, in the case of fair dealing for purposes of research, the defence only applies to research for a non-commercial purpose.)⁴⁵ As Chadwick LJ said in the Court of Appeal decision of *Newspaper Licensing Agency v. Marks & Spencer plc*, ‘a dealing by a person with a copyright work for his own commercial advantage—and to the actual or potential commercial disadvantage of the copyright owner—is not to be regarded as a “fair dealing” unless there is some overriding element of public advantage which justifies the subordination of the rights of the copyright owner’.⁴⁶

2.3.5 Motives for the dealing

Another factor that may influence the decision as to whether a use is fair relates to the motives of the alleged infringer.⁴⁷ The court must ‘judge the fairness by the objective standard of whether a fair minded and honest person would have dealt with the copyright work in the manner’ in question.⁴⁸ Thus, where a person acts dishonestly or for a motive

⁴² *Hubbard v. Vosper* [1972] 2 QB 84.

⁴³ *Ibid.*, 94–5, 98 (Megaw LJ) (example of a parishioner quoting an epitaph on a tombstone in the churchyard); *Sillitoe v. McGraw Hill* [1983] FSR 545; *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515, 520; cf. *Zamacois v. Douville* [1943] 2 DLR 257 where the Canadian Exchequer Court suggested that the copying of an entire work cannot qualify as fair dealing.

⁴⁴ *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 380 (Lightman J).

⁴⁵ CDPA s. 29(1)(as amended, to give effect to Info. Soc. Dir., Art. 5(3)(a); Database Dir., Art. 6(2)(b)).

⁴⁶ *Ibid.* [2000] 4 All ER 239, 257 (Chadwick LJ) (CA).

⁴⁷ *Hyde Park v. Yelland* [2000] EMLR 363, para. 36 (CA); *Pro Sieben v. Carlton UK Television* [1999] FSR 610, 614 (Walker LJ); *Beloff v. Pressdam* [1973] 1 All ER 241, 263.

⁴⁸ *Hyde Park v. Yelland* [2000] EMLR 363, 379. Followed in *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 250 (Gibson LJ) (CA).

that the courts finds questionable (such as being primarily motivated by financial gain), it is likely to weigh against them. In contrast, if an alleged infringer can show that they were acting benevolently or were motivated by some altruistic or noble cause, this will increase the chances of them establishing that the dealing was fair.

2.3.6 Consequences of the dealing

Another factor that will influence the decision as to whether a dealing is fair relates to the impact that the dealing will have upon the market for the work. This is particularly important where the parties are in competition and the defendant's use of the work acts as a substitute for the purchase of the original work.⁴⁹ This would be the case, for example, if in criticizing a work a defendant showed all of a film.

2.3.7 Could the purpose have been achieved by different means?

In some cases, the courts have asked whether the purpose could have been achieved in a manner that is less intrusive on the copyright holder's rights.⁵⁰ While there can be few objections to this test being used to determine whether a dealing is fair, problems may arise in the way it is applied by the courts. This can be seen in *Hyde Park v. Yelland*. This case concerned an application for summary judgment against the *Sun* newspaper for publishing stills of Dodi Fayed and Diana, Princess of Wales, taken from security film, the copyright in which was owned by the claimant. The defendant argued that the stills revealed the times when Dodi and Diana were present at Villa Windsor and therefore exposed the falsity of statements made by Mohammed Al Fayed. At first instance it was argued that it was not necessary for the *Sun* to have published the images taken from the video. Instead, it was suggested that the same result could have been achieved via written word. In particular it was argued that the *Sun* could have interviewed the security guard and said that they had seen the photographs without actually publishing them. The Court of Appeal agreed. As Aldous LJ said, 'the information as to the timing of arrival and departure of Dodi and Princess Diana could have been given in the articles by the reporter in the *Sun* stating that he had seen the photographs which proved the Princess and Mr Dodi only stayed at the Villa for 28 minutes'.⁵¹ In so doing, the Court of Appeal implied that the pictures were no more effective evidence than the written word.⁵²

2.4 SUFFICIENT ACKNOWLEDGMENT

In certain situations, for the fair dealing defence to apply the dealing must be accompanied by a 'sufficient acknowledgment'. In essence this means that the author and the work must

⁴⁹ *Hubbard v. Vosper* [1972] 2 QB 84.

⁵⁰ *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 382–3. Note also Info. Soc. Dir., Art. 5(3)(a), (c), (d) (limiting scope of exceptions for research, reproduction by the press and criticism or review respectively to 'the extent justified' by the non-commercial purpose, the 'informatory purpose' and the 'specific purpose'). Such an approach seems difficult to reconcile with ECHR-informed jurisprudence, which gives journalists leeway to determine what is necessary for a particular purpose: *Fressoz & Roire v. France* [2001] 31 EHRR 28, 60 (para. 54); *A v. B & C* [2002] 3 WLR 542 (para. 11).

⁵¹ *Hyde Park v. Yelland* [2000] EMLR 363, 379.

⁵² Mance LJ also said the interest 'in resolving general falsity did not require the misappropriation of the stills or their supply to the *Sun*, presumably for money or their publication by the *Sun*'. *Hyde Park v. Yelland* [2000] EMLR 363, 392.

be identified. It should be noted that sufficient acknowledgment is not required in all cases.

(i) In relation to fair dealing for research for a non-commercial purpose or private study, sufficient acknowledgment is *only* required where the dealing relates to research, and acknowledgment is not impossible ‘for reasons of practicality or otherwise’.⁵³

(ii) In relation to fair dealing for criticism and review, sufficient acknowledgment is required for *all* works.⁵⁴

(iii) In relation to the reporting of current events, sufficient acknowledgment is required for all works.⁵⁵ However, no acknowledgment is required in connection with the reporting of current events *by means* of a sound recording, film, or broadcast where this would be not impossible ‘for reasons of practicality or otherwise’.⁵⁶

Where required, the defendant must show that they have identified both the work *and* the author of the work.⁵⁷ A work can be identified by its title or by some other description.⁵⁸ The author can be identified by name, pseudonym, or by other means such as a photograph or a logo.⁵⁹ Whatever method is chosen, it must convey ‘to a reasonably alert member of the relevant audience that the identified person is the author’.⁶⁰ It is important to note that it is the author and not the owner of the copyright work who must be identified.⁶¹ There is no need for the author to be identified where a work is published anonymously or, in the case of an unpublished work, where it is not possible for a person to ascertain the identity of the author by reasonable inquiry. It seems that even in these cases the work still needs to be identified.

With these general points in mind, we now turn to consider each of the specific fair dealing defences.

3 FAIR DEALING FOR THE PURPOSES OF RESEARCH OR PRIVATE STUDY

Section 29(1) provides that fair dealing of a work for the purpose of non-commercial research or private study does not infringe copyright in the work. The defence applies where the dealing takes place with literary, dramatic, musical, and artistic works, as well as to the typographical formats of published works.⁶² The exception does not apply where the dealing is with a broadcast, sound recording, or film.⁶³ The limited scope of the

⁵³ CDPA s. 29(1), (1B) (as amended to give effect to Info. Soc. Dir. Art. 5(3)(c)).

⁵⁴ CDPA s. 30(1). ⁵⁵ CDPA s. 30(2). The exception does not apply to photographs.

⁵⁶ CDPA s. 30(3) (as amended to give effect to Info. Soc. Dir., Art. 5(3)(c)). ⁵⁷ CDPA s. 178.

⁵⁸ *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 616.

⁵⁹ *Ibid.*, 625. The logo of Pro Sieben, a stylized figure 7 (Sieben means seven in German) in the top right-hand corner of the broadcast images was sufficient acknowledgment. Newspaper publishers need to be identified by the name of the newspaper that they publish: *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 384.

⁶⁰ *Pro Sieben Media v. Carlton UK Television* [1997] EMLR 509, 597.

⁶¹ *Express Newspapers v. Liverpool Daily Post* [1985] 3 All ER 680.

⁶² CDPA s 29(2) (in relation to the typographical copyright, the defence is available for all research, not just non-commercial research).

⁶³ CDPA s. 29: *Pro Sieben Media v. Carlton UK Television* [1997] EMLR 509.

defence has been criticized because it 'fails to reflect the increasing importance of non-textual media for both study and research'.⁶⁴ The defence is also of limited application to computer programs.⁶⁵

The rationale for this defence lies in the belief that research and study is necessary to generate new works. It also recognizes that non-commercial research and study does not normally interfere with the incentives and rewards that copyright provides to creators and owners. In effect, the defence helps to fulfil copyright's goal of maximizing the production of works. The defence also takes account of the fact that dealings of this kind would often be difficult to detect.

In order for a defendant to rely upon the research or private study defence they must show (i) that the use made of the copyright work was for the purpose of non-commercial research or private study and (ii) that the dealing was 'fair'. In the case of research, the work and the author must be sufficiently acknowledged (with certain exceptions).

3.1 IS THE DEALING FOR THE 'PURPOSE OF RESEARCH OR PRIVATE STUDY'?

To fall within section 29(1), the defendant must show that the dealing was for the purpose of either research for a non-commercial purpose or private study. Private study is defined, in section 178, as not including any study which is directly or indirectly for a commercial purpose.⁶⁶ The provisions therefore cover most research or private study for academic purposes but will also potentially include situations where a person copies material to investigate their family history. In contrast, where a work (such as a database) is used in the market testing of new drugs or for a commercial training course, the defence would not apply. Much research will, however, occupy a difficult middle ground. Here, useful reference might be made to Recital 42 of the Information Society Directive which indicates that the determination is to be by reference to the activity as such, rather than 'the organisational structure and the means of funding the establishment'. Research carried out in an independent school or a private university may be non-commercial, and research in a publicly-funded university may, depending on its orientation, be commercial.⁶⁷

Prior to 2003, little turned on whether an activity was defined as research or private study. It seemed that the only difference between the two concepts was that research was seen as a process that is intended to lead towards a particular result (be it a conclusion, a decision, an answer to a problem, an article, or a book), whereas study might be 'for its own sake'. However, the distinction may now prove more important, as the defence will usually only apply to dealings for research where there is 'sufficient acknowledgment'. The terms must also be interpreted in the light of the Information Society Directive. In this context, it seems that the key difference between private study and research is that research may not be private. Private study can cover any private use, such as note-taking or

⁶⁴ Copinger, para. 9–08.

⁶⁵ CDPA s. 29(4)–(4A) (excluding from the fair dealing exceptions acts which are permitted in relation to computer programs under CDPA ss. 50B and 50BA).

⁶⁶ To give effect to the limitation in Info. Soc. Dir., Art. 5(b). The defence of fair dealing for private study is available in relation to databases, whether electronic or not, despite Database Dir., Art. 6(1).

⁶⁷ Davison, pp. 79–80.

photocopying from a book, whether it be for its own sake or with a goal in mind⁶⁸ whereas 'research' seems to relate to the use of copyright material in papers, documents, talks, and other output which make arguments, observations, or draw conclusions. The research exception is intended to be available to justify the public communication or distribution of copyright material, as well as its reproduction. Indeed, the permitted exception in the Directive relates to 'use for the sole purpose of illustration for . . . scientific research'. It seems therefore that the use of quotations in a book or journal article can be dealings for research. However, not all public output is research. The book, paper, or article must have been researched: that is, it must be a product of systematic inquiry (as opposed, for example, to fiction).⁶⁹

3.2 THE DEALING MUST BE 'FAIR'

The mere fact that a defendant can show that the work was used for private study or non-commercial research does not necessarily mean that the dealing will be exempt from liability. It is also necessary to show that the dealing was fair. As we explained earlier, a number of different factors will influence the decision as to whether a particular dealing is fair. In this context the most important are likely to be the amount taken,⁷⁰ whether the work is readily available, and the effect that the dealing has on the market for the original work.

3.3 SPECIAL CASES

3.3.1 Copying by third parties

In many cases, the person who does the copying will also be the person who carries out the research or study. Indeed, as a general rule, in order to come within the defence the dealing must be for defendant's *own* research or study. A publisher cannot, for example, rely on the exception to justify reproducing parts of copyright-protected works in study guides.⁷¹ However, in some circumstances, the defence is available even though the primary actor may not be the person engaged in the research. This might be the case, for example, where a research assistant or a librarian makes photocopies for academics or students. The 1988 Act recognizes that for the defence to apply, it is not necessary for the activity that leads to the alleged infringement to be undertaken by the researcher or student. That is, it is possible for an agent to do the copying on behalf of the researcher or student. However, an important limitation to this possibility is imposed by section 29(3)(b).⁷² This provides

⁶⁸ Thus, private study would include situations where a student is preparing for a seminar, or photocopies material to assist in the writing of an essay or where a person photocopies the racing results from various newspapers to study the form of a particular horse or to help them decide what type of stove to buy.

⁶⁹ The Federal Court of Australia has said that research means 'a diligent and systematic inquiry or investigation into a subject': *De Garis v. Neville Jeffress Pidler* (1990) 18 IPR 292 (FCA).

⁷⁰ *Universities U.K. v. Copyright Licensing Agency Ltd.* [2002] RPC 693, 702 (para. 34) (student who photocopies an article or short passage from a book is likely to be involved in a 'fair' dealing, while a student who photocopies the whole of a textbook would not be).

⁷¹ *Sillitoe v. McGraw Hill Book Co.* [1983] FSR 545; *Longman Group v. Carrington Technical Institute* [1991] 2 NZLR 574 (CANZ).

⁷² This should be read in conjunction with the education copying defences discussed below (especially CDPA s. 38) and the relevant collective licensing schemes (see below at pp. 212–14).

that copying by a person other than a researcher or student is not a fair dealing if the person doing the copying knows it will result in 'copies of substantially the same material being provided to more than one person at substantially the same time and for substantially the same purpose'.⁷³ This means that lecturers are unable to use the research or private study defence where they make multiple copies of a work for their students.

3.3.2 Limited application in relation to computer programs

As a result of changes introduced to implement the Software Directive, the research and private study defence is limited in relation to computer programs. Section 29(4) provides that it is not fair dealing to (a) convert a computer program expressed in a low-level language into a version expressed in a higher-level language or (b) incidentally in the course of so converting the program to copy it. Section 29(4) ensures that the decompilation of computer programs is taken outside the remit of the research and private study defence. Instead, defendants will have to resort to the more limited defence under section 50B (which is discussed below). Section 29(4A) similarly excludes from the scope of the defence the acts of observing, studying, and testing the functioning of a computer program in order to determine the ideas and principles which underlie it. Since the Software Directive requires such acts to be permitted irrespective of whether the acts are done for commercial purposes, it was decided to provide a special exemption in section 50BA, which we will return to later. It should be noted that the fair-dealing defence is available for other uses of computer programs.

3.4 SUFFICIENT ACKNOWLEDGMENT

Where a dealing is for purposes of non-commercial research, it can only benefit from the exception if there is 'sufficient acknowledgment'.⁷⁴ However, this can be dispensed with where the acknowledgment is impossible for reasons of practicality or otherwise. As mentioned above, no such requirement is required as regards 'private study'. Although the exact distinction between research and private study will now require judicial articulation, the requirement of sufficient acknowledgment seems to take account of the fact that research output, whether papers or articles, is often circulated.

4 FAIR DEALING FOR CRITICISM OR REVIEW

Section 30(1) provides that fair dealing with any work for the purpose of criticism or review does not infringe the copyright in the work. This defence recognizes the value of criticism or review. It also recognizes that for a person to critique someone's work, they will normally need to cite the author—something that authors might be reluctant to allow. The defence prevents copyright owners from using copyright to control who should review their works, when they may do so, and what parts of the work may be used.⁷⁵

⁷³ CDPA s. 29(3). Cf. *Longman Group v. Carrington Technical Institute* [1991] 2 NZLR 574 (CANZ).

⁷⁴ Reflecting, and in such implementation eliding, Database Dir. Art. 6(2)(b) ('as long as the source is indicated') and Info. Soc. Dir., Art. 5(3)(a) ('as long as the source, including the author's name, is indicated, unless this turns out to be impossible').

⁷⁵ *Time Warner v. Channel 4* [1993] EMLR 1, 14; *Banier v. News Group Newspapers* [1997] FSR 812.

In order to rely upon the defence, a defendant must show that (i) the dealing was for the purpose of criticism or review, (ii) the work had previously been made available to the public, (iii) the dealing was ‘fair’, and (iv) the dealing was accompanied by sufficient acknowledgment.

4.1 WAS THE DEALING FOR THE PURPOSE OF ‘CRITICISM OR REVIEW’?

For a defendant to rely upon section 30(1), they must show that the dealing was for the purpose of criticism or review of the work, or of another work,⁷⁶ or the performance of a work. As we explained above, the courts take an objective approach when deciding the purpose for which the work was used. The courts have also said that criticism and review should be construed liberally.⁷⁷ Consequently, the criticism or review may be of the work as a whole or a single aspect of a work, the thought or philosophy underpinning a work,⁷⁸ or its social and moral implications.⁷⁹ Some decisions have seemed to suggest that the criticism or review need not be of a work at all. For example, where a television programme used extracts from Kubrick’s film *A Clockwork Orange* to criticize the decision to withdraw the film from distribution, Henry LJ explained that this fell within the defence, which applied ‘equally where the criticism is of the decision to withdraw from circulation a film in the public domain, and not just the film itself’.⁸⁰ In *Pro Sieben*, the Court of Appeal treated the use of extracts from the claimant’s television broadcast (which featured interviews with a woman who was pregnant with octuplets) as justified even though the defendant’s programme criticized the practices of ‘cheque-book journalism’ of which the claimant’s programme was said to be an example, rather than the claimant’s broadcast itself.⁸¹ In recent cases, however, the courts have been more fastidious in relation to the requirement that the criticism be of ‘that or another work or of a performance of a work’.⁸² In *Ashdown v. Telegraph*, for example, the exception was held not to justify the reproduction in the *Sunday Telegraph* of sections of Ashdown’s memorandum of a meeting with Tony Blair where the gist of the article lay in criticizing the political event and actors described in the memorandum, rather than the existence, style, or other aspects of the memorandum.⁸³ If this narrow (though on the basis of the statutory wording hardly unjustified) reading of the exception takes root, defendants will be forced to rely on the other exceptions: an academic paper criticizing the Blair–Ashdown meeting might be able to claim fair dealing for research, and a newspaper account (being for commercial

⁷⁶ *Beloff v. Pressdram* [1973] 1 All ER 241; *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515.

⁷⁷ *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 257 (Chadwick LJ) (CA); *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 620.

⁷⁸ *Hubbard v. Vosper* [1972] 2 QB 84, 94 ff.; *Time Warner v. Channel 4* [1994] EMLR 1, 15.

⁷⁹ *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 621.

⁸⁰ *Time Warner v. Channel 4* [1994] EMLR 1, 15.

⁸¹ *Pro Sieben Media AG v. Carlton UK Television Ltd. & Anor.* [1999] EMLR 109

⁸² This limitation is not required by the Info. Soc. Dir., Art. 5(3)(d), where it is the ‘quotations’ that must relate to a work rather than the criticism or review, and it is hoped that when the legislature comes to recodify the 1988 Act, it seriously considers leaving the object of criticism or review at large.

⁸³ *Ashdown v. Telegraph Group Ltd.* [2002] Ch 149, 171; [2002] RPC 235, 251.

purposes) might be permitted as reporting current events or exceptionally disclosing matters in the public interest.

4.2 THE WORK MUST HAVE BEEN MADE AVAILABLE

The defence is only available where the work has been made available to the public. Making available is broadly defined to include the issuing of copies, making the work available by an electronic retrieval system, rental, or lending of copies to the public, the performance, exhibition playing, or showing of the work and the communication to the public.⁸⁴

4.3 WAS THE DEALING FAIR?

Once a defendant has shown that the dealing was for the purpose of criticism or review, they must then show that the dealing was fair. As we explained earlier, a number of different factors will influence the decision as to whether a particular dealing is fair. In this context the most important of these are likely to be the amount taken,⁸⁵ the effect on the market, and the nature of the dealing. When deciding whether a dealing for the purpose of criticism or review is fair, the courts have not tended to consider whether the criticism itself is fair.⁸⁶ Rather, they take account of whether the extent of the copying is fair to illustrate or support the criticism. As such, the criticism may be malicious, unbalanced, or motivated by insecurity without forfeiting the defence.⁸⁷ While this is likely to continue to be the general nature of the assessment, UK courts may now pay attention to the limitation in the Information Society Directive that the use be 'in accordance with fair practice, and to the extent required by the specific purpose'.

4.4 SUFFICIENT ACKNOWLEDGMENT

The third and final factor that a defendant must show to fall within the criticism or review defence is that the dealing was accompanied by 'sufficient acknowledgment'. This is required for *all* works.⁸⁸ The issue of sufficient acknowledgment was discussed above.

⁸⁴ CDPA s. 30(1A) (added by SI 2003/2498 to give effect to Info. Soc. Dir., Art. 5(3)(d)). Since this requirement was included by delegated legislation under the European Communities Act, it is difficult to see a justification for applying it to databases and computer programs (which were unaffected by the Info. Soc. Dir. (see Info. Soc. Dir., Art. 1), or typographical arrangements. However, in the light of *Hyde Park v. Yelland* [2000] EMLR 363, 378 (para. 34) and *British Oxygen Liquid Air* [1925] 1 Ch 383, the addition of the requirement is unlikely to be of material significance.

⁸⁵ Rather oddly, the Info. Soc. Directive seems to require that the defence be confined to 'quotations', implying that paraphrasing or summarizing is outside its scope. Given that Art. 5(3)(d) is built around an idea of proportionality, it would seem sensible to interpret 'quotations' as covering 'quotations and other infringing uses'.

⁸⁶ There is no need for the critical work to be representative of the original. *Time Warner v. Channel 4* [1994] EMLR 1, 12.

⁸⁷ *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 619. In these circumstances an author's remedy for malicious and unjustified criticism lies in the law of defamation, not copyright.

⁸⁸ CDPA s. 30(1).

5 REPORTING OF CURRENT EVENTS

Section 30(2) provides that fair dealing with any work (other than a photograph)⁸⁹ for the purpose of reporting current events does not infringe the copyright in the work provided it is accompanied by a sufficient acknowledgment.⁹⁰ No acknowledgment is required, however, in connection with the reporting of current events by means of a sound recording, film, or broadcast where this would be impossible by reason of practicality or otherwise.⁹¹

As Gibson LJ explained, the reporting of current events defence aims to strike a 'balance between protection of rights of creative authors and the wider public interest (of which free speech is a very important ingredient)'.⁹² In order to rely upon the defence, a defendant must show (i) that the dealing was for the purpose of reporting current events, (ii) that the dealing was 'fair', and (iii) that there was sufficient acknowledgment.⁹³ Before looking at these, it should be noted that contractual restrictions on what would otherwise fall within the defence of fair dealing for the purpose of reporting current events are void insofar as the restriction relates to the inclusion of visual images taken from a broadcast in another communication to the public.⁹⁴

5.1 WAS THE DEALING FOR THE PURPOSE OF REPORTING A CURRENT EVENT?

As we explained above, the courts take an objective approach when deciding the purpose for which the work was used. The courts have also said that the reporting of current events should be construed liberally.⁹⁵

To fall within the defence, the dealing must take place in relation to an event that is *current*. An event will be current if it deals with a contemporary issue. The older the issue, the less likely it is that it will be treated as having any currency. An event that took place some time ago may however be current if it is still under discussion. For example, in *Hyde Park* it was accepted, both at first instance and by the Court of Appeal (albeit grudgingly), that although the stills in the *Sun* were published more than a year after the visit by Dodi and Princess Diana to Villa Windsor, that the events still had some currency. As Jacob J said, 'at the time of publication the events were still very much under discussion that it would pedantic to regard them as anything other than current'.⁹⁶

⁸⁹ This means that a newspaper is not able to take photographs from another paper and claim this defence. Hence the need to rely on the criticism or review defence in *Banier v. News Group Newspapers* [1997] FSR 812.

⁹⁰ Cf. CA 1911, s. 2(1)(a) which referred to fair dealing with any work for the purposes of newspaper summary. This became 'reporting current events' in CA 1956, s. 6(3).

⁹¹ CDPA s. 30(3).

⁹² *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 249 (Gibson LJ) (CA).

⁹³ CDPA s. 30(2).

⁹⁴ Broadcasting Act 1996, s. 137 (as amended).

⁹⁵ The value placed on freedom of information and freedom of speech requires that gateway to be wide, *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 382; *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 172.

⁹⁶ *Hyde Park Residence v. Yelland* [1999] RPC 655, 661. See also *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 172 (meeting between Ashdown and PM in October 1997 was an event that was 'a matter of current interest to the public' in Nov. 1999).

For the defence to apply, a defendant must also show that the dealing took place in relation to an *event*.⁹⁷ It seems that certain matters by their very nature will be treated as events. Thus, matters of national or political importance (planned minimum wage proposals, campaign about child labour, a case about alleged race bias at a rival establishment, or announcements about the Euro⁹⁸), as well as major sporting contests (the World Cup,⁹⁹ Wimbledon, or the Olympics) are likely to be events.¹⁰⁰

In contrast, matters that are trivial, ephemeral, or immaterial will not be treated as events. For example, it has been said that comparisons of products such as wines, chicken Kiev, and taramasalata,¹⁰¹ lifestyle articles on choice of underwear, and the times of television programmes were not current events.¹⁰² The fact that a matter is currently of interest or in the press does not mean that it is a current event.¹⁰³ However interesting an article may be, the fact that it is reported in a newspaper does not necessarily make it a current event. Thus, it was suggested in the *NLA* decision that the mere fact that a fashion editor of a journal featured a Marks & Spencer garment did not make it a current event.¹⁰⁴

While trivial or immaterial matters will not ordinarily be treated as events, it is possible for such matters to be transformed into an event through media coverage. This can be seen in *Pro Sieben* where a matter that was otherwise of limited and ephemeral interest (here it was the sale by a member of the public of an interview about a woman pregnant with octuplets to German television),¹⁰⁵ was nonetheless treated as an 'event'. This was because the volume and intensity of the media coverage was sufficient to bring the media coverage within the ambit of current events.

The material dealt with by the defendant must relate to or be relevant to the current event in question. This means that the defence will not cover any dealing that takes place outside of the current event in question. Thus, it was held that the *Daily Mail* newspaper was unable to rely on the death of the Duchess of Windsor to justify the republication of correspondence between her and her husband.¹⁰⁶ Similarly in *Hyde Park*, the Court of Appeal held that the publication of the driveway stills that showed the arrival and departure times of Dodi and Princess Diana did not fall within the current events defence. This was because the material in question (the driveway stills) did not correlate with the event in question (the purpose being to expose the lies of Mr Al Fayed).¹⁰⁷

⁹⁷ The concept of 'current events' is narrower than 'news': *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 382; cf. [2000] 4 All ER 239, 249 (Gibson LJ) (CA).

⁹⁸ *Ibid.*, 267 (Mance LJ) (CA). According to Lightman J, the event 'may be a matter of entirely local interest or of interest to few people': *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 382 (para. 18).

⁹⁹ *British Broadcasting Corporation v. British Satellite Broadcasting* [1992] Ch 141.

¹⁰⁰ Chadwick LJ took a more subjective approach when he said the publication of an article which features comments that relate to or impact upon the appellant's products was an event: *Newspaper Licensing Agency v. Marks & Spencer* [2000] 4 All ER 239, 257 (CA).

¹⁰¹ *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 383.

¹⁰² *Independent Television Publications v. Time Out* [1984] FSR 64.

¹⁰³ *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 382.

¹⁰⁴ *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 250 (Gibson LJ); 267 (Mance LJ) (CA).

¹⁰⁵ *Pro Sieben Media v. Carlton UK Television* [1999] FSR 610.

¹⁰⁶ *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515.

¹⁰⁷ The Court of Appeal looked to the relevant parts of the *Sun* to ascertain the perceived purpose of the use of the work. *Hyde Park v. Yelland* [2000] EMLR 363, 374, 379–80.

The upshot of this is that while the publication of historical material is not ordinarily a current event,¹⁰⁸ old information may become relevant in response to some fresh event. As Walton J said:

[T]he publication of historical material, material that is strictly historical, may nonetheless be of urgent necessity in reporting current events. One has only to think, for example, of correspondence dealing with nuclear reactors that have just blown up or have had a core melt-down: that might date from a very considerable period previous to the event happening, but would be of a topical nature in order to enable a report of what actually happened to be properly prepared.¹⁰⁹

5.2 WAS THE DEALING FAIR?

Once a defendant has shown that their dealing was for the purpose of reporting of current events, they must then show that the dealing was fair. According to the Court of Appeal, the defence should be available ‘where the public interest in learning of the very words written by the owner of the copyright is such that publication should not be inhibited by the chilling factor of having to pay damages or account of profits’.¹¹⁰ Although a number of different factors will influence the decision as to whether a particular dealing is fair, including how the information was obtained, the amount taken, and the motive for the dealing,¹¹¹ the most important is likely to be whether it the dealing is reasonably necessary to refer to the work in order to deal with the events in question.¹¹² It also seems that the courts will be influenced by what is taken to be normal behaviour in the circumstances. Thus, in the *World Cup* case, it was fair for the defendant to reshoot the goals and match highlights, typically thirty seconds of a ninety-minute match, even though these were clearly the most important extracts. This was because the sequences were the normal and obvious means of illustrating the news report.¹¹³

It has also been suggested that the commercial nature of a dealing will weigh against a defendant trying to establish that the dealing was fair. A more extreme view was taken by Mance LJ in the *NLA* decision. While he was not willing to express a final opinion on the matter,¹¹⁴ Mance LJ had doubts about whether it was possible to extend the fair-dealing exception, which represents a public interest exception to copyright, to the reporting of current events for private commercial purposes.¹¹⁵ Such an approach is problematic in that it will greatly restrict the ability of commercial media to rely upon fair dealing. A more realistic approach was adopted by Jacob J in the first instance decision of *Hyde Park v. Yelland*, where he held that the fact that the security guard and the *Sun* had both expected to make money from the publication of the pictures did not derogate from the

¹⁰⁸ *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 166–7 (para. 44).

¹⁰⁹ *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515.

¹¹⁰ *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 173 (para. 69).

¹¹¹ *Newspaper Licensing Agency v. Marks & Spencer* [2000] 4 All ER 239, 258 (Chadwick LJ) (CA).

¹¹² *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515, 519; *Hyde Park v. Yelland* [2000] EMLR 363, 393 (para. 78).

¹¹³ Although the BBC and the BSB were in competition, Scott J did not think it to be important because ‘highlights’ of this nature do not really compete with a full-length live broadcast lasting 90 minutes.

¹¹⁴ *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 267 (Mance LJ) (CA).

¹¹⁵ ‘The rationalization that in a capitalist society all economic activity serves the public good does not avoid the distinctions’. *Ibid.*

fair-dealing justification.¹¹⁶ As Jacob J said, the ‘press often have to pay for information of public importance. And when they publish they will always expect to make money. They are not philanthropists’.¹¹⁷

5.3 SUFFICIENT ACKNOWLEDGMENT

The third and final factor that a defendant must show to fall within the defence is that the dealing was accompanied by ‘sufficient acknowledgment’ (which was discussed earlier).¹¹⁸ This is required for all works to which the defence applies.¹¹⁹ However, no acknowledgment is required in connection with the reporting of current events *by means* of a sound recording, film, or broadcast, where this would be ‘impossible for reasons of practicality or otherwise’.¹²⁰

6 INCIDENTAL USES

The urban landscape is full of works that are protected by copyright. Most city centres contain an array of murals, buildings, sculptures, and advertisements.¹²¹ This creates a potential problem for photographers, film-makers, broadcasters, painters, and the like who wish to represent that landscape. If a movie is filmed in a public place, it is highly likely that the final product will include a number of different copyright works. This gives rise to a potential problem in that the recording of these works is *prima facie* an infringement of copyright.¹²²

To ensure that problems of this nature do not arise, section 31(1) provides that copyright in a work is not infringed by its ‘incidental inclusion’ in an artistic work, sound recording, film, or broadcast.¹²³ This means that a defence is available where a copyright work, such as a painting, is incidentally included in the background of another work, such as a film. Section 31(2) extends the defence to include the exploitation of works that incidentally include other works. This ensures that the showing, as distinct to the making, of a film does not infringe.

The question of when a work is ‘incidentally included’ in another work was considered

¹¹⁶ Cf. *Initial Services v. Putterill* [1968] 1 QB 396.

¹¹⁷ *Hyde Park v. Yelland* [1999] RPC 655, 663. The Court of Appeal overturned Jacob J’s decision. While the Court of Appeal did not address the issue directly, the fact that the security guard and the *Sun* benefited financially from the dealing seems to have influenced the finding that the use was not fair. When combined with other factors, the Court of Appeal concluded that to ‘describe what the *Sun* did as fair dealing is to give honour to dishonour’: *Hyde Park v. Yelland* [2000] EMLR 363, 379 (para. 40).

¹¹⁸ See above at pp. 196–7. ¹¹⁹ CDPA s. 30(2). ¹²⁰ CDPA s. 30(3).

¹²¹ See also CDPA s. 62 (re public display of artistic works).

¹²² For similar issues raised in the context of Canada’s right to use one’s own image, see *Aubry v. Éditions Vice Versa Inc* 157 DLR (4th) 577 (paras. 58–9).

¹²³ CDPA s. 31(1). For a discussion of the relationship between this section and its predecessors (CA 1956, s. 9(4) (works of architecture), s. 9(5)), see *Football Association Premier League Ltd v. Panini UK Ltd* [2004] FSR 1 per Chadwick LJ (paras. 19–20) (doubting whether linguistic differences would have any effect on the result in a particular case); but cf. *Mummery LJ* (para. 39). There is no defence of incidental inclusion in a web site, because Internet transmissions fall outside the scope of the meaning of broadcast in CDPA s. 8. However, the inclusion in a web site of a work which incidentally includes another work, and thus benefits from the exception in CDPA s. 31(1) will not infringe: CDPA s. 31(2).

in *Football Association Premier League Ltd v. Panini UK*.¹²⁴ There, the Premier League, its members, and Topps brought an action alleging that Panini had infringed copyright in their club emblems and the Premiership heraldic lion emblem by distributing stickers depicting well-known footballers, for purchase and collection in a book. Topps had obtained an exclusive licence from the claimant to use the emblems in this way, and Panini had lost out in the tendering process for the licence but nevertheless gone ahead and produced an ‘unofficial’ product. In Panini’s product, most players were in club strip, with their club emblems and the Premiership heraldic lion emblem often visible. The defendant argued that the emblems were artistic works which were incidentally included in other artistic works (photographs). Peter Smith J rejected the defence, and this was affirmed by the Court of Appeal. There, the Court of Appeal declined to define the term ‘incidental’,¹²⁵ Mummery LJ stating that the ‘range of circumstances in which the word “incidental” is commonly used to describe a state of affairs is sufficiently clear to enable the courts to apply it to the ascertainable objective context of the particular infringing act in question’. The question whether the uses were incidental did not have to be determined at the time the photograph was taken, but rather when the sticker was created.¹²⁶ The question was why one work was included in another, and the court could take account of commercial as well as artistic or aesthetic reasons.¹²⁷ Given that the answer in the case was the self-evident one of producing ‘something which would be attractive to a collector’, in this case a player in their authentic club strip, the Court concluded that the inclusion of the emblem was ‘essential to the object for which the image . . . was created’ rather than incidental. In an earlier case the High Court held that by featuring the claimant’s magazine, *Woman*, in a TV advertising campaign run for the defendant’s own magazine, the defendant had infringed the claimant’s artistic copyright in the masthead, the layout, and the photographs on the magazine cover. The defendant’s argument that the use was incidental was rejected ‘since the impact of the advertisement would be lost entirely if the front cover of *Woman* was not used. The inclusion of the copy of *Woman* was an essential and important feature of the advertisement. The impact could not be more obvious’.¹²⁸

The defence will apply irrespective of whether a work is accidentally or deliberately included.¹²⁹ This is not the case, however, with musical works or lyrics (as well as a sound

¹²⁴ [2004] FSR 1. For commentary, see K. Garnett, ‘Incidental Inclusion under s.31’ [2003] EIPR 579.

¹²⁵ In contrast with Richard McCombe QC, sitting as Deputy High Court judge in *IPC Magazines v. MGN* [1998] FSR 431, 441 (a use was incidental if its inclusion was ‘casual, inessential, subordinate, or merely background’).

¹²⁶ This rather technical approach, requiring the assessment of whether the inclusion is ‘incidental’ to be made for every act of infringement, undermines the value of CDPA s. 31(2). This implies that if copyright in the emblems is not infringed by taking the photograph, it is not infringed by issuing copies of the photograph. However, the Court of Appeal decision suggests that this inference is incorrect: whether the inclusion incidental must also be assessed when the commercial form of the copy (here the sticker) is determined.

¹²⁷ Cf. *IPC Magazines v. MGN* [1998] FSR 431, 441 where the judge suggested that the question of whether a work was incidentally included does not depend on the user’s intention or on the views of those who witness the use.

¹²⁸ *Ibid.* This was, evidently, a case of comparative advertising: the argument that it should therefore be permitted under the Comparative Advertising Directive was rejected at [1998] FSR 431, 447. See pp. 918–19 below.

¹²⁹ *Football Association Premier League Ltd v. Panini UK Ltd* [2004] FSR 1 (para. 24) (‘“incidental” was not intended to mean “unintentional”’). However, the courts may well resort to the ‘logic’ that if something was deliberately included, then it must be of more than ‘incidental’ significance.

recordings, or broadcasts of a musical work or lyrics). The reason for this is that section 31(3) says that musical works or lyrics shall not be regarded as being incidentally included if they are deliberately included. This means that the defence is not available where a song is chosen for the background of a film, or a song from a radio is deliberately played in the background to a broadcast. Thus, if the makers of the police drama, *The Bill* decide to have a scene where a character is listening to a radio playing a *Rolling Stones*' song, this is not an incidental inclusion. However, if a musical work is accidentally included in a live broadcast, this is within the defence. Thus, a broadcast of a football match that accidentally includes a sound recording played over the public address system falls squarely within the defence.¹³⁰

7 DISCLOSURE IN THE PUBLIC INTEREST

Despite the lack of any statutory provision on point,¹³¹ a defendant may—probably, though only in very rare instances—resist an action for copyright infringement on the grounds that the use in question is necessary ‘in the public interest’. Although such a defence was recognized by the High Court in the 1970s and Court of Appeal in the 1980s, the reasoning in those cases and thus the existence and scope of this defence has been heavily debated, both by courts and commentators, over the last few years.¹³² In order to gain an appreciation of the uncertainty surrounding the existence and scope of the defence, it is necessary to pay close attention to three Court of Appeal decisions: *Lion Laboratories v. Evans*, *Hyde Park v. Yelland*, and *Ashdown v Telegraph*.

In *Lion Laboratories v. Evans*,¹³³ the manufacturers of a breathalyser (the Lion Intoximeter) sought to prevent the defendant newspaper, the *Daily Express*, from publishing extracts of a confidential internal memorandum which cast doubt on the accuracy of the breathalyser. The defendant claimed that the public had an interest in knowing that the breathalyser might be faulty. They also said that the public interest should override the rights of the copyright owner. All three members of the Court of Appeal accepted that the public interest defence was available in an action for infringement of copyright. According to the Court of Appeal, if the alleged fault with the breathalyser was not investigated, a significant number of motorists could have been wrongly convicted of driving with excess alcohol. On the basis that there was a seriously arguable case that the disclosure was justified in the public interest, the Court refused to grant interim relief.

¹³⁰ Laddie *et al.*, para. 2.161.

¹³¹ The validity of the common law defence recognized in case law under the 1956 Act seemed to have been recognized by CDPA s. 171(3) which says that nothing in the Act ‘affects any rule of law preventing or restricting the enforcement of copyright, on grounds of public interest or otherwise’. This is confirmed by Hansard, which shows that Parliament intended to preserve a common law public interest defence. Lord Beaverbrook, 491 Hansard, HL, 8 Dec. 1987, col. 77. See Copinger, para. 22.48; G. Dworkin and R. Taylor, *Blackstone's Guide to the Copyright Designs and Patents Act 1988* (1989), 81–2.

¹³² See *Lion Laboratories v. Evans* [1985] QB 526 (esp. at 536 per Stephenson LJ and 550 per Griffiths LJ). *Beloff v. Pressdram* [1973] 1 All ER 241 is usually regarded as the first case to recognize the public interest defence for an infringement of copyright. There, drawing inspiration from the public interest defence in breach of confidence, Ungood-Thomas J said that the ‘public interest is a defence outside and independent of statutes, is not limited to copyright cases and is based on a general principle of common law’.

¹³³ [1985] QB 526.

It will be recalled that *Hyde Park v. Yelland* concerned an application for summary judgment against the *Sun* newspaper for publishing stills of Dodi Fayed and Diana, Princess of Wales, taken from security film, the copyright in which was owned by the claimant.¹³⁴ The defendant argued that the stills revealed the times when Dodi and Diana were present at Villa Windsor and therefore exposed the falsity of statements made by Mohammed Al Fayed. As such, the publication was in the public interest. The Court of Appeal found that there was no arguable defence. The Court did not consider that it was in the public interest to publish the stills to prove that Al Fayed's statements were false: the information could have easily been made available by the *Sun* without infringing the claimant's copyright. While the Court could have argued that the public interest defence did not succeed on the facts, the majority (Aldous LJ, with whom Stuart-Smith LJ agreed) said that there is no general public interest defence to an action for infringement of copyright in the UK (though this was not how *Ashdown*, a later case, interpreted Aldous LJ). He gave three reasons. First, on the basis that the statutory regime was exhaustive, Aldous LJ observed that no such defence is recognized in the code. Second, he said the defence of disclosure of information in the public interest was inappropriate, because copyright restricts reproduction of the form of a work, not the information it contains. Third, Aldous LJ argued that the defence was incompatible with the Berne Convention.¹³⁵ In addition, Aldous LJ held that the reasoning in *Lion Laboratories* lacked any substantial basis in precedent.¹³⁶ In contrast, Mance LJ accepted that Parliament had intended, *via* section 171(3), that the courts should retain some discretion to refuse to enforce copyright on public interest grounds.

In *Ashdown v Telegraph*,¹³⁷ a differently constituted Court of Appeal rejected the approach of the majority in *Hyde Park*, preferring that of Mance LJ and referring with approval to *Lion Laboratories*. As we have seen, the *Ashdown* case concerned the publication in the *Sunday Telegraph* of sections of a secret memorandum written by the leader of the Liberal party, Paddy Ashdown, about a meeting that had taken place with Tony Blair concerning a possible pact between the Liberal party and the Labour party. Ashdown sought summary judgment, and the newspaper sought to justify its infringement on the basis of the public interest defence (the criticism defence having failed because there was no criticism of a work, and the reporting current events defence because the use was not fair). Although the Court of Appeal rejected the *Sunday Telegraph's* arguments on the

¹³⁴ *Hyde Park Residents v. Yelland* [2000] EMLR 363. For criticism, see R. Burrell, 'Defending the Public Interest' [2000] EIPR 394.

¹³⁵ Cf. Berne, Art. 17. See Ricketson, para. 9.72.

¹³⁶ Although Aldous LJ denied the existence of a public interest defence, he recognized that the courts do retain a power under their 'inherent jurisdiction' to refuse to enforce copyright where it offends against the 'policy of the law'. In effect, Aldous LJ sought to conflate the case law on 'public interest' with the general power of the courts to refuse to enforce copyright in scandalous, libelous, seditious, or blasphemous works employed in cases such as *Glyn v. Weston Feature Film Co.* [1916] 1 Ch 261 (immoral) and discussed at pp. 111–13 above. Thus, for Aldous LJ, the courts would refuse to enforce copyright on the basis that it would be against the 'policy of the law' where the work is scandalous, immoral, or contrary to family life; the work itself is injurious to public life, public health, and safety, or the administration of justice; or where a work incites or encourages others to act in a way which is injurious to public life, public health, and safety, or the administration of justice: *Hyde Park v. Yelland* [2000] EMLR 363, 389.

¹³⁷ *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368; [2002] RPC 235 (Lord Phillips MR, Keene LJ, and Robert Walker LJ). For commentary, see R. Burrell, 'Reining in Copyright Law: Is Fair Use the Answer?' (2001) IPQ 368.

facts,¹³⁸ it reviewed the law relating to the 'public interest defence' in the light of the Human Rights Act 1998. While the Court explained that copyright was not normally in conflict with freedom of expression, because copyright does not prevent the publication of information,¹³⁹ there could be such a conflict where expression required reproduction of specific text or images.¹⁴⁰ In such cases, if fair dealing and refusal of discretionary relief would not protect the public interest, a defendant could invoke the public interest defence, as developed by the common law and acknowledged by section 171(3) of the 1988 Act.¹⁴¹

In the absence of a decision of the House of Lords on this issue, the view favoured by the majority on the Court of Appeal over the three cases thus seems to be that a 'public interest' defence might justify an act otherwise infringing copyright. But in what circumstances? The Court of Appeal in *Lion Laboratories* failed to draw any distinction between the application of the public interest defence to a case of breach of confidence, and one based upon copyright. The Court was clear that the defence was not confined to cases of iniquity, but covered situations where there was 'just cause or excuse' for breaking confidence.¹⁴² In *Hyde Park*, Mance LJ had declined to define the exact circumstances in which the defence would be available, but said that this discretion is much more limited than the defence recognized in breach of confidence cases. According to Mance LJ, the countervailing public interest was of more limited scope in the case of copyright, given that it is a property right and regulated by statute.¹⁴³ The Court of Appeal in *Ashdown* said it agreed with Mance LJ that the circumstances in which the public interest may override copyright are not capable of precise categorization or definition, but indicated that the defence would only succeed in 'very rare' circumstances.¹⁴⁴ The more recent decisions therefore offer little assistance as to when the 'public interest defence' would apply, except to indicate that the circumstances were more limited than in cases of breach of confidence.

8 LIBRARY USES

The 1988 Act provides librarians with a number of defences.¹⁴⁵ Most of these apply only to prescribed, non-profit libraries, that is libraries prescribed by the Secretary of State and the defences cover *inter alia* school, university, and local authority libraries.¹⁴⁶

¹³⁸ *Ibid.*, at para. 02. ¹³⁹ *Ibid.* [2002] *Ch* 149, 163 (para. 31).

¹⁴⁵ CDPA ss. 37–44; Copyright (Librarians and Archivists) (Copying of Copyright Material) Regulations 1989 (SI 1989/1212). Different classes of library are prescribed by the Regulations in relation to different exemptions. Such exemptions are permitted by Info. Soc. Dir. Art. 5(2)(c) at least as they relate to 'specific acts of reproduction made by publicly accessible libraries, educational establishments or museums, or by archives, which are not for direct or indirect economic or commercial advantage'.

¹⁴⁶ CDPA s. 37(1)(a). See J. Griffiths, 'Copyright and Public Lending in the United Kingdom' [1997] *EIPR* 499, 501

8.1 COPIES FOR RESEARCH OR PRIVATE STUDY

Librarians (from a prescribed, non-profit library) are permitted, in specified circumstances, to copy works in order to supply them to individuals at cost *and* for purposes of non-commercial research or private study.¹⁴⁷ In the case of articles, they may copy up to one article in an issue of a periodical.¹⁴⁸ In the case of published literary, dramatic, or musical works, they may copy no more than a reasonable proportion of the work.¹⁴⁹ In the case of unpublished works, librarians may make and supply single copies of a literary, dramatic, or musical work as long as the copyright owner had not prohibited copying thereof.¹⁵⁰ The requirement that the recipient satisfy the librarian or archivist that they require the copies for the purposes of research for a non-commercial purpose or private study, is likely to place librarians in a difficult position. For example, if a person requires copies because they are researching a topic for publication in a book (and they will receive royalties from the publisher), in the absence of guidance the librarian will have to determine whether this is for a 'commercial purpose'. The legislation fortunately provides that librarians may rely on signed declarations by any person requesting a copy.

8.2 LENDING OF WORKS

Special defences also exist where libraries lend copyright works. Section 40A provides that copyright in a work of any description is not infringed by the lending of a *book* by a *public library* if the book is eligible to be within the Public Lending Right Scheme.¹⁵¹ The second defence that relates to the lending of works is found in section 40A(2). This states that copyright in *any work* is not infringed by the lending of copies of the work by a prescribed library or archive (other than a public library) that is not conducted for profit.

8.3 LIBRARY COPYING

Prescribed libraries are allowed to make copies of periodical articles, or the whole or part of a published edition of a literary, dramatic, or musical work in order to supply another prescribed library.¹⁵² Libraries are also able to copy from any item in order to preserve or replace material in a library's permanent collection without infringing copyright in any literary, dramatic, or musical work.¹⁵³

¹⁴⁷ The immunity conferred relates not just to copyright in the article or literary, dramatic, or musical work, but also in any illustrations accompanying the work or in the typographical arrangement.

¹⁴⁸ CDPS s. 38.

¹⁴⁹ CDPA s. 39. 'Prescribed library' means those specified in Part A, Sched. 1 to the Regulations. CDPA s. 40 qualifies s. 38 and s. 39 so that it cannot be used as a mechanism to facilitate multiple copying.

¹⁵⁰ The provisions in CDPA ss. 38–9 and s. 43 require the person requiring the copy to pay the cost price of its production.

¹⁵¹ Rental Dir., Art. 5. On the uncertain scope of the provision see Griffiths, 'Copyright and Public Lending' [1997] *EIPR* 499, 502.

¹⁵² CDPA s. 41. This does not apply if at the time the copy is made the librarian knows or could reasonably ascertain the name and address of a person entitled to authorize the making of the copy: CDPA s. 41(2).

¹⁵³ CDPA s. 42. This applies to prescribed libraries and archives where the item is in the permanent collection and it is not reasonably practicable to purchase a copy for that purpose.

9 EDUCATIONAL USES

The copying that takes place in educational institutions is governed by a complex web of provisions. In addition to the fair-dealing defences and the defences for library copying we have already looked at, the 1988 Act contains a number of defences that relate to the copying carried out by schools and other educational establishments (which includes universities and colleges of further education).¹⁵⁴

9.1 COPYING FOR INSTRUCTION AND EXAMINATION

The 1988 Act contains a number of defences that relate to copying carried out for pedagogical purposes. Section 32(1) provides that copyright in a literary, dramatic, musical, or artistic work is not infringed if it is copied in the course of, or preparation for, instruction. This is subject to four provisos: that the copying is done by the person either giving or receiving the instruction (i.e. the teacher or student), that the instruction is for a non-commercial purpose, that the copying is *not* done by means of a reprographic process and that the copying is accompanied by sufficient acknowledgment.¹⁵⁵ The defence applies whether the work in question is published or not, and there appears to be no limit on the quantity of copying. This exception enables, for example, a student or a teacher to write out a whole poem, or extensive passages from a book, in longhand without fear of infringing copyright in the work. A second exception applies as regards copying of literary, dramatic, musical, or artistic works in slightly different circumstances. Section 32A provides that copyright in a literary, dramatic, musical, or artistic work is not infringed if it is copied in the course of, or preparation for, instruction but is subject to five provisos: that the work has been made available to the public,¹⁵⁶ that the copying is a fair dealing with the work, that the copying is done by the person either giving or receiving the instruction (i.e. the teacher or student), that the copying is not done by means of a reprographic process, and that the copying is accompanied by sufficient acknowledgment (but it is not a requirement that the instruction be for a non-commercial purpose). Both provisions appear to be of limited value since neither allows for reprographic copying. It is unclear whether the defence would apply to digital copying carried out for the purpose of instruction.¹⁵⁷

A related defence exists for copying done for the film-making courses. Section 32(2)

¹⁵⁴ As specified by the Secretary of State under his powers under CDPA s. 174(1)(b); s. 174(3). 'School' is defined by reference to the Education Act 1996, the Education (Scotland Act) 1962 and the Education and Libraries (Northern Ireland) Order 1986 (SI 1986/59: NI 3). The Copyright (Educational Establishments) (No. 2) Order 1989 (SI 1989/1068) specifies that universities, theological colleges, and various institutions providing further education are 'educational establishments'. These provisions have been extended to apply to teachers employed by a local authority to give instruction to pupils unable to attend an educational establishment: the Copyright (Application of Provisions relating to Educational Establishments to Teachers) (No. 2) Order 1989 (SI 1989/1067).

¹⁵⁵ CDPA s. 32(1) (as amended by SI 2003/2498, introducing the sufficient acknowledgement requirement (reflecting Art. 5(3)(a)) and the non-commercial purpose limitation reflecting Info. Soc. Dir. Art. 5(2)(c)). This does not apply to subsequent dealings (sale, hire, or offering for sale or hire or communicating to the public).

¹⁵⁶ As defined in CDPA s 30(1A).

¹⁵⁷ Reprographic copying is defined in CDPA s. 178.

states that the 'copyright in a sound recording, film, or broadcast is not infringed by its being copied by making a film or film sound-track' in the course of, or preparation for, instruction in the making of films or film soundtracks. This is subject to three conditions: that the person giving or receiving the instruction does the copying, that the copying is accompanied by sufficient acknowledgment, and that the instruction is for a non-commercial purpose.

A special defence applies to copying done for the purpose of preparing or giving examinations. Copyright is not infringed by anything done for the purposes of setting exam questions, communicating the questions to the candidates, or answering the questions, provided that the questions are accompanied by sufficient acknowledgment. The classic form of exam question, familiar to all law students, which comprises a quote followed by the instructions 'critically discuss', must therefore be appropriately attributed. This defence does not apply, however, to the making of a reprographic copy of a musical work to be used in an exam.¹⁵⁸

9.2 COPYING SHORT PASSAGES IN ANTHOLOGIES AND COLLECTIONS

Section 33 provides that copyright is not infringed where a 'short passage' from a published literary or dramatic work is included in a collection that is intended for use in an educational establishment.¹⁵⁹ This is subject to the proviso that (i) the collection consists mainly of material in which no copyright subsists, (ii) the inclusion is acknowledged, and (iii) the inclusion does not involve more than two excerpts from copyright works of the same author in collections published by the same publisher over any period of five years. These restrictions greatly restrict the utility of the defence.¹⁶⁰ The defence would be used, for example, to compile a collection of cases, many of which were out of copyright.

9.3 PERFORMING, PLAYING, OR SHOWING WORKS

A special defence exists to protect the performing, playing, or showing of literary, dramatic, or musical works before an audience consisting of teachers and pupils at an educational establishment.¹⁶¹ Section 34(1) operates by deeming certain performances not to be public performances and hence not to be infringements of the performing right. To fall within the defence, the performance must be before an audience consisting of teachers and pupils at an educational establishment. The performance must be carried out either by a teacher, a pupil, or by any other person for the purposes of instruction. This will exempt performances, whether by students or outsiders, before students in a drama class. It does not cover pupil performances to audiences of parents.¹⁶²

A similar defence exists with regard to the showing of films and broadcasts and the

¹⁵⁸ CDPA s. 32(3) (as amended by SI 2003/2498). On subsequent dealings with copies see CDPA s. 32(5).

¹⁵⁹ CDPA s. 33; CA 1956 s. 6(6); CA 1911 s. 2(1)(iv).

¹⁶⁰ The work from which the passage is taken must itself not be intended for use in an educational establishment, and no more than two excerpts from copyright works by the same author may be published in collections by the same publisher over any period of 5 years. Moreover, the collection in question must be described as being for use in educational establishments, must consist mainly of material in which no copyright subsists, and there must be a sufficient acknowledgment.

¹⁶¹ CDPA s. 34(1).

¹⁶² CDPA s. 34(3).

playing of sound recordings before an audience of teachers and pupils for the purposes of instruction.¹⁶³ While this would cover the showing of a documentary about the first moon landing to a primary-school class, it would presumably not cover school film societies since they are for pleasure and not instruction.

9.4 RECORDING OF BROADCASTS

Section 35 provides that in the absence of a 'certified licensing scheme',¹⁶⁴ educational establishments may make a recording of a broadcast, or a copy of such a recording for the educational purposes of that establishment, provided that there is sufficient acknowledgment of the broadcast and the educational purposes are non-commercial.¹⁶⁵ As educational establishments have entered into a number of relevant certified licensing schemes, section 35 has little practical importance.¹⁶⁶

9.5 REPROGRAPHIC COPYING

Section 36 provides that to the extent that licences are unavailable, educational establishments may reprographically copy 1 per cent of literary, dramatic, and musical works per quarter of a year for the purposes of instruction without infringing copyright.¹⁶⁷ The exception only operates where the copies are accompanied by sufficient acknowledgment (except where this would be impossible), and the instruction is for a non-commercial purpose. Again, the operation of the section 36 defence is limited as a result of the fact that educational establishments have entered into a number of relevant certified licensing schemes.

9.6 LENDING OF COPIES

Copyright in a work is not infringed by the lending of copies of the work by an educational establishment.¹⁶⁸

10 USES OF WORKS FOR THE HANDICAPPED

Two sets of provisions are designed to facilitate the making available of works to persons whose aural or visual senses are impaired.

10.1 MODIFICATION OF BROADCASTS FOR THOSE WITH POOR HEARING

Section 74 allows a designated body to make copies of broadcasts to provide subtitled or modified copies of broadcasts to people who are deaf, hard of hearing, or physically or

¹⁶³ CDPA s. 34(2). These are deemed not to be public performances.

¹⁶⁴ CDPA s. 143. ¹⁶⁵ CDPA s. 35(1).

¹⁶⁶ e.g. Copyright (Certification of Licensing Scheme for Educational Recording of Broadcasts and Cable Programmes) (Educational Recording Agency Ltd) Order 1990 (SI 1990/879); Copyright Certification of Licensing Scheme for Educational Recording of Broadcasts) (Open University) Order 2003 (SI 2003/187).

¹⁶⁷ CDPA s. 36.

¹⁶⁸ CDPA s. 36A was introduced into the 1988 Act by the Related Rights Reg. 11. See Rental Dir., Art. 5(3).

mentally handicapped.¹⁶⁹ The making, supply, or lending of such copies does not infringe any copyright in the broadcasts or in any work included in them.¹⁷⁰ This defence does not apply, however, if there is a relevant certified licensing scheme in existence.¹⁷¹

10.2 MODIFICATIONS FOR BENEFIT OF VISUALLY-IMPAIRED

The Act permits the making of copies of commercially published literary, dramatic, musical, and artistic works, as well as of published editions, for the personal use of visually impaired persons.¹⁷² In addition, in the absence of a licensing scheme notified to the Secretary of State,¹⁷³ an educational establishment, or a body not conducted for profit is permitted to make and supply, other than for profit, accessible copies of commercially published literary, dramatic, musical, or artistic works, or of published editions, for the personal use of visually impaired persons.¹⁷⁴ Most obviously, this would include transliterations into braille, or the making and issue of recordings of spoken versions of those literary works.¹⁷⁵ The exemption does not apply if copies making the works accessible to visually impaired persons are already commercially available.¹⁷⁶

11 PUBLIC ADMINISTRATION

The 1988 Act contains a number of defences that facilitate involvement in, and the dissemination of information about, public administration.¹⁷⁷ To this end the 1988 Act provides that copyright is not infringed by anything done for the purposes of parliamentary or judicial proceedings,¹⁷⁸ or for proceedings of a Royal Commission or statutory

¹⁶⁹ CDPA s. 74; Copyright (Subtitling of Broadcasts and Cable Programmes) (Designated Body) Order 1989 (SI 1989/1013) (designating The National Subtitling Library for Deaf People). See Info. Soc. Dir., Art. 5(3)(b).

¹⁷⁰ CDPA s. 74(1). ¹⁷¹ CDPA s. 74(4) and s. 143.

¹⁷² CDPA s. 31A (added by the Copyright (Visually Impaired Persons) Act 2002). The exception does not apply to copyright databases. It is subject to the following conditions: (i) the visually impaired person has lawful possession or use of a copy; (ii) the copy is not accessible to them because of their impairment; (iii) copies that would be accessible to them are not commercially available; (iv) the copy states it was made under s. 31A; (v) there is acknowledgement of author and title. A 'visually impaired person' is defined in CDPA s. 31F(9) as a person: (a) who is blind; (b) who has an impairment of visual function which cannot be improved, by the use of corrective lenses, to a level that would normally be acceptable for reading without a special level or kind of light; (c) who is unable through physical disability, to hold or manipulate a book; or (d) who is unable, through physical disability, to focus or move their eyes to the extent that would normally be acceptable for reading. For background, see, Copyright Directorate, *Summary of Responses to the Consultative Exercise on a Possible Copyright Exception for the Benefit of Visually Impaired People that took place from February to May 2001* (2001). For commentary, see K. Garnett, 'The Copyright (Visually Impaired Persons) Act 2002 [2003] *EIPR* 522.

¹⁷³ CDPA s. 31D(1). The scheme must not be 'unreasonably restrictive'.

¹⁷⁴ CDPA s. 31B (added by the Copyright (Visually Impaired Persons) Act 2002). For background, see Copyright Directorate, *Summary of Responses to the Consultative Exercise on a Possible Copyright Exception for the Benefit of Visually Impaired People that took place from February to May 2001* (2001).

¹⁷⁵ CDPA s. 31B(2) states that the exemption does not apply 'if the master copy is of a musical work, or part of a musical work, and the making of an accessible copy would involve recording a performance of the work or part of it.' The exemption also does not apply if the work concerned is a database.

¹⁷⁶ CDPA s. 31B(3), (4). ¹⁷⁷ Info. Soc. Dir., Art. 5(3)(e).

¹⁷⁸ CDPA s. 45(1); CA 1956 ss. 6(4), 9(7), 13(6), 14(9), 14A(10).

inquiry.¹⁷⁹ This means that copyright is not infringed if a barrister digitally scans a case report, or a police officer photocopies a statement for use in a trial. The 1988 Act also provides that copyright is not infringed by anything done for the purposes of *reporting* such proceedings.¹⁸⁰ This means that law reports do not infringe copyright in the barristers' statements, a defendants' evidence, or a speech of a judge. It should be noted that these defences do not extend to the copying of the published reports of such proceedings.¹⁸¹ As such, the defence does not apply, for example, to the photocopying of law reports.

Special defences also enable the copying of material that is open to public inspection pursuant to a statutory requirement (this would apply to material on the patents, designs, and trade mark registries);¹⁸² to material that is communicated to the Crown in the course of public proceedings;¹⁸³ and, in certain circumstances, to material on public records.¹⁸⁴

12 CULTURAL PRESERVATION

A number of defences aid in the preservation of cultural objects.¹⁸⁵ A designated non-profit organization may record a song and make copies available for non-commercial research or private study even though there is copyright in the words or music. This is subject to the proviso that the words are unpublished and are of unknown authorship.¹⁸⁶ In addition, where an article of culture or historical importance cannot lawfully be exported from the UK unless a copy of it is made and deposited in an appropriate library or archive, it is not an infringement to make that copy.¹⁸⁷ Finally, a recording of a broadcast of a designated class,¹⁸⁸ or a copy of such a recording, may be made for the purpose of being placed in an archive maintained by a designated body without thereby infringing any copyright in the broadcast or in any work included in it.¹⁸⁹

¹⁷⁹ CDPA s. 46(2).

¹⁸⁰ CDPA ss. 45(2); 46(2). The latter, which relates to Royal Commissions and statutory inquiries, is limited to the reporting of any such proceedings held in *public*.

¹⁸¹ This would include arbitration proceedings, *London & Leeds Estates v. Paribas (No. 2)* [1995] 1 ECLR 102, 106. Note also *A v. B* [2000] EMLR 1007 (refusing summary judgment in a case where defendant had copied pages from claimant's diary with a view to using them in divorce proceedings, even though those proceedings had not yet begun); cf. *Auckland Medical Aid Trust v. Commissioner of Police* [1976] 1 NZLR 485 (proceedings must have commenced); *Television New Zealand v. Newsmonitor Services* [1994] 2 NZLR 91, 100 (High Court of Auckland) (extends to situation where a work is required to be reproduced so that legal advisers can properly advise client whether or not it is appropriate to commence legal proceedings or to defend proceedings which are threatened).

¹⁸² CDPA s. 47.

¹⁸³ CDPA s. 48.

¹⁸⁴ CDPA ss. 47 and 49. CDPA s. 50 provides a defence for acts specifically authorized by an Act of Parliament.

¹⁸⁵ See above at p. 211 (ability of libraries to make copies for purposes of preservation).

¹⁸⁶ CDPA s. 61. The making of the recording must not infringe any other copyright and must not have been prohibited by any of the performers. For designated bodies, see Copyright (Recordings of Folksongs for Archives (Designated Bodies) Order 1989 (SI 1989/1012).

¹⁸⁷ CDPA s. 44.

¹⁸⁸ All broadcasts other than encrypted transmissions and all cable programmes have been designated for this purpose.

¹⁸⁹ CDPA s. 75. The Copyright (Recording for Archives of Designated Class of Broadcasting and Cable Programmes) (Designated Bodies) Order 1993 (SI 1993/74).

13 EXCEPTIONS FOR ARTISTIC WORKS

A number of defences exist in relation to artworks. Given that artistic works protect a broad array of subject matter from paintings and sculpture through to typefaces and industrial designs, it not surprising that these defences are similarly eclectic. In addition to the defences listed below, it should be noted that a number of defences exist in relation to industrial designs. These are discussed in Chapter 29.¹⁹⁰

13.1 REPRESENTATION OF WORKS ON PUBLIC DISPLAY

A special defence exists in relation to the representation of artistic works on public display.¹⁹¹ Section 62 provides that copyright in (a) buildings and (b) sculptures, models for buildings, and works of artistic craftsmanship if permanently situated in a public place or in premises open to the public, may be represented in a graphic work, photographed, filmed, or broadcast without a licence. The defence also applies to subsequent dealings of the representation. Thus, a postcard of a sculpture in Trafalgar Square can be reproduced and distributed without infringing copyright in the sculpture. Similarly, a film of a new building could be made or broadcast without the consent of the owner of copyright in the building.¹⁹² It seems that the defence applies to both private and public buildings. If so, this means that a company that was taking photographs of private homes to be stored on a database for use by real estate agents could rely upon the defence to avoid a claim for infringement of any copyright in the building.

One potential problem with the defence is that section 62 says that copyright in *such a work* is not infringed. As such the defence would seemingly not apply to any preliminary drawings or plans that were used to create the public work. If so, it greatly reduces the scope of the defence.¹⁹³

13.2 ADVERTISEMENTS FOR SALE OF AN ARTISTIC WORK

Section 63 declares that it is not an infringement of copyright in an artistic work to copy it or to issue copies to the public in order to advertise the sale of the work. This means that it is permissible when selling a painting to take a photograph of the painting and to publish it in a catalogue. Section 63 serves to reconcile the conflict that may arise where the artistic work and the copyright in that work are owned by different parties. It does this by preventing the copyright owner from exercising their copyright so as to hinder the owner

¹⁹⁰ CDPA ss. 51–3. See below at pp. 662–6.

¹⁹¹ See also incidental use defence in CDPA s. 31 discussed at pp. 206–8 above (but with CDPA s. 62 there is no need for the use to be incidental). Info. Soc. Dir. Art. 5(3)(h) permits member states to have an exception relating to ‘use of works, such as works of architecture or sculpture, made to be located permanently in public places’.

¹⁹² Though (as a consequence of amendments made by SI 2003/2498) while a film of a building could be placed on a web site without infringing (CDPA s. 62(3) referring to communications to the public of anything whose making was not an infringement), a direct live feed of images of the building would appear to fall outside the scope of the exception (CDPA s. 62(2) referring to broadcasts).

¹⁹³ Copinger, para. 9–90.

of the artistic work from selling it. It should be noted that subsequent uses of the copy, such as selling it, are not covered by the defence.¹⁹⁴ This means that the sale of a catalogue formerly used to advertise the sale of the work is *prima facie* an infringement of copyright.¹⁹⁵

13.3 SUBSEQUENT WORKS BY THE SAME ARTIST

It is common practice for artists to build upon and develop earlier works they have created. A potential problem that arises for artists who sell the copyright in their works is that copyright owners may object to the artist continuing to work in the same style. Under general copyright principles, artists are able to develop the same ideas as long as they do not copy a substantial part of the expressive form of the earlier work. To ensure that owners of copyright in an earlier work are unable to stifle an artist's ability to work in the same style, section 64 adds that an artist is able to copy their earlier works, provided they do not repeat or imitate its main design.

13.4 RECONSTRUCTION OF BUILDINGS

Section 65 allows for the reconstruction of a building without infringement of any copyright in the building or in the original drawings or plans for it.¹⁹⁶ This ensures that an owner of a building is able to carry out repairs without having to seek the approval of the copyright owner.

13.5 USE OF TYPEFACES IN THE ORDINARY COURSE OF PRINTING

A special defence exists where typefaces (which are protected as artistic works) are used in the ordinary course of printing. Section 54 provides that it is not an infringement of copyright in an artistic work consisting of the design of a typeface to use the typeface in the ordinary course of printing activities. The section also provides that it is not an infringement to possess or do anything in relation to the material produced by such a use.¹⁹⁷

14 EXCEPTIONS FOR COMPUTER PROGRAMS

Special provisions in the 1988 Act, which follow from the Software Directive, govern how far it is permissible to copy and otherwise use computer programs without infringing. These defences ensure that a lawful user is able to make a back-up copy, to decompile a program for certain purposes, to study the program, and to adapt or copy the program where necessary for the lawful use of the program. The first three of these exceptions cannot be excluded or restricted by contract, and provisions attempting so to do are to be treated as null and void.¹⁹⁸ A report by the European Commission in 2000 on the

¹⁹⁴ CDPA s. 63.

¹⁹⁵ Info. Soc. Dir., Art. 5(3)(j) permits member states to have an exception for such advertising 'to the extent necessary to promote the event, excluding any other commercial use'.

¹⁹⁶ CDPA s. 65; Info. Soc. Dir., Art. 5(3)(m).

implementation of the Software Directive concluded that overall the aims of the Directive had been achieved. The Commission did however make some comments about the way that the Directive had been implemented in the United Kingdom, which may require adjustment in the future.¹⁹⁹

One issue that may impact upon the scope of the defences relates to the question of whether computer programs are seen as databases (and thus protected under the database right). As we alluded to in our discussion of the database right, if 'database' is defined broadly enough it may include computer programs. If so, this will impact upon the relevance of the copyright defences. This is because there are fewer defences available to a defendant in relation to infringement of the database right than are available for infringement of copyright.

14.1 MAKING BACK-UP COPIES

Section 50A(1) provides that it is not an infringement of copyright for a 'lawful user'²⁰⁰ of a copy of a computer program to make any back-up copy of it, which is necessary for them to have for the purpose of their lawful use.²⁰¹ By enabling users to make back-up copies, it provides a form of insurance in case a computer program fails or is corrupted. Importantly section 50A(3) provides that any term or condition in an agreement that purports to prohibit or restrict an act that is permitted under section 50A is void.²⁰²

The scope of the defence will depend on when it is 'necessary' for a lawful user to make a back-up copy. It is likely that this will depend on factors such as the relative stability of the program (the more vulnerable the program the more the need for back-up), the environment in which the program operates, and the consequences of a program failing (it is more likely that a court will consider it necessary to make a back-up copy where the program is used for air traffic control or to assist in heart surgery than where it is a computer game). Indeed, in *Sony Computer Entertainment Inc. v. Owen* it was held that, when a person buys a computer game on a CD, it is not 'necessary' for that person to make a back up copy of the disk.²⁰³

14.2 DECOMPILATION

One of the problems facing creators of computer programs is that they have to ensure that their creations can be used in conjunction with existing products and processes. In the same way in which a manufacturer of spare parts for cars needs to ensure that their

¹⁹⁹ *Report from the Commission on the implementation and effects of Directive 91/250/EEC on the legal protection of computer programs*, COM (2000) 199 final (Brussels, 10 Apr. 2000), 12–14. The UK has since added CDPA s. 50BA which meets one of the Commission's criticisms.

²⁰⁰ Defined as a person who has a right to use the program: CDPA s. 50A(2). In its Report on the Software Directive, the Commission said that 'lawful acquirer' (which was the term used in the Directive), meant a 'purchaser, licensee, renter or a person authorized to use the program on behalf of the above'. *Report from the Commission on the implementation and effects of Directive 91/250/EEC on the legal protection of computer programs* COM (2000) 199 final (Brussels 10 Apr. 2000), 12.

²⁰¹ The Commission said that the notion of 'back-up' meant 'for security reasons' and that the result of the wording of Art. 5(2) was that only one copy is permitted. *Report from the Commission on the implementation and effects of Directive 91/250/EEC on the legal protection of computer programs* COM (2000) 199 final (Brussels 10 Apr. 2000), 18.

²⁰² CDPA s. 50A(3), s. 296A.

²⁰³ [2002] EMLR 742.

products are the appropriate size and shape, so too producers of computer programs and devices used in conjunction with existing programs need to ensure that their products comply with the pre-existing standards. While some of this information will be generic and widely available, some of it may be hidden in the program. For a producer to ensure that their creations are compatible (or inter-operable) with pre-existing systems, they need to have access to the information that is hidden in the program. Some developers (most famously IBM) publish such information to encourage others to construct further application programs or add-on devices, whereas others license the information. In some circumstances, the only way in which the relevant information can be obtained is by decompiling or reverse engineering the program. The process of decompilation reduces the object code in the program to a form that approximates with the source code. The potential problem with this is that as decompilation involves intermediate copying of a program, it is *prima facie* an infringement of copyright.²⁰⁴

After considerable debate it was decided to include a defence for decompilation in the Software Directive.²⁰⁵ This found its way into British law via section 50B. Before looking at the defence it should be noted that the parties cannot contract out of the decompilation defence.²⁰⁶ It should also be noted that the importance of section 50B is reinforced by the fact that fair dealing for the purpose of research and study does not apply to the decompilation of computer programs.²⁰⁷

Section 50B provides that it is not an infringement of copyright for a lawful user of a copy of a computer program expressed in a low-level language to convert it into a higher-level language (that is, to 'decompile' it) *or* incidentally in the course of converting the program, to copy it. This is subject to the proviso that:

(a) it is necessary to decompile the program to obtain the information necessary to create an independent program which can be operated with the program decompiled, or with another program (the 'permitted' objective); *and*

(b) the information obtained is not used for any purpose other than the permitted objective.

These conditions will be not be met, for example, where (i) the relevant information is readily available to the lawful user, (ii) the decompilation is not confined to acts necessary to achieve the permitted objective, (iii) the lawful user supplies the information to any person to whom it is not necessary to supply it in order to achieve the permitted objective, or (iv) the lawful user uses the information to create a program which is substantially similar in its expression to the program decompiled or to do any act restricted by copyright.²⁰⁸

In its Report on the Implementation of the Software Directive, the Commission was critical of the way Article 6 had been implemented in the United Kingdom. (Article 6 sets out the decompilation exception.) In particular, the Commission said there are four reasons why section 50B may be non-conforming. First, section 50B's use of 'lawful user' appears not to include a 'person authorized on behalf of the licensee or person having a

²⁰⁴ See Copinger, para. 9–61. S. Chalton, 'Implementation of the Software Directive in the UK' [1993] *EIPR* 138,

²⁰⁵ Software Dir., Art. 6.

²⁰⁶ CDPA ss. 50A(3), 50B(4), 50D(2).

²⁰⁷ CDPA s. 29(4).

²⁰⁸ CDPA s. 50B(3).

right to use a copy of the program'. Second, while Article 6 mentions 'reproduction of the code and translation of its form', this has been implemented in section 50B as 'expressed in a low-level language to convert it into a higher-level language'. Third, there is no restriction in the UK to 'parts' of the decompiled program: instead section 50B is restricted to 'such acts as are necessary to achieve the permitted objective'. The final criticism is that the section 50B defence is not expressly subject to the three-step test (as is required under Article 6(3)).²⁰⁹ It is possible that British courts could construe section 50B in such a way as to comply with many of the criticisms (if it was felt desirable).

14.3 OBSERVING, STUDYING, AND TESTING PROGRAMS

Section 50BA, introduced in October 2003,²¹⁰ implements Article 5(3) of the Software Directive, by providing that a lawful user of a copy of a program is not liable for infringement if, when carrying out an act they are entitled to do (such as to load, display, run, transmit or store the program), that person observes studies or tests the functioning of the program in order to determine the ideas or principles which underlie any element of the program.

14.4 COPYING AND ADAPTING FOR LAWFUL USE

In the absence of contractual terms to the contrary, section 50C(1) allows a lawful user of a computer program to copy or adapt it if 'it is necessary for his lawful use'.²¹¹ An example of a situation where it will be necessary to copy for a lawful use is given by section 50C(2). This says that it is not an infringement for a lawful user of a copy of a computer program to copy or adapt it for the purpose of correcting errors. Another obvious example is copying that occurs in the RAM of a computer that enables the program to run. In contrast, it has been held that a licence to use a computer game in Japan did not justify adaptation to circumvent copy-protection so as to enable its use in the UK.²¹² Given the limits of the licence to Japan, there was no lawful use in the UK.

15 EXCEPTIONS FOR DATABASES

Section 50D provides that it is not an infringement of copyright in a database for a person who has a right to use the database or any part of the database (whether under a licence to do any of the acts restricted by the copyright in the database or otherwise) to do, in the

²⁰⁹ *Report from the Commission on the implementation and effects of Directive 91/250/EEC on the legal protection of computer programs* COM(2000) 199 final (Brussels, 10 Apr. 2000), 14.

²¹⁰ As noted earlier, these acts no longer fall to be treated as fair dealing under CDPA s. 29. The specific implementation of Software Dir., Art. 5(3) seems to have been required now that the notion of fair dealing for research and private study has been limited to non-commercial ends.

²¹¹ Note the contradictory provisions of Software Dir., Art. 5(1) and Recital 18 (stating that the acts of loading and running necessary for use of the program and the act of correction of its errors may not be prohibited by contract. This defence does not apply to the making of back-up copies (s. 50A), to the decompilation of programs (s. 50B) or to acts carried out to study or test the program (s. 50BA).

²¹² *Sony Computer Entertainment Inc v. Owen* [2002] *EMLR* 742, 747. See B. Esler, 'Judas or Messiah? The Implications of the Mod Chip Cases for Copyright in an Electronic Age' (2003) *Hertfordshire Law Journal* 1.

exercise of that right, anything which is necessary for the purposes of *access* to and *use* of the contents of the database or of that part of the database. This means that if in the course of searching a database, the database is downloaded into the memory of a computer, this will not be an infringement. Although in situations where the copyright owner and the user are in a contractual relation (as a subscriber to *Lexis* would be) the user would have, at the very least, an implied licence covering these acts, this exception seems to operate in favour of others with a right to use the database, such as transferees of material copies of databases (such as the purchaser of a second hand CD-ROM of the *Oxford English Dictionary*). It is important to bear in mind that fair dealing for the purposes of research and study is not available for databases. This increases the relative importance of the section 50D defence. As with the defences for the making of back-up copies and decompilation, it is not possible to contract out of the section 50D defence.²¹³

16 EXCEPTIONS FOR WORKS IN ELECTRONIC FORM

Under section 56, if the purchaser of a work in electronic form (such as a computer program or an e-book) is entitled to make further copies or adaptations of the work, then unless there is an express stipulation to the contrary, so too is anyone to whom the ownership of the copy has been transferred. That is, the defence applies when a back-up copy is transferred if the original copy is no longer usable. Any copies remaining with the original purchaser after transfer are infringing.²¹⁴

17 TEMPORARY TECHNOLOGY-DICTATED COPIES

In order to implement Article 5(1) of the Information Society Directive, a new defence was introduced in October 2003 relating to the temporary copying of copyright works other than programs or databases. This applies only if four conditions are met: (i) the copy must be transient or incidental; (ii) the making of the copy must be 'an integral and essential part of a technological process'; (iii) the copying must take place to enable either transmission of the work in a network between third parties and an intermediary, or a lawful use of the work; and (iv) the temporary copy must have 'no independent economic significance'. Lawful use is defined to include uses 'authorised by the rightholder or not restricted by law'.²¹⁵ The provision appears to have been designed to allow 'caching',²¹⁶ that is the temporary storage of information in the user's computer or server which allows for speedier access to web sites.²¹⁷ Such activities are positively desirable, since they enable

²¹³ CDPA s. 50D(2). For speculation as to the scope of this exception and criticism, see Davison, 77–8.

²¹⁴ CDPA s. 56(2)–(3). See C. Millard in H. Jongen and A. Meijboom (eds.), *Copyright Software Protection in the EC* (1993), 224.

²¹⁵ Info. Soc. Dir., Recital 33.

²¹⁶ Info. Soc. Dir., Recital 33. This seems to impose further conditions paralleling those set out in the E-commerce Directive. These are: first, that the intermediary does not modify the information; and that he does not interfere with the lawful use of technology, widely recognized and used by industry, to obtain data on the use of information.

²¹⁷ See P. B. Hugenoltz, 'Caching and Copyright: The Right of Temporary Copying' [2000] *EIPR* 482, 483 (in particular focusing on 'proxy (web) caching' and 'client caching').

the 'web' to function speedily and efficiently, and seem to have no obvious impact on the economic interests of content-holders. Nevertheless, while the provision may have been designed to exempt such acts (which might otherwise technically infringe the reproduction right in the content being stored),²¹⁸ the conditions imposed make it difficult to predict when (if at all) such acts will in fact be legitimate. First, the requirement that the reproduction be an 'integral and essential' part of a technological process raises a difficult hurdle. This is because while digital transmission is more efficient if caching occurs, such transmission can occur without caching. Can it then be said that caching is 'integral and essential' rather than desirable?²¹⁹ Second, the requirement that the acts be of no 'independent economic significance' raises the question as exactly how a defendant might prove that (as well as how a court is to determine whether) activities have any 'independent economic significance'.

18 DEFENCES FOR FILMS AND SOUND RECORDINGS

18.1 EXPIRY OF FILM COPYRIGHT

As we saw earlier, one of the changes brought about as a result of the Duration Directive is that copyright in films expires seventy years from the end of the calendar year in which the death occurs of the last to die of the following: the principal director, the author of the screenplay, the author of the dialogue, or the composer of any music specifically created.²²⁰ One of the consequences of this is it may be difficult to determine when copyright in a film actually expires. To ensure that this uncertainty does not unduly hinder subsequent uses of the film, section 66A provides that copyright in a film is not infringed if (i) it is not possible by reasonable inquiry to ascertain the identity of any of the relevant persons and (ii) that it is reasonable to assume that the copyright has expired *or* that the last relevant person has been dead for over seventy years.

18.2 CHARITABLE USES OF SOUND RECORDINGS

Another exception operates in favour of non-profit, charitable organizations and permits those organizations to play sound recordings as part of the activities of, or for the benefit of, the organization without infringing copyright in the sound recording.²²¹ As a practical consequence, charitable organizations do not need to obtain licences from PPL (the collective body that deals with the public playing of sound recordings), but only from PRS (since the exception does not apply to copyright in the literary and musical works). Not surprisingly, this exception has long been a source of resentment to the record industry and performers' groups who see no reason why the revenues to which they would otherwise be entitled (and which other authors do get) should be compulsorily given to

²¹⁸ But note P. B. Hugenholtz, 'Why the Copyright Directive is Unimportant and Possibly Invalid' [2000] *EIPR* 499, 501 ('A common sense interpretation of the reproduction right would have done the job [of exempting caching and browsing] as well, if not much better').

²¹⁹ See P. B. Hugenholtz, 'Caching and Copyright: The Right of Temporary Copying' [2000] *EIPR* 482, 488–9.

²²⁰ CDPA s. 13B(2). See above at pp. 157–8.

²²¹ CDPA s. 67(1) does not apply to musical works.

charity. Because of a belief that the exception in the form originally enacted in the 1988 Act fell foul of the 'three-step test', it has been amended, and is (after 31 October 2003) subject to a host of conditions.²²²

First, the exception only applies if the organization is not established or conducted for profit, and that its main objects are charitable or are otherwise concerned with the advancement of religion, education, or social welfare.²²³ Second, the exception only applies if the sound recording is played by a person who is acting primarily and directly for the benefit of the organization and who is not acting with a view to gain. This means the exemption does not apply if the organization hires a disc-jockey to choose and play the recordings. Third, the exception only applies if the proceeds of any charge for admission to the place where the recording is to be heard are applied solely for the purposes of the organization. Finally, for the exemption to operate it is required that the proceeds from any goods sold by or on behalf of the organization (in the place where the sound recording is heard and when the recording is played) are applied solely for the purposes of the organization.²²⁴ The effect of this last condition depends particularly on what is meant by 'good or services sold by, or on behalf of, the organisation'. If a charitable organization has a fund-raising event at which recorded music is played, but obtains the services of the local publican to serve drinks (and the publican keeps the profits from such sales), are the bar services provided 'on behalf of the organisation' so that the defence does not apply? Or are the services provided by and on behalf of the publican, with the paradoxical consequence that the exception applies? If the aim of the limitations is to restrict the operation of this defence to events where everybody involved gives their services and profits to the charity, it is likely that the publican who has been invited to sell drinks at the event (primarily for their own benefit), would be treated as acting 'on behalf of the charity.

19 BROADCASTS

Various acts are permitted in relation to the making, retransmission, and reception of broadcasts. In addition to the provisions we have already looked at in relation to archives²²⁵ education, and sub-titling for the hard of hearing²²⁶ the following defences may apply.

²²² The Info. Soc. Dir., Art. 11 amended the Rental Dir., Art. 10, by adding that limitations to the fixation, broadcasting, communication, and distribution rights are only applied in accordance with the three-step test. See also WPPT, Art. 16(2). It is not obvious why the three-step test led to the imposition of the new conditions. For example, why would the mere fact that the organization paid a professional disc-jockey render the activities prejudicial to the legitimate interests of the 'rightsholders', or mean that the use conflicts with 'normal exploitation'? The view seems to be that if anyone is paid or makes a private profit, then so should the record companies and performers.

²²³ A local government authority was held to be neither an 'organization' similar to a club or society nor an organization whose main objects was the advancement of 'social welfare': *Phonographic Performance Ltd v. South Tyneside Metropolitan Borough Council* [2001] RPC 594 (exemption held not to cover playing sound recordings at fitness classes run by the local authority).

²²⁴ CDPA s. 67(2).

²²⁵ CDPA s. 75.

²²⁶ CDPA ss. 32(2), 34(2), 35.

19.1 INCIDENTAL RECORDING FOR THE PURPOSE OF BROADCASTING

A person authorized to broadcast a work may make a recording of it for purposes of the broadcast.²²⁷ This is subject to the requirement that the recording should not be used for any other purpose and should be destroyed within twenty-eight days of first being used.²²⁸ This ensures that any temporary copies that are made in the course of broadcasting will not infringe.

19.2 RECORDING FOR PURPOSES OF SUPERVISION

As part of the regulatory framework that governs the broadcasting industry, a number of organizations are given the task of supervising broadcast programmes. To ensure that these bodies are able to fulfil these tasks, the 1988 Act provides that supervisory bodies (in particular, after the Communication Act 2003, the new unitary body, OFCom) may make recordings of broadcast for the purpose of controlling broadcasting.²²⁹

19.3 TIME-SHIFTING

Section 70 provides for the much-debated time-shifting defence that allows for the private recording of broadcasts so that they may be watched at a later time. The making in domestic premises for private and domestic use of a recording of a broadcast solely in order to view it or listen to it at a more convenient time does not infringe any copyright in the transmission, or of works included in the transmission.²³⁰ This enables a person to video a programme to watch at a more convenient time or tape radio programmes so that they can be listened to later. Since broadcasts do not include most 'Internet transmissions' this defence cannot be employed to justify private copying from web sites. Moreover, the limitation of the defence to recordings made 'in domestic premises' means it cannot justify acts of recording broadcasts in commercial establishments, such as the recording of simultaneous Internet broadcasts in Internet cafés.²³¹ Rather strangely, however, it means that if a person tapes a radio programme on their cassette-recorder situated in their office they will infringe, whereas they would not do so were they at home. In an era where it is increasingly important for the rules relating to copyright-liability to make sense to the public, this differentiation seems regrettable.

²²⁷ CDP A s. 68; Info. Soc. Dir., Art. 5(2)(d); Rental Dir., Art. 10(1)(c); Berne, Art. 11 bis(3).

²²⁸ See *Phonographic Performance v. AEI Rediffusion Music* [1998] Ch 187; [1997] RPC 729 (holding that the making of permanent recordings for the purpose of broadcast could not be treated as authorized under compulsory licence).

²²⁹ CDP A s. 69; Info. Soc. Dir., Art. 5(3)(e). Communication Act 2003, Sched. 17, para. 91(3).

²³⁰ CDP A s. 71. Presumably this is thought to be within Info. Soc. Dir., Art. 5(2)(b), and that under Recital 35 no compensation need be paid. The requirement that the recording be on domestic premises may have been intended to ensure compliance with the requirement that the reproduction be not for ends which are directly or indirectly commercial.

²³¹ Even prior to the addition of this requirement by SI 2003/2498 it had been held that the exception did not justify the copying of such material by a commercial organization at the request of individuals, because the copying was not for the 'private and domestic use' of the organization: *Sony Music Entertainment (UK) Ltd v. EasyInternetcafe Ltd.* [2003] FSR (48) 882 (paras. 40–1). For commentary, see K. Garnett, 'The Easy Internet Café Decision' [2003] EIPR 426.

19.4 FREE PUBLIC SHOWING OR PLAYING

Although having a radio or television on in public normally infringes the public performance right in the broadcast, and any works therein, a special defence limits the scope of such liability where a broadcast is shown or played to a non-paying audience.²³² An audience will be paying if they have paid admission, or if goods or services are supplied at that place at prices which are substantially attributable to the facilities afforded for seeing or hearing the broadcast or programme, or at prices exceeding those usually charged there and which are partly attributable to those facilities.²³³ So a wine bar wishing to have a television on for the benefit of customers, but which does not alter its prices, would fall within the exception, whereas a bar which charges an entry fee when broadcasts are being shown would not. The free-showing defence also covers the showing or playing of broadcasts to residents of hotels, inmates in prisons, patients in hospitals, and members of clubs. It also covers free demonstrations of broadcast receiving equipment, for example in shop windows.

The free-playing defence only applies to claims relating to infringement of copyright in the broadcast or any film included in it and, in certain specified situations, to the copyright in sound recordings. Permissions as regards other works included in the broadcast, for example music and lyrics of songs, will be required (so a PRS licence will be required).²³⁴ In the case of sound recordings, the section distinguishes between two categories of sound recordings. If the sound recordings are either not recordings of music or songs (for example, recorded interviews with politicians) or are musical recordings of which the author is also the author of the broadcast (such as sound recordings created as theme music for the channel or to accompany a programme), it is not an infringement of the copyright in the recording to show in public a broadcast which includes the recording.²³⁵ The exception however does not excuse any infringement of the copyright in other sound recordings i.e. those which are recordings of music and songs where the author of the recording is not the author of the music (termed 'excepted sound recordings'). These excepted sound recordings encompass most commercially-distributed popular and classical music, so that the general 'free-playing' defence would not apply to sound recordings featured on the radio or *Top of the Pops*. For these 'excepted sound recordings', a much more limited exception exists as regards the free playing or showing of a broadcast which 'forms part of the activities of an organisation that is not established or conducted for profit'.²³⁶ So, while a wine bar or hotel will benefit from the broad free-playing defence as regards broadcasts and films included therein, a PPL licence will therefore need to be

²³² CDPA s. 72.

²³³ CDPA s. 72(2)(b). Residents or inmates and the members of a club or society are not normally regarded as having paid for admission.

²³⁴ Hence many electrical retailers allow the demonstration of television equipment with the sound off.

²³⁵ CDPA s. 72(1A), introduced by SI 2003/2498 to implement Rental Dir., Art. 10(3). The EC Commission announced on 26 July 2001 that it had referred the question of whether the UK had failed to implement the Rental Directive to the European Court of Justice: the action may now be dropped.

²³⁶ CDPA s. 72(1B)(a). A further exception applies where the broadcast is played for the purposes of repairing equipment for the reception of broadcasts, demonstrating that such repair has been carried out or demonstrating such equipment. This is acceptable under Info. Soc. Dir., Art. 5(3)(l), and implicitly therefore under Rental Dir., Art. 10(2).

obtained to cover the 'excepted sound recordings' included in the broadcast.²³⁷ In contrast, the defence will extend to broadcasts which include excepted sound recordings where the broadcast is played to an NHS Hospital or government-owned prison, since these activities fall within both within the broad free-playing defence and the narrower version of the free-playing defence which applies to excepted sound recordings.²³⁸

19.5 PHOTOGRAPHS OF TELEVISION BROADCASTS

The making in domestic premises for private and domestic use of a photograph of an image from a broadcast is not an infringement of copyright in the broadcast or any film included in it.²³⁹ The exception does not extend to photographs of artistic works included in TV broadcasts.²⁴⁰

19.6 RECEPTION AND RETRANSMISSION OF WIRELESS BROADCAST BY CABLE

A special defence in section 73 deals with the retransmission of wireless broadcasts by cable operators. The defence helps to ensure that people in areas where reception of the broadcast is very poor or restricted are able to get access to programmes.²⁴¹ The defence also takes account of the fact that certain cable operators are under a 'must carry' obligation.²⁴²

Section 73 applies where a wireless broadcast made from a place in the United Kingdom is received and immediately retransmitted by cable. Such retransmissions would, in the absence of any exceptions, infringe copyright in the broadcast and any works included therein.²⁴³ However, retransmissions are often done merely to enable potential customers of a broadcast to obtain reception in areas where the signal is weak. In these cases, where there is no alteration of the transmission at all, it is difficult to see in what way the copyright owners in the works included in the broadcast are prejudiced by the act of retransmission (after all, they have been paid by the initial broadcaster). Consequently, the Act provides that copyright in any work included in the broadcast is not infringed when the broadcast is retransmitted by cable if and to the extent that the broadcast is made for reception in the area in which it is retransmitted by cable.²⁴⁴ The broadcaster's permission is, however, required unless the broadcast is part of a qualifying service (such as the BBC,

²³⁷ CDPA ss. 128A–B requires that such licensing arrangements should be notified to the Secretary of State by a licensing body, before it comes into effect, and the Secretary of State may refer the licence or scheme to the Copyright Tribunal.

²³⁸ The government has indicated that it will consider modifications of this provision, and doubts have been raised as to the compatibility of the provision with the EC Rental Directive.

²³⁹ CDPA s. 71. Justifiable, possibly under Info. Soc. Dir., Art. 5(2)(b) or Art. 5(3)(i).

²⁴⁰ In these circumstances, it would be necessary to rely upon other defences (e.g. CDPA s. 31).

²⁴¹ Copinger, para. 9–108.

²⁴² Such obligations are imposed under the Communications Act 2003, s. 64. For the background see Copinger, para. 9–107.

²⁴³ CDPA s. 20(1), s. 6(5A) (defining broadcast to include relaying by reception and immediate retransmission).

²⁴⁴ CDPA s. 73(2). However, where the making of a *broadcast* was an infringement of copyright in the work, the fact that the broadcast was retransmitted is to be taken into account in assessing damages for that infringement. Note also CDPA s. 73(9), empowering the secretary of State to limit the operation of s. 73(3).

Channel 3, 4, or 5), and was made for reception in the area in which the retransmission is provided.²⁴⁵

Some other acts of transmission are obligatory under the Communications Act 2003. As it would be grossly unfair to make a person who is obliged to transmit a broadcast liable to the copyright owner, either in the broadcast, or the works contained therein, the Act exempts such a person from infringement. As regards copyright in the broadcast itself, retransmission is permitted if the retransmission takes place in pursuance of a 'relevant requirement' (whether the transmission extends beyond the intended broadcast area or not).²⁴⁶ As regards copyright in the underlying works, retransmission in the same area as the broadcast is exempted by section 73(3). Where a cable retransmission goes beyond the area of reception of the broadcast, and the retransmission has been required under a 'relevant requirement', the Act provides that the retransmission of any work included in the broadcast is to be treated as licensed by the owner of copyright, subject to the payment of a reasonable royalty by the person making the broadcast.

20 MISCELLANEOUS DEFENCES

20.1 NOTES OR RECORDINGS OF SPOKEN WORDS

As a result of changes introduced by the 1988 Act, it is now possible for a person who makes a speech to have copyright in the speech. This innovation gave rise to a concern that speakers would be able to use the new copyright to restrict people who record speeches (such as journalists) from making use of their recordings. To avoid this, section 58 provides that the copyright that vests in a person who makes a speech cannot be used to restrict the use of recordings made of their speech for the purpose of reporting current events, or recordings made for communicating to the public the whole or part of the work.²⁴⁷ For the defence to operate the recording must be a direct record of the spoken words, and the speaker must have not prohibited the recording of their speech.²⁴⁸

20.2 PUBLIC RECITATION

Section 59(1) provides that the reading or recitation in public by one person of a reasonable extract from a publicized literary or dramatic work does not infringe any copyright in the work so long as it is accompanied by a 'sufficient acknowledgment'.²⁴⁹ Section 59(2) provides that copyright in a work is not infringed where a recording or recitation covered by section 59(1) is included in a sound recording, or communicated to the public.²⁵⁰

²⁴⁵ CDPA s. 73(2)(b). Qualifying service means a regional or national Channel 3 service, Channel 4, 5, and S4C (both analogue and digital); the teletext service; and the television and teletext services of the BBC. CDPA s. 73(6).

²⁴⁶ CDPA s. 73(2)(a).

²⁴⁷ CDPA s. 58; cf. Info. Soc. Dir., Art. 5(3)(f) (which requires that the source, including the author's name, is indicated).

²⁴⁸ CDPA s. 58. ²⁴⁹ Defined in CDPA s. 178.

²⁵⁰ As long as the recording or communication consists mainly of material in relation to which it is not necessary to rely on CDPA s. 59. CDPA s. 59(2) may be justified by reference to Info. Soc. Dir., Art. 5(3)(o) on the basis that recitation is an 'analogue use'.

20.3 ABSTRACTS

Where an article on a scientific or technical subject is published in a periodical accompanied by an abstract indicating the contents of the article, it is not an infringement of copyright in the abstract or in the article to copy the abstract or issue copies of it to the public.²⁵¹ This provision does not apply, however, if or to the extent that there is a relevant licensing scheme certified under section 143 of the Act.²⁵² As no licensing scheme has been established in this area, the defence plays an important role in ensuring the circulation of scientific information.

20.4 DIFFICULTIES WITH IDENTIFYING AUTHORS

Where works are of unknown authorship, a fixed term of copyright replaces the normal *post-mortem* term.²⁵³ Similarly, in the case of films, where it is not possible to identify any of the persons by whom the calculation of the term of protection is normally made, a fixed term operates. In both situations the possibility arises that while a user may rely on the fixed term, the author may later become known. If so, the longer conventional term would apply.²⁵⁴ In order to ensure that this does not create problems, there is a defence to infringement where reasonable inquiry cannot ascertain the identity of any author of a work and it is reasonable to suppose that copyright has expired in the work.²⁵⁵

20.5 TIT-FOR-TAT COPYING

The courts have refused to enforce copyright because the claimant was involved in activities similar to the defendant. In *Express Newspapers v. News (UK)*, Browne-Wilkinson V-C refused to enforce the copyright owned by one newspaper against a competitor who copied a story. This was because the claimant newspaper had itself indulged in a similar act of appropriation.²⁵⁶ The judge explained that the claimant should not be allowed to 'approbate and reprobate'. This is sometimes referred to as the tit-for-tat defence. It is probably better seen, however, as an exercise of the court's judgment as to the balance of convenience in proceedings for an interim injunction, or as an exercise of the equitable discretion to refuse injunctive relief where the claimant has unclean hands. It is not a defence to an action for damages.

20.6 RIGHT OF REPAIR

As part of the general jurisdiction to refuse to enforce copyright where it would contravene public policy, the courts have sometimes treated a person as having a right to repair their property even though to do so would be a direct or indirect reproduction of a copyright work.²⁵⁷ This was taken furthest by the House of Lords in *British Leyland*

²⁵¹ CDPA s. 60(1). The retention of this defence might be justified on Info. Soc. Dir., Art. 5(3)(a) or (o) (for analogue uses).

²⁵² CDPA s. 60(2). ²⁵³ CDPA s. 12(3).

²⁵⁴ CDPA ss. 12(4); 13(4). Cf. CDPA 13(9) where there is no person.

²⁵⁵ CDPA ss. 57, 66A. The retention of this defence might be justified under Info. Soc. Dir., Art. 5(3)(o) (though this is confined to analogue uses).

²⁵⁶ [1990] FSR 359.

²⁵⁷ See Info. Soc. Dir., Art. 5(3)(l) (allowing exceptions relating to use in relation to repair of equipment).

v. Armstrong,²⁵⁸ where it was held that manufacturers were entitled to make spare parts for motor vehicles (even though to do so would be to indirectly reproduce the claimant's design drawings) so as to facilitate the repair of such vehicles. However, the defence enunciated in *British Leyland* has subsequently been qualified to such an extent that it is hard to imagine any situations where it might apply. In *Canon Kabushiki Kaisha*,²⁵⁹ Lord Hoffmann said that for the defence to apply it must be plain and obvious that the circumstances are unfair to customers and that the monopoly is anti-competitive. Soon after that decision, the scope of the repair defence was further restricted in *Mars v. Teknowledge*.²⁶⁰ There Jacob J held that the *British Leyland* defence could not be applied to claims for infringement of copyright in computer software or to rights in databases because those rights stemmed from exhaustive European statutory regimes.²⁶¹ The upshot of this is that the right of repair has effectively been abolished.²⁶²

²⁵⁸ [1986] RPC 279. ²⁵⁹ [1997] FSR 817. ²⁶⁰ [2000] FSR 138.

²⁶¹ *Mars v. Teknowledge* [2000] FSR 138 (the defence was unlikely to succeed unless the court can be reasonably certain that no right-thinking member of society would quarrel with the result).

²⁶² See G. Llewellyn, 'Does Copyright Recognize a Right to Repair?' [1999] *EIPR* 596, 599.

10

MORAL RIGHTS

1 INTRODUCTION

Once a work qualifies for copyright protection two distinct categories of rights may arise. In addition to the economic rights that are granted to the first owner of copyright, the 1988 Copyright Act also confers moral rights on the authors of certain works.¹

Moral rights² protect an author's non-pecuniary or non-economic interests.³ The 1988 Act provides authors and directors with the right to be named when a work is copied or communicated (the right of attribution), the right *not* to be named as the author of a work which one did not create (the right to object against false attribution), and the right to control the form of the work (the right of integrity). The moral rights recognized in the United Kingdom are more limited than the rights granted in some other jurisdictions where, for example, authors are provided with the right to publish or divulge a work, to correct the work, to object to the alteration or destruction of the original of a work, to object to excessive criticism of the work, and to withdraw a work from circulation on the ground that the author is no longer happy with it (because, for example, it no longer reflects the author's world view, or because the person to whom the economic rights in the work have been assigned has failed to exploit it).

Infringement of a moral right in the United Kingdom is actionable as a breach of a statutory duty⁴ and will result in an award of damages. The moral rights of integrity and attribution recognized under the 1988 Act last for the same time as the copyright in the relevant work. The right to object to false attribution is less extensive, only lasting for twenty years after the author's death.⁵ After the author's death, moral rights usually are

¹ See W. Cornish, 'Moral Rights under the 1988 Act' [1989] *EIPR* 449; R. Durie, 'Moral Rights and the English Business Community' [1991] *Ent LR* 40; J. Ginsburg, 'Moral Rights in a Common Law System' [1990] *Ent LR* 121; Copinger, ch. 11; Laddie *et al.*, ch. 27; P. Anderson and D. Saunders (eds.), *Moral Rights Protection in a Copyright System* (1992).

² The term 'moral rights' is derived from the French *droit moral*.

³ Ginsburg, 'Moral Rights in a Common Law System' [1990] 121. This does not mean that they cannot be used to secure economic benefits. The estate of French painter Maurice Utrillo has benefited considerably from the grant of the right to use Utrillo's name in relation to certain paintings. See J. Merryman, 'The Moral Right of Maurice Utrillo' (1993) 43 *American Journal of Comparative Law* 445; A. Dietz, 'The Artist's Right of Integrity under Copyright Law: A Comparative Approach' (1994) 25 *IIC* 177.

⁴ CDPA s. 103.

⁵ UK law also describes a further right, that of privacy in photographs, as a 'moral right': CDPA s. 85. We consider this briefly in Ch. 6. Breach of confidence may provide something akin to a divulgence right: see, e.g. *Prince Albert v. Strange* (1848) 2 *De G & Smith* 652 (1849) 1 *MacG CC* 25 (preventing unauthorized disclosure of previously unpublished artwork on grounds of common law copyright and breach of confidence).

exercised by their heirs,⁶ but in some countries may be enforced by executive bodies such as the Ministry for Culture.

The moral rights in the 1988 Act were introduced to give effect to Article 6 bis of the Berne Convention,⁷ which requires that members of the Union confer on authors the right of attribution and integrity.⁸ More specifically, it states that:

Independently of the author's economic rights, and even after the transfer of the said rights, the author shall have the right to claim authorship of the work, and to object to any distortion, mutilation or other modification of, or other derogatory action in relation to, the said work, which would be prejudicial to his honour or reputation.

Instead of replicating Article 6 bis verbatim, the British legislature chose to introduce a series of detailed statutory provisions, each of which contains a number of conditions, limitations, and exceptions.⁹ This has led commentators to suggest that the manner in which Article 6 has been implemented in the United Kingdom is 'cynical, or at least half-hearted'.¹⁰ Given that failure to give effect to Article 6 bis does not represent a ground of objection to the World Trade Organization,¹¹ it is unlikely that much will come of these complaints.

While moral rights have received a considerable amount of support,¹² particularly from creators, they have also been subject to a degree of criticism.¹³ At a general level, moral rights have been criticized for the fact that they are founded upon a romantic image of the author as an isolated creative genius who in creating a work imparts their personality upon the resulting work. Under this model, moral rights enable the author to maintain the 'indestructible creational bond' that exists between his or her personality and the work.¹⁴

⁶ The rights pass on death to the person nominated by testamentary disposition, or else to the person to whom copyright is being passed; otherwise they are to be exercised by personal representatives, CDPA s. 95(1). As an exception, the right against false attribution passes to the author's personal representatives: CDPA s. 95(5).

⁷ While various moral rights existed in the UK prior to 1989, it was widely believed that the protection was not sufficient to meet the criteria in the Berne Convention. The Gregory Committee (1952), Cmnd. 8662, paras. 219–26 had been reluctant to introduce such rights in 1956, anticipating difficulties in their drafting. The Whitford Committee, Cmnd. 6732, paras. 51–7, impressed by the form of their implementation in Dutch law, recommended their adoption in 1977. See G. Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 11.

⁸ These were introduced at the Rome Conference in 1928. See Ricketson, paras. 8.92–8.116. Art. 6 bis was in some ways a compromise. Durie tells us that the terms 'honour and reputation' were introduced in place of 'moral interests of the author' to satisfy objections of common law jurisdiction. Most importantly, Art. 6(2) left Union countries free to determine the conditions under which the rights were to be exercised. Durie, 'Moral Rights and the English Business Community', [1990] *Ent LR* 40; Ricketson, para. 8.98.

⁹ CDPA ch. IV. The criticisms are that the provisions do not implement Berne; do not improve the position of authors; are, in practical terms, ineffective; and neglect the essential characteristics of moral rights.

¹⁰ Ginsburg, 'Moral Rights in a Common Law System' [1990] *Ent LR* 121, 129.

¹¹ Cornish has suggested that the express recognition of moral rights may lay the foundation for less meagre treatment in future—particularly by penetrating judicial attitudes. Cornish, 'Moral Rights under the 1988 Act' [1989] *EIPR* 449.

¹² Although TRIPS requires member states to comply with Arts. 1 to 21 of Berne, it is notable that the agreement says that 'Members shall not have rights or obligations under this Agreement in respect of the rights conferred under Art. 6 bis of that Convention'.

¹³ Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 34 (opposition to moral rights has at times bordered on the hysterical).

¹⁴ Dietz, 'The Artist's Right of Integrity Under Copyright Law' (1994) 25 *IIC* 177, 182.

The notion of the romantic author, which has become unfashionable in the second half of the twentieth century, has been criticized because it presents an unrealistic image of the process of authorship. In particular, it has been criticized for the fact that it fails to acknowledge the collaborative and inter-textual nature of the creative process.¹⁵

Another criticism made about moral rights focuses on what is perceived as their foreign or alien nature.¹⁶ More specially, it has been suggested that moral rights, which have their origin in continental copyright systems,¹⁷ cannot be readily absorbed or transplanted into a common law system.¹⁸ Any attempt to do so will not only fail, it will also upset the existing copyright regimes.

Moral rights have also been criticized on the basis that they represent an unjustified legal intervention into the working of the free market. Such arguments highlight the fact that moral rights typically secure authors' interests at the expense of entrepreneurs, disseminators, and exploiters of copyright.¹⁹ Given this, it is not surprising that while authors' groups argue for further entrenchment of the rights (so that they are inalienable), the entrepreneurial interests lobby for further restrictions on the rights and their subjugation to voluntary market transactions.²⁰ Another criticism made of moral rights is that they prioritize private interests over the public interest. More specifically, it has been suggested that moral rights may inhibit the creation and dissemination of derivative creations, such as multimedia works and parodies.²¹ For example, if an author was to use their moral right of integrity to prevent the publication of a parody of their work, this would conflict with the right to free expression, and thus with broader public interests.²²

¹⁵ P. Jaszi, 'On the Author Effect: Contemporary Copyright and Collective Creativity' (1992) 10 *Cardozo Arts and Entertainment LJ* 293.

¹⁶ For a discussion of tension along such 'comparative' lines, see I. Stamatoudi, 'Moral Rights of Authors in England: The Missing Emphasis on the Role of Creators' (1997) 4 *IPQ* 478. For similar concerns see the Gregory Report. For a less caricatured approach, see G. Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 6.

¹⁷ The earliest French cases based moral rights on contract. However, by the end of the nineteenth century the courts recognized an artist's moral rights in their own right. For the French and German histories, see D. Saunders, *Authorship and Copyright* (1992), chs. 3 and 4. For a recent statement of the position in France, P. Dulian, 'Moral Rights in France through Recent Case Law' (1990) 145 *RIDA* 126. For an exhaustive (if dated) account, S. Stromholm, *Le Droit Moral de L'Auteur en droit Allemand, Française et Scandinave* (1966).

¹⁸ While historically, there have been those who have wished to confine copyright to the protection of an author's pecuniary interests, they have not in general succeeded. The Engravings Act of 1735, for example, was directed, in part, to protecting an engraver against 'base and mean' imitations. See *Gambart v. Ball* (1863) 14 *CB* (NS) 306; 143 *ER* 463 (submission that Engravings Acts could not be relied on to prevent photography on grounds that the Act's sole purpose was protection of reputation and quality, which was not diminished in a photograph, was rejected).

¹⁹ Moral rights have been characterized as limits on the 'right of the owner of the copyright to do what he likes with his own'. *Preston v. Raphael Tuck* [1926] *Ch* 667, 674.

²⁰ Dworkin, 'Moral Rights and the Common Law Countries', 5, 36 argues for 'a fair balance between the genuine moral interests of the author and the genuine economic interests of those using and exploiting copyright works', but his employment of the language of balance does not take the analysis very far.

²¹ G. Pessach, 'The Author's Moral Right of Integrity in Cyberspace—A Preliminary Normative Framework' (2003) 34 *IIC* 250 (proposing a 'liberal' approach to use of components of existing works in new digitized works by reference to whether the later work 'is identified as a work of the first author'); J. Gaster, 'Copyright and Neighbouring Rights in the European Information Society', in *Copyright in Multimedia: Papers from the Aslib Conference held on 19 July 1995* (1995).

²² See *Confetti Records v. Warner Music UK Ltd* [2003] *EMLR* (35) 790 (para. 161) (declining to 'read down' the integrity right to give effect to ECHR, Art. 10).

With these initial points in mind, we now turn to look at the moral rights which are recognized in the United Kingdom.

2 THE RIGHT OF ATTRIBUTION (OR PATERNITY)

The right of attribution or, as the statute prefers, the right of paternity is perhaps the most well known of all the moral rights recognized in the United Kingdom. In essence the right of attribution provides the creators of certain types of works with the right to be identified as the author of those works.²³ While the right of attribution cannot be assigned, as we will see, it can be waived. The moral right of attribution lasts for the same period of time as the copyright in the relevant work.

The right to be named as author of a work carries with it a number of symbolic, economic, and cultural consequences. The reason for this is that the name of the author performs a number of different roles: it facilitates the management of intellectual works (through indexes, catalogues, and bibliographies),²⁴ the channelling of royalties (for example from the Public Lending Right), the interpretation of the work (insofar as it provides a psychological or biographical history of the author), the celebration, reward, and sustainment of authorial talent or genius,²⁵ and the construction of the individual as the creator of an intellectual 'oeuvre'. In many cases, the right to be named as author of a work will often be unnecessary because it is in the interests of all the parties concerned in the exploitation of the work to attribute it. Where this is not the case, however, the right of attribution is potentially a very important right.

Before looking at the right of attribution in more detail, it should be noted that an author may be able to rely on a number of mechanisms other than the right of attribution to ensure that they are named as author. Publishing contracts, for example, will often contain terms dealing with attribution which may be enforced against a publisher²⁶ and possibly also against third parties who knowingly induce such breaches. In some circumstances, such a term might be implied into a contract.²⁷ The right to be named as author of a work may also be ensured by other means such as union power and industry standards.²⁸ The law of reverse passing-off might also be used to prevent another person from falsely claiming that they are the author of a work.

²³ Cf. the information protected by rules on 'rights management information' discussed in Ch. 13. For a detailed exploration of the inter-relation between moral rights and protection of rights management information, see J. Ginsburg, 'Have Moral Rights Come of (Digital) Age in the United States?' (2001) 19 *Cardozo Arts and Entertainment LJ* 9; S. Dusollier, 'Some Reflections on Copyright Management Information and Moral Rights' (2003) 25 *Col J L & the Arts* 377.

²⁴ See R. Chartier, 'Figures of the Author', in Sherman and Strowell.

²⁵ A link is frequently drawn between the right to be named and the ability to gain a reputation and make an income as an author or artist. See *Tolnay v. Criterion Film Productions* [1936] 2 *All ER* 1625.

²⁶ *Ibid.* (breach of contractual stipulation to give author of a screenplay credit was held to give rise to claims for damages for loss of advertising and publicity which would enhance the author's reputation in the future).

²⁷ *Miller v. Cecil Film Ltd* [1937] 2 *All ER* 464 (implying term that credit should not be given to person other than the plaintiff author, but not implying a term that the plaintiff should be mentioned).

²⁸ See D. Read and D. Sandelson, 'Credit Where Credit's Due' [1990] *Ent LR* 42.

2.1 SUBSISTENCE OF THE RIGHT OF ATTRIBUTION

In order for the right of attribution to arise it is necessary to show two things. First, it is necessary to show that the work in question is the type of work that the right applies to. Second, it is also necessary for the right of attribution to have been asserted.²⁹ We will deal with each of these requirements in turn.

2.1.1 Relevant works

The right of attribution is only granted to the creators of a limited number of works. More specifically, the right is only recognized in relation to original literary, dramatic, musical, and artistic works, and in films. In the case of literary, dramatic, musical, and artistic works the right is granted to the author of the work. In the case of films, the right of attribution is granted to the director.³⁰

Within these general categories, a number of specific types of works do not give rise to a right of attribution. The right of attribution does not arise in relation to works made for the purpose of reporting current events. Nor does it apply to contributions to a newspaper, magazine or periodical, or an encyclopedia or similar work.³¹ These exceptions, which are difficult to reconcile with the Berne Convention, reflect government concessions to the lobbying power of the newspaper and other publishing industries. The objections were informed by fears that the need to name the author of a work would interfere with the prompt delivery of news.³² It was also feared that in enabling an author of a news story to be named, it would undermine the image of the news as being objective and neutral.

The 1988 Act also states that the right of attribution does not apply to computer programs,³³ computer-generated works,³⁴ typefaces,³⁵ and works protected by Crown or similar copyright.³⁶ No satisfactory policy-based justification has been given for denying authors of computer programs or typefaces a right of attribution.

2.1.2 The requirement of assertion

The right of attribution does not arise until it has been asserted.³⁷ Even if it has been asserted, in an action for infringement of the attribution right the courts take into account any delay in asserting the right when considering remedies.³⁸ The imposition of the

²⁹ The requirement of assertion and the rules governing who is bound by an assertion have the effect that the attribution right occupies a grey area between property rights and rights *in personam*. In many cases, third parties will be bound by the attribution right whereas an author who was forced to rely on contract law might not succeed.

³⁰ For such works created prior to 1 Aug. 1989, see COPA, Sched. 1, para. 23(2)–(3) (the right applies: except in the case of a film made before that date; and other works where the author died before that date; or where the author had assigned the copyright before that date).

³¹ CDPA s. 79(6).

³² Laddie *et al.*, para. 27.14; Copinger, para. 11–34.

³³ TRIPS Art. 10 states that computer programs shall be protected as literary works under the Berne Convention. Thus while TRIPS Art. 9 does not require that members apply Art. 6 bis, it seems (somewhat counter-intuitively) that Art. 10 requires that Art. 6 bis be applied as regards computer programs.

³⁴ Perhaps on the ground that such works do not fall within Berne that is a Union for the protection of the rights of authors: Berne Art. 1.

³⁵ CDPA s. 79(2). Typefaces are probably within the scope of Art. 2(7), which requires members only to protect such works by copyright if they do not offer protection as designs and models. Typefaces also fall under the remit of the Vienna Convention.

³⁶ CDPA s. 79(7). Perhaps justified because of Berne Art. 2(4).

³⁷ CDPA s. 78(1).

³⁸ CDPA s. 78(5).

requirement of assertion is said to be justified because Article 6 bis merely requires members of the Union to confer on authors the right 'to claim' authorship.³⁹ However, it has been suggested that such an interpretation is unsustainable given that Article 5(2) of the Berne Convention requires that an author's 'enjoyment and exercise of these rights shall not be subject to any formality'.⁴⁰ As the TRIPS agreement does not require that Article 6 bis of Berne be implemented, the merits of these arguments are unlikely to be tested before the WTO.⁴¹

In general, the right can be asserted in one of two ways. First, when copyright in a work is assigned, the author or director includes a statement that asserts their right to be identified.⁴² Second, the right may be asserted by an instrument in writing signed by the author or director. The form of assertion has an important impact on the extent to which third parties are bound to comply with the right.⁴³ If the first mode of assertion is chosen, it binds the assignee and anyone claiming through them, whether or not they have notice of the assertion. If the second mechanism is employed, however, the assertion only binds those who have notice of the assertion. The former is consequently the more effective mode of assertion. There seems to be no reason why an author or director should not use both methods or make a number of assertions.

Two additional modes of assertion exist in relation to artistic works.⁴⁴ First, the right will have been asserted if the artist is identified on the original, copy, frame, mount, or other attachment when the artist or the first owner of copyright parts with possession of the original.⁴⁵ Such an assertion binds anyone into whose hands the original or copy comes (including borrowers and purchasers), whether or not the identification is still present or visible.⁴⁶ If the work is exhibited in public thereafter, the artist should be named.⁴⁷ Second, the right may be asserted by the inclusion of a specific statement to that effect in a licence that permits copies of the work to be made.⁴⁸ This kind of assertion binds the licensee and anyone into whose hands a copy made in pursuance of the licence comes, whether or not they have notice of the assertion.⁴⁹

2.2 INFRINGEMENT

The attribution right provides that when the work is dealt with in certain ways, that authors and directors have the right to be identified as author of the work. In order for the right of attribution to be infringed, it is necessary to show that:

- (i) the author has not been properly identified;

³⁹ The requirement of assertion also helps to overcome some of the problems that may arise in tracing authors, Laddie *et al.*, para. 27.10.

⁴⁰ See Ginsburg, 'Moral Rights in a Common Law System' [1996] *Ent LR* 121, 128.

⁴¹ It has been argued that 'the assertion requirement will have to go when the legislation is amended and that such an amendment is already overdue'. I. Stamatoudi, 'Moral Rights of Authors in England' (1997) 4 *IPQ* 478, 504.

⁴² This may be difficult because the author need not be a party to such an assignment, for example, where they are not first owner. But, in such circumstances, if there is an assertion, it does not seem to matter that the author was not party to the assignment.

⁴³ CDPA s. 78. ⁴⁴ See 491 Hansard (HL) cols. 346–56. ⁴⁵ CDPA s. 78(3)(a).

⁴⁶ CDPA s. 78(4)(c). ⁴⁷ Described as 'ill-drafted' by Copinger, para. 11–25.

⁴⁸ CDPA s. 78(2)–(3). ⁴⁹ CDPA s. 78(4)(d).

- (ii) the work has been dealt with in circumstances where attribution is required; and
- (iii) none of the defences or exceptions applies.

2.2.1 Nature of the identification

For the attribution right to be infringed, it is necessary to show that the author has not been properly identified. In order to be properly identified, the name of the author must appear in or on each copy of the work in a clear and reasonably prominent manner.⁵⁰ Where it is not appropriate for the name of the author to appear on each copy of the work, the name must appear in a manner which is likely to bring their identity to the notice of a person acquiring a copy of the work.⁵¹ So long as the name becomes apparent during its use, there does not seem to be any need for the author to be named in a way which can be ascertained prior to acquisition of the copy.⁵² Thus, an author of a book might be named on the inside of the work. Where a performance, exhibition, showing, broadcast, or cable transmission is involved, the author has the right to be identified in a manner likely to bring their identity to the attention of a person seeing or hearing the communication. Where the relevant work is a building, the identification should be visible to persons entering or approaching the building.⁵³

If in asserting the right of attribution, the author specifies that a pseudonym, initials or some other form of identification such as a symbol (as the Artist-formerly-known-as-Prince requires) be used, then that form of identification should be adopted.⁵⁴ Otherwise any reasonable form of identification may be used. It is not clear whether the attribution right gives rise to a right of anonymity, which may be valuable in raising public curiosity about the work and in protecting the author from vilification or criticism. However, it seems unlikely from the wording of the provisions that if an author made it clear that they wanted the work to be published anonymously, that this would be treated as the particular form of identification that had to be used.

2.2.2 Circumstances where attribution is required

The right to be identified as author or director of a work only arises when the work is dealt with in certain ways. While the particular circumstances in which the right arises varies depending upon the type of work in question, in all cases the right applies whether the act is carried out in relation to the whole work or a substantial part thereof.

An author of *literary or dramatic work* has the right to be identified whenever copies of the work are published commercially, or the work is performed in public or broadcast.⁵⁵ This means, for example, that the author of a play has the right to be named when copies of the play are sold in bookshops or the play is performed in public. Similarly, the writer of a filmscript has the right to be named when videos are sold to the public or the film is broadcast on television (but not, it seems, on rental copies).⁵⁶ The right applies equally to adaptations of the work: so the author of a French novel has the right to be named on copies of an English translation.

⁵⁰ CDPA s. 77(7).

⁵¹ CDPA s. 77(7)(a).

⁵² Copinger, para. 11–16.

⁵³ CDPA s. 77(7)(b).

⁵⁴ CDPA s. 77(8).

⁵⁵ CDPA s. 77(7)(a).

⁵⁶ Although the practice of renting copies of films in plain packaging is common, this does not depend upon the absence of a right of attribution in relation to rental: for in such cases, the director of a film or the author of other works included therein will usually be identified in the film credits.

Songwriters are treated slightly differently. The author of the music or lyrics of a song has the right to be named on commercial publication of copies of the song—such as the issue of songbooks, sound recordings or films containing a recording of the song. However, the right of attribution given to the author of a song does not extend to circumstances where the song is performed in public or broadcast.⁵⁷ This limitation, often dubbed the disc-jockey exception, was introduced so that disc-jockeys and broadcasters would not have to name the songwriters when songs are played at discotheques or broadcast. It thus allows them to continue the current practice whereby only the name of the recording artist is mentioned.⁵⁸

Where a right of attribution relates to an *artistic work*, the artist has the right to be identified where the work is published commercially, is exhibited in public, or where a visual image of it is broadcast or included in a cable transmission. If an artwork is filmed, the artist should be identified when copies of the film are issued to the public or if the film is shown in public. The 1988 Act also specifies that the creator of a building, sculpture, or work of artistic craftsmanship should be named where ‘copies of a graphic work representing it, or of a photograph of it’ are issued to the public.⁵⁹ The author of a work of architecture has the right to be identified on the building as constructed. If a series of buildings are made, however, the architect only needs to be identified on the first building to be constructed.

The director of a *film* has the right to be identified whenever the film is publicly shown, broadcast or included in a cable service. The director also has the right to be named on copies of the film, but not (it seems) where the films are rented.

2.2.3 Exceptions

A number of exceptions and qualifications are placed upon the scope of the right of attribution by the 1988 Act. The right of attribution is constrained by section 79(3) which provides that if the employer or copyright owner authorized reproduction, etc. of the work, then the right does not apply.⁶⁰ It has been suggested that this exception can be explained on the basis that as an employer has paid for the creation of the work, they should have complete freedom to exploit it. It is also said that they should not be required to keep detailed records of who contributes to a collaborative work.⁶¹ In so far as the right of attribution plays a role in the establishment of an author’s or artist’s reputation, the link between authorship and livelihood is less important when the creator is employed.

The 1988 Act also provides that the right of attribution will not be infringed where the act in question amounts to fair dealing for the purpose of reporting current events by means of a sound recording, film, broadcast, or cable programme.⁶² The 1988 Act also provides that the attribution right is not infringed where the work is incidentally included

⁵⁷ CDPA s. 77(2), (3).

⁵⁸ This was so even though there was no specific obligation to do so. However, WPPT, Art. 5 now confers moral rights on the performers of ‘live aural performances or performances fixed in phonograms’.

⁵⁹ CDPA s. 77(4).

⁶⁰ CDPA s. 79(3).

⁶¹ Laddie *et al.*, para. 27.12.

⁶² CDPA s. 79(4)(a). This corresponds with CDPA s. 30(2)–(3), which require ‘sufficient acknowledgment’ in cases of fair dealing for reporting current events by other means, such as in newspapers. The effect is that the fair-dealing defences parallel the moral rights provisions: fair dealings where acknowledgment is required but not provided are likely to be infringements of both the copyright and the author’s moral right.

in an artistic work, sound recording, film, broadcast, or cable programme.⁶³ Exceptions also exist where the work is used for the purposes of examinations, parliamentary or judicial proceedings, and government inquiries.⁶⁴

Further exceptions to the right of attribution exist in relation to works that lie at the interface between design law and copyright law. The defences to infringement of copyright granted by sections 51 and 52 of the 1988 Act also apply to infringement of the attribution right. Consequently, if a person makes an article to a design document, there is no need to obtain the permission of the copyright owner, or to name the author of the design. This is also the case where twenty-five years has elapsed since an artistic work has been industrially applied. Such a time limitation fits awkwardly with the broader conception of moral rights as the personal rights of the artist.

2.2.4 Waiver

Finally, it should be noted that an author can waive his or her right of attribution.⁶⁵ Waiver of the right of attribution, which is relevant for activities such as ‘ghost writing’, is discussed in more detail below in the context of the integrity right.

3 THE RIGHT TO OBJECT TO FALSE ATTRIBUTION

The right to object to false attribution is the oldest of the United Kingdom’s statutory moral rights.⁶⁶ Re-enacted in section 84 of the 1988 Act, this right is effectively the flip side of the attribution right: the right of attribution provides authors with the right to be named upon works which they have created, whereas the right to object to false attribution provides individuals with the right *not* to be named on works which they have not created.⁶⁷ Unlike the right of attribution, the right to object to false attribution applies whether or not the claimant is an author. The right to object to false attribution applies to persons⁶⁸ wrongly named as the authors of literary, dramatic, musical, and artistic works and as the directors of films.⁶⁹ The right of false attribution only lasts for twenty years after the death of the person who is falsely said to be the author.

⁶³ CDPA s. 79(4)(b).

⁶⁴ The right of attribution applies to cases which would not infringe copyright because they amount to cases of fair dealing for purposes of criticism or review. However, because a finding of fair dealing requires ‘sufficient acknowledgment’ of the author, most cases of fair dealing will not infringe the moral right of attribution. These provisions relate to Berne Art. 10, which is intended to protect the author’s attribution right: see Gregory Committee, para. 42.

⁶⁵ CDPA s. 87(2).

⁶⁶ CDPA s. 84(6) re-enacts CA 1956, s. 43 which, in turn, was an expansion to literary, dramatic, and musical works of Fine Art Copyright Act 1862, s. 7(4). Gregory Committee, para. 225. CDPA, Sched. 1, para. 22. The general transitional provision of the 1988 Act states that no act done before 1 Aug. 1989, is actionable as a violation of these moral rights, but preserves causes of action previously arising under s. 43 of the 1956 Act for violating the right against false attribution of authorship.

⁶⁷ For discussion of whether the Berne Convention implicitly requires recognition of such a right see Ricketson, para. 8.105 (suggesting Berne does not cover the case where an author is seeking to deny rather than establish their authorship).

⁶⁸ *Clark v. Associated Newspapers* [1998] 1 All ER 959, 964. According to Lightman J, the section confers a personal or civic right (at 965).

⁶⁹ The provision does not contain the usual exceptions for computer programs or computer-generated works, so that while the author of a program has no right to be named, a person who is not the author of a program has the right not to be named as its author.

The right is infringed by a person who issues copies of a work to the public, or exhibits in public an artistic work on which there is a false attribution (rather than by the person who makes the false attribution). The right can also be infringed by a person who performs, broadcasts, or shows the work and who knows that the attribution is false. Section 84(5) also provides for infringement where certain commercial acts are done with the knowledge that the attribution is false.⁷⁰

Whether a work has been attributed to the wrong person depends on ‘the single meaning which the . . . work conveys to the notional reasonable reader’.⁷¹ There is no need for the complainant to prove that the attribution actually caused them any damage.⁷² Examples of situations where the right has been violated include the attribution of a newspaper article to a member of the public written by a journalist but based on conversations between the two,⁷³ and a newspaper parody of a politician’s diaries (see Fig. 10.1).⁷⁴ In another decision, an author’s work was held to be falsely attributed when it was attributed to the author after having been substantially added to by another person without their consent.⁷⁵ On this basis, it seems that a replica of a painting that included the signature of the original artist could be said to be falsely attributed, since the replica painting would not be solely made by the original artist.⁷⁶ In the case of artistic works, a special provision extends the right to object to false attribution to circumstances where the work has been altered, even if that alteration only amounts to a deletion of part of the work. This would be the case, for example, where a detail is cut from a broader canvas and sold as an unaltered original.⁷⁷ The right would also be infringed where a black-and-white drawing was colourized.⁷⁸

The right to object to false attribution of authorship is supplemented by various non-statutory causes of action, such as the action for passing off or defamation.⁷⁹ Under the former, a person can complain where a work is misrepresented as being by the claimant,

⁷⁰ CDPA s. 84(5), (6) (possessing or dealing with a falsely attributed copy of the work in the course of business or, in the case of an artistic work, dealing with it in business as the unaltered work of the artist when in fact it was altered after leaving their possession, knowing or having reason to believe that there is false attribution).

⁷¹ *Clark v. Associated Newspapers* [1998] 1 All ER 959, 968; [1998] RPC 261. ⁷² *Ibid.*, 965.

⁷³ *Moore v. News of the World* [1972] 1 QB 441 (finding false attribution in a newspaper article entitled ‘How my love for the Saint turned sour by Dorothy Squires’, written in the first person by journalist on basis of conversations with Squires). It is not altogether clear whether the work was falsely attributed because Squires had not written the words, or because she had not spoken them. In the light of the changes in the 1988 Act, which confer copyright on spoken words, it seems that a verbatim account by a journalist of a speech should not be treated as having been falsely attributed to the speaker.

⁷⁴ *Clark v. Associated Newspapers* [1998] 1 All ER 959; [1998] RPC 261.

⁷⁵ *Noah v. Shuba* [1991] FSR 14 (finding no false attribution of 17 words added to passage extracted from the plaintiff’s work, since these words did not constitute a work, but that there was false attribution of the extract as a whole as attributed solely to the plaintiff). In effect the plaintiff succeeded in protecting his right to endorse the defendant’s services, and thus indicates a potential usefulness in the context of ‘personality merchandising’.

⁷⁶ *Preston v. Raphael Tuck* [1926] Ch 667 (replica with no signature would not be falsely attributed).

⁷⁷ CDPA s. 84(6) (introduced in response to a complaint of this sort by the English painter Landseer). For discussion of the extent of such alterations see *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (alteration must be material in the senses that it might affect the credit and reputation of the artist).

⁷⁸ *Ibid.* (in a case where colour was taken to be a very important element).

⁷⁹ Indeed, Fine Art Copyright Act 1862, s. 7(4) was described as ‘a kind of statutory prohibition against what is commonly known as a passing off of the goods of one person as the goods of another’: *Carlton Illustrators v. Coleman* [1911] 1 KB 771, 779.

On the historic day Tony Blair made his Commons debut as Prime Minister, Alan Clark found himself in the ignominious position of sitting on the Opposition benches. PETER BRADSHAW imagines how the great diarist would record the event

It's wonderful to be back in the old place

Tuesday 6th May

Albany

Well, the Tory political landscape is a smoking ruin.

But as the dawn comes up, and Blair's Messerschmitts drone away over the horizon, I am delighted to report that the smart shops and elegant terraces of Kensington and Chelsea are unscathed. The only vote I seem to have lost is that of Michael Winner, the film director, who cut up rather rough over my comments about his house in this Diary.

We are in a mess, though, and every revolting little BBC functionary and Guardian scribbler with a colleague or homosexual "partner" on the New Labour benches is gloating.

Little Major has mumbled something about the show being over and it being time to leave the stage. This apparently was a phrase he learned at his father's knees as the old boy, wearing smeared make-up and floppy-toed clown shoes, hid in his dressing room with the lights off while the angry audience demanded their money back.

We have now started a spastic "leadership contest", which has about as much political significance as the election of a refreshments secretary in a suburban golf club. Heseltine is *hors de combat*, and while he was delirious with pain-killers on his hospital bed, his lady wife Anne typed out his withdrawal statement, then gripped his writing hand and wrote out his signature underneath. I'm not sure how he took the news of his standing down.

Clarke is standing for the collaboration with Kohl faction, Michael Howard is running on his iron-fist-in-the-iron-glove ticket, apparently with fresh-faced, apple-cheeked young Hague as his supporter, an arrangement toasted over champagne earlier this evening.

No one seems to be begging me to stand.

Wednesday 7th May

Albany

Morning

Hague has dumped.

His clique of admirers encouraged him to think of himself as the Young Pretender, and he is believing this publicity whole-heartedly. So the engagement is broken off.

Now Dorrell is courting the bore vote and Redwood's candidacy is gravely damaged by the support of *The Times*.

A complete shower. I am going to the Commons.

House of Commons

Evening

Extraordinary.

In the Commons I saw what appeared to be a crocodile of schoolchildren in the Central Lobby, moving unimpeded into the Chamber. When I complained, someone explained that this was the New Labour intake, all polytechnic lecturers, media folk and trades union press officers, with their electronic pagers dutifully turned off, and the person at their head barking instructions was little Mandelson — although what he knows about Parliament could be written on the back of a stamp.

It is *marvellous* to be back in the House; I simply can't believe it has been five years, although it was *very* strange to see the sides reversed. I couldn't get used to the through-the-looking-glass effect — I felt dizzy and disorientated and had a slight nose bleed.

We were in opposition when I first arrived in '74, when Ted Heath was Leader and it was a disgraceable shock to see that he is *still here*, Sir Edward Heath, Father of the House, still pompous and slow-witted — visibly briding when Gwyneth Dunwoody, in her speech proposing dear Betty Boothroyd as Speaker, called him "Mr" Heath.

Later I was strolling towards the Strangers Bar, whistling a lively air, when I came across a *very* pretty girl in tears. "What's the matter?" I asked. The dear little thing gulped and pouted and said: "It's my first day. I'm lost..." I twinkled, like Alec d'Urberville. "Never mind," I said, proffering a hanky. "It's easy for a secretary to get lost on her first day." She turned on me, her beautiful eyes flashing angrily. "I am the New Labour Member for Watford!" she shouted, and ran off down the corridor.

But she still has my handkerchief — an excuse to get back in touch!

How have I existed out of this place?

Fig. 10.1 Alan Clark's Secret Political Diary

Source: Reproduced by kind permission of the *Evening Standard*.

when it is in fact the work of the defendant.⁸⁰ In *Ridge v. English Illustrated Magazine* the defendant published a story that they attributed to the plaintiff, a well-known author, which in fact had been written by a grocer's assistant from Bournemouth.⁸¹ The court instructed the jury to find the publication to be defamatory if 'anyone reading the story would think that plaintiff was a mere commonplace scribbler'.⁸²

4 RIGHT OF INTEGRITY

The right of integrity is one of the most important of the innovations in the 1988 Act. The moral right of integrity lasts for the same time as the copyright in the relevant work. The right of integrity is the right to object to derogatory treatment of a work, or any part of it. The basis for this authorial prerogative is that the artist, through the act of creation, has embodied some element of their personality in the work that ought to be protected from distortion or mutilation.⁸³ In some cases, this carries with it the corollary that the artist feels some degree of responsibility for the work.⁸⁴ The desire to protect the reputation of authors was also a factor used to support the right.

4.1 SUBSISTENCE OF THE RIGHT

As with the other moral rights recognized under the 1988 Act, the right of integrity is given to the author of a literary, dramatic, musical, or artistic work and the director of a film.⁸⁵ It does not apply to computer programs nor to computer-generated works.⁸⁶ With respect to computer programs, the exclusion is justified on the basis that it may be necessary to alter, debug, improve, or modify a program to render it suitable to achieve its

⁸⁰ Passing off requires a claimant to demonstrate not merely a misrepresentation, but also the existence of goodwill and likelihood of damage. It is broader than s. 84 in that s. 84 relies on a single meaning, whereas a misrepresentation can be established in passing off in circumstances where a substantial or large number of consumers are likely to be misled. See *Clark v. Associated Newspapers* [1998] 1 All ER 959.

⁸¹ *Ridge v. English Illustrated Magazine* [1911–16] MacG CC 91.

⁸² See also *Marengo v. Daily Sketch* (1948) 65 RPC 242 (a cartoonist called KIM succeeded in a passing off action against another cartoonist using the name KEM); *Samuelson v. Producers Distributing* [1932] 1 Ch (passing off by using similar title to play for film).

⁸³ A. Dietz, 'The Artist's Right of Integrity under Copyright Law', (1994) 25 IIC 177, 181. See also B. Ong, 'Why Moral Rights Matter: Recognising the Intrinsic Value of Integrity Rights' (2003) 26 Col JL & the Arts 297.

⁸⁴ This is the case, for example, with Stanley Kubrick's reaction to copy-cat violence (and the resulting media coverage) that followed the release of the film he directed, *A Clockwork Orange* (1971).

⁸⁵ CDPA s. 80(1). For such works created prior to 1 Aug. 1989, see Sched. 1, para. 23(2)–(3) (the right applies: except in the case of a film made before that date; and other works where the author died before that date; or where the author had assigned the copyright before that date). Colourization of pre-1989 black-and-white films would not infringe the moral right of integrity. See Laddie *et al.*, para. 27.21. However, insofar as the film consists of photographs of which the director is the author, colourization might incur liability on the basis of 'false attribution' under CDPA s. 84(6). Cf. *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (on Fine Art Copyright Act 1862, s. 7). This last caveat would not apply to films made after 1956.

⁸⁶ CDPA s. 81(2). See the discussion in relation to these exclusions from the right of attribution above as to whether this is compatible with Berne.

purpose.⁸⁷ The integrity right does not apply to a work made for the purpose of reporting current events,⁸⁸ to publications in newspapers, or collective works of reference such as encyclopedias.⁸⁹ In the latter case, the relevant publishers were keen to retain their power to edit or otherwise alter any submissions without having to consult contributing authors.⁹⁰

4.2 INFRINGEMENT OF THE RIGHT

In order for the right of integrity to be infringed, an author or director must be able to show that:

- (i) there has been a ‘derogatory treatment’ of the work;
- (ii) the work has been dealt with in circumstances where the author is protected from derogatory treatment;
- (iii) none of the exceptions apply; and
- (iv) the right has not been waived or the action consented to by the author.

4.2.1 Derogatory treatment

In order for an author or director to show that the right of integrity has been breached, it is necessary to show that there has been a ‘derogatory treatment’ of their work. Before looking at the meaning of ‘derogatory’, it is necessary to explore what the Act means when it refers to a ‘treatment’ of the work.

(i) *Treatment*. ‘Treatment’ of a work means any ‘addition to, deletion from, alteration to or adaptation of the work’. The concept of the work that is employed here is that of an autonomous artefact, which is neither born out of, tied to, or related to other works nor to its environment. Moreover, the work has its own internal integrity or logic (a beginning, middle, and end; a foreground, middleground, and background; line, shade, colour).⁹¹ For a treatment of the work to take place, it seems that the defendant must interfere with the internal structure of the work.⁹² This idea of treatment would, it seems, cover a situation such as in *Noah v. Shuba*⁹³ where seventeen words were added to the claimant author’s medical guide. It would also cover situations where a portion of a painting was cut from its original canvas and exhibited; a song was chopped up and inserted into a megamix,⁹⁴ a drawing was reproduced in reduced size or recoloured;⁹⁵ or a black-and-white film

⁸⁷ Cf. Copinger, para. 11–55 (observing that inept alterations to a computer program which are still likely to be regarded as the work of the original author . . . may be highly damaging to his reputation). But the right of integrity for the author of a computer program is limited even in France: Dietz, ‘The Artist’s Right of Integrity under Copyright Law’, (1994) 25 *IIC* 177, 184.

⁸⁸ CDPA s. 81(3).

⁸⁹ CDPA s. 81(4).

⁹⁰ See Copinger, para. 27–76 ff.

⁹¹ *Pasterfield v. Denham* [1999] *FSR* 168, 180. This structural approach is evident in the interpretation of the concept of ‘alteration’ under the Fine Art Copyright Act 1862, s. 7(4) in *Carlton Illustrators v. Coleman* [1911] 1 *KB* 771 and *Preston v. Raphael Tuck* [1926] *Ch* 667.

⁹² No indication is given as to the degree of significance to be attached to changing the ‘meaning’ rather than the structure, sequence, and organization of the work. Laddie *et al.*, para. 27.17 (actual physical treatment not as important as message).

⁹³ [1991] *FSR* 14.

⁹⁴ *Morrison v. Lightbond* [1993] *EMLR* 144.

⁹⁵ In *Tidy v. Trustees of the Natural History Museum* (1998) 39 *IPR* 501, 503 neither party disputed that a reduction was an alteration. Cases of alteration under Fine Art Copyright Act, s. 7(4) will be clear cases of

'coloured'.⁹⁶ In these cases the internal composition or structure of the work is changed.

The definition of treatment that is used in the United Kingdom is narrower than is employed in Article 6 bis of the Berne Convention that requires that the author be able to object to 'any . . . derogatory action' in relation to a work. The broader definition used in Berne seems to acknowledge that a treatment of a work can take place even though the composition or structure of the work is not altered. Importantly it suggests that a treatment of a work can take place where the meaning and significance of the work is affected. It has been suggested, for example, that the mere act of placing a work in a new context such as the hanging of a religiously inspired artistic work alongside a piece of erotic art would probably not amount to a treatment of a work under UK law. It would, however, amount to a treatment of the work under the Berne Convention.⁹⁷

In the absence of much case law, we can only speculate as to which of the following scenarios would be considered to be a 'treatment' under UK law: placing two written works side by side in a bound volume? Changing the title of a work? Placing a book in an offensive or vulgar dust jacket?⁹⁸ Placing a caption on the frame of a painting? Placing a caption beside a painting?⁹⁹ Placing a ribbon around the neck of a sculpture of a goose? Placing a sculpture designed for a particular location in a different location? Performing a song's lyrics to a different tune or adding different words to a song's music?¹⁰⁰ Performing a tragedy in a manner whereby it seems like a farce?¹⁰¹ Adding recordings of the claimant's music to a film of which they did not approve?¹⁰² Interrupting a film for advertising breaks?¹⁰³

The type of activities that will be considered to be a 'treatment' is further restricted by the fact that treatment is defined to exclude translations of literary and dramatic works, and arrangements or transcriptions of musical works involving no more than a change of key or register.¹⁰⁴ It is unclear why moral rights are deemed to be inappropriate here. One rather implausible explanation is that such acts never affect the internal structural or

'treatment': *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (colouring of drawing) and *Preston v. Raphael Tuck* [1926] Ch 667.

⁹⁶ *Huston v. Turner Entertainment* (1991) 23 IIC 702 (French Cour de Cassation) (injunction granted to prevent television broadcast of colourized version of 'Asphalt Jungle'). See B. Edelman, 'Applicable Legislation Regarding the Exploitation of Colourized Films' (1992) 23 IIC 629; J. Ginsburg, 'Colors in Conflicts' (1988) 36 *Journal of the Copyright Society USA* 810.

⁹⁷ Both Cornish (p. 313) and Dworkin and Taylor (p. 97) argue that to put an artistic work in a pornographic exhibition would not be a treatment.

⁹⁸ *Mosely v. Staley Paul & Co.* [1917–23] MacG CC 341 (where such action was held to be defamatory).

⁹⁹ *Pasterfield v. Denham* [1999] FSR 168, 180.

¹⁰⁰ In *Confetti Records v. Warner Music UK Ltd* [2003] EMLR (35) 790, the defendants had 'rapped' over the claimant's 'track' (which comprised an insistent instrumental beat accompanied by the vocal repetition of the word 'burning'). The defendant accepted that this was a treatment, but the judgment of Lewison J. leaves unstated what was 'treated'—the musical work by the addition of the rap, or the literary work comprising the repetition of a single word. A more thorough analysis would have been helpful.

¹⁰¹ Ricketson, para. 8.107.

¹⁰² *Shostakovich v. Twentieth-Century Fox Film Corp* (1948) 80 NYS (2d) 575 (failed). Apparently the claim was successful in France; *Société le Chant de Monde v. 20th Century Fox* cited in Durie, 'Moral Rights and the English Business Community' [1991] *Ent LR* 40, 42.

¹⁰³ T. Collova, 'Les interruptions publicitaires lors de la diffusion de films à la télévision' (1990) 146 *RIDA* 124.

¹⁰⁴ CDPA s. 80(2)(a).

composition of a work.¹⁰⁵ Another possible explanation is that these activities would amount to adaptations of the work and as such require the consent of the copyright owner.¹⁰⁶ However, it is clear that an inaccurate translation may have a negative impact upon an author of a literary work.¹⁰⁷ It may be that in order to minimize the incompatibility between UK law and Article 6 bis that the courts might treat an inaccurate or poor-quality translation as if it were not a 'translation' at all, thus falling outside the scope of the exclusion.¹⁰⁸

(ii) 'Derogatory'. Once it has been shown that there has been a treatment of the work, it is then necessary to show that the treatment was 'derogatory'. Section 80(2)(b) of the 1988 Act states that a treatment is derogatory if it amounts to a 'distortion' or 'mutilation' of the work; or if it is otherwise prejudicial to the honour or reputation of the author.¹⁰⁹

As yet there is little indication of what the 1988 Act means when it talks about the 'distortion' or 'mutilation' of a work.¹¹⁰ There appears, however, to be a growing (if surprising) consensus that in order for a work to be distorted or mutilated, the action must be prejudicial to the honour or reputation of the author.¹¹¹

The question of what the phrase 'prejudicial to honour and reputation' means was considered in the Canadian case of *Snow v. The Eaton Centre*.¹¹² Michael Snow, a sculptor of international repute, created a work entitled 'Flight-Stop' which he sold to a shopping complex in Toronto called the Eaton Centre. The work comprised sixty geese flying in formation. The Eaton Centre tied ribbons around the necks of the geese as a Christmas decoration. Snow argued that this was prejudicial to his honour and reputation (the Canadian Copyright Act being in similar terms to the British 1988 Act).¹¹³ Snow was adamant that his naturalistic composition was made to look ridiculous by the addition of the red ribbons, which he likened to the addition of earrings to the Venus de Milo. Snow's views were also shared by a number of well-respected artists and experts. Although the

¹⁰⁵ See Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 22.

¹⁰⁶ See P. Goldstein, 'Adaptation Rights and Moral Rights in the UK, the US and the Federal Republic of Germany' (1983) 14 *IIC* 43.

¹⁰⁷ See, e.g. the French case of *Leonide Zorine v. Le Lucernaire* [1987] *ECC* 54.

¹⁰⁸ There is authority that suggests that a 'translation' must be accurate: *Wood v. Chart* (1870) *LR* 10 *Eq* 193, 205; *Lauri v. Renad* [1892] 3 *Ch* 402.

¹⁰⁹ CDPA s. 80(1), (2).

¹¹⁰ In *Tidy v. Trustees of the Natural History Museum* (1998) 39 *IPR* 501, 503 it was accepted that a reproduction in reduced size is not a mutilation.

¹¹¹ *Confetti Records v. Warner Music UK Ltd* [2003] *EMLR* (35) 790 (para. 149–50); *Pasterfield v. Denham* [1999] *FSR* 168, 182; *Laddie et al.* (3rd edn.), para. 13.18; Copinger, para. 11–42; Ricketson, para. 8.107 (otherwise concepts of distortion and mutilation could lead to problems because they appear to be 'highly subjective'). *Snow v. The Eaton Centre* (1982) 70 *CPR* (2d) 105 (Canada) ('I am satisfied that the ribbons do distort or modify the plaintiff's work and the plaintiff's concern that this will be prejudicial to his honour or reputation is reasonable under the circumstances'). If this is right, then it is possible that highly distorting treatments, such as parodies, which may not be prejudicial to the author's reputation, do not infringe the integrity right. An alternative view is that distortions and mutilations are to be treated as *per se* prejudicial, and that prejudice need only be proved for lesser cases of 'treatment'. In *Tidy v. Trustees of the Natural History Museum* (1998) 39 *IPR* 501, 504 the submissions that the treatment was a 'distortion' was treated as an alternative to the submission that it was 'otherwise prejudicial'. The two views largely depend on differing interpretations of the words 'or otherwise', but also reflect disagreement as to interpretation of the Berne Convention itself: see Ricketson, para. 8.112.

¹¹² *Snow v. The Eaton Centre* (1982) 70 *CPR* (2d) 105 (Canada).

¹¹³ CDPA s. 12(7) RSC 1970 c. C-30.

Eaton Centre produced another artist to deny the claim, the Ontario High Court ruled for Snow and ordered that the ribbons be removed. In so doing the court indicated that so long as they were not irrational, the author's word on the matter would be sufficient. More specifically, O'Brien J said that the words 'prejudicial to honour and reputation' involved a certain subjective element or judgment on the part of the author, so long as it was reasonably arrived at.

In ascertaining what is meant by the phrase 'prejudicial to the honour or reputation of the author', as used in the 1988 Act, British courts have shown little inclination to follow the emphasis in the *Snow* case. In *Tidy v. Trustees of the Natural History Museum*,¹¹⁴ the cartoonist Bill Tidy gave the gallery of the Natural History Museum the right to exhibit a series of black-and-white cartoons of dinosaurs he had drawn. Tidy claimed that his right to integrity in the drawings had been violated when in putting the cartoons in a book the gallery reduced the size of the cartoons from 420 mm × 297 mm to 67 mm × 42 mm and added coloured backgrounds to the black-and-white originals. Tidy complained that the reductions had less of a visual impact, that the captions were unreadable, and that the process led to the inference that he had not been bothered to redraw the cartoons so as to ensure that they were suitable for publication in a book. In the High Court, Rattee J refused Tidy's application for summary judgment for breach of his right of integrity, explaining that he was far from satisfied that the reductions amounted to a distortion of the drawings. The judge also suggested that in order to find the gallery's treatment of the cartoons was prejudicial to Tidy's honour, it was necessary to have evidence as to how the public perceived the defendant's acts. Referring to *Snow*, Rattee J said that he would have to be satisfied that the view of the artist was one which is reasonably held, which 'inevitably involves the application of an objective test of reasonableness'.¹¹⁵ Without further evidence, Rattee J said he could not see how he could draw such a conclusion.

A county court judge has recently gone further and argued that for a treatment to be derogatory, 'what the plaintiff must establish is that the treatment accorded to his work is either a distortion or a mutilation that prejudices his honour or reputation as an artist. It is not sufficient that the author is himself aggrieved by what has occurred'.¹¹⁶ Applying that test the judge took the view that certain colour variations between the original and the artwork in question (the design of a brochure), the omission of trivial matter, and the reduction in size were not derogatory. The judge added that while the changes to peripheral matters were of the kind that 'could well be the subject of a Spot the Difference competition in a child's comic', it would be wrong to elevate such differences to a 'derogatory treatment'.

In a third UK case, *Confetti Records v. Warner Music UK Ltd*,¹¹⁷ Lewison J held that the claimant, Andrew Alcee (a member of the 'Ant'ill Mob'), had not made out a sufficient case for a finding of derogatory treatment where his garage track 'Burnin', which comprised an insistent instrumental beat accompanied by the vocal repetition of the word 'burning', had been superimposed with a rap by another garage act, 'The Heartless Crew' (the words of which were difficult to make out). The defendant accepted that this was a

¹¹⁴ *Tidy v. Trustees of the Natural History Museum* [1996] EIPR D-86; (1998) 39 IPR 501 (reductions of cartoons). See also Laddie *et al.*, para. 27.18 (court unlikely to treat author's own reaction as determinative).

¹¹⁵ *Tidy v. Trustees of the Natural History Museum* [1996] EIPR D-86; (1998) 39 IPR 501.

¹¹⁶ *Pasterfield v. Denham* [1999] FSR 168, 182.

¹¹⁷ [2003] EMLR (35) 790.

treatment, so the crucial issue was whether it was derogatory. The claimant had argued that it was, first, because the rap contained references to violence and drugs, by using phrases such as ‘mish mish man’, ‘shizzle (or sizzle) my nizzle’; and ‘string dem up one by one’, which was, according to the claimant, an ‘invitation to lynching’. Alternatively, it was argued that the rap affected the ‘coherence of the original work’. Lewison J rejected the claimant’s argument. First, he stated that the fact that the words were difficult to decipher militated against them being derogatory. Second, he noted that the meaning of the words which he described as being ‘in a foreign language’ could only be determined by way of expert evidence, and no such evidence had been offered. Third, Lewison J took the view that ‘string dem up’ was not necessarily an ‘invitation to lynching’, and could be heard as merely advocating the return of capital punishment. Most importantly, however, he rejected the claimant’s argument because he had failed to provide evidence of his honour or reputation. In the absence of such evidence, even by the complainant himself, the judge was not prepared to infer prejudice. Lewison J was confirmed in this view by the fact that the Ant’ill Mob itself utilized the imagery of gangsters. As regards the claim based upon the effect of the rap on the coherence of the song, Lewison J seems to have been strongly influenced by indications that the song was written as a background for rapping, and that the Ant’ill Mob’s own mixes added rapping over the whole track.

Despite these decisions, it is still unclear how derogatory treatment will be construed in the UK. In particular, there is still some uncertainty as to whether the question of whether a treatment is prejudicial to the honour or reputation of an author is to be judged from an objective or subjective standpoint. Under UK law one would expect that the notion of reputation used in this context would be similar to that which is employed in defamation law.¹¹⁸ If this were the case, one would expect that the question of whether or not conduct was prejudicial to an author’s reputation should be judged from the viewpoint of right-thinking members of society (that is, objectively).

While ‘reputation’ is a familiar concept in British law, the same cannot be said for ‘honour’. If ‘honour’ is taken to refer to what a person thinks of themselves (and is thus similar to the Roman law concept of *dignitas*), it would seem that prejudice to honour might well involve a strong subjective element.¹¹⁹ This distinction might be important where a defendant parodies the claimant’s work in such a way that a member of the public would be unlikely to find that the claimant’s reputation was harmed because they would not believe the parody to be the claimant’s work.¹²⁰ Nonetheless, the claimant might nevertheless feel offended.

4.2.2 Circumstances where the author is protected from derogatory treatment

The right of an author or a director to object to, or prevent, the derogatory treatment of their work only arises when the work or copies thereof are dealt with in certain ways (section 80). While these acts vary according to the category of work involved, basically they arise where someone communicates, disseminates or otherwise renders the

¹¹⁸ Ricketson, para. 8.110 (explaining that these terms were preferred to the wider concept of ‘moral or spiritual interest of the author’).

¹¹⁹ Laddie *et al.*, para. 27.18 (honour refers to integrity as a human being). This is consistent with the Report of Michael Plaisant at the Brussels Conference revising Berne: see Ricketson, para. 8.110.

¹²⁰ Copinger, para. 11–46.

derogatory treatment available *to the public*. As a result of this requirement, the right to integrity is not a right to prevent destruction or spoliation of the work itself.¹²¹

In relation to *literary, dramatic, and musical works* the right to object to derogatory treatment is infringed when a derogatory treatment of the work is published commercially, performed in public, or communicated to the public. It is also infringed when copies of a film or sound recording embodying the derogatory treatment are issued to the public.¹²² In turn, with an *artistic work*, the right is infringed by a person who publishes commercially or exhibits in public a derogatory treatment of the work. The right is also infringed where someone communicates to or shows in public a film including a visual image of a derogatory treatment of the work.¹²³ Further acts are specified in relation to works of architecture, sculpture, and works of artistic craftsmanship.¹²⁴ In relation to *films*, the right of integrity is infringed whenever a derogatory treatment of the film is shown in or communicated to the public, or when copies of a derogatory treatment of the film are issued to the public.¹²⁵

In addition, it should be observed that certain acts may amount to a secondary infringement of the right of integrity.¹²⁶ This will occur where in the course of business a person possesses, sells or lets for hire, offers or exposes for sale or hire, exhibits in public, or distributes an article which they know or have reason to know, is an infringing article. In this context an infringing article means a work or a copy of a work which has been subjected to a derogatory treatment and has been, or is likely to be, the subject of any of the infringing acts in section 80. Secondary infringement only takes place if the dealing prejudicially affects the honour or reputation of the author. If the treatment itself is derogatory, it seems likely that the dissemination of the treatment will prejudice the honour or reputation of the author.

4.2.3 Exceptions and defences

A number of exceptions are placed upon the right of integrity by the 1988 Act. It is notable that there are no defences for fair dealing, nor for the design-copyright interface. Some commentators have therefore suggested that the defences are 'unduly narrow'.¹²⁷

In the case of works created by employees,¹²⁸ the right of integrity does not apply to anything done by or with the authority of the copyright owner except in two particular situations.¹²⁹ The general rule, then, is that an employer can deal publicly with derogatory treatments of an employee's work. In these circumstances, the authorial prerogative gives way to the demands of the employer for control.¹³⁰ This means, for example, that artists

¹²¹ Such a right has been accepted in the US Visual Artists Rights Act. At the Brussels Revision of Berne, one of the *voeux* adopted said that countries introduce such a prohibition. See Ricketson, para. 8.109.

¹²² CDPA s. 80(3)(a), (b). These are identical to the occasions on which an author has a right to be identified under CDPA s. 77(2): no differentiation is made for songs as in CDPA s. 77(3).

¹²³ CDPA s. 80(4)(a). ¹²⁴ CDPA s. 80(4)(c). ¹²⁵ CDPA s. 80(6).

¹²⁶ CDPA s. 83. ¹²⁷ Laddie *et al.*, para. 27.27.

¹²⁸ CDPA s. 82. The same rules apply to works in which Crown or parliamentary copyright subsist and works in which copyright originally vested in an international organization under CDPA s. 168.

¹²⁹ The provision refers to the circumstance where works vested in the director's employer by virtue of CDPA s. 9(2)(a). The Copyright and Related Rights Regulations 1996 (SI 1996/2967) amended the provisions on film authorship and ownership without altering the reference in CDPA s. 82(1)(a).

¹³⁰ G. Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 27, 'the exceptions and qualifications to moral rights . . . were attempts by the UK Government to modify . . . moral rights in the light of business reality'.

who work for a design firm will not be able to use their right of integrity where their artworks are modified either by their employer or by other employees. Similarly, an employee who drafts a report will not be able to restrain publication of a version that is rewritten on behalf of the employer.

The exceptions to this general position relate to circumstances where the author/employee has been, or is to be, identified. Although the law privileges the needs of the employer and the copyright holder, those needs do not extend as far as continuing to name the employee where the work has been modified. Consequently, 'the right does not apply to anything done in relation to such a work by or with the authority of the copyright owner unless the author or director (a) is identified at the time of the relevant act, or (b) has previously been identified in or on published copies of the work'.¹³¹ However, even in these cases, the right of integrity is not infringed if there is 'sufficient disclaimer'. That is, if there is a clear and reasonably prominent indication that the work has been subjected to treatment to which the author or director has not consented.¹³²

There are also special defences to infringement of the moral right of integrity. In particular, the right is not infringed by anything done for the purpose of avoiding the commission of an offence (such as under the Obscene Publications Act 1959 or the Public Order Act 1986), complying with a duty imposed by or under an enactment, or in the case of the British Broadcasting Corporation 'avoiding the inclusion in a programme broadcast by them of anything which offends against good taste or decency or which is likely to encourage or incite crime or to lead to disorder or to be offensive to public feeling'.¹³³ In the case of a work of architecture, the right is limited. Where an architect is identified on a building which is subject to derogatory treatment, the architect is given the right to have their identification as architect removed from the building.¹³⁴

4.2.4 Waiver

Although the moral right of integrity, like the other moral rights, cannot be assigned, section 87 of the 1988 Act ensures that they can be waived by way of agreement in writing. Such a waiver can be specific or general, and relate to existing or future works. It has been said that most 'objective observers would acknowledge that such wide waiver provisions, both in theory and in practice, erode significantly, indeed drive a coach and horses through the moral rights provisions'.¹³⁵ This is because the industries that exploit copyright works tend to require authors and artists to enter standard form contracts which require them to waive the integrity rights. Even the requirement that waiver be in writing, which provides authors with some residual protection, is compromised by section 87(3) which states that the general law of contract and estoppel applies to informal waiver.

4.3 ALTERNATIVE AND RELATED FORMS OF RELIEF

If an argument based upon the moral right of integrity fails (or is dubious), an author may fall back on protection under common law or contract.¹³⁶ If a work is presented as being

¹³¹ CDPA s. 82(2).

¹³² CDPA s. 178.

¹³³ CDPA s. 81(6).

¹³⁴ CDPA s. 80(5).

¹³⁵ G. Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 28. R. Durie, 'Moral Rights and the English Business Community', 40, 48, calls this 'the greatest compromise in the Act'.

¹³⁶ For a general review of the common law analogues to moral rights, see G. Dworkin, 'Moral Rights: The Shape of Things to Come' [1986] *EIPR* 329.

that of the author but has been substantially altered, that representation could be defamatory. Thus, in *Humphries v. Thompson*,¹³⁷ a newspaper which serialized a story but changed the names of the characters and omitted and added other text was found by the jury to have defamed the author by damaging her literary reputation. Similarly, in *Archbold v. Sweet*,¹³⁸ an author successfully claimed that his reputation had been injured by the publication of a further edition of his work that contained a number of errors. The new edition would have been understood by the public to have been prepared by the author.¹³⁹

Similarly, there are many situations in which an author may be able to rely on contract rather than moral rights to object to derogatory treatment of their work. In *Frisby v. BBC*,¹⁴⁰ the claimant had written a play for the BBC, and the BBC deleted a line 'My friend Sylv told me it was safe standing up . . .' on the ground that it was indecent.¹⁴¹ The complex contractual arrangement prohibited the BBC from making 'structural' as opposed to 'minor' alterations to the script. The court decided the contract was a licence and considered whether the alteration was structural or minor. The claimant alleged that it was essential to and even the climax of the play. In contrast, the BBC claimed it was a minor deletion. Goff J granted the injunction, saying that the author 'prima facie would appear to be the best judge' of the significance of the line.

4.4 THE FUTURE: HARMONIZATION

In April 2000, the Commission published a report on moral rights which had been prepared for it by Alain Strowel, Marjut Salokannel, and Estelle Derclaye. The existing Directives have steered carefully clear of the hornets' nest that moral rights stirs up, particularly in the UK. However, one would have thought that however politically difficult it may seem, there would be clear justification (in terms of the Internal Market) for activity in this sphere.¹⁴² The Report, entitled *Moral rights in the context of the exploitation of works through digital technology*, reveals substantial differences in the detail of the laws of member states on moral rights, but little dissatisfaction with the lack of harmonization. In part, this reflects the similar (high) levels of moral right protection in most European countries. The Report also revealed that one of the reasons for the failure to press the Commission to undertake harmonization was fear that the effect of the legislative process would be to allow the influence of exploiters and the 'copyright countries' to lower the level of protection. Not all commentators share the view espoused by the study.¹⁴³

¹³⁷ [1905–1910] *MacG CC* 148. Interestingly, the jury rejected the defendant's arguments that any moral obliquity would attach to them, as publishers, rather than the author.

¹³⁸ [1832] 172 *ER* 947. See also *Springfield v. Thame* (1903) 89 *LT* 242.

¹³⁹ See also *Ridge v. English Illustrated Magazine* [1911–16] *MacG CC* 91 (where the defendant published a story attributed to the plaintiff, a well-known author, but in fact written by a grocer's assistant from Bourne-mouth, the judge instructed the jury to find defamation if 'any one reading the story would think that plaintiff was a mere commonplace scribbler').

¹⁴⁰ *Frisby v. BBC* [1967] *Ch* 932.

¹⁴¹ The defence under CDPA s. 81(6)(c) means that claimant in *Frisby v. BBC* would still have to rely on contract.

11

EXPLOITATION AND USE OF COPYRIGHT

1 INTRODUCTION

As we saw in Chapter 6, copyright law confers on the first owner of copyright certain exclusive rights over the exploitation of the work. These rights are capable of being exploited in a number of ways. Most obviously, the rights enable copyright owners to control the sale of both the original work as well as copies of the work. By selling copies of the work at an appropriate level, the copyright owner can ensure they reap a reward sufficient to cover the costs of producing the work. This form of exploitation is most important where the market for the work is limited and the owner can easily be linked to a purchaser: as with sales of limited editions of engravings or prints by artists.

If copyright law only gave the first owner the right to exploit the work, its economic usefulness would be limited. Few authors have the financial ability, economic acumen, or the willingness to print and sell their own works. Consequently, the law treats copyright as a form of personal property that can be exploited in a number of ways, most importantly by being assigned or licensed.¹ This enables copyright to be transferred to those who can exploit it most profitably. Where this occurs the terms of the transfer-agreement will determine how the profits are to be distributed. As we will see, such transfers are often arranged in advance of the creation of a work, for example, where an author enters into a publishing contract prior to writing a book. Moreover, since some works can be exploited in a variety of ways, there may be many assignments, licences, and sublicences. With new forms of exploitation, the web of transactions is becoming ever more complex.

One of the characteristics of the intangible property protected by copyright is that it has the potential to be used by a range of different people at the same time. For example, a sound recording can be played in numerous public places (such as pubs, shops, and discos) simultaneously. As works are increasingly exploited in this manner, the role of licensing in exploitation becomes ever more important. In some situations the copyright owner will be able to license the use of the work by the customer directly (for example where sale of software on a floppy disc includes a licence to make the immaterial copies necessary to run the program). In other cases, owner-user relations are mediated by an agency or collective management systems.

In this chapter, we look at the ways copyright can be exploited or transferred. After exploring the most important forms of exploitation, *viz.* assignment and licensing, we

¹ CDPA ss. 1 and 90(1).

consider the transfer of copyright in the case of mortgages, bankruptcy, or death. In turn, we examine situations where the rights are exploited by way of compulsory licence. We also consider briefly techniques for exploiting works that rely on the use of technological measures, techniques which are becoming increasingly important in the digital environment. (These are examined in detail in Chapter 13.) Finally, we look to the important role that collecting societies play in copyright exploitation.

Before doing so, it is important to note that assignment, licence, or other transaction in relation to copyright is only effective if the purported assignor was able to enter the transaction. Consequently, it is important to ensure that the person entering the transaction is the owner, or is appropriately authorized by the owner.² In this respect it should be noted that where there are joint proprietors, all of them must consent to any transaction (if it is to effect more than their own share).³ Particular difficulties may arise in relation to transactions made by minors. These are only inviolable if made for the benefit of the minor. If not so made, on reaching majority, the minor can have such a transaction set aside.⁴

2 ASSIGNMENT

An assignment is a transfer of ownership of the copyright. As a result of an assignment, the assignee stands in the shoes of the assignor and is entitled to deal with the copyright as he or she pleases. Although an assignment may be for payment of a royalty (as well as for a fixed sum), the nature of the assignment means that if the assignee transfers the copyright to a third party, the transferee takes free of the personal agreement to pay royalties.⁵

It is not necessary that all of the copyright be assigned.⁶ In contrast with other types of property, where the tendency is to simplify transfers by limiting the ways in which the rights can be divided up, copyright law takes a liberal view of what may be assigned. In particular, copyright allows partial assignments by reference to 'times, territories and classes of conduct'.⁷ For example, an agreement to write a book might include an exclusive grant of all rights. In turn, the publisher might parcel out the exploitation of the work by way of hardback, paperback, newspaper serialization, audiotape, reprography, electronic distribution, dramatization, translation, as well as by being filmed.⁸ Restrictions that are geographical in nature are subject to EC rules, so that agreements that are intended to divide up the Common Market will be prohibited.⁹

In order for an assignment to be valid, it must be in writing and signed by or on behalf

² *Beloff v. Pressdram* [1973] RPC 765.

⁴ *Chaplin v. Frewin (Publishers)* [1966] Ch 71.

⁵ *Barker v. Stickney* [1919] 1 KB 121 (royalty clause not enforceable against subsequent assignees but only on the basis of contract against the initial assignee). See J. Adams, 'Barker v. Stickney Revisited' [1998] *IPQ* 113 (arguing that the case was wrongly decided, in particular, that the agreement constituted a charge); Copinger, para. 5–69 (discussing role of the doctrine of mutual benefit and burden).

⁶ CDPA s. 90(2).

⁷ *Kervan Trading v. Aktas* (1987) 8 *IPR* 583, 587.

⁸ See further Copinger, paras. 27.15–16. For consideration of the limits of such parcelling see Copinger, para. 5.87.

⁹ *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] 1 *ECR* I-2789. It seems, geographical restrictions may not be imposed so as to subdivide the UK: Copinger, para. 5.92. Cf. *British Actors Film Co. v. Glover* [1918] 1 KB 299.

of the assignor. It has been held that sufficient writing might be provided by an invoice or receipt.¹⁰ The assignment should identify the work concerned with sufficient clarity so that it can be ascertained, though the courts have admitted oral ('parol') evidence to assist in the process of identification.¹¹ No special form of words is required, so a transfer of 'all the partnership assets' will include a transfer of any copyright owned by the partnership.¹² Assignment of copyright is a distinct legal transaction and is not effected by mere sale or transfer of the work itself.¹³ Thus, if a person sells an original painting or manuscript, this (of itself) only transfers the personal property right in the chattel: the copyright remains with its owner.¹⁴ If a vendor wishes to transfer the copyright as well as the personal property in the chattel, this should be done explicitly.

Where an assignment is made orally, this will be ineffective *at law*. However, the general equitable rule that treats a failed attempt at a legal assignment as an oral contract to assign the interest will usually apply to attempted assignments of copyright. So long as there is valuable consideration, an oral contract of this nature will be specifically enforceable.¹⁵ Where this occurs a prospective assignee will be treated as the immediate equitable owner.¹⁶ While such an equitable owner may commence an action against an infringer and secure interlocutory relief, the legal owner needs to be joined as a party before final relief can be secured.¹⁷

A prospective copyright owner (usually an author) can also make assignments of future copyright. That is, they can assign the copyright in works not in existence at the time of the agreement.¹⁸ This will be useful, for example, where a painting is commissioned, or where a music publishing agreement is entered into before a songwriter creates the songs. However, it seems that the assignment of future copyright only operates where the agreement is for valuable consideration, since it is only in these circumstances that the assignee would be 'entitled as against the whole world'.¹⁹

An assignment does not need to be registered to be valid. Priority is determined by reference to rules as to first-in-time and bona fide purchase. In the case of legal assignments, the first transfer in-time has priority over claims deriving from subsequent purported transfers of the same rights. Assignments effective in equity will only be defeated at the hands of a later bona fide purchaser for value without notice of the earlier assignment.

2.1 PRESUMED TRANSFERS

Although transfer of ownership of copyright (or its component rights) is usually governed by contract, an important exception exists in relation to film production agreements. Where a contract concerning film production is concluded between an author and a film producer, the author is presumed to have transferred their *rental* right to the film

¹⁹ *Laddie et al.*, para. 13.6.

producer.²⁰ The presumption only operates in relation to authors of literary, dramatic, musical, and artistic works, and therefore does not apply to the director of a film. Moreover, the presumption does not apply to the author of a screenplay, dialogue, or music specifically created for and used in a film.²¹ The presumption is important in relation to the incorporation of pre-existing works in films, for example where the author of a novel agrees to their work being made into a film, or a musical composer agrees to their work being used in a soundtrack. The presumption can be rebutted by an agreement to the contrary, which it seems can be express or implied.

3 VOLUNTARY LICENCES

The powers conferred on the copyright owner are most commonly employed by the copyright owner giving licences to particular individuals permitting them to carry out specified activities. At a basic level a licence is merely a permission to do an act that would otherwise be prohibited without the consent of the proprietor of the copyright.²² A licence enables the licensee to use the work without infringing. So long as the use falls within the terms of the licence,²³ it gives the licensee an immunity from action by the copyright owner.

In contrast with an assignment (where the assignor relinquishes all interest in the copyright), the licensor retains an interest in the copyright. Indeed, no proprietary interest is passed under a licence,²⁴ though in most circumstances a licence is binding on successors in title of the original grantor of the licence.²⁵ While the essential nature of a licence is that it is a mere permission, copyright law has developed a sophisticated repertoire of ways whereby a work might be licensed.

Licences may take many forms: from a one-off permission through to an exclusive licence. Licences may be limited geographically, temporally, and in relation to specific modes of exploitation of the copyright work. A licence, even if non-exclusive, may (if the parties so choose) grant the licensee a right of action against infringers.²⁶ For the most part, the choice of terms of a voluntary licence is up to the parties to determine. As such, they will depend on the needs, capacities, and wishes of the parties.

3.1 EXCLUSIVE LICENCES

Of the different forms of licence, perhaps the most significant is the 'exclusive licence'. An exclusive licence is an agreement according to which a copyright owner permits the

²⁰ CDPA s. 93A. Implementing Rental Rights Dir., Art. 2(6). See Copinger, para. 5.96.

²¹ CDPA s. 93A(3).

²² *British Actors Film Co. v. Glover* [1918] 1 KB 299; *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1997] AC 728, 735.

²³ Where a licensee breaches the agreement the question arises whether there is merely an action for breach of contract or for infringement of copyright: if the act is outside the scope of the licence, it is an infringement; if the breach relates to a condition precedent for the licence, the action will also infringe (*Miller v. Cecil* [1937] 2 All ER 464); moreover, if the breach is sufficiently serious to amount to a repudiation of the contract, this may be accepted by the copyright owner and an action will lie for infringement of copyright as regards subsequent acts.

²⁴ *CBS v. Charmingdale* [1980] FSR 289, 295.

²⁵ CDPA s. 90(4).

²⁶ CDPA s. 101A (added by SI 2003/2498).

licensee to use the copyright work. At the same time, the copyright owner also promises that they will not grant any other licences and will not exploit the work themselves. The legal consequence of this is that the licence confers a right in respect of the copyright *work to the exclusion of all others including the licensor*.²⁷ In some ways it is the intangible property's equivalent of a 'lease'.²⁸

While a bare licensee acquires the right not to be sued in relation to the acts set out in the licence, an exclusive licence confers on the licensee a 'statutory procedural status' that is equivalent to that of the proprietor.²⁹ One significant aspect of this status is that an exclusive licensee can sue infringers without having to persuade the proprietor to take action on their behalf.³⁰ Section 101(1) of the Act declares that an exclusive licensee has the same rights and remedies in respect of matters occurring after the grant of the licence as they would have if the licence had been an assignment. An exclusive licensee is given the same rights as a copyright owner and therefore has the right to bring proceedings in respect of any infringement of the copyright after the date of the licence agreement. Indeed, an action can be brought by both the copyright owner and an exclusive licensee: special provisions dealing with this situation are provided for in section 102. Exclusive licences of legal interests in copyright have to be in writing and signed by or on behalf of the assignor³¹ if the licensee wishes to take advantage of their statutory entitlement to sue for infringement.³² This is in contrast to a non-exclusive licence, which may be made orally, or in writing; and might be contractual or gratuitous, express or implied.³³

In practice, the grant of an exclusive licence can often be seen as equivalent to an assignment.³⁴ Consequently, publishers are often happy to be granted exclusive licences, rather than full assignments, by authors.³⁵ However, there are legal differences between an assignment and an exclusive licence. The first difference arises from the fact that an assignee becomes the copyright owner, whereas an exclusive licensee does not. One of the consequences of this is that the remedies available to the exclusive licensee are limited to those that arise in an action for breach of contract against the copyright owner.³⁶ The second difference is that the rights given to licensees are less certain and can be defeated at the hands of a purchaser in good faith for valuable consideration and without notice (actual or constructive) of the licence.³⁷ Third, an exclusive licensee may not always be able to grant a sublicense or transfer the benefit of their licence to a third party.³⁸ Fourth, the rights of an exclusive licensee may be limited by implied terms.³⁹ Finally, a copyright

³⁹ e.g. in *Frisby v. BBC* [1967] *Ch* 932 (in the case of a licence the courts will more readily imply a term limiting the right of the licensee to alter the work).

owner who wishes to permit another to exploit a work can retain better protection by giving an exclusive licence.⁴⁰

In some situations it may be difficult to determine whether a copyright owner has assigned their copyright or merely granted an exclusive licence.⁴¹ Whether a person is an exclusive licensee or an assignee is a matter of construction of the agreement. The question to be answered is whether there is evidence from which an intention to assign can be inferred. The way in which the parties describe the arrangement will be influential, but not conclusive. Use of terms such as 'grant', 'sole', and 'exclusive rights', and provisions on 'retransfer' if the copyright is not exploited, might indicate an assignment.⁴² However, these descriptions may be ignored if the tenor of the agreement suggests that in substance there is an exclusive licence.⁴³ Occasionally, the courts have treated provisions concerning 'royalties' as suggesting that the arrangement is an exclusive licence rather than an assignment.⁴⁴ But in all cases the court should beware of linguistic formalism and infer the intention from all the circumstances of the case.⁴⁵

3.2 IMPLIED LICENCES

In certain circumstances the court may see fit to imply a licence to use a copyright work. However, for the most part the courts have been reluctant to imply licences from the circumstances.⁴⁶ The courts have indicated that they will normally only imply terms into a contract in two situations. First, terms may be implied 'by law' where they are 'inherent in the nature of the contract'. Second, terms may be implied to fill gaps left in an agreement where it is necessary to provide 'business efficacy'.

In relation to terms implied by law, the court is primarily concerned with whether the contract falls into a particular class. However, that is not to say that the express terms are not important. This is because they may indicate that the parties did not intend the normal incidents of the particular class of contract to apply. The classes subject to such implied terms are not closed, and change with the necessities of the times. An Australian case has indicated that one such class of contracts concerns 'persons who prepared written material with the intention it should be used in a particular manner'.⁴⁷ The specific terms to be implied in this class then depend upon the 'particular purpose'. For example, where an architect provides a client with plans, the court might determine the purpose (and the extent of any licence) from the fee when viewed in the light of the standard professional fee scales operating.⁴⁸

Where courts are implying terms for particular cases, they look at the existing express terms and the surrounding context. It has been said that for a term to be implied it must be reasonable and equitable, necessary to give business efficacy to the contract, obvious

⁴⁸ *Blair v. Osborne & Tompkins* [1971] 2 QB 78; *Stovin-Bradford v. Volpoint Properties* [1971] 1 Ch 1007. Note that *Ray v. Classic FM* [1998] FSR 622 treats these cases as ones where the terms are implied to give business efficacy to the agreement.

that it 'goes without saying', capable of clear expression, and must not contradict any express term of the contract.⁴⁹ In *Ray v. Classic FM*, Lightman J found that an expert in music who had been engaged by a radio station to catalogue its musical recordings had copyright in the catalogues produced. While the terms of his consultancy were silent as to copyright, the court held that the expert had granted an implied licence to the radio station to do certain things with the catalogues. The scope of the licence was limited to use of the material for the purpose of broadcasting in the United Kingdom. This meant that claimant's copyright was infringed where copies were made for the purpose of exploiting the database abroad.

In less formal circumstances (particularly those involving consumers) the courts have tended to react flexibly in deciding the nature and extent of any licence. For example, it seems that sale of an article to a consumer usually carries with it a licence to repair that article,⁵⁰ and sale of a knitting pattern might carry with it an implied licence to the effect that a person can make the pattern for domestic, but not commercial, purposes.⁵¹ Where the licence is claimed by a competitor who could have entered formal contractual arrangements but neglected to do so, the courts have been reluctant to imply a licence.⁵²

4 MORTGAGES

Like other forms of property, copyrights may be mortgaged, that is assigned as security for a debt.⁵³ This can be a useful technique that enables copyright owners to raise funds. It has proved to be particularly common where a work is extremely expensive to create, as in the film industry.⁵⁴ In this context, a mortgage is achieved by way of an assignment of the copyright by the copyright owner to the mortgagee-lender. This is subject to a condition that the copyright will be reassigned to the mortgagor when the debt is repaid (or as the law describes this as 'redemption'). In addition, it is important that the assignment reserves for the mortgagor a right to continue selling copies of the work. This is probably best achieved by reservation of an exclusive licence.⁵⁵ Alternatively, copyright can be used as security by way of a charge. While in these circumstance there is no assignment, the chargee gains certain rights over the copyright as security.⁵⁶ In the case of both forms of security, the transaction must be in writing and signed by the parties in order to be valid. A mortgage or charge by a company of its copyright must also be registered within

⁴⁹ *BP Refinery (Westernport) v. Hastings Shire Council* (1977) 16 ALR 363, 376 (Lord Simon of Glaisdale) approved in *Ray v. Classic FM* [1998] FSR 622.

⁵⁵ On the importance and delicacy of the terms of the licence, see M. Antingham, 'Safe as Houses? Using Copyright Works as Security for Debt Finance' (Mar. 1998) 78 *Copyright World* 31, 32.

⁵⁶ Copinger, para. 5–189 seems to suggest that such a charge is equitable. While there is no definitional provision equivalent to PA 1977 s. 130, there seems no reason why it should not be legal.

twenty-one days of its creation with the Registrar of Companies, if it is not to be void against the liquidator or a creditor of the company.⁵⁷ It has been assumed that a mortgagee has the powers of proprietor and is therefore able to sue infringers,⁵⁸ even though as a matter of practice, the borrower is in a better position to police infringements.

‘Securitization’ is the name given to a further way of raising money from copyright. Typically, securitization involves selling tranches of (that is defined periods of entitlement over) the rights to royalties accruing from bundles of copyrights: a well-known example being in relation to David Bowie’s recordings. The reasons for creating these financial arrangements stem from the desire to exchange future possible income for immediate capital, which will facilitate reinvestment of that capital in new projects.⁵⁹

5 TESTAMENTARY DISPOSITIONS

Because copyright is personal property, it is capable of passing on the death of the proprietor either by will or according to the rules applicable in cases of intestacy. In the case of the death of one co-proprietor, because they hold copyright as tenants in common (rather than as joint tenants), the share of the deceased co-owner passes along with the rest of their estate.⁶⁰ A presumption exists that where a work is unpublished and a bequest is made of a document or other material thing containing the work, the bequest is to be construed as including the copyright in the work, insofar as the testator was the owner of the copyright immediately before their death.⁶¹

6 BANKRUPTCY

On bankruptcy, copyright passes to the trustee in bankruptcy by operation of law.⁶² Where a court appoints a receiver to sell assets, both the appointment and subsequent sales by the receiver will involve transfers ‘by operation of law’ and therefore need not comply with the formalities requirements.⁶³ Where copyright has been assigned in return for a royalty and the assignor subsequently becomes insolvent, that right also vests in the bankrupt’s trustee in bankruptcy.⁶⁴

7 COMPULSORY LICENCES

In general, if a copyright owner chooses not to allow others to exploit their rights then that is their prerogative.⁶⁵ However, in certain exceptional circumstances the law will intervene to force the copyright owner to license the work and require the ‘licensee’ to pay a fee. The

basis for such action varies, as do the conditions on which the law permits the copyright owner's wishes to be overridden. Provisions of this nature are called 'compulsory licences'. In jurisprudential terms, the grant of a compulsory licence converts a property rule into a liability rule.⁶⁶ Compulsory licences can arise either as a result of various provisions in the 1988 Act or through the general powers of the European Commission. We discuss these in turn.

7.1 COMPULSORY LICENCES IN THE UNITED KINGDOM

Compulsory licences are only made available under British law in a small number of specifically defined circumstances. One reason why so few non-voluntary licences exist in the United Kingdom is because the international standards that the United Kingdom has committed itself to are generally incompatible with compulsory licensing. Although two provisions of the Berne Convention explicitly permit the national legislature to grant such licences,⁶⁷ the United Kingdom no longer takes advantages of these provisions. As regards rights in phonograms, the Rome Convention intimates that compulsory licences may only be imposed as regards the broadcasting or communication to the public of phonograms.⁶⁸

Another reason for the limited circumstances in which compulsory licences are available is that they are generally seen as unsatisfactory when compared with full property rights. This is because in contrast to exclusive property rights, the existence and terms of compulsory licences require some administrative procedure, which is costly and time-consuming when compared to free-market negotiations. Critics of the compulsory licence also complain that the value of a licence can only ever be accurately determined by negotiations in the marketplace. It is also argued that compulsory licences unfairly deprive the copyright holder of the most significant element of their rights, namely the right to bargain.

There are no common characteristics that explain the circumstances in which compulsory licences are granted. In some cases they are granted in response to past practices of 'abuse', usually where that abuse either prevented the production of a product for which there was a clear demand or where the evidence showed that the copyright holder had imposed unjustifiable restrictive conditions. On other occasions, compulsory licences are granted where changes in the market conditions unduly strengthen the copyright owner's interest. This sort of consideration explains the introduction of compulsory licences where copyright had lapsed but has been revived by the Duration Regulations.⁶⁹ We will limit ourselves to looking at the TV Schedules and Needle-time Licences.⁷⁰

7.1.1 TV schedules

Prior to the Broadcasting Act 1990, the BBC and ITV refused to provide advance information about TV schedules. In so doing they blocked the production of comprehensive

⁶⁶ See further R. Merges, 'Contracting into Liability Rules: Intellectual Property Rights and Collective Rights Organizations' (1996) 84 *California LR* 1293.

⁶⁷ Berne Art. 11 bis(2); Berne Art. 13 (aka the 'mechanical licence'). Berne Art. 17 is not intended to permit any general system of compulsory licences but to cover such things as the maintenance of public order and morality. See Ricketson, para. 9.72.

⁶⁸ Rome Art. 12. Note also Art. 15(2).

⁶⁹ Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297), r. 24(1).

⁷⁰ See Copinger, ch. 29.

weekly television guides to compete with their own guides (*TV Times* and *Radio Times*).⁷¹ After a Monopoly and Mergers Commission Report,⁷² the Broadcasting Act 1990 placed specified broadcasters under a duty to supply publishers with the titles and times of programmes which were to be included in the broadcaster's service.⁷³ More significantly the 1990 Broadcasting Act also introduced provisions into the 1988 Act entitling publishers, once certain conditions are satisfied, to reproduce that information.⁷⁴ The scheme requires the publisher to attempt, in the first instance, to reach a negotiated licence. However, if that fails the publisher can apply to the Copyright Tribunal to settle the terms on which it can reproduce the schedules.⁷⁵ The Tribunal may make such order as it determines to be reasonable in the circumstances.⁷⁶

In *News Group Newspapers v. ITP*,⁷⁷ a number of publishers sought to clarify the amount that had to be paid where they used information about BBC and ITV schedules. The Copyright Tribunal said that its task was to promote the dissemination of information, rather than to protect the financial interests of the broadcasters as copyright owners.⁷⁸ Consequently the Tribunal held that the fee should reflect the costs to the broadcasters and the extent of use by the publishers. (This was calculated by reference to circulation and to the number of days for which the information was published, with a minimum set to ensure that the marginal costs of supply were met.) The Tribunal assessed the basic costs of the broadcasters at £125,000 each and the administrative costs at £200 per publisher. Consequently, it imposed a rate of 0.003p for each day multiplied by the circulation (with a £200 minimum per publisher).

One issue that has gone largely unnoticed is the impact that the Database Regulations may have on this compulsory licence. It seems that as a result of the Regulations, television listings will only be protected by the new *sui generis* right (see Chapter 13). The effect of this is likely to be that the compulsory licence is no longer available in relation to the listings, for no such licence is referred to in the Database Regulations. However, given previous ECJ case law, it seems unlikely that the television broadcasters would revert to their former practice of refusing such licences.

7.1.2 Use of sound recordings in broadcasts

From 1946 to 1990, the owners of copyright in sound recordings (through *PPL*) insisted that broadcasters should limit the amount of time that they spent playing their recordings (so called 'needle-time'). This was done to induce such broadcasters to employ their own musicians. A Monopoly and Mergers Commission Report concluded that these restrictions were an anti-competitive practice that adversely affected radio licensees and that it should be abandoned.⁷⁹ In response, the Broadcasting Act 1990 introduced provisions making a compulsory licence available against a licensing body which either imposes

⁷⁸ *Ibid.*, 186.

⁷⁹ MMC, *Collective Licensing: A report on certain practices in the collective licensing of public performances and broadcasting rights in sound recordings* (1988) (Cm. 530), esp. paras. 7.44, 7.48, 7.49.

restrictions on the total or proportionate time in which such recordings can be played,⁸⁰ or imposes unacceptable terms as to payment.⁸¹ The licence is confined to uses of 'sound recordings'. Consequently, the licence does not encompass musical works or associated lyrics embodied in the recording, which must therefore be the subject of a separate agreement with the owner of these rights.⁸²

The administration of the scheme parallels that dealing with the right to use information about TV programmes. After complying with certain procedural formalities,⁸³ the broadcaster may broadcast the recording. During this time, they are treated as if they had been granted a licence.⁸⁴ However, the broadcaster must comply with any reasonable condition imposed on them by the licensing body.⁸⁵ The Copyright Tribunal may make such orders as it deems to be reasonable in the circumstances. It has been held that the power to review the conditions of the licence does not enable the Tribunal to require the licensing body to grant related ancillary rights, such as the right to dub recordings,⁸⁶ to keep copies indefinitely,⁸⁷ or to provide other stations with copies of programmes compiled by the licensee.

The scope and operation of the needle-time licence can be seen in *AIRC v. PPL*,⁸⁸ where the Copyright Tribunal considered the effect of the removal of needle-time restrictions on the terms of licences between PPL and the AIRC. PPL sought a substantial increase in the rates that had been determined when airplay was restricted to nine hours per day. PPL argued that such an increase was justified by the huge increase in the applicant's use of its records since the rates were last set by the Tribunal. In rejecting PPL's argument for a substantial increase the Tribunal held that, whilst the amount of needle-time was a relevant consideration in assessing payment, on the facts, the abolition of needle-time had not only worked to the benefit of the broadcasters but also to the benefit of PPL.⁸⁹

7.2 COMPULSORY LICENCES ORDERED BY THE EC

Compulsory licences may also be made available by the European Commission if a copyright owner is found to have violated Article 82 EC (formerly Article 86 of the Treaty) which prohibits the 'abuse' of a 'dominant position'.⁹⁰ Until recently, the jurisprudence drew a distinction between acts relating to the existence of copyright which could not amount to breaches of Article 82 EC because they were assumed to fall within the protective shield of Article 295 EC (formerly Article 222 of the Treaty), and 'exercises' of copyright which might amount to abuses. It was therefore thought that a refusal to license a use

⁸⁰ CDPA s. 135A(5).

⁸¹ Introducing CDPA ss. 135A to 135G. Some minor amendments to these provisions were made by the Broadcasting Act 1996. These limitations are permissible under Rome Art. 12.

⁸² These will be administered in the main by the PRS.

⁸³ CDPA s. 135B. ⁸⁴ CDPA s. 135C(1).

⁸⁵ The Tribunal has held that a requirement that a licensee identify which programmes are supplied by third parties and the identity of the supplier is reasonable: *The Association of Independent Radio Companies v. Phonographic Performance* [1994] RPC 143, 188–9.

⁸⁶ That is to make a further copy of recorded music.

⁸⁷ *Phonographic Performance v. AEI Rediffusion Music* [1998] RPC 335, 358.

⁸⁸ *The Association of Independent Radio Companies v. Phonographic Performance* [1994] RPC 143.

⁸⁹ [1994] RPC 143, 183–4.

⁹⁰ I. Goraere, *The Use and Abuse of Intellectual Property Rights* (1996), 135–50.

of copyright, being an act pertaining to the existence of the right, could not amount to a violation of Article 82. That view became unsustainable after the Court of Justice's decision in *RTE and Independent Television Publications v. Commission* (known as 'The Magill case').⁹¹

The decision in *Magill* arose from the practice whereby the Irish broadcasting organization (RTE), who owned copyright in its television schedules, refused to license newspapers to publish TV listings in a weekly format. The effect of this was that the only weekly guides available were those issued separately by RTE and the other broadcasting organizations (BBC and ITV). As such, if a viewer wanted to plan their television viewing for the week ahead, they would have to purchase all three magazines. Magill, who proposed to publish a comprehensive guide, claimed that the refusal to license contravened Article 82. The Commission agreed and ordered the defendant to license the listings.⁹²

The Court of Justice, affirming the Court of First Instance's decision, held that the broadcasting organizations held a dominant position in the market for weekly television magazines.⁹³ The Court of Justice also agreed that the refusal to license was an abuse. The Court observed that the refusal to license an intellectual property right 'cannot of itself constitute abuse of a dominant position' but that 'the exercise of an exclusive right by the proprietor may, in exceptional circumstances, involve abusive conduct'.⁹⁴ The Court agreed with the Court of First Instance that this was a case of abuse, because there was a specific, constant, and regular potential demand on the part of consumers for comprehensive weekly listings, which was being unmet because the appellants would only offer their own partial weekly guides. There was no 'justification' for this behaviour related either to broadcasting or to the publishing television magazines. The consequence of the refusal to license was that the broadcasters reserved to themselves the secondary market of weekly television guides by excluding all competition on that market.

The Court of Justice emphasized the 'exceptional' nature of the circumstances where it would require intellectual property rights-owners to license their rights. Subsequent analysts have desperately sought to find the touchstone whereby the scope of *Magill* could be defined.⁹⁵ At its broadest, *Magill* appeared to suggest that where one person owns an intellectual property right which not only confers the exclusive power to control a primary market, but also some related/auxiliary market, and that right-holder refuses to supply the secondary market (or supplies it in some partial way), the Commission may order compulsory use of the intellectual property right. This might mean, for example, that a compulsory licence would be made available where a novelist refused to permit the making of a translation, or a playwright the staging of a play. At its narrowest, *Magill* could be confined to its own particular facts.⁹⁶

Subsequent case law—of the European Court of Justice, the Court of First Instance, and the English High Court—suggests that those who emphasized the narrowness of the scope

⁹¹ [1995] 4 CMLR 18. ⁹² *Magill TV Guide/ITP, BBC and RTE* (1989) OJL 78/43.

⁹³ [1995] 4 CMLR 18, 718 (para. 50). The ECJ's reasoning on this point has also been treated as less than fully satisfactory: T. Vinje, 'The Final Word on Magill' [1995] *EIPR* 297, 299. Subsequent commentaries have suggested that one distinguishing feature of *Magill* was that the dominance of RTE, ITV, and the BBC was in the provision of broadcasting services.

⁹⁴ [1995] 4 CMLR 18, 718 (para. 50).

⁹⁵ N. Jones, 'Euro-defences: *Magill* Distinguished' [1998] *EIPR* 352.

⁹⁶ R. Greaves, '*Magill* est Arrivé' [1995] *ECLR* 244, 245–6.

of application of *Magill* (to intellectual property rights) were probably correct.⁹⁷ In *Oscar Bronner v. Mediaprint*⁹⁸ (the facts of which did not concern intellectual property) the ECJ reiterated that all four factors mentioned in *Magill* must be present: there must be a refusal to supply material which is *indispensable* to another's business; that refusal must prevent the appearance of new products for which there is *potential consumer demand*; the refusal must *not be justified* by objective considerations; and the refusal must be *likely to exclude all competition in the secondary market*. The mere exercise of power from a primary market into a secondary market is clearly not sufficient.⁹⁹

Perhaps the most important of the four factors is that the material must be *indispensable* to the applicant's business. This can be seen from the Court of First Instance decision in *Tierce Labroke v. Commission*.¹⁰⁰ The case concerned a complaint by the proprietor of a chain of betting shops in Belgium to the effect that a refusal by the owner of rights in certain televised pictures of French horseraces to allow retransmission in the applicant's betting shop amounted to a breach of Article 82 EC (then Article 86 of the Treaty). The Court of First Instance held that there was no such abuse. It said that the relevant market in which the defendant had dominance was the retransmission of broadcasts of horse-races, and that the complainant's market was that of betting shops. However, while the refusal to license the complainant was an exercise of power from a primary market into a secondary market, the case differed from *Magill* in that the secondary market already operated and the refusal to license in no sense prevented the defendant from operating in it. Indeed, it already had the largest share of that market. The provision of pictures was not essential for the applicant's activity nor was the applicant proposing to introduce a new product for which there was 'specific, constant and regular potential demand on the part of consumers'.

The most recent discussion of Article 82 and copyright occurred in the *IMS Health* and *NDC Health* cases. The background to the cases concerned IMS's alleged dominant position in the German market for data services in respect of pharmaceutical products. Of particular interest to pharmaceutical firms was information about sales by wholesalers to pharmacies, since these give an indication of doctors' prescribing habits and thus enable the pharmaceutical companies to assess and respond to the effectiveness of their marketing to doctors. For privacy purposes, the data had to be collated to relate to at least three pharmacies. IMS (Intercontinental Marketing Services) Health produced sales data reports in Germany and had developed a geographical model for analysing the German pharmaceutical market—a so called 'brick structure', comprising 1,860 segments, which it used from January 2000. IMS suspected that two competitors (one a predecessor of NDC) were using its structure and brought an action for copyright infringement in the Landgericht Frankfurt. Interim injunctions were granted.¹⁰¹ In the light of the injunction, NDC sought a licence to use the 1,860 brick structure, offering an annual licence fee of about

⁹⁷ In *Phillips Electronics NV v. Ingman* [1999] FSR 112 Laddie J observed that *Magill* might not apply in the same way to all intellectual property rights. More specifically, he observed that in *Magill* 'what was being considered were the rights in a sub-species of copyright'.

⁹⁸ Case C-7/97 [1998] ECR I-7791. (Refusal by one newspaper to allow a competitor to utilize its home delivery service not an abuse of dominant position.)

⁹⁹ *Getmapping plc v. Ordnance Survey* (31 May 2002). ¹⁰⁰ Case T-504/93 [1997] ECR II-923.

¹⁰¹ Landgericht Frankfurt made a reference to the ECJ: Case C-418/01 (pending).

5,000 Euros. When that was refused, NDC lodged a complaint with the Commission alleging an infringement of Article 82.

In July 2001, the Commission adopted a decision ordering interim measures, pending further investigation. It held there was a reasonably strong *prima facie* infringement of Article 82. The Commission took the view that IMS occupied a dominant position on the market ‘for German regional sales data services’, which constituted a substantial part of the common market. According to the Commission, there was a *prima facie* case that by refusing to license NDC to use what was a ‘*de facto* industry standard’, IMS was abusing its dominant position. The Commission gave a broad interpretation to *Magill*¹⁰²—the critical factor being merely that the information was indispensable to the appearance of a new product on the market. The Commission did not treat as essential that this be a distinct product/market which the IPR holder did not offer and for which there was demand. There was no likelihood of competitors creating alternative structures, and simultaneously no justification for IMS’s refusal to licence use of the 1860 structure. Consequently the Commission ordered IMS to grant a licence.

IMS sought the annulment of the decision and suspension of the order, pending judgment in the main action, before the CFI.¹⁰³ To do so IMS needed to demonstrate ‘the subsistence of serious grounds for doubting the correctness of the Commission’s assessment’ either of the legal case or the risk of serious and irreparable harm.¹⁰⁴ The President suspended the Commission’s decision.¹⁰⁵ This was because there were serious grounds for doubting the correctness of the Commission’s decision. He observed that ‘there are a number of potentially important differences between the circumstances of [*Magill*] and those underlying the contested decision . . . The contested decision appears to turn upon a non-cumulative interpretation of the conditions regarded as constituting “exceptional circumstances” in *Magill*.¹⁰⁶ As far as the President was concerned the correctness of this ‘extensive interpretation’ of exceptional circumstances could only be determined in the main judgment. He explained that ‘[a]lthough the Commission’s interpretation may be correct, the existence of reasonable grounds for concluding that the “exceptional circumstances” envisaged by the Court of Justice in *Magill* . . . are concurrent cannot be excluded’. There was at the very least, a serious dispute regarding the correctness of the fundamental legal conclusion underpinning the contested decision. Consequently, there was a *prima facie* case justifying suspension of the order. (In fact, the President called it a strong *prima facie* case). Given the further finding that there was a real and tangible risk that the operation of the interim order cause serious and irreparable damage to IMS, the President held that the ‘balance of interests favours the unimpaired preservation of its copyright until judgment in the main action’.

The issues raised in *IMS* as to the scope of *Magill* are, of course, important (and further

¹⁰² *RTE and ITP v EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808.

¹⁰³ *IMS Health v Commission*, T-184/01 R [2002] 4 CMLR 58. In *NDC Health Corporation and NDC Health GmbH*, Case C-481/01P(R), NDC appealed against the order of the President of the CFI seeking to have the interim measures reinstated, claiming that the President took an illegitimate approach, substituting his own views for those of the Commission. The President of the Court, Rodríguez Iglesias, refused to allow the appeal. The strength (or lack thereof) of the legal pleas were relevant, and the other objections (largely turning on approach to review by the CFI) were unpersuasive.

¹⁰⁴ *IMS Health Inc v. Commission*, T-184/01 R [2002] 4 CMLR 58 (para. 73).

¹⁰⁵ *IMS Health Inc v. Commission*, T-184/01 R [2002] 4 CMLR 58. ¹⁰⁶ (para. 100).

guidance from the ECJ would be welcome). The broader the notion of exceptional circumstances is construed, the weaker the 'intellectual property rights'. Given that IPRs are generally regarded as justifiable (e.g. by reference to providing incentives to create), one would expect a narrower, rather than broad, interpretation to follow. The interim judgments of the CFI suggests just such a scepticism of the Commission's broad approach. This is consistent with the other cases. The Advocate General, Francis Jacobs, in his opinion in *Oscar Bronner* gave several reasons justifying a narrow approach to the interpretation and application of *Magill*. First, he observed that Community law endorses the right to choose one's trading partners and freely dispose of one's property, and incursions on those rights requires careful justification.¹⁰⁷ Second, he noted that the justification for Article 82 is to prevent distortion of competition so as to safeguard the interests of consumers, not to protect the position of competitors as such. Third, he observed that intellectual property rights are themselves limited so as to balance the interests of free competition with the need to provide incentives for research and development, and creativity. Because the process of balancing occurs at the stage of delineating the right, refusal to license should not—in the absence of other factors—constitute an abuse.¹⁰⁸

8 TECHNOLOGICAL MEASURES OF PROTECTION

As already mentioned, copyright works have been traditionally exploited by the manufacture and sale of duplicated copies (where the processes of manufacturing and distribution have been controlled by the copyright owner). In the light of the emergence of digital communication technologies, and digital reproduction, many copyright owners are concerned that continued use of such a traditional model of exploitation will expose them to undue levels of infringement. More specifically, there is a concern that if digital versions of works are made available, it will result in widespread unauthorized copying, particularly by individual users in private. Since these digital copies will be perfect, this is seen as a much greater threat than that previously posed by photocopiers, for example. Relying on copyright against widespread copying by individuals is not a realistic option. So copyright holders have sought techniques outside copyright to protect their interests: in particular through the use of so-called 'technological measures of protection'. That is, they have sought to make available works only when they have additional protection systems through technologies which prohibit access, encrypt or control copying. A familiar example of such a technology is the encryption of satellite broadcast signals and the provision to authorized subscribers to the service of cards that enable the use of the decoding technology. A second is the 'content scrambling system' used to protect DVDs and ensure they can only be used on authorised players with CSS descrambling software. A third example is that of the 'Series Copyright Management System' introduced in the 1980s by record companies which allowed for the making of first-generation but not second-generation copies of sounds embodied on Digital Audio Tape (DAT)—that is, copies of copies. The system worked by triggering a device fitted in electrical goods.

¹⁰⁷ Case C-7/97 [1998] ECR I-7791, 7811 (para. 56); 7812 (para. 62).

¹⁰⁸ Case C-7/97 [1995] 4 CMLR 718, 789 (para. 47). See also *Sandvik AB v. KR Piffner (UK)* [1999] ELR 755; *HMSO v. Automobile Association* [2001] ECC 272. But refusing to allow parallel importation may be an abuse: *Microleader Business v. EC*, T-198/98 [2000] All ER (EC) 361.

Technological measures are regarded as critically important for the so-called ‘information society’, because the feared duplication of works is thought likely to take place in private, and thus be impossible to police. Technological measures provide an opportunity to police private uses, by forcing users to enter contractual arrangements before they can use or copy works. If users do not contact the copyright owner, they do not get a set of keys to open the technological locks. However, the potential for technological measures is much more than just operating to solve the problem of the digital shift in replication from public to private arenas. It poses the possibility of radical transformation in the way works are delivered. For example, in a technological fantasy world a person will not have to buy a whole book, they could just buy a copy of Chapter 1 and if they like Chapter 1 they can buy the rest (such a user need only spend £1 rather than £8 on all the books they buy a end up not liking). Similarly, technological measures may mean a person can buy a digital newspaper for a single read with the advantage that the newspaper does not need to set the price on the basis that other readers will look at the copy (and so will not buy their own paper). The potential of technological measures is that we will all be able to get works delivered in the form we want, with costs to the user tailored more closely to the use of the work. Everybody should be better off.

The use of technological measures to support copyright is, however, not a complete answer to the problems of digital distribution and replication. This is because for every lock, there is some enthusiast willing to pick it. So those wishing to rely on technological measures have sought government support for the use of technological measures through the provision of laws prohibiting circumvention of such measures. Government and particularly the US Government and the European Commission—have been supportive.¹⁰⁹ They argue that by providing protection now copyright owners will be given appropriate incentives to develop such systems. If such legal protection were not provided, that investment is vulnerable to being undermined by the rapid spread of anti-circumvention technology. So there has been felt to be a need to act immediately. The problem with formulating legal principles to prevent circumvention, however, is that it is the locking systems currently being used are crude. Strong protection of crude systems carries two problems: it may give users of technological protection too much control (or control of public domain dimensions of content) and it provides developers with little reason to make the systems more sophisticated.¹¹⁰

The 1988 Act, as amended, contains a formidable array of civil and criminal provisions dealing with situations where a person facilitates access to works to which the person concerned is not entitled to use or receive. Some of these relate to the circumvention of effective technological measures applied to copyright works other than computer programs, and are designed to implement Article 6 of the Information Society Directive.¹¹¹

¹⁰⁹ S. Dusollier, ‘Technological Measures and Exceptions in the European Directive of 2001: An Empty Promise’ (2003) 34 *IIC* 62. For an examination of the US provisions under the Digital Millennium Copyright Act 1998, see D. Nimmer, ‘A Riff on Fair Use in the Digital Millennium Copyright Act’ (2000) 148 *U Pa LR* 673.

¹¹⁰ Not surprisingly, therefore, the formulation of legislative provision in the Information Society Directive ‘caused more controversy than any other in the Copyright Directive’: M. Hart, ‘The Copyright in the Information Society Directive: An Overview’ [2002] *EIPR* 58, 61.

¹¹¹ CDPA s. 297ZA(1), (6); s. 296 ZD(1), (8) (copyright works (other than computer programs), performances, database right, publication right); Info. Soc. Dir., Recital 50 (without prejudice to Software Directive). In turn, Art. 6 implements Art. 11 of the WCT and Art. 18 of the WPPT. However, they go beyond the requirements of those treaties in breadth (since they apply also to broadcasting organizations, publication

Others, somewhat less prescriptive in scope, apply only to computer programs (and implement Article 7(1)(c) of the Software Directive). The third category, in sections 297–9, relate to reception of transmissions (and implement an EC Directive giving legal protection to services based on ‘conditional access’).¹¹² We consider these provisions in Chapter 13. Whether these provisions will give copyright owners the confidence to exploit works, particularly in electronic form, by utilizing technological protection, awaits to be seen.

9 COLLECTING SOCIETIES

One of the central problems facing copyright owners who wish to exploit their works is how to monitor or police infringements. Where the main form of copyright was the book and the main mode of exploitation the sale of printed copies, this policing (typically undertaken by a publisher) was *ad hoc* and depended on monitoring activities in the marketplace. However, as copyright expanded to encompass a wider array of subject matter and (particularly ephemeral) uses, the problems of policing copyright have changed. One of the main mechanisms developed by copyright owners to monitor infringement has been collective systems of management and enforcement of rights, in particular, the ‘collecting society’.¹¹³

Collective administration is a system whereby certain rights are administered for the benefit of authors and/or copyright owners. The organizations that administer the rights are empowered to authorize various specified uses of their members’ works, normally by way of a licence.¹¹⁴ The essential characteristic of these arrangements is that they are able to negotiate and act without individual consultation. In most cases the copyright owner assigns their rights to the society. Where this occurs the rights are pooled so as to create a repertoire of works at the disposal of potential users.

The main UK collecting societies are:

The Performing Right Society (PRS), formed in 1914, which administers as assignee the performing, and broadcasting rights in music and lyrics. PRS annual income from all sources is in the region of £200 million.¹¹⁵

The Mechanical-Copyright Protection Society (MCPS), formed in 1924, which administers as agent the ‘mechanical rights’ in music and lyrics that is the right to make a sound recording (part of the reproduction right).

Phonographic Performance Limited (PPL), formed in 1934, which administers as assignee the performing and broadcasting rights in sound recordings.

Video Performance Limited (VPL), which administers, as agent, the performing, and broadcasting rights in relation to videos.

right, and *sui generis* database right), and—more importantly—depth. The Directive goes beyond acts of circumvention to cover devices and services which enable circumvention.

¹¹² Directive 98/84 EC of the European Parliament and of the Council of 20 Nov. 1998 on the Legal Protection of Services based on, or consisting of, Conditional Access.

¹¹³ For commentary, see Copinger, ch. 28; Laddie *et al.*, paras. 15.14–15.38.

¹¹⁴ M. Freegard, ‘Collective Administration’ (1985), *Copyright* 443. A similar definition can be found in Satellite and Cable Directive, Art. 1(4). Note also the definition of ‘licensing body’ in CDPA s. 116(2).

¹¹⁵ On the history of the PRS, see T. Ehrlich, *Harmonious Alliance: A History of the Performing Right Society* (1989). For details of the PRS see www.prs.co.uk.

Authors' Licensing and Collecting Society (ALCS), formed in 1977, which, *inter alia*, collects fees for writers from the retransmission by cable of all terrestrial channels.

Copyright Licensing Agency (CLA), formed in 1982, represents authors' and publishers' licensing societies (including ALCS) with regard to reprographic reproduction. It enters blanket licences with educational authorities and universities.

The Design and Artists' Copyright Society (DACS), formed in 1983, administers, as agents, the reproduction rights for painters, printmakers, sculptors, and photographers.

Educational Recording Agency (ERA), and Open University Educational Enterprises which license educational establishments to record off-air under schemes which have been certified.¹¹⁶

9.1 ORGANIZATION

As collecting societies are private organizations that have emerged in response to particular commercial environments, there is no great uniformity to their organizational structures. Nevertheless, it is worth considering the different dimensions of some of the existing societies.

9.1.1 Membership terms

In terms of copyright owner–society relations, the relevant relationship will be determined in the membership agreement and the rules of the society. To ensure that each collecting society is capable of licensing the relevant right on behalf of the copyright owner, the owner has to assign the right to the society or appoint the society as its agent. The scope of any such assignment or agency will depend on the proposed function of the society. For example, a copyright owner joining the PRS is required to assign the 'small rights' relating to non-dramatic performances. The 'grand rights' relating to dramatic performances, which are not included, are administered by individual agreements. The rules of a society might also make provision for a member to assign rights in relation to works not in existence at the time of joining. A society may have different categories of membership (for example, author members and publisher members). As a member, a copyright owner will have power to vote at meetings and thus to influence the way the society operates. A collecting society will distribute any licensing revenues it collects in accordance with the rules of the society. Usually this will involve some kind of sampling mechanism that enables the society to estimate the amount that each member is proportionally entitled to. A society will usually first deduct its administration expenses. In some jurisdictions a portion of the revenue is used for 'cultural purposes' (for example to fund indigenous music culture in the country making the deduction) and for pension and welfare payments.¹¹⁷ Provisions exist within the rules of a society specifying the

¹¹⁷ See A. Harcourt, 'The Unlawful Deduction Levied upon UK Composers' Performing Rights Income' (Oct. 1996) 64 *Copyright World* 15 (criticizing the practice of European performing rights societies in deducting up to 10% of income in this way).

circumstances in which a person may leave the society, which will usually require a substantial period of notice.

9.1.2 Licensing arrangements

The collecting societies enter into negotiations with copyright users, either as associations of users or on an individual basis. Negotiations with associations of users will often result in the establishment of tariffs.¹¹⁸ Sometimes a society-user agreement will cover more than just a licence fee. Some associations of users will involve themselves in ensuring that licence fees are paid by their members, or help in other ways in the administration in return for a reduced tariff. Although the terms of licences will vary, it is common for collecting societies to grant a 'blanket' licence entitling users to use any work in the repertoire of the licensing body without restriction.¹¹⁹

9.2 ASSESSMENT

At a practical level, collecting societies are a convenient way of resolving some of the difficulties faced by copyright owners and users in reaching appropriate arrangements.¹²⁰ Collecting societies are useful insofar as they provide users with a focal point to locate and transact with copyright owners. Collecting societies reduce the 'transaction costs' that would otherwise exist in ascertaining and negotiating individual licences with individual copyright owners. This is particularly important where a user wishes to utilize a large number of copyright works, so that transacting on an individual basis would be time-consuming and costly.¹²¹ Moreover, where the society grants a user a blanket licence, this offers users a degree of flexibility. For example, where a blanket licence is granted to a disco or a radio station, it means that they do not need to determine in advance the works they are going to play.

For the copyright owner, collective administration relieves an otherwise impossible burden of policing and enforcing rights. It also provides copyright owners with a bargaining power that they would not possess as individuals. Moreover, the possibility of collective administration has enabled owners to argue for the extension of rights in relation to subject matter that might not otherwise have been protected on the basis that it was unenforceable.

Probably the most interesting thing about collecting societies is the way in which their emergence represents a significant shift in the character of copyright. As Thomas Streecher has observed, with collective administration copyright loses much of its character as a property right exploited through distribution of copies bought and sold in the marketplace. Instead, copyright becomes more like the legal underpinning of an institutional

¹¹⁸ e.g. at sports grounds where music is played incidentally the PRS receives a rate of £1.56 per 1000 persons admitted; whereas for pop concerts the PRS charges 3% of box-office receipts. See *BSB v. PRS* [1998] RPC 467 (para. 4.29).

¹¹⁹ While the MCPS operates a blanket licence for re-recordings, first recording requires individual licensing: *BPI v. MCPS* [1993] EMLR 86, 139.

¹²⁰ G. Davies, 'The Public Interest in Collective Administration of Rights' (1989) *Copyright* 81.

¹²¹ J. Fujitani, 'Controlling the Market Power of Performing Rights Societies: An Administrative Substitute for Antitrust Regulation' (1984) 72 *California LR* 103, 106 (breaking down the transaction costs in identifying and locating the copyright owner, obtaining the information necessary to negotiate a price, and transaction time costs).

bureaucracy that attempts to simulate a market through statistical mechanisms. Each copyright loses its individuality and the 'property form' is replaced by a liability form. In effect, collecting societies turn an author's property right into a right to receive welfare payments and a user's licence fee into a tax upon their activities.¹²²

9.3 INTERNATIONAL DIMENSIONS

Although collecting societies tend to operate at the national level, they form part of a global network of collecting agencies. For example, while performing rights are administered in the UK by the PRS, there are equivalent societies in the USA (BMI, ASCAP), Australia (APRA), Germany (GEMA), France (SACEM), Belgium (SABAM), and so on. Typically, there will be 'reciprocal representation contracts' between national copyright management societies.¹²³ Under these arrangements, one national society (A) undertakes, on a reciprocal basis, to manage the rights attached to the repertoire of a foreign society (B) within its sphere of operation, normally its national territory. The society (A) collects royalties on behalf of the foreign society (B), pursues infringers, takes any necessary proceedings in respect of infringement and transfers sums collected to (B). Effectively, these agreements can mean that a particular national society controls within the territory the entire world repertoire of works.

LIMITS ON EXPLOITATION

1 INTRODUCTION

The terms and conditions under which a copyright work is transferred or exploited are usually determined contractually by the parties. In this chapter we look at the exceptional situations where the law controls the way those rights are exploited. As we will see, sometimes these limits are designed to prevent a copyright owner from losing their rights. In other cases, the law may step in to stop a copyright owner from abusing their rights. We begin by looking at the various mechanisms that are used to regulate contracts between authors and entrepreneurs. We then go on to look at the impact that British and European competition law has on the copyright owner's ability to exploit their copyright. In turn we look at the ways in which copyright contracts are regulated in respect to users of copyright. Finally, we look at the various controls that are imposed on collecting societies.

Before looking at these, it is important to note that there are many other restrictions placed on the owners' ability to exploit and use the copyright work that we will not look at here.¹ Although copyright is described as a 'property right' and therefore might be expected to give absolute dominion, copyright law operates as an exclusionary right: it prevents all parties (other than the copyright holder) from exploiting the work. Copyright does not, however, confer any positive rights on the proprietor of the copyright to make and sell copies of the work. Consequently, the copyright owner will be subject to the regulatory regimes in the field in question (relating for example to the showing of films or broadcasts) and criminal laws (such as obscenity or public order). Another factor that may affect the ability of a copyright owner to exploit a work are the rights that exist in any underlying works. For example, where the owner of the copyright in an English translation of a French novel wishes to exploit the copyright in the translation, it will be necessary for them to obtain the permission of the owner of copyright, if any, in the French novel that has been translated. With some copyright works, such as films or multimedia works, a whole host of prior right-owners will have to be identified, approached, and persuaded to consent to the exploitation.² It should be noted that one joint owner may not exploit the work without the licence of the other owners.³

¹ The moral rights of attribution and integrity operate as techniques of control over the manner in which a work is exploited, and thus are frequently akin to statutory implied contract terms. See Ch. 10.

² Sometimes it will be impossible to trace the relevant copyright holders, in which case the exploiter might take out insurance, pay notional royalties into a fund, or simply take a risk. Cf. CDPA s. 190 (performers).

³ CDPA s. 173(2); *Lauri v. Renad* [1892] 3 Ch 402; *Powell v. Head* (1879) 12 Ch D 686; *Cescinsky v. Routledge* [1916] 2 KB 325, 330.

2 LIMITS ON AGREEMENTS BETWEEN AUTHORS AND ENTREPRENEURS

This section considers the extent to which UK law will interfere to regulate the terms of transactions between authors and entrepreneurs, either to protect the psychological link between the author and their work, or to protect an author's financial interests. A number of other jurisdictions, notably France and Germany, include within their copyright legislation provisions relating to the interpretation of copyright contracts. They also impose overriding terms that protect the financial interests of authors.⁴ In the United Kingdom, there are very few provisions specifically directed at authors. The legal validity of such arrangements is generally dependent upon the law of contract, not the law of copyright. In the United Kingdom, the basic principle is that a contract freely entered into by an adult is binding. The court will not reopen the contract merely because the court thinks that the terms are unreasonable or unfair. The main way in which authors' interests are protected derives less from legal regulation than from collective processes such as union activity or the promotion of standard contracts like those formulated by the Society of Authors and the Writers' Guild.⁵ Individual authors and artists are also better able to secure reasonable terms by the engagement of literary agents.⁶

Having said this, a contract entered into between an author and entrepreneurs may be regulated in a number of ways. On occasions the general contractual doctrines of undue influence and restraint of trade have been used to protect particularly vulnerable authors from the more egregious of practices. In other cases the courts may interfere with the sanctity of the author—entrepreneur contracts where they are anti-competitive (either under domestic or European law). After looking at these, we will examine the specific terms that are implied by statute into certain contracts.

2.1 UNDUE INFLUENCE

If a disadvantageous bargain is the result of the exercise of undue influence the court may set the bargain aside. An extreme example would be where an author assigned copyright to a publisher because of threats made by the publisher. However, the court's power to interfere extends beyond those extreme scenarios to all situations where a 'person in a position of domination has used that position to obtain unfair advantage for himself, and

⁴ See L. Bently, *Between a Rock and a Hard Place* (2002); W. Cornish, 'The Author as Risk-Sharer' (2002) 26 *Columbia JL & Arts* 1; G. D'Agostino, 'Copyright Treatment of Freelance Works in the Digital Era' (2002) 19 *Santa Clara Computer & High Technology LJ* 37; W. Nordemann, 'A Revolution of Copyright in Germany' 49 (2002) *J Copyright Soc'y USA* 1041; G. Boytha, 'National Legislation on Authors' Contracts in Countries Following Continental European Legal Traditions' [1991] *Copyright* 198; J. Black, 'The Regulation of Copyright Contracts: A Comparative View' [1980] *EIPR* 386.

⁵ Even here, however, competition law may limit collective self-help. In *Re: Royal Institute of British Architects*, Case ref GP/908 (March 2003), the OFT held that 'fee guidance' to its members infringed the Chapter 1 prohibition, though a collation of historical price trends did not.

⁶ See D. De Freitas, 'Copyright Contracts: A Study of the Terms of Contracts for the Use of Works Protected by Copyright under the Legal System in Common Law Countries' [1991] *Copyright* 222. For an example, see B. Nyman, 'The Author-Publisher Agreement' [1995] *Ent LR* 127.

so caused injury to the person relying on his authority or aid'.⁷ For the courts to interfere in the sanctity of the contract, two elements need to be satisfied. *First*, it must be shown that the parties are in a relationship in which one person has influence over another. *Second*, it must be shown that the influence was used to bring about a 'manifestly disadvantageous transaction'.⁸ If undue influence exists, the contract is then voidable, and copyright assigned thereunder may be revested in the author. It seems that since the contract is voidable (as opposed to void), contractual dealings with bona fide purchasers which take place before the contract is avoided will remain binding.

In order to have a contract set aside on the basis of undue influence, it must first be shown that the parties are in a relationship in which one person has influence over another. That is, it is necessary to demonstrate a 'dominating influence'. The most common situation where this occurs is where the parties are in a fiduciary relationship; that is, one of trust. Where the relationship between the parties is deemed by the court to be 'fiduciary', the existence of a dominating influence is presumed. In most cases of copyright assignments, for example a publishing agreement, such a fiduciary relationship is unlikely to exist because there will rarely be any pre-existing relationship. An example of an exception to this is provided by *Elton John v. James*.⁹ There Elton John sought to avoid an agreement tying him and fellow songwriter Bernie Taupin to a publishing arrangement with James for six years. Nicholls J held that there was a 'dominating influence' even though the acquaintance of John, Taupin, and James was short before the publishing agreement was signed, because James 'really took charge', while the writers were young and eager and received no independent advice, reposing trust 'in a man of stature in the industry that he would treat them fairly'.

A similar position was reached in *O'Sullivan v. Management Agency*.¹⁰ This decision arose as a result of the fact that a young and then unknown composer named Gilbert O'Sullivan entered into an exclusive management agreement with the defendant. The defendant operated through a number of companies with whom O'Sullivan entered into publishing and other agreements. O'Sullivan later sought a declaration that these contracts were void and unenforceable on the ground, *inter alia*, that they had been obtained by undue influence. Mars-Jones J held that the defendant was in a fiduciary position and thus the agreements were presumed to have been obtained by undue influence. The associated companies were equally subject to fiduciary obligations.¹¹ Although there was no pressure on O'Sullivan to execute the agreements that did not matter. As Fox LJ said, on appeal, '[t]he fiduciary relationship existed. The onus was then upon those asserting the validity of the agreements to show that they were the consequence of the free exercise of Mr O'Sullivan's will in the light of full information regarding the transaction. That has not been done. He had no independent advice about these matters at all'.¹²

⁷ *National Westminster v. Morgan* [1985] 2 WLR 588, 599 (quoting Lord Shaw).

⁸ The relationship need not be one of domination: *Goldworthy v. Brickell* [1987] Ch 378, 404–6.

⁹ *Elton John v. James* (1985) [1991] FSR 397.

¹⁰ [1985] QB 428. ¹¹ [1985] QB 428, 448 (Dunn LJ).

¹² On appeal, the central issue was to determine the appropriate remedy. Dunn, Fox, and Waller LJ held that the court should try to achieve 'practical justice' and found that the assignments of the copyright should be set aside, the copyrights be returned to the author, and the manager be required to account for profits made from them, but subject to deduction of a service fee for his contribution to the composer's success: [1985] QB 428, 458–9, 466–9, 471–3. See, generally, J. Tatt, 'Music Publishing and Recording Contracts in Perspective' [1987] *EIPR* 132.

In order to have a contract set aside on the basis of undue influence, it must also be shown that the dominating influence was used to bring about a transaction that was 'manifestly disadvantageous'. The problems that confront authors and artists here is that in many cases their grievances are collective, rather than individual, in nature. Consequently, the possibility exists for an assignee or exclusive licensee to deny that there is disadvantage by referring to agreements with other authors and the practices of other entrepreneurs. It should be noted that this tactic does not always work. For example, in *Elton John v. James* some of the publishing agreements were found to be unfair even though James acted in a bona fide manner, imposing terms standard in the trade. In that case (as with the *O'Sullivan* decision), the court was influenced by the fact that the royalty under the contract was less than that paid to other 'unknown' artists.¹³

2.2 RESTRAINT OF TRADE

The second way in which vulnerable authors are protected is via the doctrine of 'restraint of trade'. As it suggests, this doctrine reflects a general policy of contract law that a person should be able to practise their trade.¹⁴ Contracts that restrict this right will be scrutinized by the courts to ensure that they are justified.¹⁵ In these circumstances the courts have said that the terms must be no more than is reasonably required to protect the legitimate interests of the promisee and the public interest.¹⁶ This doctrine has been important in relation to long-term contracts that are common in the music industry.

The impact of the doctrine of restraint of trade can be seen in *Schroeder Music Publishing Co. v. Macaulay*,¹⁷ where the House of Lords held that an agreement between a songwriter and a publisher was invalid because it was in restraint of trade. The agreement was in a standard form and required the songwriter to assign copyright in his works to the publisher. The most important factor was that the duration of the agreement was to be for five years and, if the royalties for the first five years exceeded £5,000, for a further five-year period. In effect, the songwriter was bound to the publisher for ten years. However, the publisher was under no obligation to exploit the songs. Lord Reid suggested that even if there was a term requiring the publisher to use its best endeavours to promote the composer's work, this would be of little use to the composer. He said, 'if no satisfactory positive undertaking by the publisher can be devised, it appears to me to be an unreasonable restraint to tie the composer for this period of years so that his work will be sterilized and he can earn nothing from his abilities as a composer if the publisher chooses not to publish'.¹⁸ Only a clause permitting the composer to terminate the agreement could save it. Lord Diplock said that the doctrine of restraint of trade was part of a general jurisdiction to protect parties from unconscionable contracts. In these circumstances, the relevant question was whether the bargain was fair, that is, 'whether the restrictions are both

¹⁸ *Ibid.*, 622.

reasonably necessary for the protection of the legitimate interests of the promisee and commensurate with the benefits secured to the promisor under the contract'.¹⁹ Lord Diplock's reliance on the broad notion of inequality of bargaining power, after receiving a positive reception,²⁰ has been largely ignored in subsequent cases which have preferred to rely on the more concrete doctrines of restraint of trade, rather than develop general principles of this sort.²¹

Another situation where restraint of trade has been used to protect an author is in *Zang Tumb Tuum v. Holly Johnson*,²² which dealt with a publishing agreement and a recording agreement that the group *Frankie Goes to Hollywood* signed with Perfect and ZTT respectively. The publishing agreement was for five years and the recording agreement possibly for nine years. Soon after the group became successful, Holly Johnson left the group. ZTT tried to enforce a 'leaving member' clause in the recording contract and sought an injunction to restrain him from working for another record company. ZTT's action failed. Applying the doctrine of restraint of trade, the Court of Appeal set aside the recording contract and the publishing agreement. The Court was particularly influenced by the duration of the agreement: Dillon LJ said that 'stringent provisions such as many of those in the recording agreement may be justifiable in an agreement of short duration. But the onus must, in my judgment, be on the recording company to justify the length and the one-sidedness of the provisions as to its duration in this recording agreement'.²³ The Court held that ZTT had failed to justify the terms.

If in the light of these cases the doctrine of restraint of trade seems to offer substantial protection to authors and artists, it is important to observe the doctrine's limitations that were highlighted in *Panayiotou v. Sony Music Entertainment*.²⁴ Panayiotou, a songwriter and singer who worked under the name George Michael, sought to have the recording agreement which he had entered into with Sony in 1988 set aside. The background to the agreement was relatively complicated. In 1982 as a member of the group *Wham!*, Michael signed an agreement with a record company called Innervision. After some initial success, the validity of the agreement was called into question. Subsequent legal proceedings were settled and in 1984 a new agreement was entered into between *Wham!* and Sony (who had been licensees of Innervision). This agreement placed *Wham!* under a potential obligation to record eight albums. When the group disbanded in 1986, Sony exercised its 'leaving member clause' which was to the effect that the 1984 agreement was to continue to bind Michael as an individual recording artist. After the success of Michael's first solo album (*Faith*), the 1984 agreement was renegotiated and replaced by a new agreement with Sony (the 1988 agreement). This also bound Michael, if the defendant so wished, to deliver a further eight albums and was to endure for fifteen years. As part of the renegotiation, Michael was given much improved financial terms. As a result of changes in the corporate structure of the defendant company, Michael became disenchanted and in 1992 sought to release himself from his obligations to Sony.

¹⁹ *Ibid.*, 623. ²⁰ e.g. *Clifford Davis v. WEA Records* [1975] 1 *All ER* 237.

²¹ *National Westminster v. Morgan* [1985] 2 *WLR* 588 (rejecting inequality of bargaining power and unconscionability) and *Union Eagle v. Golden Achievement* [1997] 2 *All ER* 215 (describing as 'beguiling heresy').

²² *Zang Tumb Tuum v. Johnson* [1993] *EMLR* 61. ²³ *Ibid.*, 73.

²⁴ *Panayiotou v. Sony Music Entertainment* [1994] *EMLR* 229. For criticism, see A. Coulthard, 'George Michael v. Sony Music: A Challenge to Artistic Freedom?' (1995) 58 *MLR* 731.

Parker J rejected Michael's claim that the 1988 agreement should be set aside. The main ground for rejecting George Michael's claim was that it was contrary to public policy to seek to reopen a previously compromised action and that the 1984 agreement was such a compromise:²⁵ the 1988 agreement being based on the 1984 predecessor, was covered by the same policy. However, aware that the case was likely to be appealed,²⁶ Parker J went on to consider whether, had there been no compromise, the 1988 agreement was an unreasonable restraint of trade. He found that the agreement was restrictive of trade,²⁷ but that the restraint was reasonable. Although not explicit, Parker J appears to have accepted that the restraint was necessary to protect the defendant's interests, not merely in recouping investment they had placed in Michael, but also the investment they generally made in young artists who turned out to be unsuccessful.²⁸ Moreover, the restraint was reasonable as regards Michael's interests given the generous remuneration which was to be promised to the artist: the length of the agreement was simply a product of Michael's success. Parker J added that when Michael's obligations under the 1984 agreement were taken into consideration, the 1988 agreement hardly restrained Michael at all.²⁹

The *Panayiotou* case makes it clear that there are limits to the operation of the doctrine of restraint of trade. However, it has not provided any clear markers as to how to determine where those limits are. More specifically, it is unclear what the legitimate interests of a recording or publishing company are, and how the decision is to be made that the obligation (for example, to produce eight albums, rather than three albums or five-year deal), is reasonable. Moreover, the case introduced a new limitation on the doctrine through Parker J's final reason for dismissing Michael's claim: Parker J found that Michael, by requesting an 'advance' from Sony in 1992 had affirmed the existence of the contract and could not thereafter argue that it should be set aside.³⁰ If this approach is followed,³¹ authors, artists, and performers who seek to have lengthy or one-sided agreements set aside, will have to take great care to ensure they do not accept the benefit of the agreement after being informed of its potential unenforceability.

2.3 ANTI-COMPETITIVE CONTRACTS

A further ground on which a court might reopen an agreement between an artist and an entrepreneur is on the basis that it is anti-competitive. More specifically, a contract may be declared to be void by virtue of Article 81 EC (formerly Article 85 of the Treaty). As noted in Chapter 1, this renders void all agreements which affect trade between member states and which have the object or effect of distorting competition within the Common Market.

²⁵ For criticism of this aspect of the case, see Coulthard, *ibid.*, 736 (pointing out that the action compromised by the 1984 agreement did not involve the defendant, and moreover that the 1984 agreement contained no express promise not to reopen the 1982 agreement).

²⁶ In fact, no such appeal was heard.

²⁷ *Panayiotou v. Sony Music Entertainment* [1994] *EMLR* 229, 342.

²⁸ *Ibid.*, 361.

²⁹ Cf. *Watson v. Prager* [1993] *EMLR* 275. In fact, the 1988 agreement effectively required Michael to produce eight albums not the six that would have been needed to meet his remaining obligations under the 1984 agreement.

³⁰ *Panayiotou v. Sony Music Entertainment* [1994] *EMLR* 229, 385–6.

³¹ It has been in *Nicholl v. Ryder* [2000] *EMLR* 632. For arguments against the affirmation doctrine, see A. Coulthard, 'George Michael v. Sony Music: A Challenge to Artistic Freedom?' (1995) 58 *MLR* 731, 741–3.

The case of *RAI/Unitel*³² indicated that an exclusive contract with four opera singers for one operatic work was an agreement between ‘undertakings’ which might have an ‘appreciable effect’ on trade between member states and thus might be subject to Article 81. Although the Commission took the view that the agreement concerning the broadcast of the performance of *Don Carlos* at La Scala in Milan was subject to Article 81, the case was settled. As such, it remains unclear when such an agreement would be unlawful.

It seems possible that a contract between an author and an entrepreneur would fall outside the scope of Article 81 because the effect on competition might not be ‘appreciable’. Alternatively, as with exclusive distribution agreements, the contract might be justifiable under Article 81(3).³³ An argument based on Article 81 was also raised but rejected in *Panayiotou v. Sony Music Entertainment*.³⁴ Parker J held that the 1988 agreement between Michael and Sony had no effect on trade between member states of the EU because the agreement operated ‘worldwide’,³⁵ that because the 1988 agreement replaced the 1984 agreement it in fact had no effect on trade at all,³⁶ and did not have the object or effect of restricting competition.³⁷ Moreover, because the agreement involved an assignment of copyright in the sound recordings to Sony, Parker J held that it fell within Article 295 (formerly Article 222 of the Treaty) which protects property. Whether any or all of these conclusions are satisfactory has been doubted. However, had the contrary conclusion been reached that the agreement fell within Article 81(1), it is likely that the Commission would have been required to consider a deluge of individual applications for exemptions.

Three developments which have taken place since the *George Michael* case are worth noting. The first is the Commission Regulation on Vertical Restraints (discussed in Chapter 42), which makes available a block exemption from Article 81 for ‘vertical agreements’ including exclusive supply agreements.³⁸ This means that even if an agreement falls within Article 81 EC, it is exempt as long as the market share of the purchaser is under 30 per cent.³⁹ However, while a publishing, recording, or songwriting contract would fall within the general definition of a ‘vertical restraint’ in the Regulation,⁴⁰ the Block Exemption does not apply where the *primary object* of the agreement concerns intellectual property.⁴¹ We await a decision on whether the primary object of such an arrangement concerns intellectual property. This seems more likely with publishing than recording agreements. However, even if the Block Exemption does not apply, a restrictive agreement may be found exempt individually under Article 81(3).

The second significant development since the *George Michael* case is that section 2 of the 1998 Competition Act introduced a national provision (the so-called ‘Chapter I

³² [1978] OJ L 157/39; [1978] 3 CMLR 306; 12th Report on Competition Policy 1982, para. 90.

³³ Article 81(3) is directly applicable from May 2004, and the old system which required ‘prior notification’ has been abandoned.

³⁴ [1994] EMLR 229. For a review of this see A. Coulthard, ‘Panayiotou v. Sony Music Entertainment’ [1995] *J of Business Law* 414.

³⁵ [1994] EMLR 229, 416.

³⁶ *Ibid.*, 420.

³⁷ *Ibid.*, 425.

³⁸ Such agreements will be minor agreements if the market share of each is less than 15% as falling outside of Art. 81(1): Notice on Agreements of Minor Importance [2001] OJ C 368/13. Below the threshold, the Commission considers that the competition authorities of member states should provide primary supervision.

³⁹ Vertical Restraints Reg., Art. 3. Assuming it has no ‘hard core’ terms.

⁴⁰ *Ibid.*, Art. 2(1).

⁴¹ *Ibid.*, Art. 2(3).

prohibition') equivalent to Article 81.⁴² It seems that an author or artist will be better served by the domestic provision, since they do not require that the applicant shows that the contract had an adverse effect on trade between member states. This is because the 1998 Competition Act only requires that the agreement 'may affect trade within the United Kingdom'. There is no express requirement that this effect must be 'appreciable' or 'substantial' (though there is an immunity from fines for 'small agreements' and 'conduct of minor significance').⁴³ However, as with the European provision, most vertical agreements are exempt from section 2 unless the agreement has as its primary object terms relating to the assignment or use of intellectual property.⁴⁴

Third, and finally, it should be noted that, as from 1 May 2004, the effect of Regulation 1/2003 is to render Article 81(3) directly applicable by competition authorities and courts of member states. (Previously, such decisions could only be made by the European Commission.) This means that a finding that an exclusive recording agreement breaches Article 81 will not now produce the bureaucratic consequences (in terms of notifications) that it formerly would have entailed. This may make a court willing to abandon the reasoning employed in the *George Michael* case, treat exclusive recording arrangements as anti-competitive, but rely on its own assessment of Article 81(3) in deciding whether such arrangements improve the production of goods, while allowing consumers a fair share of the resulting benefit.

2.4 THE STATUTORY RIGHT TO EQUITABLE REMUNERATION

Although UK copyright law treats the terms of a contract as essentially a matter for voluntary negotiation, a significant exception has recently been introduced in relation to transfers of rental rights. This so-called 'unwaivable right to equitable remuneration' marks a first step in the transplantation of provisions protecting authors in countries such as France and Germany, via the process of European harmonization,⁴⁵ into UK copyright law. Section 93B of the 1988 Act specifies that where a person transfers the rental right 'concerning' a film or sound recording to the producer of the sound recording or film, 'he retains the right to equitable remuneration for rental'. The potential beneficiaries of the retained right are the authors of literary, dramatic, musical or artistic works and the principal director of a film.⁴⁶

The right applies whether the transfer is presumed under section 93A (or with performers, section 191F), or is voluntary transferred. The right to remuneration cannot be

⁴² Competition Act 1998, s. 2. See J. Turner, 'The UK Competition Act 1998 and Private Rights' [1999] *EIPR* 181.

⁴³ Competition Act 1998, ss. 39 and 40; Competition Act 1998 (Small Agreements and Conduct of Minor Significance) Regulations 2000 (SI 2000/262). But the OFT takes the view that an agreement will have no appreciable effect on competition if the parties' combined share of the market does not exceed 25%.

⁴⁴ The Competition Act (Land and Vertical Restraints Exclusion) Order 2000 (SI 2000/310).

⁴⁵ More specifically, the Rental Dir., Art. 4.

⁴⁶ CDPA s. 191G has the same effect as regards performers. It seems that CDPA s. 93B applies not just to circumstances where the work is incorporated in a film or sound recording (for example, the music used on a film) but also where the work is to be rented with the sound recording or film, such as might occur with artwork on a record sleeve. This conclusion is consistent with the expansive definition of author in CDPA s. 93B(1)(a) as covering authors of artistic works and the use in s. 93B(1) of 'concerning'. However, s. 93C(3) refers to the importance of the 'contribution . . . to' the sound recording or film.

excluded by agreement.⁴⁷ The remuneration is to be claimed from the person 'for the time being entitled to the rental right', and the relevant time is presumably the time of rental rather than of claim. The right can only be assigned to a collecting society, by testamentary transmission, or operation of law (e.g. on bankruptcy). The amount deemed equitable is to be determined by agreement or, failing this, by the Copyright Tribunal. In determining what is equitable, the Tribunal is directed to take into account the importance of the contribution of the author or performer to the film or sound recording. Remuneration is not to be considered inequitable merely because it was paid by way of a single payment or at the time the rental right was transferred.⁴⁸

2.5 HARMONIZATION?

As can be seen, with one or two exceptions, English law leaves authors free to make arrangements for the exploitation of their rights, and rarely interferes to protect authors against decisions that are not in their long-term interests. In contrast, most Member states have provisions regulating the terms and conditions of contracts between creators and exploiters. So far, the only harmonization in this area was the 'unwaivable equitable right of remuneration' conferred on authors and performers after the transfer of their rental rights. In 1992, this looked like it was going to be the first stage of a European copyright law that would protect author's from unfair contractual exploitation. But since then little has happened. In May 2002, a study by Hugenholtz and Guibault was published under the title *Study in the Conditions Applicable to Contracts Relating to Intellectual Property in the EU*.⁴⁹ The Report does not recommend harmonization. While it acknowledges 'the demand expressed within some member states for a more adequate protection for creators against abusive contractual practices may indeed be quite justified', it offers little prospect of action at a European legislative level. The Report concludes instead that harmonization of the rules on copyright contracts would be premature. This, it says, is because: there has yet to be harmonization of other substantive copyright rules, such as rules on ownership and moral rights; there is no evidence of any impact of differences in national laws on the Internal Market and European intervention must honour the principle of subsidiarity. The Report argues that 'the issues of copyright contract law are best addressed at the national level, since the national legislator is in the best position to reconcile the principles of copyright law, with those of contract law, labour law, and social law, while taking account of the relevant cultural considerations'.

3 COMPETITION LAW AND THE EXPLOITATION OF COPYRIGHT

In this section we look at the impact that UK and European competition law has on the copyright owner's ability to exploit copyright. In so doing, we take as our paradigmatic scenario the circumstance where a copyright owner licenses another commercial

⁴⁷ CDPA s. 93B(5).

⁴⁸ The right applies even where transfers were made pursuant to agreements made prior to 1 Jan. 1994, but only if the author asserted a claim to that effect between 1 Dec. 1996 and 1 Jan. 1997. See Related Rights Reg. 33(b).

⁴⁹ ETD/2000/BS-3001/E/69.

undertaking to exploit the copyright. This encompasses a number of different types of contracts: a publishing firm might license or assign film rights in a literary work to a film production company; the owner of film copyright might allow for the production and sale of videos; or the owner of software copyright might license the use of the software on a particular site.

The key provision of European competition law affecting copyright agreements is Article 81 EC (formerly Article 85 of the Treaty). This renders void all agreements which affect trade between member states and which have the object or effect of distorting competition within the Common Market. Nevertheless, certain agreements that provide benefits may be exempt. In contrast with the fields of technology licensing and vertical restraints, the Commission has been slow to develop block exemptions in the copyright field. The Technology Transfer Block exemption will exempt certain agreements which deal with copyright,⁵⁰ but only where such agreement is 'ancillary' to a pure patent licensing or know-how licensing agreements and to mixed patent and know-how licensing agreements. The Regulation on Vertical Restraints will be of more general applicability: exempting many agreements relating to the distribution of copyright works (for example, the distribution of books or sound recordings).⁵¹ However, as we noted earlier the exemption does not apply where the primary object of the agreement is the assignment or use of intellectual property rights. Therefore it will rarely be applicable to copyright licences, such as software licences. However, the exemptions made may provide an important guideline on the thinking of the Commission on terms in such agreements.

As a result of the Competition Act 1998, UK regulation of copyright agreements parallels European competition law. Section 2 introduces the 'Chapter 1 prohibition', which is equivalent to Article 81 EC.⁵² This is subject to an exemption regarding 'vertical restraints' (which like its European counterpart does not cover agreements primarily relating to intellectual property). Moreover, because an agreement will be deemed to be exempt from the national prohibition if it is exempt from the Community prohibition, the Technology Transfer Regulation might also provide exemption.⁵³

With these general points in mind, we now look at the cumulative effect of the Chapter 1 prohibition and Article 81 EC on various terms that are used in copyright contracts.

3.1 AGREEMENTS CONFERRING EXCLUSIVE TERRITORIAL RIGHTS

A copyright assignment or licence commonly includes terms guaranteeing the licensee the exclusive right to sell the work in a particular territory. For example, the licence may grant someone the exclusive right to sell paperback versions of a book in the United Kingdom, or to show a film in public in Belgium. It may also include an undertaking by the licensor not to put the work on the market in that territory and an undertaking by the licensee not to sell the work in the territories of other licensees. The inclusion of such a guarantee of exclusivity may be important to a licensee who has to invest in the advertising or marketing of the work, and who needs to ensure that they have a reasonable degree of control in the relevant market.

⁵⁰ Technology Transfer Reg.

⁵¹ Vertical Restraints Reg.

⁵² Competition Act 1998, s. 2. See OFT, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline*, OFT 418 (Nov. 2001).

⁵³ Competition Act 1998, s. 10 (parallel exemptions).

In related situations, the Commission has recognized both the value of such terms *and* also the threat posed by exclusive licensing to the achievement of the internal market. Consequently, the Commission treats exclusive agreements as legitimate, but simultaneously prohibits certain terms which it considers will have an unduly restrictive affect on the practices of parallel importers. Consequently, while the Commission allows terms which prohibit the active marketing of the work in the territory of another licensee, the agreement may not prohibit 'passive' sales.⁵⁴

Where an exclusive territorial agreement covers the representation (or exhibition), as opposed to the distribution of copies of the work, it may also fall within Article 81 EC. In *Coditel (No. 2)*,⁵⁵ a French company granted a Belgian company the exclusive right to exhibit the film, *Le Boucher*, in Belgium for seven years. The French company later licensed a German broadcasting company to broadcast the film on German television. When it did so, Coditel, a Belgian cable operator, included the film in its Belgian service. The question referred to the European Court of Justice was whether the exclusive exhibition agreement was prohibited by Article 81 (then Article 85 of the Treaty). The Court held that in general exclusive licences of this nature did not automatically fall within Article 81. However, the Court added that it might do so if the royalties exceeded a fair remuneration; if the agreement was excessively long; or if the exercise of the right was likely to distort competition within the Common Market.⁵⁶

3.2 RESTRICTIVE FIELD OF DISTRIBUTION AGREEMENTS

Where a work has a number of potential markets, a copyright owner may wish to limit the field in which the licensee exploits the work. For example, a copyright owner may wish to license a work for sale by a book club, separately from sale by retail outlets. Such agreements are akin to 'fields of use' limitations. Under the Vertical Restraints Regulation these would be restrictions of the customers to whom the buyer may sell the contact goods or services. These would not be exempt unless the restriction is confined to active sales to an exclusive customer group allocated by the supplier to another buyer. If a copyright owner has given general retail rights exclusively to one person and book club rights to another, a restriction preventing the book club owner from actively selling outside the club would be exempt from Article 81. The OFT seems to have taken a similar stance as regards the application of the Part I prohibition.⁵⁷

3.3 PRICE LIMITATIONS

A copyright owner may wish to restrict the price at which the licensee sells a particular product. They might also require the licensee to specify to subsequent purchasers that they

⁵⁴ Technology Transfer Reg., Art. 1(2), Recital 15; Vertical Restraints Reg., Art. 4(b); See *Re BBC* [1976] CMLR D-89. An OFT investigation into the CD market found evidence of past anti-competitive agreements requiring retailers of CDs not to import cheaper CDs from mainland Europe, or offering favourable terms to those who did not do so: see OFT, Annual Report (2002-3), 61.

⁵⁵ *Coditel SA v. Cine Vog Films SA (No. 2)*, Case 262/81 [1982] ECR 3381.

⁵⁶ Case 262/81 [1982] ECR 3381, 3401-2 (paras. 15, 17, 19).

⁵⁷ See OFT, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline*, OFT 418 (Nov. 2001) (para. 2.21).

may not resell the product at anything other than a specified price. Although such agreements have traditionally been treated as being unlawful, rather surprisingly from 1956 until recently the UK law went out of its way to tolerate one such price-fixing arrangement in the form of the 'Net Book Agreement'. This was an agreement between members of the Publishers' Association to impose certain conditions on booksellers as regards the price at which certain books ('net books') could be sold.⁵⁸ However, in 1995 the majority of publishers decided to abandon the net book system. As a result, the exemption previously afforded to the Agreement was removed.⁵⁹

Under the Vertical Restraints Regulation attempts at resale price maintenance constitute 'hardcore' restrictions that prevent the block exemption from operating.⁶⁰ An individual exemption would therefore be necessary.⁶¹ The domestic position is similar: the general exemption of vertical agreements from the Chapter 1 prohibition does not apply where the agreement has the object or effect of restricting the buyer's ability to determine its sale price.⁶²

3.4 SITE LICENCES

One of the characteristics of most digitized works is that in using the work users will ordinarily infringe copyright (insofar as they make a temporary reproduction on their computer). As a result, licences are frequently needed to permit such use. In the cases of software, databases, and journals in electronic form, it has become common to limit permitted use to a particular location. The question arises whether such a restriction is anti-competitive. It has been argued that in as much as site licences operate as caps on output they are anti-competitive and fall within Article 81 EC. For example, if the effect of licensing software to one particular terminal restricts the productive use of that software, such a licence may fall within Article 81 EC. However, if a site licence is 'open' in the sense that it allows for expansion of output or has a clause allowing for further licences on commercial terms, then this objection does not operate.⁶³ Under the Technology Transfer Regulation,⁶⁴ restrictions on quantities of output will place agreement outside the block exemption.

⁵⁸ *Re Net Book Agreement 1957* [1962] 1 WLR 1347.

⁵⁹ *Re Net Book Agreement 1957 (No. 4)* [1998] ICR 753.

⁶⁰ VRR, Art. 4(a).

⁶¹ The European Court of Justice held the UK Net Book Agreement to fall within the then Art. 85 prohibition but said it might be justifiable under Art. 85(3), overturning the views of the Commission and Court of First Instance: *Re Net Book Agreements: Publishers' Association v. EC Commission*, Case C-360/92P [1996] FSR 33; [1996] ICR 121; [1995] EMLR 185 (ECJ); *Publishers' Association v. EC Commission* [1992] 4 All ER 70; [1992] ICR 842 (CFI).

⁶⁴ TTR Art. 3(5).

4 REGULATION FOR THE PROTECTION OF USERS

In this section, we consider the ways in which the law interferes with copyright contracts for the benefit of 'users'. By 'users' we primarily mean individual consumers who wish to utilize copyright-protected material. The idea of protecting users from unfair contracts imposed by copyright owners is a relatively new one. In part this has arisen because certain acts carried out by users have come to require the consent of copyright owners. In the past, a person who bought a book could do most acts that they wished with the book without the need for further consent: the book could be read, lent to a friend, or sold to a charity shop without raising any potential liability. Today, as a result of technological developments, many similar acts such as photocopying the book or reading an electronic version on screen might now require permission. The second reason why contracts between copyright holders and users are becoming increasingly common is that new techniques of distribution, particularly digital dissemination, are removing intermediaries from the distribution process. A consumer who formerly would have bought a hard copy of a phonogram from a retailer can now be supplied with an equivalent digital version over the Internet directly from the copyright holder. This direct contact allows the copyright owner to reinforce any rights they may have under copyright with obligations imposed as part of the contract they have with the owner.

The main concern in these circumstances is that click-through contracts will extend copyright owners' rights beyond their existing scope. Consequently, such licences might impose conditions for use of works in which copyright has lapsed, or in the case of software might prohibit the making of back-up copies or decompilation, or in other cases might prohibit criticism or review. As the use of electronic resources increases and such contracts become the norm, the 'delicate balance' between owners and users encapsulated in statutory copyright may be sacrificed.

Although the E-Commerce Directive specifies that 'electronic contracts' should be recognized as valid,⁶⁵ specific Directives nevertheless indicate that certain exemptions may not be overridden by contract law.⁶⁶ For example, the Software Directive allows certain acts including the decompilation of computer programs. It also renders void contracts that attempt to restrict those rights.⁶⁷ A similar clause has been introduced to prevent contractual circumvention of defences to infringement of copyright in databases.⁶⁸ Moreover, the Information Society Directive explicitly takes on board concerns about oppressive use of technological measures to prevent access to material falling within copyright's carefully defined exceptions. Article 6(4) of the Information Society Directive provided for a strange, barely comprehensible, compromise.⁶⁹ This, and its UK implementation in section 297ZE of the 1988 Act, is reviewed in Chapter 13.

⁶⁵ Electronic Commerce Dir., Art. 9(1).

⁶⁶ Broadcasting Act 1996, s. 137.

⁶⁷ CDPA ss. 50A, 50B, 296A(1)(a), 296A(1)(b), 296A(1)(c).

⁶⁸ CDPA s. 296B. See also Database Reg. 19(2).

⁶⁹ Brian Esler has called this 'arguably the most obtuse and incoherent provision yet enacted by the EU in the touchy area of intellectual property harmonization'. See B. Esler. 'Technological Self-Help: Its Status under European Law and Implications for UK Law' at www.bileta.ac.uk/02/papers/esler.html.

5 CONTROLLING COLLECTING SOCIETIES

In Chapter 11 we looked at the ways in which copyright owners exploit their rights by way of collective administration. While collective licensing can clearly be beneficial to both copyright owners and users, the existence of single bodies solely responsible for administering rights may also cause a number of problems. The problems posed are of two sorts: problems with members and problems with users. Problems with members typically occur because a copyright owner has little alternative to joining the society, which can thus impose restrictive terms. The second set of problems arises from the relations with users, who similarly have little alternative but to take a licence from the collecting society on whatever terms it chooses. Because of these problems collecting societies have been described (in terms similar to the atom bomb) as ‘at once the most ingenious and the worst invention of mankind’.⁷⁰ This section looks at how these problems have been recognized and regulated at a national and European level.⁷¹

5.1 REGULATION OF MEMBER-SOCIETY RELATIONS

The terms of membership and control over the collecting society are a matter, first and foremost, for the rules of the society. If a large enough number of members object to these rules, they can be changed by consent. Equally, if a majority of the members are unhappy with the management of the society, control can be changed.⁷²

A powerful form of external control of society-member relations is provided by the UK competition authorities. As mentioned previously, the Competition Act contains prohibitions on agreements and concerted practices which restrict competition (the Part I prohibition) and ‘abuse of a dominant position’ (the so-called Part II prohibition). Since collecting societies occupy a dominant position in the market (the supply of services of administering particular rights) relations are apt to be scrutinised to ensure there is no abuse. In addition, under Part IV of the Enterprise Act 2002, the Office of Fair Trading is able (after conducting a preliminary informal investigation) to make a ‘market investigation reference’ to the Competition Commission where OFT has grounds for suspecting the features of a market prevents, restricts, or distorts competition.⁷³ The Competition Commission must investigate, assess whether there is an adverse affect on competition, and report. As a result of such a finding, the Competition Commission may require that action be taken to remedy the adverse affect, and make orders or require undertakings to

⁷⁰ A. Bertrand, ‘Performing Rights Societies: The Price is Right “French Style”, or the SACEM Cases’ [1992] *Ent LR* 147.

⁷¹ For a proposal that there be an ombudsman to regulate these relations see T. Meredith, ‘Dealing with Complaints against Collecting Societies’ (1995) 13(2) *Copyright Reporter* 58.

⁷² Copinger, para. 28–27,

⁷³ Enterprise Act 2002, s. 131. See OFT, *Market Investigation References*, OFT 511 (Mar. 2003). When making a reference, the OFT must have reasonable grounds for suspecting that one or more features of a market prevents, restricts or distorts competition in relation to the supply or acquisition of goods or services in the UK (or part of the UK). Previously, equivalent powers were made available by Part IV of the Fair Trading Act 1973, and it was on the basis of these that the Monopolies and Mergers Commission investigated PRS and PPL.

bring about appropriate changes.⁷⁴ In a previous investigation, under powers similar to those now granted by the Enterprise Act, the Monopoly and Mergers Commission (the predecessor of the Competition Commission) held that certain practices of the Performing Right Society were unsatisfactory and the Society agreed to amend its rules.⁷⁵

Another form of control over the rules of the society is to be found in Article 82 EC (formerly Article 86 of the Treaty). This prohibits the abuse by an undertaking of a dominant position. Most rights organizations constitute 'undertakings' and have a dominant position in the supply of relevant services to composers, authors, and publishers.⁷⁶ The critical issue is in what circumstances the terms constitute an abuse.

The balancing exercise required by Article 82 EC has been felt in four important aspects of society-member relations. *First*, it is clear that under European law societies may not discriminate on grounds of nationality, for example, by conferring associate status on foreign authors. All collecting societies must permit other nationals from the EU to join the society.⁷⁷ *Second*, the Commission has stated that the rules of collecting societies should ensure that no group of members obtains preferential treatment from revenue collected from the membership as a whole.⁷⁸ *Third*, in *Belgische v. SABAM*,⁷⁹ the European Court of Justice held that abuse would occur if a society imposed obligations on members which were not absolutely necessary for the attainment of the society's objectives and which could encroach unfairly on members' freedoms.⁸⁰ A restriction imposed upon a member must be 'indispensable' to the operation of the society, and must restrict the member's freedom to dispose of their works no more than is absolutely necessary (the 'equity' test).⁸¹ *Fourth*, societies are not permitted to impose unduly lengthy notice periods. In *Belgische v. SABAM*, the European Court of Justice observed that rules operated by SABAM, the Belgian society of authors and composers, allowing the society to retain rights for five years after a member withdrew 'may appear an unfair condition', but left the specific determination of whether it was to the national authority.⁸²

⁷⁹ *Belgische Radio en Televisie v. SV SABAM*, Case 127/73 [1974] ECR 313.

⁸⁰ Case 127/73 [1974] ECR 313, 317 (para. 15).

⁸¹ See *Re GEMA (No. 1)* [1971] CMLR D-35 (where the Commission held that it was an abuse for the German society to require the assignment of all categories of right). Similarly, in the context of complaints against the PRS, the MMC recommended that further exceptions could be allowed to the exclusive assignments that PRS demanded of its members, in particular permitting them to collect their own live performance revenues. The MMC also found that the PRS did not have in place adequate systems for ensuring that the distribution of royalties was carried out equitably. It recommended that the PRS rectify these failings by publishing detailed accounts, as well as taking advice about its mechanisms of sampling and how changes in those mechanisms and distribution policies impact on members. *Report on the Supply in the UK of the Services of Administering Performing Rights and Film Synchronization Rights* (1996) (Cm. 3147) (paras. 2.119–2.121).

5.2 REGULATION OF SOCIETY-USER RELATIONS

Another way in which collecting societies are regulated is in terms of their relationship with users of copyright. Here the problem is that most people wishing to use copyright works have no alternative but to seek a licence from a collecting society. This places the society in a strong bargaining position, which may enable it to dictate terms of use to the licensee. In the absence of regulatory control, the society might charge exorbitant fees, discriminate unfairly between different kinds of users, or require parties to become licensees of many more works than the user wants. In order to ensure that this monopoly power is not abused, there are both domestic and European regulatory controls.⁸³

5.2.1 The Copyright Tribunal

The Copyright Tribunal (which replaced the Performing Right Tribunal in 1989) has wide-ranging powers to review licences and licensing schemes operated by collecting societies.⁸⁴ The Tribunal normally sits in panels of three, selected from a group of up to eight. While it has been said that the Tribunal carries out a 'useful and indeed necessary function', its procedures have been criticized as being costly and lengthy.⁸⁵

The Copyright Tribunal is primarily concerned with the operation of 'licensing bodies'. A licensing body is defined as a society or other organization that has as one of its main objects the negotiation or granting of copyright licences. A body is still a licensing body if it is an agent, as well as when it becomes the owner of copyright. This means, for example, that the MCPS (which operates as an agent) is within the jurisdiction of the Copyright Tribunal. However, a body is only a licensing body if its object is the granting of licences covering works of more than one author.⁸⁶

The 1988 Act distinguishes between two kinds of activities involving a licensing body, namely 'licensing schemes' and one-off 'licences'. A licensing scheme is defined as any regime that specifies the circumstances and terms on which a licensing body is willing to grant licences.⁸⁷ The Tribunal can consider complaints by representative organizations concerning the terms of a proposed scheme;⁸⁸ or complaints by organizations or individuals with respect to a scheme in operation.⁸⁹ The Tribunal has wide powers: it may approve or vary schemes, hold that particular applicants should be granted licences under such schemes, or approve or vary the terms of particular licences.⁹⁰ The Tribunal will also

⁸³ A 'market investigation' reference could also be made under the Enterprise Act 2002. The equivalent power in the Fair Trading Act 1973 justified the MMC's 1988 Report, *Collective Licensing: A Report on Certain Practices in the Collective Licensing of Public Performances and Broadcasting Rights in Sound Recordings* (Cm. 530) (1988).

⁸⁴ Though as is explained below, not every aspect of copyright is regulated by the Tribunal. See Related Rights Reg. 17(4); CDPA s. 205B; Database Regs., Sched. 2.

⁸⁵ M. Freegard, 'Forty Years on: An Appraisal of the United Kingdom Copyright Tribunal, 1957–1997' (1998) 177 *RIDA* 3, 69, 63. See also *Universities UK v. Copyright Licensing Agency* [2002] *RPC* 693, 699 (para. 16) (explaining that the goal of the tribunal is to prevent unreasonable terms from being imposed and stating that current perceptions of proceedings as 'extremely costly, intolerably lengthy and highly complex' undermine the objective of the tribunal).

⁸⁶ See D. Zeffman and J. Enser, 'The Impact of UK Competition Law on the Music Industry' [1993] *Ent LR* 67, 71 (licensing body arguably includes companies such as publishers).

⁸⁷ CDPA s. 117.

⁸⁸ CDPA s. 118.

⁸⁹ CDPA s. 119.

⁹⁰ CDPA ss. 118–20.

hear disputes over which applicants for licences fall within the scheme,⁹¹ as well as refusals to grant licences. The Tribunal may make an order declaring that the complainant is entitled to a licence. After the Tribunal makes an order, a scheme may be referred again by its operator, a claimant for a licence, or a representative organization.⁹²

The criterion by which the Tribunal judges matters is one of 'reasonableness'. As such, its role is more than one of 'arbitration'.⁹³ Indeed, where there are several reasonable solutions, the Tribunal's job is to select whatever is the 'most reasonable'.⁹⁴ In considering whether to make an order the Tribunal is instructed to have regard to a number of factors, of which the most important is to ensure there is no 'unreasonable discrimination' between the scheme or licence in issue and comparable schemes or licences.⁹⁵ Apart from that, specific factors are to be considered in relation to different schemes.⁹⁶ For example, if the scheme concerns reprographic copying, the Tribunal is to have regard to the availability of published editions, the proportion of the work copied, and the nature of the use to which the copies will be put. In addition to the factors specifically listed in the 1988 Act, the Tribunal will also take account of factors indicated as relevant in EC Directives.⁹⁷

In determining the reasonableness of licence fees, the Copyright Tribunal has often described its task as determining what a 'willing licensor and willing licensee' would have agreed.⁹⁸ The usual starting point for ascertaining what this may be is with previous agreements, which are evaluated by the Tribunal in the light of changed circumstances.⁹⁹ Because the Tribunal is directed to ensure that there is no unreasonable discrimination, it will often be presented with evidence of allegedly equivalent arrangements. These may include arrangements by the same licensing body with other categories of users,¹⁰⁰ or arrangements by similarly positioned licensing bodies with the same licensees.¹⁰¹ While evidence of schemes in other jurisdictions is frequently put forward, it has rarely been influential.¹⁰² Other factors which are often treated as relevant include the extent of use, the size of the audience, and the user's revenue. Ultimately, calculating fees is not a process of mathematics, but one of 'judicial estimation'.¹⁰³

5.2.2 Other avenues

A user who is dissatisfied with the terms of a licensing scheme or an individual licence from a collecting society might also be able to bring an action based upon either Article 81

⁹¹ CDPA s. 119. The Tribunal can make orders concerning matter excluded from a licensing scheme: *Universities UK v. Copyright Licensing Agency* [2002] RPC 693, 707 (para. 59) (interim decision that the Tribunal had jurisdiction to review handling of 'study pack' material which had been excluded from the scope of the licensing scheme).

⁹⁴ *BPI v. MCPS* [1993] EMLR 86, 139; 22 IPR 325, 333.

⁹⁵ CDPA s. 129. Any discrimination should be 'logical': *BSB v. PRS* [1998] RPC 467, para. 5.4. Cf. M. Freegard, 'Forty Years On: An Appraisal of the United Kingdom Copyright Tribunal, 1957–1997' (1998) 177 *RIDA* 3, 57 (comparisons rarely used as guides).

⁹⁶ CDPA ss. 130–5. ⁹⁷ *BSB v. PRS* [1998] RPC 467 (Satellite Dir., Recital 17).

⁹⁸ e.g. *Working Men's Club v. PRS* [1992] RPC 227, 232.

⁹⁹ *BACTA v. PPL* [1992] RPC 149; *BPI v. MCPS* [1993] EMLR 86, 139.

¹⁰⁰ *BACTA v. PPL* [1992] RPC 149. ¹⁰¹ *Ibid.*; *AIRC v. PPL* [1994] RPC 143.

¹⁰² *British Airways v. The PRS* [1998] RPC 581.

¹⁰³ *Universities UK v. Copyright Licensing Agency* [2002] RPC 693, 726 (para. 177).

or 82 EC (formerly Articles 85 and 86 of the Treaty),¹⁰⁴ or the two prohibitions contained in the domestic Competition Act 1998.¹⁰⁵

Applying Articles 81 and 82 EC, the ECJ has provided national courts with general guidance on legitimate collecting society behaviour. In particular, in *Ministere Public v. Tournier*¹⁰⁶ it was argued that the arrangements between the French copyright management society SACEM and discotheques were prohibited under Articles 81 and 82 EC. In that case SACEM granted a blanket licence for its whole repertoire and charged discotheques according to a percentage of gross receipts. Some discotheque owners complained that the charges were excessive and that SACEM refused to grant licences for part of its repertoire, namely in relation to popular dance of Anglo-American origin. The public prosecutor brought criminal proceedings against Tournier, who was director of SACEM, for 'unfair trading'. As part of the action, certain questions were referred to the ECJ.

In relation to SACEM's refusal to license use of music from abroad separately, the Court noted that the parallel behaviour might amount to strong evidence of a concerted practice (contrary to Article 81). The Court added that it might be possible to account for the parallel behaviour on the grounds that direct licensing would require each society to establish their own management and monitoring system in other countries.¹⁰⁷ With regard to SACEM's decision only to grant blanket licences, the Court suggested that the test was one of 'necessity', that is whether the terms or practices were 'necessary' to safeguard the interests of authors, etc. This was a matter for national courts to determine.

With respect to the charges, the ECJ stated that 'if it were proved that the fees of a dominant undertaking in one member state are appreciably higher than those charged in other member states and where such a comparison of the fee levels has been made on a consistent basis, it follows that the discrepancy 'must be regarded as indicative of an abuse of dominant position'.¹⁰⁸ In such circumstances, the ECJ indicated that the burden of proof was effectively reversed. Where this occurs it would be for the relevant collecting society 'to justify the difference by reference to objective dissimilarities between the situation in the member state concerned and the situation prevailing in all the other member states'.¹⁰⁹

Uncharacteristically the ECJ also volunteered some views on the extent to which differences between SACEM and other societies were justified. More specifically, the ECJ found that one of the reasons for the marked differences between SACEM and other equivalent societies was the level of operating expenses: the SACEM staff level was much larger than in other countries and the proportion of receipts taken up by administrative expenses was therefore higher. However, the ECJ did not consider that these differences in operating expenses could necessarily justify higher charges being imposed on users. Instead, it said that rather 'the possibility cannot be ruled out that it is precisely the lack of competition

¹⁰⁴ These prohibitions would also apply to society-society arrangements, such as reciprocal agreements. See Commission Decision of 8 Oct. 2002 relating to a proceeding under Art. 81 of the EC Treaty and Art. 53 of the EEA Agreement (Case no. COMP/C2/38.014—*IFPI 'Simulcasting'* (2003/300/EC) *OJ L* 107/58 (30 Apr. 2003) (granting exemption to reciprocal agreement permitting multi-territorial simulcasting).

¹⁰⁵ Competition Act 1998, s. 2 (Ch. 1 prohibition), s. 18 (Ch. 2 prohibition).

¹⁰⁶ *Ministere Public v. Tournier and Verney*, Case 395/87 [1989] *ECR* 2521.

¹⁰⁷ *Ministere Public v. Tournier and Verney*, Case 395/87 [1989], *ECR* 2521; [1991] 4 *CMLR* 248.

¹⁰⁸ *Ibid.*, 2577 (para. 38). In *Bassett v. SACEM*, Case 402/85 [1987] *ECR* 1747, 1769 (para. 19) the Court did observe that 'it is not impossible, however, that the amount of royalty . . . charged by the copyright management society may be such that [Art. 82] applies'.

¹⁰⁹ Case 395/87 [1989] *ECR* 2521, 2577 (para. 38).

on the market in question that accounts for the heavy burden of administration and hence the high level of royalties'.¹¹⁰

The decision of the European Court of Justice indicates that some collecting society practices will contravene Articles 81 and 82. It also made it clear that an assessment of the existence of anti-competitive behaviour or abuse is largely one for national authorities. It seems too that the Commission is unlikely to intervene and take action to enforce Articles 81 and 82 against collecting societies on the ground that the activities lack sufficient 'Community interest'. For example in *Tremblay*, where a complaint was brought by French discotheques against SACEM on the ground that its charges were substantially higher than those charged elsewhere in the Community, after an initial inquiry the Commission decided not to pursue the complaint. It did so on the grounds that the effects of the pricing policy were felt only in France and that proceedings had already been initiated in the French courts. The European Court of Justice declined to overturn this analysis and compel the Commission to investigate further.¹¹¹

For the future, then, complaints about society-user relations are best directed to national authorities. In the United Kingdom this would be to the courts or the OFT where Articles 81 and 82 are implicated, otherwise to the Copyright Tribunal. It should be noted that the effect of the *Tremblay* case is not to make Articles 81 and 82 irrelevant. Rather it merely indicates that the Commission no longer sees itself as having a central role in investigating complaints and enforcing these provisions in the context of collecting societies. In that regard, it merely anticipated the so-called 'modernization' process and establishment of the European Competition Network.

5.2.3 European harmonization of collecting societies

As we have seen, although the Treaty imposes certain restrictions on the operation of collecting societies that will be investigated at a Community level, collective licensing is largely controlled at the national level. A number of the existing Directives highlight the need for collecting societies to meet certain standards of rationalisation and transparency,¹¹² but none of the Directives propose anything of substance. The Commission has held hearings and, in 2003, the European Parliament called for a Report from its Legal Affairs Committee.¹¹³ This Report was published in December 2003, and is generally supportive of the activities of Collecting Societies, but sees them as needing to be rendered more transparent and accountable to their members, and subject to scrutiny by competition authorities in cases of abuse. The Report specifically calls, amongst other things, for the 'establishment of minimum standards for organisational structures, transparency, accounting and legal remedies'. The Report may prompt further action from the Commission, possibly by way of a Directive.

RELATED RIGHTS: PERFORMERS' RIGHTS, DATABASE RIGHT, TECHNOLOGICAL MEASURES, RIGHTS MANAGEMENT INFORMATION, PUBLIC LENDING RIGHT, AND THE *DROIT DE SUITE*

1 INTRODUCTION

If there is one characteristic that typifies the development of intellectual property law since the Second World War, it is the proliferation of new forms of intellectual property. In this chapter we outline a number of regimes which are related to but which fall outside of the remit of copyright law: performers' rights; database right; rights relating to technological measures and rights management information; public lending right; and the so-called *droit de suite* or artist's resale royalty right.

2 PERFORMERS' RIGHTS

While the creative or cultural contributions made by people who play instruments, read poetry, and act in plays have long been valued, nonetheless performers have been poorly served by intellectual property law. Indeed, it was not until technological changes at the beginning of the twentieth century (notably the emergence of sound-recording technologies and radio broadcasting) threatened the livelihood of performers that the law intervened to protect performers. This occurred in 1925 when criminal sanctions were introduced to discourage people from abusing a performer's right to control the fixation

and subsequent use of their performances.¹ The courts provided additional relief by allowing performers to bring civil suits for injunctions and damages for threatened breaches of the criminal law.² While it might have been expected that copyright law would have been expanded to accommodate performers, this was not the case. In part this was because the fleeting and transitory nature of performances meant that they could not satisfy the requirement of material form that was widely considered to be a prerequisite for the subsistence of copyright. Another reason why performers were not protected by copyright was that they were considered to be subservient to the interests of the 'proper' rights-holders: namely, authors, composers, and dramatists. While authors and composers create primary works, performers were seen to merely translate or interpret these works. In short, it was believed (at least by some) that performers were involved in acts that were less 'creative' than authors, graphic artists, and film directors. The second-rate status of performers was reflected in the decision that performers did not belong within the Berne Convention (along with the producers of phonograms and broadcasting organizations). Indeed it was not until the Rome Convention of 1961 that performers were recognized at the international level.³ The rights given to performers have been expanded further in the WIPO Performers and Phonograms Treaty 1996.

Subsequent attempts to expand the protection available to performers often met with the response that it was not necessary to provide additional protection because performers were already compensated through industry pay awards. In part these awards reflect the fact that performers have learned to negotiate collectively, through union action (such as Actors' Equity). Eventually, the lobbying efforts of performers paid off when the 1988 Act provided performers with the right to control the recording of live performances (and other related rights). As the rights were not assignable, they are described as 'non-property' rights. The 1988 Act also provided producers with certain rights when they entered into exclusive contracts to record performers.⁴ The scope of the protection given to performers was further expanded as a result of European harmonization. To bring UK law into line with the Rental Rights Directive, the 1988 Act was amended from 1 December 1996 to provide performers with fully assignable 'property rights' and certain 'rights to remuneration'. In many ways, these bring performers' protection to a level virtually equivalent to that of authors.

2.1 SUBSISTENCE

Protection is confined to dramatic performances (which include dance or mime), musical performances, readings and recitations of literary works, and also to 'a variety act or any similar presentation'.⁵ This definition clearly encompasses much of what we would expect. Protection therefore arises for dramatic performances, such as the acting of a play in front of a live audience or film-script before a camera, or the performing of a ballet. It also arises

¹ Dramatic and Musical Performers' Protection Act 1925, consolidated and amended in the Performers' Protection Acts 1958 and 1972. See R. Arnold, *Performers' Rights* (1997).

² *Rickless v. United Artists* [1987] FSR 362.

³ See above at pp. 38–40.

⁴ CDPA ss. 180–4.

⁵ CDPA s. 180(2). The WPPT, Art. 2(a), defines performers as 'actors, singers, musicians, dancers and other persons who act, sing, deliver, declaim, play in, interpret, or otherwise perform literary or artistic works or expressions of folklore'.

where the performance is 'musical' as with the playing of a classical piece, such as Beethoven's Fifth Symphony by an orchestra, or the rendition of a pop song by a band.⁶

However, the definition is not without its ambiguities and apparent restrictions. First, there are ambiguities raised by the definition as to whether the work performed must exist before the performance takes place. The wording of section 180 of the CDPA suggests this need not be so for musical or dramatic works, since sub-section (2) refers to musical or dramatic performances. Thus unscripted and improvised musical and dramatic performances are almost certainly covered.⁷ However, in the case of readings or recitations, the definition suggests that the literary work must be in existence prior to the performance. Consequently, a person who gives a spontaneous speech or an interview will not obtain protection. Presumably, a singer who sings a song gives a 'musical' performance, even though in copyright terminology there might only be a performance of a literary work. Another ambiguity relates to what constitutes a 'musical performance'. It is unclear whether the term covers the playing of the work from a recording, so that a disc-jockey could be a performer. Finally, the definition of performance seems unduly restrictive. It seems that a performance of an 'artistic work'—by way of 'tableaux vivant', for example—is not included, unless such a performance can be classed as a 'variety act' or 'similar presentation'. A broad interpretation may be desirable in order to ensure compliance with the UK's international obligations. A sculpture, installation or physical construction is almost certainly outside the definition of performance, since the statute requires that a performance be given by one or more individuals (so that a performance appears to require the presence of a performer).⁸

Before moving on, it should be noted that international and regional treaties frequently distinguish between audiovisual performances and performances embodied on phonograms: indeed, international standards are directed primarily at the latter. While the reasons for the distinction are easy to understand (some parts of the film industry fearing that giving performers rights will potentially jeopardize a film company's ability to exploit a film), the distinction is not entirely satisfactory. This is because there is now a significant overlap and interchangeability between media, so, for example, that some performances start life as audiovisual before being recorded onto purely aural media, and some aural performances are later fixed on audiovisual media. The boundary-lines are, not surprisingly, highly contested.

⁶ One may wonder whether performance of Cage's 'four minutes thirty-three seconds' constitutes a musical performance. See the earlier discussion as to whether the piece is a 'musical work' for copyright purposes at p. 68.

⁷ Kamina, p. 350. Given that a 'dramatic work' is a 'work of action which is capable of being performed' it seems that a performance of a dramatic work requires action: performances lacking movement not being covered (unless they can be categorized as akin to 'variety acts').

⁸ Owen Morgan has proposed a 'principled definition' of a performance as 'the transitory activity of a human individual that can be perceived without the aid of technology and that is intended as a form of communication to others for the purpose of entertainment, education or ritual'. See, O. Morgan, *International Protection of Performers' Rights* (2002), 27.

2.2 PERFORMERS, AND RELATED BENEFICIARIES

The beneficiary of the rights given in a performance is *prima facie* the performer (or performers).⁹ Although performers are typically free-lance workers rather than employees, a performer is entitled to performance rights *even if* they are employed.¹⁰ Two issues are worth further consideration. The first concerns exactly who counts as a performer. The second concerns special provisions relating to the rights of those who are a party to exclusive recording agreements.

2.2.1 Main performers, ancillary performers, and other contributors

In contrast with some other jurisdictions, no attempt is made under UK law to exclude ancillary performers from the scope of protection.¹¹ This means that in practice care must be taken to deal contractually with all participants, session musicians as well as named artists, extras as well as star performers. A person present in the audience at a performance would not normally be regarded as ‘giving’ a performance, though in situations where a show depends upon active participation of members of the audience it is possible that a member of the audience might become a performer.¹² Although a director or choreographer or make-up artist may contribute significantly in the preparation of a performance, it cannot be said that they ‘give’ the performance. Consequently, they are left to their rights, if any, under copyright or contract law. The same is true for the organizer of a performance, such as a theatre or venue operator.

2.2.2 Exclusive recording contracts

Special provisions exist in the 1988 Act that relate to exclusive recording contracts. Section 185 defines an exclusive recording contract as ‘a contract between a performer and another person under which that person is entitled to the exclusion of all other persons (including the performer) to make recordings of one or more of his performances with a view to their commercial exploitation’. If the person having such rights is a qualifying person, then they are granted rights similar to a performers’ non-property rights. More specifically, their consent is required by anyone else wishing to make a recording. A party who is the beneficiary of an exclusive recording contract may commence an action for breach of statutory duty against a person who makes such a recording,¹³ or who shows a

⁹ The Act provides no indication as to the test of co-performance. For example, one might ask whether if a band perform a song there is: (a) one performance and multiple performers (as one might assume); or (b) multiple performances each given by the individual performer (guitarist, singer, drummer, which is not implausible given that each will be ‘miked-up’ individually, so that the contributions are technically separable) as held in *Bamgboye v. Reed* [2004] *EMLR* 5; or (c) two performances (one a musical performance by the musicians, one a dramatic performance by the singer). Is the issue one of separability of contribution, intention to integrate, or perception of integration? The answer might be important when determining whose consent is required to exploit elements or parts of the collective performance. Morgan argues that each individual makes a separate performance and that individual performers should have first ownership in their performances as individuals: Morgan, 21. See also Copinger, para. 12–26 (in most cases each performance is distinct, but leaving open possibility of concept of joint ownership).

¹⁰ R. Arnold, *Performers’ Rights* (1997), ch. 3. Note that such performers are presumed employees under French law: see Kamina, p. 357.

¹² Cf. Copyright Act 1968, s. 248A(2)(d) (Australia) (excluding ‘a participation in a performance as a member of an audience.’)

¹³ CDPA s. 186.

wrongful recording in public or broadcasts it,¹⁴ as well as against those dealing commercially in such illicit recordings.¹⁵ While performers' non-property rights are not transferable, the person with an exclusive recording contract may assign rights under that contract.¹⁶

2.3 RIGHTS

There are three types of rights available to protect performers: non-property rights, property rights, and remuneration rights.

2.3.1 Non-property rights

A performer has the right to authorize the recording of a live performance. They also have the right to prevent the making of a recording of a live performance from a broadcast in which it has been included.¹⁷ (These are the acts of 'bootlegging'.) Performers also have the right to prevent their live performances being broadcast. Prior to the mass distribution of fixed recordings, this right would have been very important. Where a recording has been made without the consent of a performer, their rights are infringed when the wrongfully recorded performance is shown or played in public, or communicated to the public. This right is only infringed where the defendant knew or had reason to believe the recording was made without the performer's consent.¹⁸ This would cover the playing of obviously bootlegged recordings at discotheques or over the radio. Performers are also given the right to control the distribution of illicit recordings. These are recordings made, otherwise than for private purposes, without the consent of the performer or the person, if any, having recording rights.¹⁹ Importation and sale of illicit recordings is prohibited where the person knows or has reason to believe that the recording is illicit.²⁰

All of these non-property rights are non-transmissible, except on death.²¹ Infringement is actionable as a breach of statutory duty. A person may also be subject to criminal liability if they knowingly commit certain commercial acts in relation to illicit recordings.²² At present, performers do not benefit from moral rights. However, a consultation process is under way to consider how UK law should be amended to give effect to Article 5 of the WIPO Performances and Phonograms Treaty (which provides for moral rights of attribution and integrity for performers).²³ Consideration is also being given as to whether these amendments should extend to audiovisual performances.²⁴

2.3.2 Property rights

Performers are also given property rights in their performances. These rights were

¹⁴ CDPA s. 187. ¹⁵ CDPA s. 188. ¹⁶ CDPA s. 185(2), (3).

¹⁷ CDPA s. 182. The limitation to the effect that these rights are not infringed if the recording is made for private and domestic purposes has been removed to implement the Info. Soc. Dir.: SI 2003/2498 Sched. 2.

¹⁸ CDPA s. 183. ¹⁹ CDPA s. 197. ²⁰ CDPA s. 184.

²¹ CDPA s. 192A. ²² CDPA s. 198. Illicit recording is defined in CDPA s. 197.

²³ See above at p. 42.

²⁴ Copyright Directorate, *Moral Rights for Performers: A Consultation Paper on Implementation in the UK of the WIPO Performances and Phonograms Treaty Obligations on Performers' Moral Rights and on Further Developments in WIPO on Performers' Moral Rights* (1999). The document proposes that the moral rights granted to performers be formulated to contain similar limitations and exceptions as those granted to authors, most notably, a requirement of 'assertion' of the right of attribution. On such limitations, see Ch. 10.

introduced in order to implement the Rental Rights Directive.²⁵ The performer's property rights include the right to make copies of a recording of a qualifying performance, the right to issue copies of a recording to the public, the right to rent or lend copies and the right to include the performance in an on-demand service.²⁶ The definitions of these three rights correspond to those of a copyright owner.²⁷ In contrast with the other rights given to performers, these property rights are transmissible. Any assignments made must be in writing and signed by the assignor.²⁸ In relation to film-production agreements, a performer is presumed, in the absence of an agreement to the contrary, to have transferred the rental right to the producer.²⁹

2.3.3 Right of remuneration

Performers are also given two 'remuneration rights'. These were introduced in the process of implementing the Rental Rights Directive. The most important of these, at least financially, is the right to claim equitable remuneration from the owner of copyright in a *sound recording* (note, not an audiovisual work) of a qualifying performance, where the sound recording is played in public, or communicated to the public (other than by way of 'making available').³⁰ This right formalized the pre-existing practice whereby recording companies made *ex gratia* payments to bodies representing musicians. Under the new regime, performers must claim their revenue that accrues in the United Kingdom from the collecting society that administers the performing and broadcasting rights on behalf of the owners of copyright sound recordings, namely Phonographic Performance Limited. In practice, this is done via the collecting society PAMRA (the Performing Artists' Media Right Association).³¹ The second remuneration right is less important. This provides that where a performer has transferred their rental right concerning a sound recording or film to the producer, the performer retains the right to equitable remuneration for the rental of sound recordings or films.³²

Both of the remuneration rights may only be assigned to a collecting society.³³ In the absence of a relevant agreement, the Copyright Tribunal may determine royalty rates.³⁴ As

²⁵ See Ch. 2. The new regime applies to performances given before commencement: Related Rights Reg. 26(1). No act done in pursuance of an agreement made before 19 Nov. 1992 shall be treated as an infringement of any new right: Reg. 27. Where before commencement the owner or prospective owner of a performer's right in a performance has authorized a person to make a copy of a recording of the performance, any new right, such as the issuing right or rental right, in relation to that copy shall vest on commencement in the person so authorized: Reg. 31.

²⁶ CDPA s. 191A and s. 182A–C, s. 182CA (as added by SI 2003/2498 r. 7). The Copyright Tribunal has an ultimate power to override a performer's right to consent, if they cannot be identified: CDPA s. 190, as amended. Prior to 1 Dec. 1996, the Tribunal had power to override refusal of consent if it was being unreasonably withheld.

²⁷ See Ch. 6. ²⁸ CDPA s. 191B. ²⁹ CDPA s. 191F.

³⁰ CDPA s. 182D (as amended by SI 2003/2498 r. 7). A sound recording is not played in public when a film in which the recording is incorporated is shown in public: CDPA s. 5B(3)(a). Cf. Kamina, pp. 356–7 n. 111.

³¹ PAMRA was formed in 1995 and represents all performers. It currently has over 9,000 members and has reciprocal agreements with, *inter alia*, the corresponding Dutch (SENA) and German (GVL) societies. An alternative organization, Association of United Recording Artists (AURA), also represents performers, especially named performers.

³² CDPA s. 191G. This scheme applies only to rentals after 1 Apr. 1997, and, with respect to rentals of sound recordings or films made in pursuance of an agreement entered into before 1 Jul. 1994, is only available if there was appropriate notification before 1 Jan. 1997.

³³ CDPA s. 191G(2). ³⁴ CDPA ss. 182D(4), 191H.

yet there have been no cases where the Tribunal has been asked to assess what an equitable remuneration should be. Although the concept of 'equitable remuneration' is a 'Community concept' it is one to be applied by national authorities, so each is left with a wide margin of appreciation, particularly as to determining relevant criteria. In the only decision to date, the ECJ has said that it was within this margin to calculate the money to be paid by a broadcaster by reference to the number of hours of phonograms broadcast; the viewing and listening densities; the tariffs used in respect of such uses of musical works; the tariffs used in other member states; and the amounts paid by other (commercial) stations.³⁵ The 'national court is therefore doing everything to ensure the best possible compliance with the provisions of Article 8(2) . . . assuring the equitable remuneration of performing artists and phonogram producers by giving preference to a contractual agreement based on objective criteria'.³⁶

2.4 DURATION, DEFENCES, AND REMEDIES

All performers' rights last for at least fifty years from the end of the year of the performance. However, if a recording incorporating the performance is released within this period,³⁷ the rights last for fifty years from the year of release.³⁸ Rights vested in a performer at the time of their death may only be exercised by a person specifically nominated in the performer's will or by their personal representative.³⁹

Performers' rights are subject to a host of defences that, rather inconveniently, are contained in Schedule 2 to the 1988 Act. The defences parallel those for copyright and include fair dealing for criticism or review, fair dealing for reporting current events, incidental inclusion, as well as a range of educational and library defences. These are all discussed in Chapter 9, and the comments made there apply equally to performers (*mutatis mutandis*). One defence notable by its absence is the defence of fair dealing for research and private study. However, the defence applicable to recording broadcasts for the purpose of watching or listening to the broadcast at a later time also applies to any performance included in the broadcast.

Like copyright, the property and non-property rights are enforceable in civil and criminal actions. The usual remedies for breaches of statutory duty are available, namely injunctions, damages, or account of profits. The right-owner may also prosecute for a range of statutory offences, seek orders which include delivery-up and disposal, and seize infringing articles from traders without premises. These remedies are discussed in Chapter 48.⁴⁰

2.5 FOREIGN PERFORMANCES

Performances by foreign performers or performances that take place in foreign countries will be protected in the United Kingdom if the performance is 'qualifying'. A performance is a 'qualifying performance' if it is given by a 'qualifying individual' or takes place in a

³⁵ *Stichting ter Exploitatie van Naburige Rechten (SENA) v. Nederlandse Omroep Stichting (NOS)*, Case C-245/00 [2003] EMLR (17) 364.

³⁶ *Ibid.*, para. 44.

³⁷ CDPA s. 191(2). The requisite 'release' includes the following acts if authorized: publication, playing or showing in public, or communication to the public: CDPA s. 191(3). For further details on these rights, see Ch. 6.

³⁸ CDPA s. 191.

³⁹ CDPA s. 192.

⁴⁰ CDPA ss. 194–202.

'qualifying country'.⁴¹ A 'qualifying individual' is a citizen of, or an individual resident in, a 'qualifying country'.⁴² A 'qualifying country' is defined as the United Kingdom, another member state of the EEA, or a country 'designated . . . as enjoying reciprocal protection' under section 208 of the 1988 Act.⁴³ Section 208 empowers Her Majesty to designate certain countries as qualifying countries by Order in Council: either countries party to a convention relating to performers' rights (namely the Rome Convention or TRIPS), or countries deemed to give 'adequate protection' to performances by British citizens, residents or taking place in the United Kingdom.⁴⁴ Where a country is designated, it seems that such designation operates retroactively.⁴⁵ Unfortunately, the relevant Order in Council does not contain any saving for vested rights or for those who have prepared arrangements on the assumption that no relevant performer's right operated.⁴⁶

Section 185, which confers equivalent rights on a person who is party to an exclusive recording contract, does so only if they or one of their licensees, is a 'qualifying person'. A 'qualifying person', is defined as a 'qualifying individual' or a body corporate sufficiently connected with a 'qualifying country'.⁴⁷

3 DATABASE RIGHT

Many different technologies organize and order information: encyclopedias, filing cabinets, and textbooks all play their role in placing information in a usable format. Databases are another obvious example. While databases have existed in one form or another for a very long time, digital technology has transformed and revitalized databases. In particular, the digital database has enabled the production of facilities that enable easy access to vast collections of information. Examples familiar to lawyers include LEXIS and WESTLAW, as well as CD-ROMs such as the 'Index to legal periodicals'. The value of these facilities is the comprehensive nature of the information that they contain and the ease of access, rather than the way that information is ordered. While databases can cost a considerable amount of money to construct, they are readily copied. This makes them an ideal candidate for intellectual property protection.⁴⁸

Faced with the fact that the level of protection varied, sometimes considerably, between

⁴¹ CDPA s. 181.

⁴² CDPA s. 206. For a general analysis of concepts relevant to protecting foreign claims see above at pp. 5, 107–11.

⁴³ There is no distinction drawn between 'extension' and 'application', though CDPA s. 208(5) allows Part II of the Act to be 'applied' to countries that in Part I are subject to 'extension'.

⁴⁴ Performances (Reciprocal Protection) (Convention Countries) Order 2003 (SI 2003/773) which revoked and replaced SI 1995/2990.

⁴⁵ This is done currently by way of the Performances (Reciprocal Protection) (Convention Countries) Order 2003. In this Order qualifying countries are divided into three categories: under Part I, the Isle of Man; under Part II of the Order countries which belong to the EEA or the Rome Convention, and performances connected to them are granted full protection; or under Part III of the Order, to WTO members, in which case connected performances receive more limited protection, being confined to the right to prevent the making of a sound recording from a live performance and the broadcasting of a live performance.

⁴⁶ See Arnold, *Performers' Rights*, 51–7.

⁴⁷ CDPA ss. 181, 185(3), 206(1).

⁴⁸ At least in economic theory: see Davison, 239 ff., with criticisms.

member states,⁴⁹ the EC decided to harmonize the law that protected the effort that went into creating databases.⁵⁰ Eventually these efforts took shape in the form of the Database Directive.⁵¹ The Database Directive required member states to introduce a two-tier system of protection for databases.⁵² The first tier involves retaining copyright protection for databases that are 'original'.⁵³ This was discussed in Chapters 3 and 4. The Directive also requires member states to provide a second tier of protection by way of a new *sui generis* right known as the 'database right'. Database rights arise in relation to databases, including those that fail to reach the copyright's originality threshold.⁵⁴ The database right is separate from and in addition to any copyright protection that may exist in relation to a database. It has been described by one commentator as an 'unfair competition rule conceptualised and transformed into a positive intellectual property right'.⁵⁵ While this may have been an acceptable characterization of the initial proposal for a Directive, in its final form the right is potentially much stronger than a right against 'unfair competition'.⁵⁶ In fact, this new database right has been described as 'one of the least balanced and most potentially anti-competitive intellectual property rights ever created'.⁵⁷ The new right was introduced into the United Kingdom on 1 January 1998, in the Database Regulations.⁵⁸

⁴⁹ Some, such as the UK and Ireland would have probably protected most databases by copyright; others would have done so through 'unfair competition'; the Nordic countries had adopted a special form of protection for catalogues and a burning issue remains to what extent the Directive should be read as generalizing the latter position. On this, see Davison, 141.

⁵⁰ Complete uniformity has not been achieved because member states are able to retain unfair competition protection, and to diverge in implementing exceptions (Database Dir. Art 9, Art. 13). See Davison, 156–7. Note also Recital 52, which enables countries which have specific rules providing a right comparable to the *sui generis* right (presumably, the Nordic countries) to retain 'as far as the new right is concerned, the expectations traditionally specified by such rules'.

⁵¹ See above at p. 50. The legislative history of the Directive is explored in Davison, 50–68. See also, F.W. Grosheide, 'Database Protection—The European Way' (2002) 8 *Wash U Jo L and Policy* 39.

⁵² Similar initiatives are being considered in the US and at WIPO. A draft WIPO Database Treaty was circulated in Aug. 1996 but was not considered in the Geneva meeting in Dec. 1996. See p. 53 above. For a discussion of the US, see Davison Ch. 5. For WIPO, see Davison, Ch. 6 and J. Reichman and P. Samuelson, 'Intellectual Property Rights in Data?' 50 *Vanderbilt LR* 51, 95–113. Most commentators are sceptical about the usefulness of the European Directive as an international model. But cf. N. Thakur, 'Database Protection in the European Union and the United States: The European Database Directive as an Optimum Global Model' [2001] *IPQ* 100 (generally defending the *sui generis* right, but recognizing that there are unresolved issues, and proposing that were the right to be required under international arrangements, it should be subject to compulsory licensing).

⁵³ Transitional provisions make it clear that databases which are already protected by copyright on 27 Mar. 1996, but which would not reach the standards required under the Directive, continue to enjoy protection until the end of the copyright term.

⁵⁴ Database Reg. 13(2) (reflecting Database Dir. Art. 7(4)) says that it is immaterial whether or not the database or any of its contents are copyright works. In the original proposal, a work which benefited from copyright would not have been able to benefit from database right: Davison, 81.

⁵⁵ Stamatoudi, 96. Database Dir., Recital 6, refers to the new right as necessary given the absence of regional harmonization of unfair competition law.

⁵⁶ Davison characterizes the new right as new form of copyright, a hybrid of elements of the copyright laws of European countries: Britain's tendency to protect investment, with the tendency of France and Germany to provide for only narrow exceptions: a dangerous concoction of the most protective elements of each system. Davison, 99.

⁵⁷ J. Reichman and P. Samuelson, 'Intellectual Property Rights in Data?' 50 *Vanderbilt LR* 51, 81. Davison, 285, though less hysterical, is equally critical, saying the Directive has 'significant flaws in both its detail and overall design'.

⁵⁸ Copyright and Rights in Databases Regulations 1997 (SI 1997/3032). For implementation in Europe, see Davison Ch. 5. For a database of national case law, see www.ivir.nl/files/databases/index.html.

As yet, it is difficult to assess the impact of the new database right.⁵⁹ In a number of ways the protection provided by the database right is stronger than that conferred by copyright—a rather bizarre situation given that the criteria of protection seems to be less onerous than for copyright. One of the problems with database protection is its potential to be extended indefinitely. If this occurs, third parties will have to pay to access the data or generate the data themselves. At the same time the exceptions to the database right are much narrower than exist for copyright. It has been doubted whether it was necessary for the protection of databases to be nearly as strong as it is.⁶⁰

3.1 SUBSISTENCE

The database right is a property right that subsists in a database whether made before or after 1 January 1998.⁶¹ A 'database' is defined as 'a collection of independent works, data or other materials that are arranged in a systematic or methodical way, and are individually accessible by electronic or other means'.⁶² We reviewed the meaning of 'database' in Chapter 3, noting its potentially awesome breadth. The database right only arises if there has been a substantial investment in obtaining, verifying or presenting the contents of the database. 'Investment' includes any investment, whether of financial, human, or technical resources.⁶³ Investment may be 'substantial' in terms of quality, quantity, or a combination of both. A key question emerging in the national case law is whether investment directed at another goal is relevant for these purposes: for example investment in deciding the times of TV programmes can justify *sui generis* database right in the programme listings.⁶⁴

⁵⁹ This has not stopped the Commission claiming in its submission to WIPO that the regime constitutes a 'balanced approach' which 'has proven to fulfil the economic expectations' and not to 'interfere with the research or with the exchange of information': *Submission from the European Community and Its Member States: The Legal Protection of Databases* (2002).

⁶⁰ Reichman and Samuelson, 51. See also, C. Colston, 'Sui Generis Database Right: Ripe for Review' (2001) 3 *Information Law and Technology* (critical of the Directive, and suggesting introduction of compulsory licensing and expansion of exceptions); J. Lipton, 'Database as Intellectual Property: New Legal Approaches' [2003] *EIPR* 139 (criticizing *sui generis* right as too strong, and proposing a protection system based on registration of databases for specific markets); D. Freeman, 'Revising Canadian Database Protection: What Lessons From Europe?' [2002] 81 *Can. Bar Rev* 563.

⁶¹ Database Regs. 13(1), 27–8 (implementing Database Dir., Art. 14(3), Art 16). It is immaterial whether or not the database or any of its contents is a copyright work, so that there may be a database right where there is no copyright, or there may be both copyright and a database right. It may also be possible for a database to attract copyright but not the database right if the selection and arrangement renders the collection the author's own intellectual creation but there is not substantial 'human' investment in presenting the contents of the database. Nothing in these Regulations affects any agreement made before commencement; nor does any act done either before or after commencement, in pursuance of an agreement made before commencement amount to an infringement of the database right in a database.

⁶² Database Reg. 12.

⁶³ Database Reg. 13; Database Dir., Recitals 7, 12, 39, 40 (right protects *any* investment and referring to various types).

⁶⁴ See, e.g. *Fixtures Marketing v. Oy Veikkaus A*, Case C-46/02, a pending reference to the ECJ from Finland concerning whether there is database right in the Premier League's fixtures, and focusing on whether 'investment' in producing the fixtures was relevant when deciding whether there had been 'substantial investment' in the creation of the database; *Fixtures Marketing v. AB Svenska Spel*, Case C-338/02, a reference from Sweden, which also asks the ECJ to rule on the so-called 'spin-off' issue, that is whether investment must be primarily intended to create a database, rather than have some other object; *British Horseracing Board v. William Hill* [2001] *ECDR* 257, 270 (Laddie J) (acts of BHB in deciding when races should be run, and at which venues, did not of themselves constitute relevant investment.) There is a third *Fixtures Marketing*

Is this ‘investment in obtaining . . . the contents of the database’? Another issue is the extent to which originality in the selection or arrangement of a database counts as investment in obtaining or presenting the contents of the database.⁶⁵ Perhaps more important still is whether ‘substantial’—a term which (as we saw in the different context of Chapter 8) can cover a range of possibilities—is to be set at a high or low level.⁶⁶ All these issues will need to be decided by the ECJ.

The basic term of protection is fifteen years.⁶⁷ More specifically, the database right expires fifteen years from the end of the calendar year in which the database was completed.⁶⁸ However, where a database is made available to the public before the end of the period fifteen years from when it was made, rights in the database expire fifteen years from the end of the calendar year in which the database was first made available to the public. It is possible that a database right might subsist for thirty years (and may thereafter be extended, as discussed below). Where copies of the database as published bear a label or a mark stating that the database was first published in a specified year, the label or mark shall be presumed to be correct until the contrary is proved.⁶⁹

It is important to note that a new period of protection may be acquired for a database. For this to occur there must be a substantial change *to the contents* of the database.⁷⁰ This will include a substantial change resulting from the accumulation of successive additions, deletions, or alterations (so long as the changes constitute a substantial new investment in the database). In these circumstances the ‘new’ database qualifies for its own term of protection.⁷¹ This means that while a person who can access an old version of a database in which the *sui generis* right has expired will be able to extract and reuse the information from that public domain database,⁷² they would infringe if they took the same information from a database in which in a new period of protection subsisted. While the idea of giving a new period of protection to an updated database may seem no less justified than the idea of giving the authors of the second edition of a textbook copyright in the new edition, problems exist in relation to databases because many are subject to a process of continual updating. For example, in *British Horseracing Board*, the BHB database was

reference, *Fixtures Marketing v. Organismoa Prognostikon Agnon Podosfairou*, Case C-444/02 (pending). See also Davison, 83–7; 135–6 (Dutch cases); 143; 154–5; and 158 (doubting whether the incentive provided by the *sui generis* right is needed in spin-off situations). We doubt whether the courts will feel justified, given Recital 40, or comfortable with the idea of discriminating between investment in the creation of the information, and investment in ‘obtaining’ it, a differentiation which the ‘spin-off’ doctrine, if adopted, would appear to require.

⁶⁵ Davison, 84.

⁶⁶ See, e.g. *British Horseracing Board v. William Hill* [2001] ECDR 257, 270 (Laddie J) (the ‘qualifying level of investment is fairly low’).

⁶⁷ Where the making of a database was completed on or after 1 Jan. 1983, the right begins to subsist in the database for the period of 15 years beginning on 1 Jan. 1998: Database Reg. 30.

⁶⁸ Database Reg. 17 (implementing Database Dir. Art. 10).

⁶⁹ Database Reg. 22(3). Cf. Database Dir., Recital 53.

⁷⁰ Database Reg. 17(3); Database Dir., Art. 10(3); Recitals 54, 55.

⁷¹ For an economic critique of the Directive see C. Koboldt, ‘The EU-Directive on the Legal Protection of Databases and Incentives to Update: An Economic Analysis’ (1997) 17 *International Rev Law & Economics* 127.

⁷² Accessing such a database may be unproblematic where there is a hard copy, but much more difficult where the owner of database right has only distributed the database ‘online’ and has subjected it to regular updating.

constantly being updated so that 800,000 new records or changes to existing records were being made each year—that is over 2,000 a day. In these cases, which Laddie J has described as relating to ‘dynamic databases’, there are clear difficulties in deciding when a sufficient alteration of the contents will have occurred such as to render the database a new, separate database.⁷³ Hopefully, the ECJ in *British Horseracing Board v. William Hill*, will provide some guidance.

3.2 MAKERS AND OWNERS

The ‘maker’ of a database is the first owner of the database right.⁷⁴ Subject to an exception as regards employees, the maker of the database is the person who takes the initiative in obtaining, verifying, or presenting the contents of a database, and who assumes the risk of investing in that obtaining, verification, or presentation.⁷⁵ The implication of this is that the maker must take the initiative *and* the risk of the investment. If one person takes the risk and another person takes the initiative, joint making may occur. Where a database is made by an employee in the course of employment, unless otherwise stipulated, the employer is regarded as the maker of the database.⁷⁶

A number of presumptions simplify the task of proving ownership.⁷⁷ Where a name purporting to be that of the maker appears on copies of the database as published or on the database when it was made, the person whose name appeared is presumed to be the maker of the database and to have made it in an employment relationship. Where copies of the database as published bear a label or a mark naming a person as the maker of the database, the label or mark is presumed to be correct. Both presumptions are rebuttable.

The database right is an assignable property right, and sections 90–3 of the 1988 Act apply to the database right as they would to copyright works. It is also possible to license database rights, and licensing schemes and licensing bodies are subject to supervision in accordance with Schedule 2. The jurisdiction of the Copyright Tribunal has been extended accordingly.

3.3 INFRINGEMENT, RIGHTS, AND REMEDIES

The database right is infringed where a person, without the consent of the owner of the right, ‘extracts’ or ‘reutilizes’ all of, or a substantial part of, the contents of the database.⁷⁸

⁷³ *British Horseracing Board v. William Hill* [2001] ECDR 257, 283–285 (Laddie J); [2002] ECDR 41 (Court of Appeal). In the case of such a ‘dynamic database’, Laddie J. noted that an ‘attempt to split it into a series of discrete databases, besides being impossible to do, would not reflect reality’. He accordingly reasoned that, in that case, ‘[a]s new data are added, so the database’s term of protection is constantly being renewed’. Nonetheless, he qualified this conclusion by opining that, if a person extracts old data from the database, that person is only infringing if the data was only added to the database in the last 15 years.

⁷⁴ Database Reg. 15.

⁷⁵ Database Reg. 14; Database Dir., Recital 41.

⁷⁶ Database Reg. 14(2). Where a database is made by Her Majesty or by an officer or servant of the Crown in the course of his duties, Her Majesty shall be regarded as the maker of the database: Database Reg. 14(3). Where a database is made by, or under the direction or control of, the House of Commons or the House of Lords, the rule is varied: Database Reg. 14(4).

⁷⁷ Database Reg. 22(1).

⁷⁸ Davison, at 87, argues that while these new terms give the impression that this is a new kind of right, the terms in fact ‘refer to rights that already exist and are well known in copyright law’: ‘extraction’ is really reproduction, and ‘re-utilization’ a combination of distribution, rental, and communication to the public.

The owner of database right must prove that the alleged infringer has derived the material from the claimant's database, whether directly or indirectly.⁷⁹ 'Extraction' means the permanent or temporary transfer of *the contents* of a database to another medium by any means or in any form.⁸⁰ It (almost certainly) does not require that the information no longer remain in the original database.⁸¹ 'Reutilization' means making those contents available to the public by any means. It is not confined to making the contents available for the first time—rather it is any distribution (whether by electronic means or otherwise).

One problem which has already been raised before the courts is the conflict between, on the one hand, these rights over the 'contents' of the database, and, on the other, the assertion made in the Recitals to the Directive that *sui generis* rights 'should not give rise to the creation of a new right in the works, data or other materials themselves'.⁸² What is the difference between a right over the contents of a database and a right over the data themselves? Rejecting an argument to the effect that all that is protected is the 'database-ness' of a collection of information, Laddie J has held that infringement of the right is not avoided by rearranging the contents of the database: according to Laddie J what is prohibited is certain kinds of use of 'parts of the contents' of the database. Taking a collection of data from the database is such an act.⁸³ However, it should be noted that, on appeal, the Court of Appeal referred the issue of the exact scope of protection to the ECJ.⁸⁴

The 'infringing' act must take place in relation to a 'substantial' part of the contents of the database.⁸⁵ The question of whether the part taken is substantial depends on the quantity and/or the quality of the part taken. It may be that the courts will assess substantiality by reference to the value of the part to users, or the impact on the database-maker's market for information.⁸⁶ In *British Horseracing*, taking the most recent and core information from a database of horseraces was held to be taking of a substantial part, though on appeal, the Court has now referred a number of questions to the ECJ.⁸⁷ We await its guidance.

Importantly, Regulation 16(2) provides that the repeated and systematic extraction or reutilization of *insubstantial* parts of the contents of a database may amount to the extraction or reutilization of a substantial part of those contents.⁸⁸ This will only be infringement where it comprises acts 'which conflict with a normal exploitation of that database or which unreasonably prejudice the legitimate interests of the maker of the database'.⁸⁹ In the context of a database of information relating to horseraces, Laddie J suggested that an example of a legitimate repeated extraction would be that of a novelist who repeatedly

⁷⁹ As was the case in *British Horseracing Board v. William Hill* [2001] ECDR 257, 271 per Laddie J; approved on appeal [2002] ECDR 41).

⁸⁰ Database Reg. 12, Database Dir., Art. 7(2)(a). Playing a song from a jukebox would not be an extraction because the contents are not transferred to another medium.

⁸¹ *British Horseracing Board v. William Hill* [2001] ECDR 257, 269 (per Laddie J). Otherwise, 'extraction' would not cover the copying and re-arrangement referred to in Recital 38 of the Directive, nor the 'on-screen display' referred to in Recital 44.

⁸² Database Dir., Recital 46. ⁸³ *British Horseracing Board v. William Hill* [2001] ECDR 257, 269.

⁸⁴ [2002] ECDR 41 (Court of Appeal); Case C-203/02. Davison notes that confining protection to 'database-ness' would significantly limit the effect of the Directive, and should be regarded as dubious: Davison, 155.

⁸⁵ Database Reg. 16; Database Dir., Art. 7, Recital 42. ⁸⁶ Davison, 156.

⁸⁷ *British Horseracing Board v. William Hill* [2001] ECDR 257, 278 per Laddie J; [2002] ECDR 41 (Court of Appeal).

⁸⁸ Database Dir., Art. 7(5), Recital 49. ⁸⁹ Database Dir., Art. 7(5).

chose names of his characters from the database.⁹⁰ In contrast, in that case the repeated use of information for betting services was held—at first instance—to be the systematic extraction of parts of the claimant's 'dynamic database'. Elsewhere in Europe, the systematic extraction right has been used against the providers of search engines which locate and forward data of specified types to users.⁹¹

The database right allows the maker to control the first sale, but not the subsequent distribution, of hard copies on which data is stored. Where a copy of a database has been sold within the EEA by, or with the consent of, the owner of the database right in the database, further sales within the EEA of that copy shall not constitute the extraction or reutilization of the contents of the database. It is interesting that the right is only exhausted by 'sale' and not other forms of transfer.⁹² Consequently, the sale by a customer of gratuitously distributed copies of databases, such as British Telecom telephone directories, may infringe. Oddly, where there has been first sale of hard copies on which data are stored, the Regulations only permit resale and not other forms of transfer. The Regulations appear to suggest that the lawful buyer of a copy of a database cannot give it away, nor rent it.⁹³

In relation to the remedies available for breach of the database right, the Database Regulations provide that equivalent provisions of the 1988 Act apply in relation to the database right and databases in which that right subsists, as they apply in relation to copyright and copyright works.⁹⁴

3.4 EXCEPTIONS AND DEFENCES

3.4.1 Lawful use

A lawful user of a database which has been made available to the public in any manner is entitled to extract or reutilize insubstantial parts of the contents of the database for any purpose.⁹⁵ This limitation may not be excluded by agreement.

3.4.2 Fair dealing

Where a database has been made available to the public in any manner, the database right is not infringed by a fair dealing with a substantial part of its contents if three conditions are satisfied: (i) if that part is extracted from the database by a person who is a lawful user of the database; (ii) if it is extracted for the purpose of illustration for teaching or research and not for any commercial purpose; and (iii) if the source is indicated.⁹⁶ In exempting pedagogical uses, this provision gives rise to the possibility that a person may infringe copyright in an original database, but not the database right in the component data.⁹⁷

⁹⁰ *British Horseracing Board v. William Hill* [2001] ECDR 257, 284.

⁹¹ See Davison, 125, and case law there described.

⁹² Database Reg. 12(3).

⁹⁴ See Ch. 47.

⁹⁵ Database Reg. 19; Database Dir., Art. 8. The definition of 'lawful user' is problematic: see pp. 219, 221.

⁹⁶ Database Reg. 20(1); Database Dir., Art. 9(b). Criticized by the Royal Society as 'vague and unhelpful': Royal Society, *Keeping Science Open: The Effects of Intellectual Property on the Conduct of Science* (2003) para. 5.5.

⁹⁷ On fair dealing, see Ch. 9.

3.4.3 Public lending

An exception is also made for public lending.⁹⁸ For lending to be ‘public’ it must take place through an establishment which is accessible to the public. Such an establishment is permitted to charge borrowers an amount that does not go beyond what is necessary to cover the costs of the establishment.⁹⁹ However, permitting remote access is not deemed to constitute a lending.¹⁰⁰ Bizarrely, the exception for public lending does not apply to the making of a copy of a database available for on-the-spot reference use. Even if the lending is gratuitous and in a public establishment, the Regulations suggest that it may be an infringement.¹⁰¹

3.4.4 Other defences

Defences also exist in relation to parliamentary and judicial proceedings, Royal Commissions and statutory inquiries, material open to public inspection or on an Official Register, material communicated to the Crown in the course of public business, public records, and acts done under statutory authority.¹⁰²

The Regulations also provide a defence where the extraction or reutilization occurs at a time when the identity of the maker could not be ascertained by reasonable inquiry, or in pursuance of arrangements made at a time when such identification was not possible. It must also be reasonable to assume that the database right has expired.¹⁰³ There does not appear to be any limitation as regards television listings.¹⁰⁴

Competition law will apply to database right as to other intellectual property rights.¹⁰⁵ More specifically, Article 82 EC (and the UK Competition Act’s Chapter II prohibition) will be available to prevent abuse of a dominant position. It is notable that cases such as *Magill* and *IMS Health*, (considered in Chapter 11) where Article 82 has been invoked by the European Commission, both concerned works that would have benefited from database right. Indeed, it may be that the decision to omit the provisions on compulsory licensing (which featured in the initial proposal) from the final version of the Directive, was based on the presumption that Article 82 and its national analogues would offer a strong licensing-incentive to sole-source database-makers. However, there are at least two problems with this assumption.¹⁰⁶ First, the exact scope of the ‘exceptional circumstances’ which warrant intervention has yet to be settled. Second, it may be that competition authorities will be more reluctant to interfere with rights specifically created by the European legislature than with the operations of pre-harmonised national laws.

⁹⁸ Database Reg. 12(2) Database Dir., Art. 7(2).

⁹⁹ Database Reg. 12(3).

¹⁰⁰ Fourth Standing Committee on Delegated Legislation, 3 Dec. 1997, Minister of State, Dept. of Trade and Industry (Ian McCartney): ‘On the question of libraries holding databases and making them available for remote access, we believe that is likely to count as an extraction or reutilization of the database’s contents, and not as public lending. Public lending means that a copy of the database held by the library is lent out and is to be returned. Public lending is excluded from the scope of the database right, under Reg. 12(2)’.

¹⁰¹ Database Reg. 12(4).

¹⁰² Database Regs., Sched. 1: these correspond to the provisions of CDPA ss. 45–50; Database Dir., Art. 9(c).

¹⁰³ Database Reg. 21(1).

¹⁰⁴ Cf. pp. 259–60.

¹⁰⁵ Database Dir., Recital 47.

¹⁰⁶ See above pp. 261–5. Davison, 43–8, also observes that there will be difficulties (i) proving dominance (ii) inducing the relevant authorities to act and (iii) proving that the refusal to licence is an ‘abuse’. At 280, he suggests that the onus of proof be placed on the database right owner to demonstrate it is not the sole source, is not dominant in the relevant market and has not abused its economic power.

3.5 FOREIGN DATABASES

The database right will only subsist where its maker was, at the material time¹⁰⁷ either: a national of an EEA state; habitually resident within the EEA; a body incorporated under the law of an EEA state; a body with its principal place of business or its registered office within the EEA; or a partnership or other unincorporated body which was formed under the law of an EEA state which, at that time, satisfied certain conditions.¹⁰⁸ Mark Davison has argued that these rules put the EC in breach of its obligations under Berne and TRIPS to provide national treatment. This is because, in Davison's view, the so called '*sui generis*' right is in substance a type of copyright: the criteria for acquisition of the right (in particular taking account of the quality of investment in the creation and arrangement of the database), the nature of the rights conferred, and the exceptions, all—he argues—have the characteristics of copyright.¹⁰⁹ If Davison is wrong, and the *sui generis* right is deemed to be a unfair competition right, there might equally be a violation of TRIPS and the Paris Convention, which requires countries of the Union to grant national treatment as regards the protection of industrial property, which includes 'the repression of unfair competition'.¹¹⁰

4 TECHNOLOGICAL PROTECTION MEASURES

As mentioned in Chapter 11, copyright owners have begun to exploit copyright-protected works by self-help mechanisms in the form of 'technological measures of protection'. As mentioned, this new mode of exploitation reflects real fears amongst the right-holders that digital reproduction and communication technologies presents the threat of such widespread private copying that copyright law by itself could not be relied upon to protect the investment involved in creating and publishing the work. Such technological protection measures include encryption and similar access controls where works are encoded so that only those with legitimate keys can obtain access, and copy-controls which allow users access to works but operate to prevent the subsequent making of copies.

The use of technological measures to support copyright is reinforced by complex and extensive laws prohibiting circumvention of such measures. The re-inforcement is by way of a mesh of overlapping civil and criminal actions. This complex topic deserves treatment separate from secondary infringement of copyright, but as 'related rights' for two reasons. First, because the measures are in many cases not limited to those applied to protect copyright works, but also protect performances, and *sui generis* database right. Second, because the civil rights of action are frequently conferred not only on the copyright holder who applies the measure to the work, but also on the person issuing copies to the public in

¹⁰⁷ Database Reg. 18. The 'material time' means the time when the database was made, or, if the making extended over a period, a substantial part of that period.

¹⁰⁸ Database Reg. 18(2). The conditions are (a) that the body has its central administration or principal place of business within the EEA or (b) that the body has its registered office within the EEA and the body's operations are linked on an ongoing basis with the economy of an EEA state.

¹⁰⁹ Davison, 222–5. One unfortunate consequence of such a characterization is that the database right should last for a minimum term of 50 years *post mortem*.

¹¹⁰ Paris, Art. 2(1), 1(2); TRIPS, Art. 2(1), Art. 3(1).

protected form, and any other person with intellectual property rights in the technological measure employed.

The 1988 Act, as amended, contains three categories of provision dealing with situations where a person facilitates access to works to which the person concerned is not entitled to use or receive. The first category, in sections 296 ZA–ZF, relates to the circumvention of effective technological measures applied to copyright works other than computer programs, and is designed to implement Article 6 of the Information Society Directive.¹¹¹ The second category, which is found in section 296, applies only to computer programs (and is intended to implement Article 7(1)(c) of the Software Directive). The third category, in sections 297–9, relates to reception of transmissions (and is intended to implement an EC Directive giving legal protection to services based on ‘conditional access’).¹¹² Each needs to be considered in turn.

4.1 MEASURES APPLIED TO COPYRIGHT WORKS (OTHER THAN COMPUTER PROGRAMS)

Sections 296ZA–ZF are intended to implement Article 6 of the Information Society Directive which requires member states to provide ‘adequate legal protection’ against a number of activities in relation to the circumvention of ‘effective technological measures’. Because those provisions are not supposed to affect the provisions in the Software Directive, we are here concerned with cases where effective technological measures have been applied to a copyright work other than a computer program.¹¹³ Section 296ZF defines ‘technological measures’ as ‘any technology, device or component that is designed, in the normal course of its operation, to protect a copyright work other than a computer program’.¹¹⁴ A technological measure is ‘effective’ where the use of a protected work, etc. ‘is controlled by the copyright owner through either (a) an access control or protection process such as encryption, scrambling or other transformation of the work, or (b) a copy control mechanism, which achieves the protection objective’.¹¹⁵ This makes clear that the provisions apply both to access controls, such as encryption, and copy controls, such as SCMS. It remains unclear, however, whether they cover devices which monitor usage.¹¹⁶ Following largely the schema of the Directive, the Act distinguishes between two sorts of objectionable behaviour: on

¹¹¹ CDPA s. 297ZA(1), (6); s. 296 ZD(1), (8) (copyright works (other than computer programs), performances, database right, publication right); Info. Soc. Dir., Recital 50 (without prejudice to Software Dir.). In turn, Art. 6 implements Art. 11 of the WCT and Art. 18 of the WPPT. However, they go beyond the requirements of those treaties in breadth (since they apply also to broadcasting organizations, publication right and *sui generis* database right), and—more importantly—depth. The Directive goes beyond acts of circumvention to cover devices and services which enable circumvention.

¹¹² Directive 98/84 EC of the European Parliament and of the Council of 20 Nov. 1998 on the Legal Protection of Services based on, or consisting of, Conditional Access.

¹¹³ CDPA s. 296ZA(1).

¹¹⁴ CDPA s 296ZF. This largely echoes Info. Soc. Dir., Art. 6(3). However, there the definition is worded so as to relate to devices designed ‘to prevent or restrict acts, in respect of works or other subject matter, which are not authorised’ by the rightholder.

¹¹⁵ CDPA s 298ZF(2), replication Info. Soc. Dir., Art. 6(3).

¹¹⁶ L. Bygrave, ‘The Technologisation of Copyright: Implications for Privacy and Related Interests’ [2002] *EIPR* 51, 54–5. It is unclear whether the definition in Info. Soc. Dir., Art. 6(3) of ‘effective’ is exhaustive and so only covers access or copy controls, and, if it is, whether a system for monitoring usage is an ‘access control or protection process’.

the one hand, protection is given against the act of circumvention itself; on the other, protection is given against those who make or sell devices which enable circumvention, or supply services that achieve that end.

4.1.1 The act of circumvention

Section 296ZA gives specified persons civil rights of action where a person does anything which circumvents technological measures knowing or with reasonable grounds to know that they are pursuing that objective. The persons given the right to bring the action, who are described as having the same rights as a copyright owner has in respect of an infringement of copyright, are: the copyright owner of the work protected (or their exclusive licensee); and the person issuing copies of the work or communicating the work to the public in a form to which technological measures have been applied.¹¹⁷ The *scienter* requirement means that users do not commit a wrong if they circumvent accidentally: it is only where a person knows or has reasonable grounds to know that they are trying to circumvent technological measures that they infringe. The wrong is only committed where a successful act of circumvention has taken place: mere attempts are not covered. The provision is inapplicable where a person circumvents a measure 'for the purposes of research into cryptography' unless by so doing 'or issuing information derived from that research, he affects prejudicially the rights of the copyright owner'.¹¹⁸

4.1.2 Facilitating circumvention

In addition to prohibiting the act of circumvention itself, civil and criminal measures provide protection against a host of related activities which facilitate such circumvention—including manufacture, import, and distribution of devices, products, or components or the provision of services.¹¹⁹ The addition of criminal liability reflects the fact that these acts are regarded as the ones which seriously threaten the copyright-holder's interests: after all, the general public does not have the time or means to break technological locks or controls. It is only with the assistance of commercially available circumvention devices or services that anti-circumvention is likely to become widespread.

There are two criminal provisions. The first applies to devices, products, or components 'primarily designed, produced or adapted for the purpose of enabling or facilitating the circumvention of effective technological measures'.¹²⁰ The limitation to devices 'primarily designed' for circumvention is important, and while it would cover forged smart-cards for decrypting copyright-protected broadcasts, devices which serve legitimate purposes (such as general purpose personal computers) fall outside its scope even if they can be used to avoid technological protection (as was notoriously the case with SCMS). A person commits an offence if they manufacture for sale or hire, distribute in the course of business, or

¹¹⁷ CDP s. 296ZA(3). Cf. the wider range of persons mentioned in s. 296ZD(2) and s. 296(2).

¹¹⁸ CDP s. 296ZA(2); Info. Soc. Dir., Recital 48. One may wonder whether circumvention ought not to be lawful where it is done in the public interest: e.g. where an employee circumvents a measure protecting business records (e.g. by-passes a password control) in order to reveal the wrongful practices of their employer, or where a person wants to investigate the practices of those who design censorware (Internet filters) to find out exactly what they are preventing us from accessing. A provision equivalent to CDP s. 171(3) might provide this flexibility.

¹¹⁹ Member states may also prohibit private possession of such devices: Info. Soc. Dir., Recital 49.

¹²⁰ CDP s. 296ZB(1).

to such an extent as to affect prejudicially the copyright owner such a device unless they prove they did not know, and had no reasonable grounds for believing, that the device enabled or facilitated the circumvention of effective technological measures.¹²¹ One peculiar feature of this offence is that, in a situation where a device is primarily designed for circumvention but can be used for other legitimate purposes, a person commits an offence by making and selling such devices even where they were genuinely making and selling them for legitimate purposes. In such a situation, the defence is of no assistance, because while they have good reason to believe the device will not be used to circumvent, they know it *could* be so used. The second criminal provision relates to a service, the purpose of which is to enable or facilitate the circumvention of effective technological measures. A person commits an offence if, in the course of business or to such an extent as to affect prejudicially the copyright owner, they provide, promote, advertise, or market such a service.¹²² As with devices, it is a defence for the accused to show that they did not know, nor had reasonable grounds for believing, that the service enabled or facilitated circumvention. In both cases a further defence applies to acts of the intelligence services and law enforcement agencies.¹²³

The civil actions cover broader ground than the criminal ones (and, in contrast to the criminal provisions, apply *mutatis mutandis* to effective technological measures used in relation to performances, database right, and publication right).¹²⁴ As regards manufacture and distribution of devices (etc.), liability exists not just in relation to devices 'primarily designed, produced, adapted . . . for the purpose of enabling and facilitating' circumvention, but also to devices 'promoted, advertised or marketed' for that purpose and ones having 'only a limited commercially significant purpose or use other than to circumvent'.¹²⁵ As regards services, civil liability is in some respects more narrowly defined than criminal liability, being confined to the *provision* of services (as opposed to the advertising, promoting, and marketing a service). Civil liability exists, most obviously, where the service is performed for the purpose of enabling or facilitating circumvention. However, civil liability also exists in two other circumstances: where the service provided is merely advertised or promoted for that purpose (even if the service does not achieve the advertised purpose!), and second, where a service is provided which has only a limited commercially significant purpose other than to circumvent (even, it seems, if it is provided for just such a non-circumventing use). Civil actions to enforce these provisions can be

¹²¹ CDPA s. 296ZB(5).

¹²² CDPA s. 296ZB(2). The reference to non-business activities which affect prejudicially the copyright owner goes beyond the requirements of the Directive and seems designed to cover making available on the net of decryption code (as occurred in the US case of *Motion Picture Association of America v. Corley and 2600 Enterprises, Inc* 111 F. Supp. 2d 294 (SDNY) affd 273 F.3d 429 (2d cir, 2001)). See, e.g. N. Hanbridge, 'Protecting Right Holders Interests in the information society: Anti Circumvention; Threats Post Napster; and DRM' [2001] *Ent LR* 223; B. Esler, 'Protecting the Protection: A Trans-Atlantic Analysis of the Emerging Right to Technological Self-Help' (2003) 43 *IDEA* 553. Although not in the Directive, the provision may well be justified because the former CDPA s. 296(2)(b) covered the situation where a person 'publishes information intended to enable or assist persons to circumvent copy-protection'.

¹²³ CDPA s. 296ZB(3).

¹²⁴ CDPA s. 296ZD(8). s. 296 ZE(11).

¹²⁵ CDPA s. 296ZD. The wrongful acts are more broadly defined too: any manufacture, as opposed to manufacture for sale or hire; importation, compared to importation 'otherwise than for his private and domestic use'; any distribution, rather than distribution in the course of business; selling or hiring, or offering or advertising for sale or hire, rather than doing so in the course of business. Moreover, civil liability extends to the situation where a person has a device in their possession for commercial purposes.

brought by a number of parties: the copyright owner, or their exclusive licensee; the person issuing copies of the work to the public or communicating to the public the work to which technological measures have been applied; and the owner, or exclusive licensee, of 'any intellectual property right in the effective technological measures'. There is no defence of ignorance, though damages may not be awarded against a defendant who demonstrates that they did not know, nor had reason to believe, that their acts enabled or facilitated an infringement of copyright.¹²⁶

4.1.3 Attempts to avoid digital lock-up

When the proposals to expand the scope of protection of technological measures were being debated representatives of consumers vigorously articulated their fear that such provisions would facilitate digital lock-up of material which the public is currently entitled to access and use (without payment). Those fears related in part to the supply of public domain works (for example, the works of Shakespeare) in digital form but subject to technical measures: why, it was asked, should the public not be able to circumvent such measure to access what are, after all, public domain works? The fears also related to the use of technical measures to prevent uses that fall within existing copyright exceptions: in a world where works are protected by technical measures, and those measures are protected by law against circumvention, how are users to be able to access and copy works for research and private study, criticism and review and so forth?

The first concern may seem to have been met through the definition of 'technological measure'. As already observed 'technological measure' is defined as a technology designed in the normal course of its operation to protect a copyright work other than a computer program. Moreover, the provisions on civil liability for circumvention, or supplying devices or services that facilitate circumvention, only apply where 'effective technological measures have been applied to a copyright work other than a computer program'. While this may seem at first glance to protect the public against 'digital lock-up', in practice the result is likely to be quite different: this is because if the measure protects at least one work, civil liability applies. Consequently, devices cannot be circulated, services provided, or acts of circumvention carried out where versions of public domain (i.e. unprotected) works with technological measures include *any* copyright material: liability will exist for example, where a person circumvents a measure to access the complete works of Shakespeare because the collection also contains a recently written introductory essay.¹²⁷

In addition, one should note that the criminal provisions apply irrespective of the *particular* application of a technological measure. As long as the measure is 'designed' to protect a copyright work other than a computer program, criminal infringements occur in the circumstances which have been set out above. Imagine that an entrepreneur designs a technological measure to protect copyright works, but then decides to apply the measure

¹²⁶ CDPA s. 296ZD(7).

¹²⁷ One issue worth noting here is whether the typographical arrangement right could apply to works in digital form: if so, it seems a person is not permitted to break into a technologically protected non-copyright literary work where there is a copyright typographical arrangement. For criticism of the equivalent US provisions, see J. Litman, *Digital Copyright*, 183–4 (the public should have an affirmative right to gain access to, extract, use and reuse ideas, facts, information, and other public domain material embodied in protected works. That affirmative right should include a limited privilege to circumvent any technological access controls for that purpose, and a privilege to reproduce, adapt, transmit, perform, or display so much of the protected expression as is required in order to gain access to the unprotected elements).

to public domain works. The measure, even though now applied to public domain works, retains its quality of being designed to protect a copyright work. A person commits a criminal act by selling devices or advertising services to enable or facilitate the circumvention of such measures. The defence in section 296ZB(5) will not assist.

As regards the relationship between technological measures and exceptions to copyright, Article 6(4) of the Information Society Directive provides for a strange, barely comprehensible, compromise.¹²⁸ The Community was caught in the tricky position of wanting to legislate to protect technological measures from circumvention, but without being in a position to understand fully the implications of such strong protection.¹²⁹ As things currently stand, it is impossible to predict how dependent consumers are going to be on digital delivery, or the extent to which consumers who previously relied on the limited scope of the rights conferred on copyright owners are going to be inconvenienced by such measures. Article 6(4) is intended to reassure the user community that the legislature will not stand by and let everything go horribly wrong. If technological measures start seriously to impair user actions, ways will be found to sort out the problems. Pending review at the EU level (under Article 12(1), every three years), national authorities may (or indeed in some cases must) take action to release content from its technological chains. Article 6(4) also operates to indicate to content holders that they should develop technological measures with as much sophistication as is possible so that they can enable users to take advantage of limitations and exceptions traditionally recognized by copyright law. Article 6(4) of the Directive states that:

Notwithstanding the legal protection provided for by paragraph 1, in the absence of voluntary measures taken by rightholders, including agreements between rightholders and other parties concerned, Member States shall take appropriate measures to ensure that rightholders make available to the beneficiary of an exception or limitation provided for in national law in accordance with Article 5(2)(a), (2)(c), (2)(d), (2)(e), (3)(a), (3)(b), or 3(e) the means of benefiting from that exception or limitation, to the extent necessary to benefit from that exception or limitation and where that beneficiary has legal access to the protected work or subject-matter concerned.

The UK implemented Article 6(4) in section 297ZE of the 1988 Act. This allows for complaints to be made to the Secretary of State where an effective technological measure prevents a person from carrying out a permitted act. The relevant permitted acts are listed

¹²⁸ Brian Esler has called this 'arguably the most obtuse and incoherent provision yet enacted by the EU in the touchy area of intellectual property harmonization'. B. Esler, 'Technological Self-Help: Its status under European Law and Its Implications for UK Law' (2002) www.bileta.ac.uk/02papers/esler.html.

¹²⁹ For thoughtful consideration of ways of protecting users see D. Burk and J. Cohen, 'Fair Use Infrastructure for Rights Management Systems' (2001) 15 *Harv J L & Tech* 41 (suggesting access/copying systems that allow fair use; third party operated procedures such as key escrow—management of rights management keys by trusted third parties (but issues of whether identity of applicant should be revealed to the copyright holder); or both (condition enforcement on automatic fair use defaults). The US law permits circumvention of access-control measures for certain narrowly-defined classes of works that are determined by the Librarian of Congress on the basis of hearings and findings of the Register of Copyrights every three years: 17 U.S.C. s. 1201(a)(1). There are four classes in the latest regulations: one concerns devices that need to be circumvented to investigate the sites which Internet censorware blocks; another concerns the circumvention of malfunctioning devices used on software; a third concerns the need for archiving services to circumvent protection measures which have become obsolete in order to archive computer programs and video games; the final case relates to circumvention of access controls which prevent the use of an e-book's read-aloud function, so as to enable blind users to take advantage of that facility.

in Schedule 5A.¹³⁰ It does not apply to copyright works that are made available on agreed contractual term in such a way that members of the public may access them from a place and at a time individually chosen by them.¹³¹ Given that this would cover most Internet supply of works (where a person accesses a work from their own terminal at a time chosen by them), this exclusion may confine the scope of the complaint-procedure to circumstances involving encrypted broadcasts or technologically-protected hard copies.¹³² The Secretary of the State is given wide powers to give directions to ascertain whether voluntary measures are in place enabling such acts to be permitted, and if not, to ensure that the owner or exclusive licensee of the copyright work makes available to the complainant the means of carrying out the permitted acts.¹³³ The order might be complied with by placing a copy lacking the technological measures at the disposal of the complainant; or possibly by giving the complainant access to a circumvention device. If the copyright owner fails to comply, the complainant is granted normal remedies for breach of statutory duty.¹³⁴

4.2 COMPUTER SOFTWARE

Section 296 confers a civil right of action where a person does either of two specified acts which facilitate the circumvention of any 'technical device' which has been applied to a computer program.¹³⁵ Technical device is defined as 'any device intended to prevent or restrict acts that are not authorised by the copyright owner of that computer program and are restricted by copyright'.¹³⁶ The right is conferred on three sets of persons: the copyright owner is the computer program, or his exclusive licensee; the person issuing or communicating the program to the public; and the owner (or his exclusive licensee) of 'any intellectual property right' in the technical device.¹³⁷ The right is infringed by two specified acts: the manufacture, distribution, or possession for commercial purposes of 'any means the sole intended purpose of which is to facilitate the unauthorised removal or circumvention of the technical device'; or the publication of information intended to

¹³⁰ The contents of the list are determined by Art. 6(4), though the logic is hard to fathom. Why is action to be taken only where some exceptions are impeded (photocopying, educational, ephemeral recordings for broadcasts, reproductions of broadcasts, teaching, disability, and public security) but not others, and ones such as reproduction in the press or criticism or review that represent important public interests? Why is there an *obligation* to take action where some limitations are concerned but only an option where the private use exception in Art. 5(2)(b) is concerned? See T. Foged, 'US v EU Anticircumvention Legislation: Preserving the Public's Privileges in the Digital Age' [2002] *EIPR* 525, 537.

¹³¹ CDPA s. 296ZF(9) implementing Info. Soc. Dir. Recital 53.

¹³² M. Hart, 'The Copyright in the Information Society Directive: An Overview' [2002] *EIPR* 58, 63 ('As more and more music, film and other content become available on the Internet, this could be a very important qualification in relation to the ability of users to exercise exceptions'.) This assumes that the courts accept that 'click-on' or other non-negotiable agreements make the works available on 'agreed contractual terms', and this is an assumption that will need to be tested.

¹³³ CDPA s. 296ZE(3).

¹³⁴ CDPA s. 296ZE(6).

¹³⁵ CDPA, s. 296(1).

¹³⁶ CDPA s. 296(6). This is narrower than the previous provision on 'copy-protection' in that it does not encompass technical devices which are intended merely 'to impair the quality of copies made', but is broader in that it covers devices which would prevent any act which would infringe copyright not just devices designed to prevent, restrict *copying* of a work.

¹³⁷ CDPA, s. 296(2). Formerly, the right was only given to the person issuing copies.

enable or assist persons to remove or circumvent the technical device.¹³⁸ In either case, liability is predicated on *scienter*, that is, there is only infringement where a person does the act 'knowing or having reason to believe it will be used to make infringing copies'.¹³⁹

It is useful here to observe how much more limited the provisions related to software are than those applicable to other copyright works. First, there is only civil liability in relation to circumvention of software (subject to what was said above about the possible application of measures 'designed' for copyright works (other than computer programs) to other material including computer programs). Second, there is no liability for the act of circumventing devices protecting software. Third, as regards software, liability applies only in relation to any means 'the sole intended purpose of which' is to facilitate circumvention, whereas the Information Society provisions cover the much broader array of devices advertised for or primarily designed for circumvention or with only a limited commercially significant purpose other than circumvention. Fourth, liability in relation to the supply of devices to circumvent measures protecting software is predicated on a knowledge requirement that the person knows or has reason to believe the computer program will be used to make infringing copies: *scienter* is not relevant to section 296ZD except as part of a defence of innocence to an action for damages. Fifth, in relation to technological measures protecting software, no liability pertains to offering or carrying out circumvention services.¹⁴⁰ Although these differences might be taken to reflect a legislative awareness that too strong control of technical measures applied to software might seriously limit access to and development of software, almost certainly they reflect a desire not to re-open the legislative compromise effected in the Software Directive of 1991. Nevertheless, the existence of such stark differences in the scope of protection is likely to prompt those who own copyright in software to argue that the technological measures they employ simultaneously protect copyright software and other protected works, so that they too obtain the benefit of the generous protection granted by Article 6 of the Information Society and section 296ZA-ZF of the 1988 Act.

4.3 TRANSMISSIONS

A third set of provisions deals with protection measures used in relation to transmissions. Although the 1988 Act, as enacted, contained some such provisions, they have been amended to implement the 'Conditional Access' Directive by the Conditional Access Regulations 2000.¹⁴¹ These apply to broadcasts and 'information society services' which are

¹³⁸ The wording of the first act follows closely that in Software Dir. Art. 7(1)(c), and is consequently narrower than the previous CDPA s. 296(2)(a), which applied to 'any device or means specifically designed or adapted to circumvent the form of copy-protection employed'. The difference between 'specific design' and 'sole intended purpose' will be important if there is a second purpose.

¹³⁹ Infringing copies are made for these purposes when a computer is loaded into a console: *Sony Computer Entertainment v. Owen* [2002] EMLR 742.

¹⁴⁰ While the general effect of this comparison is that technological measures receive much stronger protection outside the field of computer programs, it should be noted too that the safeguard provisions of s. 296ZE (implementing Art. 6(4) of the Info. Soc. Dir.) does not apply to computer programs and, in that minor respect, the provisions of s. 296 are stronger.

¹⁴¹ Directive 98/84 EC of the European Parliament and of the Council of 20 Nov. 1998 on the Legal Protection of Services based on, or consisting of, Conditional Access; Conditional Access Regulations 2000 (SI 2000/1175).

encrypted and, *inter alia*, prevent unauthorized dealings in decoders. The definition of information society service is found in Council Directive 98/34/EC of June 22, 1998 laying down a procedure for the provision of information in the field of technical standards, and covers any service which is normally provided for remuneration and which operates at a distance by electronic means and at the individual request of a recipient of the services.¹⁴²

4.3.1 Fraudulent reception

Section 297 imposes criminal liability for dishonestly receiving a programme included in a broadcasting service provided from a place in the United Kingdom. It must be proved that the recipient intended to avoid payment of any charge applicable to the reception of the programme.

4.3.2 Unauthorized decoders¹⁴³

Section 297A imposes criminal liability on those who supply 'unauthorised decoders' which decode encrypted transmissions so as to enable access to the transmission without payment of the fee which the person making the transmission charges for access.¹⁴⁴ A transmission is defined as any programme included in a broadcasting service from a place within the UK or any other member state or 'an information society service'. It therefore covers transmissions of encrypted television services (which as we saw in Chapters 3 and 6 do not include most 'on-demand' transmissions), and encrypted services providing video, music, or access to databases 'on demand', the latter falling squarely within the complex definition of 'information society service'. The wrongful acts include making, importing, distributing, selling, possessing (for commercial purposes), and advertising the sale or hire of unauthorized decoders as well as installing, maintaining, and replacing for commercial purposes an unauthorized decoder. Obvious examples of such wrongs would include the unauthorized manufacture of 'digi-boxes', as well as re-enabling or extending the range of reception on old smart cards.¹⁴⁵

4.3.3 Civil liabilities

Section 298 gives civil rights of action, akin to those of a copyright owner, to persons who charge for the reception of programmes included in a broadcasting service, send

¹⁴² Council Directive 98/34/EC of 22 Jun. 1998 laying down a procedure for the provision of information in the field of technical standards. The Directive excludes television and radio broadcasts from the definition, as well as providing an 'indicative list' of services which are not 'at a distance', 'by electronic means' or 'at the individual request of a recipient', in Annex V.

¹⁴³ CDPA s. 297A. Note that the Copyright and Trade Marks (Offences and Enforcement) Act 2002 has added a power to grant search warrants relating to such offences, as well as a power to order forfeiture or destruction of decoders located in the course of investigations of such offences: CDPA 297B–C.

¹⁴⁴ CDPA s. 297A(4): A transmission is 'encrypted' when it is 'subjected to scrambling or the operation of cryptographic envelopes, electronic locks, passwords or any other analogous application'. A 'decoder' is defined as an apparatus designed or adapted to enable an encrypted transmission to be decoded. A decoder is unauthorized where it is designed or adapted to enable an encrypted transmission to be accessed in an intelligible form without payment of the fee which the person making the transmission charges for access.

¹⁴⁵ See, e.g. *R. v. Bridgeman & Butt* [1996] FSR 538 (re-enabling or extending the range of reception on old smart cards for Spain, where the transmitter did not supply the cards, violated CDPA s. 297A and thus involved a conspiracy to defraud).

encrypted transmissions, or provide 'conditional access services'.¹⁴⁶ This would cover many of the existing satellite broadcasters, such as Sky, Film Four, etc. A 'conditional access service' is defined as a service providing conditional access technology, that is, any technical measure or arrangement whereby access to encrypted transmissions in an intelligible form is made conditional on prior individual authorization.¹⁴⁷

A person covered by section 298 has the same rights as a copyright owner against a person who makes or trades in various ways in apparatus which is 'designed or adapted to enable or assist persons to access the programmes or other transmissions or circumvent conditional access technology related to the programmes or transmissions when they are not entitled to do so'.¹⁴⁸ This would seem to cover the situation where somebody made or sold fraudulent smart cards or decoders to enable reception of Sky channels to persons who were not subscribers, but also the importation of smartcards authorized for use abroad. The rights also encompass a person who publishes any information calculated to enable or assist access.¹⁴⁹ The case law, so far, has largely concerned the manufacture and sale of decoders for satellite broadcasts of programs.

4.3.4 Relationship with sections 296ZA-ZF

As we saw earlier a copyright owner and person communicating a work to the public have various rights under sections 296ZA and ZD where technological measures are applied to the work. These can operate cumulatively with the special transmission and conditional access provisions. For example, if a person installs a device enabling receipt of an encrypted transmission, they will violate section 296ZA if they knowingly circumvent a technological measure. They will also violate section 298(2)(a)(iii) if they install, maintain, or replace for commercial purposes 'an apparatus designed or adapted to enable or assist persons to access the programmes or transmissions or circumvent conditional access technology . . . when they are not entitled to do so'. If someone distributes an unauthorized decoder, they will be both distributing 'a device . . . primarily designed . . . for the purpose of enabling the circumvention of those measures'—that is measures applied to the copyright-protected broadcast—and so violate section 297ZD(1)(b)(iii) and also be distributing an apparatus 'designed or adapted to enable or assist persons to access the programmes or transmissions or circumvent conditional access technology . . . when they are not entitled to do so'. In each situation, a careful analysis needs to be undertaken to decide which section is most suitable.

¹⁴⁶ CDPA s. 298 (as amended by the Conditional Access Regulations 2000 (SI 2000/1175)). The rights only apply to transmissions 'from a place in the UK or any other member State.'

¹⁴⁷ CDPA s. 298(7), 297A(4).

¹⁴⁸ CDPA ss. 298, 299. See *BBC Enterprises v. Hi-Tech Xtravision* [1992] RPC 167 (manufacture in UK of decoders for sale abroad infringed s. 298: 'not entitled' meant 'not authorized').

¹⁴⁹ CDPA s. 298, as amended by the Conditional Access Regulations 2000 (SI 2000/1175), in order to implement the Directive 98/84 EC of the European Parliament and of the Council of 20 Nov. 1998 on the Legal Protection of Services based on, or consisting of, Conditional Access. But see Laddie *et al.*, *The Modern Law of Copyright*, paras. 35.5–35.5D, 1680–1682 (arguing that the amendments are invalid).

5 RIGHTS MANAGEMENT INFORMATION

New provisions, introduced from 31 October 2003, grant protection over 'electronic rights management information' to give effect to Article 7 of the Information Society Directive.¹⁵⁰ By 'rights management information' the Act means any information provided by the copyright owner which identifies the work, the author, the copyright owner, the holder of any intellectual property rights, information about the terms and conditions of use of the work, or any numbers or codes that represent such information.¹⁵¹ In effect, what we are concerned with is information equivalent to the title page of a book (author, publisher, ISBN, etc.) that is electronically attached to (typically being woven into the fabric of) a work which is distributed digitally. This is sometimes referred to as 'meta-data'.¹⁵² The information falls within the scope of protection when it (or any of it) is associated with a copy of a work or appears in connection with the communication to the public of a work.¹⁵³ The provision also applies to the *sui generis* database right.

Although the phrase 'rights management information' may not sound very glamorous, the European Commission sees its protection as the key pre-requisite to an effective 'information society'.¹⁵⁴ This is essentially for two reasons. The first is that rights management information is seen as having the potential to enable direct contracting between content holders and consumers, the 'metering' of uses of works, and enabling rights clearances more generally (for example, in relation to the production of multimedia works).¹⁵⁵ It is thus seen as the lubricant that will keep the legal cogs of the Internet turning. As Thomas Dreier has written, digital rights management 'clearly goes beyond mere protection against piracy and illegal copying. Rather, . . . [digital rights management] aims at implementing a technical structure which enables product and service differentiation together with, and on the basis of, price discrimination'.¹⁵⁶ Second, the Commission recognizes that works in digital form are 'plastic'. In other words, works in digital form are readily capable of modification and alteration. The protection of rights

¹⁵⁰ For a discussion of the equivalent US provisions, see D. Nimmer, 'Puzzles of the Digital Millennium Copyright Act' 46 (1999) *J Copyright Soc'y* 401.

¹⁵¹ CDDA s. 296ZG(7). It is clear from this that protection extends to all sorts of information which is electronic rather than being limited to information about 'electronic rights'.

¹⁵² Dusollier has questioned whether the definition of RMI would cover digital watermarks, because some do not contain 'identifying information': S. Dusollier, 'Some Reflections on Copyright Management Information and Moral Rights' (2003) 25 *Colum-VLA JL Arts* 377. For speculation as to whether it covers personal data about users, see L. Bygrave, 'The Technologisation of Copyright: Implications for Privacy and Related Interests' [2002] *EIPR* 51, 55–6 (examining whether removal of personal data for the sake of individual privacy would give rise to liability).

¹⁵³ Info. Soc. Dir. Art. 7(2). Whether details appear on a web site, but are not embedded in an aspect of it which is reproduced, would qualify as being 'associated with a copy of a work' is unclear.

¹⁵⁴ See Commission Staff Working Paper, *Digital Rights: Background, Systems, Assessment* SEC (2002) 197 (Brussels, 14 February 2002).

¹⁵⁵ Various projects have been established to standardise information in electronic copyright management systems, including IMPRIMATUR (Intellectual Multimedia Property Rights Model and Technology for Universal Reference). See M. Schippar, 'Purchase and Licensing of Digital Rights: The VERDI Project and the Clearing of Multimedia Rights in Europe' [2000] *EIPR* 198.

¹⁵⁶ Thomas Dreier in the Rights Management Report of the Commission meeting Santiago de Compostela, June 2002.

management information is needed to prevent the removal of various identifying insignia from works and to enable users to keep track of what the information is and where it comes from.

Section 296ZG provides copyright owner, its exclusive licensee, and any person communicating or issuing work to the public,¹⁵⁷ with the ability to prevent the removal of rights management information and the further circulation of copies from which such information has been removed.¹⁵⁸ Liability is dependent in both cases on *scienter*. As regards removal or alteration, a person is liable where they 'knowingly and without authority' remove or alter meta-data in circumstances where that person 'knows or has reason to believe that by so doing [they are] inducing, enabling, facilitating or concealing an infringement of copyright'. Accidental removal of data is therefore permitted, as is deliberate removal of meta-data where a person has no reason to think there has been, is (or is likely to be) an infringement. A researcher who deliberately deletes meta-data when making an electronic copy of material from an electronic source for purposes of their own non-commercial research or private study will therefore not violate the section. As regards dealings in material that has been tampered with by the removal or alteration of meta-data, a person infringes where they 'knowingly and without authority' distribute, import for distribution, or communicate to the public, copies of such material where that person 'knows or has reason to believe that by so doing [they are] inducing, enabling, facilitating or concealing an infringement of copyright'. The provisions do not expressly prevent the publication of information on how to remove such information or the sale of devices which enable the removal of information, though the English legal system might regard this as joint tort-feasance.¹⁵⁹

6 PUBLIC LENDING RIGHT

Although copyright in books enables authors to control (and seek compensation) where their works are copied, they have no right to prevent a range of people from reading the same book. Typically this occurs when books are repeatedly borrowed from a library. As borrowing reduces sales of a work, when it is carried out on a large scale (public libraries in England lend 600 million times a year), it can substantially reduce an author's expected income. To remedy these problems, a public lending right was established in the UK in 1979.¹⁶⁰ The Public Lending Rights Act 1979 provides a framework for the scheme which is contained in the Public Lending Right Scheme 1982.¹⁶¹ This Scheme has been amended a number of times and its modern form is set out in a 1990 text.¹⁶²

¹⁵⁷ CDP s. 296ZG(3)–(5).

¹⁵⁸ Info. Soc. Dir., Art. 7; Cf. 17 USC s. 1202.

¹⁵⁹ See below at pp. 1062–4.

¹⁶¹ Public Lending Right Scheme 1982 (Commencement) Order (SI 1982/719); Public Lending Right Scheme (Increase of Limit) Order 2003 (SI 2003/839).

¹⁶² SI 1990/2360. Since then there have been further alterations in the Public Lending Right Scheme (Commencement of Variation) Order 1992 (SI 1992/3049) (altering Art. 46(a) of scheme); 1991 (SI 1991/2618) (removing Art. 6(2)(b)). For fuller commentary, see Copinger, Ch. 19. The scheme is subject to a quinquennial review at the hands of the Department of Culture, Media and Sport. The latest review, dated

The public lending right scheme entitles authors to remuneration where their works are loaned by public libraries.¹⁶³ This is based on the principle that authors should be compensated for lost revenues since such loans are substitutes for sales. The public lending right does not provide authors with large sums of money. Basically, an author¹⁶⁴ may register their right to receive a share of up to £6,000 per annum from a government fund of £8 million.¹⁶⁵ The right persists for the same period as copyright.¹⁶⁶ To qualify for the scheme, authors must have their principal homes in a listed country (at present, EEA countries). The right only applies with respect to books which must be 'printed and bound'. Musical scores are excluded.¹⁶⁷ The scheme is administered for the Government by a Registrar of Public Lending Right. However, section 3(3) declares that the entitlement is to be 'dependent on, and its extent ascertainable by reference to, the number of occasions on which books are lent out from particular libraries'. Libraries thus have to provide information about the books they have loaned.

7 DROIT DE SUITE

The final right 'related' to copyright is the *droit de suite*, or as it is also known the 'artist's resale royalty'. The '*droit de suite*' (literally translated as the right to follow the work) enables artists to claim a portion of the price for which a work is resold. The idea is that an artist may sell a painting for a low price at a time when they are unknown, and have little bargaining power. In due course, if the artist's reputation develops, that painting can be resold for continually increasing sums. The *droit de suite* enables the artist to claim a proportion of the increased value. The right is seen as justifiable not only because it encourages creation, but also because the artist is conceived (through the authorial link) as responsible for the increase in value (economic success) of their works.¹⁶⁸ Consequently,

2002, is available at: www.plr.uk.com. The principal recommendations are raising the maximum earnings limit and extending the right to cover on-site use of reference books. It also recommends that further consideration be given to the extension of the right to cover lending of 'audio-books'. The review recommends no immediate action as regards loans by academic libraries and schools.

¹⁶³ A number of countries also recognize 'public lending rights'. See S. von Lewinski, 'Public Lending Right: General and Comparative Survey of the Existing System in Law and Practice' (1992) 154 *RIDA* 3: Denmark (1946), Norway (1947), Sweden (1955), Finland (1961), Iceland (1963), Netherlands (1971), Germany (1972), New Zealand (1973), Australia (1974), UK (1979), Canada (1986), and Israel (1986). These rights are not within the remit of the Berne Convention and vary considerably from place to place.

¹⁶⁴ Defined in Art. 4. Note that the author's name should appear on the title page or be entitled to a royalty from the publisher: Art. 4(2). N.b. while the right is assignable and devolves on death, only the author may apply to register a book. It has yet to be seen whether publishers will require its assignment to them or the payment over of any part of the moneys received.

¹⁶⁵ Public Lending Right Scheme (Increase of Limit) Order 2003 (SI 2003/839).

¹⁶⁶ Public Lending Right Scheme 1982 (SI 1982/719) as amended by Art. 20, Public Lending Right Scheme (Commencement of Variations) Order 1997 (SI 1997/1576); SI 1999/420 (excluding books which lack ISBNs).

¹⁶⁷ Eligible books are defined in Art. 6. Book means printed and bound publication but does not include books bearing corporate names, musical scores, and serial publications. The restriction to books of 32 pages has been removed.

¹⁶⁸ Cf. J. Merryman, 'The Proposed Generalisation of the Droit de Suite in the European Communities' [1997] *IPQ* 16, 22-3 (arguing that increases in value can be attributed to a variety of causes, including the work of critics, museums, dealers, collectors, and that the artist shares in their efforts through the increased value in any works they have retained).

although the right is essentially economic in nature, it is sometimes categorized as a ‘moral right’. Because of its specific *sui generis* nature, we have included it in this chapter on related rights.

At present, no such artists’ resale right is recognized in British copyright law.¹⁶⁹ However, Article 14 ter of the Berne Convention encourages the recognition of such rights,¹⁷⁰ and most European countries do so.¹⁷¹ Because of the principle of ‘non-discrimination’, British artists may claim the benefit of any *droit de suite* recognized in other member states of the EU.¹⁷² Moreover, because of the potential impact of the differences in national laws on the Internal Market for modern artworks,¹⁷³ the Resale Right Directive was adopted by the Parliament and Council—Directive 2001/84/EC of 27 September 2001—requiring all member states to introduce such a right.¹⁷⁴ Prior to its adoption, the proposed Directive was widely criticized, particularly from the perspective of the UK art market. One particular fear that was expressed was that the effect of harmonizing ‘upwards’ would be to drive sales of modern artworks out of Europe—to the auction houses of New York, where no such ‘tax’ will be imposed on the seller. (Apparently when California created a *droit de suite*, Sotheby’s closed its auction house there.) These criticisms and questions, however, did not prove persuasive, though the *droit de suite*, as adopted, is much more limited than that originally proposed and gives considerable leeway to member states as regards implementation.

The Directive applies to original works of art,¹⁷⁵ that is ‘works of graphic or plastic

¹⁶⁹ See, for previous British views, *Report of the Committee on Copyright and Designs Law*, Chap. 17 (Cmnd. 6732, 1977).

¹⁷⁰ However, para. 2 then leaves the existence or scope of any such right to be determined by the laws of the country where protection is claimed.

¹⁷¹ Belgium, Denmark, France, Germany, Italy, Luxembourg, Portugal, Spain, and Sweden. Resale Right Dir., Recital 9 (explaining that differences exist as regards the rights covered, those entitled to receive royalties, the rate applied, the sales subject to payment and the basis of assessment). Apparently, such royalties are only collected in five countries of the Union.

¹⁷² Resale Right Dir., Recital 6.

¹⁷³ Resale Right Dir., Recitals 9–15. See also P. Torremans, ‘The Proposed Droit de Suite: A Critique’ (Paper Discussed at the IP Forum, 1998) (reviewing other differences but concluding lack of harmonization is a factor that distorts the operation of the art market). But see D. Booton, ‘A Critical Analysis of the European Commission’s Proposal for a directive Harmonising the Droit de Suite’ [1998] *IPQ* 165 (arguing that there is no evidence that differences distort the internal market in works of art).

¹⁷⁴ Directive 2001/84/EC of the European Parliament and of the Council of 27 Sep. 2001 on the resale right for the benefit of the author of an original work of art (hereafter Resale Right Dir.). For the legislative history, see European Commission, *Proposal for a European Parliament and Council Directive on the Resale Right for the Benefit of the Author of an Original Work of Art* COM (96) 97 final [1996] *OJ C* 178/16 (adopted by Commission 13 Mar. 1996); Parliament Resolution 9 April 1997 [1997] *OJ C* 132/88; Amended Proposal adopted by Commission 12 Mar. 1998 [1998] *OJ C* 125/8. For commentaries, see J. Merryman, ‘The Proposed Generalisation of the Droit de Suite in the European Communities’ [1997] *IPQ* 16 (arguing that the premise on which the Commission operates, that the droit de suite is a ‘good thing’ is not sustainable, so harmonization requires its removal); D. Booton, ‘A Critical Analysis of the European Commission’s Proposal for a directive Harmonising the Droit de Suite’ [1998] *IPQ* 165; S. Hughes, in L. Bently and S. Maniatis, *Intellectual Property and Ethics, Perspectives in Intellectual Property Vol. IV*, (1998); P. Torremans, ‘The Proposed Droit de Suite: A Critique’ (Paper Discussed at the IP Forum, 1998).

¹⁷⁵ The right will be applied to existing works still in copyright on 1 Jan. 2006, but only as regards sales after that date.

art'. It does not apply to manuscripts of writers and composers.¹⁷⁶ The Directive includes within that definition works such as paintings, engravings, tapestries, ceramics, and photographs, and this implicitly suggests that the right is not available to designers of 'works of applied art'. The right will apply not merely to unique works but also to works produced in multiples, provided they are made by the artist or are copies considered to be original works of art which have been made in limited number by the artist or under their authority.¹⁷⁷

The right, which the Directive requires member states to confer on the author of such a work,¹⁷⁸ is the inalienable right to receive a defined percentage of the sales price obtained from any resale of the work. It applies to all acts of resale where the sellers, buyers, or intermediaries are 'art market professionals' such as salesrooms, galleries, and dealers.¹⁷⁹ It therefore seems to exclude transactions between individuals acting in their private capacity. A Recital also makes clear the right is not to apply to resales by persons acting in their private capacity to museums which are not-for-profit and are open to the public.¹⁸⁰ The sum is to be paid by the seller,¹⁸¹ though member states may provide that a buyer or intermediary shall 'alone be liable or shall share liability with the seller for payment of the royalty'.¹⁸² The right is to last for the full term of copyright protection, though certain transitional limitations exist.¹⁸³

As regards calculation of the sum due it should be noted that member states may operate a threshold where the seller acquired the work directly from the author within three years of the resale, and the resale price is less than €10,000.¹⁸⁴ Recital 18 implies that this is confined 'to the particular situation of art galleries which acquire works directly from the author'. But the Article is not so restricted. Since the maximum such a seller would have to pay would be €500,¹⁸⁵ the utilization of this exemption would seem particularly mean-minded.

Under the Directive royalties are calculated on sales prices, net of tax. This is in contrast to some member states, where authors were only entitled where the price of the work increased.¹⁸⁶ The member states are given free rein in establishing a threshold (as long as it does not exceed €3,000) and setting royalty rates where the minimum threshold is lower than €3,000, as long as the rate is 4 per cent or above.¹⁸⁷ After that, the royalty

¹⁷⁶ Resale Right Dir. Recital 19. Presumably existing regimes which extend resale royalties further will need to limit the operation of the right. This follows from the reasons for harmonization and more specifically from Recital 21 which states that 'the categories of work of art subject to the resale right should be harmonised'.

¹⁷⁷ Resale Right Dir., Art. 2.

¹⁷⁸ Or, after death 'those entitled under him'. See Resale Right Dir., Art. 6(1). Foreign authors—that is those from non-EU countries—may enjoy the right as long as authors from member states enjoy reciprocal treatment in the third countries concerned: Art. 7.

¹⁷⁹ Resale Right Dir., Art. 1.

¹⁸⁰ Recital 18.

¹⁸¹ Resale Right Dir. Art. 1(3). Recital 25 states that the seller 'is the person or undertaking on whole behalf the sale is concluded'.

¹⁸² Resale Right Dir. Art. 1(4).

¹⁸³ Resale Right Dir., Art. 8.

¹⁸⁴ Resale Right Dir., Art. 3(1). Member states may make the right available below that threshold so as to further the interests of young artists: Art. 3(2), Recital 16.

¹⁸⁵ In a state operating Art. 4(2).

¹⁸⁶ Recital 20.

¹⁸⁷ Art. 3, 4(3). The threshold may help to avoid disproportionately high collection and administration costs: Recital 22. However, member states may desire to provide royalties below €3,000 'to promote the interests of new artists'. The Recital notes that variations are unlikely to have a significant effect on the proper functioning of the internal market.

rates are set by the Directive and the percentage decreases as the resale price increases: up to €50,000 the artist is to be entitled to 4 per cent (or if a member state elects 5 per cent),¹⁸⁸ between €50,000 and €200,000 3 per cent; for sales between €200,000 and €350,000, 1 per cent; for those fetching €350–500,000 a mere 0.5 per cent and for those exceeding €500,000 0.25 per cent.¹⁸⁹ As if these sums were not measly enough—a sale for 1 million giving the artist €10,000 (exactly 1 per cent), there is a cap—so that the royalty may not exceed €12,500.¹⁹⁰ The rates are set so low in order to avoid the right having the effect of causing sales to relocate in order to circumvent the rules: Recital 24. However, they may come to be increased, and provision is made for periodic review by the Commission.¹⁹¹

The resale royalty right is to be assertable by the artist against the seller, but member states are permitted to provide for the compulsory or optional collective management of sums paid over by virtue of the right.¹⁹² In order to enforce the right, authors may require an art market professional (salesrooms, art galleries, and dealers in general) to furnish relevant information concerning transaction in which they have been involved in the previous three years.¹⁹³

The Directive has an implementation date of 1 January 2006. However, countries lacking such a right on 13 October 2001 (i.e. the UK, Ireland, Liechtenstein, or Austria) are the beneficiaries of a further transitional measure. They do not have to apply the resale right to existing works where the author has died until 1 January 2010. For a while then the right only operates in relation to ‘modern and contemporary art’.¹⁹⁴ Indeed, if the member state so desires it can inform the Commission sometime before January 1, 2009 that it wishes to extend this a further two years to January 2012. The Commission will assess the grounds of a member state’s desire to extend the period.

PART II
PATENTS

14

INTRODUCTION TO PATENTS

1 INTRODUCTION

A patent is a limited monopoly that is granted in return for the disclosure of technical information. Under this Faustian pact, the applicant is required to disclose their invention so that it can be used (or worked) by a 'person skilled in the art'.¹ In return, the state (in the guise of the Patent Office) issues the applicant with a patent that gives them the exclusive right to control the way their patented invention is exploited for a twenty-year period.

While the protection provided by a patent, which is limited to twenty years, is not as long as the protection provided by copyright law or (possibly) trade mark registration, the rights granted are more extensive. The rights granted to the patent owner cover most commercial uses of the patented invention. In addition, the rights will be infringed irrespective of whether or not the defendant copied from the patented invention. In part, the breadth of the patent monopoly is offset by the fact that patents are only granted if an applicant complies with a relatively onerous registration process. Unlike copyright, which arises automatically on creation of the work, patents are only granted after the applicant satisfies the requirements of registration. Although the granting process may not be as onerous as some would like, it does impose a number of limits and safeguards on the types of inventions that are patented, the scope of the monopoly granted, and the nature of the information that is disclosed in the patent. As such, rather than merely being seen as a prerequisite to grant, patent registration should be seen as a process in which policy goals are implemented and enforced.

Two bodies grant the patents that operate in the United Kingdom. The first and oldest granting authority is the UK Patent Office. Patents granted by the UK Office only apply in the UK. A British patent cannot be infringed, for example, in Ireland or Germany. As of 1 June 1978, it is also possible to get a patent to protect inventions in the United Kingdom by applying to the European Patent Office (EPO). It should be noted that the EPO grants a bundle of national patents. That is, rather than granting a single pan-European patent, the EPO grants a series of national patents. (The countries where protection is sought are chosen by the applicant.) Where an applicant designates the United Kingdom as one of the countries where they wish their invention to be protected, the resulting patent is known as

¹ This is a notional person who has the requisite skill and knowledge appropriate to the type of invention in question.

a European patent (UK).² While there are some subtle differences, once a patent has been granted by the EPO, it is treated as if it had been issued by the British Patent Office.

Applications for grant of a patent can be made directly to the British Patent Office or the European Patent Office. It is also possible to apply to these offices indirectly by way of an international filing under the Patent Cooperation Treaty (PCT). The European Patent Convention (EPC) has surpassed the UK Patent Office as a source for applications for UK patents. As a result the question has arisen as to whether there is much to be gained from retaining a national patent office.³ In line with the fact that there are two routes by which a patent for the UK can be granted, there are also two (interrelated) legal regimes that need to be taken into account. These are set out in the 1973 EPC and the 1977 Patents Act (which is modelled on the EPC). In addition, there are also two different sets of tribunals that adjudicate on patent disputes: the tribunals at the EPO and the traditional British court structure (with some amendments for specialist tribunals for patents).

2 HISTORY OF THE BRITISH PATENT SYSTEM UP UNTIL 1977

The passage of the 1977 Patents Act marked an important change in British patent law. As well as introducing procedural and substantive changes, it also saw Britain's entry into the EPC. While there are many important differences in the post-1977 law, in the following chapters we will encounter many concepts and ideas that predate the 1977 Act. For example, the image of the invention as the human intervention into nature that brings about a resulting physical change that underpins much contemporary jurisprudence, was well entrenched in British law by the mid-nineteenth century.

In so far as patents can be seen as monopolies offered by the state as rewards, there are many historical antecedents. A notable example is the practice that came to prominence in sixteenth- and seventeenth-century Britain, where the Crown granted privileges to subjects in return for the subject carrying out some corresponding duty. Initially, these privileges were granted in letters patent, that is as 'an open letter' from the Crown to the subject (from which the term patent is derived). Unlike the present system, there were no formal checks or balances on the privileges granted by the Crown. As such, patents were frequently granted for activities that were already being performed by individuals. A famous example is the grant of a monopoly over the selling of playing cards.⁴ Clearly, the grant of such a monopoly would have been detrimental to anyone who was already selling playing cards. As Crown grants of patents increased over the course of the sixteenth and seventeenth centuries, so too did the criticism. Eventually, the Crown's right to grant such privileges was challenged in the courts.⁵ It was also subject to parliamentary intervention with the passage of the 1624 Statute of Monopolies, which imposed a general prohibition

² As a result of changes introduced by EPC 2000, it will not make sense to speak of a European patent (UK) under the EPC 2000. See below at p. 350 n. 1. This has also been adopted in the Patents Bill 2004, Sched. 1, para. 9(2)(b).

³ See W. Kingston, 'What role now for European National Patent Offices' [2003] *EIPR* 289; J. Phillips, 'Time to Close the Patent Office Doors?' [1990] *EIPR* 151.

⁴ *Darcy v. Allen* (1602) 11 *Co Rep* 84b; 77 *ER* 1131.

⁵ *Ibid.*; 77 *ER* 1260; *The Clothworkers of Ipswich Case* (1614) *Godb R* 252; 78 *ER* 14.

on the grant of patents by the Crown. While the Statute of Monopolies imposed a general prohibition on the grant of monopolies, an exception was made in section 6 where the grant related to 'a manner of new manufacture'. As well as limiting the circumstances in which a patent could be granted, the 1624 Statute of Monopolies also limited the duration of the patents for new manufacture to a period of fourteen years. This period, which corresponded to two terms of apprenticeship, was based upon the idea that in return for the monopoly the patentee would teach the new 'art' to two sets of apprentices.

While patents have existed in one form or another for many centuries, the patent system that exists today is largely a creation of the nineteenth century. Indeed many aspects of the registration process as well as many of the legal concepts that we look at in subsequent chapters crystallized over this period.⁶ One of the most important changes that took place over the course of the nineteenth century was that patents changed from primarily being a creature of Crown prerogative to become a creature of bureaucracy. Although some of the trappings of the patent system's early connection with the Crown remain, patents are better seen as the product of an administrative process than a form of Crown prerogative. The shift from Crown to administration was reinforced with the passage of the 1977 Patents Act that saw Britain enter into the EPC. Another important yet often overlooked change that took place in the nineteenth century was the crystallization of patent *law*. Indeed, it was only after the publication of the first textbooks on patent law and the first series of judicial decisions to consider the validity and infringement of patents that a distinct and relatively coherent body of law came into existence.

Another important event that took place over the nineteenth century was that the emerging patent system was subject to a considerable amount of vocal and highly critical public scrutiny.⁷ This scrutiny led not just to calls for the reform of patent law; but in some cases to calls for the abolition of the whole patent system itself. Critics of the patent system said that it was unnecessarily complicated, technical, and obscure. They also said that while applicants were able to benefit from the protection provided by the patent monopoly, the corresponding public interest in the disclosure of technical information was not being met. In part this was because in many cases the information disclosed in the patent was of limited practical value. Given the lack of control exercised over the nature and content of the information disclosed in the patent, key aspects of inventions were often not disclosed. As a result, third parties were often not able to work or practise the invention from the information that was disclosed in the patent. Even where the information disclosed in the patent was potentially valuable, it was often very difficult for third parties to locate the relevant information. This was attributed to a range of factors from the fact that the titles of many patents did not match the subject matter of the invention, through to the fact that patent specifications were often not filed in a consistent or logical fashion. The criticisms of the patent system were also motivated by ideological concerns that focused on the monopolistic nature of the patents. Motivated by political economists, who championed *laissez-faire* ideas that the government should only interfere in the operation of the market where it was absolutely necessary, patent monopolies were presented as

⁶ See Sherman and Bently, 95–110.

⁷ The patent controversy was also important insofar as it led to public discussions about the goals and functions of patent law (and intellectual property law more generally). See F. Machlup and E. Penrose, 'The Patent Controversy' (1950) 10 *J Economic History* 1.

unjustifiable inhibitions on the market that inhibited free trade. (This is in contrast with critics of the Crown grant of patents in the seventeenth century when monopolies were seen to be undesirable because of their association with the Stuart attempts to govern without Parliament.)

The criticisms made of the patent system had a longstanding impact on its shape and direction. Importantly, the shift away from patents being seen as a form of Crown prerogative opened the system up to the possibility of reform. Many of the objections to the existing patent laws were rectified in the 1883 Patents Designs and Trade Marks Act and by changes to Patent Office rules and guidelines. In turn many of the criticisms made of the registration process were met by a raft of administrative reforms. For example, the patent system was rationalized with the establishment of the Patent Office in 1852. In addition, patents were organized alphabetically and rules were introduced that helped to ensure that the titles of the patent corresponded to the patented invention. The growing practice of including a description of the invention (now called the specification) in the patent application was formalized. There was also more attention given to the form and nature of the information disclosed in the patent.

While many of the criticisms made of the patent system were met by legal and administrative reforms, nonetheless the criticisms made of the patent system continued to have an impact upon the way patents were viewed, long after the debates had ended. In part, this may explain why it was that from '1883 until after the end of the [Second World War], the courts tended to regard patent monopolies with some disfavour as being generally contrary to the public interest'.⁸ It is interesting to contrast these attitudes with the approach post 1949, where 'the climate of opinion has changed. It is now generally recognized that it is in the public interest to encourage inventive genius. Accordingly the modern tendency of the courts has been to regard patent claims with considerably more favour than before'.⁹ This trend has become even more marked in recent years as the tribunals both in the UK and the EPO have grown increasingly inventive in their efforts to circumvent legislative obstacles to patent protection.

Another notable trend that developed over the nineteenth century was the growing influence that foreign patents systems had on the development of the British patent regime. As well as borrowing concepts from French and American patent law, aspects of the British registration process were modelled on foreign regimes. The second half of the nineteenth century also saw the growing internationalization of the patent system. These moves reached their peak with the signing of the 1883 Paris Convention¹⁰ (which now has over 140 member countries).¹¹ One of the notable achievements of the Paris Convention was that it introduced the principle of national treatment. This is the principle that a convention country must treat the nationals of other signatory countries in the same way as it treats its own.¹² Another notable aspect of the Convention was that it provided that an application for a patent in one member state should not prejudice later applications in

⁸ *Ethyl Corporations Patent* [1972] RPC 169, 193 (Salmon LJ).

⁹ *Ibid.*

¹⁰ Bilateral arrangements that dealt with patent-related issues were entered into in the early nineteenth century. These were usually in the form of Treaties of Freedom, Commerce, and Navigation.

¹¹ See S. Ladas, *The International Protection of Industrial Property* (1930); E. Penrose, *The Economics of the International Patent System* (1951); *Asahi Kasei Kogyo* [1991] RPC 485, 532 (HL).

¹² Paris Art. 2.

other member states.¹³ This is achieved by requiring the later application to be treated as having the priority date of the earlier one. It should be noted that the Paris Convention does not impose minimum standards of protection for patents, as the Berne Convention does for copyright.¹⁴

3 JUSTIFICATIONS FOR PATENTS

Over time, a number of different justifications have been given in support of the patent system. At times, the proponents of patent protection have emphasized the natural rights of inventors to the products of their mental labour.¹⁵ Others have argued that justice demands that an inventor's contribution should be recognized by the grant of a reward.¹⁶ While arguments of this ilk have occasionally been relied upon in discussing aspects of the patent system, they have not been as popular as the public interest rationales. Having said that, the current debates about how indigenous interests should best be accounted for in the patent system have seen a resurgence of interest in arguments about inherent rights and justice.

While commentators have occasionally drawn on natural rights in support of the grant of patents, the most common form of argument has concentrated on the public benefits that flow from the grant of patent monopolies. Although these arguments have changed over time, what they share in common is the basic idea that the public should only ever have to endure the harm caused by the grant of a patent if the public receives some corresponding benefit. These arguments have tended to dominate discussion of the function of the patent system since the nineteenth century.

Initially, the public interest in the patent system was said to flow from the fact that the patentee introduced a form of technology that had not previously been available in the United Kingdom. Often this simply involved the patentee importing information about a trade or a craft from another country. Over time, this rationale was replaced by the argument that the public benefit lay in the disclosure of the invention that occurred on publication of the patent application. That is, the justifications focused on the role that the patent system played in the generation and circulation of technical information. (This is often referred to as the 'information function' of the patent system.) In particular it is said that patents act as incentives to individuals or organizations to disclose information that may have otherwise remained secret.¹⁷ Patents also encourage information to be disclosed in a way that is practically useful. At a more general level, the public interest in allowing patents is said to flow from the fact that the numerous patents that have been granted over time constitute a substantive and valuable database of technical and scientific information. The information function of the patent system was reinforced by the 1977 Patents Act and the EPC, which emphasized the need for the invention to be disclosed in such a way that it

¹³ *Ibid.*, Art. 4. The priority period is 12 months.

¹⁴ Although Paris Art. 4 *ter* requires mention of the inventor, Art. 4 *quater* requires that patents are not refused on the ground that sale of the product is restricted in domestic law, Art. 5 restricts the ability to forfeit the patent and the availability of compulsory licences.

¹⁶ *Ibid.*, 17–21.

¹⁷ See D. Davies, 'The Early History of the Patent Specification' (1934) 50 *LQR* 86.

could readily be put into practice.¹⁸ The value and effectiveness of the information was also bolstered by the publication of patent specifications on the Internet.

While the primary focus of the patent system is on the disclosure of technical information for scientific and industrial reasons, the information that is collected at patent offices throughout the world is occasionally used for other purposes. For example, historians have used the patent system as an indicator of public attitudes towards different technologies.¹⁹ More bizarrely, the fact that patent applications had been lodged for ovens for the burning of human corpses was used in a defamation action as evidence of the existence of gas chambers at Auschwitz.²⁰

Patents have also been justified by the fact that they provide an incentive for the production of new inventions.²¹ As Lord Oliver said in *Asahi* the 'underlying purpose of the patent system is the encouragement of improvements and innovation. In return for making known his improvement to the public the inventor receives the benefit of a period of monopoly during which he becomes entitled to prevent others from performing his invention except by his licence'.²² More specifically, it is said that as patents provide the possibility for inventions to be exploited for a twenty-year period, this means that investors will be more willing to fund research and development. In this sense, patents act as a vector that links scientific and technical research with commercial spheres.²³ Arguments of this nature have proved to be particularly important in situations where an invention can be readily ascertained (or reverse-engineered) from the product which is put on the market (and no other form of protection exists).

The fact that a product is patented is often used by retailers trying to gain a competitive advantage to show the innovative nature of their products. There is also a sense in which the fact that a product has been patented suggests that the product (or process) has been publicly sanctioned in some way or other. This has proved to be an important consideration in the ethical debates about whether patents should be granted for genetically modified humans, animals, and plants.

If we reflect upon the way that patent law has been viewed over the last century or so, a number of things stand out. The first notable feature is that the patent system has widely been seen, both by supporters and critics alike, as a system of regulation: that is, as a regime that modifies behaviour. While in some cases this is explicit; in most cases it is implicit in the way commentators talk about and think about patents.²⁴ Another notable

Plant, 'The Economic Theory Concerning Patents for Inventions' [1934] *Economica* 30; C. Taylor and A. Silbertson, *The Economic Impact of Patents* (1973), chs. 2 and 14.

²³ The role that the patent system played in inducing the invention and implementation of new industrial practices has been widely but inconclusively debated. See C. MacLeod, *Inventing the Industrial Revolution* (1988); H. Dutton, *The Patent System and Inventive Activity during the Industrial Revolution: 1750–1852* (1986).

²⁴ Driven by a form of legal positivism that has long disappeared from most other areas of law, it is occasionally suggested that patent law does not regulate behaviour: rather, it merely grants property (or

and consistent trend has been that whenever commentators talk about the patent system in a *positive* sense, that is as a system that regulates and controls behaviour in a desirable way, they have almost always seen it as a tool to promote economic ends, such as the encouragement of new industries, research and development, or innovation.²⁵ In contrast, whenever non-economic factors such as health, human rights, the environment, or ethics are discussed, they have either been treated as external (*negative*) constraints upon the core activities of the patent system, or as undesirable side effects that need to be mitigated.

While there is no denying the important role that patents play in macroeconomic policy, there is no reason why the patent system, as a regulatory tool, should only be used in the pursuit of economic ends, nor any reason why 'external' factors such as the impact of technology on the environment or health should not fall within the core remit of the patent system. That is, there is no compelling reason why the various practices, rules and concepts that have been developed and fine-tuned over the last couple of centuries or so should only be used for economic ends. Given that modern patent law already performs a number of, sometimes surprising, non-economic roles, this is not as alien a proposition it might first appear. For those who require an older lineage, there are also many examples from pre-modern patent law where the grant of a patent was used by the Crown to achieve political and personal, rather than economic, ends. As we will see below, arguments of this nature are beginning to have an influence on patent law, particularly in relation to the use of biological inventions and the protection of Indigenous knowledge.²⁶

4 CURRENT LEGISLATIVE FRAMEWORK

The law that regulates the creation and use of patents that operate in the UK is a hybrid mixture of national, European, and international factors. In this section, we provide an introduction to the legislation, conventions, and treaties that we will encounter in subsequent chapters. We begin by looking at the most important regimes, namely the 1973 European Patent Convention and the 1977 Patents Act. We then go on to look at the impact that the European Commission has had on patent law. After looking at the Community Patent Convention, we turn to look at some of the international treaties that have shaped British patent law. In particular, we look at the Patent Cooperation Treaty, TRIPS, and the Convention on Biological Diversity.²⁷

monopoly) rights in inventions. Invariably, however, the pretence of neutrality that underpins arguments of this nature disappear when commentators talk about the importance of patent protection in promoting technical innovation or investment in innovation.

²⁵ Occasionally, policy debates have also focused on the positive impact that patents has on the collection and distribution of technical information.

²⁶ See below pp. 347–8, 382–3.

²⁷ There are a number of other regional patent agreements, most notably the Bangui Agreement, the Harare Protocol on Patents, and the Eurasian Patent Convention (Moscow, 1994).

4.1 THE EUROPEAN PATENT CONVENTION

The European Patent Convention (EPC) was signed in Munich in 1973 and came into operation on 1 June 1978.²⁸ The EPC was based upon (and modified) the patent law of the various member states in force at the time. The EPC is an intergovernmental treaty that is distinct from the European Community. As such, membership extends beyond members of the EC. Currently, there are twenty seven member states of the EPC.²⁹ As we will see, the member states of the EPC recently agreed to revise the Convention.³⁰

The EPC is primarily concerned with the granting of European patents.³¹ This was facilitated by the establishment of the European Patent Office (EPO) in Munich, which acts as a centralized system for the grant of European patents. When an applicant wishes to protect their invention in a number of European countries, the EPO provides them with the benefit of a single application and search procedure, and a single grant of a bundle of national patents in each of the countries designated.³²

Applications are made to the European Patent Office, situated in Munich. The applicant is required to designate the countries where they want their invention to be protected. The application is submitted to the Examining Division and appeals are made from there to a Technical or Legal Board of Appeal. In rare cases, the Boards of Appeal (or the President of the EPO) may refer legal matters to the Enlarged Board of Appeal. EPC applications must be in one of three official languages and the text of the patent must be in that language. Upon grant, a European patent becomes a bundle of national patents that have effect in each of the designated states for twenty years from the date of filing. The procedure for application to the EPO is similar to that for the UK Patent Office.³³

When the EPC was being formulated, it was decided that for there to be an effective single granting process, it was necessary for the member states to harmonize the basic rules of patent law. This was particularly the case in relation to the rules on patentability and validity. As we will see, the tribunals at the EPO have had a substantial impact on this area of law. It is important to note that the EPC only provides a mechanism for the grant of national patents. As such, while the EPC is concerned with the validity of European

²⁸ Work began on a European patent system in 1949 in the Council of Europe with the Longchambon plan. For background see K. Haertel, 'The Munich Diplomatic Conference on European Patent Law' (1973) 4 *IIC* 271. P. Braendli (1974) 4 *IIC* 402.

²⁹ As of 25 Sept. 2003 the members were Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Liechtenstein, Luxembourg, Monaco, the Netherlands, Portugal, Romania, Slovenia, Slovak Republic, Spain, Sweden, Switzerland, Turkey, and the UK. In addition there are four extension states: Albania, Latvia, Lithuania, and the former Yugoslav Republic of Macedonia.

³⁰ See below at pp. 331–3.

³¹ This has cast doubts over the independence of the Office. Interestingly, the European Parliament suggested that the EPO reconsider the practice whereby it 'obtains payments for the patents that it grants as this practice harms the public nature of the institution'. *Proposal for a Directive of the European Parliament and of the Council on the Patentability of Computer-implemented Inventions* COM (2002) 92 final, Recital 7b (introduced by European Parliament, Amendment 95).

³² The second planned element of the European patent system, the Community Patent Convention (CPC), provided for the establishment of Community-wide patent. It has not yet come into force and has been supplanted by the EC's plan for a Europe-wide patent. See below at p. 34.

³³ One important difference is that the EPC allows for third-party opposition to the grant during the 9 months after publication of the details of the grant. Opposition is not possible under the UK system, but it is open to a person who objects to the patent to seek revocation on similar grounds.

patents, matters of infringement, enforcement, revocation, renewal, and litigation are exclusively dealt with by national law. One of the consequences of this is that a patent granted at the EPO for two countries might be interpreted differently in each country. In order to reduce the chances of problems of this nature from arising, the EPO examiners, national judges, and examiners meet annually. Further, a Protocol on the Interpretation of Article 69 of the EPC provides guidance as to how patents should be interpreted.³⁴

4.1.1 Revision of the EPC: the EPC 2000

In the last decade or so, there have been growing calls for the European Patent Convention to be changed to take account of the technological, political, and legal changes that have occurred since it was signed in 1973. To this end, a conference took place in Munich in November 2000 to discuss revision of the EPC.³⁵ The conference aimed to modernize the European patent system while maintaining the proven principles of substantive patent law and procedural law. The conference also aimed to undertake a comprehensive review of the EPC in light of technical and legal developments, and over twenty years of practical experience. The conference also wanted to bring the EPC into line with TRIPS, the future Community patent, and the provisions of the forthcoming (WIPO) Patent Law Treaty. In light of the leading political and legislative role that the European Union played in relation to the protection of biotechnological inventions, it was decided that it was inadvisable to open up parallel discussions in this area. It was also decided that further diplomatic conferences should be organized to consider the protection for computer programs and biotechnology inventions, as well as the changes required to implement the Community patent.

At the end of the conference, the member states of the EPC agreed to make a number of changes to the EPC.³⁶ The revised Convention, known as the 'EPC 2000', and new Implementing Regulations, were adopted by the EPO Administrative Council on 28 June 2001. The EPC 2000 and its Implementing Regulations will come into force no more than two years after the 15th contracting state ratifies or accedes to the new Convention. When this occurs, the EPC 2000 will replace the existing EPC. To date, seven contracting states have acceded to the EPC 2000.³⁷ As such, it is expected that the EPC will not come into effect for a few years. It should be noted that the 2004 Patents Amendment Bill (discussed below) was introduced into Parliament in January 2004 to give effect to EPC 2000.³⁸ In this section we provide an overview of some of the key features of the EPC 2000; we leave more detailed discussions for the appropriate place in the text.

For the most part, the EPC 2000 will not bring about (or at least is not intended to bring about) many changes in existing law. For example, Article 52(1) EPC 2000 does not make

³⁴ PA 125(3). See B. Sherman, 'Patent Claim Interpretation: The Impact of the Protocol on Interpretation' (1991) 54 *MLR* 499.

³⁵ The Administrative Council of the EPO launched the revision project in 1998.

³⁶ Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e (hereafter EPC Revision Act).

³⁷ As the Chair of Administrative Council of the EPO said at the close of the Conference on 29 November 2000, 'the Convention as revised at this Conference will . . . probably not have legal effect for another four or five years'. Statement by Dr Roland Grossebacher, Chairman of the Administrative Council of the EPO, 29 Nov. 2000 (Press release).

³⁸ The revised text will enter into force 2 years after the 15th contracting state has ratified, or 3 months after all of the contracting states have ratified the revised text. EPC Revision Act, Art. 6. See also Arts. 3, 4.

any substantial changes to the types of inventions that are patentable from the existing provisions in Article 52(1) EPC. Following Article 27(1) of TRIPS, it does however add a new phrase that 'European patents shall be granted for any invention, in all fields of technology'. Contrary to the Base Proposal for the Revision of the European Patent Convention, which proposed to delete '*computer programs as such*' from Article 52(2)(c),³⁹ the conference decided not to delete computer programs from the list of non-patentable inventions in Article 52(2) of the EPC.⁴⁰ As such, the existing legal position remains unchanged. The provisions in the EPC 2000 in relation to novelty, inventive step, and the internal requirements for patentability are basically the same as in the EPC. The main change is that Article 54(4) EPC has been deleted. This means that the state of the art will include all prior European applications irrespective of their designation.

In other cases, existing provisions have been reworded to make them more transparent. For example, Article 52(4) EPC says that methods of treatment and diagnosis are lacking in industrial applicability and as such as excluded from patentability. In contrast, Article 53(c) EPC 2000 takes a more direct approach insofar as it simply says that such methods are excluded from patentability. In other cases, the text has been changed to ensure that the EPC 2000 reflects current practice. As such, while there may be a change in the language of the Convention, this is not intended to bring about a change in existing law. For example, Article 54(5) EPC 2000 expressly allows for claims to second and further medical uses of known substances or compositions without the need for such claims to be expressed as Swiss-type claims, as is currently the case. The EPC 2000 also clarifies and strengthens the extent of protection conferred by European patents by expressly including the doctrine of equivalents in the revised Protocol on Article 69 EPC 2000.⁴¹

One of the most notable changes brought about by the EPC 2000 is that it provides patent owners with the option of limiting the protection afforded by their patents in a central procedure before the EPO.⁴² The existence of centralized procedure for amendment means that proprietors will not have to go through the national patent offices. It also means that should a patent as granted turn out to be invalid, it can be amended quickly. It was hoped that this would act as an incentive to amend incorrectly granted patents quickly and at a lower cost. Article 138 EPC 2000 introduces the *right* of a proprietor to limit a European patent by amendment of the claims in national proceedings relating to a patent's validity. As we will see, this has important ramifications for the judicial discretion that exists in UK patent law as to whether amendment should be allowed.

The EPC 2000 also makes a number of amendments that aim to simplify the patent grant procedure before the EPO.⁴³ These changes are intended to provide greater legal certainty for applicants and patent owners. In the future, for example, it will be possible 'to file patent applications in any language, since a translation into one of the official languages of the EPO will not be required until a later date. During the procedure itself,

⁴² EPC 2000, Art 105 (a)–(c). See below at pp. 378–81. Amendments are currently only possible under the EPC as part of opposition proceedings.

⁴³ See, e.g. EPC 2002 Art. 15 ff; EPC 2000 Implementing Regulations. See also EPC Revision Act, Art. 1, items 27–43.

applicants will benefit from improved protection against inadvertent legal consequences arising from the non-observance of time limits'.⁴⁴ The EPC 2000 also aims to streamline the European grant procedure. Notably, it was decided that the search and examination of the patent application should be brought together. Presently, search and examination are carried out in a number of different locations. It was argued that as the EPO's vast collection of search documentation is available through databases at all its duty stations, there is no longer any need to separate the two tasks. It is expected that this will lead to a 'significant increase in the productivity and efficiency of the EPO'. The EPC 2000 makes a number of other notable procedural changes. For example, in contrast to Article 79 EPC, which requires applicants to designate the states in which they wish to be protected, Article 79(1) EPC 2000 provides that all EPC states will be deemed to be designated at the date of filing. The EPC 2000 has also created the legal basis for special agreements between the contracting states concerning the translation of European patents and the introduction of a central court system for the enforcement of European patents, issues which are also of importance for the Community patent proposed by the European Commission.⁴⁵ It also authorizes the Administrative Council to adapt the EPC to international treaties and European Community legislation.⁴⁶ Given the increased activity of the European Community in patent law, this may prove to be an important change.

4.2 1977 PATENTS ACT

The law that regulates the creation and use of patents in the United Kingdom is found in the 1977 Patents Act, as amended.⁴⁷ As the bulk of the 1977 Act was based upon the EPC, the passage of the 1977 Patents Act brought with it a number of substantive and procedural changes to British patent law. It also saw the United Kingdom's entry into the EPC.

In so far as the provisions of 1977 Patents Act are based on the EPC, the 1977 Act says that the provisions should be interpreted so as to give effect to the EPC and decisions made thereunder.⁴⁸ The important task of ensuring that the UK law remains consistent with the law at the EPO has been recognized by the English courts in numerous cases.⁴⁹ Interestingly, the EPO has occasionally reciprocated by taking notice of the decisions of national offices and courts so as to avoid lack of uniformity in the law of the EPC countries.⁵⁰ Although there is no consistent pattern, pre-1977 decisions have not been treated as being wholly irrelevant when deciding questions under the 1977 Act. In some cases the courts have said that the 1977 Act swept away the old law.⁵¹ In other cases, however, they have acknowledged that as the intent of the EPC was to harmonize existing

national rules, pre-1977 decisions are still important.⁵² Despite this, as the jurisprudence at the EPO develops, it is clear that pre-1977 cases are becoming less important in the United Kingdom.

4.2.1 Reform of the 1977 Patents Act

In November 2002, the UK Patent Office and the Department of Trade and Industry released a consultation paper that outlined a number of possible amendments to the 1977 Patents Act.⁵³ While the aim of these changes was primarily to give effect to the EPC 2000, the consultation paper also suggested a number of other changes designed to improve the 1977 Act. The Government's conclusions drawn from the consultation process were published in late 2003.⁵⁴ A Bill to amend the 1977 Patents Act was introduced into Parliament in January 2004.

Many of the proposed changes in the 2004 Patents Bill mirror those in the EPC 2000 (discussed above). The 1977 Act will be amended to reflect the changes in EPC 2000 by dealing with methods for treatment and diagnosis as exceptions to patentability rather than under section 4(2) on the basis that they lack industrial applicability.⁵⁵ Following Article 54(5) EPC 2000, the government also plans to simplify and clarify the manner in which patent protection can be obtained for second and further medical uses. In particular, the Patents Bill 2004 proposes that claims to second or further medical uses of a known substance or composition be allowed whether or not they are drafted as Swiss-type claims.⁵⁶ This would allow further medical use claims in UK law, while not precluding the possibility of Swiss-type claims.⁵⁷ It is also planned that the 1977 Act be amended to reflect the fact that all applications for European patents will form part of the state of the art under section 2(3), irrespective of whether the United Kingdom has been designated.⁵⁸ The government's proposal to amend section 1 of the 1977 Act to reflect the new Article 52(1) EPC 2000 (particularly that inventions 'should be granted in all fields of technology') has not been adopted in the 2004 Patents Bill.⁵⁹

A number of changes will be made in relation to the amendment of patents. The government has said that it will recognize the new centralized limitation process available under EPC 2000, alongside amendment in section 77(6)(b). Where a patent not in English is limited, at the EPO, the 1977 Act will require the patent (as granted, limited, or

On the basis that the revised Protocol to Art. 69 would operate in the UK under the current arrangements, it was decided that it was not necessary to make any changes in this regard. *Ibid.*, paras. 40–41.

amended) to be translated into English within a specific period of time, before the (limited) patent can take effect in the UK.⁶⁰ The government intends to amend the 1977 Act to remove a number of anomalies that currently exist in terms of when a patent may be amended.⁶¹ The government also plans to ensure that post-grant amendment proceedings in the United Kingdom are no longer subject to judicial discretion.⁶² The aim is to bring the United Kingdom into line with the non-discretionary nature of post-grant amendment before the EPO and in other member states. The 2004 Patents Bill also proposes to make a number of minor changes to the scheme developed to compensate employee-inventors⁶³ and to clarify that co-owners have the ability to amend and revoke a patent if they act jointly.⁶⁴

Infringement proceedings can be brought before the comptroller only if both parties agree that this should happen. In order to provide patentees (particularly small and medium sized organisations) with an alternative dispute resolution process, the Consultation Paper suggested that the 1977 Act be changed to allow infringement proceeding to be brought before the comptroller at the request of one party. This proposal was not supported.⁶⁵ Instead, the 2004 Patents Bill plans to amend the 1977 Patents Act to give the comptroller a general power to undertake both post-grant re-examination of a patent and also to make declarations as to whether a particular patent has been infringed. This is to be a non-binding opinion of the Patent Office, rather than a legally binding decision. It is hoped that this will provide a fast, fair and effective way of resolving disputes, as an alternative to formal litigation.⁶⁶

4.3 THE COMMUNITY PATENT CONVENTION

As part of the plans for the establishment of a European patent system in the 1960s and the 1970s, it was decided that a dual system of protection should be introduced. The first element, which eventually emerged as the EPC, aimed to establish a centralized granting authority. The second part aimed to establish a single Community patent that was to be obtained by one central procedure and be binding in all member states. This came to be known as the Community Patent Convention (CPC), which was signed in Luxembourg in

⁶⁰ Patents Bill cl. 2 (amending ss. 27, 58, 62, 63 and 65 of the 1977 Patent Act). See also *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of responses and the government's conclusions* (13 Nov. 2003), paras. 32–33; Explanatory Notes to the Patents Bill 2004, paras. 22–25. EPC 2000 provides that contracting states may require a translation of the patent as granted, amended, or limited within a certain period of time.

⁶¹ PA s. 75 is to be changed to allow amendment during any proceedings in which validity may be in issue. Responding to problem highlighted by Jacob J in *Norling v. Eez-Away* [1997] RPC 160.

1975.⁶⁷ One of the key advantages that is said to flow from the Community patent is that it would lead to a rationalization of patent administration and thus to a reduction in costs. Unlike the EPC, the CPC has never come into force. To a large extent, these initial plans have recently been surpassed by EU moves to establish a single Community-wide patent.

Under the CPC, a patent application would be made to an office at the EPO. To facilitate this, two new departments would be established: the Administration Division to deal with the administrative matters such as transfers and renewals of patents; and the Revocation Division, to deal with applications to revoke Community patents. It is proposed that the system would offer a degree of flexibility, allowing an applicant to switch between EPC and CPC systems in early stages. A number of major problems emerged with the proposed system as regards languages and litigation. Under the 1975 Convention, it was proposed that an applicant would provide translations of claims in all (then eight) official languages. Under a 1989 revision to the CPC it is now proposed that this translation be of the complete text, not only the claims within three months of publication. Where this is not complied with, the patent would be void. This proposal would make a Community patent much more costly and less attractive. There will therefore be little advantage to an applicant for a Community patent than for a European patent. The advantages of the CPC would be limited to convenience and cheaper renewal fees.

The Community patent would offer the possibility of Europe-wide litigation and enforcement (as well as challenge) through a Community patent court. The jurisdiction of the 1975 Convention was to be divided between national courts and the Community court, the former dealing with scope of protection, and the latter with validity. This was rejected in 1989. Under the revised CPC, the validity of a patent would be challengeable either by application to the Revocation division, or in a counterclaim for revocation before a national community patent court. Appeal from either would lie to a (yet to be established) Community Patent Appeal Court (COPAC). Appeal from a national court on other issues (such as damages) would be to the national appeal court. COPAC would also make the final decisions on appeals from the Administration and Revocation divisions. The plan was for COPAC to be an independent organization and not attached to the EPO or the ECJ. COPAC would be not only the appeal court but would also give preliminary rulings on the interpretation of the CPT, on request from national courts. With respect to remedies, the national rules of the contracting state where the infringement occurred would have to apply. These Conventions have never been ratified by all the member states and have never entered into force.

4.4 IMPACT OF THE EUROPEAN COMMUNITY

While the European Community has not been involved in the reform of patent law anywhere near as much as it has in relation to trade marks and copyright, the Commission has been active in two areas. These are in relation to the duration of patents (via the Supplementary Protection Certificates scheme) and biotechnological inventions.⁶⁸ In this

⁶⁷ A. Krieger, 'The Luxembourg Convention on the Community Patent: A Challenge and a Duty' (1988) 19 *IIC* 143; V. Scordamaglia, 'The Common Appeal Court and the Future of the Community Patent' (1991) 22 *IIC* 334; V. Scordamaglia, 'The Common Appeal Court and the Future of the Community Patent following the Luxembourg Conference' (1991) 22 *IIC* 458.

⁶⁸ EU competition law also plays a key role in shaping British patent practice: see below at pp. 556–60.

context it is important to recall that the European Patent Convention, whose membership extends beyond the boundaries of the EC, is a separate and distinct treaty which operates outside the remit of the EC. The potential for overlap and conflict between the two regimes has been minimized by the fact that the two bodies have worked in tandem on many issues (which given the membership overlap is not that surprising).

The first area of patent law where the EC has intervened is in relation to the duration of patent protection. Faced with growing delays caused by the need for regulatory approval prior to marketing, patent owners argued that the time available for them to exploit their inventions was much shorter than the planned twenty-year period.⁶⁹ To remedy this problem the EC introduced the so-called Supplementary Protection Certificates, which extend patent protection where it has not been possible for the patent proprietor to take full advantage of their patent rights over the period of the grant.⁷⁰ In particular, Supplementary Protection Certificates compensate the owner where they have not been able to market the patented product because of delays in seeking regulatory approval.⁷¹ The effect of the basic patent can be extended for up to five years by this supplementary right. The right is characterized as a right distinct from patents in order to avoid the apparent conflict that would otherwise occur with the maximum term under Article 63 of the European Patent Convention. A challenge made by the Spanish Government to this regime in 1995 was dismissed by the European Court of Justice.⁷² A corresponding scheme for Supplementary Protection Certificates has been introduced in the UK.⁷³

A second area where the EC has intervened in the patent field is in respect of biotechnological inventions. After a decade of heated debate, the Biotechnology Directive was formally adopted by the Council and the European Parliament on 6 July 1998.⁷⁴ The Biotechnology Directive deals with the patentability⁷⁵ and scope of protection conferred on biotechnological inventions.⁷⁶ As well as introducing special defences,⁷⁷ the Directive also establishes a scheme for compulsory licences and cross licences to deal with the overlap between patent and plant variety protection.⁷⁸ In addition it also provides for the deposit of biological material.⁷⁹ The Directive has now been implemented in the United Kingdom.⁸⁰

⁶⁹ On the extent to which competitors may experiment prior to expiry of the patent, see below at pp. 543–5.

⁷⁰ Council Regulation (EEC) No. 1768/2 of 18 Jun. 1992 concerning the creation of a supplementary protection certificate for medicinal products; (1992) *OJ L* 182/1. Regulation (EC) No. 1610/96 of the European Parliament and of the Council of 23 Jul. 1996 concerning the creation of a supplementary protection certificate for plant protection products; (1996) *OJ L* 198/30–35.

⁷¹ The relevant regulatory authorities include the Medicines Control Agency, the Veterinary Medicines Directorate, the European Agency for the Evaluation of Medicinal Products, and the Pesticides Safety Directorate.

⁷² This was on the grounds that the Community did not have competence to legislate a new patent right, and that intervention could not be justified by reference to the need to harmonize laws for the internal market: *Spain v. Council of the European Union*, Case 350/92 [1995] *ECR* I-1985.

⁷³ See below at pp. 586–90.

⁷⁴ EC Directive on the Legal Protection of Biotechnological Inventions 98/44/EC of 6 Jul. 1998; 98/44/EC of 6 Jul. 1998; (1998) *OJ L* 213/13. (hereinafter *Biotech. Dir.*)

⁷⁵ *Biotech. Dir.*, Arts. 1–7.

⁷⁶ *Ibid.*, Arts. 8–10.

⁷⁷ *Ibid.*, Art. 11.

⁷⁸ *Ibid.*, Art. 12.

⁷⁹ *Ibid.*, Arts. 13–14. It also deals with implementation and review procedures Arts. 15–18.

⁸⁰ Arts. 1–11 of the Directive were introduced into British law by Patents Regulations 2000 (SI 2000/2037) (in force 28 July 2000). Note also SI 2001/1412 and SI 2002/247.

During the passage of the Directive, the question arose as to the nature of the relationship between the Biotechnology Directive and the EPC. What would a British court do, for example, if the EPC and the Directive were in conflict? Problems of this nature were resolved when the Administrative Council of the EPO incorporated the Biotechnology Directive into the Implementing Regulations of the EPC.⁸¹ In so doing, the Administrative Council aligned the EPC with the provisions of the Biotechnology Directive. The Council also provided that the Directive should be used as a supplementary means of interpreting the EPC. As a result, the Recitals to the Directive can be taken into account where relevant.⁸²

The controversial nature of the patenting of biotechnological inventions, which delayed the passage of the Directive for so long, has continued since it was passed. In addition to on-going public criticism of biotechnological patents, in November 1998 the Dutch Government filed a challenge to the Biotechnology Directive in the European Court of Justice. While the ECJ rejected the Dutch challenge to the Directive,⁸³ there are still many critics of the ongoing expansion of patent law in the life sciences.⁸⁴

4.5 PROPOSED EUROPEAN COMMUNITY CHANGES

There are currently a number of proposals for reform that have been put forward by the European Commission that will have an important impact upon patent law if and when they are finalized. After looking at the proposal for utility model protection, we look at the two proposals that have grown out of the *Green Paper on Innovation*.⁸⁵ In particular, we examine the plans for the establishment of a unitary patent valid throughout the EU, and the proposed Directive on patent protection for computer-implemented inventions.⁸⁶

4.5.1 Utility model protection

A utility model is a registration-based form of intellectual property that provides protection for inventions. While similar to patents, utility model protection tends to apply a

⁸¹ Administrative Council of the EPO 16 Jun. 1999 amending the Implementing Regulations of the EPC [1999] *OJEP* 437, 573 (in force from 1 Sept. 1999).

For the challenge see [1998] *OJ C* 378/13). See A. Scott, 'The Dutch Challenge to the Bio-Patenting Directive' [1999] *EIPR* 212.

⁸⁴ See Commission on Intellectual Property Rights, *Integrating Intellectual Property Rights and Development Policy* (Sept. 2001); Nuffield Council on Bioethics, *The ethics of research related to healthcare in developing countries* (2001). See also G. Dutfield, *Intellectual Property Rights and the Life Sciences Industries* (2003).

⁸⁵ COM (95) 382. The Green Paper also considers intervention into other areas of patent law, such as employees' inventions, the use of patent agents, and the recognition of professional qualifications.

⁸⁶ See O. Bossung, 'The Return of European Patent Law to the European Union' (1996) 27 *IIC* 287. Following the Commission's *Green Paper on Innovation* Dec. 1995, in Nov. 1996 the Commission issued an *Action Plan for Innovation in Europe*, proposing three lines of action for tackling Europe's perceived 'innovation deficit'. Subsequent to this initiative, a *Green Paper on the European Patent* was adopted by the European Commission on 24 Jun. 1997, the main proposal of which concerns the option of converting patent law into a Community instrument. This was followed by *Promoting innovation through patents: the follow up on the Community Patent and the Patent System in Europe* [1999] *OJEP* 197.

lower standard of 'inventiveness' than is required in patent law.⁸⁷ Proponents of utility model protection argue that insofar as it provides cheaper, quicker protection for low-level innovations that it fills a gap in the existing legal framework. This is said to be particularly important for small and medium-sized enterprises.⁸⁸ Most European member states (except the United Kingdom, the Netherlands, and Luxembourg)⁸⁹ already offer some form of utility model protection for inventions, variously referred to as petty patents, registered inventions, or more generally as second-tier protection. However, no such regime currently exists in the UK.⁹⁰

As part of its ongoing reform of intellectual property law, in 1995 the European Commission announced its intention to legislate in relation to utility models. To this end a Green Paper on the Protection of Utility Models was published. As part of the review process, the Green Paper asked whether European utility model protection should be a Community-wide based right or whether it should be a nationally based right. If the latter approach were adopted, it would have necessitated the harmonization of existing laws and, for countries such as the United Kingdom, the creation of a new right.⁹¹ On the basis that most of the respondents favoured a nationally-based right, in 1997 the Council published a proposal for a *Directive Approximating the Legal Arrangements for the Protection of Inventions by Utility Model*.⁹² Following input from the Parliament, the Commission followed up in August 1999 with an *Amended Proposal for the Protection of Inventions by Utility Model*.⁹³ The reaction to the proposal from interested parties in the United Kingdom was largely negative.⁹⁴ Some people questioned whether the introduction of such a system would improve technological progress or economic prosperity.⁹⁵ Indeed, many feared that

⁸⁷ While the terms 'utility model' and 'petty patents' are sometimes used interchangeably, there are differences between the two regimes. Although the terms are not used consistently, the term 'petty patent' is normally used to refer to a system that parallels the patent system in its scope and techniques, but confers a shorter period of protection. In contrast 'utility model' is normally used to refer to some sort of hybrid protection between designs law and the patent system where functional articles are afforded protection by reference to their shape or configuration. The scope of utility model systems, therefore, tends to be narrower because it does not extend to chemical inventions or processes. Instead, it is confined to 'ingenious devices'.

⁸⁸ Proposed UM Dir., Recital 6 (need for an instrument which is cheap, rapid, and easy to evaluate and apply).

⁸⁹ For background, see M. Kern, 'Towards a European Utility Model' (1994) 25 *IIC* 627; Green Paper, *The Protection of Utility Models in the Single Market* (19 Jul. 1995) COM 95 370 final.

⁹⁰ It is usually asserted that the idea of second-tier protection was first developed in Germany, where the 'gebrauchsmuster' was introduced in the 1891 Utility Models Act, but the better view is that the UK's Utility Design Act 1843 was an earlier utility model system: see L. Bently and B. Sherman, 'The UK's Long-Forgotten Utility Model: The Utility Designs Act 1843' (1997) 1 *IPQ* 265.

⁹¹ Green Paper, *The Protection of Utility Models in the Single Market* (Brussels, 19 Jul. 1995) COM (95) 370 final.

⁹² COM (97) 691 (final).

⁹³ Amended Proposal for a European Parliament and Council Directive approximating the legal arrangements for the protection of inventions by Utility Model (12 Aug. 1999) Brussels COM (1999) 309 final/2. The Proposal incorporates most of the amendments proposed by the European Parliament in Mar. 1999.

Llewelyn, 'The Model Myth and the Relevance of the Proposed EC Utility Model System to the United Kingdom' (Feb. 1996) 79 *Patent World* 32; M. Llewelyn, *Utility Models/Second Tier Protection: A Report on the Proposals of the European Commission* (1996).

⁹⁵ M. Llewelyn, *Utility Models/Second Tier Protection: A Report on the Proposals of the European Commission* (1996), 70–1; C. Lees, 'Utility Models: A Rainbow Response' (1995) *CIPAJ* 536, 539. Van Engelen, 'The Misappropriation Doctrine in the Netherlands (1991) 22 *IIC* 11, 21 describes how attempts to introduce such protection in the Netherlands were opposed (successfully) because it was anticipated that the system would be used mostly by foreign applicants to the detriment of local industry.

the addition of a new form of unexamined intellectual property might have complicated and increased uncertainty in trade. Other critics questioned the extent to which it makes sense, practically or conceptually, to add a second layer of protection onto patent law. More specifically, questions were raised as to the whether it is possible to locate a standard of protection below the standard of non-obviousness traditionally used in patent law. It has also been suggested that utility models are foreign in origin, and, as such, do not properly belong within the ambit of British intellectual property law.⁹⁶ Similar views were raised in some other member states. Problems in reaching agreement over a number of basic issues led the Commission to suspend work on the proposed Directive in March 2000.⁹⁷

Prompted by concerns from the European Council about the slow progress that had been made in relation to utility model protection, the Commission changed tack in 2001 and published a working paper on the possible introduction of a Community-wide utility model that would apply in *all* EU member states. The proposed new right would protect inventions for both products and methods, so long as they were novel, industrially applicable, and involved a degree of inventiveness (that is somehow to be fixed at a lower level than for patents). There would be no formal examination to qualify for utility model protection. Instead, applications would be subject to a process of 'formal verification'. Once granted, utility model protection would offer Community-wide rights that are identical to those given to patentees, although they would only run for a ten-year period. The proposal allows for dual utility model-patent protection, but would not allow concurrent disputes to be run. In contrast to the earlier EC proposal to harmonize existing national systems, the proposed Community utility model would operate in tandem with the existing national rights. This would mean that the only form of utility model protection that would operate in the United Kingdom would be the Community utility model.

The majority of the respondents to the Commission's consultation paper opposed the Community utility model.⁹⁸ Opponents of the proposal said that it would restrict competition, create uncertainty, and impose inappropriate criteria on applicants (inventiveness).⁹⁹ Some parties suggested that the Community should resume work on a Directive to harmonize existing national legislation. Supporters of the Directive argued that it would form a useful complement to the patent system, particularly for organizations whose innovations only have a short lifespan.¹⁰⁰ Following a report of the findings to the Council in March 2002, the Commission said that it would shortly propose an appropriate follow up to the consultations.¹⁰¹ To date, no such follow up has been published. For critics of utility models, many of the failings of the current systems of protection for inventors could be remedied by reform of European patent law, rather than the introduction of a new right. It is yet to be seen whether EPC 2000 will satisfy these demands. In any case, the political will to push through the utility model proposal seems to be draining away.

4.5.2 The Community patent

The goal of establishing a single European patent has been on the political agenda for over thirty years. Undeterred by the failings of the CPC, on 5 July 2000 the European Commission proposed the creation of a Community patent.¹⁰² The possibility of a pan-European patent received a considerable boost on the 3 March 2003 when EU Ministers agreed on the text of a Common Political Approach regarding the principles of the Community Patent.¹⁰³ The Common Approach includes the main outlines of the system including a centralized Community Court that would rule on disputes, the languages to be used, costs, the role of national patent offices, and the distribution of fees. The Common Political Approach was supported by the Council of Europe on 21 March, 2003. Following the political agreement, a revised version of the Commission's draft Regulation was published in September 2003. The Commission has said that if the Community patent was introduced it would significantly lessen the burden on business and encourage innovation by making it cheaper to obtain a patent (by reducing translation costs). It is also meant to provide a clearer legal framework.

The planned Community patent offers an alternative for patent protection in Europe alongside the national and EPO systems. The Community patent would provide inventors with the option of obtaining a single patent valid throughout the European Union. However, if a Community patent was successfully challenged, it would fail in all EU member states. While applications are to be filed either in national patent offices or with the EPO in Munich, Community patents would only be issued by the EPO. The role of national patent offices is to be limited to a search at the applicant's request. Applications for a Community patent would have to be in one of three languages—English, French, or German—or in any other language together with a translation. Once granted, the patentee will have to translate all of the claims (but nothing else) into all Community languages. This would then be filed at the EPO. Community patents would coexist with the national and EPC patents giving inventors the option to choose the system that best suited their needs.

The Commission also proposes to create a new centralized Community tribunal called the Community Patent Court. The Community Patent Court is to be established in Luxembourg by 2010 as a panel attached to the ECJ Court of First Instance. Prior to this, member states are to designate a limited number of national courts to have jurisdiction in relation to Community Patent matters. When established, the Community Patent Court will have exclusive jurisdiction in relation to invalidity and infringement of Community patents, and actions relating to declaration of non-infringement, and be able to grant provisional measures. Disputes relating to contractual licensing and ownership of Community patents will be handled by national courts.

4.5.3 Patentability of computer-implemented inventions

Another area where the Community has been active is in relation to computer-implemented inventions. After a period of consultation, which raised a number of questions about the scope, nature, and impact of patents for computer-related inventions,¹⁰⁴ the Commission published a proposal for a *Directive on the Patentability of Computer-Implemented Inventions* in February 2002.¹⁰⁵ The proposed Directive moved a step closer to becoming law when it was approved by the European Parliament in September 2003.¹⁰⁶ In approving the Directive, the Parliament made a number of substantive amendments to the Commission's initial proposal. Before the proposed Directive comes into force, the Parliament, Commission, and the Council will have to agree on the text of the Directive (as part of the 'co-decision procedure').

The proposed Directive aims to fulfil a number of different goals. It aims to strike a balance between promoting innovation and ensuring adequate competition in the marketplace. The proposed Directive also aims to clarify the current position on the patentability of computer-implemented inventions in Europe, which is said to be unclear. According to Recital 14, 'the Directive simply clarifies the present legal position with a view to securing legal certainty, transparency and clarity of the law'. The proposed Directive also aims to harmonize national patent laws in relation to computer-related inventions amongst different member states. This is reflected in Recital 16 of the amended proposal which says 'the competitive position of European industry will be improved if the current differences in the legal protection of computer-related inventions are eliminated'. In part, this was motivated by the belief that the absence of EU-harmonized legislation was a potential barrier to industrial growth, competitiveness, and the development of the internal market. The proposed Directive also aims to rectify the anomalous situation that currently exists in European patent law, namely that while computer programs 'as such' are excluded from patentability, nonetheless thousands of patents for technical inventions using a computer program have been granted by national patent offices and by the EPO.

While the proposed Directive makes a number of changes to existing law, for the most part, it merely confirms existing law. For example, the proposed Directive confirms that inventions only can be protected by patents if they make a technical contribution. Technical contribution is defined as a contribution to the state of the art in a technical field.¹⁰⁷ In turn, 'technical field' is defined as 'an industrial application domain requiring the use of controllable forces of nature to achieve predictable results'.¹⁰⁸ The mere implementation of an otherwise unpatentable method on an apparatus such as a computer is not in itself sufficient to warrant a finding that a technical contribution is present. A computer-related invention is defined as 'any invention within the meaning of the EPC, the performance of which involves the use of a computer, computer network or other programmable

¹⁰⁴ The EC launched a process of consultation on 19 Oct. 2000.

¹⁰⁵ *Proposal for a Directive of the European Parliament and of the Council on the Patentability of Computer-implemented Inventions* (hereinafter, *Computer-Implemented Inventions Dir.*) COM (2002) 92 final. The Council considered the proposal and reached a common position in Nov. 2002. See Committee on Legal Affairs and the Internal Market, *Report on the Proposal for a Directive* (18 Jun. 2003) FINAL A5-0238/2003 (McCarthy Report).

¹⁰⁶ 364 in favour, 153 against, 33 abstentions.

¹⁰⁷ *Computer-Implemented Inventions Dir.*, Art. 2(b).

¹⁰⁸ *Computer-Implemented Inventions Dir.*, Art. 2(ba). Industry is defined as 'the automated production of material goods': an oddly non-information technology friendly definition.

apparatus and having in its implementation one or more technical features which are realised in whole or partly by a computer program or computer programs'.¹⁰⁹

The proposed Directive confirms the continued non-patentability of business method patents. For example, Article 4(a) says that a computer-related invention shall not be regarded as being patentable 'merely because it involves the use of a computer, network or other programmable apparatus'. Thus, computer programs which implement business, mathematical or other methods and do not produce any technical effects beyond the normal physical interactions between a program and the computer, network or other programmable apparatus shall not be patentable.¹¹⁰ The proposed Directive also confirms that 'algorithms defined without reference to a physical environment' are not patentable. To avoid any doubt, an algorithm is said to be inherently non-technical and therefore non-patentable. However, a method that uses an algorithm might be patentable, so long as it makes a technical contribution.¹¹¹ The proposed Directive also says that data processing shall not be considered to be a field of technology. Thus, innovations in data processing cannot be patented.¹¹² It also provides that computer-implemented inventions shall not be considered patentable merely because they improve efficiency in the use of resources within a data processing system.¹¹³ In addition, the handling, processing, and presentation of information do not belong to a technical field and are also therefore not patentable.¹¹⁴ However, as is the case in both the UK and the EPO, if it can be shown that a computer-implemented invention makes a technical contribution it is potentially patentable. This can be seen, for example, in Article 2(b) which says that the 'use of natural forces to control physical effects beyond the digital representation of information belongs to a technical field' and is thus patentable. While the proposed Directive largely replicates existing law, one area where it seems to differ is that it says that a 'patent claim to a computer program, either on its own or on a carrier, shall not be allowed'.¹¹⁵

Computer-related inventions must meet the normal criteria for protection: that is, they must be industrially applicable, novel, and make an inventive step.¹¹⁶ The proposed Directive provides that in order to involve an inventive step,¹¹⁷ a computer-implemented invention must make a technical contribution, which is to be assessed 'by consideration of the difference between all of the technical features included in the scope of the patent claim considered as a whole, irrespective of whether or not such features are accompanied by non-technical features'.¹¹⁸

One of the criticisms made of patent protection for computer-implemented inventions, particularly from the open source movement, is that it restricts access to information and

¹⁰⁹ Computer-Implemented Inventions Dir., Art. 2(a).

¹¹⁰ A computer-implemented business method, data processing method or other method in which the only contribution to the state of the art is non-technical cannot constitute a patentable invention. Computer-Implemented Inventions Dir., Recital 13(a). This cannot be circumvented by merely specifying a technical means in the patent: Recital 13(b).

¹¹¹ Computer-Implemented Inventions Dir., Recital 13(c). ¹¹² *Ibid.*, Art. 3(a).

¹¹³ *Ibid.*, Art. 4(b). ¹¹⁴ *Ibid.*, Art. 2(b). ¹¹⁵ *Ibid.*, Art. 5(1a).

¹¹⁶ *Ibid.*, Recital 11.

¹¹⁷ For example, Computer-Implemented Inventions Dir., Art. 3(a) says that 'when determining whether a given computer-implemented invention makes a technical contribution, the following test shall be used: whether it constitutes a new teaching on cause-effect relation in the use of controllable forces of nature and has an industrial application in the strict sense of the expression, in terms of both method and result'.

¹¹⁸ Computer-Implemented Inventions Dir., Art. 4, Recitals 11–13a.

that it stifles innovation. In an attempt to respond to criticisms of this nature, the proposed Directive includes a number of defences to infringement. Recognizing the potential for overlap between patent and copyright protection, the proposed Directive says that the rights conferred by patents shall not affect the defences introduced under Article 5 and 6 of the Computer Software Directive, particularly in relation to decompilations and interoperability.¹¹⁹ It also says that member states shall ensure that the production, handling, processing, distribution, and publication of information, in whatever form, can never constitute direct or indirect infringement of a patent, even when a technical apparatus is used for that purpose.¹²⁰ The proposed Directive also provides that 'wherever the use of a patented technique is needed for a significant purpose such as ensuring conversion of the conventions used in two different computer systems or networks so as to allow communication and exchange of data content between them, such use is not considered to be a patent infringement'.¹²¹ While the scope of this defence is not clear, given that it excludes situations where a patented technique is used for 'a significant purpose', it could have a very broad impact. Somewhat cryptically, the proposed Directive also provides that 'the use of a computer program for purposes that do not belong to the scope of the patent cannot constitute a direct or indirect patent infringement'.¹²²

The latest version of the proposed Directive (as amended by the European Parliament) has met with some criticism, primarily because it moves the balance away from patent owners towards the interests of users. The UK Patent Office has indicated that it does not support the amendments made by the European Parliament (describing the changes made by the Parliament as merely the latest step in the complex process of agreeing a Directive).¹²³ It is likely that the Commission and the Council will reject many of the amendments made by the Parliament. Given that the Parliament, Commission and the Council all have to agree on the text of the proposed Directive before it comes into force, it may be some time before the proposed Directive becomes law.

4.6 INTERNATIONAL TREATIES

As we mentioned earlier, international treaties have long played an important role in shaping aspects of British patent law. In addition to the Paris Convention (discussed above), the other treaties of note are the Patent Cooperation Treaty, TRIPS, and the Convention on Biological Diversity.

4.6.1 Patent Cooperation Treaty

The Patent Cooperation Treaty (PCT) was signed in 1970 and came into operation from 1978. The key feature of the Treaty is that it provides for a system of international application and preliminary examination procedure. The PCT currently has 123 contracting states.¹²⁴ It is important to note that the Patent Cooperation Treaty only provides for an international application and search: the authority to grant the patent remains with the

¹²⁴ As of 15 Oct. 2003.

national patent office.¹²⁵ The PCT provides a second route through which applications for patents that operate in the United Kingdom and the EPO can be made.

Under the PCT, an applicant can apply to an international office and get an international search and an international preliminary examination. Once this is carried out the application is sent to the designated national offices to decide whether to grant national patents. The centralized procedure is particularly useful for countries where the patent office is not capable of carrying out its own examination. The patent cooperation system is attractive because it reduces the fees payable and because of the lengthy period between the initial application to the international office and the time when that application is forwarded to the relevant national offices. The extra time, which varies between eight and eighteen months, gives applicants time to decide whether the invention is likely to be successful enough to warrant the translation costs that arise when the application is transferred to the national offices.

4.6.2 TRIPS

While TRIPS had a dramatic impact upon many developing countries, it had little direct impact upon European or British patent law.¹²⁶ Perhaps the most significant change brought about by TRIPS relates to the limits imposed on compulsory licences. The impact of TRIPS may increase, however, as the jurisprudence at the World Trade Organization takes shape. In an important decision in relation to the patenting of computer programs, the EPO Board of Appeal noted that as the EPO was not a signatory to TRIPS, they were not bound by it. However, on the basis that TRIPS aimed at setting common standards the Board said that it acted as an indicator of modern trends.¹²⁷ As we will see shortly, the member states of TRIPS are currently in negotiations over the reform of TRIPS.

(i) *Reform of TRIPS.* The member states of TRIPS are currently in the process of reviewing and updating the 1994 Agreement. Two areas of reform concern us here, namely patents and public health, and the patentability of plants and animal inventions.

One issue that has attracted a lot of attention in recent years is the extent to which patents restrict access to life saving drugs. This problem came to a head when patentees threatened to challenge legislation in South Africa that would have allowed their patented medicines (for the treatment of HIV/AIDS) to be sold at a price lower than they would have liked. Triggered by the dispute in South Africa, the 4th WTO Ministerial Conference, held at Doha in November 2001, focused on access to patented medicines in developed and less-developed countries. The delegates noted that compulsory licences, which are allowed under TRIPS, offer a possible solution for countries, such as South Africa, that

¹²⁵ The PCT was signed in Washington 1970; amended in 1979; modified in 1984. See K. Pfanner, 'The Patent Cooperation Treaty: An Introduction' (1979) *EIPR* 98; D. Perrott, 'The PCT in Use' [1982] *EIPR* 67; C. Everitt, 'Patent Cooperation Treaty (PCT)' (1984) 13 *CIPAJ* 383; Anon. 'Patent Cooperation Treaty (PCT) in 1992' (1993) 75 *JPTOS* 354; J. Cartiglia, 'The Patent Cooperation Treaty: A Rational Approach to International Patent Filing' (1994) 76 *JPTOS* 261; J. Anglehart, 'Extending the International Phase of PCT applications' (1995) 77 *JPTOS* 101. See below at pp. 365–6.

¹²⁶ TRIPS Art. 2 requires members are to comply with Arts. 1–12 of the Paris Convention (1967). In addition TRIPS Arts. 27–34 increases the level of standards: Art. 27 as regards patentability; Art. 28 rights; Art. 29 disclosure requirements; Art. 30 exceptions; Art. 31 authorized uses; Art. 33 requires a term of 20 years from filing date.

¹²⁷ *IBM/Computer programs*, T1173/97 [2000] *EPOR* 219, 224–5.

have the domestic capacity to manufacture medicines. However, Article 31(f) of TRIPS, which provides that medicines produced under compulsory licence must predominantly be for the domestic market, creates problems for countries that are unable to manufacture the patented medicines themselves. In particular, it means that it is not possible to manufacturer a patented drug under compulsory licence in Country A, with the intention of exporting the drug to Country B. While the delegates at Doha agreed that this problem needed to be resolved, they were unable to decide on how this should be done.¹²⁸ After heated public debate, on 30 August 2003 the WTO member states agreed that developed and less-developed countries that do not have the domestic capacity to manufacture drugs should be able to import cheaper generic drugs made under compulsory licences in other countries.¹²⁹ That is, the member states agreed to allow countries to manufacture patented pharmaceutical products under compulsory licence for export to developing countries. The decision covers patented products, products made using patented processes in the pharmaceutical sector, including active ingredients and diagnostic kits. The WTO member governments agreed that the obligations under Article 31(f) were to be waived, at least until the Article is amended.

The second area of the Agreement currently under review in the TRIPS Council is Article 27.3(b). This provides a limited exception to the general rule that patents should be granted in all areas of technology in relation to plant and animal inventions. In particular, it provides that members may exclude from patentability plants and animals other than micro-organisms, and essentially biological processes for the production of plants or animals.¹³⁰ As part of the review process, a number of submissions have been made outlining the existing national patent protection for plant and animal and also the plant variety protection. A number of countries have also made suggestions as to how Article 27.3(b) should be amended. These include discussions about whether patent applicants should be forced to disclose the origin of genetic materials and/or traditional knowledge used in the creation of their invention: the main debate here is the consequences of non-compliance.¹³¹ At the same time, a group of African countries has argued that there should be a general ban on the patenting on all life forms (including animals, plants and micro-organisms) and that farmers should have a general right to save seed. Given the divergence of views on the question of patenting life forms, it is not surprising that reform of Article 27.3(b) has progressed slowly. The slow progress can also be attributed to the fact that the review touches on a number of contentious issues, such as patent protection for Indigenous knowledge, the relationship between intellectual property and the protection of

¹²⁸ WTO, *Declaration on the TRIPS Agreement and Public Health* (20 Nov. 2001) WT/MIN(01)/DEC/2. See C. Correa, 'Implications of the Doha Declaration on the TRIPS Agreement and Public Health' *WHO Health, Economics and Drugs EDM Series No. 12* (June 2002).

¹²⁹ WTO, *Implementation of para 6 of the Doha Declaration on the TRIPS Agreement and Public Health* (1 Sept. 2003) WT/L/540 (decision of the General Council of 30 Aug. 2003).

¹³⁰ TRIPS Art. 27.3(b) also requires members to provide for the protection of plant varieties either by patents or by an effective *sui generis* system or both.

¹³¹ The EU has proposed that patent applicants be required to disclose the origin of genetic material, with legal consequences outside the scope of patent law. Switzerland has proposed an amendment to WIPO's Patent Cooperation Treaty (and, by reference, WIPO's Patent Law Treaty) so that domestic laws ask patent applicants to disclose the origins of genetic resources and traditional knowledge. Failure to disclose could hold up a patent being granted, or affect its validity. In turn Brazil, Cuba, Ecuador, India, Peru, Thailand, and Venezuela wants the TRIPS Agreement to be amended to make disclosure an obligation.

biodiversity, and the way in which TRIPS and the CBD are to interact.¹³² Given this, it is likely that the review of Article 27.3(b) may take some time.

The slow progress of the TRIPS review continued at the 5th WTO Ministerial Conference, which was held in Cancun (10–14 September 2003). While intellectual property issues were not at the forefront of the discussions, the meeting ended in a deadlock with the parties unable to reach agreement as to the next phase of the Doha negotiations. It is currently unclear how future negotiations will proceed. Given that developing countries have little to gain from the TRIPS review (with the possible exception of extending protection for geographical indications of origin), it seems that there is little impetus for them to break this stalemate. As a result we might expect to see a move away from multilateral treaties towards bilateral agreements (as is currently being favoured by the US) in an attempt to extend the scope of patent protection beyond that permitted by TRIPS.

4.6.3 The Convention on Biological Diversity (CBD)

The Convention on Biological Diversity (CBD) was signed in June 1992.¹³³ While the Convention was not directly concerned with patent standards, it heralds a new approach to the way biological resources are treated. The Convention provided developing countries with an opportunity to voice their unhappiness at the exploitation of indigenous resources by firms from the developed world. Of late, there have been numerous examples of situations where this has occurred: the Neem tree traditionally used in India to make medicines and insecticides has been the subject of thirty-seven patents in Europe and the USA;¹³⁴ there have been applications relating to the use of turmeric for treating wounds,¹³⁵ and inventions based on genetic material obtained from the Hagahai people, a small group in Papua New Guinea, have been patented. The Convention on Biological Diversity offers a potential basis to control the uses made of traditional knowledge. The preamble recognizes the close and traditional dependence of many indigenous and local communities embodying traditional lifestyles on biological resources. It also recognizes the desirability of sharing equitably the benefits arising from the use of traditional knowledge, innovations, and practices relevant to the conservation of biological diversity and the sustainable use of its components.

While the Convention may not have an immediate impact on patent law, it does represent a change of attitude towards the way natural resources are exploited which may impact upon the way patents are viewed. In particular it may help to undermine the pro-patent attitudes that have dominated for the last forty or so years. The impetus provided by the Convention on Biological Diversity to reconsider the aims and functions of the patent system has been reinforced by the growing body of literature that questions the often taken-for-granted assumption that technological development is both desirable and neutral. In so doing, commentators have emphasized the adverse physical and psychological effects of technology on individuals, their relations with society (alienation), and

¹³² The Doha Declaration says that in reviewing Art. 27.3(b) the TRIPS Council should look at the relationship between the TRIPS Agreement and the CBD; and the protection of traditional knowledge and folklore.

¹³³ There are 179 signatories to the Convention. The UK signed on 12 Jun. 1992; the EC on 13 Jun. 1992.

Huft, 'Indigenous and Drug Discovery Research: A Question of Intellectual Property Rights' (1995) 89 *Northwestern University LR* 1678.

¹³⁵ (26 Oct. 1996) *New Scientist*, 14.

the planet in general (environmental problems). Technology is also seen as having vastly altered the nature of political government and reduced individual autonomy (computer databases, surveillance devices). Some authors have called for the democratic control of technology, in particular arguing that some research and development should be prohibited (note, for example, the debate over patenting higher life-forms).

In recent years, the CBD has begun to impact upon patent law in a variety of ways, the most notable being the possibility of making 'prior informed consent' a condition of patentability. Debates about this and related issues have become intertwined with the ongoing review of the TRIPS Agreement being conducted by the TRIPS Council and with WIPO's discussions about the protection of Indigenous knowledge.¹³⁶ We look at these issues in more detail below.

4.6.4 WIPO Patent Law Treaty

In the last decade or so, the World Intellectual Property Organization (WIPO) has been engaged in an ongoing programme of reform of international patent law. The first concrete outcome from this process was the Patent Law Treaty (PLT) which was completed in June 2000.¹³⁷ The PLT, which opened for signature on 2 June 2000, will enter into force once it has been ratified by ten countries.¹³⁸ In essence the PLT is an international treaty that aims to simplify and streamline procedures for obtaining and maintaining a patent. It also aims to harmonize patent procedures relating to national and regional patent applications and the maintenance of patents.

The PLT promises to reduce the cost of patent protection (as a result of changes such as national patent offices sharing the results of search and examination procedures) and to make the process more user-friendly and widely accessible. The specific changes include: the use of standardized forms and simplified procedures that reduce the risk of error; cost reductions for inventors, applicants, and patent attorneys; elimination of cumbersome and complicated procedures; improved efficiency of patent offices and lower operating costs; possibility to introduce electronic filing of patent applications and related communications; standardization of patent formalities in all countries party to the PLT (including the incorporation of provisions under the Patent Cooperation Treaty); exceptions from mandatory representation; and the possibility to obtain a filing date, even if the main part of the application (description) is filed in a foreign language.¹³⁹ Under the PLT, the requirements and procedures for national and regional patent applications, and those for Patent Cooperation Treaty international applications, will be harmonized. This will eventually lead to standardized formal requirements and streamlined procedures for all patent applications at both national and regional patent offices.¹⁴⁰

4.6.5 Global harmonization of substantive patent law

The next stage in WIPO reform of global patent law began in November 2000, when

¹³⁶ See above at pp. 345–6.

¹³⁷ WIPO, Patent Law Treaty (2 Jun. 2000) PT/DC/47.

¹³⁸ There were 107 signatories to the Final Act of the Diplomatic Conference (including the UK and the EPO) on 2 Jun. 2000. The Treaty had been ratified by seven countries as of 1 Dec. 2003.

¹³⁹ WIPO Press Release PR/2000/222; WIPO, Patent Law Treaty (2 Jun. 2000) PT/DC/47.

¹⁴⁰ Consultation on proposed reforms to bring UK legislation into line with the WIPO Patent Law Treaty ended on 30 May 2003.

WIPO launched discussions on the harmonization of the substantive requirements of patent law.¹⁴¹ These discussions go beyond the Patent Law Treaty of June 2000, which focused on the task of harmonizing the processes by which patents are granted, to consider substantive issues. It is hoped that by standardizing the rules on patentability this will mean that as applicants will not have to prepare totally different patent documents for different patent offices, the costs of patenting will decrease. It is also hoped that it will increase predicability about patentability of inventions.

Although the Patent Cooperation Treaty (PCT) contains some principles of substantive patent law, these are only taken into account at the international phase when an application is submitted under the PCT. PCT contracting states are free to apply any substantive conditions of patentability during the national phase of an international application. Importantly, it is at this stage that the national authorities make the important decision as to whether a patent should be granted. At present there are six basic legal principles under consideration by the Standing Committee on the Law of Patents. These are definitions of prior art, novelty, inventive step (non-obviousness), industrial applicability (utility), sufficiency of disclosure, and the structure and interpretation of claims. It is planned that a future meeting will consider 'first-to-file' versus 'first-to-invent', time-limits upon the publication of applications and post-grant opposition.¹⁴²

¹⁴¹ WIPO Standing Committee on the Law of Patents, 'Suggestions for the further development of internal patent law' (25 Sept. 2000) SCP/4/2. Negotiators attended a meeting of the Standing Committee on the Law of Patents (SCP), which met 6–10 Nov. 2000. For the background see R. 15

THE NATURE OF A PATENT

1 INTRODUCTION

Patents have changed dramatically since they were first granted in England and Wales over four centuries ago. Initially, patents were crude documents, often only one or two sentences long. Since then, patents have become much more sophisticated, complex, and lengthy. As we will see in the next chapter, the process by which a patent is granted has also changed dramatically. A lot of care and attention has been given to the form and content of the patent. If there is a kind of symmetry or logic to the patent system, the content of the patent is the key to that process. As such, to understand many facets of patent law, it is important to have a good grasp of the nature and content of the patent. This chapter is intended to provide an introduction to the nature of the patent. In so doing we look at the different ways patents are described, the way patents are drafted, and the contents of a patent.

2 TYPES OF PATENTS

Patents are described in a number of different ways in the United Kingdom. Most commonly, a patent is seen as a legal document that confers a twenty-year monopoly on the patentee. Patents are also characterized in terms of the organization that grants them. As we saw earlier, the patents that operate in the United Kingdom are granted by two authorities: the British and European Patent Offices. The patents that operate in the United Kingdom are known either as British patents or European patents (UK). British patents are issued by the Patent Office in the United Kingdom and are subject to British law. In contrast, European patents are patents that have been issued by the EPO in Munich. A European patent (UK) is a patent issued by the European Patent Office where the applicant has designated the United Kingdom as a country where they want the patent to operate.¹ While there are a number of differences between the two systems, once a European patent (UK) has been granted, it is treated as if it had been granted by the British Patent Office.² Another way of classifying patents is in terms of the subject matter that

¹ EPC 2000 Art. 79(1) provides that all EPC states will be deemed to be designated as the country where the patent will operate at the date of filing (in contrast to Art. 79 EPC, which requires the applicant to designate the states in which they wish the patent to operate). Given this, it will not make sense to speak of a European patent (UK) under the EPC 2000. This has also been adopted in the Patents Bill 2004, Sched. 1, para. 9(2)(b).

² PA ss. 77–8, PA r. 80; EPC Art. 64.

they protect. In some instances, patents are described by reference to the industry or branch of science to which the patented invention relates. So, for example, it is common to speak of chemical patents or biotechnology patents. In other cases, patents are classified according to the nature of the interest that is protected; whether it is a product patent, a process patent, or a product by process patent. These are looked at below.

3 DRAFTING OF PATENTS

The drafting of patents, which is normally undertaken by patent agents, is an important part of the patent process. It is also a complex and difficult task. In part, these difficulties can be attributed to the nature of the subject matter that is protected by patent law and to the fact that it is sometimes very difficult to explain particular forms of technology in the form demanded by patent law. In certain instances, notably in relation to biological inventions, patent law has been forced to develop specific rules and procedures to enable them to meet the requirements for patentability.

Another reason why patent drafting is often such a difficult process is that patents are at once technical, commercial, and legal documents. As such, they are written with a number of different purposes in mind. As we saw earlier, one of the rationales for the grant of patents is that they encourage the dissemination of technical and scientific information. In the hypothetical patent bargain which sees patents as if they were a contract between inventors and the state, the information contained in the application is treated as the 'consideration' for the grant of the monopoly.³ As well as encouraging inventors to disclose information that may otherwise remain secret, the patent system also attempts to ensure that the information which is made public is placed in a format that is usable. To this end, a series of detailed rules and procedures regulate the way the patents are drafted.⁴ To take one example, patent law stipulates that the patent specification ought to disclose the invention in a manner which is clear enough and complete enough for the invention to be performed by a person skilled in the art.⁵

While the patent system encourages inventors to disclose their technical creations, it would be incorrect to conclude from this that patentees necessarily draft their patents according to the rules and procedures set down by the law. In some cases an inventor may take out a patent, but attempt to manipulate the information in the patent application in a way which suits their own purposes. For example, as well as disclosing the invention an applicant may draft their patent in such a way as to attract sponsorship or to advertise the existence of their patent.⁶

Given that the information contained in a patent application may be used by an applicant's competitors, it is understandable that applicants may be tempted to provide

³ 'This is the price which the inventor pays in return for his twenty-year monopoly'. *Mentor v. Hollister* [1993] *RPC* 7, 9. See also *Grant v. Raymond*, 31 US (6 Pet) 218, 247 (1832).

⁴ e.g. PA r. 18–20; EPC r. 29–33.

⁵ PA s. 14(3); EPC Art. 83. See below at pp. 488–93.

⁶ In *Cartonneries de Thulin v. CTP White Knight* [2001] *RPC* 107, 116 Robert Walker LJ said patent attorneys in different industrial countries adopt perceptibly different approaches to drafting patent specifications: German (and other continentao) draftsmen tend to a 'central' style which concentrates on the 'centre of gravity' of an invention: British (and still more, American) draftsmen tend to a 'peripheral' style which seeks to delimit the boundaries of an invention.

only the minimum amount of information that is necessary for them to obtain a patent. While patentees may not be able to obscure their inventions in the way they once were, applicants are only required to disclose such details of the invention as to enable a person skilled in the art to make the invention. As a result, a patent may not reveal important features about the invention such as the cheapest or strongest starting materials.⁷ This 'know-how' may provide the patentee with a strategic advantage over competitors that may be important when an invention is made available to the public. Ultimately, the degree to which applicants are able to draft patents for their own purposes depends upon how stringently the Patent Offices and the courts enforce the disclosure requirements.

Another factor that adds to the complexity of the drafting process relates to what has been called the infringement–validity dichotomy (or as it is also known the *Gillette* defence). As the scope of the monopoly is determined by what is claimed in the patent, the applicants may be tempted to claim more than they perhaps ought. At the same time, however, applicants need to be mindful of the fact that if they draft claims too broadly, this increases the chance there is for the patent to be declared invalid (primarily for lack of novelty). As matters of infringement and validity are heard in the same tribunal, the infringement–validity dichotomy helps to ensure that the scope of the patent monopoly corresponds to what was actually invented.

4 CONTENTS OF A PATENT

Patents in Britain and the EPO are made up of four key parts: (i) an abstract,⁸ (ii) a description of the invention,⁹ (iii) one or more claims,¹⁰ and (iv) any drawings referred to in the description or claims.¹¹ Before looking at these in more detail, it is important to bear in mind a number of preliminary issues.

The various components of a patent perform a number of different roles. Some of these, such as the abstract, are used both for administrative purposes and as a way of advertising the existence of the patented invention. The description and claims, which form the core of the patent, respectively disclose the invention in a usable form and demarcate the scope of the monopoly. It is also important to note that the contents of a patent application differ somewhat from the patent itself. While the patent and the application for a patent both contain a description and claims, the main difference is that the patent application contains additional information—the request for grant. The request for grant, which is used for administrative purposes, normally includes the title of the invention (which clearly and concisely states the technical designation of the invention), as well as relevant biographical details of the applicants and patent agents (if used). In the case of EPO applications, the request for grant must also designate the contracting state or states in which protection is sought.¹² As it is permissible to amend the patent application during

⁷ Although there is no requirement of good faith, note PA ss. 62(3) and 63(2).

⁸ PA s. 14(2)(c), PA r. 19; EPC Art. 78(1)(e), EPC r. 33.

⁹ PA s. 14(2)(b), PA r. 16; EPC Art. 78(1)(b), EPC r. 27.

¹⁰ PA s. 14(2)(b) and PA r. 16(2); EPC Art. 78(1)(c), EPC r. 29.

¹¹ PA s. 14(b), PA r. 16(2), r. 18; EPC Art. 78(1)(d), EPC r. 32. Patent applications must also contain a request for the grant of a patent and designate the inventor.

¹² PA s. 14(2)(a), PA r. 16(1)–(3); EPC Art. 78(1)(a), EPC r. 26.

and after the grant process, the final form that a patent takes may differ from the initial application. This process of amendment is examined in more detail later.¹³

While UK and European patents are very similar,¹⁴ there are some differences that ought to be borne in mind. One of these relates to the language that is used to describe the components of the patent. More specifically, it relates to the fact that while the core of a British patent is known as the 'specification' (which comprises a description of the invention, the claims, and any drawings referred to in the description or claims), the EPC and the PCT speak of the contents of a 'patent application' rather than of the specification.¹⁵ Another difference between UK and European patents relates to the controls that are exercised over the form and content of the patent. While similar in that both have to meet the statutory requirements for patentability, the rules of the EPC (but not the United Kingdom) provide detailed guidance as to the precise form that a patent should take. This is particularly the case in relation to the description and claims.

With these initial points in mind, we can now turn to look at the contents of a patent in more detail.

4.1 THE ABSTRACT

The first element of a UK and EPO patent is the abstract.¹⁶ This is a brief summary (usually around 150 words) of the more important technical features of the invention. Normally, an abstract contains the title of the invention, a concise summary of the matter contained in the specification, and an indication of the technical field to which the invention belongs. The relevant rules also provide that the abstract should outline the technical problem which the invention attempts to resolve, the gist of the solution to that problem, and the principal use or uses of the invention.¹⁷

Patent abstracts perform two main tasks. First, they are used by the Patent Offices as a search tool in the examination of other patent applications. To this end, the patent rules stipulate that abstracts ought to be drafted in such a way that they constitute an efficient instrument for searching in the particular technical field.¹⁸ Abstracts, which are normally published around eighteen months after the application was filed, also alert third parties to the existence of the application. To ensure that abstracts are only used for these purposes, the 1977 Patents Act and the EPC stipulate that the abstract can only be relied upon to provide 'technical information'.¹⁹ One of the consequences of this is that for patent law purposes the abstract does not form part of the state of the art.²⁰ This avoids the potential problem of the abstract anticipating the patent and in so doing rendering it invalid for lack

¹³ See below at pp. 369, 378–81, 498–502.

¹⁴ European patents which designate the UK are treated as UK patents. PA s. 77.

¹⁵ PA s. 14. See *Genentech's Patent* [1989] *RPC* 147, 197–9, 236–7, 261. A. White, 'The Function and Structure of Patent Claims' [1993] *EIPR* 243.

¹⁶ PA s. 14(2)(c), PA r. 19; EPC Art. 78(1)(e), EPC r. 33.

¹⁷ PA r. 19(2); EPC r. 33(2) (abstract may be amended by the Comptroller).

¹⁸ EPC r. 33(15) and PA r. 19(5) require that the abstract be drafted in such a way that it constitutes an efficient instrument for purposes of searching in the particular technical field, in particular by making it possible to assess whether there is a need to consult the specification (or patent application) itself.

¹⁹ PA s. 14(7); EPC Art. 85.

²⁰ This is explicit in EPC Art. 85 and implicit in PA s. 14(7).

of novelty. The fact that the abstract is only used for 'technical' purposes also means that it cannot be used to influence the scope of the monopoly.²¹

4.2 THE DESCRIPTION

The next element of a patent is the description.²² As with the abstract, the description plays an important role in ensuring that the information function of the patent system is fulfilled. In many ways, descriptions are similar to scientific or technical papers: they explain what has been created, the problems that the invention solves, why it is important, and how the invention differs from what has been created before.²³

In most cases, a description will begin with an account of the background to the invention.²⁴ In so doing, it will summarize the prior art, usually referring to existing patents and other published documents. This information is used to understand the nature of the invention, for carrying out the search report, and for the purposes of examination.²⁵ Typically, a description will then disclose the invention as claimed.²⁶ This is usually done by outlining the technical problem that the invention attempts to solve and the solutions that it offers (which are often couched in terms of the advantages that the invention offers over the background art).²⁷ Following a brief introduction to any drawings that are used,²⁸ the description will normally provide a detailed account of how the invention is carried out.²⁹

To ensure that the invention is disclosed in such a way that it is of practical use to people in the art, patent law imposes a number of constraints upon the way inventions are disclosed. At a general level, the application ought to describe the invention in a manner that is clear and complete enough for it to be performed by a person skilled in the art.³⁰ The description must also support the claims.³¹ If the patent fails to meet these criteria, it may later be declared invalid. These issues are dealt with in more detail later.³²

4.2.1 Description of biological materials

One of the rationales for the inclusion of the description in a patent application is that it

²¹ *Bull/Identification system*, T246/86 [1989] OJEPPO 199. (The TBA refused to allow an applicant to use an abstract which suggested that the apparatus was a credit card as a way of expending the preliminary description and claims which had not suggested that the apparatus could include a portable object.)

²² PA s. 14(2)(b), PA r. 16(2); EPC Art. 78(1)(b), EPC r. 27–28a. Unlike the EPC which provides detailed guidance as to the contents of the description, the 1977 Patents Act and the rules are silent as to the form that the description in a UK application ought to take. See *CIPA*, para. 14.12.

²³ On the specification see R. Merges and R. Nelson, 'On the Complex Economics of Patent Scope' (1990) 90 *Columbia LR* 839, 844; G. Myers, 'From Discovery to Invention: The Writing and Re-writing of Two Patents' (1995) 25 *Social Studies of Science* 57.

²⁴ EPC r. 27(1)(b); *EPO Guidelines C-II*, 4.3–4.4. See *Sony/Television receivers*, T654/92 [2000] EPOR 148 (on the meaning of 'background art').

²⁵ EPC r. 27(1)(b). ²⁶ EPC r. 27(1)(c); *EPO Guidelines C-II*, 4.5–4.6.

²⁷ EPC r. 27(1)(c). For criticisms of r. 27 on the grounds that it is ambiguous and uncertain see H. Ullrich, *Standards of Patentability for European Inventions: Should an Inventive Step Advance the Art?* (1977), 113.

²⁸ EPC r. 27(1)(d); *EPO Guidelines C-II*, 4.7.

²⁹ The patent should include a specific description of at least one detailed embodiment, often referred to as the preferred embodiments. Occasionally, this will be unnecessary: see *Toshiba/Semiconductor device*, T407/87 [1989] EPOR 470. EPC r. 27(1)(f) adds that the applicant should, where necessary, state the way in which the invention is capable of industrial exploitation. *EPO Guidelines C-II*, 41.2.

³⁰ PA s. 14(3); EPC Art. 83.

³¹ PA s14(5)(c); EPC Art. 84.

³² See below at pp. 488–93.

ensures that the public is able to access and make use of the invention that is disclosed in the application. This is based on the presupposition that it is possible to describe the invention, whether using words, figures, or diagrams, in such a way that third parties will be able to understand and make use of the invention. While this assumption holds true in relation to most technologies, it is not necessarily the case in relation to biological inventions. The reason for this is that where an invention depends on the use of living materials such as micro-organisms or cultured cells, it may be impossible to describe the invention so that the public is able to make the invention.³³

The EPC³⁴ and the 1977 Patents Act³⁵ attempt to address this problem by providing that if an invention involves biological material which cannot be described in a way that enables the invention to be carried out by a person skilled in the art, the applicant must deposit a sample of this biological material at a 'recognized institution' (or depositary).³⁶ These issues were also addressed in the Biotechnology Directive.³⁷ The application must contain such relevant information as is available on the characteristics of the biological material.³⁸ In depositing a sample, the applicant is treated as consenting to the depositary making the sample available to any person after publication of the application.³⁹ An applicant may require that until the application has either been abandoned or patented, the deposit should only be released to experts who are only able to use the culture for experimental purposes.⁴⁰ Special rules also exist in relation to patent applications relating to nucleotide and amino acid sequences.⁴¹

4.3 THE CLAIMS

The next element of a patent is the claims.⁴² While the purpose of the description is to ensure that the invention disclosed in the patent is of some practical use, the primary

³³ In *American Cyanamid (Dann)'s Patent* [1971] RPC 425 the House of Lords held that there was no obligation on a patentee under the 1949 Patents Act to supply the micro-organism to the public. See generally, B. Hampar, 'Patenting of Recombinant DNA Technology: The Deposit Requirement' (1985) 67 *JPTOS* 569; V. Meyer, 'Problems and Issues in Depositing Micro-organisms for Patent Purposes' (1983) 65 *JPTOS* 455.

³⁴ EPC r. 28, 28a. ³⁵ PA s. 125A (introduced by CDPA, Sched. 5 para. 30).

³⁶ Recognized depositary institutions include all international depositaries under the 1977 Treaty on the International recognition of the Deposit of Micro-organisms (the Budapest Treaty) (modified 1980). This established minimum requirements for maintaining an international depositary for microorganisms (UK joined 29 Dec. 1988). There are 38 states with 29 International Depositary Authorities.

³⁷ Biotech. Directive Arts. 13–14; Implemented in the UK by Patents (Amendment) Rules 2001, SI 2001/1412 (as of 6 July 2001).

³⁸ EPC r. 28(1)(b); PA s. 125A, PA r. 17; Patents Rules 1990, Sched. 2 (as amended by Patents (Amendment) Rules 2001, SI 2001/1412).

³⁹ Patents Rules 1990, Sched. 2, para. 1(2)(a)(iii). EPC r. 28.

⁴⁰ EPC r. 28(4); Patents Rules 1990, Sched. 2 para. 3.

⁴¹ EPC r. 27A. See also 'Decision of the President of the EPO 2 Oct. 1998 concerning the presentation of nucleotide and amino acid sequences in patent applications and the filing of sequence listings' (1998) 11 *OJEPO Supp. No. 2* 1.

⁴² PA s. 14(2)(b), PA r. 16(2); EPC Art. 78 (1)(c), EPC r. 29. The requirement of a claim was first introduced in the UK by Patents, Designs and Trade Marks Act 1883 s. 5(5). However, the practice of including claims had been common from at least the 1830s. Claims are central to the operation of the European patent system: *Mobil/Friction-reducing additive*, G2/88 [1990] *OJEPO* 93, 99; J. Kemp (ed.), *Patent Claim Drafting and Interpretation*. On the history see *British United Shoe Machinery v. Fussell* (1908) 23 *RPC* 631, 650.

function of the claims is to set out the scope of the legal protection conferred by the patent.⁴³ As such the claims play a key role in patent law.

Typically, a patent will consist of a number of claims that are arranged hierarchically.⁴⁴ Such patents will commence with a widely drawn 'principal' or 'generic' claim that defines the invention by setting out its distinctive technical features. General claims of this sort are often followed by a series of narrower dependent or subsidiary claims (which may refer back to earlier claims).⁴⁵ For example, the primary claim may be for a product (such as a contact lens) having a particular character (such as being made up of recycled plastic), whereas the dependent claims may limit the principal claim to certain quantitative parameters (such as minimum or maximum length).

One of the reasons why claims are arranged hierarchically is that it provides patentees with the flexibility to respond to any legal challenges which are made to the patent.⁴⁶ More specifically, if claims are arranged hierarchically, a challenge to the patent may only lead to the principal or broadest claim being severed, leaving behind the more narrowly drafted claims.⁴⁷ Confident in the knowledge that the validity of narrower claims are not dependent on the validity of the more general claims, patentees are able to draft claims more generously than they would otherwise be able to do. The rules at the EPC require that, where appropriate, claims ought to be in two parts.⁴⁸ The first, which is called the 'preamble', sets out the technical features of the invention which are necessary for the definition of the claimed subject matter, but which are already part of the prior art. This is followed by a 'characterizing portion' that sets out the novel technical features that the applicant wishes to protect.⁴⁹ The so-called characterizing portion of the claim is neither required nor forbidden in the United Kingdom.⁵⁰ In British patents, the final claim will often be an omnibus claim, that is a claim that largely mimics the way the invention is set out in the descriptions or the drawings.⁵¹ While permissible in the United Kingdom omnibus claims are generally not permitted in EPO applications.⁵²

A notable feature of most patent claims is that they are, at least to the non-expert reader, difficult to understand. This not surprising given that patents are not written for the

⁴³ PA s. 14(5); EPC Art. 84. Given that the claims define the scope of protection, the way the claims are interpreted is very important. See below at pp. xxx–xxx.

⁴⁴ The number has to be reasonable having regard to the nature of the invention claimed. EPC r. 29(5). In *Oxy/Gel forming composition*, T246/91 [1995] EPOR 526, a patent with 157 claims violated EPC Art. 84 and EPC r. 29(5): 'patents should not be allowed to erect a legal maze or smokescreen in front of potential users of the inventions to which they lay claim'.

⁴⁵ *Hallen v. Brabantia* [1990] FSR 134, 140–1.

⁴⁶ G. Myers, 'From Discovery to Invention: The Writing and Re-writing of Two Patents' (1995) 25 *Social Studies of Science* 57, 82.

⁴⁷ See *Van der Lely v. Bamfords* [1964] RPC 54, 73, 76 (CA); *Chiron v. Organon (No. 7)* [1994] FSR 458, 460–6.

⁴⁸ This provision, apparently put in to appease British interests, enables UK patents to be drafted according to the traditional British approach.

⁴⁹ EPC r. 29(1)(b), *EPO Guidelines C-III*: 2; EPC r. 29(1). In the USA there are three parts: the preamble, transition, and body. See R. Merges, *Patent Law and Policy* (1992), 12.

⁵⁰ *CIPA*, para. 14.21.

⁵¹ *Raleigh Cycle v. Miller* (1948) 65 RPC 141; *Surface Silo v. Beal* [1960] RPC 154; *Deere v. Harrison McGregor & Guest* [1965] RPC 461.

⁵² Rules 29(4) and 29(6). See *CIPA*, para. 14.25. *Bayer/Polyamide moulding composition*, T150/82 [1981] OJEP 431. In *Phillips Electronic's Patent* [1987] RPC 244, the patentee was permitted to add an omnibus claim to a European patent (UK) on the grounds that it did not extend the scope of protection.

general reader, but for the relevant person skilled in the art. As well as being written for specialists, the drafting and reading of claims builds upon well-established and sophisticated techniques and procedures that make them difficult for the uninitiated to understand. Another reason why the claims may be difficult to understand is that they often use expressions not ordinarily employed in everyday speech. For example, while most people commonly talk about ‘mice’, a claim may refer to ‘non-human mammals’. Similarly a door handle may be called a ‘rotatable actuating means’⁵³ and a sleeping car in a train known as ‘a communal vehicle for the dormitory accommodation of nocturnal viators’.⁵⁴ Moreover, while in other contexts the rules of grammar are used to make the language we use easier to understand, this is not so with patents, where claims are often made up of single lengthy, repetitive sentences.⁵⁵ Indeed, in one case an attempt to divide claims up into separate (shorter) phrases was considered to be ambiguous in scope.⁵⁶

4.3.1 Types of claims

Given that claims operate to demarcate and define the patented invention, they will always vary from case to case. Having said that, claims are commonly grouped together usually on the basis either of the subject matter that is protected or the way the claims are formulated. While there are many different types of claims, such as Swiss claims, Markush claims, and novelty of use claims, in this section we wish to focus on some of the more common types of claims.

(i) *Product claims.* Product claims, which were the first type of patents to be recognized by British patent law, provide protection over physical entities or things (such as products, apparatuses, devices, and substances). Such a patent could, for example, be for a new type of contact lens or, as a patent agent might say, ‘a new type of optical membrane being made up of at least one polymer and at least one solvent’.⁵⁷ Product claims or, as they are also known, claims to a product *per se*, confer protection over all uses of that product, no matter how the product was derived.⁵⁸ As we will see, this has been the subject of some controversy, particularly in relation to patents for gene patents.

(ii) *Process claims.* In contrast process claims, which were recognized by patent law in the early part of the nineteenth century, protect activities or actions (such as methods, processes, or uses).⁵⁹ Such a patent would claim, for example, the particular method by which

⁵³ *Southco v. Dzus Fastener Europe* [1992] *RPC* 299.

⁵⁴ *Hookless Fastener v. GE Prentice* (CCA 2d, 1934) 68 *F* (2d) 940, 941. See also W. Woodward, ‘Definiteness and Particularity in Patent Claims’ (1948) 46 *Michigan LR* 755.

⁵⁵ ‘The repetitiveness of the claims and the lack of any indication of the strategic links between them, is part of what makes them so hard for a non-lawyer to read’. G. Myers, ‘From Discovery to Invention: The Writing and Re-writing of Two Patents’ (1995) 25 *Social Studies of Science* 57, 75. The technique of drafting claims in this way can have important implications for their interpretation see: *Glaverbel SA v. British Coal* [1995] *RPC* 255, 281.

⁵⁶ *Leonard’s Application* [1966] *RPC* 269.

⁵⁷ *Advanced Semiconductor Products/Limiting feature*, T384/91 [1995] *EPOR* 97 [1994] *OJEPO* 169.

⁵⁸ See *Mobil/Friction reducing additive*, G2/88 [1990] *OJEPO* 93; *Telectronics/Pacer*, T82/93 [1996] *EPOR* 386; [1996] *OJEPO* 274, 285. In *MOOG/Change of category*, T378/86 [1988] *OJEPO* 386 the EPO explained: ‘[The] division of patents into various categories (process or product) is legally important because the extent of protection depends to a crucial extent on the category selected, specific types of use being allocated to each category which in some cases differ substantially from each other. The difference in effect on the right conferred by a patent is the reason why it is at all justifiable to classify patents in categories’.

⁵⁹ *Crane v. Price* (1842) 134 *ER* 239. See Sherman and Bently, 108.

a contact lens is made (or, 'the method of making an optical membrane from a solution comprising at least one polymer and at least one solvent').⁶⁰ Sometimes a product *per se* claim will not be available because the product is already known in the field, and a claim to the process or use is therefore all that is possible.

(iii) *Product-by-process claims*. Beyond these two broad categories of claims, there are a range of hybrids.⁶¹ A well-known example is the 'product-by-process' claim.⁶² To continue with the example used above, a product-by-process patent might claim 'a contact lens made by a particular method'. Where a product already exists but a new process is devised for producing that product, it may be desirable to claim both the process and the product produced by the process. It is important to bear in mind the Court of Appeal's reminder that 'it is not right to lump all claims which contain a process feature into a category called product-by-process claims . . . a patentee can define the monopoly claimed so as to disclaim products made by a particular process or only disclaim products which do not have the features of products made by a particular process. The two types of claims can be loosely called product-by-process claims, but to do so is likely to hide the differences between the two'.⁶³

Product-by-process claims are viewed differently in the United Kingdom and at the EPO. The Technical Board of Appeal at the EPO has consistently said that product-by-process claims are not recognized at the EPO, except where the 'product cannot be satisfactorily defined by reference to its composition, structure or other testable parameter'.⁶⁴ That is, product-by-process are only acceptable as 'a manner of claiming structurally indefinable product claims' or where a product cannot be satisfactorily defined by its features. In contrast, the Court of Appeal expressly rejected the position at the EPO and said that other than the general criteria for patentability, there were no limits either in the 1977 Patents Act or in the EPC as to how the monopoly is defined.⁶⁵ As such, there were no additional limits on when product-by-process claims are allowed in the United Kingdom.

In essence the difference between the approach adopted at the EPO and in the United Kingdom turns on the way the invention is defined: the Board of Appeal placing more emphasis on the interaction of the process and the product as a separate entity. On one level the different approaches can be traced to different legal cultures (British compared to a more Germanic approach). More specifically the difference can be traced to differences in the way the invention is characterized. In essence the crux of the difference is that the EPO sees the invention in terms of the relationship between the product and the process, whereas the UK tribunals seem to draw a clear divide between product and process. For example, at the EPO it has been said that 'the effect of a process manifests itself in the

⁶⁰ *Advanced Semiconductor Products/Limiting feature*, T384/91 [1995] EPOR 97 [1994] OJEPO 169.

⁶¹ 'There are no rigid lines of demarcation between the various possible forms of claim'. *Mobil/Friction reducing additive*, G2/86 [1990] OJEPO 93, 98–9. *IBM/Computer-related claims*, T410/96 [1999] EPOR 318.

⁶³ *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 3, para. 27 (Aldous LJ) (CA).

⁶⁴ *IFF/Claim categories*, T150/82 [1984] OJEPO 309, para. 10–11. This decision was made in the knowledge of the different approach in the UK (para. 11).

⁶⁵ *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 3, paras. 29–31 (Aldous LJ) (CA); upholding the finding of the Patents Court on this point in *Kirin-Amgen v. Roche Diagnostics* [2002] RPC 1, para. 296 ('As a matter of ordinary language, I find it impossible to construe a product-by-process claim . . . in an absolute sense as the Board apparently felt able to do in T219/83').

result, i.e. in the product in chemical cases together with all its internal characteristics'.⁶⁶ In a similar vein, 'the product is in consequence of the invention, without being the invention itself, which is rather the novel interaction represented by the process in such cases. Any attempt to claim the in itself non-inventive product by means of product-by-process claims is claiming the mere effects instead'.⁶⁷ As we will see below, this has important consequences when a patent is being examined for novelty.⁶⁸ Despite these differences, product-by-process claims remain useful at the EPO and in the United Kingdom where there is no other information available to define the product by reference to its composition, structure or other testable parameter.⁶⁹ This is particularly the case in relation to certain biotechnological inventions and chemical inventions, where the product by process claim may offer the only way 'to define certain or macromolecular materials of unidentified or complex composition which have yet to be defined structurally'.⁷⁰

(iv) *Representative claims.* It has long been accepted practice for patents to be granted for extremely large classes of objects. This is particularly the case in relation to chemical and biotechnological inventions where patents may claim hundreds of thousands and sometimes millions of compounds, DNA sequences, and the like.⁷¹ If patentees were required to outline every particular manifestation of their invention, it would make those patents unwieldy, cumbersome, and, in some cases, unworkable. Because of this, where a patent is for a class of compounds, it is not necessary for applicants to spell out each and every product or process covered by the patent,⁷² nor to show that they have 'proved their application in every individual instance'.⁷³ Instead patentees are able to claim a broad range of products on the basis of a limited number of (representative) examples. This can be done, for example, through the use of functional language (particularly where the relevant features cannot be defined more precisely), the use of 'Markush' claims (where a claim refers to a chemical structure by means of symbols indicating substituent groups),⁷⁴ or the inclusion of a practical application of a theoretical principle or a formula. In other cases, a patent may include variations, analogues, or deemed equivalents that greatly expand the scope of the claims.⁷⁵

Functional claims define the invention by reference to the function or end that the invention performs, rather than the structure or elements of the invention. That is, instead of specifying what the invention is, a functional claim outlines what the invention does. For example, instead of claiming a modified form of bacteria in terms of its elements or

⁷⁰ *EPO Guidelines* C.III, 4.7b. The benefits of product-by-process claims are less important under the European Patent Convention since infringement of a process occurs where a person disposes of, uses, or imports any product obtained directly by means of that process. PA s. 60(1)(c); EPC Art. 64(2).

⁷¹ See K. Luzzatto, 'The Support and Breadth of Claims to New Classes of Chemical Compounds' (1989) *Patent World* 21.

⁷² *Biogen v. Medeva* [1997] *RPC* 1, 48 (Lord Hoffmann) (HL).

⁷³ *Kirin-Amgin v. Transkaryotic Therapies* [2003] *RPC* 31, 67 (Aldous LJ) (CA).

⁷⁴ Named after US patent application 1,506,316 by Eugene Markush. See M. Franzosi, 'Markush Claims in Europe' [2003] *EIPR* 200.

⁷⁵ For problems that may arise see *American Home Products v. Novartis Pharmaceuticals* [2001] *RPC* 159 (CA).

structure, the invention may be described functionally as a bacteria which eats pollution.⁷⁶ Functional claims are permissible so long as they provide instructions that are sufficiently clear for the expert to reduce them to practice without undue burden⁷⁷ and ‘if from an objective point of view, such features cannot otherwise be defined more precisely without restricting the scope of the claim’.⁷⁸

In some cases, patentees use functional claims because the language and concepts are not available to describe the invention in any other way.⁷⁹ This is often the case with biotechnological inventions.⁸⁰ In other cases, patentees may use functional language because it offers them a strategic advantage over competitors. For example, in describing how two metal plates are attached, a patentee might use functional language and claim a ‘means for attaching’ instead of claiming a ‘nut and bolt’. This has the advantage in that a competitor cannot get round the claim by using a screw.

4.3.2 Regulating the form and content of claims

A number of different rules and procedures regulate the form that claims ought to take.⁸¹ At a general level, the contents of the claims must comply with the substantive requirements for patentability: namely, subject matter, novelty, and non-obviousness. The claims must also define the matter for which protection is sought in terms of the technical features of the invention,⁸² be clear and concise,⁸³ be supported by the description,⁸⁴ and relate to one invention or group of inventions that are so linked as to form a single inventive concept.⁸⁵ We look at these criteria in more detail later.⁸⁶

4.4 DRAWINGS

The final component of a patent is the drawings. These provide a representation of the invention.⁸⁷ Along with the description, the drawings may be used to interpret the claims.⁸⁸ The Patent Office rules provide very detailed rules as to the nature and form of the drawings. These range from the quality of the paper,⁸⁹ the size of the margin,⁹⁰ the use

⁷⁶ See *Biogen v. Medeva* [1997] RPC 1 where the claim was to a DNA molecule characterized by the way it was made (recombinant DNA) and what it did (display HBV antigen specificity).

PROCEDURE FOR GRANT OF A PATENT

1 INTRODUCTION

Unlike the position under copyright law where rights arise without formality, patents are only granted after a series of formal procedures have been complied with. The process of registration plays a key role in defining many aspects of patent law and practice. In this chapter we explore some of the key features of those processes. We begin by exploring some of the issues that would-be applicants ought to consider when deciding whether to take out a patent to protect their inventions in the United Kingdom. We then follow the trajectory of a patent through the administrative process from its inception as a patent application through to grant. In so doing we discuss the British and European patent systems, the Patent Co-operation Treaty, and how they intersect.

2 PRELIMINARY CONSIDERATIONS

2.1 DECIDING TO PATENT

A range of factors are taken into account when considering whether to patent an invention. A potential applicant will need to consider the benefits that may flow from patenting. Perhaps the most obvious benefit is that as a patent confers an exclusive right to make, use, and sell the patented invention for a period of up to twenty years, it provides the owner with associated monopoly profits. It should be noted that the economic value derived from a patent will vary according to the type of invention in question. For example, where competitors are able to develop new ways of achieving the same result which fall outside the scope of the monopoly (this is known as inventing around the patent), the economic benefits are reduced. Another benefit associated with patenting flows from the fact that patenting translates inventions from the world of science and technology to the world of commerce. In so doing, patenting enables inventions to be included on the balance sheets of organizations and on the research returns of publicly-funded institutions. This may be particularly important in attracting funds to pay for research.

Other less obvious benefits flow from patenting. These include the esteem or symbolic capital that flow from being recognized as an inventor. Indeed in some cases it is the romantic appeal of becoming an inventor that encourages a person to enter into the patent

system in the first place.¹ Another benefit of patenting is that it enables manufacturers to enhance the image of their goods. By advertising that their goods are patented, sellers are able to represent to consumers that they are buying cutting-edge technologies. There is also a sense in which the mere fact that something has been patented carries with it the belief that the product has public approval: this has been particularly important in relation to the patenting of life forms.

The benefits that flow from patenting need to be weighed against the associated costs. The financial costs of patenting include patent agent fees (possibly £150 per page), the administrative charges imposed by national and international institutions as a condition of grant,² and where a patent is sought in a non-English-speaking country, the costs of translation. Non-financial costs such as the time and effort involved in transforming a practical technical idea into the form required by the patent system also need to be taken into account. Another cost associated with patenting relates to the fact that the applicant must make their invention available to the public. While competitors may not be able to copy the patented invention, the disclosure of the invention makes it easier for them to invent around the patent. Another factor to be taken into account is whether the benefits that flow from patenting can be achieved through other means with fewer of the associated costs.³ An important factor here is that an inventor (or owner) may be able to rely upon other techniques to protect their creations that do not require the invention to be disclosed to the public. These include contractual restrictions on the use or disclosure of the process, the law relating to breach of confidence, or to non-legal techniques such as secrecy. The problem with these techniques is that they carry with them the risk that if the information is disclosed to the public (even if through a breach of contract or confidentiality), in most cases the invention becomes part of the public domain, free for all to use.⁴ Another factor that may influence the decision to seek a patent is the ease by which the details of the invention can be ascertained or reverse-engineered when the invention or the products thereof are made available to the public.

Given that the decision to patent is influenced by a range of factors, it is not surprising that patenting practices vary from industry to industry. For example, in the pharmaceutical industry, where research and development costs are high and the products are readily and cheaply copied, the patent process is commonly relied on to protect inventions. In other industries, such as in the aviation field where the expense of copying is very high, greater emphasis is placed on secrecy as a mode of protection.

² European Patent Office, 'Cost of Patenting in Europe' (1995) 26 *IIC* 650; M. Bednarek, 'Planning a Global Patent Strategy: where to get the most "Bang for your buck"?' (1995) 77 *JPTOS* 381; S. Helfgott, 'Why Must Filing In Europe Be So Costly?' (1994) 76 *JPTOS* 787.

³ There may be a danger of another person patenting the invention. This has occasionally prompted defensive patenting which, at one time, prompted a third of all applications in the USA: W. Davis (1947) 12 *Law & Contemporary Problems* 796, 799–800; W. Ericson and I. Freedman (1957) 26 *George Washington LR* 78.

⁴ On the trade secret/patenting decision, see Munson (1996) 78 *JPTOS* 689.

2.2 ROLE OF PATENT AGENTS

It is common for decisions concerning patent applications to be made in consultation with a patent agent. Since emerging as a discrete profession during the nineteenth century,⁵ patent agents have come to play a central role in the operation of the patent system. Under the EPC a new breed of expert, the European patent agent, has developed to deal with the intricacies of the European patent system.⁶ Patent agents normally have knowledge of the law, the patent administration process, and a particular branch of science. As well as assisting in the drafting and processing of patents, patent agents also offer advice as to whether a patent should be taken out and where and how patents are best exploited. In some cases they are also able to litigate on behalf of patentees. In a sense, patent agents act as go-between who unite the technical-scientific domains with the legal and commercial. The patent system encourages the use of patent agents by penalizing the owners of poorly drafted patents. For example, where a patent is found to be partially valid, relief by way of damages, costs or expenses is only available where a claimant can show that the patent was framed in good faith and with reasonable skill and knowledge:⁷ a matter which may be difficult for non-specialists to prove.

2.3 CHOICE OF ROUTES TO GRANT

Once the decision is made to protect an invention in the United Kingdom by patent, it is then necessary to decide the particular route to take to secure grant of the patent. In particular, it is necessary to decide whether to take out a British patent or a European patent (UK).⁸ In turn, it is necessary to decide whether to apply directly to the British Patent Office or the EPO, or whether it would be better to make use of the application system provided by the Patent Cooperation Treaty.⁹ The particular route which is chosen depends on a variety of factors: perhaps the most important are the countries where protection is desired.

When deciding whether to bring an application to the UK or the EPO, commercial and strategic considerations may come into play. From a commercial point of view, the primary variable is the fees charged by the respective patent offices. As the cost of an application to the EPO is greater than to the UK office, if an applicant only wishes to file in the

⁵ See D. Van Zyl Smit, 'Professional Patent Agents and the Development of the English Patent System' (1985) 13 *International J Society and the Law* 79; H. Dutton, *The Patent System and Inventive Activity during the Industrial Revolution 1750–1852* (1984), ch. 5; F. Kittel, 'Register of Patent Agents: A Historical Review' (1986–7) 16 *CIPAJ* 195.

⁶ See EPC Arts. 133–4; L. Osterborg, 'The European Patent Attorney: A New Profession' (1994) 25 *IIC* 313.

⁷ PA s. 63(2). See *General Tire v. Firestone Tyre* [1975] *RPC* 203, 269; *Hallen v. Brabantia* [1990] *FSR* 134, 143; *Chiron v. Organon Teknika (No. 7)* [1994] *FSR* 458. Good faith primarily depends on whether the patentee knew something detrimental to the patent, or which escaped the eye of the patent examiner. Reasonable skill and knowledge relates to the competence employed in framing the specification. See *Hoechst Celanese v. BP Chemicals* [1997] *FSR* 547.

⁸ Applications to the EPO and UK PO are alternatives, so a patentee cannot have patents via both mechanisms. To prevent this PA s. 73(2) requires the Comptroller to revoke a UK patent where there is a European patent (UK) for the same invention having the same priority date which was applied for by the same applicant. Before revocation the patentee is given an opportunity to justify holding two patents: PA s. 73(3), amended by CDPA, Sched. 5, para. 19.

⁹ There are four alternative routes available to get a patent for the UK: directly to the UK Patent Office, indirectly to the UK Patent Office via the PCT, directly to the EPO, or indirectly to the EPO via the PCT.

United Kingdom or in a few countries it would be cheaper for them to apply to the respective national offices. There comes a point, however, where the cumulative cost of applying to several national offices will exceed the cost of a European application designating those countries.¹⁰

Applicants may also be influenced by strategic considerations when they are considering whether to apply to the EPO or to national offices. An important factor relates to the fact that although the substantive law of the national systems and the EPC are largely the same, there are a number of other important differences.¹¹ In particular, while the EPC has a full examination system some national offices do not require examination at all,¹² some allow for deferred examination, some require patent agents to provide the examination service, while others will only reject applications on limited grounds (such as novelty).¹³ Another factor that may influence the route that is taken is the relative vulnerability of the patent. In particular, while a national patent can only be challenged in national tribunals, the EPC allows for a central challenge to be made against a European patent (this takes the form of an 'opposition' to the grant which can be brought in the nine-month period after grant).¹⁴ If a would-be-patentee believes that the application is likely to be challenged, rather than risking the possibility of a successful central attack which would deprive the applicant of protection in all the designated states, an applicant might prefer to maximize the survival chances of their patent by registering in a range of national offices.

Similar factors will influence inventors when they are considering whether to apply directly to the UK Patent Office or the EPC, or whether they want to make use of the international filing system provided by the Patent Cooperation Treaty (PCT).¹⁵ While the

¹⁰ Translation costs are a significant consideration in the decision whether to file for a European patent or a national patent. This is because the EPC allows member states to require the patent to be translated as a prerequisite for validity: EPC Art. 65. As the translation is not required until 3 months after grant, there may be some strategic advantages in the EPC route. Whether this will remain the position under the EPC is unclear. Given the expense of translation, (estimated to be DM400 million per year in 1995), the EPO has proposed that full translation be replaced with translation of an enhanced abstract: European Patent Office, 'Cost of Patenting' (1995) 26 *IIC* 813; P. Braendli, 'The Future of the European Patent System' (1995) 26 *IIC* 813. This has generated further proposals, including only requiring translation of claims or some part of the description, or allowing further delays as to when the translation must take place. B. Pretnar, 'How to Reduce High Translation Costs to European Patents' [1996] *EIPR* 665; K. Heinonen, 'Translation of European Patents: Package Solution not the Answer' [1997] *EIPR* 220; E. Jeneral, 'Once More How to Reduce High Translation Costs of European Patents' [1997] *EIPR* 490; C. Lees, 'Translation: The Key Solution' [1997] *EIPR* 594. On the role of translation in the proposed Community Patent, see p. 341 above.

¹¹ Early versions of the EPC proposed a two-stage approach: a provisional grant which was only subject to formal examination and novelty report, followed by the possibility of confirmation as a final European patent within 5 years at the behest of applicant or a third party. G. Oudemans, *The Draft European Patent Convention* (1963), 53–60, 164–76.

¹² There is no examination in Belgium, the Netherlands, Switzerland or Ireland. On the latter see *Rajan v. Minister for Industry and Commerce* [1988] 14 *FSR* 9; A. Parkes, 'The Irish Patent Act 1992' (1991–2) 21 *CIPAJ* 426.

¹³ e.g. the French Patent Office will not refuse on grounds of lack of inventive step: Law of 2 Jan. 1968, Art. 16, J. Schmidt-Szalewski, 'Non-obviousness as a requirement of patentability in French Law' (1992) 23 *IIC* 725. For Germany, see E. Fischer, 'The New German Patent Procedure: From the View of a Corporate Patent Department' (1971) 2 *IIC* 277.

¹⁴ EPC Arts. 99–101.

¹⁵ See above at pp. 344–5. D. Perrott, 'The PCT in Use' [1982] *EIPR* 67; B. Bartels, 'Patent Cooperation Treaty: The Advantages for the Applicant in the UK' (1983) 13 *CIPAJ* 3; J. Cartiglia, 'The Patent Cooperation Treaty: A Rational Approach to International Patent Filing' (1994) 76 *JPTOS* 261; J. Anglehart, 'Extending the International Phase of PCT Applications' (1995) 77 *JPTOS* 101.

PCT does not issue patents, it does provide an alternative starting point by which both UK and European patents (UK) can be obtained.¹⁶ Under the PCT,¹⁷ an international application can be made to the Patent Office of one of the contracting states, which is called the receiving office.¹⁸ The application must contain:¹⁹ a request, a description, at least one claim, drawings (where appropriate), and an abstract. Prior to 1 January 2004, applicants also had to designate the states in which protection is sought.²⁰ This is no longer necessary, however, as the filing of a request automatically applies in all contracting states to the PCT (unless the applicant specifies otherwise).²¹ Applicants can apply to designated international offices for an international search²² and an international preliminary examination to be carried out.²³ At this point, the applicant can shift to the designated national offices who will decide whether to grant national patents.²⁴ At this stage, the national office treats the application as if it has been filed in that office. Instead of going straight to the national stage, an applicant may ask for an international preliminary examination by an examining authority.²⁵ The examining authority issues an international preliminary examination report indicating whether the invention appears to meet international standards of novelty, inventive step, or industrial applicability.²⁶ It should be noted that the examination is merely advisory and not binding on designated countries.²⁷

The procedures are useful for countries where the patent office is not capable of carrying out its own examination. Another factor in favour of the PCT is convenience. Rather than having to apply in each individual country, a single application can be submitted to a relevant PCT body. The PCT is also attractive because of the lengthy period between the initial application to the international office and the time when the application is forwarded to the relevant national offices when the expensive process of translation must be completed.

¹⁶ This was signed in 1970 and came into operation from 1978. There are 108 contracting states as of Apr. 2000. PA s. 89 gives statutory effect to some of the Treaty's provisions.

¹⁷ PCT Art. 3.

¹⁸ The receiving office retains one copy of the application, transmits another to WIPO and another to an international Search Authority. The receiving office checks to ensure that a filing date should be granted (Art. 14) and that appropriate fees have been paid. The ISA conducts a search and reports its findings to WIPO: Art. 15 PCT. The application can then be amended within 2 months (PCT Art. 19, PCT r. 46) and it and the search report are then communicated to the Patent Offices of the designated states: PCT Art. 20. The application must be published after the expiration of 18 months from the priority date: PCT Art. 21 (2).

¹⁹ PCT rr. 4–8.

²⁰ On the need to correct failure to designate during the international phase, see *Vapocure Technologies Application* [1990] RPC 1.

²¹ PCT r. 53.7. For a discussion of changes to the filing of international applications as of 1 Jan. 2004, see PCT Newsletter no. 11/2003 (Nov. 2003)

²² There are 9 International Search Authorities.

²³ There are 8 International Preliminary Examination Authorities.

²⁴ At 20 months after the priority date the national stage begins, by formally initiating prosecution in the designated states, filing translations, and paying fees as necessary.

²⁵ PCT ch. II; PCT Art. 22 (revised by PCT Assembly on 3 Oct. 2001) (provides for a minimum period of 30 months within which the applicant must provide certain documents and fees). Implemented in the UK by Patent (Amendment) Rules 2002 (SI 2002/529) (1 Apr. 2002).

²⁶ PCT Art. 35(2).

²⁷ PCT Art. 33.

3 FEATURES OF THE PATENT APPLICATION PROCESS

Before looking in detail at the procedures for grant of a patent, it may be helpful to highlight some of the key features of the UK and EPO patent application processes.²⁸

3.1 THE REQUIREMENT OF REGISTRATION

Registration has long been a prerequisite for grant of a patent in the United Kingdom. In modern times, this is largely explained by reference to the type of monopoly that a patent confers. The decision to make patent protection dependent upon registration is said to result from the fact that patents confer an absolute monopoly that enables the patentee to prevent all others from practising the invention. This is the case even if the infringer developed the same invention independently from the patented invention. Consequently, as a matter of fairness it is necessary to have a register open to the public. This ensures that third parties are able to ascertain whether they are infringing someone else's rights. The process of filing also helps to establish the priority of the invention and is a prerequisite to systems of pre-grant examination such as those that operate in the UK and EPO.

3.2 FIRST-TO-FILE

Most patent systems, including the United Kingdom and the EPC, operate on the basis that the first person to file an (acceptable) application for an invention should be granted a patent over the invention. The fact that patents are granted via a system of registration does not necessarily mean that the patent ought to be granted to the first person to file an application. In some other patent systems, notably the USA, a patent is granted to the first person to invent, rather than to the first person to file an application.²⁹

While the first-to-file system may be incompatible with a regime of intellectual property predicated on natural rights, it avoids the need to consider difficult questions about who was the first person to have a particular idea or to reduce the idea to a working model (as occurs in first-to-invent systems).³⁰ Instead, the first-to-file system replaces such

²⁸ The Strasbourg Agreement Concerning International Patent Classification 1971 (UK joined on 7 Oct. 1975) has led to a degree of uniformity in the presentation of patent documents. See A. Wittmann, R. Schiffels, and M. Hill, *Patent Documentation* (1979), 124–34.

²⁹ C. Macedo, 'First-to-file' (1990) 18 *AIPLA Quarterly J* 193. The USA now accepts provisional applications see s. 111(b) discussed by J. Miller, 'The same effect?': United States Provisional Patent Applications and Paris Convention Priority Rights' (1996) 78 *JPTOS* 716.

³⁰ The preference for a first-to-file system does not, however, avoid all legal investigations into who was the 'inventor'. This is because inventors are entitled to be named on the patent, even if they are not the applicant: PA s. 13; EPC Art. 62, Art. 81. If the inventor is not designated, the application is treated as having been withdrawn: EPC Art. 91. However, there is no investigation into the correctness of the designation. Where the inventor designated and the applicant are different persons the practice is to inform the inventor of the application, thereby enabling the inventor to raise any objection they may have. Procedures are also available for inventors to be omitted from published versions of the application if they wish: EPC r. 18(3).

investigations with an administrative practice that delivers rough but simple justice.³¹ The first-to-file system is also justified on the basis that it provides inventors with an incentive to disclose (or a reward for having disclosed) the invention: the first applicant to disclose the invention obtains the patent.³² As we will see, the adoption of a first-to-file system has certain consequences that need to be taken into account later in the grant process.³³

3.3 EXAMINATION

Another notable feature of the patent application processes in the UK and the EPO is that applications are subject to a full examination.³⁴ That is, all applications are examined to ensure that they comply with the formalities of filing, as well as the requirements of subject matter, novelty, non-obviousness, and sufficiency.

For most of its long history, British patents were granted without examination. The question of whether examination as a prerequisite for grant should be introduced into the UK was considered and rejected on a number of occasions during the nineteenth century.³⁵ One of the main arguments against examination was that it would have made the recognition of property rights subject to the discretion of government officials. Examination would also have added to the cost and time of obtaining a patent:³⁶ changes which would have run counter to the spirit of much nineteenth-century reform which aimed to simplify the system and to reduce the 'taxes' imposed on inventors.

After much deliberation, a limited system of examination was introduced into the United Kingdom in 1905.³⁷ An important factor which helped to support the case for examination was the finding of the 1901 Fry Committee that 40 per cent of the patents registered at the time were for inventions which had already been described in previous patents.³⁸ As these patents would not have withstood litigation, they were theoretically harmless. Nevertheless, it was believed that they deterred others from working in the same field. Moreover, the lack of examination brought the system into disrepute and undermined the trust placed in valid patents. For some, the prospect of an examination system sanctioned and controlled by the state was attractive because it would have created a legal (and thus a commercial) presumption that any patents which had been granted were valid. Another factor which supported the case for examination was that fears of arbitrary or self-seeking exercise of discretion on behalf of those in charge of the register had been allayed by a growing trust in bureaucracy: a trend which was cemented by the increased use of experts.³⁹

³¹ T. Nicolai, 'First-to-File vs. First-to-Invent: A Comparative Study Based on German and United States Patent Law' (1972) 3 *IIC* 103; W. Kingston, 'Is the United States Right about 'First-to-Invent?' [1992] *EIPR* 223; T. Roberts, 'Paper, Scissors, Stone' [1998] *EIPR* 89.

³² For arguments for first-to-file see [no author] 'Prior Art in Patent Law' (1959) 73 *Harvard LR* 369, 380.

³³ See below at pp. 378–81, 498–502. ³⁴ G. Smith, 'Why Examine?' (1982) 12 *CIPAJ* 9.

³⁵ (1864) 29 *PP* 321; (1871) 10 *PP* 603; (1872) 11 *PP* 395.

³⁶ The most common criticism of examination today is delay. Many patent systems operate with time limits in an attempt to reduce such problems. In the UK, examination should occur not later than 4 years and 6 months from priority.

³⁷ Patents Act 1902. The Office began to search British patents in 1905. ³⁸ (1901) 23 *PP*.

³⁹ Under the existing law, EPC Art. 113 gives an applicant whose patent has been refused an opportunity to comment. This is of fundamental importance for ensuring a fair procedure and reflects the generally accepted notion of a right to be heard. The examiner must give the grounds, that is, the essential reasoning, sufficient for the case to be properly understood. See *NEC/Opportunity to comment*, T951/92 [1996] *EPOR* 371; [1996] *OJEPO* 53.

The limited examination system established in 1905 was maintained until the passing of the 1977 Patents Act, when the current full examination system was introduced.⁴⁰ While the examination system currently forms an integral part of the British patent system, there may come a time where the United Kingdom may wish to follow other countries in the EPC who in the face of falling national applications have abandoned full examination as part of national procedure. If this were to happen, it would provide applicants with greater choice: the alternatives being an unexamined national patent or an examined European patent.

3.4 AMENDMENT

Another notable feature of the grant system is that applicants are able to alter or amend their initial application both during and after grant of the patent. The decision to give patentees the opportunity to amend their patent recognizes that the first-to-file system may encourage applicants to register without a full understanding of the invention or complete familiarity of the relevant prior art. It is also based on the fact that subsequent examination, either by the applicant or the Patent Office, may reveal the existence of a piece of prior art which requires the application to be reformulated to ensure its validity.⁴¹ Similarly, an applicant may wish to amend the application as filed in light of subsequent experiments carried out on the invention. Where a patent is found to be partially valid,⁴² it is desirable that the patent be amended by the deletion of the invalid claims which otherwise might remain as a potential nuisance to industry.⁴³ We look at the situations where applicants and patentees are able to amend and the restrictions that they operate under at the end of the chapter.

4 PROCEDURE FOR GRANT

The basic procedure for application for a patent to the UK Patent Office is roughly the same as at the European Patent Office. In this section we provide an overview of some of the more important features of those processes (see Fig. 16.1).

4.1 WHO IS ENTITLED TO APPLY FOR A PATENT?

There are virtually no restrictions on who may apply for a patent. In contrast with the rules relating to copyright and trade marks, there are no limitations as regards the nationality or residency of the applicant.⁴⁴ Where appropriate, an application for a patent may be

⁴⁰ Prior to the 1977 Act, examination was for patentability and novelty only. Examination for inventive step was introduced by the 1977 Act.

⁴³ *Van der Lely v. Bamfords* [1964] *RPC* 54, 73–4 (Pearson LJ).

⁴⁴ PA s. 7(1); EPC Art. 58. Cf. Paris Art. 2(1) which provides equal protection to nationals of any country to the Union as nationals receive. See also PCT Art. 9.

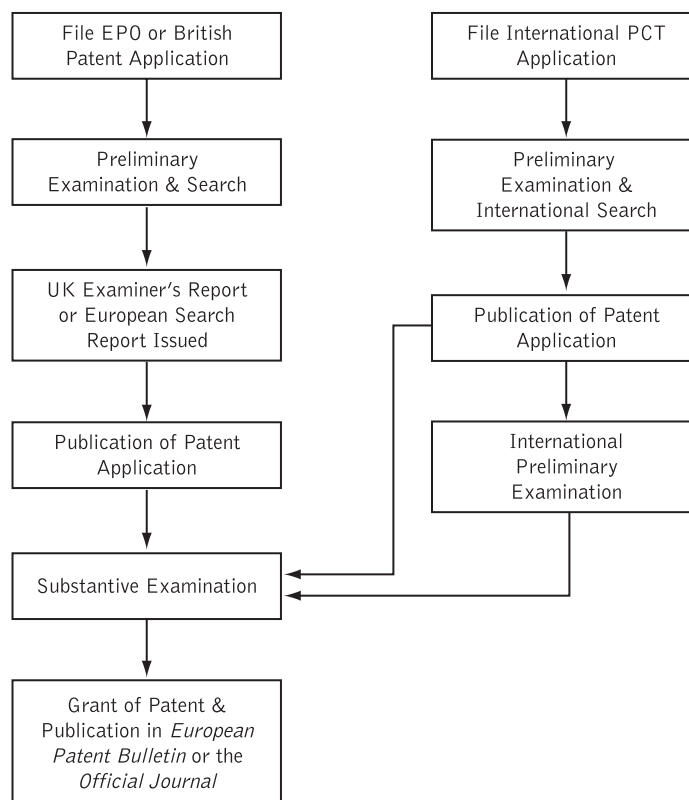

Fig. 16.1 Flow chart of a patent application

made by two or more applicants. It is important to note that while anyone may apply for a patent, there are a number of restrictions placed on those who are entitled to be granted a patent. The issue of entitlement to grant is dealt with later.⁴⁵

During the application process disputes over who is entitled to a patent that may ultimately be granted are dealt with differently, depending on whether it is a British or a European application.⁴⁶ For the purposes of proceedings before the EPO, it is assumed that the applicant is entitled to exercise the right to the European patent: issues about entitlement are determined elsewhere.⁴⁷ The EPO will only take account of the question of entitlement if a decision is made by an appropriate national court that a person other than the applicant is entitled to the patent.⁴⁸

⁴⁵ See below at pp. 503–18.

⁴⁶ Under EPC Art. 60 the right to a European patent belongs to the inventor or his successor in title. The rights of employees depend on the law of the state in which he is mainly employed or, if that cannot be determined, that in which the employer has his place of business. See below at p. 506.

⁴⁷ EPC Art. 60(3). See G. Le Tallec, 'The Protocol on Jurisdiction and the Recognition of Decisions in Respect of the Right to the Grant of a European Patent' (1985) 16 *IIC* 318; *Kirin-Amgen/Erythropoietin*, T412/93 [1995] *EPOR* 629 (questions of entitlement could not be considered in opposition proceedings).

⁴⁸ Three courses of action are available: prosecution of the application in place of the applicant; filing of a new application; or a request that the application be refused: EPC Art. 61(1). See *Latchways/Unlawful applicant*, G3/92 [1995] *EPOR* 141.

As with the EPC, an applicant for a British patent is presumed to be entitled to grant of the patent.⁴⁹ However, in contrast with the EPC the comptroller is able to consider issues of entitlement which are raised before grant.⁵⁰ If a person 'properly entitled' to a patent decides to submit a new application, they may be able to use the wrongful applicant's priority date.⁵¹ The comptroller of the UK British Patent Office is given similar powers to determine entitlement where a patent has already been granted.⁵²

4.2 FILING A PATENT APPLICATION

Applications for British patents are filed in Newport. Applications for a European patent may be filed either with the European Patent Office in Munich, The Hague, or Berlin, or with national patent offices in the contracting states.⁵³ European patent applications must be filed either in English, French or German: with the important qualification that it may be necessary to translate the specification into the language of the designated country within three months of grant.⁵⁴

Applicants at the UK Patent Office and the EPO are faced with the choice of either making a 'full application' or alternatively of taking advantage of the facility which allows for 'early filing'.⁵⁵ A full application for a patent must contain a request for grant of a patent, a description of the invention, one or more claims, any drawings referred to in the description or the claims, and an abstract.⁵⁶

In order to provide applicants with greater flexibility, the patent systems provide that instead of filing a full application, applicants are able to make an 'early filing'.⁵⁷ Early filing occurs where an applicant supplies an indication that a patent is sought, information identifying the applicant, and a description of the invention. In the case of a European application, the application must also include one or more claims and list the member states in which protection is sought.⁵⁸ Essentially, early filing provides applicants with a twelve-month breathing-space in which they can decide whether they wish to pursue a patent, are able to carry out further experiments on the invention, look for investors, and further consider the countries in which they wish to seek patents. The applicant must file

⁴⁹ PA s. 7(4). ⁵⁰ PA s. 8. See T. Gold, 'Entitlement Disputes: A Case Review' [1990] *EIPR* 382.

⁵¹ PA s. 8(3).

⁵² PA s. 37, PA r. 54–6. See *James Industries Patent* [1987] *RPC* 235 (applicant's claim for share of patent for net beds rejected in absence of contract evincing clear understanding that patent rights were to be shared); *Nippon* [1987] *RPC* 120; *Norris' Patent* [1988] *RPC* 159.

⁵³ EPC Art. 75(1)(2). On designation costs see O. Bossung, 'The Return of European Patent Law to the European Union' (1996) 27 *IIC* 287, 296. On the international status see *Lenzing* [1997] *RPC* 245.

⁵⁴ EPC Art. 97(5); EPC r. 51(4). Art. 65 allows individual states to require the translation into their language. Translation is required of all countries except Luxembourg and Germany. In the UK see PA s. 77(6)–(9). Under PCT Art. 3 an international application can be made to the Patent Office of one of the contracting states, which is termed the receiving office. Rules 4–8 PCT set out the contents of a filing, i.e. a request, a description, at least one claims, drawings where appropriate, and an abstract. The application must designate the states in which protection is sought.

⁵⁵ Patent application fees at the UK Patent Office were abolished from 1 Oct. 2000.

⁵⁶ PA s. 14(2); EPC Art. 78(1); PCT Arts. 3–7, PCT r. 3–8, 10, 11, 13, and 32; *A. C. Edwards v. Acme Signs* [1990] *RPC* 621, 642; see *Xerox/Amendments*, T133/85 [1988] *OJEP* 441, 448. Patent applications must also designate the inventor. PA s. 13, PA r. 14; EPC Art. 81, EPC r. 17, *EPO Guidelines* A-III, 5.

⁵⁷ PA s. 15(1); EPC Art. 80, EPC r. 26; PCT Arts. 11 and 14(2), PCT r. 7, 14.1(b), 15.4(a), 16, and 20.2(a)(iii).

⁵⁸ EPC Arts. 79–80; PCT Art. 4(ii).

the claims and abstract within twelve months of the early filing (the so-called filing date) if an early application is not to lapse.⁵⁹ While early filing offers a breathing-space 'for completion of the formalities and the interim preservation of priority', early filing was not intended 'to provide a cover for making improvements in the disclosed invention by bringing in new material not covered by the disclosure whilst preserving for it the priority conferred by the original filing date'.⁶⁰

4.3 PRIORITY DATE OF THE APPLICATION

The initial application is important in that it sets in play the sequence of steps that may ultimately result in the grant of the patent. Irrespective of whether the filing is an early filing or a full application, filing is also important since it establishes the 'priority date' of the patent. In the absence of a claim to an earlier date, the priority date is the filing date of the application.⁶¹ As we will see, the priority date is the date at which the novelty, inventiveness, and other aspects of the invention are assessed. As such it is often of critical importance for the validity of the patent. The priority date is of practical significance in several other ways. Firstly, because novelty is assessed as of the priority date, once the date is established an applicant is able to exploit their invention without fear of invalidating the patent. Second, applicants are able to use the priority date established by filing in the UK or EPO as the priority date for applications in other countries.

4.4 PRELIMINARY EXAMINATION AND SEARCH

The next formal step in the process of grant is the preliminary examination and search.⁶² When the claims and abstract have been submitted, the applicant should request a preliminary examination and search.⁶³ At the EPO the formal examination is carried out by the Receiving Section whereas substantive examination is conducted by the Examining Division.⁶⁴

On *preliminary examination* the examiner or, at the EPO, the Receiving Section determines whether the application complies with certain formal requirements.⁶⁵ These are that the application contains a request for grant, a description of the invention, one or more claims, any drawings referred to in the description or claim, and an abstract. In addition, the preliminary examination also ensures that the inventor(s) have been identified and

⁵⁹ See *Antiphon's Application* [1984] RPC 1, 9. On late submission of drawings see *VEB Kombinat Walzlager* [1987] RPC 405.

⁶¹ PA s. 5, PA r. 6; EPC Arts. 87–9. An application for which a date of filing has been accorded under the PCT is treated as an application for a patent under the 1977 Act.

⁶² PA s. 17, PA r. 28–29, 31–32; EPC Art. 90. PCT Arts. 14, 15, 17, and 18, PCT r. 26–30, 33, 37, 38, 40, and 43.

⁶³ PA s. 17(1).

⁶⁴ Under the revised text of the EPC, the search and examination stages of the application process will be brought together. See Art. 1, items, 4–6, of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev 1e.

⁶⁵ The receiving office retains one copy of the application, transmits another to WIPO and another to an international search authority. The receiving office checks to ensure that a filing date should be granted and that appropriate fees have been paid. EPC Art. 14.

that the application accords with other formalities (such as payment of fees).⁶⁶ In the case of the EPO, checks are also made to ensure that the application designates the countries in which the patent is to operate.⁶⁷

Applicants are alerted to any problems that may have been identified in the preliminary examination in a report which is issued to them.⁶⁸ Applicants are then given the opportunity to respond to the report or, if necessary, amend their application to overcome the problems. If an applicant fails to change their application in a manner that satisfies the respective Patent Offices, the application may be refused.⁶⁹

The examiner or (at the EPO) the Search Division also carry out a limited search of the prior literature for relevant prior art (that is, information similar to the invention in question).⁷⁰ The aim of the search is to identify the documents that may be used at the substantive examination stage when the application is examined for novelty and inventive step.⁷¹ The applicant is informed of the findings of the search by way of an examiner's report or, as it is known at the EPO, the European search report.⁷²

As well as identifying the documents that may be relied upon when the application is examined for novelty and inventive step, the application is also examined during the search stage to ensure that it relates to one invention or to a group of inventions which form a single inventive concept.⁷³ That is, it is examined to ensure it meets the requirement of 'unity of invention'.⁷⁴

Where two or more inventions are claimed in the one application, the application will fail to comply with the requirement of unity of invention unless it can be shown that the inventions form a single inventive concept.⁷⁵ To do this it is necessary to show that the inventions share the same 'special technical features'. Special technical features are the features that define the contribution that each of the claimed inventions, considered as a whole, makes over the prior art.⁷⁶ There are at least two reasons for limiting patent applications to a single inventive concept. The first is that patent protection should not be available for two inventions for the price of one. Second, and more importantly, to allow more than one inventive concept to be included in a single patent is likely to undermine the administrative systems for locating, identifying, and searching for prior patents.

If it is found that the application contains more than one invention, the search is limited to the first invention that is set out in the claims.⁷⁷ In the face of a finding that an application contains more than one patent, applicants may simply pursue a patent for one of the inventions. Alternatively, they may divide the initial application up into two (or more) fresh applications. So long as additional fees are paid and no new material is

⁷⁵ PA s. 14(5)(d) and s. 14(6), PA r. 22; EPC Art. 82, EPC r. 29(2) and 30.

⁷⁶ PA r. 22(2); EPC r. 20. Technical features 'are the physical features which are essential to the invention'. With respect to a product these are 'the physical parameters of the entity'. In relation to a process, the technical features are 'the physical steps which define such activity'. *Mobil Oil/Friction Reducing additive*, G2/88 [1990] EPOR 73; [1990] OJEPO 93, 100. See also *May & Baker v. Boots* [1950] 67 RPC 23, 50; *Biogen v. Medeva* [1995] RPC 25, 92–3; *Bayer* [1983] OJEPO 274; *Siemens/Unity*, G1/91 [1992] OJEPO 253.

⁷⁷ *Hollister's Application* [1983] RPC 10; G2/92 [1993] OJEPO 591.

added, they may use the priority date for the original application for the new applications.⁷⁸

4.5 PUBLICATION

The next stage in the grant process is the publication of the patent application. The application will be published and made available for public inspection eighteen months from the date of filing (or 'as soon as possible thereafter').⁷⁹ This process informs third parties that the application has been made. While third parties are not able to oppose the grant of a patent at this stage, they are able to make observations as to whether the patent should be granted.⁸⁰

The documents published in the UK and the EPO include the description, claims, and drawings (if any) that have been filed. In the United Kingdom, the publication must include the original claims, any amendments that have been made to the claims, as well as any new claims. The UK Patent Office is also given power not to publish parts of the application which are offensive or disparaging,⁸¹ or which might be prejudicial to national security.⁸² At the EPO, the abstract and (where available) the search report are also published.⁸³

Publication is important for two reasons. First, since the act of publication discloses the invention to the public, an unwanted publication may prevent the applicant from relying on other ways of protecting their invention (such as confidentiality). Similarly, once a patent application has been published, the application can no longer be resubmitted (whereas if the application is withdrawn prior to publication it is possible to make a later application).⁸⁴ Second, if the patent proceeds to grant, the date of publication is the date from which the patentee is able to sue for infringement of the patent. This is on the condition that the act would have infringed both the patent as granted and the claims in the form in which they were published.⁸⁵ In these circumstances, the patentee is only entitled to damages for infringement in the period between publication and grant.

As mentioned, a third party may respond to the publication of the application by submitting 'observations' to the Patent Office (at any time before grant).⁸⁶ Such observations should relate to whether the invention is a patentable invention.⁸⁷ Observations may be made by 'any person' and must be submitted in writing accompanied by appropriate reasons. The comptroller of the UK Patent Office is instructed to consider the observations, whereas the European Patent Office is merely required to communicate the

⁷⁸ Failure to meet an objection of lack of unity is frequently remedied by the making of the divisional applications. EPC r. 25(1), r. 46; PA s. 17(3), s. 18(3), PA r. 100.

⁷⁹ PA s. 16, PA r. 27; EPC Art. 93, EPC r. 48–50; PCT Arts. 21 and 29, PCT r. 9.1 and 48.

⁸⁰ PA s. 21, PA r. 37; EPC Art. 115. ⁸¹ PA s. 16(2), PA r. 34(2).

⁸² PA s. 22 (no EPC equivalent). PA s. 23 provides that British residents need prior written approval from the comptroller before they file applications outside of the UK. This gives the office the opportunity to examine applications to see if the information is prejudicial to the defence of the realm or the safety of the public. If so, the office may prohibit or restrict publication.

⁸³ EPC Art. 93(2), *EPO Guidelines* A-VI, 1.3, 1.5.

⁸⁴ EPC Art. 128 specifies that the application prior to this point is confidential and may only be viewed by third parties with the consent of the applicant.

⁸⁵ PA s. 69(2); EPC Art. 67; PCT Art. 29. ⁸⁶ PA s. 21; EPC Art. 115.

⁸⁷ That is, matters covered in PA s. 21(1), s. 1; EPC Art. 115, Art. 52.

observations to the proprietor who, in turn, is permitted to comment on them. If the EPO wishes, it can take account of such observations when examining the application.⁸⁸ In both fora, the party submitting the observations does not become party to the proceedings and so will not be asked to any hearing, nor made to pay the costs of any proceedings.

4.6 SUBSTANTIVE EXAMINATION

Once the requirements of preliminary examination and search have been satisfied, the next stage in the application process is the 'substantive examination'.⁸⁹ The applicant must request this within six months from the date of publication of the application, or at the EPO the publication of the search report.⁹⁰

The purpose of the substantive examination is to ascertain whether the application complies with the requirements of the 1977 Patents Act or in the case of the EPO, the European Patent Convention.⁹¹ Unlike the preliminary examination, which is mainly concerned with ensuring the presence of certain documents, during the substantive examination the application is scrutinized to ensure that it complies with all aspects of validity. In particular, the invention is examined to ensure that it does not consist of subject matter excluded from patentability, and that the invention is novel, involves an inventive step, and is industrially applicable. The substantive examination also ensures that the application has been sufficiently disclosed, and that the claims are concise and are supported by the description.

The substantive examination takes the form of a dialogue between the examiner and the applicant. After the examination has taken place the examiner draws up a report which outlines any objections to the application which have been identified. The report is supplied to the applicant who is given an opportunity to comment on the objections, often in the hope of persuading the examiner that any doubts they have about their application are ill-founded. Alternatively, the applicant may respond to the objections by amending the patent application.⁹² If they think it necessary, the examiners may make or require further searches. Ultimately, the dialogue may lead to a hearing before the Senior Examiner in the United Kingdom or the full Examining Division of the EPO, and from there by way of appeal to the UK Patents Court or the Board of Appeal of the EPO.⁹³

⁸⁸ EPC Art. 114.

⁸⁹ PA s. 18(1), PA r. 33; EPC Art. 94, EPC r. 33. Under the PCT, the national stage begins 20 months after the priority date by formally initiating prosecution in the designated states, filing translations, and paying fees as necessary. Instead of going straight into the national stage, an applicant may ask for an international preliminary examination by an examining authority (PCT Art. 31). This is dealt with in Chapter II of the Convention. This delays entry into the national systems for a further 10 months, so that entry is within 30 rather than 20 months of the priority date. The IPEA establishes an international preliminary examination report indicating whether the invention appears to meet international standards of novelty, inventive step or industrial applicability (PCT Art. 35(2)). Such examination is merely advisory and not binding on designated countries: PCT Art. 33.

⁹⁰ PA r. 33(2); EPC r. 6. This distinction is not of great significance, given that in the UK an applicant should receive the search report before the date of 'early' publication.

⁹¹ Substantive examinations of EPO applications are carried out in Munich, The Hague, and Berlin.

⁹² PA s. 18(3); EPC Art. 96, EPC r. 86(2); PCT ch. II (preliminary examination).

⁹³ PA s. 97(1); EPC Art. 94(1), EPC r. 86(2).

4.7 GRANT OF THE PATENT

If the respective Patent Office is not satisfied that the application satisfies the various requirements for grant, the application will be refused.⁹⁴ If the respective Patent Office is satisfied that all the necessary requirements have been satisfied, the patent will be granted.⁹⁵ The decision to grant a patent does not take effect until the date on which it is mentioned in the *Official Journal* (for a UK patent) or the *European Patent Bulletin* (for a European patent).⁹⁶ The protection afforded by a patent can last up to twenty years from the filing date.⁹⁷ Renewal fees must be paid after four years.⁹⁸ As we will see, the protection may extend beyond the twenty-year period where a supplementary protection certificate is issued. The extent of protection conferred by a patent will be considered later.⁹⁹

The date of the grant of a European patent is also the date of its transition from a European application to a bundle of separate national rights.¹⁰⁰ With the exception of opposition proceedings, questions of validity and infringement are thereafter considered at a national level.¹⁰¹ Once granted, a European patent (UK) is given the same level of protection as those granted by the national patent office.¹⁰² If the European patent was not published in English, an English translation must be filed at the British Patent Office, otherwise the patent is treated as void.¹⁰³

4.8 REVOCATION

While the patent examination processes at the UK and European Patent Office are relatively rigorous, they are not conclusive. As such, it is possible for patents to be revoked after grant on a limited number of grounds. The grounds on which a patent may be revoked are set out in section 72 of the 1977 Act and Article 138 of the EPC. These are that:

- (i) the invention is not a patentable invention;¹⁰⁴
- (ii) the patent was granted to a person who was not entitled to that patent;¹⁰⁵
- (iii) the specification of the patent does not disclose the invention clearly enough and completely enough for it to be performed by a person skilled in the art;¹⁰⁶ or
- (iv) the material in the patent extends beyond the material in the application as filed (impermissible amendment).¹⁰⁷

In addition, the British Patent Office has limited power to revoke patents on its own initiative.¹⁰⁸

One of the notable features of section 72 is that it says that 'any person' can apply to have

⁹⁴ PA s. 18(3); EPC Art. 97(1), *EPO Guidelines* C-VI, 4.5a, 7.8.

⁹⁵ PA s. 18(4). A dissatisfied applicant may appeal: PA s. 97(1).

⁹⁶ PA s. 24(1); EPC Art. 97(4). ⁹⁷ PA s. 25; EPC Art. 63(1).

⁹⁸ The fees increase over time to ensure that the Registry does not become cluttered with useless patents.

¹⁰⁸ PA s. 73.

a patent revoked. This has been taken to mean that there is no need for a person to have any interest, whether commercial or otherwise, in the outcome of proceedings to bring an action to revoke a patent.¹⁰⁹ Unlike the position under the 1949 Patents Act, a person who has no interest in the revocation is nevertheless entitled to apply to have the patent revoked. As Jacob J said, 'Parliament purposively made patents vulnerable to attack from anyone'.¹¹⁰

4.9 OPPOSITION PROCEEDINGS AT THE EPO

While the grant of a European patent generally brings the European stage to an end, a central challenge can be made to the validity of the European patent in the nine-month period following grant of the patent.¹¹¹ This process, known as 'opposition', has a number of advantages over leaving decisions about the validity of patents exclusively to national offices or courts. The most obvious advantage is cost: it is cheaper to launch or defend a single attack in one place rather than to engage in revocation proceedings in each of the countries where the patent was issued.

Any person may file a notice of opposition. For a period, it was common for the proprietor to file oppositions in order to make post-grant amendments (which otherwise would have to be made at national level).¹¹² This practice has now been curtailed.¹¹³ Opposition has to be filed within nine months from grant and must be based on one of three grounds.¹¹⁴ These are that:

- (i) the subject matter of the European patent is not patentable under EPC Articles 52–7,¹¹⁵
- (ii) the European patent does not disclose the invention in a manner sufficiently clear and complete enough for it to be carried out by a person skilled in the art;¹¹⁶ or
- (iii) the subject matter of the European patent extends beyond the content of the application as filed.¹¹⁷

Any opposition to a European patent is communicated to the patent proprietor who may contest the opposition, make observations and/or make amendments. The opposition proceedings will determine whether the patent should be revoked, maintained, or maintained in an amended form.¹¹⁸ If the proceedings result in revocation, the

¹¹⁸ EPC Art. 102.

patent is deemed, from its outset, not to have had any of the effects specified in the EPC.¹¹⁹

5 AMENDMENT

As we mentioned earlier, applicants are able to alter or amend their initial application both during and after grant of the patent. *Prior to grant*, applicants are able to amend their application where the examination reveals that the formal and substantive requirements are not complied with.¹²⁰ In addition, applicants have a general power to amend their application at any time before a patent is granted.¹²¹ The ability to amend during grant is based on a belief that it would be unreasonable to expect applicants to be fully aware of all prior art at the point when they filed their application. This is especially the case given that the patent system provides for a search and examination at a later stage.

After a patent has been granted by the British Patent Office, the owner of a patent is also able to amend their patent.¹²² In addition, the comptroller is able to instigate proceedings that may prompt such amendment.¹²³ Under the EPC (as it currently stands) post-grant amendment can only occur in opposition proceedings.¹²⁴ Otherwise, such matters are for national law.¹²⁵ Under the EPC 2000, patents owners are given a general power to revoke or limit European patents after grant at the EPO.¹²⁶ (A number of changes to the way patents are amended post-grant in the UK have been proposed in the 2004 Patents Bill.)¹²⁷ Article 138(3) EPC 2000 also provides proprietors of European patents with the *right* to limit a patent by amendment in national proceedings relating to the patent's validity. As we will see, this has ramifications for the role of the judicial discretion to allow amendment. Under the procedures in the UK and EPO, the application to amend is advertised so that any person may oppose it within two months. If granted, the amendment is deemed to have taken effect from the grant of the patent. Since these provisions make no provision for circumstances where there are infringement proceedings and amendment is desired

¹¹⁹ EPC Art. 68.

¹²⁴ *Advanced Semiconductor Products/Limited Feature G1/93* [1994] *OJEPO* 169. Amendments in opposition proceedings are only considered where they are appropriate and necessary, that is that they can be fairly said to arise out of the grounds of opposition: *Mobil/Admissibility*, T550/88 [1992] *OJEPO* 117; [1990] *EPOR* 391, 397. For a discussion of the situations where amended claims will be allowed at the EPO see *Minnesota Mining and Manufacturing Company, G/99* [2001] *OJEPO* 381 (EBA); *Lubrizol Corporation, T525/99* [2003] *OJEPO* 452, 457–8.

¹²⁵ *Mobil/Admissibility*, T550/88 [1992] *OJEPO* 117; [1990] *EPOR* 391, 394. (Unfortunately for some proprietors of European patents, the EPC does not contain any specific provisions enabling a European patent to be amended by a centralized procedure before the EPO.)

¹²⁶ EPC 2000, Art. 105a–105c. See also Art. 1, items 51, 62 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev 1e. It has been proposed that where a patent not in English is limited at the EPO, the UK will require a translation of the patent as granted, limited or amended within a specific time before that limited patent can take effect in the UK. 'Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions' (13 Nov. 2003), para. 32–33.

¹²⁷ Patents Amendment Bill 2004, cl. 2.

but validity is not in issue, they leave a lacuna in the legislative scheme.¹²⁸ This discrepancy is to be resolved by amending section 75 so as to allow patentees to propose amendments in the course of any proceedings.¹²⁹

5.1 RESTRICTIONS ON AMENDMENT

In order to ensure that any amendments that are made comply with the overriding aims of the patent system,¹³⁰ a number of restrictions are placed on an owner's ability to amend their application/patent. The amended patent must comply with the requirements that have to be met by all patents. These include the requirements of subject matter, novelty, and inventive step. The amended claims must also be clear and concise, be supported by the description, and relate to one invention or group of inventions that are linked to form a single inventive concept.

There are a number of other provisions that restrict an owner's ability to amend either the application or the patent. Perhaps the most important of these, which we deal with in Chapter 20, strike at the validity of the patent. Under these provisions, if the amendment introduces subject matter that was not in the original application, or the amendment extends the scope of protection beyond the initial application, the amended patent is liable to be revoked.¹³¹ In this section, we wish to focus on the situations where validity is not at stake.

An important factor that limits the owner's ability to amend their application as filed arises from the fact that post-grant amendments are (currently) at the discretion of the comptroller and the courts.¹³² The onus is on the patentee to establish that the amendment should be allowed.¹³³ The courts have tended to use their discretion to deny amendments where the owner has not acted innocently. As Jacob J noted, '[n]o patent office is there for the purpose of enabling people deliberately to impose bogus monopolies on the

¹²⁸ *Norling v. Eez Away* [1997] RPC 160, 165. 'All this suggests that the sooner the whole procedure of amendment of a patent is rethought and provided for by an amended statute and rules the better. Preferably, so far as European patents are concerned, there should be one, effective and cheap, procedure'. In *Boston Scientific v. Palmaz* (unreported 20 Mar. 2000), the Court of Appeal held that if the EPO had amended a patent 'after judgment in UK patent litigation, but before an appeal of that judgment is heard, the Court of Appeal must consider the patent as amended' [2000] EIPR N-115.

¹²⁹ It is proposed that PA s. 75 be changed to allow for amendment during any proceedings where validity may be put in issue, namely during any proceedings for infringement, groundless threats, declarations of non-infringement, revocation proceedings or disputes over Crown use. See *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), paras. 153–155.

Krasser, 'Possibilities of Amendment of Patent Claims during the Examination Procedure' (1992) 23 IIC 467, 471; Gunzel, *Staking Your Claim: Claiming Options and Disclosure Requirements in European Patent Practice* (1990), 29. A. Bubb, 'Implied Added Subject Matter, A Practitioner's View of History' (1991) CIPAJ 444.

¹³¹ PA s. 72(1)(d) and (e), s. 76; EPC Art. 138(1)(c).

¹³² PA ss. 27(1); 75(1). The Court of Appeal confirmed the general discretion of the courts to refuse post-grant amendments in the public interest under PA s. 75 in *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 422, 435. In so doing it overturned Laddie J's decision in the Patents Courts in *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 424. (Cf. *Palmaz's European Patent (UK)* [1999] RPC 47, 63–5 which distinguished Laddie J on this point.) For the application of the CA decision see *Oxford Gene Technology v. Affymetrix (No. 2)* [2001] RPC 310 (CA). See generally P. Cliffe, 'A Sorry Case of Making Amends' [2002] EIPR 277.

¹³³ *SKF v. Evans Medical* [1989] FSR 561, 569; *Chevron Research Company's Patent* [1970] RPC 580.

public'.¹³⁴ There are two situations where the discretion has been exercised against the patentee. The first is where a patentee knowingly and deliberately obtained claims that were wider than justified by what was invented.¹³⁵ The second situation where discretion has not been exercised is where knowing of the doubtful validity of the patent, a patentee has been slow to take action to amend.¹³⁶ In *Raleigh Cycle v. Miller*¹³⁷ the House of Lords emphasized that a patentee who suspects a patent is too widely drawn should amend it promptly. If they do not, the discretion to amend will be refused. Lord Normand explained that 'the public interest is injured when invalid claims are persisted in so that inventors are illegitimately warned off an area ostensibly monopolised by the claims'. In this situation, patentees should either litigate or amend. However, if they choose to litigate, they should not be permitted to amend later. It is reasonable for a patentee to delay where they believed on reasonable grounds that the patent was valid.¹³⁸

While the right to amend in the United Kingdom is currently subject to the court or comptroller's discretion, the government has announced that it plans to remove the discretion entirely from post-grant amendment proceedings in the United Kingdom.¹³⁹ In so doing this will bring the United Kingdom into line with the non-discretionary nature of post-grant limitation and amendment before the EPO (and also with other contracting states to the EPC). When this occurs, the conduct of the proprietor will no longer be a factor to be considered when deciding whether an amendment is allowed.

Another factor that serves to regulate the way patents are amended arises from the fact that the courts may limit the damages that are awarded where an amended patent is infringed. There are two situations where this may occur. The first is set out in section 73. This provides that if an amended application expands the claims beyond that which was reasonable to expect from the application as it was initially published, the courts may limit the damages that are available to the patentee. The question of whether the inference is reasonable is objective. As such, it does not matter what the defendant (subjectively) thought.¹⁴⁰ It has been suggested that section 73 will apply where a defendant reasonably thought that any claim covering what they do would not be supported by the description in the specification. Apart from that, it was unlikely to have wide application.¹⁴¹ Another

¹³⁴ *Richardson-Vicks Patent* [1995] RPC 568. See also *Hallen v. Brabantia* (1990) FSR 134, 149; *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 422, 435 (Aldous LJ) (CA).

¹³⁵ *ICI (Whyte's) Patent* [1978] RPC 11. In *Richardson-Vicks Patent* [1995] RPC 561, 568, Jacob J observed that there was little EPO jurisprudence as regards post-grant amendment in opposition proceedings. Nonetheless he assumed that if it was shown that an applicant had deliberately sought to patent an unjustifiably wide claim, the EPO would refuse leave to amend. Beyond this, however, Jacob J predicted that the EPO might allow a patent to be amended. Consequently, Jacob J held that for purposes of consistency, nothing short of really blameworthy conduct by a patentee should act as bar to amendment in the UK. See also *Kimberly-Clark Worldwide v Procter & Gamble (No. 2)* [2001] FSR 339, 342–3.

¹³⁶ *SKF v. Evans Medical* [1989] FSR 561, 577.

¹³⁷ (1950) 67 RPC 226.

¹³⁸ On some occasions the courts have suggested that delay is more justified where the patentee operates outside the UK. *Bristol Myers Company v. Manon Freres* [1973] RPC 836, 857; *Mabuchi Motor KK's Patent* [1996] RPC 387 (not blameworthy to delay when involved in worldwide litigation in which the UK was not an important country).

¹³⁹ *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), paras. 71–76.

¹⁴⁰ *Unilever v. Chefaro* [1994] RPC 567, 592.

¹⁴¹ Jacob J's reasoning, which was dependent on the assumption that there could be no revocation for broad unsupported claims, is now doubtful in the light of *Biogen v. Medeva* [1997] RPC 1 (HL).

factor that regulates the way patents are amended arises from the fact that where a specification is amended, damages are only awarded prior to the date of the amendment if the court is satisfied that the specification as originally published was framed in good faith and with reasonable skill and knowledge.¹⁴² In practice, it is rare for the courts to find that patents were not framed in these terms.

5.2 ERRORS AND CLERICAL MISTAKES

Instead of amending a patent, a patentee may seek to have the patent altered to correct errors and clerical mistakes.¹⁴³ Such corrections take effect retroactively. The ability to correct mistakes does not conflict with the general policy of protecting third parties which forbids amendments that extend the patent beyond the scope of the application as filed. The reason for this is that 'if the mistake was obvious, it cannot have misled'.¹⁴⁴

If the request to correct a mistake concerns the description, claims or drawings, the correction must be obvious. A correction will be obvious where it is immediately evident that nothing else would have been intended other than what is offered as the correction.¹⁴⁵ If there are any doubts, a correction cannot be made. A useful example of the limits imposed on a patentee's ability to correct mistakes can be seen in *PPG Industries Patent*.¹⁴⁶ In this case it was said that faced with the proposition '2 + 2 = 5' a person might readily presume that this was obviously incorrect and that to correct the mistake the '5' should be changed to a '4'. However, as Dillon and Slade LJ pointed out, since an alternative solution was to change one of the '2's to a '3', in the absence of an indication as to where the mistake lay, the correction was not obvious within the meaning of the Act.

6 REFORM

The procedure for grant of a patent will undergo a number of changes in the next few years. The main reason for this is that the EPC 2000 makes a number of amendments that aim to simplify the patent grant procedure before the EPO.¹⁴⁷ It is expected that corresponding changes will also be made in the United Kingdom. The changes introduced by the EPC 2000 are intended to provide greater legal certainty for applicants and patent owners. One of the main changes introduced by the EPC 2000 is that it will be possible 'to file patent applications in any language, since a translation into one of the official languages of the EPO will not be required until a later date. During the procedure itself, applicants will benefit from improved protection against inadvertent legal consequences arising from the

¹⁴² PA s. 62(3). See *General Tire & Rubber v. Firestone Tyre & Rubber* [1975] RPC 270 (CA); *Chiron v. Organon (No. 7)* [1994] FSR 458. PA s. 62(3) does not apply to an account of profits. *Codex Corporation v. Racal Milgo* [1983] RPC 369 (CA).

¹⁴³ PA s. 117(1), PA r. 91(2); EPC r. 88.

¹⁴⁴ *Holtite v. Jost* [1979] RPC 81, 91 (Lord Diplock). In *Correction Under Rule 88; G3/89* [1993] EPOR 376, it was held by the Enlarged Board of Appeal that as a matter of construction of the EPC, the correction must not extend protection contrary to EPC Art. 123(2).

¹⁴⁵ This was the position under PA 1949 s. 31(1): *Holtite v. Jost* [1979] RPC 81.

¹⁴⁶ [1987] RPC 469, 478, 483. ¹⁴⁷ See e.g. EPC Revision Act, Art. 1, items 27–43.

non-observance of time limits'.¹⁴⁸ While search and examination at the EPO are currently carried out in a number of different locations, these will be brought together. Another change initiated by the EPC 2000, which mirrors similar changes in the PCT, is that applicants will no longer need to designate the states in which they wish to be protected. This is because all EPC states will be deemed to have been designated at the date of filing.¹⁴⁹

Another change that may take place in patent procedure relates to the information that applicants have to disclose in their patent application. While these changes are some way off, discussions are taking place at the national, community, and international level about the possibility of requiring inventors who draw upon or utilize genetic resources in the development of their inventions to disclose information, such as the fact that they have prior informed consent to use the genetic resources, in their patent application. These discussions have been prompted by Article 15 of the CBD (which recognizes equitable benefit sharing for access providers) and by Article 8(j) of the CBD (which encourages the equitable sharing of benefits arising from the use of Indigenous knowledge).¹⁵⁰ The discussions have also been prompted by the growing concern about biopiracy and the general misuse of genetic resources in the biodiversity process. The idea that applicants should be required to disclose information about their invention builds upon the idea that patent law has the potential to modify behaviour to promote good corporate and scientific conduct. The fact that an organization may not be able to patent products derived from genetic resources, if they do not have the prior informed consent from the access provider, will act as a powerful incentive for such organizations to ensure that they have the relevant prior informed consent. As we mentioned earlier, debates are at present taking place at the international level over whether or not and, if so, how prior informed consent should be incorporated into patent law.¹⁵¹ Discussions are also taking place within Europe as to the best way in which the goals of the CBD might be achieved.¹⁵² The issue of prior informed consent has already been recognized in Europe in the Biotechnology Directive, albeit only in the non-binding Recitals. In particular, Recital 27 encourages patent applications to include information on the geographical origin of biological material. In turn, Recital 55 requires member states to recognize Article 8(j) of the CBD when developing laws and regulations. To date these have had minimal impact on member states.¹⁵³ More recently, the Commission has suggested that there should be a debate over the unilateral development under EC law of 'a self-standing obligation for patent applicants to disclose the origin of genetic resources'.¹⁵⁴ This builds upon existing requirements that encourage

¹⁴⁸ Statement by Dr Roland Grossebacher, Chairman of the Administrative Council of the EPO, 29 Nov. 2000 (Press release).

¹⁴⁹ EPC 2000, Art. 79(1).

¹⁵⁰ See also the *Bonn Guidelines on access and benefit sharing*, adopted at the Sixth Conference of the Parties to the CBD, (The Hague, 2002). These are voluntary provisions that act as a guide to the implementation of CBD Art. 1, 8 (j), 10(c), 15, 16, and 19.

¹⁵¹ Particularly at the CBD, the TRIPS Council and at WIPO. See above at pp. 382–3.

¹⁵² See also 'EC Thematic Report on Access and Benefit-Sharing', submitted to CBD Secretariat in Oct. 2002, available at <http://biodiversity-chm.eea.eu.int/>.

¹⁵³ A notable exception being Denmark. See G. van Overwalle, 'Belgium goes its own way on Biodiversity and Patents' [2002] *EIPR* 233.

¹⁵⁴ *The Implementation by the EC of the 'Bonn Guidelines' on access to genetic resources and benefit-sharing under the Convention on Biological Diversity* (19 Dec. 2003) COM (2003),18.

disclosure of information, namely enabling disclosure, disclosure of relevant background prior art for novelty examination, and the disclosure of the inventors.¹⁵⁵ The proposal by the Commission is fairly modest. Prior informed consent will not be treated as an additional or formal requirement for patentability. Rather, the Commission has suggested that failure to comply with the requirement of prior informed consent would carry remedies outside of patent law. For example, it may carry civil law claims for compensation or administrative remedies (such as a fee for refusal to submit relevant information). The Commission is also looking at introducing similar requirement for plant variety rights.¹⁵⁶

The Commission has also opened up discussions as to the position that it should adopt in international multilateral treaty negotiations about prior informed consent.¹⁵⁷ In this context, the Commission has said that it should be prepared to discuss prior informed consent as a formal condition of patentability, and not merely as a self-standing obligation. Here the options include the non-processing of patent applications until all the relevant information has been provided, the invalidation and revocation of patents if the applicant fraudulently disclosed incorrect information. As a way of assisting applicants, the Commission has also suggested the use of certificates of origin.

While there are many questions that remain unanswered, there is a chance that prior informed consent may go some way to providing indigenous groups as well as megabiodiverse countries with an equitable share of the benefits that flow from the use of their resources. Ironically, by encouraging the situation in which access providers will be entitled to a percentage of the patent royalties that flow from products developed from genetic resources, this adds to the problem of 'royalty stacking' that is causing so many problems in the life sciences. Unrealistic expectations about the value of the genetic resources have served to exacerbate this problem.

¹⁵⁵ *Ibid.*, 17. The proposal also builds on a Concept Paper submitted by the EC to the TRIPS Council in Oct. 2003 on the relationship between TRIPS and the CBD.

¹⁵⁶ *Ibid.*, 18.

17

PATENTABLE SUBJECT MATTER

1 INTRODUCTION

In the previous two chapters, we looked at the nature of the patent and the processes by which patents are granted. In this and the following three chapters we look at the factors that an invention must comply with to be patentable. These are that the invention:

- (i) consists of subject matter that is patentable (this chapter),
- (ii) is new (Chapter 18),
- (iii) involves an inventive step (Chapter 19), and
- (iv) complies with the internal requirements of patentability (Chapter 20).

If an application fails to comply with any of these criteria, a patent will not be granted. If a patent has already been granted, non-compliance may mean that the patent is revoked. With these general points in mind, we now turn to look at the subject matter that is able to be patented.

2 PATENTABLE SUBJECT MATTER

The task of having to decide the types of subject matter that ought to be patentable invariably generates conflict and uncertainty. This is because patent law inevitably finds itself dealing with technologies that it may not yet understand. It is also because the task of having to decide whether to grant property rights in a particular type of invention raises a complex mix of legal, cultural, political, and social questions. Over time a range of different factors has restricted the subject matter protected by patents. Perhaps the most important is the image of the invention as something concrete and physical, which results from human intervention into nature.¹ A range of other more explicit policy factors has also limited the type of subject matter that is protected by patents.

The subject matter that is potentially patentable under the 1977 Patents Act and the EPC is regulated in four ways.

(i) The first limitation is that to be patentable an invention must be capable of 'industrial application': section 1(1)(c), section 4/Article 52(1)(4). While this is probably

¹ Sherman and Bently, 46, 150–7.

the least important of the four requirements, it has been important in relation to inventions involving naturally occurring substances as well as medical and veterinary inventions.

(ii) The second restriction on the subject matter protected by patents is set out in section 1(2)/Article 52(2)(3). In essence this provides a non-exhaustive list of things which are not regarded as inventions. If the subject matter of an application falls within the scope of these provisions, it will not be patentable.

(iii) The third general restriction on the subject matter excluded from patent protection is in paragraph 3(f) of Schedule A2 to the 1977 Patents Act²/Article 53(b). This provides that a patent shall not be granted for 'any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a microbiological process or the product of such a process'.

(iv) The fourth factor which restricts the subject matter protected by patent law is that patents are not granted for immoral inventions or inventions which are contrary to public policy: section 1(3)³/Article 53(a). While rarely used in the past, this exclusion has taken on a new significance in light of recent developments in biotechnology. A number of specific exclusions relating to immoral biological inventions are now contained in paragraph 3 of Schedule A2 to the 1977 Act.

We will look at each of these in turn.

3 INDUSTRIAL APPLICATION

In order for an invention to be patentable it must be capable of 'industrial application'.⁴ This reflects the long-held view that patent protection should not be available for purely abstract or intellectual creations. The need to show industrial applicability also reflects the image of the patentable invention as having a concrete and technical character. The decision to include a requirement of industrial applicability in the EPC was also used to give effect to the policy goal that sought to exclude methods of medical and veterinary treatment from the remit of the scope of what may be patented.⁵

An invention is capable of industrial application if it can be used or made in 'any kind of industry'.⁶ Industry is construed in its widest sense, including activities whether or not

² This provision, which replaced PA s. 1(3)(b) (as enacted), was introduced by the Patents Regulations 2000 (SI 2000/2037) (in force 28 Jul. 2000).

³ This provision, which replaced PA s. 1(3)(a) (as enacted), was introduced by the Patents Regulations 2000 (SI 2000/2037).

⁴ PA s. 1(1)(c); EPC Art. 52(1).

⁵ EPC 2000, Art. 52(1) provides that European patents 'shall be granted for any inventions *in all fields of technology*, provided that they are new, involve an inventive step and are susceptible of industrial application'. See Art. 1, item 17 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e; Base Proposal for the Revision of the European Patent Convention, CA/100/00 e (2000), 38. PA s. 1 is to be amended to reflect Art. 52(1) EPC 2000. *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), para. 17. Despite earlier plans, this has not been adopted in the Patents Bill 2004.

⁶ PA s. 4(1); EPC Art. 57. But not when the invention contravenes well-established natural laws (such as Newton's Law of Gravity): *Ward v. Comptroller-General* (unreported) (19 May 2000) (CA) (application for perpetual motion machine was rejected).

they are made for profit,⁷ and expressly extends to include agriculture.⁸ As such, the requirement that an invention be made or used in industry presents few problems. In a controversial decision, however, it was held that a private and personal activity (the application of a contraceptive composition to the cervix) was not industrial in character and thus not patentable.⁹

As well as being used or made in any kind of industry, for an invention to be industrially applicable, it is also necessary to show that it has a 'useful purpose'.¹⁰ As the 1977 Patents Act and the EPC provide that inventions only need to be *susceptible* or *capable* of industrial application, this implies that there is no need to show actual use: it is enough to show that the invention has the *potential* to be used or made in industry. Where a product has been used (or put on the market), the commercial success of the product is not relevant when deciding industrial applicability.¹¹

The requirement that inventions need to exhibit a useful purpose is particularly important in relation to biological research. The reason for this is that, although researchers have been successful in locating and identifying new gene structures, so far they have been much less successful in ascertaining what many of these genes do.¹² While researchers have been able to identify the genes that make up the human genome, the role that many of these genes play remains unknown. Unless a useful purpose can be found for these genes, they will not be industrially applicable and, as such, not patentable.¹³ This position is reinforced by the Biotechnology Directive insofar as it attempts to clarify the industrial applicability requirement in relation to biological inventions.¹⁴ As the Recitals to the Directive explain, a mere DNA sequence without any indication of a function does not contain any technical information and is therefore not a patentable invention.¹⁵ In relation to gene sequencing, the Biotechnology Directive and the Patents Act (as amended) specify that the industrial application of a sequenced or a partial sequence of a gene must be disclosed in the application.¹⁶ Where a sequence or partial sequence of a gene is used to

⁷ *Chiron v. Murex* [1996] RPC 535, 607 (Morritt LJ).

⁸ PA s. 4(1); EPC Art. 57.

⁹ *British Technology Group/Contraceptive method*, T74/93 [1995] EPOR 279, 284. For criticisms of the decision see J. Pagenberg, 'Comment' (1996) 27 IIC 104.

¹⁰ *Chiron v. Murex* [1996] RPC 535, 607 (Morritt LJ).

¹¹ *Harvard/Onco-mouse* [2003] OJEP0 473, 494 (Opposition Division). (The fact that the transgenic mice were commercially unsuccessful was not relevant: all that mattered in this context was that they were on the market).

¹² This problem has been exacerbated by the success of the human (and other) genome projects which attempt to identify the thousands of genes that comprise the genetic blueprint of biological entities. On which see T. Wilkie, *Perilous Knowledge* (1993); BMA, *Our Genetic Future: the Science and Ethics of Genetic Technology* (1992); P. Gannon, T. Guthrie, and G. Laurie, 'Patents, Morality and DNA: Should there be Intellectual Property Protection of the Human Genome Project' (1995) 1 *Medical Law International* 321; J. Straus, 'Patenting Human Genes in Europe' (1995) 26 IIC 920.

¹⁴ In *Icos Corporation/Seven transmembrane receptor* [2002] OJEP0 293, 304 (para. 9), the Opposition Division said that the Recitals to the Biotech Dir. were relevant as supplementary rules of interpretation when examining European patent applications.

¹⁵ Biotech. Dir., Recital 23.

¹⁶ *Ibid.*, Art. 5(3), Recital 22. PA s. 76A, and Sched. A2, para. 6 (Patent Regulations 2000 (SI 2000/2037)). See also Administrative Council of the EPO 16 June 1999 amending the Implementing Regulations of the EPC, EPC Rule 23e(3) (1999) 7 OJEP0 437 (which introduces Biotech. Directive, Art. 5(3) into the EPC). See

produce a protein or part of a protein, the subject matter will only satisfy the requirement of industrial applicability if the application specifies which protein is produced or the function that it performs.¹⁷ For example it would be necessary to show a biological function (which would imply a therapeutic use), or that the sequence could be used as a genetic marker (which would imply a diagnostic use). The Opposition Division at the EPO applied this reasoning in the *Icos Corporation* decision to deny patent protection for a purified and isolated polynucleotide encoding for the amino acid sequence of the V28 protein.¹⁸ The specification in question listed a number of predicted uses for the claimed protein (in relation to 'immunological and inflammatory events'). The problem for the applicant, however, was that these uses were based on the *predicted* function of the protein as a receptor.¹⁹ Importantly, the applicants were unable to show that the receptor was actually involved in any specific immunological and or inflammatory events. The Opposition Division said that it was not enough if the application merely disclosed uses that were speculative.²⁰ Echoing (but not citing the USPTO Guidelines²¹), the Opposition Division added that 'DNA sequences with indications of function which are not substantial, specific, and credible shall not be patentable inventions according to Article 52(1) EPC'.²² On this basis, the Opposition Division said that the application lacked industrial applicability and, as such, was not patentable.

While critics who argue that gene patents are having a chilling impact on research will welcome this decision, others may find that it does not go far enough. In particular, it is now being suggested that the problem with patents over genes is that while a patentee only has to disclose one specific use to show industrial applicability, once this threshold is satisfied they are given control over *all* uses of the patented gene: even those uses which they had not discovered or even imagined. The problem here is that there is a lack of symmetry between what is disclosed and what is protected. This has led some to argue that protection should be limited to what is actually disclosed in the application.²³ Despite its importance, this issue has not yet been given the attention that it clearly requires.

S. Bostyn, 'The Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 7–8; J. Straus, 'Patenting Human Genes in Europe: Past Developments and Prospects for the Future' (1995) 26 *IIC* 920, 934–5; O. Gandy, 'The EC Biotechnology Patent Directive: A More Ethical European Patent System?' (1998) 12 *World Intellectual Property Reports* 239.

¹⁷ Biotech. Dir., Recital 24. See *Chiron v. Murex* [1996] *FSR* 153, 177 (claim to polypeptides invalid because the claim covered 'an almost infinite number of polypeptides which are useless for any known purpose').

¹⁸ The UK Patent Office said that it will follow *Icos Corporation/Seven transmembrane receptor* [2002] *OJEP* 293. UK Patent Office, *Biotechnology Examination Guidelines* (Sept. 2002), para. 33–35.

¹⁹ This was because the specification did not disclose any antibody substances which specially recognize V28 protein.

²⁰ This was based on Recital 23 of the Biotech. Dir. (which provides that 'a mere DNA sequence without indication of a function does not contain any technical information and is therefore not a patentable invention').

²¹ The USPTO issued guidelines on the interpretation of the utility requirement under US patent law on 5 Jan. 2001. These state that for an invention to have requisite utility (which is similar to industrial application), there must be a 'specific, substantial and credible' use. The Guidelines are available at www.uspto.gov/web/menu/utility.pdf.

²³ See above at pp. 358–60.

3.1 METHODS OF MEDICAL AND VETERINARY TREATMENT

While the meaning to be given to 'industrial applicability' is largely left to the relevant tribunals, a notable exception is found in section 4(2)/Article 52(4).²⁴ This provides that an 'invention of a method of treatment of the human or animal body by surgery or therapy or of diagnosis practised on the human or animal body shall *not* be taken to be capable of industrial application.'²⁵ The provisions attempt to ensure that people who carry out medical or veterinary treatment should not be inhibited by patents.²⁶ There are a number of important points to bear in mind when thinking about these provisions.²⁷ Before looking at these, it is important to note that the position under EPC 2000 will be the same as under the EPC, insofar as methods of treatment and diagnosis will not be patentable. One important difference, however, is that methods of treatment and diagnosis are to be directly excluded from patentability under Article 53(c) EPC 2000, rather than on the basis of the fiction that they are not capable of industrial application, as is the case at present. It has been proposed in the 2004 Patents Bill that the 1977 Patents Act be amended to reflect the changes in EPC 2000 by dealing with methods for treatment and diagnosis as exceptions to patentability, rather than under section 4(2) as lacking industrial applicability.²⁸

3.1.1 Methods

The first point to bear in mind is that the exclusion is confined to *methods* of medical and veterinary treatment.²⁹ As such, it does not prevent the patenting of surgical, therapeutic, or diagnostic substances and compositions (such as drugs), or apparatuses or products (such as ECG machines, prosthetic ball and socket joints, or pacemakers).³⁰

3.1.2 Surgery, therapy, or diagnosis

The second point to note is that for an invention to be caught by section 4(2)/Article 52(4), it must consist of a method of *surgery, therapy, or diagnosis*. When deciding whether an invention is for method of surgery, therapy, or diagnosis the tribunals have focused on

²⁴ See also PA s. 4(1); EPC Art. 57. The content of Art. 52(4) is replicated in the EPC: 2000. the chief difference is that methods of medical and veterinary treatment are now dealt with as exceptions to patentability. EPC 2000, Art. 53(1). See also Art. 1, item 18 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e. See also Base Proposal for the Revision of the European Patent Convention, CA/100/00 e (2000), 42. Otherwise, the exclusion remains the same. This has been adopted in the Patents Bill 2004, cl. 1.

²⁵ TRIPS Art. 27(3) allows members to exclude from patentability diagnostic, therapeutic, and surgical methods for the treatment of humans or animals.

²⁶ *Wellcome/Pigs I*, T116/85 [1989] EPOR 1; [1989] OJEO 13; *Telectronics/Pacer*, T82/93 [1996] EPOR 409; *See-Shell/Blood flow*, T182/90 [1994] EPOR 320. A technique that results in death of the animal does not fall within the exception.

²⁷ See generally, D. Thums, 'Patent Protection for Medical Treatment: A Distinction between Patent and Medical Law' (1996) 27 *IIC* 423; G. Burch, 'Ethical Considerations in the Patenting of Medical Processes' (1987) 65 *Texas LR* 1139 (under US law, methods of medical treatment are patentable).

See also *Consultation on the proposed Patent's Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), paras. 19, 20. Minor changes will also be made to bring the language in the 1977 Act closer to that used in EPC 2000.

²⁹ PA s. 4(3); EPC Art. 52(4).

³⁰ T712/93 [1998] OJEO (special edn.) 12; *Visx v. Nidek* [1999] FSR 405, 465.

the skill and knowledge that is needed for a person to use the method in question. Thus, if an activity needs to be carried out by or under the supervision of a doctor or a vet,³¹ exercising medical or veterinary skills,³² it is more likely to fall within the exclusion.³³ If the invention can be used by someone such as an engineer³⁴ or a farmer,³⁵ it is more likely to fall outside the scope of the exclusion. While the skill and knowledge needed to perform the invention in question may provide a useful indication as to whether it is excluded, it is not a definitive factor.³⁶ Instead, it is necessary to look at the overall effect or purpose of the invention and ask whether it was for surgery, therapy, or diagnosis.³⁷ Thus, the purpose and inevitable effect of an invention are more important than the question of who is the practitioner of the method.³⁸

‘Surgery’ has been defined as the branch ‘of medicine concerned with the healing of disease, accidental injury or bodily defects by operating on the living body’. It is said to include both ‘conservative (non-invasive) procedures such as repositioning and the far more numerous operative (invasive) procedures using instruments’.³⁹ On the basis that surgery is limited to processes that give ‘priority to maintaining life or health of the human or animal body on which they are performed’, it does not include processes whose end result is the death of living beings under treatment, either deliberately or incidentally.⁴⁰

‘Therapy’ has also been interpreted broadly to include *prophylactic* treatments with a view to maintaining health by preventing ill effects that would otherwise arise.⁴¹ It has also been held to include *curative* treatments that aim to cure diseases or bodily malfunctions that have already arisen.⁴² On the basis that pregnancy and lice infestation are not diseases, inventions for methods of treatment that prevented pregnancies⁴³ and removed lice were not caught by the exclusion.⁴⁴ However, a method of immunizing against coccidiosis⁴⁵ and

⁴³ *Schering's Application* [1971] RPC 337; *British Technology Group/Contraceptive Method*, T74/93 [1995] EPOR 279. But a method of contraception which includes a therapeutic method will be unpatentable even where that therapy is only present to counteract the side-effects of the contraceptive method: *General Hospital/Contraceptive Methods*, T820/92 [1995] EPOR 446.

⁴⁴ *Salimen/Pigs III*, T58/87 [1989] EPOR 125.

⁴⁵ *Unilever's (Davis) Application* [1983] RPC 219.

a method of controlling mange in pigs were held to relate to diseases and, as such, were excluded as methods of treatment by therapy.⁴⁶ The exclusion of therapeutic methods applies irrespective of whether the disease or bodily malfunction that the invention seeks to prevent or cure is internal or external, and whether or not it is a temporary or a permanent infliction.⁴⁷ It also applies irrespective of the origin of the pain, discomfort or incapacity that the therapy seeks to remedy.⁴⁸ Therapeutic methods (which are seen as being carried out for noble purposes) are often contrasted with cosmetic methods (which are carried out for less important reasons). As such, a method that leads to weight loss for the purpose of curing or preventing obesity would fall within the exclusion.⁴⁹ In contrast, a method for weight loss that is undertaken for cosmetic purposes would not and, as such, may be patentable.⁵⁰

For many years, *diagnostic methods* was construed more narrowly than surgery and therapy. Based upon the idea that medical diagnosis involved a number of steps (recording the case history, observing, palpating, and listening (or ausculting) to various parts of the body, carrying out various medical and technical examinations and tests), the Board of Appeal held in *Bruker/Non-invasive measurement* that for an invention to be classified as a non-patentable diagnostic method, *all* of the different steps had to present.⁵¹ This meant that the exclusion only applied where an invention made it immediately possible to decide on a particular course of medical treatment. One of the consequences of this was that if an invention only provided interim or preliminary results (i.e. data or information), it was not excluded from patent protection.⁵² This meant that many diagnostic methods were not caught by the exclusion despite the express language of the EPC and the 1977 Act. It also meant that common diagnostic procedures practised on the human body, such as percussion or palpitation, could, in principle, be patented because they did not constitute a complete diagnosis.⁵³ Problems of this nature, and the fact that the standard applied to diagnostic methods was different than the one applied to methods of surgery or therapy, led the Board of Appeal in *Cygnus* to overturn the Board's earlier approach in *Bruker/Non-invasive measurement*.⁵⁴ Based upon the discovery that the level of glucose below the skin correlates with the level of glucose in the blood, the application in *Cygnus* was for a non-invasive method of sampling (and analysing) substances from a human or animal body. In effect, the invention monitored sugar levels from the skin thus avoiding the need for the pricking of fingers to collect blood: a particular problem for diabetics who have more or less continuously to monitor blood glucose levels. Had the Board followed *Bruker*, the invention would have been *prima facie* patentable, since it did not involve all the steps in

⁴⁶ *Wellcome/Pigs I*, T116/85 [1988] EPOR 1; [1989] OJEP0 13. Fatigue is not a disease: T469/94 (1998) OJEP0 12.

⁴⁷ *Wellcome/Pigs I*, T116/85 [1988] EPOR 1; [1989] OJEP0 13.

⁴⁸ *Rorer/Dysmenorrhea*, T81/84 [1988] EPOR 297; [1988] OJEP0 207.

⁴⁹ A method of treating plaque, since it inevitably had a beneficial effect, was held not patentable: *ICI/Cleaning plaque*, T290/86 [1991] EPOR 157.

⁵⁰ A cosmetic method is patentable unless it inevitably has a therapeutic effect. It was therefore possible to patent a method of dieting involving suppression of appetite, since the effect would not necessarily have been positive: *Du Pont/Appetite suppressant*, T144/83 [1987] EPOR 6; [1986] OJEP0 301.

⁵¹ *Bruker/Non-invasive measurement*, T385/86 [1988] EPOR 357, paras. 3.2–3.4.

⁵² *Bruker/Non-invasive measurement*, T385/86 [1988] EPOR 357. For criticisms of this decision see R. Moufang, 'Methods of medical treatment under Patent law' (1993) 24 *IIC* 18, 46–47.

⁵³ *Cygnus/Device and method for sampling substances*, T964/99 [2002] OJEP0 4, 13.

⁵⁴ *Ibid.*

medical diagnosis (it only provided information that may have subsequently used to make a diagnosis). However, the Board rejected the reasoning of *Bruker* (and subsequent decisions) and held that the patent was a method of medical diagnosis and as such was excluded from patentability.

Drawing upon the French text of the EPC, the Board in *Cygnus* said that the EPC ‘does not favour an interpretation limiting the exception to patentability encompassing all steps required for reaching a medical diagnosis’.⁵⁵ Instead the Board said that ‘any medical activity concerning the gathering of information in the course of establishing a diagnosis qualifies as a diagnostic method’. On the facts the Board said that the taking of a body sample for the purpose of medical examination belongs to a fundamental diagnostic activity: ‘the claimed step of sampling a substance *relates* to diagnosis and constitutes in this context an essential diagnostic measure practiced on the living human or animal body . . . such a step is to be regarded as an essential activity pertaining to diagnosis’.⁵⁶ It is not clear whether this decision will be followed in the United Kingdom. What is clear, however, is that it will be welcomed by those worried about the negative impacts that patent law may upon health care and delivery (exemplified most famously by the patents granted to Myriad over both the genes that highlight the propensity to breast cancer and the diagnostic tests that use such genes).

3.1.3 Treatment *on* or *in* the body

The third point to note is that the exclusion of inventions for methods of medical or veterinary treatment only applies to methods of treatment that are practised *on*⁵⁷ or *in*⁵⁸ the human or animal body. The exclusion does not apply to methods practised on substances that are removed from the body.⁵⁹ Thus, the treatment of blood for storage in a blood bank or diagnostic testing of blood samples is not excluded. Similarly, operations that occur at a cellular level (such as the incorporation of an oncogene into the fertilized egg of an animal) are not performed on or in the body.⁶⁰ In contrast, a treatment of blood by dialysis, where the blood is returned to the same body, would be excluded.⁶¹ While an invention may interact with or relate to a human or animal body, it will only be excluded if it is classed as a form of treatment on the body. In line with this, the Technical Board of Appeal held that ‘a method and apparatus for preventing piglets from suffocating’ by blowing hot air under a mother pig to discourage piglets from going under her was patentable. While the invention protected the body, it was still patentable because the method was not practised *on* the body of the piglet.⁶²

3.1.4 Direct treatment

In order for a patent to fall within the therapeutic method exclusion, it is necessary to show that the invention constitutes a *direct* treatment by therapy. This means, for example, that while the programming of a pacemaker to control the way it uses energy undoubtedly

⁵⁵ *Ibid.*, 15. ⁵⁶ *Ibid.*, 17. ⁵⁷ *Salminen/Pigs III*, T58/87 [1989] EPOR 125.

⁵⁸ *Siemens/Flow measurement* [1989] EPOR 241; T254/87 [1989] OJEP 171.

⁵⁹ The treatment of body tissues or fluids after removal from the body is not excluded: *EPO Guidelines* C-IV, 4.3.

⁶⁰ *Harvard/Onco-mouse* [2003] OJEP 473, 491 (OD). It added that ‘the incorporation of the oncogene into the genome is a method which is neither surgical nor therapeutic nor diagnostic in nature’.

⁶¹ *EPO Guidelines*, C-IV, 4.3. See *Baxter/Blood extraction method*, T329/94 [1998] EPOR 363, 367.

⁶² *Salminen/Pigs III*, T58/87 [1989] EPOR 125; *Thompson/Cornea*, T24/91 [1996] EPOR 19.

has an indirect effect on the human body, it was held to be more concerned with improving an apparatus, rather than health.⁶³ While it is difficult to draw the line between direct and indirect effects, a patent is more likely to fall within the exclusion if it can be shown that there is a 'corresponding functional link' between the invention and human or animal health.⁶⁴ That is, a method does not fall within Article 52(4) 'if there is no functional link and hence no physical causality between its constituent steps carried out in relation to a therapy device and the therapeutic effect produced on that body by that device'.⁶⁵ In a similar vein, it has been held that to fall within the exclusion, the invention must target a particular illness or disease,⁶⁶ and also provide a 'defined, real treatment' of a pathological condition.⁶⁷

3.1.5 Two or more uses

So long as an application has a use which falls within the scope of section 4(2)/Article 52(4) it will be excluded. This is the case even if the invention has other uses that do not fall within the exclusion.⁶⁸ Thus, an application for a method of cleaning plaque from human teeth which had both an (excluded) therapeutic effect and a (non-excluded) cosmetic effect was excluded from patentability by Article 52(4) on the basis that the application claimed a therapeutic treatment.⁶⁹ While the presence of a surgical step in a multi-step method of the treatment of the human or animal body normally confers a surgical character on the method, there may be some cases where this is not the case.⁷⁰ On the basis that methods that have a destructive purpose do not fall within the aim of section 4(2)/Article 52(4), surgery is limited to processes that give 'priority to maintaining life or health of the human or animal body on which they are performed'.⁷¹ As such, a process that has as its end result the death of a living thing (either deliberately or incidentally) will not be caught by the exclusion: even if the process involves a surgical step.

3.1.6 Limits

While section 4(2)/Article 52(4) imposes important limits on the types of medical and veterinary inventions that may be patented, it would be wrong to assume from this that all medical and veterinary inventions are excluded from the scope of patent protection. The reason for this is that the potential scope of the exclusion is restricted by the fact that it must be read in light of section 2(6)/Article 54(5). While we deal with this in more detail

⁶³ *Ela Medical*, T789/96 [2002] OJEP0 364, 369 (para. 2.2.2.1).

⁶⁴ *Ela Medical*, T789/96 [2002] OJEP0 364, 369–70.

⁶⁵ *Siemens*, T245/87 [1989] OJEP0, 171, (para. 3.2.3).

⁶⁶ *Sequus Pharmaceuticals*, T4/98 [2002] OJEP0 139, 149–50.

⁶⁷ *Eli Lilly/Serotonin receptor*, T241/95 [2001] OJEP0 103, 109 (para. 3.1.2); See also *Norsk Hydro*, T135/98 (20 Nov. 2002) (a feed mixture for optimally satisfying the nutritional requirements of farmed fish was not a medical treatment practised on an animal body).

⁶⁸ Unlike PA s. 1(2)/EPC Art. 52, the exclusion is not confined to methods of treatment 'as such'.

⁶⁹ *ICI/Cleaning plaque*, T209/86 [1991] EPOR 157; [1992] OJEP0 414; *Du Pont/Appetite suppressant*, T144/83 [1986] OJEP0 30; *General Hospital/Contraceptive methods*, T820/92 [1995] EPOR 446; *Meiji/Feeds*, T438/91 [1999] EPOR 452; *Telectronics/Pacer*, T82/93 [1996] EPOR 409 (if hybrid claims include a feature within the exception, the whole is unpatentable).

⁷⁰ *See-Shell/Blood flow*, T182/90 [1994] EPOR, 320; EPO Guidelines C-IV, 4.3.

⁷¹ *Georgetown University/Pericardial access*, T35/99 [2000] OJEP0 447, 451. This is in contrast to processes whose end result is the death of living things 'under treatment' either deliberately or incidentally.

later,⁷² it is enough to note that these provisions have been construed in such a way that they permit the patenting of uses of known substances for the *manufacture* of a medicament for the treatment of a particular disease.⁷³ As we will see while the so-called second medical use patents continue to undermine the scope of the methods of medical and veterinary treatment exception, recent cases suggest (at least in relation to dosage regimes) that this situation has changed.

As section 2(6)/Article 54(5) only apply to medical *methods* which use substances or compositions, the exclusion of methods of medical and veterinary treatment still applies where apparatuses and objects are used. The residual scope of the exclusion was reaffirmed by the Appeal Board of the EPO when it resisted attempts to extend the scope of Article 54(5) beyond the use of substances and compositions to include the surgical use of an instrument.⁷⁴

4 EXCLUDED SUBJECT MATTER

Up until 1977, for a patent to be valid it was necessary to show a ‘manner of new manufacture’. This phrase, which was first used in the 1624 Statute of Monopolies, proved to be a remarkably versatile and flexible tool which enabled patent law to adapt to and accommodate many of the technological and scientific changes that have taken place over the last two and a half centuries. The passage of the 1977 Patents Act saw a dramatic change in the way in which British patent law determined what was patentable subject matter. The reason for this was that unlike previous legislation, neither the 1977 Patents Act nor the EPC upon which it is based contains a definition of the invention.⁷⁵ Nor do they expressly require that applicants disclose an invention in order to be patentable. Instead, the 1977 Patents Act and the EPC contain a non-exhaustive list⁷⁶ of creations which were deemed *not* to be inventions.⁷⁷ To this end section 1(2) (which is the equivalent of Article 52) provides:

It is hereby declared that the following (among other things) are not inventions for the purposes of this Act, that is to say, anything that consists of:

- (a) a discovery, scientific theory or mathematical method;
- (b) a literary, dramatic, musical or artistic work or any other aesthetic creation whatsoever;
- (c) a scheme, rule or method for performing a mental act, playing a game or doing business, or a program for a computer;

⁷² See below at pp. 458–63.

⁷³ *ICI/Cleaning plaque*, T290/86 [1991] EPOR 157. For PA s. 2(6)/Art. 54(3) to operate, the use must fall within PA s. 4(2)/Art. 52(4): *Nycomed/Contrast agent for NMR Imaging*, T655/92 [1988] EPOR 206.

⁷⁴ In response to an attempt to patent a second use of a surgical instrument, the Appeal Board said ‘a surgical use of an instrument is not analogous to a therapeutic use (of a medicament) . . . since the former is not consumed in the application and could be repeatedly used for the same or even other purposes as well . . . medicaments on the other hand are expended in the process of use and thus have a once for all utility’. *Codman/Second surgical use*, T227/91 [1994] OJEP 491; [1995] EPOR 82.

⁷⁵ Under s. 101 of the 1949 Patents Act inventions were defined by the phrase ‘manner of manufacture’.

⁷⁶ See *Lux Traffic v. Pike Signals* [1993] RPC 107, 137ff.; *Christian Francheries/Traffic regulations*, T16/83 [1988] EPOR 65.

⁷⁷ G. Kolle, ‘The Patentable Invention in the EPC’ (1974) 5 *IIC* 140, 144.

(d) the presentation of information;

but the foregoing provisions shall not prevent anything from being treated as an invention for the purposes of this Act only to the extent that a patent or application for a patent relates to that thing as such.

While the decision not to require the existence of an invention as an express requirement for patentability marked an important change in British patent practice, section 1(2) (and Article 52) effectively codified the picture of the invention which had built up in Britain (and most other EPC countries) prior to 1977.⁷⁸

With the exception of the exclusion of computer programs, what the various factors excluded from protection share in common is that they are abstract, intellectual, and non-technical in nature.⁷⁹ Lurking behind the categories of subject matter excluded from protection is an image of the invention as something that is concrete and technical in character. Whereas an invention leads to a practical concrete result, this is not the case with a discovery, a mathematical method, or a scientific theory. Neither is it the case with a scheme, rule, or method for performing a mental act, playing a game, or doing business, or the presentation of information: activities that are seen to be abstract and intellectual in nature and thus not patentable.

While most of the material listed in section 1(2)/Article 52(2) is excluded because it is abstract and non-technical, this is not the case with computer programs which were excluded because it was thought at the time the EPC was drafted that they were better protected by copyright law.⁸⁰ As we will see, a lot of time and effort has subsequently been expended attempting to undo this decision.

4.1 AN INVENTION AS A POSITIVE REQUIREMENT OF PATENTABILITY?

Despite the absence of any formal requirement to show the existence of an invention as a precondition for patentability, a number of recent decisions in the UK and the EPO have suggested that for an invention to be patentable it is necessary to show that the application discloses an invention.⁸¹ In the UK, support for this view comes from the decision of *Genentech v. Wellcome* where the Court of Appeal said that it was an essential requirement which ‘must be satisfied before a patent can properly be granted . . . that the applicant has made an “invention”’.⁸² More recently, the question of whether the existence of an invention was a prerequisite for patentability was touched upon in the House of Lords decision of *Biogen v. Medeva*. While Lord Mustill suggested that the requirement that there be an invention may be of relevance in the future, the question was left unanswered.⁸³ As such,

⁷⁸ Because the exceptions were intended to harmonize existing laws, pre-1977 case law has been treated as of persuasive value when interpreting the exclusions: *Gale’s Application* [1991] *RPC* 305. Over time pre-1977 decisions have been replaced by decisions of the EPO and other member states.

⁷⁹ The exclusion of literary, dramatic, musical, and artistic works under PA s. 1(2)(b) is also explained by the fact that the subject matter is protected by copyright and designs law.

⁸⁰ G. Kolle, ‘The Patentable Invention in the EPC’, (1974) 5 *IIC* 140, 147–8.

⁸¹ *EPO Guidelines*, C-IV, 1.1, 2.2; EPC rr. 27 and 29.

⁸² *Genentech’s Patent* [1989] *RPC* 147, 262 (Mustill LJ). Mustill LJ based his arguments on the wording of PA s. 1(2), EPC Art. 52 and the *EPO Guidelines* C-IV, 1.1, and 2.2.

⁸³ *Biogen v. Medeva* [1997] *RPC* 1, 31 (Lord Mustill), cf. Lord Hoffmann, 42.

the only issue that applicants currently need to concern themselves with in this context is whether their invention falls within the scope of the subject matter excluded by section 1(2) and Article 52(2).⁸⁴

5 IS THE INVENTION EXCLUDED BY SECTION 1(2)/ARTICLE 52?

The question of whether an invention is denied patent protection on the basis that it falls within one of the excluded categories listed in section 1(2)/Article 52 plays an important role in determining the types of inventions protected by patents. The law in this area is currently in a state of flux. In part this is an inevitable consequence of the fact that law has to pass judgment over complex and rapidly changing technologies. Another reason for the uncertainty is that this area of law has become caught up in a power struggle between the institutions of the European Union and the EPO as to who controls the future direction of patents in Europe. There is also an ongoing pressure for the threshold for patent protection to be lowered in Europe to ensure that is on par with that provided in the USA (where non-technical business methods are patentable). At the same time, there is a growing concern about the number of trivial patents that have been granted (particularly for computer-related inventions) and the breadth of many gene-based patents.

While all these factors have played their part in muddying the waters, perhaps the single most important reason for the complexity that we now face is because two different approaches are used when deciding whether an invention falls foul of section 1(2)/Article 52. The first, which we will call the '*contribution approach*', is used in the United Kingdom and was used at the EPO until 2000. The second approach, which we call the '*Pension Benefits Approach*', was first suggested by the Technical Board of Appeal in the *Pension Benefit Systems Partnership* decision.⁸⁵ While focusing on the patentability of a business method invention, the decision has broader consequences for the way section 1(2)/Article 52 is applied. Importantly, the *Pension Benefits Approach*—which been followed in one Patent Office decision in the UK⁸⁶ and incorporated into the EPO Guidelines for Examination⁸⁷—has been mooted as a possible solution to some of the problems facing European patent law. While there are many similarities between the two approaches, there are enough differences to warrant them being looked at separately.

5.1 CONTRIBUTION APPROACH

In considering whether an invention falls within the scope of section 1(2)/Article 52 under the contribution approach two separate questions need to be asked. First, what is the subject matter of the application? Second, does the subject matter as characterized

⁸⁴ EPC Art. 52 is repeated in EPC 2000, Art. 53(2). There are no substantive changes to the patentable subject matter: Art. 1, item 17 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e.

⁸⁵ *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP 441 (TBA).

⁸⁶ *John Edward Rose*, 0/075/01 (14 Feb. 2001) (Patent Office).

⁸⁷ See *EPO Guidelines C-IV*, 2; C-IV, 9.5 (amended as of 31 Aug. 2001). See 'Notice from EPO' [2001] OJEP 464.

fall within one of the excluded categories? We will deal with each of these questions in turn.

5.1.1 Characterizing the invention

The first question that needs to be asked when considering whether an invention falls within the scope of section 1(2)/Article 52 is what is the subject matter of the application. That is, what is the invention? While this may appear to be a relatively inconsequential question, it has proved to be crucially important in determining the validity of many patents.

(i) *A mixture of patentable and non-patentable elements.* One of the first questions that arose in relation to section 1(2)/Article 52 was what happens if an application contains a mixture of both excluded and permitted features? What should be done, for example, if an invention includes as one of its elements a discovery or a computer program which is expressly excluded under section 1(2)/Article 52 as well as other non-excluded elements? Initially, discussions in this area focused on the meaning that should be given to the proviso to section 1(2)/Article 52 which states that the listed exclusions only apply to the extent that the alleged invention relates to that thing *as such*. Given the ambiguous nature of the proviso, it is not surprising that it lent itself to a number of different and sometimes conflicting styles of interpretation.⁸⁸

Despite initial doubts, courts in the UK and at the EPO (even after *Pension Benefits*) have come down in favour of what is known as the whole-contents approach to interpretation.⁸⁹ This means that when considering whether an invention falls foul of section 1(2)/Article 52, the courts disregard the fact that the invention has as one of its elements say a computer program or a discovery and focus instead on the invention *as a whole*. In so doing the courts have reinforced the fact when determining whether an invention is patentable it is not necessary to compare the non-technical and the technical elements of the invention. That is, it is irrelevant that an invention is made up of a mixture of technical and non-technical elements.⁹⁰

(ii) *What is the invention?* While the whole-contents approach offers guidance in situations where a patent is made up of a mixture of excluded and non-excluded elements, it offers little assistance on the more general question as to how the invention ought to be interpreted. In thinking about the nature of the invention a number of different approaches could have been adopted. The courts could, for example, have attempted to distil the essence or kernel of the invention from the claims themselves. Alternatively, they could have focused on the novel elements of the invention.

One of the interesting features of the way the invention has been interpreted by courts in the UK and the EPO (pre-*Pension Benefits*) under the contribution approach is that

⁸⁸ It was initially suggested that when determining whether an invention falls within PA s. 1(2)/EPC Art. 52, the courts should separate the excluded and non-excluded elements of the application and focus only upon the non-excluded components. *Merrill Lynch's Application* [1988] RPC 1.

⁸⁹ In the UK see *Merrill Lynch Application* [1989] RPC 561 (CA); *Genentech v. Wellcome* [1989] RPC 147, 204–14, 224 ff. At the EPO see *Vicom/Computer-related invention*, T208/84 [1987] OJEP0 14; [1987] EPOR 74; *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72; [1988] OJEP0 19.

⁹⁰ *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72; [1988] OJEP0 1; *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441, 450 (TBA); Cf. *IBM/Text clarity processing*, T38/86 [1990] EPOR 606.

rather than attempting to identify the essential nature of the invention, they have focused on what the invention does. That is, when determining whether an invention falls within section 1(2)/Article 52 the courts have concentrated upon the *contribution* or *effect* that the invention has upon the known art (or knowledge in the area in question).

5.1.2 Does the invention fall within the scope of section 1(2)/Article 52?

Once the invention in question has been identified, it is then possible to turn to the question of whether it falls within the scope of section 1(2)/Article 52.

In situations where the invention clearly falls within one of the excluded categories set out in section 1(2)/Article 52, it will not be patentable. This can be seen, for example, in *Merrill Lynch's Application*⁹¹ where the Court of Appeal was called upon to consider whether an automatic share-trading system, operated using a computer program, fell within the scope of section 1(2)(c). While the invention had a computer program as one of its elements, the court said that as the invention needed to be looked at as a whole, this did not necessarily mean that the patent was invalid. Rather what the court needed to ask was whether the invention viewed as a whole made a contribution in a field not excluded from patentability. Unfortunately for the applicants, the Court of Appeal found that the contribution made by the invention was limited to the field of business (explicitly excluded by section 1(2)(c)) and, as such, was unpatentable.⁹²

Although in many situations it will be relatively easy to determine whether an invention falls within the scope of section 1(2)/Article 52, in some circumstances this is not the case. One reason why it is often difficult to determine whether an invention falls within the scope of section 1(2)/Article 52 is that applicants may attempt to describe an invention which falls foul of section 1(2)/Article 52 in such a way that it appears to fall outside the scope of the excluded categories. Faced with the possibility of applicants dressing non-patentable inventions up in a way that makes them appear as if they are patentable, the courts have responded by ignoring the *form* of the claims and focusing instead on the *substance* of the invention.⁹³

In the twenty or so years in which tribunals in the UK and the EPO have been thinking about how applications which are only made up of excluded subject matter are to be distinguished from inventions which only happen to include as one of their components something such as a computer program and are therefore *prima facie* patentable, a somewhat surprising situation has developed. This is that in determining whether an invention falls within the scope of section 1(2)/Article 52(2) the courts have ignored the often difficult question of whether the invention is, for example, a computer program or a mathematical method. Instead, they have asked whether the invention-as-claimed is 'technical'. If the invention exhibits technical character, or the problem that the invention solves is technical,⁹⁴ this is taken to mean that it falls outside the scope of section

⁹¹ [1989] RPC 561 (CA). ⁹² *Merrill Lynch's Application* [1989] RPC 561, 569.

⁹³ *Ibid.* (Fox LJ); *IBM/Document abstracting and retrieving*, T22/85 [1990] OJEPO 12; [1990] EPOR 98, 105.

⁹⁴ *IBM/Data processor network*, T6/83 [1990] OJEPO 5; [1990] EPOR 91; *IBM/Computer-related invention*, T115/85 [1990] EPOR 107. The feature of using technical means for a purely non-technical purpose and/or for processing purely non-technical information does not necessarily confer technical character to any such individual steps of use or to the method as a whole: in fact, any activity in the non-technical branch of human culture involves physical entities and uses, to a greater or lesser extent, technical means.

1(2)/Article 52(2).⁹⁵ Conversely, the absence of technical character is treated as virtual proof that the invention falls within the scope of section 1(2)/Article 52(2) and that it is therefore unpatentable. In a sense what has happened, at least in difficult border-line cases, is that the negative criteria set out in section 1(2)/Article 52(2) have been recast in more positive terms. These specify that for an invention to be patentable it is necessary to show that it exhibits technical character or, in other words, that it provides a technical contribution to the art.

The introduction of technical character as a *de facto* non-statutory requirement for patentability owes its origin to an imaginative interpretation of Article 52 of the EPC. All the categories in Article 52(2) have in common is that they are non-technical, either because they are abstract (discoveries, scientific theories) or because they are clearly non-technical (aesthetic creations or presentations of information).⁹⁶ As Article 52(1) and (2) only exclude from protection those inventions which are non-technical, it is a short inductive leap to conclude from this that the term 'invention' relates to inventions of a technical nature. This conclusion was reinforced by the Rules and Guidelines of the EPC that clearly state that in order for an invention to be patentable it must be technical.⁹⁷

The use of technical character as a way of determining whether an invention falls within the scope of the excluded subject matter is set out in the leading EPO decision of *Vicom*.⁹⁸ In deciding that an application which related to a method of digitally filtering images using a device called an operator matrix which aimed at producing enhanced images was patentable, the Board stressed that even if the idea underlying an invention was a mathematical method it could still be patentable if the invention as a whole made a technical contribution to the known art.

While some doubts have been raised in the United Kingdom about the use of technical character as a way of distinguishing between inventions which are 'in reality' or 'in truth' patentable from those which are made up solely of excluded subject matter,⁹⁹ British courts have followed the lead of the EPO and adopted technical character as a way of determining whether an invention falls within section 1(2).¹⁰⁰ This was highlighted in the Court of Appeal in *Merrill Lynch* when Fox LJ said:

[I]t cannot be permissible to patent an item excluded by section 1(2) under the guise of an article which contains that item—that is to say, in the case of a computer program, the patenting of a conventional computer containing that program. Something further is necessary. The nature of that addition is, I think, to be found in the *Vicom* case where it was stated

⁹⁵ The mere occurrence of technical features in a claim is not enough: *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441, 450 (TBA).

⁹⁶ *Sternheimer/Harmonic vibrations*, T366/87 [1989] EPOR 131.

⁹⁷ A patentable invention must relate to a technical field: EPC r. 27(1)(b); it must be concerned with a technical problem: EPC r. 27(1)(d), and it must be characterized in the claims by means of technical features: EPC r. 29(1). *EPO Guidelines C-IV*, 1.2(ii).

⁹⁸ *Vicom/Computer-related invention*, T208/84 [1987] EPOR 74; [1987] OJEP0 14. Beyer 'Der Begriff der Information als Grundlage für die Beurteilung des technischen Charakters von programmbezogenen Erfindungen' [1990] GRUR 399.

⁹⁹ *Wang Laboratories* [1991] RPC 463, 470; *Fujitsu's Application* [1996] RPC 511, 521. The Munich Diplomatic Conference on the establishment of the EPC abstained from limiting the concept of the invention by use of 'technical' as was earlier proposed: G. Kollé 'Patentable Inventions in the EPC' (1973) 5 *IIC* 140, 145.

¹⁰⁰ Technical character has become decisive in determining whether or not a patent falls within the scope of s. 1(2). *CIPA*, para. 1.09.

'Decisive is what technical contribution the invention makes to the known art'. There must, I think, be some technical advance on the prior art in the form of a new result.¹⁰¹

While Fox LJ's language differs in certain respects from the language of the Technical Board of Appeal, the Court of Appeal accepted that the presence of technical character was sufficient to show that an invention did not relate to a disqualified matter and, as such, that it was *prima facie* patentable.¹⁰² The convergence that has been taking place between Britain and the EPO in this area received great support from the House of Lords decision of *Biogen v. Medeva* that embodies the spirit and language of the approach adopted at the EPO.¹⁰³

One of the main advantages of shifting attention towards the idea of technical character is that the courts are able to avoid the difficult task of having to define the subject matter listed in section 1(2)/Article 52(2), a task which is not only technically problematic but also one that changes in technology are likely to render obsolete. Indeed, one of the major problems with specific formulations such as section 1(2) and Article 52(2) is that because they are drafted in light of contemporary technologies they are prone to obsolescence or, at least, convoluted interpretations. Whatever advantages there may be in using technical character as a *de facto* requirement for determining whether an invention falls within the ambit of section 1(2)/Article 52(2), it still leaves us with the difficult task of having to formulate and understand what is meant by the term 'technical'. (As we will see, it is the difficulty in answering this question that led to adoption of the *Pension Benefits* approach.) It is to this question that we now turn.

(i) *Determining whether an invention is technical: physical change.* In the vast bulk of cases it is very easy to ascertain whether an invention is technical. This is because it is generally accepted that certain types of creations, such as those in the fields of mechanical engineering or organic chemistry, are technical and as such belong within the remit of patent law. This is made all the easier by the fact that applicants are required to specify the technical field into which their applications fall.

While in most circumstances it may be easy to determine whether an invention is technical, in some situations this is not the case.¹⁰⁴ Typically this arises in relation to creations which fall outside the currently accepted legal limits. This is presently the case with inventions in relation to financial systems, software-generating software, language-processing, text-editing, and computer programs. In these borderline cases, determining whether an invention is technical is often a difficult task. This problem was recently highlighted by the British Comptroller of Patents who complained that 'in practice it is often very difficult to determine whether a particular invention does as a matter of fact involve the sort of technical contribution or result alluded to in the cases'.¹⁰⁵ The difficulty of this task was borne out by the fact that while the legal studies which prompted the revision of the EPO guidelines were able to propose 'technical character' as one of the ways of determining whether subject matter was excluded from patentability, they were

¹⁰¹ [1989] RPC 561, 569.

¹⁰² *IBM/Document abstracting and retrieving*, T22/85 [1990] OJEP0 12; [1990] EPOR 98, 103.

¹⁰³ *Biogen v. Medeva* [1997] RPC 1, 34. See also *Fujitsu's Application* [1997] RPC 608 (CA).

¹⁰⁴ See J. Thomas, 'An Epistemology of Appropriation: Patentable Subject Matter after *State Street Bank* [2000] IPQ 27, 49 ff.

¹⁰⁵ *Fujitsu's Application* [1996] RPC 511, 521.

unable to provide a precise definition of what was meant by the term 'technical'.¹⁰⁶ Instead, they left the task of defining technology to the jurisprudence of the courts.

While the task of having to define what is meant by a technical creation may have been left to the respective courts, so far they have provided little direct guidance in this matter. In many cases where this issue has arisen, no indication is given as to how a decision was reached as to whether something was technical. In other cases, the tribunals have offered the equally unhelpful 'it depends on the facts of the case'.¹⁰⁷ Given that the fate of many inventions depends on the way technology is defined, it may be helpful to provide some guidance in this matter.

In determining whether an invention is technical, the courts have fallen back on the model of the invention that has long been employed in patent law.¹⁰⁸ This is one that sees the process of invention as the reduction of the abstract to the specific, or as a transformation from the general to the concrete, processes which are mediated by the inventor. In turn, this model distinguishes between creations that are abstract, intellectual, mental, undefined, and unpatentable, and those that are concrete, physical, tangible, and patentable.¹⁰⁹ Drawing upon this model of the invention, it has been held that an invention is technical and patentable if it provides or leads to a concrete, causal or non-abstract result or change in things. When translated into the context of section 1(2)/Article 52, this means that if it can be shown that the invention brought about a tangible physical change, this is taken as virtual proof that the invention is technical and that it therefore falls outside the scope of the excluded categories.¹¹⁰

The use of physical change to determine whether an invention is technical can be seen in *Vicom* where the Board of Appeal explained how unpatentable mathematical methods could be distinguished from patentable inventions:

the fact that a mathematical method or a mathematical algorithm is carried out on numbers . . . and provides a result also in numerical form, the mathematical method or algorithm being only an *abstract* concept prescribing how to operate on numbers. No direct technical result is produced by the mathematical method as such.

While abstract creations are not patentable, the Board of Appeal added that:

if a mathematical method is used in a technical process, that process is carried out on a physical entity (which may be a material object but equally an image stored as an electrical signal) by some technical means implementing the method and provides as its result a certain *change* in that entity.¹¹¹

¹⁰⁶ WG/CP/I/1.

¹⁰⁸ See *NRDC's Application* [1961] RPC 134, 142; *Rote Taube* (1970) 1 IIC 136, 137–8.

¹⁰⁹ The 'invention must belong not to the field of abstractions or speculations, but to that of practical achievement. It must concern not an abstract principle but a conception which is implemented in industry'. *Christian Francies/Traffic regulations*, T16/83 [1988] EPOR 65, 70; [1990] OJEPO 379.

¹¹⁰ The following inventions were held to be unpatentable because they did not bring about a physical change: inventions for document-abstracting (*IBM/Document abstracting and retrieving*, T22/85 [1990] EPOR 98); linguistic expression processing (*IBM/Text clarity processing*, T38/86 [1990] EPOR 606); a system for listing semantically related linguistic expressions (*IBM/Semantically related expressions*, T52/85 [1989] EPOR 454); method for automatically detecting and correcting contextual homophone errors in a text document (*IBM/Text processing*, T65/86 [1990] EPOR 181).

¹¹¹ *Vicom/Computer-related inventions*, T208/84 [1987] EPOR 74, 79.

In a move that has important ramifications for many inventions, particularly in the field of information technology, the physicalist conception of technology has been interpreted very broadly. This can be seen in the comment that 'physical entities' includes 'a real thing, i.e. an image, even if that thing was represented by an electrical signal'.¹¹² The wide definition given to physical entity can also be seen in the EPO decision of *Kock & Sterzel*. In this case, it was held that the fact that the invention controlled X-ray tubes in such a way as to ensure optimum exposure while at the same time minimising against the danger of overloading of the tube was sufficient change for the application to be deemed technical.¹¹³ Perhaps the best example of the way in which the meaning of 'physical entity' has been extended can be seen in *BBC/Colour television signal* where it was said that despite its transient character, as a TV signal could be detected by technical means it had a physical reality and therefore could not be considered to be an abstract entity.¹¹⁴ As such, it was prima facie patentable.

Although the approach being followed in the United Kingdom is less consistent than at the EPO, there are a number of cases where the physicalist model of the invention has been used to determine whether a patent falls within the scope of section 1(2).¹¹⁵ It would be premature, however, on the basis of these decisions to make any definitive comments as to the way technology is being defined in the United Kingdom. This is particularly the case in light of recent lower-court decisions which seem to be following a different agenda from that which is well established at the EPO. We must await further decisions to see if the general trend is in favour of the approach of the Technical Board of Appeal.

(ii) *Summary of the contribution approach.* The task of determining whether an invention falls within the scope of section 1(2)/Article 52 can be broken down into two steps.

- (1) It is first necessary to determine what is being claimed. This is done by:
 - (a) looking at the invention as a whole;
 - (b) disregarding the form or kind of claim and concentrating on its content; and
 - (c) identifying the contribution that the invention provides or the problem that it solves.
- (2) Once the invention has been characterized, it is then possible to determine whether it falls within the scope of section 1(2)/Article 52(2).
 - (a) If the invention clearly falls within section 1(2)/Article 52(2), it is not patentable.
 - (b) Where it is difficult to determine whether an invention falls within the scope of section 1(2)/Article 52(2), it is necessary to consider whether the invention is technical. If the invention is technical, this will be taken as showing that the invention falls outside the scope of section 1(2)/Article 52(2). The absence of technical character, however, means that the invention is not patentable.

¹¹² *IBM/Document abstracting and retrieving*, T22/85 [1990] EPOR 98, 105.

¹¹³ *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72; [1988] OJEPO 14. See also *IBM/Computer-related invention*, T115/85 [1990] EPOR 107; [1990] OJEPO 30 (an invention which automatically gave visual indications about conditions prevailing in an apparatus or system was said to resolve a technical problem).

¹¹⁴ *BBC/Colour television signal*, T163/85 [1990] EPOR 599; [1990] OJEPO (Suppl.) 19. On this basis the invention did not fall within EPC Art. 52(2)(d).

¹¹⁵ *Gale's Application* [1991] RPC 305 (CA).

(c) While no clear guidance has been given as to what the tribunals mean by a 'technical' invention, the fate of a patent is improved if it can be shown that it leads to or produces a physical change in things.

5.2 THE 'PENSION BENEFITS' APPROACH

The second approach used to determine whether an invention falls within Article 52/section 1(2) was set out in the Technical Board of Appeal decision of *Pension Benefits Systems Partnership*.¹¹⁶ The patent at issue related to a computer-related invention that performed a number of different tasks (such as calculating amounts payable and determining future assets) that were necessary in running pension benefit schemes. The patent included both method claims for controlling a pension benefits system and apparatus claims for controlling a pension benefits system. The method claim (a method of controlling a pension benefits program by administering at least one subscriber employer account who is to receive periodic payments) was made up of a series of steps, including the provision of data, determining the average age of all employees and so on. The apparatus claim was for a data processing means which was arranged to receive and process information to be used to control a pension benefits system.

The approach the Board adopted to the *method claim* in *Pension Benefits* was very similar to the approach previously adopted at the EPO and to the approach currently used in the United Kingdom. The Board began by noting that the question to be asked was whether the method claim represented a method of doing business as such. The Board then went on to characterize the invention saying that all the features of the method claim were 'steps of processing and producing information having purely administrative, actuarial and/or financial character. Processing and producing such information are typical steps of business and economic methods'.¹¹⁷ On this basis the Board concluded that the method claim was merely a method of doing business as such, and was therefore excluded from patentability under Article 52(2)(c).¹¹⁸ The mere fact that the invention operated on a computer did not turn the subject matter of the claim into an invention within the meaning of Article 52(1).¹¹⁹

While the Board found that the method claims fell foul of Article 52(1), this was not the case with the *apparatus claims*. The apparatus claims in question were for an apparatus for controlling a pension benefits system consisting of a suitably programmed computer or system of computers. In considering whether the apparatus claims were patentable, the Board made a number of general comments. The Board began by noting that there are four basic requirements of patentability under the EPC, namely, firstly that there must be an invention, and furthermore that the invention must satisfy the requirements of industrial applicability, novelty, and inventive step.¹²⁰ The Board also said that the basic test of whether there is an invention within the meaning of Article 52(1) is *separable and distinct* from the questions whether the subject-matter is susceptible of industrial application, is new and involves an inventive step.¹²¹ The Board added that 'in addition to these basic

¹¹⁶ *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441 (TBA).

¹¹⁷ *Ibid.*, 449. ¹¹⁸ *Ibid.* ¹¹⁹ *Ibid.*

¹²⁰ *EPO Guidelines* C-IV, 1.1 (The Guidelines were changed as of 31 Aug. 2001 to bring them into line with EPO case law on computer-related inventions).

¹²¹ *EPO Guidelines* C-IV, 1.2.

requirements' the EPC and the Implementing Regulations implicitly contain the further requirement that the invention must be of technical character.¹²²

The Board also considered the way that an invention should be characterized when deciding whether it complies with Article 52(1). In particular they looked at the contribution approach recommended in the EPO Guidelines for Examination (which is basically the same as the approach used in the United Kingdom). These said that when deciding whether an invention complied with Article 52(1) it was necessary to:

disregard the form or kind of claim and concentrate on its content in order to *identify the real contribution* which the subject matter claimed, considered as a whole, adds to the known art. If this contribution is not of a technical character, there is no invention within the meaning of Art 52(1).¹²³

The Board said that there were a number of problems with the contribution approach.¹²⁴ The first and most general criticism was that there 'is no basis in the EPC for distinguishing between "new features" of an invention and features of that invention which are known from the prior art when examining whether the invention concerned to be an invention within the meaning of Article 52(1) EPC'.¹²⁵ The contribution approach was also criticized because it failed to keep the Article 52(1) inquiry separate and distinct from the questions as to industrial applicability, novelty, and inventive step. The Board also said that the contribution approach confused the requirement of 'invention' with the requirements of 'novelty' and 'inventive step'.¹²⁶ Moreover, the Board believed that the contribution approach incorrectly imported issues relating to inventive step into the inquiry into whether a patent complied with Article 52(1).¹²⁷ As a result, the Board rejected the contribution approach saying that there 'is no basis in the EPC for applying this so-called contribution approach'.¹²⁸

Rather than looking at the contribution made by the invention and determining whether this was technical, the Board focused on the *character* of the invention. That is, the Board attempted to distil the essence or kernel of the invention, rather than looking at what the invention did. On the facts the Board said that what was claimed was a computer system suitably programmed for use in a particular field. Once the invention had been characterized, the next question to be decided was whether the invention exhibited the

¹²² *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441, 454; following *EPO Guidelines* C-IV, 1.2.

¹²³ *EPO Guidelines* C-IV, 2.2 (emphasis added). The revised Guidelines have taken out the reference to the contribution made by the invention.

¹²⁴ The Board said that the distinction drawn between a method of doing business and an apparatus situated to perform such a method was justified by the fact that while 'schemes, rules and methods' are non-patentable categories in the field of economy and business, but the category of 'apparatus' in the sense of 'physical entity' or 'product' is not mentioned in Article 52(2) EPC. *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441, 452 (TBA).

¹²⁵ *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441, 454 (TBA).

¹²⁶ The TBA cited the German Federal Court of Justice (BGH) decision of *Sprachanalyseeinrichtung (Speech Analysis Apparatus)* (11 May 2000). For further discussion see *Dell USA O/177/02* (24 Apr. 2002), para. 24 (Patent Office).

¹²⁷ The Board said that the contribution approach used to determine whether a patent complied with Art. 52(1) was 'so very closely related to examination with regard to the requirement of inventive step that the examining division decided in fact implicitly that there was lack of inventive step under Article 56 EPC'. *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441 455 (TBA).

¹²⁸ *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP0 441, 442 (TBA).

requisite technical character. In answering this question, the Board said that ‘a computer system suitably programmed for use in a particular field, even if that is the field of business and economy, has the character of a concrete apparatus in the sense of a physical entity, man-made for a utilitarian purpose’. Given that an invention is likely to have a technical character if it leads to or produces a physical change in things, it is not surprising that the Board said that an ‘apparatus constituting a physical entity or concrete product suitable for performing or supporting an economic activity, is an invention within the meaning of Article 52(1) EPC’.¹²⁹ That is, unlike the situation with the method claim, the apparatus claim could not be classified as a method of doing business and, as such, did not fall foul of Article 52(1). (It should be noted that the patent was refused on the basis that it lacked inventive step.)

There are a number of notable features of the *Pension Benefits* decision. The first relates to the way the invention is to be characterized when determining whether it complies with Article 52(1). In particular, the Board said that it was not appropriate to look to the contribution made by the invention. Instead, the Board looked to the character or essence of the invention. Under the *Pension Benefits* approach the contribution made by the invention is only looked at when novelty and inventive step are examined.

Second, and more subtly, the Board down played the importance of the inquiry as to whether an invention falls within the scope of Article 52(1)/section 1(2).¹³⁰ This is reflected in the Board’s comment that if ‘the formal category’ of a claim had the *potential* to be categorized as an invention an applicant would comply with Article 52(1).¹³¹ Even if this was not the intention of the Board, it is one of the consequences of the decision. This is because apparatus claims will (nearly) always be characterized as concrete physical entities when the *Pension Benefits* approach is used. Given that the existence of physical change is virtual proof that an invention is technical, the adoption of the *Pension Benefits* approach effectively means that most (if not all) apparatus claims will comply with Article 52(1). It is important to reiterate that this does not mean that such inventions are now patentable at the EPO. Rather, it means that they will be denied patentability (if at all) because they lack inventive step, rather than because they do not comply with Article 52(1).

The third and most interesting aspect of the *Pension Benefits* decision is the way it shifts the focus of attention away from the inquiry of whether a patent complies with Article 52(1) to the inquiry of whether there is an inventive step (and arguably also novelty and industrial applicability).¹³² This is spelt out clearly in the revised EPO Guidelines that say that when examining computer-related inventions it may ‘be more appropriate for the examiner to proceed directly to the questions of novelty and inventive step, without considering beforehand the question of technical character’. The shift towards inventive

¹²⁹ *Ibid.*, 453.

¹³⁰ This was not the case, however, with the method claims.

¹³¹ *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP 441, 452. It is also reflected in the comment by the German Federal Supreme Court in *Sprachanalyseeinrichtung (Speech Analysis Apparatus)* (11 May 2000) that the ‘technical character even of a know apparatus that . . . is technical cannot be denied because it does not add anything (new) to technology’. Cited in *Dell USA*, O/177/02 (24 Apr. 2002), para. 24 (Patent Office).

¹³² The ‘inference from Pension Benefit . . . is that lack of technical contribution might be a matter for inventive step rather than exclusion from patentability’. *Dell USA*, O/177/02 (24 Apr. 2002), para. 27 (M. Wilson) (Patent Office).

step is reinforced in the EPO Guidelines by the fact that when 'assessing whether there is an inventive step, the examiner must establish an objective technical problem. The solution of that problem constitutes the invention's technical contribution to the art. The presence of such technical information establishes that the claimed subject matter has a technical character and therefore is indeed an invention within the meaning of Art. 52(1)'.¹³³ The shift has also been confirmed in subsequent decisions at the EPO that have focused on inventive step rather than exclusion from patentability.¹³⁴

Reactions to *Pension Benefits* in the United Kingdom have been mixed. For example in one Patent Office decision, the *Pension Benefits* approach was used to decide whether an application for 'behaviour modification' fell within section 1(2). While the method claim (which related to the use of an externally generated stimulus to elicit post-hypnotic suggestion) was rejected on the basis that it was essentially a mental act, the apparatus claims did not fall foul of section 1(2). Following *Pension Benefits* the Hearing Officer said that although the 'method claims . . . relate to a method excluded by section 1(2), an apparatus for carrying out the method is an invention within the meaning of section 1(1)'.¹³⁵ (As in *Pension Benefits*, the application was eventually excluded on the basis that it lacked inventive step). In contrast, there have been a number of decisions at the UK Patent Office that expressly rejected the *Pension Benefits* approach.¹³⁶ The main criticism of *Pension Benefits* in these Patent Office decision is that it runs contrary to a number of Court of Appeal decisions in the United Kingdom that held that claims directed to a system (hardware or apparatus) did not avoid the terms of section 1(2).¹³⁷ The Board's decision was also criticized because it contradicts the established British view that questions of patentability should be decided as a matter of substance and not according to the actual form of the words. This has led the Patent Office to conclude on a number of occasions that it is bound to follow the contribution approach set out in UK courts, and not the approach advocated in *Pension Benefits*.¹³⁸

The nature of the change brought about by *Pension Benefit*, and the impact it has on the way a patent is examined, can be seen in the Patent Office decision of *James Shanley*, where the contribution approach and the *Pension Benefits* approach were applied to the same facts.¹³⁹ The invention in question was for demountable partitions for buildings (that included both flat and curved panels). Using the contribution approach, the Hearing Officer said that the contribution made by the invention was wholly aesthetic insofar as it

¹³⁶ See *Pintos Global Service's Application*, O/171/01 (6 Apr. 2001) (Patent Office); *Hutchins' Application* [2002] RPC 8; *James Shanley*, O/422/02 (16 Oct. 2002) (Patent Office).

¹³⁷ *Merrill Lynch's Application* [1989] RPC 561 (CA) (not possible to patent under the guise of an article which contains that item); *Fujitsu's Application* [1997] RPC 608 ('the fact that the invention was claimed as a method, a way of manufacture or an apparatus was irrelevant when the only invention claimed revolved around the use of a computer program'). Cf. 'A computer system suitably programmed for use in a particular field, even if that use, for example, the field of business and economy, has the character of a concrete apparatus, in the sense of a physical entity or product and is thus an invention within the meaning of Article 52(1)'. EPO Guidelines C-IV, 2.3.

¹³⁸ See, e.g. *Hutchins' Application* [2002] RPC 264, 270 (Patent Office); *Pintos Global Application*, O/171/01 (6 Apr. 2001), paras. 20–29.

¹³⁹ *James Shanley*, O/422/02 (16 Oct. 2002), (Patent Office).

was solely directed ‘to altering appearances’. As the invention neither solved a technical problem nor made a contribution in a non-excluded field, the application was excluded by section 1(2)(b). The Hearing Officer then went on to consider how the invention would have fared under the *Pension Benefits* approach. After reviewing the Technical Board’s decision, the Hearing Officer said that ‘what is claimed is a partition for buildings, and since this, taken as a whole and without regard to whether or not any technical contribution is involved, manifestly has a technical character . . . I would have to find that what is claimed . . . is an invention under section 1(2)’.¹⁴⁰

It is too early to ascertain the impact that the *Pension Benefits* approach will have on patent practice in Europe. The proposed *Computer-Implemented Inventions Directive*, issued in February 2002 by the European Commission, adopted a number of the features of the *Pension Benefits* approach. As with the *Pension Benefits* decision, the initial Proposal subtly changed ‘the nature of the investigation . . . from the sterile one of exceptions into one of obviousness’ (thus answering one of the major criticisms of computer-related inventions’.¹⁴¹ It also saw inventive step largely in terms of technical contribution. However, in September 2003, the European Parliament made a number of amendments to the Commission’s initial proposal. Importantly, these changes marked a shift away from the attempt to implement the *Pension Benefits* approach. Given that the Parliament, the Commission, and the Council all have to agree on the text of the Directive before it comes into force, there is a possibility that the final text of the Directive may yet endorse the *Pension Benefits* approach.

Given that applications excluded under section 1(2) via the contributions approach would invariably be excluded under the *Pensions Benefits* approach because they lack inventive step, it is unlikely that the new approach will lead to different results. The most immediate change brought about by the *Pension Benefits* approach is in the way business method inventions (and indeed all computer-related inventions) are excluded from protection. It is also possible that the new approach might lead to changes in the way applications are examined.¹⁴² It will be interesting to see whether *Pension Benefits* brings about any other changes. In part this will depend on whether or not, and if so how, the decision is followed in the United Kingdom. It will also depend on the final shape of the *Computer-Implemented Inventions Directive*. While there are many issues that are unclear, there is little doubt that this is a topic that needs to be followed closely.

¹⁴⁰ As the Officer was bound by UK decisions, he did not follow the *Pension Benefits* approach: *Ibid.*, para. 22.

¹⁴¹ T. Cook, ‘Intellectual Property Protection for Computer Programs’, BCS Review 2003; cited in Committee on Legal Affairs and the Internal Market, *Report on the proposal for a Directive* (18 Jun. 2003) FINAL A5-0238/2003 (McCarthy Report).

¹⁴² It has been suggested that one of the most valid complaints about computer programs and business method patents ‘is that they are for inventions that trivial or that they seek protection that is too broad for their scope’. Both of ‘these issues—obviousness and insufficiency—that get tested by the EPO before granting patent applications in other technologies, but in the case of applications for computer programs and business method patents, matters used never to get that far and discussion instead was limited to the rather sterile and philosophical issue of whether or not the alleged invention confers a “technical effect”’. T. Cook, ‘Intellectual Property Protection for Computer Programs’, BCS Review 2003.

6 SPECIFIC APPLICATIONS

Having looked at the general approaches that are taken to the question of whether an invention falls within the scope of section 1(2)/Article 52(2), we now move to focus on a number of more specific problems that arise in relation to the scope of the protected subject matter. In particular, we look at patent protection available for naturally occurring substances and for computer-related inventions.

6.1 DISCOVERIES AND NATURAL SUBSTANCES

Advances in genetic engineering over the last few decades have enabled scientists to isolate and replicate a host of naturally occurring substances. Given the considerable investment that has been made in this research, it is not surprising that attempts have been made to patent the results of that research. In part, the extent to which this biological research is patentable depends on whether the resulting products and processes are treated as discoveries or inventions. The reason for this is that discoveries as such are excluded from the remit of patentable subject matter.¹⁴³ However, if it can be shown that when viewed as a whole, an application that incorporates a discovery brings about a technical change, it may be patentable. This means that if a person finds a new property of a known material or article, this will be treated as an unpatentable discovery. However, if that person puts the property to a practical use, the invention may be patentable. For example, the discovery that a known material is able to withstand mechanical shock would not be patentable. However, a railway sleeper made from that material could well be patentable.¹⁴⁴

In thinking about the extent to which biological products and processes are patentable, it is important to bear in mind that patent law distinguishes between naturally occurring substances (unpatentable discoveries) and the products and processes which result from the human effort in isolating those substances from their natural environment (patentable inventions).¹⁴⁵ That is, a distinction is drawn between things that freely exist in nature (and can only be unearthed or discovered) and things that are artificial (and which contain the necessary degree of human intervention for the resulting product to be called an invention).¹⁴⁶

Given this, the important question that we need to consider is: what is the difference between something that is 'natural' and thus unpatentable, and something that is 'artificial' and thus potentially patentable? More specifically, given that the act of discovery and the act of invention often both involve a considerable amount of time, effort, skill, and labour, we need to ask: what type of effort is needed for an activity to be described as an

¹⁴³ PA s. 1(2)(a); EPC Art. 52(2)(a). On attempts to protect discoveries see F. Neumeyer, 'Legal Protection of Scientific Discoveries' [1975] *Industrial Property* 348; K. Beier, 'Scientific Research, Patent Protection and Innovation' [1975] 6 *IIC* 367; E. Kitch, 'The Nature and Function of the Patent System' (1977) 20 *J Law & Economics* 265, 288.

¹⁴⁴ *EPO Guidelines* C-IV, 2.3.

¹⁴⁵ See R. Whaite and N. Jones, 'Biotechnological Patents in Europe: The Draft Directive' [1989] *EIPR* 145, 149; A. White, 'The Patentability of Naturally Occurring Products' [1980] *EIPR* 37.

¹⁴⁶ For a different perspective on the issue of patenting of higher life forms see *Harvard College v. Canada (Commissioner of Patents)* [2002] SCC 76 (Supreme Ct of Canada) (rejecting an application to patent the genetically altered Onco-mouse).

artificial invention as distinct from a natural unpatentable discovery? In answering these questions, it becomes apparent that the borders between discovery and invention are far more vague and problematic than they might seem at first glance. Perhaps the best way to think about the extent to which biological inventions are patentable is to look at the different types of patents that may be granted.¹⁴⁷

(i) If a process is developed that enables a substance found in nature to be isolated and obtained from its surroundings, the *process* may be patentable.¹⁴⁸

(ii) The finding of a *substance* freely occurring in nature is a mere discovery and, as such, is unpatentable. As the Opposition Division at the EPO explained this means that the ‘discovery’ of the moon (when the Americans landed on it in 1969), the finding of a 5,000-year-old mummy in the Italian/Austrian Alps, or a new animal would not be patentable.¹⁴⁹ This is reflected in Article 5(1) of the Biotechnology Directive which says that the ‘human body, at the various stages of its formation and development, and the simple discovery of one of its elements, including the sequence or partial sequence of a gene, cannot constitute a patentable discovery’. Similar provisions exist in the 1977 Patents Act and the EPC.¹⁵⁰

(iii) If a natural substance that has been *isolated* from its surroundings can be properly characterized either by its structure, by the processes by which it is obtained, or by other parameters, the substance *per se* may be patentable. This means that as long as ‘something’ is inside a human or animal body or a plant, it is a natural element and cannot be considered to be patentable. However, once this ‘something’ is isolated from the human or animal body or a plant by means of a technical process, it becomes eligible for patent protection.¹⁵¹ This is the case even if its structure is identical to that of a natural element, since the processes used to isolate the element are technical processes.¹⁵² This can be seen in the *Relaxin* decision, which concerned claims relating to DNA sequences of a naturally occurring substance that relaxes the uterus during childbirth, which was obtained from the human ovary.¹⁵³ The Opposition Division of the EPO held that the invention was not a discovery and as such was not excluded from patentability. Following the EPO Guidelines, the Opposition Division said that as the substance Relaxin had not previously been

¹⁴⁷ As yet there has been no case directly on this point in the UK. There is little reason to doubt that the position in the UK will be the same as that at the EPO. Cf. *Chiron v. Murex Diagnostics* [1996] FSR 153, 177.

¹⁴⁸ EPO Guidelines C-IV, 2.3.

¹⁴⁹ *Howard Florey/Relaxin*, T741/91 [1995] EPOR 541, 549. It is interesting to note that plant breeders’ rights are available to those who ‘discover’ varieties, whether growing in the wild or occurring as a genetic variant, whether artificially induced or not: PVA, s. 4(3) and 4(6). Apparently the Braeburn apple was found in this way in 1952. See T. Boswell, Hansard (HC) (24 Jun. 1997) col. 717.

¹⁵⁰ See PA Sched. A2, para. 3(a) (introduced by Patents Regulations 2000 SI 2000/2037); EPC Rule 23(e)(1), Implementing Regulations to the EPC (introduced by [1999] OJEP0 437).

¹⁵¹ See Biotech. Directive Recitals 21–2. Similar arguments apply for the *purification* of a naturally occurring substance.

¹⁵² S. Sterrckx, ‘Some Ethically Problematic Aspects of the Proposal for a Directive on the Legal Protection of Biotechnological Inventions’ [1998] EIPR 123, 124–5; cf. S. Crespi, ‘Biotechnology Patents: the Wicked Animal Must Defend Itself’ [1995] EIPR 431, 432–3.

¹⁵³ (1996) 27 IIC 704, 705–6. See *Icos Corporation/Seven transmembrane receptor* [2002] OJEP0 293, 307 para. 11(i) (Opposition Division) (While ‘the V28 protein exists as a segment of the human genome and thus is a part of nature, the purified and isolated nucleic acid having that sequence does not exist in nature and thus cannot be discovered’).

recognized, that a process had been developed to obtain Relaxin and the DNA which encoded it, that the products were characterized by their chemical structure, and that the products had a use, the claims were patentable under Article 52(2).

This position is affirmed by Article 3(2) of the Biotechnology Directive (and by paragraph 2 of Schedule A2, to the 1977 Patents Act)¹⁵⁴ which provides that 'biological material that is isolated from its natural environment or produced by means of a technical process may be the subject of an invention even if it previously occurred in nature'.¹⁵⁵ More specifically, Article 5(2) of the Biotechnology Directive states that an element isolated from the human body or otherwise produced by means of a technical process, including the sequence or partial sequence of a gene, may constitute a patentable invention even if the structure of that element is identical to that of a natural element. Equivalent provisions have been introduced in the UK¹⁵⁶ and in the Implementing Regulations to the EPC.¹⁵⁷

This means that 'raw data' on the human genome (including the human DNA sequence and its variations:¹⁵⁸ human genes, partial gene sequences, the human body at various stages of its development) that are not isolated, purified or somehow produced by a technical process are not patentable.¹⁵⁹ However, if the genetic information (including the sequence or partial sequence of a gene) has been isolated from the human body or somehow produced by a technical process, it will be potentially patentable. For example, if we take the situation where a research team successfully isolates the gene responsible for migraines. While the underlying genetic information would be in the public domain, the technique used to isolate the gene (which may include complicated processes of identification, purification, and classification) would be patentable. On the basis that the isolated gene would not have been identified without the human intervention (*techné*), the isolated gene may be patented.¹⁶⁰ This would also be the case where an invention is for a transgenic plant or animal, which by definition, do not exist in nature.¹⁶¹

The *Kirin-Amgen* decision, which involved Amgen's highly valuable patent for a method of producing erythropoietin (EPO), offers another useful example of the impact that the invention/discovery dichotomy has upon patentable subject matter. EPO is the hormone that promotes the production of red blood cells, and is particularly useful in the treatment of anemia. Underlying the patent was Amgen's discovery and subsequent sequencing of the gene that produces EPO. Building on this discovery Amgen isolated and cloned the DNA sequence that produces EPO. The DNA sequence was then introduced into a host

¹⁵⁴ Introduced by Patents Regulations 2000 (SI 2000/2037), in force 28 Jul. 2000.

¹⁵⁵ Biotech. Dir. Art. 3(2); PA Sched. A2, para. 2 (introduced by Patents Regulations 2000); EPC Rule 23c(a) Implementing Regulations to the EPC (introduced by (1999) *OJEPO* 437).

¹⁵⁶ See PA Sched. A2, para. 5 (introduced by Patents Regulations 2000).

¹⁵⁷ EPC Rule 23e(2), Implementing Regulations to the EPC (introduced by (1999) *OJEPO* 437).

¹⁵⁸ This was confirmed by the joint statement by Tony Blair and Bill Clinton, 'Joint Statement to ensure that discoveries for the human genome are used to advance human health', 14 Mar. 2000.

¹⁵⁹ See S. Bostyn, 'The Patentability of Genetic Information Carriers' [1999] *IPQ* 1.

¹⁶⁰ The requirement that there be technical intervention is closely related to the requirement that the invention be non-obvious (*DSM NV's Patent* [2001] *RPC* 675, 709 (talking about obviousness over nature)) and also be industrially applicable (*Salk Institute for Biological Studies*, T338/00 (6 Nov. 2002)).

¹⁶¹ *Harvard/Onco-mouse* [2003] *OJEPO* 473 (Opposition Division) ('transgenic animals of the present invention having an artificially inserted oncogene do not exist in nature as such but are the result of a technical intervention by man', at 491).

cell (Chinese hamster ovary cell), which was used to manufacture the EPO. At first instance Neuberger J said the claim was 'ultimately to the use of information first revealed in the patent, namely, the genetic code for EPO, for the purpose of expressing EPO cells by artificial manipulation of DNA. The essence of the invention was not the artificial manipulation but the use of the information'.¹⁶² As a result, the technique used to manufacture the EPO was irrelevant. The Court of Appeal disagreed saying that Neuberger J's definition was too broad. While the Court of Appeal had no doubt that the discovery and sequencing of the gene that produced EPO was at the heart of the invention, the Court said that the gene sequence *per se* could not be claimed as the invention because it existed in nature. Instead, the Court held that what was claimed was an exogenous DNA sequence suitable for expressing EPO when introduced into a host cell. While the decision did not directly focus on discovery as patentable subject matter, it is important insofar as it exemplifies the way that the non-patentability of naturally occurring substances can influence not only the subject matter that is patentable, but also the decision as to whether a patent has been infringed.¹⁶³

While the patenting of processes used to isolate natural substances is relatively uncontroversial, the same cannot be said about the patenting of the substances that are isolated using those processes. In particular, doubts have been raised as to whether the act of isolation and characterization of a naturally occurring substance is really that different from the mere finding of the substance. As one commentator has noted 'even if a natural element is isolated from the body by technical means, this does not change the "naturalness" of the element (neither does a purification of the element)'.¹⁶⁴ However valid these arguments may be, they have been outweighed by the policy goal outlined in the Biotechnology Directive that research aimed at obtaining and isolating elements valuable to medicinal production should be encouraged by the patent system.¹⁶⁵

6.2 PATENTS AND COMPUTER-RELATED INVENTIONS

Given that computer programs are expressly excluded from patentability by section 1(2)(c)/Article 52(2)(c), it may come as a surprise to learn that many patents have already been granted for computer-related inventions.¹⁶⁶ Moreover, while when the EPC was first drafted it may have been thought that copyright rather than patent law would regulate information-technology-based creations, since 1977 the trend has been towards more and more patent protection for computer-related inventions. One of the most important

Davis, 'The Patenting of the Products of Nature' [1995] *Rutgers Computer and Technology LJ* 331; cf. S. Bostyn, 'The Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 3–4.

¹⁶⁵ Biotech. Dir., Recital 17.

¹⁶⁶ The Comptroller of the British Office reported on 2 Nov. 2000 that over 15% of the patents granted by the British Patent Office have a software element. Interview with Alison Brimelow, Patent Office News and Notices, <http://www.patent.gov.uk.snews/notices/transcript.html>. The EPO has granted over 20,000 software-related patents, and it is said that objections are made in relation to less than 1% of software-related applications. See I. Kober, 'Software Patents: An Essential Element of the European Patent System', *The Patent Office Conference on Software Patents* (<http://www.patent.gov.uk/softpat/en/index.html>).

changes that led to the liberalization of the protection offered by patents to computer-related inventions was the decision that an invention which included a computer program could be patentable so long as the invention as a whole was technical. The upshot of the acceptance of the whole contents approach was, as the Board of Appeal said in *Vicom*, that 'an invention which would be patentable in accordance with conventional patentability criteria should not be excluded from protection by the mere fact that for its implementation modern technical means in the form of a computer program are used'.¹⁶⁷

While a computer program *per se* remains unpatentable, following the acceptance of the whole contents approach, it is clear that applications which contain a computer program are *prima facie* patentable, so long as the invention as a whole makes a technical contribution to the art.¹⁶⁸ This can be seen, for example, in *Kearney*¹⁶⁹ where the Technical Board of Appeal held that a computer program that alerted machine operators when their machines needed to be repaired or a worn tool needed to be replaced solved a technical problem and as such was patentable subject matter. Similarly, in *Bosch* the Board of Appeal said that a device for monitoring computer components was technical because it considerably reduced 'the operating time of the computer component and thus undoubtedly improved the effectiveness of the device'.¹⁷⁰

In contrast, if it *cannot* be shown that an application that contains a computer program is technical, then it will not be patentable. This was the case, for example, in *Gale's Application* where the Court of Appeal decided that a ROM carrying a particular program was not distinguishable from the program itself and, as such, was unpatentable.¹⁷¹ This was reinforced in *Fujitsu's Application*¹⁷² where the Court of Appeal held that a computer-related invention that enabled chemists to produce digital models of hybrid chemicals was not patentable. The reason for this was that while the invention saved chemists a considerable amount of time and effort (in that they did not have to undergo the laborious task of building models by hand), it did not produce a technical result. More specifically the Court of Appeal said that the invention only achieved something that had previously been possible albeit at a much faster speed and more conveniently than had previously been the case. On this basis, the Court of Appeal held that the invention was for a conventional computer operating in a conventional way and as such was not patentable.¹⁷³

While the extent to which computer-related inventions will be patentable always depends on the particular application in question, it can safely be said that an ordinary computer program used in a general-purpose computer would normally be unpatentable. The reason for this is that while the implementation of the program in the computer transforms mathematical values into electrical signals, the electrical signals amount to no more than a reproduction of information which would not be regarded as bringing about a technical effect.¹⁷⁴

¹⁶⁷ *Vicom/Computer-related invention*, T208/84 [1987] EPOR 74; [1987] OJEP 14.

¹⁶⁸ This means that if it can be shown that the subject matter makes a technical contribution to the known art, patentability would not be denied merely on the ground that a computer program is involved in its implementation.

¹⁶⁹ *Kearney/Computer-related invention*, T42/87 [1997] EPOR 236, 241.

¹⁷⁴ *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72.

As well as leading to greater protection for computer-related inventions, the approach outlined in *Vicom* shifted attention away from the exclusion of computer programs *per se* towards the other heads of section 1(2)/Article 52(2); notably to methods of doing business, the presentation of information, and methods of performing mental acts. After looking at these issues, we will look at the protection offered to computer programs.

6.2.1 Methods of doing business

The approach which has been used to determine whether an application is excluded on the basis that it consists of ‘a method of doing business’ under section 1(2)(c)/Article 52(2)(c) is much the same as has been used with the other areas of section 1(2)/Article 52.¹⁷⁵ This can be seen in *Merrill Lynch’s Application*¹⁷⁶ where the Court of Appeal held that an automatic share-trading system operated by a computer program was unpatentable because it merely amounted to a method of doing business. This has been confirmed by a UK Patent Office Practice Notice¹⁷⁷ and in a number of decisions at the UK Patent Office.¹⁷⁸ A similar approach has been followed at the EPO. This can be seen in *Petterson/Queueing system*,¹⁷⁹ which concerned a patent for a system for handling customers queuing at a number of service points. The patent consisted of a turn-number allocating unit, an information unit, a selection unit, and a computer program that decided which particular turn-number was to be served at a particular service point. While the patent was rejected in Sweden, the Board of Appeal at the EPO held that the claimed apparatus was clearly technical in nature and thus patentable. Although the invention was used in a business context, a telling factor in the Board’s decision to uphold the validity of the patent was that their finding that the essence of the invention lay in the way the elements of the system were combined.¹⁸⁰ More specifically, the validity of the patent was upheld

¹⁷⁵ See *Trilateral Report on Comparative Study on Business Method Related Inventions* (14 June 2000) for a summary of approaches at EPO and US and Japanese Patent Offices. H. Hanneman, ‘The Patentability of “Methods of Doing Business”’ [2000] *epi Information* 16; D. Booton and P. Mole ‘The Action Freezes? ¹⁷⁷ Patent Office Practice Notice, *Patents Act 1977: Interpreting section 1(2)* (24 Apr. 2002) [2002] *RPC* 40. (Stressing that technical contribution is the basis for deciding patentability and in so doing rejecting the view that ‘some excluded things cannot be patentable even if a technical contribution is present’. This means that ‘inventions which involve a technical contribution will not be refused a patent merely because they relate to business methods or mental acts’).

¹⁷⁸ The following applications were refused at the UK Patent Office on the basis that they were business methods: web-based on-line user system for ordering computer equipment—*Dell USA* O/432/01 (4 Oct. 2001); system for exchange of information between providers and enquirers—*Pintos Global Services* O/171/01 (6 Apr. 2001); a system for automating the ordering of food in a cafeteria—*Fujitsu Ltd*, O/324/03 (23 Oct. 2003); method for allowing users to buy personalized financial products in the Internet—*Accucard Ltd*, O/145/03 (29 May 2003); a computer system for handling conflicting demands for resources, such as booking of meeting rooms—*Fujitsu Ltd* O/317/00 (23 Aug. 2000).

¹⁷⁹ T1002/92 [1995] *OJEPO* 605; [1996] *EPOR* 1; See also *Texas Instruments/Language-understanding system* T236/91 [2000] *EPOR* 156; *Fujitsu’s Application* (23 Aug. 2000) (O/317/00) (re computerized system for resolution of conflicting database entries (room or flight bookings) according to predetermined priorities).

¹⁸⁰ *NAI/Bagging plant* [1993] *EPOR* 517 (claims were allowed to a computer method which involved weighing and bagging on the quayside material transported in bulk by ship, because it used technical equipment to achieve a technical end (the production of sealed weighed bags of materials)). See also *Pension Benefit Systems Partnership* T931/95 [2001] *OJEPO* 441 (TBA) (claim for method of controlling a pension

because the problem that the invention solved related to the way the components of the system interacted: which was seen as a technical rather than a business problem.¹⁸¹

The possibility of patenting business method inventions at the EPO received a boost as a result of *Sohei* decision where the Technical Board of Appeal suggested that 'business' ought to be construed narrowly.¹⁸² While the Board accepted that inventions that related to personnel management would be caught by the exclusion, they suggested that the management of manufacturing processes might not fall within the excluded category. If followed, this would further limit the scope of the exclusion. The Board of Appeal also suggested that the technical element of an invention might be implicit within the invention.¹⁸³ The possibility of patenting business method inventions at the EPO was further enhanced as a result of *Pitney Bowes*, where the Technical Board of Appeal said that an invention that improved mail processing was not excluded on the basis that it was a business method. In ignoring the need to show technical character, the Board said that 'the skills exercised in solving the problem addressed by this invention are those of a person skilled in the art of mail sorting, not those of a manager or businessman'.¹⁸⁴ As a result, the Board held that the invention was not a method of doing business and, as such, was not caught by Article 52(2)(c).

In thinking about the protection available for methods of doing business, it is important to keep in mind the comments made above about *Pension Benefits Systems*.¹⁸⁵ In particular it is important to recall that the approach adopted by the Technical Board of Appeal to the method claims was the same as is used for other types of inventions. By rejecting the claims on the basis that they were all limited to non-technical business methods (because they were administrative, actuarial or financial in nature), the Board reinforced the current position at the UK and the EPO. That is, a business method invention is only patentable if it can be shown that it has technical character. Given that the corresponding patent application was granted in the United States, the decision also highlights the difference in approach between Europe and the US in relation to patent protection for business method inventions.¹⁸⁶ Given the relaxed attitude towards apparatus claims at the EPO, it is likely that many method claims will be dressed up to appear as

benefits program was rejected on the basis that all the features were for processing and producing information having purely administrative, actuarial and/or financial character).

¹⁸¹ In the USA, see *State Street Bank & Trust v. Signature Financial Group* 149 F. 3d 1368 (1998). The Federal Circuit Court of Appeals (23 Jul. 1998) said that 'since the 1952 Patent Act, business methods have been, and should have been, subject to the same legal requirements (utility, novelty, non-obviousness, disclosure) for patentability as applied to any other process or method' so that a patent application relating to the transformation of data, representing discrete dollar amounts, by a machine, through a series of mathematical calculations into a final share price, constitutes a practical application of a mathematical algorithm, formula or calculation, and is thus patentable subject matter. There is no exception for 'methods of doing business'.

¹⁸² *Sohei/General-purpose management system*, T769/92 [1996] EPOR 253, 258. *Sohei* 'is generally acknowledged to have adopted an even more software-friendly approach in assessing patentability'. I. Kober (President of the EPO), 'Software Patents: An Essential Element of the European Patent System', Patent Office, Conference on Software Patents (<http://www/patent.gov.uk/softpat/en/index.html>).

¹⁸³ *Sohei/General-purpose management system*, T769/92 [1996] EPOR 253.

¹⁸⁴ *Pitney Bowes/System for processing mail*, T767/99 (13 March 2002) (TBA), para. 2.6.

¹⁸⁵ See above at pp. 402–6.

¹⁸⁶ A patent had been granted on the appellants pension system in the US. See *Pension Benefit Systems Partnership*, T931/95 [2001] OJEP 441, 447 (para. iv). Despite the fact that the reasoning of the Board was said to be reminiscent of the USPTO's 1996 *Guidelines for the Examination of Computer-Related Inventions*; see M. Likhovski, 'Fighting the Patent Wars' [2001] EIPR 267, 270.

if they are apparatus claims. In this sense, the decision may have an indirect impact on the operation of the exclusion.¹⁸⁷

6.2.2 The presentation of information

The approach that has been used to determine whether an invention consists of the presentation of information and thus falls foul of section 1(2)(d)/Article 52(2)(d) is similar to the approach that has been used in relation to the other categories of subject matter excluded from protection.¹⁸⁸ This can be seen, for example in *Broselow/Measuring tape*, where the invention was for a method of ascertaining information about accident victims (such as drug dosage or defibrillation techniques). More specifically, the method involved an ambulance officer measuring the body length of the emergency victim using a particular tape, which provided information about how the patient was to be treated. Importantly this was done without the need for clinical expertise or reference to other sources. Highlighting the importance of the way the invention is construed, the Board of Appeal held that the 'co-relation between the measured length and the information on the tape measure results in the tape . . . becoming a new gauge for directly measuring the patient treatment values'. Such a new gauge 'for directly measuring the patient values, is clearly technical in character'.¹⁸⁹

In applying the basic principles used when considering whether a patent is excluded under Article 52(2) and (3), the EPO has drawn a distinction between ordinary (cognitive) information which is excluded by section 1(2)(d)/Article 52(2)(d) and special (functional) information (which is not excluded).¹⁹⁰

Ordinary cognitive information, which is the type of information excluded under section 1(2)(d)/Article 52(2)(d) as a presentation of information, includes subject matter that merely conveys cognitive or aesthetic content directly to a human.¹⁹¹ In essence ordinary cognitive information includes any representation of information that is characterized solely by the content of the information. This would include, for example, a TV signal solely characterized by the information *per se* (e.g. moving pictures, modulated upon a standard TV signal). Similarly, digital data that encode cognitive content (such as a

¹⁸⁷ This is reflected in the EPO Guidelines which state that 'in relation to an apparatus claim which contains computers, computer networks or other conventional programmable apparatus or a program thereof, for carrying out at least some steps of a scheme, it is to be examined as a computer-related invention'. EPO Guidelines, C-IV.

¹⁸⁸ See, e.g. *Texas Instruments/Language-understanding system*, T236/91 [2000] EPOR 156; See also *Hiroki Ashizawa*, O/235/03 (18 Aug. 2003) (Patent Office).

¹⁸⁹ *Broselow/Measuring tape* T77/92 [1998] EPOR 266, 270. The Board added that 'the subject matter as a whole of a claim consisting of a mix of known technical elements and non-technical elements is not excluded from patentability under Art. 52(2) and (3) when the non-technical elements interact with the known technical elements in order to produce a technical effect'.

¹⁹⁰ The Board said that with the growth of information technology in the last half-century, information in its 'special sense had become much more important'. Nonetheless, the Board noted that the information mentioned in Art. 52(2)(d) was limited to information in the ordinary (cognitive sense): *Koninklijke Philips's Electronics/Picture retrieval system*, T1194/97 [2000] OJEP 525, 541, para. 3.7.2.

¹⁹¹ *Ibid.* The Board said that the only decision that appeared to have construed 'presentation of information' to include an aspect of the special sense of information was *Kock & Sterzal/X-ray apparatus*, T26/86 [1988] EPOR 72. The Board noted that *Kock & Sterzal* dealt with the exclusion of computer program and as such was 'strictly obiter as far as Article 52(2)(d) is concerned': para. 3.7.4.

picture) in a standard manner would also be excluded.¹⁹² As the EPO Guidelines explain, a claim will be excluded where it is directed to the presentation of information *per se* (e.g. acoustic signals, spoken words), to information recorded on a carrier where the carrier (i.e. the book, the gramophone record, or magnetic computer tapes) is characterized solely by the content being carried (the subject of the book, musical content, or data or programs), or to processes and apparatus for the presentation of information.¹⁹³ In all these cases, the key aspect of the invention is the content of the message.

In contrast, a patent for *functional information* (or data) does not fall within the scope of Article 52(2)(d). As with all inquiries into excluded subject matter, if it can be shown that the information carrier, or the process or apparatus for presenting the information has a technical feature, the invention may be patentable. It is also possible that the arrangement or manner of representation, as compared to the content of the information itself, may be patentable. This would include instruments designed to measure information, or the use of a code to represent characters. In explaining what is meant by functional information, the EPO supported the view that information (in its special sense) must not be confused with meaning. In fact, two messages, one of which is heavily loaded with meaning and the other of which is pure nonsense, can be exactly equivalent from the information technology point of view. Information in communication theory relates not so much to what you do say, as to what you could say. That is, information is a measure of one's freedom of choice when one selects a message.¹⁹⁴

Using this definition the Board of Appeal said that information in the special (non-excluded) sense includes physical interactions within and between machines that do not convey any humanly understandable meaning. They have also said that a TV signal solely characterized by the information *per se* (e.g. moving pictures, modulated upon a standard TV signal) would be an excluded presentation of information. In contrast, a TV signal defined in terms that included the technical features of the TV system in which it occurs has been held not to be a presentation of information.¹⁹⁵ In a similar fashion, the Board held that an invention that was defined in terms that inherently included the technical features of the system in which the record carrier operated was not excluded as a presentation of information.¹⁹⁶

In *Koninklijke* the Board said that the difference between (excluded) cognitive information and (non-excluded) functional data was illustrated by the fact that if the cognitive data or content were lost, the result would be a humanly meaningless picture, like snow on a TV screen. This would not have any effect whatsoever on the technical working of the

¹⁹² In rejecting an application for a configuration for simultaneously displaying several images on a computer screen, the Technical Board of Appeal said that imparting information on events in a screen window merely drew attention to the content of the images and, as such, was not technical: T599/93 [1997] OJEP0 (special edn.) 14.

¹⁹³ EPO Guidelines C-IV, 2.

¹⁹⁴ *Koninklijke Philip's Electronics/Picture retrieval system*, T1194/97 (15 Mar. 2000), para. 3.7.1, quoting from C. Shannon and W. Weaver, *The Mathematical Theory of Communication* (1949) [no page number provided].

¹⁹⁵ *BBC/Colour television signal*, T163/85 [1990] EPOR 599, 603; OJEP0 379.

¹⁹⁶ On the facts the Board held that the claim in question was not a presentation of information since it had functional data recorded thereon (in particular a data structure of picture line synchronization, line numbers, and addressees): *Koninklijke Philip's Electronics/Picture retrieval system*, T1194/97 (15 Mar. 2000). The Board followed *IBM/Computer program product*, T1173/97 [1999] OJEP0, 609.

system. In contrast, the loss of functional data would impair the technical operation of the system and may indeed bring the system to a halt.¹⁹⁷

6.2.3 Methods for performing a mental act

Section 1(2)(c)/Article 52(2)(c), which excludes methods for performing mental acts from the scope of patentable subject matter, has played an important role in regulating the property rights granted in information-technology-based inventions. This is particularly the case in relation to inventions in the field of text-editing, artificial intelligence, and expert systems. While there is agreement between courts in the UK and the EPO in relation to many aspects of section 1(2)/Article 52(2), there are a number of differences in the way they have approached the exclusion of mental acts.

(i) *Text-editing*. In considering whether text-editing-based inventions are patentable, the EPO has largely followed the line of thought used in relation to other areas of Article 52(2). This means that if an application only relates to the internal, linguistic elements of the text (which are seen as being non-technical), it will fall foul of Article 52(2) and thus be unpatentable. This can be seen in *IBM/Text-clarity processing*¹⁹⁸ where the Technical Board of Appeal was called upon to decide whether an application for improving the clarity of texts was patentable. The invention in question was made up of a program that identified linguistic expressions that were difficult to understand. The program then offered alternative expressions that were easier to understand. An important factor in the decision that the invention was directed to text-editing and as such that it was not patentable was that the inventive element of the application lay in the mental elements of the process: *viz.* in the process of identifying parts of texts that were difficult to understand and offering alternatives. Unfortunately for the applicants, the Board of Appeal found that the process by which these mental acts were placed in a format where they could be performed automatically by a computer only involved the routine straightforward application of conventional techniques. Given that the only contribution made by the application was in relation to the mental steps of the process and not (for example) in the way these steps were automatically carried out by computer, the Board declared that the application was invalid. A number of other text-editing applications have been rejected on the basis that they use the same steps as mental processes and when automated merely employ conventional equipment ordinarily programmed.¹⁹⁹

In contrast, if it can be shown that the contribution made by the application is technical and not merely linguistic in nature, then it will be *prima facie* patentable. That is, if it can be shown that the application extends beyond text-processing to provide a technical

¹⁹⁷ *Koninklijke Philip's Electronics/Picture retrieval system*, T1194/97 (15 Mar. 2000), para. 3.3.

¹⁹⁸ T38/86 [1990] EPOR 606 (application for a method for detecting and replacing incomprehensible expressions using conventional hardware and a dictionary); *IBM/External interface simulation*, T833/91 [1998] EPOR 431 (method of designing external interfaces for a computer application program excluded).

¹⁹⁹ *Siemens/Character form*, T158/88 [1992] EPOR 69 (methods for representing letters on a VDU was non-technical); *Beattie/Marker*, T603/89 [1992] EPOR 221 (apparatus for a method for learning how to play a keyboard instrument was non-technical). Abstracting a document (*IBM/Document abstracting & retrieving*, T22/85 [1990] EPOR 98); processing data set out in table form (T95/86); detecting linguistic expressions (*IBM/Text clarity processing*, T38/86 [1990] EPOR 606); detecting contextual homophone errors ('there' for 'their') (*IBM/Text processing*, T65/86 [1990] EPOR 181): were all held not patentable because they were 'mental acts'.

contribution or resolve some technical problem, then it will be patentable. A helpful example of this is provided by *IBM/Editable document form*,²⁰⁰ which concerned an application for a method for transforming printer control items in word-processing documents from one format to another (which in turn allowed documents to be transferred from one text-processing format to another). Using the same logic that is used in relation to the other parts of Article 52(2), the Board of Appeal said that in considering whether the application was valid, they needed to ‘investigate whether the claim seen as a whole constitutes nothing more than a method for performing mental acts as such, albeit performed on a computer’. After reviewing the nature of the invention in question, the Board found that the application could not be described as a method for performing a mental act (nor as a computer program). The reason for this was that the invention was concerned above all with (printer) control items in the source document. Given that the ultimate purpose of these control items was the control of hardware, the Board said that the application had nothing to do with the linguistic meaning of the texts being processed. Rather, it represented features of the technical, internal working of that system.²⁰¹ As such, the application did not fall foul of Article 52(2)(c).

While there is a consistent line of authority in relation to text-editing-based inventions at the EPO, as yet no decisions in this field have been heard in the UK. However, on the basis of the approach that has been adopted by British courts in relation to the patenting of expert systems (discussed below), there is good reason to doubt whether UK courts will follow the approach adopted at the EPO towards text-editing inventions.

(ii) *Expert systems.* Although courts in the UK and at the EPO are largely in agreement that a patent will not be granted if the only contribution that the invention offers is mental (or intellectual), there is disagreement as to what is meant by a ‘mental act’.²⁰² More specifically there is disagreement as to whether or not and, if so, in what circumstances a process which automatically performs a mental act will fall within the scope of section 1(2)(c)/Article 52(2)(c). This difference is most notable when the respective tribunals have considered the nature of patent protection available for expert systems.

While methods of performing mental acts *per se* remain unpatentable at the EPO, where technical means are used to carry out a method for performing a mental act, such a process *may* be patentable. Although these inventions may face difficulties in relation to obviousness and novelty, the EPO has accepted that patents will not fall foul of Article 52(2)(c) if the invention viewed as a whole is technical.²⁰³ Many of the activities which are carried out by a computer, such as object recognition or the checking of text for spelling mistakes, are tasks that can also be performed by humans. Nonetheless, the EPO has been willing to accept that activities carried out automatically by machine may be *qualitatively* different to similar activities carried out by humans. That is, while a computer and a human may perform the same task, when this task is carried out automatically by

²⁰⁰ T110/90 [1995] EPOR 185.

²⁰¹ They were said to be akin to the technical functions carried out in mechanical typewriters, such as carriage return, new page, and new paragraph.

²⁰² See D. Wells, ‘Expert Systems, Mental Acts and Technical Effects’ (1995) *CIPAJ* 129; C. Muse, ‘Patented Personality’ (1988) 4 *Computer High Technology LJ* 285.

²⁰³ *Stockburger/Coded distinctive mark*, T51/84 [1986] EPOR 229.

computer it may be done with such speed or accuracy that it is not the same as a functionally equivalent task performed by a human.²⁰⁴

In contrast, courts in the United Kingdom have consistently refused applications that amount to the automation of operations that could otherwise be performed by humans.²⁰⁵ This means that inventions in the fields of expert systems,²⁰⁶ pattern recognition systems,²⁰⁷ or systems for rearranging conflicting demands for resources (such as room bookings)²⁰⁸ will not be patentable in the United Kingdom. Somewhat bizarrely, this is the case even if the invention could not be carried out by the unaided human mind.²⁰⁹ While the EPO has accepted that where a mental act is automatically performed by a computer the activity may change in such a way that it can no longer be seen as the performance of a mental act, in the United Kingdom such activities remain a method for performing a mental act. This is the case even when the computer carries out the process in a way that could not be mimicked by the human mind.²¹⁰ This point was reinforced by the Court of Appeal in *Fujitsu's Application* where it was held that the concept for performing a mental act should be construed widely to include all methods of the type performed mentally, even if the particular method in question would not be carried out by the human mind.²¹¹ This was because a method 'remains a method for performing a mental act, whether a computer is used or not'. As Aldous LJ said, 'a method of solving a problem, such as advising a person whether he has acted tortiously, can be set out on paper or incorporated into a computer program. The purpose is the same, to enable advice to be given, which appears to me to be a mental act'. Aldous LJ added that the 'method may well be different when a computer is used, but to my mind it still remains a method for performing a

²⁰⁴ *IBM/Text clarity processing*, T/38/86 [1990] *OJEPO* [1990] *EPOR* 606. See the discussion on the practice at the EPO on text-editing above at pp. 416–17. See also, D. Wells 'Patents for Software: the "Mental Act" Exclusion' [1993] *CIPAJ* 272, 273 (arguing that the UK patent office's decision in *Raytheon's Application* [1993] *RPC* 427 is 'completely at variance with the practice of the EPO'). For the position in Germany (following the approach at the EPO) see *Sprachanalyseeinrichtung (Language analysis device)* (BGH) (Federal Court of Justice), 10th Civil Senate, (11 May 2000) X ZB 15/98 [2002] *OJEPO* 415.

²⁰⁵ Claims to an inference processor forming the core of an expert system have been allowed in a hearing at the Patent Office. D. Wells, 'Expert Systems, Mental Acts and Technical Effects' [1995] *CIPAJ* 129.

²⁰⁶ *Wang Laboratories' Application* [1991] *RPC* 463 (expert system comprising a conventional computer operating in the normal way with an expert system program the knowledge base of which was in the form of hierarchically defined terms and their definitions was a mental act and that it was therefore excluded from protection).

²⁰⁷ *Raytheon's Application* [1993] *RPC* 427 (patent for a method of 'pattern recognition and the matching of silhouettes, particularly those of ships' was rejected). In *Fujitsu's Application* [1996] *RPC* 511, the Court of Appeal refused an application directed to methods for modelling a synthetic crystal structure by combining images of two structures to display a third image representing a further crystal structure. In rejecting the application, the Court focused on the method claimed which 'left it to the operator to select what data to work on, how to work on it, and which results, if any, results to use'. The control left to the operator was such that the end product was largely determined by the personal skill of the operator. To have granted a patent over this would have meant that property rights were being granted (in substance) of a scheme or method of performing a mental act.

²⁰⁸ *Fujitsu's Application*, O/317/00 (23 Aug. 2000) (Patent Office).

²⁰⁹ *KK Toshiba* [1993] *IPD* 160 (19 Feb. 1993).

²¹⁰ *Fujitsu's Application* [1996] *RPC* 511, 518–19 (Patent Office).

²¹¹ [1997] *RPC* 608. The suggestion that the provision be limited to those acts that can be carried out by the human mind. This was rejected on the basis it would require the courts to engage in the extremely difficult task as to how the human mind actually works: [1997] *RPC* 608, 619–20.

mental act, whether or not the computer program adopts steps that would not ordinarily be used by the human mind'.²¹²

The current position in the United Kingdom is not only out of step with the approach at the EPO, it is also out of step with the image of technology as the process of artificially reproducing that which already exists in nature. In part this can be attributed to a failure to recognize that while activities carried out by machines may be functionally equivalent to similar tasks performed by the human mind, this does not mean that the two are therefore necessarily equivalent. While computer-related inventions may perform analogous tasks to those carried out by humans, there must come a time when the analogy breaks down. That is, there is a point when a process which is carried out by a computer is so qualitatively different to a functionally equivalent process carried out by the human mind that the two events cannot be equated with each other: the question that is yet to be determined in the United Kingdom is where and how this line is to be drawn.

6.2.4 The patenting of computer programs?

When the 1977 Patents Act and the EPC were enacted it was commonly thought that copyright law rather than patents would be the area of intellectual property law which regulated the creation and use of computer programs. While copyright has been important in this process, one of the most notable changes that has taken place since 1977 is the growing role played by patent law in relation to computer-related inventions. One of the last hurdles facing those who favour greater use of patents in the field of information technology is the fact that computer programs *as such* are expressly excluded from the scope of patentable subject matter.²¹³ As a result of recent decisions at the EPO and corresponding changes in UK Patent Office practice, programs for computer programs are patentable if they have a technical character. As a result, it seems as if this last hurdle has nearly been overcome.

The question of the scope of the exclusion of computer programs *as such* was considered in two decisions by the Technical Board of Appeal, both involving applications by IBM. The invention in the first decision *IBM/Computer programs* (T935/97) was for a method for allowing information in a data-processing system that was displayed in one window to be altered if that window was obscured by another window. The application included claims for software in itself, and for software recorded in a computer-readable medium.²¹⁴ While some of the claims were accepted, the Examining Division refused the application insofar as it was directed to a computer-program product. The second *IBM* decision (T1173/97) related to 'resource recovery in a computer system'.²¹⁵ Again, the Examining Division rejected the application insofar as it claimed a computer-program product. In both cases the question for consideration related to the scope of the exclusion of computer program *as such*. The reasoning in both cases was identical.

The Board of Appeal began by noting that the language of Articles 52(2) and (3) showed that the legislators did not want to exclude all computer programs from

²¹² *Wang Laboratories' Application* [1991] RPC 463, 473; *Fujitsu's Application* [1997] RPC 620, 621 (CA). The comptroller adopted a similar approach to reject an application for a computerized system for resolving disputes for resources (such as room or flight bookings) according to certain priorities more easily accessible to users: *Fujitsu's Application*, O/317/00 (23 Aug. 2000), 11.

²¹³ PA s. 1(2)(c); EPC Art. 52(2)(c).

²¹⁴ *IBM/Computer programs*, T935/97 [1999] EPOR 301.

²¹⁵ *IBM/Computer programs*, T1173/97 [2000] EPOR 219.

patentability.²¹⁶ Instead, all that was excluded were computer programs *as such*. Drawing upon the logic that has been applied to Article 52(2) and (3) generally, the Board said that when the EPC referred to computer programs *as such*, it meant mere abstract creations, lacking in technical character. In more positive terms this meant that computer programs that had a technical character were potentially patentable.²¹⁷ In so doing, the Board distinguished between computer programs *as such* (which are not patentable) and computer programs that had a technical character (which are patentable).²¹⁸

This gives rise to the question: when does a computer program have a technical character? As with all inventions, the requisite technical character may exist either in technical effects or in the solution to a technical problem. In addressing this question, the Board began by noting that a computer program cannot be assumed to have a technical character merely for the reason that it is a program for a computer. This means that *normal* 'physical modifications of the hardware (causing, for instance, the generation of electrical currents) deriving from the execution of the instructions given by programs for computers cannot *per se* constitute the technical character required for avoiding the exclusion of those programs'.²¹⁹ The Board added that such modifications were a common feature of all computer programs and therefore could not be used to distinguish programs with a technical character from programs 'as such'. Instead, the Board said that the technical character must be found elsewhere in the effects caused by the execution of the computer program by the hardware. That is, a computer program product could be patentable if it resulted in additional technical effects that went beyond the 'normal' physical interaction between the program (software) and the computer (hardware) on which it was run.

The Board also noted that computer program products only produced and showed an effect when the program concerned was made to run on a computer. The effect only shows in physical reality when the program is being run. On the basis that there was no good reason to distinguish between a direct technical effect and the potential to produce a technical effect, the Board accepted that a computer program that had the potential to cause a predetermined further technical effect was in principle not excluded from patentability under Article 52(2) and (3).²²⁰

After reviewing the scope of protection for computer programs, the Board remitted both cases back to the Examining Division to determine whether the applications complied with this reading of Article 52(2)(c). While it is clear that the *IBM* decisions mark a victory for the proponents of greater protection for information-technology-related inventions, ultimately the extent to which computer programs are patentable depends on how 'technical character' is construed. One factor that suggests that the exclusion will be read narrowly flows from the Board's comment that it does not make any difference for the purpose of the exclusion whether a computer program is claimed by itself or as a

²¹⁶ *IBM/Computer programs*, T935/97 [1999] EPOR 301, 309; T1173/97 [2000] EPOR 219, 226.

²¹⁷ They did so on the basis of EPC r. 27, 29. *IBM/Computer programs*, T1173/97 [2000] EPOR 219, 226.

²¹⁸ In so doing, the Board overturned *EPO Guidelines C-IV 2.3* which state that a 'computer program by itself or as a record on a carrier is not patentable, irrespective of its content'. The Board also distinguished *ATT/System for generating code*, T204/93 (29 Oct. 1993). *IBM/Computer programs*, T935/97 [1999] EPOR 301, 308.

²¹⁹ *IBM/Computer programs*, T935/97 [1999] EPOR 301, 310; T1173/97 [2000] EPOR 219, 227.

²²⁰ *IBM/Computer programs*, T935/97 [1999] EPOR 301, 313; T1173/97 [2000] EPOR 219, 230.

record on a carrier.²²¹ This means that so long as a computer program is technical, the medium in which it is recorded (the carrier) is irrelevant.²²² This would allow, for example, patents to be granted for software-implemented inventions distributed online over the Internet²²³ and to computer-program products directly loadable into the internal memory of a digital computer.²²⁴

In order to ensure that practice at the UK Patent Office is consistent with that of the European Patent Office, the UK Patent Office has amended its practice guidelines to follow the *IBM* decisions.²²⁵ The UK Patent Office *Practice Notice* provides that the British Patent Office will now 'accept claims to computer programs, either in themselves or on a computer, provided that the program is such that when it is run on a computer it produces a technical effect which is more than would necessarily follow merely from the running of any program on a computer'.²²⁶ As a result, British law in relation to the patenting of computer programs is the same as at the EPO.

6.2.5 Reform

The last three decades have seen a remarkable transformation in the way computer programs and computer-related inventions are dealt with under European law. From a situation where computer programs 'as such' were expressly excluded from patentability, approximately 15 per cent of all applications for patents received by the EPO²²⁷ and the UK Patent Office now relate to computer-implemented inventions.²²⁸ The scope of protection available for computer-related inventions was enhanced by the fact that while computer programs *per se* have long been considered to be non-technical and thus outside the scope of patent law, this way of thinking about computer programs has recently been questioned. In particular, a number of decisions at the EPO have recast computer programs as technical creations.²²⁹ This reconfiguration of computer programs as technical creations has been particularly important in light of Article 27 of TRIPS which states that 'patents shall be available for any inventions, whether products or processes, in all fields of technology' and that 'patents shall be . . . enjoyable without discrimination as to . . . field of technology'.²³⁰

²²¹ *IBM/Computer programs*, T935/97 [1999] EPOR 301, 317; T1173/97 [2000] EPOR 219, 234.

²²² The Board said that if the 'computer program product comprises a computer-readable medium on which the program is stored, this medium only constitutes the physical support on which the program is saved and thus constitutes hardware'. *IBM/Computer programs*, T935/97 [1999] EPOR 301, 312; T1173/97 [2000] EPOR 219, 229.

²³⁰ The Board of Appeal noted that as the EPO was not a signatory to TRIPS, they were not bound by it. However, on the basis that TRIPS aimed at 'setting common standards and it acted as an

Notwithstanding (or possibly because of) these changes, there have been growing calls for reform of the scope of protection available for computer programs and computer-related inventions in Europe.²³¹ In part, these debates have been stimulated by changes in US patent law that facilitated the patenting of computer programs and business method patents.²³² As well as setting a benchmark against which European law is judged, the liberalization of the level of protection in the USA also led to a flood of applications for computer-related inventions in Europe. In turn, these changes have led to the suggestion that the threshold for protection in Europe should be lowered to ensure that there is level playing field between Europe and the USA. In response to such suggestions, a consortium of interests led by members of the open-source community have campaigned against greater protection.²³³

Despite the widespread calls for reform, to date there has been little change in the scope of protection for computer-implemented inventions in Europe. At best, there have been proposals for the law to be changed to make it clearer and more consistent. Notably, the American approach that protects business-method inventions has not found favour at the EPO, the UK Patent Office, or in any of the Community agencies responsible for legislative change in Europe. The preference for the status quo can be seen in the revision of the EPC that took place in 2000. While it was suggested that 'computer programs as such' be deleted from the subject matter excluded from patentable subject matter in Article 52(2)(c),²³⁴ delegates to the Diplomatic Conference voted against the proposal.²³⁵ As a result, Article 52(2)(c) EPC 2000 replicates the exclusion of 'programs for computers' currently found in Article 52(2)(c) EPC.

The UK government has also come out in support of the status quo. During a process of consultation in 2000, respondents were asked to what extent should computer programs and Internet business methods be patentable. The resulting study found that while there was no consensus about the extent to which software should be patentable,²³⁶ there was

indicator of modern trends, the Board noted that it was the clear intention of TRIPS not to exclude from patentability any inventions, in particular, not to exclude programs for computers': *IBM/Computer programs*, T1173/97 [2000] EPOR 224–5.

Art. 1, item 17 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev 1e. As the explanatory remarks explained, the EPO Board of Appeal decisions that computer programs producing a technical effect are patentable subject matter, meant that the 'current exception has become *de facto* obsolete'. Base Proposal for the Revision of the European Patent Convention, CA/100/00 e (2000), 37. It was also suggested that Art. 52(2) ought to be abolished altogether. This was not put forward to the Diplomatic Conference for Nov. 2000.

²³⁶ See *Should patents be granted for computer software or ways of doing business?: The government conclusions* (March 2001), para. 11. Available at www.patent.gov.uk/about/consultations/conclusions.htm.

support for the ongoing patentability of computer-related inventions with technical effect. It was also clear from the responses that the law in this area was unclear. This led the UK government to conclude that clarification is needed, particularly as to 'how to define the boundary defining when software is, and is not, part of a technological innovation, so that what is patentable will be clear in specific cases in the future'.²³⁷ The consultation process also revealed that there was widespread opposition to patents for computer-implemented business methods that did not bring about some form of technological innovation.²³⁸ This led the UK government to conclude that 'those who favour some form of patentability for business methods have not provided the necessary evidence that it would be likely to increase innovation. Unless and until that evidence is available, ways of doing business should remain unpatentable'.²³⁹

One of the consequences of the decision to retain the status quo in the revised EPC 2000 is that the debate on the patenting of computer-related inventions has shifted to the European Commission and the European Parliament. As we explained above,²⁴⁰ the Commission's response has taken shape with the publication of the draft *Directive on the Patentability of Computer-Implemented Inventions* in February 2002. While an amended draft was approved by the European Parliament in September 2003, the Directive needs to be jointly approved by the Parliament, the Commission, and the Council. With the possible exception of the exclusion of a 'patent claim to a computer program, either on its own or on a carrier',²⁴¹ the draft Directive does not expressly alter existing law. For example, business methods, algorithms, and non-technical computer-implemented inventions are also excluded from protection. However, given that the proposed Directive uses concepts that are alien to British law, there is a chance that the Directive may bring about a number of unexpected consequences. This is reinforced by the fact that although the Directive is very short (it consists of six Articles), it lacks a coherent structure. As the Parliament and the Commission do not see eye-to-eye on the shape that the Directive should take (the Parliament having rolled back the level of protection initially proposed by the Commission), it seems that it will be some time before the draft Directive becomes law. In the meantime, it seems that the jurisprudence developed at the EPO and in the United Kingdom will continue to play a key role in the transformation of patent law in this area.

7 BIOLOGICAL SUBJECT MATTER

The third category of subject matter excluded from patent protection is set out in paragraph 3(f) of Schedule A2 of the Patents Act 1977²⁴²/Article 53(b). As we pointed out earlier, these provisions were amended as a result of the Biotechnology Directive. Paragraph 3(f) of the 1977 Act, which is in similar terms to Article 53(b) of the EPC, provides that a patent shall not be granted for 'any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a microbiological process or other technical process or the product of such a process'.²⁴³

²³⁷ Ibid., para. 20.

²³⁸ Ibid., para. 21.

²³⁹ Ibid., para. 24.

²⁴⁰ See above pp. 342–4.

²⁴¹ Computer-Implemented Inventions Dir. Art 5(1a).

²⁴² Formerly PA s. 1(3)(b).

²⁴³ The Biotech. Directive prompted the introduction of the phrase 'or other technical process'; Biotech. Dir. Art. 4(1); EPC Rule 23(b)(c), Implementing Regulations to the EPC (introduced by (1999) OJEP 437).

These provisions fall into two parts. First, they declare that patents should not be granted for ‘animal varieties’, ‘plant varieties’, and ‘essentially biological processes’. The second part of paragraph 3(f)/Article 53(b) goes on to qualify and limit the subject matter which is excluded from patentability. As an exception to the exception, it provides that if an invention is ‘a microbiological process or other technical process or the product of such a process’, the invention may be patented.

Before looking at the exceptions, it might be useful to point out there is no general bar on the patenting of biological material or biotechnological inventions.²⁴⁴ Indeed as the EPC and the 1977 Act (as revised) make clear, an invention shall not be considered unpatentable solely on the ground that it concerns a product consisting of or containing biological material or a process which by which biological material is produced.²⁴⁵ More specifically, the EPC and the 1977 Act explicitly state that it is possible to patent inventions for plants and animals, so long as they comply with the general requirements of patentability.²⁴⁶

7.1 ANIMAL VARIETIES

The first form of subject matter excluded from protection by paragraph 3(f) of Schedule A2 to the 1977 Patent Act/Article 53(b) is ‘animal varieties’.²⁴⁷ While the exclusion of plant varieties is usually explained on the basis that when the EPC was drafted there was a ban on dual protection in *UPOV*, the fact that there is no equivalent treaty for animal varieties has led some to question why animal varieties were also excluded. In discussing the rationale for the animal variety exclusion, the Opposition Division at the EPO said that ‘the most obvious reason for this must have been the intention or at least the keeping open of the possibility to create such a law for the protection of animal varieties later on’.²⁴⁸ A more honest explanation for the exclusion of animal varieties is that they are simply ‘not an appropriate subject matter’.²⁴⁹ When Article 53(b) was first drafted the potential scope of the animal variety exclusion was straightforward and uncontroversial. This has changed, however, as patent law has been forced to confront the developments in biotechnology that have taken place since then.

The meaning of ‘animal variety’ was considered in the *Onco-mouse* decision. Here the

TRIPS Art. 27(3) permits members to exclude ‘plant and animals other than micro-organisms, and essentially biological processes for the production of plants or animals other than non-biological and microbiological processes’. EPC 2000, Art. 53 provides that European patents shall not be granted in respect of ‘plant or animal varieties or essentially biological processes for the production of plants or animal: this provision shall not apply to microbiological processes or the products thereof’. See Art. 1, item 18 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e.

²⁴⁴ The Technical Board of Appeal said that when Art. 53(b) was drafted, ‘the knowledge of the potential development in the field of biotechnology was rather limited’. *Lubrizol/Hybrid plants*, T320/87 [1990] OJEP 71. claims related to a genetically modified non-human mammal (in particular a mouse), which had been modified so that it would be susceptible to cancer. The resulting products (the mice with cancer) were used in cancer research. At first instance, the Examining Division held that the exclusion not only covered groups of animals but animals in general. As such, the invention was for an unpatentable animal variety.²⁵⁰ On appeal, the Technical Board of Appeal held that the Examining Division had misconstrued the exclusion, which being an exception to patentability, ought to be construed narrowly.²⁵¹ Importantly, the Board of Appeal said that Article 53(b) did not exclude animals in general. On this basis, the Board of Appeal remitted the matter to the Examining Division for reconsideration.

The Examining Division said that animal variety either meant a species or a subunit of a species. The Examining Division acknowledged that while the terms of the Convention were not consistent—the English and French terms (animal varieties and *races animales*) meaning subunit of a species and the German term (*Tierarten*) meaning species—it was not necessary to decide which was the authoritative meaning for the Convention.²⁵² This was because the claims in question related to non-human mammals, a category that was neither a species nor a subunit of a species. (In zoological terms, mammals are of a higher taxonomic classification than species.) Consequently, the subject matter did not relate to an animal variety and as such was not excluded by Article 53(b). The meaning of ‘animal variety’ was revisited by the Opposition Division when it looked at an amended version of the *Onco-mouse* patent. Before looking at this decision, it may be helpful to look at the changes brought about by the Biotechnology Directive.

The Biotechnology Directive and the subsequent changes to the EPC and the 1977 Act appear to confirm the current jurisprudence in relation to animal varieties. Article 4 states that ‘animal varieties’ are not patentable. Article 4(2) of the Directive explains that inventions that concern animals shall be patentable if the technical feasibility of the invention is not confined to a particular animal variety. Article 4(2) (which we look at below) has been introduced in the United Kingdom²⁵³ and in the EPC.²⁵⁴ This makes clear that animals are potentially patentable, so long as the applicant does not attempt to patent an animal variety. That is, an invention relating to an ‘animal’ may be patentable, so long as the technical aspect of the invention does not reside in a particular animal variety.

The ongoing importance of the pre-Directive jurisprudence was confirmed by the Opposition Division in its 2003 decision in relation to the patentability of an amended version of the *Onco-mouse* patent (which was limited to transgenic rodents). The Opposition Division began by noting that there was no doubt that living matter and in particular plants and animals could be patented.²⁵⁵ It also added that the exclusion is limited to varieties only and that it cannot be extended to animals in general.²⁵⁶ The Opposition Division then said that the Enlarged Board of Appeal’s reasoning in relation to plant varieties in *Novartis* was equally applicable to the decision as to whether an invention fell

²⁵⁶ *Harvard/Onco-mouse* [2003] OJEP0 473, 500 (Opposition Division).

foul of the animal variety exclusion.²⁵⁷ In *Novartis* (which is discussed in the next section), the Board held that where specific plant varieties are not individually claimed, the claim is not excluded from patentability under Article 53(b) EPC, even though it may embrace plant varieties. This means that for a claim to be excluded because it is for a plant or animal variety, the claim must be for variety *per se*. On this basis, the Opposition Division said that as the *Onco-mouse* invention was applicable to more than just varieties of mice, this meant that the patent was not excluded by Article 53(b).

7.2 PLANT VARIETIES

The second form of biological subject matter that is excluded from the scope of protection is 'plant varieties'.²⁵⁸ The reason for the exclusion can be traced to the fact that the EPC was drafted in light of the International Convention for the Protection of New Varieties of Plants (UPOV): a regime established in 1961 to grant property rights in new plant varieties. In order to ensure that plant breeders were not able to obtain patent protection *and* plant variety protection, it was decided that the two conventions should be mutually exclusive: a person could be given either a *sui generis* plant breeder's right or patent protection, but not both.²⁵⁹ Article 53(b) and section 1(3)(b) were drafted to give effect to this policy decision.²⁶⁰ While the principle that the scope of the two regimes should be mutually exclusive was removed when UPOV was revised in 1991, nonetheless the exclusion of plant varieties still exists in both the EPC and the 1977 Patents Act. Article 4(1) of the Biotechnology Directive confirms that plant varieties are not patentable. It also provides, as do the resulting changes to the 1977 Act and the changes to the Implementing Regulations to the EPC, that the concept of plant variety is to correspond to the definition used in Article 5 of the Community Plant Variety Regulation.²⁶¹

One of the earliest decisions to consider the scope of the plant variety exclusion was *Ciba-Geigy's Application*.²⁶² The application in question claimed any plant propagating

²⁵⁹ UPOV Art. 2(1).

²⁶⁰ Art. 53(b) was intended to express a general intention to exclude patent protection for subject matter capable of protection within the UPOV convention. *Ciba-Geigy/Propagating material application*, T49/83 [1979–85] C EPOR 758; [1984] OJEP0 112; *Plant Genetic Systems/Glutamine synthetase inhibitors* (1993) 24 IIC 618.

²⁶¹ A 'plant variety' has been defined to mean: 'a plant grouping within a single botanical taxon of the lowest known rank. This is subject to the proviso that the grouping can be (a) defined by the expression of the characteristics that result from the given genotype of combination of genotypes, and (b) can be distinguished from other plant groupings by the expression of at least one of the said characteristics, and (c) considered as a unit with regard to its suitability for being propagated unchanged'. PA Sched. A2, para. 11; Biotech. Dir. Art. 2(3); EPC Rule 23b(4)(a)–(c), Implementing Regulations to the EPC (introduced by (1999) OJEP0 437).

²⁶² *Ciba-Geigy/Propagating material application*, T49/83 [1979–85] C EPOR 758; [1984] OJEP0 112. Followed in *Lubrizol/Hybrid plants*, T320/87 [1990] EPOR 173; [1990] OJEP0 71 ('the present hybrid seed and plants from such seed, lacking stability in some trait of the whole generation population, cannot be classified

material which had been chemically treated so as to make the material resistant to other agricultural chemicals. In deciding that the invention was not a 'plant variety', the Technical Board of Appeal held that plant varieties were 'limited to claims to individually characterized plants which would have the detailed taxonomy and the reproductive capacity which is required in general for a plant variety right'. The Board of Appeal also stressed that a defining feature of a plant variety was that it contained certain features that distinguished the variety in question from other varieties. These distinguishing features needed to be stable enough so that the essential characteristics were passed on through subsequent generations. In so doing the Technical Board of Appeal highlighted the need for homogeneity between different generations. They also added that 'it is perfectly sufficient for the exclusion to be . . . restricted . . . to cases in which plants are characterized *precisely* by the genetically determined peculiarities of their natural phenotype'.²⁶³

On the facts, the Technical Board of Appeal held that claims for plant-propagating materials that had been chemically treated so as to make the material resistant to other agricultural chemicals were not claims to a 'plant variety'. The reason for this was that while plant breeding (which is a form of genetic modification) introduced a trait to plants that reappeared in subsequent generations, this did not occur with chemical treatment. As such, the Technical Board of Appeal held that the claims were not for plant varieties and thus not excluded from the scope of protection.

The next decision to consider the plant varieties exclusion was *Plant Genetic Systems*.²⁶⁴ The claims in dispute related to plants, plant cells, and seeds that possessed a foreign gene which made them resistant to a type of herbicide. Given that modified plants were immune to the application of the weedkiller, farmers were able to spray (modified) crops safe in the knowledge that the weedkiller would only affect the unmodified weeds. Greenpeace objected to the application arguing, *inter alia*, that the material claimed was a plant variety and thus excluded by Article 53(b).

At first instance, the Opposition Division held that the claims were not restricted to a specifically defined narrow group of plants (such as a variety), but related to a much broader group of plants. As such, the claims were unobjectionable. In overturning this decision, the Board of Appeal acknowledged that 'the concept of plant variety under Article 53(b) refers to any plant grouping within a single botanical taxon [or classification] of the lowest known rank'. On this basis the Board said that plant cells as such, which modern technology allows to culture much like bacteria and yeasts, 'cannot be considered to fall under the definition of plant or of plant variety'.²⁶⁵ Following *Ciba-Geigy* the Board stressed that stability and homogeneity were important factors in determining whether something was a plant variety. More specifically, the Board noted that a plant variety 'is characterized by at least one single transmissible characteristic distinguishing it from

as plant varieties'); and *Plant Genetic Systems/Glutamine synthetase inhibitors*, T356/93 [1995] EPOR 357 (practice is to allow claims directed to groups of plants larger than plant varieties if the invention is applicable to such larger plant groups).

²⁶³ *Ciba Geigy/Propagating material application*, T49/83 [1979–85] CEPOR 758; [1984] OJEPO 112, para. 4 (our emphasis).

²⁶⁴ *Plant Genetic Systems/Glutamine synthetase inhibitors*, T356/93 (1993) 24 IIC 618 (Opposition Division); [1995] EPOR 357; [1995] OJEPO 545 (TBA).

²⁶⁵ *Plant Genetic Systems/Glutamine synthetase inhibitors*, T356/93 [1995] EPOR 357, 375 (TBA).

other plant groupings and which is sufficiently homogeneous and stable in its relevant characteristics'.²⁶⁶

While the Board of Appeal in *Plant Genetic Systems* agreed with much of the reasoning in *Ciba-Geigy*, it disagreed with the way the ambit of the exclusion had been interpreted. More specifically, while in *Ciba-Geigy* plant varieties were restricted 'to cases in which plants are characterized precisely by the genetically determined peculiarities of their natural phenotype', the Board of Appeal in *Plant Genetic Systems* adopted a more expansive reading of the exclusion. In particular, they were willing to extend the exclusion beyond claims that were specifically directed to or characterized as plant varieties, to include claims that encompassed or included a plant variety within their scope. On the facts, the Board of Appeal held that what was being claimed was based upon or derived from genetically engineered cells (and that the application required the production of plant varieties to exemplify them). This meant that they were claiming rights over the plant varieties formed by those plants and seeds. As such, they were not patentable.

In summary, the Technical Board of Appeal held that while claims relating to plant cells are potentially patentable, claims which 'encompass' or are 'based on' a plant variety are not.²⁶⁷ (This is subject to the rider that the resulting plants have a distinguishable characteristic that is stable and homogeneous.) Given that plant varieties are frequently used as the starting point for the production of genetically engineered plants,²⁶⁸ this meant that in most cases plants produced as a result of genetic engineering would not have been patentable:²⁶⁹ a decision which, if followed, would have had important ramifications for the plant-breeding industry.²⁷⁰ Given this, it is not surprising that the *PGS* decision was subject to a considerable amount of criticism.²⁷¹

Much of the case for concern about the impact of the *PGS* decision of plant genetics has now been alleviated. This is because two subsequent events have effectively overturned the *PGS* decision. These are the Biotechnology Directive and the decision of the Enlarged Board of Appeal in *Novartis*.

Article 4(2) of the Biotechnology Directive provides that 'inventions which concern plants . . . shall be patentable if the technical feasibility of the invention is not confined to a

²⁶⁶ Ibid. ²⁶⁷ On 'essentially derived variety', see Art. 14(5) UPOV.

²⁶⁸ Most of the reaction was negative: U. Schatz, 'Patentability of Genetic Engineering Inventions in EPO Practice' (1998) 29 *IIC* 2; T. Roberts, 'Patenting Plants around the World' [1996] *EIPR* 531, 534; A. Schrell, 'Are plants still patentable?' [1996] *EIPR* 242; M. Llewellyn, 'The Legal Protection of Biotechnological Inventions: An Alternative Approach' [1997] *EIPR* 115. Cf. M. Llewellyn, 'Article 53 Revisited: *Greenpeace v. Plant Genetic Systems NV*' [1995] *EIPR* 506.

²⁶⁹ A. Schrell, 'Are Plants Still Patentable?' [1996] *EIPR* 242, 243.

²⁷⁰ The President of the EPO, believing there to be a contradiction between *PGS* and *Ciba Geigy* (and also with the *Onco-mouse* decision), referred the matter to the Enlarged Board of Appeal. The Enlarged Board of Appeal refused to answer the question, which it ruled was improper because there was no conflict between the decisions. *Inadmissible referral*, G3/95 [1996] *EPOR* 505; [1996] *OJEPO* 169 (EBA).

²⁷¹ As Bostyn explained, '[There] is a difference between a claim embracing a plant variety and a claim to a variety. Every claim to plants will embrace plant varieties, since a plant variety is a plant grouping of the lowest possible rank. When claiming a species, or even a higher rank, it will always embrace plant varieties: all Golden Delicious Apples (variety) are apples (species), but not all apples are Golden Delicious.' S. Bostyn, 'The Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 18. See also R. Crespi, 'Patents and Plant Variety Rights: Is there an Interface Problem?' (1992) 23 *IIC* 173.

particular plant . . . variety.²⁷² Similar provisions have been introduced in the 1977 Act and the EPC.²⁷³ So long as a claim encompasses more than one variety it is potentially patentable. The upshot of the Biotechnology Directive is that claims to plants will be allowed even if they encompass a plant variety. However, claims specifically directed to particular plant varieties (which are protected by a separate regime) will not be protected. This would appear to require member states to accept claims to genetically modified plants (such as those in *Plant Genetic Systems*) as being as patentable.

A similar position was reached by the Enlarged Board of Appeal of the EPO in *Novartis*²⁷⁴ (which related to plants that were genetically modified to render them resistant to fungi). In relation to the plant variety exclusion, the Board found that 'a claim wherein specific plant varieties are not individually claimed is not excluded from patentability under Article 53(b), even though it may embrace plant varieties'.²⁷⁵

The Enlarged Board of Appeal noted that Article 53(b) serves to define the borderline between patent and plant variety protection. They also noted that the extent of the exclusion for patents is the obverse of the availability of plant variety rights²⁷⁶ and that plant varieties are only granted for specific plant varieties (and not for technical teachings). On this basis the Enlarged Board of Appeal held that in 'the absence of the identification of a specific plant variety in a product claim, the subject matter of the claimed invention is not directed to a plant variety or varieties within the meaning of Article 53(b) EPC'.²⁷⁷ In short, the Enlarged Board overturned the *PGS* decision and held that a claim that encompasses more than one variety is not excluded under Article 53(b). That is, the mere fact that a patent encompasses a plant variety will not be mean that the invention falls within the exclusion. Instead the exclusion will operate only where the patent claims a plant variety *per se* (which should be protected by plant variety protection).

While the proponents of patent protection for plants will welcome the *Novartis* decision, it gives rise to a potential problem, similar to the problems that arose when the whole contents approach was first adopted in relation to the patenting of computer programs. This is the problem that patent claims will be dressed up to appear as if they do not fall within the exception.²⁷⁸ While the jurisprudence on the patentability of computer programs may provide guidance in this area, the different rationales behind the exclusions means that the whole contents-technical effect approach cannot be directly imported into

²⁷² Biotech. Dir. Recital 29–32. Recital 31 states that 'a plant grouping which is characterized by a particular gene (and not its whole genome) is not covered by the protection of new varieties and is therefore not excluded from patentability even if it comprises new varieties of plants'.

²⁷³ PA Sched. A2, para. 4; EPC Rule 23c(b), *Implementing Regulations to the EPC* (introduced by (1999) OJEP0 437).

²⁷⁴ *Novartis/Transgenic plant*, T1054/96 [1999] EPOR 123; [1998] OJEP0 (special edn.) 149; R. Nott, 'You Did It: The European Biotechnology Directive At Last' [1998] EIPR 347, 351.

²⁷⁵ *Novartis/Transgenic plant*, G1/98 [2000] EPOR 303, 319 (EBA). The EBA gave the analogy with Art. 53(b) (morality) of a patent for a copying machine. The fact that the machine could be used for copying counterfeit notes would not mean that the machine was excluded since the improved properties could be used for other purposes. As we will see, this suggests a particular approach to morality that is not universally accepted.

²⁷⁶ This was because 'inventions ineligible for protection under the plant-breeder's rights systems were intended to be patentable under the EPC provided they fulfilled the other requirements for patentability'.

²⁷⁷ *Novartis/Transgenic plant*, G1/98 [2000] EPOR 303, 319 (EBA).

²⁷⁸ *Novartis/Transgenic plant*, T1054/96 [1999] EPOR 123, 137 (TBA).

paragraph 3(f) of Schedule A2 to the 1977 Patents Act/Article 53(b). It may, however, provide some useful insights into the potential problems that may arise.

7.3 ESSENTIALLY BIOLOGICAL PROCESSES

The third type of invention excluded from protection by paragraph 3(f) of Schedule A2 to the 1977 Patents Act/Article 53(b) are those inventions which are regarded as ‘essentially biological processes for the production of animals and plants’.²⁷⁹ As with the exclusion of animal and plant varieties, the exclusion of essentially biological processes has been reconfirmed in the Biotechnology Directive,²⁸⁰ and by corresponding changes made to the 1977 Act and to the EPC.²⁸¹ Three aspects of this exclusion are worth emphasizing.

First, as the exclusion only applies to processes, it has no application to a product claim or a product-by-process claim. Consequently, in the *Onco-mouse* litigation it was irrelevant to the patentability of the invention that the claims included circumstances where genetically modified rodents reproduced. The offspring of such an ‘essentially biological process’ (if sexual reproduction is such a process) were products and hence fell outside the exclusion.²⁸²

Second, the exclusion only applies where the process is for the ‘production of animals or plants’. As such, the exclusion may not apply if the process results in the death or destruction of animals or plants.²⁸³

Third, the exclusion only applies where the process is ‘essentially biological’. According to the Biotechnology Directive, a process for the production of plants and animals is said to be essentially biological if ‘it consists entirely of natural phenomena such as crossing or selection’.²⁸⁴ The key question that has arisen in this context is—how much human intervention is needed for a process that involves biological steps not to be classified as an essentially biological process?²⁸⁵ This question was considered in *Lubrizol*,²⁸⁶ where the Technical Board of Appeal had to decide whether a process of producing high-quality hybrids was excluded from patentability on the ground that it was ‘essentially biological’. Drawing upon the image of the invention widely used in patent law, the Board of Appeal

²⁷⁹ The Biotech. Dir. affirms that essentially biological processes for the production of plants or animals are not patentable. EPC 2000, Art. 53(b) provides that European patents shall not be granted in respect of ‘plant or animal varieties or essentially biological processes for the production of plants or animal: this provision shall not apply to microbiological processes or the products thereof’: Art. 1, item 18 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e.

²⁸⁰ Biotech. Dir. Art. 4(1)(b).

²⁸¹ PA Sched. A2, para. 3(f).

²⁸² [1990] OJEP0 476, 488.

²⁸³ Cf. *NRDC's Application* [1961] RPC 134; *Swift's Application* [1962] RPC 37.

²⁸⁴ Biotech. Dir. Art. 2(2).

²⁸⁵ Earlier drafts of the Directive defined ‘essentially biological’ as ‘a process in which human intervention consists in more than selecting an available biological material and letting it perform an inherent biological function under natural conditions’; ‘a process which, taken as a whole, does not exist in nature and is more than a mere production process shall be patentable’; and ‘a process which, taken as a whole, does not exist in nature and is more than mere breeding process.’

²⁸⁶ *Lubrizol/Hybrid plant*, T320/87 [1990] EPOR 173; [1990] OJEP0 71. (These were prior to the introduction of the definition.) See also *Ciba-Geigy/Propagating material application*, T49/83 [1984] OJEP0 112 (propagating material not the result of essentially biological process where the process involved treatment with chemical agents); *Harvard/Onco-mouse* [1989] OJEP0 451 (Exam) (process for producing transgenic mouse not essentially biological because it involved micro-injection); *Harvard/Onco-mouse*, T19/90 [1990] EPOR 501; [1990] OJEP0 476, 488 (agreeing that micro-injection is not essentially biological and noting also that sexual reproduction is not necessarily essentially biological).

said the question of whether a claim was for an essentially biological process had to be 'judged on the basis of the essence of the invention taking into account the totality of human intervention and its impact on the result achieved'.²⁸⁷ Turning to the facts of the case, the Board noted that the process in question was divided into a number of steps. First, parent plants were selected and crossed. The resulting hybrids were then evaluated and suitable hybrids selected. The parent plants of the chosen hybrids were then cloned. The crossing was then repeated. The Board held that while each step might be characterized as biological, the arrangement of steps *as a whole* represented an essential modification of known biological processes. On this basis, the Board of Appeal held that the process was not an essentially biological process and, as such, not excluded by Article 53(b).

The question of the degree of technical intervention needed for a process to fall outside the scope of the exclusion was also considered in the *Novartis* decisions. The Technical Board of Appeal said that to decide whether a process was 'essentially biological', the tribunal must make a value judgment about the extent to which a process should be non-biological before it loses the status of 'essentially biological'.²⁸⁸ The Board added that there were three possible approaches that could be taken when answering this question.

(1) Under the first approach, an invention would be excluded if it included an aspect or step that was biological. To fall outside the exclusion, the claimed processes would have to be exclusively made up of non-biological process steps.²⁸⁹

(2) The second approach, which was taken from *Lubrizol*, requires the tribunal to weigh up the overall degree of human intervention in the process.²⁹⁰ Under this approach, the decision as to whether an invention was essentially biological would be judged on the basis of the essence of the invention, taking into account the totality of human invention and its impact on the result received.

(3) The third option, which was the most liberal, provides that the mere presence of a single artificial (or technical) element in the process might be enough to prevent its being classified as an essentially biological process.²⁹¹ The Technical Board of Appeal said that the third approach was reflected in Article 2(2) of the Biotechnology Directive.

Neither the Technical Board of Appeal nor the Enlarged Board of Appeal in *Novartis* provided any direct guidance as to which of these approaches was to be adopted.²⁹² Despite this, there is little doubt that purely biological processes—that is, processes where there is no human intervention—are essentially biological. Article 2(2) of the Biotechnology Directive offers a useful example of this, insofar as it provides that 'a process for the production of plants or animals is essentially biological if it consists entirely of natural

²⁸⁷ *Plant Genetic Systems/Glutamine synthetase inhibitors*, T356/93 [1995] EPOR 357. ('In the present case the impact of human intervention is decisive since the claimed plants and plant material only exist as a result of the process of the invention'.)

²⁸⁸ *Novartis/Transgenic plant*, T1054/96 [1999] EPOR 123, 134 (TBA).

²⁸⁹ *Ibid.* This was drawn from EPC Art. 52(4) re methods of treatment by surgery and therapy. See *General Hospital/Contraceptive method*, T820/94 [1995] EPOR 446.

²⁹⁰ *Lubrizol/Hybrid plants*, T320/87 [1990] EPOR 173.

²⁹² *Novartis/Transgenic plant*, G01/98 [2000] EPOR 303, 321 (EBA).

phenomena, such as crossing or selection'.²⁹³ This means that conventional breeding procedures would not be patentable. 'In contrast, where (human) technical intervention plays a significant part in determining or controlling the result it is desired to achieve, the process would not be excluded'.²⁹⁴

While these two extremes may be clear, one question that remains is whether processes that only have a trivial or minimal amount of human intervention will also be classified as essentially biological processes. In *Lubrizol*, the Board of Appeal said that while trivial interventions may mean that a process is not 'purely' biological, it does not mean that it is not essentially biological.²⁹⁵ Such a process may therefore still be excluded. In contrast it seems, that the changes made to the EPC and the UK Patents Act in light of the Biotechnology Directive may suggest a different conclusion. This is because a process is defined as essentially biological if 'it consists *entirely* of natural phenomena such as crossing or selection'.²⁹⁶ Given that the definition of 'essentially biological process' contained in paragraph 11 of Schedule A2 does not say 'includes', but instead uses the word 'means', we can deduce that if a process involves any technical intervention then it falls outside the exclusion from patentability in Article 53(b) and paragraph 3(f) of Schedule A2. This reading of the provision was supported by the Technical Board of Appeal in *Novartis*, when it said that the third approach (outlined above) was reflected in Article 2(2) of the Biotechnology Directive.

7.4 MICROBIOLOGICAL OR TECHNICAL PROCESSES

As we saw earlier, the exclusion of animal varieties, plant varieties, and essentially biological processes from the scope of patentable subject matter is subject to the general qualification that the invention is not 'a microbiological process or other technical process or the product of such a process'.²⁹⁷ If an invention is for a microbiological or technical process,²⁹⁸ it will not be caught by the exclusion. In essence, the qualification restricts the subject matter excluded by paragraph 3(f) of Schedule A2/Article 53(b) to non-microbiological and non-technical processes. Given that the qualification restricts the scope of the subject matter excluded by paragraph 3(f)/Article 53(b), this means that if it

²⁹³ Similar provision are found in EPC Rule 23b(5), Implementing Regulations to the EPC (introduced by (1999) *OJEP* 437); PA Sched. A2, para. 11.

²⁹⁴ *EPO Guidelines C-V*, 3.4.

²⁹⁵ The Board said that 'the necessity for human intervention alone is not yet sufficient criterion for its not being "essentially biological". Human interference may only mean that the process is not "purely" biological process, without contributing anything beyond a trivial level'. *Lubrizol/Hybrid plants*, T320/87 [1990] *EPOR* 173, 178.

²⁹⁶ Biotech. Dir. Art. 2(2); EPC Rule 23(b)(5) Implementing Regulations to the EPC (introduced by (1999) *OJEP* 437); PA Sched. A2, para. 11.

²⁹⁷ PA Sched. A2, para. 3(f); EPC Rule 23c(c), Implementing Regulations to the EPC (introduced by (1999) *OJEP* 437). EPC 2000, Art. 53(b) only refers 'to microbiological processes or the products thereof'. See Art. 1, item 18 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e. TRIPS only requires that micro-organisms, non-biological, and microbiological processes be patentable. It does not require that products of micro-biological processes be patentable. See also Teschemacher, 'Patentability of Micro-organisms *per se*' (1982) 13 *IIC* 27; Cadman, 'The Protection of Micro-organisms under European Patent Law' (1985) 16 *IIC* 311; Marterer, 'The Patentability of Micro Organisms *per se*' (1987) 18 *IIC* 666.

²⁹⁸ A microbiological process is defined as 'any process involving or performed upon or resulting in microbiological material'. Biotech. Dir. Art. 2(2). EPC Rule 23b(6); PA Sched. A2, para. 11.

was interpreted broadly it would greatly undermine the impact of the provision as a whole. If this were the case, it would increase the scope of biological subject matter that is patentable.

It should be noted that when section 1(3)(b)/Article 53(b) was first enacted, the qualification was limited to 'a microbiological process or the product of such a process'. This was changed as a result of the Biotechnology Directive to apply to 'a microbiological process or other technical process or the product of such a process'.

The issue of what is meant by a 'microbiological process' was considered in *Plant Genetic Systems*²⁹⁹ where the Board of Appeal said that microbiological processes refers to processes in which micro-organisms or their parts are used to make or to modify products. They also said that it refers to processes where new micro-organisms are developed for specific uses. Products of microbiological processes encompass 'products which are made or modified by micro-organisms as well as new micro-organisms as such'. While cells and parts thereof were said to be microbiological, processes of genetic engineering were not.³⁰⁰ The extension of the provision to include technical processes largely renders these issues obsolete.

When construing the qualification in section 1(3)(b)/Article 53(b) as enacted (that is, when it was limited to microbiological processes), most of the discussions focused on whether a process that was made up of a mixture of microbiological and technical steps fell within the qualification.³⁰¹ For example, in *PGS* where the Board of Appeal was contemplating when a process that involves a number of different steps is a microbiological process, the Board said that a process was not a microbiological process simply because a microbiological step was involved. Instead the process had to be judged as a whole. On the facts of the case, the Board said that while the introductory step of transforming plant cells or tissues with recombinant DNA was microbiological, subsequent steps of regeneration and transformation that played an important role in bringing about the final product were not microbiological processes. When viewed as a whole, the process was best described as a technical process that included a microbiological step, rather than a microbiological process (which would have justified the patenting of the process or a product of the process). As a consequence, the resulting plants were held not to be the product of a microbiological process within the meaning of Article 53(b) (as enacted).³⁰²

While *Plant Genetics Systems* provides us with some guidance as to the limits of the qualification, its precise scope remains unclear. It seems, however, that this may not matter too much. This is because the changes introduced to section 1(3)(b)/Article 53(b) so that they also include 'technical processes' means that the problems of the type discussed in *PGS* have largely been overcome. Given that genetic manipulation is undoubtedly a technical process, this appears to demand the patentability of genetically modified plants and

²⁹⁹ (1993) 24 IIC 618 (Opposition Division); [1995] OJEPO 545 (Board of Appeal).

³⁰⁰ *Plant Genetics Systems/Glutamine synthetase inhibitors* [1995] OJEPO 545.

³⁰¹ The issue of how you ascertain whether a process with a number of steps is a microbiological process is similar to the question of whether a process is 'essentially biological'.

³⁰² While the point was not discussed at length, it was suggested in *Plant Genetics Systems/Glutamine synthetase inhibitors* [1995] OJEPO 545, that a microbiological process was a purer process (with less human intervention) than a process which was essentially biological.

animals.³⁰³ As much of the research carried out in relation to biological subject matter involves a degree of human intervention, most of the processes will be captured by the qualification and thus fall outside the scope of the exclusions.³⁰⁴ By increasing the scope of the qualification to section 1(3)(b)/Article 53(b), the changes initiated by the Biotechnology Directive will minimize the impact that the exclusion has upon the scope of patentable subject matter.

The scope of the subject matter excluded by paragraph 3(f) of Schedule A2 to the 1977 Patents Act/Article 53(b) would have been further undermined if the approach suggested by the Technical Board of Appeal in *Plant Genetic Systems* had been followed. In that case, the Board suggested that a plant variety that was a product of a microbiological process would not have been caught by the exclusion and thus would have been patentable. This approach was rejected in *Novartis* when the Enlarged Board of Appeal said that the plant variety exclusion applied irrespective of how the plant varieties were produced. The mere fact that a plant variety was obtained by means of genetic engineering does not give the producers of such plant varieties a privileged position.³⁰⁵ This reflects the position set out in Recital 32 of the Biotechnology Directive which says that 'if an invention consists only in genetically modifying a particular plant variety, and if a new plant variety is bred, it will still be excluded from patentability even if the genetic modification is the result not of an essentially biological process but of a biotechnological process'.

8 IMMORAL INVENTIONS

It is a longstanding principle of patent law that patents should not be granted for immoral inventions. Until recently, the principle was rarely used. However, as a result of developments in biotechnology and related attempts to patent the products of that research, in recent years ethical considerations have played a more prominent role in patent law. While these provisions are potentially applicable to all patentable subject matter, more detailed provisions have also been introduced in relation to biotechnological inventions. What is most striking about the interaction of patent law and ethics is how uncomfortable the relationship has been and the difficulties that it has produced.³⁰⁶

When the EPC and the 1977 Act were first drafted, the relevant statutory provisions in relation to immoral inventions were set out in section 1(3)(a) of the 1977 Patents Act and

³⁰³ Earlier drafts of the Directive defined microbiological to mean 'a process carried out with the use of or performed upon or resulting in a micro-organism'; as 'a process consisting of a succession of steps' including 'at least one essential step of the process' which is microbiological; and as meaning 'a process involving or performed upon or resulting in microbiological material'. All were abandoned. See M. Llewelyn, 'The Patentability of Biological Material: Continuing Contradiction and Confusion' [2000] *EIPR* 191.

³⁰⁴ A. Schrell, 'Are Plants Still Patentable?' [1996] *EIPR* 242, 243.

³⁰⁵ *Novartis/Transgenic plant*, G1/98 [2000] *EPOR* 303, 321 (EBA). This is supported by Recital 32 of the Biotech. Dir.

³⁰⁶ L. Bently and B. Sherman, 'The ethics of patenting: towards a transgenic patent system' (1995) 3 *Medical LR* 275.

Article 53(a) of the EPC.³⁰⁷ As a result of the Biotechnology Directive and TRIPS, two important changes have been made to these provisions as they were first enacted.

The first change is that section 1(3)(a) (as enacted) of the 1977 Act has been replaced by a new section 1(3).³⁰⁸ The old section 1(3)(a) provided that a patent should not be granted for 'an invention the publication or exploitation of which would be generally expected to encourage offensive, immoral or anti-social behaviour'. In contrast, the new section 1(3) provides that a 'patent shall not be granted for an invention the commercial exploitation of which would be contrary to public policy or morality'.³⁰⁹ The new section 1(3) is closer to Article 53(a), which refers to 'inventions the publication or exploitation of which would be contrary to *ordre public* or morality'.³¹⁰ (Article 53 remains unchanged.) It is unlikely that the new section 1(3) will make any substantial changes to the law.

The second change that has taken place in light of the Biotechnology Directive is that the 1977 Act and the EPC have been amended so as to give specific guidance as to the types of biotechnological inventions (such as human cloning) that fall within the scope of section 1(3)/Article 53(a).³¹¹ We will deal with these provisions later.

It has been suggested that the reforms to the 1977 Act and the EPC do not bring about any substantive change in the law.³¹² While there may be some doubts about the accuracy of such claims, it is clear that the decisions under the 'old' regime are still important. As well as providing an important insight into the way patent law and ethics interact, the jurisprudence developed prior to the Biotechnology Directive will still be used to determine whether inventions are caught by the exclusion. Given this, we will first look to the approach adopted by the tribunals to the EPC and the 1977 Act as enacted. We will then look at the changes initiated by the Biotechnology Directive.

8.1 THE EPC AND THE 1977 PATENTS ACT AS ENACTED

The role and meaning of the morality exclusion under the EPC (as enacted) was first considered in the 1989 *Onco-mouse* decision.³¹³ As we have already seen, the case

³⁰⁷ These are permitted by Art. 27(2) TRIPS which says that members may exclude: 'inventions, the prevention within their territory of the commercial exploitation of which is necessary to protect order public or morality, including to protect human, animal or plant life or health or to avoid serious prejudice to the environment, provided that such exclusion is not made merely because the exploitation is prohibited by domestic law'.

³⁰⁸ Patents Regulations 2000 (SI 2000/2037) (in force 28 Jul. 2000). PA s. 1(4) states that for the purpose of s. 1(3) exploitation shall not be regarded as contrary to public policy or morality only because it is prohibited by law in force in the UK.

³⁰⁹ This replicates the language in Biotech. Dir. Art. 6(1). Similar language is used in EPC 2000, Art. 53(a). See Art. 1, item 18 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e; Base Proposal for the Revision of the European Patent Convention CA/100/00 e (2000), 42.

³¹⁰ Biotech. Dir. Art. 6(1).

³¹¹ PA Sched. A2, para. 3(b)–(c); EPC Rule 23d (a)–(d); Biotech. Dir., Art. 6(1).

³¹² It has been said that the Regulations that implement the Biotech. Dir. do not lead to anything being patentable that was not already patentable, UK Patent Office: Patents Regulations 2000 www.patent.gov.uk/snews/news/patreg.html (in relation to Arts. 1–11 of the Biotech. Dir.).

³¹³ *Harvard/Onco-mouse* [1990] EPOR 4; [1989] OJEPO 451 (Exam); T19/90 [1990] EPOR 501; [1990] OJEPO 490 (TBA); [1991] EPOR 525 (Exam). See V. Vossius, 'Patent Protection for Animals' [1990] EIPR 250; Dresser, 'Ethical and Legal Issues in Patenting New Animal Life', [1988] *Jurimetrics Journal* 399; U. Schatz, 'Patentability of Genetic Engineering Invention' (1998) 29 *IIC* 2; Manspeizer, 'The Cheshire Cat, the March Hare and the Harvard Mouse' (1991) 43 *Rutgers LR* 417.

concerned the patentability of mice that had been genetically modified so that they would develop cancer: a result that the applicants hoped would be useful in cancer research.³¹⁴ Initially, the Examining Division declined to consider Article 53(a), taking the view that it was inappropriate for people who were essentially qualified as technicians to consider such an issue.³¹⁵ On appeal, the Technical Board of Appeal took a very different view. It observed that the genetic manipulation of mammalian animals is 'undeniably problematical in various respects', particularly in circumstances where the modifications 'necessarily cause suffering'.³¹⁶ Moreover, the release of the mice into the environment might 'entail unforeseeable and irreversible adverse effects'. Consequently, it was necessary to consider the application of Article 53(a).

The Board of Appeal, remitting the case to the Examining Division for reconsideration, explained that the application of Article 53(a) 'would seem to depend mainly on a careful weighing up of the suffering of animals and possible risks to the environment on the one hand, and the invention's usefulness to mankind on the other'. Applying this utilitarian balancing test, the Examining Division held that the subject matter was patentable. It reasoned that finding a cure for cancer was a highly desirable end, and that the mouse would assist in achieving that end. In contrast, the Examining Division played down the harm caused by the invention. The Examining Division suggested that given that the research would take place anyway, and that it would require vast numbers of mice to locate some which had 'naturally' developed cancer, the invention produced a benefit to mouse-kind in that large numbers of healthy mice would no longer need to be bred and then destroyed.

The utilitarian approach adopted in *Onco-mouse* was applied in 1991 when the EPO warned the pharmaceutical company Upjohn that it would not accept an application to patent a mouse into which a gene had been introduced such that the mouse would lose its hair. In weighing up the benefit that flowed from the invention (the usefulness of the mice in experiments to cure hair loss) as against the harm suffered by the mice, the EPO asserted that the invention was immoral and thus would not be patentable.³¹⁷

The next occasion on which the application of Article 53(a) was considered was by the Opposition Division in *Plant Genetic Systems*.³¹⁸ In this case, the opponents (Greenpeace) objected to the patent that had been granted for a genetically engineered plant (which rendered the plants resistant to herbicide) on the grounds that it was inherently immoral and that it created risks to the environment. Following the cost/benefit test suggested in *Onco-mouse*, the opponents argued that these risks should be balanced against the benefits likely to accrue from the invention. The Opposition Division refused to apply the utilitarian cost/benefit analysis. On the basis that the patent system was primarily concerned with technical considerations and that they were not competent or qualified to decide ethical issues, the Opposition Division believed that it should not be routinely involved in considering ethical questions. Instead, the Opposition Division said that it was only necessary

³¹⁴ More accurately, of a mammal into which malignancy-creating genes had been introduced so that the mammal had an increased probability of developing tumours.

³¹⁵ [1989] *OJEPO* 451 (Exam).

³¹⁷ *Independent* (2 Feb. 1992).

³¹⁸ [1993] 24 *IIC* 618.

to consider the exclusion where the invention would be universally regarded as outrageous and where there was an overwhelming consensus that no patent should be granted. That is, it was only necessary to consider ethical questions once a certain ethical threshold had been crossed. The upshot of this is that in most cases it would not be necessary to consider the morality of patents.

The *Plants Genetic Systems* decision highlights a further difficulty in relation to the immorality examination. In an attempt to apply the utilitarian examination outlined in *Onco-mouse*, the Opposition Division was faced with the problem that it was unable to quantify the objections raised against the patent. This was compounded by the fact that no evidence was submitted to support these claims. Instead, the examiners were asked to determine the opposition on the basis of personal philosophy or conviction. The Opposition Division rejected such an approach on the basis that it would produce 'individualistic' or 'arbitrary' decisions. Moreover, even if it were possible to convert abstractly formulated objections into a more concrete format (for example, through the use of opinion poll evidence), the Opposition Division clung to the view that patent law should not be the forum in which such opinions should play a role.

The approach advocated in the Greenpeace decision was adopted by the Opposition Division in the *Relaxin* case.³¹⁹ This decision concerned an opposition by the Green Party to the Howard Florey Institute's patent for the DNA sequences of a naturally occurring substance, that relaxes the uterus during childbirth, which is obtained from the human ovary. The Green Party objected to the patent on three grounds. First, they argued that the use of pregnancy for profit was offensive to human dignity; secondly, that the applicant was involved in patenting life, an activity that was intrinsically immoral; and thirdly that such patenting was equivalent to slavery. In rejecting the Green Party's objections, the EPO noted that the tissue used in the research was donated during the course of necessary gynaecological operations and thus had not offended 'human dignity'. Moreover, the Opposition Division said that DNA was not 'life'. Rather, it was a 'chemical substance which carries genetic code'. The argument that the applicant was 'patenting life' was thus misconceived. Finally, the Opposition Division rejected the Green Party's assertion that such patenting was equivalent to slavery on the ground that such an assertion misunderstood the nature of a patent. This was because, according to the Opposition Division, a patent does not give the proprietor any rights over a human being: all a patent monopoly provides is the right to prevent someone from practising the same invention.

As with the *Plant Genetics* decision, the Opposition Division's decision in *Relaxin* further highlights the problems that confront patent law in accommodating ethical considerations. This was explicitly acknowledged in *Relaxin* when the Opposition Division said the question of whether 'human genes should be patented is a controversial issue on which many persons have strong opinions . . . the EPO is not the right institution to decide on fundamental ethical questions'.³²⁰ The case also reveals the difficulties involved in translating the ethical concerns of the objectors into the language of patent law. Faced with a choice between a scientific understanding of DNA as a chemical substance and the social understanding of DNA as life, the former interpretation was preferred by the Opposition Division. This prioritization of the scientific view of genetic process over the

³²⁰ *Howard Florey/Relaxin*, T74/91 [1995] EPOR 541, 552.

Green Party's approach illustrates the depth of the conflict between the logic of ethical objections and those of patenting, at least as it is currently understood.

The latest development in this area came with the decision of the Board of Appeal in *Plant Genetic Systems*³²¹ where the Board concluded that claims for genetically modified seeds did not contravene Article 53(a). Although this decision, which has attracted many critics,³²² represents a more flexible approach to the incorporation of ethics into patent law, it still highlights the uncertainty and ambiguity that exist in this relationship. The Board of Appeal said that the concept of morality under the EPC was built upon the belief that some behaviour is right and acceptable whereas other behaviour is wrong: a belief that was founded on norms deeply rooted in European society and civilization. Noting that patent offices exist 'at the crossroads between science and public policy', the Board of Appeal said that *ordre public* in Article 53(a) covers the protection of public security, the physical integrity of individuals as part of society, and protection of the environment. On this basis, the Board of Appeal said that where the exploitation of an invention was likely to breach public peace or social order (for example, through acts of terrorism) or seriously prejudice the environment, the invention would be excluded from patentability under Article 53(a).³²³

The Board of Appeal then attempted to clarify the way Article 53(a) was to be interpreted. As well as casting doubts on the value of opinion poll evidence, the Board also said that the mere fact that the exploitation of a particular type of subject matter was permitted in some or all of the contracting states would not automatically influence the ethical status of that subject, at least in relation to its patentability. The Board observed that a balancing exercise was not the only way of assessing patentability, although it was useful in situations where actual damage and/or disadvantage existed. The Board added that although the morality provision is to be construed narrowly, it should not be disregarded. This is the case even if it is difficult to judge whether the claimed subject matter is contrary to *ordre public* or morality. Given the explicit wording of Article 53(a), it is difficult to see how they could have concluded otherwise. The status of Article 53(a) was discussed by the Opposition Division at the EPO in its 2003 judgment in relation to an amended version of the *Onco-mouse* patent.³²⁴ As this decision was made after the Biotechnology Directive, we will look at the decision after we look at the impact that the Directive had on the morality exclusion.

8.2 MORALITY AFTER THE BIOTECHNOLOGY DIRECTIVE

As we mentioned above, the ethical status of biotechnological inventions was addressed in the Biotechnology Directive. This has led to the introduction of a new section 1(3) in the 1977 Act.³²⁵ More importantly, it led to the 1977 Act and the EPC being amended so that they now list certain types of inventions that are excluded on the basis that they are immoral. It is likely that the Directive will bring about other changes. For example, Article 7 of the Directive states that the Commission's European Group on Ethics in Science and

³²¹ [1995] *OJEP* 545. ³²² J. Straus, 'Patenting Human Genes in Europe' (1995) 26 *IIC* 920.

³²⁴ *Harvard/Onco-mouse* [2003] *OJEP* 473 (Opposition Division).

³²⁵ And to conform with TRIPS Art. 27(2).

New Technologies is to evaluate all ethical aspects of biotechnology.³²⁶ While this is unlikely to have a direct impact on patenting, there is a possibility that it may influence attitudes towards ethical issues. This is reinforced by the fact that the Commission is obliged under the Biotechnology Directive to report annually to the European Parliament and Council on the implications of patent law in the field of biotechnology and genetic engineering.³²⁷

When the Directive was first proposed, it made no reference to the morality of patenting. Over time, however, the Directive became a focal point for public concerns about the ethical and social dimensions of biotechnology generally, as well as specific concerns about the patenting of the products of such activities. In response, the proponents of patenting argued that the patent system was an inappropriate vehicle to deal with concerns over morality. The reason for this was the uses that were to be made of an invention are not clear at the application stage, that patent examiners are not qualified to deal with ethical questions, and most importantly because patents do not control whether or how an invention is exploited. Instead it was said that exploitation of biotechnological inventions was best controlled through other regulatory systems.³²⁸

In the end, the Biotechnology Directive took a middle ground. Article 6(1) affirms the relevance of ethical considerations insofar as it provides that inventions shall be unpatentable where their commercial exploitation would be contrary to *ordre public* or morality. This is mirrored in the new section 1(3) and, in turn, reflects Article 53 EPC (as enacted). Article 6(1) goes on to say that exploitation shall not be considered to be contrary to morality simply because it is prohibited by law or regulation. Similar provisions exist in the 1977 Act and the EPC.

Importantly, Article 6(2) of the Biotechnology Directive provides some specific examples of types of inventions that are unpatentable. These are now mirrored in the 1977 Act³²⁹ and the EPC.³³⁰ The inventions excluded are:

- (a) processes for cloning human beings;³³¹
- (b) processes for modifying the germ line genetic identity of human beings;³³²
- (c) uses of human embryos for industrial or commercial purposes;³³³

³²⁶ Recital 26, which talks about the need for 'free and informed consent' from the person whose body the material is taken, has not been implemented in the UK. See D. Beyleveld, 'Why Recital 26 of the EC Directive on the Legal Protection of Biotechnological Inventions Should be Implemented in National Law' [2000] *IPQ* 24. Cf. S. Bostyn, 'The Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 8.

³³³ EPC Rule 23d(c), Implementing Regulations to the EPC (introduced by (1999) *OJEP*O 437); PA Sched. A2, para. 3(d); Biotech. Dir., Art. 6(2)(c).

- (d) processes for modifying the genetic identity of animals which are likely to cause them suffering without any substantial medical benefit to man or animal, and also animals resulting from such processes.³³⁴

The exclusion of processes for human cloning reflects concerns about eugenics. Human cloning is defined in Recital 41 of the Directive as ‘any process, including techniques of embryo splitting, designed to create a human being with the same nuclear genetic information as another living or deceased human being’.³³⁵ It has been suggested that the scope of the exclusion will depend on how ‘human being’ is defined.³³⁶ In particular, ‘human being’ may be defined in such a way as not to include human embryos and embryonic tissue. The UK Patent Office has said that human totipotent cells (which have the potential to develop into an entire human body) would not be patentable ‘because the human body at the various stages of its formation and development is excluded from patentability’.³³⁷ In contrast, the UK Patent Office is willing to grant patents for human embryonic pluripotent stem cells (which arise from the division of totipotent cells but do not have the potential to develop into an entire human body). The fact that a number of reports from key scientific bodies, including The Royal Society and the Nuffield Council on Bioethics, supported embryonic stem cell research was taken as evidence that such research was not contrary to public policy or morality in the UK.³³⁸ It should be noted that the EPO declared (on the basis of the ‘old’ law) that methods in a cloning process which fused human and pig cells were contrary to morality. As a consequence the applicants did not pursue the application any further.³³⁹ As such, it seems that even if the cloning of human embryos was not caught by EPC Rule 23d(a) it would fall under the general prohibition in Article 52(a).³⁴⁰

The exclusion of processes that modify the germ line genetic identity of human beings (a process that could alter the reproductive cells that are capable of transmitting genetic material to our descendants) also reflects concerns about eugenics. While somatic cell gene therapy is not caught by the provisions, germ cell line therapy inventions are.³⁴¹ It has been suggested that the exclusion of all forms of germ line therapy is an overreaction. More specifically it has been said that as it is conceivable that morally unobjectionable applications of germ line therapy (for example, for inheritable diseases like cystic fibrosis) may

³⁴⁰ Such activities may also be caught by Biotech. Dir. Art. 5; Rule 23e(1); PA Sched. A2, para. 3(a).

³⁴¹ S. Bostyn, ‘The Patentability of Genetic Information Carriers’, [1999] *IPQ* 1, 8. Bostyn offers the following definitions: ‘somatic cell gene therapy applies to differentiated cells of the foetus, the child or the adult, such as cells of the liver, blood or other organs’ (8, n. 36); ‘germ line therapy applies to non-differentiated cells, such as gametes or the fertile egg, and implies that the genetic modification will be transmitted to the individual’s offspring’ (8, n. 37).

arise in the future, the exclusion is 'retrograde and short-sighted'.³⁴² As Recital 42 of the Directive points out, the exclusion does not affect inventions for therapeutic or diagnostic purposes which are applied to the human embryo and are useful to it.

The exclusion of uses of human embryos for industrial or commercial purposes is relatively straightforward.³⁴³ To a large extent, the scope of the exclusion will depend on what is meant by 'industrial' or 'commercial' purposes. The UK Patent Office has said that as well as excluding uses of human embryos, that patents will not be granted for processes of obtaining stem cells from human embryos.³⁴⁴ As we mentioned above, the UK Patent Office has also said that while human totipotent cells are not patentable, they had no objections to the patenting of human embryonic pluripotent stem cells. In one of the few decisions to consider the new provisions, the Opposition Division at the EPO held that the University of Edinburgh's controversial human embryo patent did not comply with EPC Rule 23d(c).³⁴⁵ (The patent 'involved removing stem cells from human embryos, genetically manipulating these cells and cultivating genetically manipulated embryos from them'. After amendment, the patent no longer includes human or animal embryonic stem cells but still covers modified human and animal stem cells other than embryonic stem cells).

The final category of inventions expressly excluded from protection are 'processes for modifying the genetic identity of animals which are likely to cause them suffering without any substantial medical benefit to man or animal, and also animals resulting from such processes'. The fact that the provision is limited to the modification of animals means that it will not impact upon animal cloning (such as Dolly the sheep). In the latest installment in the *Onco-mouse* saga, the Opposition Division at the EPO was called on to consider whether a patent for transgenic rodents containing an additional cancer gene was excluded from patentability under EPC Rule 23d(d) (which corresponds to Article 6(2)(d) of the Biotech Directive). The Opposition Division began by noting that EPC Rule 23d(d) supersedes the balancing test set out by the Technical Board of Appeal in the earlier 1990 *Onco-mouse* decision.³⁴⁶ After noting that the key criteria in EPC Rule 23d(d) were 'suffering' and 'substantial medical benefit', the Opposition Division resurrected a version of the old balance test. In particular they said that if 'it was agreed that there is suffering, in accordance with [EPC Rule 23d(d)], this suffering must be balanced by a substantial medical benefit'.³⁴⁷ In quantifying the benefit provided by the invention, the Opposition Division made two points. The first was that the date at which the assessment is to be made is the date of the patent application and *not* the date at which the assessment is actually made.³⁴⁸ This means that the assessment has to be made with an element of probability and without

³⁴⁸ This was because all other patentability criteria were assessed at the date of application.

taking into account later evidence as to the actual outcome of the invention. Second, in answering the question—how is the benefit to be assessed?—the Opposition Division focused on the subjective viewpoint of the inventor (subject to the rider that these viewpoints had to be bona fide). Combined together, this meant that the decisive question was ‘whether at the [date of the patent application], the inventor has bona fide reasons to believe his invention would have a substantial medical benefit’.³⁴⁹ While the Opposition Division provided some guidance as to how ‘medical benefit’ is to be calculated, they provided little guidance as to how ‘suffering’ is to be assessed. The one point they did make was that the date at which the suffering was to be evaluated was different than the date used when determining medical benefit. More specifically the Opposition Division said that suffering exists—independent of the assessment date—once the animals develop tumors. That is, in assessing suffering, the Opposition Division was willing to look at evidence from after the date when the patent was filed. Looking at the facts before them, the Opposition Division said that it ‘cannot be denied that the animals of the inventions were made for a good cause’.³⁵⁰ They also said that in light of the state of the art in relation to medical cancer testing at the time, that there were bona fide reasons to expect a substantial medical benefit. Armed with this information, the Opposition Division balanced the benefit against the harm and concluded, with no further explanation, that EPC Rule 23d(d) was not a bar to patentability.

As well as arguing against the *Onco-mouse* patent on the basis that it was excluded by EPC Rule 23d(d), the opponents also argued that it fell foul of Article 53(a). In upholding the patent in an amended form, the Opposition Division set out what it saw to be the general principles underlying Article 53(a) EPC. In particular, they said that Article 53(a) would only ever apply in exceptional cases. They also said that in assessing whether a patent fell foul of Article 53(a), that they had no intention to apply ‘extreme positions’. By this they meant they would not take account of possible abuses of the invention.³⁵¹ However, in an exercise of logic that would please the most hard line of legal positivists, the Opposition Division said that *ordre public* and morality had to be assessed ‘primarily by looking at laws or regulations which are common to most of European countries because these laws and regulations are the best indicators about what is considered right or wrong in a society’.³⁵² The fact that most member states allowed animals to be used for experimental or other scientific purposes meant that the *Onco-mouse* patent did not fall foul of Article 53(a). If this is followed, the Opposition Division will have effectively shifted the focal point of the morality provision away from the Patent Office to other legal arenas. This will allow the EPO to give the appearance that it is concerned with ethical considerations, while satisfying those who believe that patent examiners do not have the competence to deal with such matters.

18

NOVELTY

1 INTRODUCTION

Both the 1977 Patents Act and the EPC stipulate that for an invention to be patentable it must be ‘new’.¹ An invention is said to be new if it does not form part of the ‘state of the art’.² The ‘state of the art’ is defined very broadly to include all matter that is available anywhere in the world before the priority date of the invention. Where an invention is disclosed or ‘anticipated’ by the state of the art, a patent will not be granted or, if it has been granted (because the prior art escaped the attention of the Examiner), the patent is liable to be revoked.³

Novelty requires that the invention be *quantitatively* different from what has been disclosed previously; that is, that the technical information disclosed by the patent is not already available to the public. In this sense, novelty is different from the requirement that to be patentable an invention must have involved an inventive step (or be non-obvious), which is basically a *qualitative* examination to ascertain whether the contribution is creative enough to warrant a monopoly.

By ensuring that patents are not granted for products or processes which are already known, novelty helps to ensure that patents are not used to stop people from doing what they had already done before the patent was granted.⁴ As we will see, this so-called right to work argument has been modified as a result of changes in the way novelty is determined.⁵ Another factor that is used to justify the novelty requirement relates to the overall rationale for grant of patents.⁶ More specifically, it is argued that the public is willing to pay the

¹ PA s. 1(1)(a); EPC Art. 52(1).

² PA s. 2(1); Art. 54(1). PA s. 130(7) provides that PA s. 2 is framed so as to have, as nearly as practicable, the same effect in the UK as the corresponding provisions of the EPC.

³ PA s. 72(1)(a); EPC Art. 138(1)(a). Lack of novelty is a ground of opposition at the EPO under EPC Art. 100(a).

⁴ 1 Prior to the 1624 Statute of Monopolies, the Crown granted patents for activities which had already been carried out. One of the most infamous examples being for the buying and selling of playing cards. This meant that those who were already practising the activities could no longer continue to do so. Not surprisingly, such persons were aggrieved. See *Clothworkers of Ipswich Case* (1614) *Godb R* 252; 78 *ER* 147; *Darcy v. Allin* (1602) 74 *ER* 1131. In part, the 1624 Statute of Monopolies was introduced to overcome these problems.

⁵ On the right to work see *Windsurfing International v. Tabor Marine* [1985] *RPC* 59, 77; B. Reid, ‘The Right to Work’ [1982] *EIPR* 6. With respect to registered designs *Falk v. Jacobwitz* (1944) 61 *RPC* 116, 123.

⁶ At the EPO, the purpose of the novelty requirement is to prevent the prior art from being repatented: *Bayer/Diastereomers*, T12/81 [1982] *OJEPO* 296; [1979–85] *EPOR* B-308, 312; *Bayer/Amino acid derivatives*, T12/90 [1991] *EPOR* 312, 317.

costs (or monopoly profits) of patenting if, and only if, they are able to get access to information that would have otherwise not been available to them. To adopt the contract analogy that is often used to justify and explain patents, novelty ensures that the inventor provides the consideration necessary to warrant the patent being granted in the first place.

While the 1977 Patents Act retains many of the basic principles and rationales that have long been a feature of British law on novelty, Britain's entry into the EPC introduced some important changes in the way the novelty requirement is applied in the United Kingdom. One of these relates to the fact that the 1977 Act and the EPC operate on the principle of 'objective novelty': that is, an attempt, where possible, to avoid subjective judgments (which are seen to lead to uncertainty).⁷ Perhaps the clearest example of this is that both British and European patent law have adopted the principle of 'absolute novelty'.⁸ This means that the novelty of an invention is judged against all the information which is available at the priority date of the invention; irrespective of where the information was released or the form that it was released in.⁹

Given the broad nature of the knowledge base against which the novelty of inventions are assessed, it is not surprising that it has been criticized on the basis that by allowing obscure materials to anticipate, absolute novelty produces harsh results. In its favour, however, absolute novelty is said to provide a 'brightline' test thus, 'avoiding subjectivity and most questions of degree'.¹⁰ Given the sophisticated information tools that are currently available to researchers, there may be good reasons for providing disincentives to prevent the duplication of research that has already been carried out.¹¹ Another notable change in the post-1977 law is that in determining whether an invention is novel, the courts have placed increased attention on the information function of the patent system. As we will see, this has had important consequences for so-called secret or inherent uses and their ability to anticipate.

The task of determining whether an invention is novel can conveniently be broken down into three separate questions. These are:

- (1) What is the invention?
- (2) What information is disclosed by the prior art?
- (3) In light of (1) and (2), is the invention novel? That is, is the invention part of the state of the art?

We will deal with each of these in turn. After doing so, we will look at three specific types of inventions and the problems that have arisen when assessing their novelty.

⁷ See *Genentech's Patent* [1989] *RPC* 198, 203 (Purchas LJ) (CA).

⁸ Strasbourg Convention Art. 4. France and Italy already had such a standard.

⁹ This is wider than under pre-1977 law, especially as regards the requirement of worldwide novelty. In other ways it may be narrower since the pre-1977 language of 'having regard to what was known and used' had no specific requirement that the use make 'the invention' available to the public. Some countries require novelty within the territory, exclude old documents, or confine the state of the art to printed documents. For an argument in favour of a more 'realistic standard' see Note, 'Prior Art in the Patent Law' (1959) 73 *Harvard LR* 369.

¹⁰ *Milliken Denmark AS v. Walk Off Mat* [1996] *FSR* 292.

¹¹ R. Merges, *Patent Law and Policy* (1992), 192–4 (examining the rationale behind the novelty doctrine from the point of view of its impact on search activities).

2 WHAT IS THE INVENTION?

Before being in a position to determine whether an invention is new, it is first necessary to identify what the alleged invention is.¹² While the way an invention is characterized often plays a key role in shaping many aspects of the novelty examination and consequently the fate of many inventions,¹³ it has received very little attention. One notable exception to this is in relation to product-by-process claims. As we explained above, product-by-process claims are viewed differently in the United Kingdom than at the EPO.¹⁴ In particular, while the Court of Appeal in *Amgin* held that product-by-process claims were allowed in the UK, product-by-process claims are not recognized at the EPO, except where the 'product cannot be satisfactorily defined by reference to its composition, structure or other testable parameter'.¹⁵ As we explain below, this has had an impact on the way novelty of such claims are assessed.¹⁶

3 WHAT INFORMATION IS DISCLOSED BY THE PRIOR ART?

Once the technical features of an invention have been identified, it is then necessary to ascertain the nature of the information that has been disclosed by the prior art. In order to do this it is first necessary to ask: what material forms part of the state of the art? Once this has been ascertained (and the prior art which is relevant to the invention in question has been identified), it is then possible to determine the nature of the information (or teaching) which is disclosed by the prior art.

3.1 WHAT IS THE STATE OF THE ART?

The state of the art is defined in extremely broad and inclusive terms to include all matter (whether a product, process, information about either, or anything else) which, at the priority date of the application in question, has been made available to the public (whether in the United Kingdom or elsewhere) by written or oral description, by use or in any other way.¹⁷ There are a number of features of the way in which the state of the art is defined which should be borne in mind.

3.1.1 No geographical limits

There are no geographical limits placed on where the state of the art must be disclosed. As such, it includes information that is available *anywhere* in the world.

¹² *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 82 (HL); *Evans Medical Patent* [1998] RPC 517.

¹³ *Glaverbel v. British Coal* [1994] RPC 443; [1995] RPC 255 (CA); *CIPA*, para. 2.03.

¹⁵ *IFF/Claim categories*, T150/82 [1984] OJ/EPO 309, para. 10–11. This decision was made in the knowledge of the different approach in the UK (para. 11).

¹⁶ See below pp. 455–6.

¹⁷ PA s. 2(2); EPC Art. 54(2).

3.1.2 No restrictions on the mode of disclosure

Information will become part of the state of the art irrespective of the way in which it was made available to the public. Consequently, information may become part of the state of the art as a result of written descriptions (such as prior published patents¹⁸ or journal articles),¹⁹ through prior uses,²⁰ exhibitions, sales,²¹ or by oral communications (although in the latter case difficult evidential questions may arise).²² If the information is accessible, then its age, obscurity, duration, language, or location is irrelevant.²³ Similarly, there are no minimum requirements on how widely the information must be published for it to be disclosed. Thus, a single copy of a document, or the sale of a single item will be sufficient for the information to become part of the state of the art.²⁴

3.1.3 Potential rather than actual disclosure

Material is factually available (and part of the state of the art) if it is open to or capable of being accessed by the public. As such, there is no need to demonstrate that anyone *actually* had access to the information in question: all that matters is that if they had wanted to, they could have accessed the information.²⁵

3.1.4 Priority date

Both the 1977 Patents Act and the EPC provide that the date at which the novelty is to be assessed is the 'priority date' of the invention in question.²⁶ The upshot of this is that the state of the art only includes information that is made available to the public *before* the priority date of the invention in question. While the priority date is normally the date on which an application was filed,²⁷ in some cases the priority date is calculated from an

¹⁸ T877/98 [2001] OJEP0 Special Edition No. 3, 20 (a patent becomes part of the public domain on publication in the relevant Official Journal, not upon notification of the decision to grant).

¹⁹ This includes a magazine available to the public one day before the priority date, but not a doctoral thesis which has been placed in a library archive and yet to be indexed: *Research Corporation/Publication*, T381/87 [1990] OJEP0 213; [1989] EPOR 138. See also *Exxon Mobil*, T314/99 (21 Jun. 2001).

²⁰ *Luchterberg/Rear-view mirror*, T84/83 [1979–85] EPOR 793, 796. On prior use as prior art under the EPC see *Castro* (1996) 27 IIC 190; and under French law, see *Mandelo* (1996) 27 IIC 203.

²³ *Windsurfing International v. Tabor Marine* [1985] RPC 59.

²⁴ *Fomento v. Mentmore* [1956] RPC 87. *Monsanto (Brignac's) Application* [1971] RPC 153, where a publication placed in the hands of salesmen was held to have been made available to the public, since there was no fetter on their use of that information. See also *Van Wouterghem*, T1022/99 (10 April 2001) (sale of object to a single customer). However, supply to a manufacturer is likely to be treated as in confidence: *Strix v. Otter* [1995] RPC 607, 633–4. It should be noted that supply will only make the invention available if it reveals it: *Pall Corp v. Commercial Hydraulics* [1990] FSR 329.

²⁵ *Japan Styrene Paper/Foam particles*, T444/88 [1993] EPOR 241. There is no requirement that a person be likely to examine the document: *Hoechst/Polyvinylester dispersion*, T93/89 [1992] OJEP0 718; [1992] EPOR 155; *Woven Plastics v. British Ropes* [1970] FSR 47; *Harris v. Rothwell* (1887) 4 RPC 225.

²⁶ PA s. 2(1); EPC Art. 54(2) (which provides that the relevant date is the 'date of filing'). In the USA, the relevant date is the date when the invention was made.

²⁷ PA s. 5(1); EPC Art. 80.

earlier date²⁸ (notably where an application is made in the previous twelve months in a Paris Convention country).

In contrast with some other patent regimes,²⁹ applicants for UK and European patents are not provided with a 'grace period', that is a period prior to filing in which they are able to practise their inventions.³⁰ Consequently, patents are frequently anticipated and thus rendered invalid for want of novelty as a result of the applicant's own acts and disclosures.³¹ The priority date is thus not only important because it is the date at which novelty is assessed, it is also important because it is the date from when inventors are able to exploit their inventions without jeopardizing any potential patents.³²

3.1.5 Material specifically included within the state of the art

While as a general rule patent law provides that the state of the art only includes material in the public domain before the priority date of the invention, an exception is made in relation to patent applications that are published after the priority date of the application in suit. More specifically, the relevant laws provide that in addition to the matter published before the priority date of the invention, the state of the art also includes patent applications (for other patents) that are published after the priority date of the invention in question, but nonetheless have an earlier priority date than the application in question.³³ The reason why the state of the art is (effectively) backdated in this way is to avoid the possibility of double patenting, that is, of patents being granted to different applicants for

²⁸ The law facilitates this by allowing for priority not only from full filing but also from early filing. PA s. 14–15; EPC Arts. 80. On a situation where early PCT filing is claimed under EPC Arts. 87–88 see *Requirement for claiming priority of same invention*, G/98 [2001] OJEP0 413 (earlier priority could only be claimed from an earlier application if the skilled person could derive the subject matter of the later claim, directly and unambiguously from the previous application as a whole).

²⁹ A grace period is provided by US law 35 USC section 102(b), in which the applicant's own acts are deemed to fall outside the state of the art.

³⁰ For calls for grace periods, see WIPO H1/CE/1/2 (15 May 1985); Lesser, (1987) *EIPR* 81. More recently the Intergovernmental Conference of Member States of the EPO called for the EPO to examine the conditions under which a grace period should be introduced into the EPC. For expert opinions on this see http://www.european-patent-office.org/news/headlns/2000_07_25_e.htm. See F. Blakemore, 'Grace Periods in European Patent Law' (Oct. 1998) *Patent World* 18.

³¹ See *Fomento v. Mentmore* [1956] *RPC* 87; *Lux Traffic Controls v. Pike Signals* [1993] *RPC* 107, 134–5; *Research Corporation/Publication*, T381/87 [1990] OJEP0 213; [1989] *EPOR* 138.

³² *Asahi Kasei Kogyo* [1991] *RPC* 485, 529 (Lord Oliver) (HL). In the USA, experimental use will not invalidate a patent even though the invention was in public use or on sale more than a year before the priority date.

³³ PA s. 2(3), s. 130(3); EPC Art. 54(3), Art. 87(4). The test for novelty under PA s. 2(3) is the same as under PA s. 2(2): *SmithKline Beecham plc's Patent* [2003] *RPC* 114, 120–22 (CA) and *Synthon BV v. SmithKline Beecham* [2002] *EWHC* 1172. EPC Art. 54(3) does not treat prior national rights as part of the state of the art, so that a European patent (UK) would be granted at the EPO but not in the UK where the prior national right would anticipate. See *Mobil/Admissibility*, T550/88 [1992] OJEP0 117; [1990] *EPOR* 391 (construing the term 'European patent application' in EPC Art. 54(3) as excluding prior national applications, by reference to Arts. 93 and 139); *Woolard's Application* [2002] *RPC* 39; *Zbinden's Application* [2002] *RPC* 13 (discussing when a withdrawn application forms part of the state of the art). This position will change under EPC 2000, which abolishes EPC Art 54(4). The effect of this is that will be that the state of the art for a European application or patent will include all prior European applications irrespective of their designation. The 1977 Patents Act will be amended to reflect the fact that all applications for European patents will form part of the state of the art under s. 2(3): *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), paras. 23, 24.

the same invention.³⁴ This potential problem is created by the fact that there is a time lag between the date of filing, which is normally the priority date, and the early publication of the application—when the application becomes part of the state of the art.

3.1.6 Material specifically excluded from the state of the art

There are two situations where material in the public domain is not taken into account when assessing novelty of inventions. The first is where the information was obtained unlawfully or was disclosed as a result of a breach of confidence.³⁵ In a sense this reaffirms the old principle that material is only available to the public if the recipient is free in law and equity to divulge its contents.³⁶ The second situation where information is excluded from the state of the art is where the disclosure was due to or made in consequence of the inventor displaying the invention at an ‘international exhibition’.³⁷

It is important to note that the exclusions only apply to disclosures that are made in the six-month period immediately preceding the date of filing of the invention in question.³⁸ Any disclosures that are made outside of this period will not be caught by the exceptions and will thus form part of the state of the art for the purposes of assessing novelty.

3.2 WHAT INFORMATION IS DISCLOSED BY THE PRIOR ART?

The information disclosed by the prior art is restricted to the information that the person skilled in the art is able to derive from the prior art in question.³⁹ In considering the way the prior art is interpreted by the person skilled in the art, it is useful to distinguish between situations where the relevant prior art consists of a document and where it is made up of a product.⁴⁰

³⁴ The section may, however, not always avoid double patenting because the disclosure will only anticipate if it is enabling. See *Asahi Kasei Kogyo* [1991] RPC 485 (HL).

³⁵ PA s. 2(4)(a)(b); EPC Art. 55(1)(a). Relevant examples include disclosure by employees (*Robert Bosch/Electrical machine*, T1085/92 [1996] EPOR 381); submission of an article to a refereed journal (*Research Corporation/Publication*, T381/87 [1989] EPOR 138); and disclosures at a meeting with a manufacturer (*Macor Marine Systems/Confidentiality agreement*, T830/90 [1994] OJEPO 713; *Telecommunications/Antioxidant*, T173/83 [1987] OJEPO 465; [1988] 3 EPOR 133). Cf. *Deodorant Detergent/Unilever*, T585/92 [1996] OJEPO 129 (early publication by Brazilian Patent Office as a result of lamentable error was unfortunate and detrimental but not an evident abuse within Art. 55 since evident abuse required state of mind of abuser to be influenced by its specific relationship with the applicant as with breach of confidentiality). On the timing of the disclosure see *University Patents*, G3/98 [2001] OJEPO 62.

³⁶ *Humpherson v. Syer* (1887) 4 RPC 407; *Bristol Myers Application* [1969] RPC 146; *James Industries' Application* [1987] RPC 235; T818/93 and T480/95 [1997] OJEPO 20–21; *Robert Bosch/Electrical Machine*, T1085/92 [1996] EPOR 381; *Research Foundation/Translation inhibitor*, T838/97 (14 Nov. 2001) (oral presentation of an invention to a conference of 100 experts, who were told that the information could not be used without specific authorization, was a private communication that did not form part of the public domain).

³⁷ PA s. 2(4)(c); EPC Art. 55(1)(b). ‘International exhibitions’ are defined in PA s. 130 and EPC Art. 55(1)(b) as relating to the Convention on International Exhibitions signed at Paris in 1928. See A. Serjeant ‘International Exhibitions’ (1985–6) 15 CIPA 319.

³⁸ PA s. 2(4) refers to the period proceeding the application date. According to the EBA, under EPC Art. 55(1) the ‘relevant date is the date of the actual filing of the European patent application; the date of priority is not to be taken into account in calculating this period’. *University Patents/Materials and methods for herpes simplex virus vaccination*, G3/98 [2001] OJEPO 62 (EBA).

³⁹ See R. Jacob, ‘Novelty of Use Claims’ (1996) 27 IIC 170, 174.

⁴⁰ T270/89 in G. Keller, ‘Summary of Some Recent Decisions at the EPO’ [1993] JPTOS 237.

3.2.1 Interpreting documents

Documents are interpreted as if they were being read at the date of their publication,⁴¹ and not the priority date of the invention or the date of trial. Given that the act of interpretation usually takes place after the date on which the document was published, it is important that documents are neither read retrospectively,⁴² nor construed in light of events which have taken place since publication (notably the creation of the invention in question). The information available is that which a person skilled in the art would derive from reading the document in light of common general knowledge. In this respect the skilled person has a limited ability to extend the meaning of the document beyond that which would be provided by a literal reading. In line with this, the person skilled in the art is able to correct obvious mistakes, inconsistencies, or errors that may exist in the documents.⁴³

Another important rule of interpretation is that the information must be drawn from a single document. This means that it is not possible to combine together (or mosaic) separate items in the prior art. In a similar vein, it is not normally possible to combine elements from within a single document.⁴⁴ The only occasion where it is permissible to combine documents together is where a primary document inevitably leads to a second document; that is, where the person skilled in the art would read different documents as if they were one.⁴⁵

3.2.2 Interpreting products

A number of special rules have been formulated to deal with situations where the prior art consists of a product, such as a drug or a machine that has been released on the market.⁴⁶ In circumstances where the product is the same as the invention, few problems arise. The task of interpretation becomes more problematic, however, where the technical information necessary to anticipate an invention is not immediately apparent from looking at the product, but can only be obtained if the product is analysed.⁴⁷

It has long been recognized that the information disclosed by a product is not limited to the information that is immediately apparent from looking at the product. Importantly, the information available to the public also includes the information that a skilled person

⁴¹ *General Tire & Rubber v. Firestone Tyre & Rubber* [1972] RPC 457; *Minesota Mining v. Bondina* [1973] RPC 491; *Tektronix/Scottky barrier diode* [1995] EPOR 384. Cf. questions of sufficiency of disclosure where documents are read at the priority date of the invention.

⁴² *Rhone-Poulenc/Taxoids*, T77/97 [1998] EPOR 256.

⁴³ *Toshiba*, T26/85 [1990] OJEPO 22; *Scanditronix/Radiation beam collimation*, T6/87 [1990] OJEPO 188; [1990] EPOR 352; *ICI/Latex composition*, T77/87 [1990] OJEPO 280; [1989] EPOR 246.

⁴⁴ *Draco/Xanthines*, T7/86 [1985] EPOR 65; [1988] OJEPO 381; *Scanditronix/Radiation beam collimation*, T56/87 [1990] OJEPO 188; [1990] EPOR 352.

⁴⁵ If the disclosure reveals one part of the product, and another disclosure another element, there is no anticipation: *Bayer/Diastereomers*, T12/81 [1979] B EPOR 308; [1982] OJEPO 296. *Texaco/Reaction injection moulded elastomer*, T279/89 [1992] EPOR 294, 298; *Amoco Corporation/Alternative claims*, T153/85 [1988] OJEPO 1; [1988] EPOR 116, 123; *ICI/Latex composition*, T77/87 [1990] OJEPO 280; [1989] EPOR 246, 251.

⁴⁶ *Quantel v. Spaceward Microsystems* [1990] RPC 83.

⁴⁷ See L. Tournroth, 'Prior Use' (1997) 28 IIC 800, 800–1; Paterson, para. 10–07. In *Lux Traffic*, Aldous J distinguished between cases of prior use where the public had access to the invention and were able to handle it, and prior uses which allowed the public only to observe the object. The circumstances in which each would anticipate would differ, disclosure being much more likely in cases of handling. This, however, was not conclusive. In *Luchtenberg/Car mirror*, T84/83 [1979–85] EPOR 793, 796, the TBA accepted that the use of a mirror attached to a car in public for six months might be revealed if all aspects were disclosed. Cf. *Pfennig-absatz* [1966] GRUR 484, 486.

would be able to derive from the product if they analysed or examined it.⁴⁸ The person skilled in the art is able to make use of the analytical skills and techniques commonly available in the field before the priority date of the invention. This means that if the skilled person worked in a field in which reverse engineering was commonly practised, then a machine placed on sale would reveal all the information that a person skilled in the art would be able to obtain if they reverse-engineered the machine.

Any information that is obtained as a result of an analysis undertaken by a person skilled in the art must be obtained without undue burden or without the need to exercise any additional inventive effort.⁴⁹ If it were necessary for the person skilled in the art to embark on inventive or exploratory research to reveal the information in question, the information would not form part of the state of the art.

The amount of information that is revealed by an examination depends on the type of analysis undertaken.⁵⁰ This would vary with things such as the skills of the researchers in question, and the time and money spent on the examination.⁵¹ Given this, the question has arisen as to whether limits should be placed on the type of (hypothetical) analysis that is undertaken. Following the principle of objective novelty, subjective factors such as the cost of carrying out the analysis or the time taken to find the relevant information are *not* taken into account when determining the nature of the information revealed by a product.⁵² Neither is it necessary that there be particular reasons which prompted the skilled person to examine the composition of the product in the first place:⁵³ the question is *could* and not *would* the product be analysed by the person skilled in the art?

4 IS THE INVENTION NOVEL?

Once the invention under examination and the information disclosed by the prior art have been identified, it is then possible to determine whether the invention is new. Until recently novelty was determined by applying the so-called reverse-infringement test. Under this test, which is based on a belief that the novelty examination is a mirror of the test for infringement, the court asks the following (hypothetical) question: if the disclosure was carried on or took place after grant, would it have infringed the patent (if granted)? If yes, then the disclosure is anticipatory.⁵⁴ While the reverse-infringement test was approved in a number of decisions under the 1977 Patents Act,⁵⁵ it has become clear

⁴⁸ *Thomson/Electron tube*, T953/90 [1998] EPOR 415.

⁴⁹ *Availability to the Public Decision*, G1/92 [1993] EPOR 241; [1993] OJ EPO 277. Undue burden, however, seems to carry with it a subjective element. In *Packard/Liquid scintillatia*, T952/92 [1997] EPOR 457, the TBA argued that the reference to 'undue burden' in G1/92 was *obiter dictum* and that the issue of burden in terms of time or work was irrelevant.

⁵⁰ It also depends on the general nature of the article: *Wesley Jessen Corp v. Coopervision* [2003] RPC 355, 384 (the skilled addressee would have 'all the information he might require' form a contact lens in the public domain, which was 'not a product of high technical sophistication').

⁵¹ *Novartis/Erythro-compounds*, T990/96 [1998] EPOR 441; [1998] OJEPO 489 (re disclosure for chemical compounds).

⁵² *Packard/Liquid scintillatia*, T952/92 [1997] EPOR 457.

⁵³ *Availability to the Public Decision*, G1/92 [1993] EPOR 241; [1993] OJEPO 277.

⁵⁴ The classic statement is provided by Sachs LJ in *General Tire & Rubber v. Firestone Tyre & Rubber* [1972] RPC 457, 485–6.

⁵⁵ See, e.g. *PLG Research v. Ardon International* [1993] FSR 197, 218.

that it is no longer the test to be applied to determine whether an invention is novel.⁵⁶ Instead of determining novelty by asking—if the prior art was carried out after grant would it infringe the patent (if granted)?—the focus of the ‘new’ law is much more upon novelty in its own right.

Drawing upon the language of the 1977 Patents Act and the EPC, the new test provides that an invention will lack novelty if at the priority date of the invention it has been ‘made available’ to the public.⁵⁷ This, in turn, gives rise to the question: what does it mean to say that something has been made available to, or known by, the public?

In many cases, particularly where the prior art and the invention are identical or the prior art leads directly to the patented invention, it will be relatively easy to determine whether an invention has been made available to the public. This task becomes more problematic, however, where there is a gap between the prior art and the invention. The reason for this is the same thing may be known by the public in a number of different ways: things may be described in terms of what they look like, how they are made, what they do, the problems they solve, what they are made of, how much they cost, and so on.⁵⁸ This gives rise to the question, how does a patent need to be described for it to be known by the public? Put differently, how specific must a disclosure be for an invention to be ‘known’ or ‘made available’ to the public?⁵⁹ For example, will a chemical invention be anticipated if the formula of the chemical structure of the invention is made available to the public?⁶⁰ Or is it necessary for the formula and the means by which the formula is implemented to both be available to the public?

Drawing upon the principle that patents should only be granted if the public has been provided with useful information, an invention is said to have been made available to the public if there has been an ‘enabling disclosure’.⁶¹ A disclosure will be enabling and thus

⁵⁶ Arguably, the test never did state the law accurately since the carrying out of instructions which might (rather than inevitably would) lead to the invention was not thought to be an anticipation, though clearly on some occasions after grant it would amount to infringement.

⁵⁷ Available ‘carries with it the idea that, for lack of novelty to be found, all the technical features of the claimed invention in combination must have been communicated to the public, or laid open for inspection’. *Mobil Oil/Friction reducing additive*, G2/88 [1990] EPOR 73; *Chemie Linz/Reinforced channels*, T242/85 [1988] EPOR 77.

⁵⁸ *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 88 (HL). As Lord Hoffmann reminds us, this is essentially an epistemological question: what does it mean for the public to know something so that it can anticipate? The problem is that there is often a marked difference for something to be ‘known’ by the general public and for it to be known for the purposes of patent law: hence Lord Hoffmann’s comments about the specific epistemological basis of patent law. In a similar vein the TBA said ‘the concept of novelty must not be given such a narrow interpretation that only what has already been described in the same terms is prejudicial to it . . . There are many ways of describing a substance’: *Bayer/Diastereomers*, T12/81 [1979–85] B EPOR 308, 312; *Hoechst/Thiochloroformates*, T198/84 [1979–85] C EPOR 987; [1985] OJEPO 209.

⁵⁹ While this question would have been relatively easy to answer if anticipation had been limited to circumstances where the disclosure and the invention were identical, it is not necessary that an invention be replicated exactly in the prior art; or that it be described in identical terms for a disclosure to be novelty-destroying. A mere difference in wording or phraseology will not substantiate a claim to novelty. ‘The term “made available” clearly goes beyond literal or diagrammatical description, and implies a communication, express or implicit, of technical information by other means as well. The inevitability of the outcome requires proof beyond reasonable doubt’: *Allied signal/Polyolefin fiber*, T793/93 [1996] EPOR 104, 109.

⁶⁰ Similarly, would a patent for quinine be anticipated by the fact that Amazonian Indians have known for some time that the spirit of the cinchona bark possessed certain qualities that made it good for treating fevers?

⁶¹ The same requirement operates in Germany: *Fluoron* [1989] IIC 736.

novelty-destroying if the public is given sufficient information to enable the invention to be put into effect. That is, a disclosure will anticipate an invention if it enables the invention to be 'worked' or 'practised'.⁶²

It is very difficult to state with any precision the circumstances where the prior art will enable an invention to be worked and thus be anticipated.⁶³ The reason for this is that what amounts to an enabling disclosure always depends upon the facts of the case in question. That is, the information that is needed for an invention to be 'worked' always depends upon the particular invention under examination. As a result, it is impossible to specify in advance that to be novelty-destroying the prior art must adopt a particular format. It is impossible to predict, for example, the nature of the information that needs to be disclosed for a chemical compound to be worked or practised.

This can be seen if we look at the various ways in which chemical compounds can be anticipated. For example, in *Asahi Kasei Kogyo*⁶⁴ the House of Lords held that the disclosure of the formula to a particular chemical compound did not anticipate a patent for that compound.⁶⁵ The reason for this was that for a skilled person to be in position where they could work the invention in question, they needed to be given not only the chemical formulae but also the means by which the compound could be produced. While on the facts of *Asahi* the formulae may have been non-enabling, as Lord Oliver said there may 'be [other] cases where the means of producing the thing will be self evident to the man skilled in the art from the mere Recital of the formula of its composition'.⁶⁶ That is, there may be circumstances where the disclosure of a formula to a chemical compound is sufficient to anticipate the compound. In other instances, in order to anticipate it may be necessary for the prior art to disclose not only the formulae and the means, but also details of the starting materials.⁶⁷

While it may be impossible to state in advance the nature of the prior art or the type of description that must be disclosed for an invention to be anticipated, there are a number

⁶² *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 89 (HL). This reiterates the old idea that in order for a method or use claim to be anticipated, the prior art must provide 'clear and unmistakable directions to do what the patentee claims to have invented': *Flour Oxidizing v. Carr* (1908) 25 RPC 428, 457.

⁶³ As such, it is not very helpful to attempt to quantify the situations in which a patent can be anticipated. Cf. *Inhale Therapeutic Systems v. Quadrant Healthcare* [2002] RPC 21, para. 43; *Smithkline Beecham PLC's Patent (No. 2)* [2003] RPC 607, 630–1 (suggesting that a claim can be anticipated in two ways: if the prior art describes something falling within its scope, and where the inevitable result of carrying out what is described in the prior art falls within the claims).

⁶⁴ [1991] RPC 485 (HL).

⁶⁵ Drawing upon a series of cases decided under the 1949 Patents Act which utilized the reverse-infringement test (such as *Gyogyszeripari's Application* [1958] RPC 51), it was argued that as the prior art disclosed the formulae of the chemical compound and an indication that the compound had actually been made that the chemical compound lacked novelty. This was the case irrespective of whether or not the chemical could have been made. In rejecting this line of argument (and in so doing finding that *Asahi's* patent had *not* been anticipated), the House of Lords stressed that in order for a disclosure to be novelty-destroying, it needed to be 'enabling'. As such the crucial question to be determined was whether or not the prior art provided sufficient information to enable the public to make the chemical compound.

⁶⁶ [1991] RPC 485, 536 (HL).

⁶⁷ *ICI's Application/Herbicide pyradine*, T206/83 [1986] 5 EPOR 23; [1987] OJEPO 5. In other instances a chemical compound will not be 'known' unless the information disclosed in the prior art enables the compound to be prepared or, in the case of a naturally occurring compound, to be separated. *EPO Guidelines C-IV*, 7.3.

of general points that can be made about the way enabling disclosure has been interpreted that should be noted.

4.1 OBJECTIVE NOVELTY

The question of whether a disclosure enables the public to work an invention is decided objectively.⁶⁸ This means that there is no need to show that a member of the public *actually* worked the invention, nor that they were aware of its existence. Importantly, this has been held to mean that if it is an *inevitable* consequence of following the information disclosed in the prior art that the invention is made, then the invention will have been anticipated.⁶⁹ If the instructions probably, normally or only sometimes produce the product, however, there will be no anticipation.⁷⁰ In these circumstances, there is no need for the person skilled in the art to know that they are producing the product in question: all that matters is that the prior art discloses information which, if followed, inevitably leads to the invention. To use the analogy often used in this context, ‘if the recipe which inevitably produces the substance is part of the state of the art, so is the substance made by that recipe’.⁷¹ It does not matter that the cook was ignorant of the fact that they were producing the product.

4.2 NO ADDITIONAL INVENTIVE ACTIVITY

While the person skilled in the art is permitted to draw upon the general knowledge common to the field, for a disclosure to be enabling the prior art must place the skilled person in a position whereby they are able to work the invention without the need for further information, nor the need to engage in new experiments, or in some other additional inventive activity.⁷²

4.3 SECRET OR INHERENT USE

One of the most important changes that has taken place with the shift to enabling disclosure is in relation to the issue of whether a prior secret or inherent use is able to anticipate a subsequent patent. Basically, a secret or inherent use occurs where something is created, usually either accidentally or as an unknown by-product of some process,

⁶⁸ *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 88, 89, 90. ‘This does not affect the principle that the prior art directions or information that will inevitably result in the use of a patented process or creation of the patented product invalidates by anticipation’. Ibid. 90, 93. *Kaye v. Chubb* (1887) 4 RPC 289, 298.

⁶⁹ See *Inhale Therapeutic Systems v. Quadrant Healthcare* [2002] RPC 21 (where Laddie J reviewed his earlier judgment in *Evans Medical Ltd’s Patent* [1998] RPC 517); *Smithkline Beecham PLC’s Patent (No. 2)* [2003] RPC 607, 631.

⁷⁰ On inevitable disclosure, see *General Tire v. Firestone* [1972] RPC 457, 458–6. Inevitably has been defined to mean in 99 cases out of 100 (*Fomento v. Mentmore* [1956] RPC 87); ‘tantamount to 100 per cent probability’ (*Allied Signal/Polyofin fiber*, T793/93 [1996] EPOR 104). It seems that at the EPO the inevitability of the disclosure needs to be satisfied ‘beyond all reasonable doubt’: *Allied Signal/Polyofin fiber*, T793/93 [1996] EPOR 104.

⁷¹ *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 90 (HL). See also *CPC/Flavour concentrates decision*, T303/86 [1989] EPOR 95; *Bayer/Diastereomers*, T12/81 [1979–83] B EPOR 308, 312; *Availability to the Public*, G1/92 [1993] EPOR 241.

⁷² *Hills v. Evans* (1862) 31 LJ Ch 457; 45 ER 1195 (HL).

without the public knowing of its existence. While it was possible for a secret or inherent use to anticipate under the 1949 Patents Act, this is no longer the case under the 1977 Act.⁷³ The position under the 1949 Act was set out in *Bristol-Myers' Application*,⁷⁴ where the question arose as to whether Bristol-Myers' patent for an ampicillin compound (an artificial antibiotic derived from penicillin) had been anticipated by the fact that before the priority date of the invention, Beecham had made small quantities of the ampicillin. At the time the ampicillin was made, Beecham did not know about the invention nor were they aware of its particular advantages. While the prior art conveyed no relevant information about the product to the general public, nonetheless the House of Lords held that the patent had been anticipated by the secret or uninformative use. The explanation for this was twofold. First, had the patent been granted, the patentees would have been able to stop another trader from doing what they had done before (the right to work doctrine); secondly, the test for anticipation was coextensive with the test for infringement. Given that for a defendant to infringe it was not necessary for them to have realized that what they were doing was an infringing act, such knowledge was therefore equally unnecessary when determining whether the invention was novel (the reverse-infringement test).

The question of the status of secret or inherent use under the 1977 Patents Act was considered by the House of Lords in *Merrell Dow v. Norton*.⁷⁵ This decision arose from the fact that in 1972, the claimant was granted a patent for the antihistamine terfenadine: a drug used in treating hay fever and other allergies. When terfenadine was taken by patients, it was transformed (or metabolized) in the body to produce a number of different products (or metabolites). While terfenadine proved to be very effective in the treatment of hay fever, it had a number of unwanted side effects, notably that it led to heart-related problems in some patients. As the initial patent was nearing the end of its duration, the claimant isolated and identified the particular metabolite that acted as an antihistamine. It was accepted that prior to this the specific metabolite that acted as an antihistamine had not been identified. In 1983, the claimant obtained a patent for the newly identified metabolite. More accurately, it obtained a patent for the making of the metabolite with the antihistamine effects within the human body by the ingestion of terfenadine. This carried with it the obvious advantage that while it was useful in the treatment of hay fever, it did not have any of the side effects associated with terfenadine.

After grant of the patent for the metabolic acid, Merrell Dow (the claimant) brought an action against Norton claiming that by supplying terfenadine, the defendant was facilitating

⁷³ The 1977 Patents Act 'introduced a substantial qualification into the old principle that a patent cannot be used to stop someone from doing what he has done before. If the previous use was uninformative, then subject to section 64 [which provides a defence for secret use before the priority date] it can': *Merrell Dow Pharmaceuticals v. Norton* [1996] *RPC* 76, 86 (HL).

⁷⁴ [1975] *RPC* 127. Such an approach would mean that a prior secret use would anticipate a patent even if it were not clear how the invention worked. This is because such a use would give public the benefit of the old invention even without their knowledge. Under the 1977 Act, it seems that there is nothing to prevent a person from concealing the use of their invention in this manner, though it has been suggested that in a clear case of fraud the Patent Office might decline to grant a patent. See H. Frost, 'Why Europe Needs a Sale Bar' [1996] *EIPR* 18; R. Jacob, 'Novelty of Use Claims' (1996) 27 *IIC* 170.

⁷⁵ *Merrell Dow Pharmaceuticals v. Norton* [1996] *RPC* 76 (HL); I. Karet 'A Question of Epistemology' [1996] *EIPR* 97; see V. Vossius, C. Vossius, and T. Vossius, 'Prior Written Disclosure and Public Prior Use under German Law and the EPC' [1994] *EIPR* 130.

the making of the patented metabolite, thus infringing the second patent.⁷⁶ The defendants counterclaimed arguing that the second patent had been anticipated by prior use. The argument for anticipation by use relied on the fact that terfenadine had been made available to and used by volunteers in clinical trials before the priority date of the patent. As the patented metabolite was produced in the livers of the volunteers when they took terfenadine, it was argued that the second patent had been anticipated and was thus invalid.

Lord Hoffmann said that while under the 1949 Patents Act mere uninformative use of this kind would have invalidated the patent, this was no longer the case under the 1977 Act.⁷⁷ In rejecting the reverse-infringement test, Lord Hoffmann said that when deciding novelty the starting point was whether there had been an enabling disclosure of the claimed invention.⁷⁸ Importantly, Lord Hoffmann said that while an invention may have been in existence before the priority date through a secret or inherent use, this was not sufficient in itself to be novelty-destroying. The reason for this was that ‘the use of a product makes the invention part of the state of the art only insofar as that use makes available the necessary information’.⁷⁹ While the patented metabolite was inevitably produced in the body of the volunteers when they took the terfenadine, this working of the invention was not as a result of information that had been made available to the public. The uninformative consumption of terfenadine, which secretly or inherently produced the metabolite, did not reveal or disclose information that would have allowed either the volunteers or the public more generally to make the metabolite in their bodies. On the basis that the use of terfenadine in the clinical trials conveyed no information that would have enabled anyone to work the invention (it was not enough that it had in fact been made), the House of Lords held that the prior use was not anticipatory.⁸⁰

It should be pointed out that the invention was anticipated by the earlier patent. In the case of anticipation by use, the acts relied upon conveyed no information which would have enabled anyone to work the invention: that is, to make the acid metabolite in the body. In contrast, the earlier patent made information available to the public that enabled it to do an act, the inevitable consequence of which was that the patented metabolite was produced. The terfenadine specification taught that the ingestion of terfenadine produced a chemical reaction in the body. For the purposes of working the invention in this form, this was a sufficient description of the making of the patented metabolite.

4.4 PRODUCT-BY-PROCESS CLAIMS

As we explained above, while product-by-process claims are permissible in the UK, they are only allowed at the EPO where it is impossible, or at least very difficult, to define the

⁷⁶ This was on the basis it amounted to a contributory infringement under PA s. 60(2).

⁷⁷ As such *Bristol-Myer's Application* [1975] RPC 127 is no longer good law.

⁷⁸ ‘The question to be decided is not what may have been “inherent” in what was made available (for example, by a prior written description or in what has previously been used (prior use)). Rather it was what has been made available to the public’. *Mobil/Friction reducing additive*, G2/88 [1990] EPOR 73, 88.

⁷⁹ Lord Hoffmann emphasized that the invention, which was a piece of information, must have been made available to the public. *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 86 (HL).

⁸⁰ This rule applies whether the prior art is a prior application, a prior use, description, or set of instructions. The ‘information deriving from a use is governed in principle by the same conditions as is information disclosed by oral or written description’. *Availability to the Public*, G1/92 [1993] EPOR 241, 243.

product in any other way. In part, this is a consequence of differences in the way product-by-process claims are interpreted. This difference also manifests itself in the way the novelty of such claims is assessed in the UK and at the EPO.

At the EPO, a product-by-process claim will only be novel if the product itself is novel: novelty cannot be conferred by the process alone. That is, the EPO ‘does not recognise that novelty can be conferred on a known substance by a novel process for producing that substance’.⁸¹ This means that even if the process claimed is novel, a product-by-process claim will be anticipated (and thus held to be invalid) unless the product itself is also novel. In contrast, the UK Court of Appeal explicitly rejected such an approach saying that there was ‘no reason why the limitation of a claims to products produced by a process could not impart novelty . . . If a person invents a new method of extracting gold from rock, he can obtain a claim to the process and as Art 64(2) [EPC] makes clear, he can also monopolise the gold when produced directly by the process’.⁸² That is, product-by-process are prima facie valid in the UK provided the process is itself patentable. While this may seem to suggest that old products (such as gold) are able to be re-monopolized every time a new process is invented, it is important to note that protection only applies to products made by that process.

4.5 BIOTECHNOLOGICAL INVENTIONS

While a number of changes have been made to patent law to accommodate biotechnological inventions, for the most part they are treated in a similar manner to other types of inventions. The test for novelty is no exception to this general rule: a biotechnological invention will only be anticipated and thus invalid where there has been an enabling disclosure.⁸³ Despite this, questions sometimes arise where biotechnological inventions are based on natural materials. In this context it is important to note that a natural substance (such as a polynucleotide sequence) that has been isolated for the first time, will not lack novelty because it was already present in nature (for example in the human genome). Here, patent law draws a distinction between the invention (the isolated ‘artificial’ polynucleotide) and the natural substance (the polynucleotide that exists in nature).⁸⁴ The artificial nature of the isolated substance provides the requisite difference between the prior art and the invention, necessary to ensure novelty.

⁸¹ UK Patent Office, Examination Guidelines for Patent Applications relating to Biotechnological Inventions (Sept. 2002), para. 13; *Kirin-Amgin v. Transkaryotic Therapies* [2003] RPC 31, para. 296 (CA).

⁸² *Kirin-Amgin v. Transkaryotic Therapies* [2003] RPC 31, para. 33 (CA). ‘I can discern no reason in principle or in practice why a claim to a product made by a certain process could be invalid simply because the product is not novel, if the process is novel, so that a claim to a process would be valid’.

⁸³ See, e.g. *Asahi’s Application* [1991] RPC 485 (HL); *Genentech’s (Human Growth Hormone) Patent* [1989] RPC 613; UK Patent Office, *Biotechnology Guidelines* (Sept. 2002) paras. 8–11.

⁸⁴ *Howard Florey Institute’s Application T74/91* [1995] OJEPO 388. See also D. Schertenleib, ‘The Patentability and Protection of DNA-based Inventions in the EPO and the European Union’ [2003] EIPR 125; EPO, USPTO, JPO Trilateral Project 24.1, *Biotechnology Comparative Study on Biotechnology Patent Practices*.

5 THE DISCOVERY OF A NEW ADVANTAGE OF AN OLD THING USED IN AN OLD WAY

In this final section we move away from the general principles of novelty that have concerned us so far to concentrate on three specific types of inventions and the problems that have arisen when assessing their novelty. In particular, we look at the novelty of inventions which relate to medical uses, non-medical uses, and so-called selection inventions.

For many years, the primary goal of the research carried out in many areas of science and technology was the creation of either new products or new uses of old things. On the whole, the fruits of this research have been well served by patent law. This can be seen in the fact that patent law has long recognized the discovery of new things⁸⁵ (such as the discovery of aspirin) and the discovery of new ways of using old things⁸⁶ (such as the discovery that aspirin rubbed on the skin acts as an effective insect repellent) as being novel.

In the last forty years or so, a number of changes have taken place in the type of research undertaken in various industries. These changes were motivated by a realization that in certain fields (notably in relation to pharmaceutical and biological inventions) the possibility of discovering new things or the finding of new uses for old things was decreasing. As a result, the focus of research shifted to concentrate on the discovery of new uses (or purposes) of old substances used in old ways. The problem that confronted researchers working in this way was that British patent law traditionally refused to recognize the discovery of a new advantage of an old thing used in an old way, as being novel. This would mean, for example, that if someone discovered that as well as being useful in the curing of headaches, that the consumption of aspirin also thinned the blood (and was thus useful in preventing blood clots), they would be unable to patent the invention. The reason for this is that the traditional British approach treated a claim to a 'product for a particular use' as a claim to the product *per se*, so that the product would lack novelty even if the product has previously been employed in a different use.⁸⁷ The problem that confronted this 'new' style of research was, in short, that patent law was not willing to recognize 'novelty of purpose' as a basis on which an invention could be patented.

One of the notable trends in recent years is the way in which this principle has slowly been undermined. One of the first areas where the general rule was relaxed was in relation to medical uses.⁸⁸ With the EPO leading the way and UK courts following, this was interpreted to include second and subsequent medical uses. While initially seen as an exception which left the general rule intact, the EPO and (arguably) now UK courts, have recognized novelty of purpose irrespective of the field of technology.

⁸⁵ Claims to a substance provide protection not only over the thing itself, but also over all subsequent uses.

⁸⁶ Typically, new uses are claimed as a 'new method of using the old article'.

⁸⁷ See *Adhesive Dry Mounting v. Trapp* (1910) 27 RPC 341; R. Jacob, 'Novelty of Use Claims' (1996) 27 IIC 170, 173.

⁸⁸ It is arguable that selection patents, discussed below, were an early exception to the general rule about the non-patenting of novelty of purpose.

5.1 NEW MEDICAL USES

As we saw earlier, when the EPC was being drafted it was decided that methods of treatment of the human or animal body should not be patentable.⁸⁹ While the pharmaceutical industry were able to patent new substances,⁹⁰ the proposed blanket exclusion of methods of medical treatment (now to be found in section 4(2) and Article 52(4)) presented them with a problem. The reason for this was that most of the research then being carried out was not into the creation of new substances or drugs. Rather, most of the research focused on the discovery of new uses of old substances or the discovery of new benefits from old substances. As such, the exclusion of methods of medical treatment from the scope of patent protection would have had a dramatic impact upon medical research. To appease the interests of the pharmaceutical industry, section 2(6)/Article 54(5) were introduced. Section 2(6) provides that:

the fact that an invention consisting of a substance or composition for use in a method of medical treatment forms part of the state of the art, shall not prevent the invention from being taken to be new, if the use of the substance or composition in any such method does not form part of the state of the art.⁹¹

Essentially, section 2(6)/Article 54(5), which permit the patenting of new uses of old substances used in old ways (in a medical context), create a statutory exception to the traditional British view that the mere discovery of purpose could confer novelty of an invention.⁹² In essence the provisions confer novelty via the new *purpose* ('the new pharmaceutical use of a known substance'), even though 'the substance itself is known and comprises part of the state of the art'.⁹³

5.1.1 Second and subsequent medical uses of a known product

When enacted, it was widely believed that section 2(6)/Article 54(5) only applied to the discovery of the first medical use of known products: a position supported by a normal reading of the provisions. Under this reading, this would have meant that claims for second or further medical uses of products would have lacked novelty.

The question of the scope of Article 54(5) was considered by the Enlarged Board of Appeal of the EPO in *Eisai/Second Medical Indication*.⁹⁴ Basing its arguments on the legislative history of the EPC and the principle that exceptions to patentability should be construed narrowly, the Board decided that as well as protecting first uses that Article

⁸⁹ PA s. 4(2); EPC Art. 52(4). See above at pp. 388–93.

⁹⁰ PA s. 4(3) and EPC Art. 52(4) leave open the possibility of claims to new substances or compositions. Consequently, while it is not possible to obtain a patent for a method of preventing headaches involving the taking of aspirin, aspirin is patentable *per se*.

⁹¹ This was apparently based on French law. Paterson, para. 9.61; R. Singer, *The European Patent Convention* (1995), 167; *Hoffmann–La Roche/Pyrrolidine derivatives*, T128/82 [1984] OJEP 164; [1979–85] B EPOR 591.

⁹² See A. Benyamini, *Patent Infringement in the European Community* (1993), 80 ff.; G. Paterson, 'The Patentability of Further Uses of a Known Product under the EPC' (1991) *EIPR* 16; G. Paterson, 'Product Protection in Chemistry: How Important for the Protection of an Apparatus, Device or Substance Are Statements Made in a Patent as to their Purpose?' (1991) 22 *IIC* 852; G. Paterson, 'Novelty of Use Claims' (1996) 27 *IIC* 179; R. Jacob, 'Novelty of Use Claims' (1996) 27 *IIC* 170.

⁹³ A. Horton, 'Methods of Treatment and Second Medical Use' (Aug. 2000) *Patent World* 9.

⁹⁴ *Eisai*, G5/83 [1985] OJEP 64. See *EPO Guidelines C-IV*, 4.2.

54(5) also applied to second and subsequent medical uses. The Enlarged Board of Appeal went on to say, however, that this was conditional on the fact that claims were drafted in a style known as the 'Swiss form of claims'. Basically this meant that the patent had to claim the 'use of a substance for the manufacture of a medicine for a specified new therapeutic use'.⁹⁵ This would mean that for the discovery that the consumption of aspirin was useful in thinning the blood to be valid, the applicant would have to claim the 'use of aspirin in making a medicament for use in the prevention of blood clots'.⁹⁶

One of the notable features of a Swiss claim is that it is directed at the *manufacture* of the known substance. This ensures that the invention is not excluded on the basis that it is a method of medical treatment under section 4(2)/Article 52(4).⁹⁷ At the same time, the novelty of a Swiss claim arises from the new therapeutic application (the drug and first medical use already being known).⁹⁸ As a result, the focus of the patent shifts so that the novelty of the invention is not in the way the substance is used, nor in relation to the substance itself. Rather, the novelty of the invention is in the new therapeutic use (or purpose) which has been discovered. This is the case even 'where the process of manufacture does not differ from known processes using the same active ingredients'.⁹⁹

The status of second medical use patents in the United Kingdom was considered by the Patents Court sitting *in banc* in *Wyeth's Application*.¹⁰⁰ Following this decision, it is clear that section 2(6) of the 1977 Patents Act includes second and subsequent medical uses that are drafted in the Swiss form. The patent in question in *Wyeth's Application* arose out of research carried out by Wyeth in relation to pharmaceuticals known as guanidines. While prior to this it was known that guanidines lowered blood pressure, Wyeth discovered that guanidines were also useful in treating and preventing diarrhoea.¹⁰¹ Wyeth subsequently lodged a patent application to protect their discoveries.

Wyeth's Application included three claims. First, the application claimed 'a guanidine for use as an anti-diarrhoeal agent'. This was rejected on the ground that since a medical use of guanidine was already known, section 2(6) could not confer novelty on the application. Second, Wyeth claimed 'the use of guanidine in treating diarrhoea'. This was also rejected on the basis that this was essentially a claim to a method of medical treatment and, as such, that it was directly in conflict with section 4(2). Third, Wyeth claimed 'the use of a guanidine in the preparation of an anti-diarrhoeal agent for treating or preventing diarrhoea'. While this claim, which was drafted in the Swiss form, was refused by the examiner on the basis that it was inconsistent with existing UK case law, it was allowed on appeal by the Patents Court sitting *in banc*. Although the Patents Court said that the better interpretation of section 2(6) was that it only applied to first medical uses,¹⁰² the Court took judicial notice of the fact that the Board of Appeal in *Eisai* had construed Article 54(5) to cover second and subsequent medical uses. In recognition of the need for the harmonization of patent law, the Patents Court followed the lead of the EPO and permitted the

⁹⁵ *Second Medical Indication: Switzerland* [1984] OJEP0 581. See also Germany [1984] OJEP0 26; Netherlands [1988] OJEP0 405.

⁹⁶ Patents have been allowed where the novelty lay in the frequency of drug administration.

⁹⁷ As the Enlarged Board of Appeal said in *Eisai*, the Swiss-type of use claim is not prohibited by Art. 52(4) and is capable of industrial application': G5/83 [1985] OJEP0 64.

⁹⁸ A. Horton, 'Methods of Treatment and Second Medical Use' (Aug. 2000) *Patent World* 9.

⁹⁹ *Ibid.* ¹⁰⁰ [1985] RPC 545.

¹⁰¹ *Schering's Application* [1971] RPC 337.

¹⁰² Since the 1977 Patents Act could clearly have specified otherwise if it had so intended.

claims in the Swiss form. In so doing the Patents Court confirmed that section 2(6) includes second and subsequent medical uses of a known substance.

5.1.2 Requirements for a Swiss claim

The finding in *Wyeth's Application* has been confirmed, albeit somewhat reluctantly, by the Court of Appeal in *Bristol-Myers v. Squibb*.¹⁰³ In light of the general acceptance of second medical use in the UK and at the EPO, attention has subsequently shifted to the details of the Swiss claim. As a result it is clear that for a Swiss claim to be valid it is necessary to show that the patent claims the *manufacture* of a medicament.¹⁰⁴ It is also necessary to show that the novelty of the invention arises from the discovery of a *new therapeutic purpose* and not in some other aspect of the invention. In turn, it must also be shown that a second medical use claim *actually works*. We will look at each of these in turn.

(i) *Manufacture of a medicament*. As we explained earlier, one of the key features of a Swiss claim is that by focusing on the *manufacture* of something that can be used in a medical treatment rather than a method of medical treatment *per se*, the patent does not fall foul of the method of medical treatment exclusion in section 4(2)/Article 52(4). In recognition of the fact that an unpatentable invention may be drafted in such a way so that it appears to comply with the Swiss-format, the courts have been careful to look at what is actually patented. Indeed as Aldous LJ said in *Bristol-Myers*, the form of the claim is not always determinative of the fate of a patent. Instead it is necessary to look at the *effect* of the invention.¹⁰⁵ Thus for a Swiss claim to be valid, the invention must be for the *manufacture* of a medicament and not a surreptitious attempt to monopolize a new method of medical or veterinary treatment. That is, it is necessary to show that what the patent teaches is how to manufacture a drug for use in the treatment for the patient, rather than how to treat the patient: which is the teaching that the Swiss-type claim is designed to avoid.¹⁰⁶

The patent in dispute in *Bristol-Myers* was for a particular regime covering the dosage and infusion duration of the anti-cancer drug taxol. One of the inevitable side effects of the use of taxol is that it leads to a fall in the patient's white blood cell count (which is known as 'neutropenia'). Bristol-Myers claimed that the novelty of their invention lay in the discovery of a regime of dosage/infusion of taxol that reduced the side effect of neutropenia, without losing any benefits of the taxol. It was previously thought that it was necessary to infuse patients over a 24-hour period with high dosages of taxol (greater than 170 mg.). Bristol-Myers discovered that short diffusion times of about three hours at

¹⁰³ *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, 18, 24–6, Aldous LJ, para. 48; Buxton LJ, paras. 76–81. See also D. Sternfeld, 'A Second Medical Use Case' [2001] EIPR 107; *Monsanto v. Merck* [2000] RPC 77, 92 (CA); *Pharmaceutical Management Agency v. Commissioner of Patents* [1999] RPC 752 (High Court of New Zealand).

¹⁰⁴ Which is suggestive of 'manner of manufacture' as used in British patent law, from 1624 until 1977.

¹⁰⁵ In *Pfizer/Sertraline*, T158/96 [1999] EPOR 285, 288: claim 1 was directed to 'the second or subsequent therapeutic application of sertraline . . . the said therapeutic application being the treatment or prevention of obsessive-compulsive disorders'. The TBA said that claim 1 was construed as 'implicitly including the functional technical features that sertraline, when formulated into a medicament and administered to patients, achieves a therapeutic effect or any pharmacological effect which directly and unambiguously underlies the claimed therapeutic application'.

¹⁰⁶ *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, 28, para. 93 (Buxton LJ).

a dosage level between 135 mg. to 175 mg. had the same benefits, but with fewer side effects.

The Court of Appeal rejected the patent saying that it was an unsuccessful attempt to monopolize the new method of treatment by drafting it along the lines of the Swiss-type claim. When analysed the Court held that each step of the patent was directed to a method of treatment. In particular, the Court of Appeal noted that the premedication given to the patient prior to taxol is chosen by and administered according to the directions of the doctor. In addition, the amount of taxol is selected by the doctor at the time of administration. Importantly, the actual medicament that is said to be suitable for treatment is produced *in the patient* under the supervision of the medical team. As a result, it could not be seen in normal parlance as an industrial application or manufacture. As such, the invention was for a method of medical treatment, which is not patentable.¹⁰⁷

A similar approach has been adopted at the EPO in *Procter & Gamble* (which concerned a regime for the administration of drugs in the treatment of gastro-intestinal disorders). The Technical Board of Appeal said that when considering the possible limits of what could be recognized as a further medical indication (or a new therapeutic application), it is appropriate to consider whether 'the sole distinguishing feature . . . relates to non-commercial and non-industrial medical activities.' The Board recognized that the pharmaceutical industry was attempting to optimize the maximum therapeutic effects of drugs and medicaments by investigating the optimum regimen for their administration. Nonetheless, the Board said that:

determination of the best individual treatment schedule, in particular the prescribing and modification of drug regimes used for administering a particular medicament, so as to comply with the specific needs of a patient, appear to be in the first place part of the typical activities and duties of the doctor in accordance with their traditional skills of curing, preventing or alleviating the symptoms of suffering. These are, however, typical non-commercial and non-industrial medical activities which Article 52(4) EPC intends to free from restraint.¹⁰⁸

One of the consequences of the decisions concerned with the meaning of the manufacture of a medicine is that they have limited the possibility of Swiss claims being used to protect treatment regimes. Indeed it has been suggested that it is now questionable whether a prescribing regime could ever amount to a further medical indication, and thus not fall foul of the method of treatment exclusion.¹⁰⁹

(ii) *New therapeutic application*. The second feature of a Swiss claim is that it must disclose a *new therapeutic application*. That is, it is necessary to show that the novelty does not 'lie in the method of use, but in the new therapeutic purpose for which the substance is used'.¹¹⁰ To do this, it is necessary to show that the new use is unconnected with previous

¹⁰⁷ The CA was reinforced by the fact that the foundations for infringement were based on the defendant's clinical trials at hospitals: which were treatments of humans, *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, para. 55 (Aldous LJ) (CA).

¹⁰⁸ *Procter & Gamble/Gastrointestinal compositions*, T317/95 [1999] EPOR 528, 538. See also *Nycomed/Contrast agent for NMR imaging*, T655/92 [1998] EPOR 206.

¹⁰⁹ *Procter & Gamble/Gastrointestinal compositions*, T317/95 [1999] EPOR 528, 538. See also A. Horton, 'Methods of Treatment and Second Medical Use' (Aug. 2000) *Patent World* 11.

¹¹⁰ *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, 26, para. 83 (Buxton LJ) (CA).

known uses.¹¹¹ In turn,¹¹² it is necessary to show that the application ‘necessarily entails the use of a substance for a new and completely different purpose from that in relation to what is already known’.¹¹³

The new therapeutic purpose may take a number of different forms. Perhaps the most well-known example is where someone discovers that a pre-existing use of an existing compound can be used to solve a different disease. An invention may also qualify as a new therapeutic purpose where the discovery relates to the application of a known substance used in a known way to a new target group of patients. In particular it has been held that the application of a vaccine to a new class of animals can be regarded as a new therapeutic application for which novelty can be derived.¹¹⁴ It has also been recognized that a ‘second medical use could arise from a different *mode* of administration of the same pharmaceutical’.¹¹⁵

These decisions can be contrasted with the *Bristol-Myers* decision where the Court of Appeal held that the patent for the regime covering the dosage and infusion of the anti-cancer drug taxol could not be described as a second medical use. Rather it was merely an unpatentable discovery of new information about an old use. The reason for this was that the drug (taxol) was exactly the same; the method of administration (by injection and infusion) was exactly the same; and the therapeutic application or purpose (namely the attempt to treat cancer) was exactly the same. The only difference was that if the drug is infused over a shorter period of time, the undesirable side-effects of neutropenia are minimized without affecting the therapeutic benefits of the taxol.¹¹⁶ In short, the Court of Appeal held that as the patent was for an improvement in the method of administering an existing treatment, it was not a new therapeutic purpose. In a similar fashion, it has also been held that ‘a known effect *cannot* become novel for the sole reason that it presents a hitherto unknown increase in a known activity’.¹¹⁷ Nor could a further reduction in the formation of known impurities in an old product constitute a second medical use.¹¹⁸

(iii) *An effective therapeutic application.* To be valid, it is necessary to show that the second medical use claim actually works (at least for some individuals). That is, it is not enough that a compound is being used to try and treat an illness. As Laddie J said, a ‘second medical use claim only survives because the compound is effective to achieve a new

¹¹¹ *Wyeth's Application* [1985] *RPC* 545, 566.

¹¹² This is because if the novelty can lie in the nature of the use, rather than in the end result at which the use aims, then the invention would effectively be for the method of treatment: *ibid.*

treatment'.¹¹⁹ This would not be the case if the same result could be achieved from a placebo. In this situation, the benefit is said to flow from the fact that the patient believes that they are being treated, and 'not because of any peculiar feature or efficacy of the patented compound'.¹²⁰

5.1.3 Reform

While the status of the second and subsequent medical uses in both the UK and the EPO is clear, there remains a degree of suspicion about second (and subsequent) medical use patents, particularly in the United Kingdom. Buxton LJ captured the tone of these concerns when he said in *Bristol-Myers* that the acceptance of Swiss claims may seem 'to be merely a roundabout way of seeking to patent a medical process and one that only doubtfully gives proper weight to the first sentence of Article 52(4)/section 2(6)'.¹²¹ These concerns have not been adopted in EPC 2000, which is more concerned to ensure that the law is transparent and that it reflects current practice. As a result, the jurisprudence that is developing in this area will become even more important.

There are two changes in the EPC 2000 that are relevant here. The first is that it takes medical uses out of Article 52 EPC and places them with the other exceptions to patentability in Article 53 EPC 2000. This is to be replicated in the proposed amendments to the 1977 Patents Act. The second change is in relation to second and further medical uses. Article 54(5) EPC 2000 specifically allows applicants to claim second and further medical uses of known substances or compositions, without having to use a Swiss-type claim. While this is intended to simplify and clarify the manner in which patent protection can be obtained for second and further medical uses,¹²² it provides second and further medical use claims with an official stamp of approval. Under the UK Patents Bill 2004, it is proposed that the 1977 Act be amended to implement the new position under EPC 2000.

5.2 NON-MEDICAL USES OF KNOWN PRODUCTS: NOVELTY OF PURPOSE PATENTS

Shortly after the scope of the medical use exception was clarified, the question arose as to whether patent law should also recognize novelty of purpose in non-medical fields.¹²³ That is, the question arose as to whether patent law should recognize the discovery of new uses for old substances used in old ways, irrespective of the field in which the invention

¹¹⁹ *Pfizer Ltd's Patent* [2001] FSR 201, 220; following *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, para. 21 (CA).

¹²⁰ *Pfizer Ltd's Patent* [2001] FSR 201, 220.

¹²¹ *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, 26 para. 81 (CA). Nonetheless Buxton LJ still followed *Eisai* and *Wyeth*.

¹²² The effect would be to allow further medical use claims in UK law, while not precluding the possibility of Swiss-type claims: *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), para. 26.

¹²³ See G. Paterson, 'The Patentability of Further Uses of a Known Product under the EPC' [1991] *EIPR* 16; G. Paterson, 'Product Protection in Chemistry: How Important for the Protection of an Apparatus, Device or Substance Are Statements Made in a Patent as to their Purpose?' (1991) 22 *IIC* 852; G. Paterson, 'Novelty of Use Claims' (1996) 27 *IIC* 179; R. Jacob, 'Novelty of Use Claims' (1996) 27 *IIC* 170; C. Floyd, 'Novelty under the Patents Act 1977: The State of the Art after Merrell Dow' [1996] 9 *EIPR* 480.

was made. This question was particularly important given that a great deal of non-medical research is devoted to the discovery of new applications of known compounds.

The status of novelty of purpose patents under the EPC was considered by the Enlarged Board of Appeal in *Mobil/Friction reducing additive*.¹²⁴ This decision arose from Mobil's attempt to patent a substance for use as a friction-reducing additive in lubricating oils. The application was opposed by Chevron on the basis that the substance was already known and on the basis that it was already being used to inhibit rust-formation in ferrous metals. In response Mobil applied to amend their application to limit it to the use of the substance for reducing friction, saying that its usefulness for this purpose had not previously been known. The question that thus came to be considered by the Enlarged Board was whether the discovery of a new use of a known substance used in an old way could be patented.

The Enlarged Board of Appeal held that while using an old substance in a new way to achieve a new purpose might be novel, the use of an old substance in an old way to achieve a new purpose would not. In the latter case, the only difference between the discovery and the old use was that it was carried out with a different purpose in mind: the applicant would be doing the same thing with the same substance. Given that on the facts of the case the same substance (the additive) was used in the same way (for example, by pouring it into the engine), it may have been reasonable to presume that the attempt to patent its use as a friction reducer when it was previously thought only to inhibit rust would have failed. This was not the case.

The reason for this was, as the Board of Appeal went on to say, that a claim for the use of an old compound in an old way for a new purpose could be interpreted to include 'the function of achieving the new purpose (because this is the technical result)'.¹²⁵ In such a case, the fact that the substance achieved the new purpose would be an objective 'functional technical feature' of the invention, rather than something which only resided in the mind of the user. In relation to the case in hand, the Enlarged Board of Appeal said that the invention exhibited a functional technical feature in that the substance operated to reduce friction. As such, the Board held that claims for the use of a specified lubricant for the reduction of friction in engines were patentable: even though the lubricant had previously been used as a rust inhibitor. As a result of this decision, it is now clear that the discovery of a new purpose of an old thing used in an old way is potentially patentable at the EPO, irrespective of the technical field in which the invention takes place.¹²⁶

As we will see, a number of criticisms have been made of the *Mobil* decision in the UK.¹²⁷ Nonetheless it is clear that in Britain it is now possible to patent the discovery of a new purpose for an old thing used in an old way.¹²⁸ Unlike pre-1977 law, the mere fact that

¹²⁴ G2/88 [1990] EPOR 73. See also *Bayer's Application G6/88* [1990] OJEP 114.

¹²⁵ *Mobil/Friction reducing additive*, G2/88 [1990] EPOR 73.

¹²⁶ The Court of Appeal in *Bristol-Myers* said that Swiss claim was based on a different logic to *Mobil Ortho/Pharmaceutical prevention of skin atrophy*, T254/93 [1999] EPOR 1.

¹²⁷ See C. Floyd, 'Novelty under the Patents Act 1977: The State of the Art after Merrell Dow' [1996] 9 *EIPR* 480; CIPA, para. 2.21; A. White, 'The Novelty Destroying Disclosure' [1990] *EIPR* 315; J. Lane, 'What Level of Protection is Required to Anticipate a Patented Invention by Prior Publication or Use' [1990] *EIPR* 462. These problems are particularly acute in the UK (and not at the EPO) because the EPO is only concerned with issues of validity, whereas British courts have to deal with both validity and infringement.

¹²⁸ *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] *RPC* 1, 18, Aldous LJ, para. 49 noting that *Mobil* had been considered in some detail and applied by the House of Lords in *Merrell Dow* (admittedly on a different point). Aldous LJ said, 'it is unlikely that [the Court of Appeal] would conclude that [*Mobil*] was wrongly decided when the House of Lords did not so conclude'. See also Buxton LJ, para. 81.

the sole point of novelty of an invention lies in the discovery of a new purpose no longer means that the application will automatically be disallowed.

The key feature of a novelty of purpose claim is the discovery that a known use of a known substance achieves a new purpose. The only aspect of the invention that is novel is the third element: *viz.* the discovery of the new purpose. The step that facilitated the acceptance of novelty of purpose patents was the decision that a prior secret use does not destroy the novelty of a patent. As we explained earlier, under pre-1977 British law it was possible for a prior secret use to anticipate a later patent. Under the old law, the discovery that a known substance used in a known way could be put to a hitherto unknown purpose would not have been patentable. This is because the new purpose would have been inherent in the pre-existing use of the known substance. The fact that the use was secret would not have affected the fate of the invention.

As we pointed out above, under existing law a prior secret use will no longer destroy the novelty of a later patent.¹²⁹ As the Enlarged Board said in *Mobil*, the ‘question to be decided is what has been “made available to the public”: the question is not what may have been “inherent” in what was made available’. ‘Under the EPC, a hidden or secret use, because it has not been made available to the public, is not a ground of objection to validity of a patent. As such, ‘the question of “inherency” does not arise’ under the EPC (nor under the 1977 Patents Act).¹³⁰ In so doing this opened up the possibility for patent protection to be given to the discovery that a known substance used in a known way could be put to a new purpose. Once this step was taken, deciding the status of a discovery that a known substance used in a known way could be put to a new purpose is relatively straightforward. As the Enlarged Board of Appeal said in *Bayer*, the question to be decided in these circumstances is, as with all inventions, whether the invention has already been made available to the public.¹³¹ This has been reflected in subsequent case law, which has focused on whether the purpose that has been discovered is actually new.¹³²

In those cases where novelty of purpose patents have been accepted the applicant has been able to show that they have ‘two distinctly different effects, two distinctly different applications or uses of the same substances, which can clearly be distinguished from each other’.¹³³ For example, in *Mobil* the patent was for the use of an additive as a lubricant, whereas the state of the art revealed use of the same additive as a rust inhibitor. Similarly in *Bayer* the patent application was directed to the use of a compound as a fungicide, whereas the state of the art described use of the same compound as an agent for influencing plant growth.¹³⁴ In both cases, the patent revealed that the known substance used in a known way could be put to a new purpose.

In contrast, in *Roberto/Deodorant compositions*, the patent was rejected on the basis that it lacked novelty. The applicants discovered that ‘aromatic esters’ when used as an active ingredient in a deodorant composition have the capability of inhibiting esterase-

¹²⁹ See above at pp. 453–5.

¹³⁰ *Mobil/Friction reducing additive*, G2/88 [1990] EPOR 73, 88 (EBA).

¹³¹ *Bayer/Plant growth regulating agent*, G6/88 [1990] EPOR 257, 265 (EBA).

¹³² In many ways, the reasoning used in relation to new purpose is similar to that used in relation to second and subsequent medical uses. The main difference is that in this context there is no need to show manufacture.

¹³³ *Robertet/Deodorant compositions*, T892/94 [1999] EPOR 516, 526.

¹³⁴ *Bayer/Plant growth regulating agent*, G6/88 [1990] EPOR 257.

producing micro-organisms on the human skin. The prior art disclosed the use of aromatic esters as an active ingredient in deodorizing products. The Technical Board of Appeal rejected the application saying that all the patent did was disclose information about a pre-existing purpose. That is, it was an *ex post facto* explanation of what had already taken place. While in *Mobil* and *Bayer* a new purpose had been discovered, all that had been disclosed in this case was more information about a known purpose. The application was merely more information or an explanation of a prior event, rather than the discovery of a new purpose *per se*. As such, it was held not to be novel. A similar conclusion was reached in *Ortho Pharmaceuticals* where the Technical Board of Appeal said that 'the mere explanation of an effect obtained when using a compound in a known composition, even if the effect was not known to be due to this compound in the known composition, cannot confer novelty on a known process if the skilled person was aware of the occurrence of the desired effect'.¹³⁵

The principles used to determine novelty of new purpose patents are similar to those used for other types of inventions. In other respects, however, notably in terms of the problems that arise when deciding whether a novelty of purpose patent has been infringed, they mark a more radical change of direction. We look at this issue in more detail in our discussions of patent infringement.¹³⁶

5.3 SELECTION PATENTS: GENERIC DISCLOSURE

The third area that we wish to focus on is the novelty of so-called selection patents. As with methods of medical treatment and novelty of purpose patents, selection patents developed in response to a particular problem. This arose from the fact that in some fields, such as organic chemistry, a researcher may discover that a particular combination of molecules produces certain results. In some instances, the researcher then extrapolates from this initial discovery to assert that the same qualities will be produced by a range of variants or homologues. This is referred to as a generic or general disclosure. In so doing, the researcher (potentially) discloses an extremely broad range of compounds.

Problems arise when it is subsequently discovered that some of the compounds which were outlined in the generic disclosure are particularly advantageous or have uses other than were initially envisaged. As the compounds have already been made available to the public, the prior generic disclosure appears to prevent subsequent claims being made for individual members of the group.¹³⁷ This led to the potential problem that if the generic disclosure was able to anticipate, it would act as a disincentive for further research to be carried out in relation to the materials already disclosed. The question that underpins the doctrine of selection patents is whether or not and if so, the extent to which, a prior generic disclosure anticipates subsequent inventions in the same field.

In the United Kingdom, the classic answer to this problem is provided by the 1930

¹³⁵ *Ortho Pharmaceuticals/Prevention of skin atrophy*, T254/93 [1999] EPOR 1, 8. This was reinforced by the fact that the specific purpose in question was also known (at 7).

¹³⁶ See below at pp. 529–31.

¹³⁷ This is exacerbated by the fact that (at least until recently) patent law did not normally allow patents for discoveries of new advantages.

decision of *IG Farbenindustrie*.¹³⁸ This decision concerned an application to revoke IG Farbenindustrie's patent for a process of manufacturing certain azo and aromatic amine dyestuffs. This was on the ground that in light of a prior disclosure in an expired patent the invention lacked novelty. In response, IG Farbenindustrie claimed that there were potentially millions of combinations of azo and aromatic amine dyestuffs outlined in the expired patent. They also argued that the particular group of dyes that they had selected had peculiar and beneficial properties in that they withstood certain processing techniques required of cotton.¹³⁹ Maugham J said that if the compounds in question had previously been made they would have lacked novelty. If the compounds had not been previously made, however, the patent might be valid if it could be shown that:

- (i) the selection was based on substantial advantage resulting from the use of selected members;
- (ii) all members of the selected class possessed the advantage in question, and
- (iii) if the selection was in respect of a quality of a special character, that it could fairly be said to be peculiar to the selected group.

While on the facts, IG Farbenindustrie's patent was held to be invalid,¹⁴⁰ the decision helped to establish the principle that selection inventions are potentially patentable where it can be shown that the 'inventiveness' of the application lies in a particular selection from a known field. Selection patents:

enable a valid patent to be obtained for the selection of a product or process from a range of known or obvious products or processes because of surprising and non-obvious advantages over the others . . . The selection must be based on a substantial advantage of special character. The selected member or class must have the advantage, and the specification must direct the mind of the skilled reader to the advantage of the selection from the class.¹⁴¹

Although Maugham J's judgment was approved in subsequent decisions,¹⁴² a number of issues remain unclear.¹⁴³ Many of the uncertainties result from a failure to differentiate clearly between novelty and inventive step. Another reason for the confusion can be traced to the fact that while Maugham J expressly said that the three propositions outlined in his judgment were not meant to be exhaustive, nonetheless they have often been treated as if they were definitive guidelines as to when a selection invention will have been anticipated. Another problem is that it is often forgotten that selection patents are not limited to new uses; they apply, at least potentially, to the discovery of new

¹³⁸ (1930) 47 RPC 289, 322–3. See *Shell Refining and Marketing Patent (Revocation)* [1960] RPC 35, 52; P. Grubb, *Patents in Chemistry and Biotechnology* (1986), 132. While mechanical subject matter does not readily lend itself to the idea of selection, there have been a number of selection patents for mechanical inventions. See, *Clyde Nail Russell* (1916) 33 RPC 291, 306 (Lord Parker); *Shell Refining and Marketing Patent (Revocation)* [1960] RPC 35, 54; *EI Du Pont de Nemours (Witsiepe's) Application* [1982] FSR 303, 314; *Hallen v. Brabantia* [1991] RPC 195.

¹³⁹ More specifically, the advantage claimed was 'fastness to kier boiling under pressure in caustic liquor'.

¹⁴⁰ This was because the dyestuffs claimed did not have the property which the applicant alleged.

¹⁴¹ *Boehringer Mannheim v. Genzyme* [1993] FSR 716.

¹⁴² *EI Du Pont de Nemours (Witsiepe's) Application* [1982] FSR 303, 309.

¹⁴³ It should be noted that there is some inconsistency in the EPO decisions in this area, e.g. *Pfizer/Penem*, T1042/92 [1995] EPOR 207 is inconsistent with *Sanofi/Enantiomer*, T658/91 [1996] EPOR 24.

substances, new uses for old substances, and new purposes for old substances used in old ways.¹⁴⁴

Perhaps the greatest uncertainty that exists in relation to selection patents is whether the doctrine has any continued relevance under the 1977 Patents Act. In light of recent changes—notably, the shift to enabling disclosure, the consequential move away from secret or inherent use, and the (apparent) acceptance of the discovery of new purposes as conferring novelty—there are good reasons for suggesting that it does not.

To argue that under British law the doctrine of selection patents should be jettisoned in favour of the more general rules about novelty is not as radical as it may first seem. This is because the issues which arise with selection patents are really no different from the question which Lord Hoffmann said underpinned the novelty examination more generally: *viz.* how specific must a disclosure be for an invention to be ‘known’ or ‘made available’ to the public? (The key difference is that with selection patents the question is rephrased to be: how specific must a generic or general disclosure be for it to destroy the novelty of a subsequent invention which incorporates the prior knowledge?) While Lord Hoffmann wisely answered that it always depends on the invention in question, the doctrine of selection patents has attempted the impossible and tried to stipulate in advance the type of disclosure that is needed to anticipate. Given the futility of this, it may be better if the novelty of selection patents were answered through the general rules about novelty.¹⁴⁵ If this approach were adopted, it would mean that a prior generic disclosure would only anticipate a selection invention if it was enabling: that is, if the disclosure placed a skilled person in a position whereby they could ‘work’ the invention in question.

It appears that this is in fact the approach that has been adopted at the EPO where the rules on selection patents have been treated as being consistent with rather than an exception to the general rules about novelty. In these circumstances a prior generic disclosure will anticipate a substance if it can be characterized as an enabling disclosure.¹⁴⁶ This can be seen, for example, in *Bayer/Diastereomers*:¹⁴⁷ a decision that concerned an application for the diastereomeric form of a compound which was useful in treating mycoses (fungal diseases such as ringworm). The problem that confronted the applicants was that a prior patent had disclosed a group of compounds including the compound in question, as well as the method by which the compound could be produced. The Technical Board of Appeal rejected the application on the basis that it was lacking in novelty. In so doing the Board held that the teaching of a prior document was not confined to the detailed information given in the examples of how the invention is carried out. Rather, it embraces any information in the claims and description enabling a person skilled in the art to carry out the invention. The Technical Board of Appeal stressed that the essential point is what a person skilled in the art carrying out the invention could be expected to deduce from the earlier disclosure.

¹⁴⁴ It is only if this is correct that selection patents provide obvious tactical advantages over patents for ‘uses’ that the EPO has recently recognized. Moreover, if this were not the case the requirement demanded particularly by the EPO of novelty *per se* rather than mere novelty of use, would be unnecessarily stringent.

¹⁴⁵ In *IG Farbenindustrie* Maugham J argued that the rules applicable to ‘selection patent’ did not differ from the general rules of patent law: a view which was reaffirmed in *Shell Refining and Marketing Patent (Revocation)* [1960] RPC 35.

¹⁴⁶ *Sanofi/Enantiomer*, T658/91 [1996] EPOR 24. On the EPO see M. Vivian, ‘Novelty and Selection Patents’ (1989) 20 IIC 303.

INVENTIVE STEP

1 INTRODUCTION

In this chapter we focus on the requirement that to be patentable an invention must involve an ‘inventive step’.¹ An invention is said to involve an inventive step if it is not obvious to a person skilled in the art² (the terms inventive step and non-obviousness are used interchangeably).³ The question of whether an invention is obvious can arise during examination in the Patent Offices, where it is *ex parte*. It can also arise *inter partes* in opposition proceedings at the EPO, or in revocation proceedings before the comptroller or the courts. In each case, the onus is on the Patent Office, the opponent, or the party seeking revocation (as opposed to the applicant or patentee) to establish that the invention is obvious. While the inventive step requirement has long been a key element of modern patent law, it may become more important in the future. This is a result of changes that have taken place at the EPO, but not in the United Kingdom, in the way patentable subject matter is determined. As we explained earlier, as a result of the *Pension Benefits System* decision, the Technical Board of Appeal has shifted the focus of attention away from subject matter to inventive step.⁴ (The Board held that while the claim for an apparatus for controlling a pension benefits system was an invention for the purposes of Article 52(1), it lacked inventive step and was thus not patentable). While there is a close relationship between the two requirements (particularly as a result of the focus on ‘technical character’ when determining subject matter), it is not clear what the consequences of this shift will be. It is, however, an important change that needs to be followed in the future.

As we will see, deciding where the line is to be drawn between inventions that are obvious (or non-inventive) and those that are inventive (or non-obvious) is a difficult task. As well as being one of the most important requirements of patentability, inventive step is also one of the most problematic. Indeed, it has been said that inventive step is ‘as fugitive, impalpable, wayward, and vague a phantom as exists in the whole paraphernalia of legal concepts’.⁵ In part this is because the examination for inventive step is a factual inquiry: to this end it has frequently been dubbed a ‘question of fact’ or a ‘jury question’

¹ PA s. 1(1)(b); EPC Art. 52(1); PCT Art. 33(3); TRIPS Art. 27(1). See generally, J. Bochnovic, *The Inventive Step* (1982); H. Ullrich, *Standards of Patentability for European Inventions* (1977).

² PA s. 3; EPC Art. 56.

³ However, a useful proposal (such as the idea to cover an umbrella with water-soluble textile) might be non-obvious but lack inventive step. R. Singer, *The European Patent Convention* (1995), 181, n. 1; *Exxon/Gelation*, T1119/82 [1979–85] EPOR 566; [1984] OJEP0 217.

⁴ *Pension Benefits Systems Partnership/Controlling pension benefits systems*, T931/95 [2001] OJEP0 413.

⁵ *Harries v. Air King* 183 F 2d 158, 162 (1950) (Judge Learned Hand).

(though juries have not sat in patent cases in the United Kingdom since 1883). The corollary of the factual nature of the inquiry is that precedents should be treated with caution, even those that involve decisions on the same invention. The evaluative nature of the inquiry also means that reasonable people can easily reach different conclusions: thus making it extremely difficult to predict the outcome of an obviousness attack or objection.⁶ This has led to accusations of uncertainty and to the arbitrary use of discretion.⁷ It also means that on appeal, courts are often reluctant to overturn decisions of the lower courts.

While the novelty examination ensures that there is a quantitative difference between the invention and the state of the existing knowledge, non-obviousness ensures that this difference is of a quality deserving of patent protection.⁸ By ensuring that patents are only granted for non-obvious inventions, the requirement of inventive step acts as a qualitative threshold that ensures that only meritorious inventions are granted protection. The need to show inventive step as a condition of patentability has been explained on the basis that 'if every slight difference in the application of a well-known thing was held to constitute a ground for a patent', it would lead to an unjustifiable interference with trade.⁹ As the Court of Appeal said in *PLG Research v. Ardon International*, the 'philosophy behind the doctrine of obviousness is that the public should not be prevented from doing anything which was merely an obvious extension or workshop variation of what was already known at the priority date'.¹⁰ In more positive terms, it has been suggested that the obviousness inquiry encourages people to carry out research that may not otherwise be undertaken. More specifically, the fact that patents are *not* granted for obvious inventions encourages speculative or risky research.¹¹

2 DETERMINING WHETHER AN INVENTION IS OBVIOUS

In order to harmonize the divergent approaches to obviousness that had been adopted in the member states prior to the passage of the EPC, the European Patent Office set out to develop an approach to the assessment of inventive step that was objective, economical, and transparent. In so doing they also hoped to provide a degree of certainty to the area.¹²

⁶ This 'contributes significantly both to the insecure commercial value of many patents and to the cost of litigating their validity'. W. Cornish, 'The Essential Criteria for Patentability', (1983) 14 *IIC* 765, 771.

⁷ H. Ullrich, *Standards of Patentability for European Inventions* (1997), 37; J. Schmidt-Szalewski, 'Non Obviousness as a Requirement of Patentability in French Law' (1992) 23 *IIC* 725, 737.

⁸ While there has been a shift in the theoretical basis of the novelty requirement from a 'right to work' to an information-related understanding, such a shift has yet to be recognized in relation to inventive step.

The technique that was chosen to achieve these ends is known as ‘the problem and solution approach’.¹³ This is based on an image of the invention as a solution to a problem. Accordingly, an inventive step is seen as ‘a step from the technical problem to its solution’.¹⁴ As such, rather than asking whether an invention is obvious, the European Patent Office asks whether the solution that an invention provides to the problem being addressed would have been obvious to the person skilled in the art. In more positive terms, this means that for an invention to be patentable, the solution must *not* have been obvious to the person skilled in the art at the priority date of the invention in question. There are a number of subsidiary steps that need to be undertaken when applying the problem and solution approach. In particular, it requires the tribunal to identify: the technical field of the invention must be ascertained (which is used, amongst other things, to determine the field of expertise of the person skilled in the art); the closest prior art in the field; the technical problem which can be regarded as solved in relation to the closest prior art; and finally, whether the technical feature(s) which form the solution claimed could be derived by the skilled person in an obvious manner from the state of the art.¹⁵

Over the time the problem and solution approach has been utilized at the EPO, it has proved to be a useful technique for determining inventive step. It is also one that was applied in nearly all situations. Despite this, aspects of the approach were called into question by the Technical Board of Appeal in *Alcan/Aluminium alloys*.¹⁶ In this decision, the Board said that while it was often assumed that the problem and solution approach was applicable in all situations, it was better seen as one of many possible approaches that could be adopted when assessing inventive step. The Board said that there was no legal reason why all cases involving inventive step should be shoehorned into a single approach. In situations where the invention broke new ground, the test was inappropriate because there was no close prior art from which to formulate the problem. In these circumstances, the problem and solution approach was unnecessarily artificial. As the problem and solution approach proceeds on the basis of a search that is made with actual knowledge of the invention, it also suffered from the fact that it was inherently based on hindsight.

In a sense what the Technical Board of Appeal did in *Alcan* was to align the problem and solution approach more closely to the types of research under consideration. By modifying (and narrowing) the circumstances in which the test may be applied, the Board has served to strengthen the test. Despite these criticisms, the problem and solution approach is still the chief way in which inventive step is determined at the EPO.

2.1 UNITED KINGDOM

Whatever the current state of the law at the EPO, English courts have largely remained isolated from and resistant to the adoption of the problem and solution approach.¹⁷

¹³ This was espoused in the first published decision of the TBA, *Bayer/Carbonless Copying*, T1/80 [1979–85] B EPOR 250.

¹⁴ The problem and solution approach builds upon an image of research as an activity that sets out to solve particular problems. *ICI/Containers*, T26/81 [1979–85] B EPOR 362; [1982] OJEPO 211.

¹⁵ *Comvik/Two identities*, T641/00 [2003] OJEPO 319, para. 5. ¹⁶ T465/92 [1995] EPOR 501.

¹⁷ Although these provisions are intended to be applied uniformly throughout the EPC states, inventive step appears to be an area where British courts have taken little notice of EPC precedents, and therefore in which harmonization seems at its most embryonic. *Hallen v. Brabantia* [1991] RPC 195, 212 (Slade LJ); *Hoechst Celanese v. BP Chemicals* [1997] FSR 547, 567, 572.

Instead, when considering the way in which an invention is to be interpreted they have relied on the approach set out in the *Windsurfer* decision.¹⁸ In this decision, the Court of Appeal said that the court must begin by identifying the inventive concept embodied in the patent. The court should then identify the differences that exist between the cited prior art and the alleged invention. Finally, the court should ask whether, viewed without any knowledge of the alleged invention, those differences constitute steps that would have been obvious to the skilled man or whether they required a degree of invention.¹⁹

The decision to use the approach set out in *Windsurfer* rather than the approach used at the EPO was reinforced by the fact that the problem-and-solution approach has been subject to a considerable degree of criticism in the UK.²⁰ As well as being criticized for its use of hindsight,²¹ the test is also said to be unnecessarily artificial because many inventions are developed without having a problem in mind. Perhaps the most important objection is that while the problem and solution approach is presented as being applicable to all types of research, there are situations where its use is inappropriate. While the problem and solution approach is sensibly applied to the improvement of existing techniques, it is not easy to formulate a problem for many inventions, particularly in the chemical-pharmaceutical field.²² As well as being difficult to apply in situations involving the discovery of a new application for an existing technique or product, it is said to be wholly inappropriate where an innovation satisfies a latent need which has never previously been expressed.²³ In the case of so-called 'problem inventions', where the solution becomes obvious once the problem has been formulated, the reformulation of the research undertaken in terms of problem and solution 'is equivalent to emptying the definition of the problem of any substance, and thereby depriving the problem and solution approach of any effectiveness'.²⁴

In determining obviousness under the 1977 Patents Act British tribunals have tended to utilize the test set out in the *Windsurfer* decision rather than the problem and solution approach. In recent years, however, there has been a growing belief that the problem and solution type approach ought to be used in the United Kingdom.²⁵ In part this has been motivated by a realization that the two tests may not be as conceptually different as they first appeared,²⁶ by the fact that the EPO approach has precursors in UK patent

law,²⁷ and that the *Alcan* decision goes some way towards resolving some of the criticisms which have been made of the approach adopted at the European Patent Office.²⁸ Perhaps the strongest support for the use of the problem and solution approach comes from the House of Lords' decision in *Biogen v. Medeva* where Lord Hoffmann said that a 'proper statement of the inventive concept needs to include some express or implied reference to the problem which it required invention to overcome'.²⁹

While it is important to keep in mind the different approaches that have been adopted at the UK and the EPO, there are enough similarities for them to be dealt with together. Perhaps the best starting point for thinking about whether an invention is obvious is with section 3 of the 1977 Act (EPC Article 56) which states that an invention is taken to involve an inventive step 'if it is not obvious to a person skilled in the art, having regard to any matter that forms part of the state of the art.' Stated in this way, the inquiry gives rise to three further questions. These are:

- (i) Who is the 'person skilled in the art' and what skills and knowledge do they have?
- (ii) What is the 'invention' that is being examined? and
- (iii) What does it mean to say that something is 'non-obvious'?

We will deal with each in turn.

3 PERSON SKILLED IN THE ART

As section 3 of the 1977 Act and Article 56 of the EPC make clear, obviousness is determined from the standpoint of the average person skilled in the art.³⁰ This means that when considering whether an invention is obvious, the tribunal views the invention through the eyes of the average person skilled in the art. The notional interpreter is equipped with the attributes, skills, background knowledge, and qualifications relevant to the field in which they work.³¹ The objective nature of the inquiry means that the *actual* process by which the invention came about is irrelevant.³² As such, it does not matter if an invention arose as a result of years of research by a team of leading experts, or as a chance result by an

unskilled person. All that matters is whether the person skilled in the art would consider the invention to be non-obvious.

The skills and qualifications of the person skilled in the art, as well as the resources and equipment that are available to them vary according to the particular invention in question.³³ More specifically, the qualities of the skilled person depend on the technical field into which the invention falls. Determining the technical field of the invention is made easier by the fact that at the EPO, the patent description should specify the technical field that the invention falls into.³⁴ Similarly, in the United Kingdom, the description begins with a short title that indicates the general subject matter of the invention. The choice of technical field is particularly important in situations where the invention is made up of a mixture of technical and non-technical features. This is particularly the case in relation to computer related inventions and business method patents. To date the tribunals have been careful to ensure that the person skilled in the art only has expertise in technical fields. For example, in *Comvik* (which concerned the invention of a new single-user identity card (SIM card) which dealt with the way charges for different types of mobile phone calls were organized for digital mobile telephones)³⁵ the Technical Board of Appeal said that the 'skilled person will be an expert in a technical field. If the technical problem is concerned with a computer implementation of a business, actuarial or accountancy system, the skilled person will be someone in data processing, and not merely a businessman, actuary, or accountant'.³⁶ If the skills base of the expert was extended to include non-technical areas such as business or management skills, it would increase the patentability of business patents and other types of inventions that are currently excluded from protection.³⁷

The skills attributed to the person skilled in the art will vary depending on what is regarded as normal in the field in which they are deemed to operate. In some cases, the person skilled in the art may have a Ph.D. and a well-established research record;³⁸ in other cases they may have no formal academic qualifications and only have 'ordinary' skills.³⁹ While the person skilled in the art is normally an individual, in situations where research is carried out by groups of researchers, the court will adopt the standpoint of a notional research team.⁴⁰

While the skill and qualities of the notional interpreter vary according to the art in question, one trait that is shared by skilled persons irrespective of the field in which they

work is that they are uninventive.⁴¹ It has also been said that the person skilled in the art is conservative in the sense that they would not go against established prejudices, try to enter into sacrosanct or unpredictable areas, or take incalculable risks.⁴²

3.1 THE STATE OF THE ART

In considering whether an invention is obvious, the person skilled in the art has regard to any matter that forms part of the state of the art at the priority date of the invention.⁴³ With two notable exceptions, the state of the art in an obviousness examination is the same broad concept as is used in a novelty examination (which was discussed above).⁴⁴

The first difference is that patent applications that have priority over the application in suit, but have not yet been published, are not included in the state of the art for the purposes of assessing inventive step.⁴⁵ The second difference is that when considering whether an invention is non-obvious (but not whether it is novel), it is possible to combine together (or mosaic) information from different sources. The act of combining documents must be 'natural and logical'.⁴⁶ It must also be a process that an unimaginative skilled person would (as opposed to could) make.⁴⁷ Documents that conflict or are unrelated cannot be combined to demonstrate obviousness.⁴⁸

The state of the art is made up of everything that is made available to the public before the date of filing: irrespective of the language of publication or how widely it has been circulated.⁴⁹ The potentially broad nature of the state of the art is restricted by the fact that the prior art is judged through the eyes of a person skilled in the art. On this basis the courts have accepted that a person skilled in a particular art may place greater emphasis on certain types of information than on others.⁵⁰ In more extreme cases, the fact that the person skilled in the art is able to evaluate the prior art may mean that certain types of information are discarded.⁵¹

The potentially broad nature of the state of the art is further restricted by the fact that the skilled person is only expected to have scrutinized the information available in their own or closely related fields. The impact that this has on the material available to the

⁴¹ This has been questioned in relation to the field of biotechnology. *Genentech's Patent* [1989] RPC 147, 214 (Purchas LJ) and 279–280 (Mustill LJ). See also *Technograph Printed Circuit v. Mills & Rockley* [1972] RPC 346 (Lord Morris); *Polymer Powders/Allied colloids* T39/93 [1997] OJEPO 134, 149.

⁴² *Genentech/Expression in yeast*, T455/91 [1995] OJEPO 684.

⁴³ This date might be critical. For example, in *Biogen v. Medeva* [1995] RPC 25 (CA) it was acknowledged that because recombinant DNA technology had developed so quickly, the invention would have been obvious by Dec. 1979. As such, it was critical whether Biogen could take advantage of an earlier priority date from Dec. 1978.

⁴⁴ See above at pp. 445–50. ⁴⁵ *BASF/Metal refining*, T24/81 [1979–85] B EPOR 354.

⁴⁹ *Blaschim/rearrangement reaction*, T597/92 [1996] EPOR 456; *Mitsubishi/Endless power transmission*, T169/84 [1979–85] B EPOR 354; *Hoechst Celanese v. BP Chemicals* [1997] FSR 547, 563.

⁵⁰ *PLG Research v. Ardon International* [1994] FSR 116, 137: '[k]nowing of a piece of prior art is one thing; appreciating its significance to the solution to the problem in hand is another.'

⁵¹ Cf. *Brugger v. Medic Aid* [1996] RPC 635, 653. The 'court should be wary of uncritical ageism in relation to prior art . . . The fact that a document is old does not, *per se*, mean that it cannot be a basis for an obviousness attack'.

person skilled in the art can be seen in *Mobius/Pencil Sharpener*,⁵² which concerned an application for a patent over a hand-operated pencil sharpener with a device that prevented pencil shavings from escaping. The application survived an obviousness attack on the basis of two pieces of prior art: one concerned with pencil sharpeners, the other with savings boxes. The Technical Board of Appeal held that while the prior art concerning the pencil sharpener represented the closest prior art, it failed to suggest the answer employed in the invention and was thus of no relevance. Given the technological differences between the two fields, the prior art in relation to savings boxes was also of no relevance because it was not in a closely related or neighbouring field. Consequently, the person skilled in the art would not have utilized the solution set out in the prior art relating to the savings box.⁵³

In addition to being confronted with relevant material from the state of the art, the person skilled in the art is also presumed to have the benefit of the ‘common general knowledge’ of the particular art or technical field in question.⁵⁴ As well as being a valuable source of information in its own right,⁵⁵ the common general knowledge is also important because it enables the notional interpreter to combine different pieces of prior art together and to develop and build upon existing pieces of prior art (so long as they do not do anything inventive). The common general knowledge is also important because it acts as the basis from which documents are interpreted.

The sources from which the notional skilled addressee acquires their general knowledge varies depending on the nature of the technical field in question.⁵⁶ Frequently, the tribunal assumes that the common general knowledge is that which can be found in encyclopedias and standard dictionaries. Where this is the case, care must be taken to avoid a logical fallacy: common general knowledge will be in encyclopedias, but that does not mean that everything in such works is common general knowledge.⁵⁷ Individual patent specifications are not normally regarded as forming part of the common general knowledge.⁵⁸ Scientific papers only become part of the general knowledge ‘when it is generally known and accepted without question by the bulk of those who are engaged in the particular art’.⁵⁹ Usually, information that is common general knowledge will have been used in some capacity or other. The fact that a concept has not been used does not mean that it is necessarily excluded: only that it is unlikely to form part of the common general knowledge.⁶⁰

4 WHAT IS THE 'INVENTION'?

As the Court of Appeal pointed out in the *Windsurfer* decision, when considering whether an invention is non-obvious the court must identify the inventive concept embodied in the patent.⁶¹ As we saw in relation to patentable subject matter and novelty, the way an invention is interpreted may play an important role in determining whether it is patentable. This is also the case with inventive step. As we explained earlier, one of the consequences of *Pension Benefits Systems* is that it places greater emphasis on the requirement that there must be an inventive step. In particular, it places more emphasis on the way that the invention is characterized, that is on the way the 'inventive concept' is determined.

At the EPO, the task of identifying the invention is achieved via the problem and solution approach. More specifically, based on an image of the invention as a solution to a problem, to identify the 'thing' that must be non-obvious, it is necessary to identify the particular problem that the invention addresses. As with most aspects of the obviousness inquiry, this is understood from an objective point of view at the priority date of the invention.⁶² The task of having to identify the problem that the invention solves is made easier by the fact that the rules to the EPC provide that 'the description should disclose the invention as claimed in such terms that the technical problem (even if not expressly stated as such) and its solution can be understood'.⁶³

While in many cases it is possible to rely upon the problem that is disclosed in the patent application, in some cases the patent application cannot be used to provide an objective statement of the problem.⁶⁴ In situations where the problem is not properly set out in the application, the problem may be reformulated by the EPO.⁶⁵ In these circumstances, the nature of the problem is determined from the differences between the closest prior art⁶⁶ and the invention (which is seen in terms of its effects rather than its structure).⁶⁷ This may refer to the need to achieve the same kind of result, an improved result

⁶¹ *Windsurfing International v. Tabur Marine* [1985] RPC 59 (CA). The importance of the way an invention is interpreted is illustrated in *Genentech's Patent* [1989] RPC 147 (CA). See also B. Reid, 'Biogen in the EPO: The Advantage of Scientific Understanding' [1995] 2 *EIPR* 98.

⁶² The problem that the applicant is required to specify should be a technical as opposed to a commercial one: *Esswein/Automatic programmer*, T579/88 [1991] EPOR 120.

⁶³ EPC r. 27(1)(c), r. 33(2).

⁶⁴ The problem might need to be reformulated in the light of information revealed by the search report, or the documents relied upon in opposition or appeal proceedings, if these represent a closer state of the art than that originally mentioned. Similarly the technical problem may need to be reformulated in the light of experiments which reveal that the claim is too broad. *Polymer Powders/Allied colloids*, T39/93 [1997] OJEP 134, 144 ff.

⁶⁵ *Phillips Petroleum/Passivation of Catalyst*, T155/85 [1988] EPOR 164, 169; *Sperry/Reformulation of the problem*, T13/84 [1986] EPOR 289.

⁶⁶ *IBM/Enclosure for data-processing apparatus*, T9/82 [1997] EPOR 303. *Bayer/Thermoplastic moulding composition*, T68/83 [1979–85] C EPOR 71; G. Knesch, 'Assessing Inventive Step in Examination and Opposition Proceedings at the EPO' (1994) *epi-Information* 95 ('the crucial question is whether the man skilled in the art would really have chosen that document as the starting point').

⁶⁷ *Pegulan/Surface finish*, T495/91 [1995] EPOR 517.

(for example, a quicker, stronger, or cheaper result), or a different result than is achieved by the existing art.⁶⁸

As we explained earlier, English courts have largely remained resistant to the problem and solution approach. While there has been criticism of the problem and solution approach in the United Kingdom, there has been little discussion as to the alternative approach that ought to be adopted. It seems that British tribunals distil the ‘invention’ from the specification (presumably read purposively from the perspective of the relevant person skilled in the art).⁶⁹ It is important to recall that in *Biogen v. Medeva* Lord Hoffmann said that a ‘proper statement of the inventive concept needs to include some express or implied reference to the problem which it required invention to overcome’.⁷⁰ Given the importance of this issue, it warrants more attention.

One question that arises in this context concerns the way inventions that are made up of a mixture of technical and non-technical features are to be characterized. While it is legitimate to for there to be a mix of technical and non-technical features when deciding patentable subject matter under section 1(2)/Article 52(1),⁷¹ this is *not* the case when deciding whether there is an inventive step. As the Technical Board of Appeal said in *Comvik*, non-technical factors are not relevant when deciding whether there was an inventive step. This means that where an invention consists of a mixture of technical and non-technical characters, that non-technical features should be ignored.⁷² ‘This approach, which is actually a method of construing the claim to determine the technical features of the claimed invention, allows separating the technical from the non-technical features of the claimed invention even if they are intermingled in a mixed type-claim’.⁷³ The exclusion of non-technical features (which echoes the approach currently taken to subject matter in the United Kingdom) has important consequences for the fate of computer related inventions (particularly those in relation to business and economics). Given that in many cases the real innovations will be in solving managerial or business problems rather than in relation to information technology *per se*, the exclusion of non-technical features means that the inventive step is judged against standard computer technology. As *Pension Benefits Systems* and *Comvik* showed, one of the consequences of this is that such inventions are now excluded at the EPO on the basis that they lack an inventive step.

⁶⁸ It seems this was derived from practices in Germany, but differs in that the EPO problem and solution approach is ‘effects centred’: *CIPA*, para. 3.21. On the approach in Germany see J. Pagenberg, ‘Examination for Non-obviousness: A Critical Comment on German Patent Practice’ (1981) 12 *IIC* 1.

⁶⁹ *Brugger v. Medic Aid* [1996] *RPC* 635, 656. (The inventive concept must be characterized in the light of the claims and must apply to all embodiments in the claim.)

⁷⁰ [1997] *RPC* 1, 45. Lord Hoffmann identified the ‘inventive concept’ differently at different stages of his analysis.

⁷¹ *Koch & Sterzel/X-ray apparatus*, T26/86 [1988] *OJEP* 19.

⁷² Non-technical meaning ‘features relating to non-inventions within the meaning of Article 52(2)’: *Comvik/Two identities*, T641/00 [2003] *OJEP* 319, para. 4.

⁷³ *Ibid.*, para. 7; following *Pension Benefits Systems Partnership/Controlling pension benefits systems*, T931/95 [2001] *OJEP* 413.

5 IS THE INVENTION 'OBVIOUS'?

Once the person skilled in the art and the invention have been identified, it is then possible to consider whether the invention is non-obvious.⁷⁴ While the question of whether an invention is non-obvious is widely regarded as one of the most difficult questions in a difficult area of law, it is not that different from other questions the courts are required to consider, such as whether a contractual term is fair, or whether evidence is relevant to an issue. In another sense, however, the task of determining whether a particular invention is non-obvious is not only different but also more problematic. One reason for this is that in patent law the tribunals are frequently required to pass judgment on complex and novel technologies. While in deciding whether a person acted negligently a judge may be able to rely on their background experience and knowledge, there may be little to guide them when they are forced to consider, for example, the inventiveness of a genetically modified plant. These problems are exacerbated by the fact that questions about the obviousness of an invention may arise some time after the invention was made. It also means that the way that inventive step is determined will change as a technical field develops. For example, while in the 1980s the futuristic nature of molecular biology meant that the threshold for inventiveness was easily satisfied, advances over the last decade or so mean that the criteria will be harder to satisfy. In particular, as more 'is known about the various genomes and the function of the constituent genes, the more difficult it will be to establish an inventive step for any isolated gene'.⁷⁵

While ascertaining whether an invention is obvious is a difficult task, it is made easier by the fact that the question is asked from the perspective of the person skilled in the art. While a non-specialist may find it difficult to assess whether an invention is obvious, a person who has knowledge of the area, particularly of what is regarded as normal progress in the field, will find it much easier to judge whether something is inventive. The task of determining whether an inventive step is present is also made easier by the fact that the courts invariably draw upon the evidence of experts. While experts are not able to take the place of the court in making the final decision as to whether an invention is obvious, they play an important role in providing the court with a sense of what would be normal in the field (and thus what would be unexpected and inventive).⁷⁶ However helpful these factors may be, it still leaves us with the question: what does it mean to say that an invention is obvious?⁷⁷

5.1 THE MEANING OF 'INVENTIVE STEP'?

One of the things that courts and commentators regularly agree on is that the qualitative and factual nature of the inquiry means that it is not possible to reduce obviousness to a

⁷⁴ Where the problem and solution approach is followed this question becomes whether the solution that an invention provides to the problem being addressed would have been obvious to the person skilled in the art.

⁷⁵ UK Patent Office, *Biotechnology Guidelines* (Sept. 2002), 8–9.

⁷⁶ *Hoechst Celanese v. BP Chemicals* [1997] FSR 547, 563; *British Westinghouse v. Braulik* (1910) 27 RPC 209 (Fletcher Moulton LJ); *Brugger v. Medic Aid* [1996] RPC 635, 661.

⁷⁷ While the *Windsurfing* decision and the 'problem and solution approach' provide guidance as to how the invention is to be interpreted, they provide no assistance in determining whether an invention is obvious.

precise verbal formula.⁷⁸ That is, it is not possible to define either ‘inventive step’ or ‘non-obvious’ in a meaningful or helpful way. While it may not be possible to formulate a test which enables us to predict with accuracy whether an invention will be regarded as obvious, it is possible to offer general guidance as to some of the factors which have shaped obviousness inquiries in the past.

An important factor that has influenced decisions as to whether an invention is obvious is the extent to which the national researcher has exercised choice in the inventive process. In situations where there is no opportunity or need for an inventor to enter into and shape the research process—that is where there is no ‘no real choice’ or ‘the skilled man is in an inevitable “one way street” situation’⁷⁹—the invention is likely to be obvious. In these situations there is little or no scope for a researcher to act in a technically creative way. The converse of the need for choice is that there is a possibility that the research will fail. Where the research involves no risk or uncertainty, that is where the results are predictable or likely, the invention is more likely to be obvious and thus unpatentable.

In a sense, the focus on the degree of choice or control exercised by the inventor builds upon the idea of invention as a process whereby the inventor (as creator) engages with Nature to produce something new. More specifically, it builds upon a model of the invention as a process in which the inventor is actively involved with and ultimately shapes the final product. It presumes that there is a degree of human intervention in the production of the invention. In situations where there is no real need nor opportunity for a researcher to make decisions about the shape and nature of the research, there is no real potential for ‘human intervention’ and, as such, no inventiveness. This is the case, for example, where an invention results from the application of a known technique to a known problem, or where it was obvious to try the technique in question. It is also the case where the person skilled in the art is ‘directly led as a matter of course’ to the invention.⁸⁰

The mere fact that a researcher has exercised a degree of choice and control over the research process is not in itself enough for the final product to be non-obvious. Put differently, while the exercise of (mental) labour and effort is a necessary condition for an invention to be non-obvious, it is not a sufficient condition. In order for an invention to be non-obvious, it needs to be shown that the way the choice is exercised is technically creative: a notion which not only changes across technologies (both in terms of how it is expressed and also the amount of ingenuity involved), but also over time.

A number of different factors have been taken into account when determining whether an invention is technically creative. At a general level, a distinction is drawn (similar to the distinction drawn in copyright law between sweat of the brow and creativity) between the exercise of routine skills (where the results are non-patentable) and inventive skills (the results of which are). This is based upon the idea that inventions which are based on laboratory techniques, are routine, or which follow ‘plainly or logically from the prior art’⁸¹ do not contribute anything to ‘the real advancement of the arts’⁸² and, as such, are not worthy of protection.

⁷⁸ *John Manville’s Patent* [1967] RPC 479, 493 (Diplock LJ). Singer suggests 13 subtests: R. Singer, *The European Patent Convention* (1995), 182–3.

⁷⁹ *Hallen v. Brabantia* [1991] RPC 195 (CA).

⁸⁰ *Olin Mathieson v. Biorex* [1970] RPC 157.

⁸¹ *EPO Guidelines C-IV*, 9. The Guidelines were devised largely by reference to German patent practice: Buhling (1978) *AIPLA Quarterly J* 61, 62.

⁸² *Atlantic Works v. Brady*, 107 US 192 (1883) (Justice Bradley).

The courts have also taken care to ensure that only *technical* factors are taken into account when determining inventive step. To this end, it was held that the fact that a particular route was not tried for some time because it was believed that the outcome would not get regulatory approval did not make it a route that was not 'obvious to try'.⁸³ Equally, while the activities of a manager or accountant may play an important role in shaping the research process, their input is not regarded as 'technical' and, as such, is not taken into account when deciding whether an invention is non-obvious.⁸⁴ This was exemplified in the *Pension Benefits Systems* decision where the Technical Board of Appeal said that 'the improvement envisaged by the invention', (which was for a computer-apparatus for controlling a pension benefit system), 'is an essentially economic one, i.e. lies in the field of economy, which, therefore cannot contribute to inventive step'.⁸⁵ As such, the claimed subject matter lacked inventive step. While the level of inventiveness required must be more than the mere application of time, money, and effort,⁸⁶ the courts have acknowledged that 'in practice what is technically feasible is unlikely to be wholly isolated from what is commercially feasible'.⁸⁷ This means that in some cases commercial and technical considerations may be so inextricably linked that commercial factors may be relevant when considering whether a contribution is technical.⁸⁸

5.2 SPECIFIC APPLICATIONS

Given that decisions about the obviousness of an invention are closely linked to the facts of each case, it may be helpful to look at the way inventive step has been approached in a number of different circumstances.⁸⁹

5.2.1 Technique or avenue for research

In some situations, the inventive step may lie in the technique or the avenue of research that is followed. In these circumstances an invention will be obvious if a person skilled in the art *would* (rather than *could*) have taken the route in question.⁹⁰

The person skilled in the art is assumed to have tried all avenues that have a good prospect of producing valuable results.⁹¹ Factors that might in reality mean that one route

Schertenleib, 'The Patentability and protection of DNA-based Inventions in the EPO and the European Union' [2003] EIPR 125; UK Patent Office, *Examination Guidelines for Biotechnological Inventions* (Sept. 2002), para. 17–30.

⁹⁰ *Rider/Simethicone tablet*, T2/83 [1984] OJEP0 265; [1979–85] C EPOR 715; *Genentech/Expression in yeast*, T455/91 [1996] EPOR 85; [1995] OJEP0 684.

⁹¹ *American Cyanamid v. Ethicon* [1979] RPC 215, 266–67.

is tried before another—such as low cost, easy availability of starting materials, or the likely time before the outcome of an experiment is known—are ignored since they are not pertinent to whether or not the route is technically obvious. As Laddie J explained in *Brugger v. Medic Aid*, ‘if a particular route is an obvious one to take or to try, it is not rendered any less obvious from a technical point of view merely because there are a number, and perhaps a large number, of other obvious routes as well’.⁹² The position is the same if the route to an invention requires the person to take a succession of obvious steps.⁹³
