In order for a particular avenue of research to be obvious, there is no need for a researcher to be one hundred per cent certain that the chosen route will lead to a particular result. Thus, ‘a route may still be an obvious one to try even if it is not possible to be sure that taking it will produce success, or sufficient success to make it commercially worthwhile’.⁹⁴ All that needs to be shown for an invention to be obvious is that there was a reasonable expectation of success, or that there was an expectation that the avenue of research ‘might well produce a useful desired result’.⁹⁵ In *John Manville’s Patent* Diplock LJ said that an invention would be obvious if the ‘person versed in the art would assess the likelihood of success as sufficient to warrant actual trial’.⁹⁶ The test of ‘expectation of success’ cannot be applied in all situations. While the test is useful where predictable methods are relied on to solve technical problems (such as methods of genetic engineering such as cloning and expressing DNA sequences), as the Technical Board of Appeal noted, the test is not useful where an invention depends on random techniques (such as mutagenesis). Where the outcome of a process depends on random events, luck, or chance, the Board said that it was not appropriate to attempt to evaluate the expectation of success. ‘Under these circumstances, as for example in a lottery game, the expectation of success always ranges irrationally from nil to high, so that it cannot be evaluated in a rational manner based on technical facts’.⁹⁷

The inventiveness of a particular avenue of research can arise in a number of different ways.⁹⁸ In some fields an avenue of research will not be obvious to try because the person skilled in the art considers the whole field to be unpredictable.⁹⁹ In other circumstances, the inventive step may arise from the fact that the research overcomes ‘prejudices in the art’.¹⁰⁰ That is, it breaks with current views about an area of research. The decision to follow a particular line of research may be inventive where it had previously been thought

⁹² [1996] RPC 635, 661.

⁹³ *VDO Adolf Schindling/Illuminating device*, T324/94 [1997] EPOR 146. The number of alternative routes may be relevant: if there is only one route, then even an unexpected result might be treated as being obvious: *Rider/simethicone tablet*, T2/83 [1984] OJEP 265; [1979–85] C EPOR 715.

⁹⁴ *Brugger v. Medic Aid* [1996] RPC 635, 660.

⁹⁵ *Olin v. Mathieson Biorex* [1970] RPC 157, 187.

⁹⁶ [1967] RPC 479, followed under the 1977 Act in *Brugger v. Medic Aid* [1996] RPC 635, 661. *Chiron Corporation v. Murex Diagnostics* [1996] RPC 535, 557.

⁹⁷ *DMS/Astaxanthin*, T737/96 (9 March 2000), para. 11. Patentees argued that there was no reasonable expectation of achieving the solution offered by the patent. This test was rejected by the Board because it was not possible to make reasonable predictions about the possibility of success because the success of the invention depended on chance events (mutagenesis).

⁹⁸ A distinction is drawn between an exercise of ingenuity and a voyage of discovery. See *Beechams Group (Amoxycillin) Application* [1980] RPC 261 (Buckley LJ) (CA).

⁹⁹ *Genentech/Expression in yeast*, T455/91 [1995] OJEP 684.

¹⁰⁰ J. Schmidt-Szalewski, ‘Non-obviousness as a Requirement of Patentability in French Law’ (1992) 23 *IIC* 725, 735–6.

that the area was either exhausted or fruitless. Similarly, the decision to follow a line of research may be inventive where all recent developments have exploited a different avenue.¹⁰¹ As the EPO Guidelines explain, as 'a general rule, there is inventive step if the prior art leads the person skilled in the art away from the procedure proposed by the invention. This applies in particular where a skilled person would not even consider carrying out experiments to determine whether these were alternatives to the known way of overcoming a real or imagined technical obstacle'.¹⁰² Similarly, if a document in the prior art suggests that the route in question is unlikely to work, but the patentee successfully took the route, it is likely that the invention will be patentable. In this context it is important to keep in mind the comment by Lord Hoffmann that the mere fact that scientific opinion might have thought that something was 'perfectly useless' does not mean that practising it, or having the idea of making a preparation to do so, necessarily amounts to an inventive step. If this was allowed, it would lead to the paradoxical situation where 'anyone who adopted an obvious method for doing something which was widely practised, but the best scientific opinion thought was pointless, could obtain a patent'.¹⁰³

A particular line of research will also be inventive where it would not have been pursued by the person skilled in the art. It is also important to show that the research was selected for technical reasons: factors such as the cost of the research are not taken into account. In this context it is interesting to note that in *Biogen v. Medeva*¹⁰⁴ the evidence suggested that whereas a person less skilled in the art might have regarded the route to be obvious, a person skilled in the art would consider it so beset by obstacles as not to be worth trying.¹⁰⁵

5.2.2 Overcoming of obstacles

In some cases, the ingenuity and skill needed for an invention to be non-obvious lies not so much in the identification of a research problem or in reaching the final goal. Instead, the invention arises in the way the obstacles and problems that arise en route to reaching the final goal are overcome.¹⁰⁶ Where unforeseeable difficulties exist, the outcome will be non-obvious if the route chosen to overcome those difficulties is inventive.¹⁰⁷ However, where the obstacles are overcome through tenacity, sound technique, or trial and error, the outcome remains obvious.¹⁰⁸

5.2.3 Selection of the problem

In some cases, the non-obvious nature of an invention may lie in the problem that has

¹⁰¹ If a particular route has not been considered for commercial reason, such a prejudice is irrelevant. See *Brugger v. Medic Aid* [1996] RPC 635, 661.

¹⁰² EPO Guidelines C-IV, Annexe 4; *Mobay/Nethylenebis*, T2/81 [1982] OJEP0 394; [1979–85] B EPOR 265 (documents revealed a prejudice or general trend pointing away from the invention).

been selected, or in the selection of the goals to be pursued.¹⁰⁹ In situations where the inventiveness lies in the way the problem to be solved is chosen, for the resulting invention to be non-obvious the perception of the problem must be beyond the capability of the person skilled in the art.¹¹⁰ In *Boeing/General technical knowledge*¹¹¹ the patent application related to a mechanism for extending a high-lift device (similar to a crane): the problem to be solved was how this could be done without using long cables. The solution developed by the applicant involved using short cables and pulleys. The Examining Division rejected the application on the basis of two pieces of prior art: one from the aircraft engineering field, the other a patent application directed at no specific field. The Technical Board of Appeal stated that inventiveness could not be found in the perception of the problem since the overcoming of recognized drawbacks and the achievement of consequent improvements must be considered as the normal task of a skilled person.

5.2.4 Unexpected result

Another situation where the pursuit of an obvious route may result in a non-obvious invention is where the outcome is, in some important way, unexpected. If a route is obvious to try in response to a known problem, but the particular route chosen produces unexpected advantages, the result might be inventive. This is because the person skilled in the art would not associate the avenue of research with the final result.¹¹² Where the route taken merely produces a result of the sort as was expected, but more cheaply or efficiently, it is unlikely to be inventive.

5.3 SECONDARY EVIDENCE

While the question of whether an invention is obvious is ultimately decided by the tribunals, at times they have been willing to accept so-called secondary evidence that supports a claim that an invention is non-obvious.¹¹³ In effect, secondary evidence is evidence which acts as virtual proof that the invention involved an inventive step. That is, it provides a basis from which it can be inferred that the invention is non-obvious.

While supporters of secondary evidence argue that it makes decision-making simpler and adds a degree of realism to the inquiry,¹¹⁴ there is a growing consensus of opinion

¹⁰⁹ *Beecham Group's (Amoxycillin) Application* [1980] RPC 261. Buckley LJ said 'It will suffice if it is shown that it would appear to anyone skilled in the art but lacking in inventive capacity that to try the step or process would be worthwhile . . . Worthwhile to what end? It must, in my opinion, be shown to be worth trying in order to solve some recognized problem or meet some recognized need'. *Rider/Simethicone tablet*, T2/83 [1984] OJEPO 265; [1979–85] C EPOR 715.

¹¹⁰ *Rider/Simethicone tablet*, T2/83 [1984] OJEPO 265; [1979–85] C EPOR 715. With problem inventions dangers of hindsight are particularly pronounced: *Bonzel v. Intervention (No. 3)* [1991] RPC 553.

¹¹¹ T195/84 [1986] OJEPO 121; [1986] EPOR 190.

¹¹² *Rider/Simethicone tablet*, T2/83 [1984] OJEPO 265; [1979–85] C EPOR 715. The discovery of a yet unrecognized problem may give rise to patentable subject matter and that an unexpected bonus may be interpreted as a solution of a yet unknown problem.

Pagenberg, 'Different Level of Inventive Step for German and European Patents? The Present Practice of Nullity Proceedings in Germany' (1991) 22 *IIC* 763, 764; E. Kitch, 'The Nature and Function of the Patent System' (1977) 20 *J Law and Economics* 265, 283.

against placing too much reliance on secondary evidence.¹¹⁵ As Laddie J warned, secondary evidence ‘must not be permitted, by reason of its volume and complexity, to obscure the fact that it is no more than an aid in assessing the primary evidence’.¹¹⁶ The growing suspicion about secondary evidence may reflect the fact that with the increased specialization of the patent courts the judges are happier to make technical judgments.¹¹⁷ It also reflects a desire to keep the cost of patent litigation down: with secondary evidence seen as adding unnecessarily to the time and cost of litigation. With these general reservations in mind, we will now outline some of the forms of secondary evidence that have been used as proof of the non-obviousness of inventions.

5.3.1 Closeness to prior art

One factor that has been used to indicate that an invention is obvious is its proximity to the prior art. If, for example, an invention combines two documents from neighbouring fields, it is likely to be obvious. In a famous case, the Court of Appeal held that a patent for a sausage machine that merely combined a better way of cutting sausages with an existing filler was obvious.¹¹⁸ It would be possible, however, for elements from different areas to be combined in a non-obvious way. Similarly, where a patent application is for a ‘new use’ that is analogous to the existing known uses of the thing, it is unlikely to be inventive. The use of a substance to reduce friction when it was already known that the substance operated as a rust inhibitor was held not to be analogous.¹¹⁹

5.3.2 Comparative efforts

The efforts of researchers working in the same field as the inventor have also been used as evidence to support non-obviousness.¹²⁰ If a number of people working in the same field were pursuing the same goal, the fact that the inventor was the only person successfully to solve the problem might imply inventiveness. This is on the basis that the corresponding failure of others indicates that the solution was not obvious. On the other hand, if other researchers made the same invention shortly after the applicant, that might imply that the invention was obvious.¹²¹

The courts have emphasized that evidence of comparative effort should be treated with caution. In order to be of any value, the comparative inventors must have been working from the same prior art as that cited in the non-obviousness inquiry. They must have been pursuing the same goal and working for some time. If different starting points were used,

¹²¹ *Windsurfing International v. Tabur Marine* [1985] RPC 59, 73–4; *Beloit Technologies* [1995] RPC 705, 753; *Genentech’s Patent* [1989] RPC 147, 221 (Purchas LJ).

no inference can be drawn as to the obviousness of the invention from their relative activities. As Laddie J said, the fact that 'a particular researcher working from an unpleaded piece of prior art, arrived at the invention in suit is of no assistance to the court'.¹²²

5.3.3 Long-felt want

A related form of evidence that is used to support claims for inventive step is evidence that the invention satisfies a 'long-felt want'. The logic of this is straightforward: if people had been trying to solve a particular problem for many years and the solution had been obvious, someone would already have invented it.¹²³ Given the existence of a long-felt want, the fact that no one had previously developed the invention means that the invention must have been non-obvious. While long-felt want may indicate inventiveness, there might be other reasons why a development was not made earlier.¹²⁴ As such, it is necessary to be careful when inferring non-obviousness from a long-felt want. The need must have been known about for some time; there must have been an interest in developing the field; and the materials and information that form the basis of the solution must have been known and available.¹²⁵

5.3.4 Commercial success

In some situations, the fate of an invention after grant may provide evidence that suggests that the invention is non-obvious. For example, if an invention proves to be commercially successful, or is widely copied by or licensed to competitors, it might be inferred that the invention involved a leap beyond what previously existed. As Tomlin J said in *Parkes v. Cocker*:

When it has been found that the problem had awaited solution for many years and that the device is in fact novel and superior to what had gone before and has been widely used and indeed in preference to alternative devices, it is practically impossible to say that there is not present that scintilla of invention necessary to support the patent.¹²⁶

Evidence about the fate of an invention after grant that is introduced to prove inventive step needs to be treated with caution.¹²⁷ This is because there may be a number of reasons other than the non-obvious nature of an invention that explain the reaction of the market or competitors to the invention. For example, a competitor may have taken out a licence from a patentee to avoid threats of litigation, rather than because they regarded the patentee's invention as based on a significant technical advance. Similarly, commercial success might be attributable to factors such as advertising, distribution, marketing, or business acumen rather than to technical advance. For evidence of the fate of an invention after grant to be of value, it must suggest a link between the success of the product and the

product's patented features.¹²⁸ As a result, commercial success will rarely be of significance unless it can be shown that there is evidence of a prior need for a solution to the particular problem, that the relevant prior art had been published for some time, and, most importantly, that the commercial success was attributable to the technical features of the invention.¹²⁹

INTERNAL REQUIREMENTS FOR PATENTABILITY

1 INTRODUCTION

In this chapter, we turn our attention away from the external criteria for patentability (subject matter, novelty, and inventive step) to focus on the internal criteria for patentability (so named because they focus on the way the patent is drafted). The first is the requirement that the invention be disclosed in a manner that is clear and complete enough for it to be performed by the person skilled in the art.¹ Secondly, we look at the requirements that focus on the form and content of the claims. In particular, we look at the requirements that the claims be clear and concise, be supported by the description, and relate to one invention.² Finally, we look at the requirement that the patent must not be amended in such a way that it contains additional subject matter or extends the protection conferred by the patent.³

2 SUFFICIENCY OF DISCLOSURE

In determining how the scope of protection is to be determined, patent law has had to juggle a number of conflicting demands. On the one hand, it is necessary to ensure that patents offer sufficient rewards to encourage organizations to become involved in the patent process in the first place. To do this, the protection must be robust enough to ensure that competitors are unable to circumvent the patent, for example, by making minor changes to the invention. It is also important that the scope of protection coincides with the invention as disclosed in the patent. As Aldous LJ said, ‘I do not believe that the patent system should be used to enable a person to monopolise more than that which he has described in sufficient detail to amount to an enabling disclosure. If it was, it would stifle research’.⁴ It is also important that the information disclosed in the patent is useful. It makes little sense to reward someone for disclosing their invention with a patent if a key element of the invention is missing, or if members of the public have to undertake additional or onerous research before they are in a position to reproduce the invention. In

this section we look at one of the most important rules used to regulate the scope of patent protection and in so doing help to resolve such issues.⁵ This is the requirement that the patent application disclose the invention in a manner that is clear enough and complete enough for it to be performed by the person skilled in the art:⁶ which is usually referred to as the requirement of sufficiency of disclosure. Failure to comply with the requirement of sufficiency gives rise to an objection pre-grant, and is also a ground of revocation once a patent has been granted.⁷

In recent years there have been a number of attempts to categorize the sufficiency examination according to the nature of the disclosure and the type of invention in question.⁸ However, the Court of Appeal in *Kirin-Amgen* dismissed these efforts saying there is only one ground for insufficiency set out in the 1977 Act (and the EPC): namely that the specification must enable the invention to be performed.⁹ This means that the test for sufficiency is the same whether the claimed invention is a class of chemical compounds, a DNA sequence, or a simple mechanical invention. In all cases, the disclosure in the specification must enable the person skilled in the art to manufacture the invention.¹⁰ In Lord Hoffmann's words, there must be an enabling disclosure. It is important to note that the information that has to be disclosed for a person skilled in the art to perform an invention always varies depending on the nature of the invention and the circumstances of the case.¹¹ In some situations, the mere disclosure of a formula may be sufficient for the invention to be performed or worked.¹² In other cases, it may be necessary for both the formula and the starting materials (or means) to be disclosed for the person skilled in the art to put the invention into practice.

The question of whether the invention has been adequately disclosed is assessed as of the date of filing.¹³ While the onus of establishing that an invention has been sufficiently disclosed initially falls upon the applicant/patentee, at trial the obligation is on the defendant to establish that the claims are insufficient.¹⁴ It is not enough for a defendant merely to allege that a patent has not been disclosed in a way that enables the invention to be performed by the person skilled in the art.¹⁵ Instead, a patent can only be challenged on the basis that the invention is not sufficiently disclosed if there are 'serious doubts which

⁵ See B. Domeij, 'Patent Claim Scope: Initial and Follow-on Pharmaceutical Inventions' [2001] *EIPR* 326.

¹³ *Biogen v. Medeva* [1997] *RPC* 1, 53–4 (Lord Hoffmann) (HL); *Kirin-Amgen v. Transkaryotic Therapies* [2003] *RPC* 31, 71 (Aldous LJ) (CA).

¹⁴ *Pharmacia Corporation v. Merck* [2002] *RPC* 775, 798 (Aldous LJ) (CA).

¹⁵ PA s. 14(3), s. 72(1)(c)/EPC Art. 83.

are substantiated by verifiable facts'.¹⁶ In the absence of evidence to this effect, the patent will be upheld.¹⁷

Sufficiency is decided by the court judged through the eyes of the person skilled in the art. As the 1977 Patents Act and the EPC make clear, the specification must be disclosed in such a way that it can be performed by *the person skilled in the art*. The notional skilled person employed in this context is similar to the notional interpreter used to assess inventive step. One difference is that whereas for the purposes of evaluating inventive step the skilled person only has knowledge of the prior art, for the purpose of evaluating sufficiency of disclosure the skilled person has knowledge of the prior art *and* of the invention as disclosed.¹⁸

As the focus of the sufficiency requirement is on whether the *invention* has been disclosed, one of the first tasks that arises in this context is that the scope and nature of the invention must be ascertained. Once this is done, it is necessary to ask whether the invention-as-claimed is disclosed in a manner that is clear enough and complete enough for it to be performed or carried out by a person skilled in the art. This means, for example, that if an invention is a compound that reduces pain, that the specification must contain sufficient information to enable compounds with that attribute to be manufactured.¹⁹ Similarly, where the claims 'include a number of discrete methods or products, the patentee must enable the invention to be performed in respect of each of them'.²⁰ That is, the disclosure must enable the invention to be performed across the whole range of the products claimed.²¹ If this cannot be done, the patent will be invalid.²²

In recognition of the fact that many (if not most) patents require some degree of fine-tuning before they can be put into practice, the patent specification does not need to

¹⁶ The mere fact that a claim is broad is not in itself a ground for considering the application as not complying with the requirement for sufficient disclosure in EPC Art. 83: *Harvard/Onco-mouse* T19/90 [1990] OJEP0 476.

¹⁷ T9182/89 [1991] OJEP0 391.

¹⁸ *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 120. For the purposes of determining sufficiency of disclosure, the person skilled in the art is non-inventive, is able to make use of common general knowledge, and is able to perform non-inventive experiments. The notional interpreter 'is not to be expected to exercise any invention nor any prolonged research or inquiry or experiment. He must, however, be prepared to display a reasonable degree of skill and common knowledge of the art in making trials and to correct obvious errors in the specification if a means of correcting them can readily be found'. *Mentor v. Hollister* [1993] RPC 7, 13 (Lloyd LJ); *Valensi v. British Radio Corporation* [1973] RPC 337; *Edison & Swan Electric Light v. Holland* (1889) 6 RPC 243. While the skilled reader is presumed to have access to everything in the state of the art, this does not mean that they also have *knowledge* of everything in the state of the art. *EPO Guidelines* C-IV, 9.6

¹⁹ *Pharmacia Corporation v. Merck* [2002] RPC 775, 798 (Aldous LJ) (CA).

²⁰ *Biogen v. Medeva* [1997] RPC 1, 48 (Lord Hoffmann) (HL).

²¹ *Exxon/Fuel oils*, T409/91 (18 March 2003); *Unilever/detergents*, T435/91 (9 Mar. 1994); *Biogen v. Medeva* [1997] RPC 1, 48 (HL) (the specification must enable the invention to be performed to the *full* extent of the monopoly claimed). See also *Evans Medical Patent* [1998] RPC 517, 562; *Chiron v. Organon (No. 12)* [1994] FSR 153, 184 (CA). Similarly, there has 'never been a requirement that all embodiments within the scope of the monopoly should have been tested. Sufficiency required the monopoly to match the contribution': *American Home Products v. Novartis* [2000] RPC 547, 567; A similar approach has been adopted at the EPO: *Exxon/Fuel Oils*, T409/91 [1994] EPOR 149.

²² *Pharmacia Corporation v. Merck* [2002] RPC 775, 800 (Aldous LJ) (CA). (If the invention 'is a selection of certain compounds, in order to secure an advantage or disadvantage, the specification must contain sufficient information on how to make the compounds, and also describe the advantage or how to avoid the disadvantage').

spell-out every specific detail necessary for an invention to be performed.²³ In line with this, it has been accepted that in putting an invention into practice the skilled person is able to make use of common general knowledge,²⁴ engage in routine laboratory tests, correct obvious errors in the specification,²⁵ and does not have to be told what is self-evident.²⁶ There are, however, two important limitations on the types of activities that the person skilled in the art can legitimately be called upon when implementing the invention. The first is that if the person skilled in the art needs to use any inventive skill when putting the invention into practice, the invention will not have been sufficiently disclosed and, as such, will be invalid.²⁷ The second limitation is that the invention must be able to be reproduced without 'undue burden'.²⁸ Undue burden is a catch-all phrase that covers activities that the courts deem to be onerous.²⁹ This has been the case, for example, where the patent required the skilled person to undertake lengthy experiments before they are able to perform the invention,³⁰ or where the reproduction of the invention depended on a 'stroke of luck'.³¹

2.1 REPRESENTATIVE CLAIMS

As we explained earlier, it is accepted practice for patents to be granted for extremely large classes of compounds, DNA sequences, and the like.³² This is particularly the case in relation to chemical and biotechnological inventions where patents may claim hundreds of thousands and sometimes millions of compounds. The test for whether a patent for a large class of compounds has been sufficiently disclosed is the same test as is used to

²³ *Valensi v. British Radio Corp.* [1973] RPC 337, 375; *Mentor Corp. v. Hollister* [1993] RPC 7, 12.

²⁶ *Biogen v. Medeva* [1995] RPC 1, 25, 98 (HL); *Chiron v. Organon (No. 12)* [1996] FSR 153, 185.

²⁷ *Mentor Corporation v. Hollister* [1993] RPC 7, 12; *Valensi v. British Radio Corporation* [1973] RPC 337, 377; *Wacker-Chemie*, T931/91 (20 April 1993).

²⁸ *Unilever/Cleanser Composition*, T226/85 (17 March 1987).

²⁹ The 'whole subject-matter which is defined in the claim should be enabled without undue burden by the teaching of the patent specification': *Weyershauser/Cellulose*, T727/95 [2001] OJEPO 1, para. 7; *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 119 (where the Technical Board of Appeal said, the 'claims need to provide instructions which are sufficiently clear for the skilled person to reduce them to practice without undue burden, i.e. with no more than a reasonable amount of experimentation and without applying inventive skill'). The person skilled in the art should not be called upon to make a prolonged study of matters that present some initial difficulty. *Valensi v. British Radio Corporation* [1973] RPC 337; *Badische Anilin v. Société Chimique* (1898) 15 RPC 359.

³⁰ *DSM NV's Patent* [2001] RPC 675, 712–716 (cloning, sequencing and recombinant expression of the gene for phytase from fungus, held to be extremely broad and unworkable because the skilled person would have had to depart from the patent, and to experiment over what may have been a long period of time to achieve the desired goal). *Icos Corporation/Novel V28 seven transmembrane receptor* [2002] OJEPO 293, 300 (Opposition Division) (disclosure of a predicted function of a protein in combination with a method of verification of this function was insufficient because the skilled person was required to test millions of available compounds). Cf. *Bayer CropScience/Safeners* (2003) OJEPO 533, 542 (the actual time taken was not relevant when deciding whether a claim is clear and concise).

³¹ *Weyershauser/Cellulose*, T727/95 [2001] OJEPO 1, para. 10.

³² '[M]ost claims are generalizations from one or more particular examples. The extent of generalization permissible is a matter which the examiner must judge in each particular case in the light of the relevant prior art'. *EPO Guidelines C III 6.2*. See K. Luzzatto, 'The Support and Breadth of claims to new classes of chemical compounds' (1989) *Patent World* 21.

examine a patent for a simple mechanical device. So long as the patent equips the person skilled in the art with the means to perform the invention without undue burden³³ or the need to use inventive skills,³⁴ the invention will be sufficiently disclosed. This is subject to the rider that the applicant must be able to show that the specification discloses a principle of general application that is shared by all members in the class. As Lord Hoffmann explained, if the patentee has disclosed something 'which is common to the class, he will be entitled to a patent for all products of that class . . . even though he has not made more than one or two of them'.³⁵

The information needed for a patent over a class of compounds to be sufficiently disclosed differs depending on the type of invention in question. In some situations this might include details about the relationship between the chemical structure and the activities that the chemicals perform.³⁶ In other cases, knowledge of an appropriate DNA sequence might provide the skilled person with enough information to rework the invention.³⁷ Another example is offered by the *Genentech* decision where the applicants invented a general principle that enabled plasmids to control the expression of polypeptides in bacteria. As there was no reason to believe that the invention would not work equally well with any plasmid, bacterium, or polypeptide, the patent for more general claims was granted.³⁸ Problems arise, however, if the patentee is unable to show that there is something that unifies the general class. This would be the case, for example, where a patentee discovers 'a new product which has the beneficial effect but cannot demonstrate that there is a common principle by which that effect will be shared by other products of the same class, he will be entitled to a patent for that product but not for that class: even though some may turn out to have the same beneficial effect'.³⁹ In the absence of a unifying principle, the claim will be for a generalized description of a large number of compounds, rather than a true class.⁴⁰

The criteria that a patentee must comply with to ensure that a patent over a class of compounds satisfies the sufficiency requirement are relatively clear. The same cannot be said, however, when the onus shifts to the defendant to show that such a patent is insufficient. In particular there are doubts about the evidence that a defendant needs to produce to show that a class of compounds has not been disclosed in a manner that is clear enough and complete enough for it to be performed by the person skilled in the art. Is it enough,

³³ *Unilever/Cleanser composition*, T226/85 (17 Mar. 1987).

Merck* [2002] RPC 775 (CA) (inability to point to any characteristic that unified an otherwise unpredictable class of chemical compounds meant that the claims were insufficient and thus invalid).

⁴⁰ *Monsanto v. Merck* [2000] RPC 709, para. 67; approved on appeal *Pharmacia Corporation v. Merck* [2002] RPC 775, 799 (CA). *Biogen v. Medeva* [1997] RPC 1, 47 (HL) ('may claim every way of achieving a result, when it enables only one way and it is possible to envisage other ways of achieving that result which makes no use of the invention') (drawing on *Genentech I/Polypeptide expression*, T292/85 [1989] OJEP 275).

for example, if an opponent shows that of a class of 1,000 compounds that one compound cannot be manufactured? If not, how many.⁴¹

There is no easy answer to this question. In part, the answer will depend on the invention in question, the prior art in the field, and how developed the relevant discipline is.⁴² Having said this, it is possible to make some general comments as to how insufficiency is calculated. The first and most straightforward point, which flows from that fact that the onus is on the defendant to show that claims are insufficient,⁴³ is that a patent will be upheld if the defendant fails to provide evidence showing that at least one of the claims cannot be performed.⁴⁴ The courts have also stressed that when carrying out experiments to test whether the invention is insufficient and thus invalid that the defendant should select representative samples, rather than samples that are likely to fail. This follows from the fact that the person skilled in the art will be motivated by a desire to succeed, not to fail.⁴⁵ The courts have also suggested that where a defendant introduces experimental evidence that casts doubts over the sufficiency of a patent, it may hinder the patentee's case if they do not provide experimental evidence to the contrary.⁴⁶

3 CLAIMS

The claims play a crucial role in the patent system, not least because they define the scope of protection.⁴⁷ Given this, it is not surprising that there are a number of restrictions on how the claims are to be drafted. Here we focus on the requirements in section 14(5)(c)/Articles 82 and 84 that the claims must be clear and concise (clarity), be supported by the description, and relate to one invention or group of inventions. Before looking at these in more detail, it is necessary to make some comments about the consequences of non-compliance with these provisions.

As we mentioned earlier, non-compliance with the requirement of sufficiency of disclosure gives rise to an objection pre-grant.⁴⁸ It is also a ground for revocation post-grant. This is because insufficiency is specifically listed as a ground for revocation in section

⁴¹ *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 119 (the essential features of the claimed invention must be capable of being performed); *Exxon/Fuel Oils*, T409/91 [1994] EPOR 149; *Sumitomo/Vinyl chloride resins*, T14/83 [1984] OJEPO 105; *Unilever/Stable bleaches*, T226/85 [1989] EPOR 18; [1988] OJEPO 336.

⁴² The tribunals seem to have taken a more relaxed approach in relation to biotechnological inventions than chemical inventions.

⁴³ *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 31, 71 (Aldous LJ) (CA).

⁴⁴ The importance of this can be seen in *Kirin-Amgen* where the absence of any evidence from the defendant that a single DNA sequences could not be worked meant that the ground of insufficiency was not established. Allowance is made for situations where a few minor or marginal embodiments cannot be made to work: *Filtration/Fluid filter cleaning system*, T126/89 [1990] EPOR 292; *Sumitomo/Vinyl Chloride Resins*, T14/83 [1984] OJEPO 105; T 79/88 [1992] EPOR 387.

⁴⁵ *British Thomson-Houston v. Corona Lamp Works* (1922) 39 RPC 49, 89; followed in *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 31, 70–71 (Aldous LJ) (CA).

⁴⁶ In *Pharmacia Corporation v. Merck* [2002] RPC 775, 806 (CA) Aldous LJ said, the 'patentees had ample opportunity to do experiments in reply to demonstrations that the compounds were not representative. They had equipment and the knowledge to do the experiments, but failed to do them'. *AgrEvo/Triaizoles*, T939/92 [1996] OJEPO 309, para. 2.5.4.

⁴⁷ PA s. 14(5)(a).

⁴⁸ PA s. 14(3)/EPC Art. 100.

72(1).⁴⁹ One of the notable features of the revocation provisions is that they do not mention any of the criteria listed in section 14(5)(c) or its EPC equivalents as the basis on which a patent may be revoked. (As unity of invention has traditionally only ever arisen pre-grant, these discussions are limited to the requirements that the claims be ‘clear and concise’ and that they be ‘supported by the description’.⁵⁰) On a strict reading, this suggests that while non-compliance with section 14(5)(c)/Articles 82 and 84 will be a basis on which a patent will not be granted, non-compliance is *not* a ground of revocation once a patent has been granted. This strict reading was followed when the matter first came before the courts in the UK, where it was held that while failure to comply with section 14(5)(c) could be objected to prior to grant, it was not a ground on which a patent could be challenged after grant.⁵¹

This question was revisited by the House of Lords in *Biogen v. Medeva* where Lord Hoffmann said that the ‘substantive effect of section 14(5)(c), namely that the description should, together with the rest of the specification, constitute an enabling disclosure, is given effect by section 72(1)(c). There is accordingly no gap or illogicality in the scheme of the Act’.⁵² A similar position was adopted at EPO where it was said that ‘[a]lthough Art. 84 is not open to objection under the terms of Art. 100 EPC, it may nevertheless constitute a proper ground for revoking a patent if objections to either clarity or support arise out of amendments to the patent as granted’.⁵³ These rulings suggest that while failure to comply with Article 14(5)(c) is not a ground that could be *directly* argued against post-grant, the requirements that the claims be ‘clear and concise’ and that they be ‘supported by the description’ could *indirectly* be taken into account when deciding insufficiency. In effect, it was suggested that the section 14(5)(c) requirements could be subsumed, post-grant, within section 14(3)/Section 72(1).

This reading of *Biogen* has been thrown into doubt by the Court of Appeal decision of *Kirin-Amgin* where the Court considered whether the section 14(5)(c) requirements could indirectly be taken into account via section 14(3) to revoke a patent. This was triggered by the argument that there were problems in the way claims had been drafted (namely, that there was no standard against which the named recombinant polypeptide could be tested). The Court of Appeal began by reiterating the line taken pre-*Biogen* that while clarity and support were relevant when assessing whether to grant a patent, they were not express grounds for revocation under section 72(1).⁵⁴ (The Court noted that this was also the position under the EPC). Because of this, the only way in which the claims could have been revoked in the circumstances was on the basis that they were insufficient. Following *Biogen*, the Court of Appeal said that the test for whether claims were insufficient under section 72(1)(c) was whether the disclosure was enabling. On the facts, the Court said that while the claims may have lacked clarity, nonetheless the person skilled in the art could

⁴⁹ EPC Art. 100 (grounds for opposition); Art. 138 (grounds for revocation).

⁵⁰ *Siemens/Unity*, G1/91 [1992] *OJEP* 253 (lack of unity is not an issue in opposition or oppositional appeal proceedings).

⁵¹ See *Genentech’s Patent* [1989] *RPC* 147, 248 (CA); *Chiron v. Organon (No. 3)* [1994] *FSR* 202, 242 (Aldous J); *Chiron v. Organon (No. 12)* [1996] *FSR* 153, 178–9 (CA).

⁵² *Biogen v. Medeva* [1997] *RPC* 1, 47 (Lord Hoffmann) (HL).

⁵³ *Mycogen/Modifying plant cells*, T694/92 [1998] *EPOR* 114, 119.

still implement the invention. That is, as the invention could be performed without undue effort, there had been an enabling disclosure. As such, the claims were not insufficient. The Court also said that they believed that the defendant's challenge was not an attack on the basis of insufficiency, rather it was 'an attack of lack of clarity dressed up to look like insufficiency'.⁵⁵ In relation to the suggestion that the section 14(5)(c) criteria of clarity and support might be indirectly raised to undermine a patent post-grant, the Court of Appeal said that 'the fact that a claim is not clear or is not supported by the specification is likely to be irrelevant'.⁵⁶ They also added that '[w]e can see no reason to stretch s72(1)(c) to seek to cover issues of lack of clarity of claiming as patentees will not be able to establish infringement of unclear claims'.⁵⁷ As a result, unless the matter is overturned on appeal, it seems that there is little scope to raise lack of clarity and support once a patent has been granted. With these points in mind, we now turn to look at the criteria in more detail.

3.1 CLARITY

During the nineteenth century, when anti-patent feelings were at their peak, many patents were struck down because they contained trivial errors in grammar or spelling. While patent law is no longer as harsh as it once was, it still demands that the public should not be left in any doubt as to the subject matter covered by a particular patent. As the claims demarcate the scope of the monopoly, if the claims are unclear or inconcise the extent of protection cannot easily be discerned. This would lead to the undesirable situation where third parties would not be able to determine whether they were infringing the patent.⁵⁸ To ensure that this does not occur, patent law requires that the claims be clear and concise.⁵⁹ While clarity may not be an issue that can be used to challenge a patent post-grant, it has been suggested that where a claim contains a vague and ambiguous term, it is less likely that the courts will find that there has been an infringement.⁶⁰ The requirement that the claims be clear and concise has been important in relation to structural and functional claims.⁶¹

Claims will be clear and concise if the skilled person is able to understand the language used.⁶² The requirement that the claims be clear and concise applies to 'the choice of category of claims, to the terminology and also to the number and order of the claims'.⁶³ While claims should be internally consistent and free from contradiction, most of the problems tend to arise as a result of the use of relative or imprecise terms. Where this occurs, the test is whether the skilled person would have had difficulty in understanding the language used when read in light of common general knowledge.⁶⁴ As the skilled

⁵⁵ *Ibid.* ⁵⁶ *Ibid.* ⁵⁷ *Ibid.*

⁵⁸ Another reason why the claims need to be clear and concise is because they will invariably be translated into another language. If claim were not formulated in clear and precise terms, it would undermine the translation process and also cast doubts on 'foreign' patents.

⁵⁹ PA s. 14(5)(b); EPC Art. 84, EPC r. 29.

⁶⁰ *Albany/Pure terfenadine*, T728/98 [2001] OJEP0 319, 325–6 (para. 3.1).

⁶² *Strix v. Otter* [1995] RPC 607. ⁶³ Singer and Stauder, 378.

⁶⁴ *Strix v. Otter* [1995] RPC 607; *ICI/Optical sensing apparatus*, T454/89 [1995] EPOR 600.

addressee reads the claims, this means that words and phrases that may not be understood outside the field of the invention may still be clear and concise.

The mere fact that a claim is very broad or takes a long time to understand does not necessarily diminish its clarity. As the Technical Board of Appeal said, there is no basis in the Article 84 clarity requirement 'for objecting that a claim is not simple but complex and hence takes too long to understand, as complexity is not tantamount to lack of clarity of a claim'.⁶⁵ All that Article 84 requires is that the claims 'define the subject-matter for which protection is sought clearly and unambiguously for the skilled person'.⁶⁶ In contrast to the requirement of sufficiency of disclosure (where length of time may impose an undue burden on the public), the actual time required to determine whether a given compound falls within the scope of a claim 'does not really matter as long as the claim itself is clear'.⁶⁷ In reaching this position the Board stressed that there was no justification for imposing quantitative criteria (such as amount of time taken to understand a claim) on what is essentially a qualitative requirement that the claims be clear and concise.

The parameters of the invention may be defined by quantitative criteria (such as size, weight, volume, temperature) or qualitative criteria. While in most cases applicants will use precise measurements to define their inventions, applicants may confine their descriptions to general relationships between component parts where nothing turns on finite limits.⁶⁸ Relative terms such as thin, fat, thin, slow are admissible, but only if they have a generally recognized meaning in the field. Where no unequivocal generally accepted meaning exists in the relevant art, this casts uncertainty over the subject matter covered by the claim. On this basis it was held that use of the term 'substantially pure' (which was the sole feature designed to distinguish the subject matter of a chemical invention), which had no clear and unequivocal meaning, meant the patent was unclear and thus not in conformity with Article 84.⁶⁹

3.2 SUPPORTED BY THE DESCRIPTION

The second requirement imposed on the claims is that they 'must be supported by the description'.⁷⁰ This helps to ensure that there is a correlation between what is invented and what has been claimed. The requirement that the claims must be supported by the description reflects the 'general legal principal that the extent of the patent monopoly as defined in the claims, must correspond to the technical contribution to the art'.⁷¹ The requirement that the claim be supported by the description plays an important role in ensuring that the scope of the protection provided to the patentee does not exceed or differ from the invention disclosed in the patent.⁷² By ensuring that the claims (which shape the scope of the legal monopoly) are supported by the description (which provides the necessary technical information), patent law enables potential users to ascertain without undue

⁶⁵ *Bayer CropScience/Safeners*, T1020/98 [2003] OJEP0 533, 542 (TBA). In relation to a Markush formulae for a class of chemical compounds, the TBA held that simplicity of a claim is not a criterion for the granting of a patent under the EPC.

⁶⁷ *Ibid.*, 542.

⁶⁸ *No-Fume v. Pitchford* (1935) 52 RPC 231.

⁶⁹ *Albany/ Pure terfenadine*, T728/98 [2001] OJEP0 319, 329 (para. 3.3).

⁷⁰ PA s. 14(5)(c)/ EPC Art. 84.

⁷¹ *CIRD Galderma*, T1129/97 [2001] OJEP0 273, 287.

⁷² *Exxon/Fuel oils*, T409/91 [1994] EPOR 149, 154; *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 118.

burden or the need for inventive activity whether their planned commercial use is likely to infringe the patentee's monopoly.⁷³

The approach that is used to decide whether the claims are supported by the description is similar to the approach that is used to decide whether the specification has been sufficiently disclosed.⁷⁴ As is the case with the requirement of sufficiency of disclosure, a description that outlines one way of performing the claimed invention may support broader claims. This would be the case, for example, 'where the disclosure of a new technique constitutes the essence of the invention and the description of one way of carrying it out enables the skilled person to obtain the same effect of the invention in a broad area by use of suitable variants of the component features'.⁷⁵ As with sufficiency of disclosure, a single embodiment can only ever justify a broader claim if the class as a whole shares a common principle.⁷⁶ In other cases, more technical details and more than one example may be necessary to support claims of a broad scope.⁷⁷

One situation where claims may not be supported by the description is where the breadth of the claims extends beyond the technical contribution provided by the invention.⁷⁸ This might occur, for example, where the patent claims results that cannot be performed from the information in the claims. This would be the case where the patent claims the making of a wide class of products, but it only enables one of those products to be made and fails to disclose a principle that enables the other products to be made. Similarly, a patent may lack support where it claims every way of achieving a particular result when it only enables one way of making the product and it is possible to envisage other ways of achieving that result that do not make use of the invention.⁷⁹

3.3 UNITY OF INVENTION

As well as being clear, concise and supported by the description, claims must also relate 'to one invention or to a group of inventions which are linked as to form a single inventive concept'.⁸⁰ The requirement that there be unity of invention, which ensures that applications only contain a single invention or a single group of inventions, plays an important

⁷³ *Oxy/Gel-forming composition*, T246/91 [1995] EPOR 526, 531.

⁷⁴ The phrase, 'supported by matter disclosed' is also used in PA s. 5(2) (to establish whether priority from an earlier application is acceptable). A description would not support claims for the purpose of s. 14(5)(c) unless the specification contained sufficient material to constitute an enabling disclosure under s. 14(3). *Biogen v. Medeva* [1997] RPC 1, 47 (Lord Hoffmann) (HL); *Asahi Kasei Kogyo* [1991] RPC 485, 535–6 (Lord Oliver) (HL). A similar approach was adopted by the Technical Board of Appeal in *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 119.

⁷⁵ *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 120.

⁷⁶ *Molnlycke AB v. Procter & Gamble* [1992] FSR 549, 600 (Morritt J) based on *Genentech/Polypeptide Expression* [1989] EPOR 1 and applied in *Chiron v. Organon (No. 3)* [1994] FSR 202, 241–2.

⁷⁷ This is the case where the achievement of a given technical effect by known techniques in different areas constitutes the essence of the invention and there are serious doubts as to whether the said effects can readily be obtained for the whole range of applications claimed; *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 120. *Xerox/Amendments*, T133/85 [1988] OJEP 441, 448.

⁷⁸ *Biogen v. Medeva* [1997] RPC 1, 50–1 (Lord Hoffmann) (HL). ('whether the claims cover other ways in which they might be delivered: ways that owe nothing to the teaching of the patent or any principle which it disclosed').

⁷⁹ *Mycogen/Modifying plant cells*, T694/92 [1998] EPOR 114, 120.

⁸⁰ PA s. 14(5)(d), PA r. 22; EPC Art. 82, EPC r. 30.

administrative role. It also helps to minimise some of the problems that might otherwise arise in the application of the substantive tests for patentability if a patent contained a number of distinct inventions.⁸¹ For two or more inventions to appear in the same patent, there must be a single inventive concepts that links them together. This might occur, for example, if there was an expectation in the art that the various inventions will behave the same way. Importantly the unifying factor that links the different inventions must be an inventive concept and not some other feature of the invention.⁸²

4 IMPROPER AMENDMENTS

The final internal requirement for patentability we look at here concerns the extent to which patents can be amended. As we saw earlier, a number of restrictions are placed on the way patents can be amended. In this section we wish to concentrate on those amendments which throw the validity of the patent into doubt. There are two important limits on the way patents may be amended. The first is that an application must not be amended in such a way that it contains subject matter that extends beyond the content of the application as filed. The second restriction is that amendments after grant must not extend the protection conferred by the patent.

The restrictions placed on the ability of patents to be amended have been criticized on the basis that the rules have been applied too rigorously.⁸³ It has been said that this denies legitimate inventors the protection they deserve, and encourages loose filing.⁸⁴ Another problem with the law in this area is that there has been very little discussion about the principles on which the restriction of amendment is based. As Staughton LJ observed:

[The] problem is not that the technology in this case is obscure or recondite, but that the law as to added matter is . . . A clear and precise test is not to be found in the Patents Act. Those who are engaged in the important business of inventing and manufacturers too, are to my mind entitled to more precise guidance as to how they should conduct their affairs. But they must seek it from Parliament, or from an international convention.⁸⁵

4.1 RESTRICTIONS ON AMENDMENTS THAT ADD MATTER

The first limit is that an application must not be amended in such a way that it contains subject matter that extends beyond the content of the application as filed.⁸⁶ Failure to

⁸¹ *Exxon*, T314/99 (21 Jun. 2001) (three different embodiments covered by the claim did not belong to the same single general inventive concept. While lack of unity could not be raised in opposition, it was held that the inventiveness of the claim as a whole was denied in the event that only one of the embodiments was obvious).

⁸² *Draenert/Single general inventive concept W6/90* [1991] *OJEPO* 438. For the problems this presents for gene patents see D. Schertenleib, 'The patentability and protection of DNA-base inventions in the EPO and the European Union' [2003] *EIPR* 125, 128–9.

⁸³ *Protoned BV 's Application* [1983] *FSR* 110.

⁸⁴ R. Krasser, 'Possibilities of Amendment of Patent Claims during the Examination Procedure' (1992) 23 *IIC* 467, 471.

⁸⁵ *AC Edwards v. Acme Signs* [1992] *RPC* 131, 147 (CA).

⁸⁶ PA s. 76(2); EPC Art. 123(2); *EPO Guidelines* C–VI; CPC Art. 57(1). Despite obvious similarities, PA s. 76 is not listed in PA s. 130 (7) as being framed as to have as nearly as practicable the same effect as the corresponding provision of the Convention. Nevertheless, the UK courts have referred to EPO decision. See

comply with these requirements opens the patent up to the possibility of revocation.⁸⁷ Consequently, applicants are confined by the scope of the description of the invention that is set out in the application. This ensures that patentees are not permitted to extend the patent so as to claim an invention developed after the priority date.⁸⁸ It also ensures, as the Technical Board of Appeal said, that applicants are not able to improve their position by adding subject matter not disclosed in the application as filed, giving them 'an unwarranted advantage and possibly being detrimental to the legal security of third parties relying on the contents of the application as filed'.⁸⁹

While it is permissible for a patentee to claim the same invention in a different way, patentees are not able to amend their application so as to protect an inventive concept that was not disclosed in the original application.⁹⁰ As Aldous LJ said, this means that if a feature was omitted from a claim which the specification had made clear was essential, or if a feature was added that had not been disclosed in the application as filed, the amendment would add matter.⁹¹ The basic issue is whether the amended patent contains any additional (technical) material that was not disclosed in the original application.⁹² Basically this requires the tribunal to compare the application as filed (the description, any claims, or drawings⁹³ but not the abstract⁹⁴ or priority documents) with the amended application to determine whether the amended application contains any additional matter.⁹⁵ As has been noted at the European Patent Office, the issues that arise here are conceptually similar to those that arise in relation to novelty requirement: in both cases the issue is whether something 'new' has been added. In the case of novelty, the invention must be new; in the case of amendment, the amended application must not contain anything new.⁹⁶ Under this approach the test is whether a skilled person could

B & R Relay's Application [1985] RPC 1; *A. C. Edwards v. Acme Signs and Displays* [1990] RPC 621; [1992] RPC 131, 144 (Fox LJ) (CA).

⁸⁷ PA s. 72(1)(d) renders it a ground for revocation that the matter disclosed in the specification of the patent extends beyond that disclosed in the application as filed.

⁸⁸ *A. C. Edwards v. Acme Signs* [1992] RPC 131, 147 (Staughton LJ).

⁸⁹ *British Biotech/Heterocyclic compounds*, T684/96 [2000] EPOR 190, 197.

⁹⁰ *Southco v. Dzus Fastener Europe* [1990] RPC 587, 618. Consequently amendment of a claim from 'handle' to a 'rotatable actuating means' would be read as not extending the disclosure.

⁹¹ *Texas Iron Works Patent* [2000] RPC 207, 246–7 (CA).

⁹² 'Clearly the function of this provision is to prevent the addition of subject matter to a patent application after the date of filing. In contrast the reformulation of the same subject matter . . . would be permissible'. *Xerox/Amendments*, T133/85 [1988] OJEP0 441, 449. *Milliken Denmark AS v. Walk Off Mats* [1996] FSR 292.

⁹³ *Amp/Connector*, T66/85 [1989] EPOR 283; [1989] OJEP0 167; cf. *Sulzer/Hot gas cooler* [1990] EPOR 14; [1989] OJEP0 441.

⁹⁴ *BULL/Identification System*, T246/86 [1989] OJEP0 199. The documents are looked at through the eyes of the notional skilled addressee: *Siegfried Demel v. Jefferson* [1999] FSR 204, 214.

⁹⁵ *Bonzel v. Intervention (No. 3)* [1991] RPC 553, 574; *Molnlycke AB v. Procter & Gamble (No. 5)* [1994] RPC 49 (CA). Aldous J held that 'matter' included both structural features and inventive concepts: *Southco v. Dzus Fastener Europe* [1990] RPC 587, 616. However, this has proved to be controversial. see *A. C. Edwards v. Acme Signs* [1992] RPC 131, 144 (Fox LJ). For a more sympathetic reading see *Sara Lee Household & Body Care v. Johnson Wax* [2001] FSR 261 (Judge D. Young QC), following *Metal-Fren/Friction pad assembly*, T582/91 [1995] EPOR 574.

⁹⁶ *EPO Guidelines C–VI*, 5.4, 7.2, 9. *Shell/Lead Alloys*, T201/83 [1984] OJEP0 401; *General Motor/ Electrodes*, T194/84 [1990] OJEP0 59, 65. It is different from the requirement that the claim be supported by the description, since support may justify broadening where novelty would not: *Xerox/Amendments*, T133/85 [1988] OJEP0 441, 450. In the UK, the courts have referred to the novelty test employed at the EPO as a useful test but one which should be applied with caution. *A. C. Edwards v. Acme Signs* [1990] RPC 621, 644.

derive any information in the amended patent that was not already in the application as filed.⁹⁷

Unlike the position after grant, there is no reason *per se* to object to the broadening of the claims prior to grant.⁹⁸ This is because it is immaterial whether the amendment widens or narrows the monopoly claimed. The only restriction is the general one that prevents patentees from altering their claims in such a way that they claim a different invention from that which is disclosed in the application.⁹⁹ If the application as filed described the insertion of cancer genes in mice and flagged the potential application of the invention to other mammals, there is no reason why the claim should not be expanded to cover cats, dogs, or mammals in general.¹⁰⁰ The broadening of claims is legitimate as long as there is no new matter introduced. However, if the description as filed only mentioned mice, then such broadening of the claims would add subject matter and thus be invalid.¹⁰¹

A simple illustration of the way the courts determine whether the amendment has introduced additional matter is provided by *Ward's Application*,¹⁰² which concerned an application for a patent for the packaging of flowerpots. The specification as filed referred to the packaging of a number of articles nested one within another. It also referred to nested flowerpots or similar containers. Subsequent amendments that added references to plant pot bases were objected to by the Examiner on the basis that it extended the content of the application. Mr Bridges in the Patent Office concurred saying that the question was whether 'the amendment . . . resulted in the specification disclosing matter which extends beyond that disclosed in the specification as filed . . . matter must not be disclosed which extends, in the sense of enlarging upon the original disclosure, i.e. which increases the specificity or particularization of that disclosure'.¹⁰³ On the basis that plant pot bases were recognizably different from plant pots, the specification breached section 76(3)(a).

While the question of whether an amended application contains additional subject matter always depends on the facts of the case, it may be helpful to outline some of the more common scenarios that may arise. It is not normally possible to amend a patent application where the description was itself insufficient.¹⁰⁴ As Lord Hoffmann said in *Biogen v. Medeva* the application may not add new matter to make an insufficient application sufficient.¹⁰⁵ At the EPO applicants are prohibited from removing matter from a claim which appeared to be essential in the original application.¹⁰⁶ This is because if the feature that is being removed was essential in the original application, then the amended feature

⁹⁷ *British Biotech/Heterocyclic compounds*, T684/96 [2000] EPOR 190, 197; *Advanced Semi-Conductor Products*, G1/93 [1994] OJEP0 541.

⁹⁸ *Spring Foam v. Playhut* [2000] RPC 327, 337–8.

⁹⁹ *Southco v. Dzus Fasteners Europe* [1990] RPC 587, 615.

¹⁰⁰ Broadening is permissible where there is a basis for a claim lacking the feature in the application as filed: *AMP/Connector*, T66/85 [1989] OJEP0 167.

¹⁰¹ *A. C. Edwards v. Acme Signs* [1992] RPC 131. ¹⁰² [1986] RPC 50.

¹⁰³ *Ward's Application* [1986] RPC 50, 54.

¹⁰⁴ *A. C. Edwards v. Acme Signs* [1992] RPC 131, 147 (Staughton LJ).

¹⁰⁵ According to Terrell, para. 7.62 'those preparing patent specifications must be much more careful in pre-grant proceedings as to the nature of the amendments which they seek and indeed should proceed on the basis that it will be impossible to rectify an inadequate disclosure'.

¹⁰⁶ This will be so if the feature as essential in the original disclosure, is indispensable in the light of the technical problem or the removal requires other features to be modified. *ALZA/Infuser*, T514/88 [1990] EPOR 157, 161–2. Adopted in *Southco v. Dzus Fastner Europe* [1992] RPC 299, 324 (Nicholls LJ), 327 (Staughton LJ) (CA).

introduces novel subject matter.¹⁰⁷ The prohibition on removing essential features does not prevent an amendment that introduces an essential feature that was previously described as non-essential.¹⁰⁸

Often a patentee may wish to narrow the ambit of the patent. This usually occurs where a search reveals that some of the examples of prior art fall within the claims as originally filed or where subsequent experimentation reveals that some of the examples listed in the claims as filed do not work. Here, an applicant may amend the claim by disclaiming the examples.¹⁰⁹ While increasing the specificity of a claim, for example by narrowing it from mammals to mice, does not generally introduce new matter, it should not automatically be assumed that this is the case. The reason for this is that if the narrowing of the claims adds a technical feature (or something inventive) it will not be permissible.¹¹⁰ However, if the limitation merely excludes protection for part of the subject matter of the application as filed, this would not give any unwarranted advantages to the applicant and as such is *prima facie* allowed.

4.2 AMENDMENTS THAT EXTEND THE SCOPE OF PROTECTION

In recognition of the fact that third parties may modify their behaviour in light of the patent as published, restrictions are placed on the degree to which the scope of protection conferred by the patent can be altered after grant.¹¹¹ To this end section 76(3)/Article 123(3) provide that amendments after grant must not extend the protection conferred by the patent. That is, after the patent has been granted, a patentee may not amend the scope of the claims so as to extend the monopoly beyond that covered by the claims as granted.¹¹² Failure to comply with these provisions opens the amended patent up to the possibility of revocation.¹¹³

The limits imposed on amendments that extend the scope of the patent operate in a

¹⁰⁷ See *ALZA/Infuser*, T514/88 [1990] EPOR 157, 161–2.

¹⁰⁸ *Hymo/Water-soluble polymer dispersion*, T583/93 [1997] EPOR 129. The rule against the removal of essential features may explain the criticized decision in *Protoned BV's Application* [1983] FSR 110. See D. Stanley, 'Euphemism v. Pragmatism of the Implication of Added Subject Matter' (1988) 17 *CIPAJ* 108; G. Dworkin 'Implied Added Subject Matter: An Academic Overview' (1990–1) 20 *CIPAJ* 340.

¹⁰⁹ *Sulzer/Hot gas cooler*, T170/87 [1989] OJEP0 441; *Molnlycke AB v. Procter & Gamble (No. 3)* [1994] RPC 49, 135.

¹¹⁰ If a limiting feature is not disclosed in the application as filed or otherwise derivable therefrom it will violate EPC Art. 123(2). *Advanced Semiconductor Products/Limited features*, G1/93 [1995] EPOR 97; [1994] OJEP0 541; [1995] EPOR 110, 114.

¹¹¹ *Leland/Light source*, T187/91 [1995] EPOR 199, 202–3.

¹¹² PA s. 76(3) says that no amendment of the specification of a patent shall be allowed under PA ss. 27(1), 73, or 74 if it results in the specification disclosing additional matter or extends the protection conferred by the patent. PA s. 72(1)(e) provides for the revocation of patents on the ground that the protection conferred by the patent has been extended by an amendment which should not have been allowed. It seems that PA s. 72(1)(e) is only concerned with post-grant amendments: Terrell, para. 7.71. EPC Art. 123(3) makes it clear that amendments of claims after grant (unlike those before) must not extend the scope of protection. The acceptance of post-grant amendments is subject to the discretion of the comptroller or court, who have tended to employ that discretion to deny amendments to those whose behaviour is not perceived to have been innocent.

¹¹³ While it would be possible to allow widening amendments that are prospective only, it might be thought that a person should be able to rely on the patent in its state as granted rather than to have to constantly check to see whether it has been altered.

similar way to the prohibition on amendments that introduce additional subject matter (discussed above). The provisions will not operate where claims are narrowed.¹¹⁴ Perhaps the most notable situation where amendments have been allowed under this head is where they contain changes to the types of claims employed.¹¹⁵ Thus, it is normally permissible to amend a claim from a compound to a use, since the claim to a use is narrower than the claim to the compound. Amendments of this type commonly arise where the patent application has been drafted on the basis that the compound was new *per se*, whereas it turns out that the compound was already within the state of the art, but the use was not.¹¹⁶

¹¹⁴ *Strix Limited v. Otter Controls* [1995] RPC 607; *Mobil/Friction reducing additive*, G2/88 [1990] OJEP0 93, 100–1.

¹¹⁵ In *Phillips Electronic's Patent* [1987] RPC 244, the patentee was permitted to add an omnibus claim to a European patent (UK) on the ground that it did not extend the scope of protection.

¹¹⁶ *Moog/Change of category*, T378/86 [1988] OJEP0 386 (an amendment of a process claim to include a claim to the apparatus for carrying out the process was allowed); cf. *Telectronics/Cardiac pacemaker*, T82/93 [1996] OJEP0 274, where change from a method of operating a device (a pacemaker) to a device was not allowed, because the latter claim extended the subject matter to cover the situation where the pacemaker was ready for use (not just when it was being used).

21

OWNERSHIP

1 INTRODUCTION

Ownership plays a key role in shaping the way the rights and responsibilities that flow from the grant of a patent are organized. The owner, or as the Patents Act 1977 prefers, the proprietor of a patent is able to exploit and control the use that is made of a patent.¹ They are also able to make decisions about when and the conditions under which a patent can be assigned, licensed, or mortgaged.² The owner of the patent is also the person who is able to sue for infringement.³

The question of who is the owner of a patent is closely connected with the question of who is entitled to be granted the patent. This is because the chain of ownership begins with the person entitled to grant of the patent: they are treated as first owner (or proprietor) of the patent. It is important to note at the outset that the right to be granted a patent, which is the central focus of this chapter, is primarily given to the inventor or joint inventors. This presumption may be overridden in a number of situations: notably in relation to employee inventions and in situations where the right to the patent has been transferred to a third party.

While a particular individual or group of individuals may *initially* have been given the right to be granted the patent, it does not necessarily follow from this that they will also be the owner of the patent. One reason for this is that the person entitled to grant of the patent may have assigned his or her rights in the patent to someone else. Alternatively, the patent may have been transferred to a third party as a result of death or insolvency. Consequently, in ascertaining ownership it is necessary to discover who was initially entitled to the grant of the patent and thereafter whether there has been an effective transfer of the patent to another person.

2 ENTITLEMENT TO GRANT

Given the consequences that flow from the ownership of a patent, it is not surprising that disputes often arise over who is properly entitled to be granted a particular patent. Questions about who is properly entitled to be granted a patent can arise both during and

¹ 'Proprietor' is not defined in the 1977 Act.

² Under the 1977 Act, applications for a patent are also capable of being owned.

³ It has been proposed that the 1977 Act be amended to clarify that co-owners are able to seek, amend, and revoke a patent if they act jointly. It will also confirm that co-owners would be able to contract out of this requirement if they so wished. See *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), para. 115–124.

after the grant of a patent and may even be heard prospectively, that is before any application has been made for a patent. In practice, however, most disputes tend to be heard after the patent has been granted.⁴

When the EPC was being drafted it was decided that matters relating to the ownership of patents were better dealt with by the national courts or tribunals, than by the EPC.⁵ As a result, the European Patent Office has only a limited procedural role in determining disputes over entitlement.⁶ The upshot of this is that while the processes by which patents are granted in the UK and the EPO are very similar, the procedures by which a UK patent and a European patent (UK) may be challenged are somewhat different. As such, we will deal with them separately.

2.1 UK PATENTS

The starting point for determining who is properly entitled to the grant of a British patent is set out in section 7(4).⁷ This creates a rebuttable presumption that the patent applicant is the person who is entitled to be granted the patent. The grounds on which this presumption may be rebutted, which we deal with below,⁸ are set out in section 7(2). If none of these grounds can be established, the applicant will be treated as the proprietor of the patent. The significance of the presumption should not be underestimated. This is because as the evidence about entitlement is often inconclusive,⁹ the presumption frequently operates to maintain the status quo.¹⁰

Prior to the grant of a patent for an invention, anyone may refer to the comptroller the question of whether they are entitled to be granted (alone or with other persons) a patent for that invention.¹¹ They may also ask the comptroller to determine whether they have or would have any rights in or under any patent so granted. While these issues will normally be referred to the comptroller, if the comptroller considers that the question involves

⁴ This is because if an issue is raised during the application under PA s. 8(1), but has not been determined by the time of grant, the dispute is usually continued as if it were a dispute as to the entitlement of a granted patent (that is, as if it were a PA s. 37 application). See PA s. 9; *Goddin & Rennie's Application* [1996] RPC 141.

⁵ This was because disputes about entitlement potentially raise questions about legal personality, contract, equity, and labour law, rather than patent law.

⁶ This issue was recently reopened in the *EC Green Paper on the Community Patent*, where after noting that the application of these different rules has an impact on research work and management, it asked respondents to indicate whether 'existing differences between member states laws on employees' inventions impacted on innovation and employment conditions and/or the freedom to provide services and/or the conditions of competition? Are they such as to justify harmonization at Community level? See also Commission, *Comparative Study of Employees' Inventions Law in Member States of the European Communities* (1977).

⁷ In answering the question of who is the proprietor of the patent, a useful starting point is with the patent itself. This is because PA s. 13(2) provides that anyone who makes an application must state who the inventor is or, if the inventor is not applying, indicate on what basis they are applying. See T. Gold, 'Entitlement Disputes: A Case Review' [1990] *EIPR* 382.

⁸ See above at pp. 369–71 and below at pp. 507–18.

⁹ In part, this is because it is often difficult to determine the precise point in time and the circumstances in which an invention was created. The reason for this is, as Lord Wilberforce said, that 'it is often difficult to fix the point or points in a continuous line of discovery at which an invention has been made'. *Beecham Group v. Bristol Laboratories International* [1978] RPC 521, 567.

¹⁰ On the importance of the presumption see *Staeng's Patent* [1996] RPC 183; *Viziball's Application* [1988] RPC 213.

¹¹ PA s. 8(1).

matters that would be better dealt with by the court, the comptroller may refer the matter to the courts for consideration.¹²

The question of who is properly entitled to a UK patent may also be raised after grant. Any person claiming a proprietary interest in a patent may ask the comptroller to clarify who is the true proprietor of the patent, whether the patent should have been granted to the person to whom it was granted, or whether any right in or under the patent should be transferred or granted to another person.¹³

2.1.1 Possible remedies

Where it has been decided that the wrong person has applied for a patent or a patent has been granted to the wrong person, the comptroller has a number of options available. In deciding what action to take, it has been said that the main aim should be 'to reach a solution which would provide a reasonable opportunity for the patent to be exploited should there be a demand for it':¹⁴ a goal which reflects a desire to see that the invention enters the commercial domain, rather than a concern with recognizing entitlements.

Where a successful entitlement challenge has been made in relation to a patent application, the comptroller can refuse, amend, or transfer the application.¹⁵ If the application is refused and the person properly entitled to apply decides to submit a new application, they may be able to avail themselves of the wrongful applicant's priority date.¹⁶ Comptrollers also have jurisdiction to reach more creative solutions. For example, they may grant the patent to one co-inventor, but order that the other co-inventor be given a non-exclusive, non-assignable licence, perhaps with payment of a royalty.

Where a patent has been granted, an order may be made directing that the person referring the issue to the tribunal shall be listed as the proprietor of the patent. Alternatively, the comptroller may grant a licence to the claimant or revoke the patent on the ground that it was granted to the wrong person.¹⁷ If it is decided that the patent should be revoked, the comptroller may order that the person who made the application (or their successor in title) may make a new application for a patent. It is important to note that no order may be made to transfer the patent or permit the reapplication if the reference was made two years from the date of the grant. This exclusion does not apply, however, if the proprietor of the patent knew that they were not entitled to the patent.¹⁸

¹² PA s. 37(8). ¹³ PA s. 37(1).

¹⁴ *Goddin & Rennie's Application* [1996] RPC 141. The factors that were considered relevant in this case included whether either of the joint inventors wished to exploit the patent themselves, and the feasibility of their agreeing to license third parties.

¹⁵ PA s. 8(2)(c). PA s. 8(2)(a) suggests that where it is decided that the referent was the sole inventor, it will probably be ordered that the application shall proceed in the name of that person. Alternatively, if it is found that the invention was made jointly, the likely order is that the application proceed jointly.

¹⁶ PA s. 8(3).

¹⁷ That is, to a person not entitled under PA s. 7(2) or PA s. 36. PA s. 72(1)(b); EPC Art. 138 (1)(e). While lack of entitlement is a ground of revocation, it appears that the right to demand revocation is only available to a person 'initially entitled' to the patent, and not to someone to whom that right has been transferred. *Dolphin Showers and Brueton v. Farmiloe* [1989] FSR 1; *Henry Brothers v. Ministry of Defence* [1997] RPC 693. It remains unclear whether a declaration under PA s. 37 is required prior to an action for revocation under PA s. 72.

¹⁸ Protection for third parties in these situations is offered by PA ss. 37(6)–(7), 38(1), 38(3)–(4).

2.2 EUROPEAN PATENTS (UK)

As we mentioned above, the European Patent Office only has a limited procedural role in determining disputes over entitlement. For the purposes of proceedings before the EPO, the applicant is deemed to be entitled to exercise the European patent, leaving issues of entitlement to be determined in national fora. As a result, the EPO only takes account of questions of entitlement if a decision has been made by an appropriate national court to the effect that a person other than the applicant is entitled to the patent. This means that questions relating to the ownership of European patents (UK)¹⁹ both before and after grant²⁰ may be heard by the British comptroller²¹ or courts.²²

In order to prevent a proliferation of ownership proceedings in different member states (and to prevent forum shopping), a Protocol to the EPC (The Protocol on Jurisdiction and Recognition in Respect of the Right to a Grant of a European Patent) was formulated. The Protocol provides that questions about entitlement are only to be heard by one member state. The Protocol also establishes rules to determine the nation which has jurisdiction to hear ownership disputes.²³ In the absence of an agreement between the claimant and the applicant stating the jurisdiction which is to operate, the Protocol provides that questions about entitlement are to be determined by the tribunals (and the law) of the country of which the applicant is resident (or has their place of business). If the applicant is from outside the EPC, ownership is decided by the tribunal of the country of the claimant.²⁴ Consequently, a UK court would decline to hear a case concerning a dispute between a French claimant and a German applicant, or between a British claimant and a French applicant. It would, however, consider disputes between a German claimant and a British applicant, and between a British claimant and an American applicant.

2.2.1 Possible remedies

Once a national tribunal has made a determination as to entitlement, the EPO will take appropriate action. In these circumstances, Article 61 of the EPC provides that three courses of action are available: prosecution of the application in the place of the applicant, the filing of a new application, or a request that the application be refused.²⁵

¹⁹ PA s. 12(1); s. 77(1)(b). See *Norris's Patent* [1988] RPC 159; *Canning's US Application* [1992] RPC 459 (re international patent applications). *Kirin-Amgen/Erythropoietin*, T412/93 [1995] EPOR 629 (questions of entitlement could not be considered in opposition proceedings).

²⁰ It seems that the issue of jurisdiction will be determined in accordance with the general rules of the Brussels Convention and that Art. 16(4), which requires issues relating to the validity and registration of patents to be dealt with by the tribunals of the country from which the patent issued, has no applicability. See *Duijnste v. Goderbauer* [1985] FSR 221; [1985] 1 CMLR 220.

²¹ PA s. 37(8).

²² PA s. 82 provides for rules as to UK jurisdiction over disputes as to ownership of European patents. See *Kakkar v. Szelke* [1989] FSR 225.

²³ It also provided for the recognition of their decisions by other member states. See G. Le Tallac, 'The Protocol on Jurisdiction and the Recognition of Decisions in Respect of the Right to the Grant of a European Patent (Protocol on Recognition)' (1985) 16 IIC 318, 356.

²⁴ These are reflected in PA ss. 82 and 83.

²⁵ *Latchways/Unlawful applicant*, G3/92 [1995] EPOR 141.

3 DETERMINING WHO IS ENTITLED TO GRANT

While the 1977 Patents Act provides that anyone is entitled to apply for a patent,²⁶ section 7(2) goes on to say that patents should only be granted to a limited category of persons.²⁷ These provisions are the basis on which issues of entitlement are determined.

The starting point for determining issues of entitlement and ownership is section 7(2)(a). This provides that the right to be granted a patent is *primarily* given to the inventor or joint inventors. This focus upon the inventor follows the common practice whereby the creator is accorded the privileged status of first owner of intellectual property rights. Although the process of invention is frequently presented as being less creative than the production of literary or artistic works, patent law bears many of the marks of the romantic author. It is, at the very least, based on a model of an individual inventor; a matter emphasized in the 1977 Act by the requirement that the inventor be the ‘actual deviser’ of the invention.²⁸

The assumption that the inventor is the person who is properly entitled to grant of the patent can be overridden in two situations. The first of these is set out in section 7(2)(b). This states that the presumption in favour of the inventor as owner does not apply where it can be established that at the time the invention was made another person was entitled to the invention by virtue of (i) any enactment or rule of law, (ii) any foreign law, treaty, or international convention, or (iii) an enforceable term of any agreement entered into with the inventor before the making of the invention. Although the precise meaning of the section remains unclear,²⁹ it is widely accepted that it deals with the employee inventions caught by section 39.

The second situation where the presumption in favour of the inventor as owner is overridden is set out in section 7(2)(c). This states that a patent may be granted to ‘the successor or successors in title of any persons or persons mentioned in section 7(2)(a) or (b)’. This provision allows for the rights in the invention to be transferred to third parties.

While section 7(2) potentially covers a broad array of situations, in practice questions relating to entitlement to grant tend to fall into two general areas: (i) inventors and joint inventors; and (ii) employee inventions. We will deal with each of these in turn.

²⁶ PA s. 7(1).

²⁷ As we saw earlier, PA s. 7(4) creates a rebuttable presumption that the person who applies for a patent is the person who is entitled to grant of a patent. The grounds on which this presumption may be rebutted are set out in PA s. 7(2), which exhaustively sets out the parties to whom a patent may be granted.

²⁸ PA s. 7(3).

²⁹ Rather oddly it would not appear to cover the position of an employee who was a joint inventor with someone who was not also an employee, since the employer would not then be a person who at the time of the making of the invention was entitled to the *whole* of the property. It might have been assumed that such an anomaly would have been capable of being rectified by the use of express agreements between those concerned. However, the clause entitling a person to a patent as a result of being the beneficiary of ‘an enforceable agreement entered into with the inventor before the making of the invention’ is uncertain in scope too. See *Goddin & Rennie’s Application* [1996] RPC 141. Because the provision excludes from its remit ‘equitable interests’, it is arguable that it would not cover a contractual agreement made prior to invention that a person was to assign their rights, because such an agreement creates a mere equitable right to the patent. However, such a pedantic interpretation seems to render redundant the provision relating to agreements, as well as to contradict the obviously desirable policy of encouraging the formation of such agreements allocating ownership.

3.1 INVENTOR AND JOINT INVENTORS

Being named as the inventor or joint inventor of a new product or process often carries with it a number of rewards. In addition to the kudos which is associated with being named as the creator of a new invention,³⁰ a lot flows from the presumption that patents are granted *primarily* to the inventor or joint inventors.³¹ Given this, it is not surprising that the tribunals are often called upon to decide who is properly entitled to be named as inventor or joint inventor of a given invention. Problems in this area tend to group together in two areas.

The first arises where someone claims that they and not the named inventor are the ‘actual deviser’ of the patented invention.³² Problems also arise where an individual claims that their contribution to the invention has not been properly recognized.³³ In both situations, the courts are required to identify the ‘inventive’ elements of the invention. In turn, the courts are required to consider whether the claimant was responsible for the development of some or all of those elements.³⁴ In some cases, the courts have been willing to divide an invention up into parts: allocating responsibility for different claims to different inventors. In a recent case the court emphasized that the appropriate way to determine who was the inventor was not to divide up the elements of a claim and ask who devised each. Rather, it was necessary to interpret the claim so as to ascertain the essential inventive concept and then determine who contributed that concept.³⁵

3.1.1 What is an inventive contribution?

In order to determine whether someone is entitled to be called an ‘inventor’ or ‘joint inventor’ under the 1977 Act, it is necessary to know what has been invented.³⁶ The process of invention is often a complex process. It is also a process in which a range of different factors may have contributed to the final result. While certain contributions—such as the posing of the problem to be solved or the answering of those problems—are usually treated as being inventive, other contributions—such as the supply of the test tubes used in the experiments—would usually be regarded as being non-inventive. In between these two extremes there are a range of other types of contributions which are more difficult to categorize. The question that arises here is which of the various contributions that are made to the production of an invention ought to be recognized as being inventive (or

³⁰ Inventors are entitled to be named on the patent, even if they are not entitled to the patent: PA s. 13; EPC Arts. 62 and 81. If the inventor is not designated, the application is treated as having been withdrawn, EPC Art. 91.

³¹ PA s. 7(2)(a); EPC Art. 60(1). For a useful overview of the steps involved in determining whether parties were jointly entitled to an application see *Minnesota Mining and Manufacturing Companies’ International Patent Application* [2003] RPC 28.

³² ‘Inventor’ is defined in PA s. 7(3) to mean the ‘actual deviser’ of the invention. Joint inventors are construed accordingly.

³³ PA s. 10. On US law, see W. Fritz Fasse, ‘The Muddy Metaphysics of Joint Inventorship: Cleaning Up after the 1984 Amendments to 35 USC’ (1992) 5 *Harvard J Law & Technology* 153.

³⁴ For an analysis of this in the USA see *Mueller Brass v. Reading Industries* 352 F. Supp. 1357 at 1372–3. (ED Pa 1972), aff’d without opinion, 487 F.2d 1395 (3d Cir. 1973).

³⁵ *Henry Brothers v. Ministry of Defence* [1997] RPC 693.

³⁶ *Ibid.* [1999] RPC 442, 449 (Robert Walker LJ) (CA) (observing, at 452, that the ‘whole question of co-ownership called for clarification’).

technically creative) and which ought not.³⁷ This is a particularly complex issue, not the least because what is considered to be inventive not only changes over time,³⁸ it also changes between different areas of science and technology.³⁹ Given this, and that the definition of inventor offered in the Patents Act offers little guidance in this regard,⁴⁰ perhaps the best way to approach this issue is by example.

It is commonly accepted that where a person has done something that helps to solve a particular problem or answer a particular question, this will be regarded as an inventive contribution. As such, if it can be shown that an individual has done something that helps to solve a problem, it is likely that they will be treated as an inventor or joint inventor. While the answering of a problem is, in some ways, the archetypal inventive contribution, it is by no means the only type of contribution that is recognized as being inventive. For example, the perfection or improvement of a solution may also be regarded as an inventive contribution. Improvement of an existing device or process may itself provide for a patentable invention, in which case one would expect the patent to belong to the person who made the improvements (irrespective of the ownership of the starting invention). However, in practice, the process of devising a patent may incorporate a series of elements, some of which are mere improvements of an initial breakthrough. In those circumstances, the question arises as to whether these later contributions are sufficient for that person to become a joint inventor.⁴¹

The generation of the idea or avenue for research, that is the formulation of the problem to be addressed, has also been treated as being inventive.⁴² For example, in *Staeng's Patent*,⁴³ it was held that a person (A) was a joint inventor of a new method of securing electric cables, where it was unlikely that the main inventor (B) would have turned his mind to the question without having been prompted (by A). In this case, the Patent Office was influenced by the fact that the principal inventor, who did not work in the field, was only alerted to the possibility of the improvement by A.

In other cases, however, the mere posing of a question to be answered (or the

³⁷ The task of determining who is the inventor or joint inventor is similar to the non-obviousness inquiry. However, in contrast with the non-obviousness inquiry that is determined 'objectively', the idea of inventorship carries a 'subjective' component. This arises because the inquiry can be undertaken even when no application has been made for a patent: PA s. 8(1)(a). See *Viziball's Application* [1988] RPC 213; *Goddin & Rennie's Application* [1996] RPC 141.

³⁸ e.g. it is no longer possible to obtain a patent (as it was for a long time) merely for being the 'importer' of an invention. *Edgeberry v. Stephens* (1691) 1 WPC 35; 1 *Haywards Patent Cases* 117.

³⁹ The question of who should be recognized as creators in intellectual property law is an important and often contentious issue. Over time, the law has witnessed many occasions where interest groups have attempted to argue that they are creative enough to warrant the protection offered by intellectual property law. While these struggles may not be as visible in patent law as in other areas of intellectual property law, patent law is no exception to this general statement.

⁴⁰ Inventor is defined in PA s. 7(3) as the 'actual deviser'.

⁴¹ In *Allen v. Rawson* (1845) 1 CB 551; 135 ER 656, Earle J said that where a person collaborated in the elaboration of a 'main principle' and in so doing made valuable accessorial discoveries, these were the property of the inventor of the original principle. The applicability and scope of this principle is, however, unclear. *Goddin & Rennie's Application* [1996] RPC 141.

⁴² It was said in *Staeng's Patent* [1996] RPC 183, 189 that 'blowing the fire, rather than igniting it' can be sufficient for the contributor to be considered as the 'deviser' of the resulting invention.

⁴³ [1996] RPC 183. Under German law, the formula for calculating compensation for use of employee inventions, gives equal weighting to those who 'elucidate' the problem as those who 'devise' the solution. See V. Schmied-Kowarzik, 'Employee Inventions under German Law' (1972) 54 *JPTOS* 807.

recognition of the problem to be solved) will *not* be treated as an inventive contribution. The reason for this is that in some circumstances, particularly in the biotechnology industry, particular goals are commonly known (this is illustrated by the fact that a number of different companies often pursue the same goal).⁴⁴ In these circumstances, the decision to pursue a particular goal is unlikely to be treated as being sufficiently creative for it to be recognized as an inventive contribution.

3.1.2 What is a non-inventive contribution?

In the same way in which certain types of contributions are normally considered to be inventive, there are other types of contributions that are not. It seems that managerial and entrepreneurial contributions, such as the provision of money, facilities, materials, support staff, and the like, will not be regarded as inventive contributions (although the provider of such contributions may obtain the right to apply for a patent).⁴⁵

Another type of contribution that seems to be excluded from what may be labelled as an inventive contribution is the supply of crucial starting materials.⁴⁶ In a celebrated American case, doctors at the UCLA Medical Center extracted a cell-line from the spleen of the patient (and plaintiff) John Moore who was being treated for hairy-cell leukemia. The cell-line formed the basis of an invention that was subsequently patented by the university. The Supreme Court of California held that Moore had no proprietary interests in the invention (or patent).⁴⁷ More specifically, the court held that he had no property rights in either the genetic information encoded in his cells or the cells themselves. In so doing the court noted that everyone's genetic material contains information for the manufacture of lymphokines, and as a result that Moore's cell-line was 'no more unique to Moore than the number of vertebrae in the spine'. The court contrasted the mundane nature of the source materials with the skills of the researchers, noting that the 'adaptation and growth of human tissues and cells in culture is difficult—often considered an art.' From the view of one commentator, the case illustrates the pervasive influence of the 'author-construct' which leads intellectual property law to privilege certain kinds of contributions: the material basis of intellectual property is disregarded, while the researchers who manipulate that material are prioritized.⁴⁸

A related issue arises in relation to bioprospecting. This is the practice whereby pharmaceutical firms, typically from the developed world, employ the knowledge of indigenous

⁴⁴ See *Genentech v. Wellcome* [1989] RPC 147 (CA).

⁴⁵ *Morgan v. Hirsch*, 728 F 2d 1449, 1452 (Fed. Cir. 1984) (claimant confused entrepreneurship with inventorship); *Minnesota Mining and Manufacturing Companies' International Patent Application* [2003] RPC 28, 556 (a party whose contribution was to identify or to draw attention to some prior art could qualify as an inventor in the appropriate circumstances).

⁴⁶ Cf. in the novelty examination, where the fact that prior art fails to disclose the starting materials may mean that the prior art is not novelty-destroying. See above at p. 453.

⁴⁷ *Moore v. Regents of the University of California*, 793 P 2d 479 (Cal 1990), cert denied, 111 S. Ct. 1388 (1991). It was accepted that Moore had a cause of action for breach of fiduciary duty or lack of informed consent. For some of the many commentaries see T. Dillon, 'Source Compensation for Tissues and Cells used in Biotechnical Research: Why a Source Shouldn't Share in the Profits' (1989) 64 *Notre Dame LR* 628; B. Edelman, 'L'Homme aux cellules d'or' (1989) 34 *Recueil Dalloz Sirey* 225; B. Edelman, 'Le Recherche biomédicale dans l'économie de Marché' (1991) 30 *Recueil Dalloz Sirey* 203; B. Hoffmaster, 'From the Sacred to the Profane' (1992) 7 *Intellectual Property J* 115.

⁴⁸ J. Boyle, 'A Theory of Law and Information: Copyright, Spleens, Blackmail, and Insider Trading' (1992) 80 *California LR* 1413, 1516.

groups to identify the medicinal properties of local plants which are then synthetically reproduced. Perhaps one of the most well-known examples of this is the US patent, which has subsequently been revoked, directed to the medicinal application of turmeric in wound-healing (a practice that has been known about in India for centuries).⁴⁹ In an attempt to argue that indigenous peoples should be compensated for the use that is made of their knowledge, the question has been raised as to whether the contribution of indigenous knowledge (such as the identification of starting materials) ought to be recognized as an 'inventive' contribution to the resulting synthetic drugs. As the law is currently formulated, it seems that the provision of information is unlikely to amount to co-inventorship.⁵⁰ The main reason for this is that the contribution of knowledge about a plant's whereabouts or uses, especially where the information is already in the public domain,⁵¹ is unlikely to be seen as an essential part of the structure and composition of a synthetically produced drug. As a result, many now accept that the goal of providing proper rewards to indigenous communities is better served by other means (such as by the international recognition of a *sui generis* right).

In order for a contribution to an invention to rise to the level of joint inventorship, the contribution must be concrete and specific rather than vague or general.⁵² Similarly, if an inventor instructs an assistant or employee to carry out specific tests, it is unlikely that the assistant will be treated as a joint inventor. This is because the carrying out of instructions is likely to be seen as a process of execution rather than creation. It is interesting to note that for the purposes of determining ownership between employers and employees, a person who merely contributes advice or other assistance in the making of an invention is not an inventor.⁵³ Outside of the employer-employee context, such contributions are also likely to be treated as non-inventive unless it can be shown that the advice or assistance was in some way inventive.⁵⁴

While there has been little guidance as to the amount of mental labour that a person must contribute to an invention for them to qualify as a joint inventor, there may be grounds for arguing that where a person makes only a minor contribution to an invention that they should not be treated as a joint inventor. The reason for this is that joint inventors are sometimes able to control the ability of the other joint inventors to obtain or maintain a patent:⁵⁵ a power that may not be justified if the contribution is particularly

⁴⁹ See M. Uniyal, 'Trade: Biopirates Stake Claim to Southern Knowledge', Inter Press Service, 29 Aug. 1996.

⁵⁰ M. Huft, 'Indigenous Peoples and Drug Discovery Research: A Question of Intellectual Property Rights' (1995) 89 *Northwestern University LR* 1678, 1728; M. Blakeney, 'Access to Genetic Resources: The View from the South' (1997) 3 *Bioscience LR* 94, 99.

⁵¹ Whether because the information is known within the community or because it has been documented by ethnobiologists. The classic anti-malarial drug, quinine, is derived from the bark of South American cinchona trees, the extract from which was first used to treat fever by the indigenous peoples of Peru in the eighteenth century. See M. Huft, 'Indigenous Peoples and Drug Discovery Research: A Question of Intellectual Property Rights' (1995) 89 *Northwestern University LR* 1678, 1700. See the observations of Lord Hoffmann in *Merrell Dow v. Norton* [1996] *RPC* 76, 88.

⁵² It has been suggested that the 'conceptual specificity of a persons contribution' is a critical factor in deciding whether or not they are joint inventor. See R. Harris, 'Conceptual Specificity as a Factor in Determination of Inventorship' (1985) 67 *JPTOS* 315. *Garrett v. United States*, 422 F 2d 874, 881 (Ct Cl 1970).

⁵³ PA s. 43(4). *Allen v. Rawson* (1845) 1 CB 551: 135 ER 656; *Smith's Patent* (1905) 22 *RPC* 57.

⁵⁴ *Staeng's Patent* [1996] *RPC* 183. ⁵⁵ PA s. 36.

small.⁵⁶ It should also be noted that in contrast with copyright law,⁵⁷ there is no explicit requirement in patent law that for a person to be recognized as a co-inventor the parties must have collaborated. Having said this, it is clear that where two persons independently create the same invention, they will not be treated as co-inventors: the first to file is the person entitled to the patent.⁵⁸

3.2 EMPLOYEE INVENTIONS

Although the romantic image of the amateur inventor plays an important role in shaping the way we think about patent law, it has long been recognized that many inventions are made by professional researchers who are employed to invent, often by large corporations:⁵⁹ a situation which has expanded rapidly with the growth of so-called big science in the last forty years or so.⁶⁰ Patent law recognizes the financial interests of such employers by providing that in certain circumstances it will be the employer rather than the employee who will be the owner of inventions made by employees. In this way, patent law retains the romantic model of the inventor in name, but allocates the important monopoly rights to the commercial interests that support and maintain the research.⁶¹

When the EPC was being drafted it was decided that questions relating to ownership of employee inventions were a matter which was better dealt with by national laws rather than the EPC.⁶² While the EPC (as with the CPC and the PCT) makes no provision in relation to employee inventions, when the 1977 Patents Act was drafted, the (then) Labour Government took the opportunity to regulate the position of employee inventors. In so doing they effectively codified an area which, prior to the enactment of the 1977 Patents Act, was primarily dealt with by case law.⁶³

There are two notable features of the 1977 Patents Act relating to employee inventions. The first, which is the focus of the remainder of this chapter, is that sections 39–43 of the

⁵⁶ A co-inventor who refuses to apply for a patent can have any such patent that has been granted to a co-inventor revoked.

⁵⁷ CDPA s. 11.

⁵⁸ The other inventor being left with such *in personam* defences as they can establish. See below at pp. 545–6.

⁵⁹ Cf. S. Cherensky, 'A Penny for Their Thoughts: Employee-Inventors, Preinvention Assignment Agreements, Property, and Personhood' (1993) 81 *California LR* 595; J. Hughes, 'The Personality Interest of Artists and Inventors in Intellectual Property' (1998) 16 *Cardozo Arts & Entertainment LJ* 81.

⁶⁰ See P. Galison and B. Hevly (eds.), *Big Science: The Growth of Large Scale Research* (1992).

⁶¹ For a comparative position see H. Parker, 'Reform for Rights of Employed Inventors' (1984) *Southern California LR* 603, 615 ff.; V. Schmied-Kowarzik, 'Employee Inventions under German Law' (1972) 54 *JPTOS* 807; J. Joviczyk, 'Employee Inventions' (1989) 20 *IIC* 847.

⁶² As such, national laws are free to determine ownership issues between employer and employee. All the EPC does is specify which national law should operate. *EC Green Paper on the Community Patent* (1997) COM (97) 314 final, para. 4.3 (explaining that great differences between member states' rules governing inventions by employees: that in some member states the question is dealt with in general terms by patent law (e.g. in France and the UK); in others a specific law has been enacted, as in Germany and Sweden. Other laws distinguish between 'permanent', 'temporary', and 'occasional' inventive roles, with different rules for determining ownership of the patent in each case. Other laws, such as the German Act, contain a long series of provisions relating to the remuneration of employees with an inventive role and lay down the precise method for calculating additional remuneration).

⁶³ PA ss. 39–43 only apply to inventions made after 1 Jun. 1978. J. Phillips and M. Hoolahan, *Employee Inventions in the UK* (1982); W. Cornish, 'Rights in Employee Inventions: The UK Position' (1990) 21 *IIC* 290; W. Cornish, 'Rights in University Inventions' [1992] *EIPR* 13.

Patents Act provide detailed guidance as to the way in which ownership disputes between employers and employees should be determined. The second notable feature of the Patents Act, which is dealt with in Chapter 23, is that employees are provided with a right of fair reimbursement (or compensation) where their inventions belong to their employers.

In deciding whether an invention made in the course of employment should belong to the employee or the employer, patent law had to balance a range of competing interests. On the one hand, a desire to protect and promote freedom of labour, particularly for activities carried on outside the scope of employment, lent support to those who favoured employee ownership. These arguments were supported by the longstanding principle that the inventor is the first owner of a patent. Mitigating against this, however, was the powerful and ultimately more influential argument that where someone is employed to do something (such as invent), the employer and not the employee should be the owner of the resulting products (or inventions).

Disputes between employers and employees over who is entitled to apply for a patent, or if a patent has already been granted who is the rightful initial owner of the patent, are governed by section 39 of the 1977 Act. Following the common law position, the 1977 Act provides that an invention belongs to an employer in two situations.⁶⁴ Employee inventions that fall outside these two categories belong to the employee.⁶⁵

The first situation where an employee invention belongs to the employer is where the invention was made in the course of the employee's normal or specifically assigned duties *and* the invention was made in circumstances where an invention might reasonably have been expected to have resulted from the carrying out of those duties: section 39(1)(a).

The second situation where an employee invention belongs to an employer is set out in section 39(1)(b). This provides that in certain circumstances an employee's position and status within an organization will be such that they will be taken to be under a 'special obligation to further the interests of the employer's undertaking'. Thus, where an employee occupies a senior managerial or administrative position, any inventions that they produce belong to their employer.

3.2.1 Employer ownership of employee inventions

Before looking at the way ownership of employee inventions are allocated under the 1977 Patents Act, it is necessary to take account of a number of preliminary points.

(i) *Made in the course of employment.* In order for section 39 to come into play, it is necessary to show that the invention was made by an 'employee' who was 'mainly employed' in the United Kingdom.⁶⁶ For the most part, showing that an invention was made in the course of employment is unlikely to present any major difficulties. Problems may arise, however, in peripheral situations where inventions are made by consultants, academics, visitors to universities, students, researchers on secondment, home-workers,

⁶⁴ PA s. 39(1)(a)(b). As the sections are not necessarily mutually exclusive, an employee may be caught by either subsection (a) or (b): *Memco-Med's Patent* [1992] RPC 403, 406.

⁶⁵ PA s. 39(2). PA s. 39(3), which was introduced by the CDPA, provides that where an employee is entitled to the patent, they may 'use material in support of the application in which the employer owns copyright or design.' For the common law position in the USA see *United States v. Dubilier Condenser Corp.*, 289 US 178 (1933), amended by 289 US 706 (1933).

⁶⁶ PA s. 43(2).

and company directors.⁶⁷ While ‘employee’ and ‘employer’ are both defined in section 130 of the Act, this provides little guidance in these grey areas. In order to determine whether a particular inventor is in an employment relationship, a range of different factors are taken into account.⁶⁸ These include the relevant National Insurance and tax arrangements, the way the relationship is described by the parties, the provision of materials, as well as the control and responsibility that is exercised by the parties in question.

(ii) *‘Inventions’*. Another notable feature of section 39 is that it refers to ‘inventions’ rather than to ‘patented inventions’ (or some similar phrase). One of the consequences of this is that the section will operate to resolve issues of ownership irrespective of whether a patent application has been filed or a patent granted. It has also been suggested that the fact that the section refers to inventions may mean that the section extends beyond patentable subject matter to include things such as suggestion schemes.⁶⁹

(iii) *Onus of proof*. While evidential and procedural matters are often overlooked in discussions about patent law, decisions relating to the onus and standard of proof play an important role in shaping the way patent law operates in practice. Although the standard of proof in this context is clear enough—it is the civil standard of balance of probabilities—there is some uncertainty as to whether the onus of proof falls upon the employer or the employee. Given that the inventor is presumed to be the owner of the patent and that section 39 provides exceptions to this, it would seem reasonable to expect that the onus of proof falls upon the employer to establish that a particular employee invention belongs to them as a result of section 39(1)(a) or (b). Mitigating against this, however, is the fact that in a number of cases the Comptroller has presumed that the onus of proof falls upon the person who is putting the question of entitlement in issue.⁷⁰ As this approach concentrates on the person who makes the application, rather than on the relative bargaining powers of the parties, it is if not untenable then certainly an undesirable position.⁷¹

(iv) *It is not possible to diminish the rights of employees by contract*. In order to protect an employee whose inferior bargaining position may lead them to sign their statutory rights to their employer, section 42 of the 1977 Act provides that any term in a contract of employment⁷² which diminishes the rights of an employee in any invention shall be unenforceable against the employee.⁷³ The scope of the section is limited by the fact that it

⁶⁷ See *CIPA*, para. 39.06. B. Sherman, ‘Governing Science: Patents and Public Sector Research in the United Kingdom’ (1995) 26 *IIC* 15.

⁶⁸ *O’Kelly v. Trusthouse Forte* [1984] *QB* 90; *Lee Ting Sang v. Chung Chi-Keung* [1990] 2 *AC* 374 (PC); *CIPA*, para. 39.06. For a discussion on equivalent provisions in copyright, see above at pp. 122–8.

⁶⁹ In other contexts it has been held that ‘invention’ encompasses unpatentable subject matter: *Viziball’s Application* [1988] *RPC* 213.

⁷⁰ *Staeng’s Patent* [1996] *RPC* 183; *Viziball’s Application* [1988] *RPC* 213.

⁷¹ *CIPA*, para. 39.07. In *Greater Glasgow Health Board’s Application* [1996] *RPC* 207, where an employee agreed to allow the employer to proceed with a patent application pending a decision, Jacob J said that it would be unfortunate if anything turned on the question of onus of proof.

⁷² The provisions apply to contracts of employment, as well as to contracts made between employees and third parties either at the request of the employer or in pursuance of the employee’s contract of employment. The section applies both to contracts made before or after the 1977 Act came into force.

⁷³ PA s. 42(2).

does not apply in relation to an employee's duty of confidentiality.⁷⁴ It is also limited in that section 42 does not seem to prohibit contracts dealing with inventions created after an employee leaves employment.⁷⁵ The reason for this is that while such contracts may appear to fall within the terms of section 42, the section probably has no application because the inventions will have been made when the inventor was no longer in employment.⁷⁶ The exact scope of the provision, and the degree to which it modifies the common-law rules in this area, remain unclear.

With these initial points in mind, we now turn to look in more detail at the two situations in which employee inventions will belong to an employer.

3.2.2 Persons employed to invent

The first situation where an employee invention belongs to an employer is set out in section 39(1)(a). This provides that an invention made by an employee will belong to their employer if the invention was made in the course of the employee's normal or specifically assigned duties *and* the circumstances in which it was made were such that 'an invention might reasonably have been expected to result from the carrying out of those duties.'

(i) *Scope of an employee's duties.* In order to determine whether an employee invention belongs to the employer by virtue of section 39(1)(a), it is necessary to determine the scope and nature of an employee's duties. It is then necessary to ascertain whether the invention was made by the employee carrying out those duties.

The job description and the contract of employment are often used as a way of determining the precise nature of an employee's normal duties.⁷⁷ There has also been a willingness to look beyond the formal legal arrangement of the contract of employment to the activities that are *actually* undertaken by the employee.⁷⁸ Once the scope of an employee's normal duties has been ascertained it is relatively easy to determine whether an employee has been assigned any additional duties.

Once the duties of the employee have been ascertained it is necessary to determine whether the invention was made 'in the course of those duties'. The factors to be considered include when and where the invention was made, the facilities used by the employee, and the relationship between the invention and the field in which the employer operates.⁷⁹ So long as it can be shown that the activity in question falls within the general scope of employment, this is unlikely to present any major problems.

⁷⁴ On the question of employee's duty to disclose inventions and its relationship with PA s. 44, see *CIPA*, para. 42.01. More generally see J. Turner, 'Preinvention Assignment Agreement Breach: A Practical Alternative to Specific Performance or Unqualified Injunction' (1997) 5 *JIPL* 631.

⁷⁵ In the USA these are called 'holdover' or 'trailer clauses'. See Hershovitz, 'Unhitching the Trailer Clause: The Rights of Inventive Employees and Their Employers' (1995) 3 *JIPL* 187.

⁷⁶ Even if these were not invalidated by s. 42, they would be subject to the doctrine of restraint of trade. See *Electrolux v. Hudson* [1977] *FSR* 312.

⁷⁷ *Staeng's Patent* [1996] *RPC* 183, 198 (the job description will normally be decisive).

⁷⁸ In *Harris's Application* [1985] *RPC* 19, there was no evidence as to the contract of employment and Falconer J looked at what was actually done. See also *Greater Glasgow Health Board's Application* [1996] *RPC* 207, 222. It should be noted, however, that most of the cases begin, at least as a starting point, with the job description.

⁷⁹ In *Staeng's Patent* [1996] *RPC* 183, it was suggested that any invention that was useful to employer would automatically fall within the employee's duties, cf. *Greater Glasgow Health Board's Application* [1996] *RPC* 207, 222. See P. Chandler, 'Employee's Inventions: Inventorship and Ownership' [1997] *EIPR* 262.

(ii) *Duties which can be expected to result in an invention.* As well as establishing that the invention was made in the course of an employee's normal or special duties, the second limb of section 39(1)(a) provides that it is also necessary to show that the invention was made in circumstances where an invention might reasonably have been expected to result from the carrying out of such duties.

One of the notable aspects of the second limb of section 39(1)(a) is that it requires that *the* invention be made in circumstances where *an* invention might reasonably be expected to result from the carrying out of the employee's duties. The question of what is meant by 'an invention' in this context was considered by Falconer J in *Harris's Patent* where he said that 'an invention' did not mean *any* invention, nor did it mean 'the precise invention that was made'.⁸⁰ While Falconer J's comments are useful in telling us what the phrase does not mean, it offers little positive guidance as to what it does mean.⁸¹ One possibility is that it could be construed to mean an invention of the same description or type as the invention in suit.⁸²

An important factor which is often relied upon when deciding whether there was an expectation that the carrying out of the employee's duties would lead to an invention is the extent to which the employee was engaged to invent or design.⁸³ Inventions that are made by an employee whose duties are limited to mechanical, routine, or non-creative tasks will ordinarily remain with the employee.⁸⁴ This can be seen in *Harris's Patent*:⁸⁵ an ownership dispute between Reiss, who manufactured valves under licence from Sistag, and Harris, who worked as a manager for Reiss. The particular issue in dispute was whether Reiss or Harris owned rights in a valve, invented by Harris, which controlled the flow of dust through ducts. A number of factors led the court to its finding that the invention belonged to Harris. These included the fact that Harris's normal duties were limited to the non-inventive tasks of sales and after-sales service. Importantly, in dealing with customer problems, Harris's role was limited to non-creative or routine application of known engineering practices. The fact that Reiss had no research laboratory, was not involved in research and development, and always referred major technical problems to Sistag for solution, reinforced the conclusion that Harris had not been employed to design or invent. Indeed, when Harris made suggestions to Reiss as to how the valves could be improved, Reiss turned them down. Given that it was not part of the employer's business to solve design problems in valves, it could hardly have been a part of Harris's duties.⁸⁶

⁸⁰ *Harris's Patent* [1985] RPC 19, 29.

⁸¹ In this context it is interesting to note that PA s. 40(7) speaks of 'inventions of the same description'. In *Harris's Patent* [1985] RPC 19, 29 Falconer J said that the phrase an 'invention might reasonably have been expected to result from the carrying out of the duties' refers to 'an invention which achieves, or contributes to achieving, whatever was the aim or object to which the employee's efforts in carrying out his duties'.

⁸² Another aspect of PA s. 39 that is unclear is that the section provides that the invention must be made in circumstances where it might reasonably be 'expected'. It is unclear who it is that ought to expect the invention, whether the invention ought to be expected by the employee, the employer, or, most probably, an objective third party.

⁸³ Presumably, the status of the employee, a factor normally limited to PA s. 39(1)(b), would influence whether an invention would be 'expected'. It was said in *Greater Glasgow Health Board's Application* [1996] RPC 207 that this was to be judged in terms of the circumstances in which the invention in suit was made and not the general circumstances of employment.

⁸⁴ *Ibid.*, 222. It was said that a duty to treat patients did not impose a general duty to invent new ways of diagnosing and treating patients.

⁸⁵ [1985] RPC 19.

⁸⁶ *Ibid.*, 32.

Where a person is employed to invent or design, there will ordinarily be an expectation that the carrying out of the employee's duties would lead to an invention and, as such, that any inventions which are made will belong to their employer. This is the case even if the creative aspect of an employee's duties only forms a small part of an employee's overall duties. For example, in *Staeng's Patent*,⁸⁷ it was held that while an employee was primarily engaged in marketing, the fact that his job description also assigned to him the creative role of using discussions with customers to generate ideas for new products, as well as thinking of novel uses for existing products, meant that any inventions he made belonged to his employer. As yet, it is unclear how small the creative contribution of an employee's duties needs to be for section 39(1)(a) not to apply.

3.2.3 Special obligations

The second situation in which an invention made by an employee will belong to his or her employer is set out in section 39(1)(b). While section 39(1)(a) primarily deals with people who are employed to invent or design, section 39(1)(b) is concerned with inventions which are made by managerial or administrative employees. More specifically, section 39(1)(b) provides that in certain circumstances an employee's position within an organization is such that they are deemed to be under a special obligation to further the interests of their employer. While the normal or special duties of an employee may not require them to invent or design, this is overridden by the fact that their seniority effectively places them under a legal obligation not to compete with the firm.⁸⁸ This fiduciary principle, which is embodied in section 39(1)(b), means that if an employee who occupies a senior position within an organization produces an invention and it can be shown that the invention was made in the course of the duties of the employee, the invention will belong to the employer.

Whether an employee is under a 'special obligation' largely depends upon the position that the employee occupies within an organization and the responsibilities that flow from that position. Employees who occupy senior positions, such as senior executives, directors, and managers are treated as alter egos of their employers and are, as such, under a 'special obligation to further the interests of the employer's undertaking'.⁸⁹ In contrast, fewer obligations are imposed on less senior employees, such as sales managers or marketing managers.⁹⁰ The difficult issue here is deciding at what point within the hierarchy of an organization section 39(1)(b) ceases to apply: how junior must an employee be for them to retain the inventions which they produce?

We are able to gain some guidance as to where this line is to be drawn if we compare *Harris's Patent* where the employee was held not to be under a special obligation, with *Staeng* where section 39(1)(b) applied. As we saw earlier, *Harris's Patent* turned on the question of whether an invention made by Harris belonged to Harris, as employee, or

⁸⁷ [1996] RPC 183.

⁸⁸ In many circumstances this implied duty of good faith meant that an employee was under a duty to assign the patent to the employer: *Patchett v. Sterling* [1955] RPC 50; *British Syphon v. Homeword* [1956] RPC 330. The statutory rule may be more strict than the common-law position: on which see *Worthington Pumping Engine Company v. Moore* (1903) 20 RPC 41.

⁸⁹ *Ibid.*, 46. It was said in *Harris's Patent* [1985] RPC 19 that pre-1977 cases offered guidance as to the extent and nature of an employee's obligations to further the interest of his employer's undertakings.

⁹⁰ *Harris's Patent* [1985] RPC 19, 37–8.

Reiss, as employer. As well as failing under section 39(1)(a), section 39(1)(b) was also held not to apply. This was because while Harris was called a manager, when the court looked at what Harris actually did, it found that he had no power to hire, fire, or agree holiday dates, he never attended board meetings (even when his department was being discussed), and had limited financial control. As such, the court found that Harris did not owe a 'special obligation' to his employer. Rather, they found that he was only under an obligation to do the best that he could to effect sales of the valves and related customer after-care service. Consequently, the court concluded that as Harris was not under a special obligation, the invention in question belonged to Harris. In contrast, in *Staeng's* case the employee operated at a very senior level: he attended board meetings; often acted in a similar capacity to the directors; had some control over budgetary matters (such as the product range; was party to the company's profit-bonus scheme); and had discretion whether to solve problems himself or to pass them on to others. From this basis, the Court concluded that Staeng was under a special obligation under section 39(1)(b). As such, the invention he made belonged to his employer.

22

INFRINGEMENT

1 INTRODUCTION

Patent infringement is a notoriously complex area of law.¹ In part this is a consequence of the evidential nature of the inquiry, a fact that often makes it difficult to generalize beyond the particular case in hand. Another factor that has added to this complexity (but simultaneously enhanced the effectiveness of the patent system) is that it has long been accepted that the scope of the patent monopoly should not be limited to situations where the infringing act takes place in relation to a product or process which is exactly the same as the patented invention. While extending the scope of the monopoly beyond a strict reading of the claims may have satisfied the law's desire to protect the equity of the patent, it generated a new question: how broadly can the patent be read? Similarly, when it was agreed that not all of an invention needed to be taken for a patent to be infringed, the question arose: how much of the invention needs to be taken? The difficulties that these questions generate further accentuate the problems that arise in understanding patent infringement.²

The complexity of the topic is also a consequence of Britain's entry into the European Patent Convention. When the EPC was drafted it was decided that questions about the infringement of patents issued by the EPO were better dealt with by national courts.³ Nonetheless, the close relationship between validity and infringement has meant that decisions at the EPO (particularly in relation to novelty) have impacted on the British law of infringement. These transitions have proved to be all the more problematic because of the absence of a common tribunal dealing with infringement.

Despite its complex and often uncertain nature, determining patent infringement can be separated into three tasks.

- (1) First, it is necessary to determine the types of activities that constitute an infringement.
- (2) Second, it is necessary to ascertain whether the activity complained of falls within the scope of the patent monopoly.

¹ It is also potentially a very costly process. In one case it was suggested that it cost £250,000 for a two-day trial in the county court and about £112,000 for the Court of Appeal: *Warheit v. Olympia Tools* [2003] FSR 6.

² See A. Benyamini, *Patent Infringement in the European Community* (1993).

³ Infringement proceedings can be also brought before the comptroller so long as both parties consent: PA s. 61(3). The suggestion that the 1977 Act be amended to remove the need for the consent of both parties was not adopted in the proposals for reform of the 1977 Act. See *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), para. 115–124.

- (3) Third, it needs to be determined whether the defendant is able to make use of any of the defences to infringements that are available to them.

Each of these tasks will be dealt with in turn.

2 TYPES OF INFRINGING ACTIVITIES

It is important to note at the outset that patent law draws a general distinction between direct and indirect infringement. The main difference between them is that direct infringement involves some immediate engagement with the patented product or process,⁴ whereas indirect infringement applies where a person facilitates the act of infringement:⁵ in effect a patent law version of aiding and abetting. Before looking at direct and indirect infringement in more detail, it is important to note that to infringe the activity must be carried out without the consent of the patentee (i.e. the activity must not be covered by licence);⁶ occur within the UK;⁷ and take place during the duration of the patent.⁸

2.1 DIRECT INFRINGEMENT

For a patentee to succeed in an infringement action they must show on the balance of probabilities that the defendant performed one of the activities that falls within the patent owner's control.⁹ The primary rights given to a patent owner are set out in section 60(1). As we will see, section 60(1) covers a wide array of activities from the making or using of a product or a process, through to the sale or importation of the product. As a result, most if not all of the commercially valuable activities are within the owner's control.

The rights given to an owner differ depending on whether the patent is for a product, a process, or a product obtained directly from a process. It is important to note that with the exception of the situation where an infringer uses a process or 'offers a process for use' under section 60(1)(b), direct infringement takes place irrespective of the knowledge of the defendant. This means that in relation to a patent for a product or where a product has been obtained directly from a patented process, liability is absolute. As such, there is no need for a patentee to show that the defendants knew that they were infringing. In these cases, independent, accidental, and unintentional creation of the same invention will infringe.

2.2 PATENT FOR A PRODUCT

The owner of a patent for a *product* is given the right to make, dispose of, offer to dispose of, use, import, or keep the product whether for disposal or otherwise.¹⁰ It is important to

⁴ PA s. 60(1).

⁵ PA s. 60(2); CPC Art. 26. The Patents Act also contains provisions in relation to contributory infringement.

⁶ See below at p. 552.

⁷ The UK includes the Isle of Man and the territorial waters of the UK, PA s. 132(2)(3).

⁸ A patentee may only sue with respect to acts that occur after publication of the application and then only if the patent has been granted. PA s. 62(3) introduces certain qualifications where the patent application is amended after publication. PA s. 62(2) deals with the position where the patentee fails to renew the patent promptly. For considerations of duration and supplementary protection certificates see below at pp. 586–90.

⁹ PA s. 60(1)–(2); CPC Arts. 25–8.

¹⁰ PA s. 60(1)(a).

note that in this context liability is absolute: the knowledge of the defendant is not relevant when deciding whether they have carried out one of the activities within the owner's control. While intention to infringe is not relevant to the determination of liability, *mens rea* might play a significant role in relation to the remedy granted by the court.¹¹

Three different rationales are usually given to explain why patent liability is absolute.¹² The first and most general is that the principle is necessary to allow the patentee full enjoyment of their monopoly rights.¹³ This is often said to be more pressing because of the onerous nature of the validity requirements imposed on patent applicants. When thinking about assertions of this nature, it is important to remember that property rights are never absolute and that the rights recognized in patents are no exception to this.¹⁴ For example, patents are limited in terms of duration, scope of operation, subject matter, and types of activities that are protected. As such, there is little, if anything, in this argument that demands that infringement be absolute.

The second argument in favour of the principle that the intention of the defendant is irrelevant in deciding infringement can be traced to the so-called reverse-infringement test which is sometimes used to determine whether an invention is novel.¹⁵ Under this test, which is based on a belief that the novelty examination is a mirror of the test for infringement, the court asks the following hypothetical question: if the disclosure was carried on or took place after grant, would it have infringed the patent (if granted)? If yes, then the disclosure is anticipatory.¹⁶ The next step in the argument is to remind us that when considering whether information in the public domain anticipates an invention, the intention of the person who made that information public is irrelevant (that is, novelty is decided objectively). On the basis that novelty and infringement are mirrors of each other and that novelty is determined objectively, it is therefore suggested that infringement should also be decided objectively. While the reverse-infringement test was approved in the United Kingdom in a number of decisions under the 1977 Patents Act,¹⁷ it has become clear that it is no longer the test to be applied to determine whether an invention is novel.¹⁸ Instead of determining novelty by asking—if the prior art was carried out after grant

¹¹ PA s. 62(1). See further below at pp. 1101–6.

¹² The following cases are usually cited in support; *Proctor v. Bennis* (1887) *RPC* 333, 356–7 (no real justification given); *Curtis v. Platt* (1863) 3 *Ch D* 135 at 140n; *Valensi v. BRC* [1972] *FSR* 273, 306 (adds nothing); *Stead v. Anderson* (1847) 2 *WPC* 151, 156; *Wight v. Hitchcock* (1870) *LR* 37, 47 (argument based on a version of parallel importation: 'If the law were otherwise . . . another might by merely crossing the Channel, and manufacturing abroad, and selling for far less than the original price . . . wholly deprive the patentee of the benefit of the invention'); *Walton v. Lavater* (1860) 8 *CB (NS)* 162, 186; 29 *LJ (CP)* 275, 279; *Betts v. Neilson* (1865) 34 *LJ (Ch)* 537; *Elmslie v. Boursier* (1869–70) *Law Rep* 9 *Eq* 217.

¹³ *Lishman v. Erom Roche* (1996) 68 *CPR* (3d) 72 at 77 (FCTD).

¹⁴ R. Gordon, 'Paradoxical Property', in J. Brewer and S. Staves (eds.), *Early Modern Conceptions of Property* (1995), 95. '[P]atents do not create wholly controlled monopolies. They confer on their owners the narrower benefit of exclusive commercial exploitation for a duration limited to twenty years. Even during the currency of the patent, members of the public are free to conduct experiments on the patented invention'. Lord Irvine of Lairg, 'The Law: An Engine for Trade' (2001) 64 *MLR* 333.

¹⁵ See, e.g. *Robert Alfred Young and Robert Neilson v. Rosenthal* (1884) *RPC* 29, 31–33.

¹⁶ The classic statement is provided by Sachs LJ in *General Tire & Rubber v. Firestone Tyre & Rubber* [1972] *RPC* 457, 485–6.

¹⁷ See, e.g. *PLG Research v. Ardon International* [1993] *FSR* 197, 218.

¹⁸ Arguably, the test never did state the law accurately since the carrying out of instructions which might (rather than inevitably would) lead to the invention was not thought to be an anticipation, though clearly on some occasions after grant it would amount to infringement.

would it infringe the patent (if granted)?—the focus of the ‘new’ law is much more upon novelty in its own right. In any case, while the test may have brought conceptual clarity to the infringement examination, it offers little real guidance when considering whether intention should be a factor taken into account when deciding infringement.

The third argument in support of the principle that the intention of the defendant is irrelevant in deciding infringement focuses on the existence of the patent register and the information function performed by the patent system more generally. Here, the potential harm that third parties might endure as a result of the fact that infringement is absolute is said to be mediated by the fact that as part of the patent process the invention is made available to the public. More specifically, it is argued that as information about the patented invention is in the public domain, third parties are able to access the information and subsequently alter their behaviour (or licence the patent), and thus avoid infringing the patent. While this rationale *may* carry some weight in relation to mechanical inventions, it is not as easily applied to biological inventions. This is because the rationale for strict liability is based on an image of the invention as something inert, static, and (largely) immutable. In the case of mechanical inventions (where it is the behavior of the defendant that determines whether they infringe), would-be defendants are able to modify their conduct to ensure that they do not infringe. However, in the case of biological inventions, which are dynamic and active, there may be very little (if anything) that a defendant can do to avoid infringing. Given that the infringement may be traced to the action of the invention (rather than the defendant), this may be the case even if the defendant knew about the patented invention.

The potential problems that arise in relation to biological inventions were highlighted by the Canadian decision of *Monsanto v. Schmeiser*¹⁹ where a farmer was successfully sued for infringing Monsanto’s patent for Glyphosate-Resistant Plants, when patented plants were found growing on his property. Importantly, it was held that the principle of strict liability meant that it did not matter whether the defendant farmer had planted the infringing plants, or whether, as he claimed, the plants were there as a result of conduct outside his control (including cross field breeding by wind or insects; seed blown from passing trucks with loose tarpaulins; seed dropped from farm equipment; and seed that had escaped when a neighbour dropped a bag of Monsanto’s seed from his truck): all that mattered was that there had been an unauthorized use of the patented invention. The decision is important since it highlights the possibility of, and some of the problems associated with, what could be called passive infringement of biological inventions. This is the fact that a farmer may, through no fault of their own, be liable for patent infringement when a patented plant ‘invades’ their property and cross-pollinates with one of their pollinated plants. (Similar problems could arise with genetically modified animals). The possibility of passive infringement has important ramifications for the traditional farming practice whereby seeds saved from one year’s harvest are used to sow crops in the following year. Even if this does not occur, the mere possibility of passive infringement of biological inventions will increase the pressure on farmers to obtain licences to use patented inventions of this nature. It is, however, a problem that could be easily remedied through the introduction of a defence for passive infringement.

¹⁹ *Monsanto v. Schmeiser* [2001] FCT 256; [2003] 2 FC 165 (Federal Ct) (leave to appeal to Supreme Court of Canada granted).

2.2.1 The right to make the product

Perhaps the most important right given to the owner of a patent for a product is the exclusive right 'to make' the product. Few problems have arisen in determining what is meant by the right to make a product. One exception to this is where the defendant repairs or modifies the patented product. Patent law has long recognized that purchasers of patented products should be able to repair and modify those products. As Lord Hoffmann said in the *United Wire* decision, 'repair is one of the concepts (like modifying or adapting) which shares a boundary with "making" but does not trespass on its territory'. He added that 'as a matter of ordinary language, the notions of making and repair may well overlap. But for the purposes of the statute, they are mutually exclusive. The owner's right to repair is not an independent right conferred upon him by licence, express or implied. It is a residual right, forming part of the right to do whatever does not amount to making the product'.²⁰ At the same time, however, patent law has been keen to ensure that while a person who obtains a patented product is able to repair or modify the product, they may not go so far as to make the product anew.²¹ In these circumstances, the question arises: how much of a product is a person able to repair or modify before they infringe the owner's right to make the product? That is, when does the legitimate act of repair or modification switch to become the illegitimate making of the patented product?

The way these questions are answered depends upon the circumstances of the case under consideration. It seems that both quantitative factors, such as the amount of the product that is repaired and qualitative considerations such as the relative importance of the part of the patented product that has been repaired, are likely to be taken into account.²² It is less likely for a court to hold that a person has made a patented product when they have repaired an immaterial part of a product.²³ For example, if a patented product related to the invention of a pool table with a novel coin-operating system, it would almost certainly be legitimate for a person to replace the cloth on the pool table. It would probably not be legitimate, however, for them to replace an old coin-operating system with a new one, since it is likely that this would be an essential component of the invention.²⁴ Where purchasers of a patented article are entitled to repair the product, they 'must be entitled to carry out what is a genuine repair whether it is economical to do so or not, and whether the part repaired or replaced in the course of what is truly a repair is crucial to the function of the patented article or not'.²⁵ It also seems that the fact that the repaired article may not work as well or as safely as the original product will not affect the decision as to whether the repair is legitimate.²⁶

²⁰ *United Wire v. Screen Repair Services* [2000] 4 All ER 353 (HL). Prior to this decision, the right to repair had sometimes been based on the idea of implied licence: *Solar Thompson Engineering v. Barton* [1977] RPC 537, 555; *British Leyland v. Armstrong* [1986] RPC 279, 358, 361–2 (Lord Bridge). Cf. *Canon v. Green Cartridge Co.* [1997] FSR 817, 822; *Hazell Grove v. Euro League Leisure* [1995] RPC 529, 537–41.

²¹ *Solar Thompson Engineering v. Barton* [1977] RPC 537; *Sirdar Rubber v. Wallington Weston* (1907) 24 RPC 537 (Lord Halsbury); *British Leyland v. Armstrong* [1986] RPC 279, 376.

²² *Sirdar Rubber v. Wallington Weston* (1905) 22 RPC 257.

²³ *United Wire v. Screen Repairs Services (Scotland)* [2000] 4 All ER 353 (HL).

²⁴ *Hazell Grove v. Euro League Leisure* [1995] RPC 529.

²⁵ *Solar Thompson Engineering v. Barton* [1977] RPC 537, 555 (Buckley LJ).

²⁶ *Ibid.*, 556–7 (Buckley LJ). *Dellareed v. Delkin Developments* [1988] FSR 329; approved in *Hazell Grove v. Euro League Leisure* [1995] RPC 529, 541.

2.2.2 The right to dispose of the product

Another important right given to the owner of a product patent is the right to sell (or vend) the product. The right to sell, which is part of the general right to dispose of the invention,²⁷ includes the sale of individual articles.²⁸ It also applies where the patented product is sold to people who intend to use the article in non-infringing activities (such as sale to a person who intends to use the article for experimental purposes).²⁹ A patent owner's right to dispose of a product will be infringed where a person supplies the product in kit form. As with all infringement actions, the kit must fall within the scope of the claims.³⁰ If the kit partially falls outside the claims, a patentee will have to rely on indirect or contributory infringement to prevent sale of the kits.³¹ These matters are discussed below.³²

(i) *Implied licences and exhaustion.* A patent owner's ability to control the way patented products are disposed of is limited by the common-law doctrine of implied licence and the doctrine of exhaustion as developed under Community law. According to the doctrine of implied licence, in the absence of any limitation to the contrary, where the patentee sells a patented product, the patentee is unable to rely on the patent to prevent the resale of the article. This is because the sale of a product carries with it an implied licence to keep, use, and resell the product.³³ However, where there is an express limitation, it will bind those who receive the goods with notice of the limitation: unless the limitation contravenes Article 28 or 81 EC (formerly Articles 30 and 85 of the Treaty of Rome).

Under the doctrine of exhaustion,³⁴ a patentee is unable to use a patent to prevent the further disposal of an article that has been placed on the market in the EEA with the patentee's consent.³⁵ Consequently, an express limitation on further disposal of a patented article will contravene Article 28 and thus be void if it prevents importation into or resale in another member state.³⁶ However, such a limitation might enable a UK

²⁷ *Gerber Garment v. Lectra* [1995] RPC 383. To be an infringing act an 'offer to dispose' must be made in the UK and propose disposal within the UK: *Kalman v. PCL Packaging* [1982] FSR 406. For issues relating to joint tortfeasance where the joint tortfeasor is located outside the jurisdiction, service out of the jurisdiction, and actions for infringement of foreign patents see below at pp. 1062–4.

²⁸ *Hadley Industries v. Metal Sections and Metsec* (UK) (13 Nov. 1998).

²⁹ *Hoffman La Roche v. Harris Pharmaceuticals* [1977] FSR 200 (under the PA 1949).

³⁰ *Rotocrop v. Genbourn* [1982] FSR 241; *Furr v. Trueline (Building Products)* [1985] FSR 553, 565. A. Benyamini, *Patent Infringement in the European Community* (1993), 68–74 (suggesting that kits are dealt with as direct infringements unless they lack one or more essential elements).

³¹ *Rotocrop v. Genbourn* [1982] FSR 241, 258–9. ³² See below at p. 534.

³³ *Betts v. Willmott* (1871) 2 Ch LR 6; *Incandescent Gas Light Co. v. Cantelo* (1895) 12 RPC 262; *National Photograph Co. of Australia v. Menck* [1911] AC 336. While the common law has tended to adopt an implied licence approach, there is some evidence that this case law may be being reinterpreted as part of an 'exhaustion of rights' principle like that found within European law. In *Canon v. Green Cartridge* Lord Hoffmann said that the notion of 'a general implied licence to use the patented product at all, which is sometimes used to explain why mere user does not infringe the patentee's monopoly . . . is perhaps better regarded as a consequence of the exhaustion of the patentee's rights in respect of the particular article when it is sold'. [1997] FSR 817, 822.

³⁴ See above at pp. 12–15.

³⁵ The doctrine of exhaustion has been held inapplicable to products made under a compulsory licence: *Merck v. Stephar* [1981] ECR 2063 (ECJ).

³⁶ If the CPC comes into force, PA s. 60(4) will come into effect (see CPC Art. 81). On the scope of PA s. 60(4) see *Dellareed v. Delkin Developments* [1988] FSR 329, 347.

patentee to prevent export to Australia, or perhaps further disposal within the United Kingdom.³⁷

2.2.3 The right to import the product

The patentee has the right to control the importation of products that fall within the scope of the product. It seems that where the patented product is passively imported (that is where the patented product is of no importance as far as any question of carriage is concerned), the patent will not be infringed. As Tomlin J said, 'I cannot think . . . that the employment of a patented cutting blow-pipe or a patented hammer in the manufacture of some part of a locomotive would necessarily render the importation of the locomotive an infringement'.³⁸ A person will infringe where they deal with the patented product in the course of trade or for the purposes of profit.³⁹ As an importer must have a legal and beneficial interests in the infringing goods, a foreign party will not infringe where they transfer their interests in the infringing object outside of the UK (although they might be liable as a joint tortfeasor).⁴⁰ As with the right to dispose of the product, the patentee's right to prevent importation is limited by the common-law principle of implied consent and by the doctrine of Community exhaustion.

2.2.4 The right to keep the product

The patentee's monopoly also includes situations where an infringer keeps the product, whether for disposal or otherwise. The scope of this right was considered in *SKF v. Harbottle*⁴¹ where the court was called upon to decide whether the storage of a product in a London warehouse fell within the meaning of 'keep' in section 60(1). This decision arose from the fact that British Airways, who were in the process of transporting an anti-histamine drug called Cimetidine from Italy to Nigeria, stored 20 kg. of the drug in a warehouse in London. While the drug was being stored in British Airways' warehouse, a patent infringement action was brought by the UK patentees (SKF) against the owner and importer of the drug, Harbottle. Along with Harbottle, British Airways were joined as co-defendants in the infringement action on the basis that British Airways had infringed the owner's right to keep the product. Finding in favour of British Airways, the court held that the act of passively storing a patented drug in a warehouse in London could not be construed as the 'keeping of a product' within the meaning of section 60(1). While declining to arrive at a definitive meaning of the term 'keep', the court was strongly influenced by the 'very much more limited' terms employed in Article 29(a) of the Community Patent Convention where the equivalent wording refers to 'stocking' a

³⁷ *Roussel Uclaf SA v. Hockley International* [1996] RPC 441 (for a limited licence applied to sales of a patented product outside the EEA to be effective, notice of it must be brought to the attention of every person down the chain of supply).

³⁸ *Wilderman v. Berk* (1925) 42 RPC 79, 88.

³⁹ This is the case irrespective of whether the ultimate destination is the UK or elsewhere: *Hoffmann-La Roche v. Harris Pharmaceuticals* [1977] FSR 200 (under the PA 1949).

⁴⁰ *SABAF v. Meneghetti* [2003] RPC 264, 284–5 (CA). As the Italian defendants passed legal title in the 'infringing' article (that was subsequently imported into the UK) to another party in Italy, it could not be said that they imported the goods into the UK, although they did organize and pay for the haulage of the articles. In so doing the Court of Appeal expressly disregarded *Waterford Wedgwood v. David Nagli* [1988] FSR 92 (re importation under Trade Marks Act 1994). See below p. 910.

⁴¹ [1980] RPC 363; M. Howe, 'Infringing Goods and the Warehouseman' [1979] EIPR 287.

patented product. On this basis it was said that 'keep' implied 'keeping in stock' rather than acting as a custodian.

Despite the approach adopted in the *Harbottle* decision, a broader interpretation of the right to keep a product was adopted in *McDonald v. Graham*.⁴² In this case, the patentee asserted that the defendant (who was a marketing consultant who had been introduced to the patentee) retained certain articles (and later made them available to a third party) and had infringed their right to 'keep' the patented product. In response, the defendants argued that the materials had not been kept 'for disposal or otherwise'. The Court of Appeal held that the defendant had kept the product 'in the sense of keeping them in stock for the purposes of his business in order to make use of them as and when it would be beneficial to him to do so'.⁴³ As such, the patent had been infringed.

In circumstances where the patentee has placed the product on the market, a person will be free from liability under the implied licence theory. However, if no such licence is implied, liability for mere possession or use is absolute (irrespective of knowledge or intent).

2.2.5 Scope of protection for biotechnological inventions

In the lead up to the Biotechnology Directive⁴⁴ questions arose about the scope of protection for biotechnological inventions. The issues were dealt with by Articles 8–10 of the Directive. The 1977 Patents Act has been amended to take account of these provisions.⁴⁵ The scope of protection of product patents for biological material is dealt with in Articles 8(1) and 9 of the Directive.

Article 8(1) provides that the protection conferred by a patent on biological material (possessing specific characteristics) extends to any biological material derived from that biological material by propagation or multiplication in an identical or divergent form. This would apply, for example, to inventions for herbicide-resistant plants and genetically manipulated animals.⁴⁶ For the derivative biological material to be covered by the patent it must possess the same characteristics as the patented biological material. This means that a patent for a genetically modified animal would extend to include future generations (so long as they retain the 'specific characteristics' of the 'original' animal).⁴⁷

Article 9 (which is mirrored in the United Kingdom in paragraph 9 of Schedule A2 to the 1977 Patents Act)⁴⁸ deals with the scope of protection for a product that contains genetic information. More specifically it provides that the protection conferred on a patent containing or consisting of genetic information shall extend to all material, save as provided in Article 5(1),⁴⁹ in which the product is incorporated and in which the genetic information is contained or performs its function.

In recent years, there has been a growing concern about the nature of the protection granted to biotech inventions, particularly in relation to product patents granted for genes, DNA sequences, and the like. The main problem with product patents in this context is that they give the patentee control over subsequent uses of the product, even for uses that

⁴⁸ Introduced by Patents Regulations 2000 (SI 2000/2037) (in force 28 Jul. 2000).

⁴⁹ Biotech. Dir. Art. 5(1)/PA Sched. A2, para. 3(a), states that the human body at the various stages of its formation and development, and the elements thereof (including gene sequences) cannot be patented.

they did not envisage or know about. For example if a research team discovered that the ABC gene caused acne, it might be possible for them to obtain a product patent over the isolated ABC gene. If another research team subsequently discovered that the ABC gene also played a role in the development of skin cancer, this would be covered by the earlier product patent. One objection to a situation such as this is that the reward granted to the patentee outweighs the benefits that flow from their disclosure. Another related problem is that product patents may stifle research for new uses of a patented product. While special defences have been introduced to minimize the impact of product patents for biological inventions,⁵⁰ many commentators believe that further action is necessary. One solution that has been suggested is that the scope of protection for gene patents should be limited to the use that is actually disclosed in the patent.⁵¹ To continue with the example mentioned above, this would mean that the initial patent would only be granted for the ABC gene insofar as it triggers acne. In this situation, the protection reflects the disclosure. The more limited protection also means that the patent would not act as a disincentive for others to look for other uses of the ABC gene. It has been suggested that this proposal is supported by Recital 25 of the EC Biotechnology Directive insofar as it limits product claims to the parts of the product which are essential to the invention, that is, it restricts the scope of DNA product patents based on their disclosed function.⁵² Another more radical suggestion, which harps back to the way chemical inventions were treated in the early part of the twentieth century, is to limit gene patents to process claims. That is, product production would simply not be available for gene-based inventions.

2.3 PATENTS FOR A PROCESS

The owner of a patent for a process is given the right to use the process or to offer it for use in the UK.⁵³ This is subject to the proviso that the right is only infringed where it can be shown that the defendant knew, or it would have been obvious to a reasonable person in the circumstances, that the unauthorized use of the process would be an infringement of the patent. It is important to note that in contrast with the rights given to owners of patent for products (discussed above) and the rights given to patents for products derived from processes (discussed below), liability for infringement of a patent for a process is *not* absolute. That is, liability depends upon the owner proving that the defendant knew, or that it would have been obvious to a reasonable person in the circumstances, that the unauthorized use of a process would be an infringement of the patent. In essence the owner of a patent for a process is given the right to practise the invention or to put the invention into effect. For the most part, there have been few problems in interpreting this provision (although problems may arise in discovering how a defendant makes a

⁵⁰ See below at pp. 546–8.

⁵² Where the claimed DNA sequence 'overlap only in parts which are not essential to the invention, each sequence will be considered as an independent sequence in patent law terms'. D. Schertenleib, 'The Patentability and Protection of DNA-based Inventions' [2003] *EIPR* 125, 136

⁵³ PA s. 60(1)(b).

particular product⁵⁴). Problems may arise, however, in relation to patents for novelty of use claims, which are discussed below.

2.3.1 Direct products of patented processes

It has long been accepted that where a patent is granted over a process the protection includes both the process in question and the products that flow from that process. This principle is now to be found in section 60(1)(c) of the 1977 Patents Act which provides that a person infringes a process patent if they dispose of, offer to dispose of, use, import, or keep any product derived from that process.⁵⁵ This protection is particularly important where no claim has been made to a product as such. It is also important where the process is carried on outside the United Kingdom and a product derived from that process is imported into the United Kingdom.⁵⁶ As we have already looked at the way these terms are construed, there is no need to examine them again.

The protection given to process patents is potentially very wide. In part this is because where a range of different products flow from a single process, all of the products fall within the remit of the patent. It is also because the scope of protection not only includes the products that flow from the process, but also the products that are based upon the products which flow from the process: if you like, the derivatives of the derivative. To ensure that the scope of the monopoly is kept within justifiable limits, an important restriction is placed on the products that are protectable by process patents. This has been done by stipulating that for protection to arise, there must be a direct *relationship* between the process and the product in question.⁵⁷

The question of what is meant by a 'direct' relationship was considered by the Court of Appeal in *Pioneer Electronics v. Warner Music*.⁵⁸ This action arose when the claimant argued that their process patent for a method of manufacturing compact discs had been infringed when the defendants imported optical discs that were a by-product of the patented process into the United Kingdom. While there was no doubt that the imported discs had been derived from the patented invention, it was unclear whether there was a 'direct' relationship between the process patent and the imported discs.

After considering the way equivalent provisions were interpreted in other European jurisdictions, the Court of Appeal concluded that 'directly' meant 'without intermediary'. More specifically, Nourse LJ said that when the 1977 Patents Act stipulated that for protection to arise there had to be a direct relationship between the process and product, this meant that there were no material or important steps that intervened between the process and the product in question. In situations where material and important steps did intervene, the process patent could not be used to control the use that was made of the product. This situation would only change if it could be shown that the intervening steps were immaterial or trivial.

⁵⁴ For some of the problems that arise in proving infringement a process patent where the process is carried out overseas see *Nutrinova Nutrition Specialties & Food Ingredients v. Sanchem UK* [2001] FSR 797.

⁵⁵ CPC Art. 25(c); EPC Art. 64(2).

⁵⁶ *CIPA*, para. 60.06.

⁵⁷ PA s. 60(1)(c). For the common-law position see *Saccharin Corp v. Anglo Continental Chemical* (1900) 17 RPC 307.

⁵⁸ [1997] RPC 757 (CA). See H. Hurdle, 'What is the Direct Product of a Patented Process?' [1997] *EIPR* 322; F. Russell and H. Hurdle, 'What is the Direct Product of a Patented Process?' [1995] *EIPR* 249.

The process patent for the production of the master discs was not infringed when the final discs were imported into the United Kingdom. The reason for this was that a number of important and material steps separated the product from the process. A key factor in the finding of non-infringement was that the production of the master discs was only an initial stage in the production of the final optical discs. The master discs were used to produce 'mothers' which in turn were converted into 'sons', which subsequently acted as the basis from which the moulding of the final discs took place. While the patented invention may have acted as a platform that aided in the production of the final discs, because there were a number of important and material steps that separated them, there was not a direct relationship and thus no infringement.

The requirement that there be a direct relationship is in accord with the general logic of patent law. While a product may draw upon a process patent, if the product only comes into existence as a result of material steps that occur outside the process, the products are no longer derivative; they are new products that warrant separate patent protection. If patentees were able to regulate the use that was made of such products, this would extend the ambit of the monopoly beyond the scope of the invention disclosed in the patent.⁵⁹

2.3.2 Direct products of biotechnological processes

The question of the scope of protection for patents for biotechnological processes is dealt with in Article 8(2) of the Biotechnology Directive. A similar provision now exists in the 1977 Patents Act as a result of amendments made in July 2000.⁶⁰ These provide that:

[T]he protection conferred by a patent on a process that enables a biological material to be produced possessing specific characteristics as a result of the invention shall extend to biological material directly obtained through that process and to any other biological material derived from the directly obtained biological material through propagation or multiplication in an identical or divergent form and possessing those same characteristics.

As with the protection given to product patents for biological materials, the derived material must possess the same characteristics as the 'original' material. It should be noted that the protection under Article 8(2)/paragraph 8 of Schedule A2 to the 1977 Patents Act⁶¹ is limited to material 'directly obtained' from the patented process. It seems that directly obtained would be construed in a similar way as 'direct' relationship was construed in *Pioneer Electronics*.

2.4 NOVELTY OF USE CLAIMS

For the most part, the key question when determining whether a defendant has carried out one of the activities within the patentee's control is the way the language of the patent is construed. One situation where problems may arise, however, is in relation to patents for a new use of a known substance used in an old way, which have been recognized at the EPO and in the United Kingdom.

The decision to accept novelty of purpose patents has met with considerable resistance

⁵⁹ If a 'patentee wants appropriate cover . . . they should secure a product-by-process claim.' *Banks Committee*, para. 297.

⁶⁰ Patents Regulations 2000 (SI 2000/2037) (in force 28 Jul. 2000).

⁶¹ Introduced by Patents Regulations 2000.

in the United Kingdom.⁶² As Lord Hoffmann said in *Merrell Dow*, the Board's decision in *Mobil* has been criticized on the 'ground that a patent for an old product used in an old way for a new purpose makes it difficult to apply the traditional UK doctrine of infringement'.⁶³ The problem with novelty of use claims is that it may be difficult to ascertain when a product is being used in the relevant way. Taking the example of the invention in *Mobil Oil* (which was for a substance, already being used to inhibit rust-formation, to be used as a friction-reducing additive in lubricating oils) Lord Hoffmann asked, how is a court to 'tell whether the person putting the additive into his engine is legitimately using it to inhibit rust or infringing by using it to reduce friction?'. Unless use claims are confined to uses of products that are distinct, it seems that a patentee of an invention that consists of a new use must demonstrate that the infringer intended to produce the particular effect.⁶⁴

The reason why the recognition of use claims is incompatible with the traditional UK doctrine of infringement can be traced to the fact that the infringement of a patent turns exclusively on the physical conduct of the defendant. A person will infringe if, for example, they manufacture or sell the patented invention without permission. In so doing, the alleged infringer's state of mind is irrelevant; it does not matter whether the alleged infringer knew that they were dealing with the patented product. In most cases, this presents few problems. For example, because claims to a new use of an old thing will be physically different from previous uses of the same thing, the earlier use can continue to be performed without it infringing the subsequent patent. Problems may arise, however, in relation to novelty of use patents. This is because for infringement purposes the discovery that a known product used in a known way can be put to a new purpose is physically identical to the prior use: the only difference between the two uses being in the mind of the user. Given that the physical acts protected by a novelty of purpose patent would be the same as the steps taken during the previous use, when someone uses an old substance in an old way, there is no obvious way of telling whether they are using the substance to achieve the old purpose, or whether they are using the substance to achieve the new purpose. As Lord Hoffmann said:

Liability for infringement is, as I have said, absolute. It depends upon whether the act in question falls within the claims and pays no attention to the alleged infringer's state of mind. But this doctrine may be difficult to apply to a patent for the use of a known substance in a known way for a new purpose. How does one tell whether the person putting the additive into his engine is legitimately using it to inhibit rust or infringing by using it to reduce friction?⁶⁵

⁶² To 'hold that every new use of an old composition may be the subject of a patent upon the composition would lead to endless confusion and go far to destroy the benefits of our patent laws': *In re Thuaau* 135 F 2d 344 (CCPA 1943).

⁶³ *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 92 (HL). In *Mobil* it was said that the analogous problems concerning infringement would arise in relation to second and subsequent medical uses. *Mobil/Friction reducing additive*, G2/88 [1990] EPOR 73, 89.

⁶⁴ For consideration of the position of the supplier of the substance see indirect infringement below at pp. 531–3.

⁶⁵ *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 92 (HL). See also *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1, 18 (CA), para. 49 (Aldous LJ said that it was unlikely that the Court of Appeal would suggest that *Mobil* was wrongly decided when the House of Lords 'did not so conclude').

The problem raised by novelty of purpose patents is that while the only feature which enables a novelty of purpose patent to be distinguished from the previous use is the purpose for which it is used (which exists in the mind of the user), the purpose of the alleged infringer is not taken into account when determining whether a patent has been infringed: all that matters is whether the physical act of infringement has taken place. The consequence of this is that a patent granted for the discovery of a new purpose of an old thing used in an old way could prevent someone from doing what they had already done before: thus denying the prior user their right to work.⁶⁶

While it has been suggested that these problems are based on an artificial distinction,⁶⁷ the inherent conflict between the physical nature of infringement and the mental nature of novelty of purpose patents gives rise to real problems in the United Kingdom which will need to be resolved if novelty of purpose patents are allowed. If novelty of purpose patents are not to impinge upon the legitimate (pre-existing) activities of others,⁶⁸ it may be necessary to limit the scope of the monopoly (possibly to the making, using, and commercial supply of the thing for the specified use) or to modify the defence of prior use.⁶⁹

2.5 INDIRECT INFRINGEMENT

In addition to the prohibited activities set out in section 60(1), the 1977 Patents Act also provides that a patent is infringed where a person contributes to, but does not directly take part in, the infringement.⁷⁰ This is particularly important where the maker or user is difficult to detect (for example where the manufacture or use occurs in private), or they are not worth suing. Section 60(2) states that a person infringes a patent where they supply or offer to supply any means relating to an essential element of the invention for putting the invention into effect. Thus, a patent for a glue which is produced by combining two chemicals A and B may be infringed by a person who supplies either A or B to a person who then manufactures the glue.⁷¹ The question of what it means for an online invention to be put into effect in the United Kingdom was recently considered by the Court of Appeal. The patent in question was for a gaming system consisting of a host computer, terminal computers, and software that operates the system. The invention enabled end-users on terminal computers to engage in interactive gaming with the host computer.

⁶⁶ 'New use patents raise vexing questions about the patentee's right to prevent others from selling the old compound': *Rohm & Haas v. Dawson Chem.*, 448 US 176 (1980).

⁶⁷ Paterson, para. 10–31.

⁶⁸ In response to arguments of this type, the Enlarged Board of Appeal offered the following unhelpful advice: 'there is a clear distinction between the protection which is conferred and the rights which are conferred by a European patent'. While the 'protection conferred by a patent is determined by the terms of the claims (Art. 69(1) EPC) and in particular by the categories of such claims and their technical features. . . [i]n contrast, the rights conferred on the proprietor of a European patent (Art. 64(1) EPC) are the legal rights . . . [conferred] upon the proprietor'. *Mobil/Friction reducing additive*, G2/88 [1990] EPOR 73, 80–1.

⁶⁹ See below at pp. 545–6.

⁷⁰ PA s. 60(2); CPC 26(1). *Dow Chemical v. Spence Bryson* [1982] FSR 598, 628–30 (inducing or procuring infringement by persuading infringer to adopt process, teaching how to operate it). See below at pp. 1061–4.

⁷¹ The policy of expanding the patentee's monopoly to cover contributory infringement seems to conflict with the policy underpinning the rules preventing a patentee from requiring licensees to utilize particular suppliers. On these see below at p. 558. The connection is recognized in US jurisprudence where the Supreme Court has observed that the 'doctrines of contributory infringement and patent misuse have long and interrelated histories': *Dawson Chemical Co. v. Rohm & Haas Co.*, 448 (US) 176 (1980).

The defendant, William Hill, operated an on-line gaming system for punters in the UK. British punters were supplied with a computer program (either via CD or downloaded from the net) that transformed their computer into a terminal computer of the defendant's system. The claimants argued that when the defendant's system was in use it infringed their patent. The defendant argued that it did not infringe the patent because its host computer was located abroad and not in the United Kingdom (in Antigua and then in Curacao in the Netherlands Antilles). Aldous LJ said that it was 'not straining the word "use" to conclude that the UK punter will use the claimed gaming system in the UK, even if the host computer is located in, say, Antigua'.⁷² Focusing on the way the end-user related to the invention, Aldous LJ said that a punter who uses the William Hill system would be using the whole system as if it was in the United Kingdom. The punter will in substance use the host computer in the United Kingdom, it being irrelevant to him where it is situated. Aldous LJ concluded saying that in supplying the computer program in the United Kingdom, the defendant intended to put the invention into effect in the United Kingdom and as such infringed the claimant's patent.⁷³

A person will also indirectly infringe where they supply a number of the essential components of a patented invention. This would occur, for example, where a patent for an oil lamp (which was made up of a vessel holding the oil, a burner and wick, an outer glass container, and a chimney) and the defendant supplied all of the parts other than the chimney.⁷⁴

For indirect infringement to take place, three elements must be satisfied. First, the proprietor of the patent must establish that the means supplied by the defendant relate to an essential element of the invention.⁷⁵ Second, the supplier must know, or it must be obvious to a reasonable person in the circumstances, that the means are both 'suitable' for and are 'intended' to be used in putting the invention into effect.⁷⁶ The imposition of a knowledge requirement, which is construed objectively, ensures that parties who do not knowingly benefit from the misuse of a patent are not caught as indirect infringers. Third, in recognition of the fact that there may be legitimate reasons why a person supplies or offers to supply something that enables the means for putting the invention into effect, section 60(3) provides that the supply of a staple commercial product will not constitute an indirect infringement under section 60(2).⁷⁷ The meaning of 'staple commercial product' is not clear, though it might be assumed that it covers basic products that are readily available.⁷⁸ The staple commercial product exemption does not apply where the product is specifically supplied for the purpose of *inducing* an infringement.⁷⁹

2.5.1 Novelty of use claims

Given the difficulty in establishing direct liability in relation to new-use patents (discussed earlier), indirect liability may take on a greater significance. Taking the example of a patent

⁷² *Menashe Business Mercantile v. William Hill Organization* [2003] RPC 575, 584–5 (CA); upholding Jacob J's decision ([2002] RPC 951), but for different reasons.

⁷³ *Ibid.* ⁷⁴ See *Wallace v. Holmes*, 29 F Cas 74 (No. 17, 100) (CC Conn 1871).

⁷⁵ *Hazell Grove v. Euro League Leisure* [1995] RPC 529, 541.

⁷⁶ For the pre-1977 position see *Dunlop v. Moseley* (1904) 21 RPC 274.

⁷⁷ In *Pavel v. Sony* SRIS CC/14/93 the Patents County Court defined staple commercial product as meaning 'products of regular kind needed daily and generally available'.

⁷⁸ A. Benyamini, *Patent Infringement in the European Community* (1993), 234–5.

⁷⁹ *Furr v. CD Truline (Building Products)* [1985] FSR 553, 565.

for the use of a substance in oil as a lubricant, where it was previously known that the substance inhibited rust, it would seem that a defendant would infringe if they supplied the oil to persons and advertised it as a lubricant. However, a person would not infringe if they continued to supply the oil as a rust inhibitor. While it may be known that the oil could be used as a lubricant, it would be difficult to prove that the defendant 'intended' that the oil be used in this way (as is required under section 60(2)). In these circumstances, secondary factors such as the documentation that accompanies the product, which may indicate the way the product was expected to be used may be helpful.⁸⁰ It would be more difficult to determine whether a defendant indirectly infringes where they supplied the oil saying that it acted both as a rust inhibitor and a friction reducer. The liability of the defendant is also uncertain when they supplied the oil saying it acted as a rust inhibitor, where it was widely known that the oil could also be used to reduce friction. In these circumstances, the likelihood of the user using the oil as a lubricant is high but not certain. Jacob J, who has expressed doubts about the role of novelty of use claims, has called for these issues to be considered in detail by the European Patent Office whenever it gives further consideration to claims for uses.⁸¹ So far, these pleas have fallen on deaf ears.

2.6 ADDITIONAL LIABILITY

In addition to the rights set out in sections 60(1) and 60(2), patentees are also able to make use of a limited number of provisions that exist outside of the 1977 Patents Act. These provisions will be particularly important where a party acts in such a way as to undermine the value of a patent, yet the activities fall outside of the scope of section 60(1) or (2).

Perhaps the most important non-statutory mechanism available to a patent owner is the concept of joint tort-feasance.⁸² This provides that even if a party does not fall within the scope of section 60, if it can be shown that they have acted in a 'common design' with a party who is liable of a statutory tort of infringement under section 60 (and that they jointly inflicted damage on a patentee), the patentee can enjoin the third party as a joint tortfeasor.⁸³

It has also been suggested that the law of restitution provides patentees with an additional ground on which to found liability. More specifically, it has been argued that independently of the rights set out in the Patents Act, the law also recognizes unjust enrichment as a separate cause of action. Proposals of this type were considered and rejected in *Union Carbide Corporation v. BP Chemicals* where Jacob J said that the law of restitution could *not* be used to supplement the law of patents to the extent of providing a cause of action for unjust enrichment.⁸⁴ Jacob J did, however, say that there might be cases where the strict rights set out in section 61 of the 1977 Act might not limit what a court could do in furtherance of the policy of patent law: what this policy is and what it might mean in this context was left unclear.

⁸⁰ It has been said that German case law supports the view that in this form there is direct infringement, either because a use claim is seen as primarily a product claim and this amounts to sale of the product, or because such an act is an offering of a process for use: see A. Benyamini, *Patent Infringement in the European Community* (1993), 84–90 (advocating direct infringement approach). See further A. Horton, 'Methods of Treatment and Second Medical Use' (Aug. 2000) *Patent World* 9, 12.

⁸¹ *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [1999] *RPC* 253, 280.

⁸² See, *CIPA*, para. 60.24.

⁸³ See further below at pp. 1062–4.

⁸⁴ [1998] *FSR* 1.

3 SCOPE OF PROTECTION

Once it is clear that a defendant has carried out one of the activities listed in section 60, it is then necessary to consider whether in so doing they fell within the scope of the patent. This requires the court to compare the patented invention with the defendant's alleged infringing process or device. Where the two are identical, the defendant will clearly infringe. Similarly, where the claimant's invention and the alleged infringing product are very different, there will be no infringement. It is also clear that a defendant will infringe where they incorporate the patented invention into a larger process or product. This is the case even if the addition improves upon the patented invention. It is also clear that the defendant will infringe where they supply a patented product in parts or in kit form.⁸⁵ A defendant will not infringe, however, if the consumer needs to exercise inventive skill in putting the kit together.

While these situations are relatively unproblematic, problems arise where there is only a slight difference between the patented invention and the defendant's alleged infringing product. This would be the case, for example, where rather than adding to the patented invention a defendant alters or omits to include part of the patented invention in their product or process and on this basis argues that their invention falls outside the scope of the monopoly.⁸⁶ Problems also arise where a defendant changes one aspect of an invention, or where they use a different means to reach the same end result as the patented invention. In these situations, the decision as to whether a defendant infringes largely turns on the way the scope of protection is determined.

3.1 DETERMINING THE SCOPE OF PROTECTION

The starting point for determining the scope of protection is section 125 of the Patents Act, which corresponds to Article 69 of the EPC. This provides that the extent of the protection conferred by a patent shall be 'taken to be that specified in a claim of the specification of the application or patent, as the case may be, as interpreted by the description and any drawings contained in that specification'. Over time, a number of rules have been developed that influence the way patent claims are interpreted. The more important of these provide that a patent specification must be read as a whole; that the description and drawings shall be used to interpret the claims;⁸⁷ that the claims must be interpreted as part of the entire document;⁸⁸ and that the court can hear expert evidence on the meaning of technical terms.⁸⁹ The patent document is read from the point of view of a person

⁸⁵ *Rotocrop International v. Genbournne* [1982] FSR 241.

⁸⁶ A related situation arises where a defendant supplies most but not all of the patented invention in kit form.

⁸⁷ PA s. 125; EPC Art. 69. In *Rosedale v. Carlton Tyre* [1960] RPC 59 the Court of Appeal used the drawings and descriptions in determining that 'holes' did not have to be round.

⁸⁸ *EMI v. Lissen* (1939) 56 RPC 23; *Glaverbel SA v. British Coal Corporation* [1995] RPC 255, 269. The statement of the problem which the invention is intended to solve may be particularly influential: *Minnesota Mining & Manufacturing Co. v. Plastus Kreativ AB* [1997] RPC 737 (CA); *SEB v. De'Longhi* [2002] EWHC 1556, para. 2 (when one encounters a word of degree, the problem is to ascertain its function in the claim so as to obtain a handle on its meaning).

⁸⁹ *Glaverbel SA v. British Coal Corporation* [1995] RPC 255, 269 (Staughton LJ).

skilled in the art and is understood according to the common general knowledge available at the time of its publication.⁹⁰ Controversially, the prosecution history, that is information exchanged between the applicant and the Patent Office during the grant of the patent, has also been used to interpret the claims.⁹¹

While a variety of different factors are taken into account when determining the scope of protection provided by a patent, three things stand out. These are Lord Diplock's judgment in *Catnic v. Hill and Smith*, the Protocol on the Interpretation of Article 69, and Hoffmann J's judgment in *Improver v Remington*. We will look at each in turn.

3.1.1 *Catnic v. Hill and Smith*

In order to understand the way patents have been interpreted under the Patents Act 1977, it is necessary to return to the 1982 House of Lords decision of *Catnic v. Hill and Smith* where Lord Diplock argued that a patent specification should be given a *purposive* rather than a literal construction.⁹² Although *Catnic* was decided under the 1949 Patents Act, it has been decided that Lord Diplock's rejection of the literal mode of interpretation and its replacement by a purposive style of interpretation was not only still relevant under the 1977 Act, it was also accepted that the purposive approach to interpretation is the correct approach to be adopted under the Protocol on the Interpretation of Article 69 of the European Patent Convention.⁹³ The ongoing importance of Diplock LJ's judgment was reinforced by Hoffmann J's 1990 decision in *Improver v Remington*, which builds upon Lord Diplock's judgment.

In *Catnic* the House of Lords was called upon to decide whether in manufacturing steel lintels the defendants had infringed the claimant's patent for galvanized-steel lintels. (A lintel is a load-bearing beam that spans open spaces such as doors and windows in cavity walls.) While it was evident that the defendant's lintel and the patented invention (see Figure 22.1) were very similar, one issue remained unclear. This arose from the fact that while the patent specified that the rear side of the lintel should be 'vertical', the defendant's lintel (see Figure 22.2) was at an angle of 84 degrees. In order to determine whether the

⁹⁰ *Hoechst Celanese Corporation v. BP Chemicals* [1999] FSR 319 (Aldous LJ). On common general knowledge, see *Beloit v. Valmet* [1997] RPC 489, 494.

⁹¹ *Furr v. CD Truline (Building Products)* [1985] FSR 553, 560–4.; *Rohm and Haas v. Collag* [2002] FSR 445, 457–8 (letter to EPO held to contain objective information that was of assistance in resolving aspects of the specification that were unclear); *Wesley Jessen v. Coopervision* [2003] RPC 355, 382 (prosecution history at the EPO, which showed that application was changed from pattern to dots to avoid prior art, was used to limit 'dots' to mean 'small roundish marks' and nothing else). For the position of prosecution history estoppel in the US see *Festo Corporation v. Shoketsu Kinzouku Kogyo KK* 535 US 722 (2002); [2003] FSR 10 (patentee bound by representations made at US patent office). See also *Celltech (Adair's) US Patent* [2003] FSR 433 (in a matter that had to be decided on the basis of US patent law, Jacob J applied US patent law rule as file wrapper stopper as if he was a US District court judge). Cf. *Glaverbel v. British Coal (No. 2)* [1993] RPC 90.

⁹² [1982] RPC 183, 241 (HL).

⁹³ In *PLG Research v. Ardon International* [1995] RPC 287, 309, the Court of Appeal argued that *Catnic* was no longer good law under the 1977 Act. However, the promotion of Aldous LJ to the Appeal Court led to an immediate reversal of this view. This has been confirmed in a range of subsequent decisions. See, e.g. *Kastner v. Rizla* [1995] RPC 585, 594; *Beloit Technologies v. Valmet Paper Machinery* [1997] RPC 489 (CA); *Minnesota Mining & Manufacturing v. Plastus Kreativ AB* [1997] RPC 737 (CA); *Codex v. Racal-Milgo* [1983] RPC 369 (CA); *Anchor Building v. Redland Roof Tiles* [1990] RPC 283 (CA); cf. J. Turner, 'Purposive Construction: Seven Reasons Why *Catnic* is Wrong' [1999] EIPR 531 (but, see the critical response by M. Franzosi, 'In Defence of *Catnic*' [2000] EIPR 242).

Fig. 22.1 Claimant's lintel

Fig. 22.2 Defendant's lintel

claimant's patent had been infringed, the House of Lords had to decide whether a claim that specified that the rear support be vertical encompassed a lintel whose rear support was at an angle of 84 degrees.

While a literal reading of the claims would have limited the claimant's patent to lintels at 90 degrees (and thus to a finding of non-infringement), Lord Diplock said that the patent ought to be construed *purposively*. A purposive interpretation demands that the claims be read through the eyes of the person skilled in the art, and that the purpose or function of the invention should be borne in mind when the patent is interpreted.⁹⁴ This meant that when deciding whether 'vertical' included lintels at an 84-degree angle, the person skilled in the art would take into account the function or purpose of the invention. On reading the patent, it was decided that the person skilled in the art would have understood that the reason why the patent specified that the rear support member was to be 'vertical' related to the load-bearing capacity of the lintel. An important factor in the finding that the patent had been infringed was that a 6-degree movement away from 90

⁹⁴ *Kastner v. Rizla* [1995] RPC 585.

degrees only led to a 0.6 per cent reduction in the load-bearing capacity of the lintel. This meant that the defendant's lintel effectively performed the same purpose or function as the claimant's lintel.

It is often assumed that purposive interpretation offers greater protection to patentees than a more literal reading of the claims may provide and, in turn, that the two styles of interpretation are opposites. However, this is not necessarily the case.⁹⁵ The reason for this is that while the use of a purposive style of interpretation often means that the scope of the monopoly is broader than that which would arise if the claims were interpreted literally, purposive interpretation does not necessarily require that the claims be read broadly or indeed in the patentee's favour. All that the purposive approach states is that the court should interpret patents through the eyes of the person skilled in the art, while taking into account the purpose of the invention. Nothing more, nothing less. How broadly claims will be read in any particular case *always* depends on the approach undertaken by the person skilled in the art in the case in hand which, in turn, is influenced by the purpose of the invention and the way the claims are drafted.⁹⁶

The potentially limiting nature of the purposive interpretation was highlighted in *Catnic* when Lord Diplock said that there may be good reasons why a person skilled in the art reads the patent claims literally, thus restricting the scope of the monopoly.⁹⁷ The most obvious reason why a patentee might have intended that the primary meaning of the claim should be strictly complied with is because of the existence of some closely related prior art which would anticipate (and thus invalidate) the patent if it was construed broadly. Another reason why the person skilled in the art may think the patentee intended to confine the scope of the claims relates to the language or types of parameters used by the patentee. Where specific numerical ranges or technical terms (such as 'helical spring') are used, a person skilled in the art might be inclined to think the choice of wording was deliberate.⁹⁸

3.1.2 The Protocol on Interpretation of Article 69 of the EPC

One of the problems that confronted the drafters of the EPC was that some member states, notably the United Kingdom and Germany, approached the task of interpreting patent claims differently. While the British were said to favour a strict, literal reading of the claims, it was suggested that in Germany the claims simply acted as a guide for determining the scope of protection. Given the potentially important role that claim interpretation plays in determining the scope of protection, if these different styles of interpretation were allowed to continue under the EPC, it would have undermined the aim of a standardized pan-Europe patent system. In an attempt to overcome these (perceived) differences and to harmonize the way patents are interpreted across member states,

⁹⁵ See *Minnesota Mining & Manufacturing v. Plastus Kreativ AB* [1997] RPC 737, 747; *Auchinloss v. Agricultural and Veterinary Supplies* [1997] RPC 649.

⁹⁶ See above at pp. 351–2.

⁹⁷ *Catnic Components v. Hill & Smith* [1982] RPC 183. See also *Minnesota Mining & Manufacturing v. Plastus Kreativ* [1997] RPC 737, 747.

⁹⁸ *Improver Corp. v. Remington* [1989] RPC 69 where Hoffmann J interpreted the term 'helical spring' as one which would be understood by a person skilled in the art as being confined so that it did not include a functional equivalent made out of rubber.

the Protocol on Interpretation of Article 69 of the EPC was introduced to provide guidance as to how patent claims should be interpreted.⁹⁹

There are two notable features of the Protocol. The first is that it stipulates the standpoint of interpretation that should *not* be adopted when interpreting a patent. In particular it says that the courts should not read the claims literally. The Protocol also says that the claims should not be used as a mere guide to interpretation. Instead it says, somewhat cryptically, that the courts should adopt a position in between these extremes. The second more positive feature of the Protocol is that it says that the courts should interpret the claims in a way that combines a fair protection for the patentee with a reasonable degree of certainty for third parties.¹⁰⁰

3.1.3 *Improver v. Remington*

Alongside *Catnic*, the most influential decision on the patent infringement in the United Kingdom is Hoffmann J's judgment in *Improver Corporation v. Remington Consumer Products*.¹⁰¹ The patent in issue in this case was for a device designed to remove body hair known as the 'Epilady'. The Epilady consisted of a helical spring attached to an electronic motor which, when activated, expanded and contracted. When applied to the skin, hairs were caught in the spring (as it closed) and then pulled out as the spring contracted. The defendant's product, evocatively called the 'Smooth & Silky', also removed body hair. In contrast to the helical spring used in the Epilady, the Smooth & Silky used a piece of rubber that had a series of small slits cut into it to capture and pull out hair. In finding that the claimant's patent had not been infringed, Hoffmann J. said that Lord Diplock's judgment in *Catnic* could be reduced to three questions (known as the 'Improver questions').¹⁰² These are:

- (1) Does the variant have a material effect on the way the invention works? If yes, the variant is outside the claim. If no:
- (2) Would this (i.e. that the variant has no material effect) have been obvious at the date of the publication of the patent to a reader skilled in the art? If no, the variant is outside the claim. If yes:
- (3) Would the reader skilled in the art nevertheless have understood from the language of the claim that strict compliance with the primary meaning was an essential requirement of the invention? If yes, the variant is outside the claim.¹⁰³

The first Improver Question requires the court to identify the difference (or variation) between the patented invention and the alleged infringing product. In *Improver* this was the use of the rubber tube rather than the helical spring. Once this is done, the court must then ascertain whether the variant had a material impact on the way the invention works. Two key concepts underpin the first Improver Question. The first is that it 'envisages that

⁹⁹ On the Protocol see B. Sherman, 'Patent Claim Interpretation: The Impact of the Protocol on Interpretation' (1991) 54 *MLR* 499. Proposed new Protocol on the Interpretation of Art. 69: Art. 2, item 2 of the *Act Revising the Convention on the Grant of European Patents (EPC)* (Munich) (29 Nov. 2000) MRJ/3/00 Rev 1e.

¹⁰⁰ On the background see *American Home Products v. Novartis Pharmaceuticals* [2000] *RPC* 547, 557.

¹⁰¹ [1990] *FSR* 181, 189.

¹⁰² These questions have been called the 'Improver Questions', the 'Protocol Questions' (*Wheatley v. Drillsafe* [2001] *RPC* 133, 142 (CA) (Aldous LJ) and 'the Questions' (*Kirin-Amgen v. Transkaryotic Therapies* [2002] *RPC* 187, 194–5 (Neuberger J)). To avoid confusion we will refer to them as the *Improver* Questions.

¹⁰³ *Improver v. Remington* [1990] *FSR* 181, CCC.

the claim has wider ambit than the literal meaning of the words, so as to give fair protection for the patentee'.¹⁰⁴ That is, it encourages a non-literal reading of the claims. (If the scope of protection was limited to that which was provided by a literal reading of the claims, any variation would mean that there was no infringement). At the same time, the question harps back to a long-standing rule in British patent law that it is not necessary for every element of a patented invention to be taken for it to be infringed. Rather, for an infringement to take place, a defendant must take all of the *material* or *essential* elements of the invention.¹⁰⁵ Correspondingly, the fact that a defendant fails to take an immaterial or non-essential part of the patented invention will not allow them to escape liability for infringement. This ensures that patentees' interests are not undermined by defendants who dress up infringing inventions to appear as if they fall outside of the scope of the patent monopoly.¹⁰⁶

If the court finds that the variant has a material effect on the way the invention works this is the end of the matter: there is no infringement. However, if the court finds that the variant does not have a material effect on the way the invention works, the court then goes on to ask the hypothetical question: would this (i.e. that the variant has no material effect) have been obvious at the date of the publication of the patent to a reader skilled in the art?¹⁰⁷ If no, the variant is outside the claim. To secure a reasonable degree of certainty for third parties, the second question imposes limits on the non-literal reading encouraged by the first question. One issue that has arisen when applying this question is the level of knowledge that should be imputed to the skilled person. Should they, for example, be told that the defendant's invention works? Or, should the skilled person simply be presented with the invention, with no additional explanations or instructions? The way this issue is resolved is important, since the more information given to the skilled person, the more likely it is that they would conclude that it was obvious that the variant did not have a material effect on the way the invention worked. In *Kirin-Amgen* the Court of Appeal proceeded on the basis that the skilled addressee would know about the existence of the alleged infringing product, but would not know whether it worked or that it had a material effect on the way the invention works.¹⁰⁸

¹⁰⁴ *Wheatley v. Drillsafe* [2001] RPC 133, 142 (CA) Aldous LJ.

¹⁰⁵ There has been little discussion about how the material elements of the invention are to be determined. Presumably, the courts ought to construe the patent purposively from the perspective of the reasonable person skilled in the art. The terms 'essence', 'pith and marrow', 'substantial', 'material', and 'essential' have been used interchangeably. All boil down to the same point, that for an infringement action to be successful, it is necessary for the essence or core of a patented invention to be 'taken'. See *Clark v. Adie* (1877) 2 App Cas 315 (Lord Cairns).

¹⁰⁶ Albeit that the question is turned inside out. Instead of stating that the material aspects of an invention must be taken for there to be an infringement, the first *Improver* Question requires the court to find that the variant does not have a material effect on the way the invention works. This is supported by Arden LJ's comment that the 'variant must be immaterial, obvious, and consistent with the language of the patent'. *Pharmacia v. Merck* [2002] RPC 775, 830 (CA).

¹⁰⁷ Hoffmann J followed *Catnic* ([1982] RPC 183, 243) and said that the second question was to be judged as of the date when the specification was published. However, this was not followed in *American Home Products v. Novartis Pharmaceuticals* [2001] RPC 159, 172 (CA) (date of the patent). Similarly in *Kirin-Amgen v. TKT* [2003] RPC 3, the court looked at evidence from the filing date of the patent. See H. Dunlop, 'Court of Appeal Gets to Grips with the Protocol' [2003] EIPR 342, 349 (arguing that the 'second question is judged at the filing date of the application (or the priority date if this is claimed and relied upon)').

¹⁰⁸ *Kirin-Amgen v. TKT* [2003] RPC 31, 63 (CA) For a similar approach pre-*Amgen*, see *Owen Mumford v. Novo Nordisk*, O/261/02. On this see H. Dunlop, 'Court of Appeal gets to grips with the Protocol' [2003] EIPR

The third and final *Improver* Question requires the court to ask whether the reader skilled in the art would have understood from the language of the claim that strict compliance with the primary meaning was an essential requirement of the invention? If yes, the variant is outside the claim. This is the clearest and most straightforward of the three *Improver* Questions. As Lord Diplock explained in *Catnic*, there are a number of reasons why patentees might want to have their claims read strictly: the most obvious being the desire to avoid some prior art that would otherwise anticipate the patent. In this sense, it provides fairness to the patentee and also a degree of certainty for third parties.¹⁰⁹

3.1.4 How is the scope of patent determined?

In thinking about the way the scope of protection provided by a patent is determined, it is necessary to take a number of things into account. While there is little doubt that *Catnic*, the Protocol on Interpretation, and the *Improver* Questions form the cornerstone of patent claim interpretation, it is important to keep in mind that they are, as Mance LJ said, ‘no more than aids to assist to arrive at the proper construction’.¹¹⁰ As such, they should not be applied mechanistically, nor necessarily in all cases.¹¹¹ This is reflected in the fact that while the courts have tended to favour the *Improver* Questions when determining whether a patent has been infringed,¹¹² the tests are applied inconsistently.¹¹³ For example while Aldous LJ may use the *Improver* Questions fairly consistently, in other cases the *Improver* Questions have been applied, but then ‘checked’ against the principles laid down in the Protocol.¹¹⁴ In other situations the courts have jettisoned *Catnic*, the *Improver* Questions and the Protocol and simply relied on first impressions.¹¹⁵ In other cases, the courts have looked to the essence or core of the invention as the basis for determining infringement.

It is also important to note that while *Catnic* and *Improver* provide useful guidance when thinking about whether a patent for a mechanical invention has been infringed, they are less helpful when it comes to the infringement of complex chemical and biotechnological inventions.¹¹⁶ Where a patent for a mechanical invention such as a door lintel or a hair removal device is infringed, there are unlikely to be any doubts about the parameters of either the invention or the alleged infringing device. In these situations, the main question is whether they are the ‘same’. This is not the case, however, with complex biotechnological and chemical inventions. One of the main problems, particularly with the *Improver* Questions, is that they do not provide any guidance as to how the patented

342, 348 ff (person skilled in the art should not be provided with a working example as that would tip the balance in favour of a ‘yes’ answer).

¹⁰⁹ H. Dunlop, ‘Court of Appeal Gets to Grips with the Protocol’ [2003] *EIPR* 342, 345.

¹¹⁰ *Wheatley v. Drillsafe* [2001] *RPC* 133, 156 (Mance LJ) (CA).

¹¹¹ *Kirin-Amgen v. Transkaryotic Therapies* [2002] *RPC* 187, 202 (Neuberger J).

¹¹² *Monsanto v. Merck* [2000] *RPC* 709, 782 (Pumfrey J); *Wheatley v. Drillsafe* [2001] *RPC* 133, 144 (Aldous LJ) (CA).

¹¹³ For problems in the application of the *Improver* test, see *Wheatley v. Drillsafe* [2001] *RPC* 133 (CA); *Consafe Engineering v. Emtunga* [1999] *RPC* 154, 160–1; *Kastner v. Rizla* [1995] *RPC* 585, 595 (suggesting that the court should lean away from over rigid application of the *Improver* test).

¹¹⁴ *Pharmacia v. Merck* [2002] *RPC* 775, 830 (Arden LJ) (CA).

¹¹⁵ *Wheatley v. Drillsafe* [2001] *RPC* 133, 151 (Sedley LJ) (CA).

¹¹⁶ See G. Thomson and L. Kempton. ‘Construction Issues in Pharmaceutical and Biotech Cases’ [2002] *EIPR* 591; P. Cole ‘Pioneering Pays—Or Does It?’ [2000] *EIPR* 534, 540.

invention or the defendant's 'product' are to be characterized. Instead, the *Improver* Questions take these as givens, focusing instead of the difference between the two. While it may be relatively easy to characterize the claimant's invention and the defendant's alleged infringing device where mechanical inventions are involved, this is often not the case with complex technologies. As Laddie J explained, this is because 'precision is not always possible: either because the language is incapable of defining the boundary or because the technology has not developed sufficiently for the boundary to be identified'.¹¹⁷

Problems of this nature have led some commentators to suggest that the *Improver* Questions should 'be reserved for the types of cases from whence they came, namely those involving mechanical variants'.¹¹⁸ To some extent, it seems as if this is already happening. This can be seen, for example, in *Pharmacia v. Merck*, which involved the infringement of the complex chemical compound rapamycin. Aldous LJ said that he found it difficult to apply the *Improver* Questions to a 'claim in which every term is unambiguous and devoid of any question of degree . . . but which would nonetheless be read as necessarily involving the presence of other species not mentioned . . . It is the nature of class claims that not every member of every class will be exemplified and described'.¹¹⁹ As a result, Aldous LJ accepted that this was not a situation where the *Improver* Questions could be used without modification. Instead he said that the Court had no alternative but to seek the middle way required by the Protocol by considering what would be fair for the patentee and whether that would unfairly impinge upon the required certainty for the public.¹²⁰ In other cases, the courts have fallen back on the longstanding practice whereby they look to the essence of the invention when determining whether a patent has been infringed.¹²¹

3.2 REPLACEMENT OF PART OF AN INVENTION WITH AN EQUIVALENT PART

It is well settled that for there to be an infringement, the defendant must deal with all the material elements of the invention. One issue that remains uncertain under the 1977 Act is whether a person will infringe where they substitute a material element of an invention with something that is functionally equivalent. Prior to the passage of the 1977 Patents Act, under the so-called doctrine of equivalents, the courts held that elements of an invention were the same not only when they were identical, but also when they were functionally equivalent.¹²² This means that 'there may be infringement even if the accused product falls outside the meaning of the words of the claim when understood in context'.¹²³ As Thomas Webster wrote in 1851, 'the question is, whether that which may have been done, though different in form and configuration, is not a geometrical, mechanical

¹¹⁷ *American Home Products v. Novartis Pharmaceuticals* [2000] RPC 547, 558 (Laddie J).

¹¹⁸ Thomson and Kempton, 595.

¹¹⁹ *Monsanto v. Merck* [2000] RPC 709 (approved on appeal in *Pharmacia v. Merck* [2002] RPC 775, 796 (Aldous LJ) (CA)).

¹²⁰ *Pharmacia v. Merck* [2002] RPC 775, 796 (Aldous LJ) (CA).

¹²¹ *Wheatley v. Drillsafe* [2001] RPC 133, 154–55 (Mance LJ) (CA); *Rohm and Haas v. Collag* [2002] FSR 445, 454 (linking purposive interpretation to inventive purpose).

¹²² See *Van der Lely v. Bamfords* [1963] RPC 61 (HL); *Rodi & Weinenberger v. Showell* [1969] RPC 367 (HL); *Beecham Group v. Bristol Laboratories* [1978] RPC 153.

¹²³ *Celltech (Adair's) US Patent* [2003] FSR 433, 436 (Jacob J); see generally M. Franzosi, 'Equivalence in Europe' [2003] EIPR 237.

or chemical equivalent; whether, though the form be changed, the same result be not attained'.¹²⁴

Despite its long tradition, doubts have been raised as to whether the doctrine of equivalents is still applicable under the 1977 Act. The reason given for this is that neither Article 69 of the EPC¹²⁵ nor the Protocol makes any specific reference to the doctrine of equivalents.¹²⁶ While this is undoubtedly the case, it is wrong to assume from this that the doctrine of equivalents therefore has no place in British law. Rather, following the widely shared view that a purposive style of interpretation is the approach that ought to be adopted under the Protocol, the question of whether the doctrine of equivalents has any continued relevance under the 1977 Act ought to be decided purposively on the facts of individual cases. This means that whether the replacement of a part of an invention with something that is functionally equivalent constitutes an infringement ought to depend on the way the person skilled in the art views the patent in question.¹²⁷ Such an approach would not only be consistent with the current jurisprudence in other EPC countries, by focusing upon the function or purpose that invention is to perform (which is what the doctrine of equivalents demands) this follows the spirit rather than the letter of the Protocol: the very point that Lord Diplock was making in the *Catnic* decision.

Any remaining doubts about the status of the doctrine of equivalents were answered by the EPC 2000. In affirming the continued role of the doctrine of equivalents, the new Protocol on Interpretation in the EPC 2000 reads that for 'the purposes of determining the extent of protection conferred by a European patent, due account shall be taken of any element which is equivalent to an element specified in the claims'.¹²⁸

4 DEFENCES TO INFRINGEMENT

Once the claimant has proved that the defendant has performed an activity that falls within the scope of the patent monopoly, the obligation then shifts to the defendant to show that the activity is exempted from liability by one of the defences to patent infringement that are available to them. There has been surprisingly little discussion about the defences to patent infringement and the policies that inform them.¹²⁹ At a general level, the exceptions balance the interests of patentees against the interests of other groups, such as competitors, prior users, traders, users, non-profit-making bodies, as well as teaching and research establishments. In some cases, the defences operate to overcome the market failure that occurs where a patentee declines to license a socially beneficial use because of

¹²⁴ T. Webster, *The Subject Matter of Letters Patent for Inventions and the Registration of Designs* (1851), 83.

¹²⁵ PA s. 125.

¹²⁶ *Beloit Technologies v. Valmet Paper Machinery* [1995] RPC 705, 720; *Celltech (Adair's) US Patent* [2003] FSR 433, 436 (no express provision in Europe for doctrine of equivalents).

¹²⁷ In *Eli Lilly v. Novopharm* [1966] RPC 1, 21 the Federal Court of Canada said that as the court was entitled to adopt a purposive approach in construing the claims and the essential parts thereof, this obviated the need to resort to the doctrine of equivalents.

¹²⁸ Proposed new Protocol on the Interpretation of Art. 69: Art. 2, item 2 of the *Act Revising the Convention on the Grant of European Patents (EPC)* (Munich) (29 Nov. 2000) MR/3/00 Rev 1e.

¹²⁹ D. Gilat, *Experimental Use and Patents* (1995); R. Eisenberg, 'Patents and the Progress of Science: Exclusive Rights and Experimental Use' (1989) 56 *University of Chicago LR* 1017; J. Karp, 'Experimental Use as Patent Infringement' (1991) 100 *Yale LJ* 2169.

the transaction costs involved. With these general points in mind, we now turn to look at some of the more important defences that may exempt a defendant from liability.

4.1 PRIVATE NON-COMMERCIAL USES

Section 60(5)(a) provides that acts that are done privately *and* for non-commercial purposes do not infringe.¹³⁰ The private use exception is usually explained on the basis that while private uses may increase scientific knowledge and thus be socially beneficial, high transaction costs may mean that they are unlikely to be licensed.¹³¹ Another factor in favour of the defence is that private non-commercial uses do not pose much of a threat to the patent monopoly. While private uses need not be secret or confidential, they must be 'for the person's own use'.¹³² Where an activity has both commercial and non-commercial benefits, it is necessary to ascertain the subjective intention of the user. If the infringer was motivated by commercial interests, the defence would not apply. However, if the subjective purposes were non-commercial, the defendant could rely on the immunity. This is the case even if the resulting information has a commercial benefit.¹³³

4.2 EXPERIMENTAL USES

Section 60(5)(b) provides immunity for acts done for experimental purposes relating to the subject matter of the invention.¹³⁴ This defence gives effect to a number of related policies, the most obvious is that the patent monopoly should not be allowed to inhibit scientific developments. It is likely that the experimental use defence will become increasingly important as patenting (especially in relation to biotechnology) enters the traditional domains of 'pure' scientific research carried out within the universities.¹³⁵

To a large extent, the scope of the defence depends on the way 'experimental purpose' is defined.¹³⁶ If it can be shown that the purpose of the activity was to discover something unknown or to test a hypothesis, it would be regarded as an experiment.¹³⁷ An act will also be experimental where a person is attempting to discover whether the patented invention works.¹³⁸ This may occur, for example, where a party is thinking to license a patent or they

¹³⁵ E. Barash, 'Experimental Uses, Patents and Scientific Progress' (1997) 91 *Northwestern University LR* 667 (recommending expansion of experimental-use defence for non-profit research).

¹³⁶ The 'purposes for which tests or trials are carried out may in some cases be mixed and in some cases may be difficult to discern'. *Monsanto v. Stauffer Chemical* [1985] RPC 515, 542 (Dillon LJ) (CA).

¹³⁷ *Ibid.*, 515.

¹³⁸ The decision of the Supreme Court of Canada in *Micro-Chemicals v. Smith Kline and French Inter-American* (1971) 25 *DLR* 79, 89 (that use by a defendant to establish that it could manufacture a quality product in accordance with the specification was not an infringement) was explicitly approved by Dillon LJ in *Monsanto v. Stauffer Chemical* [1985] RPC 515, 538. Trials directed to discovering whether something which is known to work in certain conditions will work in different conditions could fairly be regarded as experiments: *ibid.*, 542; D. Gilat, *Experimental Use and Patents* (1995), 20.

believe that the patent is invalid on grounds of insufficiency. Given the public interest in determining whether a monopoly has been validly granted it is desirable that competitors undertake this kind of policing task. In the absence of an experimental use defence, such acts might require the licence of the patentee, which in the circumstances may not be forthcoming.¹³⁹

If the purpose of the activity is to prove something that is already known, to demonstrate to a third party that the product works in the way the maker claims, or to obtain official approval for a product,¹⁴⁰ these would not be regarded as acts done for experimental purposes.¹⁴¹ In one case it was held that trials that were carried out to obtain safety clearances and to gather information to support an attempt to gain approval for a new use of a patented product (to be used once the patent had expired) were for commercial rather than scientific purposes.¹⁴² While the issue has yet to be considered in any detail, it seems that if there is a commercial motive behind the experimental use that it is more likely to fall outside the scope of the exception.¹⁴³ This question will undoubtedly become more pressing given the growing trend for public sector agencies that have traditionally relied upon the defence, such as universities, to commercialize their research results.¹⁴⁴ So far, there has been no consideration given to the question of whether a person who tests an invention to improve it, to invent around the patent, or to invent something else falls within the defence.¹⁴⁵ However, the German Supreme Court has held that experiments to discover the most appropriate form that a patented product should take to alleviate a specific disease fell within the experimental use defence under German law.¹⁴⁶

Once it has been shown that a use has been carried out for an experimental purpose, it

¹³⁹ The situation is analogous to the criticism or review defence in copyright law, which is based on the idea that criticism would be stifled if the law were to require a prospective critic to obtain a licence from the copyright owner before criticizing the work.

¹⁴⁰ *Auchinloss v. Agricultural and Veterinary Supplies* [1999] RPC 397, 405.

¹⁴¹ *Monsanto v. Stauffer Chemicals* [1985] RPC 515, 542 (CA).

¹⁴² *Ibid.*, 515; *Auchinloss v. Agricultural and Veterinary Supplies* [1997] RPC 649; [1999] RPC 397 (CA). Another situation where a person may wish to rely on the defence is where they test someone else's patented invention for the purposes of obtaining regulatory approval, either by providing data or samples to the relevant authority. In *Upjohn v. Kerfoot* [1988] FSR 1, Whitford J held that the mere application for a marketing authorization in respect of a medicinal product even when accompanied by test results did not constitute an infringement of the patent since it did not amount to use of the patent. In the USA such samples are permitted under the Drug Price Competition and Patent Term Restoration Act 1984, 35 USC s. 271. The EU argued that a similar Canadian provision, which permits making and stockpiling of the drug up to 6 months prior to the expiry of the patent, contravened TRIPS. The matter was referred to the WTO: 12 Nov. 1998. See 'Canada: Patent Protection of Pharmaceutical Products (Report of the panel)' (17 Mar. 2000) WT/DS114/R.

¹⁴³ *Inhale Therapeutic Systems v. Quadrant Healthcare* [2002] RPC 419, 463.

¹⁴⁴ For the approach taken in the USA in this situation see *Madey v. Duke University* 64 USPQ 2d 1737 (Fed. Cir. 2002) (Duke University could not rely on experimental use defence because *inter alia* of the commercial nature of the University).

¹⁴⁵ *McDonald v. Graham* [1994] RPC 407 ('No doubt the defendant would be right to submit that supplying a patented article to a designer with a request that he design a non-infringing equivalent would be, in principle, an unobjectionable use of the article if the article were a "franked" article, but the defendant used infringing articles which he was well aware were not supposed to be in his possession at the material time').

¹⁴⁶ *Klinische Versuche (Clinical trials) II* [1998] RPC 423, s. 11(2) of the German Patent Act. See P. Tauchner, 'Experimental Use Exemption in Germany' (Dec. 1997) *Patent World* 23.

is then necessary to show that the experiment relates to the subject matter of the patent.¹⁴⁷ This means, for example, that a person who wished to test a cure for cancer they had developed by applying it to a genetically modified mouse could not rely on the defence against a claim by the patentee of the mouse. If the law were otherwise, the patentees of diagnostic test kits would never receive any remuneration because all uses of the kit would be experimental.¹⁴⁸ Where a researcher wishes to use patented processes or products to test other subject matter, they would need to obtain a licence.¹⁴⁹

4.3 PRIOR USE

As we saw earlier, one of the changes brought about by the 1977 Act was that novelty was redefined only to exclude inventions that had been ‘made available to the public’. As a result, secret third-party use is not novelty-destroying.¹⁵⁰ One of the consequences of this is that the rights conferred by a patent might cover secret activities carried out by a third party prior to grant.¹⁵¹ In recognition that it would be wrong if patents were allowed to be used to prevent a person from carrying on an activity that they were doing prior to grant (the so-called right to work doctrine), section 64(1) provides prior users with a personal defence.¹⁵²

There are a number of points to note about the defence. The first is that it only applies where the prior acts were committed in the United Kingdom (or possibly the EEA).¹⁵³ Given that the novelty standard is worldwide, this raises the possibility that a person carrying out an activity in Japan which is then patented by another person in the United Kingdom, will not be able to practise the invention in the United Kingdom.

It is also important to note that the defence is only available where the acts were carried out in good faith. Although the notion of good faith is yet to be interpreted by the courts, this may prevent a member of a research team from relying on the prior use defence where they left the research team contrary to an understanding between them. Similarly, if a former employee was preparing to use trade secrets obtained while in employment to

¹⁴⁷ In *Auchincloss v. Agricultural and Veterinary Supplies* [1999] RPC 397, 402, 406 (CA), Aldous LJ said the ‘subject matter’ of the invention must be ascertained from the patent as a whole.

¹⁴⁸ *SKF Laboratories v. Evans Medical* [1989] FSR 513, 523.

¹⁴⁹ *Monsanto v. Stauffer Chemical* [1985] RPC 515, 522.

¹⁵⁰ This reinforces the policy that the patent should be granted to the first to file and disclose the invention rather than the first to invent. See P. Hubert, ‘The Prior User Right of H.R. 400: A Careful Balancing of Competing Interests’ (1998) 14 *Comp & High Tech LJ* 189; Symposium (1996) 36 *IDEA* 345.

¹⁵¹ Art. 4(B) of the Paris Convention leaves such matters to the domestic legislation of contracting states. See R. Rohrback, ‘Prior User Rights: Roses or Thorns?’ (1993) 2 *U Balt Intell Prop J* 1; N. Marterer, ‘The Prior User’s Right’ (1990) 21 *IIC* 521; A. Monotti, ‘Balancing the Rights of the Patentee and Prior User of an Invention: The Australian Experience’ [1997] *EIPR* 351.

¹⁵² *Helitune v. Stewart Hughes* [1991] FSR 171, 206.

¹⁵³ The latter modification may be required to prevent the provision being contrary to Art. 28 EC (formerly Art. 30 of the Treaty), as interpreted in *EC Commission v. United Kingdom*, Case C-30/90 [1993] RPC 283; [1992] 2 *CMLR* 709. There is no Community harmonization of this issue. See L. Osterborg, ‘Towards a Harmonized Prior User Right within the Common Market Patent System’ (1981) 12 *IIC* 447; J. Neukom, ‘A Prior Use Right for the Community Patent Convention’ [1990] *EIPR* 165; ‘A Prior Use Right for the Community Patent Convention: An Update’ [1991] *EIPR* 139.

compete with their ex-employer, the ex-employee would not be able to rely on the preparatory acts as a defence to patent infringement.¹⁵⁴

The defence is only available where the defendant has done the acts or made 'serious and effective preparations' before the priority date of the patent to do an act which would be infringing if it was carried out after the grant of the patent. It has been said that the preparations 'must be so advanced as to be about to result in the infringing act being done'.¹⁵⁵ The defence allows a prior user to continue to do the same act after the patent has been granted. While it is not necessary for a defendant to show unbroken use, they must show a clear link or a 'chain of causation' between the prior use and the infringing use.¹⁵⁶ As the prior secret-use defence is a personal defence, the continued use must be by the same person (or partner). The exact scope of the act is therefore crucial. The defence is not available to a defendant who commits an act that is wholly different in nature. This would mean, for example, where the prior use was in relation to a process, the prior user would not be able to use the defence in relation to acts carried out (after grant) in relation to products of the process.¹⁵⁷ It is important to note that some variation is allowed between the prior use and the alleged infringing act:¹⁵⁸ the difficult question is, how much of a variation is possible?

If the act or preparations were done in the course of business, the prior user has the right to authorize the doing of the act by their partners for the time of the business. They also have the right to assign that right or to transmit it on death to any person who acquires that part of the business in the course of which the act was done or the preparations were made.¹⁵⁹ Importantly the defence does not extend to include licensees.¹⁶⁰

4.4 DEFENCES FOR BIOTECHNOLOGICAL INVENTIONS

As a part of the regime dealing with biotechnological inventions, three new defences to the infringement of patents for biotechnological inventions have been formulated. These are set out in Articles 10 and 11 of the Biotechnology Directive and in changes made to the 1977 Patents Act by Patents Regulations 2000.

4.4.1 Exhaustion of biological patents

Article 10/paragraph 10 of Schedule A2 of the 1977 Act provide that the protection conferred by a patent¹⁶¹ shall not extend to biological material obtained from the

¹⁵⁴ Subject to the 'springboard principle', the action for breach of confidence may not be available once the employee's patent is published, so it is important that the ex-employee cannot rely on the s. 64 defence. See below at pp. 1005–7.

¹⁵⁵ *Lubrizol Corporation v. Esso Petroleum* [1998] RPC 727, 770 (CA); *Helitune v. Stewart Hughes* [1991] FSR 171 (serious and effective preparations required more than general research into the same field).

¹⁵⁶ *Hadley Industries v. Metal Sections* (13 Nov. 1998) (unreported) (Patents Court).

¹⁵⁷ *Ibid.*

¹⁵⁸ *Helitune v. Stewart Hughes* [1991] FSR 171, 206; *Lubrizol v. Esso Petroleum* [1992] RPC 281, 295; *ibid.* [1998] RPC 727 (CA).

¹⁵⁹ PA s. 64(2) provides an equivalent to exhaustion when a prior user disposes of the product. The person who acquires the product is entitled to deal with the product in the same way as if it had been disposed of by a sole registered proprietor.

¹⁶⁰ PA s. 64(3).

¹⁶¹ As set out in Biotech. Dir. Arts. 8 and 9; PA Sched. A2, paras. 7, 8, 9. These were discussed above at pp. 526–7.

propagation or multiplication of biological material placed on the market by the owner of the patent (or with his consent), where the multiplication or propagation necessarily results from the application for which the biological material was marketed. This is subject to the proviso that the material obtained is not subsequently used for other types of propagation or multiplication.

In effect Article 10 introduces a specific form of exhaustion for biological patents. For the patent rights to be exhausted under Article 10, it is necessary to establish that the multiplication or propagation (which potentially infringes) the patent is 'an incident of what might be called the true purpose of the sale'.¹⁶² The upshot of this is that a person who used a patented yeast to make beer would prima facie infringe the patent in the yeast. This is because the process of making the beer necessarily involves the multiplication of the yeast. However, if the patented yeast were sold in a home brew shop for the purpose of beer-making, Article 10 (and its British equivalent) would provide the defendant with a 'defence'. However, if the defendant propagated the yeast and offered it for sale, the defence would not apply.¹⁶³ The defence will allow farmers to sow a patented seed, to harvest and sell the resulting crop (for example, to sell the wheat for flour). They would not be permitted, however, to sell the seed to other farmers for the purpose of propagating new crops.¹⁶⁴

4.4.2 Farmers' privilege

In the debates surrounding the Biotechnology Directive, one of the fears raised was that patent protection over biological inventions would have a negative impact on traditional farming practices. In particular, it was feared that patent protection would mean that farmers would not be able to use the seeds that they harvested from their crops to resow crops, nor would they be able to breed patented animals. The potential problem was that sowing and breeding carried out in relation to a patented product would infringe. To remedy problems of this sort, Article 11(1) and (2) of the Biotechnology Directive provide farmers with specific defences. These provisions have been mirrored in sections 60(5)(g) and 60(5)(h) of the 1977 Patent Act, introduced in July 2000.

Section 60(5)(g) provides a defence where a farmer uses the product of their harvest for propagation or multiplication by them on their farm, where there has been a sale or other form of commercialization of plant-propagating material to the farmer by the patent owner for agricultural use. In effect the defence enables farmers to save seeds from one year's crop to sow crops in the following year. The defence in section 60(5)(g) only applies to the plant species and groups set out in paragraph 2 of Schedule A1 to the 1977 Patents Act. This covers various types of fodder plants, cereals, potatoes, and oil and fibre plants. In situations where a farmer successfully relies on the defence in section 60(5)(g), the farmer must pay the relevant rights-holder equitable remuneration.¹⁶⁵ The remuneration must be 'sensibly lower than the amount charged for the production of the protected material of the same variety on the same area with the holder's authority'.¹⁶⁶ The need to

¹⁶² See S. Bostyn, 'The Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 30.

¹⁶³ *Ibid.*

¹⁶⁴ R. Nott, 'You Did It: The European Biotechnology Directive at Last' [1998] *EIPR* 347, 349.

¹⁶⁵ PA Sched. A1, para. 3(1) (introduced by Patents Regulations 2000).

¹⁶⁶ PA Sched. A1, para. 3(3) (introduced by Patents Regulations 2000) says that a remuneration will be sensibly lower if it would be 'sensibly lower within the meaning of Art. 14(3) third indent of the Council Regulation on Community plant variety rights'.

pay equitable remuneration does not arise if a farmer can prove that they are a 'small farmer'.¹⁶⁷ Where requested, the rights-holder and the farmer must supply each other with certain information.¹⁶⁸ The use of the defence is subject to a number of other restrictions (such as ability of the farmer to move protected material from their farm).

Section 60(5)(h) provides farmers with a defence in relation to the breeding of animals. More specifically, it provides that 'the use of an animal or animal reproductive material by a farmer for an agricultural purpose . . . of breeding stock or other animal reproductive material which constitutes or contains the patented invention' is non-infringing. The farmer's defence for the breeding of animals is potentially very broad. In part, the scope of the defence will depend on how the phrase 'use for an agricultural purpose' is construed. The Act tells us that 'use for an agricultural purpose' includes situations where the animal or animal reproductive material is made available for the purposes of pursuing the farmer's agricultural activity. However, it does not include 'sale within the framework, or for the purposes of a commercial reproduction activity'.¹⁶⁹

It will be interesting to see what impact these defences have upon farming practices. It will also be interesting to see how the biotechnology industry responds to these defences. It has been suggested that defences such as those provided in section 60(5)(g)(h) may act as a stimulus for the development of techniques such as terminator genes or special hybrids that operate to ensure that seeds will not regeminate.¹⁷⁰

4.5 MISCELLANEOUS DEFENCES

A number of other exceptions to infringement exist. Section 74(1)(a) expressly provides that the validity of a patent may be put in issue by way of a defence to proceedings for infringement. This is the most commonly used defence: an alleged infringer will normally argue that the patent is invalid because the invention lacks novelty or is obvious. A particular example of this is the so-called *Gillette* defence, where a defendant attempts to demonstrate that the infringing activity was being carried out in public before the priority date of the patent, thus forcing the patentee either to require the patent to be interpreted so as to exclude the activity or to accept that the patent covers the activity and is therefore invalid (for want of novelty).

A defence is available where a person in a pharmacy makes an extemporaneous preparation of a medicine in accordance with a prescription.¹⁷¹ A defence also exists where products or processes are used on ships, aircraft, hovercraft, or vehicles that have temporarily or accidentally entered UK airspace or waters.¹⁷² The Crown has a broad immunity

¹⁶⁷ PA Sched. A1, paras. 4(1)–(2) (introduced by Patents Regulations 2000). A 'small farmer' is defined via Art. 14(3) third indent of the Council Regulation on Community plant variety rights.

¹⁶⁸ PA Sched. A1, para. 5–11 (introduced by Patents Regulations 2000).

¹⁶⁹ PA s. 60(6B)(a)(b). Sale is defined to include any other form of commercialization: PA s. 60(6C).

¹⁷⁰ R. Nott, 'You Did It: The European Biotechnology Directive at Last', [1998] *EIPR* 347, 349 n. 27.

¹⁷¹ PA s. 60(5)(c).

¹⁷² PA s. 60(5)(d)(e). See *Stena Rederi v. Irish Ferries* [2003] *RPC* 668 (CA). A ship that sailed between Dublin and Holyhead in the UK three or four times a day (each visit the ship was in UK waters for about three hours), was held to have temporarily entered the UK. Here 'temporarily' meant 'transient' or 'for a limited period of time', rather than the frequency of the visits. See further R. Sharma and H. Forrest, 'A Lifeline for Infringing Ships' [2003] *EIPR* 430.

from infringing the exclusive rights of patentees.¹⁷³ The Crown may use an invention without obtaining a licence in advance, so long as it pays compensation. More specifically, the defence permits 'any government department and any person authorized in writing by a government department' to do certain acts¹⁷⁴ in return for which the department must provide payment,¹⁷⁵ including 'compensation' for loss of profits.¹⁷⁶ In some cases, the doctrines of exhaustion of rights and implied licence, reviewed above, also (effectively) provide defences to accusations of infringement.

Prior to the passage of the Competition Act 1998, section 44 provided a defence where a patentee imposed a requirement on a licensee 'to acquire from the licensor or his nominee, or prohibit him from acquiring from any specified person, or from acquiring except from the licensor or his nominee, anything other than the product which is the patented invention or (if it is a process) other than any product obtained directly by means of the process or to which the process has been applied'. The defence was available to any person against whom the licensor brought an infringement action.¹⁷⁷ Section 44, which was widely criticized, has now been repealed by the 1998 Competition Act.¹⁷⁸

23

PATENT EXPLOITATION

1 INTRODUCTION

As forms of personal property,¹ patents and patent applications may be assigned, licensed, or mortgaged, and they may devolve by operation of law (notably through death or bankruptcy).² One of the consequences of this is that patents have become part of the commercial currency; they can be traded, exploited, and included on the balance sheet of companies. As such, instead of being seen as peripheral aspects of the patent system, patent exploitation is better seen as being at the centre of the patent system.³

The terms and conditions that control the way patents are exploited are usually determined contractually by the parties: patent law merely provides a framework within which parties are able to manoeuvre. Where parties have agreed upon the way a patent is to be exploited, the law has been reluctant to interfere with the sanctity of the contract. There are some situations, however, where this is not the case. Apart from the general vitiating factors of contract law (such as unreasonable restraint of trade), special provisions exist in the 1977 Patent Act in relation to co-owners,⁴ employee inventions and, at least until recently, certain types of contractual terms. Competition law, both domestic and European, also places important limits upon the nature and content of transactions entered into by a patentee. In recognition of the fact that non-use of a patent may produce undesirable consequences, in certain situations the law may order a patent owner to grant a licence to work the invention. Where this occurs, it is often necessary for the tribunal to set the rates of remuneration that should be paid to the proprietor.

This chapter is divided into four parts. First, we consider at the various ways patents may be exploited. We then look at some of the limits that are imposed on the way patents are exploited to minimize any possible anti-competitive effects. We then examine situations where compulsory licences are available (for example, where a patent is not used or is underused). Finally, we look at the compensation payable where the patent is used via a compulsory licence, as well as when an employer or the Crown uses the invention.

2 MODES OF EXPLOITATION

In this section, we examine some of the ways in which patents are exploited. After considering the situation where patentees exploit the patent themselves, we look at some of the more common forms of voluntary uses: *viz.* assignment and licence. We then turn to

¹ PA s. 30(1).

² PA s. 30(3).

³ R. Merges, *Patent Law and Policy: Cases and Materials* (1992), 865.

⁴ PA s. 36(3), (7).

consider situations where the patent is exploited by way of a compulsory licence or a licence as of right.

2.1 EXPLOITATION BY THE OWNER

In many cases, the owner of a patent may decide to manufacture or use the patented invention himself. While in most cases self-exploitation presents few legal problems, difficulties may arise when the patent is owned by a number of different parties. The most significant issue that arises here is whether one co-owner is able to practise the invention without the consent of the other co-owners. In some cases, the conditions of use will be dealt with contractually between the parties. As well as setting out the way each of the co-owners is able to exploit the patent, ideally such a contract should also specify the obligations that the parties have to each other. In situations where there is no contract between co-owners of a patent,⁵ the 1977 Patents Act declares that each of the co-owners is 'entitled to operate under the patent themselves'.⁶ That is, each owner is permitted to use and benefit from their undivided share of the patent. This means that a joint owner with a one-per cent interest can work the patent on their own to the detriment of the other owners. The possibility for opportunistic behaviour that this presents is limited by the fact that a joint owner cannot license others to use the patent without the permission of the other co-owners.⁷

2.2 ASSIGNMENT

A common way in which patented products and processes are exploited is for the owner to assign their interests to another party. An assignment is a transfer of ownership of the patent (or application). As a result of an assignment, an assignee stands in the shoes of the assignor and is entitled to deal with the patent as they see fit. In contrast with a licence (where the licensor retains an interest in the patent), once a patentee has assigned the patent they no longer have any interest in or responsibility to maintain the patent.⁸

For an assignment to be valid, it must be in writing and signed by or on behalf of all the parties to the transaction.⁹ Where the patent or application is owned by more than one party, for the assignment to be valid, all of the co-owners must consent to the assignment.¹⁰

⁵ A patent may be co-owned where the invention is a product of joint inventorship, or as a result of dealings with a patent that was initially solely owned, such as an assignment to two persons.

⁶ PA s. 36. Disputes between co-owners may be resolved via PA s. 37. See R. Merges and L. Locke, 'Co-Ownership of Patents: A Comparative and Economic View' (1990) 72 *JPTOS* 586.

⁷ *Henry Brothers v. Ministry of Defence* [1997] *RPC* 693. Cf. M. Anderson, 'Applying Traditional Property Laws to Intellectual Property Transactions' [1995] *EIPR* 236, 240.

⁸ It seems that an assignor comes under a personal disability in that they may not challenge the validity of the assigned patent: *Chambers v. Crichley* (1864) 33 *Beav* 374 (assignor prohibited from challenging validity of patent on basis of non-derogation from grant). But see A. Robertson, 'Is the Licensee Estoppel Rule Still Good Law? Was It Ever?' [1991] *EIPR* 373.

⁹ PA s. 30(6). Differently worded but largely equivalent provisions for Scotland are set out in PA s. 31. An oral assignment might take effect as an agreement to assign and be enforceable in equity: *Stewart v. Case* (1891) 8 *RPC* 259; (1892) 9 *RPC* 9.

¹⁰ PA s. 36(3), (7). For a situation where the Patent Office ordered an assignment of a patent where one of seven co-owners was opposed to the agreement, see *Florey's Patent* [1962] *RPC* 186.

While assignments need not be registered to be valid, certain advantages flow from registration: these are reviewed below.¹¹

2.3 VOLUNTARY LICENCES

Another common way in which patents are exploited is by licence. A licence provides a party with permission to do an act that would otherwise be prohibited. Licences may be made orally or in writing,¹² and may be express or implied.¹³ Where a patent is owned jointly, all of the co-owners must provide their consent for the licence to be valid.¹⁴ In contrast with an assignment, no proprietary interest is passed under a licence.¹⁵

Licences may take many forms: from a one-off permission through to an exclusive licence. An exclusive licence is an agreement under which the owner of a patent not only grants the licensee permission to use the patented technology, they also promise that they will not grant any other licences nor will they exploit the technology themselves. The legal consequence of this is that an exclusive licence confers rights upon the licensee to the exclusion of all others, including the licensor.¹⁶

While the grant of an exclusive licence is very similar to an assignment,¹⁷ an exclusive licence need not be made in writing.¹⁸ Indeed, as with other licences, an exclusive licence may be made orally or in writing,¹⁹ and may be express or implied.²⁰ While a 'bare licensee' acquires the right not to be sued in relation to the acts set out in the licence, an exclusive licence confers powers on the licensee that are equivalent to those of the proprietor. Undoubtedly the most significant of these is that an exclusive licensee can sue infringers in their own right: they do not need to persuade the proprietor to take action on their behalf.²¹

2.4 MORTGAGES

Like other forms of property, patents may be mortgaged (or assigned as security for a debt).²² This can be a useful technique that enables patentees to raise the necessary funds

¹¹ See below at pp. 553–4. ¹² *Crossley v. Dixon* (1863) 10 HLC 293.

¹³ See *Morton-Norwich v. Intercen and United Chemicals* [1981] FSR 337. A voluntary and exclusive licence is granted 'under' and not 'in' a patent—therefore PA s. 30(6) does not apply: *Instituform v. Inliner* [1992] RPC 83; *CIPA*, para. 30.05.

¹⁴ PA s. 36(3), (7).

¹⁵ *Allen & Hanbury v. Generics* [1986] RPC 203, 246. A licence itself can be dealt with: PA s. 30(4)(a).

¹⁶ Cf. *Peaudouce SA v. Kimberly-Clark* [1996] FSR 680, 690–1.

¹⁷ There are a number of differences between an assignment and an exclusive licence. For example, while an assignment of a patent must be in writing, an assignment of an exclusive licence need not: *Instituform v. Inliner* [1992] RPC 83. In addition, note the weak position of the exclusive licensee in relation to the compulsory licence of right provisions operating in relation to the extension of patent terms: *Kaken Pharmaceutical Patent* [1990] RPC 72.

¹⁸ Cf. the position in relation to copyright: CDPA s. 92 (exclusive licences must be in writing). *Morton Norwich v. Intercen and United Chemicals* [1981] FSR 337.

¹⁹ *Crossley v. Dixon* (1863) 10 HLC 293.

²⁰ *Morton Norwich v. Intercen and United Chemicals* [1981] FSR 337.

²¹ PA s. 67. The proprietor is made party to the proceedings, if necessary by joining them as a defendant.

²² A mortgage includes a charge for securing money or money's worth: PA s. 130(1). See M. Bezant and R. Punt, *The Use of Intellectual Property as Security for Debt Finance* (1997); D. Townend, *Using Intellectual Property as Security* (1996); M. Henry, 'Mortgages of Intellectual Property in the United Kingdom' [1992] EIPR 158.

for them to exploit the patented invention. In this context, a mortgage is achieved by way of an assignment of the patent by the patentee-mortgagor to the mortgagee-lender. This is subject to a condition that the patent will be reassigned to the mortgagor when the debt is repaid (or as the law says, on redemption). It is important that the assignment reserves for the mortgagor a right to continue practising the invention. This is probably best achieved by the reservation of an exclusive licence. Alternatively, a patent can be used as security by way of a legal charge, in which case there is no assignment.²³ In this case, the chargee gains certain rights over the patent as security.

In order to be valid, a mortgage must be in writing and signed by the parties.²⁴ Where there are joint proprietors, all of them must consent to the mortgage.²⁵ A mortgage need not be registered to be valid, but there are advantages from registration: these are reviewed below.

2.5 TESTAMENTARY DISPOSITIONS

Because a patent is personal property, it is capable of passing on the death of the proprietor either by will or via the rules of intestacy. Because co-owners hold patents as tenants in common (rather than as joint tenants),²⁶ if a co-proprietor dies their share passes along with the rest of his or her estate, rather than accruing to the other co-owners. In devolving the patent, the personal representative must sign a written consent.²⁷

2.6 REGISTRATION OF INTERESTS AND TRANSACTIONS

There is no need for transactions to be registered for them to be valid. Nonetheless, the Patents Act provides that assignments, mortgages, licences, sub-licences, and certain equitable interests may be registered.²⁸ While non-registration will not affect the validity of transactions made in relation to a patent, there are two reasons why a transaction should be registered.

The first is that registration gives the registrant priority against anyone who has an earlier unregistered right. This is subject to the proviso that the registrant had no notice of the earlier right.²⁹ In so doing, registration helps to allocate priorities between the parties who have interests in a patent. The act of registration enables a person with an interest to secure priority over those who engage in subsequent transactions. The effect of this can be illustrated as follows:

- (i) On 1 July 2001 X assigns their patent to Y. On 1 August 2001 X licenses the patent to Z. At the time of the licence, Y had not registered the assignment, nor did Z have any knowledge of the assignment to Y. On being informed by Y of their interest, Z registered its licence on 1 September 2001. In this case, Y is bound by Z's licence.

²³ Charges are included within the definition of mortgage in PA s. 130.

²⁴ PA s. 30(6). ²⁵ PA s. 36(3).

²⁶ On an attempt to alter this (which failed) see *Florey's Patent* [1962] RPC 186.

²⁷ PA s. 30(6)(b). ²⁸ PA ss. 32–3.

²⁹ The relevant date to assess whether the registrant knew of the right is the date at which the later registrant acquired their interest. Both the fact of registration and the knowledge of the party are assessed at the time of the transaction (which is registered), not the date of registration.

- (ii) On 1 July 2001 X grants an exclusive licence to Y, which Y duly registers on 15 July 2001. On 1 August, X grants another licence to Z. Y can sue Z if Z attempts to exercise the 'rights' they were purportedly granted.
- (iii) X grants a mortgage of her patent to Y. Z, who was aware that Y has not registered the mortgage, obtains an exclusive licence from X which they immediately register. Y's mortgage binds Z.

The second reason why registration is advisable is that in the case of assignments and exclusive licences, non-registration may affect a party's right to damages or an account of profits.³⁰ This is because a proprietor or exclusive licensee who does not register within six months of the transaction cannot claim damages or an account of profits for infringements which occurred in the period prior to registration.³¹ Given that this only leaves patentees with an injunction as a possible remedy, this might be a serious penalty.³² This means, for example, that if:

- (i) On 1 January 2001 A assigns the patent to B, but B does not register the assignment until 1 May. C began activities which infringe the patent on 1 March 2001. In this case, B is able to get damages for the period from March to May.
- (ii) On 1 January 2001, X assigns the patent to P. On 1 March 2001, D infringes the patent. P registers the assignment on 1 August 2001, P can claim only for period post-1 August (because the registration is outside the sixth-month period).

2.7 LICENCES OF RIGHT

A patentee who is willing to exploit the technology to all-comers may take advantage of the facility of entering on the register that licences are to be available as of right.³³ Once an endorsement 'licences of right' is entered on the register, anyone is able to apply for a licence and establish the scope of the licence they desire (whether it be to manufacture, sell, or import the invention). There are two reasons why a patentee may want to render a patent subject to licences as of right. First, the endorsement of a patent 'licences of right' acts as an advertisement that the owner of the patent is willing to grant licences to parties who wish to exploit the invention. Second, such an endorsement halves the renewal fees payable.

One of the consequences of making licences available as of right is that the patentee is no longer able to dictate who can exercise the patent, nor control the terms of such licences. The terms of any licence are set by the parties, or if they cannot agree, by the comptroller. The courts have accepted that they have a wide discretion in the determin-

³⁰ *Molnlycke AB v. Procter & Gamble* [1992] FSR 549, 606–10 (section protects infringers).

³¹ PA s. 68. For the application of this provision see *Spring Form v. Toy Brokers* [2002] FSR 276; *LG Electronics v. NCR Financial Solutions Group* [2003] FSR 428.

³² Presumably, the right to damages could not be regained by assigning the patent (with a right to sue for past breaches) on to another who registers, or requesting reassignment from the original registered proprietor. Cf. *Stile Hall Properties v. Gooch* [1979] 3 All ER 848. However, it has been held that a grant of a second exclusive licence which included extra rights gave rise to damages when the transaction was registered a month later: *Minnesota Mining and Manufacturing v. Rennicks* [1992] FSR 118.

³³ On the history see *Allen & Hanburys v. Generics* [1986] RPC 203, 246.

ation of terms.³⁴ When deciding the terms under which the licences should be exercised, the courts have taken into account the guidelines provided for the grant of compulsory licences.³⁵ A patentee who has previously rendered a patent subject to 'licences of right' can apply to the comptroller for cancellation of the entry. If accepted, the patentee must repay the balance of the renewal fees owing. Applications to remove the entry may be opposed.³⁶

2.8 COMPULSORY LICENCES

The final mode of exploitation worth noting is the compulsory licence. A compulsory licence is a licence compulsorily imposed on the patentee. In contrast with a licence of right, which is usually initiated voluntarily, the decision as to whether a compulsory licence should be granted and if so the terms on which it is to be granted are decided by the relevant tribunals. We deal with the situations where compulsory licences may be granted in more detail below.³⁷

3 LIMITS ON EXPLOITATION

A number of limits are also imposed on the ability of the patent owner to exploit the invention. When a patent owner exploits an invention, they must comply with the general laws and regulations. These require respect for the rights of other patentees, as well as compliance with health and safety laws, environmental regulation, product liability, and criminal laws.³⁸ While these non-economic restrictions on patent exploitation should not be neglected, our particular concern here is with the potentially anti-competitive effects of patent exploitation. There are three areas of law which minimize the potential for patent misuse. These are British patent law, British competition law, and EC competition law.

3.1 UK PATENT LAW

For most of its long history patent law has used various techniques to minimize the potential for abuse that the monopoly conferred. These have included rules prohibiting the use of certain terms in patent licences,³⁹ as well as provisions permitting the use of patented inventions by third parties where the patent was being underused or misused by the patentee. Despite this long tradition, it was recently decided that it was more appropriate for the potential abuse of patents to be regulated by competition law rather than by patent law. This farming out of the patent regulation took place when the draconian provisions of sections 44 and 45 were repealed by section 70 of the 1998 Competition Act.

³⁴ *Cabot Safety Corp's Patent* [1992] RPC 39. In that case the tribunal made decisions about who the licence should be granted to.

³⁶ PA s. 47.

³⁷ See below at pp. 561–5.

³⁸ Biotech. Dir., Recital 14.

³⁹ PA ss. 44 and 45 (now repealed).

3.2 UK COMPETITION LAW

The introduction of the 1998 Competition Act marked an important change in the way British law regulated anti-competitive behaviour.⁴⁰ The 1998 Competition Act establishes a system that parallels European competition law. It does this by enacting a prohibition (the 'Chapter 1 Prohibition') that is equivalent to Article 81 EC (formerly Article 85 of the Treaty). Section 2 of the Competition Act provides that agreements that may affect trade within the UK and have as their object or effect the prevention, restriction, or distortion of competition within the UK are prohibited.⁴¹ An agreement will not be caught by section 2 if it falls within any individual exemption, or it falls under a 'block exemption' that may be made under section 6.⁴² While the details of the British exemptions to section 2 have yet to be finalized, an agreement is deemed to be exempt from the national prohibition if it is exempt from the Community prohibition. This is also the case with licences that fall within the terms of the EC Technology Transfer Block Exemption, but which are not subject to Article 81 EC because they do not affect trade between EC member states.⁴³

3.3 EC COMPETITION LAW

The key provision of European competition law affecting patent licences and exploitation agreements is set out in Article 81 EC. This provides that all agreements which affect trade between member states and which have the object or effect of distorting competition within the common market shall be void.⁴⁴ However, agreements falling within Article 81(1) may, under certain conditions, be exempt from Article 81 as a result of Article 81(3). These exemptions may be obtained from the Commission either on an individual basis or as part of a 'block exemption'.⁴⁵ The most important 'block exemption' for patent licences is the Technology Transfer Regulation, which entered into force on 1 April 1996. Although the effect of the Regulation on patent licences is considered in detail in specialist texts, we will briefly outline its scope and application to a few typical patent licence terms.⁴⁶ The Commission is currently planning to replace the current block exemption with a new block exemption. If adopted this may bring about a number of changes. We look at the key features of the draft block exemption below.

The first aspect of the Regulation worth observing is its scope. The Regulation applies to patent licensing and know-how licensing agreements and to mixed patent and know-how

⁴⁰ S. Rose, A. Clark, and M. Burdon, 'A New UK Competition Law: More Restrictions on Restrictions' (Jan. 1997) *Patent World* 27.

⁴¹ Conduct that amounts to the abuse of a dominant position in a market within the UK of a part thereof is also prohibited: The Chapter II Prohibition.

⁴² Competition Act 1998, ss. 4–11.

⁴³ *Ibid.*, s. 10. See Office of Fair Trading, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline* (Nov 2001), 18 n. 2. (Revised draft Guidelines have yet to be published).

⁴⁴ A licence term was held to be 'incompatible with EC Art. 81 if it sought to regulate the commercial market by controlling not only what was made with the licensed technology but also the use which was made of it thereafter'. *Intel Technologies v. Via Technologies* [2003] FSR 574, 600 (Morritt VC).

⁴⁵ From 1 May 2004, organizations will have to must determine for themselves whether their agreements within the Block Exemptions: Council Regulation No. 1/2002 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty (2003) *OJL* L/1.

⁴⁶ See V. Korah, *Technology Transfer Agreements and the EC Competition Rules* (1996).

licensing agreements. Although the primary target of the Regulation is licences, it also applies to licences that are dressed up as assignments.⁴⁷

The Regulation provides guidance as to the types of terms that may and may not be included in such licensing agreements if they are to be treated as exempt from Article 81 EC. Article 1 of the Regulation lists eight types of restrictive obligations that would ordinarily be caught by Article 81(1) EC, but which are exempted by the Regulation. Article 2 of the Regulation contains a list of obligations found in licensing agreements that are normally not restrictive of competition. These are exempt from Article 81(1).⁴⁸ This list of terms, which is called the White List, is not exhaustive. Article 3 of the Regulation contains a list of obligations, referred to as the Black List, that may not be included in licensing agreements. These clauses render agreements *prima facie* anti-competitive and thus within Article 81(1) EC. Particular terms excluded by the Black List can, however, be declared to be exempt on a case-by-case basis. Article 4 of the Regulation contains a third category of terms, known as the Grey Terms. These are terms that are neither within the White List nor the Black List.⁴⁹ Agreements containing Grey Terms may be exempt from Article 81(1) EC so long as the Commission is notified. If the Commission does not give notice of opposition within four months of notification, such agreements are deemed to be covered by the exemption. This procedure is referred to as the 'reduced opposition procedure'. The notification process will be phased out as of 1 May 2004.⁵⁰ This will mean that corporations will no longer be able to obtain individual Article 81(3) exemptions from the Commission. Instead, corporations will have to make their own decision as to whether they comply with the relevant EC competition rules.

3.4 SPECIFIC EXAMPLES

We now go on to consider how the Regulation impacts upon some of the terms which are commonly used in patent licensing or assignment agreements.

3.4.1 Exclusivity

Under the Regulation, a licence may be exempt from Article 81 EC even if the agreement gives the licensee exclusive rights to exploit the patent in a particular territory. However, this is subject to three important limitations. First, for a term guaranteeing exclusivity to be exempt, the duration of an exclusivity provision must be confined to 'the extent that and for as long as the licensed product is protected by parallel patents'. Second, while an exempt exclusivity provision may prohibit active exploitation in the territory of another licensee for the duration of parallel patents,⁵¹ the agreement may only prohibit passive sales (that is an obligation not to put the licensed product on the market in response to unsolicited orders in the territories licensed to other licensees) for five years from the date when the licensed product was first put on the market within the common market.⁵²

⁴⁷ TTR, Recital 9.

⁴⁸ *Ibid.*, Recital 27 specifies that agreements which come within the terms of Arts. 1 and 2 and which have neither the object nor the effect of restricting competition in any other way need no longer be notified.

⁴⁹ TTR., Art. 4(2), Recital 25.

⁵⁰ Council Regulation No. 1/2003 of 16 December 2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] *OJ L* 1/1.

⁵¹ TTR, Art. 1(1)(5).

⁵² *Ibid.*, Art. 1(2), Recital 15.

Finally, in the absence of ‘an objectively justified reason’, the agreement must not contain an obligation ‘to refuse to meet orders from users or resellers in their respective territories who would market products in other territories within the common market’.

3.4.2 Field of use limitations

A patent licence may fall within the exemption conferred by the Regulation even if it imposes a ‘field of use’ limitation, but only where the limitation restricts exploitation of the licensed technology to one or more *technical fields* of application or to one or more product market.⁵³ A provision is not exempt if it includes other sorts of restriction on the areas in which the licensee may trade, for example, so as merely to divide up the markets.

3.4.3 No-challenge clauses

A patent licence must be notified to the Commission if it contains a ‘no-challenge clause’, that is an undertaking by the licensee not to challenge the validity of the agreement. This is a term in the Grey List and thus is subject to the opposition procedure. In addition, it should be noted that the White List specifically exempts agreements that permit the licensor to terminate the agreement if the licensee contests the validity of a licensed patent or claim that such a patent is not necessary.⁵⁴

3.4.4 Tie-in clauses

Under the Block exemption, patent licences may sometimes include provisions requiring a licensee to purchase unpatented articles from the patentee (so-called ‘tie-ins’). Article 2(5) allows patentees to impose an obligation on the licensee ‘to procure goods or services from the licensor or from an undertaking designated by the licensor’, insofar as these products or services are necessary to ensure ‘a technically proper exploitation of the licensed technology’.⁵⁵ This appears to allow a patentee to insist that the licensor buy particular starting materials from them where the invention would not work using alternatives. The White List also states that a tie-in agreement may be imposed where it ensures that ‘the product of the licensee conforms to the minimum quality specifications that are applicable to the licensor and other licensees; and to allow the licensor to carry out related checks’. The phrase ‘minimum-quality specifications’ appears to be directed at regulatory standards such as EC product liability laws.

Beyond these narrowly defined situations, other tie-ins are treated as Grey Terms and are thus subject to the notification/opposition process. Article 4(2) expressly identifies as Grey Terms conditions which oblige the licensee ‘at the time the agreement is entered into to accept quality specifications or further licences or to procure goods or services which are not necessary for a technically satisfactory exploitation of the licensed technology or for ensuring that the production of the licensee conforms to the quality standards that are respected by the licensor and other licensees’. It is unclear when such clauses will be accepted by the Commission: it has been suggested that while they ‘may no longer be black clauses . . . they are, at least in the Commission’s eyes, near to the [excluded] end of the spectrum’.⁵⁶

⁵³ Ibid., Art. 2(1)(8) Recital 22.

⁵⁴ TTR, Art. 2(15)–(16).

⁵⁵ W. Bowman, ‘Tying Arrangements and the Leverage Problem’ (1957) 67 *Yale LJ* 19, 27–8.

⁵⁶ C. Kerse, ‘Block Exemptions under Article 85(3): The Technology Transfer Regulations: Procedural Issues’ [1996] *ECLR* 331, 334.

3.4.5 Duration of agreement

It seems that patentees may benefit from the exemption even if the licence includes a term that requires royalties to be paid for longer than the duration of the patent (for example, that royalties be paid for thirty years when the patent duration is limited to twenty years). The Regulation allows patentees and licensees to negotiate royalty terms as they think fit. Consequently, the White List permits a patentee to impose an obligation on the licensee to pay royalties for the use of the licensed technology after the patent has expired.⁵⁷ However, it is important to observe that Recital 21 states that ‘the setting of rates of royalty so as to achieve one of the restrictions listed in Article 3 renders the agreement ineligible for the block exemption’.

3.4.6 Grant-backs

Subject to certain restrictions, a licence will be exempt even though it requires a licensee to confer on the licensor the benefits of any technological improvements they make to the patented invention.⁵⁸ More specifically, clauses that ensure that the benefits of any improvements made are shared with the patentee-licensor are permitted.⁵⁹ On the other hand, any agreement that obliges the licensee to assign any improvements they make to the licensed technology to the licensor is said to have a restrictive effect on competition and, as such, falls into the Black List.⁶⁰

3.4.7 Price limitations

Under the Technology Transfer Regulation, price restrictions are treated as improperly limiting the ability of the licensee to exploit the licensed technology. Restrictions on the quantity of goods that the licensor deals with are perceived as potentially having the same effect as export bans.⁶¹ Both types of clauses are therefore black listed.⁶²

3.4.8 Patent pooling

The Technology Transfer Regulation does not deal with the practice whereby two or more patentees organize themselves so that they can obtain the benefit of the other's patents. Such patent pools range from simple cross-licensing contracts to much more complex arrangements where large numbers of patents are transferred to a company established to control the joint venture. Whether a patent pool operates against the public interest will depend on the circumstances. They might integrate complementary technology or reduce transaction costs. In other cases, the arrangements may appear as cosy cartel-like arrangements designed to exclude competition or facilitate price-fixing. Given this, a patentee involved in a patent pooling arrangement which affects interstate trade would, however, be advised to seek individual exemption from the Commission.⁶³

⁵⁷ TTR, Art. 2(1), (7) provides for a similar rule concerning know-how.

⁵⁸ A. Robertson, ‘Technology Transfer Agreements: An Overview of How Regulation 240/96 Changes the Law’ [1996] *ECLR* 157, 160.

⁵⁹ TTR, Art. 2(1), (4), Recital 20.

⁶⁰ *Ibid.*, Art. 3(6).

⁶¹ *Ibid.*, Recital 24.

⁶² But note *ibid.*, Art. 2(1), (12).

⁶³ Some patent pools may be exempt under Regulation 418/85 which applies to collaboration for research and development.

3.5 REFORM

As we mentioned above, the Commission has released draft Technology Transfer Regulation to replace the 1996 Technology Transfer Regulation.⁶⁴ The Commission has also published draft Guidelines on technology transfer agreements to assist corporations in deciding whether they comply with the new provisions. While it is intended that the new Technology Transfer Regulations will come into force on 1 May 2004, the start date may be delayed.⁶⁵ In many ways the draft Regulation follows the logic of 1996 Regulation is so far as it declares that technology transfer agreements are to be exempt from the Article 81(1) prohibition.⁶⁶ A notable feature of the draft Regulation is that it treats agreements differently depending on whether the parties are 'competing undertakings' or 'non-competing undertakings'. Competing undertakings are defined as undertakings that compete on the relevant technology market and/or the relevant product market.⁶⁷ Other undertakings are dealt with on the basis that they are non-competing. Another notable feature of the draft Regulation is that it imposes a threshold that parties must comply with if they are to benefit from the block exemption. In particular it says that if the combined market share of the parties exceeds 20 per cent for competing undertakings and a 30 per cent for non-competing undertakings, the agreement will fall outside the scope of the immunity conferred by the block exemption. Failure to comply with these market ceilings does not mean that agreements are illegal *per se*. Rather, it simply means that they have to be judged on a case-by-case basis as to whether they comply with Article 81(3) EC. While the draft Regulation does not contain a White List of permitted terms, it does contain a series of 'hardcore restrictions' (Black List).⁶⁸ If an agreement falls within a clause that has been black-listed, it will fall outside the scope of the block exemption and thus carry the risk that the agreement (or at least part thereof) is void. Different standards apply depending on whether the parties to an agreement are in competition with each other. For 'competing undertakings' the black-listed terms include those that restrict a party's ability to set prices, limit output or sales, allocate markets or customers, or restrict the licensee's ability to exploit its own technology or carry out research and development.⁶⁹ For 'non-competing undertakings' the black-listed terms include those that restrict a party's ability to set prices, restrict the territory in which or the customers to whom the licensee may sell, and terms that restrict sales to end users.⁷⁰ The draft Regulation also contains grey-listed terms that may be permissible, but need to be assessed on a case-by-case basis. These include no-challenge clauses and terms that impose obligations on the licensee to grant the licensor an exclusive license for any improvements in the licensed technology.

⁶⁴ Draft Commission Regulation on the application of Article 81(3) of the Treaty to categories of technology transfer agreements (hereinafter Draft TTR). This grew out of the *EC Technology Transfer Block Exemption Evaluation Report* (Dec. 2001).

⁶⁵ Agreements in force on 30 Apr. 2004 are exempt from the new provisions until 31 Oct. 2005. Draft TTR, Art. 9(2).

⁶⁶ Draft TTR, Art. 2.

⁶⁷ *Ibid.*, Art 1(1)(h) (which also defines 'relevant technology market' and 'relevant product market').

⁶⁸ *Ibid.*, Art. 4. ⁶⁹ *Ibid.*, Art. 4(1). ⁷⁰ *Ibid.*, Art. 4(2).

4 LIMITS ON NON-EXPLOITATION: COMPULSORY LICENCES

Another way in which patents can be misused is if the owner uses the patent to prevent the product from being manufactured or demand for the product is being met from some other source. In contrast with trade marks law, there is no obligation on a patentee to work or intend to exploit the invention. However, provisions exist in the form of compulsory licences that permit people other than the patent owner to exploit the invention in situations where the patentee is either unable or unwilling to do so.⁷¹ Compulsory licensing provisions were first introduced into British patent law at the end of the nineteenth century. These were motivated by a fear that large (often foreign) organizations that were in a dominant market position might buy up patents and decline to exploit them. There was also a concern that technical progress might be impeded by the holder of a basic patent who refused to license people who made improvements to patented inventions. There was also a perceived risk that patents might be used to prevent the adequate supply of essentials, such as food or medicine. While few applications are made for compulsory licences, it would be wrong to conclude from this that the provisions are of little effect. This is because the threat of such licences being granted may stimulate the patentee into working or voluntarily licensing the patent. Compulsory licences have become a topic of debate recently, primarily as a result of discussions at the WTO about access to medicines in developing countries. As we saw earlier, the WTO member states agreed in August of 2003 to allow pharmaceutical products to be produced under compulsory licence for export to developing countries.⁷² The UK government has said that it intends to change national legislation to allow the granting of patented medicines under this decision.⁷³

Under the Paris Convention, Union members are able to provide for compulsory licences 'to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent, for example, failure to work'.⁷⁴ The restrictions placed upon the granting of compulsory licences were greatly increased by Article 31 of TRIPS. British law on compulsory licences was amended in 1999 to take account of TRIPS.⁷⁵ As we will see, these changes have restricted the circumstances in which compulsory licences are available. One of the changes brought about by the TRIPS amendments is that the grounds on which a compulsory licence will be granted depends on whether or not the patent is owned by a WTO proprietor.

The Act differentiates between four general situations where compulsory licences can be granted. These are: first, the various grounds set out in section 48 (which in turn distinguishes between patents with WTO owners and patents with non-WTO owners); second, following a report of the Competition Commission; third for Crown use; and fourth, in relation to biotechnological inventions. Before looking at these in more detail it is necessary to make some preliminary comments.

⁷¹ See, e.g. C. Fauver, Comment, 'Compulsory Patent Licensing in the US: An Idea Whose Time Has Come' (1988) 8 *Northwestern J International Law & Business* 666.

⁷² See above at pp. 345–6.

⁷³ UK Patent Office, *TRIPS and Essential Medicines* (17 Nov. 2003).

⁷⁴ Paris, Arts. 5A(2) and 5(4).

⁷⁵ Patents and Trade Marks (WTO) Regulations 1999 (SI 1999/1899) (in force 29 Jul. 1999).

4.1 COMPULSORY LICENCES UNDER SECTION 48

The general conditions under which a compulsory licence may be issued are set out in section 48 of the 1977 Act (as amended). As we mentioned above, the 1977 Patents Act was recently amended to take account of provisions in TRIPS in relation to compulsory licences. One of the consequences of these changes is that a different approach is taken depending on whether a WTO proprietor or a non-WTO proprietor owns the patent. As we will see the grounds on which compulsory licences will be granted are more onerous in the case of WTO owners than non-WTO owners.⁷⁶ Given the number of countries in the WTO, it is unlikely that these more generous provisions will be used very often.

In both cases, a compulsory licence granted under section 48 is not available until three years from the grant of the patent.⁷⁷ This gives patentees a reasonable amount of time to exploit the invention or to arrange for others to do so.⁷⁸

4.1.1 WTO proprietors

The relevant grounds on which a compulsory licence will be granted in relation to a patent owned by a WTO proprietor are set in section 48A. Before looking at the grounds on which a compulsory licence will be granted, it is important to note that as with all compulsory licences the onus is on the applicant for a compulsory licence to establish a *prima facie* case that the grounds relied upon apply.⁷⁹ It is also important to note that a compulsory licence (for a WTO patent) will not be granted unless the applicant has made efforts to obtain a licence from the proprietor on reasonable commercial terms and conditions, and they can establish that their efforts have not been successful within a reasonable period.⁸⁰ In addition, compulsory licences are not available if the patented invention is in the field of semi-conductor technology.⁸¹

The grounds for grant are as follows:

- (i) The first ground on which a compulsory licence may be granted is where demand in the UK for a patented product is not being met on reasonable terms.⁸²
- (ii) A compulsory licence may be granted where the owner's failure to license a patent on reasonable terms has a blocking effect on later improvements.⁸³ The comptroller must be satisfied that the proprietor of the patent for the later invention is 'able and willing to grant to the proprietor of the patent concerned and his licensees a licence under the patent for the other invention on reasonable terms'.⁸⁴

⁷⁶ A proprietor is a WTO proprietor if they are a national of, or is domiciled in, a country that is a member of the World Trade Organization; or they have a real and effective industrial or commercial establishment in such a country: PA s. 48(5)(a)(b).

⁷⁷ PA s. 48(1) (as amended by SI 1999/1899). See PA s. 48B(2).

⁷⁸ Paris Art. 5. In some cases, 3 years may be too little so the comptroller may reject an application for compulsory licences if it is considered that the patentee ought to be given more time in which to attempt to exploit the patent themselves.

⁷⁹ *Monsanto's CCP Patent* [1990] FSR 93, 98.

⁸⁰ PA s. 48A(2).

⁸¹ PA s. 48A(3).

⁸² PA s. 48A(1)(a).

⁸³ PA s. 48A(1)(b)(i). It may be possible in such cases to claim that licences should be made available by the European Commission to prevent abuse of a dominant position contrary to Art. 82 EC. Laddie J's suggestion in *Philips Electronics v. Ingman* [1998] 2 CMLR 1185 that *Magill* might have no application to patents was rejected in *Intel Technologies v. Via Technologies* [2003] FSR 574 (CA). See above at pp. 15–17, 261–5.

⁸⁴ PA s. 48A(4).

- (iii) A compulsory licence may also be granted where the owner's failure to license a patent on reasonable terms unfairly prejudices the 'establishment or development of commercial or industrial activities in the UK'.⁸⁵
- (iv) The next situation where a compulsory licence may be ordered focuses on the conditions imposed on the grant of licences under the patent, or on the disposal or use of the patented product, or on the use of the patented process. A compulsory patent may be granted where it can be shown that as a consequences of these limitations, the manufacture, use, or disposal of materials not protected by the patent, or the establishment or development of industrial activities in the United Kingdom, is unfairly prejudiced.⁸⁶

The power vested in the comptroller to grant a compulsory licence under section 48 is a discretionary power: section 50 provides a list of 'purposes' and 'factors' that the comptroller ought to take into account when exercising this discretion.⁸⁷ The recognized purposes are that:

- it is in the public interest to work an invention in the United Kingdom;
- an invention should be worked 'without undue delay' and 'to the fullest extent that is reasonably practicable';
- the patentee should receive 'reasonable remuneration having regard to the nature of the invention'; and
- the interests of the person who has worked the invention ought not to be unfairly prejudiced.

The factors which the comptroller is directed to take into account include the nature of the invention, the time which has elapsed since the grant of the patent, and the measures taken by the proprietor or exclusive licensee to make full use of the patent.

The grant of a compulsory licence in relation to a patent with a WTO owner is subject to the further restrictions that the licence should:⁸⁸

- not be exclusive;
- not be assigned except to a person to whom there is also assigned the part of the enterprise that enjoys the use of the patented invention, or the part of the goodwill that belongs to that part;
- predominantly be for the supply of the market in the United Kingdom;
- include conditions entitling the proprietor of the patent concerned to remuneration adequate in the circumstances of the case, taking into account the economic value of the licence; and
- be limited in scope and in duration to the purpose for which the licence was granted.

⁸⁵ PA s. 48 A(1)(b)(ii).

⁸⁶ PA s. 48A(1)(c).

⁸⁷ *Monsanto's CCP Patent* [1990] FSR 93, 97.

⁸⁸ PA s. 48A(6)(a)–(e). TRIPS, Art. 31. See M. Blakeney, *Trade Related Aspects of Intellectual Property: A Concise Guide* (1996), 88–93.

In addition, the Act provides that compulsory licences should not be assigned except to a person to whom the patent for the other invention is also assigned.⁸⁹

4.1.2 Compulsory licences in relation to non-WTO owners

In the case of an application for a compulsory licence made in respect of a patent whose proprietor is not a WTO proprietor,⁹⁰ the relevant grounds are set out in section 48B of the 1977 Act.⁹¹

- (i) The first ground on which a compulsory licence may be granted is where the patented invention is not being commercially worked in the United Kingdom, or is not being worked to the fullest extent that is reasonably practicable.⁹² A compulsory licence will not be granted under this head if the patented invention is being commercially worked in a country that is a member state of the WTO, and demand in the United Kingdom is being met by importation from that country.⁹³
- (ii) A compulsory licence may also be granted where the demand for a patented product in the UK is not being met on reasonable terms, or is being met to a substantial extent by importation from a country which is *not* a member state of the WTO.⁹⁴
- (iii) A compulsory licence may also be granted where the patented invention is prevented or hindered from being commercially worked in the United Kingdom by the importation from a country which is not a member state of a patented product, a product obtained directly by means of a patented process or to which the process has been applied.⁹⁵
- (iv) A compulsory licence may also be granted where the owner's failure to license a patent on reasonable terms means:
 - a market for the export of any patented product made in the United Kingdom is not being supplied,⁹⁶ or
 - the working or efficient working in the United Kingdom of any other patented invention which makes a substantial contribution to the art is prevented or hindered,⁹⁷ or

⁸⁹ PA s. 48A(5).

⁹⁰ A proprietor is a WTO proprietor if they are a national of, or is domiciled in, a country that is a member of the World Trade Organization; or they have a real and effective industrial or commercial establishment in such a country: PA s. 48(5)(a)(b).

⁹¹ For discussions under the law prior to the 1999 amendments see *Penn Engineering & Manufacturing Corp. Patent* [1973] *RPC* 233; *Monsanto's CCP Patent* [1990] *FSR* 93, 100.

⁹² PA s. 48B(1)(a). ⁹³ PA s. 48B(3).

⁹⁴ PA s. 48B(1)(b). These changes overcome the problem identified in *EC v. UK and Italy* [1993] *RPC* 283. See M. Hodgson, 'Changes to UK Compulsory Patent Licensing Laws' [1992] *EIPR* 214.

⁹⁵ PA s. 48B(c).

⁹⁶ PA s. 48B(d)(i). This is subject to the proviso that compulsory licence granted under this head should not contain such provisions as appear to the comptroller to be expedient for restricting the countries in which any product concerned may be disposed of or used by the licensee: PA s. 48B(4).

⁹⁷ PA s. 48B(1)(d)(ii). The comptroller must be satisfied that the proprietor of the patent for the other invention is able and willing to grant to the proprietor of the patent concerned and their licensees a licence under the patent for the other invention on reasonable terms: PA s. 48B(5).

- it unfairly prejudices the establishment or development of commercial or industrial activities in the United Kingdom.⁹⁸
- (v) The next situation where a compulsory licence may be ordered focuses on the conditions imposed on the grant of licences under the patent, or on the disposal or use of the patented product, or on the use of the patented process. A compulsory patent may be granted where it can be shown that as a consequence of these limitations, the manufacture, use, or disposal of materials not protected by the patent, or the establishment or development of industrial activities in the United Kingdom, is unfairly prejudiced.⁹⁹

In deciding whether to grant a patent the comptroller must take into account the factors set out in section 50. The only additional limit in relation to non-WTO-owned patents arises where an application is made on the ground that the patented invention is not being commercially worked in the United Kingdom, or is not being so worked to the fullest extent that is reasonably practicable. In these cases, if for any reason there has been insufficient time since the publication of the patent to enable the invention to be so worked, the application may be adjourned by the comptroller for a period of time for the invention to be so worked.

4.2 COMPETITION COMMISSION

The third situation where compulsory licences may be made available is where a report of the Competition Commission has concluded that an undesirable monopolistic situation exists or an anti-competitive practice is operating against the public interest.¹⁰⁰ The provision gives the appropriate Minister the power to respond to the report by applying to the comptroller to have the patent endorsed as a licence as of right. The application may be opposed.

4.3 CROWN USE

A special form of compulsory licence exists for the benefit of the Crown.¹⁰¹ The elaborate provisions contained in sections 55 to 59 entitle any government department and any person authorized in writing by a government department to do certain acts¹⁰² in return for which the department must provide payment¹⁰³ (including 'compensation') for loss of profits.¹⁰⁴ In contrast with the compulsory licences described above, there is no requirement that the department needs to apply to the comptroller (or any other authority) before acting.¹⁰⁵ The Crown use of a patent is only legitimate where it is done by or with authorization of 'a government department',¹⁰⁶ and 'for the services of the Crown'. This is

⁹⁸ PA s. 48B(1)(d)(iii). ⁹⁹ PA s. 48B(1)(e). ¹⁰⁰ PA s. 51; see TRIPS Arts. 8, 31(k), 40.

¹⁰² Listed in PA s. 55(1)(a)–(e).

¹⁰³ PA s. 55(4). An exception where no royalty needs to be paid operates under section 55(3). Payment may have to be made to others: see *Patchett's Patent* [1963] RPC 90.

¹⁰⁴ PA s. 57A.

¹⁰⁵ There is a duty to inform the proprietor that the department is using the invention.

¹⁰⁶ With recent trends to roll back the state, determining what is a government department is not always easy. In many cases, consultation of relevant legislation may be of assistance. See *Dory v. Sheffield Health Authority* [1991] FSR 221.

defined to include the supply of anything for foreign defence purposes, the production of specified drugs and medicines, and certain purposes relating to the production or use of atomic energy.¹⁰⁷ Disputes relating to the exercise, terms, or payment for Crown uses are referable to the court.¹⁰⁸

4.4 BIOTECHNOLOGICAL INVENTIONS

One of the features of the packages of reforms initiated by the Biotechnology Directive is that it introduces a new regime for compulsory licensing and cross-licensing of biotechnological inventions. In essence the new scheme attempts to manage the interrelationship between patent protection for biological inventions and plant variety protection. A similar scheme was introduced into the United Kingdom as of 1 March 2002 by the Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002.¹⁰⁹

The 2002 Regulations introduce two new forms of compulsory licences in the UK. The first of these is set out in Regulation 3.¹¹⁰ This provides that where a person is unable to acquire or exploit a plant breeder's rights or a Community plant variety right without infringing a prior patent, they are able to apply to the Comptroller of Patents for a non-exclusive compulsory licence to use the invention. This is subject to the requirement that the applicant pay an appropriate royalty and that the holder of the patent will be entitled to a cross-licence to use the protected variety on reasonable terms.¹¹¹ In order for a compulsory licence to be granted under Regulation 3, the applicant must show that they have applied unsuccessfully to the holder of the patent to obtain a licence. They must also show that the new plant variety in which they wish to acquire or exploit the plant breeders rights or Community plant variety right 'constitutes significant technical progress of considerable economic interest in relation to the invention protected by the patent'.¹¹² It seems that the later requirement may impose considerable limitations on the grant of compulsory licences for biotechnological inventions. In part, this will depend on the how 'significant technical progress' and 'considerable economic interest' are interpreted.

The second compulsory licence is set out in Regulation 11.¹¹³ This provides that where the holder of a patent for a biotechnological invention is unable to exploit the invention without infringing prior plant breeders' rights, that the patent owner is able to apply to the Controller of Plant Variety Rights for a non-exclusive compulsory licence to use the protected plant variety.¹¹⁴ This is subject to the requirement that the patent owner pay an appropriate royalty and that the holder of the plant breeder's rights is entitled to a cross-licence to use the patented invention on reasonable terms.¹¹⁵ For a compulsory licence to be granted under Regulation 11, the applicant must show that they made an unsuccessful application to the holder of the patent or plant variety right to obtain a licence. As with the compulsory patent licence, an applicant for a compulsory plant variety licence is subject to

¹⁰⁷ PA s. 56(2).

¹¹³ Biotech. Dir., Art. 12(2).

¹¹⁴ The applicant must also comply with the Plant Breeders' Regulations established under Reg. 23.

¹¹⁵ Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002 (SI 2002/247), Reg. 11(1); 11(2)(b).

the onerous requirement that the biotechnological invention protected by the patent 'constitutes significant technical progress of considerable economic interest in relation to the plant variety protected by the prior plant breeders' rights'¹¹⁶ It seems that this second requirement may impose considerable limitations on the grant of compulsory licences for biotechnological inventions.

In relation to prior Community Plant Variety Rights that restrict the ability of patentees to exploit their invention in the United Kingdom, the patentee must first apply to the Community Plant Variety Office for a 'compulsory exploitation right'.¹¹⁷ Where such a right is granted to a patentee for a biotechnological invention who could not otherwise exploit their invention in the UK without infringing the prior Community plant variety right, the patentee is entitled to apply to the Comptroller of Patents for a cross licence to use their biotechnological invention in the United Kingdom.¹¹⁸

5 COMPENSATION FOR USE

In the vast bulk of cases, the amount that is paid for the use of a patent is largely left to the market and the negotiating skills of the parties. In a number of exceptional circumstances, however, the comptroller or court may be called upon to determine the amount payable for use of the patent. The question of the compensation payable arises in relation to employer use of employee inventions, compulsory licences, licences of right, and Crown use. In each case the tribunal has to make difficult qualitative judgments about the value of the patent, and how the profits that have been or might be made are to be allocated. In due course, international agreements may require that the contributions of indigenous groups are compensated where their knowledge and resources are used to develop pharmaceuticals.¹¹⁹

5.1 COMPENSATION FOR EMPLOYER USE

While the fate of a creator's relationship with his or her creations is normally left to the vagaries of contract law and the negotiating skills of the creator, intellectual property law occasionally recognizes that creators have residual interests in their creations.¹²⁰ One of the most notable examples of this is found in sections 40(1) and 40(2) of the Patents Act which provides employee-inventors with a statutory right to compensation where their inventions are exploited by their employer.¹²¹ The compensation provisions apply when an invention made by an employee is owned by the employer by virtue of section 39 (1)(a) or (b) and it can be shown that the patented invention is of outstanding benefit to the

¹¹⁶ Ibid., Reg. 11(c). Biotech. Dir., Art. 12(3)(a)(b).

¹¹⁷ Dir. 98/44/EC, Art. 12(3)

¹¹⁸ Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002 (SI 2002/247), Reg. 15.

¹¹⁹ Convention on Biological Diversity, Art. 15(7).

¹²⁰ The most obvious examples are to be found in copyright law where the creator's personality interests are protected by moral rights, and their financial interests by the *droit de suite* and unwaivable rights to remuneration.

¹²¹ See A. Chandler, 'Employee Inventions: Outstanding Compensation?' (1992) *J Business Law* 300; K. Wotherspoon, 'Employee Inventions Revisited' (1993) 22 *ILJ* 119, 131; J. Hughes, 'The Personality Interest of Artists and Inventors in Intellectual Property' (1998) 16 *Cardozo Arts & Entertainment LJ* 81, 138.

employer.¹²² The compensation provisions also apply where an employee-invention has been assigned to or exclusively licensed by the employer and it can be shown that the remuneration that the employee received from the transaction was inadequate. In both these situations, inventors have a statutory right of compensation.¹²³ Awards for compensation will only be made if it is 'just' to do so.¹²⁴

While these provisions may appear to provide employee-inventors with a potentially valuable source of income, they have been construed in such a way as to provide little direct benefit to employees. Whether the compensation scheme provides indirect benefits to employees, for example, acting as an impetus for the introduction of in-house compensation schemes is another matter.¹²⁵

Applications for compensation can be made to the comptroller or the court during the life of the patent and up to one year after the patent has expired. In recognition of the fact that the fate of a patented invention may change over time, if an initial application for compensation is rejected, employees can reapply for compensation at a later stage.¹²⁶ After some initial uncertainty,¹²⁷ it is now clear that the onus of proving that the patent is of outstanding benefit to the employer falls upon the employee.¹²⁸

In order to protect employees, the 1977 Act provides that contractual terms which attempt to undermine the employee's right to compensation are unenforceable.¹²⁹ In recognition of the fact that unequal bargaining power might be mitigated by collective action, provision is made for collectively bargained schemes to override the individual claim machinery. Thus section 40(3) states that any employee who is a member of a trade union which has a 'relevant collective agreement' with the employer is unable to bring a claim for compensation.¹³⁰ For the provision to apply, the collective agreement must provide for the payment of compensation in respect of inventions of the same description as made by the employee.¹³¹

5.1.1 Compensation where an invention automatically belongs to employer

The first situation where employees are entitled to apply for compensation is set out in section 40(1). This states that where an employee has made an invention belonging to the employer via section 39(1), the employee may be entitled to compensation. For an award for compensation to be made, the employee must show (i) that the patent is of benefit to the employer, (ii) that the benefit is outstanding, and (iii) that it is *just* that the employee be awarded compensation. We will deal with each of these in turn.

(i) '*Of benefit to the employer*'. Determining the level of benefit that an employer has derived from a patent¹³² is a complex task.¹³³ The process of calculation is made somewhat easier as a result of the fact that benefit has been construed to mean 'money or money's

¹²² PA s. 40(1). ¹²³ PA s. 40. ¹²⁴ PA ss. 40(1) and 40(2)(d).

¹²⁵ The regime places an onus on an employer to keep detailed records. PA s. 59(2) specifies that personnel records of inventors should be kept for at least one year after the patent has ceased to have effect.

¹²⁶ PA s. 41(7). ¹²⁷ Cf. *GEC Avionic's Patent* [1992] RPC 107, 112.

¹²⁸ *Memco-Med's Patent* [1992] RPC 403.

¹²⁹ PA s. 42(2). ¹³⁰ PA ss. 40(3) and 40(6). ¹³¹ PA s. 40(3).

¹³² The calculation may take into account the benefits received under foreign patents and equivalent rights (such as utility models): PA s. 43(4); *GEC Avionic's Patent* [1992] RPC 107, 111.

¹³³ On the importance of foreign patents see *ibid.*, RPC 107; *British Steel's Patent* [1992] RPC 117, 121.

worth'.¹³⁴ This means that non-financial benefits such as the kudos and prestige that flow from a patent are excluded from the equation. In calculating the benefit that flows to an employer from a patent, it is important to note that only *actual* rather than *potential* or *future* benefits are taken into account.¹³⁵ This point was emphasized by the examiner in *British Steel's Patent*,¹³⁶ when he said that while the benefits that were expected to flow from a patent were relevant when considering whether an award was 'just', they were not relevant when deciding whether the benefit from the patent was outstanding.¹³⁷ The examiner also declined to consider any benefits that might have accrued had the employer exploited the invention to its full potential. This was said not to have been germane in the circumstances because the relevant benefit was actual rather than potential.

Over time, a number of guiding principles have been developed to assist the tribunal when calculating the benefit. For example, in *Memco-Med's Patent*,¹³⁸ the court said it was useful 'to examine what the employer's position would have been if the patent had never been granted, in comparison with the actual position'.¹³⁹ It has also been suggested that the courts should speculate as to what an employee would have paid an independent contractor for the invention.¹⁴⁰ The benefit derived from the patent is not diminished by the possibility that a different invention might have produced a similar benefit, though this might have some bearing on whether the tribunal considers the benefit to be outstanding.¹⁴¹

However helpful these principles may be, the courts have tended to rely upon more concrete information when calculating benefit. Thus, where a licence has been granted for use of the patent, the licence fee or assignment income is taken as an indication of the patent's benefit to the employer.¹⁴² Where a patent has been included on the balance sheet of an organization, this would presumably also provide a similar basis from which the benefits could be calculated. Another important piece of information that has been used to determine benefit is the employer's sales figures. This is particularly relevant where employers exploit or manufacture the patented invention themselves.¹⁴³ While sales figures, licence fees, and the like provide a useful basis from which to calculate the benefit that an employer has derived from a patent, they cannot be relied upon to provide an exact figure. The reason for this is that while the existence of a patent over a manufactured product will frequently influence sales, the number of products sold (as with the licence or assignment fees which are paid for use of the patent) may be a consequence of a range of factors—such as the advertising and marketing campaigns used to sell the product.¹⁴⁴

Given that sales figures and licence fees may be influenced by an array of factors other than the patented invention, when they are being used to calculate benefit, it is necessary

¹³⁴ PA s. 43(7).

¹³⁵ Future benefits can only be taken into account when they may reasonably be expected to come about. In *GEC Avionic's Patent* [1992] RPC 107, 115 'options' were held to be too tentative.

¹³⁶ [1992] RPC 117. ¹³⁷ [1992] RPC 117, 127. ¹³⁸ [1992] RPC 403.

¹³⁹ [1992] RPC 403, 413.

¹⁴⁰ See *British Steel's Patent* [1992] RPC 117, 128. ¹⁴¹ *Ibid.*, 127.

¹⁴² *GEC Avionic's Patent* [1992] RPC 107, 108.

¹⁴³ The particular problem that arises in these situations is that there is no readily identifiable benchmark against which benefit can be measured.

¹⁴⁴ Whether an employer can circumvent the provision by deciding not to patent but utilize other form of protection such as confidentiality agreements remains unclear. PA s. 43(4) defines 'references to a patent' as covering 'a patent or other protection': arguably including confidentiality.

to isolate the *net* benefits that flow from the patent to the employer from any other contributing factors. *British Steel's Patent*¹⁴⁵ offers another useful example of the care that needs to be taken when calculating the net benefit that flows to an employer from a patent. The particular accounting problem that arose in this case stemmed from the fact that a number of technical obstacles had to be overcome before the patented invention could be put into practice. In this situation, the examiner accepted that in calculating the net benefit that flowed to the employer, it was necessary to subtract the costs that the employer had incurred in moving the invention from its initial conception to a practical profitable reality.

The care that needs to be taken in using sales figures as a indicator of benefit was also highlighted in *Memco-Med's Patent*,¹⁴⁶ where Aldous J was called upon to resolve a remuneration dispute over a patented invention which detected when someone was near lift doors and prevented the doors from closing on them. In response to the argument that high sales of the patented detection device was evidence that the employer had derived high levels of benefit from the patent, the court found that the high sales were attributable more to the price and quality of the product and to the fact that the manufacturer had a long and established relationship with the purchaser than to the patent itself.¹⁴⁷ From this basis, the court concluded that the benefit that flowed to the employer from the patent was minimal.

(ii) *Is the benefit 'outstanding'?* Once the level of benefit that an employer has derived from a patent has been calculated, it is then necessary to determine whether it is 'outstanding'. It has been suggested that the reason why compensation is only awarded where the benefit is outstanding is that the employees who would be making a claim under section 40(1) would already have received some remuneration for the invention in their salary package.¹⁴⁸ While 'outstanding' is not defined in the Act, it has been likened with 'significant or substantial' and said to require something out of the ordinary.¹⁴⁹ In *GEC Avionics's Patent*¹⁵⁰ an application for compensation was rejected on the ground that although the patent conferred some benefit, the employer achieved similar benefits in relation to products not involving the invention.

Whether a patent is of outstanding benefit to an employer depends on the circumstances of the case in question. The only guidance that the Act provides is that the 'size and nature of the employer's undertakings' ought to be taken into account when determining whether a patent is of outstanding benefit.¹⁵¹ The provision has been interpreted in such a way that where an employee works for a large corporation, it is virtually impossible for an employee to produce anything which could be classified as 'outstanding'.¹⁵² For example, in *GEC Avionics* the patent enabled the employer to secure a \$72 million contract, with a \$10 million profit. However, because GEC had entered into contracts of a similar size not

¹⁴⁵ [1992] RPC 117.

¹⁴⁶ [1992] RPC 403.

¹⁴⁷ [1992] RPC 403, 417. There is a presumption that sales from non-patented goods are not attributable in any way to the patent. *GEC Avionics's Patent* [1992] RPC 107, 114.

¹⁴⁸ *Ibid.*, 115.

¹⁴⁹ In *British Steel's Patent* [1992] RPC 117, 122 the examiner suggested that the term implied a 'superlative'. See also *Memco-Med's Patent* [1992] RPC 403, 414.

¹⁵⁰ [1992] RPC 107.

¹⁵¹ PA s. 40(1).

¹⁵² *British Steel's Patent* [1992] RPC 117.

involving the invention, the examiner held that the patent did not provide any outstanding benefit to the employer.¹⁵³

Given that the benefit is looked at in relation to the size of the activities of the employer, it is important to ascertain the scope of the relevant undertaking. While it has been said that the size of the employer's undertakings could be either the whole or a division of the employer's business,¹⁵⁴ the reported decisions have not provided any guidance as to how this issue is to be resolved. Nevertheless, the consequences are clear. In *British Steel's Patent* an employee inventor claimed compensation in relation to a patent taken out by his employer for a valve which had been described in the employer's publicity and the press as revolutionary and vital cost-saving technology. While the employee asserted that the employer had benefited from the patent to the tune of £5 million per year, the employee was only able to prove a benefit of between £100,000 and £500,000 per year. In any case the court rejected the application on the ground it was not outstanding. In so doing, the comptroller defined the undertaking as the undivided totality of British Steel's operation. Thus neither the proven benefit¹⁵⁵ nor the claimed benefit were outstanding when compared with British Steel's turnover of £4900 million and a profit of £593 million.¹⁵⁶

(iii) *Is it just that compensation should be awarded?* For compensation to be awarded, as well as establishing that the patent is of outstanding benefit to the employer, the employee must also show that it is 'just' that the employee be awarded compensation.¹⁵⁷ The decision as to whether an award for compensation is just is based on the same factors that are taken into account when deciding whether the patent provides the employer with an outstanding benefit. As a result, it is difficult to imagine situations where a patent is of outstanding benefit to the employer and it is not also just for the employee to receive compensation. It may be that the requirement that the award ought to be just enables the tribunal to make more qualitative judgments. For example, where an employee works for a small firm and is already well compensated under their contract of employment, the tribunal may consider that a further award would place an unfair burden upon the employer.¹⁵⁸ The requirement that the award be just may also be used as a way of introducing general equitable principles to reject applications where the employee acted in a way that is contrary to their duty of fidelity.¹⁵⁹

5.1.2 Compensation where an employee-invention has been assigned to an employer

The second situation where an award for compensation may be made to an employee is set out in section 40(2). This provides that additional compensation may be paid where the initial entitlement to an invention lay with an employee but the employee assigned or licensed the invention to the employer. The employee must demonstrate that the

¹⁵³ *GEC Avionic's Patent* [1992] RPC 107, 115.

¹⁵⁴ *Memco-Med's Patent* [1992] RPC 403, 414.

¹⁵⁵ The proven benefit in money or money's worth to the employer of the patented invention represented no more than 0.01% of turnover or 0.08% of profits. Even on the most favourable interpretation of the facts, the benefit was not even equivalent to 1%.

¹⁵⁶ *British Steel's Patent* [1992] RPC 117, 126. In *Garrison's Patent* (SRIS O/44/97) a benefit of 2–3% of the total turnover of a small company manufacturing snooker cues was held not to be outstanding.

¹⁵⁷ PA s. 40(1).

¹⁵⁸ In *Memco-Med's Patent* [1992] RPC 403, 411 it was said that because of duties of employee 'it would need some quite exceptional benefits to flow from the patent for it to be just that an award should be made'.

¹⁵⁹ See *CIPA*, para. 40.04.

remuneration for the transaction is inadequate in comparison with the remuneration derived by the employer from the patent. They must also show that it is just that additional compensation be paid.

To determine whether compensation is payable under section 40(2), it is necessary to ascertain the benefit that the employee derived from the contract with their employer and the benefit the employer derived from the patent. Once these two figures have been calculated, it is then necessary to determine whether the remuneration was adequate. This appears to require the court to estimate what remuneration might have been achieved in a market transaction between a willing seller and purchaser. However, given that an employee who makes an application under section 40(2) will have had an opportunity to bargain with their employer, it is unlikely that the tribunal will hold that remuneration is inadequate in circumstances where it would not treat the benefit to be outstanding.

5.1.3 Calculating the amount of compensation

Once it has been decided that compensation should be awarded to the employee, the question arises: how much? Section 41(1) directs that the award should secure for the employee a 'fair share' of the benefit that the employer has derived. Compensation may be awarded as a lump sum or in periodic payments.¹⁶⁰ There is a power to vary the amount at a later stage.¹⁶¹ In determining the compensation to be awarded, the court or comptroller is directed to take account of an array of factors.¹⁶² In *British Steel* the examiner said that the question was similar to the question that arose when determining the royalty payable in licence of right proceedings. The relevant considerations included the size of the benefit that had been and was likely to be derived from the patent, and the salary and awards that the employee had already received. In *British Steel* these would have included a £10,000 ex gratia payment from British Steel and an MBE. In other cases, the tribunal might take account of the contribution made by other people, such as co-inventors, other employees, and the employer.

5.2 COMPENSATION FOR COMPULSORY LICENCES AND LICENCES AS OF RIGHT

Another situation where the tribunals may be called upon to determine the compensation that ought to be paid for the exploitation of a patent is where the patent is subject to a compulsory licence or a licence as of right. In these circumstances, the principal goal is to ensure that the owner of the patent receives reasonable remuneration for the use that is made of the invention.¹⁶³

Three techniques have been used to reach an appropriate sum. These are commonly referred to as the 'comparable royalties', 'costs', and 'profits available' approaches. The comparable royalties test is regarded as 'by far the best and surest approach'.¹⁶⁴ It involves utilizing evidence from comparable licences to estimate what would have been agreed by the parties. The kinds of evidence used will vary from evidence relating to standard royalty

¹⁶⁴ *Ibid.*

rates for patented products in a particular field,¹⁶⁵ through to the actual examples of licence agreements voluntarily entered into by the patentee. In deciding whether a situation is comparable, the most important factor is the nature of the patentee's invention: if the patentee's invention is unusual, and the comparator licence covered the same invention, it is likely to offer a useful comparison (although it may be necessary to make adjustments in relation to market size and other terms in the licence).¹⁶⁶ If the invention is unusual, and the licence that is used as a basis for comparison relates to a different product, it is likely to be of little value (even if the size of the market is similar).¹⁶⁷

Where no comparable licence exists, the terms are calculated by the so-called 'costs approach'.¹⁶⁸ Under this approach the tribunal tries to assess the value of the patent in terms of a return on costs. This involves an examination of the patentee's expenditure on research and development, promotional expenditure, and an appropriate annual increase. The idea behind this approach is that the patentee should receive a fair and reasonable return for their financial outlay. Once the costs have been calculated, it is necessary to determine what an appropriate increase would be. This may be done by looking at the average annual return that the patentee makes on other inventions.¹⁶⁹

The third approach, which is called the '*profits available approach*' is used as a last resort.¹⁷⁰ The approach requires the tribunal to determine the profit the applicant will make (if licensed) and then to divide the available profits between the patentee and the licensee. One problem with this approach is that it will often be difficult to decide how to split the profits.¹⁷¹ It has been said that the profits available approach is particularly dubious because it gets matters the wrong way round. It 'makes the licensee's reasonable remuneration the measure of what is an appropriate royalty instead of the patentee's reasonable remuneration'.¹⁷² There is also a danger that it might leave the patentee with no royalty at all.¹⁷³ Despite these problems, it has been acknowledged that 'some assistance may often be derived from looking at what are the expected profits, if only as a cross-check on the end result'.¹⁷⁴

5.3 COMPENSATION FOR CROWN USE OF PATENTS

Where an invention is used for the services of the Crown, the government department concerned is required to inform the proprietor of the patent and negotiate to pay such terms as may be agreed. In the absence of an agreed rate, the matter is determined by the

courts who, following the approach taken in compulsory licence proceedings, attempt to second-guess what a willing licensor and licensee would have agreed.¹⁷⁵ At the very minimum, given Article 31 of TRIPS, the court should give the patentee adequate remuneration taking into account the economic value of the authorization. The 1977 Patents Act says that the patentee should be awarded compensation to cover 'loss of profit' that is 'any loss resulting from his not being awarded a contract to supply the patented product, or . . . to perform the patented process or supply a thing made by means of the patented process'.¹⁷⁶ In determining the loss, the court takes account of the profit which would have been made on such a contract and the extent to which any manufacturing or other capacity was underused.¹⁷⁷

RIGHTS RELATED TO PATENTS

1 INTRODUCTION

In this chapter we examine two areas of law that are related to, but do not traditionally form part of, patent law. The first and oldest of the two regimes is the system of plant variety protection. This gives protection to the breeders of new plant varieties. We then go on to look at supplementary protection certificates that currently operate in the United Kingdom to extend the length of patent protection. In essence the supplementary protection certificate scheme was introduced to compensate owners for time lost while they were waiting to get regulatory approval to market their patented products.

2 PLANT VARIETIES

While the value of new plant varieties has long been recognized in the United Kingdom, a system of protection was only introduced in 1964. (In contrast a system of protection existed in the USA from 1930.)¹ In part this was because of the belief that the development of new varieties was part and parcel of traditional farming practices rather than a distinct activity of breeders (that required separate protection). Moreover, for much of the twentieth century, the leading breeders' organizations were publicly funded institutions that did not prioritize intellectual property protection.² However, during the Second World War the desire to improve agricultural yields became a matter of national significance. In addition by the 1950s it had become clear that the few private seed firms that operated in the United Kingdom were losing ground to foreign competitors: the lack of property protection was seen as one possible cause.³

The production of successful varieties is thought to be highly desirable insofar as it

¹ See B. Greengrass, 'The 1991 Act of the UPOV Convention' [1991] *EIPR* 466; M. Llewelyn, 'The Legal Protection of Plant Varieties in the European Union: A Policy of Consensus or Confusion?' [1997] 2 *Bioscience LR* 50; M. Llewelyn, 'European Plant Variety Protection: A Reactionary Time' [1999] *Bioscience LR* 211.

² See P. Palladino, 'Science, Technology, and the Economy: Plant Breeding in Great Britain, 1920–1970' (1996) 49 *Economic History Review* 116 (reporting that 83% of wheat grown by British farmers in the 1990s was derived from seeds grown in publicly financed plant-breeding centres).

³ See P. Palladino, 'Science, Technology, and the Economy: Plant Breeding in Great Britain, 1920–1970' (1996) 49 *Economic History Review*, 116, 131 (another alleged cause was lack of capital).

increases yields, resistance to pests and disease, and the sheer number and diversity of varieties.⁴ While the breeding of new varieties takes a considerable amount of time and is often very costly,⁵ once a variety is made available to the public it can be readily duplicated.⁶ Indeed, one of the features of plant varieties is that they produce their own reproductive material. Consequently, it was thought that it would be 'equitable to give plant breeders the opportunity of a fair reward for their work, effort, and investment in breeding, and to grant them protection against unauthorized exploitation'. It was also intended 'to provide plant breeders with an incentive to produce improved varieties of a wide selection of plant species to the benefit of farmers, growers, and private gardeners'.⁷

However, in the same way in which agriculture was long seen as being non-industrial (and thus outside the remit of patent law), so too the results of plant breeding were not thought to be appropriate subject matter for patent protection. In part this was because prior to acceptance of Mendelian theories of genetics, the production of varieties was seen more as an art than a scientifically informed activity.⁸ This was reinforced by the fact that there were technical problems in describing plant varieties in a way that met the requirements of patent law. However, the most significant reason why plant varieties were thought to be inappropriate subject matter for patent protection was that new plant varieties were unlikely to satisfy the inventiveness threshold of patents: most breeds were obvious. Consequently, it was decided that the protection needed could best be provided by a *sui generis* system tailored to the characteristics of plant varieties and the needs of breeders, growers, and traders.

The United Kingdom first adopted a system of plant variety protection in 1964. This was in response to the *Report of the Committee on Transactions in Seeds*⁹ and to the International Convention for the Protection of New Varieties of Plants (UPOV), originally formulated in 1961.¹⁰ The 1964 Plant Varieties and Seeds Act was substantially amended in 1978 and 1991 to take into account revisions in UPOV.¹¹ In 1997 it was repealed and

¹⁰ UPOV had 54 members as of 10 Nov. 2003. For a discussion of the early history see UPOV, *The First Twenty Five Years of the International Convention for the Protection of New Varieties of Plant* (1986).

¹¹ UPOV was also modified on 10 Nov. 1972, and revised in 1978. The 1991 version came into force in Apr. 1998. For commentary, see B. Greengrass, 'UPOV and the Protection of Plant Breeders—Past Developments, Future Perspectives' (1989) 20 *IIC* 622; M. Llewelyn, 'The Legal Protection of Biotechnological Inventions: An Alternative Approach' [1997] *EIPR* 115, 119; N. Byrne, *Commentary on the Substantive Law of the UPOV* (1991).

replaced by the Plant Varieties Act.¹² In 1994 the European Community adopted a Community Plant Variety Regulation¹³ which made it possible, from 27 April 1995, for breeders to apply for a single Community-wide right for varieties. Community plant variety rights have uniform effect within the territory of the Community.¹⁴ The grant of a Community right leads to the suspension of any equivalent national rights that may exist.¹⁵ As the international, regional, and national systems are in similar terms, we will look at them together.

2.1 PROCEDURE FOR GRANT

As with patents, plant variety rights arise as a result of a process of registration. The initial application is made to a relevant granting authority: either the UK Plant Variety Rights Office in Cambridge, or the Community Plant Variety Office in Angers in France.¹⁶ Anyone may apply for national rights irrespective of their nationality. However, a person may only apply for a Community right where they are a national of, or domiciled in, a country which is a member of UPOV.¹⁷ As well as identifying the botanical taxon, the applicant must also provide the name of the breeder, a provisional designation for the variety, a technical description of the variety, the geographical origin of the variety, details of any previous commercialization of the variety, and information about applications made in respect of the variety.¹⁸ In some cases a colour photograph of the variety must also be supplied. An applicant must select a name for the variety.¹⁹ Provision is made for objections by third parties.²⁰ Fees are payable.²¹

The Office will examine the application in three stages. First, there is a formal examination.²² This is followed by a substantive examination whereby the Office examines the

¹² In force 8 May 1998: Plant Varieties Act 1997 (Commencement) Order 1998 (SI 1998/1028); Plant Breeders' Rights Regulations 1998 (SI 1998/1027). The four major changes are: that the regime extends to all genera and species; that the rules on prior exploitation are liberalized to allow market testing; a simplified system of rights pending grant; breeders' rights are strengthened. The plant breeders' regime falls under the control of the Dept. for Environment, Food, and Rural Affairs (formerly known as the Ministry of Agriculture, Fisheries and Food rather than the Dept. of Trade and Industry). For an introductory guide see, MAFF, *UK Plant Breeders' Rights Handbook 1998*. The 1964 Act had previously been amended by the Plant Varieties Act 1983 which was intended to enable UK ratification of the 1978 Revision of UPOV.

¹³ See P. van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997).

¹⁴ CPVR, Art. 2.

¹⁵ CPVR, Art. 92; PVA s. 11(3). The Regulation is otherwise 'without prejudice' to the rights of member states to grant national rights. While there is no 'approximation Directive', the common need to satisfy the requirements of UPOV and good sense have produced a high level of harmonization. Most countries in the Community have a parallel national system with the exception of Greece and Luxembourg.

¹⁶ <http://www.cpvo.fr>. Neither system is heavily used: in 1994 there were 582 UK applications and 419 grants of PVRs, and 238 applications and 139 grants in 1998; in 1998 there were 1,835 Community PVR applications, and 1,491 issued CPVRs. See 'Statistics' (1999) 86 *Plant Variety Protection* 8. By 2002 the number of applications at the Community Plant Variety Office had increased to 2,223 and the grants to 1,704: Community Plant Variety Office, *Annual Report 2002* (2003).

¹⁷ CPVR, Art. 12. The Commission may extend qualification to nationals and domiciliaries of other countries which provide corresponding protection.

¹⁸ PVA s. 3(2); CPVR Art. 50.

¹⁹ PVA s. 18(2)(a); CPVR, Art. 50(3).

²⁰ CPVR, Art. 59.

²¹ The Plant Breeders' Rights (Fees) (Amendment) Regulations 1999 (SI 1999/1089). The application fee is £275, but the tests fees and renewal fees vary according to the species involved—for example, tests are £745 for cereals, but only £120 for roses; renewals are £435 for cereals and £70 for roses.

²² CPVR, Art. 53.

application to ensure that it relates to appropriate subject matter (that is, a variety), that the variety is new, and that the applicant is the person entitled to plant breeders' rights.²³ The Office also considers the suitability of the name proposed for the variety, and takes account of a host of considerations, including prior registrations.²⁴ The third stage is the technical examination of the characteristics of the variety. At this stage, the Office examines the application to ensure that the variety is distinct, uniform, and stable.²⁵ These requirements are sometimes referred to as the 'DUS'.²⁶ An applicant must supply propagating material that the Office can use to test the DUS by planting and growing the variety.²⁷ The tests are often carried out at more than one site. In most cases DUS tests will take between one and three years.²⁸ As a result, it may be some years between application and grant.²⁹ Indeed, the crop is grown throughout the period of the monopoly and if it becomes apparent that the variety does not satisfy the requirements of the Act it is liable to be revoked.³⁰

2.2 SUBJECT MATTER

All three systems of plant variety protection cover varieties of 'all plant genera and species' from ornamental roses, to vines, potatoes, and wheat.³¹ Section 1(3) of the 1997 Plant Variety Act defines a variety as:

a plant grouping within a single botanical taxon of the lowest known rank, which grouping . . . can be (a) defined by the expression of the characteristics resulting from a given genotype or combination of genotypes, (b) distinguished from any other plant grouping by the expression of at least one of those characteristics, and (c) considered as a unit with regard to its suitability for being propagated unchanged.³²

A botanical 'taxon' means a 'group' of plants: the requirements that it be of the lowest known rank is to make it clear that protection could not be granted for a 'family', 'genus', or 'species' which are groups higher in the taxonomical classification system.³³

2.3 VALIDITY

In order to be protected the variety must be 'new'. It is also necessary for the variety to be 'distinct', 'uniform', and 'stable'.³⁴

²³ Ibid., Art. 54.

²⁴ Ibid., Art. 63.

²⁵ UPOV, Art. 5; CPVR, Art. 6; PVA s. 4(2).

²⁶ CPVR, Art. 55.

²⁷ For the UK, this work is mainly carried out by the National Institute of Agricultural Botany (NIAB), the Scottish Agricultural Science Agency (SASA), and the Dept. of Agriculture for Northern Ireland (DANI). See also UPOV, Art. 12; CPVR, Arts. 53–5;

²⁸ Usually 1 year for ornamentals, 3 for herbage varieties and trees, and 2 years for other species.

²⁹ Provisional protection is provided: UPOV, Art. 13; CPVR, Art. 95; PVA s. 5(1).

³⁰ CPVR, Arts. 20–1; PVA ss. 21–2.

³¹ CPVR, Art. 5 (all botanical genera and species, including, *inter alia*, hybrids between genera and species); PVA s. 1(2).

³² CPVR, Art. 5(2); PVA s. 1(3). See further *Van Den Bout and Ten Hoopen*, A1/2002 (CPVO Board of Appeal) (1 Apr. 2003), 5.

³³ A wild rose is in the species 'carolina', which is in the genus 'rosa', which is in the family 'rosaceae', which is in the order 'rosales', which is in the class 'dicotyledons', which is in the subphylum 'angiospermae', which is in the phylum 'spermatophyta' which finally is in the kingdom 'plants'.

³⁴ UPOV, Art. 5; CPVR, Art. 6; PVA s. 4(2).

2.3.1 Novelty

The requirement that the variety be new is nowhere near as onerous as the worldwide novelty requirement in patent law. A variety is new if there has been no sale or disposal of propagating or harvested material within the territory (under the Plant Variety Act, the UK, or in the case of the Community Plant Variety Regulation, the Community) more than one year prior to the application. The novelty of a variety may also be lost if there has been a sale or disposal outside of the relevant territory, in the case of trees and vines, more than six years before the application date; in other cases, not more than four years prior to the application date.³⁵

Three features of the novelty requirement should be noted. The *first* is that novelty is not lost by prior use (for example, growth) of the variety, but only by prior sale or disposal. As such, a plant can be grown in someone's garden for years prior to application and an application still succeed. In part this reflects the desire to reward the discovery as much as the breeding of new varieties. Indeed, it seems that the applicant can still obtain a plant variety right even if they have given away propagating or harvested material, as long as this was not 'for the purposes of exploiting the variety'. The *second* notable feature is that the novelty provisions allow for substantial 'grace periods'. That is, they allow for periods in which the applicant can commercialize the plant prior to grant without prejudicing the application. As a result, a person can sell vines outside the UK for up to six years before they need apply for a plant variety right. *Third*, and perhaps most significantly, the only disposals or sales to be taken into account when considering the novelty of a particular variety are those *by the applicant themselves or with their consent*.³⁶ Sales of material by third parties who have independently developed the same variety will not render the variety lacking in novelty. In such circumstances, priorities are accorded to the first to apply.³⁷ However, no protection is given to the independent developer via prior user's rights. In such circumstances a monopoly may be granted to a person over an activity or trade which someone else was doing already.

2.3.2 Distinct, uniform, and stable

As well as being novel, to be the subject of plant breeders' rights the variety must also be 'distinct', 'uniform', and 'stable'.³⁸ These are sometimes referred to as the 'DUS' or 'agro-technical' requirements.

A variety is *distinct* if it is 'clearly distinguishable by one or more characteristics which are capable of a precise description from any other variety whose existence is a matter of common knowledge at the time of application'.³⁹ Distinctiveness may arise through visible differences in outward appearance, such as height, size of leaves, leaf colour, or in the ears of cereals. It may also arise through physiological differences associated with the variety's particular chemical or biological structure, such as resistance to disease,⁴⁰ or ability to

³⁵ UPOV, Art. 6; CPVR, Art. 10; PVA Sched. 2, para. 4.

³⁶ See A. Christie, 'The Novelty Requirement in Plant Breeders' Rights' (1988) 19 *IIC* 646. Cf. P. van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997), 15.

³⁷ PVA Sched. 2, Part II, para. 5.

³⁸ UPOV, Art. 5; CPVR, Art. 6; PVA s. 4(2).

³⁹ UPOV, Art. 7; CPVR, Art. 7 (clearly distinguishable by reference to the expression of characteristics that results from a particular genotype or combination of genotypes); PVA Sched. 2, para. 1.

⁴⁰ *Maris Druid: Spring Barley* [1968] *FSR* 559 (resistance to mildew accepted as a characteristic).

withstand certain conditions.⁴¹ Any difference will suffice:⁴² there is no need for the distinguishing feature to confer any particular aesthetic or economic advantage. Distinctness is a comparative test and may require the claimed variety to be compared with similar varieties. The variety must only be compared with 'other' varieties and not with examples of 'itself'.⁴³ In practice, the comparison is made with the varieties of the same species in the Office's 'reference collection'. The reference collection is made up of those varieties for which rights already exist or are being sought. The types of characteristic and the extent of the deviation necessary for a variety to be distinct will vary with the grouping concerned. Moreover, the characteristics needed for a variety to be distinct may be different for each comparison (for example variety A might differ from variety B by being higher, but differ from variety C by being hardier).⁴⁴

A variety is *uniform* if 'it is sufficiently uniform in those characteristics' which make it distinct.⁴⁵ This means that nearly all examples of the variety must bear the characteristics that make the plant distinct. During the early stages of the breeding process, a proportion of the plants grown may not bear the relevant characteristics. Where this is the case, it may be necessary to undertake further breeding to eradicate deviant strains. However, there comes a point where uniformity requires effort that is out of proportion to the improvement in uniformity gained by the removal of deviants. Consequently, it is not necessary for a variety to be completely uniform. This means that a variety will still be uniform even if a few of the plants that are grown do not exhibit the critical characteristics. To this end, the Plant Variety Office has stated that a variety is sufficiently uniform if there is:

the degree of uniformity a capable breeder skilled in the art can reasonably be expected to achieve having regard generally to the nature of plant material and more particularly to the biological possibilities of the species in which he is working including its mode of reproduction, and to any special features of the variety under consideration.⁴⁶

A variety is *stable* if the characteristics that make it distinct 'remain unchanged after repeated propagation'.⁴⁷ The idea is that while a first generation might be distinct and uniform, when a second generation is grown a large number of deviants appear (due to residual 'heterozygosity'). This requires an assessment to be made of the inherent capability of the variety to remain true to its original characteristics. As with the testing of uniformity, deviants that appear as a result of pollination by nearby crops are ignored.

⁴¹ Under the 1964 Act these two types of distinctiveness were referred to as 'morphological' and 'physiological'.

⁴² It seems that a mere modification of genetic structure which is not revealed or expressed in the variety will not make it distinct: Van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997), 16.

⁴³ See Christie, 'The Novelty Requirement in Plant Breeders' Rights', (1988) 19 *IIC* 646, 651-4; cf. Van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997), 16.

⁴⁴ For an illustration (though under the differently worded provision in the 1964 Act), see *Daehnfeldt v. Controller of Plant Varieties* [1976] *FSR* 95.

⁴⁵ UPOV, Art. 8; CPVR, Art. 8; PVA Sched. 2, para. 2. For an example illustrating the difficulties of determining uniformity in tests where variants can arise through 'out-pollination' from nearby crops and spontaneous mutants see *Moulin Winter Wheat* [1985] *FSR* 283.

⁴⁶ *Zephyr: Spring Barley* [1976] *FSR* 576, 579.

⁴⁷ UPOV, Art. 9; CPVR, Art. 9; PVA Sched. 2, para. 3.

2.4 OWNERSHIP

The person entitled to the grant of plant breeders' rights is the person who breeds the plant variety or discovers and develops it.⁴⁸ However, where these events occur in the course of a person's employment, the employer is presumed to be the person entitled to grant of the plant breeders' rights.⁴⁹ The concept of breeding 'does not necessarily imply inventing something totally new but includes the planting, selection, and growing on of pre-existing material and its development into a finished variety'.⁵⁰ Plant breeders' rights are property rights and as such are assignable, though the statute forbids a separate assignment of rights in the protected variety and rights in 'dependent' varieties. The Community right cannot be assigned other than for the Community as a whole. Where this occurs the assignment must be in writing and should be entered in the Register kept by the Community Plant Variety Office.⁵¹

2.5 DURATION

The duration of rights varies with the type of plant concerned: UPOV requires members to provide a minimum duration of twenty years for most plants and a minimum of twenty-five years for trees and vines.⁵² However, the European and UK systems go further than these minima, protecting potatoes, trees, and vines for thirty years, and other genera and species for twenty-five years.⁵³ Throughout the period for which the grant operates rights-holders should ensure they are in a position to produce propagating material to the Office.⁵⁴ A national right will become ineffective on grant of a Community right for the same variety.⁵⁵

2.6 RIGHTS AND INFRINGEMENT

A valid plant breeders' right gives the proprietor (initially, the breeder or discoverer) a number of rights.⁵⁶ While these rights are primarily in relation to the commercialization of propagating material, they may also apply to harvested material and to derivative varieties.⁵⁷ The rights given to breeders are more limited than in the cases of patentees.⁵⁸ Moreover, it should be noted that as with other intellectual property rights these are negative rights. It is also important to note that with the exception of

⁴⁸ PVA s. 4(3); UPOV, Art. 1(iv); CPVR, Art. 11(1). The fact that rights are available to 'discoverers' has sometimes proved controversial: see G. Dworkin, 'The Plant Varieties Act 1983' [1983] *EIPR* 270, 272.

⁴⁹ PVA s. 4(4); UPOV, Art. 1(iv). As far as the CPVR is concerned entitlement shall be determined in accordance with the national law applicable to the employment relationship in the context of which the variety was bred, or discovered and developed.

⁵⁸ 1960 Committee, para. 141.

ornamentals and fruit, the breeder must gain relevant regulatory approval before a variety is marketed.⁵⁹

2.6.1 Propagating material

The fundamental right conferred on a proprietor of a plant breeder's right is the exclusive right to authorize certain acts in relation to 'propagating material' (which is referred to in the 1997 Act as 'reproductive material',⁶⁰ and as 'variety constituents' in the Community Regulation). In particular, a plant breeder is given the right to produce or reproduce the material; to 'condition' the material for the purposes of propagation; and to sell, offer for sale, stock, export, or import the material.⁶¹ While propagating material is not defined, it includes seeds for sowing, seed potatoes, seedlings, bulbs, rhizomes, grafts, and the like. The nature of plant material and breeding technology is such that a variety can be propagated from a much wider array of plant material than has traditionally been the case, including material such as cut blooms. Consequently, material will be treated as propagating material if it is intended to be used as a propagating material. Obviously, a person will infringe the fundamental right if, for example, they sell seeds, produce cuttings, or import bulbs. However, if such as person (who has legitimately grown the plant) sells beans for canning, grain for milling, or blooms or rose bushes for personal use, and they are subsequently used for propagation, it is unlikely that the vendor will be liable. In these cases, the user will be liable because they will have reproduced or 'conditioned' the material for the purposes of propagation.

2.6.2 Harvested material

In most cases the rights conferred in relation to the exploitation of propagating material also apply to harvested material obtained through the *unauthorized* use of propagating material (for example, crops of wheat from unauthorized seed). Harvested material is defined to include entire plants and parts of plants.⁶² As such it will encompass things such as cut blooms from flowers.⁶³ An exception to this right arises where prior to harvest, the rights-holder has had a reasonable opportunity to exercise their rights in relation to the unauthorized use of the propagating material.⁶⁴

The plant breeders' rights also extend to any product that is made directly from such harvested material (such as flour made from wheat) which falls within the categories prescribed by the Ministers.⁶⁵ Certain procedures and presumptions operate to assist the

⁵⁹ They must pass tests of value for cultivation and use, that is of yield, quality, and disease-resistance. Once this is done, the variety is entered on the National List: Seeds (National Lists of Varieties) Regulations 1982 (no seed of the major agricultural and vegetable species may be marketed in the UK unless the variety is on a UK National List or the EC Common Catalogue). See J. Harvey, 'UK Plant Breeders' Rights and the European Seed Regime' (1990) *Patent World* 22.

⁶⁰ For a discussion of definitional problems, see G. Dworkin, 'Plant Breeders' Rights: The Scope of United Kingdom Protection' [1982] *EIPR* 11, 12.

⁶¹ PVA s. 6; UPOV, Art. 14(1)(a); CPVR, Art. 13(2). Though these rights are limited within EC law: *Re the Plant Royalty Bureau* [1979] *FSR* 644 (Commission investigation on restriction of exports).

⁶² PVA s. 6(6)(b).

⁶³ The Scheme under Sched. 3 to the 1964 Act has been abolished.

⁶⁴ PVA s. 6(3).

⁶⁵ PVA s. 6(4). The provision only applies if no relevant consent has been gained in relation to dealing with the propagating material, and the right-holder has not had a reasonable opportunity to enforce those rights—for example, where the wheat was produced in a country which did not recognize plant breeders' rights. It will also only operate as regards varieties prescribed in regulations by the Ministers. For background, see J. Rooker (Minister of State, MAFF) *Hansard* (HC) 24 June 1997, cols. 692–4.

holder of plant breeders' rights in proving that harvested material and products made directly from such material were obtained through unauthorized use of propagating material. The right-holder may issue an information notice to a defendant requesting certain information as to the source of specified material. If the recipient fails to provide the relevant information within a particular time, the material is presumed to have been obtained by way of an unauthorized use.⁶⁶

2.6.3 Derivative varieties

The plant breeders' rights extend beyond the registered variety to cover varieties that are 'dependent' on the protected variety. Dependent varieties include varieties whose production requires the repeated use of the protected variety, as well as 'essentially derived' varieties.⁶⁷ A variety is deemed to be 'essentially derived' where it is predominantly derived from the initial variety. In addition, the variety must retain the expression of the essential characteristics that result from the genotype of the initial variety, and at the same time be clearly distinguishable from the initial variety.

2.6.4 Naming rights

Registration is conditional on the applicant providing a suitable name for the variety. This prevents the confusion that would otherwise arise if a number of different names were used to describe the same variety.⁶⁸ Once approved, anyone who sells or markets propagating material is obliged to use that name. This duty, breach of which is punishable under criminal law,⁶⁹ applies to the proprietor as much as to the public at large.⁷⁰ The duty subsists indefinitely, that is, even after expiry of plant breeders' rights.⁷¹ The proprietor of a British plant variety right is also able to control the wrongful use of that name. As a result, the right-holder may bring an action against anyone who uses the name of a protected variety in marketing material of a *different* variety within the same class, or uses a name so nearly resembling the registered name so as to be likely to deceive or cause confusion.⁷²

2.7 EXCEPTIONS

One important feature of the plant variety system is the careful way in which the competing interests of developers, users, and other interested parties have been accommodated through the use of exceptions and compulsory licences.⁷³ UPOV permits members of the Union to impose various restrictions on the operation of the monopoly.⁷⁴

There are certain limitations that parallel those in the EPC. Acts done privately and for non-commercial purposes, and acts done for experimental purposes are not infringing.⁷⁵

⁶⁶ PVA ss. 14–15. Plant Breeders' Rights (Information Notices) (Extension to European Community Plant Variety Rights) Regulations 1998 (SI 1998/1023).

⁶⁷ PVA s. 7; UPOV, Art. 14(5); CPVR, Art. 13(5). On essential derivation, see J. Rooker, Hansard (HC) 24 June 1997, cols. 693–4.

⁶⁸ M.-C. Piatti and M. Jouffray, 'Plant Variety Names in National and International Law' [1984] *EIPR* 283.

⁶⁹ PVA s. 19. Failure to use the name is a crime punishable by a fine. See also UPOV, Art. 20(7).

⁷⁰ UPOV, Art. 20; CPVR, Art. 63. ⁷¹ UPOV, Art. 20(7). ⁷² PVA s. 20(2).

⁷³ Users are represented largely through the National Farmers Union. The breeders are represented by the British Society of Plant Breeders.

⁷⁴ UPOV, Art. 17. ⁷⁵ CPVR, Art. 15; PVA s. 8.

Moreover, acts done for the purpose of breeding or discovering and developing other varieties do not infringe plant breeders' rights. There are also the customary rules relating to Community exhaustion of rights where material is 'disposed of to others by the holder or with his consent'.⁷⁶

As regards certain varieties,⁷⁷ farmers are authorized to use 'in the field, on their own holding' the product of a harvest which they have obtained by planting a variety. Small farmers are permitted to use such saved seed without payment, whereas others must provide equitable remuneration.⁷⁸ Remuneration is required in relation to lists of fodder plants (such as vetch and clover), cereals, potatoes, as well as oil and fibre plants such as rape.⁷⁹

2.8 COMPULSORY LICENCES

Compulsory licences may be granted by the controller in certain circumstances two years after grant of plant breeders' rights.⁸⁰ The first condition is that the holder of a plant breeders' right has either unreasonably refused to grant a licence or has proposed an unreasonable term for such a licence.⁸¹ It has been said that this is a heavy burden to discharge.⁸² The controller must also be satisfied that such licences are needed to ensure that the variety is available to the public at reasonable prices, is widely distributed (though not necessarily that demand is fully met),⁸³ or is maintained in quality. The applicant must be intending to exploit the rights and be in a position to do so.⁸⁴ The controller sets the terms of the licence as he thinks fit, having regard to the desirability of securing reasonable remuneration to the plant breeder, but the licence must not be an exclusive licence. The controller can require the plant breeder to supply propagating material to the holder of the licence.

As we saw above, a new regime for compulsory licensing and cross-licensing of biological innovations was introduced into the United Kingdom in 2002. In essence the new scheme attempts to manage the interrelationship between patent protection for biological inventions and plant variety protection.⁸⁵

⁷⁶ CPVR, Art. 16; PVA s. 10.

⁷⁷ CPVR, Art. 14(2); PVA s. 9. On the importance of these sorts of provisions for developing countries, see S. Verma, 'TRIPS and Plant Variety Protection in Developing Countries' [1995] *EIPR* 281, 286.

⁷⁸ CPVR, Art. 14(3); PVA s. 9(3)–(4). Small farmers are further defined. Plant Breeders' Rights (Farm Saved Seed) (Specified Information) Regulations 1998 (SI 1998/1026).

⁷⁹ CPVR, Art. 14; Art. 29; Commission Regulation 1768/95 of 24 Jul. 1995. Collections of remuneration for farm saved seed began in autumn 1996.

⁸⁰ CPVR, Art. 29 (compulsory exploitation rights); PVA s. 17; Plant Breeders' Rights Regulations 1998 (SI 1998/1027) Reg. 10 (compulsory licences operate only 2 years after grant). *Cama Wheat* [1968] *FSR* 639, 643 (explaining that plant breeder should have complete control at the first introduction of a variety when seed supplies may be limited and demand uncertain).

⁸¹ PVA s. 17(1). ⁸² *Cama Wheat* [1968] *FSR* 639, 644.

⁸³ *Ibid.*, 645 (where the breeder's licensees supplied 2,000 tons of seed, a refusal to license the applicant to sell 30 tons did not result in the seed not being 'widely distributed').

⁸⁴ PVA s. 17(2)(b)–(c).

⁸⁵ Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002 SI 2002/247. See above at pp. 566–7.

2.9 RELATIONSHIP TO THE PATENT SYSTEM

The plant breeders' rights system was initiated because of the belief that plant varieties fell outside of the types of creations that were traditionally considered to be patentable.⁸⁶ Nonetheless, when the EPC was formulated, a specific exclusion was placed in the definition of patentable subject matter to avoid the possibility of dual protection.⁸⁷ For most of the history of the operation of the EPC it was thought that the patent and plant variety systems were mutually exclusive. Indeed the 1961 version of the UPOV seemed to require that members allow either patenting or *sui generis* protection, but not both.⁸⁸

However, developments in techniques for modifying plants such as somatic cell hybridization and genetic engineering more generally have thrown the relationship of mutual exclusivity into doubt. This has been reinforced by the fact that biotechnology companies have attempted to use the patent system to obtain protection for their innovations (for example claims directed to plant cell strains, or to groups of plants at a taxonomical level higher than a 'variety').⁸⁹ In so doing this increases the possibility of overlap with the plant breeders' system. As a result of the 1991 revision of the UPOV, the patent and plant variety systems are no longer mutually exclusive.⁹⁰ As such, this increased the possibility for overlap between the regimes. Since the patent system allows for stronger (though not longer) protection, the possibility of overlap has resulted in increased attempts to obtain patent protection for plant-related products.⁹¹ Some commentators have called for the removal of the exclusions relating to plant varieties from the EPC, thereby leaving choice between the patent and plant breeders' regime to the applicant.⁹² However, others have asserted that the scope of breeders' rights regimes should be extended and developed to protect plant biological material more generally.⁹³ At the same time, frustration with what are seen as overly broad exceptions in the plant breeders' rights systems has led some breeders to resort to technological measures, such as the controversial terminator technology (that renders plants sterile), to protect their research. The use of genetic use restriction technologies (GURTs) poses a direct threat to the plant variety systems. While plant variety rights are only granted to botanical innovations that satisfy certain criteria, are

⁸⁶ Most importantly, it was seen not as being capable of meeting the requirements of sufficient disclosure. For an international overview, see T. Roberts, 'Patenting Plants Around the World' [1996] *EIPR* 531.

⁸⁷ Art. 53(b) EPC. *Ciba-Geigy/Propagating material application*, T49/83 [1979–85] *C EPOR* 758; [1984] *OJEP* 112. (The legislator did not wish to afford patent protection under the EPC to plant varieties within 1961 Convention.) *Plant Genetic Systems/Glutamine synthetase inhibitors* (1993) 24 *IIC* 618 ('the purpose of Art. 53(b) EPC . . . is to draw an appropriate dividing line between plant variety and patent law . . . It is . . . important that no grey area in which protection is not given exists between the above two systems').

⁸⁸ UPOV, 1961 Art. 2(1).

⁸⁹ See above at pp. 423–32.

⁹⁰ Recital 8 states that the definition of plant variety is not intended to alter definitions applicable in relation to other intellectual property rights, esp. the patent field.

⁹¹ A. Christie, 'Patents for Plant Innovation' [1989] *EIPR* 394; S. Crespi, 'Patents and Plant Variety Rights: Is there an Interface Problem?' (1992) 23 *IIC* 168; M. Llewelyn, 'The Legal Protection of Biotechnological Inventions: An Alternative Approach' [1997] *EIPR* 115, 117; J. Funder, 'Rethinking Patents for Plant Innovation' [1999] *EIPR* 551.

⁹² J. Straus, 'AIPPI and the Protection of Inventions in Plants: Past Developments, Future Perspectives' (1989) 20 *IIC* 600; in *Plant Variety Rights: An Outmoded Impediment? A Seminar Report* (1998), T. Cook argues that the 'option' to protect plants by *sui generis* rights in TRIPS Art. 27(3), should be removed.

⁹³ B. Greengrass, 'UPOV and the Protection of Plant Breeders: Past Developments, Future Perspectives' (1989) 20 *IIC* 622; M. Llewelyn, 'The Patentability of Biological Material: Continuing Contradiction and Confusion' [2000] *EIPR* 191, and *Plant Variety Rights: An Outmoded Impediment? A Seminar Report* (1998).

limited in time, and provide a number of exceptions to protect breeders and farmers, this is not the case with genetically-based protection regimes. Although it may be some time before genetic use restriction technologies are put to work, they are likely to shape the way intellectual property deals with biological inventions in the future.

3 SUPPLEMENTARY PROTECTION CERTIFICATES

Supplementary protection certificates (SPCs) are intellectual property rights that are based on and are similar in nature to patents. SPCs operate to extend patent protection where it has not been possible for the patent proprietor to take full advantage of their patent rights over the period of the grant. In particular, they compensate the owner where they have not been able to market the patented product because of delays in obtaining regulatory approval.⁹⁴ The need for additional protection arose as a result of the fact that since the 1970s the systems of regulatory approval have become more rigorous and lengthy. For example, in 1990 the average period for approval of medicines was twelve years. Such delays may erode the time in which the patent owner is able to market their inventions under the protection of the patent monopoly.

Following a Proposal by the Commission in 1990 (which has proved to be an important document in interpreting the legislation),⁹⁵ two Council Regulations were passed creating new rights related to patents for 'medicinal products' and 'plant protection products'.⁹⁶ The right is characterized as a right distinct from patents in order to avoid the apparent conflict that would otherwise occur with the maximum term under Article 63 of the European Patent Convention.

Because SPCs operate at the interface between the patent system and the system of regulatory approval, the availability, scope, and duration of protection is defined by concepts drawn from each system, coupled with the key hybrid concept of a 'product'. More specifically, under the systems of regulatory approval, approval is granted to the marketing of highly specifically defined products: 'medicinal products' or 'plant protection products'. These are usually defined by reference to their chemical or other ingredients and, for example, by their physical form or intended mode of delivery.⁹⁷ In contrast, a patent is

⁹⁴ The relevant regulatory authorities are the Medicines Control Agency, the Veterinary Medicines Directorate, the European Agency for the Evaluation of Medicinal Products, and the Pesticides Safety Directorate.

⁹⁵ The USA introduced 'patent term restoration' in 1984 and Japan in 1987. In 1991 France and Italy introduced so-called 'certificates of complementary protection': see P. Kolker, 'The Supplementary Protection Certificate: The European Solution to Patent Term Restoration' [1997] *IPQ* 249. For problems in relation to the SPC scheme created by the decision to enlarge the EU to include Eastern European countries see L. Brazell, 'The protection of pharmaceutical products and regulatory data: EU enlargement update' [2002] *EIPR* 155, 159–160.

⁹⁶ Council Regulation (EEC) No. 1768/2 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products (*OJ* 1992 *L* 182/1) (hereafter the SPC(MP) Reg). Regulation (EC) no. 1610/96 of the European Parliament and of the Council of 23 Jul. 1996 concerning the creation of a supplementary protection certificate for plant protection products (*OJ* 1986 *L* 198/30–5). (Hereafter the SPC (PPP) Reg.) The Spanish unsuccessfully challenged Regulation 1768/2 on the grounds that the Community did not have competence to legislate a new patent right, and that intervention could not be justified by reference to the need to harmonize laws for the internal market: *Spain v. Council of the European Union Case* 350/92 [1995] *ECR* I-1985, [1996] *FSR* 73. Note also the Canadian complaint, WTO/DS 153.

⁹⁷ SPC(MP) Reg. Art. 1(a); SPC(PPP) Reg. Art. 1(1).

likely to be much broader in its coverage, extending perhaps to a chemical *per se* or combination of chemicals, a method of production, or—at its narrowest—a new medical use of a known product. The effect of this is that a single patent may cover a range of individual medicinal or plant protection products. The key-mediating concept between these two regimes is ‘the product’ (which is the ‘active substance’, for a plant protection product or the ‘ingredient’, in the case of medicinal products, for which approval was gained).⁹⁸ For example, if marketing approval was sought for ‘aspirin in 500-mg. tablet form to be sold in packets of not more than sixteen tablets’, the ‘active ingredient’ would be aspirin. In most cases the product includes derivatives, such as salts or esters.

3.1 AVAILABILITY

In order to receive an SPC, a person must apply to the national patent office and not the EPO.⁹⁹ The application must be made within six months of receipt of authorization to market the medicinal product or plant protection product.¹⁰⁰ At the time of application, the applicant must be the proprietor of a basic patent that is in force. Applications lodged outside of the six-month period¹⁰¹ will not be accepted.¹⁰² Taking into account third-party observations,¹⁰³ the Patent Office assesses whether an SPC should be granted (that is whether the patent covers the product,¹⁰⁴ and whether appropriate authorizations exist):¹⁰⁵ there is no reinvestigation of the validity of the patent. It should be noted that the relevant authorization must be the *first* authorization.¹⁰⁶ This means that if a patent is granted for a new process of making an old product, an existing authorization relating to the old product will probably mean that no certificate will be available.¹⁰⁷ The first authorization must be a marketing authorization in accordance with the relevant EC Directives and not some other authorization required by national law (such as is required to

⁹⁸ SPC(MP) Reg. Art. 1(b) (defining product); SPC(PPP) Reg. Art. 1(8) (defining product), Art. 1(3) (defining active substance), Art. 1(2) (defining substances).

⁹⁹ At present there is an application fee of £250. See the Patent Office, *Supplementary Protection Certificates for Medicinal Products and Plant Protection Products: A Guide for Applicants* (1997), available online at <http://www.patent.gov.uk/forms/supp/pdfs/spctext.pdf>.

¹⁰⁰ SPC(MP) Reg. Art. 7; SPC(PPP) Reg. Art. 7; *Yamannouchi Pharmaceuticals v. Comptroller-General* [1997] RPC 844 (ECJ). A valid authorization does not include a mere authorization of clinical trials: *British Technology Group SPC Application* [1997] RPC 118.

¹⁰¹ Calculated from the date of grant of authorization and not the date of publication of grant in the relevant Official Gazette: *Abbott Laboratories' SPC Application* (25 Jul. 2002) O/302/02 (Patent Office).

¹⁰² *Hässle AB v. Ratiopharm* Case C-127/00 (11 Dec. 2003) paras. 80–89 (ECJ). ‘Where a mistake has been committed regarding the date of first marketing authorisation in the Community . . . the certificate must be declared invalid’ (para. 89). Extensions beyond the six-month limit may be granted under Patent Rules 1995, r.110(1)

¹⁰³ Art. 18(2); *BASF AG's SPC Application* [2000] RPC 1. Documents are usually open to public inspection within 14 days of being filed. Observations should be made in writing.

¹⁰⁴ If a patent is granted for a combination of ingredients but a certificate relates to one of the ingredients only, no certificate should be granted: *Centacor SPC Appn.* [1996] RPC 118. Whether a patent for a product would cover its salts or esters will be a matter of interpretation of the patent claims, applying principles explained at pp. 534–40: see *Takeda Chemical Industry's Application* [2003] EWHC 649 (Pat).

¹⁰⁵ *British Technology Group SPC Application* [1997] RPC 118 (refusing an SPC because no relevant authorization).

¹⁰⁶ SPC(MP) Reg. Art. 3(d); SPC(PPP) Reg. Art. 3(1)(d).

¹⁰⁷ *BASF AG's SPC Application* [2000] RPC 1 (an attempt to claim that the certificate related to a different product which necessarily had certain impurities resulting from the particular patent process was rejected).

determine the pricing of medicines).¹⁰⁸ For pharmaceutical products the relevant Directive is the EC Directive on Medicinal Products for Human Use.¹⁰⁹ For veterinary products, it is the Directive relating to veterinary medical products.¹¹⁰

If a patentee applies for an SPC but is unable to submit the appropriate marketing authorization (for example, because it was granted to the patentee's licensee and that person refuses to cooperate), the Patent Office may contact the relevant authority.¹¹¹ However, the Office will first require the applicant to provide evidence of their inability to supply the authorization, as well as Official Gazette information that will enable the Office to verify the identity of the product and the date of authorization.¹¹² Once an SPC is granted, the relevant authority may demand an annual fee to maintain it in force. In the United Kingdom these fees are £600 for the first year, rising to £1,000 for the fifth (which must be paid in one instalment).¹¹³

An SPC will not be granted where it extends beyond the scope of the underlying patent. This is because, as Jacob J said, the SPC system is 'not a system for providing protection for different monopolies'.¹¹⁴ Thus an application for an SPC for a combination of two active ingredients was rejected because the patent only covered one of the ingredients.¹¹⁵ In certain circumstances, there may be more than one basic patent relating to a particular product.¹¹⁶ This can be seen, for example, if we take the situation where A applied for a patent for substance X in 1990 and B applied for a patent for use of substance X in making a pharmaceutical preparation for use in thinning blood in 1993. If authorization was given to B to market the pharmaceutical preparation in 2000, A would be entitled to a certificate lasting five years and B a certificate lasting two years. However, the mere existence of a second patent will not of itself justify the grant of a certificate. If, in the same example, A had received authorization to market the substance as a cure for headaches in 1996, A would be entitled to a certificate for one year, but B would not be entitled to any certificate. This is because the authorization in 2000 was not the first authorization relating to the product. The existence of B's 1993 patent is of no special significance.

3.2 SUBJECT MATTER

The protection provided by an SPC extends to the 'product' covered by the authorization and any use of the product as a medicinal (etc.) product that has been authorized before

¹⁰⁸ *Hässle AB v. Ratiopharm*, Case C-127/00 (11 Dec. 2003) paras. 58–59 (ECJ).

¹¹⁴ *Takeda Chemical Industry's Application* [2003] EWHC 649, para. 12 (Pat).

¹¹⁵ *Ibid.*, para. 11–12. Jacob J. rejected an attempt to use a version of the reverse infringement test to determine whether a patent covers a 'product' saying that 'the fact that the combination might infringe the . . . patent simply because one component infringes is irrelevant'. (para. 12).

¹¹⁶ If a patent holder has more than one patent for the same product, he should not be able to obtain more than one certificate for that product: *Takeda Chemical Industries Application* (31 May 2002) O/229/02 (Patent Office) (interpreting the statement from the ECJ that under 'Article 3(c) of the Regulation . . . only one certificate may be granted for each basic patent': *Biogen v. Smithkline Beecham Biologicals* [1997] RPC 833, 843 (ECJ)).

expiry of the SPC.¹¹⁷ The product is defined as the ‘active substance’ (in the case of plant protection) or the ‘ingredient’ (in the case of medicinal products) for which approval was gained.¹¹⁸ For example, if A applies for a patent for aspirin on 1 January 1990 and was granted marketing authorization for sale of aspirin in tablet form as a treatment for headaches on 1 January 1996 and A then obtained an SPC, the SPC would not only cover sale in tablet form, but also any subsequent authorizations of the same product which were obtained before the expiry of the patent in 2010. Thus, if A later gets marketing authorization for sale of aspirin in capsule form as a treatment for headaches in 1999, the SPC that would operate from 2010 to 2011 would also cover that use.

The scope of the SPC is not confined to the specific product for which authorization was first secured. The SPC is capable of covering the product mentioned in the marketing authorization ‘in any of the forms enjoying the protection of the basic patent’.¹¹⁹ As the European Court of Justice said in the *Farmitalia* decision, if an SPC were only able to protect the product in the specific form stated in the marketing authorization, this would mean that ‘any competitor would be able, after the basic patent had expired, to apply for and in some circumstances, obtain marketing authorization for [a different version] of the same ingredient, formerly protected by that patent’. If this were permitted, it would allow ‘medicinal products which were in principle therapeutically equivalent to that protected by the certificate to compete with the latter. The result would be to frustrate the purpose of [SPCs] which is to ensure the holder of the basic patent of exclusivity on the market during a given period extending beyond the period of the validity of the basic patent’.¹²⁰ In the *BASF* decision, the ECJ said that in the case of plant protection products, the product is the active substance including any impurity inevitably resulting from the manufacturing process.¹²¹ The ECJ also added that two plant protection products containing the same active substance in different concentrations were identical products for the purposes of the Regulations.¹²²

3.3 LIMITS

The rights granted under an SPC are subject to the same limitations and obligations as applied to the basic patent.¹²³ An SPC will therefore be subject to licences of right if the patent would have been subject to such a licence prior to its expiry.¹²⁴

3.4 DURATION

The SPC comes into operation at the expiry of the patent. This is subject to the requirement that the patent is maintained until the end of its potential term.¹²⁵ If the patent is

¹¹⁷ SPC(MP) Reg. Art. 4; SPC(PPP) Reg. Art. 4. The product is the ‘active substance’ (for a plant protection product) or ‘ingredient’ (in the medicinal product) for which approval was gained.

¹²⁵ SPC(MP) Reg. Art. 13; SPC(PPP) Reg. Art. 13.

permitted to lapse, is declared to be invalid, or is revoked, the SPC will not come into effect. The duration of an SPC will vary depending on the length of time it took to receive regulatory approval. The maximum period for an SPC is five years. The period is ascertained by calculating the difference between the date of application for the basic patent and the date of the grant of the first authorization, less five years. This means that if a patent application was made in 1988 and authorization was granted in 1997, the relevant certificate should last for four years. However, as there is a maximum duration of five years if the authorization was granted in 2000, the duration of the SPC would be five years. The average term of the SPCs granted in the UK in 2000 was just over three years.¹²⁶

The duration of the SPC is formulated in a way to ensure harmonization within Europe as to the date of *expiry* of all national SPCs. Consequently, although for the purposes of an application the relevant authorization is the first national authorization, for the purposes of calculating the duration of the SPC, the relevant authorization is the first Community authorization.¹²⁷ For example, if A applies for a patent for aspirin on 1 January 1993 and A gets marketing authorization for the sale of aspirin in the UK on 1 January 2000, but had already received marketing authorization in Portugal on 1 January 1999, the UK SPC will only last for one year. If national regulatory procedures are particularly quick in other member states, SPCs may not be available in the UK to compensate owners for the loss of the opportunity to exploit the patent in the UK. To a number of commentators, this is unfair since the patent owner suffers delays but gets no compensation.¹²⁸

In calculating the duration of the SPC, it does not matter that the first authorization was for a different mode of delivery or a different use. For example, if A applies for a patent on 1 January 1993, and receives authorization for use in animals on 1 January 1999 and for use in humans on 1 January 2001, the relevant certificate would only subsist for one year. No separate certificate would be issued based on the latter authorization.¹²⁹

¹²⁶ B. Domeij, *Pharmaceutical Patents in Europe* (2000), 268.

¹²⁷ This would include relevant EEA authorizations, for example, in Iceland, Norway, and Liechtenstein. The question of the status of the first authorization as the basis for calculating duration has been referred to the ECJ from the Patents Court hearing an appeal from *Novartis AG and University College London's SPC Application* (12 Feb. 2003) O/044/03.

PART III

THE LEGAL
REGULATION OF
DESIGNS

1 INTRODUCTION

Designs play an important but often neglected part in our lives. As well as influencing the appearance of the clothes we wear, the shape of the chairs we sit in, and the surfboards we ride, design also influences the decisions we make as consumers: why it is that we choose one toothbrush over another?¹ The practice of design covers a variety of domains.² These range from industrial design,³ urban planning, graphic design, and stage design through to costume design, fashion design, product design, and packaging design. In reflection of this diversity, the role played by design varies greatly. In some cases, an object may be designed for frivolous or trivial reasons; in other cases, the way an object is designed may play an important role in how effectively the designed article works. Whatever role design performs, it is widely recognized to be a time-consuming, costly, and valuable activity. Given that the art of designing is concerned with the nature and appearance of objects, one of the notable aspects of designing is that the results are readily copied. Not surprisingly, therefore, intellectual property protection plays an important role in regulating the creation and use of designs.

Over time a number of different areas of intellectual property such as trade marks,⁴ passing off,⁵ and the law of breach of confidence⁶ have been used to protect designs. In the next six chapters, we concentrate on those areas of intellectual property law more commonly used to protect designs. These are: the registered design system established by the 1949 Registered Designs Act; the registered and unregistered rights recently made available at a Community level; copyright protection provided by the 1988 Copyright, Designs and Patents Act; and the ‘unregistered design right’ protection which was set up by Part III of the latter. As we will see, the existence of five systems of protection renders design law surprisingly and unnecessarily complex.

¹ For emphasis in legal commentaries on designs as marketing instruments, see: A Kur, ‘The Green Paper’s Design Approach—What’s Wrong with It’ [1993] *EIPR* 374, 376; F.-K. Beier, ‘Protection for Spare Parts in the Proposals for a European Design Law’ (1994) 25 *IIC* 840, 841.

² V. Papanek, *Design for the Real World: Human Ecology and Social Change* (1984) 3–4, defines design as ‘the planning and patterning of any act towards a desired, foreseeable end.’

³ C. Woodring, ‘A Designer’s View on the Scope of Intellectual Property Protection’ (1996) 24 *American Intellectual Property Law Association Quarterly Journal* 309 (defining industrial design as ‘the professional service of creating and developing concepts and specification that optimize the function, value, and appearance of products and systems for the mutual benefit of user and manufacturer’).

⁴ *Philips Electronics BV v. Remington Consumer Products* [1998] *RPC* 283. It seems that, in the light of harmonization, words can be protected as designs and this raises the issue of the relation of design law to trade marks law, and practical questions as to whether a person is better off registering a logo as a design (or relying on unregistered design right in a logo) rather than a trade mark: Musker, 14; C.-H. Massa and A. Strowel, ‘Community Design: Cinderella Revamped’ [2003] *EIPR* 68, 77. Indeed, it might be noted that the effect of the ‘Arsenal’ litigation (see pp. 911–14), led to an increase in the number of UK design registrations. On the extent to which overlap between the new designs law and trade marks should be seen as a concern, see A. Kur, ‘Protection of Graphical User Interfaces under European Design Legislation’ (2003) 34 *IIC* 50, 60–2 (arguing that these concerns are exaggerated, and observing that the possibility of such overlap has long existed in Germany without raising problems).

⁵ *Benchairs v. Chair Centre* [1974] *RPC* 429. But cf. *Hodgkinson & Corby and Roho v. Wards Mobility Services* [1995] *FSR* 169.

⁶ For recent examples, see *Carflow Products v. Linwood Securities* [1996] *FSR* 424; *Valeo Vision SA v. Flexible Lamps* [1995] *RPC* 205.

2 THE NORMATIVE BASIS OF DESIGN PROTECTION

It is a notable feature of the commentary on the legal protection of designs that there is very little consideration of the justification for granting protection to designs.⁷ Rather, it is assumed that the general arguments which justify the protection of works by copyright or inventions by patents, whether based on instrumental philosophies or ethical beliefs, are equally applicable to designs.

These assumptions are, no doubt, often warranted: the design process involves investment of time and money,⁸ and successful designs can be (and are) readily copied. Those who favour ethical arguments of a 'reap-sow' type would argue that design protection is required to prevent a second-comer reaping where they have not sown. Those who cling to the utilitarian approach,⁹ would argue that protection is necessary to provide sufficient incentives for such investment.¹⁰ However, it is notable that, historically, only rarely has the legal protection of designs been justified by reference to the natural-rights of individual designers in their creations. This reflects a commonly held assumption that designs are less creative than artistic works because designing is subject to a number of inevitable constraints.¹¹ For example, the potential scope for the design of a table is constrained by our existing idea of a table, the functions it must form, the need for it to be comfortable, cost, and the possibilities presented by available materials.¹²

3 THE BRITISH HISTORY

While the story of how designs came to be protected by five different systems of protection is a long and important one, we must deal with it here only in outline.

The story starts in 1839,¹³ when, out of a desire to improve the aesthetic quality of

⁷ J. Lahore, 'The Protection of Functional Designs: The Amended Proposal for a European Designs Directive' (1997) 1 *IPQ* 128, 132 (registering surprise at lack of analysis of benefits of design protection).

⁸ Apparently the developments costs for the outer appearance of the Ford Sierra in the 1980s amounted to \$140 million, or 20% of the total cost: M. Levin, 'Recent Developments in Nordic Design Protection' (1988) 19 *IIC* 606.

⁹ *Electronic Techniques (Anglia) v. Critchley Components* [1997] *FSR* 401, 418.

¹⁰ CDR, Recital 7 states that 'Enhanced protection for industrial design not only promotes the contribution of individual designers to the sum of Community excellence in the field, but also encourages innovation and development of new products and investment in their production'. *In the Matter of Morton's Design* (1900) 17 *RPC* 117, 121 Farwell J (the purpose of the Design portion of the Act is the same as the Patent portion of it); *Allen West & Co. v. British Westinghouse Electric & Manufacturing Co.* (1916) 33 *RPC* 157, 162 (design protection was said to be 'primarily to advance our industries and keep them at a high level of competitive progress'); *Dart Industries v. Décor Corporation* (1989) 15 *IPR* 403.

¹¹ R. Denicola, 'Applied Art and Industrial Design' (1983) *Minnesota Law Review* 707, 741–3, and n. 165; J. Reichman, 'Design Protection in Domestic and Foreign Copyright Law' [1983] *Duke LJ* 1143, 1160, 1220–1, 1235.

¹² Moreover, there is a tendency to place greater emphasis on the potential social costs that the legal protection of designs cause to competitors of the proprietors of such right. As designs are applied to 'articles', it is feared that any impediments placed on the reproduction of the design will also interfere with free competition for the article itself. One commentator describes this as the 'two-market conundrum' that arises because designs operate to render articles desirable both as (useful) articles and as attractive objects: J. Reichman, 'Design Protection in Domestic and Foreign Copyright Law' [1983] *Duke LJ* 1143.

¹³ Prior to this the Callico Printers Acts 1787 (27 Geo. 3. c. 23) and 1794 (34 Geo. 3 c. 23) conferred protection upon new and original patterns for linens, cotton, callico, and muslins *automatically*.

industrially manufactured goods, Parliament introduced a registered design system.¹⁴ Under this system, if an applicant submitted representations of a new and original design for an article of manufacture, the law would grant a monopoly over the design for up to three years. This registration system seemed to operate successfully for the rest of the century, with many thousands of designs being registered.¹⁵ In so far as there were problems with the design system, they largely concerned the relationship between the design system and patent system in the protection of useful mechanical devices, and these problems seemed to disappear with improvements in the administration of the patent system.

However, at the turn of the twentieth century, just as the use of the registered design system reached its peak, issues came to be raised as to the relationship between it and the copyright system. These questions, in large part, arose as copyright law was expanded and rationalized to give effect to the Berlin revision of the Berne Convention of 1908. These reforms presented not only the possibility, for the first time, of the protection of many designs by copyright law (especially on the basis of the design drawings that were artistic works), but simultaneously threatened the viability of the registered system. This was because copyright offered a system of protection which was automatic (no longer requiring registration), potentially longer, and (in some respects) stronger.

The initial response of the legislature was to attempt to draw a boundary between designs which required registration and artistic works (such as works of artistic craftsmanship) which were protected under the copyright system. As a result, the 1911 Copyright Act included a provision excluding from copyright protection works which were 'capable' of being registered as designs and which were intended to be used as the basis for multiplication by an industrial process. Later statutes employed different techniques to regulate the boundary. In one way or another, all of these proved to be unsatisfactory. Perhaps the most bizarre consequence of (at least) the last such attempt to establish a boundary was that designs which were unregistrable because they were 'dictated by function', were given greater protection than registrable designs. Such protection was widely referred to as 'industrial copyright'.

In response to these failings, the 1988 Copyright, Designs and Patents Act fashioned a new 'design-copyright interface'. It did so by modifying the Registered Designs Act 1949 so that registration was confined to aesthetic designs, adding important defences to copyright infringement (sections 51 and 52), and establishing a new unregistered design right regime. As a consequence, three different regimes operate to protect designs:

- a registered design system for the protection of the appearance of articles for up to twenty-five years;
- an unregistered design system, conferring automatic protection (against copying) for the designs of the shape of three-dimensional articles (whether visually attractive or not) for up to fifteen years;

¹⁴ Copyright of Designs (Registration) Act 1839 (2 Vict. c. 17). While design law was one of the first areas of modern intellectual property law to take shape, over time it has been eclipsed by copyright and patent law. This has led to the (inaccurate) claim that designs law is the stepchild of patents and copyright. See Sherman and Bently, chs. 3, 4, 163–6, 210–12.

¹⁵ L. Bently, 'Requiem for Registration? Reflections on the History of the UK Registered Design System', in A. Firth (ed.), *Perspectives in Intellectual Property: Vol. i. The Prehistory and Development of Intellectual Property* (1997), 1.

- copyright protection for design drawings for artistic works (such as sculptures), two-dimensional designs, and surface decoration (limited to twenty-five years where the design is applied to more than fifty articles).

4 INTERNATIONAL FAILINGS

While the United Kingdom pursued its own ideas as how best to protect designs, other countries took different approaches. Some placed emphasis on copyright, others on unfair competition law, others on registration.¹⁶ There was little consensus, and consequently few international norms could be agreed. The Paris Convention contains provisions on national treatment and the priority dates of design applications, but nothing on substance of registered design protection.¹⁷ The Berne Convention is only a little more prescriptive. While ‘applied art’ is included in the subject matter covered by the Convention,¹⁸ countries of the Union are given free rein with regard to the scope of protection and to whether any formalities may be required.¹⁹ The only specific requirement in relation to designs in the Berne Convention is that if special protection is not granted, then such works shall be protected as ‘artistic works’. Even the TRIPS Agreement has only two articles on designs.²⁰ Design laws were allowed to vary on a national basis.

Not surprisingly these variations in national design protection laws were quickly understood to present a problem for the EC and in particular the internal market.²¹ In 1991,²² the Commission issued a Green Paper laying out a scheme by which to begin to tackle the problems raised by the enormous variation in national designs laws.²³ The Green Paper was notable for its advocacy of a ‘designs’ approach—treating designs as a distinct field of law rather than a branch or extension of copyright or patents. The Green Paper advocated

¹⁶ J. Reichman, ‘Design Protection in Domestic and Foreign Copyright Law: From the Berne Revision of 1948 to the Copyright Act of 1976’ [1983] *Duke LJ* 1143; H. Cohen Jehoram, ‘Designs Law in Continental Europe and Their Relation to Copyright Law’ [1981] *EIPR* 235; C. Fellner, *The Future of Legal Protection for Industrial Design* (1985), ch. 6.

¹⁷ Paris, Arts. 2 and 4C(1). Indeed, until the Lisbon revision of 1958 the Convention did not even require countries of the Union to protect industrial designs: Paris Art. 5 quinquies. This does not specify how protection is to be conferred, so that compliance may be achieved through copyright or unfair competition rather than *sui generis* designs law.

¹⁸ Berne, Art. 2.

¹⁹ Berne, Art. 2(7). Under Berne Art. (7)(4) applied art should be protected for a minimum period of 25 years.

²⁰ TRIPS, Arts. 25 and 26. This requires members to provide protection for independently created industrial designs that are new or original. More specifically, it provides that the owner of a protected industrial design shall have the right to prevent third parties from making, selling, or importing articles bearing or embodying the design for at least ten years. Certain limited exceptions are permitted. See Gervais, paras. 2.240–2.250, 211–17; M. Blakeney, ch. 7; A. Kur, ‘TRIPS and Design Protection’ in *Beier and Shriker*.

²² Green Paper on the Legal Protection of Industrial Design (III/F/5131/91-EN, Brussels, June 1991) (hereafter, EC Green Paper).

²³ For useful accounts of national laws prior to harmonization, see B. Gray and E. Bouzalas, *Industrial Design Rights: An International Perspective* (2001).

a three-pronged approach, of the sort finally adopted, involving harmonization of national registered designs law, the establishment of a Community Registered Design System, and the introduction of a Community Unregistered Design Right. It seemed that from the start, this would require the passage of two pieces of Community legislation, namely a Directive to harmonize national law and a regulation to establish the two Community wide rights. Following consultation, two Proposals were published.²⁴ The Commission decided to start with the Directive, it being understood that the Regulation would—where relevant—be in the same substantive terms. Following criticisms of the initial proposal, in particular in the European Parliament, an amended Proposal for a Directive was published in 1996.²⁵ Although there were a number of significant amendments for designs generally, the whole legislative process was dogged by the issue of the appropriate form of protection for car spare parts. Ultimately, as is explained in Chapter 26, differences could not be resolved. Consequently, in the so-called ‘Standstill Plus’ compromise, the Directive left the question to member states. Once the Directive was adopted in July 1998, the Commission’s focus returned to the Regulation. Amended proposals were published in 1999 and 2000, and the Regulation was adopted in December 2001.

The Directive attempts to harmonize the features of national registered design systems which most obviously affect the functioning of the Internal Market.²⁶ It refers to this as being not ‘full-scale’ harmonization but rather ‘limited’ approximation.²⁷ Harmonization is required in relation to the ‘conditions for obtaining registration’, the rights of the design owner, the term of protection, and grounds on which the registration can be invalidated.²⁸ In contrast, issues of procedure and remedies are left to member states.²⁹ The Directive also allows member states to protect designs by other regimes such as through national unregistered design rights of through unfair competition.³⁰ The Directive requires that member states do not treat the existence of registered design protection as pre-empting protection by copyright, a regime referred to as cumulation of copyright.³¹ The Directive was supposed to be implemented by 28 October 2001, and the British government did so any amending the Registered Designs Act 1949 from 9 December 2001.³²

The Regulation on the Community Design, 6/2002 of 12 December 2001, established a Community-wide system of registered design protection with a Community Design Office (Office for Harmonization in the Internal Market). This became operational on 1 April

²⁹ Designs Dir., Recitals 5, 6.

³⁰ Designs Dir., Art. 16, Recital 7; CDR Recital 31.

³¹ Designs Dir., Art. 17, Recital 8; CDR Recital 32.

³² Perhaps not surprisingly (though no doubt rather annoying), the UK legislature has implemented the Directive into UK law by way of statutory instrument, and on occasions decided to alter the wording. We can be relatively certain that the UK courts will ignore these modifications and rely where appropriate on the Directive itself. Even the Patent Office has been irritated by the re-drafting: Designs Practice Notice, DPN 1/03 ‘Component Part of complex product visible in normal use’ (7 Jan. 2003).

2003.³³ Like the Community Trade Mark, the vision which drives the Community Registered Design is the replacement of national design systems (which, even if harmonized, present the possibility of national rights owned by different persons) with a unified system for obtaining a Community design to which uniform protection is given with uniform effect throughout the entire territory of the Community.³⁴ The Community Registered Design is acquired by application to the OHIM, but there is no substantive examination. The Community registered design, can last for up to twenty-five years, and confers an 'absolute monopoly' on the proprietor. The validity of the designs will be able to be challenged either in proceedings at the Community Design Office,³⁵ or by way of defence to an infringement action in a Community Design Court.³⁶

The Registered Community Design is supplemented by the Unregistered Community Design Right, available under the Community Design Regulation since 7 March 2002.³⁷ The Community unregistered design right is intended to provide short-term protection for those industries (such as clothing manufacture) where registration is inappropriate: primarily because designs are only of value for a short period.³⁸ The Unregistered Community Design (UCD) is also intended to provide protection during the period in which a proprietor decides whether the design is worth registering.

The Unregistered Community Design right is automatically available on the making available in the Community of a design which is novel and has an 'individual character'.³⁹ The protection lasts for three years from such making available.⁴⁰ Unlike the Registered Community design, the protection given by the UCD right is merely a protection against copying. The right will be enforced by action in a national Community Design Court. It is at this stage that the validity of the right may be challenged.

5 CUMULATIVE EFFECT

The effect of the combination of British and European law is to create a system of design protection which is multi-layered, complex, and lacking in logic. Cornish calls it an 'absurd maze'.⁴¹ The British approach, adopted in 1988, of confining registered designs to visually attractive designs, while leaving unregistered design right for functional three-dimensional designs, has been modified in part (so as to comply with the Directive), but the implications of the modifications to the scheme as a whole have not been acknowledged. The effect is to create a national scheme which affords registered protection to virtually all new designs, and unregistered protection to most three-dimensional designs that are not commonplace, with the possibility of copyright protection for designs for three dimensional artistic works, patterns and surface decoration. On top of that national

³³ The substantive provisions are aligned with those in the Directive: CDR, Recital 9.

³⁴ CDR, Recital 1.

³⁵ CDR, Art. 25.

³⁶ CDR, Arts. 24, 25.

³⁷ The aim of the Community unregistered design right is to strengthen the competitive position of European industries (not to complete the Internal Market): EC Green Paper, 4.3.9.

³⁸ J. Reichman, 'Design Protection and the New Technologies: The US Experience in a Transnational Perspective' (1989) 19 *University of Baltimore LR* 6, 23.

³⁹ It is the first Community-wide right to be available automatically.

⁴⁰ V. Saez, 'The Unregistered Community Design' [2002] *EIPR* 585, 588 (thereby avoiding problems with using creation as the key date).

⁴¹ 5th edn., para. 14–51, 564.

scheme, we now have two further layers of Community protection, covering designs of all types, either by way of registration (and lasting for up to twenty-five years) or arising automatically on publication of the design (and lasting three years thereafter).

The task ahead is therefore daunting. In the first instance, we need to understand this highly complex body of law, to explore its limits, and expose its (many) problems. The European legislature has, unfortunately, left much to be elaborated by the ECJ. But, beyond merely scrutinising the various sets of rules, we must consider what reforms would be appropriate, in the hope that at some stage Parliamentary time can be found for reform. Given that the British legislature only has limited room for manoeuvre, simplification of rules in this area, irrespective of their substantive merits, may for once be treated as a worthy end in itself. The most obvious, and hopefully least controversial, reform would be the modification of UK registered design rules, such as those on entitlement, and procedures which are unharmonized, so as to make them consistent with those operated by the OHIM. Ultimately, abolition of the domestic registration system would at least remove one layer from the edifice,⁴² and abolition of the UK's sui generis unregistered design right another. The latter experiment which targeted 'functional designs', now fifteen years old, is by no means a proven success, and the new Community and harmonized regimes offer short term, automatic, protection for such designs. The Community legislature could also assist in clearing up this mess, first by resolving the 'spare parts' issue,⁴³ and second by harmonizing the conditions and scope of protection of designs by copyright.

6 PLAN OF DISCUSSION

Since the substantive provisions of the harmonization Directive and the Community Design Regulation are virtually identical, we intend to treat the three systems—the UK Registered Design, the Registered Community Design, and the Unregistered Community Design—together over the next four chapters. Consequently, in the next chapter we look at the registration systems. In Chapter 26, we examine the meaning of 'design' employed in the Directive and the Regulation. In Chapter 27 we explore the concepts of 'novelty', 'individual character' and other aspects of validity. In Chapter 28, we consider who is entitled to apply for a design registration, the rules relating to ownership, and proprietary aspects. We also look at infringement and exceptions—again for the three harmonized systems. We then move on to consider the two other main forms of protection of designs in the United Kingdom which have not been the subject of harmonization. In Chapter 29, we examine UK copyright law, as it applies to designs. In Chapter 30, we look at the UK's unregistered design right.

⁴² Unfortunately, abolition of the national registration system is not permitted by the Directive which requires member states 'to protect designs by registration': Design Dir. Art. 3.

⁴³ The Directive set out a timetable for review, with its focus on the spare parts issue. According to Art. 18, the Commission is to submit an analysis of the consequences of the provisions of the Directive for Community industry, for consumers, for competition and for the functioning of the internal market by 28 October 2004. As a result of that analysis it is to put forward proposals for 'changes which it considers necessary in light of its consultations with the parties most affected' by 28 Oct. 2005.

25

ACQUIRING REGISTERED DESIGN PROTECTION IN THE UNITED KINGDOM AND THE COMMUNITY

1 INTRODUCTION

This Chapter is concerned with the procedure by which design protection is acquired in the United Kingdom and Europe. The chapter, therefore, is not primarily concerned with the systems of design protection where rights arise without formality—namely copyright, UK unregistered design right, and unregistered Community designs. Rather it is concerned with the decision whether to register a design, as well as the process and function of registration. Although these matters are of practical importance, and might therefore be assumed to be equally unglamorous topics of discussion, we think that they are, or in due course will prove to be, critical to understanding design law generally. This is because the distinction between procedure and substance is in many ways a false one. Most obviously, the procedure by which design protection is acquired is the procedure by which the ‘design’ for which protection is sought is identified. It is through this bureaucratic process that the property in question is defined. And so the characteristics of the procedure have a direct bearing on the substance of design protection.

2 THE DECISION TO REGISTER

The decision whether to register a design will be primarily a question of business strategy.¹ The critical issue will be whether the advantages provided by the registration system over the protection afforded by the law automatically (through unregistered Community design, unregistered national design right in the United Kingdom, national copyright, or other rights (most importantly unfair competition)), are so attractive as to outweigh the disadvantages of registration. The assessment of these matters will vary depending upon

¹ For some empirical work, see *Prospective Study about the Design Registration Demand at a European Union Level: Executive Summary*, on the OHIM’s web site. Although we set out some factors that would be taken into account by someone deciding whether to register or not, often there will be an established practice in a particular sector.

the type of design in question, the amount expended in the creation of the design and the importance of monopoly protection, the likelihood of a competitor independently creating a similar design,² the geographical extent of its potential market, and so on. In recent years, registration has been attractive to the electronics and furniture industries.³ Other industries, such as the textile design sector, which formerly relied heavily on design registration are likely to be satisfied with the systems of unregistered rights now available.⁴ Another factor that may cause a person to register a design is that it may help them secure financial backing.

The registered systems are generally regarded as conferring three benefits on the design proprietor. First, it is thought that registration provides some degree of certainty such as to justify further investment in exploitation of a design. The certainty largely derives from the fact of filing, and the manner in which this establishes priority over later designs.⁵ In some cases, where national procedures involve search and examination for novelty, registration can provide a registrant with confidence that their design is valid and not infringing any other previously published designs. However, such systems are now in the minority.⁶ (As we will see, the UK registry no longer carries out such searches, and only rejects obviously old designs.) The second advantage of registration is that the rights conferred on the proprietor tend to be stronger than with unregistered rights. This is true of the European harmonized national systems, and the Community design. Unregistered rights (copyright, the Unregistered Community Design or UK unregistered design right) are only infringed where the user of the design can be shown to have copied its design. The registered rights give monopolies that enable the proprietor to object to use of designs even if they were independently created.⁷ A third advantage is that the registered system provides potentially for twenty-five years, protection, whereas the unregistered design rights tend to be shorter: Unregistered Community Design lasts for only three years and UK unregistered design right ten years from marketing. (The exception is copyright, which, to the extent that it can protect designs also lasts for twenty-five years.)

So a designer or design owner will only be able to assess whether the automatic systems of protection are sufficient by carefully considering the likelihood that the design will be copied, the likelihood that someone will independently create a similar design, the difficulty of proving copying, the intended (and likely) markets for the design, and the likely longevity of the design. If automatic protection is deemed wanting, the design proprietor will need to consider whether the advantages of registration are sufficient to justify the expenditure in time and money required by registration. As we will see, much has been done, particularly at the OHIM, to make the system cheap and administratively attractive. The expense of registering a design is nothing like the expense associated with patenting.

² This question is much disputed. The EC Green Paper, para. 4.3.9, sees the risk of independent creation as slight.

³ In 2002, the classes with the largest numbers of applications to the UK register were: packages (1,228); furnishing (1,121); recording/communication (1,079) and games, toys, sports goods (775). The most prominent users were Ty Inc. (135), Sony (91), Nike (67), Nokia (65), and Black & Decker (64).

⁴ Especially in the light of the House of Lords decision in *Designers Guild v. Williams* [2000] 1 WLR 2416.

⁶ EC Green Paper, para. 2.3.4, p. 17.

⁷ EC Green Paper, para. 6.4.2–4, pp. 86–7.

3 APPLYING TO REGISTER IN THE UNITED KINGDOM

Although the Designs Directive harmonized the salient substantive features of the design registration systems in member states, it left procedure to national law. As we have already intimated, this may well result in significant divergences in the sorts of protection that can be acquired in different member states and thus undermine, to some extent, the goal of harmonization. It certainly will affect decisions as to whether to apply for a bundle of national registrations, or a single Community registration (or combination of national registrations and a Community registration). Important differences might include: how the systems define the protected design (whether by reference to a deposit or specimen, to graphic representations, and to what extent the procedures allow for written delimitations of protection); whether the systems allow for single applications to relate to multiple designs;⁸ whether the systems allow registrations in secret, or deferral of publication, and with what consequences;⁹ whether the systems permit applications relating to designs which do not identify a product; how the systems define priority; whether the systems provide for substantive examination, and if so, as to which potential grounds of objection;¹⁰ whether the systems carry out a search of existing designs, and how rigorous such a search is; whether the systems demand declarations by the applicant to the effect that they believe the design to be new and have individual character, or that they intend to apply the designs to products; and whether the system provides an opportunity for opposition.¹¹

3.1 THE APPLICATION

In the United Kingdom, the registration process was modified on implementation of the Directive so as to reduce differences between the national process and that at the OHIM.¹² Section 1(1) of the Registered Designs Act states that '[a] design may, . . . be registered under this Act on the making of an application for registration'. The application should be made by the person claiming to be the owner of the design to the Design Registry in the Patent Office,¹³ and include two identical representations of the design (including, if desired, an explanatory description), a statement as to the product to which the design is

⁸ Prior to harmonization Benelux and Germany would allow applications containing up to 50 designs, while France and Italy permitted up to 100. In contrast, the UK required each application to relate to a single article or set of articles.

⁹ Prior to European harmonization, many countries allowed for deferral though the periods differed: in Scandinavia deferral was for 6 months only, in the Benelux for 12 months, in Austria for 18 months, and in France for 3 years.

¹⁰ Article 14 of the Swedish Act No. 2002: 570 amending the Design Protection Act 1970: 485 (requiring examination as to whether the application relates to a design, whether the design is immoral or a misuse of a protected emblem, proprietorship, classification, representations.) Prior to harmonization, some form of substantive examination took place in Austria, Portugal, and Scandinavia: see Suthersanen, 327; 337, 357.

¹¹ Article 18 of the Swedish Act No. 2002: 570 amending the Design Protection Act 1970: 485 (allowing opposition for 2 months).

¹² In particular, 'statements of novelty' have been abolished, as has the requirement that the applicant specify an 'article' to which the design was to be applied. Substantive examination based on a prior search had been removed in 1999 even before harmonization made it desirable.

¹³ RDA s. 3(2). If unregistered design right subsists, the applicant should be that person.

to be applied, and (if desired) a 'partial disclaimer' identifying the features of the appearance for which protection is sought. The applicant, or their representative, should also sign a declaration to the effect that 'the owner believes that the design is new and has individual character'. The fee is £60 per application, except in the case of designs for lace and certain textile patterns where it is £35.

3.2 THE REPRESENTATIONS

Undoubtedly, the most significant parts of the application are the 'representations' of the design or 'specimens',¹⁴ and any partial disclaimer which indicates that the design is the appearance of only part of a product.¹⁵ The representations can be conceived as the positive claims, from which the disclaimer excludes matter, so that in combination they define the property. The interaction between representations and disclaimer is thus likely to play a key role in determining whether a design is validly registered and whether it is infringed.

The procedural rules which control the representations play an important role in defining the limits of what can be registered as a design. In the next chapter we will consider whether the definition of design in Article 1 of the Directive, by referring to 'appearance', confines designs to visual appearance. The better view, we believe, is that as a matter of substantive law, the Directive does not limit 'appearance' to the visual: the touch and feel of a designed item may also form an element meriting protection. Although Recital 11 of the Directive speaks of protection 'for those design features of a product, in whole or in part, which are shown visibly in an application', it does not require that protected features be solely or fully comprehended and appreciated from the visible representation. In order for the representations to define positively a property that is not itself visible, the UK rules permit the inclusion of a 'brief description explaining the representation' on the front of the first sheet only of each representation or specimen.¹⁶ This can be used to specify the material from which the design is made, to identify a colour (for example using the Pantone system),¹⁷ or dimensions, if they are important. In a German case, decided before harmonization, a description was utilised to explain that bright appearance of the stand for a light shade resulted from illumination from within.¹⁸ Such descriptions should also be permitted under UK practice.

Although these descriptions are thus important, for the most part they concern marginal cases. A much more important element in the system is the 'partial disclaimer'. Such partial disclaimer should appear on the representations, and so should be available to the public.¹⁹ There seems no reason why the partial disclaimer should not

¹⁴ It is for the Registrar to decide whether specimens are acceptable, by reference, amongst other things to ease of mounting: RDR r. 21.

¹⁵ RDR r. 15 (partial disclaimer), r. 17 (representations). It should be noted that the register may be rectified under RDR r. 20, and if a design has been declared partially invalid, such a declaration should appear on the register.

¹⁶ Notes to Form 2A which adds that 'any such description shall not be taken to limit the scope of protection conferred by registration of a design'.

¹⁷ Verbal techniques could also usefully clarify colour as 'subtle shades of colour do not photograph or reproduce well': Musker, 15.

¹⁸ F.-K. Beier and P. Katzenberger, 'Letter from the Federal Republic of Germany' [1975] *Ind Prop* 246 (describing a German case where this was permitted).

¹⁹ RDA s. 22(1); RDR r. 15(2), r. 67.

identify a part of the designed product by stating, for example, 'protection is sought for the head of the toothbrush, the handle being disclaimed'.²⁰ Alternatively, especially in cases where the representation comprises a photograph of the finished designed product, it may be appropriate to disclaim some aspects of appearance of the whole product (such as 'protection is sought for the shape of the toothbrush, the materials, colours, words and patterns being disclaimed'), or a particular aspect of part of the product (such as 'protection is sought for the shape and texture, but not colour, of the handle of the toothbrush').

If there is no disclaimer, it is expected that a tribunal will treat the full contents of the representation as comprising the design.²¹ While this would mean that the design might be found to be novel, it might render it easy for a competitor to avoid infringement by altering or adding some features so as to give a different overall impression (while perhaps still taking the features that embodied the registered proprietor's primary design investment). Imagine, for example, that an application relates to a toothbrush and the design investment went into developing a bend in the brush. The applicant submitted a photographic representation of the brush, including multicoloured bristles, coloured plastic stem, and COLGATE logo, but failed to disclaim the colours, the bristles, logo, or the colour of the stem. A competitor could foreseeably reproduce the bend in the brush, apply a different logo, make the brush out of blue plastic with white bristles, and thus make a product which creates a different 'overall impression' on an informed user. (Of course, in an extreme case it might be that the bend would be such a striking feature that even the competitor's version would be regarded as creating the same overall impression.)

3.3 IDENTIFICATION OF THE PRODUCT

Although the applicant for a registration in the United Kingdom will have been obliged to identify a product to which it is intended to apply the design,²² the exact significance of this should be made clear. In principle, design protection is not limited to the particular product in relation to which registration is effected, and as a corollary a design may lack novelty in the face of the design of a different product.²³ The specification of the product, then, is merely procedural,²⁴ its role being to enable classification, searching and so on, and supposedly without any substantive consequences. Thus, if a person designs a motif for use on wallpaper, and identifies the product as wallpaper, the protection granted by registration is in no way limited to wallpaper: the use of the motif by a third party on curtain fabric and duvet covers infringes. Equally, we can anticipate that a design for a 'whistling kettle' may be rejected in the face of an identical design for a 'kettle', or possibly that a toy car may be found to infringe the registered design covering the full-scale automobile. However, there are obvious *substantive* limits to the principle of the 'irrelevance of the product': it is unlikely that a registered design for the shape of a chair would be infringed by its use on the shape of a table, because an informed user would be unlikely to find that the two designs gave the same impression. Where the appearance of the product and the nature of the product have an inseparable connection, the product will matter.

²⁰ Designs Practice Note 2/03 ('Applying to register part of a product', Jan. 2003).

²¹ As was the former practice: *Kestos v. Kempat and Vivien Fitch Kemp* (1935) 53 RPC 139, 150.

²² RDR r. 14. ²³ RDR r. 14(3).

²⁴ It is also financial, since designs for lace and textile products are cheaper, and will affect whether the designs can be inspected.

Nevertheless, it is not the identification of the product in the application form that has a substantive effect in such cases.

3.4 GROUNDS OF REFUSAL

A design application can be refused but only on certain specified grounds.²⁵ The Registrar *may* do so if the application fails to comply with rules made under the Act,²⁶ and they *must* do so if the application has not been made by the person claiming to be the proprietor of the design and, where relevant, the owner of UK unregistered design right, or under section 14(1) of this Act,²⁷ or if any ground for refusal of registration mentioned in section 1A applies. This covers most matters relating to subject matter and novelty.²⁸ Thus, the Registrar must refuse to register something which is not a design (under section 1(2)), or which lacks novelty of individual character (under section 1B), is dictated by function or otherwise exclude under section 1C, or is immoral (contrary to section 1C). Moreover, the Registrar may refuse to register designs relating to royal emblems, flags, and other matters mentioned in Schedule A1.²⁹

3.5 EXAMINATION IN PRACTICE

In practice, registration is a mere formality. Under current practice, objections are only raised if there are clear and obvious grounds of refusal. The Registry will not conduct a search to determine novelty,³⁰ though if the examiner is aware of a prior publication of the same design and has some documentary evidence on which to base an objection, registration will be refused: the Design Registry's Practice Notice gives as an example an application to register a well-known cartoon character. Since a full search is not undertaken (the practice was abandoned even before implementing the Directive), whether there will be an objection will often depend on the experience and knowledge of a particular examiner. It has been argued that while somewhat subjective, such an approach implies a 'higher presumption of validity' which is welcomed by the users of the system.³¹ The UK Registry will also raise objections in obvious cases of applications which relate to parts of complex products that are not visible in normal use.³²

²⁵ RDA s. 3A.

²⁶ RDA s. 3A(2). In many cases, refusal can be avoided and the Registrar can ask the applicant to amend the application. Section 1(1) of the Registered Designs Act 1949 refers to applications to register 'a design' and, in stark contrast with the approach of the OHIM, the UK Registry operates a rule of one design per application. If an applicant mistakenly submits an application relating to more than one design, the examiner may raise a 'Divide-Out' request', under s. 3B(3), leaving the original application as a 'parent' and treating additional designs as 'child' applications. Designs Practice Note 3/03 ('Divide Outs', 21 March, 2003).

²⁷ RDA s. 3A(3). ²⁸ Designs Dir. Art. 11(1)(b), referring to Arts. 3–8.

²⁹ Designs Dir. Art. 11(2)(c). The UK did not take advantage of the option relating to designs which infringe copyright or trade marks law contained in Design Directive, Art. 11(2)(a) and (b).

³⁰ Despite RDA s. 4(4) empowering the Registrar to make such searches, if any, as they think fit.

³¹ See Patent Office, *Report of Working Group on Designs*, April 15, 2003, on Patent Office web site. See also the discussion of the meeting of 23 Jul. 2003.

³² Designs Practice Notice, DPN 1/03 'Component Part of complex product visible in normal use' (7 January 2003). Designs will also be rejected where they are dictated by function: Designs Practice Notice, DPN 5/03 'Designs Dictated by Their Technical Function' (18 Aug. 2003).

3.6 REGISTRATION

On registration, the applicant is issued with a certificate and the design is open to inspection.³³ Registration gives the proprietor the exclusive rights set out in section 7, and described in Chapter 28. Registration is treated as being made as of the date of application (despite a typical three-month processing period).³⁴ Moreover, in the case of designs for textiles and wallpaper or lace, the Designs Rules prescribe that such designs will not normally be available for inspection for three or two years, respectively.³⁵ This leaves competitors vulnerable to infringement actions as regards designs which they did not know about: in such cases, innocent defendants may benefit from an exemption from liability for damages.³⁶

4 APPLICATION TO REGISTER AT THE OHIM

Protection by way of Registered Community Design is acquired by application to the Office of Harmonization in the Internal Market at Alicante or indirectly through the offices of member states.³⁷ The procedure is governed by the Regulation itself, and the Implementing Regulations, but these are supplemented by the OHIM's 'Examination Guidelines—Community Designs'.

4.1 THE APPLICATION

The application, which must be signed, should include a request for registration, the name and address of the applicant (and their representative, if one is used), a representation of the design, indication of products in relation to which the design is intended to be used,³⁸ any relevant declaration of priority, and a specification regarding languages.³⁹ The application *may* also include a description, a request for deferment of publication, an indication as to classification, and citation of the designer.⁴⁰ Of these elements, the most important are the representation of the design suitable for reproduction,⁴¹ and the description. If an application fails to include necessary data the Office will not accord a filing date.⁴²

4.2 THE REPRESENTATIONS

The representation 'shall consist of a graphic or photographic reproduction of the design in black and white or colour'.⁴³ (In contrast with the United Kingdom, where the Registrar

³⁸ CDR, Art. 36(2), CDIR, Art. 1(d). The indication of product should indicate clearly the nature of the product and OHIM requests applicants to utilize the 'Eurolocarno List', which takes the Locarno's thirty-two classes and elaborates in the region of 4–5,000 products: CDIR, Art. 1(d).

³⁹ The application can be made in any of the official languages of the Community, but must specify a second-language from one of the five languages of the Office (Spanish, German, French, English, Italian).

⁴⁰ CDIR, Art. 1(2).

⁴¹ CDR, Art. 36(1)(c) CDIR, Art. 1(c).

⁴² CDIR, Art. 10.

⁴³ CDIR, Art. 4.

may accept specimens which can be mounted in the register, specimens can only be accepted at OHIM for registrations for which deferred publication is requested, since the process of publication in the Community Designs Bulletin by definition demands that the design be represented.)⁴⁴ Each representation must consist of at least one 'view' and may involve a maximum of seven views.⁴⁵ The Guidelines point out that since the representation is the means to specify the features of design for which protection is sought, 'it is of the utmost importance that it is clear and complete and that nothing regarding the design is left to conjecture'. The Guidelines further suggest techniques for delimiting the representation: dotted lines, for example, to indicate elements for which no protection is sought, 'boundaries' or 'colouring' (of black and white representations) to identify features for which protection is sought.⁴⁶ An official at the OHIM has even stated that 'the selection of the means for representing a design is equivalent to the drafting of the claims in a patent: including features means claiming them'.⁴⁷ Thus the choice of the representations is up to the applicant: it is for the applicant to ensure that the features for which protection is sought can be distinguished clearly (though it is possible that in some extreme cases, as where the representations are obscured by a fax machine,⁴⁸ the application may not be given a filing date, or possibly would be rejected on the ground it does not disclose a design.)

The representation should only cover one design. Where registration is for a repeating pattern, 'the representation of the design shall show the complete pattern and a sufficient portion of the repeating surface'.⁴⁹ Where registration consists of a 'typographic typeface', the representation should include the complete alphabet, all the arabic numerals, as well as five lines of text.⁵⁰

The representation may also contain a single description per design not exceeding 100 words explaining the representation of the design or specimen.⁵¹ However, this should not refer to novelty, individual character, or the technical value of the design. The description at the OHIM seems to be usable both positively to explain some aspect of the representation, and negatively to disclaim features for which protection is not desired. A description might say, for example, that 'features depicted in broken lines are not claimed'; or 'protection is sought for the encircled features'.⁵² (A distinct facility is provided for 'partial disclaimers' to be added after registration.⁵³)

4.3 MULTIPLE DESIGNS

In contrast with the approach taken by the UK Registry (at least, for the moment), several designs may be combined in one application.⁵⁴ The idea is to make the system as cheap

⁴⁴ Alternatively, a specimen can be supplied (but only in relation to two-dimensional designs, and where publication is deferred): CDIR, Art. 5(1). This facility seems to be made available to those who need time deciding whether to proceed to full registration, and presumably the submission of a specimen is regarded as minimizing the costs of securing protection to such undecided designers.

and attractive as possible, even to those sectors of industry producing large numbers of short-lived designs.⁵⁵ Multiple applications are permitted so long as the designs are intended to be applied to products within the same class of the Locarno Convention, and even that restriction does not apply in the case of ornamentation.⁵⁶ Where an application includes a number of design, the application may be divided.⁵⁷ The maximum per application is 999, and the highest, so far, somewhere around 300.

4.4 DEFERRED PUBLICATION

Additionally, provision exists for the registration of secret designs, where the application can remain unpublished for thirty months.⁵⁸ This is seen as desirable because publication can 'destroy or jeopardise the success of a commercial operation involving the design'.⁵⁹ It should be contrasted with the UK provisions which restrict access to the register as regards designs for textiles for three years, and those for wallpaper or lace for two years. The OHIM deferred publication procedure is available to applicants in relation to all designs not just those limited categories, and is more flexible in that publication can occur earlier if the applicant requests.⁶⁰ In cases where deferred publication is sought, an applicant does not have to prepare representations and may prefer to submit five copies of a specimen of each design (though these must be two-dimensional if they are to comply with practical requirements).⁶¹ A request for deferment is required, and a small fee has to be paid (€40), followed by the normal publication fee (€120) when the design is finally published. Protection during the period of deferred publication is, however, limited to situations where the design proprietor can prove that there was copying of the design.

4.5 THE DESIGNER'S ATTRIBUTION

Another feature of the Community system worth noting is the designer's 'moral' right of attribution: the designer (or the design team) has the right to be 'cited as such before the Office and in the register'.⁶² It is rather strange that the procedural rules then state that the application may—but need not—mention the designer.⁶³ Possibly, this may be to enable the designer to remain anonymous, if they so wish. However, the effect is to leave unstated exactly how issues of citation are to be resolved.⁶⁴ Pending the formulation of specific rules by the Commission, existing legal procedures will need to be employed. In the case of a designer who has not been named by the legitimate proprietor, the most obvious way to

⁵⁵ CDR, Recital 25.

⁵⁶ CDIR, Art. 2(2). The Examination Guidelines, para. 8.3, state that 'ornamentation' is 'an additional and decorative element capable of being applied to the surface of a variety of products without affecting their contours'.

⁵⁷ CDIR, Art. 10(3).

⁵⁸ CDR, Art. 50; CDIR, Art. 1(2)(b).

⁵⁹ CDR, Recital 26; EC Green Paper, para. 8.11.3, 115.

⁶⁰ CDIR, Art. 15–16; EC Green Paper, para. 8.11.1, 115 (explaining that deferred publication is desirable in automobile industry as well as textile industry).

⁶¹ CDIR, Art. 5.

⁶² CDR, Art. 18. However, If the design is a result of teamwork, the citation of the team may replace that of the individual designers.

⁶³ CDIR, Art. 1(2)(d).

⁶⁴ Musker, 119–20 (describing the change in wording of Art. 18 from the designer having 'the right vis à vis the applicant' to having 'the right, in the same way as the applicant . . .').

enforce their right would be to bring an action against the OHIM. Conflicts between teams and individuals would probably need to be resolved before national Community Design Courts, seeking a declaration as to who possesses the Article 18 right. Such a declaration could then be the basis of a further action against the OHIM. These procedural difficulties remove much of the significance of the designer's Article 18 right.

4.6 EXAMINATION

The Office does not conduct a substantive examination (e.g. as to subject matter, novelty, or individual character).⁶⁵ This is to minimize the procedural burdens on the applicant, supposedly to render protection cheaper and readily available to all.⁶⁶ The idea is that examination is difficult, expensive, and inconclusive, and it is better that the validity of a given design be decided on the basis of an *inter partes* dispute (and thus only over those designs with a significant market value).⁶⁷ Nevertheless, if, on formal examination, the Office 'notices' that the design does not satisfy the definition of design in Article 3a or is contrary to public policy or accepted principles of morality, it shall notify the applicant and, if the applicant fails to remedy the objection, refuse the application.⁶⁸ In contrast with the UK Registry, the Office cannot, however, refuse obviously old designs.⁶⁹

4.7 REGISTRATION AND PUBLICATION

As long as the application fulfills the formal requirements the Office is obliged to register the design and (except in cases of deferred publication) publish it in the Community Design Bulletin.⁷⁰ The published design registration includes the representations, indication of product, and name of designer, but not any description lodged with application.⁷¹

5 WHICH AVENUE TO CHOOSE

The Registered Community Design and UK Registered Design rights can exist cumulatively,⁷² or as alternatives. If only one form is wanted, the RCD may be preferred to a UK Registered Design (and other national rights) for a number of reasons: because it is a Community-wide right, because it is cheaper,⁷³ because it is administratively more

⁶⁵ CDIR, Art. 11. A formal examination is conducted: CDR, Art. 45, CDIR, Art. 10.

⁶⁶ CDR, Recitals 18, 24. Explanatory Memorandum to the Proposal for a Regulation, para. 8.7 ('rapid and uncostly registration'); Musker, 173.

⁶⁷ EC Green Paper, para. 2.3.4, p. 17; para. 4.3.10–11, pp. 48–9; Posner in Franzosi (ed.) at 30. A suggestion that the OHIM provide a optional examination facility was not taken up: EC Green Paper, para. 8.9.1, 112.

⁶⁸ CDR, Art. 47; CDIR, Art. 11. The Examination Guidelines state that 'Compliance with the definition of a design is subject to examination. Failure to comply with the definition constitute[s] a ground for non-registrability . . . Whether the product is actually made or used, or can be made or used, in an industrial or handicraft manner, shall not be examined'.

⁶⁹ Musker, 177 (noting no basis on which to refuse obviously old designs, or ones owned by others).

⁷⁰ CDR, Arts. 48, 49, and 73; CDIR, Art. 13.

⁷¹ CDIR, Art. 14.

⁷² CDR, Art. 95.

⁷³ OHIM charges a fee of 230€ for registration, 120€ for publication; in the case of multiple applications the basic fee must be paid only for the first design—thereafter for the 2nd to 10th design the fee is halved (to 115€) and if the application contains 11 or more designs the registration fee is reduced to 50€. In the UK the fee is £60 per application (except if the design is for lace or consists substantially of stripes or checks to be applied to textiles, in which case it is £35).

convenient (for example, because of the possibility of making a single application with multiple designs), because it is available without substantive examination, or because it offers the benefits of deferred publication. However, in some circumstances the UK Registered Design may be regarded as preferable to the Registered Community Design. This might be because only local protection is desired, or perhaps because the applicant wants the benefit of examination to the minimal extent that it takes place at the UK office.⁷⁴ For the textile industries, the United Kingdom (temporarily) closed register (with full monopoly rights) may be seen as a useful supplement to the Community's deferred publication facility. In some countries—but not the United Kingdom—local protection may be preferred because it enables the proprietor to obtain a registration for, and protection over, spare parts. Not surprisingly, since the differences between the UK and OHIM systems do not offer substantial advantages to UK registrations, the opening of the OHIM for registration of Community designs, from April 2003, has prompted a notable decline in the number of UK applications. According to the UK Registry, the total numbers of applications are down 40 per cent and foreign applicants have halved.⁷⁵ The OHIM had, by August 2003, received over 2,000 applications covering some 8,000 designs.

⁷⁴ The Community system is likely to be marginally less taxing. The OHIM cannot refuse a registration on the basis of lack of novelty or individual character, whereas the UK Design Registry can (though rarely will).

⁷⁵ Total UK design applications for 2002 numbered 9,505, and there were 9,192 registrations.

26

THE COMMUNITY CONCEPT OF DESIGN

1 INTRODUCTION

The scope of the design system is delimited at the most fundamental level through the definition of a protectable design.¹ Following the coming into operation of the Directive and Regulation, the definition of a registrable design at national and Community levels, and, indeed, the definition of design for the purposes of Unregistered Community Design Right, is identical. This definition of a protectable design is exceedingly broad—broader than many of the definitions of design in the pre-existing laws of member states.² More specifically, Article 1(a) of the Directive defines a design as:

the appearance of the whole or part of a product resulting from the features of, in particular, the lines, contour, colours, shape, texture and/or materials of the product itself and/or its ornamentation.³

In turn Article 1(b) defines a ‘products’ as:

any industrial or handicraft item, including *inter alia* parts intended to be assembled into a complex product, packaging, get ups, graphic symbols and typographical typefaces, but excluding computer programs.⁴

These two definitions need to be considered in detail, before going on to examine certain mandatory exclusions from the concept of protectable design.

¹ If an application for a UK registration does not relate to a design, it should be refused: RDA s. 1A(1)(a). If it comes to be registered such a design can be declared invalid: RDA s. 11ZA(1). In the case of an application to register a Community Design, the fact that the design does not ‘correspond to the definition under Article 3(a)’ constitutes a ground for non-registrability: CDR, Art. 47(1)(a). It is also a ground of invalidity, under CDR, Art. 25(1)(a), and this can be raised against registered and unregistered Community designs.

² Previous British law (RDA, as amended by the CDPA 1988) had defined designs as ‘features of shape, configuration, pattern or ornament applied to an article by an industrial process, being features which in the finished article appeal to and are judged by the eye’. It also required that the article be one for which appearance was material, that is persons acquiring the article took appearance into account when deciding which article to acquire.

³ Designs Dir., Art. 1(a); CDR, Art. 3(a); RDA s. 1(2).

⁴ Designs Dir., Art. 1(b); RDA s. 1(3); CDR, Art. 3(b).

2 APPEARANCE

The definition of design focuses on ‘appearance’.⁵ Despite the fact that the term ‘appearance’ directs attention to the way a product looks, it is clear that there is no requirement that the design be attractive, decorative, or ornamental: functional and aesthetic designs are equally protectable.⁶ The definition of design provides a non-exhaustive list of characteristics that can produce appearance: these include lines, contours, shape, texture, or materials. This is a broad list and covers most aspects of conventional graphic design, industrial design, product and packaging design, and fashion design. In the case of a mobile phone, for example, it would include the overall shape, the arrangement of buttons, the positioning of the earpiece and screen, the colour of the screen, the lettering, and numbering. In the case of an item of clothing, such as a shirt, it would include collar size, the proportions, the pattern, embroidered features (such as button holes), and potentially also the colours. The breadth of the definition attempts to reflect the breadth of designing activities.⁷ As there is no indication otherwise, the internal features of products (other than complex products, which are discussed further below) may be protected as long as the features can be represented.⁸

Despite the obvious breadth of the definition of design, a number of issues will, no doubt, require a formal decision of the European Court of Justice before they can be regarded as fully settled.⁹ One such issue is the degree to which the term ‘appearance’ implies that only visual aspects of designs fall to be protected. In other words, the question arises to what extent design can encompass (and thus protect) the use of particular materials, textures, smells, and sounds that are perceived by senses other than the eye. It is possible to understand the term ‘appearance’ as limited to the visual,¹⁰ and such a construction seems consistent with the requirement in Recital 11 that protection corresponds to the features ‘shown *visibly* in an application’,¹¹ and the requirement in Recital 13 that the design only be protected if it has individual character, a determination to be made by reference to an ‘informed user *viewing* the design’. However, while designs will rarely cover purely non-visual features, it was not the Commission’s initial intention that the definition be limited to aspects perceptible by the eye.¹² While it does not seem possible to include sounds or smells within the notion of appearance (and the Commission had never

⁵ As opposed to the idea or overall concept: EC Green Paper, paras. 5.4.3.1–4, pp. 58–9.

⁶ No aesthetic criteria are applicable: Designs Dir., Recital 14; CDR, Recital 10. *Explanatory Memorandum to the Proposal for a Regulation*, para. 8.2; Levin in Franzosi (ed.), p. 83.

⁷ Franzosi in Franzosi (ed.), p. 40 (‘as neutral and broad as possible in order to cover any marketing value attached to the form or shape of a product’).

⁸ Patent Office, *Legal Protection of Designs: A Consultation Paper on the Implementation in the United Kingdom of EC Directive 98/71/EC* (12 Feb. 2001), 4, para. 3 (giving example of the inside of a suitcase).

⁹ ‘It goes without saying that a colour in itself or a material as such are not eligible for protection’ (‘Official Commentary of Proposal for Regulation’ in Franzosi (ed.), 36).

¹⁰ Musker, 12 (questionable whether the word is appropriate to any sense other than sight). The equivalent terms in the Directive are ‘l’apparence d’un produit’ (French), ‘la apariencia’ (Spanish), ‘l’aspetto’ (Italian) and ‘Erscheinungsform’ (German).

¹¹ This provision was included as part of a compromise justifying rejection of Parliamentary amendments that designs were only to protect ‘outwardly visible’ features: see H. Speyart, ‘The Grand Design’ [1997] *EIPR* 603, 605–6. See above p. 603.

¹² EC Green Paper, para. 5.4.7.2 (referring to the texture of textiles).

intended that it would),¹³ references in Article 1 to texture and materials imply that touch may be an important attribute of a design, so that—for example—a conventional style of clothing when made in a new material with a distinct texture (such as Lycra was only a few years ago) might be protected.¹⁴ Equally, the weight and flexibility of materials might be an important part of the design.

3 PRODUCT

The definition of design refers to the appearance of ‘a product’. ‘Product’ is defined, exhaustively, as any industrial or handicraft ‘item’. There is no further definition of ‘item’ (or the adjectives industrial or handicraft), except that the Directive and Regulation include an exemplary list of items such as packaging, get-up and graphic symbols, and excludes computer programs. Although the definition of product is therefore very broad, covering items such as clothes, fabric, furniture, electrical goods, and motor vehicles, there are likely to be controversies in a number of difficult cases which we must now examine.

3.1 ‘PRODUCTS’ TYPICALLY ASSOCIATED WITH COPYRIGHT

Firstly, the question arises whether a painting, drawing, or building is a product within the meaning of the Directive and Regulation. If so, then it seems as if certain works typically protected by copyright might also be protected by designs—either through national or Community registration, or automatically (by UCD) after being made available to the public.¹⁵ In turn, this presents the possibility of an absolute monopoly over the design for up to twenty-five years.

For a painting to obtain protection it would have to be seen to be a ‘*handicraft item*’. Would a painting be regarded as an ‘item’? Under old British case law on registered designs, where the definition of registrable design included ‘pattern and ornament . . . applied to an article’, it was held that the article had to have a distinct existence from the design: so that a design of a football pools coupon was not registrable because the design was the article.¹⁶ The Community definition of protectable design, however, requires no such distinction to be made, as is clear from the inclusion of ‘graphic symbols’ in the list of examples of items. Thus it seems that a painting or canvas can be an item. Is a painting an ‘*industrial or handicraft item*’? Presumably, it could be argued that a painting is neither, because painting is art rather than handicraft. While this would mean that the definition of design excluded the design of a painting and hence would preclude the duplication by design law of protection conferred by copyright, there is little doubt that tribunals are going to feel some discomfort in drawing a boundary between art and handicraft.

¹³ EC Green Paper, para. 8.9.2.

¹⁴ *Franzosi* in *Franzosi* (ed.), 41 (‘all those . . . elements of the product which may be perceived by the human eye or by touch’).

¹⁵ One could also protect such works when copyright has lapsed if they have previously not been widely published.

¹⁶ *Re Littlewood’s Pools* (1949) 66 *RPC* 309. British law also excluded many items from the definition of article, and thus from the design regime, through the Registered Designs Rules, r. 26 (relating to articles of primarily a literary or artistic character).

A related question is whether architectural designs relate to the appearance of a 'product'? Again the issue is whether 'industrial or handicraft item' includes buildings. Under old case law, it had been held that the process of building was not an 'industrial process' so that a design for a petrol filling station was unregistrable.¹⁷ If followed, this would suggest that such items were not 'industrial items' and thus not products. This would also seem to be consistent with the definition of infringement in the Directive, which implies that the Directive and Regulation had portability in mind.¹⁸ However, it should be observed that other commentators have taken a different view, arguing that environmental designs, whether interior or exterior, are protectable.¹⁹ If it is deemed relevant, as it might be given that it has been specially designed for classification of designs by the OHIM, the Euro-Locarno Classification system includes houses, buildings and buildings (transportable) in class 25-Building Units and Construction Elements.

Article 1(b) specifically excludes one category of copyright subject matter—'computer programs'—from the definition of a product.²⁰ Consequently, the appearance of a computer program cannot constitute a design capable of a national or Community registration. Determining exactly what this exclusion covers may prove tricky. One obvious construction is that the appearance of the computer program is the appearance of the source or object code and thus that this, and possibly preparatory design material, is not capable of protection. Such a construction would exclude from designs protection the sort of material covered by copyright under the Software Directive, and has been favoured by a number of commentators. However, such a construction would not exclude from protection the effects of running the program in a computer: the user interface or images that appear on the computer screen might be protected individually or in the overall appearance.²¹ Indeed, Article 1(b) of the Directive refers to 'graphic symbols' as products and it is widely accepted that computer icons will also be.²² Insofar as such matters can be reduced to an appropriate form to meet the procedural requirements of national or Community law, it may well be possible to register certain aspects of web-design. However, it will probably be impossible to represent dynamic effects and sound effects visibly in the application.²³

¹⁷ *Collier & Co.'s Application* (1939) 54 *RPC* 253.

¹⁸ Musker, 18.

¹⁹ C.-H. Massa and A. Strowel, 'Community Design: Cinderella Revamped' [2003] *EIPR* 68, 71 (giving examples of amusement parks and gardens).

²⁰ At one stage, the Commission said this was because computer programs 'cannot be designed': *Explanatory Memorandum to the 1993 Proposal for a Council Regulation on the Legal Protection of Designs* (III/F/5576/92-EN) in Franzosi (ed.), p. 36. Franzosi disagreed stating that '[i]n reality this is not completely correct' (p. 43). However, it should be noted that the document continues by saying '[it] may be useful, however, to state explicitly that the copyright protection provided under the umbrella of the aforementioned Directive cannot be supplemented or reinforced by a protection of the "look and feel" of a computer program by way of design protection'.

²¹ See Patent Office, *Legal Protection of Designs: A Consultation Paper on the Implementation in the United Kingdom of EC Directive 98/71/EC* (12 Feb. 2001), 4, para. 4 (stating that the exclusion covers the programs themselves, i.e. the lines of code and the functionality); Musker, 16 ('the exclusion of screen displays seems either unnecessary or harmful' so that the scope of the exclusion should be confined to what is protected by copyright); A. Kur, 'Protection of Graphical User Interfaces under European Design Legislation' (2003) 34 *IIC* 50 (arguing that the exclusion may apply to the visual appearance generated by a computer program in its entirety, but not to individual graphic elements).

²² M. Schlotelburg, 'The Community Design: First Experience with Registrations' [2003] *EIPR* 383, 386 (describing registrations at the OHIM No. 4213, No. 211, 286, 310).

²³ Musker, 17. See above pp. 603–4, 606–7.

3.2 CORPOREAL AND BIOLOGICAL PRODUCTS

In an era where there is widespread interest in medical and cosmetic design of the human body, it might be asked whether designs for body parts, for tattoos, and even for genetically modified animals (such as a scarlet coloured cat) can be protected. The Eurolocarno Convention includes artificial eyes, limbs, and teeth in class 24, and hairpieces in class 28, suggesting that the appearance of prosthetics and wigs constitute designs. As such, there seems little reason not to treat these as 'industrial items'. Tattoos are probably not designs since it is unlikely that the courts would think it acceptable to call the human body an 'industrial or handicraft item.' (However, if a tattoo design was registered as a painting (if this is possible), it might be an infringement of registered design right to apply the image to a body, as this might amount to using the design.²⁴) It is too early to say whether animals can be regarded as 'industrial items'. The European Patent Convention, in defining when an invention is 'capable of industrial application' talks of the use 'in any kind of industry, including agriculture', which might support an argument in favour of the protection of such artefacts by designs law.

3.3 CHIP PRODUCTS

Finally, it is worth noting that designs comprising the topographies of semi-conductor chips are within the Community definition of design. Member states must therefore protect topographies by registered design, and topographies are also protectable by Community Registered Designs and automatically by Unregistered Community Design Right. This raises difficulties because member states are already obliged by the 1986 Chip Directive to give protection to topographies which are the result of the creator's own intellectual effort and are not commonplace. As if this mandatory cumulation were not inconvenient enough, the registered design system has important variations from those operating under the Chip Directive. For example, where the Chip Directive works on the basis of reciprocity, national treatment principles apply to registered designs under the Paris Convention.²⁵ Similarly, the rules on ownership of the rights are different.²⁶ Thankfully, it seems unlikely that the chip industry will take advantage of these provisions.

3.4 COMPLEX PRODUCTS

As indicated, the Directive requires member states to allow for the registration of designs of 'parts intended to be assembled into a complex product'.²⁷ A 'complex product' is defined as 'a product which is composed of multiple components which can be replaced

²⁴ But note the private and non-commercial use defence: Designs Dir., Art. 13(1), RDA s. 7A(2), CDR, Art. 20(1).

²⁵ Cf. Chip Dir., Recital 6 (on the extension of protection to persons outside the Community). See below pp. 687–8.

²⁶ Chip Dir., Art. 3(2) (allowing, but not requiring, member states to allocate ownership to employer 'where a topography is created in the course of the creator's employment', or to a commissioner); CDR Art. 14(3) (allocating ownership to employer, but only where 'developed by an employee in the execution of his duties or following the instructions given by his employer'.) Given that topographies might also be protected by patents, utility models, or copyright, the domain seems to be absurdly over-regulated.

²⁷ Designs Dir., Art. 1(b); RDA s. 1(3); CDR, Art. 3(b). As a result, it seems that the rule in *R v. R DAT, ex p. Ford* [1995] RPC 167 has been reversed.

permitting disassembly and reassembly of the product'.²⁸ The meaning of this phrase has further significance because such parts are required to reach a special standard (of novelty and individual character) before they can be protected, and are also subject to special (as yet unharmonized) limitations.²⁹ The term 'complex product' is, uncontroversially, intended to cover motor vehicles, and to allow the registration of components for such vehicles in limited circumstances. Quite what the term 'complex product' covers beyond this is less clear. Many products are made up of a number of parts which can be disassembled and re-assembled: tables can often be dismantled, as can book-cases, stereos, mobile phones, and so on. Whether these were all intended to fall within Article 1(c) is doubted by the United Kingdom Designs Registry which has suggested a 'more practical' and appropriate 'definition' of a complex product:

a product containing a multiplicity, or such a number of, components that it becomes technically complex, and one for which some of the components will need maintenance, service or repair during the life of the complex product. This will usually be a product with mechanical/electrical/electronic features such as a motor car.³⁰

The definition of 'complex product' raises a further definitional issue which we can address here: that is what is a 'component part'? More specifically, does a component include a part which is exhausted and disposed of, such as a printer cartridge? The United Kingdom's Designs Registry has indicated that consumable items which are intended to be 'used up' are not 'component parts': it prefers the test that, absent the part, the item would not be seen as a complete product.³¹ A laser printer would be seen as a complete product without its cartridge (though it would not function), so the cartridge is not a component part (though the printer may be a complex product). However, the Design Registry advises that '[p]arts which are not "used up" in the same sense as consumables but which might require replacement from time to time in order to enhance the performance of the complex product (e.g. parts of engines such as spark plugs) are considered to be component parts and so may face objections to registration'. The Design Registry's definition is of only very limited authority, and its formulation and/or application is difficult to support. To say that a part is only a component if, absent the part, the item would not be seen as a complete product raises the question as to when an item would be seen as a complete product: is a car a complete product without its hub-caps, tyres, wing-mirrors, fenders, seats, fan-belt, or sparkplug?

The question also arises whether when the Article defines a product as 'any industrial or handicraft item' it excludes the possibility of protection for combinations of more than one item. For example, is design protection available for a suite of furniture or a kitchen design (comprising multiple units)? It is clear that one could register each unit—

²⁸ Designs Dir., Art. 1(c); RDA s. 1(3); CDR, Art. 3(c). The British implementation of Art. 1(c) of the Directive, contained in s. 1(3) of the amended Act, redefined 'complex product' to mean 'a product which is composed of at least two replaceable component parts permitting disassembly and reassembly of the product'.

²⁹ Designs Dir., Art. 3(3); Art. 14; RDA s. 1B(10), s. 7A(5); CDR, Art. 4(2), Art. 110.

³⁰ Designs Practice Notice, DPN 1/03 'Component Part of complex product visible in normal use' (7 January 2003).

³¹ Designs Practice Notice, DPN 1/03 'Component Part of complex product visible in normal use' (January 7 2003). Cf. Suthersanen, 40 (toner cartridge for photocopying machine assumed to be component).

‘including . . . parts intended to be assembled into a complex product’—and it is implicit that if they form a ‘complex product’ the totality can be registered. But what if the whole is not a ‘complex product’? The Commission, in its Green Paper, had contemplated registration of a kitchen design, though it is unclear whether this would be considered as a complex product under Article 1(c).³² Probably, the critical question is whether the combination of items results in something which can itself be fairly called ‘an item’. This, in turn, will depend on whether the component elements are attached or linked to one another, whether the design value of the whole is greater than the sum of its parts and whether there is a distinct market for the combination.³³ If the totality can be called an item, it should be registrable.

4 EXCLUSIONS

There are three mandatory exclusions from the very broad definition of ‘design’.³⁴ The first relates to features dictated by function; the second to interfaces; and the third to design which are contrary to morality. We need to examine each in turn.

4.1 FUNCTIONAL FEATURES

Article 7 of the Designs Directive states that a design right ‘shall not subsist in features of appearance of a product which are solely dictated by its technical function’.³⁵ Recital 13 of the Directive explains that this exclusion is designed to prevent technological innovation being hampered.³⁶ It is notable that the Article does not say that these features are not designs, and prefers to state that design right shall not subsist in such features. The effect of this is that it may be possible to register (or obtain protection) for a design which includes such features, unless the design comprises only such elements. However, if a design does include functional features falling within Article 7, these are not taken into account for the purposes of assessing novelty or individual character,³⁷ and there is no infringement of design right where a person reproduces these features (because no design right subsists in relation to them).

³² Green Paper, para. 5.4.14.2, p. 67.

³³ Former German law had required that there be ‘unity of design’ before such combinations could be protected: see *Bernhard Pflug GmbH v. Interlübke KG*, Case 1 ZR 35/73 (1976) IIC 270 (where the Bundesgerichtshof held that furniture belonging to a ‘furniture program’ could be protected in its entirety. The ensemble comprised a bed, chest of drawers, shelf units, and corner elements which were intended to be used together, and regarded by the public as a unity).

³⁴ If an application for a UK registration is confined to excluded matter, it should be refused: RDA s. 1A(1)(b); s. 1C-D. If it comes to be registered such a design can be declared invalid: RDA s. 11ZA(1). In the case of an application to register a Community Design, the fact that the design is contrary to public policy or accepted principles of morality constitutes one of only two grounds for non-registrability: CDR, Art. 47(1)(b). The other exclusions can only be raised as grounds for invalidity, under CDR, Art. 25(1)(b), against both registered and unregistered Community designs.

³⁵ RDA s. 1C(1); CDR Art. 8(1).

³⁶ CDR, Recital 10.

³⁷ Designs Dir., Recital 14 and CDR, Recital 10.

4.1.1 Technical function

Although the exclusion relates to features dictated by technical function, no further guidance is given as to the meaning of 'technical'.³⁸ The term 'technical' has, however, become a key concept in European patent law.³⁹ The exclusion of technical features appears to achieve three related goals. First, by preventing the protection of features necessary to achieve a technical function, the Directive leaves protection of those features to the domain of patent law (and, where they exist, utility models).⁴⁰ It thereby prevents applicants from attempting to gain protection for such features at lower cost, and without the contribution reaching the standard of inventiveness demanded by patent law.⁴¹ Second, by leaving such features unprotected, the law ensures that there is potential for competition in functional products by enabling different persons to reproduce and utilize features of shape which are necessary to achieve a particular function. Third, the exclusion recognizes that in a situation where a shape is dictated by function, a designer exercises no design freedom and contributes no relevant design effort and so should not benefit from design right.⁴² If such a person makes a contribution, it is not as a designer but as an inventor.⁴³

4.1.2 Mandatory or causative?

The key question, which will need to be finally determined by the ECJ, is exactly what sort of relationship is indicated by the metaphorical language that the features be 'solely dictated' by such a function.⁴⁴ According to one reading (the so-called 'mandatory approach'), a design will be 'dictated' by technical function in situations where the designer was unable to exercise any control whatsoever over the final shape of the article. In other words, a design is dictated by function only if the precise shape of the article could perform the function. If the designer can demonstrate that other products achieving the same function have different designs, that is that a multiplicity of forms can fulfill the function, then (according to the mandatory approach) the form is not dictated by the function. According to a different reading (the so-called 'causative approach'), a design is dictated by function if it has been created with purely functional considerations in mind (even if the function could be achieved by other shapes). Under the causative approach, a design is protectable if there is any feature which was not caused or prompted by the technical function the designer had in mind.

The 'causative approach' is attractive to a British design lawyer for two reasons. The first

³⁸ This limitation was probably required because TRIPS, Art. 25(1) only permits members to provide that protection shall not extend to 'designs dictated essentially by technical or functional considerations'.

³⁹ See pp. 397–40. C.-H. Massa and A. Strowel, 'Community Design: Cinderella Revamped' [2003] *EIPR* 68, 72 ('technical function' may extend further to cover 'economic or marketing constraints'); F.-K. Beier, 'Protection for Spare Parts in the Proposals for a European Design Law' (1994) 25 *IIC* 840, 851 (contrasting technical function with aesthetic functionality).

⁴⁰ EC Green Paper, para. 5.4.6.1.

⁴¹ F.-K. Beier, 'Protection for Spare Parts in the Proposals for a European Design Law' (1994) 25 *IIC* 840, 851 ('Design protection . . . finds its natural limits when it comes to technical-functional features for which no design alternative exists').

⁴² EC Green Paper, para. 5.4.6.2.

⁴³ Musker is opposed to the exclusion altogether, seeing little harm in protecting technical contributions by a broad design law: Musker, 41–3.

⁴⁴ The French language version refers to 'les caractéristiques de l'apparence d'un produit qui sont exclusivement imposé par sa fonction technique'; the German to 'die ausschließlich durch dessen technische funktion bedingt sind'.

reason is because it was the approach taken under the pre-harmonized law by the House of Lords in *Amp v. Utilux Pty* when interpreting statutory language similar to that in the Directive.⁴⁵ The second reason is simply that the mandatory approach would render the exclusion all but redundant.⁴⁶

However, the better view is that the Directive is intended to implement the mandatory approach (and thus to apply only very rarely).⁴⁷ The mandatory approach was accepted in a number of member states prior to harmonization,⁴⁸ and the Commission explicitly gave its approval to this approach in the Green Paper.⁴⁹ More specifically, it had been indicated that this exclusion was only to operate to the extent that the realization of a technical function leaves no freedom as regards arbitrary features of appearance. While there is nothing in the language of the final versions of the Directive or Regulation to confirm that this continued to be the position of the European legislature, there is also nothing to suggest a sudden preference for the causative approach. The legislative history, then, on balance favours the mandatory approach. Two further factors support this view. First, the application of the principle, recognized in some areas of European intellectual property law, that exceptions to intellectual property are to be narrowly construed: the mandatory approach representing a narrower exclusion than the causative one. Secondly, the mandatory approach to the Designs Directive was approved by Advocate-General Colomer in the trade marks decision, *Philips Electronics NV v. Remington Consumer Products Ltd.*⁵⁰ In that case, which is reviewed at length in Chapter 36, the Court had to consider whether a sign for which trade mark protection was claimed consisted exclusively of ‘the shape of goods which is necessary to obtain a technical result’ (and thus was unregistrable as a trade mark under Article 3(1)(e) of the Trade Marks Directive). The Court held that a shape could fall within this exclusion even if it was not the only shape which could achieve the result. In his opinion to the Court, Advocate General Colomer contrasted the wording of Article 3(1)(e) of the Trade Marks Directive with that of Article 7 of the Designs Directive. The latter’s use of the word ‘dictated’, he said, suggested a mandatory relation; the former’s use of the term ‘necessary’ implied a lesser degree of inevitability between function or result and shape. In the case of designs, ‘a functional design may, none the less, be eligible for protection if it can be shown that the same technical function could be achieved by another different form’.

⁴⁵ Section 1(1)(b)(i) of the RDA (prior to amendment) excluded features of shape or configuration of an article which are dictated solely by the function which the article has to perform. The similarity between the former provision of British law and the Directive was noted by the Patent Office, *Legal Protection of Designs: A Consultation Paper on the Implementation in the United Kingdom of EC Directive 98/71/EC* (12 Feb. 2001), 10, para. 24.

⁴⁶ In *Amp v. Utilux Pty* [1972] *RPC* 103, 109 only one example of such a situation was suggested—that of a key which had to be a particular shape to be able to operate a particular lock.

⁴⁷ C.-H. Massa and A. Strowel, ‘Community Design: Cinderella Revamped’ [2003] *EIPR* 68, 72. It appears to have been accepted by the British Registry: Designs Practice Notice, DPN 5/03 ‘Designs Dictated by Their Technical Function’ (18 Aug. 2003).

⁴⁸ e.g. Benelux law excluded from protection ‘anything indispensable for the achievement of a technical result’ so that a design was registrable if it could be demonstrated that the function could be obtained using a different form: Suthersanen, p. 130. The same approach was adopted by German case law: Suthersanen, 196.

⁴⁹ In the EC Green Paper, the Commission states that a feature is dictated by function if *no other form* could be used to fulfil that function: EC Green Paper, para. 5.4.6.2.

⁵⁰ Case C-299/99 [2001] *RPC* 745, paras. 31–8. See below pp. 794–6.

4.2 INTERCONNECTIONS

The second exclusion contained in the Designs Directive relates to interconnections. Article 7(2) states that a design right 'shall not subsist in features of appearance of a product which must necessarily be reproduced in their exact form and dimensions in order to permit the product in which the design is incorporated or to which it is applied to be mechanically connected to or placed in, around or against another product so that either product may perform its function'. This has been described as 'one of the most important basic principles of the protection system'.⁵¹ The reasoning behind the exclusion seems to be that while the harmonized definition of design includes the appearance of 'parts' of products, features which enable mechanical parts to be connected together should not be protected because such protection might enable a design proprietor of a design for a particular article to prevent competition in a secondary market.⁵² For example, protection of the design of the external ports of a laptop could operate to allow the designer to control the sale of electronic mice; protection of the design of the parts of a laser printer could operate to allow the designer to control the sale of printer cartridges; design rights over coffee machines could enable the designer to control sale of sachets of coffee needed to utilize the machine; and the protection of the design of a personal organizer might prevent competition in the sale of refill-pages for the organizer.

As such, the provision is similar to the 'must fit' exclusion recognized in the British law of unregistered design right (which we discuss further in Chapter 30).⁵³ However, given differences in wording, it seems unlikely that the case law on the 'must fit' exclusion will be of much assistance in the application of Article 7(2) of the Designs Directive. Firstly, the British exclusion excludes features which 'enable' connections, Article 7 sets a more taxing requirement before the exclusion comes into play: the features 'must necessarily be reproduced in their *exact* form and dimensions'.⁵⁴ Where the shape of a designed artefact merely influences the shape of another product, for example where one must fit inside another but need not correspond exactly to the internal dimensions, the European exclusion would not come into play. Second, the European provision is confined to features which must be reproduced so that the design-protected product can be '*mechanically* connected to, or placed in, around or against another product'. The Recitals to the Directive and Regulation reiterate that the exclusion is targeted at 'mechanical fittings', but leave unstated whether the adverb 'mechanically' applies to the situation where the product is 'placed in, around or against' another product (or whether 'placement' might be regarded, necessarily, as 'mechanical').⁵⁵ While the connection of an exhaust pipe to the chassis of a car might be regarded as a classic example of a 'mechanical' fitting, it is less clear that the

⁵¹ Posner in Franzosi (ed.), 29.

⁵² Designs Dir., Recital 14, and CDR, Recital 10, state that 'the interoperability of products of different makes should not be hindered by extending protection to the design of mechanical fittings'. See also EC Green Paper, para. 5.4.10.1, p. 63.

⁵³ CDPA s. 213(3)(b). 'Design right does not subsist in . . . features of shape and configuration of an article which . . . enable the article to be connected to, or placed in, around or against another article so that either article may perform its function'. See below pp. 671–2.

⁵⁴ Though in one case the British court held that 'enablement' required such a level of exactitude: see *Amoena v. Trulife*, discussed at p. 672.

⁵⁵ The limitation of the exclusion to mechanical connection was not in the initial proposal in the EC Green Paper.

fitting of a lampshade to a table-lamp, filter to a coffee-maker, or a candle to a candelabra, would be regarded as 'mechanical'.⁵⁶ Given that the term 'mechanical' is often used in contrast to 'electrical', the possibility also arises that electrical fittings can be the subject of design protection, though the distinction has nothing to recommend it on policy grounds. Third, the only interconnections covered by the exclusion in Article 7(2) are those that relate to other products, i.e. 'industrial or handicraft items', and certainly would not cover interconnections to parts of the human body, (as the British must-fit exclusion has).

4.2.1 Modular products

The interconnections exclusion is subject to an express derogation. Article 7(3) states that, notwithstanding the interconnections exclusion, 'design right shall . . . subsist in a design serving the purpose of allowing multiple assembly or connection of mutually interchangeable products within a modular system'.⁵⁷ Recital 15 purports to justify the saving on the basis that 'the mechanical fittings of modular products may nevertheless constitute an important element of the innovative characteristics of modular products and present a major marketing asset and therefore should be eligible for protection'. The real explanation for the exclusion is that it was a product of lobbying by the Danish government, keen that the key features of LEGO bricks should remain protectable (though, since Lego, with its stud and tube coupling system, has been available to the public since 1958, there can be very few regimes where the basic design protection has not lapsed). Other examples of modular design system include: MECCANO construction sets, modular seating systems, and shelving arrangements.⁵⁸

4.3 DESIGNS WHICH ARE CONTRARY TO MORALITY OR PUBLIC POLICY

According to Article 8 of the Directive, 'design right shall not subsist in a design which is contrary to public policy or to accepted principles of morality'. This exclusion corresponds to equivalent provisions in European patent and trade mark law, and prior provisions under many national design systems.⁵⁹ Importantly, this operates both as a ground of refusal of registration (both at national and Community levels), as well as a ground for invalidity.⁶⁰ While the appearance of objects is not a domain in which morals are heavily implicated, it has been suggested that a textile design which utilizes a swastika,⁶¹ or a functional design for landmines or man-traps might fall within the exclusion.⁶²

⁵⁶ Cf. R. Durie, 'European Community Design Law', in B. Gray and E. Bouzalas (eds.), 75, 91 (giving example of TV set and stand as a mechanical interface).

⁵⁷ RDA s. 1C(3), CDR, Art. 8(2), Recital 11.

⁵⁸ Patent Office, *Legal Protection of Designs: A Consultation Paper on the Implementation in the United Kingdom of EC Directive 98/71/EC* (12 Feb. 2001), 10, para. 24.

⁵⁹ Prior to amendment to implement the Directive, RDA s. 43(1) had stated that nothing in the Act should be construed as 'authorising or requiring the Registrar to register a design the use of which would, in his opinion, be contrary to law or morality'.

⁶⁰ RDA s. 1A(1)(b); s. 1D, s. 11ZA(1); CDR, Art. 47(1)(b), Art. 25(1)(b).

⁶¹ EC Green Paper, para. 8.9.2. A swastika on the packaging of a board game about the Second World War would presumably not cause any offence.

⁶² Musker, 52 (design of landmines).

Given that the Directive 'does not constitute a harmonization of national concepts of public policy or accepted principles of morality', one can expect that some designs would be considered immoral in some countries but not others. One would not expect many such designs to be excluded from protection in the United Kingdom. In a pre-harmonization case, *Masterman's Design*, which concerned an application to register a design for a male Highlander doll which, when its sporran was lifted, revealed its genitals, the court (on appeal) allowed the registration. Aldous J stated that the test was not whether a section of the public would be offended. Instead, he said that the test was whether the moral principles of right-thinking members of the public would think it very wrong for the law to grant protection.⁶³

FOUNDATIONS OF INVALIDITY: NOVELTY, INDIVIDUAL CHARACTER, AND RELATIVE FOUNDATIONS

1 INTRODUCTION

As well as satisfying the common definition of design, national registered designs, like Community designs (both registered and unregistered), must meet two threshold requirements in order to qualify for protection: they must be new, and have individual character.¹ In addition, the validity of a design can be challenged on the basis that the right holder is not entitled to the design (an issue which we deal with in Chapter 28), and on the basis that the design is in conflict with earlier relevant rights (which include earlier design applications, trade mark rights, copyright, and rights relating to certain types of emblem).² As with novelty and individual character, these so-called ‘grounds for invalidity’ can be raised against national registered designs, registered Community designs, and unregistered Community designs.

1.1 WHEN VALIDITY IS IN ISSUE

Although the same substantive ‘grounds for invalidity’ arise in relation to the two Community design regimes and the United Kingdom’s registered design system, there are procedural differences as to when the grounds can be raised that are worth noting here.

1.1.1 The British rules

In the British national regime a distinction is drawn between a narrow category of ‘grounds of refusal’ (which includes novelty and individual character, as well as conflict with protected emblems—but not conflict with other earlier rights) and the broader

¹ Designs Dir., Art. 3(2); RDA s. 1A(2); CDR, Art. 4(1). Recital 9 of the Directive explains that the needs of the Internal Market require the adoption of ‘a unitary definition of the notion of design and of the requirements as to novelty and individual character with which registered design rights must comply’.

² Designs Dir., Art. 11 (listing 4 mandatory grounds, and 3 optional ones); RDA s. 1A (substantive grounds for refusal), s. 11ZA(grounds for invalidity), Sched. A1 (emblems); CDR, Art. 25 (listing seven grounds of invalidity).

category of ‘grounds of invalidity’. In principle, the question of whether a design meets the grounds of refusal might arise during the application process for a British registration. However, since, as we noted in Chapter 25, there is no formal search, this will only rarely be the case. In fact, the question of novelty, individual character or conflict with earlier rights is most likely to be at issue in invalidity proceedings,³ or in infringement litigation as part of a counterclaim that a registered design is invalid.

1.1.2 The Community rules

As regards Community registered designs, an application cannot be refused for want of novelty or individual character, so the issue can only be addressed either in invalidity proceedings before the OHIM or as a counterclaim in proceedings for infringement before a Community Design Court. In the case of unregistered Community design, jurisdiction to determine invalidity is confined to Community Design Courts, whether on an application for a declaration of invalidity or as a counterclaim to an infringement action.⁴

1.2 THE ROLE OF THRESHOLDS

Before examining what is meant by novelty and individual character in detail, it is worth considering the role and nature of thresholds of this sort, as well as the history of the provisions. Prior to recent harmonization initiatives (and with one or two exceptions, most notably the Scandinavian countries), most European countries operated a low threshold—asking only that the design meet some standard of local novelty.⁵ An advantage of a low threshold is that it allows protection for many types and levels of design effort. However, a serious disadvantage of making protection easily available is that the protection conferred is necessarily very limited. If design protection is permitted at a low threshold and protection is strong, this could lead to unwarranted interference with the developers of subsequent designs, so it has been common to match a low threshold with weak rights. Such an approach is frustrating for the developers of highly innovative design as it means they will often be unable to establish infringement.⁶

The EC Green Paper had proposed to reinvigorate design protection by establishing a scheme which set the threshold at a high level.⁷ The Commission initially planned to give protection to fewer designs, and proposed that the protection that was granted was to be worth having.⁸ In the Green Paper it was proposed that designs should only be protected if they possessed ‘distinguishing character’.⁹ After consultation it was accepted that the idea was impractical and the requirement of distinguishing character was likely to cause

³ RDA s. 11ZA(1), s. 11ZB.

⁴ CDR, Art. 24, Art. 25. Pending designation of such courts, the matter could be dealt with in the High Court or Patents County Court.

⁵ EC Green Paper, para. 2.3.7, 18. See Franzosi in Franzosi (ed.), 46; Levin in Franzosi (ed.), 64–5.

⁶ Levin in Franzosi (ed.), 67. It was a common complaint that the UK registered design system prior to harmonization rarely produced a monopoly worth having.

⁷ Fellner, para. 6.017. Cf. Franzosi in Franzosi (ed.) 58–9 (a halfway standard).

⁸ EC Green Paper, para. 5.5.6.3; Official Commentary on Regulation in Franzosi (ed.), 56.

⁹ Even in the EC Green Paper, the Commission proposed that this was to be assessed using a limited prior art. More specifically, it specialized circle if ‘not known to the circles specialised in the sector concerned’ and ‘through the overall impression it displays in the eyes of the relevant public, it distinguishes itself from any other design known to such circles’.

confusion with trade marks—the terms (in English, at least) being unfortunately similar to the concept of distinctive character in Article 3(1)(b) of the Trade Marks Directive.¹⁰ Moreover, in the course of consultation (and indeed during the legislative process),¹¹ it came to be accepted that a high threshold would not work well for some industries, such as textiles.¹² In order to accommodate the differing needs of design industries and the cyclical nature of fashion, a new formula was employed: in order to be registered as a national or Community design, or to receive protection as an unregistered Community design, the design must be ‘new’ and have ‘individual character’.¹³ We now examine these two requirements in detail.

2 NOVELTY

The requirement of novelty is one common to most registered design systems, though its exact meaning can vary.¹⁴ Under the definitions in the Directive and Regulation, a design is new if no identical design, or no design whose features differ only in immaterial details, has been made available to the public before the date of application (or in the case of unregistered Community designs, the date on which the design was first made available to the public).¹⁵ This is an ‘historical’ or objective test, requiring that the design be compared with a body of existing material. As such, it can be contrasted with copyright’s originality test which is a ‘psychological or ‘subjective’ test in that its focus is the relationship between the creator and the creation alone. In order to assess whether a design is new we need to ask three questions: firstly, what is the design? Second, what material is the design to be compared with—in patent jargon, what is the state of the art? And third, what difference must exist between the design and the state of the art before a design can be described as new?

2.1 WHAT IS THE DESIGN?

The question of ‘what is the design?’ is likely to be important, and as we saw, the Designs Directive defines a design as *the appearance* of the whole or part of a product. In the case of national registered designs, it seems likely that the design will be treated as that which the applicant identifies in the application for registration. In the United Kingdom, the critical documents will be the two representations or specimens, and any partial disclaimer

¹⁰ Franzosi in Franzosi (ed.), 59 n. 50; Levin in Franzosi (ed.), p. 68 (the change ‘has its real grounds in a translation problem’, noting that the German word ‘Eigenart’ remains).

¹¹ The threshold included in the original proposal to the effect that the design must ‘differ significantly’ from previous designs was further reduced by removal of the adverb ‘significantly’ in the European Parliament: see Musker, 30. Note, however, that Designs Dir., Recital 13 left in ‘differs clearly’—Musker explains that ‘a small difference may be “clear” but not “significant”’ (Musker, 31).

¹² Posner in Franzosi (ed.), 6; Franzosi in Franzosi (ed.), 62. The Scandinavians favoured a high threshold. The automobile industry was opposed to such a standard: F.-K. Beier, ‘Protection for Spare Parts in the Proposals for a European Design Law’ (1994) 25 *IIC* 840, 852–5.

¹³ RDA s. 1B; Designs Dir., Art. 3(2); CDR, Art. 4(1).

¹⁴ EC Green Paper, para. 2.3.7, p. 18.

¹⁵ RDA s. 1B(2); Designs Dir., Art. 4; CDR, Art. 5(2). If priority is claimed, the relevant date is the priority date.

which indicates that the design is the appearance of part only of a product.¹⁶ If there is no such disclaimer, it is expected that the tribunal will treat the full contents of the representation as comprising the design.¹⁷ In addition, it should be noted that functional features and mechanical interconnections excluded from protection under Article 7 of the Directive are not to be considered when assessing novelty or individual character.¹⁸

In the case of a Registered Community Design, the scope of the design will be similarly deduced from the application/registration. This will include representations, an indication of the products in which the design is intended to be incorporated, and, if the applicant submits one, a 'description' not exceeding one hundred words explaining the representation of the design or the specimen.¹⁹ Although Article 1(2)(a) of the Implementing Regulations states that the description 'shall not contain statements as to the purported novelty or individual character of the design or its technical value', the description may well prove to be useful in ascertaining the design for which protection is sought. (Rather than saying 'the novel part of the design is the pattern', the applicant should say 'the design for which protection is sought is the pattern, the shape of the teapot being disclaimed'.)²⁰ Article 18(2) of the Implementing Regulations also allows for maintenance of a design in an amended form by way of a 'partial disclaimer, not exceeding 100 words by the holder' or by an entry in the Register of a court decision or a Decision by the office declaring the partial invalidity of the design right' and such a partial disclaimer will also be relevant when working out exactly what the design comprises.²¹

In the case of unregistered Community designs, none of these bureaucratic aids are available to assist the court in identifying the design in question. As already noted the issue of the novelty of such a design can only arise before a Community Design Court, either in infringement proceedings or invalidity proceedings. In such cases it seems that the Court will have to examine the appearance of the article in issue both as a whole, and as regards its discrete parts, to determine whether there is a design which is novel or has individual character. Doubtless, in the case of an infringement action, the procedural rules of the member state in which the action is commenced will require the claimant to identify the design which they allege has been infringed. In principle, however, there seems no reason why a person should not claim a collection of features as a design, as well as each of the features individually.

¹⁶ RDR r. 15 (partial disclaimer), r. 17 (representations). It should be noted that the register may be rectified under RDR r. 20, and if a design has been declared partially invalid, such a declaration should appear on the register.

¹⁷ As was the former practice: *Kestos v. Kempat and Vivien Fitch Kemp* (1935) 53 RPC 139, 150.

¹⁸ Designs Dir., Recital 14.

¹⁹ Such statements are not published in the Community Designs Bulletin: CDIR, Art. 14(2)(d), and need not even be included in the register: CDIR, Art. 69(2)(o) but a person wishing to challenge the validity of the design can inspect the file under CDIR, r. 74, or request the Office to communicate the description to them under r. 75. The statement will no doubt be in the language of filing, which can be any of the official languages of the Community, but will have been translated, under CDR Art. 98(2) in to one of the five languages of the office.

²⁰ Musker, 156–8, with useful examples.

²¹ Musker, 157: 'Disclaimers are allowed after an invalidity action and it would therefore seem sensible to allow them on filing, to forestall unnecessary invalidity actions . . . However, disclaimers may not be acceptable as "statements", or may be ineffective, in view of paragraph 6'.

2.2 WHAT IS THE STATE OF THE ART?

Once the design has been identified, it is necessary to ascertain what exactly makes up the state of art. Since the state of the art changes as new designs are published, it is crucial to work out the relevant date on which the state of the art is assessed.

2.2.1 The date as of which the state of the art should be assessed

(i) *British and Community registrations.* Similar rules apply to both Community and national registrations. A design application (or registration) is to be assessed for novelty as against designs made available to the public before the date of filing of the application for registration or, if priority is claimed, the date of priority.²² The most important mechanism for claiming priority relates to a claim based on an earlier application to a ‘Convention country’, made not more than six months before the UK filing.²³ In the case of a *Community application*, priority may also be claimed from an earlier exhibition. However, in contrast to the British position, the Regulation also allows an applicant to claim priority from the date of disclosure at an officially recognized international exhibition.²⁴ Since there are very few such exhibitions, the difference in the approaches taken by the UK Designs Registry and OHIM are unlikely to prove of great significance.²⁵

(ii) *Unregistered Community designs.* In the case of UCDs, novelty is to be assessed from the date on which the design for which protection is claimed has ‘first been made available to the public’.²⁶ (This is also the date from which the three-year term of protection commences). The act of ‘making available to the public’ covers publication, exhibition, use in trade, or any other disclosure but does not include disclosures made under conditions of confidentiality, or disclosures which could not reasonably have become known in the normal course of business to the circles specialized in the sector concerned.²⁷ This is sometimes referred to as the ‘safeguard clause’, but in the context of UCDs its impact will not really be to ‘safeguard’ the right-holder: indeed there may be circumstances in which an owner of a putative UCD right, who has no Community-wide protection between creation of the design and its ‘making available’ may wish to argue that the design has been ‘made available to the public’ in the Community. Moreover, the safeguard clause may

²² Design Dir., Art. 4; RDA s. 14; CDR, Art. 38 (date of filing), Art. 41 (right of priority). For speculation as to whether priority might be claimed from a patent application, see Musker, 169. For the Community position, see CDR, Arts. 41–44; CDIR, Art. 8. On exhibition priority see CDIR, Art. 9.

²³ RDA s. 14(1). The convention countries are identified by way of an Order in Council under RDA s. 13. See Designs (Convention Countries) Order 1994 (SI 1994/3219) (listing 129 countries) and amended by SI 1995/2988 (adding 10 Paris accessions, and 20 WTO countries) and SI 2000/1561 (adding 12 further countries). As regards CDRs, a 6 month priority is accorded to applications for design right or for utility model protection made in a state which is party to the Paris Convention, the WTO Agreement, or which accords an equivalent right of priority.

²⁴ CDR, Art. 44.

²⁵ As we will see, in both the UK and at the OHIM, the exposure of a design at an exhibition by the applicant or with his consent in the 12 months preceding an application will not invalidate an application, because of the grace period. The inability to claim priority from the exhibition is only of significance if a third party who independently develops the design tries to register in the period between exhibition and application. Such cases are likely to be quite rare.

²⁶ CDR, Art. 5(1)(a).

²⁷ CDR, Art. 7.

leave a design disclosed outside the Community vulnerable to appropriation within, because there will be no UCD.²⁸

2.2.2 The contents of the state of the art

The state of the art comprises all designs made available to the public before the relevant date, but is then subject to a series of exceptions. A design is deemed to have been made available to the public 'if it has been published following registration or otherwise, or exhibited, used in trade or otherwise disclosed'.²⁹ Taken alone this would create a state of the art comparable to that used in patent law, that is, without geographical or temporal limits. Although, as is explained below, the effects are limited by the 'safeguard clause', it is important to bear this starting point in mind, particularly since the scope of the safeguard clause is as yet unclear. An important question will be whether the clarifying list 'published, exhibited, used in trade or otherwise disclosed' is to be regarded as a synonym for 'made available to the public', or merely as exemplifying some ways in which a design might be 'made available'. For example, the wording leaves unclear whether a design forms part of the state of the art only if it has been exhibited in public, or disclosed to the public, or whether *any* exhibition or disclosure will suffice: including a private exhibition or disclosure. However, other aspects of the harmonized law support the latter construction: in particular, the exclusion of confidential disclosure (discussed below) would hardly be necessary if disclosure meant 'disclosure to the public'.

As has already been suggested, although the legislation starts by defining the state of the art extremely broadly, it then excludes certain matters, namely:³⁰ disclosures that derive from obscure events (the 'safeguard clause'); disclosures that are confidential; disclosures that are a consequence of a breach of confidence; and disclosures by the applicant within the grace period. We need to deal with each in turn.

(i) *The safeguard clause.* A design will not form part of the state of the art if it 'could not reasonably have become known in the normal course of business to the circles specialised in the sector concerned, operating within the Community, before the date of filing of the application for registration, or if priority is claimed, the date of priority'.³¹ This is a 'safeguard clause' aimed at preventing a design from being unregistrable on the basis of prior obscure disclosures. It had been feared that a broadly defined state of the art might lead to claims of invalidity based on citation of obscure prior art such as that in museums. In principle, the safeguard clause applies to a wide range of obscure disclosures: these could be very old disclosures, or geographically remote disclosures, or disclosures to a very narrowly defined group of people. In positive terms, the safeguard clause allows for the protection of designs which while previously disclosed as a matter of objective fact, have been lost or have not been available to the design market within the Community. In

²⁸ C.-H. Massa and A. Strowel, 'Community Design: Cinderella Revamped' [2003] *EIPR* 68, 74; V. Saez, 'The Unregistered Community Design' [2002] *EIPR* 585, 588 (discussing whether protection only arises on publications anywhere that can be accessed from the Community, or whether there must be publication within territory of the Community, and finding different language versions of CDR, Art. 11 inconclusive).

²⁹ Design Dir., Art. 6; RDA s. 1B(5)(a); CDR, Art. 7(1).

³⁰ Design Dir., Art. 6; RDA s. 1B(6); CDR, Art. 7.

³¹ Design Dir., Art. 6(1); RDA s. 1B(6)(a); CDR, Art. 7(1). This is a reversal of the Max Planck's original proposal of a relative novelty requirement according to which designs were assessed against other products 'made accessible to interested business circles in the EC'.

negative terms, the provision enables monopolies to be granted over designs which quite simply, are not really new, and possibly are not even original in a copyright sense.³²

The precise impact of the 'safeguard clause' is difficult to predict, not least because its wording presents a number of ambiguities.³³ Presumably the onus of proving that a disclosure could not reasonably have been known falls upon the design proprietor, defending a design's alleged invalidity in the face of a disclosure presented by the applicant. The inquiry can be broken down into four elements.

First, we need to identify the 'event' in issue, that is, the event which is said to disclose the design. It should be noted that the safeguard clause does not ask whether 'the design' could reasonably have become known, but whether 'the event', i.e. the exhibition, use in trade or other disclosure could reasonably have become known.

Second, we need to deduce what 'sector' we are concerned with. In many cases this will be unproblematic, as the disclosure and the design the novelty of which is in issue will relate to the same sector (for example, where a design for a chair had been disclosed at an exhibition in Japan, and the issue was whether a similar design registered at the OHIM after the exhibition was novel). However, it is easy to foresee more complex situations: where the earlier design was a painting exhibited in a small art gallery, and the later design is an application of a similar image to a tea-pot: is the relevant design sector here 'painters' or 'ceramic designers'? Some commentators have argued that the sector 'concerned' must be the sector to which the earlier design belongs (here, painters),³⁴ though the Green Paper had suggested the relevant sector was that of the goods to which the design is intended to be applied.³⁵

Once we have deduced the sector we need to identify 'the circles specialised in the sector concerned, operating within the Community'. It seems 'the circles' implies not merely designers but also merchants and manufacturers.³⁶ A further unresolved question is whether we are concerned with the persons 'currently' specialized in the sector, that is at the priority date (or in the case of an unregistered Community design right, the date of disclosure). The better view is that this must be so: if we are to give effect to the aim of excluding very old designs from the relevant prior art,³⁷ then the fact that the design could reasonably have become known to those specialized in the sector concerned, operating in

³² In TRIPS terms this seems unproblematic, because TRIPS, Art. 25 merely requires members to protect designs which are new or original, but does not say that members should not protect designs which are neither new nor original! See Tritton (2nd edn.) ('just permissible as the agreement can be argued to be permissive in this respect'); Musker, 23–4 (if one takes TRIPS as mandating particular requirements 'one would struggle to find any country in compliance with TRIPS').

³³ The wording seems to originate in German and Benelux law: EC Green Paper, para. 2.3.7.

³⁴ Musker notes that if a design is well-known in one sector but unknown in another, and the latter sector is regarded as the relevant one for the safeguard clause, the design can be registered in the latter, but the scope of protection would cover the former. Subject to any right to work defence, the later registration could prevent the continued exploitation of the earlier design. Musker observes that this cannot have been the legislature's intention, and so concludes that the relevant sector must be that of the earlier design: see Musker, 36.

³⁵ EC Green Paper, para. 5.5.5.1, p. 70.

³⁶ EC Green Paper, para. 5.5.5.2 ('the specialists, designers, merchants, and manufacturers operating in the sector concerned').

³⁷ EC Green Paper, para. 5.5.5.2, pp. 70–1 ('If the design is unknown to them, then it should be eligible for protection even if an identical design has existed in the past and has completely vanished from the collective memory'); Musker, 37.

the Community long before the date of filing must be irrelevant. The best way to achieve this is to treat the term 'operating' as meaning 'currently active in design matters'.

Once we have identified the circles specialized in the sector we then need to work out the sector's habits as regards searching for prior designs. The question of whether something could have 'reasonably' become known 'in the normal course of business' is reminiscent of tests of 'constructive knowledge' in relation to transactions in land, where a person is deemed to have knowledge of those interests which a reasonable conveyancer would have discovered. The question here is what would we expect a reasonable designer in this sector to look at in the routine course of business. Although what is normal for one sector will not necessarily be normal for another, the most obvious resources which we might expect a reasonable designer to know about include trade publications, either relating to design in general, or the sector specifically, or perhaps to a number of sectors including the sector concerned; trade fairs, either relating to design in general, or the sector specifically, or perhaps to a number of sectors including the sector concerned; designs for products being sold on the High Street, and through retail outlets specialized in products for the sector. It must be doubtful whether reasonable designers would in fact check the OHIM, the international register held by WIPO under the Hague Union, or search national registries as part of 'the normal course of business' (as opposed to prior to applying), though it is easy to anticipate a tribunal wanting to treat such disclosures as outside the scope of the safeguard clause.³⁸

As will be apparent from the foregoing discussion, quite what comes to be excluded by the 'safeguard clause' is unclear. To return to the issues canvassed in the previous section, depending on how the provision is interpreted, it may have the effect of transforming the broad, objective novelty notion, into a peculiar and complex form of local novelty.³⁹

(ii) *Confidential disclosure.* The provisions dealing with confidential disclosures are more straightforward. A disclosure made under conditions of confidentiality will not make the design available to the public.⁴⁰ One potential difficulty, however, is that the legislation is silent as to when conditions of confidentiality will exist. The law of confidence has hitherto been treated as a matter of national law.⁴¹

(iii) *Disclosures in breach of confidence.* A related, but distinct, exclusion from the 'state of the art' applies 'if a design for which protection is claimed . . . has been made available to the public as a consequence of an abuse in relation to the designer or his successor in title'.⁴² The most obvious example of such an abuse would be a breach of confidence: for instance, were an employee to publish the design. This exclusion from the state is subject to the limitation that the disclosure must have taken place in the twelve months preceding the priority date.

(iv) *Grace period.* The most important of the exclusions from the 'state of the art' is the grace period. This excludes from consideration the designer's own disclosures in the

³⁸ Suthersanen asserts 'this must include all published Community registered and unregistered designs' (p. 43).

³⁹ Musker, 61 ('parochial novelty').

⁴⁰ Designs Dir., Art. 6; RDA s. 1B(6)(b); CDR, Art. 7.

⁴¹ British law has failed to decide, conclusively, on whether implicit obligations of confidentiality are to be assessed by subjective or objective criteria: see below pp. 1014–17.

⁴² Designs Dir., Art. 6(3); RDA s. 1B(6)(e); CDR, Art. 7(3).

twelve-month period preceding the priority date.⁴³ The purpose of the grace period is to allow applicants to test their designs in the marketplace before deciding whether to register.⁴⁴ It should be noted that the grace period applies to disclosures not just by the designer but also those by their successor in title, ‘or a third person as a result of information provided or action taken by the designer or his successor in title’.⁴⁵ The reference to disclosures by ‘a third person *as a result of* information provided or *action* taken by the designer’, is ambiguous. It may be interpreted to encompass the activities of a third party who copies a design made available by the designer and places imitations (or variations) on the market. The third party disclosure may be said to be ‘as a result of’ the action of the designer, in that it could not have occurred without such action (the designer’s disclosure). A narrower and more natural construction of the terms ‘as a result of action’ might confine it to disclosures which have been initiated or authorized by the designer, for example publication by authorized advertisers or exhibition by distributors. While this latter interpretation might seem to raise serious doubts over the usefulness of the grace period, it should not be forgotten that the state of the art is defined elsewhere to exclude disclosures that have been made ‘as a consequence of an abuse in relation to the designer’. If a third party has made available illegitimate or unauthorized copies of the design, these are made available as a consequence of ‘an abuse’, the abuse being an infringement of the designer’s unregistered Community design right.

While the grace period has been widely welcomed, at least two limitations are worth observing. The first is that the grace period merely exempts the designer’s own action from invalidating their own later application for registration—it does not back-date the application to the time of initial disclosure, nor establish priority against an independent design. Consequently, a design application by A will still be invalidated by disclosures of identical designs by third parties in the twelve months between A’s first disclosure and application for registration. The second limitation is that the grace period seems only to be applicable to disclosures of ‘a design for which protection is claimed’. On a literal reading, this would be highly unfortunate for an applicant who had been market-testing a design that differed—either in immaterial details or in material details which were nonetheless insufficient to create a different overall impression on an informed user: in these cases it must have been the legislative intention that the designer’s own (or authorized) actions would not invalidate a later application (albeit for a non-identical design). Such a result could be achieved, albeit artificially, by saying the ‘design for which protection is claimed’ is that in the representations *and all others which would create the same overall impression on an informed user*. A designer could then argue that insofar as his own previously disclosed variations would infringe the Community Registered design if published by a third party after the date of registration, so they are ‘designs for which protection is claimed’.

⁴³ Designs Dir., Art. 6(2), RDA s. 1B(6)(c)–(d), CDR, Art. 7(2)(b). Musker refers to this as creating ‘a regrettably long period of uncertainty for competitors’ (para. 38). Existing national laws had sometimes been even more generous: see French Intellectual Property Code, Art. L.511–6 (no time limit). However, Germany had given six months only.

⁴⁴ CDR Recital 20; EC Green Paper, para. 4.3.2–6, pp. 45–6.

⁴⁵ RDA s. 1(b), (6)(d); Designs Dir., Art. 6(2)(a); CDR, Art. 7(2)(a).

2.3 IDENTITY

Once we have ascertained the state of the art, we need to decide whether the design for which registration is sought is novel. Article 4 of the Directive states that a design shall be considered to be new if no identical design has been made available to the public before the priority date. 'Identity' is a concept which purports to have an absolute and objective quality, requiring that the design for which protection is sought be exactly the same as that previously disclosed to the public.⁴⁶ Importantly, we are comparing the appearance of the two disclosures (not their functions, nor (at least in most cases) the products to which the appearance is applied.) In making the assessment, we should recall that appearance can include not just lines, contours, and shape but also colours, texture, and materials. The appearance of a red plastic teapot may therefore not be identical to a red crockery teapot, even if the shape and size are identical; an orange coloured leather football of standard size may not be identical to a conventional white lacquered leather football of the same size; and a miniature version of Arsenal's Highbury football stadium, however detailed and true to life, might well not be identical in appearance merely because of the different dimensions. The issue is whether the appearance is precisely the same.

2.3.1 Immaterial details

Article 4 of the Directive also indicates that designs are identical if their features only differ in 'immaterial details'.⁴⁷ If ascertaining identity had been relatively unproblematic, the notion of 'immateriality' is less so. The legislation does not explain to whom the differences must be immaterial, and the other provisions of the Directive point to a number of candidates—the designer, design expert, consumer, 'informed user', 'relevant circles'. No doubt, the issue will rarely arise, and variations from previously disclosed designs will either be material to all those persons, or none at all. But there might be variations of detail that a design expert might notice that a consumer would not.⁴⁸ And there might be minor differences of appearance that might be regarded by the designer as crucially important, that are of no consequence to a consumer.

Whatever questions identity and immateriality raise, nearly all commentators agree that they are unlikely to prove to be significant. For these commentators, the novelty investigation will almost always be rendered insignificant by the more exacting inquiry into individual character.⁴⁹ The same might be said of the two criteria of novelty and non-obviousness in patent law, but there the lesser standard has retained its importance for the very reason that it enables the tribunal to by-pass the difficult qualitative assessment of 'inventive step'. It may be that the novelty inquiry has a similar attraction in design invalidity actions.

⁴⁶ Levin in Franzosi (ed.), 67, 69 (a 'strict and narrow concept' . . . 'just no predecessors').

⁴⁷ Rather strangely, the Green Paper contrasts this with a 'creative independent development': EC Green Paper, para. 5.5.5.4, p. 71.

⁴⁸ EC Green Paper, para. 5.5.5.3, p. 71.

⁴⁹ Franzosi in Franzosi (ed.) ('all products having an individual character are necessarily also new'); Levin in Franzosi (ed.), 69 (to same effect); Speyart [1997] *EIPR* 603, 607–8; Tritton, 394 (since it is likely narrower than individual character its exact ambit is likely to be of little legal significance); C.-H. Massa and A. Strowel, 'Community Design: Cinderella Revamped' [2003] *EIPR* 68, 73. Cf. Musker, 27–8.

3 INDIVIDUAL CHARACTER

As well as being novel, a design must possess ‘individual character’.⁵⁰ This has been described as ‘the overall dominant and decisive criterion’,⁵¹ and is likely simultaneously to prove to be the most difficult aspect of any design to judge.⁵²

It is also a requirement which is not obviously consistent with Community obligations under TRIPS, which obliges members to provide protection of ‘independently created industrial designs that are new or original’. ‘Individual character’ looks, at first blush, like an extra, and therefore illegitimate, hurdle. One attempt to justify the individual character standard argues that ‘individual character’ can be equated with the independent creation standard,⁵³ though this is unconvincing. A preferable approach is to understand ‘individual character’ as a standard equivalent to ‘significant difference’: Article 25 of TRIPS permits members to provide that ‘designs are not new or original if they do not significantly differ from known designs or combinations of known design features.’ Viewed thus, TRIPS can also assist us in defining the limits of the ‘individual character’ inquiry.

The test of individual character is whether ‘the overall impression it produces on the informed user differs from the overall impression produced on such a user by any design which has been made available to the public’.⁵⁴ As with the novelty investigation we can break the requirement down into distinct parts:

- first, what is the design? (discussed previously)
- second, who is the informed user?
- third, what matter does the informed user take into account?
- fourth, what differences are there between the overall impression created by the state of the art, and the overall impression created by the design?
- fifth, are those differences sufficient to confer individual character on the design in question?

3.1 THE INFORMED USER

The ‘informed user’ is a new fictitious character to the law.⁵⁵ It seems that the designation was chosen in preference to the ‘real consumer’ (who might be too ready to see individual

⁵⁰ In the other four official languages of the Office: ‘présente un caractère individuel’; ‘carácter singular’; ‘un carattere individuale’; ‘Eigenart’.

⁵¹ Levin in Franzosi (ed.), 69. There are some potential precursors in national law: the French Intellectual Property Code, Art. L.511–3 allowed design registration where ‘any industrial article . . . differs from similar articles, either by a distinctive and recognisable configuration affording it novelty or by one or more external effects giving it an individual and new appearance’, though apparently the jurisprudence has been inconsistent. See Suthersanen, p. 165. Musker refers to the German requirement of *Eigentümlichkeit*, under its old design law, but notes that this is not the term used in the Directive, where ‘Eigenart’ is used: Musker, 29–30.

⁵² Designs Practice Note 4/03 (‘Requirement of Novelty and Individual Character’, 24 Jun. 2003) (‘a much broader and more difficult test than the simple novelty test’).

⁵³ Suthersanen, 437 n. 65 (‘Arguably, the concept of “individual character” under the EC designs law may be a re-formulation of the “independently created” criterion.’)

⁵⁴ Designs Dir., Art. 5.

⁵⁵ In the other four official languages of the Office: ‘l’utilisateur averti’; ‘usuario informado’; ‘utilizzatore informato’; ‘informierten Benutzer’. The Green Paper had originally proposed a test of distinctive character to be determined by the relevant public or ordinary consumer: EC Green Paper, para. 5.5.6.2, p. 72.

character),⁵⁶ and the expert (who might be too knowledgeable and unable to appreciate the development for what it is).⁵⁷ The informed user has been described as ‘a connoisseur, yet not an initiate’.⁵⁸ No doubt, the tribunal will be offered the assistance of expert evidence.

3.1.1 Informed about what?

An informed user is deemed to be familiar with the existing design corpus, the nature of the product to which the design is applied or in which it is incorporated, the industrial sector to which it belongs, and the degree of freedom of the designer in developing the design.⁵⁹ The informed user will compare the design in issue with existing designs. It seems this can be done both individually and collectively.⁶⁰ Article 5 of the Directive talks about a comparison with ‘any’ design which has been made available, but Recital 13 indicates these are not to be viewed merely individually, since it refers to the impression made on the informed user ‘by the existing design corpus’. (This may mean that the informed user would be unimpressed by a combination of existing designs, for example, taking two existing floral motifs and combining them.)

3.1.2 Design freedom

The ‘informed user’ is also informed about the ‘design freedom’ presented by a given field.⁶¹ The notion of ‘design freedom’ goes unexplained, but seems to refer to the various constraints a designer would be under when developing the appearance of a product. One obvious set of constraints a designer faces is the need for the product to achieve its function. Other constraints are imposed by the costs of materials, existing designs, and ergonomics.⁶² The ‘informed user’ will take account of these factors when comparing the design with the existing design corpus, and, it seems, will thus be able to appreciate that small changes may give a design individual character in a field where design freedom is limited.⁶³

3.2 INDIVIDUAL CHARACTER

When the informed user compares the design in question with the existing design corpus, they are interested in overall impression. Here overall impression is to be contrasted with the idea of detailed dissection.⁶⁴ No doubt one test which will be mooted as helpful will be

⁵⁶ The user may be but is not necessarily the end consumer. In the case of the internal aspect of an electrical fitting, like a light switch, the informed user would be an electrician rather than a householder.

⁵⁷ Levin in Franzosi (ed.), 67, 70 (‘The main quality of an informed user is on the one hand that he knows and understands the type of products in question, and on the other that he is not a design specialist’.)

⁵⁸ C.-H. Massa and A. Strowel, ‘Community Design: Cinderella Revamped’ [2003] *EIPR* 68, 71.

⁵⁹ CDR, Recital 14. ⁶⁰ Musker, 31.

⁶¹ RDA s. 1B(4); Designs Dir., Art. 5(2) says ‘developing’ not ‘creating’. As Musker points out, the Directive is ambiguous as to whether the important issue is how much design freedom there really is, and how much there appears to be to the informed user. See Musker, 32 (‘only rarely will users have a true idea of the freedom available to the designer’).

⁶² A broad range of ‘constraints’ on a designer’s freedom was contemplated by the EC Green Paper, para. 5.5.8.3, 74.

⁶³ EC Green Paper, para. 5.5.8.3, 74; Franzosi in Franzosi (ed.), 52 (‘slightly different features can be considered sufficient when the [design occupies] a very crowded art’).

⁶⁴ The EC from the start proposed that the threshold be determined by ‘a synthetic approach, letting the design act on him as a whole and comparing this impression with the one produced by a similar design’: EC Green Paper, para. 5.5.8.2, p. 73.

that of ‘imperfect recollection’: if the informed user saw the design in question and later saw a previously disclosed design, would the informed user think they were the same design? Such a test may be helpful at least in clarifying that the informed user is not involved in a side-by-side comparison, which would have a tendency to focus on detail. The notion of ‘overall impression’ can be apt to mislead, however, and it is helpful to remind ourselves that the design can be the appearance of whole or part, and also that design protection exists irrespective of the product to which the design is applied.

The terms ‘individual character’ suggest we are concerned with whether the design has a ‘personality’ of its own. However, the elaborated definition of ‘individual character’ does not demand such ‘personality’, and merely focuses on difference of impression. More specifically, it states that a design has ‘individual character’ if the overall impression it produces on the informed user *differs* from the overall impression produced on such users by designs which have previously been made available to the public. The Recitals help indicate the standard: the impression given by the design must ‘clearly differ’ from the impression produced on them by the ‘existing design corpus’.⁶⁵ The history of the legislation reveals, however, that the difference need not be ‘significant’. The Official Commentary on the Regulation contrasted such a difference in impression with an impression of ‘déjà vu’.

4 COMPONENT PARTS OF COMPLEX PRODUCTS: VISIBILITY IN USE

We have already observed that the European reforms were forged amidst heavy lobbying by the automobile manufacture industry, on the one side, and the spare parts manufacturers on the other. Of the messy compromise, we saw in Chapter 26 that ‘interconnections’ are excluded from design protection, and in the next chapter we will explain that member states must apply a ‘standstill plus’ criterion as regards parts used in the repair of a complex product. A further element—the ‘visibility in use’ requirement—was imposed under the rubric of ‘novelty and individual character’.⁶⁶

Article 3(3) of the Directive states that a design:

applied to or incorporated in a product which constitutes a component part of a complex product shall only be considered to be new and to have individual character (a) if the component part, once it has been incorporated into the complex product, remains visible during normal use of the latter, and (b) to the extent that those visible features of the component part fulfil in themselves the requirements as to novelty and individual character.

Article 3(4) defines ‘normal use’ as ‘use by the end user, excluding maintenance, servicing or repair work’.⁶⁷ The idea behind this exclusion was to exclude so-called

⁶⁵ Designs Dir., Recital 13.

⁶⁶ Designs Dir., Art. 3(3); CDR, Art. 4(2); RDA s. 1B(8).

⁶⁷ RDA s. 1B(9); CDR Art. 4(3). Recital 12: ‘those component parts which are not visible during normal use of a product, or to those features of such part which are not visible when the part is mounted, or which would not, in themselves, fulfil the requirements as to novelty and individual character; whereas features of design which are excluded from protection for these reasons should not be taken into consideration for the purpose of assessing whether other features of the design fulfil the requirements for protection’. On the legislative history, see Posner in Franzosi (ed.), p. 7.

‘under-the-bonnet’ spare parts from the benefit of design protection.⁶⁸

The exclusion only applies to the component part of a complex product. The meaning of these terms (component part, complex product) was discussed in the previous chapter. To be protectable, the component part must remain visible ‘during normal use’ of the complex product. Normal use is defined as meaning use by the ‘end user’ and specifically as excluding maintenance, servicing, or repair work. This clarification gives substance to the exclusion, which might otherwise be undermined by the claim that normal users include car and bike enthusiasts who spend their weekends dismantling, cleaning, fine-tuning, and reassembling their vehicles. We can infer that normal use would include getting into and out of a vehicle, putting things in the boot, as well as driving (or being a passenger).⁶⁹ Changing the oil, fan-belt, or adjusting the points is almost certainly maintenance. The protectable parts of a car would thus be the internal features, such as the seats, gear-stick, handbrake, steering wheel, and rear-view mirrors; the external features such as bonnet, the boot, doors, hub-caps, wipers, and wing-mirrors. The designs for things such as exhaust pipes and radiators (which are only rarely seen, for example, when the car is being repaired), will not be registrable.⁷⁰ If a part is visible in use, those parts must be novel and have individual character to be protectable.

5 RELATIVE GROUNDS OF INVALIDITY

The Directive contains a number of other grounds of refusal or invalidity which we have yet to discuss. Two of these are mandatory, three optional. We can call these ‘relative grounds for invalidity’ because they concern conflicts between the rights of the putative design proprietor, and other competing claims. The ‘relative’ nature of these grounds of objection is reflected in the fact that the Directive regulates who is entitled to rely on these grounds.⁷¹

5.1 THE APPLICANT OR THE RighthOLDER IS NOT ENTITLED TO THE DESIGN RIGHT

The Directive requires that design registrations be treated as invalid ‘if the applicant for or the holder of the design right is not entitled to it under the law of the Member State concerned’.⁷² This ground may only be invoked by the person who is so entitled.⁷³

As we will see in the next chapter, the Directive says nothing about ownership of designs, leaving these matters to national law. In the United Kingdom, ownership in the first instance vests in the designer, his employer or commissioner. The British implemented

⁶⁸ See H. Speyart, ‘The Grand Design’ [1997] *EIPR* 603, 609; G. Dinwoodie, ‘Federalized Functionalism: The Future of Design Protection in the European Union’ (1996) 24 *American Intellectual Property Law Association Quarterly Journal* 611, 680.

⁶⁹ Franzosi states that normal use includes the time of purchase (Franzosi in Franzosi (ed.), p. 48), though purchasers often carry out more thorough inspections at these moments than during ‘normal use’.

⁷⁰ H. Speyart, ‘The Grand Design’ [1997] *EIPR* 603, 609 argues that the exclusion is unnecessary, for such designs will be functional or made up of interconnections.

⁷¹ Design Dir., Art. 11(5)–(6).

⁷² Design Dir., Art. 11(1)(c).

⁷³ Design Dir., Art. 11(3).

the relative ground for refusal or invalidity in two ways. Firstly, if an application is made to the UK Registry by a person who does not ‘claim to be’ the proprietor of the design and, where relevant, the owner of UK unregistered design right, the Registrar is required to refuse the application.⁷⁴ Secondly, a registration may be declared invalid on the ground that the registered proprietor is not the proprietor of the design, ‘the proprietor of the design objecting’.⁷⁵ In normal circumstances, however, the person properly entitled is much more likely to seek rectification of the register, so that they are entered thereon as the proprietor.⁷⁶

The Community Design Regulation implements the same ground of objection purely as a ground of invalidity. Before applying, the person truly entitled must previously have obtained a court decision to that effect. This should be done in a national court, usually of the jurisdiction in which the current registered proprietor is domiciled.

5.2 CONFLICTS WITH PRIOR DESIGNS

The Directive requires member states to refuse registrations or to treat them as invalid in cases where ‘the design is in conflict with a prior design which has been made available to the public after the date of filing of the application or if priority is claimed, the date of priority, and which is protected from a date prior to the said date by a registered Community design or an application for a registered Community design or by a design right of the Member State concerned, or by an application for such a right’. This ground can be invoked by the applicant for, or the holder of, the conflicting right, or if the member state elects, the appropriate authority of the member state on its own initiative.⁷⁷ Essentially, the conflicts provision requires Member States to operate a ‘first to file’ system to determine priority between registrants in cases where the earlier application was not published by the priority date of the later application. The earlier application might not have been published by the time of the later application for a number of reasons: because the earlier application was outside the Community but was the basis of a later application to a national registry of a member state (or the OHIM) claiming priority;⁷⁸ or because there was deferred publication of the earlier Community registration. The fact that the Directive is content that this ground be only capable of being invoked by the right-holder implies that the policy behind this ground of invalidity is not to avoid ‘double design registration’ in cases where two individuals come up with similar designs in close succession. Indeed, the effect of the provision is to leave it open to member states to decide whether to allow two (or more) such proprietors to have rights over identical designs.

The Registered Designs Act implements the conflicts provision through a ground of refusal, which can in principle, be invoked by the Registry, and a ground of invalidity

⁷⁴ RDA ss. 3A(3), 3(2), and 3(3). Rather oddly, given the wording of the Directive, this is not dependent upon the real design owner objecting.

⁷⁵ RDA s. 11ZA(2).

⁷⁶ RDA s. 20.

⁷⁷ Design Dir., Art. 11(1)(d), (4), (6).

⁷⁸ For example A applies in US on 1 Jan. 2003; B applies for registration of an identical design in the UK on 1 May 2003; A applies in UK on 31 May, claiming priority from its earlier US registration, and that application is published on 15 August 2003. In such circumstances B’s application is in conflict with A’s, and A’s is earlier. So A has a ground of invalidity. A’s is (I) a prior design; has been made available after B’s filing; but is protected from before.

which can only be invoked by the registered proprietor or applicant.⁷⁹ The relevant earlier designs are ones 'protected by virtue of a registration under this Act or the Community Design Regulation or an application for such registration'. It does not include, as it might have done,⁸⁰ earlier UK unregistered designs published after the date of application. There is a 'conflict' where the later registration lacks novelty or individual character when compared with such a design.

The Community Design Regulation, in contrast, recognizes this ground only as the basis of an invalidity action. Like the United Kingdom, it limits the relevant earlier designs to earlier Community applications and registrations, and earlier applications and registrations for a 'registered design right of a Member State'.⁸¹ If the invalidity action is before the OHIM, the only person who is permitted to invoke this ground is the applicant for or holder of the earlier right. If the invalidity action is before a Community Design Court on the basis of a counterclaim in infringement proceedings, it seems the appropriate authority of the member state may invoke the ground on its own initiative.

5.3 CONFLICTS WITH DISTINCTIVE SIGNS

The Directive permits member states to refuse registration of a design, or treat it as invalid, 'if a distinctive sign is used in a subsequent design, and Community law or the law of the member state concerned governing that sign confers on the right holder of the sign the right to prohibit such use'.⁸² This ground may only be invoked by the holder of the conflicting right. The UK has elected to include this in the grounds of invalidity,⁸³ as does the Community Design Regulation.⁸⁴ These provisions cover conflicts with trade mark rights. Thus if a person tries to register the design of a football shirt with a purple body, yellow collar, orange arms, and blue cuffs, and bearing the Arsenal club crest (being a registered trade mark for clothing), such a registration could be declared invalid (even though in other respects it would be novel and have individual character). One problem which will need to be resolved is that the law of trade marks normally only prohibits use of a mark on goods which are the same or similar to those for which the mark has been registered, whereas under the harmonized law of designs a registration for one product covers use of the design on all others. The courts will have to decide whether for the purposes of assessing whether the earlier right holder has the 'right to prohibit the use of the sign' we are concerned only with the application of the distinctive sign to the goods which the design applicant has identified in its statement of product goods or whether we are to assume the design applicant will apply the design to all goods. As well as basing an attack on registered trade marks, an earlier right holder may be able to rely on analogous regimes protecting 'distinctive signs',⁸⁵ which could include passing off and possibly PDOs and PGIs. In some circumstances this ground may be capable of being used by famous personalities to prevent the registration of designs of merchandise bearing their name,

⁷⁹ RDA s. 1A(2) (refusal); ss. 11ZA(1), ZB(3)–(4).

⁸⁰ EC Green Paper, para. 6.5.2.2, p. 92.

⁸¹ CDR, Art. 25(1)(d).

⁸² Designs Dir., Art. 11(2)(a).

⁸³ RDA s. 11ZA(3).

⁸⁴ CDR, Art. 25(1)(e), (3).

⁸⁵ Whether all signs which are registered as trade marks, being not exclusively 'descriptive' or 'devoid of distinctive character' can be said to be 'distinctive signs' will, no doubt, have to be resolved in due course.

signature, or image. This is important, since no other ground of objection seems to be available.⁸⁶

5.4 CONFLICTS WITH EARLIER COPYRIGHT PROTECTED WORKS

The Directive permits member states to refuse registration of a design, or treat it as invalid, ‘if the design constitutes an unauthorised use of a work protected under the copyright law of a Member State’.⁸⁷ This ground may only be invoked by the ‘holder’ of the copyright. The United Kingdom has elected to include this in the grounds of invalidity,⁸⁸ and so also does the Community Design Regulation.⁸⁹ An obvious example where this would occur is where a design for a T-shirt was based upon an unpublished painting.⁹⁰

5.5 CONFLICTS WITH PROTECTED BADGES

Finally, the Directive gives member states the option of refusing the registration of designs which constitute improper uses of items listed in Article 6 ter of the Paris Convention as well as ‘badges, emblems and escutcheons . . . which are of particular public interest in the Member State concerned’.⁹¹ Article 6 ter requires countries of the Paris Union to refuse or invalidate the registration of trade marks which are or contain prohibited emblems: armorial bearings, flags and other state emblems, official signs and hallmarks of countries of the Union, or inter-governmental organizations. With the exception of flags, these insignia have to be notified to WIPO. The Directive allows for this ground to be raised by ‘the person or entity concerned by the use’ (such as an official representative of the state concerned) or, if a member state so chooses, an ‘appropriate authority’ of the member state may invoke this ground *ex officio*.⁹²

The United Kingdom has treated this as a ground of refusal,⁹³ as well as invalidity.⁹⁴ Schedule A1 elaborates the emblems concerned. The domestic ones include Royal arms, the Crown, ‘a representation of Her Majesty or any member of the Royal family’, the Union Jack, flags of the home nations, and coats of arms granted by the Crown. The Community Regulation treats conflicts with protected badges as a ground of invalidity.

⁸⁶ Cf. Art. 4(4)(b) of the Swedish Act No. 2002: 570 amending the Design Protection Act 1970: 485. which states that design right shall not subsist if the design ‘contains, without authorization, another person’s portrait or anything that can be perceived as another person’s family name, artistic name or similar name, unless the portrait or the name obviously relates to a person who is long deceased’.

⁸⁷ Designs Dir. Art. 11(2)(a).

⁸⁸ RDA s. 11ZA(4). This refers to the ‘owner’ of copyright, which almost certainly would be taken to include exclusive licensees: CDPA s. 101(2). But not the owner of moral rights. It is expected that other countries will interpret the ‘holder’ of the right to include the author.

⁸⁹ CDR, Art. 25(1)(f), (3).

⁹⁰ If the painting was well-known the design would probably lack novelty, though this depends upon whether a painting is a design, that is, ‘the appearance of a product’.

⁹¹ Designs Dir., Art. 11(2).

⁹² Designs Dir., Art. 11(6).

⁹³ RDA s. 1A(1)(c); Sched. A1.

⁹⁴ RDA s. 11ZA(1). The application may be made by ‘any person concerned by the use’: s. 11ZB(2).

28

THE RIGHTS OF A PROPRIETOR OF A UK REGISTERED DESIGN, A REGISTERED COMMUNITY DESIGN, AND UNREGISTERED COMMUNITY DESIGN

This chapter deals with two issues in relation to the harmonized and Community regimes. First, we identify the ‘design proprietor’. This involves an examination of two sets of rules: those relating to initial entitlement, and those relating to transfers. Second, we examine the rights which the law grants such a design proprietor, and exceptions to those rights (sometimes referred to as defences).

1 INITIAL ENTITLEMENT

As we indicated in the introduction to this Part, the ‘designer’ plays a peripheral role in the discourse justifying the legal protection of designs. Given this, it is not surprising that the same can be said of the significance of the designer for the law itself.¹ There are two main reasons for this marginalization of the designer. The first is that the activity of designing is seen as less creative than that of authorship: a designer is seen as constrained—by the market, by the laws of physics, by the needs of man, and by fashion.² The design is thus seen as having a significantly less intimate relationship with the personality of a designer.³ The second reason is that the activity of designing is rarely an activity of an individual:

¹ 87% of companies have their own design departments: *Prospective Study about the Design Registration Demand at the European Union Level: Executive Summary* (on the OHIM web site), 7.

² The Design Directive and CDR specifically acknowledge that the designer’s freedom may be limited: see Design Dir., Art. 5(2), Art. 9(2), Recital 13; CDR, Art. 6(2), Art 10(2), Recital 14.

³ Indeed, the designer is referred to as ‘developing’ rather than ‘creating’ a design: Design Dir., Recital 13; CDR, Art. 14(2), Recital 14. The requirement of ‘creation’, however, is employed in framing an exception to the Unregistered Community Design: see CDR, Art. 19(2). And cf. the French version, which uses the terms ‘le créateur’ and ‘l’élaboration du dessin ou modèle’.

usually a designer will be part of a team, will be given a design brief, and asked to suggest a number of possible solutions. A design which reaches the marketplace will often be the product of many individuals, not just one, and the role of the draughtsman in the design process may by no means be the most significant.⁴ As a consequence, the law has tended to concern itself with ensuring that design protection meets the needs of 'industries' as opposed to individuals,⁵ and has focused on designs rather than designers. The law is concerned with designs as an asset, significant for their effects in the market, rather than the protection of those involved in the design process.⁶ This can be seen in the fact that protection commences either from making available (for Unregistered Community Design) or registration (national registered designs and CRD) rather than creation; the absence of moral rights for designers (or in the case of the right to be named on the register, the practical impossibility of using such a right);⁷ the fact that duration is not linked to the life of the author; and the relatively insignificant position of the designer in determining entitlement. It is to this last issue that we now turn.

The Directive does not deal with the question of who is entitled to a national registered design, so this remains a matter of national law. In the pre-harmonization era, most European countries awarded the rights to the designer or their employer, but the rules differed in their exact details (for example whether all designs created by an employee in the course of employment would belong to the employer or only those which could be expected to result from the employee carrying out their duties). Consequently, registered design rights in country A may vest in the designer, while in country B they belong to the designer's employer. Harmonization would have thus reduced the potential for national design rights to vest in different undertakings—a situation which, as we have seen, can produce barriers to the free movement of goods made to particular designs. However, it was probably thought unlikely that such barriers would arise in practice, because subtle differences in the national laws of member states could (and would) be rectified by express contractual dealings between the designer and their employer. For example, an employer desirous of obtaining protection in a number of European countries through national registration could readily enter an agreement with the designer assigning (or affirming the employer's ownership of) worldwide rights.

1.1 ENTITLEMENT UNDER THE UK REGISTERED DESIGNS ACT

In most circumstances the initial owner of a UK registered design (or as the Act prefers, the 'original proprietor') is the designer, that is, the author of the design.⁸ To this general principle there are two exceptions: first, where a design is created by an employee in the

⁴ CDR, Recital 7 does recognize the role of individual designers, but sees the more significant benefit from 'enhanced protection for industrial designs' as the encouragement of 'innovation and the development of new products and investment in their production'. The CDR explicitly refers to teamwork: CDR Art. 18.

⁵ CDR, Recitals 8, 15. Though CDR Recital 24 contemplates that the Community system might be used by individual designers.

⁶ Design Dir., Recital 15, CDR, Recital 11, both attribute the need to protect design features of modular products by reference to the fact that such features 'present a major marketing asset'.

⁷ EC Green Paper, para. 7.1.4 stating that a moral right 'hardly appears to be desirable and probably also not practical'.

⁸ RDA s. 2(1).

course of employment, the employer is treated as the original proprietor;⁹ second, where a design is made in pursuance of a commission for money or money's worth, the person commissioning the design is treated as the original proprietor.¹⁰ If a third party (A) commissions a company (B) to produce a design, and the design is created by an employee (C) of company (B), the proprietor of the design is the commissioner (A) rather than the employer (B).¹¹

The author of a design is defined as 'the person who creates it'.¹² The person who creates a design is the person who gives the design its specific form and appearance.¹³ There is case law, albeit from before harmonization, which suggests that a person is not a creator if all they have done is to bring a design into the United Kingdom from overseas (despite the fact that it may be 'new' in the Community).¹⁴ Nor is a person who is given the right to register¹⁵ or the exclusive right to distribute a design in the United Kingdom, a creator.¹⁶

If a person who does not claim to be the proprietor of the design applies for registration, the Registrar shall refuse to register the application.¹⁷ In addition, an application shall only be permitted if it is made by a person 'claiming to be the design right owner'.¹⁸ This means that where a design is for shape or configuration, the applicant must also claim to be the owner of unregistered design rights which exist in the design. This provision attempts to ensure that unregistered and registered design rights are vested in the same person. An application may be made for the registration to be declared invalid where registration has been made by a person who is not entitled to do so.¹⁹ Alternatively, a court may order the register to be rectified by changing the name of the registered proprietor.²⁰

1.2 ENTITLEMENT: THE COMMUNITY PROVISIONS

The rules as to entitlement to Registered and Unregistered Community Designs indicate that the rights should vest in the designer, or their successor in title.²¹ There is no further

⁹ RDAS s. 2 (1B), 44; *Coffey's Registered Designs* [1982] FSR 227 (suggesting that the employer is only first proprietor where employment carries with it a duty to make the design for the benefit of the employer).

¹⁰ RDA s. 2(1A). Where a person requests a design, and agreement is that the designer will have exclusive distribution in some places, the commissioner is the proprietor: *Breville Europe v. Thorn EMI Domestic Appliances* [1995] FSR 77.

¹¹ RDA s. 2(1B).

¹² RDA s. 2(3). RDA s. 2(4) defines the authorship of a computer generated designs as 'the person by whom the arrangements necessary for the creation of the design are made'.

¹³ *A. Pressler & Co v. Gartside & Co.* (1933) 50 RPC 240 (Luxmoore J).

¹⁴ *Lazarus v. Charles* (1873) LR 16 Eq 117 (importer not entitled to register under s. 5 of the 1842 Act). Cf. *Barker v. Associated Manufacturers (Gowns and Mantles)* (1933) 50 RPC 332, 337 (possible to obtain registration of a design which was used by the Ancient Egyptians six thousand years ago, if it had not been previously used in the UK).

¹⁵ *Jewitt v. Eckardt* (1878) 8 Ch D 404; *Re Guiterman's Registered Design* (1886) 55 LJ Ch D 309.

¹⁶ In *Neville v. Bennett* (1898) 15 RPC 412, it was held that where one person selected an idea for a design from pre-existing Persian designs, which was then rendered into a workable design by someone else, they were joint designers. This suggests that the process of selecting the basic design was considered a relevant act of creation, a proposition which seems difficult to reconcile with the 'importation' cases.

¹⁷ RDA s. 3A(3). ¹⁸ RDA s. 3(2).

¹⁹ RDA s. 11ZA(2) ('the proprietor of the design objecting'—the action can be brought by 'the person able to make an objection': s. 11ZB(5)).

²⁰ RDA s. 20(1A)(c). Section 20(1) refers to rectification 'by the making of any entry therein or the variation or deletion of any entry therein'.

²¹ CDR, Art. 14(1).

guidance as to who is the 'designer'. However, it is clear that the first person to disclose a design to the public is not, for that reason, the designer. Provision is made for the designer (or person entitled) to make a claim as to ownership of unregistered Community designs which have been 'disclosed or claimed by . . . a person who is not entitled to it'. The Regulation recognizes the possibility of joint design.

Where a design is 'developed by an employee in the execution of his duties or following instructions given by his employer, the right to the Community design shall vest in the employer, unless otherwise agreed or specified under national law'.²² Four points should be noted about this provision. First, in contrast with the UK provision which ascribes rights to an employer where a design 'is created by an employee in the course of employment', the Community provision refers to both 'the execution of his duties' and 'following instructions'. The difference can be seen through the example of a situation where a person is employed as an administrator, but the employer specifically requests the employee to design the cover of a brochure. It seems that under UK law the owner might be the employee, as the design was not created 'in the course of employment',²³ but that if the Community provisions apply the owner would be the employer since the design was made 'following instructions given by his employer'. Although it is not easy to think of many situations which would fall within one provision but not the other, the divergence in terminology is unfortunate.²⁴ Second, in its UK form no provision is made for 'agreements to the contrary'.²⁵ In contrast the Regulation allows for variation from the provision 'where it is agreed or specified under national law'. Such an agreement would not necessarily have to comply with the rules on formalities for transfer, just those for agreements. Third, the reference in the Regulation to specification under national law seems to offer an option to member states to have their own rules on allocation of rights to designs made by employees, and for these to override the Community rules. Fourth, the Community rules say nothing about commissioners, and thus leave the initial rights with the designer: a commissioner who wishes to own design rights must secure their prospective rights by assignment.

The person in whose name a Community Registered Design is registered 'shall be deemed to be the person entitled'.²⁶ Although this is put in categorical terms, it is obviously a presumption that can be rebutted. Provision is explicitly made for claims to be recognized as 'the legitimate holder of the Community design' and for the change in ownership to be entered in the Register.²⁷ In the absence of a provision giving the office power to decide, the matter must be for the relevant national courts, with jurisdiction

²² CDR, Art. 14(3). The designer has a right to be named on the register: CDR, Art. 18, unless waived, under CDR, Art. 36(3)(e).

²³ Possibly, the design would be treated as having been commissioned.

²⁴ It is copied from the Software Directive: EC Green Paper, 7.2.3 para. 97.

²⁵ This leaves unclear whether the normal rules on transfer must be complied with if an employee is to be made owner. If a court sees the rule on employers as a statutory variation of the orthodox rule that the designer is the owner, it may take the view that the retention of the rights in the design by the designer is not a 'transfer', and so need not comply with the normal formalities. However, if a court wishes to emphasize the evidential importance of the transfer formalities, it may insist that any variation from the statutory rule is a transfer. See *Ultraframe*, an unregistered design right case below at p. 678 n. 60.

²⁶ CDR, Art. 17.

²⁷ CDR, Art. 15. Third parties whose activities are affected by such changes in the register are protected by the availability of licences upon reasonable terms: CDR, Art. 16.

governed by the Brussels Convention.²⁸ The effect is that the action should usually be brought in the state where the defendant, the current proprietor, is domiciled.²⁹ The Regulation does, however, provide a limitation period for such actions. In general, incorrect ascription of rights can be rectified for up to three years following the publication of the Registered Community Design, but this limitation is inapplicable where the registrant has acted in bad faith. Alternatively, a Community design may be declared invalid 'if, by virtue of a court decision, the right holder is not entitled to the Community design under Article 14'.³⁰

The effect of these differences is to create a possible distinction between the person entitled under national design law, and a person entitled to the Community Design rights—and thus to produce two different rightholders equivalent rights. For example, in the UK, a commissioner of a design will be entitled to national design rights,³¹ but under the Community regime such rights would belong to the designer.³² In relation to the registered design regimes, it appears that the first to apply for a national (or Community) registration will be able to invalidate the later applicant's Community (or national) registration.³³ If this is right, the problem of duplicating rights at national and Community level in the hands of different proprietors is likely to be confined to the overlapping of national registered designs and unregistered Community designs.

2 ASSIGNMENT AND LICENCES

2.1 ASSIGNMENT AND LICENCES: THE UK PROVISIONS

The proprietor of a design may assign, mortgage, or licence others to make articles bearing the design.³⁴ An assignment should be made in writing, as should a licence.³⁵ No provision exists for the assignment of future designs, and it is probably necessary for the original proprietor to register as such and then execute the relevant dealing.³⁶ An offer of exclusivity in distribution is not an assignment, because it is not a grant of the 'right to apply' the design to a product.³⁷ Neither an exclusive licensee nor the sole distributor of a design has a right of action against an infringer: this right belongs to the proprietor alone.³⁸

2.1.1 Registration of transactions

Information concerning assignments and other transactions of registered designs is maintained at the UK Design Registry.³⁹ Any person who becomes entitled to an interest in a registered design should apply to the Registrar to have their interests entered on the

²⁸ CDR, Art. 79.

³⁹ RDA s. 17(1)(b).

register.⁴⁰ The interests which can be entered includes assignments, mortgages, co-ownership and licences, but not beneficial interests relating to trusts.⁴¹ A strong incentive exists to register such a transaction: any document in respect of which no entry has been made in the register may not be admitted as evidence of such title ‘unless the court otherwise directs’.⁴² Moreover, a transferee of a registered design will take subject to any interests which have been registered:⁴³ the position in relation to unregistered interests, it seems, being governed by the general law. There are two notable effects here: first, licences, being interests which would not bind a purchaser under the general law (being non-proprietary), as a consequence of registration acquire a proprietary character; second, equitable interests—such as an equitable charge on the design—will bind a purchaser with notice, but in the absence of registration, not one without notice.

2.2 ASSIGNMENT AND LICENCES: COMMUNITY PROVISIONS

Community design rights are unitary, so can only be transferred for the whole Community.⁴⁴ While the Regulation does not establish the rules relating to transfers, leaving those to member states, it does provide a scheme for deciding which member states’ rules apply. The basic rule is that national laws of the member state in which the holder has their seat or domicile apply. So if a design proprietor is British and assigns the Unregistered Community Design to a French citizen, the laws governing the transaction are the UK’s rules. If the French owner assigns the design to a Spaniard, the rules that operate are French.

2.2.1 Registration

In the case of registered Community designs, an additional requirement is that the transfer be entered in the register. Pending such entry, the successor in title may not invoke the rights ‘arising from the registration of’ the Community design.⁴⁵ The same is true of grants of registered Community designs as security.⁴⁶

2.2.2 Licences

A licence may be granted for the whole or part of the Community.⁴⁷ Any licence relating to part of the Community will need to be scrutinized to ensure it does not breach Article 81 EC (formerly Art. 85 of the Treaty). Licences may be exclusive or non-exclusive: an exclusive licensee may bring proceedings for infringement but a licensee needs the consent of the proprietor to do so. Licences can be entered in the register. The effect of this is likely to depend on the law of the member state of the proprietor,⁴⁸ but registration may well be a pre-requisite for the licence to bind a third party transferee of the Community Registered Design. It would be in the case of a transfer governed by British law.⁴⁹

⁴⁹ RDA s. 19(4). A court might direct otherwise to prevent the statute being used as an instrument of fraud.

3 DURATION

Because the breadth of subject matter covered by design registration is so wide, calculating an optimal period of protection is inevitably difficult. Some designs will be the product of huge investment, others of quite trivial efforts. Some designs will have a very brief commercial life, whereas others—design ‘classics’—might last for much longer.⁵⁰ Moreover, there will be a stronger public interest in freedom to make some, particularly more functional, designs than others.

The Directive harmonized the duration of national registered design right at twenty-five years, specifying that this be granted in periods of five years from the date of filing.⁵¹ Recital 17 referred to this ‘unification’ of the term of protection as fundamental to the smooth functioning of the Internal Market. However, it is worth noting that—in contrast to the position in relation to copyright where harmonization was ‘upwards’, the twenty-five-year period was not the longest provided under existing law—France had previously protected registered designs for fifty years.⁵² The 25-year period probably suggested itself as a suitable compromise, and one for which the Commission could claim some international consensus (an easier course than justifying the term by reference to economic or philosophical argument):⁵³ the term corresponds to the minimum period of copyright protection for works of applied art under the Berne Convention.⁵⁴ The same term was adopted in the Regulation for Registered Community Designs.

UCDs are protected for a much shorter term: three years from the date on which the design was first made available to the public within the Community.⁵⁵ The period was chosen by the Commission in preference to the two-year term which had been suggested by the Max Planck Institute.⁵⁶ Apparently, it ‘was considered almost unanimously to be a reasonable compromise’.⁵⁷ It is notable that the period starts irrespective of whether the making available was lawful: thus disclosures in breach of confidence or as a consequence of industrial espionage or theft can cause the UCD to come into operation. It is foreseeable, given the short period of protection, that litigation may often turn on the issue of when protection commenced (and hence lapsed). It will be for the claimant to prove subsistence of UCD and thus to demonstrate when the design was first made available within the Community.

⁵⁰ EC Green Paper, paras. 4.3.16–4.3.18, 50–51; para. 6.3, 83. ⁵¹ Designs Dir., Art. 10.

⁵² IP Code L 513(1). Benelux had 15 years; Germany 20; UK 25; Italy, single period of 15 years; Scandinavia 15; Austria 15; Spain 20; Portugal 25.

⁵³ CDR, Recital 16 refers to the term as ‘corresponding to the foreseeable market life of their products’.

⁵⁴ TRIPS, Art. 26(3) requires only a 10 year term. ⁵⁵ CDR, Art. 11.

⁵⁶ Green Paper, para. 6.3.1.2, 84. The Commission wanted the UCD to be valuable to industries which follow a policy of changing their designs after a limited number of years.

⁵⁷ Franzosi in Franzosi (ed.), 101.

4 RIGHTS OF THE DESIGN PROPRIETOR

The rights given to the proprietor of national registered designs, Registered Community Designs, and Unregistered Community Designs are couched in similar terms. Articles 9 of the Directive and 10 of the Regulation deal with ‘scope of protection’. In turn, Articles 12 of the Directive and 19 of the Regulation deal with the rights conferred by design right.

4.1 THE RIGHTS CONFERRED

The rights conferred on the proprietor are the rights ‘to use [the design] and to prevent a third party not having his consent from using it’. Use is specified as covering, in particular, ‘the making, offering, putting on the market, importing, exporting or using of a product in which the design is incorporated or to which it is applied, or stocking such a product for those purposes’.⁵⁸

4.1.1 Beyond the product

As we saw in Chapter 26, the definition of design refers to the appearance of a product, a notion that is broadly defined to include such things as graphic symbols. Just as a design requires there to be a product, so too infringement only occurs where a person deals with or uses a product. However, the infringer’s use need not be on the same product as the designer’s. That is, infringement is not confined to dealings with the same product to which the design had been applied (or that is mentioned in the registration process). Instead, the rights are infringed by the use of *a product*—that is, any product—in which the design is incorporated or to which it is applied. So, a wallpaper design might be infringed by making curtains bearing a similar pattern, and a design for a car may be infringed by making toy version of the car.⁵⁹ This is a dramatic change for UK registered designs law, which formerly confined the scope of infringing uses to use of substantially the same design on the article for which the design had been registered.⁶⁰ As such, it makes registration much more attractive and saves design proprietors from having to register a design for articles to which they do not intend to apply the design, but to which they suspect competitors might apply the design.⁶¹

One problem raised by the legal separation of the design from its use in relation to a particular product, relates to the treatment of ‘books’ (and other communications media) as products. It seems safe to proceed on the assumption that books constitute ‘industrial or handicraft items’ and so are products, since otherwise the regime would fail to protect designs of book covers. But if this is the case, designs law may now be a potential tool of censorship. For example, if a design has been registered for a cartoon figure to be applied to wallpaper, the depiction of the design in a book may constitute a ‘use’ of the design by its application to a product. Although, as we will see, a ‘citation’ defence exists, it is subject to certain limitations (in particular it may only apply to acts of reproduction, not

⁵⁸ Designs Dir., Art. 12; RDA s. 7(1); CDR, Art. 19.

distribution) and so may not adequately protect free speech interests. It would be preferable for tribunals to interpret the statute so as to avoid having to look for such an exception in the first place.

4.1.2 The meaning of 'use'

Pending the elaboration of case law on the relevant provisions, there is little to be said about the itemized infringing acts, though useful guidance may be found in the jurisprudence relating to similar terms in the Community Patent Convention which have found their way into national laws.⁶² However, the fact that the list of activities which count as 'use' is non-exhaustive is likely to reduce the significance of the definition of the itemized acts. For example, it may be that the list includes marketing a complete kit which when made up constitutes the design on the basis that this is 'putting on the market, . . . a product . . . to which [the design] is applied'. If not, such an activity is likely to be deemed infringing on the basis that it is 'use' of the design, even though it is a form of use which has not been explicitly particularized.⁶³

A more interesting consequence of the fact that the list is non-exhaustive is that it leaves the scope of the concept of use rather vague. An important question will be whether 'use' is to be limited to activities of the same sort (*ejusdem generis*) as those listed, which relate to the manufacture and distribution of *products*. The better view is that it should be so limited, especially given the broad definition of design so that it can now encompass subject matter previously the preserve of copyright and trade marks law. For example, if a cartoon character has been registered as a design, one may ask whether it is used when the cartoon is broadcast for reception on television (or used on a web site)? In Spain, prior to the harmonization Directive, the broadcasting of a design was held non-infringing,⁶⁴ and such a conclusion under the harmonized and Community regimes would be welcome. Recital 21 of the Regulation states that the right 'should also extend to trade in products embodying infringing designs', and supports a view that the meaning of 'use' is to be confined to 'trade in products'.⁶⁵ On this basis use would not cover broadcasting.

4.1.3 ABSOLUTE MONOPOLIES

As regards registered national designs and Community designs, the protection conferred is 'absolute': the rights are full exclusive rights like those conferred by patents, rather than

⁶² See pp. 523–6. The UK provisions formerly covered 'exposing for sale or hire' rather than offering, because such exposure fell short of an offer: see Fellner, para. 5.151. Although this has been deleted, the same act will almost certainly be covered, either as 'stocking' or 'use'.

⁶³ Such acts were formerly explicitly dealt with by RDA s. 7(4), with 'kit' being defined as 'a complete or substantially complete set of components intended to be assembled into an article'. Would the sale of a computer program which enabled a printer to employ a particular design-protected font be treated as use of a product in which the design is incorporated? The answer seems to be that such 'indirect use' is not covered by the harmonized and Community regimes, though might well be by national rules on joint tortfeasance: for the UK, see pp. 1062–4. See Ohlgart in Franzosi (ed.), 137–8.

⁶⁴ Cf. *Heirs to Eduardo MS v. Television Espanola en Canarias SA* discussed by L. Gimeno, 'Spain: Design Right' [1997] *EIPRD* 216.

⁶⁵ The definition of design, however, clearly indicates that the appearance of graphic symbols is to be protected. In this respect, confining use to use on material products, rather than immaterial media such as the web, seems unduly limiting. The effect of this narrow construction is also to exclude web-design from the field of designs law.

qualified rights, of the sort given by copyright, that only control the use of reproductions of the registered designs. The Commission was of the view that the right must be 'an efficient and strong right, sought after by industry'.⁶⁶ The effect is that the proprietor of a registered design need not be concerned with whether the defendant copied the design or arrived at the design independently.

4.1.4 Qualified monopolies: Unregistered Community Designs and cases of deferred publication

However, two qualifications this general proposition need to be recognized. The rights conferred by unregistered Community designs and the rights conferred by registered Community designs which have yet to be published are confined to the situation where the defendant's use results from copying the protected design.⁶⁷ This reflects the belief that it would be wrong to stop somebody using a design which they developed in circumstances where they could not have ascertained from a central register that the design was protected.⁶⁸ In the absence of such a published source from which a user could be placed on notice of earlier rights, a person should only be prevented from using a design if they can be shown to have derived that design from the claimant. Copying will, no doubt, be for the design proprietor to prove on the balance of probabilities, and it will be for a given Community Design Court to rely on its own rules of evidence.⁶⁹ In the UK, in the copyright and unregistered design context, courts show a willingness to infer copying from the circumstances by focusing on similarities between the designs, evidence of the defendant's access to the claimant's work, and the plausibility of independent creation. Article 19 elaborates that use 'shall not be deemed to result from copying the protected design if it results from an independent work of creation by a designer who may reasonably be thought not to be familiar with the design made available to the public by the holder': it is difficult to imagine that without this provision a court would have concluded that copying had taken place.

Although the Regulation clearly imposes a requirement of 'copying', it is silent on two further matters. Firstly, it does not state whether such copying can be indirect as well as direct. Second, it does not state whether a person who sells a product to which the design has been applied is liable for infringement even though the person was ignorant of the fact that the product carried a design which had been copied from a protected design. On a literal reading, in both situations, 'the contested use results from copying the protected design' and falls outside the clause clarifying when a use 'shall not be deemed to result from copying'. Nevertheless, it does seem harsh to hold a secondary infringer liable in the absence of any *mens rea*, and at least one commentator has asserted that the relevant Article can be interpreted in accordance with general principles to avoid such an outcome.⁷⁰

⁶⁶ EC Green Paper, para. 6.4.4. The CDR, Recital 21 states that such a right 'is consistent with its greater legal certainty'. The pre-harmonization position had not been uniform. Whilst most countries conferred a full monopoly, some, such as Germany, required derivation to be proved. See Suthersanen, 201.

⁶⁷ CDR, Art. 19(2), (3). It had been proposed that liability should turn on bad faith, but this was rejected. See Musker, 122; V. Saez, 'The Unregistered Community Design' [2002] *EIPR* 585, 586–7.

⁶⁸ Though this would be the case in the UK for secret designs.

⁶⁹ Cf. Ohlgart in Franzosi (ed.), 121–2, arguing that the rules as to evidence in such cases are Community rules.

⁷⁰ Ohlgart in Franzosi (ed.), 124–6; Musker, 122.

4.2 SCOPE

Under the harmonized and Community regimes, the scope of protection conferred is defined as including ‘any design which does not produce on the informed user a different overall impression’.⁷¹ The court should structure its assessment by first identifying the claimant’s and defendant’s designs. The court should then place itself in the shoes of the ‘informed user’. Third, the court should ensure that the ‘informed user’ is apprised of the ‘degree of freedom of the author in creating his design’.⁷² Finally, the court should compare the designs. The second and third stages were considered in the context of our discussions of novelty in Chapter 26. It is to the first and last stages that we now turn our attention.

4.2.1 What is being compared?

The first matter is to determine exactly what is being compared. Here the chief problem is identifying the relevant features of the claimant’s design and the defendant’s product. This task will differ depending upon whether the relevant right is registered (a national Registered Design or RCD) or unregistered (in the case of the UCD).

In the case of registered designs, the claimant’s design will be defined by reference to the representations. It should be recalled that Recital 11 of the Directive indicates that protection corresponds to the features ‘shown *visibly* in an application’, so it is likely that a tribunal will start by considering the design’s visual appearance. However, the relevant court can take into account the description or any partial disclaimers, insofar as they are permitted under national or Community schemes.⁷³ It must also exclude from consideration features which cannot benefit from design protection: features dictated by function, and interconnections excluded by Article 7(2) of the Directive.

It should be recalled that the protection sought, both in the UK and at the OHIM, might be for part of an article, or even for some aspects only of a design. In contrast, the defendant’s design will have to be ascertained by examining the particular uses which are alleged to infringe. Where the claimant has claimed the design for the total appearance of a product, and the defendant has used exactly the same design on the same product, the comparison will be straightforward. But it will be less straightforward where the claimant’s design is for part of a product, or where a defendant’s design differs or is used on a different product.

Where a design proprietor has registered only part of a product, or part of a design, then it seems that when comparing the defendant’s use with the claimant’s registration, matter added by the defendant which is of a sort specifically not claimed by the claimant must be ignored. To return to an example used in Chapter 25 of the design of a bend in a toothbrush, where the registration disclaimed colour, writing, and patterning and only sought protection for the shape of the bend. Presumably, the comparison must be ‘part’ for ‘part’, so the fact that the defendant’s use is in different colours, or bears strikingly different patterning is irrelevant (even if these would cause it to create a different overall impression). These additions or differences might justify the defendant registering a new design (for the additions individually or in combination with the shape), but would not be taken

⁷¹ Designs Dir., Art. 9(1); RDA s. 7(1); CDR, Art. 10(1). Cf. TRIPS, Art. 26, requiring that protection extend to use of a design which ‘is a copy, or substantially a copy, of the protected design’.

⁷² Designs Dir., Art. 9(2); RDA s. 7(3); CDR, Art. 10(2). ⁷³ RDA s. 7(4).

into account when deciding whether the shape of the bend was identical or produced a different overall impression on an informed user. The comparison to be made is only between the shapes of the bends.

One consequence of the 'part' for 'part' comparison is that a design which claims solely shape will only be infringed by making a product (or dealing with a product made) to that shape. This means that a design for a three-dimensional product, such as the design of an automobile, would not be infringed by use on two-dimensional products, such as posters or table-mats. Here the defendant is guilty of 'use' by sale of an article *depicting* a design, but not 'putting on the market . . . of a product . . . to which [the design] is applied'. The design, that is the shape, has not been 'applied' to the poster or table-mat. (For the same reason, a book featuring images of such designs will not infringe, though, as we already observed, this may not be the case if the designer claimed not just shape but also features of colour, line, or pattern).

In the case of unregistered Community designs, the tribunal will not have the benefit of the bureaucratic mechanisms used in defining the product. In such cases, the tribunal will no doubt initially be involved in comparing the designs as a whole. But given the definition of design as 'the appearance of the whole or part of a product', that should not be the end of the inquiry. Indeed, a claimant should be entitled to claim UCD as regards not merely the whole design of the whole product, but also any single feature of the design of the whole product, or design for part of the product, or combination of features that are sufficient to render the claimed matter new and having individual character. In such cases, the comparison that the tribunal must make is likely to be determined by the claimant's delineation of their claim according to procedural rules of the particular jurisdiction. In England and Wales, a claimant would be required to set out the design elements claimed in their statement of case, which would then be treated by the Court in a similar manner to the bureaucratic delineation of the design in the register.

4.2.2 The comparison

It is difficult to predict how the various tribunals will operate in relation to the comparison of designs. Although Recital 11 of the Directive indicates that protection is conferred for the features 'shown *visibly* in an application', so it is likely that a tribunal will start by considering the design's visual appearance, that does not appear to exhaust the inquiry. At least on one reading (where the 'and' is disjunctive), the Recital goes on to indicate that other features which are at least 'made available to the public by way of publication or consultation of the relevant file' (that is, by reference also to the description) are protected. Bearing in mind the broad definition of design to include the 'texture and/or materials of the product itself', and that the test is one of 'overall impression', the better view is that the comparison is not merely visual. As such, the court should consider the overall effect or impact of the design.

When making the comparison, the court, adopting the mantle of the informed user, takes into consideration the 'degree of freedom of the designer in developing his design'.⁷⁴ In the context of acquisition/validity, an equivalent consideration enabled the tribunal to be generous to the designer by treating minor variations in a highly constrained field as conferring individual character. In the context of infringement, most commentators have

⁷⁴ Designs Dir. Art. 9(2); RDA s. 7(3); CDR Art. 10(2).

assumed that the effect is to limit the protection of features in a crowded field to virtually identical features.⁷⁵ That would certainly make sense if we were to take into account the design freedom of the defendant, or the design freedom in the field in question: after all, if they have made a design which varies from the claimant's they have achieved as much as the first designer. However, when Article 9(2) says, in the context of 'scope of protection', that we are to consider the degree of freedom *of the designer in developing his design*, we could reasonably infer that the relevant freedom is that of the design proprietor and that the Directive requires the court to give strong protection to a designer who developed a new design in a highly constrained field. While this latter construction seems to accord better with the language, it has little to recommend it in principle. From a principled perspective, the levels of protection should correspond to the level of difference: in a heavily constrained field where design activity is limited, protection should also be highly limited.

In general, the informed user is required to assess whether the designs being compared produce a 'different overall impression'. It seems that the test of difference is closely related to the test of individual character, which is defined in much the same way. In other words, we can infer that if the defendant's design has 'individual character' compared with the claimant's, as regards the relevant features being compared, it can be said not to infringe. However, the Directive refers the informed user to certain factors in the context of the assessment of individual character which are not mentioned in relation to the scope of protection. More specifically, it will be recalled that the informed user is to have regard to the existing design corpus, the product, and the industrial sector.⁷⁶ Will these be taken into account in assessing infringement? The answer to this will be directly relevant to deciding to what extent the comparison is not merely between the paper representation of the claimant's design and the defendant's product, but is also to take account of the difference between the claimant's design and the existing state of the art. Under many national laws prior to harmonization such considerations were relevant. Put positively, such a test would state that the greater the accomplishment, the greater the scope of protection.⁷⁷ Used negatively, such a test would induce defendants to argue that their designs were highly similar to designs available before the priority date of the claimant's design.

4.2.3 The persistent problem of the relevance of the product

Although protection is not limited to the product for which the design was registered, there are substantive limits to the principle of the 'irrelevance of the product'. This is particularly the case where the design comprises the shape of a three-dimensional item. In such cases, the design and product will be so inseparable that use of a similar design for a different product will usually fail to produce the same overall impression on the informed user. This can be seen if we consider two designs which are intended to be complementary, such as a dining table and a side-board. Each may be made out of similar materials (say, oak), use simple lines, and give off a chunky though not inelegant appearance: yet it would be difficult for an informed user in such a situation to say the two designs produced the same 'overall impression', because one design has drawers and cupboards, as well as door handles, whereas the other has a flat top and four legs. The designs may be in the same

⁷⁵ For an example, see the *Danish nappy case* [1990] EIPR D-196.

⁷⁶ Designs Dir., Recital 13.

⁷⁷ In German law this was referred to as 'Abstandläre'.

'style', but the *appearance* of the two products will differ. Where the appearance of the product and the nature of the product have an inseparable connection, the product will matter.⁷⁸

5 EXCEPTIONS AND DEFENCES

The Directive and Regulation provide for, and the UK Act implements, certain 'limitations of the rights conferred' by the national design right or Community design.⁷⁹ Three of these relate specifically to ships and aircraft, and need not be discussed.⁸⁰ Three others merit at least a brief discussion. Article 13(1) of the Directive states that:

[t]he rights conferred by a design rights upon registration shall not be exercised in respect of:

- (a) acts done privately and for non-commercial purposes;
- (b) acts done for experimental purposes;
- (c) acts of reproduction for the purposes of making citations or of teaching provided that such acts are compatible with fair trade practice and do not unduly prejudice the normal exploitation of the design, and that mention is made of the source.⁸¹

The Directive and Regulation also contain provisions on 'exhaustion' of rights, and the repair of complex products, and the UK Act and Regulation contain some other specific limitations. We will look at all these in turn.

5.1 ACTS DONE PRIVATELY AND FOR NON-COMMERCIAL PURPOSES

Designs law has traditionally been concerned with uses of designs in trade.⁸² However, since the delineation of rights does not confine their scope to commercial uses, such non-trade activities are excluded by way of a limitation.⁸³ The meaning of 'private' and 'non-commercial' were discussed in relation to section 60(5)(a) of the Patents Act 1977,⁸⁴ and there is no reason to suppose that a different construction will be placed on the exception to national registered design or Community designs (whether Registered or Unregistered Community Designs).

⁷⁸ However, the former Benelux position that a change in the function of the product will take it outside the scope of protection, even if appearance is the same, can no longer be good law. In one case it was held that the design of a toy car, which included pedals, was not infringed when used as the immobile casement for a stool for a barber's shop. This is surely a classic case of use of an identical design on a different product.

⁷⁹ TRIPS, Art. 26(2) permits 'limited exceptions . . . provided that such exceptions do not unreasonably conflict with the normal exploitation of protected industrial designs and do not unreasonably prejudice the legitimate interests of the owner of the protected design, taking account of the legitimate interests of third parties'.

⁸⁰ Designs Dir., Art. 13(2); RDA s. 7A(2)(d)–(f); CDR, Art. 20(2).

⁸¹ Designs Dir., Art. 13(1); RDA s. 7A(2)(a)–(c), (3); CDR, Art. 20(1). The curious phrasing in terms of a prohibition on exercise of the rights is difficult to account for, and has not been adopted in the UK implementation.

⁸² Green Paper, para. 6.4.7.2.

⁸³ TRIPS, Art. 26(1) only requires rights to be granted over acts which are undertaken for commercial purposes.

⁸⁴ See p. 543 above.

5.2 ACTS DONE FOR EXPERIMENTAL PURPOSES

This defence corresponds to that available under section 60(5)(b) of the Patents Act, and the case law interpreting that will provide useful guidance on the scope of this limitation.⁸⁵ Given that harmonized and Community designs law can protect designs informed by functional considerations (but not those features ‘dictated by function’), the inclusion of such a defence seems warranted,⁸⁶ though its use may be rare. Imagine, for example, a company trying to discover the optimal shape of a car chassis in terms of air resistance. The company might create five designs for testing, one of which falls within the design proprietor’s protection. Such tests would be non-infringing.

5.3 ACTS OF REPRODUCTION FOR CITATION AND TEACHING

The exception relating to citation and teaching is not derived from existing patent law, and warrants more detailed discussion. The limitation seems to recognize that the breadth of the new law (particularly the wide definition of design, coupled with the principle of the irrelevance of the product and the wide ambit of the notion of use) presents the possibility of design protection inhibiting a wide-range of activities which were hitherto subject only to copyright law.

The citation limitation may prove to be of greater significance than has hitherto been recognized.⁸⁷ As we have seen, as regards three-dimensional designs, the reproduction of the design in a book or newspaper will rarely, if ever, amount to infringement. However, it is not possible to be nearly so confident about the reproduction of designs comprising other sorts of features. For example, a cartoon character or logo may be protected as a Community or national design, and this may give the design proprietor the right to prevent the sale of products, such as books and newspapers, to which the design is applied. The citation defence allows such uses in the specified circumstances (namely that such acts are compatible with fair trade practice, do not unduly prejudice the normal exploitation of the design, and that mention is made of the source). A book about cartoons, or logos, or about a company that makes the products or the designer thereof (e.g. a book about Terence Conran or Phillip Starck), might be able to reproduce the designs in the book.

The teaching limitation exempts reproduction for the purposes of teaching. A school teacher of carpentry or metal work may want to demonstrate how to produce certain, albeit design-protected, features, and this exception makes such acts non-infringing. Equally, a teacher of intellectual property law might want to reproduce logos as part of the process of teaching when a design or figurative trade mark is infringed. The defence is likely to be more important still in schools of art and design.⁸⁸ There seems no reason,

⁸⁵ See pp. 543–5 above. One difference worth observing between the Patents Act provision and that in relation to designs is that the exempted experimental purposes are not restricted to ones relating to the ‘subject matter’ of the design: in principle, a design may be employed for experiments that do not relate to the design itself.

⁸⁶ Cf. Ohlgart in Franzosi (ed.), 143 (‘there is no reason for a design-developer to base his design work on somebody else’s protected design’).

⁸⁷ The French terms ‘illustration’, and German ‘Zitierung’, confirm a broad understanding of citation as quotation or illustration.

⁸⁸ EC Green Paper, para. 6.4.7.3.

however, for confining 'teaching' to the activities of educational establishments, so it might also include demonstrations for apprentices in the private sector.

Having established the potential importance of the defence, it is important to recognise its limitations. First, it is confined to 'acts of reproduction'. On one construction, dealings in products involving reproductions are not covered. This would seem unobjectionable as far as the teaching exception operates as there is no reason to allow the teacher or student to sell the designed product. Despite this, the limitation to reproductions could seriously undermine the citation defence. Perhaps, one way round this is to interpret the prohibition on the design proprietor exercising rights 'in respect of' reproductions broadly, so that selling a book featuring a reproduction of a design is seen as an activity 'in respect of the act of reproduction'.⁸⁹ Although broad interpretations of limitation on rights are not usually acceptable under European intellectual property law, such an interpretation seems justified here given that the defence is subject to further limitations, to which we should now turn.

The defence is subject to a rather strange version of the three-step test which we have already encountered in the Berne Convention, and extended through TRIPS to designs and patents. However, in contrast to the TRIPS requirement that the limitation does not 'unreasonably conflict with the normal exploitation' or 'unreasonably prejudice the legitimate interests of the owner', the conditions imposed are that the acts are 'compatible with fair trade practice', and 'do not unduly prejudice the normal exploitation of the design'. Moreover, a third condition, that 'mention is made of the source' is also added. This has been described as the grant of 'a moral right of paternity on the Community design holder'.⁹⁰ It is not clear whether 'the source' might not be regarded as the manufacturer or the designer rather than the design proprietor. A cautious user might be best advised to mention all three!

5.4 EXHAUSTION

Although 'importation' is specifically included in the list of prohibited uses, Community exhaustion applies under the Directive, and as regards Community designs, under the Regulation.⁹¹ This is Community exhaustion only, and occurs when the product has been 'put on the market in the Community by the holder of the Community design or with his consent'. Presumably, the implication is that member states may not provide for international exhaustion, because such a provision would undermine the Internal Market objectives of the Directive. For discussion of the merits of such a position, see Chapter 41.

5.5 A UK-ONLY LIMITATION: ACTS COMMITTED BEFORE THE GRANT OF THE CERTIFICATE OF REGISTRATION

As regards UK registered designs, a limitation applies to acts committed before the date of grant of the registered design. The date of registration, from which the first five-year monopoly commences, is the application date.⁹² However, since such applications are not

⁸⁹ Ohlgart in Franzosi (ed.), 144 favours a broad construction to cover any form of use of the protected design.

⁹⁰ Ohlgart in Franzosi (ed.), 144.

⁹¹ Design Dir., Art. 15; RDA s. 7A(4); CDR, Art. 21.

⁹² RDA s. 3C(1).

open for inspection until registration, it was thought unfair to permit a design proprietor to sue as regards acts occurring between application and registration. (This is strange, given the contrary position in trade marks and patent law.) Such a limitation is not clearly permissible under the Directive, though one commentator has suggested that member states are free to provide for defences (and since the Community Design Regulation contains a prior use defence which is not provided for in the Directive, this may be correct).⁹³ Certainly, the impact of this defence will be of little significance, given that most registrations occur within three months of the application, and if the design has been made available to the public, the design proprietor will be able to rely on Unregistered Community Designs (and, if not, may be able to rely on copyright or the UK's unregistered design right).

5.6 A UK-ONLY LIMITATION: CROWN USE

Although there is nothing in the Directive permitting it,⁹⁴ the UK has retained certain provisions relating to 'Crown use'.⁹⁵ This permits any Government department and any person authorised in writing by such a department to use a registered design 'for the services of the Crown'. A classic example might be the use of a design for a gun, nuclear missile, or mask suitable for use in the case of an attack with chemical or biological weapons. Compensation should be paid to the design proprietor or exclusive licensee, on the basis of lost profits.⁹⁶ If the sum cannot be agreed, it may be determined by a court.⁹⁷

5.7 OPTIONAL EXCLUSIONS: THE STANDSTILL PLUS COMPROMISE

The exclusions on complex products, interconnections, and functionality go some way toward ensuring that many spare parts will not be protected (and thus that a competition in the production of such spares is possible). However, it is clear that designs for things such as car doors, or hub caps where the designs are visible in use, but not dictated by function or designed to enable objects to be connected together, will often fall outside those exclusions, and so are in principle protected. The European legislature proved unable to formulate an acceptable set of laws relating to such parts that would allow their manufacture for the purposes of ensuring competition in the spare-parts market. However, a compromise was reached to the effect that the existing laws in member states should be maintained, or possibly 'liberalized', pending further work by the Commission.⁹⁸ The Commission indicated that it intended to consult manufacturers of original parts and spare parts, with the aim of arriving at a voluntary agreement between the parties which provides fair and reasonable remuneration.⁹⁹

⁹³ Musker, 67.

⁹⁴ Nevertheless, the Community Regulation by recognising a similar derogation implies that the provisions of the Directive are not exhaustive on such matters: see CDR Art. 23 (which allows member states to permit use of Community design by or for the government but only to the extent that the use is 'necessary for essential defence or security needs'.)

⁹⁵ RDA s. 12, Sched. 1.

⁹⁶ Sched. 1, para. 2A.

⁹⁷ Sched. 1, para. 3.

⁹⁸ Designs Dir., Recital 19. Article 18 of the Directive requires the Commission to submit an analysis of the consequences of the provisions of the Directive for Community industry by 2004 and to propose any necessary changes by 2005.

⁹⁹ Parliament finally accepted the Council's request that this provision should not be incorporated into the text after receiving assurances from Commissioner Mario Monti that the Commission would issue a declaration referring to such a consultation exercise and that this would appear in the Official Journal along with the text of the directive.

Article 14 of the Directive therefore states that

Member States shall maintain in force their existing legal provisions relating to the use of the design of a component part used for the purpose of the repair of a complex product so as to restore its original appearance and shall introduce changes to those provisions only if the purpose is to liberalize the market for such parts.¹⁰⁰

The ‘standstill plus’ or ‘freeze-plus’ provision (as this is sometimes known) is strangely worded, and rather difficult to understand. It should be noted that the limitation to ‘use of the design’ does not mean that the design-protected component must already have been in existence and all we are concerned with is the act of repair—after all, the act of repair would seldom amount to a ‘making’ of a complex product. Rather, the term ‘use’ here means ‘making, offering, putting on the market, importing, exporting or using’: so ‘use of the design of a component part used for the purpose of the repair’ includes manufacture of component parts for repair.

A more perplexing issue is whether a legal provision *relates to the use* of the design of a component part *for repair* only if the provision is formulated in terms of an exception to the design-owner’s rights, or possibly as a positive user’s right, or whether a national provision can legitimately comprise an exclusion from the scope of protection altogether?¹⁰¹ Two readings are possible. According to the narrow reading, the limitation of Article 14 to parts that are to be made, sold or used *for repair* implies that such designs are still to be protected as regards *other uses* (for example in construction of the complex product). Moreover, in its requirement that such repair be ‘so as to restore [the complex product’s] original appearance’, the Directive seems to have in mind the bespoke manufacture of a component part for a particular damaged or non-functioning complex product. According to a broader reading, in the reference to ‘liberalization of the market’ for such parts, the Directive implies that member states may exclude such parts from protection altogether, as it is difficult to see how a market can be created in products that limits how they might be used. Perhaps the ECJ, if called on to interpret the limits of what is acceptable under Article 14, will accept a middle-ground position. However artificial it may be, one such position is that a member state may be permitted to provide third parties with freedom to manufacture component parts in anticipation of a market for them, as long as any such parts are issued to the public in packaging that specifically indicates that the parts are only to be used for repair of certain identified complex products (or to trade channels which can reasonably be anticipated to use the parts in this way).

¹⁰⁰ The Council had previously sought to allow a ‘free-for-all’, i.e. allowing the member states *carte blanche* to introduce or change national legal provisions in this area. See H. Speyart, ‘The Grand Design’ [1997] *EIPR* 603, 609. Parliament had wanted a harmonized system of fair and reasonable remuneration for right holders for any use of the design of a component part which is used in the repair of a complex product.

¹⁰¹ Apparently, Denmark has interpreted the standstill by retaining its old 15 year term for such component parts. If it is correct that a provision *relates to use for repair* if its scope goes beyond, but would cover, such uses, then it may be that British implementation by removal of the ‘must match’ exception breached Art. 14, which requires member states to maintain in force the provisions and introduce changes only to liberalize the market. The Patent Office had commented that given the designs of such parts could not be registered there was ‘no possibility of greater liberalisation and consequently no possibility of change’: Patent Office, *Legal Protection of Designs: A Consultation Paper on the Implementation in the United Kingdom of EC Directive 98/71/EC* (12 Feb. 2001), 17, para. 47 (concluding that the existing exclusion would merely be reframed using the terminology of the Directive).

The British implementation, assuming (probably correctly) that absolute exclusions were not permitted under the Directive, deleted the previous exclusion of so-called 'must-match' features,¹⁰² and instead inserted an exception or defence in section 7A(5) of the amended Act. This states that the right in a registered design of a component part which may be used for the purpose of the repair of a complex product so as to restore its original appearance is not infringed by the use for that purpose of any design protected by the registration. Section 7(2) indicates that use for these purposes includes making and putting on the market a product in which the design is incorporated.¹⁰³

The Regulation contains a provision which is differently worded, but probably has a similar effect. Article 110 states that 'protection as a Community design shall not exist for a design which constitutes a component part of a complex product used . . . for the purpose of the repair of that complex product so as to restore its original appearance'.¹⁰⁴

5.8 A COMMUNITY-ONLY LIMITATION: PRIOR USE

Article 22 of the Regulation confers a right for a third party to continue activities which they were doing, or preparing to do, before the priority date.¹⁰⁵ This provision, which parallels section 64 of the Patents Act 1977, recognizes that a person who has been secretly using a design would be unfairly prejudiced by the grant of monopoly rights over that design to someone else. To benefit from the right, the user must establish that before the priority date 'he has in good faith commenced use within the Community, or has made serious and effective preparations to that end'. The 'user right' is inapplicable if the design being used has been copied from the registered Community design.¹⁰⁶ The right allows the prior user to 'exploit the design for the purpose for which its use had been effected, or for which serious and effective preparations had been made', before the priority date. The prior user will therefore not be able to expand its activities into other arenas, for example by applying the design to new articles. The right is a personal right, in the sense that it cannot be exploited by way of licensing, and can only be transferred as part of the business.

¹⁰² RDA s.1(1)(b)(ii), prior to amendment, excluded from protection 'features of shape and configuration of an article which are dependent upon the appearance of another article of which the article is intended by the author of the design to form an integral part'. Such an exclusion continues to exist for UK unregistered design right under CDPA s. 213(3)(b)(ii) and is discussed in Ch. 30, pp. 673–5 below.

¹⁰³ While this is a genuine attempt at compliance, it is difficult to see how it can be said to 'liberalize' the market.

¹⁰⁴ See F.-K. Beier, 'Protection for Spare Parts in the Proposals for a European Design Law' (1994) 25 *IIC* 840, 868–9 (considering whether the limitation to three years in a previous proposal was compatible with TRIPS).

¹⁰⁵ CDR, Recital 23. At least the Benelux had such rule prior to harmonization.

¹⁰⁶ Though if varied sufficiently such a copied design might not infringe.

29

COPYRIGHT PROTECTION FOR DESIGNS

1 INTRODUCTION

The fourth regime that can be employed for the protection of designs is copyright law. The relationship between designs and copyright has been the focus of a great deal of attention for the last one hundred years, and different countries have attempted to delineate between the two sorts of law in a multiplicity of ways. France, classically, allowed for cumulation of design protection with that offered by copyright under the so-called theory of ‘unity of art’. In contrast, Italy attempted to make the two regimes mutually exclusive. Although the British position varied through the twentieth century, the 1988 Act sought to limit the operation of copyright for much of the design field particularly that of three-dimensional design, covered by the new ‘unregistered design right’.

Community harmonization of designs dealt only very partially with the interface between designs and copyright. While Article 17 of the Directive and Article 96(2) of the Regulation require member states to adopt a policy of cumulation of copyright, they leave it to member states to determine ‘the extent to which, and the conditions under which, such protection is conferred, including the level of originality required.’ This failure to harmonize completely the degree of protection afforded to designs through the copyright law of member states inevitably detracts from the goal of harmonization, and has been rightly criticized.¹ The United Kingdom has been permitted to retain its existing laws which only affect ‘the extent to which, and the conditions under which’ copyright protection is conferred. In this chapter, we initially set out the ways in which copyright might be available for designs, before examining the way in which this protection is limited through the defences contained in sections 51–3 of the Copyright (etc.) Act.

2 SUBSISTENCE OF COPYRIGHT IN DESIGNS

Copyright can provide protection for designs by two routes: either directly, by protecting the form and decoration of articles as artistic works (in particular as sculptures, engravings, or works of artistic craftsmanship); or indirectly, through the protection copyright

¹ L. Bently, ‘The Shape of Things to Come: European Design Law’, in P. Coughlan (ed.), *European Initiatives in Intellectual Property* (1993), 63, 86–7; Suthersanen, 77–80; Musker, 80 (‘Requiring copyright protection, yet not harmonizing it, is a curious strategy’).

confers on the author of a preliminary document on which a design is based. In the latter situation the design document will normally be protected as a graphic work but may, exceptionally, be protected as a literary work.

2.1 PROTECTION OF THE DESIGN ARTICLE AS AN ARTISTIC WORK

In order for an article embodying a design to qualify for copyright protection as an artistic work it must fall within the terms of section 4 of the 1988 Act.² The most obvious ways in which designs might be protected are as engravings, sculptures, and works of artistic craftsmanship. In each case, only some designs will fall within the category and hence get copyright protection, and exactly which designs will do so is very difficult to predict with any precision.

2.1.1 As an engraving

In some cases it will be possible to argue that features of surface decoration (even functional ones) amount to engravings. Indeed, as we saw in Chapter 3, in *Wham-O v. Lincoln Industries*,³ the New Zealand Court of Appeal held that both the mould from which a frisbee was pressed and the frisbee itself were engravings. However, we cannot assume from this decision that all surface designs will be protected by copyright as engravings.⁴ For example, the Australian Federal Court declined to hold the drive mechanism of a lawnmower to be an engraving. This was on the basis that no consideration of policy or other approach 'could justify straining the English language so far as to call the moulds engravings'.

2.1.2 As a sculpture

Many designs for the shape of three-dimensional artefacts will be susceptible to protection by copyright as 'sculptures'. In *Breville Europe v. Thorn EMI Domestic Appliances*⁵ Falconer J held that scalloped-shaped moulds for toasted sandwich makers were sculptures; and in *Wham-O*, the Court of Appeal of New Zealand held that a wooden model prototype for a plastic frisbee was a sculpture. However, not all designed artefacts will be sculptures. For example, the plastic frisbees which were created by injecting plastic into a mould were said not to be sculptures. Moreover, Laddie J has recently signalled that the term 'sculpture' will not be construed broadly so as to encompass designs for products where the main considerations are achieving a functional effect: in *Metix UK v. G. H. Maughan*⁶ Laddie J said that to constitute a sculpture, the maker must be concerned with shape and appearance rather than just with achieving a precise functional effect.

2.1.3 As a work of 'artistic craftsmanship'

Designs may also be protected by copyright if they are taken to be 'works of artistic craftsmanship'.⁷ Although in *Hensher v. Restawhile*,⁸ the House of Lords rejected a claim

² CDPA s. 4. ³ [1985] RPC 127.

⁴ *Greenfield Products v. Rover-Scott Bonmar* (1990) 17 IPR 417 (FCA, Pincus J) (the term engraving has to do with marking, cutting, or working the surface, usually the flat surface, of an object).

⁵ [1995] FSR 77, 94.

⁶ [1997] FSR 718, 722 (Laddie J).

⁷ CDPA s. 4(1)(c).

⁸ *George Hensher v. Restawhile Upholstery* [1976] AC 64.

that the prototype of an upholstered chair was a work of artistic craftsmanship, a significant body of designed artefacts may nevertheless fall within the category. In this respect, it should be observed that the decision admits that a work can be a work of artistic craftsmanship even though it is a utilitarian article. More significantly, despite *Hensher*, there is room to argue that a work may also qualify as a work of artistic craftsmanship even though it is intended to be mass-produced. Although Lord Reid and Viscount Dilhorne suggested that craftsmanship implied 'hand-made',⁹ Lord Simon concluded that 'craftsmanship' in the statutory phrase cannot be limited to handicraft; nor is the word 'artistic' incompatible with machine production.¹⁰

2.2 INDIRECT PROTECTION

Although some designs will benefit from copyright protection as artistic works, many more will be able to benefit from copyright protection indirectly, that is, through the copyright in the documents which were prepared in the process of devising the finished design. These may be drawings or literary works.

2.2.1 Design drawings

Copyright protection for designs may also arise through the creation of preliminary drawings for the design. That is, through the creation of two-dimensional graphic works on which the final article is based. As these works are protected irrespective of artistic quality, this is the commonest way in which copyright is used to protect designs for articles. As copyright protection extends to three-dimensional reproductions of two-dimensional works, and also includes indirect as well as direct reproductions, a person who replicates a three-dimensional design will infringe the rights in the two-dimensional drawing. For example, if copyright exists in a drawing for an exhaust pipe or a Lego brick, reproduction of the manufactured exhaust pipe or Lego brick would (subject to what will be said later), infringe.¹¹

2.2.2 Protection of designs as literary works

Copyright law may also protect certain design documents as 'literary works'. This is the case, for example, in relation to a knitting pattern which describes a series of stitches needed to be employed to create a pullover of a particular pattern. The protection offered by copyright in this context is very limited. While the copyright owner is able to control reproduction of the pattern, the owner is probably not able to prevent the production of pullovers made to the pattern. The reason for this is that, as the pattern and the pullover are not objectively (or visually) similar (as is required to establish infringement of copyright), these are not reproductions.¹² While the courts have sometimes suggested that infringement of copyright in literary works ought to be expanded,¹³ as yet there have been

⁹ [1976] AC 64, 77 (Lord Reid); 84 (Viscount Dilhorne).

¹⁰ [1976] AC 64, 90. *Coogi Australia v. Hysport International* (1998) 41 IPR 593 (FCA).

¹¹ See, classically, *British Leyland v. Armstrong* [1986] RPC 279.

¹² *Brigid Foley v. Elliott* [1982] RPC 433 (Sir Robert Megarry VC) (referring to the guide as comprising 'words and numerals'). But cf. *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683.

¹³ See above at pp. 134–5.

no circumstances in which a court has held that a written description of a design has been reproduced by the making of articles embodying the design.

3 LIMITATIONS ON THE USE OF COPYRIGHT

Although copyright protection for designs had been limited judicially (through the requirement of originality,¹⁴ the idea-expression dichotomy, and occasionally through the application of public policy considerations),¹⁵ for the last twenty years there has been a widely held view that copyright protection is inappropriate in much of the design field.¹⁶ This view is commonly based upon an image of copyright law as being concerned with higher works of art (a difficult premise to support if one recalls the myriad of matters which copyright protects). Operating from the assumption that copyright law is intended to protect works of art and literature, the case law that extended copyright protection to design drawings for industrial objects (such as exhaust pipes), was subjected to a considerable amount of criticism. For example, in *Franklin Machinery v. Albany Farm Centre* Thomas J in the High Court of New Zealand remarked that:

The law relating to copyright has got quite out of hand . . . It is probable that a law historically developed to protect artistic works was never suitable for application in the field of industrial design in the first place . . . Copyright has now invaded the field of technical drawing in a manner which has been dramatic. The most banal of industrial or technical drawings, which involve little more originality than that which accompanies many routine domestic tasks, has come to attract an aggressive claim to copyright protection. Frequently, the monopoly protection which the statute confers is out of all proportion to the degree of originality involved in producing the copyright work. All this is unnecessary.¹⁷

Similar sentiments informed the radical amendments introduced by the 1988 Act. In short, it was decided that further restrictions should be made of the use that can be made of copyright protection of designs. To this end, sections 51–3 of the 1988 Act introduced a series of defences which minimize the role of copyright, particularly as regards the protection of *three-dimensional designs* (which are now, usually, protected by the tailor-made unregistered design right).¹⁸

3.1 SECTION 51

Section 51 of the 1988 Act states that copyright is not infringed by making an article from a design document or a model which records or embodies a design where the design is for ‘anything other than an artistic work or a typeface’. The upshot of this is that copyright in a blueprint for a three-dimensional industrial design (such as an exhaust pipe) will not be

¹⁴ *Interlego v. Tyco* [1988] *RPC* 343.

¹⁵ *British Leyland v. Armstrong* [1986] *RPC* 279; *Canon Kabushiki Kaisha v. Green Cartridge Company* [1997] *FSR* 817.

¹⁶ In particular it was thought that copyright protection is too long, and too strong (in that it protects against reproduction of even small parts of works, if the part is ‘substantial’).

¹⁷ (1991) 23 *IPR* 649.

¹⁸ *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] *RPC* 717, 723 (intention of the legislature that copyright protection be removed from ‘ordinary functional commercial articles’).

infringed where a person makes articles (here exhaust pipes) that reproduce the drawing. The section provides immunity from copyright liability because the blueprint is a 'design document', and the exhaust pipes are 'articles made to the design' or copies thereof.

Section 51 is not, however, intended to remove all protection from such design drawings. Rather, by limiting the role of copyright in relation to three-dimensional designs (as we will see in Chapter 30), section 51 opens up a corresponding space for the operation of unregistered design right. This is because according to section 236 if the making of an article to a design drawing is an infringement of copyright, then it is not an infringement of unregistered design right.¹⁹ However, if there is a defence to infringement of copyright in the design document, there *may be* an infringement of unregistered design right. Judicial interpretation of section 51 will consequently be critical in defining the relative roles of copyright and unregistered design right in the protection of designs: if the defence is construed broadly, then unregistered design right has a greater role; if the defence is construed narrowly, then the role of copyright dominates.²⁰

There are three critical elements to the operation of section 51. First, there must be a 'design document'. Second, the design document must be 'for something other than an artistic work'. Third, the defence only applies where the defendant has made an article to the design or copied an article made to the design. We consider each in turn.

3.1.1 Design documents

Section 51 only applies where there is either a 'design document' or a 'model recording or embodying a design'. A 'design document' means 'a record of a design, whether in the form of a drawing, a written description, a photograph, data stored in a computer or otherwise'.²¹ It covers design documents which are both literary and graphic works.

It should be noted that in this context 'design' has a particular and restricted meaning. Design means 'any aspect of the shape or configuration (whether internal or external) of the whole or part of an article, other than surface decoration'. Thus, the exception does not affect copyright in any decorative feature that will be applied in two dimensions to industrial articles.²² It does, however, affect three-dimensional applications embodying the shape or configuration of an article. The term 'configuration' has also been held to encompass the arrangement of features (resistors, diodes, etc.) on a circuit diagram.²³ As we will see, this definition corresponds to the definition of 'design' used for the purposes of unregistered design right. It is unclear how important the intention of the designer is in

¹⁹ *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 65 (copyright and unregistered design right described as mutually exclusive); cf. *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728, 744 (paras. 60–68) (Etherton J.) (discussing how CDPA s. 51 demarcates the relationship between copyright and unregistered design right, but observing that it seeks to achieve more than that, and refusing to accept propositions in *Wilkinson v. Woodcraft*).

²⁰ *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 723 (approving broad construction of 'design' so as to ensure protected by design right not copyright).

²¹ CDPA s. 51(3).

²² On the meaning of surface decoration, see *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, discussed in the context of unregistered design right below at p. 669. But cf. *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728, 744 (para. 68) (Etherton J) (holding, in our view incorrectly, that CDPA s. 51(1) and (3) operates in relation to the entire 'design document', so that copyright in decoration cannot be enforced against a person making an article to the design). *Lambretta* is the subject of an appeal.

²³ *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 722–3.

determining whether the contents of a document constitute a 'design'. While still unsettled, it seems that something is only a 'design' if it is intended by its creator, at the outset, to be a 'design'.²⁴

Section 51 also applies to 'models', that is three-dimensional prototypes: so, for example, the wooden prototype for a frisbee could not be relied upon to claim copyright infringement in the reproduction of mass-produced frisbees.

3.1.2 'For something other than an artistic work'

Section 51 only applies where the design or model 'is for something other than an artistic work or a typeface'. Consequently, there is no defence where the design document or model embodies a design 'for an artistic work'. This means, for example, that a sketch of the sitter for a portrait-sculpture or a plan for a building will not be caught by the defence, since they are designs for artistic works.²⁵

The section once again raises the question of what is an artistic work. Section 4(1) states that artistic work means a graphic work, photograph, sculpture, work of architecture, or work of artistic craftsmanship. This means that a design drawing for a chair will be a design for an artistic work, if the chair is treated as a work of artistic craftsmanship. Moreover, given that the 1988 Act protects 'sculptures' and 'engravings' as artistic works irrespective of any artistic quality, it is uncertain which industrial objects would fall within these concepts.

3.1.3 Making articles to the design (or, copying articles)

The section 51 defence only applies where a person makes an article that corresponds to the 'design' or where a person makes 'a copy' of 'an article made to the design'. The upshot of this is that the section appears to allow a person to make articles (such as exhaust pipes) to the design; or to copy articles (such as an exhaust pipe) which have been made to the design. The defence does not apply, however, where a person merely photocopies a design document: this remains an infringement of copyright.²⁶

It has been suggested that the section 51 defence also provides a defence to a person who makes a two-dimensional copy of a (three-dimensional) article that has been made to a design document. In *BBC Worldwide v. Pally Screen Printing*²⁷ the BBC brought an action for infringement of copyright in the children's television characters, the Teletubbies. These characters were played by actors wearing costumes, and the defendants sold T-shirts bearing pictures of children's television characters. The claimant sought summary judgment, asserting infringement of copyright in the drawings upon which the characters' costumes were based. The defendants sought to resist summary judgment on the basis that there was an arguable defence under section 51. While the defendants admitted that they had derived the characters from the television broadcast (and thus, indirectly, from the documents) they alleged that the T-shirts were copies (albeit in two dimensions) of the costumes which, in turn, were articles made to design drawings. Laddie J said that while he

²⁴ *BBC Worldwide v. Pally Screen Printing* [1998] FSR 665, 672 (design must have been for something other than an artistic work from the outset).

²⁵ *BBC Worldwide v. Pally Screen Printing* [1998] FSR 665, 672 (emphasizing that if the drawings of the Teletubbies had been prototypes for a cartoon series the s. 51 defence could not have applied).

²⁶ *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728 (para. 65) (Etherton J).

²⁷ [1998] FSR 665, 672.

did not find the defendants' case 'terribly attractive', it was arguable. Summary judgment was consequently refused.²⁸

3.2 SECTION 52: ARTISTIC WORKS USED IN INDUSTRIAL PRODUCTION

Section 52 is intended to limit the term of copyright to twenty-five years as regards artistic works which are used as the basis for designs which are put into mass production. By so doing, section 52 is intended to prevent copyright from providing a longer term of protection for industrially exploited designs than would be gained *via* registration. As such, its purpose is to regulate the boundary between the copyright system and the registered designs regimes.

3.2.1 When the defence applies

The section 52 defence only arises where the artistic work has been exploited (by or with the licence of the copyright owner) by making 'by an industrial process' and marketing articles that are copies of the work. An article is made by an industrial process if more than fifty articles are made (whether or not by hand), all of which are copies.²⁹ Certain articles do not fall within the scope of the section. These are specified in an order.³⁰ These excluded articles, which are of an 'essentially literary and artistic character', are:

- (1) works of sculpture, other than casts or models used or intended to be used as models or patterns to be multiplied by any industrial process;
- (2) wall plaques, medals, and medallions;
- (3) printed matter primarily of a literary or artistic character, including book jackets, calendars, certificates, coupons, dress-making patterns, greeting cards, labels, leaflets, maps, plans, playing cards, postcards, stamps, trade advertisements, trade forms and cards, transfers, and similar articles.

Thus even if these items are duplicated more than fifty times, they fall outside the defence (and hence retain the full seventy-year *post-mortem* copyright term). Consequently, an artistic work which is used as a design for a book jacket remains protected for the full term. According to the order, sculptures retain full protection (even if they are used in an industrial process) only as long as they are not 'used or intended to be used' in 'any industrial process'. Given that the purpose of the order is to identify articles of an essentially artistic character, it should be understood to exclude a sculpture from the operation of section 52 even where the sculpture is multiplied on a large scale (for example, with a bust of Beethoven). In contrast, section 52 can be assumed to have been intended to apply to the case of a frisbee, the prototype for which is a sculpture, but of which the final form is merely an industrially-produced artefact; and to the use of a sculpture as the base of a mass-produced table-lamp. Paragraph 3(1)(a) of the Order should therefore be

²⁸ Affirmed in *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 723–4.

²⁹ CDPA s. 52(4)(a); Copyright (Industrial Process and Excluded Articles) (No. 2) Order 1989 (SI 1989/1070).

³⁰ CDPA s. 52(4)(b); Copyright (Industrial Process and Excluded Articles) (No. 2) Order 1989 (SI 1989/1070).

interpreted as applying to works of sculpture, other than any sculpture which is employed (or only ever intended to be employed) as an element of, or the basis for, a design of a mass-produced article (which is not itself a sculpture).

3.2.2 The scope of the defence

Section 52 operates to reduce the duration of copyright to twenty-five years from the first legitimate marketing of articles that are copies of the copyright work. It does this by providing a defence to an action for copyright infringement.³¹ The defence is similar in its operation to section 51. However, because the defence is in addition to section 51, it will apply most importantly where section 51 would not. That is, it applies to designs for two-dimensional aspects of an article, where a work was not initially *intended* to be a *design*, or where the work was initially a design for an artistic work which was subsequently exploited.

The defence in section 52 permits a person, in the specified circumstances, to make articles of any description which correspond to the artistic work. This means that if the artistic work has been applied to teapots, after twenty-five years from the first marketing of the teapots, it will no longer be an infringement of copyright to apply the same work to pillow cases. However, the defence leaves the copyright intact where the design is applied to things other than articles: so after twenty-five years of marketing the teapot, it is still an infringement to photograph the artistic work (in its unapplied state). Anything may, however, be done in relation to an article to which the artistic work has been applied without infringing copyright in the work.

3.3 SECTION 53 (ACTS DONE ON THE BASIS OF RIGHTS IN THE REGISTERED DESIGN)

Section 53 deals with the situation where the ownership of copyright and the proprietorship of a registered design are vested in different persons. This may occur through voluntary transactions or as a result of the fact that the principles by which ownership of copyright are determined differ from those relating to registered designs. Section 53 effectively provides a defence to a person who relies on permission from the registered design proprietor, but has failed to gain the authorization of the copyright owner. More specifically, section 53 states that copyright in an artistic work is not infringed by anything done 'pursuant to an assignment or licence' made by the proprietor of the registered design. The idea behind the section is to protect a person who makes a transaction with the registered proprietor by giving that person immunity from copyright infringement.

The defence is, however, qualified. It only applies where the person claiming the immunity has acted in good faith in reliance upon the registration and without notice of proceedings for cancellation or rectification of the design (if they exist). In normal circumstances the registered design displaces the copyright as far as third parties need be concerned. As soon as the legitimacy of the registration becomes questionable, however, the copyright regains its force. The acts of the registered proprietor do not fall within the scope of the defence.

³¹ CDPA s. 52(2). The author's moral rights of integrity is left intact, while CDPA s. 79(4)(f) denies the author the right of paternity.

30

UNREGISTERED DESIGN RIGHT

1 INTRODUCTION

The fifth way in which designs may be protected is through the United Kingdom's unregistered design system. This was established under Part III of the 1988 Copyright Designs and Patents Act,¹ as part of a reconceptualization of the British scheme of design protection. Prior to 1988, pressures had been placed on the boundary of the UK registered design system and the copyright system by recognition that non-registrable designs—such as the design of car exhaust pipes—could obtain copyright (so-called 'industrial copyright'). In an attempt to remove the bizarre consequence that unattractive designs obtained copyright protection, but attractive ones would not, the UDR was conceived as providing a system of short term, automatic, protection to the producer's functional designs.² It was to provide 'limited protection against unfair misappropriation of time skill and effort expended by the author of the design in the creation of the work'.³ Consequently, it was intended to limit the registered system to designs for articles for which appearance mattered, and copyright to the protection of two-dimensional designs or designs for artistic works. As we noted in the previous chapter, the protection given to the proprietor of an unregistered design is intended to dovetail with that conferred by the copyright systems in respect of design drawings for three-dimensional designs.

The logic of that division has been undermined by the harmonization of European registered design law to cover functional as well as aesthetic designs, and the establishment of an Unregistered Community Design covering a broader field than the United Kingdom's unregistered design right, though for a shorter term. While academics and policy-makers may raise questions about whether there are any good reasons for maintaining the UK UDR, a knowledge of this *sui generis* right currently remains essential for understanding the current law of designs. It may also provide valuable lessons for the Community rights.

¹ *Guild v. Eskandar* [2003] FSR (3) 23 (para. 8) ('a new, wholly statutory right.') The right was modeled on principles enunciated in the European Council Directive of Dec. 1986 on the Legal Protection of Semiconductor Chips upon which the 1987 Semiconductor Products (Protection of Topography) Regulations were based. See A. Christie, *Integrated Circuits and Their Contents: International Protection* (1995), ch. 4.

² *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* [2003] RPC (27) 499 (para. 71) ('a medley of political and practical compromise . . .')

³ *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461, 480 per Mummery LJ.

2 SUBSISTENCE OF THE UNREGISTERED DESIGN RIGHT

As with copyright, unregistered design right arises automatically on creation of a design. In order to establish the existence of an unregistered design right it is necessary to show (i) that there is a design; (ii) which falls outside the exclusions from design right; (iii) which is 'original'; and (iv) which qualifies for protection in the United Kingdom. We will deal with each in turn.

2.1 'A DESIGN'

In order for a design to be protected by unregistered design right, it is necessary to show that there is a 'design'. In this context, 'design' means 'the design of any aspect of the shape or configuration (whether internal or external) of the whole or part of any article'.

While the subject matter of UK unregistered design right is more limited than that of the harmonized registered design systems, in that UK unregistered design rights do not protect most two-dimensional features,⁴ in many other respects the subject matter of unregistered design right are similarly broad. In particular, it should be noted that unregistered design right will protect designs which are not aesthetic: in fact, there is no requirement that the design features be visible to the naked eye. For example, in one case it was held that detailed dimensions as to the shape of contact lenses could be a designs despite the fact that to any normal observer the lenses would appear to be identical and could only be distinguished with the aid of sophisticated measuring equipment.⁵ The definition of designs for the UK right also extends to designs which are purely functional.⁶ One of the leading cases, for example, concerned the internal features of a farming machine used to separate the solid and liquid parts of slurry.⁷

Unregistered design rights protect designs for 'articles'. The term is not defined further, but needs to be contrasted with the concept of 'products' utilized in the registered regimes⁸ Unregistered design rights not only apply to designs for whole articles, they also

⁴ The courts have speculated as to whether 'configuration', in contrast to shape is not confined to three-dimensional characteristics. See *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 722–3 (holding that 'configuration' should be broadly construed to cover circuit diagrams); *Baby Dan SA v. Brevi* [1999] FSR 377, 383 ('configuration' implies some form of arrangement of elements, e.g. the ribbing arrangement of a hot-water bottle); *Lambretta Clothing Co. Ltd v. Teddy Smith (UK) & Next Retail plc* [2003] RPC 728 (Etherton J) (para. 48) (there is nothing to suggest that configuration is not confined to three-dimensional aspects of an article). It was held that design right did not protect stitching on mobile phone cases: *Parker v. Tidball* [1997] FSR 680, 696. But cf. *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC (16) 257, 280 per Park J (para. 78) (stitching on case for umbrella treated as protected in case where it produced accentuated rectangular character).

⁵ *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289; *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* (4 Nov. 2003) (para. 30) ('unregistered design right extends beyond the visually appreciable to other aspects of the design of an article').

⁶ *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC (16) 257, 270 per Park J (para. 34).

⁷ *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461.

⁸ It is possible that the shape and configuration of buildings may be protected by unregistered design rights. For similar argument as to whether buildings are 'products' in relation to the harmonized definition of designs, see p. 614.

apply to designs for parts of articles. In the case of the design of a teapot, an unregistered design right could reside in the shape of the whole pot, or in a part such as the spout, the handle, or the lid.⁹

2.2 EXCLUSIONS

In order for a design to be protected by unregistered design right it is necessary to ensure that it does not fall within the list of excluded features contained in section 213. This provides that the unregistered design right does not subsist in 'surface decoration', 'methods or principles of construction', or features which 'must fit' or 'must match'.¹⁰

2.2.1 Surface decoration

Section 213(3)(c) provides that the unregistered design right does not subsist in features of 'surface decoration'. 'Surface decoration' would cover all cases of application of colour in two dimension (such as stripes on a shirt),¹¹ but is not confined to two-dimensional features. As such, it includes both 'decoration lying on the surface of the article (for example, a painted finish) and decorative features of the surface itself (for example, beading or engraving)'.¹² Consequently, in *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)*, Jonathan Parker J held that the painted finish, V-grooves, and cockbeading on the kitchen furniture the claimant had created was surface decoration and thus not protectable.¹² Other features, such as cornices, quadrants, and handle were not, and as such were protected by unregistered design right (see Figure 30.1). In other cases, three-dimensional features may not be regarded as decoration, but as part of the overall shape and configuration: ultimately, the court just has to make a value judgment. So, in *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd*,¹³ Park J took the view that although stitching on the seams of a rectangular umbrella case existed 'in a small third dimension', it was an aspect of shape which was not excluded as surface-decoration because gave that case its 'box-like character'.

⁹ *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 422; *A Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* (CA) (4 Nov. 2003) (part of a cloth case for portable umbrella).

¹⁰ An initial problem with the drafting of s. 213 should be observed. This arises from the fact that while the nature of unregistered design rights and the way in which these rights are infringed are defined in relation to 'designs', the exclusions relate to 'design rights'. A literal construction of s. 213 would produce the nonsensical result that it would be possible for an infringement to take place in relation to subject matter excluded from the scope of protection: *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63. This problem has been avoided in relation to the exclusion of 'surface decoration'. This was done by incorporating the exclusion of 'surface decoration' into the meaning of 'design'. *Ibid.*, 72 (relying on the definition of design in CDPA s. 51(3)). It is hoped that similar strategies can be applied to the other exclusions. The reasoning employed in *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63 would not resolve the problem for must fit or must match features.

¹¹ *Lambretta Clothing Co. Ltd v. Teddy Smith (UK) & Next Retail plc* [2003] RPC 728 (Etherton J) (over-arm stripes on sleeves of track top were surface decoration; mere juxtaposition of colours not configuration).

¹² [1998] FSR 63, 73. See also *Jo Y Jo v. Matalan Retail* [2000] ECDR 178 (embroidery on ladies' garments was surface decoration but other aspects of knitted cardigans, such as the choice of knit or fabric and edging were not).

¹³ [2001] RPC 257, 280 (paras. 78–9). See also *Christopher Tasker's Design Right References* [2001] RPC 39 (features must be decorative).

Fig. 30.1 The plaintiff's kitchen.

2.2.2 Methods of construction

Section 213(3)(a) provides that unregistered design right does not subsist in 'a method or principle of construction'.¹⁴ This exclusion, which has its origins in now-repealed British Registered Designs law, is intended to confine design protection to shape rather than the ideas or principles underlying a shape. The protection does not exist in relation to a 'process or operation by which a shape is produced as opposed to the shape itself'.¹⁵ The

¹⁴ CDPA s 213(3)(a).

¹⁵ *Rosedale Associated Manufactures v. Airfix Products* [1957] RPC 239; *Kestos v. Kempat* (1936) 53 RPC 139; *Oren & Tiny Love v. Red Box Toy Factory* [1999] FSR 785, 792 (registration cases).

application of this distinction can be seen from *A. Fulton Co. Ltd v. Grant Barnett*, which concerned a claim to unregistered design right in rectangular umbrella cases, where the rectangular shape was created in part by the use of stitching. While Park J accepted that the stitching used in making the umbrella cases was a technique, he was happy to treat the shape produced by that method as protected. Accordingly, it appears that the exclusion only bites where the protection of the shape would itself prevent others using the method—that is where the use of method can result in only one shape or configuration.¹⁶

2.2.3 Must fit

Section 213(3)(b)(i) of the 1988 Act provides that the ‘design right does not subsist in . . . features of shape or configuration of an article which . . . enable the article to be connected to, or placed in, around or against, another article so that either article may perform its function’. This is known as the ‘must fit’ exclusion. This exclusion (along with the ‘must match’ exclusion) is intended to minimize the significance of the unregistered design right in the protection of spare parts (particularly for automobiles). It has been said that the exclusion should be interpreted ‘purposively’ and ‘should not be given a breadth which would take it far beyond what it was intended to achieve’.¹⁷

There are a number of notable aspects of the exclusion.

(i) *The article*. The first is that the exclusion specifies that designs are excluded to the extent that they enable an article to be connected (etc.) to another ‘article’. In this context, article has been interpreted very broadly as being synonymous with the word ‘thing’.¹⁸ Following from this, it has been held that article not only includes machines and objects, it also includes the human body. Thus, it has been held that the aspects of the shape of contact lenses which enable the lenses to fit the eyes of their users, or the aspects of the shape of a mobile telephone that enable it to fit with the hand of a person holding it, fall outside the scope of the unregistered design right.¹⁹

(ii) *Integrated parts*. Where two articles are joined together to make a single article, it has been held that the ‘must fit’ exception not only applies to the parts as separate articles, but also to the interfaces that become elements of the integrated whole.²⁰ However, this view has the potential to produce odd results (apparently, for example, that there would be no unregistered design right in the wing of an aeroplane). Consequently, in *Baby Dan v. Brevi*, Judge David Young QC preferred the view that when units are assembled unregistered design right may subsist in the whole; whereas when design right is asserted in the parts, protection is confined to parts of the design other than the must fit features.²¹

¹⁶ *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC (16) 257, 278 (para. 70). Cf. *Parker v Tidball* [1997] FSR 680, 696, where the claimant claimed design right in mobile phone cases, the Judge excluded stitching in seams as a method of construction. Copinger, *supp.*, para. 13–55 sees the different results as attributable to the fact that in *Fulton* the seam was intended to produce a design feature, whereas in *Parker* the seam was an unintended result of a method of construction. Perhaps it would be easier simply to regard the remarks in *Parker* as obiter, the stitching not being shape or configuration.

¹⁷ *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC (16) 257, 278 (para. 73).

¹⁸ *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 425.

¹⁹ *Ibid.*, 425–8; *Parker v. Tidball* [1997] FSR 680, 697. For criticism, see L. Bently and A. Coulthard, ‘From the Commonplace to the Interface: Five Cases on Unregistered Design Right’ [1997] *EIPR* 401.

²⁰ *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401, 417–19.

²¹ [1999] FSR 377, 382.

(iii) *No need for designer to have intention to fit.* The must fit exclusion operates where the shape of an article enables it to be attached or connected to another article. In assessing whether an article must fit another article, the designer's intention is irrelevant. The reason for this is, according to Laddie J, 'the subsection does not require that the designer should know that the features enable the interface, it is sufficient if they do so in fact'.²²

(iv) *Closeness of fit.* Features are only excluded as must fit features if they 'enable' one article to fit with another article.²³ Perhaps the most important question is how closely shapes need to correspond to each other for the feature of one article to be said to enable it to be connected to another.

In *Amoena v. Trulife*²⁴ Judge Sumption QC suggested that the provision was to be read very narrowly. In particular he said that the must fit exclusion was 'concerned with a . . . precise correspondence between two articles, as with a rigid plug and socket, where the functional requirement that one article should fit in or against another displaces original design work'. Consequently, the design of breast prostheses was not excluded under the 'must fit' exception, because while the prostheses were shaped so that they fitted into bras, the shape of the bra would only *influence* rather than *determine* the details of the design: the prostheses were highly flexible and compliant so that they would fit a number of different bras.

However, other High Court decisions have taken a different approach, suggesting instead that features may fall within the must fit exclusion even though other shapes might do equally well. For example, in *Ocular Sciences*, Laddie J said:²⁵

There is . . . nothing in the provision which requires the feature to be the only one which would achieve the proper interface. If a number of designs are possible each of which enables the two articles to be fitted together in a way which allowed one or other or both to perform its function, each falls within the statutory exclusion.

Consequently, Laddie J held that the diameter of the claimant's soft contact lenses was not protected because evidence showed it enabled the lenses to fit onto the eyeball. This approach was approved in *Parker v. Tidball* by Judge Englehart QC,²⁶ where he held that features of mobile phone casings which permitted use of the phone while inside the case, were excluded on the basis that they were must fit features. This was despite the fact that the function that the shape performed could have been fulfilled by a number of other designs.

²² *Ocular Sciences v. Aspect Vision Care* [1997] *RPC* 289, 424–8 (features of the claimants' lenses were excluded even though they were chosen without the fit requirement in mind).

²³ The term can be contrasted with three related notions: the notion in the must match exclusion that the appearance of one article be 'dependent' on that of another, and the two exclusions in the registered design arena of features 'dictated' by function, and features which 'must necessarily be reproduced in their exact form and dimensions' to enable functional connection to another product. See below at pp. 673–5, and above at pp. 617–21. Elements which enables parts to fit together to 'look nicer' are not within the exception: *Ultraframe UK Ltd v. Fielding* [2003] *RPC* (23) 435, 460 (para. 80).

²⁴ Unreported, 25 May 1995, Jonathan Sumption QC, Deputy Judge of Ch. Div., *SRIS C/72/95*; *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] *RPC* (16) 257, 279 (para. 75) (emphasizing importance of exactness, so that a rectangular umbrella case was not excluded because it had to accommodate a rectangular shaped umbrella handle: 'any case of the same approximate dimensions would do that').

²⁵ *Ocular Sciences v. Aspect Vision Care* [1997] *RPC* 289, 424–8.

²⁶ [1997] *FSR* 680, 694.

2.2.4 Must match

Section 213(3)(b)(ii) of the 1988 Act excludes from unregistered design right features of shape or configuration of an article which are dependent upon the appearance of another article of which the article is intended by the designer to form an integral part.²⁷ As with the must fit exclusion, the idea behind this exclusion was to limit the protection afforded to spare parts, particularly for automobiles.

(i) *Appearance.* The must match exclusion is only concerned with the *appearance* of objects. This is to be contrasted with the must fit provision, which concerns the interconnection of parts so that either can perform their *function*. If we consider a classic example, such as a car door, there will probably be both must fit and must match features: the must fit features will enable the door to fit into the chassis and the handle to fit onto the door; the must match features will relate to the general shape of the door, in particular any styling features, which must match the rest of the car in order to be of an acceptable appearance.

(ii) *'Dependent' upon the appearance of another article.* The must match exclusion only operates where designs are 'dependent' upon the appearance of another article. The fact that designs are aesthetically linked to (or dependent upon) the appearance of the article as a whole lies at the heart of the rationale for the must match exclusion.

A part will be dependent and thus unprotected if it is *not* possible for it to be replaced with a different part without radically altering the appearance or the identity of the vehicle as a whole. A Mercedes-Benz with a Volkswagen roof, is no longer a Mercedes-Benz but a cannibalized mismatch. Where the owner of a complete article is obliged to replace a worn, damaged, or missing component with an identical component to maintain the appearance of the article, the part will be dependent. Where a part is dependent, the maker of the spare part has to produce a part which looks exactly like the original or it is unsaleable. They have no design freedom. Consequently, it is likely that parts such as the main body panels, doors, bonnet lids, and so forth will be treated as being 'dependent' on the appearance of the car as a whole.²⁸

In contrast, a part will be non-dependent and therefore protected if it can be replaced by a part with a different shape and configuration in such a way that it does not alter the appearance of the article as a whole. If it is possible to substitute parts with parts of different shape and configuration, while leaving the general shape and appearance of the vehicle unaffected, the part will not be a dependent. One of the defining aspects of a non-dependent part is that while it (necessarily) contributes to the appearance of the vehicle, it is *subsidiary* to the overall shape. That is, it can be replaced without 'radically altering' the appearance of the vehicle (or article) as a whole.

For example, a steering wheel may be replaced with an alternative wheel of a sportier

²⁷ Prior to reform of the registered design system, the must match exclusion also operated in that context: see Bently & Sherman, *Intellectual Property Law* (1st edn.), 590–2.

²⁸ See *In Re Ford Motor Co. & Iveco Fiat SpA* [1993] RPC 399 (a pre-harmonization registered designs case). The question was not considered by the House of Lords: *R v. Registered Designs Appeal Tribunal, ex p. Ford* [1995] RPC 167. For unregistered design right cases, see: *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC (16) 257, 279–80 (particular shape of umbrella case claimed by claimant held not dependent on shape of umbrella); *Ultraframe UK Ltd v. Fielding* [2003] RPC (23) 435, 460 (para. 79) (parts of conservatory roof assembly system which gave 'consistent theme' were not 'dependent').

design while leaving the general appearance of the vehicle unchanged. Likewise, an owner might choose to substitute seats with more comfortable seats. Although the owner of a car might wish the component to blend in with the general style of the vehicle, such items would *not* be dependent on the appearance of another article. This reflects the goal of the section which was to 'protect spare parts to the extent that they have features of shape and configuration which do not have to be copied in order to fit or to match aesthetically'.²⁹

(iii) *'Dependence' does not require the other article to exist.* The must match exclusion only prevents protection of those features of an article which must match those of another article. It is also clear that one shape can be dependent upon another article even though the latter may not yet exist. The provision requires the court to assume the pre-existence of another article and decide whether the shape or configuration of the article depicted in the design is dependent on the appearance of that other article.³⁰

(iv) *Defining the 'other' article.* Another notable aspect of the must match exclusion is that design features are only excluded where they are dependent on the shape of 'another article'. This gives rise to the difficult question of what is meant by 'another article': an issue which was discussed under the old law of registered designs in *In re Ford Motor Co. & Iveco Fiat SpA*.³¹ In the case, it was agreed that there were basically two ways of construing the phrase in the context of a part for a car. First, 'another article' could mean the vehicle as a whole, minus the part in question:³² this is the so-called 'n-1' approach. Alternatively, 'another article' could mean the whole car, including the part in question. While the decision is not altogether clear (nor convincing in its reasoning), the Registered Design Appeal Tribunal ultimately favoured the latter approach.³³ On appeal, the High Court confirmed that in relation to spare parts, 'other article' meant the vehicle as a whole.

(v) *Integral part.* The exclusion only operates where the features relate to an article which forms an 'integral part' of another article. A part is integral if it is essential to the overall design or look and feel of the article. As such, it excludes non-essential parts (the extras) such as tool kits or a car jack. As most articles or parts of articles that are non-integral will also be non-dependent, it seems that it adds little to the scope of the provision.

The provision is important, however, insofar as it helps to clarify that, although a particular item may not stand alone, this does not therefore necessarily also mean that the item forms part of another article. While articles, such as cups and saucers or knives and forks may fit together, this does not necessarily mean that they fall within the scope of the exclusion.³⁴ For example, while an article such as a cup might need to match a saucer, it is unlikely that the designer would have intended the cup to form an 'integral part' of the saucer.

In order for an article to be treated as an integral part of another article, the designed article in question must be subservient to the appearance of the other article. As such, where the articles play an equal part in the overall product, the design will not fall within the scope of the exclusion. This can be seen, for example, in relation to a unit of a range of kitchen cupboards which was held not to be an article that formed an integral part of

another article. Instead, it was seen as one of a 'series of matching articles none of which forms an integral part of another'.³⁵

2.3 ORIGINALITY

Unregistered design rights only subsist in 'original' designs. A design is not 'original' if, at the time of its creation, it is 'commonplace in the design field in question'.³⁶ Deciding whether a design is original involves two stages.

First, it is necessary to decide whether the design is original in the copyright sense. That is, in the sense that the design originated with the designer and was not slavishly copied from a pre-existing design.³⁷ Second, if the tribunal is satisfied that the designer created the design, it must see if the design is commonplace in the field in question.

The concept of 'commonplace designs' is peculiar to this right. In *Farmers Build v. Carier Bulk* the Court of Appeal said that it would be wrong to attempt any further definition of what 'commonplace' meant.³⁸ Rather, it preferred to look at the term in the light of its legislative history and purpose. Given that unregistered design right is intended to protect functional designs, and gives relatively weak protection (and that there are safeguards excluding the protection of spare parts), Mummery LJ concluded that it would be wrong to interpret 'commonplaceness' broadly. Its purpose is 'to guard against situations in which even short-term protection for functional designs would create practical difficulties'.³⁹ Consequently, once it is shown that the design was not copied, all that is required is that the design must be in some respects different from other designs so that it can be fairly and reasonably described as not commonplace. This second inquiry itself has three stages.

The first stage is to decide what is the design field. This is an important stage of the inquiry, because the broader the design field, the more likely a particular design is to be commonplace. Some guidance on the definition of the field has been provided by the Court of Appeal in *Scholes Windows v. Magnet*.⁴⁰ In this case the defendant argued that the claimant's design for decoratively-shaped window frames made in unplasticated PVC was commonplace. The defendant said the assessment should be made by considering traditional window designs for wooden frames. The claimant disputed this arguing that the design field was 'PVC window design'. The Court of Appeal rejected that view. It said that while the words 'design field' bear their 'ordinary and natural meaning', the bounds of which are issues 'of fact and degree', the definition of 'design' in this context relates to shape and configuration, rather than materials or the nature and purpose of the article. Consequently the design field is not to be defined by reference to limitations of this sort. In

³⁵ *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 73.

³⁶ CDPA s. 213(4).

³⁷ *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461, 481. *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC (16) 257, 272 per Park J (para. 42) (must have been consciously designed rather than arising accidentally). Cf. *Guild v. Eskandar* [2003] FSR (3) 23 (paras. 44–56) (recognizing that accidental feature could contribute to originality of design because it was perpetuated on purpose, but holding in the circumstances that the design lacked originality).

³⁸ [1999] RPC 461, 479.

³⁹ [1999] RPC 461, 481; *Scholes Windows v. Magnet* [2000] FSR 432, 443 *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC 257, 273 (para. 50) (commonplace to be interpreted narrowly rather than widely).

⁴⁰ [2002] ECDR (20) 196; [2002] FSR (10) 172.

the case in hand, therefore the design field was that of window frames generally. While this decision is helpful in clarifying inappropriate ways of defining a 'design field', it provides little further guidance.⁴¹

The second stage of the inquiry requires the court to examine the design of other articles in the same field including any allegedly infringing article. The Court of Appeal in *Scholes* emphasized that the court should be concerned with those designs in the field at the time of creation of the design in issue.⁴² This may include old designs, even if they are no longer available for purchase, if such designs were still available to be viewed by designers and interested members of the public. Consequently, the claimant's design in *Scholes* was to be considered in the light of the continued presence of Victorian sash windows in the built environment in 1994 (the date of creation of the claimant's design).⁴³ Other decisions have suggested further that the issue of commonplaceness is primarily, and possibly exclusively, concerned with designs which were available in the United Kingdom. As a result, designs only available in foreign countries or in other ways 'obscure' are unlikely to be taken into account.⁴⁴

Third, the court should compare the design in question to determine how similar it is to designs in the same field.⁴⁵ The closer the similarities, the more likely the design is commonplace.⁴⁶ This is because if different designers have independently come up with similar designs, but each is given protection, practical difficulties of proof of copying and enforcement will arise: and these are precisely the difficulties which the requirement (that the design be not commonplace) is intended to avoid. If, however, there are aspects of the claimant's design which are not to be found in the field in question, the design is probably not commonplace.

Obviously, 'commonplaceness' is a question of fact on which little further guidance can

⁴¹ In a case concerning designs of kitchen cabinets, the court held that the design field was 'fitted kitchen furniture' rather than 'cabinetry generally' because kitchen furniture was 'a discrete design field, with its own particular problems and characteristics': *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 74. Presumably, *L. Woolley Jewellers Ltd v. A. & A. Jewellery Ltd* [2003] FSR (15) 255 (treating design field as 'coin-mounted jewellery design') and *Spraymiser Ltd & Snell v. Wrightway Marketing Ltd* [2000] ECDR 349, 363 (defining field as 'the design of wooden configurable figures of the human form') defined the field too narrowly.

⁴² *Scholes Windows v. Magnet* [2002] ECDR (20) 196, 205 (esp. para. 45).

⁴³ Old designs will not necessarily remain present in the field: whereas sash windows have a long life, umbrellas break and are quickly thrown away: *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* [2003] RPC (27) 499, 526 (para. 83).

⁴⁴ *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC 257, 273 (para. 52) (an obscure piece of prior art does not render commonplace) (para. 52); *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* [2003] RPC (27) 499 (paras. 73, 78) (Australian and Japanese examples irrelevant: this is not a novelty inquiry) (Judge Michael Fysh QC). Cf. *Guild v. Eskandar Ltd* [2001] FSR (38) 645 (Rimer J) (design field described as 'global one of ladies' luxury fashion' as opposed to the 'sensual/philosopher' market proposed by the defendant); *Spraymiser Ltd & Snell v. Wrightway Marketing Ltd* [2000] ECDR 349, 364 (comparison with design from United States).

⁴⁵ The court usually looks at the designs through the eyes of the customer: *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* [2003] RPC (27) 499, 509; *Scholes Windows v. Magnet* [2002] ECDR (20) 196, 206 (paras. 49–50) (expressly rejecting suggestion that comparison should be from the point of view of a designer who is an expert in the field).

⁴⁶ Though where similarities which existed between a design and one already in the field were a result of the fact that both designs were modelled on the human-form, the court held the later design was not commonplace, because of differences in the detail of the features: *Spraymiser Ltd & Snell v. Wrightway Marketing Ltd* [2000] ECDR 349.

be provided. However, one observation is worth making. This is that the commonplaceness test seems to operate more harshly against decorative designs than against functional ones. This is because, in the case of decorative designs, there is likely to be a larger reservoir of existing designs in the field. This can be seen by comparing *Farmers Build* with the *Scholes Windows* case. In *Farmers Build*, the Court of Appeal held various components of the slurry separator (such as the hopper design), as well as the combination of elements to be original and protected. In part this was because slurry separators were relatively new machines, and there were not many comparators. Consequently, the (albeit visually unexceptional) functional differences between some of the claimant's parts and those of comparators meant that the claimant's design was not commonplace.⁴⁷ In *Scholes Windows v. Magnet*,⁴⁸ however, the claimant's design was in the crowded field of window frame design, and the not commonplace test posed more of a hurdle. The design—a design of a PVC window frame which was intended to evoke a traditional Victorian sash window—was held to be similar to existing window designs and not to be sufficiently different to lift it out of the ordinary run of such designs.⁴⁹

The test of whether a design is original and not commonplace needs to be compared closely with the test of novelty and individual character described in Chapter 27 which applies to the Community and harmonized regimes. Although the starting points are very different, it is a matter of time before we can say how different these thresholds are. The eventual perceptions may determine when the UK's unregistered design right is preferred to Community rights.

2.4 QUALIFICATION

The unregistered design right is only available in a design which meets one of the following criteria:⁵⁰ (i) the designer is a 'qualifying person', namely a citizen or subject of, or an individual habitually resident in, a 'qualifying country', that is, the United Kingdom, the EC, a country to which the relevant Part of the 1988 Act 'extends', or a 'designated country'; (ii) the designer has been commissioned by or is employed by such a 'qualifying person';⁵¹ or (iii) the design has been first marketed by a 'qualifying person' in the United Kingdom, the EC, or a country to which the Part 'extends'.⁵² Because of the limited scope of these provisions, many foreign designs will not qualify for protection in the United Kingdom.⁵³

⁴⁷ [1999] RPC 461, 484.

⁴⁸ [2000] FSR 432; affirmed on appeal [2002] ECDR (20) 196, 205.

⁴⁹ [2000] FSR 432, 442.

⁵⁰ CDPA s. 218. However, if the design was created in pursuance of a commission or in the course of employment, then it must qualify by that route or by first-marketing.

⁵¹ CDPA s. 219. A design which was commissioned or made in the course of employment cannot qualify via the s. 218 route (designer a 'qualifying individual').

⁵² CDPA s. 255 allows for orders 'extending' the Part of the Act to the Channel Islands, the Isle of Man, or any colony, while CDPA s. 256 allows for orders to be made 'designating' countries as enjoying reciprocal protection. See Design Right (Reciprocal Protection) Order 1989 (SI 1989/1294) (designating countries such as Anguilla, Bermuda, Hong Kong, and New Zealand).

⁵³ *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 724.

3 OWNERSHIP

The unregistered design right initially vests in the designer (subject to two exceptions).⁵⁴ The designer is the person who creates the design.⁵⁵ The case law has yet to develop, though it seems that a person who provides an idea for a product will not be regarded as a creator.⁵⁶ Nor will a person who merely executes instructions.⁵⁷ As with copyright, it seems that the creator is the person who gives the expressive form—the shape and configuration—to the design.⁵⁸

The two exceptions to the general principle as to first ownership relate to: designs created in pursuance of a commission, which are owned by the commissioner;⁵⁹ and designs created in the course of employment, which are owned by the employer.⁶⁰ As Laddie J has explained '[a]s a rough and ready rule of thumb, if designs are created and paid for by another, the statutory rights under the Act should belong to that other'.⁶¹ The rules on ownership of rights in commissioned designs are different from those in copyright law, so that copyright in design drawings may vest in one person (the designer) and the unregistered design right in the design embodied therein in another (the commissioner).⁶²

4 DURATION

The unregistered design right lasts for fifteen years from creation,⁶³ or, if the design was marketed within five years of creation ten years from the date of such marketing.⁶⁴ The maximum period of protection is therefore fifteen years. The dual system of protection means that designers get an effective period in which to interest manufacturers or pur-

⁶³ More specifically, from the end of the year in which the design was 'first recorded in a design document, or an article was first made to the design, whichever first occurred'.

⁶⁴ CDPA s. 216(1).

chasers, before actual marketing of the design.⁶⁵ The right is subject to licences of right ‘in the last five years of the design right term’.⁶⁶

5 INFRINGEMENT

5.1 RIGHTS

The owner of an unregistered design right in a design has the exclusive right to reproduce the design for commercial purposes, *inter alia*, by making articles to that design.⁶⁷ Reproduction of a design by making articles to that design is defined to mean ‘copying the design so as to produce articles exactly or substantially to that design’⁶⁸ or making a design document recording the design for the purpose of enabling such articles to be made. The owner of design right also has an ‘authorization right’, that is the right to authorize another to do any of the acts.⁶⁹ Since this is likely to be treated in the same way as the concept of ‘authorization’ in copyright law, the reader is referred back to Chapter 6.

The owner of an unregistered design right can also object to various acts of secondary infringement. These concern commercial dealings with infringing articles: importing such articles into the UK, possessing such articles for commercial purposes, as well as selling such articles and exposing them for sale. These will often be of great importance in this context, as the primary act will frequently have taken place abroad (where labour and material costs are lower). As with secondary infringement of copyright, there is a *mens rea* requirement: namely, that the alleged infringer ‘knows or has reason to believe’ the article is infringing. The concept of ‘reason to believe’ has been interpreted in the same way as the equivalent copyright provisions,⁷⁰ and, as before, the reader is referred back to Chapter 8 for further analysis.

Once it is clear that the defendant’s activities fall within the scope of the protected rights, it is necessary to show that there has been ‘substantive’ infringement. The three key elements of substantive infringement are (i) derivation; (ii) so as to produce articles; (iii) which are substantially similar in design.

5.2 DERIVATION

In order for an unregistered design right to be infringed it must be copied. As a result, in order to show infringement it is necessary to demonstrate a causal connection between the two designs. It is not enough to show that the designs are similar. In some cases this will be unproblematic: there will be direct proof of copying. Often this will be where the alleged infringer was formerly supplied by the claimant of the design right, but decided (for

⁶⁵ Fellner, paras. 3.046–3.053.

⁶⁶ CDPA s. 237.

⁶⁷ CDPA s. 226(1).

⁶⁸ CDPA s. 226(2).

⁶⁹ CDPA s. 226(3).

⁷⁰ *Baby Dan v. Brevi* [1999] FSR 377, 392; *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC 257 (knowledge of the existence of a registered design); *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* [2003] RPC (27) 499, 530–1 (inference of knowledge based on knowledge of Fulton’s action against Barnett in separate litigation).

whatever reason) to start manufacturing similar designs.⁷¹ Occasionally, there will be evidence that the defendant's designer used the claimant's design as 'inspiration'. However, in many cases there will be no direct proof of derivation, and proof of 'copying' will depend on proving 'access' and 'similarity'.⁷²

This can be seen in *Amoena v. Trulife*, where the defendant began to market PVC breast prostheses similar to ones which the claimant had been selling over the previous year. Jonathan Sumption QC dismissed Amoena's allegation of infringement of unregistered design right on the ground that it had failed to prove that Trulife had copied the design. Although the defendant would have had access to the claimant's product, and produced a similar product comparatively swiftly, Judge Sumption said he was unable to infer copying merely from the fact that the form of the designs were the same. The reason for this was because a number of design constraints limited the range of possible forms the design could take. As such, it was reasonable to conclude that the similarity could be explained on grounds other than copying. In designing breast prostheses a designer needed to emulate the appearance of a breast in a bra, the shape and size of scarring left by a mastectomy, as well as surgical practices. The judge concluded that 'designers pursuing similar objectives determined by bra design, surgical practice and stocking requirements are quite likely to arrive at designs which have a great deal in common'. While such similarities might have been the result of copying coupled with the deliberate introduction of differences, the two designs were not so similar that this was the only explanation or even the most inherently probable. The degree of similarity was perfectly capable of being explained on the basis that two designers had independently sought to achieve the result suggested to them, by the design of the bra and the location of the scars produced by current surgical methods.

5.3 SO AS TO PRODUCE 'ARTICLES'

In order to infringe an unregistered design right it is necessary to show that the defendant copied the design so as to produce *articles* exactly or substantially similar to the protected design. Two interesting questions arise in relation to this requirement. First, is there infringement where a defendant uses the design on different articles? Second, in the case of designs for parts of articles, is the comparison to be made between the parts themselves or between the part claimed and the whole of the defendant's alleged infringement?

5.3.1 Application to different articles

As with Community registered and unregistered designs, and the new harmonized national registered design,⁷³ it seems that unregistered design right will be infringed where a substantially similar design is used on other articles. In *Electronic Techniques v. Critchley*

⁷¹ *Baby Dan v. Brevi* [1999] FSR 377, 387 (where the defendant's design retained certain functional features of the claimant's design, even though in the defendant's design these features were not necessary to achieve the function); *Parker v. Tidball* [1997] FSR 680; *Farmers Build v. Carrier Bulk Materials Handling* [1999] RPC 461, 466.

⁷² *Ibid.*, 481. Compare *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC 257 (inference of copying by manufacturer in Taiwan drawn from multiplicity of similarities), with *Guild v. Eskander* [2003] FSR 23 (no copying proven).

⁷³ See above at pp. 647–8, 652–3.

Components Laddie J said that since unregistered design rights are ‘presumably intended to reward and encourage design effort, it seems unlikely that the effort should only be protected and rewarded if the infringer happens to use the design on precisely the same type of article’.⁷⁴ However, Laddie J added an important qualification to the general proposition that unregistered design right is infringed by use of the design on other articles. He said that this did not mean that the nature of the defendant’s article was irrelevant:

It may be that a design applied to certain articles has a different impact to the same design applied to others. In such cases it may well be that the design, in the context of other features of shape and configuration of the article itself, may be viewed differently to the same or a similar design in a different context.⁷⁵

5.3.2 The test with partial designs

The definition of infringement as involving the use of the claimant’s design in relation to ‘articles’ rather than to parts of articles has posed particular problems where the claimant’s design is for part of an article. The reason for this is that although the design right subsists in ‘the design of any aspect of the shape or configuration . . . of the whole or part of any article’, infringement occurs where the defendant is shown to have copied ‘the design so as to produce *articles* exactly or substantially to that design’. The statutory provisions thus seem to be inconsistent. In *Parker v. Tidball*, Judge Englehart attempted to resolve the conflict explaining that:

in a case where a design of part of an article is reproduced in part of an allegedly infringing article, one should ask oneself what by way of comparative design would be suggested to the interested observer but to do so in the light of the entirety of the allegedly infringing article, not just by confining attention to the corresponding parts. Moreover, the inquiry is directed to substantial, not necessarily exact, correspondence.⁷⁶

5.4 SUBSTANTIAL SIMILARITY

In order to infringe an unregistered design right, it must be shown that the defendant copied the design so as to produce articles that are exactly the same as or *substantially* similar to the claimant’s design.⁷⁷ It is a somewhat different test from that of copyright infringement, where the focus is (as we saw in Chapter 8) on whether the defendant has reproduced a ‘substantial part’ of the claimant’s work. In the case of designs, we are concerned with overall similarity, not just appropriation of part.⁷⁸

In cases where the design is for the appearance of an article, the question of whether the designs are the same is to be determined through the eyes of the relevant customer.⁷⁹ It is a matter of overall impression, and conclusions on such ‘matters of feel’ are not easily explained through written judgments.⁸⁰ In one case, it has been suggested that the

⁷⁴ *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401, 418.

⁷⁵ See above pp. 652–3.

⁷⁶ *Parker v. Tidball* [1997] FSR 680, 691. ⁷⁷ CDPA s. 226(2).

⁷⁸ *L. Woolley Jewellers Ltd v. A. & A. Jewellery Ltd* [2003] FSR (15) 255, 261.

⁷⁹ *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 75; *A. Fulton Co. Ltd v. Totes Isotoner (UK) Ltd* [2003] RPC (27) 499, 528.

⁸⁰ *Ultraframe UK Ltd v. Fielding* [2003] RPC (23) 435, 462 (para. 85).

question is whether a consumer looking at the two designs side by side would say they are made to substantially the same design.⁸¹ However, a visual test is inappropriate where the design features lie in details that cannot be seen by the eye. It will be recalled that in *Ocular Sciences*, Laddie J accepted the claimant's argument that each of their lenses, though differing from their neighbours only in fine dimensional details, might constitute a separate design. Indeed, Laddie J observed that the designs were protectable despite the fact that a member of the public could not tell the design of one lens in a particular range from another in the same range by mere visual inspection. If such protection is to be meaningful, the question of whether copying is exactly or substantially to the same design must not simply be a question of visual similarity.

A visual test is also inappropriate where the features of shape or configuration that are protected by unregistered design right are functional.⁸² In those circumstances the question should be whether the defendant's design embodies a form which is similar (taking into account the way the form operates to achieve the function). Although it was not necessary to decide the point, this was the kind of approach taken by Pumfrey J in his discussion in *Mackie Designs* of what would amount to infringement of unregistered design right in a circuit board.⁸³ The question of similarity would not be one of visual comparison of the shapes and colours from the point of view of someone unversed in electronics but a comparison through the eyes of someone versed in electronics, and interested in the functioning of the circuit, of the units, their order, and interconnections.

6 DEFENCES: RELATIONSHIP BETWEEN UNREGISTERED DESIGN RIGHT AND COPYRIGHT

Section 236 of the 1988 Act states that 'it is not an infringement of design right in the design to do anything which is an infringement of copyright in that work'.⁸⁴ Consequently, to the extent that there is dual protection, copyright pre-empts unregistered design right. However, as we have seen, section 51 severely limits the impact of copyright protection in this area. This is because, where copyright and unregistered design rights both exist, section 51 provides a defence so that the making of an article to the design does not infringe copyright, but may nevertheless infringe unregistered design right. An exhaust pipe produced indirectly from design drawings would not infringe copyright in those drawings. It would, however, infringe unregistered design right as regards those features of the exhaust pipe which are not excluded as 'must fit' or 'must match' features.⁸⁵

⁸¹ *A. Fulton Co. Ltd v. Grant Barnett & Co. Ltd* [2001] RPC 257, 283.

⁸² Cf. *C. & H. Engineering v. Klucznik* [1992] FSR 421, 428 (applying visual test to functional design).

⁸³ *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 723; *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 75.

⁸⁴ CDPA s. 236.

⁸⁵ However, where a design comprises surface decoration as well as configuration, the division of the creative elements amongst two forms of protection may have undesirable effects: *Jo Y Jo v. Matalan Retail* [2000] ECDR 178, 200.

7 SYNTHESIS

The legal protection of designs is a complicated matter. As a result, it may be helpful to conclude with some simple examples.

Example 1. A has designed a double-barrelled syringe, which he marketed. It is registered as a design in the UK and at the OHIM. A similar syringe has subsequently appeared on the UK market where it is being sold by X.

Firstly, we should consider the validity of A's national or Community registered designs. Both regimes afford protection to the 'appearance of . . . a product'.⁸⁶ One question will be whether the features are 'solely dictated by its technical function',⁸⁷ though as mentioned it is thought this will apply only rarely. Parts of the handle might be excluded as 'mechanical interconnections',⁸⁸ where an exact fit is required with the plunger. A more difficult hurdle will be whether the design is new and has individual character.⁸⁹

On the assumption that the registrations are valid, we would need to decide whether X infringes. X is using a design by selling articles bearing it.⁹⁰ There is no need to prove that the design was copied. The critical issue will be whether X's design produces on an informed user a different overall impression: if it does there is no infringement.⁹¹

If A can prove copying he will also be able to rely on Community unregistered design right at least for the period of three years from when the design was made available.⁹²

A will not be able to rely on copyright. The syringe is not itself an artistic work.⁹³ The drawings, if any exist, are designs for something 'other than an artistic work'. It is not an infringement to make articles to the design or copy articles made to the design.⁹⁴

A may, however, be able to rely on unregistered design right. This protection would arise automatically as regards features of shape and configuration.⁹⁵ Surface decoration (such as the measure) would not be protected. Parts of the handle might be excluded on grounds of 'must fit'—both with the syringe barrel and, possibly, the hand of the user.⁹⁶ If the shape is 'not commonplace', it may be protected.⁹⁷ (It is conceivable that the syringe might lack 'individual character' and yet be not commonplace). Assuming the syringe is protected, A will need to prove X is dealing in 'infringing articles': that is, articles made without A's permission, by copying A's design (directly or indirectly) and which are articles made substantially to the design.⁹⁸ Whether the articles are 'substantially to [the] design' is a matter of impression and only in a few cases would the result differ from that based on the registered design. A will also need to prove that X is either a primary infringer, or knows or has reason to believe the articles are infringing articles. The defence in section 236 will not apply because making articles to the design is not an infringement of copyright.

⁹⁷ CDPA s. 213(4).

⁹⁸ CDPA s. 228 (defining infringing article), s. 226.

⁸⁸ Designs Dir., Art. 7(2).

⁹¹ Designs Dir., Art. 9; RDA s. 7; CDR, Art. 10.

Example 2. B has designed a steering wheel for a new car and has retained his preliminary drawings. The steering wheel is of a conventional circular design and characterized in that it has four radiating spokes, in the shape of a 'CND' sign. B is about to commence production.

B may be able to obtain a national or Community registered design for the shape of the steering wheel. The design relates to the appearance of a product, which includes 'parts intended to be assembled into complex products'.⁹⁹ The main question will be whether the design is new and has individual character. For parts to be used in complex products, the Community-based regimes require the part to be visible in use: this should not be a problem for steering wheels.¹⁰⁰ The fact that the design is known as a CND sticker might be thought to raise issues of novelty. However, the design of the sticker is two-dimensional, whereas the three-dimensional version is different—it will have spatial presence, texture, and weight. The design would almost certainly produce a different impression on an informed user. However, a registration might be declared invalid as an infringement of copyright.¹⁰¹ Pending an application for registration, B benefits from the grace period for twelve months, and if B chooses not to register from the Community Unregistered Design Right for three years from making the design available.

B will be able to rely on copyright in any design drawings. However, such copyright will not enable B to prevent anybody replicating the steering wheel.¹⁰²

B will be able to rely on unregistered design right insofar as the steering wheel is a shape, which is original and not commonplace. Design right will not protect must fit nor must match features.

Example 3. C has developed a design for a door handle shaped as an eagle's head. C has original drawings and preliminary clay models.

C could register the design at a national or Community level, and will also have protection automatically (for three years from the making available of the design) by virtue of Community Unregistered Design Right. There may be issues as to whether the door handle is new and has individual character.

C could rely on copyright protection in the drawings and the clay model, if the latter were treated as a 'model for the purposes of sculpture'.¹⁰³ If the handle is mass-produced it is unlikely to be treated as a sculpture.¹⁰⁴ It could nevertheless be a work of artistic craftsmanship.¹⁰⁵ The extent of copyright protection will depend on the application of section 51 of the 1988 Act. If the design is a work of artistic craftsmanship, full protection would apply—either based on direct infringement of the work, or indirect infringement via the sculpture or drawings. If door handle is an artistic work, then the design drawing is a design document for an artistic work: thus, the section 51 defence does not apply. If the door handle is not an artistic work, the question arises whether the drawings, on which the sculpture was based, are designs for an artistic work; or whether they will be treated as designs for the door handle (a non-artistic work).

⁹⁹ Designs Dir., Art. 1(b); RDA s. 1(3); CDR, Art. 3(c).

¹⁰⁰ Design Dir., Art. 3(3); CDR, Art. 4(2); RDA s. 1B(8).

¹⁰¹ Designs Dir., Art. 11(2)(a); RDA s. 11ZA(4); CDR, Art. 25(I)(f).

¹⁰² CDPA s. 51.

¹⁰³ Cf. *J. & S. Davis (Holdings) v. Wright Health Group* [1988] RPC 403.

¹⁰⁴ *Wham-O Manufacturing v. Lincoln* [1985] RPC 127.

¹⁰⁵ *Coogi Australia v. Hysport International* (1998) 41 IPR 593 (FCA).

C could also attempt to rely on unregistered design right as regards the shape of the handles. However, according to section 236 of the 1988 Act, there will be no infringement of unregistered design right insofar as there is an infringement of copyright. The operation of unregistered design right is only significant, therefore if there is no infringement of copyright.

Example 4. D, an artist, produces an abstract painting (in the style of Mondrian) which is widely exhibited. It is later applied with D's consent, by E to ties. Y has now made trays bearing the painting.

E can apply to register the design for the tie at national or Community level. The application relates to the appearance of a product. The first issue that will need to be addressed is whether the design of the tie is new, given the existence of the painting. The Community-based regime provides no clear answer: whether an identical design has been made available depends firstly on whether the painting itself counts as a design. Is a painting the appearance of 'a product', namely the canvas?¹⁰⁶ Assuming the painting is a design, has it been made available? Making available includes exhibition, so it seems the painting has been made available.¹⁰⁷ Is the design of the tie identical to the design of the painting? Would the change in size, texture, and possibly colours (as well as the very nature of the product) be such that the design of the tie differs only in 'immaterial details'?¹⁰⁸ Does the design have individual character? If not, can the use of the artistic work within the previous twelve months be ignored on the basis of the grace period?¹⁰⁹ Here the hurdle is that the painting was made available by D, rather than the design of the tie by E—a situation which does not fall easily into the exclusion.

If the painting is not a design, it would seem that the design for the tie is a new design. This would mean that E would obtain monopoly rights as regards use of the tie on any product. E consequently could bring an action against Y, and the issue would be whether the design produced a different overall impression on an informed user. Would the design on a tray give a different impression from the design on a tie? If E had registered the design without D's permission, D could invalidate the registration on the ground that it infringed E's copyright.¹¹⁰ This ground would not, however, be available to Y.

D can rely, as against E or Y, on copyright in the painting. This is infringed where anybody applies the work to an artefact, because that amounts to reproduction of the work.¹¹¹ Section 51 has no application (because the painting was not a design 'for' anything: it simply was an artistic work).¹¹² However, if D permitted E to sell the tie bearing the design, after twenty-five years from marketing of the tie, it would no longer be an infringing act to apply the design to the tray.¹¹³ It is difficult to see how E could claim any copyright in the tie.

Neither D nor E can rely on unregistered design right. The design is not a shape.¹¹⁴

¹⁰⁶ RDA s.1(B)(2); Designs Dir., Art. 4; CDR, Art. 5(2).

¹⁰⁷ RDA s.1B(5)(a); Designs Dir., Art. 6; CDR, Art. 7(1).

¹⁰⁸ RDA s.1B(2); Designs Dir., Art. 4; CDR, Art. 5(2).

¹⁰⁹ RDA s.1B(6); Designs Dir., Art. 6(2); CDR, Art. 7(2)(b).

¹¹⁰ RDA s.11ZA(4); Designs Dir., Art. 11(2)(a); CDR, Art. 25(1)(f), (3).

¹¹¹ CDPA s.17.

¹¹² In any case, the painting is not a 'design', a term which relates to shape and configuration.

¹¹³ CDPA s.52. ¹¹⁴ CDPA s.213.

Example 5. F, an artist, creates an abstract sculpture which is exhibited in Holland Park. Z is thinking of selling paper-weights in a similar shape.

F may attempt to register the design of the sculpture at national or Community level. The critical question will be whether a sculpture is a product, that is, 'an industrial or handicraft item'?¹¹⁵ It seems improbable that the Registry, OHIM or courts will refuse to register such things, but they will require that F specify a product (and to identify its place in the Euro-Locarno Convention).¹¹⁶ If this has occurred, Z's use of a similar design will infringe if the resemblance is such that it does not produce a different overall impression.

F could rely on copyright, a sculpture being one of the 'artistic works' enumerated in section 4 of the CDPA, and protected 'irrespective of artistic quality'. F will thus be able to bring an action against Z on the ground that Z has infringed by reproducing the sculpture, or issuing copies of it to the public.¹¹⁷ However, F will need to prove that Z made the paperweights by copying the sculpture. If Z bought the paper-weights from a third party, F will need to show that the paper-weights are copies of the sculpture, and that Z knew or ought reasonably to have been aware that these were infringing copies.¹¹⁸

F may have unregistered design right, if the sculpture is treated as the design of the shape of an article. However, F will not be able to use unregistered design right against Z because of section 236: 'it is not an infringement of design right in the design to do anything which is an infringement of the copyright in that work'.

Example 6. G has produced a photograph and proposes to make birthday cards bearing the image.

G can register, either nationally or at OHIM. The design relates to the appearance of a product, and will obtain protection for up to twenty-five years. It will also benefit from Community Unregistered Design Right for three years from the first making available of the design.

G cannot rely on UK unregistered design right: there is no shape or configuration.

G can rely on copyright. The photograph is an original artistic work. Section 51 does not apply. Application to a greetings card will not affect the duration of protection: the article is excluded from the operation of section 52.¹¹⁹

¹¹⁵ RDA s. 1(B)(2); Designs Dir., Art. 4; CDR, Art. 5(2).

¹¹⁶ RDA s. 3(2).

¹¹⁷ CDPA s. 17, s.18. If F permits the exploitation of the sculpture by the making of more than 50 articles (which are copies of the sculpture) and their marketing, F's ability to restrain further uses of the sculpture after 25 years from such marketing may be compromised: s. 52(2). Although Copyright (Industrial Process and Excluded Articles) (No 2) Order 1989 (SI 1989/1070), para 3(1)(a) excludes 'sculptures' from the operation of CDPA s. 52, it does so only for sculptures 'other than casts or models used or intended to be used as models or patterns to be multiplied by any industrial process'. The better view is that F's copyright is unaffected if F sells multiple copies of the sculpture as a sculpture, but CDPA s. 52 comes into play if F permits the sale of articles modelled on the sculpture.

¹¹⁸ CDPA s.23.

¹¹⁹ CDPA s. 52(4)(b); Copyright (Industrial Process and Excluded Articles) (No. 2) Order 1989 (SI 1989/1070), para. 3(1)(c) (excluding 'greetings cards').

8 SEMICONDUCTOR TOPOGRAPHIES

A special form of legal protection, based on unregistered design right has been created to afford protection for the layouts of semiconductor chips (which are colloquially known as 'computer or silicon chips'). This section briefly explains this *sui generis* right.¹²⁰

When protection was first thought desirable for the designs of such chips, it was widely assumed in the USA that copyright protection would not be available (or if available would not be adequate) given that the design of such chips is essentially functional. As a result, in 1984 the USA passed a Semiconductor Chip Protection Act introducing a *sui generis* protection regime. Because the USA was only prepared to recognize the claims of foreign designers of semiconductor chips where the country of origin recognized the rights of US chip designers, the EC decided to adopt an equivalent system of protection. Consequently, in December 1986, an EC Directive was adopted requiring member states to bring into effect protection for semiconductor topographies.¹²¹ In the UK, this was effected initially by the Semiconductor (Protection of Topography) Regulations 1987,¹²² an instrument which was later repealed and replaced by the Design Right (Semiconductor Topographies) Regulations 1989.¹²³

8.1 THE UK SCHEME

Semiconductor topographies are now protected in the United Kingdom as unregistered designs, with certain modifications. Protection is afforded to the pattern or patterns fixed, or intended to be fixed, in or upon a layer or layers of a semiconductor product. A semiconductor product is defined as 'an article the purpose, or one of the purposes, of which is the performance of an electronic function and which consists of two or more layers, at least one of which is composed of semi-conducting material and in or upon one or more of which is fixed a pattern appertaining to that or another function.' The prerequisite of design right protection, that the design be 'original' and 'not commonplace', applies equally to topographies. Protection is provided against copying, but there is a defence for private reproduction for non-commercial aims and generous provision is made for reverse engineering.¹²⁴

Only a restricted range of foreign claims qualify relative to semiconductor topographies.¹²⁵ While the concept of 'qualifying country' is confined to the United Kingdom or another EEA member state, the notion of 'qualifying person' includes citizens, subjects, habitual residents, and bodies corporate listed in Schedule 1 to the Regulations. Consequently, if a design for a topography is commissioned by a 'qualifying person' who is also the first owner of design right or is created by a designer who is a 'qualifying

¹²⁰ As noted in Ch. 26, chips are also now protectable by Community Registered Design, National Registered Design, and Community Unregistered Design Right.

¹²¹ Council Directive 87/54/EEC of 16 Dec. 1986 on the legal protection of semiconductor products, *OJ L* 24/36.

¹²² SI 1987/1497. ¹²³ SI 1989/1100 (hereinafter Semiconductor Regs.). See above p. 615.

¹²⁴ Semiconductor Reg. 8. Cf. Software Dir., Arts. 4 and 6. ¹²⁵ Semiconductor Reg. 4.

person'¹²⁶ or the first marketing of a topography is by a 'qualifying person' in Europe, the design qualifies for protection in the United Kingdom. The countries listed include Australia, the USA, Japan, and others.¹²⁷

¹²⁶ The commissioner/employer and the designer routes are mutually exclusive, so that a commissioner or employer who is not a 'qualifying person' cannot claim the benefit of the designer being a 'qualifying individual'. Rather, if the commissioner or employer was first owner, it must be qualified; however, if the designer was first owner pursuant to an agreement to that effect, then the designer must qualify.

¹²⁷ For a lengthier exposition of these very complex requirements, see A. Christie, *Integrated Circuits and their Contents: International Protection*, 67–71 (1995).

PART IV

TRADE MARKS AND
PASSING OFF

1 INTRODUCTION

This part of the book is concerned with two related forms of intellectual property: namely, the common law of passing off and the statutory regime which protects registered trade marks found in the 1994 Trade Marks Act. These regimes regulate certain signs or symbols, usually words or pictures,¹ when used in trade in connection with particular goods or services. Classic (or infamous) examples include *MARLBORO* for cigarettes, *DREAMCAST* for computer games, the ‘golden arches’ in the shape of an M for restaurant services, and the ‘swoosh’ or rounded tick symbol for (*NIKE*) sports clothing. These two legal regimes transform signs into forms of property. In so doing, they enable the proprietors to prevent other traders from using the signs on the same or similar goods or services. Both forms of legal protection are available simultaneously. Under the law of passing off, the sign must have been used in trade so as to have acquired a reputation. In the case of the statutory regime, the sign must have been registered, either at the UK Trade Mark Registry or at the Community Trade Mark Office (called the OHIM). These forms of legal protection underpin the enormous value of some of these brands. In August 2003, the brand valuation agency Interbrand calculated that one hundred brands are now worth over US\$1 billion each, the most valuable, *COCA-COLA* and *MICROSOFT*, being worth in the region of \$70 and \$65 billion each.²

¹ Marks are often referred to according to the nature of the sign. A word mark is a registration of a word alone (irrespective of its depiction). A figurative mark is usually made up of a visual image, such as a picture. Marks which have both figurative and verbal elements are commonly referred to as ‘composite marks’. As we will see, there are new possibilities to register ‘three-dimensional marks’, ‘colour marks’, and ‘sensory marks’ (such as sounds or smells).

² See <http://interbrand.com>.

31

INTRODUCTION TO PASSING OFF AND TRADE MARKS

This chapter has three aims. First, it provides a brief history of the development of the law in this area. Second, it considers the ways in which legal protection of signs and symbols are justified. Third, the chapter provides an introduction to the international and regional background that informs and constrains law in the United Kingdom.

1 HISTORY

Most accounts of the history of trade marks tend to focus on two intertwined themes. One is a history of the social practices and understandings attached to the activity of applying marks to goods; the other is a positivist history of trade marks law. These two histories are often conflated in a way which suggests that the law inevitably evolves with, or ought to reflect the changes in, the nature and function of marks.¹ While acknowledging that many developments in trade marks law have been made in response to changes in the functions that marks perform, we would prefer to keep the histories separate to avoid any implication that a change in the function of marks requires us to alter (typically expand the scope of legal protection afforded by) trade marks law.

1.1 HISTORY OF MARKS

In the earliest times traders applied marks to their good to indicate ownership. These are called proprietary or possessory marks. For example, farmers commonly branded cattle and earmarked sheep as a way of identifying their livestock. In a similar way, merchants also marked their goods before shipment so that in the event of a shipwreck, any surviving merchandise could be identified and retrieved. From medieval times marks were used for a slightly different purpose within guild structures. Guilds were trade organizations that had control over who could make certain goods or provide certain services. They were also concerned to ensure that the goods were of a satisfactory quality. In order to be able to

¹ F. Schechter, *The Historical Foundations of the Law Relating to Trade Marks* (1925); G. Ruston, 'On the Origin of Trade-Marks' (1955) 45 *TM Rep.* 127 (tracing 6,000 years of use); T. Drescher, 'The Transformation and Evolution of Trademarks: From Signals to Symbols to Myth' (1992) 82 *TM Rep.* 301, 309–321. *Scandecor Development AB v. Scandecor Marketing AB* [2002] FSR (7) 122, 128–138 (Lord Nicholls).

identify the source of unsatisfactory goods, the guilds required their members to apply identifying marks or signs to the goods.²

With the demise of the guilds, it was no longer obligatory for traders to apply particular marks or signs to goods. However, with the growth of regional (as opposed to local) trading and the rise of factory production that accompanied the Industrial Revolution, many traders continued to apply their marks to the goods they manufactured.³ Moreover, with the growth of mass media and the reading public, traders started to advertise their goods by reference to these marks.⁴ In turn, purchasers of goods started to rely on the signs the goods bore as truthful indications of the source of the goods. Importantly they began to use them to assist their purchasing decisions. Over time, as consumers started to realize that some marks indicated a particular manufacturer, and in turn goods of a certain standard, the nature of the mark changed from being a source of liability to become an indicator of quality.

Another important change in the role played by marks took place around the beginning of the twentieth century. During this period trade marks changed from being indicators of origin (and thus signs from which consumers could assume consistency of quality) to become valuable assets in their own right.⁵ Thus it is said that some marks, by virtue of their distinctiveness or appeal, were able to convey some sort of emotional allure to potential consumers. Literally the sign attracted custom, not as a result of some idea or assumption of origin or quality, but as a result of so-called 'advertising' quality.⁶ Indeed, the mark *itself* (reinforced by advertising) gave rise to a desire for the product that was distinct from a desire based on a belief that the product would be of a particular quality. The trade mark serves more as a marketing tool and less as a means of identifying a product's source or sponsorship. This change in the function of trade marks has been described as a transformation from 'signals' to 'symbols'.⁷ As signals, trade marks trigger an automatic response and serve to identify the maker of the product. In contrast, as 'symbols' trade marks evoke a broader set of associations and meanings. Here they are used to identify the product or to give the product an identity. In so doing 'the mark became a symbol, a poetic device, a name designed to conjure up product attributes whether real or imagined'.⁸

More recently, trade marks have taken on new roles.⁹ In one commentator's words,

² P. Mollerup, *Marks of Excellence: The History and Taxonomy of Trademarks* (1997) 15–42; S. Diamond, 'The Historical Development of Trademarks' (1975) 65 *TM Rep* 265, 272.

³ B. Pattishall, 'Trade Marks and the Monopoly Phobia' (1952) 42 *TM Rep* 588, 590–1.

⁴ S. Diamond, 'The Historical Development of Trademarks' (1975) 65 *TM Rep* 265, 281 (with increased advertising came the increased use of trade marks in their modern function as identifiers of the source of the goods).

⁵ *Eastman Photographic Material Co. v. John Griffith Cycle Corporation* (1898) 15 *RPC* 105.

⁶ Brown identified three elements to the 'advertising' or 'persuasive' function: that which results from the distillation of associations, allure, etc. by advertising in the trade mark; that which results from previous experience by consumers of goods bearing the same mark; and that which results from the inherent attractiveness of the mark. R. Brown, 'Advertising and the Public Interest: The Legal Protection of Trade Symbols' (1948) 57 *Yale LJ* 1165, 1189.

⁷ T. Drescher, 'The Transformation and Evolution of Trademarks-From Signals to Symbols to Myth' (1992) 82 *TM Rep* 301.

⁸ *Ibid.*, 338.

⁹ R. Dreyfuss, 'Expressive Genericity: Trademarks as Language in The Pepsi Generation' (1990) 65 *Notre Dame LR* 397, 397–8, also describes how trade marks are the emerging *lingua franca*: 'with a sufficient command of these terms, one can make oneself understood the world over, and in the process, enjoy the comforts of home'.

marks have come to take on a 'mythical status'.¹⁰ In their mythical form trade marks help to provide consumers with an identity—for example, as a FERRARI or VOLVO driver or BUDWEISER or BUDVAR drinker. When the consumer purchases a product bearing a mark they purchase an 'experience envelope' which helps to construct their identity. This conception of the trade mark as myth is illustrated by books such as *American Psycho* where the attributes of the characters are conveyed through descriptions of their use of particular trade-marked products.¹¹ The conception of trade mark as 'myth' can be seen in the increased attention given to 'brands'. While the definition of brands varies in both marketing and legal analysis, it normally extends beyond a word or device mark to encompass the personality, style, or aura associated with a particular product. For those who would have us believe in the ontological status of brands, COCA-COLA is more than a product, a reputation for quality and a mark. Instead, it is an image and a way of life that is instituted through the presentation, marketing, advertising, and packaging, (as well as the production) of the product.¹²

1.2 HISTORY OF THE LEGAL PROTECTION OF MARKS

The history of the legal protection of trade marks has been less well charted than most areas of intellectual property, and the early developments are particularly obscure. It seems that the courts first began to protect 'marks' at the behest of traders in the sixteenth century. Acknowledging that such signs operated as an indication of source, the courts held that if another trader were allowed to use the same sign, this would allow a fraud to be committed on the public. Initially, protection was provided by the Common Law Courts through the action for deceit. The idea being that if a trader had already used a mark, the deliberate use of the same mark by another trader would amount to a form of deceit. Not much later, the Courts of Chancery used the action for 'passing off' to protect a trader who had developed a reputation or 'goodwill' through use of a particular sign or symbol. (This included the protection against innocent misrepresentations.) This action is still available today. In reflection of its origins in the common law of deceit, passing off always required a trader to establish that there had been a misrepresentation which deceived consumers. In effect this meant that the action was always concerned with confusion as to source. Even though the scope of the passing off action has since expanded, the action has never been severed from its origins in deceit. This has meant that the action has not developed into a general action for misappropriation of intangible value or unfair competition of the type recognized by other European legal systems.

A system of registration of marks was first introduced in 1875. The impetus for this came more from foreign sources than from domestic pressure. With increasing interest in international recognition of industrial property rights, foreign traders were unconvinced that British law provided them with the same level of protection against the misuse of their signs that foreign laws afforded to British traders in similar circumstances. Although the main impetus for the adoption of a registration system was to meet foreign concerns,

¹⁰ T. Drescher, 'The Transformation and Evolution of Trademarks—From Signals to Symbols to Myth' (1992) 82 *TM Rep.* 301.

¹¹ B. Ellis, *American Psycho* (Random House, 1991).

¹² B. Isaacs, *Brand Protection Matters* (2000), ch. 1.

the system that was adopted largely formalized the passing off action. The system allowed for the registration of a limited range of marks that the Registry subjected to examination prior to their entry on the Register.¹³

Trade mark registration brought with it a number of benefits. The most obvious was that it reduced the difficulties of proving goodwill and distinctiveness that arose in a passing off action.¹⁴ In addition, registration brought with it the possibility of a sign being protected prior to use. Other advantages of registered trade marks over passing off developed later: most notably, when the 1938 Act permitted the assignment of marks separately from the goodwill of the business.¹⁵ Despite this, passing off remained valuable insofar as the criteria of registrability were restrictive, the process of registration was inappropriate or unnecessarily onerous, and the rights granted were broader.¹⁶

Perhaps the most vexed question that has arisen has been that of determining the appropriate scope of protection. In reflection of its relationship with passing off, the 1875 Registration Act worked on the assumption that trade marks operated to indicate origin.¹⁷ However, as we just observed, around the beginning of the twentieth century marks began to function in other ways, notably as a silent ‘salesman’ that could sell products irrespective of consumer understandings about origin or associated quality. The recognition of the changed function of trade marks was soon coupled with a claim that trade mark proprietors *deserved* stronger protection to reflect the new ways marks were being understood. One of the most important advocates for greater protection was Frank Schechter, who is also the leading historian of trade marks.

Schechter radically asserted that modern trade marks law should have a single rational basis.¹⁸ More specifically, Schechter proposed that ‘the preservation of the uniqueness of a trade mark should constitute the only rational basis for its protection’.¹⁹ For Schechter (and his cohort of followers), marks should be protected as a species of property. Importantly this would mean that the owner would be protected when they were used on dissimilar goods as well as similar goods. Schechter argued that trade mark law was no longer adequate if it was wedded to a prerequisite of consumer confusion. The reason for this was that:

The real injury in all such cases . . . is the gradual whittling away or dispersion of the identity and hold upon the public mind of the mark or name by its use upon non-competing goods. The more distinctive or unique the mark, the deeper its impress upon the public

¹³ Although the position was not initially completely clear from TMA 1875 s. 10, it was soon accepted that the registered trade-marks system was a statutory supplement to the common law doctrine of passing off: *Great Tower v. Langford* (1888) 5 RPC 66; *Faulder v. Rushton* (1903) 20 RPC 477. It is clear today that protection is cumulative: TMA s. 2; *Interlotto v. Camelot Group plc* [2004] RPC (8) 171, Laddie J, [2004] RPC (9) 186 (CA).

¹⁴ *Spalding v. Gamage* (1915) 32 RPC 273 (the difficulty of proving distinctiveness was ‘one of the evils sought to be remedied by the Trade Marks Act 1875’).

¹⁵ TMA 1938 s. 22. Reviewed in *Scandecor Development AB v. Scandecor Marketing AB* [2002] FSR (7) 122, 134–138 (Lord Nicholls).

¹⁹ *Ibid.*

consciousness, and the greater its need for its protection against vitiation or dissociation from the particular product in connection with which it has been used.²⁰

Schechter's article soon became 'a talisman to members of the trademark bar who [sought] to expand the protection available to their clients'.²¹ In fact, its impact was not confined to the bar. Today, many commentators treat the subsequent period as one in which Schechter's insights have come to fruition. In particular, the arguments he made for expansion have gradually been acknowledged and implemented in national law. Notable examples include the expansion of the rights given to a trade mark proprietor to include 'dilution' (that is, certain uses of marks on *dissimilar* goods, even where consumers appreciate there is no connection); the recognition of signs as assets;²² the gradual abandonment of various restrictions on dealings with marks;²³ and the introduction of extended infringement provisions in the 1994 Trade Marks Act.

2 THE COSTS OF TRADE MARKS

One of the major charges against the protection of trade marks is that trade marks are monopolies and that monopolies are inefficient.²⁴ In most situations the characterization of trade marks as monopolies is unhelpful. As one commentator has noted, '[m]onopoly is merely an ugly word used by people to put a curse on any kind of property they do not like'.²⁵ In any case, trade marks are not properly treated as monopolies. This is because, in contrast with patent, design rights, and copyright, a trade mark does not give exclusive control over the sale of particular goods or services. Rather, it merely provides control over the use of the sign in connection with goods or services. Trade marks do not create monopolies, unless the sign is treated in combination with the goods or services as a product in its own right.²⁶ As one commentator pointed out, a trade mark 'quite simply, is not a monopoly in the underlying good, and no product market has ever been defined as narrowly as a single brand'.²⁷

Even if the charge that a trade mark is a monopoly has little to be said for it, that does not mean that trade marks law does not impose certain costs which require justification.

²⁰ Most modern commentators argue that the three functions sit side by side rather than that the origin and quality functions are subsumed in the advertising function: e.g. S. Diamond, *The Historical Development of Trademarks* (1975) 65 *TM Rep.* 265, 289–90; J. Lunsford, 'Consumers and Trademarks: The Function of Trademarks in the Market Place' (1974) 64 *TM Rep.* 75.

²¹ J. Swann and T. Davis, 'Dilution: An Idea Whose Time Has Gone. Brand Equity as Protectable Property, the New/Old Paradigm' (1994) 84 *TM Rep.* 267, 285.

²² *Lego v. Lemelstrich* [1983] *FSR* 155; *Mirage Studios v. Counter-Feat Clothing* [1991] *FSR* 145. See below at 867–78, 949–52.

²³ With increasingly less attention being paid to the role of the consumer: J. Davis, 'To Protect or Serve? European Trade Mark Law and the Decline of the Public Interest' [2003] *EIPR* 180 (arguing that emphasis of 'indication or origin' and 'advertising' functions have minimized extent of focus on consumer interest).

²⁴ E. Chamberlain, cited in N. Economides, 'The Economics of Trademarks' (1988) 78 *TM Rep.* 523, 532.

²⁵ E. Rogers, 'The Social Value of Trade Marks and Brands' (1947) 37 *TM Rep.* 249, 249.

²⁶ See, e.g. P. Behrendt, 'Trademarks and Monopolies: Historical and Conceptual Foundations' (1961) 51 *TM Rep.* 853.

²⁷ J. Swann and T. Davis, 'Dilution: An Idea Whose Time Has Gone. Brand Equity as Protectable Property, the New/Old Paradigm' (1994) 84 *TM Rep.* 267, 272. Brand premiums are rationalized as mere returns on reputation or investment in advertising.

Indeed, the grant of exclusive rights over certain signs has a number of social costs.²⁸ Probably the most obvious is that it restricts other people (most importantly other traders) from using the same or a similar sign. As the scope of the subject matter of trade mark rights has expanded to cover shapes, to avoid infringement a trader may need to design different packaging or shapes for goods. As the rights conferred by trade mark law expand, the costs increase for traders, even if they are not trading in the same or a similar field: costs of developing suitable marks, searching registers, and where necessary negotiating with owners of related marks. This is particularly so for new entrants.

To a large extent the way in which the 'harm' caused by trade marks is evaluated depends on the way signs and language are viewed. If we take the view that the number of suitable signs is infinite and the inherent value of all signs is fairly consistent, then the cost of adopting a different sign from one already used or protected by another trader should not be that great. If, however, we take the view that some signs are better than others and that the pool of available marks is limited, then the costs to other traders of one trader being granted ownership of a particular mark may be significant. As the better marks are used up, a trader will have to invest more and more money in establishing and building suitable associations with their signs. Business practices suggest that many traders consider that the choice of trade symbols is an important one and that some signs are better than others. This explains why firms such as Exxon spend so much time and money developing their marks. It also explains why so many marks are selected for their 'suggestive' or 'allusive' qualities.²⁹

More expansive trade mark protection, which gives a trade mark holder the ability to control non-trade mark uses or uses of similar marks in relation to dissimilar goods, imposes further costs. Some such regulations may even restrict free speech.³⁰ To the extent that the law confers power over words and symbols, it places to some degree the ability to make and control meaning in private hands. As Rosemary Coombe has observed, intellectual property law enables 'the commodification of symbols, imagery and text'. This enables trade mark owners to control both 'the sign's circulation and its connotations'. As such, intellectual property laws 'play a fundamental role in determining what discourses circulate in the public realm and achieve dominance, and how these "languages" are spoken, while providing both enabling conditions and limiting obstacles for those who seek to construct identities and compel recognition'.³¹

²⁸ W. Landes and R. Posner, 'The Economics of Trademark Law' (1988) 78 *TM Rep* 267, 268–9 (referring, *inter alia*, to the costs of transferring marks, enforcing them, and from the restriction on others from using similar marks).

²⁹ See J. Cross, 'Language and the Law: The Special Role of Trade Marks, Trade Names and other Trade Emblems' (1997) 76 *Nebraska LR* 95 (arguing that trade marks potentially operate to communicate four distinguishable messages: the 'denominative' message that the product came from a particular source; the 'associative' message that the goods are the same as those previously experienced by the consumer; the 'descriptive' message that the goods are of a certain quality or type; and the 'allusive' message, one which obliquely suggests some quality or association).

³⁰ And thus raise issues under ECHR Art. 10: see *WWF-World Wide Fund For Nature v. World Wrestling Federation Inc* [2004] *FSR* (10) 161 (para. 65) (CA).

3 JUSTIFICATIONS FOR THE LEGAL PROTECTION OF TRADE MARKS

In this section, we ask the question: why should we protect trade marks? In contrast with commentaries on copyright and patents, this topic has received relatively little attention. One possible reason for this is that the negative impact of trade mark rights is less obvious. Another reason is that for much of the last fifty years the flourishing of brands has been equated with the success of capitalism (in terms of increasing consumer choice).³² Indeed, to some commentators the benefits of trade marks (and thus their legal protection) are self-evident. In a remarkable post-war commentary, it was said that ‘the faith in trade marks is a phenomenon that the social sciences, some day, will describe as one of the greatest contributions of all time to social harmony and social progress’. Moreover, trade marks ‘transform mental confusion into mental harmony and . . . convert social distrust into mutual understanding’.³³ However, such blind faith in the value of trade marks is difficult to sustain and the time is ripe for a more open and critical examination of the justifications for protecting trade marks.³⁴

A number of different rationales have been used to justify trade mark protection. As we will see, there have been few problems in justifying the protection given to signs and symbols insofar as they operate as indicators of origin (to identify the origin or ownership of goods to which the mark is affixed), or as guarantees of quality (to signify that all goods bearing the mark are of a certain quality).³⁵ However, more problems have arisen in justifying the extensive protection that is currently granted to marks.

3.1 CREATIVITY

The arguments which are used to justify copyright, designs, and patents, which focus on the protection of labour and personality (whether as recognition of a right, as a reward, or as an incentive) are difficult to apply to trade marks. This is because while some trade marks may be invented, novelty is not a prerequisite to protection. These differences have not prevented some commentators from trying to extend the idea of ‘creation’ to encompass trade marks. This has been done either by claiming that a trader creates goodwill as much as an author creates a work, that a trade mark must be created to be protected in the sense of being either invented, or by virtue of the fact that a new association between the mark and a product, that is, a new meaning, has been created. Nevertheless, attempts to justify trade marks or goodwill as creations are weak, in part because while the associations between the mark and a source or goodwill may be instigated and nurtured by the trader, they are as much created by the customers and the public.

³² ‘Brand names, then, are the keystone of a competitive economy, an economy where every man is encouraged to do the best he can, and the public is the judge of whether or not he succeeds, because by branding his goods people will know that they came from him’: E. Rogers, ‘The Social Value of Trade Marks and Brands’ (1947) 37 *TM Rep* 249, 253.

³³ H. Link, ‘The Social Significance of Trademarks’ (1948) 38 *TM Rep* 622, 623, 625.

³⁴ e.g. N. Klein, *No Logo: Taking Aim at the Brand Bullies* (2000); R. Coombe, *The Cultural Life of Intellectual Properties* (1998).

³⁵ E. Hamak, ‘The Quality Assurance Function of Trademarks’ (1975) 65 *TM Rep* 318, 319.

Perhaps the most plausible argument made along these lines see trade marks as a reward for investment. This argument was summed up by Justice Breyer of the US Supreme Court when he said trade mark law helps ‘to assure a producer that it (and not an imitating competitor) will reap the financial, reputation-related rewards associated with a desirable product’. In so doing trade mark law thereby encourages ‘the production of quality products . . . and simultaneously discourages those who hope to sell inferior products by capitalising on a consumer’s inability quickly to evaluate the quality of an item offered for sale. It is the source-distinguishing quality . . . that permits it to serve these basic purposes’.³⁶

3.2 INFORMATION

Perhaps the most convincing arguments for the protection of trade signs is that they operate in the public interest insofar as they increase the supply of information to consumers and thereby increase the efficiency of the market. These arguments highlight the fact that trade marks are a shorthand way of communicating information that purchasers need in order to make informed purchasing choices. By ‘preventing others from copying a source-identifying mark’ trade marks law reduces ‘the customer’s costs of shopping and making purchasing decisions . . . for it quickly and easily assures a potential customer that this item—the item with this mark—is made by the same producer as other similarly marked items that he or she liked (or disliked) in the past’.³⁷

The information provided by trade marks is particularly important in relation to goods that a consumer cannot judge merely through inspection. (These are known as ‘experience goods’.) Where the quality and/or variety of goods is not readily apparent, trade marks enable consumers to choose the product with the desired features. Trade marks also encourage firms to maintain consistent quality and variety standards and to compete over a wide quality and variety. Consequently, it has been said that the ‘primary reason for the existence and protection of trade marks is that they facilitate and enhance consumer decisions and . . . they create incentives for firms to produce products of desirable qualities even when these are not observable before purchase’.³⁸

In some respects, it is impossible when assessing the protection of trade marks to divorce considerations about trade marks from considerations about advertising. This is because ‘[t]rade symbols are a species of advertising: their special characteristics are brevity and continuity in use, both of which are essential to their symbolic function’.³⁹ If trade marks function as a vehicle for advertising, one obvious question is whether we value advertising.⁴⁰ In a very influential article, American academic Ralph Brown tied the

³⁶ *Qualitex v. Jacobson Products* 115 S Ct 1300 (1995).

³⁷ *Ibid.* (Justice Breyer). In situations where the information relates to health or safety, the public interest in ensuring its accuracy is telling: see *S. v. London Borough of Havering* (20 Nov. 2002) (para. 11).

³⁸ N. Economides, ‘The Economics of Trademarks’ (1988) 78 *TM Rep* 523, 525–6. Landes and Posner call this the ‘economizing function’: W. Landes and R. Posner, ‘The Economics of Trademark Law’ (1988) 78 *TM Rep* 267, 270.

³⁹ R. Brown, ‘Advertising and the Public Interest: The Legal Protection of Trade Symbols’ (1948) 57 *Yale LJ* 1165, 1185.

⁴⁰ During the middle of the twentieth century economists were extremely sceptical about advertising. A view was taken that advertising persuaded consumers to accept or choose the wrong products and that it promoted allegiances that went beyond the superiority of the product. A. Greenbaum, ‘Trademarks Attacked’ (1968) 58 *TM Rep* 443.

legitimacy of trade mark protection to advertising.⁴¹ He said that ‘advertising depends on the remote manipulation of symbols, most importantly of symbols directed at a mass audience through mass media or imprinted on mass-produced goods. The essence of these symbols is distilled in the devices variously called trade marks, trade names, brand names or brand symbols’. Importantly, Brown drew a distinction between what he called informational and persuasive advertising.⁴² ‘From the point of view of the economic purist, imparting information is the only useful function of advertising’.⁴³ However, most advertising was ‘persuasive advertising’ and was socially unjustifiable. This was because it added costs and effectively insulated traders from competition. ‘By differentiating their products in order to carve out a separate market in which demand, price, and output can be manipulated . . . The main drive of advertising is to facilitate this latter form of control’. Brown was sceptical about the idea that in buying brands consumers were buying the associations, intangible allure, etc. Given his negative view of persuasive advertising, Brown argued that the task of the courts in trade marks cases was to ‘pick out, from the tangle of claims, facts and doctrines they are set to unravel, the threads of informative advertising, and to ignore the persuasive’.⁴⁴

Brown argued that in addition to being justified insofar as they were used to indicate source and quality, trade mark protection was also justified where it supports the informational aspect of advertising. For Brown, the advertising or persuasive function of marks is ‘of dubious social utility. There seems little reason why the courts should recognize or protect interests deriving from it’.⁴⁵ He considered likelihood of confusion to be the ‘universal judicial touchstone’.⁴⁶ Because persuasive rather than informational advertising can lead to distortions to incentives in a competitive economy,⁴⁷ in order to justify a corresponding extension of protection, these costs need to be shown to be worth sacrificing to some greater goal.

3.3 ETHICAL JUSTIFICATIONS

Ethical arguments have also been used to justify the trade mark regime. The main ethical argument for the protection of trade marks is based on the idea of fairness or justice. In particular, it is said that persons should not be permitted ‘to reap where they have not sown’. More specifically, it is said that by adopting ‘someone else’s mark, a person is taking advantage of the goodwill generated by the original trade mark owner’. Through this agricultural metaphor, the justification for protecting trade marks is linked to the broader arenas of the protection of traders against ‘unfair competition’ and ‘unjust enrichment’.⁴⁸

While classic cases where a trader uses someone else’s trade mark on identical goods are

⁴¹ R. Brown, ‘Advertising and the Public Interest: The Legal Protection of Trade Symbols’ (1948) 57 *Yale LJ* 1165.

⁴² See S. Haan, ‘The Persuasion Route of the Law: Advertising and Legal Persuasion’ (2000) 100 *Columbia LR* 1281 (describing the shift from informative/cognitive advertising to affective, symbolic, emotional, non-rational techniques of persuasion, and discussing the implication of this shift for legal advocacy).

⁴³ R. Brown (1948) 57 *Yale LJ* 1165, 1168.

⁴⁸ A. Kamperman Sanders, *Unfair Competition Law: The Protection of Intellectual and Industrial Creativity* (1997).

clearly objectionable under the principle that a person should not reap what they have not sown, the principle has also been used to justify more extensive protection. For example, it is said that one objection to 'comparative advertising' is that even though it does not confuse consumers, it takes advantage of the reputation that the earlier trader has built up. Similarly, the objections which are made to marks being used on dissimilar goods (for example the ROLLS ROYCE café) is that it takes advantage of the repute of the earlier mark.

Such attempts to use the principle that a person should not reap what they have not sown to justify more extensive forms of protection are problematic. The first problem is that it is not always easy to determine what the trade mark owner has sown: the mere selection of signs and symbols from the public domain seems a meagre basis on which to found such a claim (especially against a trader who is not aware of the prior registration). It is also not obvious that we should necessarily treat the associations that develop in the minds of the public as something of value which the trade mark owner has sown.⁴⁹ Second, it is often unclear whether a person is reaping from the cultivated soil of the trade mark owner or has obtained their fruits from the uncultivated commons. Although the causal link can be substantiated in cases of misrepresentation leading to confusion, it is difficult to justify protection where consumers are not 'confused'.⁵⁰ Third and more generally, the law does not penalize every case of reaping without sowing (for example, copying an unpatented business idea). As such, the onus falls on the advocates of the reapsow principle to provide guidance as to the other factors that trigger the legal operation of the principle.

Other ethical arguments have also been used to justify trade mark protection.⁵¹ For example, it is sometimes argued that the misuse of trade marks is justified by reference to moral norms which treat 'truth-telling' as a core 'good' (rather than as necessary for the maintenance of efficient markets).⁵² Under this approach, it is argued that the law ought to allow a person who suffers harm as a result of lying to bring an action against the liar. Misrepresentations as to the source of goods are equivalent to lying or deception and are simply 'wrong'.⁵³ While arguments of this sort would justify a law of trade marks and passing off in some form, they would not appear to justify the protection of one trade mark owner against the innocent adopter of a mark, nor against uses which the public would not understand as indicating a business connection with the owner. As such, it would only support a very narrowly confined law of trade marks.⁵⁴

⁵³ B. Pattishall, 'Trade Marks and the Monopoly Phobia' (1952) 42 *TM Rep.* 588, 600 (trade mark infringement is a sister of forgery, fraud, counterfeiting).

⁵⁴ M. Spence, 'Passing Off and the Misappropriation of Valuable Intangibles' (1996) 112 *LQR* 472, 480 (arguing that norms concerning truth-telling explain the existing limits of passing off).

4 INTERNATIONAL AND REGIONAL DIMENSIONS

Trade marks have always been connected to particular geographical conditions. Indeed, in some sense, the need for legal recognition of marks arose with the decline of the local economy, which meant that consumers became dissociated from the source of the goods.⁵⁵ It is not surprising therefore that further changes in the geographical aspects of trade have prompted alterations in trade mark law. These have largely taken two forms. First, growth in international trade led to the establishment of international systems of registration, thereby enabling traders to gain protection swiftly and cheaply in all relevant markets. Second, changes in international trade prompted the establishment of international minimum standards of protection.

4.1 INTERNATIONAL REGISTRATION

Traders who operate on more than a local level will wish to protect their marks on a transnational basis. Various mechanisms have been developed to assist in this regard. The earliest of these was the Paris Convention of 1883 that requires members to apply the principle of national treatment. That is, it requires members to treat foreign nationals of contracting states as they would their own nationals.⁵⁶ This ensures the possibility for foreign protection of trade marks. This is further facilitated by provisions which give registrants in one country a short period of priority,⁵⁷ and provisions obliging national offices to register any trade mark which has been registered in its country of origin.⁵⁸

While the Paris Convention was of some assistance to transnational traders, it failed to create a mechanism for the international application for marks. However, the Madrid Agreement on the International Registration of Marks of 1891 and the Madrid Protocol of 1989 provide just such mechanisms. Under these arrangements, after making a 'home registration' or 'home application', an individual or company may apply to the Bureau of the World Intellectual Property Organization for an international registration. The Bureau passes the application on to relevant national trade mark offices. If the Office of the contracting party does not refuse the application within a limited time, it is treated as registered. The simplification of the process of international registration has obvious advantages for trade mark owners. While the United Kingdom long-resisted invitations to join the Madrid Agreement⁵⁹ (mainly on the ground that the Agreement worked unfavourably against those who first registered in the United Kingdom where examination of all applications is required), the United Kingdom is now a party to the Protocol.⁶⁰

While the Madrid Agreement and Protocol provide useful simplified mechanisms for obtaining national registrations, they necessarily result in the proprietor holding a portfolio of national marks each of which needs to be managed, licensed, and enforced

⁵⁵ B. Paster, 'Trade-Marks: Their Early History' (1969) 59 *TM Rep* 551, 551–2 ('The need for trademarks is a product of man's complex commercial society').

⁵⁶ Paris, Art. 2. The Trademark Law Treaty, signed on 28 Oct. 1994, is a limited agreement relating mostly to subject matter and prosecution procedure.

⁵⁷ Paris, Art. 4. ⁵⁸ Paris, Art. 6 quinquies: the tell-quelle obligation.

⁵⁹ The UK has now acceded to the Madrid Agreement by way of the Protocol. See below and Ch. 31.

⁶⁰ See below at pp. 785–7.

separately. In contrast, the Community trade mark, which became fully operational on 1 April 1996, confers on a trade mark owner a single legal right that operates throughout the European Community.⁶¹ Such rights are acquired by the filing of a single application for a Community trade mark with the Office for Harmonization in the Internal Market (Trade Marks and Designs) (the OHIM), which is located at Alicante (Spain). As of December 2003, the OHIM had received over 350,000 applications and has registered close to 200,000 marks.⁶²

4.2 INTERNATIONAL STANDARDS

There has been relatively little action, either at the international or regional level on the protection of *unregistered* marks. In part, this can be explained by the fact that if a business operates on a transnational level, it will typically have the resources to protect its interests via registration. As a result, the protection of unregistered marks tends to be a matter of concern only for small enterprises and, as a consequence, has not prompted activities at the diplomatic level. Moreover, the forms and conditions of protection of unregistered marks varies widely, very much reflecting local legal principles. (In the United Kingdom the main form of protection is through the judge-made law of passing off.)

That said, the geographical expansion in the operations of many businesses has given rise to a form of opportunism, against which international action has been taken. More specifically, the Paris Convention has been revised to prevent the pre-emptive adoption of such marks by interlopers in countries where the 'proprietor' has not yet commenced marketing. Article 6 bis of the Paris Convention imposes an obligation to recognize and protect well-known marks even where they have not been registered.⁶³ The concept of well-known marks (as distinct from distinctive marks, marks with a reputation, and famous marks) is left undefined, and has been contested.⁶⁴ Article 16(2) of TRIPS indicates that in assessing whether a mark is well-known, members shall take account of the knowledge of the trade mark in the relevant sector of the public, including knowledge in the member concerned which has been obtained as a result of the promotion of the trade mark. UK law only recently gave effect to its obligation to recognize a special category of 'well-known trade marks'.⁶⁵ This is examined further in Chapter 34.

Second, and more generally, parties to the Convention are obliged to provide effective protection against unfair competition.⁶⁶ Article 10 bis of the Paris Convention obliges member countries to assure 'effective protection against unfair competition' which, in turn, is defined as any 'act of competition contrary to honest practices in industrial or commercial matters'.⁶⁷ UK law has not expressly implemented this provision, presumably on the assumption that the existing rules relating to registered trade marks, passing off, and malicious falsehood already deal adequately with it.

Kur, 'Well-Known Marks, Highly Renowned Marks and Marks Having a High Reputation: What's it All About?' (1992) 23 *IIC* 218; M. Blakeney, 'Well-Known Marks' [1994] *EIPR* 481.

⁶⁵ TMA s. 56. See below at pp. 723–4.

⁶⁶ Paris, Art. 10 bis.

⁶⁷ Art. 39 of TRIPS requires member states to protect undisclosed information under Art. 10(2) of the Paris Convention.

In relation to registered marks, the TRIPS Agreement provides by far the most detailed international prescription of the substantive rules relating to the protection. Articles 15 defines the protectable subject matter expansively, to include, for example, service marks.⁶⁸ It also prohibits discrimination as to registrability according to the nature of the goods and services to which a trade mark is to be applied. Article 16 requires recognition of certain rights, in particular over the use of an identical or similar mark on identical or similar goods or services where such use would result in a likelihood of confusion (though not extending to dilution).⁶⁹ Articles 17 and 18 provide, respectively, for limited exceptions to the rights conferred by a trade mark, and for the potentially indefinite registration of marks on the basis of renewable terms each of a minimum of seven years. Article 19 limits the circumstances in which registrations may be revoked for non-use, and Article 21 prohibits the compulsory licensing of marks.⁷⁰ The significance of these standards for UK law is mainly in the restrictions that they place on future potential developments.

4.3 REGIONAL HARMONIZATION

It is impossible to understand current UK law without reference to regional harmonization matters. The most significant of these is the EC Trade Marks Directive. As we explained in Chapter 1, disparities in the trade mark laws of individual member states (which gave trade mark owners different rights in different circumstances) were thought to impede the free movement of goods and freedom to provide services and to distort competition within the Common Market.⁷¹ In response, the Trade Marks Directive was designed to approximate 'those national provisions of law which most directly affect the functioning of the internal market'.⁷² The Directive therefore harmonized the general 'conditions for obtaining and continuing to hold a registered trade mark' and the rights conferred by a trade mark.⁷³ In certain areas, however, it was decided that harmonization was not necessary. Consequently, member states are given discretion to decide whether to adopt certain of the rules provided for in the Directive. For example, there are certain optional grounds for refusing to register or invalidating a trade mark.⁷⁴ The Directive also leaves to the member states matters such as the procedure concerning the registration, revocation, and invalidity of trade marks.⁷⁵

In addition to the Trade Marks Directive, it is also important to be aware of three other EC initiatives in the general field. First, following a Directive on Misleading Advertising, the Council and Parliament adopted a Directive on Comparative Advertising, which

⁶⁸ Paris, Art. 6 *sexies* only contained a wish to that effect. D. Gervais, 'The TRIPS Agreement: Interpretation and Implementation' [1999] 21 *EIPR* 3. See also TLT Art. 15.

⁶⁹ TRIPS, Art. 16 (likelihood of confusion). ⁷⁰ TRIPS Art. 21.

⁷² Trade Marks Directive, Recital 3.

⁷³ *Ibid.*, Recital 7, Arts. 5, 6, and 7. See *David West, trading as Eastenders v. Fuller Smith* [2003] *FSR* (44) 816 (para. 69) per Arden LJ ('If King Canute had been a trade mark agent, the waters of Community law . . . would surely have overwhelmed him by now').

⁷⁴ *Ibid.*, Arts. 3(2) and 4(4); Art. 5(2). These optional provisions must be implemented in full or not at all: *R v. Johnstone* [2003] *ETMR* 1, 19 (CA); *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 [2004] 1 *CMLR* (4) 448 (para. 20.) (ECJ).

⁷⁵ *Ibid.*, Recitals 4–6.

harmonizes the circumstances where comparative advertising is permissible. This has been implemented in the UK.⁷⁶ Secondly, the Community adopted an important Regulation on enforcement, which is discussed (alongside similar rules relating to other intellectual property rights) in Chapter 48. Finally, the Community has a number of related initiatives dealing with the protection of 'designations of origin' (PDOs) and 'geographical indications' (PGIs) for wines, spirits, agricultural products, and food. These are considered in Chapter 43.

5 THE FUTURE

UK trade mark law has undergone dramatic change in the last fifteen years: notably as a result of having implemented the Trade Marks Directive in the 1994 Act, and the entry into force of the Community Trade Mark Regulation. It should not be supposed, however, that intellectual property lawyers can simply sit back and slowly familiarize themselves with these rules. New pressures are constantly demanding judicial or legislative responses.

The wider recognition of brands has provided further fuel for those with expansionist tendencies. In addition to advocating protection against use of similar marks even where there is no confusion, arguments have been made for the subject matter to be expanded, for owners to be given broader control over imitation (especially in relation to 'look-alikes' and 'me-toos'), and for the relaxation of controls over licensing. Some commentators have argued that 'the positive associations that comprise a brand—a brand's equity—can rise to the level of a property right entitled separately to protection irrespective of confusion or the existence of a dilution statute'.⁷⁷

The recognition of electronic commerce and the possibility of direct sales of goods over the Internet has brought with it new questions for trade marks, the most immediate of which has been the determination of the relationship between trade marks and domain names. This issue has attracted a lot of attention, both at the national and international level. As we will see, UK law has responded to these pressures through existing legal regimes, rather than attempting to promulgate new statutes. Where a domain name is used to trade in the same sphere as an existing trade mark owner, the courts have found little difficulty in employing the laws of passing off and registered trade marks.⁷⁸ Moreover, these laws have often been applied somewhat generously to enable existing businesses to prevent opportunistic 'cybersquatting'.⁷⁹ There has also been an international response of an interesting sort: the establishment of a code (ICANN) and a system of dispute resolution administered by WIPO.⁸⁰

⁷⁸ See below at pp. 749–50, 911. There are, of course, real problems about jurisdiction where a foreign trader uses a similar name on a web site run from overseas and who targets a different market.

⁷⁹ See below at p. 749.

⁸⁰ See below at pp. 1083–5.

PASSING OFF

1 INTRODUCTION

The oldest of the modern legal regimes for the protection of trade symbols is the action for passing off.¹ In essence the action allows trader A to prevent a competitor B from passing their goods off as if they were A's. Lord Langdale MR summed up the rationale for the passing off action in *Perry v. Truefitt*² when he said:

A man is not to sell his own goods under the pretence that they are the goods of another man; he cannot be permitted to practise such a deception, nor to use the means which contribute to that end. He cannot therefore be allowed to use names, marks, letters or other indicia, by which he may induce purchasers to believe, that the goods which he is selling are the manufacture of another person.³

While the early history of passing off is unclear,⁴ it is widely thought that an action of this sort was first recognized in the Elizabethan case of *JG v. Samford*.⁵ It is also generally acknowledged that the common law roots of the action are found in the torts of deceit and misrepresentation,⁶ with the strictures of the common law action being mollified in a number of Chancery cases in the early nineteenth century.⁷ The modern or classic formulation of the action (usually classified as a tort) emerged in the second half of the nineteenth century. In its classic form, the basis of the action was the existence of a 'misrepresentation'. Typically, a misrepresentation occurs where a person says or does something that suggests, incorrectly, that the goods or services they are selling are the goods or services of the claimant. In order to justify injunctive relief, the courts believed that it was necessary for the action to be based on a property right. For some time it was suggested that this property right was located in the name or symbol employed. This approach was rejected in the 1860s when it was said that the basis of equitable intervention

¹ The pre-modern regimes included guild regulation, heraldry, and cutlers' marks: see Sherman and Bently, 166–8.

² (1842) 6 *Beav* 66; 49 *ER* 749. ³ (1842) 6 *Beav* 66, 73; 49 *ER* 749, 752.

⁴ W. Morison, 'Unfair Competition and Passing Off' (1956) 2 *Sydney LR* 50, 53; *Henderson v. Radio Corporation Pty* (1960) [1969] *RPC* 218, 236.

⁵ First cited as a precedent in *Southern v. How* (1617) *Cro Jac* 468, 79 *ER* 400. See the discussion in F. Schechter, *The Historical Foundations of the Law Relating to Trade Marks* (1925) 10.

⁶ e.g. *Sykes v. Sykes* (1824) 3 *B & C* 543; 107 *ER* 834. For arguments that there remains a common law action based on fraud, without a requirement of goodwill, see Gummow J in *10th Cantanae Pty v. Shoshama Pty* (1989) 10 *IPR* 289; *ConAgra Inc. v. McCain Foods (Australia) Pty* (1992) 23 *IPR* 193.

⁷ In particular Equity judges abandoned the requirement of bad faith in *Millington v. Fox* (1838) 3 *My & Cr* 338, 40 *ER* 956.

was the property in 'goodwill'.⁸ The concept of goodwill, which will be examined in detail below, remains a prerequisite for a successful passing off action today.

It is important to recognize that the modern action, if it can be called a single action,⁹ has moved beyond the classic case.¹⁰ Indeed, as a result of adapting to changes in the commercial environment, the tort now extends beyond the sale of goods to cover services; beyond pretences concerning the origin of goods to cover pretences concerning their quality; and beyond simple pretences that the goods are those of another trader, to cover pretences that the goods have been licensed by another trader.¹¹ As a result, the tort continues to play a central role in the legal regulation of trade behaviour.¹² The common law nature of the action also gives it a flexibility that makes it attractive in situations that are not covered by the statutory regimes. This is particularly important where business practices change and the legislature is slow to respond.¹³

With these developments it has become increasingly difficult to state the law of passing off with any clarity or precision. Indeed, it has been said that the law 'contains sufficient nooks and crannies to make it difficult to formulate any satisfactory definition in short form'.¹⁴ The difficulty in formulating a precise and accurate statement of the law has not been made any easier by the fact that the most recent authoritative statements of the law, which are found in the House of Lords' decisions in *Warnink v. Townsend* (sometimes called the 'Advocaat' decision),¹⁵ and *Reckitt & Colman v. Borden*, are in very different

⁸ *Perry v. Truefit* (1842) 6 *Beav* 66, 73; 44 *ER* 749, 752; *Spalding v. Gamage* (1915) 32 *RPC* 273, 284.

⁹ J. Phillips and A. Coleman, 'Passing Off and the Common Field of Activity' (1985) 101 *LQR* 242, 244–5, have argued that passing off is better seen as a family of actions each with particular characteristics. Despite the strength of this argument, the courts have continued to treat passing off as a unitary action, only occasionally distinguishing 'classic' passing off, from 'extended' passing off. See, e.g. *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] *RPC* 117, 127 (differentiating between 'extended' and 'classic' passing off and describing question of whether it is the same tort as 'a matter of semantics'). Note also *British Diabetic Association v. Diabetic Society* [1996] *FSR* 1, 11 per Robert Walker J (warning against assumption that principles from one set of facts can be applied to very different facts).

¹⁰ *Arsenal FC plc v. Reed (No. 2)* [2003] *EWCA Civ* 96 (21 May 2003) (para. 70) per Aldous LJ.

¹¹ However, the law of passing off has not expanded into a tort of unfair competition. See below at pp. 761–5.

¹² *Cadbury Schweppes Pty v. Pub Squash Co.* [1981] *RPC* 429, 490 per Lord Scarman (the tort 'is no longer anchored in its early nineteenth-century formulation'). But cf. *Hogan v. Koala Dundee* (1988) 12 *IPR* 508, 517 (Pincus J, Federal Court of Australia) (little progress in English law beyond the traditional notion of passing off). See also M. Shuilleabháin, 'Common Law Protection of Trade Marks—The Continuing Relevance of Passing Off' (2003) 34(7) *IIC* 722.

¹³ Passing off also operates as a basis for relief where a trader has failed to register a mark. The law relating to passing off also retains a role within the registered trade-mark system. As will be seen at pp. 878–9 it is not possible for a person to register a sign as a trade mark if the use of that sign would amount to passing off.

¹⁴ *Conagra v. McCain Foods (Aust.)* (1992) 23 *IPR* 193, 247 (FCA).

¹⁵ *Erven Warnink BV v. Townend (J.) & Sons* [1979] *AC* 731. The case contains two different formulations of the requirements of the action. Lord Diplock, at 742, laid down five 'characteristics' that must be present to create a valid cause of action in passing off: (i) a misrepresentation; (ii) made by a trader in the course of trade; (iii) to prospective customers of his or ultimate consumers of goods or services supplied by him; (iv) which is calculated to injure the business or goodwill of another trader (in the sense that this is a reasonably foreseeable consequence), and (v) which causes actual damage to a business or goodwill of the trader by whom the action is brought or (in a *quia timet* action) will probably do so. Lord Fraser at [1979] *AC* 731, 755–6, also set out five requirements: (i) that the claimant's business consists of, or includes, selling in England a class of goods to which the particular trade name applies; (ii) that the class of goods is clearly defined, and that in the minds of the public, or a section of the public, in England, the trade name distinguishes that class from other similar goods; (iii) that because of the reputation of the goods, there is a goodwill attached to the

terms.¹⁶ Having said that it is possible to formulate a general statement as to the elements of the action. In order to succeed in an action for passing off, a claimant must establish that:

- (1) the claimant has 'goodwill' (Chapter 32),
- (2) the defendant made a 'misrepresentation' that is likely to deceive the public (Chapter 33), and
- (3) the misrepresentation damages the goodwill of the claimant (Chapter 34).

Before turning to examine goodwill in more detail, two caveats are in order. The first is that each of the three elements must be shown to have existed or occurred at the time when the conduct to which the claimant objects took place (as opposed, for example, to the time of proceedings.)¹⁷ The second point to note is that the three elements are inter-related. As a result, the same facts may be important in proving goodwill, deception, and/or damage. Consequently, the courts may dismiss an action for lack of misrepresentation where it might as easily involve a lack of goodwill.¹⁸ The interrelationship is also important because developments in one area, such as misrepresentation, may impact on another area, such as damages. This can be seen, for example, with the recent recognition of dilution as a form of damage, which has thrown into doubt the need for the defendant's misrepresentation to cause confusion or deception.¹⁹

2 GOODWILL

The first factor that needs to be proved to establish an action for passing off is goodwill.²⁰ The mere fact that consumers are confused about the source of a product or service is not enough for a trader to bring a successful passing off action against another trader with whom their products are being confused.²¹ Before a trader is able to bring an action, they must show that they have goodwill in relation to the product or service in question.

Goodwill is a form of intangible property that is easy to describe, but difficult to define. It is the ineffable thing, the magnetism that leads customers to return to the same business or buy the same brand. In *IRC v. Muller & Co.'s Margarine*, Lord Macnaghten said:

[goodwill] is the benefit and advantage of the good name, reputation, and connection of a business. It is the attractive force that brings in custom. It is the one thing which

name; (iv) that the Claimant, as a member of the class of those who sell the goods, is the owner of goodwill in England which is of substantial value; (v) that he has suffered, or is really likely to suffer, substantial damage to his property in the goodwill by reason of the defendant selling goods which are falsely described by the trade name to which the goodwill is attached.

¹⁶ In *Reckitt & Colman Products v. Borden* [1990] 1 WLR 491, 499, Lord Oliver reduced the elements of the action to three: reputation, deception, and damage.

¹⁷ *J. C. Penney v. Penneys* [1975] FSR 367; *Barnsley Brewery Co. v. RBNB* [1997] FSR 462, 470; *Chocosuisse Union des Fabricants Suisse de Chocolat v. Cadbury* [1999] RPC 826, 836, 846; *Interlotto (UK) Ltd v. Camelot Group plc* [2004] RPC (8) 171 Laddie J; [2004] RPC (9) 186 (CA) (at para. 7).

¹⁸ e.g. *Chivers & Sons v. Chivers & Co.* (1900) 17 RPC 420.

¹⁹ *Harrods v. Harrodian* [1996] RPC 697.

²⁰ *Star Industrial Co. v. Yap Kwee Kor* [1976] FSR 217, 223; *Warnink v. Townend* [1979] AC 731, 742, 755–6.

²¹ *HFC Bank v. Midland Bank* [2000] FSR 176, 182–3.

distinguishes an old-established business from a new business at its first start. The goodwill of a business must emanate from a particular centre or source. However widely or extended or diffused its influence may be, goodwill is worth nothing unless it has power of attraction sufficient to bring customers home to the source from which it emanates. Goodwill is composed of a variety of elements. It differs in its composition in different trades and in different businesses in the same trade. One element may preponderate here and another element there.²²

As Lord Macnaghten stressed, for goodwill to exist, there must be some 'causative' impact upon customer behaviour. Goodwill is the attractive force which 'brings in' custom. The goodwill must have a 'power of attraction sufficient to bring customers home to the source from which it emanates'. One consequence of this is that just because a trader has started business does not necessarily mean that there will be goodwill. This is because consumers might use the business, purchase the goods or services, because it is conveniently located or just because it is there. Rather, for goodwill to exist, customers must be buying the goods or using the services as a result of the reputation that they have developed.²³

2.1 MANIFESTATIONS OF GOODWILL

The law of passing off is concerned with goodwill when it manifests itself in certain ways. Passing off is usually concerned with the signs or 'badges' that are understood as indicating that a product or service emanates from a particular trade source. These 'badges' can take a variety of forms. Typically, passing off is concerned with the goodwill that arises in relation to the name, symbol, or logo that has been employed by a trader and thus has come to be associated with the business. For example, it is clear that there is goodwill associated with the name 'Marks & Spencer', and the Nike 'swoosh' or tick. In these situations, the law is relatively straightforward. However, the courts have recognized that goodwill may arise in a number of other situations. These include, goodwill associated with the packaging, get-up, or trade dress of products, and advertising style. In this section, we will limit our discussions to some of the less straightforward situations.

2.1.1 Goodwill in descriptive words

While goodwill is typically developed through the use of words, such as NIKE, MARLBORO, COCA-COLA, or ROLLS-ROYCE, to distinguish one trader's goods or services from those of its competitors, in some circumstances goodwill may come to be associated with words which initially were capable of being understood as descriptive of the goods themselves. For example, FRUIT PASTILLES might be taken to be a description of a product delivered in pastille form which tastes of or is made from fruit. However, most children (and adults) in the United Kingdom will understand the words as indicating a particular brand of sweet confectionary, in fact made by Rowntree's. Consequently, such words have become the manifestation of the goodwill that Rowntree's own in the sweets. (Other familiar examples

²² [1901] AC 217, 224 (Lord Macnaghten). Although a tax case, it has been frequently employed in passing off cases and the Court of Appeal has said that 'no one, judge or jurist, has yet improved' on it as a description: *Scandecor Development AB v. Scandecor Marketing AB* [1999] FSR 26, 41.

²³ *HFC Bank v. Midland Bank* [2000] FSR 176, 183.

include 'TREET'S' (no longer designating a special indulgence but a confectionary made by Cadbury's) and EVIAN (no longer designating a place but instead a brand of water).

While it is possible for a descriptive term to become associated with a claimant, the courts are extremely reluctant to allow a person to obtain a monopoly in descriptive words.²⁴ In part, this is because policy considerations favour allowing other traders to make use of words that are part of the common stock-in-trade. It is also because in relation to descriptive words, it will be more difficult for a trader to show that the words indicate source, rather than what they ordinarily describe. In short, the more descriptive the words of the goods or services which the trader sells, the more difficult it will be to establish the existence of goodwill attaching to those words.

For a trader to show that they have goodwill in a descriptive word, they need to show that the word has become 'distinctive in fact' or has taken on a 'secondary meaning'.²⁵ This can be seen, for example, in *Reddaway v. Banham*,²⁶ where the House of Lords acknowledged that the claimant's use of the term CAMEL HAIR to describe their belts had acquired a secondary meaning. Other examples of (largely) descriptive words that acquired secondary meaning include: OVEN CHIPS for potato chips to be cooked in the oven rather than fried;²⁷ FLAKED OATMEAL;²⁸ MALTED MILK;²⁹ and MOTHERCARE for clothing for expectant mothers and children.³⁰

For a trader to show that they have goodwill in a descriptive word, the trader needs to demonstrate that the words have acquired a secondary meaning not only of goods or services of that description, but also specifically of the goods or services of which they are the source.³¹ It is also necessary to show that descriptive terms are distinctive of one source.³² Thus, where two publishers are competing to launch magazines with a title such as *Leisure News*, it is unlikely that either will be able to bring a passing off action until the magazine has been in the marketplace for a sufficient period of time to build up a public association between the name and a particular source.³³ As Farwell J said, the name should 'have to the whole of the trade and to all persons who have any knowledge of the article in question the sole meaning sought to be attached to it by the plaintiffs—that is to say, the original primary meaning must have been eliminated from the dictionary of persons who deal in this article in the trade and all other persons whom it may concern to know it'.³⁴

In proving secondary meaning, it will be common for a claimant to submit evidence of

²⁴ *Spalding v. Gamage* (1915) 32 RPC 273, 284; *Cellular Clothing Co. v. Maxton & Murray* [1899] AC 326, 339.

²⁵ See Wadlow (1995), para. 6.02, 348–9. Acquisition of secondary meaning is discussed in the context of registered marks at pp. 834–41.

²⁶ [1896] AC 199. ²⁷ *McCain International v. County Fair Foods* [1981] RPC 69.

²⁸ *Parsons v. Gillespie* [1898] AC 239 (PC).

²⁹ *Horlick's Malted Milk Co. v. Summerskill* (1916) 33 RPC 108.

³⁰ *Mothercare v. Penguin Books* [1988] RPC 113, 115.

³¹ Secondary meaning is essential not just where the name describes the product, but also where it embodies a reference to quality. For example, THE HIT FACTORY was descriptive of a quality of the claimant's recording studio and in the absence of a demonstration of secondary meaning could not form the basis of a passing off action: *Peter Waterman v. CBS* [1993] EMLR 27.

³² *Ibid.* ³³ *Marcus Publishing v. Leisure News* [1990] RPC 576, 584.

³⁴ *Chivers v. Chivers* (1900) 17 RPC 420, 430 (Farwell J) (in the context of personal names); Wadlow (1995), paras. 6.08–17.

things such as the length of use and the amount of money spent on advertising.³⁵ It will certainly be easier to find that a name is distinctive and thus protected where a trader has used the name separately rather than in conjunction with another sign that designates source.³⁶ Moreover, distinctiveness will be acquired more readily if the sign is not exclusively descriptive, as was the case with FARM FLUID for farm disinfectant.³⁷ A trader may acquire secondary meaning in a descriptive phrase through public adoption rather than their own action.³⁸ In these cases, the most important evidence is evidence of the trade or public. On the whole, the association must be in the mind of the general public, so that it is not normally legitimate 'to slice the public into parts'.³⁹

Similar principles apply to geographic words and personal names. In general the adoption of a geographic term or a personal name will not prevent another trader from using the same designation.⁴⁰ In certain circumstances, however, secondary meaning can attach to such signs. For example, in *Montgomery v. Thomson*⁴¹ the claimant had operated a brewery in the small town of Stone in Staffordshire for over a hundred years. Over time, its beer had become widely known as STONE ALE. The defendant, who had recently established a brewery in Stone, was prevented from using the term STONE to describe its beer.⁴² Similarly, it was held by the Court of Appeal that the term SWISS CHOCOLATE had come to be understood by a significant section of the public to mean and mean only chocolate made in Switzerland, and that this was understood as being of a particular quality.⁴³

Words, once distinctive, may later lose their ability to indicate source. In such cases, a passing off action will no longer be available. A classic example is LINOLEUM, which is the name used for a floor-covering made of solidified oil. The floor covering had been the subject of a patent, and during that time the claimant was its only manufacturer. After expiry of the patent other manufacturers began to make and sell the floor covering under the name LINOLEUM. Fry J refused to prevent competitors using this term, on the basis that it had become generic. That is, the public had begun to use the term to refer to the product generally, without connoting the source of manufacture.⁴⁴

2.1.2 Goodwill associated with packaging, get-up, and trade dress

A person may acquire goodwill through use of particular packaging or 'get-up' for their

³⁵ Such factors will not, of themselves, give rise to recognition. Advertisement distinguished from trade is nothing: *Chivers v. Chivers* (1900) 17 RPC 420, 431 Farwell J (describing the act of advertising as an atrocious disfigurement of the fairest landscape in the kingdom); *Burberrys v. Cording* (1909) 26 RPC 693 (slip on).

³⁶ *McCain International v. County Fair Foods* [1981] RPC 69 (OVEN CHIPS used with McCains). See more generally at pp. 838–41.

³⁷ *Antec International v. South Western Chicks (Warren)* [1997] FSR 278; [1998] FSR 738, 743–4.

³⁸ *Edge & Sons v. Gallon & Son* [1900] RPC 557; *Peter Waterman v. CBS* [1993] EMLR 27.

³⁹ *Ibid.* (rejecting arguments that it was sufficient that the claimant's recording studio was known as THE HIT FACTORY to popular music press and 'non-pompous end of market' when other sectors treated the phrase as referring to others).

⁴⁰ *Chivers v. Chivers* (1900) 17 RPC 420. ⁴¹ [1891] AC 217.

⁴² See also *My Kinda Town v. Soll* [1983] RPC 407 (CHICAGO pizza); *CPC (United Kingdom) v. Keenan* [1986] FSR 527 (OXFORD marmalade, OXBRIDGE marmalade).

⁴³ *Chocosuisse Union des Fabricants Suisse de Chocolat v. Cadbury* [1999] RPC 826, 832.

⁴⁴ *Linoleum Manufacturing Co. v. Nairn* (1878) 7 Ch D 834, 836.

products.⁴⁵ For example, in *Reckitt & Colman*⁴⁶ the claimant sold lemon juice in plastic containers that resembled a lemon in size, shape, and colour. The House of Lords held that in using plastic lemons that were very similar to the claimant's, the defendant had passed off its juice as the claimant's. This was because the claimant had succeeded in persuading the public that lemon juice sold in plastic lemon-sized containers had been manufactured by it.

The protection that passing off provides over trade dress, get-up, and the packaging of goods is particularly important where consumers identify products by their external features rather than by words. This will be the case where goods are sold in foreign-language markets (such as China) where little attention is likely to be paid to the words,⁴⁷ or where the goods are sold to people who are illiterate.⁴⁸ Get-up is also more likely to be an identifying feature in the case of common household goods,⁴⁹ rather than goods which are bought under professional supervision.⁵⁰

In order to establish that the claimant has goodwill associated with the get-up or packaging of a product (and thus that copying of it may amount to passing off), a claimant must be able to prove that the public recognizes that the get-up is distinctive of the claimant's goods or services.⁵¹ In practice, a claimant may experience a number of difficulties in establishing such an association, particularly where the claim relates to the shape rather than the packaging of a product. More specifically, it may be difficult to show that consumers care at all about the trade origin of a product. Moreover, it may be difficult to establish that consumers understand functional features of a product as indicating source.

The need to show that the public regard a particular feature of a product as indicating source will prove particularly difficult where the product feature in question performs some function. While there is no public policy exception to the passing off action for 'functional features' and no requirement that features of get-up be 'capricious',⁵² it will be very difficult for a trader to demonstrate that the public view functional or non-capricious features of an article as indicating source. As Jacob J said in *Hodgkinson & Corby v. Wards Mobility Services*,⁵³ the claimant must prove a misrepresentation which will be hard where there is no manifest badge of trade origin. This is because people tend to buy things for what they are and what they do, rather than out of interest in their origin. Accordingly, Jacob J found that a defendant who produced cushions which were used to help alleviate

⁴⁵ J. Evans, 'Passing Off and the Problem of Product Simulation' (1968) 31 *MLR* 642; Wadlow, paras. 6.49–6.69, 426–61; *Edge v. Nicholls* [1911] *AC* 693 (washing soap sold in a calico bag with a stick attached). For the possibility of design protection for the shapes of articles and limitations of such protection see at pp. 612–13, 617–21, 668–9, 670–5.

⁴⁶ [1990] *RPC* 341, 406.

⁴⁷ *Modus Vivendi v. Keen (World Marketing)* [1996] *EIPR* D-82 (sale of butane gas by defendant in similar get-up in China); *Johnston v. Orr Ewing* (1882) 7 *App Cas* 219, 225.

⁴⁸ *Edge v. Nicholls* [1911] *AC* 693.

⁴⁹ *United Biscuits (UK) v. Asda Stores* [1997] *RPC* 513.

⁵⁰ *Hodgkinson & Corby v. Wards Mobility Services* [1995] *FSR* 169.

⁵¹ However, while it is clear that imitation of get-up or packaging may constitute a misrepresentation, this does not mean that in all cases it will do so: *Reckitt & Colman Products v. Borden* [1990] *RPC* 341, 406.

⁵² *Hodgkinson & Corby v. Wards Mobility Services* [1995] *FSR* 169, 177. However, the House of Lords in *Reckitt* [1990] *RPC* 341, 416, did indicate that such imitation of get-up might not amount to a misrepresentation when it was the only way to present the product. Lord Oliver noted that the association of the plastic shape with the claimant arose because 'there is nothing in the nature of the product sold which inherently requires it to be sold in the particular format'.

⁵³ *Hodgkinson & Corby v. Wards Mobility Services* [1995] *FSR* 169.

bed sores, had not passed themselves off as the claimant. This was the case even though the claimant's cushions were memorable and striking, and the defendant's cushions were similar in appearance.

2.1.3 Advertising style

A trader may also attempt to establish that they have goodwill associated with particular advertising techniques or slogans, and thus that a defendant is liable for passing off as a result of using techniques or slogans that are similar to those which are used by the claimant. In *Cadbury Schweppes v. Pub Squash*,⁵⁴ the claimant produced a lemon-flavoured soft drink called SOLO. As a part of its marketing campaign in Australia, the claimant launched a series of television advertisements which featured 'ruggedly masculine and adventurous men' drinking SOLO. The defendant promoted their lemon-flavoured soft drink with a similar campaign. While the Privy Council rejected the passing off claim, Lord Scarman said that there was no reason *in principle* why the claimant could not have acquired goodwill associated with a particular advertising style. The reason for this was that:⁵⁵

the tort is no longer anchored as in the early nineteenth-century formulation to the name or trade mark of a product or business. It is wide enough to encompass other descriptive material, such as slogans or visual images, which radio, television or newspaper advertising campaigns can lead the market to associate with the plaintiff's product, provided always that such descriptive material has become part of the goodwill of the product.⁵⁶

While the Privy Council recognized that passing off may protect a claimant's advertising campaign, it seems that claimants will have difficulties in demonstrating that the public associates a specific style of advertising with a particular source.⁵⁷

2.1.4 Use of image, likeness, or voice

Finally, it is worth observing that, in principle, there is no reason why goodwill might not also arise through the use of a celebrity's image,⁵⁸ likeness, or voice.⁵⁹ Whether this is the case will always be a question of fact. In particular it will depend on whether the public believe, that there is a relevant connection between the celebrity and the goods or services in issue. It should be noted that unlike the position in many continental jurisdictions⁶⁰ and in several states in the USA,⁶¹ British law does not recognize a general right of publicity or personality.

2.2 A 'TRADER OPERATING IN TRADE'

As we indicated earlier, in order to demonstrate goodwill, a claimant must be a trader and operate in trade. We will look at each of these in turn.

⁵⁴ *Cadbury Schweppes v. Pub Squash Co.* [1981] RPC 429.

⁵⁵ [1981] RPC 429, 490. ⁵⁶ *Ibid.*

⁵⁷ For further consideration of advertisements, see the cases discussed by Wadlow (1995), para. 6.73.

⁵⁸ *Henderson v. Radio Corporation Pty* (1960) [1969] RPC 218.

⁵⁹ *Sim v. H. J. Heinz Co.* [1959] 1 WLR 313.

⁶⁰ W. Van Caenegem, 'Different Approaches to the Problem of Celebrities against Unauthorized Use of Their Image in Advertising' [1990] *EIPR* 452.

⁶¹ O. Goodenough, 'The Price of Fame: The Development of the Right of Publicity in the United States' [1992] *EIPR* 55, 90.

2.2.1 The claimant must be a 'trader'

For a claimant to be in a position to show that they have the goodwill necessary to sustain a passing off action, they must show that they are engaged in a very general sense in a business or commercial activity. The upshot of this is that the action is not available where one person changes their name to that of another, or calls their cat, boat, or house by the same name as their neighbour (however inconvenient or confusing that may be).

For the most part, the requirement that the claimant be in a trade has presented few problems. This is because the courts have been quite generous when deciding whether someone is engaged in business.⁶² For example, the courts have recognized authors,⁶³ performers,⁶⁴ unincorporated associations,⁶⁵ and charities⁶⁶ as businesses that potentially give rise to goodwill.

The courts have only occasionally rejected a claimant's claim to passing off because of a lack of business status. One situation where a passing off action was denied was in *Kean v. McGivan*⁶⁷ where the claimant claimed the exclusive right to the name Social Democratic Party. The Court of Appeal refused relief on the basis that the claimant was involved in a non-commercial activity. This was because the claimant was a small northern-based political party whose engagement in commercial activities was limited to the hiring of halls for meetings. If the claimant had been one of the major political parties who receive and spend large sums of money, however, the court might well have held that they were engaged in a trade. It should be noted, too, that the decision in *Kean v. McGivan* has been treated as doubtful, in the light of earlier authorities that were not cited to the court.⁶⁸

A further situation in which the requirement that the claimant be a trader has proved problematic is where an action for passing off is brought by a trade association. If the trade association does not manufacture or sell any particular product, it will be unable to bring a passing off action against a defendant who has merely passed off its products as those of the members of the trade association.⁶⁹ However, where a trade association organized exhibitions, it could own goodwill through its members which would form the basis for an action in passing off: in such a case the action would have to be commenced by a member of the association acting in a representative capacity.⁷⁰

⁶² 'The word "trade" is widely interpreted': *Kean v. McGivan* [1982] FSR 119, 120 (Ackner LJ).

⁶³ *Alan Clark v. Associated Newspapers* [1998] RPC 261, 269.

⁶⁴ *Henderson v. Radio Corporation Pty* (1960) [1969] RPC 218; cf. *Kaye v. Robertson* [1991] FSR 62 (Kaye, an actor, not a trader in relation to story about accident).

⁶⁵ *British Legion v. British Legion Club (Street)* (1931) 63 RPC 555, 562.

⁶⁶ *British Diabetic Association v. Diabetic Society* [1996] FSR 1, 5.

⁶⁷ [1982] FSR 119. The defendants were a high-profile breakaway group, known as the 'Gang of Four', from the Labour Party. In due course, the defendants' Social Democrats merged with the Liberal Party to form the Liberal Democrats.

⁶⁸ *Holy Apostolic & Catholic Church of the East (Assyrian) Australia New South Wales Parish Association and others v. Attorney-General (New South Wales)* [1989] 18 NSWLR 291, 294 (Court of Appeal of New South Wales).

⁶⁹ A trade consortium may sue in its own name but cannot bring a representative action: *Consorzio del Prosciutto di Parma v. Marks & Spencer* [1991] RPC 351. See also *Chocосуsse Union des Fabricants Suisse de Chocolat v. Cadbury* [1999] RPC 826, 843–4. The Court of Appeal did however acknowledge that it might be convenient if a trade association could sue on behalf of its members in such circumstances.

⁷⁰ *Artistic Upholstery v. Art Forma (Furniture)* [1999] 4 All ER 277, 286–7.

2.2.2 The claimant must be trading

Once it has been shown that a claimant is engaged in a trade activity, there will usually be few problems in establishing that they have the goodwill necessary to sustain a passing off action. Traders have, however, experienced problems in establishing goodwill in three situations. These are before they have started trading, after trading has ended, and where the trader is situated overseas. We will deal with each in turn.

(i) *Pre-trade goodwill*. Given that goodwill ‘has no independent existence apart from the business to which it is attached’,⁷¹ difficult questions arise when a person is setting up a business. In these circumstances the question may arise: at what point can a person claim to have goodwill? Is there any way in which a trader who is about to launch their business, and who has spent time and money on advertising and marketing can prevent a competitor from taking advantage of their pre-launch publicity?

The traditional position is that before a passing off action can be brought, trading must have actually commenced.⁷² This can be seen, for example, in *Maxwell v. Hogg*.⁷³ Maxwell proposed to launch a magazine called BELGRAVIA in October 1866. As a part of the pre-launch publicity, in August and September of 1866 Maxwell advertised the forthcoming launch of BELGRAVIA in a magazine run by Hogg. On 25 September 1866, Hogg issued a magazine also called BELGRAVIA. Despite noting that this was hardly fair and candid dealing, the court held that Maxwell could not restrain Hogg from using the same name. This was because a declaration of intention to use a name did not secure any protection.

In contrast, where there has been substantial pre-launch publicity, claimants have occasionally succeeded in gaining interim relief prior to the launch of their products. In *Allen v. Brown Watson*,⁷⁴ the publisher of a book entitled *My Life and Loves by Frank Harris* which had been widely advertised prior to publication, was granted an interim injunction against the defendant who proposed to publish an abridged version also called *My Life and Loves by Frank Harris*.⁷⁵ Similarly, in *BBC v. Talbot Motor Co.*, the BBC had publicized their forthcoming traffic information service named CARFAX, which required motorists to have special car radios fitted or conventional ones adapted. The BBC was granted an interim injunction preventing the defendant from selling spare parts for vehicles under the name CARFAX. Sir Robert Megarry V-C noted that ‘[a]lthough that scheme has not yet been launched, that does not prevent the BBC from having built up goodwill in it which is entitled to protection’.⁷⁶ While these authorities represent individual victories based on pre-launch publicity, they have not established conclusively that the courts will recognize goodwill prior to trade. In part this is because the cases were interim,⁷⁷ aspects of

⁷¹ *Star Industrial Co. v. Yap Kwee Kor* [1976] FSR 217, 223; *IRC v. Muller & Co.’s Margarine* [1901] AC 217, 223.

⁷² The period of time and the types of activities that are needed to generate goodwill will vary from case to case: *Stannard v. Reay* [1967] RPC 589 (3 weeks’ trade under the name MR CHIPPY was sufficient to establish goodwill on the Isle of Wight).

⁷³ (1867) LR 2 Ch App 307. ⁷⁴ [1965] RPC 191.

⁷⁵ However, the claimant’s book had been published by the time of the hearing.

⁷⁶ [1981] FSR 228, 233.

⁷⁷ But in *BBC v. Talbot* [1981] FSR 228 the court was considering the parties’ prospects of success, not merely whether there was a serious question to be tried.

the reasoning are unconvincing,⁷⁸ and neither really turned on a demonstration of goodwill.⁷⁹

Later authorities, which have adopted a more hard-line approach, have acknowledged that while pre-launch advertising and publicity assists in the acquisition of goodwill, it is necessary for a trader to have customers for them to demonstrate that they have goodwill. This can be seen, for example, in *My Kinda Bones v. Dr Pepper's Stove Co.*⁸⁰ where the claimant's claim to goodwill was based exclusively on pre-launch publicity. While the court refused to strike out the claimant's action on the ground that their case was not 'manifestly unarguable',⁸¹ nonetheless Slade J said that he thought that the claimant's prospects of success were very doubtful. The reason for this was that there was a requirement that 'a substantial number of customers or potential customers must at least have had the opportunity to assess the merits of those goods or services for themselves'. Slade J added that customers 'will not have sufficient opportunity to do this until the goods or services are actually on the market'.⁸²

While it might be inappropriate to protect a trader who has only made preparations to launch a product, fewer objections can be made about a trader being able to rely on passing off where they have engaged in widespread pre-launch advertising. This is because in these circumstances competitors are likely to be aware of the claimant's intention to use the name in a business context. Consumers are also more likely to expect a product with specific associations.

While the law in this area is unclear, it is important to note that even if there is no pre-launch goodwill, if goods or services are placed on the market after extensive preparatory publicity, goodwill may well be generated after a very short time.⁸³ It is also important to recognize that different businesses have different relationships with their customers. For example, the launch of a radio programme requires very little, if any, active involvement by the public. Finally, it is worth noting that other jurisdictions have been more flexible in recognizing the rights of traders based upon pre-launch publicity than has been the case in the United Kingdom.⁸⁴

(ii) *Goodwill after trading ends?* Given that goodwill is directly linked to the existence of a business, it follows that once a business ceases to trade that the goodwill starts to wither away.⁸⁵ As Lord Macnaghten said in *Commissions of Inland Revenue v. Muller & Co.'s Margarine*, goodwill 'cannot subsist by itself. It must be attached to a business. Destroy the business and the goodwill perishes with it'.⁸⁶ Nevertheless, in recognition of the commercial reality that businesses may recede, change hands, or close temporarily, the courts

⁷⁸ e.g. *BBC v. Talbot* [1981] FSR 228 may have misunderstood *Allen v. Brown Watson* [1965] RPC 191. See Wadlow (1995), para. 2.27.

⁷⁹ Wadlow (1995) explains that '[I]n reality, neither *Allen v. Brown Watson* [1965] RPC 191 nor *BBC v. Talbot* [1981] FSR 228 actually turned on the existence of goodwill' because both Allen and the BBC had long-established businesses: para. 2.27.

⁸⁰ [1984] FSR 289 (concerning restaurants selling spare ribs, both to be called 'rib shack').

⁸¹ [1984] FSR 289, 303. *BBC v. Talbot* meant it was not impossible to argue the case.

⁸² [1984] FSR 289, 299. See also *Marcus Publishing v. Leisure News* [1990] RPC 576.

⁸³ *My Kinda Bones v. Dr Pepper's Stove Co.* [1984] FSR 289.

⁸⁴ *Pontiac Marina Private v. Cdl. Hotels International* [1998] FSR 839, 861 (Court of Appeal for Singapore); *Turner v. General Motors* (1929) 42 CLR 352 (Australia); *Windmere Corp. v. Charlescraft Corp.* (1989) 23 CPR (3d) 60 (Canada).

⁸⁵ Wadlow (1995), paras. 2.87–90.

⁸⁶ [1901] AC 217, 224.

have held that goodwill is an asset that does not dissipate immediately a business ceases to operate. As a result, when trading stops 'elements remain which may perhaps be gathered up and revived again'. The critical question is how long can goodwill survive without the support of a business?⁸⁷

This question was addressed in *Ad-Lib Club v. Granville*.⁸⁸ The claimant opened a night-club in 1964 called 'The Ad-Lib Club'. As a result of noise problems the club closed in 1966. Pennycuik V-C granted an interlocutory injunction against the defendant who in 1970 announced that they were going to open a disco under the same name. Pennycuik V-C said that even after the cessation of business that the goodwill was retained for 'some period of time'. Pennycuik V-C added that it was a question of fact as to when the goodwill associated with a business disappeared. Although five years had passed since the business had closed, the court held that the claimant had residual goodwill in the name, Ad-Lib Club. This was because the public still associated the name with the club and, as the claimant had been seeking an alternative venue since the club had closed, there was no reason to think they had abandoned the business.

An intention to reopen the business coupled with a continued reputation are critical factors in deciding whether goodwill continues to exist after a business ceases to trade. This can be seen by contrasting *Ad-Lib Club* with the Privy Council decision in *Star Industrial*.⁸⁹ In *Star Industrial*, the claimant was a Hong Kong-based company that manufactured and exported toothbrushes to Singapore, where they were sold under the name ACE BRAND, until it ceased trading there in 1965. In 1968 the claimant assigned the exclusive use of the name ACE BRAND to a subsidiary in Singapore. When the defendant began using the same name for toothbrushes in Singapore, the claimant began proceedings for passing off. The Privy Council dismissed the claim. Lord Diplock said that the claimant had no right in the name because the claimants had ceased trading in Singapore, and had no intention of resuming trade there.⁹⁰ The Privy Council also held that even if there had been residual goodwill in the name, the claimant would not have succeeded because they had assigned the residual goodwill to their subsidiary.⁹¹

(iii) *Foreign traders*. The next situation where questions about the existence of goodwill arise is in relation to foreign traders.⁹² Where a business located in a foreign country acquires an international reputation, this may lead the foreign trader to set up business in the United Kingdom. In this case, the UK-based business will normally have goodwill. In many situations, however, something short of this may occur. For example, the foreign

⁸⁷ In the context of registered marks, 5 years' non-use, without due cause, is treated as a ground for revocation: see pp. 883–97.

⁸⁸ [1971] FSR 1; [1972] RPC 673. See also *A. Levey v. Henderson Kenton (Holdings)* [1974] RPC 617 (closure for 2 years of claimant's department store, because of fire, coupled with notices saying that reopening, held to maintain goodwill); *Sutherland v. V2 Music Ltd* [2002] EMLR (28) 568 (funk band using name LIBERTY, which was reasonably well-known in mid–1990s, retained sufficient goodwill so that pop group formed in 2001 under same name was passing itself off).

⁸⁹ [1976] FSR 256 (PC). ⁹⁰ [1976] FSR 256, 269 (PC).

⁹¹ In *Peter Waterman v. CBS* [1993] EMLR 27, Browne-Wilkinson V-C has suggested that this case may be better seen as one which was not so much about the existence of goodwill as about damage to the claimant. He has asked 'since the Hong Kong company had neither customers nor residuary goodwill in Singapore, how could any act done there injure its goodwill wherever it was situated?'

⁹² For consideration of the extent to which a UK claimant can sue for passing off committed abroad, see pp. 1076–80.

business may merely have an agent in the United Kingdom, or may only respond to orders taken directly from customers in the United Kingdom. Alternatively, the only connection that a trader may have with England and Wales is that they have a reputation, but no place of business or customers to speak of. In these circumstances, the question arises: can a foreign trader rely on passing off to prevent their interests being used in the United Kingdom? The case law, which is by no means conclusive, appears to distinguish between three situations. We will deal with each in turn.

(a) *Evidence of business activity.* If the claimant can demonstrate a trading link with the United Kingdom, they will normally succeed in establishing goodwill. The courts have been generous when considering whether a foreign trader has a sufficient trade presence and, consequentially, goodwill in the UK. It is clear that there is no need to have a registered business in the United Kingdom. The generous approach taken by the courts can be seen, for example, in *Sheraton*.⁹³ In this case, the claimant company, which ran a chain of high-class hotels, but at the time had none in England, was granted an interim injunction to prevent the defendant from using the name, 'Sheraton Motels'. The court held that although at the time the claimant did not have any hotels in the United Kingdom, the fact that bookings for their hotels abroad were frequently made both through an office which Sheraton maintained in London, and through travel agencies, was sufficient to entitle them to relief.

(b) *No business activity, but customers.* The second situation where a foreign trader may attempt to claim goodwill is where they have customers in the United Kingdom.⁹⁴ The law on this point is unclear. On the one hand there is a line of cases that suggest that for a foreign trader to establish goodwill in the United Kingdom, they must show *both* that they have customers *and* that they carry on business in the United Kingdom. This can be seen in the *Crazy Horse* decision.⁹⁵ In this case, the claimant was proprietor of the CRAZY HORSE SALOON in Paris. The defendant opened a place of the same name in London. Pennycuik J refused to grant an interlocutory injunction to restrain the defendant from using the CRAZY HORSE SALOON name in London. While the claimant had distributed leaflets in England advertising the saloon, there was no evidence that there were English customers of the Paris saloon (at least in the sense of persons who made bookings in the United Kingdom). The judge explained that 'a trader cannot acquire goodwill in this country without some sort of user in this country. His user may take many forms and in certain cases very slight activities have been held to suffice . . . I do not think that the mere sending into this country by a foreign trader of advertisements advertising his establishment abroad could fairly be treated as a user in this country'.⁹⁶

The *Crazy Horse* decision has been criticized by commentators and distinguished by the courts in the so-called 'soft-line' of cases.⁹⁷ In this second line of cases, it was held that if a foreign business can demonstrate that they have customers in the United Kingdom (other

⁹³ *Sheraton Corporation v. Sheraton Motels* [1964] RPC 202.

⁹⁴ There is some authority to the effect that this is insufficient to justify a passing off action, but the preponderance of authority now appears to be to the contrary.

⁹⁵ *Bernadin v. Pavilion* [1967] RPC 581. ⁹⁶ [1967] RPC 581, 584.

⁹⁷ The terms 'hard' and 'soft' were characterizations used in *Athlete's Foot* [1980] RPC 343, 349. See also *Baskin-Robbins Ice Cream v. Gutman* [1976] FSR 545, 548 and *Maxim's v. Dye* [1978] 2 All ER 55, 59.

than foreign customers who have merely moved here),⁹⁸ it is likely that the court will treat this as sufficient to establish goodwill. That is, it is not necessary for them to also establish that they carry on business in the United Kingdom (in any formal sense). For example, in *Athlete's Foot Marketing Association Inc. v. Cobra Sports*, an American retailer selling shoes under the name ATHLETE'S FOOT sought to prevent a UK business from using the same name. While the American firm had a reputation in the United Kingdom at the relevant time, they had not yet conducted business in the United Kingdom. Moreover, the claimant was unable to demonstrate that a single person in England and Wales had purchased their shoes. In considering whether the claimant had goodwill, Walton J said 'it does not matter that the plaintiffs are not at present actually carrying on business in this country, provided they have customers here'. The reason for this was that:

no trader can complain of passing off as against him in any territory . . . in which he has no customers, nobody who is in a trade relation with him. This will normally . . . be expressed by saying that he does not carry on any trade in that particular country (obviously, for present purposes, England and Wales) but the inwardness of it will be that he has no customers in that country: no people who buy his goods or make use of his services (as the case may be) there.⁹⁹

Given that the claimant had no customers in the United Kingdom, the court held that they did not have the goodwill necessary to sustain the passing off action.

Perhaps the most formidable critique of the approach adopted in the *Crazy Horse* decision is in *Peter Waterman v. CBS*.¹⁰⁰ Here, CBS was proposing to refurbish studios in London and call them THE HIT FACTORY. The claimant, who ran a recording business nicknamed THE HIT FACTORY, brought an action to stop CBS from using the same name. Based on the running of a recording studio in New York which was called THE HIT FACTORY, CBS responded by arguing that it had goodwill in the UK that was at the very least concurrent with any goodwill of the claimant. Browne-Wilkinson V-C held that the claimant failed to establish the distinctiveness of THE HIT FACTORY and, as such, consideration of the defendant's position was unnecessary. Nevertheless, Browne-Wilkinson V-C went on to review the authorities on the issue of whether the English courts will protect a foreign trader in the United Kingdom.

Browne-Wilkinson V-C began by noting that the essence of goodwill is the ability to attract customers and potential customers to do business with the owner of the goodwill. Consequently, any interference with the trader's customers is an interference with their goodwill. Browne-Wilkinson V-C added that prior to the *Crazy Horse* decision, there was

⁹⁸ Customers on US forces bases who bought Budweiser beer from PX stores were excluded from consideration in *Anheuser-Busch v. Budejovicky Budvar Narodni Podnik* [1984] FSR 413 even though sales numbered 65 million per annum. However, in *Jian Tools for Sales v. Roderick Manhattan Group* [1995] FSR 924 Knox J treated as relevant customers resident in the UK who had been influenced by foreign advertising and ordered goods from the US business: these were customers on the open market. But note the Trade Mark Registry's approach in cases under TMA s. 5(4): *In re Speciality Retail Group's Application (Suit Express)* (5 Apr. 2000) SRIS O/124/00 (para. 42) ('It is doubtful whether an overseas retail outlet that UK residents have used casually whilst on business or holiday abroad can be said to be in business here merely because those customers returned here after doing business with the retailer whilst abroad').

⁹⁹ [1980] RPC 343, 350. See also *SA des Anciens Etablissements Panhard et Levassor v. Panhard Levassor Motor Co.* (1901) 18 RPC 405.

¹⁰⁰ [1993] EMLR 27.

nothing in the authorities inconsistent with that view. For the Vice-Chancellor, that case law merely required the use of the name and the presence of customers in this country. To the extent that the *Crazy Horse* decision required that the trader had conducted some business (however slight) in England and Wales, Browne-Wilkinson V-C said that the case was wrongly decided.¹⁰¹ The judge took the view that the presence of customers in this country was sufficient to constitute the carrying on of business here. This is the case whether or not there is a place of business in England and Wales, or services are provided there. On this basis, Browne-Wilkinson V-C held that since the defendant's New York recording studio had a *substantial number* of customers in England, they would have been entitled to protect their name in the United Kingdom against third parties.

(c) *Mere reputation*. The third situation where the question of whether a foreign trader has goodwill in the United Kingdom is where the claimant merely has a reputation, but no customers as such in the United Kingdom. This might be the case where there is 'spill-over' advertising or where the product becomes known through films, television, or via the Internet.¹⁰² Given that it is necessary for a foreign trader to have customers in the United Kingdom for them to establish goodwill (or on a more extreme view, customers and business), it would seem reasonable to assume that where a foreign trader merely has a reputation in the United Kingdom, they would not be able to prove that they had the goodwill necessary to sustain a passing off action.

The case law on this point is unclear. On the one hand, there is authority that supports the conclusion that a foreign trader who only has a reputation in the United Kingdom may nonetheless still be able to show that they have goodwill. Indirect (and inconclusive) support for this comes from the cases dealing with pre-trade goodwill, which were discussed above.¹⁰³ More direct support for this approach comes from the 1976 decision of *Maxim's v. Dye*. The claimant in this case was the world-famous restaurant in Paris known as MAXIM'S. In 1970, the defendant opened a restaurant in Norwich also called MAXIM'S. In considering whether the claimants were entitled to protect their reputation, although they were not running any business in England, Graham J held that the claimant did have sufficient goodwill to bring a passing off action. After noting that globalization was making the 'world grow smaller', Graham J said that the true legal position was that the 'existence and extent of the claimants' . . . goodwill [in his business] in every case is one of fact however it may be proved and whatever it is based on'.¹⁰⁴ Graham J added that the claimants' existing goodwill in this country, 'which is derived from and is based on a foreign business . . . may be regarded as prospective but none the less real in relation to any future business which may be later set up by the plaintiff in this country'.¹⁰⁵

In another line of decisions, however, the UK courts have made it clear that where a trader only has a reputation in the United Kingdom, they will *not* have the goodwill

¹⁰¹ For Browne-Wilkinson V-C if the foreign trader uses their name for the purposes of trade in the UK, the piracy of that name is an actionable wrong wherever the goodwill is located. Browne-Wilkinson V-C acknowledged that there is binding authority to the effect that the basis of claim must be a goodwill situated in England.

¹⁰² *In re Readmans Ltd's Application (luxor)* (30 Jan. 2002) (TM Registry) (mere existence of Internet site accessible from UK does not give rise to goodwill).

¹⁰³ See pp. 717–18.

¹⁰⁴ *Maxim's v. Dye* [1978] 2 All ER 55, 59 quoting from *Baskin-Robbins* [1976] 2 FSR 545, 548.

¹⁰⁵ *Maxim's v. Dye* [1978] 2 All ER 55, 60.

necessary to justify an action for passing off.¹⁰⁶ This can be seen, for example, in the *Budweiser* case.¹⁰⁷ In this decision Anheuser-Busch, an American company who manufactured BUDWEISER beer sued the Czech brewers, Budejovicky Budvar, for passing off. The Czech brewers began selling their boutique beer in England under the name BUDWEISER BUDVAR in 1973.¹⁰⁸ While at this time the claimant's sales of BUDWEISER were confined to stores on American Air Force bases, the beer was widely known throughout the United Kingdom. The Court of Appeal rejected the claimant's claim on the basis that there was no goodwill in the United Kingdom. As the sales on the Air Force bases were not available for general purchase, the court held that they were to be ignored.¹⁰⁹ In rejecting the action, the court supported the view that mere reputation alone would not justify an action for passing off.

The requirement that for a foreign trader to have goodwill they must be able to show that they have customers in the United Kingdom has been criticized by those who consider the geographical division of goodwill to be out-of-step with the commercial reality of globalized trade.¹¹⁰ Support for this criticism comes from the fact that a number of comparable jurisdictions have recognized the international character of goodwill. The Full Federal Court of Australia in *ConAgra v. McCain Foods (Australia)*¹¹¹ has perhaps gone the furthest in this regard. In this case, Lockhart J said that the 'real question is whether the owner of the goods has established a sufficient reputation with respect to his goods within the particular country in order to acquire a sufficient level of consumer knowledge of the product and attraction for it to provide custom which, if lost, would likely result in damage to him. This is essentially a question of fact'.¹¹²

In the *Peter Waterman v. CBS* case, Browne-Wilkinson V-C commented on the need for passing off to be adapted to modern business environments in this way:

The changes in the second half of the twentieth century are far more fundamental than those in nineteenth century England. They have produced worldwide marks, worldwide goodwill and brought separate markets into competition with the other. Radio and television with their attendant advertising cross national frontiers. Electronic communication via satellite produces virtually instant communication between all markets. In terms of travel time, New York by air is as close as Aberdeen by rail. This has led to the development of the international reputation in certain names, particularly in the service fields, for example Sheraton Hotels, Budget Rent A Car . . . In my view, the law will fail if it does not try to meet the challenge thrown up by trading patterns which cross national and jurisdictional boundaries due to a change in technical achievement.¹¹³

¹⁰⁶ *Athlete's Foot Marketing Association v. Cobra Sports* [1980] RPC 343; *Jian Tools for Sales v. Roderick Manhattan Group* [1995] FSR 924.

¹⁰⁷ *Anheuser-Busch v. Budejovicky Budvar Narodni Podnik* [1984] FSR 413.

¹⁰⁸ Budweis is the old German name of the town in which the Czech beer is brewed.

¹⁰⁹ In *Anheuser-Busch v. Budejovicky Budvar Narodni Podnik* [1984] FSR 413, 462, Oliver LJ defined the question as 'how far is it an essential ingredient of a successful claim in passing off that the plaintiff should have established in this country a business in which his goods or services are sold to the general public on the open market?'

¹¹⁰ A. Coleman, 'Protection of Foreign Business Names and Marks Under the Tort of Passing Off' (1986) *Legal Studies* 70, 76; F. Mostert, 'Is Goodwill Territorial or International?' [1989] *EIPR* 440.

¹¹¹ *ConAgra v. McCain Foods (Australia)* (1992) 23 *IPR* 193, 234.

¹¹² *ConAgra v. McCain Foods (Australia)* (1992) 23 *IPR* 193, 34.

¹¹³ *Peter Waterman v. CBS* [1993] *EMLR* 27.

Despite these comments and his liberal interpretation of the case law, the Vice Chancellor was not prepared to abandon the requirement that to establish goodwill, a foreign trader must have customers in the United Kingdom. This reluctance to allow an action based merely on reputation may have been grounded in a fear that if such a prerequisite was abandoned it would enable claimants with an international reputation to enforce a worldwide monopoly without any guarantee that they will ever expand into the domestic market.¹¹⁴ In addition, it has been pointed out that too ready recognition of rights of foreign traders may render it difficult for domestic traders to find marks which can be lawfully used in the United Kingdom.¹¹⁵

(d) *Well-known marks*. Whatever the criticisms and prospects for further development, the 1994 Trade Marks Act provides foreign traders who lack local goodwill with a potential remedy.¹¹⁶ Section 56, which gives effect to Article 6 bis of the Paris Convention,¹¹⁷ states that:

The proprietor of a trade mark which is entitled to protection under the Paris Convention as a well-known trade mark is entitled to restrain by injunction the use in the United Kingdom of a trade mark which, or the essential part of which, is identical or similar to his mark, in relation to identical or similar goods or services, where the use is likely to cause confusion.

Importantly, this provision applies to a proprietor of a 'well-known' trade mark 'whether or not that person carries on business, or has any goodwill, in the United Kingdom'. (In fact, if the proprietor is a national of the United Kingdom, they will not benefit from the provision).¹¹⁸ The key limitation in section 56 is not goodwill. Rather, it is whether the mark is 'well-known'.¹¹⁹ It seems that a number of considerations will be taken into account when deciding whether a mark is well-known. These include trade recognition and public recognition in the United Kingdom;¹²⁰ the inherent distinctiveness

¹¹⁴ In Australia, this objection has been met by emphasizing the need for a claimant to show damage, diversion of trade that it is about to commence, or the tarnishment of reputation: *ConAgra v. McCain Foods (Australia)* (1992) 23 IPR 193, 235.

¹¹⁵ *In re Tara Jarmon's Application (Tara Jarmon)* (7 Sept. 1999) (para. 36) SRIS O/311/99.

¹¹⁶ This remedy is less attractive than passing off in three obvious respects: firstly, TMA s. 56 is only available if the mark is 'well known'; second, s. 56 results only in injunctive relief rather than compensation or restitution; third, s. 56 does not extend to dissimilar goods, whereas passing off might. Note, however, that many of the limitations to registrability of trade marks (e.g. s. 3(2)), and statutory defences to infringement of registered marks (TMA ss. 11–12), do not appear to apply to the s. 56 action.

¹¹⁷ Trademark Law Treaty, Art. 16 and TRIPS, Art. 16(2) require application of Paris Art. 6 bis to service marks.

¹¹⁸ See TMA s. 55(1)(b); *In re Thomas Cook Boot & Clothing Co.'s Application* (8 Jul. 1999) SRIS O/192/99. Nor need the proprietor of a well known mark have registered the mark in a Convention country: *In re Sharif's Application (Advanced Health Products)* (23 Mar. 2000) (para. 52) SRIS O/112/00.

¹¹⁹ There is authority that it is not just the mark that must be well known, but also that the mark be well known to be that of a proprietor which is based in a foreign country: *In re Swizzels Matlow Ltd's Application (3-d 'navy' mark)* (23 Oct. 2002) (paras. 21–3) SRIS O/437/02 (rejecting argument that shape of POLO was well-known mark because lack of evidence that proprietor was foreign). But cf. *In re Madgecourt Ltd's Application (Man O Man)* (24 Sept. 1998) 8 SRIS O/188/98.

¹²⁰ Art. 16(2) of TRIPS requires that account be taken of the knowledge of the trade mark in the relevant sector of the public, including knowledge that has been obtained as a result of the promotion of the trade mark. The *WIPO Joint Recommendation Concerning Provisions on the Protection of Well Known Marks* refers to (i) the degree of knowledge or recognition of the mark in the relevant sector of the public; (ii) the duration, extent and geographical area of any use of the mark; (iii) the duration, extent and geographical area of any promotion, advertising and publicity; (iv) the duration, geographical area of any registrations; (v) previous

of the mark; the duration and extent of any use (whether in the United Kingdom or neighbouring territories), or promotion or advertising (especially in territories covered by the same media); sales made abroad to British residents (e.g. those on holiday); and the value of the goodwill. It seems that this evidence must point to a high level of recognition amongst the relevant consumers in the United Kingdom. In *General Motors v. Yplon SA*, the Advocate General described the protection afforded to well-known marks under the Paris Convention as 'exceptional' and therefore concluded that it 'would not be surprising . . . if the requirement of being well-known imposed a relatively high standard for a mark to benefit from such exceptional protection'.¹²¹ The Trade Marks Registry, applying the criteria in the context of conflicts between well-known marks and application to register similar marks,¹²² has adopted a high standard.¹²³ In *Microsoft Corporation's Applications*,¹²⁴ for example, the Trade Mark Registry held that in May 1991 WINDOWS was not a well-known mark. The Registrar explained that he did not consider that the status of well-known mark was one to be conferred lightly. He added that 'there would need to be some independent evidence from the trade and, perhaps, more importantly the public as to the recognition accorded to the mark in this country. Evidence of use alone . . . cannot sustain the claim'.¹²⁵

3 THE SCOPE OF GOODWILL

Once it has been decided that the claimant has goodwill, the next question to consider is its scope. This is an important question because it may influence whether the defendant's representation amounts to a passing off.¹²⁶ While similar inquiries take place with other forms of intellectual property, there is one important difference, which relates to the territorial scope of the property. For example, when considering whether a patent has been infringed, the question of the geographical scope of the protection is not an issue. This is because the patent operates throughout the whole of the United Kingdom. This is not the case, however, in relation to an action for passing off where the territorial or geographical scope of the goodwill must first be ascertained. Despite the apparent dominance of nationwide firms and franchises, there are many businesses that only trade in a small and

recognition by authorities of the well-known status of the mark; (vi) the value associated with the mark. These were taken into account in *In re Alfredo International Inc's Application (Alfredo)* (6 Nov. 2001) SRIS O/486/01.

¹²¹ Case C-375/97[1999] ECR I-5421 (para. 33) (Advocate General Jacobs).

¹²² TMA s. 6(1)(c).

¹²³ *In re Sharif's Application (Advanced Health Products)* (23 Mar. 2000) SRIS O/112/00 (para. 52) (TM Registry) (use of AHP in business publications insufficient); *In re Speciality Retail Group's Application (Suit Express)* (5 Apr. 2000) SRIS O/124/00 (para. 25); *In re Rajesh Talwar's Application (Rare)* (29 Oct. 2001) (paras. 72–6) SRIS O/479/01; *In re Alfredo International Inc's Application (Alfredo)* (6 Nov. 2001) SRIS O/486/01. ¹²⁵ [1997–8] *Information Technology Law Reports* 361, 371. See also *In re St Leonards Motors Ltd's Application (SLM)* (6 Aug. 1999) (requiring 'highest test for proof of a trade mark being well-known' and insisting on survey evidence that shows 'that a lot of people actually do know the trade mark') (TM Registry).

¹²⁶ *Associated Newspapers Ltd v. Express Newspapers* [2003] FSR (51) (para. 23) (considering whether repute of THE MAIL was limited to papers which were sold, or whether it extended to free papers).

relatively confined area. In these circumstances, the way the physical limits of the goodwill are determined may be crucial to the success or otherwise of a passing off action.¹²⁷

4 OWNERSHIP OF GOODWILL

In principle, the owner of goodwill is the business that generates it. While goodwill will normally be owned by a single trader or business, the courts have recognized that a group of traders may share goodwill in a name or feature of a product that they have in common. Where the singularity of a product is shared by a group of traders (normally in a specific region), they may share goodwill in the identifying feature: the name, image, logo, etc. The courts have recognized shared goodwill in relation to champagne,¹²⁸ sherry,¹²⁹ whisky,¹³⁰ advocaat, and Swiss chocolate.¹³¹

Problems arise, however, where a number of different people, companies, or businesses cooperate in the making and distribution of a product. In these circumstances, the courts are forced to decide whether the goodwill is individually or jointly owned and, if so, by whom. The difficulties in deciding how the ownership of goodwill is to be ascribed have become all the more problematic with the expansion of international trade, the globalization of markets, and the growth of multinational corporations.¹³² In such cases it is common for a firm in one country to expand into another through a subsidiary, distributor, agent, or licensee. In the absence of a carefully formulated contract dealing with the relationships between the parties, difficult questions can arise as to ownership of the goodwill generated by the actions of the local distributor and foreign supplier. This is especially the case when the arrangements between the parties end. This can be seen, for example, in *Scandecor Development v. Scandecor Marketing*.¹³³ In this case a Swedish art poster business founded in the 1960s was rearranged so that a subsidiary, Scandecor Marketing (the defendant), had responsibility for marketing the claimant's products in the United Kingdom. The claimant supplied poster products for sale. The defendant also sold ancillary products, such as calendars and cards, not supplied by the claimant, and over which they had no control. The defendant's marketing occasionally referred to the fact that they were connected with the world's largest poster company. In the 1980s the claimant was taken over. The new owners terminated the agreement with the defendant. After further negotiations failed, the claimant demanded that the defendant stop using the SCANDECOR mark.

At first instance, Lloyd J held that the goodwill was shared between the claimant and defendant, effectively finding two different, yet connected, forms of goodwill: a distributor's goodwill and a publisher's goodwill. The Court of Appeal rejected that view, holding

¹²⁸ *Bollinger v. Costa Brava Wine Co.* [1960] Ch 262; *Taittinger v. Allbev* [1994] 4 All ER 75 (champagne companies able to prevent use of Elderflower champagne).

¹²⁹ *Vine Products v. Mackenzie* [1969] RPC 1.

¹³⁰ *John Walker & Sons v. Henry Ost* [1970] 2 All ER 106.

¹³¹ *Chocosuisse Union des Fabricants Suisse de Chocolat v. Cadbury* [1998] RPC 117.

¹³² *Scandecor Development AB v. Scandecor Marketing AB* [1999] FSR 27, 38–9 (CA).

¹³³ *Ibid.* [1998] FSR 500; [1999] FSR 27 (not considered by the House of Lords).

instead that the goodwill belonged to the defendant. The Court of Appeal observed that where the goodwill originates from a common source overseas, but then expands and is developed by different companies in different territories, it is necessary to analyse the effect of the changes occurring from time to time in the control and ownership of the businesses which generate the goodwill.¹³⁴ Reviewing that history, the Court of Appeal noted that the contact with customers had been largely through the defendant. They also denied that there was any 'rule of law or presumption of fact that the goodwill generated by the trading activities of a wholly owned subsidiary company belongs to the parent company'.¹³⁵ Instead, 'what matters is who retailers identified as the person carrying out the trading activities in the local territory'.¹³⁶ In this respect the Court of Appeal placed less emphasis than Lloyd J had on the fact that the defendant had occasionally referred to the international scope of its activities. The evidence showed that the customers treated the supplier, that is the defendant, as being more significant than the publisher.

4.1 GOODWILL AS PROPERTY

Goodwill is a form of property that is transmissible by assignment, on death, or by operation of law.¹³⁷ There are no formalities laid down for assignment of goodwill *inter vivos*. However, it is relatively settled that goodwill cannot be assigned in 'gross', that is separately from the business to which it is attached.¹³⁸

¹³⁴ The Court of Appeal in *Scandecor* [1999] FSR 27, 42 accepted that in an appropriate case, it is legally and factually possible for a business based overseas to acquire goodwill in this country by the supply of its products or services through a subsidiary, agent, or licensee. Whether or not that occurs must depend on the facts of the particular case. Cf. *Habib Bank v. Habib Bank AG Zurich* [1981] 2 All ER 650 (international parent may retain international goodwill); *Gromax Plasticulture v. Don & Low Nonwovens* [1999] RPC 367.

MISREPRESENTATION

1 INTRODUCTION

The second element of the passing off action, which we consider in this chapter, is the misrepresentation.¹ Historically, the need for a misrepresentation, which is one of the factors that distinguishes passing off from a law of unfair competition, is explained by the fact that the passing off action grew out of the common-law action for deceit.² Typically, a misrepresentation occurs where the defendant says or does something that indicates (expressly or impliedly) that the defendant's goods or services derive from (or are otherwise economically connected with) the claimant. Initially, liability for passing off was limited to situations where the defendant's actions gave rise to the suggestion that their goods or services had come from the claimant; that is, that there was confusion as to the source of the goods. Over time, however, the action has expanded to include representations that relate to the quality of the goods or services, and to representations that suggest that there is a connection between the claimant and the defendant.

This chapter is divided into four parts. First, we consider the type of conduct that forms the basis of the defendant's misrepresentation. Second, we look at the types of suggestions that are actionable. Third, we look at the requirement that, for a statement to be a misrepresentation, it must be likely to cause confusion. Fourth, we note that a passing off action can be brought not only against a person who carries out the misrepresentation, but also against someone who provides the means that enables the misrepresentation to occur.

2 NATURE OF THE DEFENDANT'S REPRESENTATION

There are no formal restrictions on the types of representations that are actionable. Indeed, as Lord Parker said in *Spalding v. Gamage*, it is 'impossible to enumerate or classify all the possible ways in which a [trader] may make the . . . representation relied upon'.³ So long as the representation confuses the public in a relevant way, the means by which this comes about is irrelevant. Having said this, it may be helpful to consider some of the more important points about the types of conduct that may constitute a misrepresentation.

¹ In *Spalding v. Gamage* [1915] 32 RPC 273, 284, Lord Parker referred to false representation by the defendant as 'the basis of a passing off action'.

² See J. Phillips and A. Coleman, 'Passing Off and the Common Field of Activity' (1985) 101 LQR 242, 243 for a comparison of passing off with deceit.

³ *Spalding v. Gamage* (1915) 32 RPC 273, 284.

2.1 DEFENDANT'S STATE OF MIND

In deciding whether a misrepresentation has taken place, the key concern is with the *consequences* of the defendant's actions and the effect that these have upon the public, rather than the state of the defendant's mind. As such, to succeed in a passing off action, there is no need for the misrepresentation to be conscious, deliberate, intentional, or fraudulent.⁴ It also does not matter whether the misrepresentation was made deliberately or innocently. Similarly, the fact that a statement is true does not matter, so long as the defendant's actions/representations generate the requisite confusion in the mind of the public.

The misrepresentation is actionable even if it is unintentional, or can be explained on what seem like legitimate grounds.⁵ For example, if a person trades under their own name they might still be passing their goods off as those of the claimant.⁶ For example, in *Parker Knoll v. Knoll International*⁷ the defendant, Hans Knoll, established a furniture manufacturing business that he called KNOLL INTERNATIONAL. Another firm of furniture makers, established by the defendant's uncle, already traded as PARKER KNOLL. Despite dicta to the effect that individuals have a 'natural and inherent right' to use their own name,⁸ the House of Lords denied that a person was entitled to use their own name to indicate that their goods are the goods of another. Consequently, their Lordships granted an injunction.⁹ Given that there is no defence where a person uses their own name, it is not surprising that there is no defence where someone changes their name or uses a nickname.¹⁰

2.2 FORM OF THE MISREPRESENTATION

The courts have been very flexible in deciding whether a defendant has made the requisite misrepresentation. The flexible nature of the misrepresentation is reflected in the fact that the misrepresentation can arise through the use of words or actions. We will look at each of these in turn.

(i) *Words.* The commonest form of misrepresentation involves the use of words, whether oral or written. In some cases this will occur where the defendant makes a statement that links them either explicitly or implicitly to the claimant. Often, the defendant will use a name that is identical or very similar to the trade name used by the claimant. Thus in *Taittinger v. All Bev*,¹¹ the Court of Appeal held that by calling their drink ELDERFLOWER CHAMPAGNE the defendants had made a misrepresentation that they were part of the group of champagne producers. One of the consequences of the fact that words are able to

⁴ *HFC Bank v. Midland Bank* [2000] FSR 176, 181. But there are advantages for a claimant who can show that use was deliberate: *Irvine v Talksport* [2002] FSR 943.

⁵ *Montgomery v. Thompson* [1891] AC 217, 220.

⁶ G. Kodilinye, 'Passing Off and the Use of Personal Names' (1975) 26 *Northern Ireland Legal Quarterly* 177; Wadlow (1995) paras. 7.10–7.14, 482–91.

⁷ [1962] RPC 265; *Nad Electronics Inc v. Nad Computer Systems* [1997] FSR 380, 392.

⁸ *Marengo v. Daily Sketch* (1948) 65 RPC 137.

⁹ G. Kodilinye, 'Passing Off and the Use of Personal Names' (1975) 26 *Northern Ireland Law Quarterly* 177, preferring Lord Denning's dissenting speech to those of the majority, argues that the case 'far from laying down any coherent principles, seems to have thrown the law into even greater confusion than before'.

¹⁰ *Biba Group v. Biba Boutique* [1980] RPC 413, 420.

¹¹ [1993] FSR 641.

form the basis of a misrepresentation is that passing off may prevent a person from calling their book, film, record, or band by the same name or title as is used by someone else.¹²

(ii) *Action*. In some cases the relevant misrepresentation may be implied from the action of the defendant. Perhaps the clearest example of this is where the defendant manufactures their goods to look like the claimant's. It will also occur if a customer asks a trader to supply them with someone else's goods, but the trader instead supplies the customer with their own goods, this would be an actionable misrepresentation.¹³ A misrepresentation can also occur where the defendant places their product in close proximity to the claimant's. For example, in *Associated Press v. Insert Media*,¹⁴ the court held that by inserting advertisements inside the claimant's newspaper after the paper had been delivered to newsagents, the defendant passed the inserts off as if they were the claimant's. The position might have been different, however, if the two products had only been delivered at the same time. It does not seem likely that where products are placed side by side on a supermarket shelf that this would amount to a misrepresentation.

Another situation where the action of a defendant may give rise to an actionable misrepresentation is in relation to the registration of names used on the Internet. This can be seen in *British Telecommunications v. One In A Million*¹⁵ which was one of the earliest British cases to deal with the practice of cybersquatting. The defendant in this case was a dealer in Internet domain names and had secured domain name registration for prestigious names such as virgin.com and tandyc.com. These were registered without the consent of the organization who owned the goodwill in those names. The defendant's aim was either to sell the names they registered to the owners of the goodwill (using the blocking effect of the registration to negotiate for a better price),¹⁶ or to sell them to other people (such as collectors). The Court of Appeal held that the act of registering names such as marksandspencer.co.uk amounted to an actionable misrepresentation. This was particularly the case where the name denoted a particular trader and no one else. Aldous LJ explained that the 'placing on a register of a distinctive name such as "marksandspencer" makes a representation to persons who consult the register that the registrant is connected or associated with the name registered and thus the owner of the goodwill in the name'.¹⁷ This decision, which is not without its critics, has important ramifications for the legal regulation of the Internet.¹⁸

¹³ *Bristol Conservatories v. Conservatories Custom Built* [1989] *RPC* 455; *LEEC v. Morquip* (7 Feb. 1996) [1996] *EIPR* D-176 (speculating on the possible significance of body language in forming the misrepresentation).

¹⁴ [1991] *FSR* 380.

¹⁵ [1998] 4 *All ER* 476. For criticism, see M. Elmslie, 'The One in a Million Case' [1998] *Ent LR* 283, 284 (questioning the conclusion given that no evidence of how users view the register was given in the case). See also *French Connection v. Sutton* [2000] *ETMR* 341.

¹⁶ For example, the defendants offered to sell the domain name burgerking.co.uk to BURGER KING for £25,000.

¹⁷ [1998] 4 *All ER* 476, 497.

¹⁸ See the discussion of ICANN at p. 1083–5 below.

3 WHAT TYPE OF SUGGESTIVE CONDUCT IS ACTIONABLE?

In the previous section we looked at the various forms of conduct that constitute a misrepresentation. In this section we turn to look at the *consequences* that flow from that conduct. In so doing, it is important to note that in order to promote the sale of their products or services, a trader may act or make statements that are suggestive of a number of things. For example, a defendant may act in such a way that the public comes to believe that their products are cheaper than the claimant's, that they are environmentally more sound, or better designed. They may also suggest that their goods are very suitable to be used in connection with the claimant's. Equally, a trader may suggest that their goods are similar to or better than the claimant's. While the defendant's conduct in each of these cases may harm the claimant, this does not mean that they will succeed in a passing off action. This is because passing off only protects against certain types of suggestions. In this section we examine the types of suggestions that are actionable.

Before looking at these, it should be noted that the misrepresentation may be made expressly or may be implied from the conduct of the defendant. The most straightforward situation is where the defendant makes an express statement, for example, that the claimant is the source of their goods or services. Another straightforward situation is where the defendant takes an aspect of the claimant's 'inducement of reputation', such as their name, logo, or slogan, colour, or get-up. In some cases, however, the reference to the claimant might be more indirect. For example, in *Copydex v. Noso*,¹⁹ the claimant's sold a type of glue called COPYDEX. The glue was demonstrated on a television programme called 'Women's Hour'. However, the name of the glue was not mentioned. The defendant subsequently advertised its glue with the words 'as shown on Woman's Hour'. Vaisey J said he would have granted interim relief but accepted an appropriate undertaking from the defendant.²⁰ In another case, the placement of advertising leaflets inside the claimant's newspaper gave rise to the suggestion that the claimant had control over the content of the advertisements.²¹

3.1 MISREPRESENTATION AS TO SOURCE

The traditional form of misrepresentation occurs where the defendant's actions give rise to a suggestion that the defendant's goods or services are those of the claimant. That is, the defendant somehow suggests that the claimant is the 'source' of their goods.²² Such a misrepresentation is objectionable because it confuses the public and attempts to ride on the back of the claimant's reputation.

A misrepresentation as to source occurs, for example, where the defendant suggests that

¹⁹ (1952) 69 RPC 38.

²⁰ While it is not completely clear whether the basis of the action was passing off, malicious falsehood, or slander of title, it illustrates how the misrepresentation may be made indirectly.

²¹ *Associated Newspapers v. Insert Media* [1991] 3 All ER 535.

²² It is irrelevant that the customers are not actually familiar with the source: *Birmingham Vinegar Brewery v. Powell* [1897] AC 710, 715; *Edge v. Nicholls* [1911] AC 693; *United Biscuits (UK) v. Asda Stores* [1997] RPC 513. This is referred to as the 'anonymous source' doctrine.

they are the manufacturer, marketer, or retailer of the product. It also occurs where the defendant uses a word or name that the public associates with the claimant's business. In both these situations the defendant's conduct gives rise to the suggestion that their goods emanate from the claimant. The representation may also give rise to a suggestion that the goods or services of the claimant and defendant are related. For example, in *Kimberley Clark v. Fort Sterling*,²³ as a part of the defendant's campaign to promote the NOUVELLE toilet roll, the defendant offered to placate customers who had brought NOUVELLE but were dissatisfied with it, by replacing NOUVELLE with ANDREX toilet paper. The claimant, who owned the goodwill in ANDREX, objected. The court held the offer to be a misrepresentation because it was likely to lead purchasers into thinking that NOUVELLE was a product from the ANDREX stable, or that ANDREX was in some way behind the promotion.

3.2 MISREPRESENTATION AS TO QUALITY

The courts have also recognized that a misrepresentation may occur where a defendant makes a representation about the quality of the claimant's goods. The objection here is not that the defendant is riding on the back of the claimant's reputation (although this may occur), so much as to the negative impact that the defendant's actions have upon the claimant's goodwill. This can be seen in *Spalding v. Gamage*.²⁴ In this case, the claimant, who manufactured and sold footballs, brought a passing off action against the defendants who had obtained some of the claimant's old disused stock and sold them as if they were new and improved footballs. Lord Parker held that this was a misrepresentation. The reason for this was that:

[the] proposition that no one has the right to represent his goods as the goods of somebody else must, I think . . . involve as a corollary the further proposition, that no one, who has in his hands the goods of another of a particular class or quality, has a right to represent these goods to be the goods of that other of a different quality or belonging to a different class.²⁵

The extension of the passing off action to include representations about the quality of the claimant's goods may enable a trader to control the parallel importation of their goods. This has been particularly important where a trader places goods of one quality on a foreign market under a particular sign and goods of a different quality on the UK market under the same sign. In these circumstances, the trader may be able to use passing off to prevent goods marketed abroad from being imported into the United Kingdom. In *Colgate-Palmolive v. Markwell Finance*,²⁶ the claimants were all members of an international group of companies which marketed toothpaste in different countries. While the external appearance of the toothpaste tube that was sold in different countries was very similar (the mark and get-up were the same), the quality of the contents varied from country to country. For example, the COLGATE toothpaste sold in Brazil was of a lower quality than that which was available in the UK. This was because the Brazilian toothpaste used a number of cheaper raw materials, such as local chalk, instead of the preferred ingredients which were used in the United Kingdom. Colgate UK, a wholly owned subsidiary of Colgate US, instigated an action to prevent Markwell from importing

²³ [1997] FSR 877.

²⁴ [1915] 32 RPC 273.

²⁵ (1915) 32 RPC 273, 284.

²⁶ [1989] RPC 497.

lower-quality COLGATE toothpaste which had been sold in Brazil into the United Kingdom. Markwell argued that Colgate UK had no right to rely upon the reputation for superior quality toothpaste that it had in the United Kingdom, when the COLGATE trade marks and the get-up were used as worldwide presentation for different quality toothpaste. Markwell also argued that Colgate US must have foreseen that different quality toothpaste would circulate around the world. In effect what Markwell argued was that it was Colgate, and not Markwell, who had made the relevant misrepresentation.

Applying *Spalding v. Gamage*, the Court of Appeal held that traders who placed the same mark on distinct classes of articles were entitled to bring a passing off action against a person who resold the inferior goods in circumstances which constituted a false representation that the goods were of the superior class and thereby damaged the trader's reputation.²⁷ Given that the defendant had made a misrepresentation to consumers in the United Kingdom as to the character and quality of the Brazilian toothpaste, it was irrelevant that the goods were originally produced and sold by a subsidiary of Colgate US.

Another situation where the courts have recognized misrepresentation about the quality of goods is in relation to the so-called 'extended form' of passing off, which was first recognized by Danckwerts J in *Bollinger v. Costa Brava Wine Co.*²⁸ As we explained earlier, this case recognized that a class or group of traders may share goodwill in a name (or some other indicator) that is distinctive of a particular class of goods. In particular, it was recognized that champagne producers who made sparkling wine with grapes from the Champagne region of France using the *champanois* process had goodwill in the 'champagne'. It was also recognized that individual members of the class of traders are able to bring an action against anyone who uses the distinctive name in relation to products of a different quality. On this basis, French champagne houses have been able to stop other traders who do not make drinks with those characteristics, for example, producers of the drinks SPANISH CHAMPAGNE OF ELDERFLOWER CHAMPAGNE, from using the term 'champagne'.²⁹ The House of Lords approved this line of authority in *Warnink v. Townsend*. In so doing they granted relief to a producer of an egg-based alcoholic drink ADVOCAAT.³⁰ The action has subsequently been used by the producers of PARMA HAM (albeit unsuccessfully) and SWISS CHOCOLATE.³¹ The specifics of the action, which has a number of idiosyncratic characteristics, are considered below.³²

3.3 MISREPRESENTATION THAT THE CLAIMANT HAS CONTROL OR RESPONSIBILITY OVER THE GOODS OR SERVICES

The courts have also recognized that a misrepresentation may occur where the defendant's conduct gives rise to the suggestion that the claimant has some type of control or

²⁷ [1989] *RPC* 497, 514 (Slade LJ), 529 (Lloyd LJ). Cf. *Champagne Heidsieck v. Buxton* [1930] 1 *Ch* 330 which was distinguished, at 513, because on the facts resale in *Colgate* carried with it a misrepresentation as to quality.

³² See below at pp. 756–60.

responsibility over their goods or services. In *British Legion v. British Legion Club (Street)*³³ Farwell J held that an organization formed to assist First World War veterans called the 'British Legion' could rely on passing off to prevent the words 'British Legion Club (Street)' from being used to describe a local social club. This was because members of the public would have thought that the social club was 'either a Branch of the plaintiff association, or at any rate that it was a club in some way amalgamated with or under the supervision of the plaintiff association for which the plaintiff association had in some way made itself responsible'.³⁴

It should be noted that the mere fact that a defendant suggests that they are somehow connected to the claimant will not necessarily amount to a passing off. This is because the connection will only be relevant if the defendant's misrepresentation suggests that the claimant has some type of control or responsibility over the goods or services in question. The nature of the connection that is necessary to sustain a misrepresentation was considered in *Harrods v. Harroddian School*.³⁵ In this case, the famous London department store was refused an injunction to prevent a preparatory school known as 'The Harroddian Club', which was built on the site of the former Harrod's club, from calling itself the 'Harroddian School'.³⁶ (Harrods claimed that Harroddian was the adjectival form of Harrods.) In the Court of Appeal Millett LJ explained that:

the relevant connection must be one by which the plaintiffs would be taken by the public to have made themselves responsible for the quality of the defendant's goods or services . . . It is not in my opinion sufficient to demonstrate that there must be a connection of some kind between the defendant and the plaintiff, if it is not a connection which would lead the public to suppose that the plaintiff has made himself responsible for the quality of the defendant's goods or services. A belief that the plaintiff has sponsored or given financial support to the defendant will not ordinarily give the public that impression.³⁷

The *Harrods* decision places an important limit on the scope of passing off, particularly in relation to sponsorship.³⁸ For example, it seems that if a trader was to adopt the logo of the Diana Memorial Fund, this would not amount to passing off. This is because the public would most probably take this to mean that the trader has made a donation to the Diana Fund, rather than that the Fund had any control over the trader's business.³⁹

3.3.1 Personality merchandising

The expansion of passing off to include situations where the defendant makes a representation that the claimant has some type of control or responsibility over their goods or services helps to ensure that the action continues to be relevant in the modern commercial environment. It has also given rise to the possibility that celebrities may be able to utilize passing off to control the use that is made of their images or other personal indicia. This is

³³ (1931) 63 *RPC* 555.

³⁴ (1931) 63 *RPC* 555, 564.

³⁵ [1996] *RPC* 697; H. Carty, 'Passing Off at the Crossroads' [1996] *EIPR* 629, taking the view that Millett LJ's restrictive approach is less in line with existing authorities than Sir Michael Kerr's dissenting judgment.

³⁶ In so doing, the Court of Appeal criticized *Bulmer v. Bollinger* [1978] *RPC* 79, 117 (Goff LJ) where it was said that the connection must 'lead people to accept them on the faith of the plaintiff's reputation'.

³⁷ [1996] *RPC* 697, 712–13.

³⁸ *Irvine v. Talksport* [2002] *FSR* 943.

³⁹ B. Isaac, 'Merchandising or Fundraising? Trade Marks and the Diana, Princess of Wales Memorial Fund' [1998] *EIPR* 44 (use of Diana logo not an indication of source but rather an indication that the user has given the fund financial support).

potentially very important given that personality merchandizing, that is the practice whereby celebrities use their names and images to endorse and associate themselves with products and services, has become a common feature of modern marketing and that, at present, UK law refuses to recognize a right of personality.⁴⁰

Despite the flexible nature of the passing off action it has provided, at best, minimal protection against traders who appropriate aspects of someone else's personality.⁴¹ In *Lyngstrad v. Annabas Products*,⁴² the pop group ABBA complained that the defendant was selling paraphernalia that bore the name and image of the group. Refusing to grant relief, Oliver J said that he did not think anyone could reasonably imagine that the pop stars had given their approval for the paraphernalia. He also added that the defendants were not doing 'anything more than catering for a popular demand among teenagers for effigies of their idols'.⁴³

The courts in Australia have adopted a more generous approach to the application of passing off to personality and character merchandising. For example, in *Henderson v. Radio Corporation*,⁴⁴ the defendants reproduced a picture of the claimants, who were ballroom dancers, on one of their record covers. The Supreme Court of New South Wales held that in so doing the defendants had made a misrepresentation that there was a 'connection' between the claimants and the defendants. This was because 'the class of persons for whom the record was primarily intended would probably believe that the picture of the respondents on the cover indicated their recommendation or approval of the record'.⁴⁵

An even more liberal approach was adopted by the Federal Court of Australia in *Hogan v. Koala Dundee*⁴⁶ where Pincus J said that it was no longer necessary to show misrepresentation to prove passing off. In this case the claimant, who was the writer and star of the film *Crocodile Dundee*, brought an action against two tourist shops which sold clothing, hats, and T-shirts that were 'of a particularly Australian nature'. The basis of the claimant's complaint was that the defendants had used the name DUNDEE and had also used an image of a koala bear which, like the hero in the claimant's film *Crocodile Dundee*, was dressed in a sleeveless shirt, wore a bush hat with teeth in the band, and carried a knife. The Federal Court of Australia granted the claimant relief, denying that there was a need for a misrepresentation. The Court grounded the decision on the basis of 'wrongful appropriation of a reputation, or, more widely wrongful association of goods with an image properly belonging to an applicant'.⁴⁷

However, in a second *Crocodile Dundee* case of *Hogan v. Pacific Dunlop*,⁴⁸ the full Federal Court reverted to the conventional position that to succeed in a passing off action the claimant must show that there has been a misrepresentation. Here, the claimant advertised shoes by reference to a particular scene (the knife scene) in the film *Crocodile Dundee*. The Federal Court of Australia said that there was a misrepresentation 'involving use of the image or indicium in question to convey a representation of a commercial connection

between the plaintiff and the goods and services of the defendant, which connection does not exist'.⁴⁹

English cases have stuck to the view that passing off requires a misrepresentation. They have also held that while the public does not need to believe that the personality made the goods or services, the public must have thought that the personality endorsed them. As a result, while labelling a product with the words 'official' or 'approved by' a particular personality would probably be treated as a misrepresentation, the unauthorized use of a celebrity's image on an advertisement may or may not.⁵⁰ In a similar vein, in the *Elvis Presley* decision Laddie J said that the public would not assume that the use of the words ELVIS, ELVIS PRESLEY, or the signature ELVISLY YOURS on toiletries and perfumes indicated any connection with Elvis's estate. This was because when people buy such articles, they probably do not care one way or the other who made, sold, or licensed them. Similarly, it has been said that persons purchasing stickers of the *Spice Girls* are unlikely to believe that the stickers were published by the band, or that the quality of the stickers was authorized by them. This was because the traders who supplied the merchandise were merely responding to a demand 'for effigies and quotes of today's idols'.⁵¹

Although it has been regarded by some as marking a shift in judicial attitudes to personality merchandising, the decision of Laddie J. in *Irvine v. Talksport* probably is nothing of the sort.⁵² In this case the famous Formula 1 racing driver brought an action against Talksport for using his image on a promotional brochure (used to attract advertising for the radio station). The brochure comprised a picture of Irvine, which had been modified so that he was listening to a radio bearing the Talksport logo. Irvine brought an action for passing off, and Laddie J found in his favour. Laddie J reviewed the cases on personalities and passing off, and held that they indicated that a person might be able to utilize passing off to prevent a misrepresentation by a trader that its products or services had been endorsed by the personality. (In so doing the judge made it clear that endorsement was a narrower notion than merchandising.) On the facts in front of him, Laddie J found that Talksport's brochure had given the impression that Irvine endorsed the radio station. In particular, Laddie J was impressed by evidence from an associate of Irvine to the effect that he sought a free radio from the racing-driver, an act which indicated that he believed Irvine had done a deal with the radio station. At best, the case indicates that British courts will be sympathetic to any unauthorized use of a personality's image or likeness which wrongfully implies endorsement of a trader's products.

3.3.2 Misrepresentations in character merchandising

Character merchandising involves the application of images of cartoon and other fictional characters to merchandise. While the Australian approach has not been followed in the UK in relation to personality merchandising, it has been more enthusiastically applied to character merchandising. For example, in *Mirage Studios v. Counter-Feat Clothing*⁵³ the defendants were found liable for passing off when they applied the claimant's characters, the *Teenage Ninja Mutant Turtles*, to their clothing. Browne-Wilkinson V-C explained that

⁴⁹ Gummow J, at first instance.

⁵⁰ *Elvis Presley Trade Marks* [1997] RPC 543, 558.

⁵¹ *Halliwell v. Panini SpA* (6 Jun. 1997) Lightman J, echoing *Lyngstrad v. Annabas Products* [1977] FSR 62 and refusing the claimant an *ex parte* injunction demanding no further sale of the albums without a disclaimer.

⁵² [2002] FSR 943.

⁵³ [1991] FSR 145.

'the critical evidence in this case was that a substantial number of the buying public now expects and knows that where a famous cartoon or television character is reproduced on goods, that reproduction is the result of a licence granted by the owner of the copyright or owner of other rights in the character'.⁵⁴ As a result, he concluded that sale of the merchandise involved two misrepresentations. First, a (mis)representation to the public that the goods were 'genuine' (i.e. that the drawings were the drawings of the claimants). Second, a misrepresentation that the goods were licensed.⁵⁵ Browne-Wilkinson V-C went on to say that he regarded the Australian authorities as 'sound'.⁵⁶

While the implications of the *Ninja Turtle* case have yet to be fully explored,⁵⁷ the indications are that the English courts will treat the decision as being limited to its particular facts.⁵⁸ As we have seen, the decision has not been extended to personality merchandising cases. Nor does it appear to extend to the use of names, as opposed to the use of copyright images.⁵⁹ This is because in the case, the judge distinguished a number of authorities on the ground that they were concerned with the licensing of names in which no copyright subsists, rather than the copyright material.⁶⁰ Moreover, even where the merchandising is protected by copyright, the courts have recently indicated that to succeed in a passing off action, the claimant must show that the public understood that the goods were licensed *and* that they bought the merchandise on that basis. This can be seen in *BBC Worldwide v. Pally Screen Printing*.⁶¹ The BBC owned copyright and merchandising rights to the popular children's characters known as the *Teletubbies*. The defendants printed pictures of the *Teletubbies* on various items such as T-shirts. In response to the BBC's action for passing off, Laddie J explained that to succeed:

the plaintiffs will need to show that they have built up the necessary reputation so that members of the public would look at this type of artwork and consider it to represent the plaintiffs or products made with the plaintiffs' approval. It seems to me that it is quite possible that members of the public will look at T-shirts bearing this artwork and think no more than it is artwork bearing illustrations of well-known television characters without having any regard whatsoever to the source of supply and without having any regard as to whether or not these T-shirts were put out with the sanction of or under the aegis of the plaintiffs.

Laddie J refused to grant the BBC summary judgment against the defendants because it was 'not unforeseeable' that the defendants might succeed.

⁵⁴ [1991] FSR 145, 155.

⁵⁵ The reference to 'genuineness' was interpreted by Laddie J as perhaps referring to the creator of the character, or his successors: *Elvis Presley Trade Marks* [1997] RPC 543, 553.

⁵⁶ The authorities did not, however, include the two *Dundee* cases. For a comparison of English and Australian law, see S. Burley, 'Passing Off and Character Merchandising' [1991] EIPR 227, 228.

⁵⁷ Wadlow (1995) says that the case leaves UK law in an unsatisfactory state from almost every point of view: para. 5.41, 310. More approving sentiments can be found elsewhere: J. Holyoak, 'United Kingdom Character Rights and Merchandising Rights Today' [1993] *J Business Law* 444, 451 (in general arguing that character merchandising is now adequately protected).

⁵⁸ *Elvis Presley Trade Marks* [1997] RPC 543, 553.

⁵⁹ *Nice and Safe Attitude v. Piers Flook* [1997] FSR 14, 21.

⁶⁰ e.g. *Wombles v. Womble Skips* [1977] RPC 99; *Tavener Rutledge v. Trexapalm* [1975] FSR 179. He also asserted that *Lygstrad v. Anabas Products* [1977] FSR 62 could be distinguished on that basis.

⁶¹ [1998] FSR 665, 674.

3.4 REVERSE PASSING OFF

Reverse or inverse passing off is the name given to the situation where a trader tries to claim the benefit of another trader's goods or service to enhance their own reputation.⁶² In the classic passing off action, the defendant's misrepresentation gives rise to a suggestion that the defendant's goods or services are those of the claimant. However, with reverse passing off the defendant's misrepresentation gives rise to the suggestion that the defendant is the source of the claimant's goods or services (or is somehow responsible for the quality of the claimant's goods or services). That is, instead of the defendant pretending that their goods are the claimant's, the defendant claims the claimant's goods as their own.

It is not clear whether reverse passing off amounts to an actionable wrong.⁶³ In principle, it depends on whether the standard requirements of the 'classical trinity' are met. The problem here is in establishing misrepresentation and damage. If a person merely resells the goods of another trader, this will not usually amount to a misrepresentation. This is the case even if they have added a new sign to the goods. Moreover, given that the claimant-manufacturer will have already placed the goods on the market, it is difficult to see where the damage lies. Although a defendant may derive benefit where they resell the goods, this does not in itself harm the manufacturer. In some circumstances, however, the activities of the reseller may cross into the realm of passing off. A good example of this is where a person represents the claimant's goods as their own, but subsequently supplies their own goods. For example, in *Bristol Conservatories v. Conservatories Custom Built*,⁶⁴ both the claimant and the defendant were engaged in the business of designing and selling conservatories. The defendant's salesmen showed potential customers photographs of the claimant's conservatories. In so doing, they led customers to believe that they were examples of their own design and craftsmanship. The defendant's application to strike out the statement of claim as disclosing no reasonable cause of action was successful at first instance. This decision was, however, overturned by the Court of Appeal. The Court of Appeal held that the defendant had made a misrepresentation that their goods were of the same quality as the claimant's. They added that as the claimant's goodwill was 'asserted and demonstrated as the photographs were shown', it did not matter that the customer might not have known of the claimant. The damage caused was the diversion of sales from the claimant to the defendant. The Court of Appeal took the view that it did not matter that there was no confusion, because the misrepresentation 'left no room for confusion'. Whether it is helpful to categorize the case as one of reverse passing off is a matter of debate.⁶⁵

3.5 COMPARATIVE ADVERTISING

'Comparative advertising' is the term used to describe advertisements where the goods or services of one trader are compared with the goods or services of another trader. To show

⁶² J. Cross, 'Giving Credit Where Credit Is Due: Revisiting the Doctrine of Reverse Passing Off in Trademark Law' (1997) 72 *Washington LR* 709–73.

⁶³ H. Carty, 'Inverse Passing Off: A Suitable Addition to Passing Off?' [1993] *EIPR* 370.

⁶⁴ [1989] *RPC* 455, 464–5. See also *Boehringer Ingelheim KG v. Swingward Ltd* (5 Mar. 2004) [2004] *EWCA Civ* 129 (paras. 55–8).

⁶⁵ Wadlow (1995), para. 5.54, 331 (not a nominate tort in its own right but a further example of an actionable misrepresentation to which the normal principles apply); J. Drysdale and M. Silverleaf, *Passing Off: Law and Practice* (1995), para. 4.14 (doubting that the concept of reverse passing off is of any value).

the advertiser's wares in a favourable light, comparative advertisements usually emphasize differences in things such as price, value, durability, or quality.⁶⁶ The question of whether a person engaged in comparative advertising is liable for passing off depends on the nature of the comparison. In some situations the comparison will not be treated as a misrepresentation. For example, in *Bulmer v. Bollinger*,⁶⁷ Goff LJ said that there is no actionable passing off 'if one says that one's goods are very suitable to be used in connection with the plaintiffs'. Equally for a defendant to say that their goods are similar to or better than the claimant's does not amount to a passing off.

In other circumstances, however, comparative advertising may be treated as a misrepresentation. For example, in *McDonald's Hamburgers v. Burgerking*⁶⁸ Burgerking advertised its hamburgers in the London Underground with the slogan 'It's Not Just Big Mac'. Opinion poll evidence indicated that members of the public treated these as advertisements for a Burgerking hamburger called 'Big Mac', or as an improved version thereof. The evidence also indicated that people were likely to respond to the advertisement by going to Burgerking stores and ordering a 'Big Mac'. Consequently, Whitford J held that the advertisement was a misrepresentation. In *Kimberley Clark v. Fort Sterling*⁶⁹ the defendant was promoting its NOUVELLE toilet roll by offering to placate dissatisfied customers by replacing their NOUVELLE with ANDREX toilet roll. The NOUVELLE packaging said prominently 'Softness guaranteed (or we'll exchange it for Andrex® registered)', the claimant, who owned the ANDREX brand, claimed that the defendant's promotion amounted to a passing off. The court agreed, holding that this was a misrepresentation because it was likely to induce purchasers into thinking that NOUVELLE was another product 'from the Andrex stable or that ANDREX is in some way behind the promotion'.

4 IS THE MISREPRESENTATION DECEPTIVE?

As we explained earlier, in deciding whether a misrepresentation has taken place the key concern is not with the state of the defendant's mind. Instead it is with the *consequences* of the defendant's actions and the effect that these have upon the public. In particular, the claimant must show that the defendant's actions have either confused or are likely to confuse the public or a substantial part thereof. That is, to succeed in a passing off action, the claimant must show that the defendant's misrepresentation is *deceptive*.⁷⁰ The question of whether the misrepresentation is deceptive is a question of fact that requires the court to predict how the public will interpret the defendant's actions.⁷¹ It does not matter that the defendant's representation is true, honest, or legitimate if it deceives the public. Equally, it does not matter if the defendant uses their own name, a relevant geographical name, or a descriptive term if it was used in a way that was deceptive.⁷²

⁶⁶ For the position of comparative advertising under the registered trade marks regime, and non-legal regulation, see below at pp. 916–23.

⁶⁷ [1978] RPC 79, 117.

⁶⁸ [1986] FSR 45.

⁶⁹ [1997] FSR 877.

⁷⁰ *Hodgkinson & Corby v. Wards Mobility Services* [1995] FSR 169, 175; *Nice and Safe Attitude v. Piers Flook* [1997] FSR 14, 20; *Barnsley Brewery Company v. RBNB* [1997] FSR 462, 467 (confusion but no deception).

⁷¹ This is a 'jury question': *Harrods v. Harrodian School* [1996] RPC 697, 717; *Neutrogena Corporation v. Golden* [1996] RPC 473, 482.

⁷² *Montgomery v. Thompson* [1891] AC 217, 220.

In deciding whether the misrepresentation is deceptive, a number of different questions may arise. While the nature and relative importance of each will vary from case to case, these include: who must be deceived? how many people must be deceived? and, when must the deception occur? After looking at these we will consider the types of evidence that may be used by the courts in this context. We will then look at some of the factors that may be taken into account in deciding whether the misrepresentation is deceptive.

4.1 WHO MUST BE DECEIVED?

The question of whether the misrepresentation operates to deceive the public is largely looked at by the courts through the eyes of the general public.⁷³ However, where the goods or services are not marketed to the general public, the court considers the impact that the misrepresentation has upon that part of the public for whom the product or services were intended. Although there are dicta to the effect that the appropriate part of the public is the defendant's customers, the better view is that the 'relevant public' should vary according to the type of misrepresentation being alleged. Thus, where the allegation is that the defendant has made a misrepresentation which suggests that the claimant is the source of their goods and the goods of the claimant and the defendant are similar, the court would consider the impact that the misrepresentation has upon the claimant's customers. Where the parties' goods or services are different, so that some other type of connection is being alleged, the court will focus on customers who are familiar with the claimant's activities, but who are in the market for goods and services of the defendant. This kind of approach was adopted in *Harrods v. Harrodian School*⁷⁴ where the relevant public was described by Millett LJ as 'affluent members of the middle class who live in London, shop at Harrods and wish to send their children to fee-paying schools'.

The attributes and skills of the notional customer will vary depending on the facts in question.⁷⁵ Indeed as Lord Oliver said in *Reckitt v. Coleman*, the 'customers have to be taken as they are found'.⁷⁶ In some cases, the relevant public might be quite discerning. For example, in a decision involving a passing off action between two banks, it was said that 'potential customers wishing to borrow large sums of money from a bank could reasonably be expected to pay rather more attention to the details of the entity with whom they were doing or seeking to do business'.⁷⁷ In other situations, however, the notional customer might be careless and uninterested: as with supermarket shoppers who apparently spend less than ten seconds examining each purchase. A defendant cannot escape liability by arguing that customers would not have been misled if they were 'more literate, careful, perspicacious, wary or prudent'.⁷⁸ While the attributes and skills of the notional customer may vary depending on the facts in question, the court will not take account of situations where the notional customer does not care one way or another about the goods they are buying.⁷⁹ If customers are indifferent to the goods they are purchasing, a claimant will be

⁷³ *Marengo v. Daily Sketch and Sunday Graphic* (1948) 65 RPC 242, 250. ⁷⁴ [1996] RPC 697, 716.

⁷⁵ *Reckitt & Colman (Products) v. Borden* [1990] RPC 341, 423. ⁷⁶ *Ibid.*, 415–16.

⁷⁷ *HFC Bank v. Midland Bank plc* [2000] FSR 176, 185.

⁷⁸ *Reckitt & Colman (Products) v. Borden* [1990] RPC 341, 415–16; *Clark v. Associated Newspapers* [1998] RPC 261, 271.

⁷⁹ As Lightman J said in *Clark v. Associated Newspapers* [1998] RPC 261, 271 'No claim lies if they are indifferent or careless as to who is the author'. See also *Politechnika Ipari Szovetzkezet v. Dallas Print Transfers* [1982] FSR 529.

unable to show that the defendant's misrepresentation was deceptive. This is because in these circumstances the misrepresentation has no impact upon the relevant consumers.⁸⁰

4.2 HOW MANY PEOPLE MUST BE DECEIVED?

The next question to consider is how many people must be deceived? It is clear that for an action to succeed it is not necessary for a claimant to show that *all* of the consumers in the relevant section of the public were deceived by the misrepresentation. As Jacob J said 'there is passing off even if most of the people are not fooled most of the time but enough are for enough of the time'. But what is enough? The courts response to this has been that a 'substantial' part of the public must be confused. As Falconer J said in *Lego*, passing off only arises if there is a 'real risk that a substantial number of persons among the relevant sections of the public will in fact believe that there is a business connection between the plaintiff and the defendant'.⁸¹

This, in turn, gives rise to the further question: what is meant by a 'substantial' part of the relevant group? There is no clear answer to this question. For the most part, the courts have defined the term negatively. Thus, it is clear that 'substantial' does not mean either a large proportion or a majority of the public.⁸² For example in the *Chocosuisse* case, the number of persons confused into thinking a chocolate bar called SWISS CHALET was made from Swiss chocolate was smaller than those who had not been deceived. Nevertheless, this was substantial enough to amount to a passing off.⁸³ The Court of Appeal has said that references to 'more than *de minimus*' and 'above a trivial level', which had been used in some cases, were best avoided.⁸⁴ Beyond these comments, the courts have been unwilling to give much guidance as to what 'substantial' entails.

4.3 WHEN MUST THE DECEPTION OCCUR?

One issue that remains largely unexplored in English law relates to the question: at what point of time must the public be misled? The way this question is answered depends on the facts of the case. In most cases the answer is straightforward: the confusion must occur at the time of purchase. This can be seen in *Bostik v. Sellotape GB*.⁸⁵ The claimant in this

⁸⁰ This explains Foster J's exclusion from consideration of a 'moron in a hurry': *Morning Star Co-operative Society v. Express Newspapers* [1979] FSR 113. See also *Newsweek v. BBC* [1979] RPC 441, 447. (The test is whether ordinary, sensible members of the public would be confused. It is not sufficient that the only confusion would be to a very small unobservant section of society.) The Court of Appeal has recently employed the touchstone of the notional consumer developed in European trade marks law, that is confusion is to be assessed from the point of view of the consumer who is reasonably well-informed, reasonably observant and reasonably circumspect: *Asprey & Garrard v. WRA (Guns) Ltd* [2002] FSR 487 (para. 35).

⁸¹ *Lego v. Lemelstrich* [1983] FSR 155, 188.

⁸² *Neutrogena Corporation v. Golden* [1996] RPC 473 (claimant had only 0.25% of the market but it was held that a substantial number of members of the public would be misled into thinking the defendant's products were those of the claimant).

⁸³ *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 143; affirmed by the Court of Appeal on the basis that the conclusion was not one which could be regarded as 'perverse': [1999] RPC 826, 838.

⁸⁴ *Neutrogena Corporation v. Golden* [1996] RPC 473, 494.

⁸⁵ [1994] RPC 556.

case manufactured and sold a blue reusable adhesive called BLU-TAK. To compete with the claimant, the defendants launched a blue-coloured adhesive called SELLOTAK that was sold in a similar sized wallet as BLU-TAK. Except for being approximately the same size, the competing products were 'wholly different in appearance'. As a result the claim for passing off rested entirely on the colour of the tack. The court held that the defendants had not passed their product off as BLU-TAK when they sold blue adhesive putty. The reason for this was that the defendant's blue adhesive putty was not visible at the point of sale.⁸⁶

In other cases, the relevant time to consider whether consumers were deceived is the point in time when the product is consumed or used, rather than when it is purchased. For example, in relation to an action for passing off brought in relation to the authorship of a newspaper story, it was said that the relevant time to consider whether the public is confused is when the person reads the story, rather than when the newspaper was purchased.⁸⁷ Post-sale confusion may also be significant in other environments. This may be the case, for example, with designer goods, such as clothes or kitchen equipment, where the manufacturer's label is often visible long after purchase.⁸⁸

One question which remains unresolved is whether there is passing off where a defendant's misrepresentation causes immediate confusion, but that confusion vanishes by the time at which the consumer makes the decision whether to purchase the defendant's goods or engage the defendant's services. This will be a realistic scenario as regards transactions which are prefaced by lengthy formalities, etc. such as those involving financial services. In *HFC Bank v. Midland Bank*, it seemed that a number of customers had gone to Midland because it was using a name, HSBC, similar to HFC, but that in no case did a customer do business with Midland without having been disabused of the error. Lloyd J accepted that to amount to passing off the deception must be more than momentary or inconsequential,⁸⁹ but beyond that declined to venture a view.⁹⁰ Even if such deception was treated as sufficient to give rise to passing off, it remains necessary for a claimant to show a likelihood of damage.

4.4 EVIDENCE OF CONFUSION

While the question of whether there is a likelihood of confusion is ultimately decided by the court,⁹¹ the courts frequently do so on the basis of evidence introduced by the parties. Three types of evidence are commonly used, usually in combination: evidence of actual confusion, expert evidence, and survey evidence.

⁸⁶ See I. Karet, 'Passing Off and Trade Marks: Confusing Times Ahead?' [1995] *EIPR* 3, 4.

⁸⁷ *Clark v. Associated Newspapers* [1998] *RPC* 261, 271; *Marengo v. Daily Sketch and Sunday Graphic* (1948) 65 *RPC* 242, 250.

⁸⁸ *Chelsea Man Menswear v. Chelsea Girl* [1987] *RPC* 189, 204 (Slade LJ, when considering risk of damage, observed that labelled garments can readily move about the country with their wearers).

⁸⁹ See also *Newsweek v. BBC* [1979] *RPC* 441, 449.

⁹⁰ *HFC Bank plc v. Midland Bank plc* [2000] *FSR* 176, 186, 202.

⁹¹ *North Cheshire & Manchester Brewery v. Manchester Brewery* [1899] *AC* 83, 86; *Mothercare v. Penguin Books* [1988] *RPC* 113, 116. The court must not surrender its own independent judgment to any witness or number of witnesses: see *A. G. Spalding Bros. v. A. W. Gamage* (1915) 32 *RPC* 273, 286–7 per Lord Parker. But note that it is the court's (rather than the judge's personal) judgment as to whether it would be deceived that is relevant: *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] *RPC* 117, 136.

While there is no requirement that to succeed in a passing off action the claimant must show evidence of actual deception, evidence that people have actually been misled will be highly significant.⁹² The lack of such evidence may also be probative, but only where the products have been on the market for some time. If after a lengthy period of time there is no evidence of actual confusion, this will weigh against a claimant, primarily because it suggests that there is no confusion.⁹³ However, before inferring a lack of confusion from this, it is important to note that a lack of evidence of confusion may arise for other reasons. For example, it may simply be because the relevant consumers have not been found or are not willing to come forward.

The courts have also been willing to accept *expert evidence* in relation to matters that the court is ignorant about and needs to be informed. Often this involves information about the particular trade involved and includes evidence of things such as the class of people, how the goods are displayed or purchased, the numbers sold,⁹⁴ and the amount of attention average shoppers give to the appearance of products at the point of purchase.⁹⁵ Thus in deciding whether the public was deceived into thinking that a chocolate bar called SWISS CHALET was made from Swiss chocolate, the Court of Appeal made extensive use of the expert evidence of the person responsible for selecting products (notably the chocolate) for Marks & Spencer.⁹⁶ In another decision, the court went so far as to admit expert evidence as to whether consumers were likely to be deceived. Although this is the very question that the court itself must determine and therefore one on which evidence is not normally admitted, Browne-Wilkinson V-C saw no good reason why the court should not be assisted by experts in making that judgment.⁹⁷

It is also commonplace for the courts to admit and rely upon survey evidence when deciding whether the public is deceived by the misrepresentation.⁹⁸ Although costly, surveys save the court from the obvious alternative, namely, a lengthy parade of witnesses.⁹⁹ The courts have been careful to scrutinize the nature of the survey. To this end, the courts frequently hear evidence from experts criticizing the methodology of the survey undertaken. The courts also scrutinize the survey to take account of issues such as who was interviewed, the questions asked, and whether or not the interviewees were prompted.¹⁰⁰

⁹² *Harrods v. Harrodian School* [1996] RPC 697, 716.

⁹³ *Kimberley Clark v. Fort Sterling* [1997] FSR 877, 887–9. See also *Antec International v. South-Western Chicks (Warren)* [1998] FSR 738, 745.

⁹⁴ *Slazenger & Sons v. Feltham & Co.* (1889) 6 RPC 531, 534.

⁹⁵ *Kimberley Clark v. Fort Sterling* [1997] FSR 877, 884.

⁹⁶ *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1999] RPC 826, 836.

⁹⁷ *Guccio Gucci SpA v. Paolo Gucci* [1991] FSR 89, 91; *Sodastream v. Thorn Cascade Co.* [1982] RPC 459, 468.

⁹⁸ It seems that the problem of survey evidence being excluded because it is hearsay has been avoided. This has been done by treating surveys as situations which do not involve proof of the truth of the opinion stated, so much as its existence: *Lego v. Lemelstrich* [1983] FSR 155, 178–9. See, e.g. Wadlow (1995), para. 8.46, 571–5. In any case, hearsay evidence is admissible in civil cases: Civil Evidence Act 1995, s. 1.

⁹⁹ *Pontiac Marina Private v. Cdl. Hotels International* [1998] FSR 839.

¹⁰⁰ *Mothercare v. Penguin Books* [1988] RPC 113, 117 per Dillon LJ. Even when flawed some courts sometimes still find survey to be ‘qualitatively valuable’, though others find surveys unhelpful. *Kimberley Clark v. Fort Sterling* [1997] FSR 877, 886–7.

4.5 FACTORS TO BE TAKEN INTO ACCOUNT IN DECIDING WHETHER THE MISREPRESENTATION IS DECEPTIVE

In deciding whether a defendant's misrepresentation is deceptive, the court will take a number of factors into consideration. These include the:

- (i) strength of the public's association with the claimant's sign,
- (ii) similarity of the defendant's sign,
- (iii) proximity of the claimant's and defendant's fields of business,
- (iv) the location of the claimant's and defendant's businesses,
- (v) the characteristics of the market,
- (vi) intention of the defendant,
- (vii) whether the defendant has made a disclaimer, and
- (viii) whether the defendant is attempting a parody or satire.

We will consider these in turn. It is important to note that the relative importance of each of these will vary according to the facts in question and that the various factors are often closely interrelated.

4.5.1 The strength of the claimant's sign

One factor that will influence a court when deciding whether a misrepresentation is deceptive is the relative strength of the claimant's sign. If the claimant's mark is highly distinctive, the courts are more likely to find that the use of similar marks in a different field of trading is likely to cause confusion. The classic example of this is provided by the *Lego* case, where it was held that the claimant's mark LEGO for children's toys was so strong that confusion resulted from use of the name on coloured plastic garden equipment.¹⁰¹

Where a mark or sign is less distinctive, slight differences between the claimant's and defendant's marks, or between the fields of trading may mean that there is no passing off. Where a claimant has adopted a descriptive word as a mark, a defendant may be able to avoid passing off by changing the word slightly.¹⁰² Thus, where a claimant used the term FURNITURELAND, the court refused to hold a furniture retailer liable for passing off for using the name FURNITURE CITY.¹⁰³ In contrast, 'BusinessPlan Builder' for software was held to be sufficiently similar to 'BizPlan Builder' to constitute a passing off. This was because 'BizPlan Builder' was not wholly descriptive, the words 'Biz' and 'Business' were virtually interchangeable and the capital 'p' and the style of script were common to both.¹⁰⁴

4.5.2 The similarity of the signs

Another factor that may influence the court when considering whether a misrepresentation deceives the public is the similarity of the signs. It is important to note that the

¹⁰¹ *Lego v. Lemelstrich* [1983] FSR 155, 187; *Antec International v. South-Western Chicks (Warren)* [1998] FSR 738, 747.

¹⁰² *Office Cleaning Services v. Westminster Window and General Cleaners* (1946) 63 RPC 39.

¹⁰³ *Furnitureland v. Harris* [1989] FSR 536, 539–40; *Associated Newspapers Ltd v. Express Newspapers* [2003] FSR (51) (THE MAIL and THE LONDON EVENING MAIL).

¹⁰⁴ *Jian Tools for Sales v. Roderick Manhattan Group* [1995] FSR 924.

approach adopted by the courts in deciding whether the signs are similar always depends on the facts in hand. As such, the points below should be treated as providing no more than general guidance.

In deciding whether two signs are similar enough to cause confusion, the marks are rarely looked at side-by-side. Instead, the courts tend to ask the hypothetical question: if a person saw the signs separately, would they mistake the defendant's product for that of the claimant's? When deciding whether signs are similar, the courts also tend to look at the signs as a whole and in the context in which they are used. The impact that this has upon the scope of passing off can be seen, for example, in *Wagamama v. City Centre Restaurants*. The claimant in this case ran a chain of Japanese restaurants called WAGAMAMA. Laddie J held that the defendant was liable for passing off when the defendant used the name RAJAMAMA for their chain of Indian restaurants. The judge was influenced by the similar form (the shared second half) of the word which might give an impression of similarity and connection. This was important in an area where it was common for recommendations to be made orally and where recollections were imperfect.¹⁰⁵

The fact that signs are looked at as a whole has important ramifications where only part of the claimant's sign or mark is appropriated. Where this occurs, the likelihood of there being a passing off depends on the relative distinctiveness of the element that is different. It also depends on the importance that consumers place on the part when purchasing the product in question. For example, where the distinctive feature of the claimant's get-up for water-bottles was that the bottles were cobalt-blue and were made of a particular shape, it was held that the defendant was not liable for passing off when they sold water in cobalt-blue bottles of a very different shape.¹⁰⁶ This can be usefully contrasted with *Reckitt v. Coleman* which, as we saw earlier, was a passing off action in relation to the get-up of lemon-juice containers. While the shape, colour, and size of the two containers were the same, the labels on the two products were different. Nonetheless, the courts held that there had been a passing off. This was because the labels were only a minor part of the get-up and not an element to which a customer would pay particular regard.¹⁰⁷

In judging the similarity of signs, the courts sometimes emphasize the 'idea of the mark'. That is, they do not focus on the detail of the mark so much as the general idea that it conveys. For example, in one case the shared idea of 'seabirds' was a significant factor in holding that the defendant had passed its PUFFIN biscuits off as the claimant's who sold their biscuits under the name PENGUIN. Given the type of audience in question and the similarity of the get-up, the court held that a substantial number of customers would have been deceived into incorrectly thinking that the biscuits were produced by the same manufacturer.¹⁰⁸

4.5.3 The proximity of the claimant's and defendant's fields of business

For some time it was thought that to succeed in a passing off action, the claimant and defendant had to share 'a common field of activity'. Thus where a radio presenter's name was used for a breakfast cereal it was held that there was no passing off. This was because

¹⁰⁵ [1995] FSR 713; *Neutrogena Corporation v. Golden* [1996] RPC 473.

¹⁰⁶ *Ty Nant Spring Water v. Simon Feeney Associates* (28 Apr. 1998) Scott VC refusing interlocutory injunction where both used bottles of the same colour (cobalt blue).

¹⁰⁷ [1990] RPC 341, 423.

¹⁰⁸ *United Biscuits (UK) v. Asda Stores* [1997] RPC 513.

the fields of radio presentation and the sale of breakfast cereals did not overlap.¹⁰⁹ However, the need to show a common field of activity was, even at its inception, difficult to reconcile with a number of earlier decisions.¹¹⁰ It has since been reinterpreted,¹¹¹ diluted,¹¹² and ultimately declared to be heretical.¹¹³ If a claimant can demonstrate a misrepresentation and likelihood of damage to their goodwill, they will succeed: there is no additional requirement that they need to establish a common field of activity.

Having said this, it is clear that the ability to demonstrate a ‘common field of activity’ will greatly assist a claimant’s action for passing off. This is because if two traders share a common field of activity, it will be easier for a court to hold that there is a misrepresentation that is likely to deceive the public and thus cause damage to the claimant.¹¹⁴ Indeed, the abandonment of the requirement of a common field of activity has meant that a comparison of the trade activities of the parties is a factor that is taken into account in determining the likelihood of deception. The similarity of the fields also interacts with other factors such as the distinctiveness of the claimant’s sign.

The courts have adopted a liberal approach when deciding whether the claimant and defendant operate in same field. For example, in one decision the use of CARFAX for spare parts for motor vehicles was held to be likely to amount to a passing off, given the claimant’s plans to launch a traffic information service under the same name.¹¹⁵ Similarly, a claimant who used the name MARIGOLD for household rubber gloves was granted an injunction to prevent the defendant from using the mark on toilet tissue. The court was confident that a customer or, more specifically a ‘housewife’ who was familiar with the claimant’s gloves, would expect toilet roll sold under the same name to be a product of the same business.¹¹⁶ In a trade mark case, however, the Registry took the view that the owner of the EVER READY mark for batteries would not be able to succeed in a passing off action against a person who used the same words for condoms.¹¹⁷ Consequently, the mark was registrable for condoms.

4.5.4 The characteristics of the market

In deciding whether a misrepresentation is deceptive the courts take account of ‘the

¹⁰⁹ *McCulloch v. May* (1948) 65 RPC 58.

¹¹⁰ e.g. *Eastman Photographic Materials Co. v. John Griffiths Cycle Corporation* (1898) 15 RPC 105 (cameras and bicycles); *Walter v. Ashton* [1902] 2 Ch 282 (*The Times* newspaper and bicycles). As argued by J. Philips and A. Coleman, ‘Passing Off and the Common Field of Activity’ (1985) 101 *Law Quarterly Review* 242 and accepted by Millett LJ in *Harrods v. Harrodian School* [1996] RPC 697, 714.

¹¹¹ In the Abba case, *Lynstrad v. Anabas Products* [1977] FSR 62, Oliver J interpreted *McCulloch* as merely requiring a ‘real possibility of confusion’.

¹¹² *Lego v. Lemelstrich* [1983] FSR 155.

¹¹³ *Mirage Studios v. Counter-Feat Clothing* [1991] FSR 145, 157 Browne-Wilkinson V-C (referring to the common field of activity theory as discredited); *Harrods v. Harrodian School* [1996] RPC 697; *Irvine v. Talksport* [2002] FSR 943.

¹¹⁴ *Nice and Safe Attitude v. Piers Flook* [1997] FSR 14, 21 (Robert Walker J) ‘the Lego case, though it illustrates a relaxation of the common field of activity concept does not mark its extinction. It must still be very relevant to the likelihood of deception’. *Oasis Stores’ Trade Mark Application* [1998] RPC 631, 644 (where the fields of activity are far apart the burden of establishing a likelihood of confusion or deception will be significantly greater).

¹¹⁵ *BBC v. Talbot* [1981] FSR 228.

¹¹⁶ *LRC v. Lila Edets* [1972] FSR 479.

¹¹⁷ *Oasis Stores’ Trade Mark Application* [1998] RPC 631 (in the context of TMA s. 5(4)).

background of the type of market in which the goods are sold, the manner in which they are sold, and the habits and characteristics of purchasers in that market'.¹¹⁸

The characteristics of the market have a particularly pronounced impact on decisions as to whether two signs are similar.

Where consumers are well-informed or particularly attentive to detail,¹¹⁹ small differences between signs may be sufficient to avoid a finding of deception. For example, the defendant's use of MOTHER CARE/OTHER CARE as a title for their book was held not to be a misrepresentation that the book was connected with the shop MOTHERCARE. As Bingham LJ explained, the claimant's lettering was not employed, the words were not spelled as one word, the Penguin mark was liberally used on the books, and no one who was familiar with the claimant's literary output could see any similarity of style, content, or format. Bingham LJ added that reasonably literate people would not see the title as an indication that the contents bore any reference to the claimant.¹²⁰ The better the consumer's memory for detail, the closer the marks must be to cause deception.

Ultimately, the level of detail remembered by the consumer will depend on the goods or services in question. While there may be exceptions, the courts do not normally assume that consumers have a perfect memory of the goods in question. Instead, they tend to assume that the notional consumers have a vague and hazy memory of the goods or services. That is, it is often assumed that consumers have 'imperfect recollection'. Consequently, where a defendant adds laudatory or commonplace words such as 'International' or 'Super' to a name, this will not mean that they will be able to escape liability.¹²¹ The reason for this is that while the addition of the prefix may mean that the signs are not identical, nonetheless they may be similar enough to deceive a consumer with a hazy and imperfect memory.

It is usually assumed that consumers pay little attention to detail in relation to purchasing of cheap necessities in supermarkets.¹²² It will also usually be assumed that non-English-speaking audiences will pay little attention to verbal or textual, as opposed to visual references.¹²³

4.5.5 The intention of the defendant

It is well established that it is not a prerequisite to liability that the claimant be able to show that the defendant intended to pass their goods off as those of the claimant.¹²⁴ However, it will assist a claimant if they can show that a defendant has acted fraudulently.¹²⁵ In these circumstances the likelihood of deception is more readily inferred. This is because the defendant is assumed to have achieved their goal.¹²⁶ Occasionally, a similar

¹¹⁸ *Reckitt & Colman (Products) v. Borden* [1990] RPC 341, 415–16.

¹¹⁹ Although evidence as to consumer behaviour might reveal that even with elite goods consumers are oddly inattentive: *Guccio Gucci SpA v. Paolo Gucci* [1991] FSR 89.

¹²⁰ *Mothercare v. Penguin Books* [1988] RPC 113, 121–2.

¹²¹ *Pontiac Marina Private v. Cdl. Hotels International* [1998] FSR 839 (CA of Singapore); *Antec International v. South-Western Chicks (Warren)* [1998] FSR 738, 745.

¹²² *Kimberley Clark v. Fort Sterling* [1997] FSR 877, 884.

¹²³ *Modus Vivendi v. Keen (World Marketing)* [1996] EIPR D-82.

¹²⁴ *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 137.

¹²⁵ *Burberrys v. Cording* (1909) 26 RPC 693, 701.

¹²⁶ *Slazenger & Sons v. Feltham & Co.* (1889) 6 RPC 531, 538; *Irvine v. Talksport* [2002] FSR 943. In *Parker Knoll v. Knoll International* [1962] RPC 262, 290 Lord Devlin questioned the basis of the rule stating that 'it is

attitude has been taken to a defendant who makes a conscious decision to live dangerously and use a sign as close to that of the claimant as is legally possible.¹²⁷

4.5.6 Disclaimers

Because the representation is to be viewed in context, it is sometimes possible for a defendant to correct any misunderstandings that their actions may potentially create.¹²⁸ For example, a defendant was able to avoid what would otherwise have been a passing off by placing the word 'sliced' in front of the claimant's distinctive designation 'parma ham'. This was held to be sufficient to counteract the alleged misrepresentation.¹²⁹

It is a question of fact whether a defendant succeeds in correcting any misunderstandings the public may have as a result of their misrepresentation.¹³⁰ The relative effectiveness of a disclaimer depends on a number of things. To be effective a disclaimer must be as 'bold, precise and compelling as the trade description itself and must be as effectively brought to the notice of any person to whom the goods may be supplied'.¹³¹ In effect, the disclaimer must negate the misrepresentation. The precise form that the disclaimer needs to take will depend upon the nature of the misrepresentation. In the old case of *Edge v. Niccolls*,¹³² the claimants produced distinctive calico bags. The defendants produced a calico bag with a similar get-up as the claimants, to which the defendant added a label saying NICCOLLS. The disclaimer was ineffective because the consumers of the goods (being the 'poorer classes'), relied on the get-up, rather than the name of the product.

The point in time when the disclaimer is communicated to the consumer will also influence whether or not it is effective. As a general rule the disclaimer must reach the relevant consumer before the misrepresentation brings about the requisite damage. Thus, a disclaimer will be ineffective where customers have already been lured into examining the defendant's product as a result of the defendant's use of the claimant's name. Another example of a situation where the importance of the timing of the disclaimer is exemplified is in *Associated Newspapers v. Insert Media*.¹³³ It will be recalled that by placing advertising inserts inside the claimant's newspaper without their permission or knowledge that the defendants were held to be liable for passing off. In response, the defendants indicated that they would be prepared to include on their inserts a statement to the effect that the material did not appear with the approval or knowledge of the newspaper publishers. Browne-Wilkinson V-C said this would not nullify the misrepresentation. The reason for this was that the:

inclusion in the insert of a disclaimer of that kind would be most unlikely to come to the attention of a person reading the advertisement contained on the insert. It is just

not easy to see why the defendant's own estimate of the effect of his representation should be worth more than anybody else's. It seems probable that the rule is steeped in history rather than in logic'.

¹²⁷ *United Biscuits (UK) v. Asda Stores* [1997] RPC 513.

¹²⁸ *Chivers v. Chivers* (1900) 17 RPC 420.

¹²⁹ *Consorzio del Prosciutto di Parma v. Marks & Spencer* [1991] RPC 351, 371 (Nourse LJ); 374 (Balcombe LJ); 379 (Leggatt LJ).

¹³⁰ The public can be surprisingly easily confused, for example, by confusing 'Elderflower Champagne' with champagne: *Taittinger SA v. Allbev* [1993] FSR 641.

¹³¹ *Norman v. Bennett* [1974] 1 WLR 1229, 1232 (a case on the Trade Descriptions Act 1968); *Clark v. Associated Newspapers* [1998] RPC 261, 272.

¹³² [1911] AC 693.

¹³³ [1991] 3 All ER 535.

inappropriate in this field for the matter to be corrected by a disclaimer which is unlikely to come to the attention of the reader and may well confuse him further if it does come to his attention.¹³⁴

A disclaimer may also fail for the simple reason that it is likely to become detached from the misrepresentation and as a result will be unable to nullify the misrepresentation.¹³⁵

4.5.7 Parody

One area where special considerations may apply is where the defendant sets out to parody or satire the claimant's goods or services (or some more general target).¹³⁶ In these cases, the owner of the goods that have been parodied may bring a passing off action. The key problem here is that for a parody or satire to be effective the audience needs to understand that the defendant's aim is to ridicule the original. If a parody is effective, there will normally be no misunderstanding and hence no possibility of confusion. This can be seen from *Miss World v. James St Productions*.¹³⁷ The claimants in this case, who were the proprietors of goodwill in the 'Miss World' beauty contest sought to prevent the showing of a film *Miss Alternative World*, which was described as a spoof with sadomasochistic overtones of the Miss World pageant. The Court of Appeal declined to intervene on the ground that there was no danger that ordinary members of the public would be confused.

However, any confidence that parody will not amount to passing off must now be shaken by the *Alan Clark* case.¹³⁸ It will be recalled that in this decision the politician and author Alan Clark wished to prevent the *Evening Standard* from publishing a satirical column called 'Alan Clark's Secret Diaries' that bore Alan Clark's name and photograph. The main issue was whether Clark could establish that there had been a misrepresentation or a 'false attribution'.¹³⁹ In turn this required Clark to establish that a substantial number of readers of the *Evening Standard* had been or were likely to have been misled in a manner which was more than momentary and inconsequential. Looking at the column and having regard to the evidence of the witnesses, Lightman J held that a substantial body of readers would be misled. The counter-messages (or disclaimers) which appeared on the column, such as the use of the word 'secret' and the statement that 'Peter Bradshaw imagines how the great diarist might record', were said not to be sufficiently forthright to counteract the suggestion that the claimant was the author of the column. As one commentator rightly observed as a result of this decision, '[t]he author of even the most obvious parody cannot assume that his work is [not] a misrepresentation under the law of passing off'.¹⁴⁰

¹³⁴ [1991] 3 *All ER* 535, 542.

¹³⁵ In *Reckitt & Colman (Products) v. Borden* [1990] *RPC* 341, 423 (per Lord Jauncey) the label was not effective to prevent misrepresentation because it would easily be detached from the product.

¹³⁶ For consideration of parody in the context of copyright and trade-mark infringements see Chs. 8 and 36. For reflections, see M. Spence, 'Intellectual Property and the Problem of Parody' (1998) 114 *LQR* 594.

¹³⁷ [1981] *FSR* 309.

¹³⁸ *Clark v. Associated Newspapers* [1998] *RPC* 261.

¹³⁹ Clark also based his claim on CDPA s. 84 (false attribution of authorship). On this see pp. 239–42 above. It is interesting to note that the constituents of false attribution in s. 84 were treated as different from those under the law of passing off, with s. 84 requiring consideration.

¹⁴⁰ See M. Spence, 'Intellectual Property and the Problem of Parody' (1998) 114 *LQR* 594, 599.

5 PROVIDING DECEPTIVE MEANS OR INSTRUMENTS OF FRAUD

It is important to note that an action for passing off can not only be brought against a person who carries out the act of misrepresentation, but also against someone who provides the means or facilities which enables the passing off to take place in the first place. This can be seen, for example, in *Lever v. Goodwin*,¹⁴¹ where the claimant sought relief against a defendant who had been selling soap in a similar get-up. The problem confronting the claimant was that while consumers may have been deceived by the similarity of the get-up, the defendants did not sell the soap directly to the public. Instead, they only sold the soap to retail buyers who, in turn, sold the soap to members of the public. The problem for the claimant was that the retailers were not deceived about the origin of the goods: they knew exactly what they were purchasing. The defendants argued that, as they did not sell the soap directly to the public and that the retailers were not confused, they were not liable for passing off. Chitty J, whose judgment was approved on appeal, denied that a defendant could escape liability in this way. What a manufacturer did in these circumstances, he explained, was to put 'an instrument of fraud' into the retailer's hands. In these circumstances it was necessary to ask, have the defendants 'knowingly put into the hands of the shopman . . . the means of deceiving the ultimate purchaser'?¹⁴² On the facts, he found that they had.

A recent example of this variant of the passing off action is provided by the *One In A Million* decision.¹⁴³ In this case, the Court of Appeal held that persons who registered and dealt in Internet domain names such as *marksandspencer.co.uk* were likely to be restrained. This was on the basis that they were 'equipped with or intending to equip another with an instrument of fraud.'¹⁴⁴ Aldous LJ said that a 'name which will, by reason of its similarity to the name of another, inherently lead to passing-off is an instrument of fraud'.¹⁴⁵ Even if a name does not inherently lead to passing off, Aldous LJ said that it may nevertheless be an instrument of fraud. In deciding whether this is the case, the court should consider 'the similarity of the names, the intention of the defendant, the type of trade and all the surrounding circumstances'.¹⁴⁶ Aldous LJ added that if the court concluded 'that the name was produced to enable passing off, is adapted to be used for passing off, and, if used, is likely to be fraudulently used, an injunction will be appropriate'.¹⁴⁷

On the facts it was held that the domain names in question were 'instruments of fraud'. This was because any 'realistic use of them as domain names would result in passing

¹⁴³ [1998] 4 *All ER* 476. For criticism of the reasoning see M. Elmslie, 'The One in a Million Case' [1998] *Ent LR* 283, 285; and C. Thorne and S. Bennet, 'Domain Names—Internet Warehousing: Has Protection of Well-Known Names on the Internet Gone Too Far?' [1998] *EIPR* 468 (referring to *One in a Million* as 'a policy decision rather than a straight application of the law of passing off'); H. Carty, 'Passing Off and Instruments of Deception: The Need for Clarity' [2003] *EIPR* 188 (arguing that the doctrine requires (i) circulation of (ii) an instrument (iii) calculated to deceive, and that in *One in a Million* there simply was no instrument of deception. Carty prefers the view that the decision is to be justified as a case of threatened passing off, or threatening to authorize another's passing off).

¹⁴⁴ [1998] 4 *All ER* 476, 493.

¹⁴⁵ *Ibid.*

¹⁴⁶ *Ibid.*

¹⁴⁷ *Ibid.*

off'.¹⁴⁸ As the value of the names lay in the threat that they would be used in a fraudulent way, the court held that the 'registrations were . . . made for the purpose of appropriating the respondent's property, their goodwill, and with an intention of threatening dishonest use by them or another'.¹⁴⁹

In contrast, in *French Connection v. Sutton*¹⁵⁰ Rattee J refused to grant summary judgment to French Connection (UK) against a defendant who had registered FCUK.COM. The judge reasoned that (in contrast with the examples in *One in a Million*) the defendant might succeed in establishing a defence at trial, namely, that the domain name was not registered with a view to passing off, but was registered for 'use by himself of what he thought would be a useful Internet and E-mail name'. According to Rattee J, this was not an 'incredible' argument, because the letters FCUK were widely used by Internet users as an alternative to the word 'fuck', usually to access sites containing pornographic material. As is clear from this, much will turn on when a court is willing to infer potential legitimate use of the name.

34

DAMAGE

The third and final element that a claimant must prove to sustain a passing off action is that they have suffered, or are likely to suffer, damage as a result of the defendant's misrepresentation.¹ After looking at the third limb of the passing off action, we turn away from the classic passing off action to consider the notion of extended passing off and then unfair competition.

1 HEADS OF DAMAGE

There are four types of damage that have been recognized by the courts. These are loss of existing trade and profits, loss of potential trade and profits, damage to reputation, and dilution.² In each case, there must be more than trivial or minimal damage.³ Where the damage to reputation relates to future losses, the damage must also be reasonably foreseeable.⁴

1.1 LOSS OF EXISTING TRADE AND PROFIT

One of the most common forms of damage is where the misrepresentation diverts trade and thus profit from the claimant to the defendant. This will occur where the misrepresentation generates confusion about the source or origin of the goods or services. In this situation, the damage is self-evident: it is the loss of profit on the sale of goods or services that the claimant suffers. This type of damage will only occur where the claimant and the defendant deal in similar goods or services or operate in similar fields.

1.2 LOSS OF POTENTIAL TRADE AND PROFIT

The courts have also recognized that a claimant may incur damage where the misrepresentation leads to a loss of future profit. This will occur, for example, where a defendant trades in a field or geographical area into which the claimant intends to expand in the future. In

¹ A requirement of damage is specified in both Lord Diplock and Lord Fraser's fifth 'probanda' ([1979] AC 731, 742, 756) and the third branch of Lord Oliver's classical trinity.

² H. Carty, 'Heads of Damage in Passing Off' [1996] *EIPR* 487.

³ Lord Fraser's reference, at [1979] AC 731, 756, to 'substantial' damage was reinterpreted in this way by Peter Gibson LJ in *Taittinger SA v. Allbev* [1993] *FSR* 641, 664.

⁴ Not 'hypothetical' or 'far-fetched': *Mothercare v. Penguin Books* [1988] *RPC* 113, 116.

this situation the damage suffered arises through the potential trade that is lost rather than the existing trade that is diverted.⁵

Importantly, the loss of potential profits includes the loss of a chance to expand into a new field. This can be seen, for example, in *Lego v. Lemelstrich*, which was an action brought by LEGO, the well-known manufacturer of children's building blocks, against Lemelstrich who sold brightly coloured plastic garden sprinklers marketed under the name, LEGO. On the basis that LEGO's reputation extended beyond children's toys to include garden sprinklers, Falconer J found that the defendant's use of the LEGO name in relation to garden equipment was likely to damage LEGO's goodwill. Given that the LEGO goodwill extended to garden equipment, the claimant would have had the potential to use their name to operate in the field of garden equipment or to have licensed or franchised other traders in that field.⁶

1.3 LOSS OF LICENSING REVENUES

Loss of future profit may also include situations where the defendant's conduct undermines the claimant's ability to license their own mark and thus brings about a loss of potential licensing revenues. The recognition of the loss of future licensing revenue as a relevant form of damage may enable celebrities to use passing off to prevent the misappropriation of their image or personality. (Without this form of damage, celebrities face the problem that if they had not already licensed their image, they would have difficulties in proving the requisite damage.) In *Mirage Studios v. Counter-Feat Clothing*,⁷ Browne-Wilkinson V-C held that the creators of the *Teenage Mutant Ninja Turtles* (fictitious humanoid cartoon characters), suffered damage when the defendant licensed others to reproduce the cartoon characters on clothing. This was because they would lose the royalties that would otherwise have been paid to them to use the images. This line of reasoning has been criticized on the basis of its circularity.⁸ The reasoning is said to be circular because a person is only entitled to licensing revenue if they have the legal ability to control the use that is made of their image (etc.). In turn, this only arises where the unauthorized use amounts to a passing off. While this criticism may be technically correct, it overlooks the fact that parties may enter into licensing schemes even though there is no legal requirement to do so.⁹ Despite doubts about the impact of passing off on character and personality merchandising, it remains a profitable business. As long as the courts only recognize damage through loss of royalties where licensing is likely to take place, it is difficult to see that the circularity objection carries much force.

This must be contrasted with *Stringfellow v. McCain*.¹⁰ The defendant in the case manufactured a new brand of long, thin oven-ready chips called STRINGFELLOWS. The television advertisements for the defendant's chips featured a choreographed disco number set in a kitchen, with a boy and his two sisters singing 'Stringfellows from McCains'. The claimant was the owner of a well-known nightclub called STRINGFELLOWS. The London nightclub consisted of a restaurant and a discotheque: the latter being described in the decision as a

⁵ *LRC v. Lila Edets* [1973] RPC 560 (use of same name, in a similar style, on toilet tissue as claimant used for household gloves and nappies caused damage because claimant was planning to move into the field).

⁶ *Lego v. Lemelstrich* [1983] FSR 155, 194. See also *Dunhill v. Sunoptic* [1979] FSR 337.

⁷ [1991] FSR 145.

⁸ H. Carty, 'Heads of Damage in Passing Off' [1996] EIPR 487, 490.

⁹ Wadlow (1995), para. 5.41, 309.

¹⁰ [1984] RPC 501.

place 'where people move their bodies in strange ways to even stranger music'.¹¹ The claimant argued that the defendant's misrepresentation was likely to prejudice their future chances of exploiting the goodwill associated with the name STRINGFELLOWS. The court refused to grant relief on the ground that it was unlikely that the misrepresentation would cause Stringfellow any damage. While Stringfellow might have been able to exploit his name (for example through the establishment of franchises), Slade LJ did not find that the television advert prejudiced his ability to do so. In part, Slade LJ was influenced by the fact that there was no evidence that Stringfellow had any intention to exploit his name. Stephenson LJ said that in a case such as this there must be clear and cogent proof of actual damage or real likelihood of damage. Along with Slade LJ, he said that where there is a tenuous overlap between the fields of activity of the protagonists, he doubted whether damage in the form of loss of future franchising or merchandising revenue was ever recoverable.¹²

1.4 DAMAGE TO REPUTATION

The courts have also recognized that damage may occur where the misrepresentation has a negative impact on the claimant's reputation.¹³ This form of damage is particularly important where the misrepresentation is made in respect of non-competing goods or services. While the claimant may not lose any trade, the misrepresentation may nonetheless have a negative impact upon the claimant's reputation. This is particularly so where the claimant deals in high-quality goods or services. As we explained above, damage from loss of existing or potential trade arises where the public is confused about the origin of the goods or services. In contrast, damage to reputation arises where the defendant's misrepresentation leads the public to believe that the goods or services of the claimant and the defendant are somehow related. The resulting damage arises from the negative impact that this has upon the claimant's reputation. As Warrington LJ explained in *Ewing v. Buttercup Margarine Co.*, to 'induce the belief that my business is a branch of another man's business may do that other man damage in various ways. The quality of goods I sell, the kind of business I do, the credit or otherwise which I enjoy are all things which may injure the other man who is assumed wrongly to be associated with me'.¹⁴

Another example of the way reputation may be damaged is offered by *Associated Newspapers v. Insert Media*.¹⁵ The claimants in this case were the publishers of two national newspapers. The defendant arranged with retail newsagents to have advertising materials inserted into the papers, without the publisher's knowledge or consent. The Court of Appeal held that since there was a real risk that the newspapers would be thought to be responsible for the accuracy and honesty of the inserts, there was an obvious, appreciable risk of loss of goodwill and reputation by the publishers.

One situation where damage to reputation may be important is where the claimant

¹¹ [1984] RPC 501, 504.

¹² [1984] RPC 501, 546–7.

¹³ But cf. *Harrods v. Harroldian School* [1996] RPC 697, 718: 'damage to reputation without damage to goodwill is not sufficient to support an action for passing off', so that even if the School had a poor reputation it would not rub off on the store.

¹⁴ [1917] 2 Ch 1, 14. Applied by Laddie J. in *Associated Newspapers v. Express Newspapers* [2003] FSR (51) (para. 46).

¹⁵ [1991] FSR 380.

deals in high-quality goods and the defendant acts in a way that undermines that reputation. This would be the case, for example, where the defendant trades under the same name as the claimant, but in a market in which the claimant would never operate. In these circumstances, the defendant's misrepresentation would not impact upon the claimant's sales. The reason for this is that the claimant would never have made the sales in the first place. Nonetheless, the courts have recognized that the defendant's conduct may damage the claimant's reputation. This can be seen, for example, in *Annabel's Berkeley Square v. Schock*¹⁶ where a well-known London club called 'Annabel's Club' was granted relief to prevent the defendant from trading as 'Annabel's Escort Agency'. The court accepted that the defendant's use of the name 'Annabel's' could have tarnished and thus undermined the claimant's reputation.

Another situation where a misrepresentation may damage a claimant's reputation is in relation to the unauthorized use of the name, image, or likeness of a celebrity. Where the name or image of a celebrity is used without permission, and the celebrity can show that the public (incorrectly) thought that they had endorsed the use of their image, this may damage the celebrity's reputation. This would be the case, for example, where the picture of a sports star who has a reputation for healthy living is used to advertise a brand of cigarettes. Damage to reputation may also be important in relation to character merchandising. For example, in *Mirage Studios v. Counter-Feat Clothing*,¹⁷ the claimants brought an action against the defendant for licensing the reproduction of images of *Ninja Turtles* on T-shirts and clothing. Browne-Wilkinson V-C said that since the public 'associates the goods with the creator of the characters, the depreciation of the image by fixing the Turtle picture to inferior goods and inferior materials may seriously reduce the value of the licensing right'.¹⁸ A similar approach was adopted by the Supreme Court of New South Wales in *Henderson v. Radio Corporation*.¹⁹ It will be recalled that in this case the unauthorized use of a photograph of two ballroom dancers on a record cover was held to be a misrepresentation that the dancers had endorsed the product. On the basis that the 'wrongful appropriation of another's professional or business reputation is an injury in itself', the Court found that the misrepresentation had caused the requisite damage. This was because it had deprived the dancers of the right to bestow recommendations at will.²⁰ Whether this is really a case of damage to reputation or a loss of an opportunity to profit is questionable.

1.5 DILUTION

The final form of damage recognized by the courts is where the misrepresentation dilutes the claimant's goodwill. This occurs where the defendant's misrepresentation causes the claimant's sign to become familiar or commonplace and, as a result, undermines the ability of the sign to summon up particular goods or values. That is, the defendant's misrepresentation dilutes the pulling power or goodwill of the claimant's sign. Importantly, this applies where the public is not confused about the source or origin of the goods or where it is unlikely that the reputation will be damaged.

¹⁶ [1972] RPC 838. See also *British Medical Assn. v. Marsh* (1931) 48 RPC 565.

¹⁷ [1991] FSR 145, 156.

¹⁸ *Ibid.*

¹⁹ (1960) [1969] RPC 218.

²⁰ [1969] RPC 218, 236.

The notion of damage through dilution was acknowledged in English law in *Taittinger v. Allbev*.²¹ The claimant was a member of a group of producers from the Champagne district who made a naturally sparkling wine, which had long been known in the United Kingdom as 'champagne'. Notably, the claimant's champagne was produced by a process of double fermentation from grapes grown in the Champagne district. The claimant brought an action against the producer of a non-alcoholic sparkling beverage called ELDERFLOWER CHAMPAGNE that was produced in England. At first instance, it was held that the claimant's had goodwill in 'champagne' and that the labelling of the defendant's product amounted to a misrepresentation. However, the court found that while a small number of people might be confused by the defendant's misrepresentation, the claimant had not established that there was any real likelihood of serious damage if the defendant continued to sell their product as ELDERFLOWER CHAMPAGNE.

On appeal, the Court of Appeal overturned the first instance decision, finding that the defendant was liable for passing off. While the Court of Appeal agreed with the judge's findings at first instance in relation to goodwill and misrepresentation, it disagreed as to the question of damage. In particular, the Court of Appeal held that the defendant's use of 'champagne' had caused the requisite damage to sustain a passing off action. Importantly, the Court of Appeal found that the relevant injury to the Champagne House's goodwill occurred under a head of damage not considered at first instance. The damage arose from the fact that there would have been blurring or erosion of the uniqueness associated with the name 'Champagne' which would have debased the claimant's reputation. The use of the name champagne for the elderflower drink brought about 'a gradual debasement, dilution or erosion of what is distinctive'.²² This was because, as Cross J explained in another context:

[I]f people were allowed to call sparkling wine not produced in Champagne 'Champagne' even though preceded by an adjective denoting the country of origin, the distinction between genuine Champagne and 'champagne-type' wines produced elsewhere would become blurred; that the word 'Champagne' would come gradually to mean no more than 'sparkling wine' and that part of the plaintiff's goodwill which consisted in the name would be diluted and gradually destroyed.²³

The explicit recognition of dilution as a form of damage was greeted enthusiastically by many commentators, especially in light of similar extensions in trade mark law.²⁴ However, the status of dilution as a head of damage in passing off has subsequently been thrown into doubt by *Harrods v. Harrodian School*.²⁵ In this decision, Millett LJ said that while 'erosion of the distinctiveness of a brand name has been recognized as a form of damage to the goodwill of the business with which the name is connected in a number of cases, particularly in Australia and New Zealand . . . unless care is taken this could mark an unacceptable extension of the tort of passing off'.²⁶ Millett LJ also said that he had problems with an action based on confusion that recognized a distinct head of damage that did

²¹ A number of earlier cases had referred to a trader's interest in maintaining the exclusivity of their signs: *Lego v. Lemelstrich* [1983] FSR 155; *Dalgety Spillers Food v. Food Brokers* [1994] FSR 504; *Peter Waterman v. CBS* [1993] EMLR 27.

²² [1993] FSR 641, 670, 674, 678 ('singularity and exclusiveness of the description Champagne').

²³ *Vine Products v. Mackenzie* [1969] RPC 1, 23.

²⁴ TMA s. 10(3) discussed below at pp. 867–78.

²⁵ [1996] RPC 697.

²⁶ [1996] RPC 697, 715–16.

not depend on confusion.²⁷ On the facts, Millett LJ held that it was highly unlikely that, as a result of the defendant's activities, the Harrods name would lose its distinctiveness or become a generic term to refer to shops that sold luxury goods. As such, the passing off action failed.²⁸

As a result of the *Harrods* decision there is now some uncertainty over the extent to which dilution will be recognized as a distinct head of damage. One view treats dilution as an appropriate form of damage only in extended passing off cases. This, at least, seems to be the position recently taken by Laddie J in *Chocosuisse*.²⁹ Other authorities, however, have been willing to accept dilution in the context of classic passing off. In British *Telecommunications v. One In A Million*³⁰ the Court of Appeal held that persons who registered and dealt in Internet domain names, such as *marksandspencer.co.uk*, were liable for passing off. This was because 'registration of the domain name including the words Marks & Spencer is an erosion of the exclusive goodwill in the name which damages or is likely to damage Marks & Spencer'.³¹

2 EXTENDED PASSING OFF

As should be clear by now, the classic passing off action contains a host of subcategories and subrules. The courts have developed one variant, known as 'extended passing off', that deserves special attention. The extended form of passing off was first recognized by Danckwerts J in the *Bollinger* decision,³² in which the claimants, who were champagne producers, brought a successful action to prevent the defendant calling its product 'Spanish Champagne'. The action for extended passing off represents a radical departure from the classic form, which is based on misrepresentation as to source.³³ As Laddie J said in *Chocosuisse*, although extended passing off grew from passing off roots, it displays marked differences to the classic form of the cause of action.³⁴ These differences are best looked at in terms of the three elements of the action: goodwill, misrepresentation, and damage.

2.1 GOODWILL

The first point to note about extended passing off is that it recognizes that a class or group of traders may share goodwill in a name (or some other indicator) that is distinctive of a particular class of goods, such as 'advocaat', 'champagne', or 'Scotch whisky'. This can be

²⁷ See Wadlow (1995), para. 3.24, 174–7.

²⁸ Sir Michael Kerr, in a dissenting judgment, applied the dilution doctrine from *Taittinger*.

²⁹ *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 127 (damage by dilution only in case of famous yet descriptive marks). H. Carty, 'Heads of Damage in Passing Off' [1996] EIPR 487 advocates caution in extending the heads of damage. See also H. Carty, 'Passing Off at the Crossroads' [1996] EIPR 629, 631; H. Carty, 'Dilution and Passing Off: Cause for Concern' (1996) 112 LQR 632.

³⁰ [1998] 4 All ER 476, 497. See also, *Pontiac Marina Private v. Cdl. Hotels International* [1998] FSR 839 ('anything which dilutes the distinctiveness of MILLENIA causes damage').

³¹ [1998] 4 All ER 476, 497.

³² *Bollinger v. Costa Brava Wine Co.* [1960] RPC 16.

³³ See S. Naresh, 'Passing Off, Goodwill and False Advertising: New Wine in Old Bottles' (1986) 45 *Cambridge LJ* 97, 98.

³⁴ [1998] RPC 117, 124; on appeal, [1999] RPC 826, 830, Chadwick LJ focused on two differences—the shared nature of the goodwill; and the fact that the class of traders was capable of continued expansion.

seen, for example, in the *Bollinger* decision³⁵ where the claimants were members of a group of producers from the Champagne district in France who made a naturally sparkling wine, which had long been known in the United Kingdom as ‘Champagne’. The claimants’s champagne was produced by a process of double fermentation from grapes grown in the Champagne district. The claimants brought a passing off action against the defendant for selling a product called ‘Spanish Champagne’. They did so on the basis that as the defendant’s drink was made in Spain and/or from grapes grown in Spain, it did not qualify to be called ‘champagne’. Danckwerts J reviewed the cases concerning geographical expressions as trade descriptions and the cases on shared goodwill. He said that passing off would restrain a trader who sought to attach to their product a name or description with which they have no natural association, ‘so as to make use of the reputation and goodwill which has been gained by a product genuinely indicated by the name or description’.³⁶ Danckwerts J added that it did not matter ‘that the persons truly entitled to describe their goods by the name and description are a class producing goods in a certain locality, and not merely one individual’. In essence, the court recognized that the claimants, along with the other members of the class, had the requisite goodwill in the name ‘champagne’. This was because the name—champagne—indicated a sparkling wine that came from the Champagne district in France, was made by a particular method, and from grapes sourced from the Champagne region. As such, champagne had a distinctive reputation which could only be used by producers from that region.

The extended form of passing off was approved and elaborated on in *Warnink v. Townsend*.³⁷ In this decision the House of Lords held that extended passing off was not confined to drinks, nor to indications of geographical origin. Instead, the action applied equally where any product had a particular characteristic or quality. In this case the claimant produced ‘advocaat’, a drink manufactured from eggs and a spirit called brandewijn. The defendant sold its drink, made out of eggs and wine, under the name ‘advocaat’. The House of Lords held that this amounted to a passing off. Previous case law had been confined to cases where a particular product had been manufactured in a particular way using ingredients from a particular geographical source, such as champagne or Scotch whisky.³⁸ In *Warnink*, no such geographical connection was claimed. Instead, the claimant based its case on the association that existed between the name—*viz.* ‘advocaat’—and a particular product with particular ingredients—*viz.* a drink manufactured from eggs and brandewijn.

Lord Fraser said that it was not necessary that the class of traders should be defined by reference to the locality in which the product was produced. Instead, the crucial thing was that the name was distinctive of a particular class of goods. He added that the name must have a ‘definite meaning’ so that its use in relation to a different product was a

³⁵ *Bollinger v. Costa Brava Wine Co.* [1960] RPC 16. See also *Vine Products v. Mackenzie* [1969] RPC 1 (sherry—wine produced by the solera process in the province of Jerez de la Frontera in Spain); *John Walker & Sons v. Henry Ost* [1970] RPC 489 (Scotch whisky—blended whisky distilled, but not necessarily blended, in Scotland); *Taittinger SA v. Allbev* [1993] FSR 641 (champagne); *Consorzio del Prosciutto di Parma v. Marks & Spencer* [1991] RPC 351; *Consorzio del Prosciutto di Parma v. Asda Stores* [1988] FSR 697 (parma ham).

³⁶ [1960] RPC 16, 31–2.

³⁷ [1979] AC 731.

³⁸ For example, in the *Bollinger* case ‘champagne’ was taken to refer to a drink made from grapes from the Champagne region which was produced by the champenois process. In *Walker v. Ost* [1970] RPC 489, ‘Scotch whisky’ referred to a blended whisky where the ingredients were all whiskies distilled in Scotland.

misrepresentation.³⁹ In a similar vein Lord Diplock said the name must denote ‘a product endowed with recognizable qualities which distinguish it from others of inferior reputation that compete with it in the same market’.⁴⁰

Lord Fraser’s sentiment that the crucial thing in relation to extended passing off was that the name was distinctive of a particular class of goods was echoed in *Chocosuisse v. Cadbury*,⁴¹ where Laddie J recognized that the Swiss Chocolate Industry Association had collective goodwill in the term ‘Swiss chocolate’. The Swiss body argued that by introducing a chocolate product called SWISS CHALET, Cadbury had made a misrepresentation to the public that the product was made of Swiss chocolate. Laddie J (whose judgment was affirmed by the Court of Appeal) said that for a claimant to succeed, it was necessary for them to show that ‘a significant part of the public took the words “Swiss chocolate” to indicate a particular group of products having a discrete reputation as a group. On the evidence, he held it had: a significant part of the public understood the words “Swiss chocolate” to denote a group of products of distinctive reputation for quality. The fact that the public could not define what those distinctive features were, was of little relevance.’⁴²

In many ways, the concept of goodwill recognized in extended passing off is similar to that recognized in the so-called ‘classic’ action. In both cases, to establish goodwill a claimant must establish that the name in question is distinctive. The shared goodwill that underpins the extended passing off action is similar to goodwill that is jointly owned by a number of parties. There are, however, a number of differences. Where classic goodwill is owned jointly, each owner cannot prevent other owners from using the particular sign. All joint owners may, however, prevent others from using the sign. However, the goodwill recognized by extended passing off differs in that other traders may participate in the shared goodwill without the consent of existing owners.⁴³

In determining whether a claimant has the requisite goodwill to bring an extended passing off action, a distinction is drawn between establishing the distinctiveness of the descriptive term in the minds of the public and establishing who is entitled to use the term. This distinction was brought out clearly in the *Chocosuisse* decision.⁴⁴ It will be recalled that in this case, the Swiss Chocolate Industry Association established that to a significant part of the British public the words ‘Swiss chocolate’ denoted a group of products which had a distinctive reputation for quality. This was the case even though the public could not define the features that made that designation distinctive.⁴⁵ Acknowledging that different manufacturers who called their chocolate ‘Swiss chocolate’ employed very different recipes, the Court of Appeal said that this did not prevent them from collectively acquiring a reputation for quality. Equally, it did not matter that the public did not know or appreciate the identifying characteristics of the class.⁴⁶ All that was required was that the designation ‘Swiss chocolate’ was taken by a significant section of the public

⁴⁶ [1999] RPC 826, 849.

to indicate a particular group of products (chocolate made in Switzerland) having a discrete reputation distinct from other chocolate.⁴⁷

Despite the assistance provided by the *Chocosuisse* case, a number of issues are unclear in relation to the operation of collective goodwill. One issue that is uncertain relates to the question: how extensive must the trade of an individual be for them to participate in the collective goodwill? That is, what does an individual trader need to do to establish that they are a member of a class? According to *Warnink v. Townsend*, the mere fact that a person has begun to trade in relation to a particular product does not mean that they are therefore entitled to share in the extended goodwill. As Lord Diplock noted:

As respects subsequent additions to the class, mere entry on to the market would not give any right of action for passing off; the new entrant must have himself used the descriptive term long enough on the market in connection with his own goods and have traded successfully enough to have built up a goodwill for his business.⁴⁸

This requirement has recently been doubted at first instance in *Chocosuisse*.⁴⁹ There, Laddie J said that the courts would allow a joint action by new users without inquiring into how extensive their trade has been. The Court of Appeal made no comment on this issue when affirming Laddie J's decision.

A second question that remains unclear is exactly how the courts are to define the class of persons who are to participate in the goodwill. In many cases this will be uncontroversial, because the reputation will have arisen in relation to a discrete class of traders who are themselves subject to regulatory control. However, the potential for difficulty of definition can be seen from the *Chocosuisse* case. There, the claimants had proposed a definition of the class based on the recipes used to manufacture Swiss chocolate.⁵⁰ However, Laddie J rejected this on the ground that it excluded a number of those who were already using the designation and were represented by the Association. Instead, Laddie J took the defining feature of 'Swiss chocolate' to be that the chocolate was made in Switzerland, according to Swiss food regulations. However, on appeal, the Court of Appeal held that the group of traders entitled to use the goodwill was that identified by the claimant, that is, those who made chocolate in Switzerland, other than those who made chocolate with vegetable fat as an ingredient.⁵¹ Since none of the claimants supplied a product with such added fat, nor wished to do so, Chadwick LJ said he saw no reason to define the product in less precise terms. Since, on either view, Cadbury's chocolate was not entitled to share in the goodwill (as it was made in England), the finding did not matter. However, had the dispute been with a Swiss producer of chocolate who added vegetable matter, the court would have been called on to locate its own basis for defining the product.

A third question relates to the extent to which the participants in the shared goodwill can themselves decide to modify the criteria by which the class is defined. If the majority of champagne makers decided to abandon the double fermentation process, perhaps

⁴⁷ [1999] RPC 826, 832.

⁴⁸ [1979] AC 731, 744. Lord Fraser [1979] AC 731, 754, said '[a] new trader who begins to sell the genuine product would become a member of the class when he had become well enough established to have acquired a substantial right of property in the goodwill attached to the name'.

⁴⁹ *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117.

⁵⁰ [1998] RPC 117, 133–5.

⁵¹ [1999] RPC 826, 840.

because it was discovered to be unhealthy, would they then be able to exclude others, who continued to do so, from using the term ‘champagne’?

2.2 MISREPRESENTATION

In establishing misrepresentation in an extended passing off action, the critical factor is what the public understands by the way the name is used. As with classical passing off, this is a question of fact. Although extended passing off and classical passing off both require the claimant to show that there has been a misrepresentation, there are important differences between the way this is approached in the two actions. In relation to extended passing off, ‘protection is given to a name or word that has come to mean a particular product rather than a product from a particular trader’.⁵² It follows from this that the descriptiveness of the term will not be sufficient to defeat the action. Moreover, there will be no misrepresentation if the defendant uses the distinctive term accurately. Rather, the misrepresentation ‘lies in marketing the goods in a way which will lead a significant section of the public to think that those goods have some attribute or attributes which they do not truly possess’.⁵³ Another difference relates to the use that the owner of the goodwill can make of the distinctive name. In conventional passing off a trader can change the quality of the goods or services that they offer under a particular sign. However, in extended passing off an existing user is not able to use the ‘sign’ on products for which it is not a correct designation.⁵⁴ Thus an individual champagne producer would not be able to use ‘champagne’ to describe another product. Each trader within the class is, however, able to use their own trade name in association with the distinctive name shared by the class of traders. This will not prejudice their right to share in the goodwill associated with the product. Thus, there is no problem with Bollinger using its name in association with champagne, nor with Warnink using its name in relation to Advocaat.

2.3 DAMAGE

A final feature of the extended form of passing off worth observing is the treatment of damage. The most relevant form of damage is the reduction of the distinctiveness of the descriptive term, that is *dilution*. While doubts have been raised about the ongoing relevance of dilution in the classic passing off action, it seems that it will continue to operate in relation to extended passing off.⁵⁵ While likelihood of damage remains a prerequisite of extended passing off, it is not essential for a claimant to demonstrate that they would have been damaged individually.⁵⁶

2.4 ACTIONS RELATED TO EXTENDED PASSING OFF

It is worth observing that the use that is made of names that designate the geographical origin or quality of goods is regulated by a number of regimes other than passing off. For

⁵² *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 125. See also [1999] RPC 826, 832.

⁵³ [1999] RPC 826, 837.

⁵⁴ The points are all drawn from Laddie J’s analysis in *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury Ltd* [1998] RPC 117, 124–6.

⁵⁵ *Ibid.*, 126–7, 143.

⁵⁶ [1979] AC 731, 756.

example, a person's ability to use an incorrect designation of origin or quality may lead to criminal liability under consumer protection laws such as the 1968 Trade Descriptions Act.⁵⁷ The European Community has also adopted a number of Council Regulations dealing with geographical 'designations of origin' (PDOs) and 'geographical indications' (PGIs) for wines, spirits, agricultural products, and food. These are discussed in Chapter 43.

Finally, it is worth noting that marks that designate the geographical origin or quality of goods can be registered in the United Kingdom as 'certification' or 'collective' trade marks,⁵⁸ or as Community Collective marks.⁵⁹ Certification marks indicate that the goods or services meet certain standards.⁶⁰ This mechanism has been used to protect products such as 'Stilton' cheese.⁶¹ In turn, Collective marks serve to distinguish the goods or services of the members of relevant associations.

3 UNFAIR COMPETITION

In the final part of the chapter, we consider the principles of unfair competition and their relevance in the United Kingdom. Many countries have granted protection well beyond the confines of passing off under the more general rubric of unfair competition law. At its broadest, unfair competition provides general, open-textured rules against competitive acts that contravene trade mores. For example, the 1909 German Act Against Unfair Competition declares that 'anyone who for the purpose of competition commits acts in the course of trade that infringe good mores, is liable to incur injunctions or damages'.⁶² It should be noted that generalized rules of this nature are not confined to civil law jurisdictions: the USA has recognized a notion of unfair competition through its case law.⁶³

The notion of unfair competition law is enshrined in the International Conventions. Notably, Article 10 bis of the Paris Convention obliges member countries to assure 'effective protection against unfair competition' which, in turn, is defined as any 'act of competition contrary to honest practices in industrial or commercial matters'. Article 10 bis(3) then specifies three particular acts that will be treated as being unfair. These are:

1. all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor;

⁵⁷ In general, these do not impose statutory duties which give rise to civil liability: *Bollinger v. Costa Brava Wine Co.* [1960] RPC 16, 34 (claim under the Merchandise Marks Acts 1887–1953).

⁵⁸ N. Dawson, *Certification Trade Marks: Law and Practice* (1988); Annand and Norman (1994), ch. 13.

⁵⁹ CTMR Art. 64. See Annand and Norman (1998), ch. 11. There is no Community certification mark.

⁶⁰ TMA s. 50. ⁶¹ *Stilton Trade Mark* [1967] RPC 173.

⁶² *Gesetz gegen den unlauteren Wettbewerb—UWG*. See W. Rowland, 'Unfair Competition in West Germany' (1968) 58 *TM Rep* 853; Knight, 'Unfair Competition: A Comparative Study of Its Role in Common Law and Civil Systems' (1978) 53 *Tulane LR* 164; A. Kamperman Sanders, *Unfair Competition Law: The Protection of Intellectual and Industrial Creativity* (1997) ch. 1; P. Kaufman, *Passing Off and Misappropriation (IIC Studies, Vol. ix)* (1986) (discussing Netherlands, West Germany, France, and the USA).

⁶³ The earliest recognition of a general doctrine of unfair competition in the USA occurred in the famous Supreme Court decision in *International News Service v. Associated Press*, 248 *US* 215 (1918). The doctrine has been characterized as having had a 'sickly growth'. See J. Adams, 'Unfair Competition: Why a Need is Unmet' [1992] *EIPR* 259.

2. false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor;
3. indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods.⁶⁴

In some countries, the protection offered by unfair competition extends beyond the level specified in the international provisions to include dilution of another trader's indications (a form of 'free riding'), slavish imitation, and misleading advertising.⁶⁵

3.1 UNFAIR COMPETITION FOR THE UNITED KINGDOM?

During the 1970s and 1980s, courts in the United Kingdom were developing passing off in a way that looked as if it was evolving into a general tort of wrongful trading.⁶⁶ In particular, the developments associated with extended passing off were seen by many as heralding the judicial recognition of unfair competition. For example, in *Vine Products*,⁶⁷ Cross J said that the Spanish champagne case was not a passing off action, but a 'new fangled tort called unfair competition'. Moreover, in *Warnink v. Townsend* Lord Diplock characterized passing off, along with conspiracy to injure a person in their trade and slander of title, as separate labels that had been attached to particular forms of 'unfair trading'. He also noted that the forms of unfair trading 'will alter with the ways in which trade is carried on and business reputation and goodwill acquired'.⁶⁸

While it seemed in the 1970s and 1980s that British law was on the verge of acknowledging a general action for unfair competition,⁶⁹ the judicial tendency was subsequently reversed.⁷⁰ In *Cadbury Schweppes v. Pub Squash*⁷¹ the Privy Council made it clear that there is no cause of action for misappropriation as such.⁷² There, it will be recalled, relief was denied to the claimant against the defendant who had imitated aspects of the claimant's advertising campaign for its SOLO soft drink. This was despite the fact that the court acknowledged that the defendant had set out in a deliberate and calculated fashion to take advantage of the claimant's past efforts. Lord Scarman explained that the claimant had failed to establish a misrepresentation. He also added that while passing off was a developing body of law that:

⁶⁴ Art. 39 of TRIPS requires member states to protect undisclosed information under Art. 10(2) of the Paris Convention.

⁶⁵ WIPO, *Protection against Unfair Competition* (WIPO Pubn. 725(E)) (1994).

⁶⁶ For the position before that, see W. Morison, 'Unfair Competition at Common Law' (1951–3) 2 *University of Western Australia LR* 34; W. Cornish, 'Unfair Competition: A Progress Report' (1972) 12 *J Society for the Public Teachers of Law* 126.

⁶⁷ *Vine Products v. Mackenzie* [1969] *RPC* 1, 28. ⁶⁸ [1979] *AC* 731, 740.

⁶⁹ G. Dworkin, 'Unfair Competition: Is the Common Law Developing a New Tort?' (1979) *EIPR* 295, 244.

⁷⁰ A. Kamperman Sanders, *Unfair Competition Law: The Protection of Intellectual and Industrial Creativity* (1997); 202.

⁷¹ [1981] *RPC* 429.

⁷² The lack of clarity, if any, arises from the Privy Council's decision not to consider the 'unfair competition' argument which the claimant had raised, on the grounds that it had been 'withdrawn'. See G. Dworkin, 'Passing Off and Unfair Competition: An Opportunity Missed' (1981) 44 *MLR* 564, 567 (optimistically saying that it was not clear what decision might have been reached on this point—but the tenor is enough to suggest the Privy Council was not about to develop such a tort).

[It] is only if the plaintiff can establish that a defendant has invaded his 'intangible property right' in his product by misappropriating descriptions which have become recognized by the market as distinctive of the product that the law will permit competition to be restricted. Any other approach would encourage monopoly. The new, small man would increasingly find his entry into an existing market obstructed by the large traders already well known as operating in it.⁷³

The implications of the case were that the courts had gone far enough in *Warnink v. Townsend* and that the Lords were not interested in developing passing off into a tort of unfair competition.⁷⁴

The approach taken by the Privy Council was echoed by a strong judgment of the Australian High Court and more recently by the UK courts specializing in intellectual property.⁷⁵ In rejecting a claim to passing off in relation to the sale of similar-looking therapeutic cushions in *Hodgkinson & Corby Ltd. v. Wards Mobility Services Ltd.*,⁷⁶ Jacob J said that there 'is no tort of copying. There is no tort of taking a man's customers . . . There is no tort of making use of another's goodwill as such. There is no tort of competition.' Similarly, in *Chocosuisse*,⁷⁷ Laddie J observed that 'the common law does not recognise a general right in one trader to complain of damaging dishonest trading practices by his competitors'.

3.2 SHOULD THE UNITED KINGDOM RECOGNIZE UNFAIR COMPETITION?

While the United Kingdom may not currently be in the process of developing a broad tort of unfair competition, debates still continue as to whether it should do so. The parties to these debates tend to divide between those who seek to expand the common law by reference to the ethical and juridical principles of unfair competition,⁷⁸ and those who wish to contain passing off (and related actions) within clearly defined paths.⁷⁹

Those who favour the introduction of a general principle of unfair competition tend to argue that:

- (i) the action is desirable because the law should promote honest and conscionable conduct in the marketplace;⁸⁰

⁷³ [1981] *RPC* 429, 496.

⁷⁴ J. Adams, 'Is There a Tort of Unfair Competition? The Legal Protection of Advertising Campaigns and Merchandising' [1985] *J Business Law* 26, 32; J. Lahore, 'The Pub Squash Case. Ricketson, 'Reaping without Sowing: Unfair Competition and Intellectual Property Rights in Anglo-Australian Law [1984] *University of New South Wales LJ* 1, 30.

⁷⁵ *Moorgate Tobacco v. Phillip Morris* [1985] *RPC* 219. But the extension of passing off to cover 'dilution' and character merchandising has been seen by others as moving English law towards unfair competition: H. Carty, 'Dilution and Passing Off: Cause for Concern' (1996) 112 *LQR* 632; S. Chong and S. Maniatis, 'The Teenage Mutant Hero Turtles Case: Zapping English Law on Character Merchandising Past the Embryonic Stage' [1991] *EIPR* 253.

⁷⁶ [1995] *FSR* 169.

⁷⁷ [1998] *RPC* 117, 127.

⁷⁸ P. Burns, 'Unfair Competition—A Compelling Need Unmet' [1981] *EIPR* 311; J. Lahore, 'Intellectual Property Rights and Unfair Copying: Old Concepts, New Ideas' [1992] *EIPR* 428; W. Gordon, 'On Owning Information: Intellectual Property and the Restitutionary Impulse' (1992) 78 *Virginia LR* 149, 223 (arguing for recognition of a tort of 'malcompetitive copying').

⁷⁹ e.g. M. Spence, 'Passing Off and the Misappropriation of Valuable Intangibles' (1996) 112 *LQR* 472.

⁸⁰ G. Dworkin, 'Unfair Competition: Is the Common Law Developing a New Tort?' [1979] *EIPR* 295.

- (ii) the action is desirable because it provides incentives to those who expend time and effort developing products which are easily copied;⁸¹
- (iii) the courts are already giving effect, albeit surreptitiously, to such a principle through existing intellectual property rights. Consequently it would be desirable to make that analysis explicit and thereby help to preserve the integrity of the existing concepts;⁸²
- (iv) the action is recognized in international conventions and in other jurisdictions and, to better effect harmonization of standards, unfair competition should be adopted in the UK;⁸³
- (v) *sui generis* legislative responses (such as unregistered design right) which are built on existing property models, confer too strong protection on the owners of those rights and inhibit free and fair competition;⁸⁴
- (vi) a general law of unfair competition would add a much needed flexibility to UK law. This would be particularly useful in the context of developing technologies and business practices;⁸⁵ and
- (vii) the concept of fairness is one which is well understood and applied by judges in other areas such as fair dealing with copyright works, unfair contract terms, and unfair dismissal.

Those who are more sceptical about the need for unfair competition respond that:

- (i) an action prohibiting unfair competition is not justified theoretically;⁸⁶
- (ii) it is inappropriate and unconstitutional for the courts to develop a general action in a field where the legislature has enacted carefully drafted specific rights;⁸⁷
- (iii) in most situations of unfair copying, passing off is flexible enough to provide a remedy.⁸⁸ As such, to develop a general 'unfair competition' law would be a disproportionate response to those cases which cannot so be accommodated;
- (iv) insofar as wrongs are being committed which fall outside the scope of the existing laws, these should be remedied if at all by *sui generis* legislative action;⁸⁹
- (v) the action for unfair competition is too general to provide any guidance to judges

in applying it to particular scenarios;⁹⁰ and is therefore an ‘invitation to judicial idiosyncrasy’;⁹¹

- (vi) unfair competition is inappropriate in a common law, adversarial⁹² system;
- (vii) unfair competition laws lead to undue interference by the judiciary in the workings of the marketplace;⁹³ and
- (viii) unfair competition laws open floodgates to litigation.⁹⁴

While much ink has been spilled debating the merits of unfair competition law, it seems unlikely that British judges are going to develop the existing regimes into a generalized action for unfair competition. Moreover, the domestic legislature has signalled a reticence about legislating in this field, either generally or in response to specific issues (such as look-alike brands).⁹⁵ As this is an area of law on which it will be difficult to reach commonly agreed principles, European harmonization also appears unlikely in the near future. For the time being, then, those who complain about unfair competitive practices will have to continue to bring their grievances within existing causes of action.

TRADE MARK REGISTRATION

1 INTRODUCTION

In this chapter we look at trade mark registration focusing in particular on the process by which registered trade marks come into being. While registering a trade mark is a costly and time-consuming process, it confers on the proprietor certain exclusive rights to use a particular sign in relation to specified commercial activities. In contrast with the law of passing off, registration enables traders to protect their marks before they are put on the market. Registration is also advantageous in that once a mark is registered there is a presumption, though not a guarantee, that the registration is valid. A third advantage of the registration of a trade mark is that it reduces the possibility of disputes, and confers on the trade mark proprietor increased certainty, because the registration determines the scope of the property protected as a trade mark. The process of registration attempts to delineate what sign is protected and in which commercial spheres it is to be protected. The Register, which is open to the public, also acts as an important source of information.¹

There are three possible routes UK traders might take to register a trade mark: national, Community, or international. A national registration system for trade marks has existed in the United Kingdom since 1875. The UK registry, which is based in Newport in Wales, provides successful applicants with rights in the United Kingdom in relation to the sign as registered. Registration at the Community level involves a single application to the Office for Harmonization in the Internal Market (OHIM) which is based in Alicante in Spain. A successful application to the OHIM results in the grant of a single trade mark which operates throughout the Community.² The Community trade mark is not mutually exclusive to a national registration: different routes suit different needs.

In contrast to registration at a national or community level, the international filing systems merely facilitate the acquisition of national marks. International registration, which is administered by the International Bureau of WIPO at Geneva, will be carried out either under the Madrid Agreement or the Madrid Protocol. The main advantage of the international system is administrative: instead of traders having to file separate applications in the countries where they would like protection, the international system enables traders to obtain protection in a number of different jurisdictions via a single application.

¹ TMA s. 63(3)(a).

² With expansion of the Community to 10 new states on 1 May 2004, existing applications and registrations are to be automatically extended to cover the new territories. For a useful explanation, see Communication No. 5/03 of the President of the Office of 16 October 2003 concerning the enlargement of the European Union in 2004.

While there has been a degree of standardization of trade mark procedure at both the regional and international levels there are many important differences between the three regimes. In particular, although the procedures and documentation needed for national, regional, or international applications are similar, there are significant variations in the way applications are examined.³

2 REGISTRATION IN THE UNITED KINGDOM

A registration system for trade marks was introduced in the United Kingdom in 1875. Earlier attempts to introduce a registration system had been resisted on the basis that it would have been complicated, expensive, and unnecessary.⁴ Eventually, the benefits of registration were seen to outweigh the potential disadvantages. In particular, it was thought that a registration system would help to reduce the difficulties that traders faced in proving reputation (which was necessary to sustain an action for passing off). It was also thought that a trade mark Registry would enable third parties to discover whether other traders had claimed the right to use a particular sign and, where necessary, to locate the proprietor of the sign. The introduction of a registration system also helped to relieve the pressure that foreign powers were exerting on the British government to introduce a registration system for trade marks.

It is common for applicants to use trade mark attorneys in the drafting and processing of applications. While trade mark agents (as they used to be called) emerged in the United Kingdom late in the nineteenth century, the professional association that governs them, the Institute of Trade Mark Attorneys, was not formed until 1934.⁵ While few restrictions were placed on who could act as a trade mark attorney until recently, the Trade Marks Act 1994 now places limits on the use of the title 'registered trade mark agent'.⁶

The registration process in the United Kingdom can be divided into four stages: (i) the filing of the application, (ii) examination, (iii) publication, observation, and opposition, and (iv) registration (see Figure 35.1).

2.1 FILING OF THE APPLICATION

Any person (natural or legal) can apply for the registration of a trade mark. Section 32 of the 1994 Act provides that an application for a trade mark must contain:⁷

- (i) a request for registration, including the name and address of the applicant;
- (ii) a statement of the goods or services for which the mark is to be registered;
- (iii) a representation of the mark; and

³ For example under the TM Dir., Recital 5, procedural matters are left to member states. Despite this, the ECJ has been happy to rule on what is 'graphic representation', on the need for a full *a priori* examination on absolute grounds, as well as the inappropriateness of certain types of disclaimer: see *Ralf Sieckmann v. Deutsches Patent-und Markenamt*, Case-273/00 [2003] *ETMR* 466; *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004).

⁴ See, e.g. A. Ryland, *Trade Marks. Registration Essential to Successful Litigation* (1862).

⁵ It has a web site at <http://www.itma.org.uk>.

⁶ TMA ss. 82–6. Kerly, ch. 22, 756–61.

⁷ TMA s. 32.

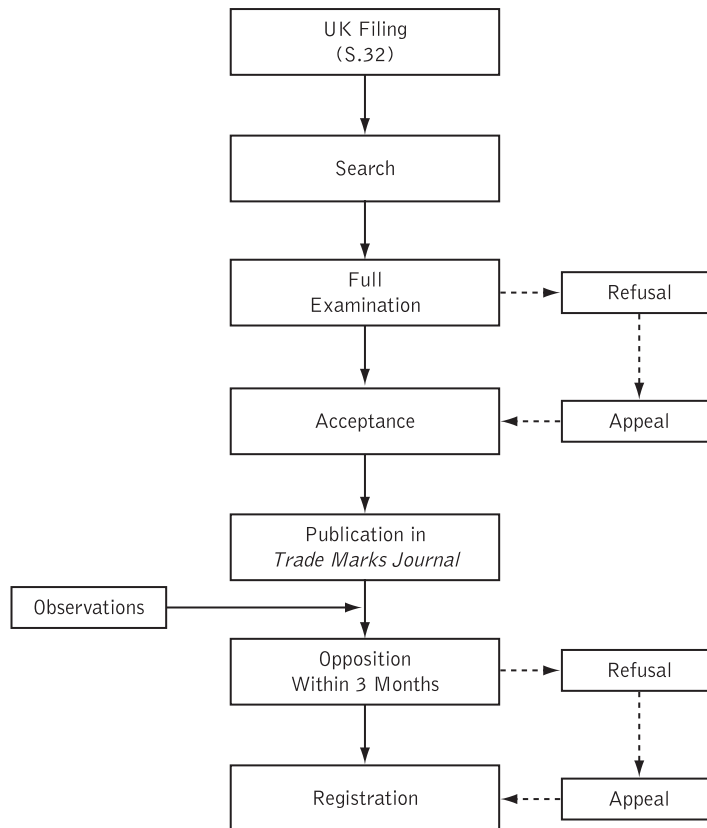

Fig. 35.1 Registering a trade mark in the UK

- (iv) a declaration that the mark is being used or that there is a *bona fide* intention to use the mark.⁸

Since there is now only a single UK Register, there is no need to specify whether registration is sought in 'Part A' or 'Part B' as was required previously.⁹ The filing date of the application (which is the date from which things such as duration are calculated) is the date on which (i)–(iii), but not (iv), are provided to the Registrar.¹⁰ It may be possible to claim a priority date from an earlier application elsewhere.¹¹ This may be important where there are independent conflicting applications for the same trade mark.

2.1.1 The statement (or specification) of the goods or services

A trade mark application must define the goods and services for which protection is

⁸ TMA s. 32(3). ⁹ Transitional provisions are contained in TMA, Sched. 3.

¹⁰ TMA s. 33. See *Ty Nant Spring Water* [2000] RPC 55, 60–1 and PAC 5/99 *Change of Registry Practice: Marks which are not Clearly Defined*.

¹¹ TMA s. 35, TMR r. 6; Paris Art., 4(A)(1), 4(C)(1) (6 months).

sought.¹² This is because the statement shapes the scope of the rights in the registered mark. As with the drafting of patent and design applications, the way statements are formulated is subject to a process of self-regulation. On the one hand, the applicant may wish to register the sign for a wide range of goods and services. At the same time, however, applicants should be mindful that as a result of an action for revocation, a broadly defined statement may subsequently be limited to the goods or services for which the registrant can demonstrate actual use. The list of goods and services may also be restricted to avoid an objection to the validity of the mark.¹³ The need to ensure that the specification is confined to the fields in which the applicant intends to operate is particularly important given that under the 1994 Act the rights conferred on trade mark owners extends to 'similar' goods or services and, in some cases, 'dissimilar' goods or services.¹⁴

2.1.2 Classification

Section 34 of the 1994 Act provides that goods and services shall be classified for the purposes of registration according to a 'prescribed system of classification'.¹⁵ The classification system, which is based in the international system adopted at Nice in 1957, has thirty-four classes of goods and eleven classes of services.¹⁶ It is possible for an application to relate to a number of classes.¹⁷ The Registrar, whose decision is final, resolves any doubts over how the goods and services are to be classified.¹⁸

The purpose of the classification process is primarily administrative: *viz.*, to facilitate the searching of earlier competing marks.¹⁹ In contrast with the specification, which helps to define the boundaries of trade mark protection, the way in which a mark is classified does not ordinarily impact upon substantive matters such as the scope of the rights given to the trade mark owner. Thus, the fact that a mark is used by a competitor on goods or services in a different class from those of the registered proprietor does not necessarily mean that it is not being used on 'identical' or 'similar' goods or services (which is the test for infringement). Having said that, there are some situations where the way a mark is classified *may* impact on the scope of the proprietor's rights. This will be the case where in their statement of the goods and services, an applicant makes reference to the classes used at the Registry:²⁰ that is, where applicants tie the list of goods or services claimed to the bureaucratic categories used at the Trade Mark Registry.

¹² For the relevance of TMA s. 3(6) that applications should be made in good faith, see below at pp. 845–8. But cf. OHIM practice which permits broad registrations, and regulates undue scope through the provisions on revocation for non-use.

²⁰ See also *GE Trade Mark* [1969] RPC 418, 458 ('electrical apparatus (included in this class) did not cover switches, not because they were not electrical but because switches had never been treated as falling within the class); *Avnet v. Isoact* [1998] FSR 16 (examining the relationship between the list and 'classification'); and *Altecnic's Trade Mark Application* [2002] RPC (34) 639 (tribunal employing class when interpreting scope of ambiguously worded specification).

2.1.3 Representation of the sign

The trade mark applicant is also required to provide a representation of the sign, and before an application is accepted that representation must be 'adequate'.²¹ This reflects the fact that the trade mark registration system is built around a notion of 'representative registration'.²² That is, rather than depositing an actual sample of the mark, applicants are required to deposit a representation of the mark.²³ This representative registration has a number of rationales (as well as having some significant effects).²⁴ One function of the representation (which might be called the 'property' function, and is analogous to the role of patent claims) is to define the scope of the trade mark owner's rights and delineate with a degree of precision exactly what sign is protected. A second function of graphic representation (which might be called the 'information function') is to enable publicity to be given to the fact that applicant is seeking registration, the publicity being provided by publication in the *Trade Marks Journal*. In particular, it helps to ensure that third parties are able to search the register and to ascertain things such as the scope of existing marks and to determine whether a fresh application conflicts with earlier marks. A third and related function of the graphic representation requirement (which might be called the 'administrative function') is to make the bureaucratic dealing with the sign, its classification and comparison with other signs, more manageable.

While each of these functions demands different things, in effect, for a graphic representation to be adequate it must fulfil all three goals. As the ECJ held in *Ralf Sieckmann*, a graphic representation is one which utilizes images, lines or characters. In order to render a sign registrable as a trade mark the graphic representation must be clear, precise, self-contained, easily accessible, intelligible, durable, and objective.²⁵ (These are known as the *Sieckmann* criteria.) While the *Sieckmann* case is useful in that it articulates criteria which a graphic representation must meet, it remains difficult to say in particular situations whether a representation is *sufficiently* stable, durable, objective, or intelligible to satisfy the criteria. It seems that a representation is not sufficiently intelligible if it is only intelligible to a few, or a limited section of the population (as for example, with a chemical formula). In the *Libertel* case, reviewed below, Advocate General Léger indicated that a representation was sufficiently accessible and intelligible if it did not require excessive efforts to be taken for the public to understand it.²⁶ Moreover, in *Shield*, the Court noted that accessibility and intelligibility did not require 'immediate' intelligibility, but only that intelligibility be 'easy', so that a music score would suffice as a representation of sound.²⁷

There are a number of different techniques that applicants may use to represent their marks graphically. These include words and images (such as line drawings and

²¹ The furnishing of a representation of the mark is one of the few elements necessary to obtain a filing date. The applicant is given 2 months to remedy any inadequacies.

²² *Sherman and Bently*, 180–93. See M. Handler and R. Burrell, 'Making Sense of Trade Mark Law' (2003) *IPQ* 388.

²³ The Community system employs a more restrictive interpretation of what counts as 'graphic representation'. CTMIR r. 3(2) specifies that when a mark is not a word mark but a three-dimensional, colour or other type of mark, a reproduction of the mark must be submitted on a sheet of paper.

²⁴ *Ralf Sieckmann v. Deutsches Patent- und Markenamt*, Case C-273/00 [2002] *ECR* I-11737 (paras. 48–9).

²⁵ These were described by the OHIM Board of Appeal as 'high standards': *Metro-Goldwyn-Mayer Lion Corp*, R781/1999–4 (25 Aug. and 29 Sept. 2003) (para. 20).

²⁶ *Libertel Groep BV v Benelux-Merkenbureau*, Case C-104/01 [2004] *FSR* (4) 65 para. 71 (AG).

²⁷ *Shield Mark BV v. Joost Kist*, Case C-283/01 (27 Nov. 2003) (para. 63) (ECJ).

photographs). With the vast majority of marks, the process of graphic representation is straightforward: 'word marks' are written, and device or 'figurative' marks are represented by pictures.²⁸ However, difficulties arise because, as we will see, since the Trade Marks Act 1994 liberalized the definition of marks it is now possible to register various 'exotic' marks, such as sounds, shapes, colours, smells, gestures, etc., and in these cases graphic representation can be more problematic. The particular mode of description that is used will vary according to the type of mark in question.

(i) *Shapes*. It has been held that a verbal description of a shape or packaging—such as 'vacuum packing' or 'a chewy sweet on a stick'—will rarely ever be satisfactory²⁹ because it will not convey the precise appearance of the sign:³⁰ rather design drawings or photographs will be necessary.³¹ The problems that arise where an applicant simply relies upon words to represent more unusual marks can be seen in *Swizzels Matlow's Trade Mark Application*,³² where an application to register a shape mark was rejected. In the application, the description of the mark read: '[t]he trade mark consists of a chewy sweet on a stick for non-medicated confectionery'. The Trade Mark Registry rejected the application, primarily on the basis that it was neither possible nor practicable for anyone inspecting the register to determine what the trade mark was from the description. More specifically, the Registry found that the representation failed to define the mark with sufficient precision so that infringement rights can be determined. This was because the words 'chewy', 'sweets', and 'sticks' could be interpreted very widely and, in combination, covered 'an infinite variety of marks'. Moreover, the description could not stand in place of the mark without the benefit of supporting material, namely, samples of the goods. In the language of *Sieckmann*, the description was not 'self-contained'.

(ii) *Colours*. One area where trade marks law has long had problems is in relation to colour marks. Indeed, the reason why colour marks were initially not registrable was because the technology did not exist to enable colour marks to be reprinted in the *Trade Mark Journal*.³³ In *Libertel Groep BV v Benelux-Merkenbureau*,³⁴ the ECJ considered the extent to which trade marks comprising a single colour could be registered. In this case the applicant had sought to register the colour orange for telephone books in class 9 and telecommunication services in classes 35–8. While the Court clearly accepted that simple colours could be represented graphically, it stated that an assessment was required in the

²⁸ Colour is presumed not to be an element of a trade mark unless the application contains a statement to that effect and specifies the colour: TMR r. 5(3); CTMIR r. 3(5). Similar rules operate under Madrid Art. 3 and Madrid Prot. Art. 3(3).

²⁹ UK practice allows for the possibility that a verbal description might be satisfactory, whereas the OHIM Implementing Regulations do not: see *Swizzels Matlow's Trade Mark Application (Love Hearts)* [1999] RPC 879, 884–5. See also *In re Telecom Plus plc's Trade Mark Application* (4 Apr. 2003) SRIS O/187/03 (Geoffrey Hobbs QC) (verbal description of pictorial mark was, on facts, not sufficiently precise or unambiguous, but Hobbs QC did 'not rule out the possibility of describing visual matter in words sufficient to satisfy the requirement of graphic representation').

³⁰ *Antoni & Alison's Application/Vacuum Packing*, R4.97–2 [1998] OJ OHIM 3/180 [1998] ETMR 460.

³¹ Likewise, an application which includes a representation of a three-dimensional image will not be treated as relating to the three-dimensional form unless the application contains a statement to that effect: TMR r. 5(2); CTMIR r. 3(4).

³² [1998] RPC 244.

³³ See Sherman and Bently, 190.

³⁴ Case C-104/01 [2004] FSR (4) 65. The Advocate General's opinion is reported at [2003] ETMR (41) 508.

light of the facts of the case and the mode of representation proposed by the applicant, as to whether the seven *Sieckmann* criteria are met. The Court held that a mere sample of a colour would not satisfy those requirements, because the exact shade of colour on paper cannot be protected from the effects of the passage of time. Equally, the Court said that a verbal description would not normally satisfy the conditions.³⁵ However, the Court reiterated that it was necessary to decide whether a given description was satisfactory on the particular facts.³⁶ Finally, the Court noted that a designation using an internationally recognized identification code *might* be considered to constitute a graphic representation, adding that such codes are precise and stable.³⁷ Moreover, the use of a sample, verbal description and international code *might*—in combination—satisfy the seven *Sieckmann* criteria.³⁸

Libertel clearly prohibits member states from operating a *per se* exclusion of simple colours from registrability.³⁹ More seriously, however, the decision may be read as precluding the operation of procedural rules specifying that only certain forms of graphic representation are adequate. For example, while the regulations implementing the Community Trade Mark Regulation specify that an applicant who wants to register a colour mark submits a 'reproduction', the OHIM has now 'recommended' that applicants add a reference to an international code.⁴⁰ Similarly, while the UK previously treated samples of colours as acceptable,⁴¹ following *Libertel*, colour samples on paper are no longer treated as graphic representations, but a written description coupled with the relevant code from an internationally recognized colour identification system will be regarded as acceptable.⁴² Other applications are to be assessed on their facts to decide whether the applicant has graphically represented the sign in such a way as to satisfy the *Sieckmann* criteria. One may wonder whether the ECJ has not moved too far into the domain of national procedure.⁴³

³⁵ See also *Orange Personal Communication Services/Orange*, R7/97-3 [1998] OJ OHIM 5/640 (description 'too imprecise'); *TMR Work Manual*, ch. 6, para. 2.3.5 (description 'too vague').

³⁶ A British tribunal held that a scientific description would not do, in a pre-*Sieckmann* case, because the representation did not provide a sufficiently 'immediate' idea of the mark: *Ty Nant Spring Water* [1999] RPC 55, 59 ('a blue bottle of optical characteristics such that if its wall thickness is 3mm the bottle has, in air, a dominant wavelength of 472-4 nanometres, a purity of 44-48%, an optical brightness of 28-32%'). 'Immediacy' is not a requirement in *Sieckmann*, but this case could have easily been decided on the basis that the criteria used were not sufficiently intelligible (as with the chemical formula in *Sieckmann* itself).

³⁷ The Advocate General had suggested that the effort demanded of the applicant to look up the code were not 'excessive'. He said that, except in cases where the collection is difficult to access, such a code reference permits a user to know, clearly and without ambiguity, what is the mark: Case C-104/01 [2003] ETMR (41) 508 (para. 72) (AG).

³⁸ Case C-104/01 [2004] FSR (4) 65 (paras. 28-38) (ECJ).

³⁹ The Advocate General observed that the practices of member states varied, some (such as Germany) permitting such registrations, others (such as Portugal) not: Case C-104/01, para. 57 (AG). On the practices of member states, see C. Schulze, 'Registering Colour Trade Marks in the European Union' [2003] EIPR 55.

⁴⁰ Commission Regulation (EC) No. 2868/95 of 13 December 1995, implementing Council Regulation (E) 40/94, r. 3(2). See Communication No. 6/03 of the President of the Office of 10 November 2003 recommending that applications relating to colour include a designation from an internationally recognized identification code while simultaneously observing that some shades might not be catered for by such coding systems.

⁴¹ UK Trade Marks Registry, Practice Amendment Circular 2/00 (1 March 2000); TM Registry Work Manual para. 2.3.5.

⁴² PAN 3/03 *Libertel*—*Graphical Representation of Colour Marks Filing Requirements* (23 Oct. 2003).

⁴³ Cf. Recital 5 of the Directive which reads 'whereas Member States also remain free to fix the provisions of procedure concerning the registration, the revocation and the invalidity of trade marks acquired by registration'. In *Heidelberger Bauchemie*, Case C-49/02, A. G. Léger has suggested that the ECJ revisit its decision in *Libertel* and rule that colours are only registrable where they are defined in relation to a specific article.

(iii) *Smells*. After a period of uncertainty in which the OHIM rather surprisingly held that a verbal description of a smell was sufficient,⁴⁴ in *Ralf Sieckmann* the ECJ has indicated that a smell will not be adequately graphically represented by a verbal description because it will not be ‘sufficiently precise’. Sieckmann had sought to register the smell of cinnamon as a trade mark in Germany, and as well as providing a verbal description had also attempted to represent the mark by way of a chemical formula and a sample. The ECJ also indicated that these other mechanisms would not meet the requirements of the Directive: a deposit of a sample is not a graphic representation, but in any case would not be sufficiently durable or stable; and a chemical formula (though probably a representation of a chemical rather than an odour) would not be sufficiently intelligible, clear, or precise. While the Court has not ruled out the possibility of there ever being an acceptable graphic representation of a smell,⁴⁵ other possible techniques—such as through chromatography or through so-called ‘digital noses’—would not seem to satisfy the requirement of intelligibility. Even accepting a degree of variation between different countries and fora in the application of concepts such as ‘intelligibility’, it is unlikely that there will be many (if any) national or Community marks granted for smells.

(iv) *Sounds*. In *Shield Mark BV v. Joost Kist*, the Court considered the application of the graphic representation requirement to sounds. The case concerned two marks: the first nine notes of the melody for Beethoven’s ‘Für Elise’ and the crowing of a cock, both for advice and services in the field of intellectual property and marketing. The applicant had used musical notation (including the instructions to be played on the piano), onomatopoeic representation (kukelekuuuuu) as well as a verbal description ‘the crowing of a cock’. The Hoge Raad has asked the Court whether such marks were registrable as trade marks and, if so, whether the requirement of graphic representation of a sound was met by: a note bar, a description in words, a voice picture or sonogram, a sound carrier, a digital recording that can be listened to via the Internet, or a combination of these.⁴⁶ The Court stated that a score which comprised a stave with a clef, musical notes, and rests whose form indicates relative values and, where necessary, accidentals (sharp, flat, etc.) would satisfy the seven *Sieckmann* requirements.⁴⁷ This was so even though not everyone can read music: the requirements is ‘intelligibility’, not ‘immediate intelligibility’.⁴⁸ In contrast, the mere verbal description of sounds (of the type involved in the case) would lack clarity and precision.⁴⁹ The Court held that onomatopoeic representation was problematic for two reasons: first because ‘there is a lack of consistency’ between the onomatopoeia itself and the sound; secondly, because perceptions of an onomatopoeia are individual (and hence subjective) or at least culturally determined (in English, for example, such a sound would be represented as ‘cock-a-doodle-doo’). Consequently, ‘a simple onomatopoeia cannot without more constitute a graphical representation of the sound or

⁴⁵ Cf. Case C-273/00 [2002] ECR I-11737 (para. 44) (AG).

⁴⁶ *Shield Mark BV v. Kist, trading as Memex*, Case C-283/01 (27 Nov. 2003).

⁴⁷ Cf. Advocate General (requiring score to specify the notes, the key, the tempo and instruments). See also *Metro-Goldwyn-Mayer Lion Corp*, R781/1999–4 (25 Aug. & 29 Sept. 2003) (para. 21). This was British practice even before *Shield*: PAC 2/00 *Acceptable Forms of Graphic Representation*, para. 19; *Guidelines concerning Proceedings before the Office for Harmonization in the Internal Market*, Part B, 8.2.

⁴⁸ Para. 63 (ECJ); para. 40 (AG).

⁴⁹ Para. 59 (ECJ).

noise of which it purports to be a phonetic description'. Although the Court declined to comment on whether a digital recording or a sonogram would suffice,⁵⁰ the Board of Appeal of the OHIM has indicated that sound spectrograms or sonograms which depict pitch, progression over time and volume, may constitute an appropriate way of representing sounds such as the 'roar of a lion'. The Board thought that the fact that a person needs a certain amount of training before they could read a sonogram was no impediment, observing that the same is true of musical notation.⁵¹

(v) *Tastes*. Following the earlier facilitative case law of the OHIM as regards registration of smells, Eli Lilly applied to register the taste of artificial strawberry in respect of pharmaceuticals. This application was initially rejected on the ground that the mere verbal description was not sufficiently precise, but ultimately the examiner based her objection on lack of distinctiveness. Rejecting an appeal, the OHIM Board of Appeal affirmed the examiner's finding that the taste was not distinctive but added that, following *Sieckmann*, a verbal description would not be acceptable as a graphic representation of a gustatory sign.⁵²

2.1.4 Bona fide intention to use

A UK application must also contain a declaration that the mark is being used or that there is a bona fide intention to use the mark.⁵³ According to section 3(6), a trade mark shall not be registered if or to the extent that the application is made in bad faith.⁵⁴ While we examine this ground of invalidity in detail later,⁵⁵ the declaration operates to warn the applicant that the UK Trade Marks Register is only intended to confer rights on persons who genuinely intend to use the particular mark in trade: it is not to be used for bogus applications in order to get in the way of opponents, blocking registrations, or ghost registrations.⁵⁶ In addition, the UK Registry has used the objection to induce applicants to restrict the specifications to a more limited range of goods and services. Although the Registry makes less use of section 3(6) to limit specifications than it did when the 1994 Act first came into force, so as to bring the UK approach more closely into line with that at the OHIM, it will refuse to accept very broad applications such as those 'for all goods or services' in a particular class as well as to applications for 'machines' in class 7, 'electrical apparatus' in class 9.⁵⁷

2.1.5 Series of marks

It is possible to register a series of marks in a single registration, thereby saving expense.⁵⁸

⁵⁰ Para. 54 (ECJ).

⁵¹ *Metro-Goldwyn-Mayer Lion Corp*, R781/1999-4 (25 Aug. and 29 Sept. 2003) (para. 21).

⁵² *Eli Lilly/The Taste of Artificial Strawberry flavour*, R120/2001-2 (4 Aug. 2003).

⁵³ TMA s. 32(3). This is not required by the OHIM.

⁵⁴ Pursuant to optional provision in Art. 3(2)(d) of the Directive; there is no corresponding provision in the CTMR Art. 26. But note Art. 51(1)(b).

⁵⁵ See below at pp. 845-8. ⁵⁶ See *Origins v. Origin Clothing* [1995] FSR 280, 285 (Jacob J).

⁵⁷ *Classification: Examination of wide specifications and objections under Section 3(6) of the Act*, PAN 8/02 (19 Jun. 2002).

⁵⁸ TMA s. 41. The practice is explained in PAN 1/03 *Applications to Register a Series of Trade Marks*, following the decision of the Appointed Person in *Logica's Trade Marks* (5 Mar. 2003) SRIS O/068/03 (holding that LOGICA followed by various domain name suffixes did not resemble each other as to their material particulars). See also *In re Digeo Broadband Inc's Trade Marks* (13 Oct. 2003) SRIS O/305/03 (DIGEO plus domain name suffixes not a series) and *In re Gateway Inc's Trade Marks* (20 Oct. 2003) SRIS O/322/03 (black and white cow spots not a series, though some of the examples might be).

A 'series of marks' is defined as 'a number of trade marks that resemble each other as to their material particulars and differ only as to matters of a non-distinctive character not substantially affecting the identity of the trade mark'. The application should include a separate representation of each mark in the series.⁵⁹ Individual marks may be deleted from the series at any time.

2.2 EXAMINATION

Once the filing process has been completed, the Registrar conducts a search⁶⁰ and an examination of the application⁶¹ to ensure that the proposed mark satisfies the various requirements set out in the Act. In particular the Registrar will ensure that the application complies with section 1(1), and that none of the absolute grounds of refusal apply. The ECJ has indicated that this examination is to be taken seriously.⁶² In addition (and in contrast to the OHIM), the Registrar may object to the application on the basis that it conflicts with earlier marks or that the applicant does not have a bona fide intention to use the mark.⁶³ The applicant is required to respond and if they fail to do so, the application will be refused.⁶⁴ If the Registrar has no valid objections to the application, it will be *accepted*. Unlike the position prior to the 1994 Act, the Registrar does not have a general discretion to reject applications: if an application satisfies the requirements set out in the Act, it must be accepted.⁶⁵ Acceptance of the application is not the same as registration. It merely marks the end of the *ex parte* procedure: registration only occurs after the period for opposition has elapsed.

2.3 PUBLICATION, OBSERVATIONS, AND OPPOSITION

Once an application has been accepted by the Registrar, it is published in the *Trade Marks Journal*.⁶⁶ In the three-month period following publication, there is an opportunity for third parties to comment on the application. This will either take the form of 'observations' on, or 'oppositions' to, the application. Any person may make observations to the UK Registry which are forwarded to the applicant.⁶⁷ It seems that third-party observations may prompt the UK Registry to reconsider the registrability of an

⁵⁹ TMR r. 21(1).

⁶⁰ TMA s. 33(2).

⁶¹ TMA s. 33.

⁶² *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2004] FSR (4) 65, paras. 58–9; *Henkel KgaA v. OHIM*, Joined Cases C-468/01P to C-472/01P (6 Nov. 2003) (paras. 51–2) (AG Colomer) (stating, in the context of the CTM, that the examination 'must not be brief, but must be stringent and thorough in order to prevent marks from being improperly registered'); *Nichols v. Registrar of Trade Marks*, Case C-404/02 (15 Jan. 2004) (paras. 51–2) (AG Colomer) (repeating himself, in context of Directive and national procedures).

⁶³ About 26% of UK applications met with 'relative grounds' objections by the Registry: Patent Office, *Future of Official Examination on Relative Grounds* (2001) para. 3.8. The government is seriously considering abolishing this part of the examination process so as to bring UK procedure into line with that at the OHIM.

⁶⁴ TMA s. 37(4); *Postperfect Trade Mark* [1998] RPC 255.

⁶⁵ White Paper, *Reform of Trade Marks Law*, Cm. 1203 (1990) para. 3.11 ('[A]dministrative discretion is . . . out of place in a modern trade mark law').

⁶⁶ TMA s. 38; TMR r. 12, r. 65; TMA s. 67(2) prohibits the Registrar from publishing details prior to publication.

⁶⁷ TMR r. 15. At the OHIM, observations may be made by 'any natural or legal person and any group or body representing manufacturers, producers, suppliers of services, traders, or consumers'.

application. Alternatively, third parties may formally oppose the registration.⁶⁸ This must be lodged within three months of the publication of the application and should specify the grounds of opposition. Where an opposition is made, it sets in play a procedural process which is structured to encourage the parties to reach an amicable settlement, but failing such, may lead to a hearing and a determination by the Registrar.⁶⁹ Because (under current arrangements) the Registry will already have subjected the mark to examination on relative grounds, such oppositions only occur in about 5 per cent of cases.⁷⁰

2.4 CHANGING THE APPLICATION AS FILED

While applicants should take great care in the way applications are drafted, for a variety of reasons, an applicant may wish to make alterations to the application as filed. This may be in response to the results of the examination, to third-party observations and oppositions, or to changes in circumstances. There are a number of ways in which an application may be changed: the most common being by way of amendment, division, merger, or disclaimer.⁷¹ Before looking at these, it should be noted that many of these changes, such as amendment, may occur either before or after grant. Other techniques, such as disclaimers, may be included in the initial application or added later.

2.4.1 Pre-grant amendment

Section 39 provides that that an applicant may, at any time, amend the application in such a way as to restrict the goods or services covered by the application. Applications may also be amended to correct the name or address of the applicant;⁷² to alter errors of wording or copying; or to correct obvious mistakes.⁷³ Such amendments are only permissible where they do not substantially affect the identity of the mark or extend the goods or services covered by the application.⁷⁴ An amendment that affects the representation or specification must be published and an opportunity provided for objections.⁷⁵

2.4.2 Division

It is also possible for an applicant to transform a single application into several 'divisional applications'.⁷⁶ At any time before registration an applicant may request that their application be divided into two or more separate applications, with each relating to different goods or services. The main reason for dividing an application up in this way is to isolate the problematic parts of an application. In so doing, it increases the chances of the

⁶⁸ TMA s. 34(2). TMA s. 38(2) (any person may oppose). ⁶⁹ TMR r. 13.

⁷⁰ Patent Office, *Future of Official Examination on Relative Grounds* (2001) para. 3.9 (at the OHIM opposition occur in 19% of cases).

⁷¹ TMA s. 37(3). An applicant is confined to the possible amendments contained in TMA s. 39 and CTMR Art. 44. It might be argued a general power to amend is implicit in TMA s. 37. However, it seems that the power to amend was deliberately limited: Michaels, para. 3.17, 57; *White Paper* (Cmnd. 2103) (1990), para. 4.09.

⁷² TMA s. 39(2). According to a Practice Notice, the Registry takes the view that correcting the name of a proprietor is a serious matter. On changing classes, see PAC 2/99 *Adding a class or classes to an application*.

⁷³ CTMR Art. 44. See *Blueco/Blue Water*, R117/1998-1 [1999] ETMR 394.

⁷⁴ The Court of Appeal has held that an amendment to change the classification was impermissible: *Altecnic's Trade Mark Application* [2002] RPC (34) 639.

⁷⁵ TMA s. 39(3); TMR r. 18. ⁷⁶ TMA s. 41; TMR r. 19.

uncontroversial parts being registered. Divided applications have the same filing date as the original application. Where division occurs after the application has been published, any objections to the original application apply to each of the divisional applications.

2.4.3 Merger

A corresponding facility exists for the *merger* of separate applications. Applicants will normally merge marks to simplify a trade mark portfolio and to save on fees. Merger only occurs if the applications are for the same mark, and have the same application date, and the same proprietor.⁷⁷ If two or more marks have already been registered, those registrations can also be merged so long as they are in respect of the same trade mark. If one of the registrations is subject to a disclaimer or limitation, the merged registration is restricted accordingly. Similarly, if they bear different dates, the date applicable for the merged registration is the latest date.

2.5 DISCLAIMERS

Section 13 of the 1994 Act enables applicants (or the proprietor) to disclaim any right to the exclusive use of specified elements of the trade mark. Applicants are also able to agree that the rights conferred by the registration shall be subject to a specified territorial or other limitation.⁷⁸ Where the registration of a trade mark is subject to a disclaimer or limitation, the rights conferred on the proprietor are restricted accordingly. Use of disclaimers may assist an applicant in overcoming a potential objection to registration.⁷⁹

The practices relating to disclaimers expose the limitations of the registration system as an effective mechanism for defining the boundaries of intangible property rights. The courts have recognized that disclaimers are of limited value because they only appear on the Register and do not follow goods into the market.⁸⁰ Consequently, because consumers and competitors would normally be unaware that aspects of a mark had been disclaimed, a disclaimer will often not save a mark from objection.⁸¹ On this basis it has been said that the Registrar 'should not register a mark under conditions in which there would exist such a strong probability that the rights of the registered proprietor would be misconceived by the public'.⁸² The ECJ stated in *Postkantoor* that national registries may not accept marks 'subject to the condition that they do not possess a particular characteristic', such as allowing PENGUIN for 'books (other than books about penguins)'. This was said to be because third parties would not be aware of the condition, and might refrain from selling goods under the mark.⁸³ In a related vein it has been said that where elements of a mark

⁷⁷ TMR r. 20.

⁷⁸ The Registrar cannot impose a disclaimer: *Patron Calvert Cordon Bleu* [1996] RPC 94, 103.

⁷⁹ e.g. *Diamond T* (1921) 38 RPC 373; *Laura Ashley's Trade Mark* [1990] RPC 539, 549.

⁸⁰ *Granada Trade Mark* [1979] RPC 303, 308.

⁸¹ Moreover, in composite marks the disclaimer may mean that it is no infringement to use just the disclaimed component, but the disclaimed component is still one element of the composite whole: *Granada Trade Mark* [1979] RPC 303, 306. Consequently matter which is disclaimed is not necessarily disregarded when questions of possible confusion are being decided. Cf. *Paco/Paco Life in Colour* [2000] RPC 451, 467.

⁸² *Ford-Werke's Application* (1955) 72 RPC 191, 195.

⁸³ *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004) (para. 115).

are obviously non-distinctive or unregistrable, it is not necessary to disclaim them since the only effect that this would have would be to 'clutter the Register'.⁸⁴

2.6 REGISTRATION

In the absence of an effective opposition, the Registrar should register the trade mark.⁸⁵ The registration is then published in the *Trade Marks Journal*.⁸⁶ The date of registration of the trade mark is deemed to be the date of filing the application.⁸⁷ This is the date from which matters such as duration are calculated⁸⁸ and the rights of the proprietor are enforceable against third parties.⁸⁹ While registration in the United Kingdom lasts for ten years, trade marks may be renewed for further ten-year periods.⁹⁰ One characteristic which differentiates trade marks from other forms of intellectual property is that there is no maximum period of protection. So long as they are renewed, trade marks can potentially last forever. As with patents and designs, the reason why renewal is required is to ensure that the only marks which are on the Register are those which proprietors have some interest in.⁹¹ Proprietors are normally provided with some leeway for late renewal⁹² and, in certain circumstances, are able to restore lapsed registrations.⁹³ Alteration of registered marks is generally not permitted.⁹⁴ The Registrar may, however, allow the proprietor's name or address to be altered. This is only permissible where the alteration does not 'substantially affect the identity of the mark'.⁹⁵

2.7 THE TRADE MARK SYMBOL

Although the trade mark symbols TM and © are used widely, there is no legal requirement that proprietors use these symbols to indicate that a mark has been registered. Criminal liability does however exist for anyone who uses these marks, the word 'registered', or any other word or symbol which suggests that a mark is registered when, in fact, it is not.⁹⁶

2.8 VALIDITY AND REVOCATION

Once a mark is registered there is presumption, though not a guarantee, that the registration is valid.⁹⁷ As with all forms of registered intellectual property, it is possible for trade marks to be withdrawn after they have been registered. This may be because the mark should not have been registered in the first place, or because changes in circumstances mean that it should no longer be registered. The grounds on which a registered mark may

⁸⁴ *COS Trade Mark* [1993] *RPC* 67, 70.

⁸⁵ TMA s. 40.

⁸⁶ TMR r. 16.

⁸⁷ TMA s. 40(3).

⁸⁸ TMA s. 42. But note TMA s. 46(1)(a) calculating period of non-use from 'the date of completion of the registration procedure'.

⁸⁹ TMA s. 9(3) explains that the rights have effect from the date of registration, i.e. filing, but no infringement proceedings may be begun before the date on which the mark is in fact registered, and no criminal liability is incurred for acts done before the date of publication of the registration. This has no parallel in the TM Dir.: see *Interlotto UK Ltd v. Camelot plc* [2004] *RPC* (9) 186 (paras 19–20).

⁹⁰ TMA s. 42; CTMR Art. 47; Madrid Prot. Art. 7(1).

⁹¹ TMA s. 43(2); TMR r. 27.

⁹⁷ TMA s. 72.

be challenged by third parties are set out in sections 46 and 47 of the 1994 Act. Section 46(1) sets out the grounds on which a mark may be *revoked*. A trade mark registration may be revoked where it has not been used for five years, where as a result of the way it has been used it has lost its distinctiveness, or where as a result of the way it has been used the further use of the mark has become likely to 'mislead the public'. In addition a mark which should never have been registered can be declared invalid under section 47. A registration will be liable to be declared invalid where it should not have been registered on absolute grounds because of a potential objection under section 3 (for example because it lacks distinctiveness) and where relative grounds for refusal existed under section 5. These issues are dealt with in later chapters.

3 REGISTRATION OF COMMUNITY TRADE MARKS

Registration at the Community level involves the filing of a single application to the Office of Harmonization in the Internal Market (OHIM) which is based in Alicante in Spain.⁹⁸ The OHIM began receiving applications on 1 April 1996.⁹⁹ In contrast with the procedure for European patents (where the EPO issues a series of national patents), a successful application to the OHIM results in the grant of a single trade mark which operates for the whole of the European Community.¹⁰⁰ The main benefit of the Community system is that it enables traders to protect their marks throughout the Community on the basis of a single application, rather than having to file separate applications in each of the member states.

While the procedure at the OHIM differs in certain respects from the procedure at the UK Office, there is close similarity between the two regimes. As is the case with the UK Registry, traders who wish to have their signs protected as Community trade marks often rely upon the expert advice of trade mark agents. Legal representation before the OHIM is more strictly prescribed than in the United Kingdom. Although legal representation is not required in all cases,¹⁰¹ businesses that are not domiciled and do not have their principal place of business in the Community must be represented before the OHIM. Representation before the OHIM can only be undertaken by a legal practitioner qualified in a member state or a professional representative recognized by the OHIM.¹⁰² To be duly recognized, a representative must be a national of a member state with a place of business in the Community. In addition, they must be entitled to act as an agent before the Trade Marks Office of the member state in which that business is located.¹⁰³

3.1 THE APPLICATION

The application for a Community trade mark may be made directly to the OHIM in Alicante or to a national Registry, which is obliged to forward the application to the OHIM within two weeks.¹⁰⁴ One important difference between registration in the UK Office and

⁹⁸ CTMR Art. 2.

⁹⁹ Strictly speaking, that was the date of opening and applications could be submitted from 1 Jan. 1996.

¹⁰⁰ CTMR Art. 1(2).

¹⁰¹ CTMR Art. 88(1).

¹⁰² CTMR Art. 89.

¹⁰³ CTMR Art. 89(2).

¹⁰⁴ CTMR Art. 25(2). There were 351,585 applications between 1996 and December 2003, with 198,440 registrations.

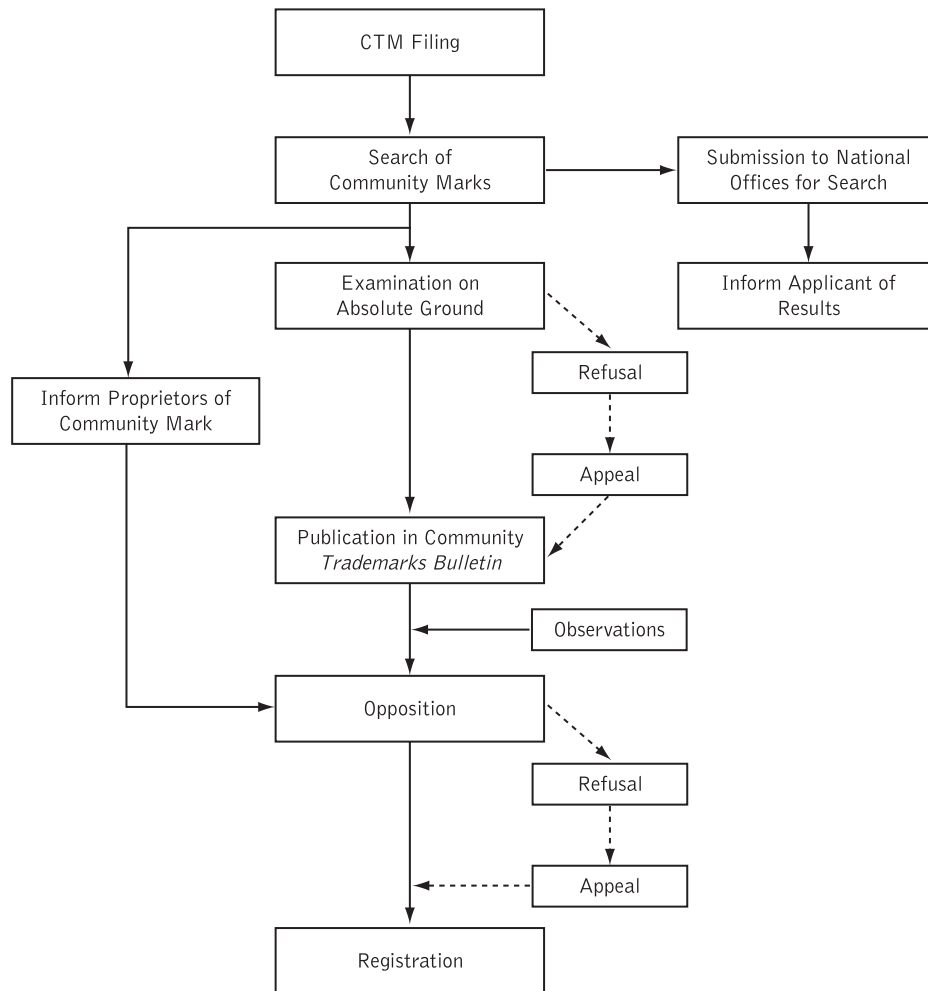

Fig. 35.2 Registering a Community trade mark

at the OHIM relates to the issue of qualification. Unlike the position in the United Kingdom where anyone can apply to register a mark, only a limited class of people is able to apply for a Community trade mark.¹⁰⁵ To apply for a Community trade mark, a person must be a national of or domiciled in an EC state or a country which is party to Paris or WTO,¹⁰⁶ or be a national of a state which accords reciprocal protection (see Figure 35.2).

An application for a Community trade mark may be filed in any of the official languages of the Community. The applicant should also specify a second language in which opposition proceedings may be conducted. As in the United Kingdom, an application for a

¹⁰⁵ CTMR Art. 5. This 'excessively complex exercise' has now been abolished: Proposal for a Council Regulation amending Regulation (EC) No. 40/9 on the Community Trade Mark No. 422/2004 of 19 Feb. 2004 *OJ L 70/1*.

¹⁰⁶ Council Regulation 3288/94 of 22 Dec. 1994 [1994] *OJ L 349/83*.

Community trade mark must include a request for registration; the name and address of the applicant; a list of the goods or services for which the mark is to be registered; and a representation of the mark.¹⁰⁷ The date of filing is the date on which these documents are furnished to the OHIM. As in the United Kingdom, it may be possible to claim a priority date from an earlier application elsewhere.¹⁰⁸

Three slight differences are worth observing. First, as regards the goods or services for which a mark is registrable, it seems that the OHIM is more generous, permitting applications, for example, relating to 'all goods in class x'.¹⁰⁹ Second, and related, there is no requirement that an applicant state that they intend to use the marks. Third, practices as to graphic representation differ slightly. These have already been discussed.

3.2 SENIORITY AT OHIM

Applicants who seek registration of a Community trade mark may claim the seniority of earlier national registrations of the same mark of which they are the proprietor.¹¹⁰ Seniority can be claimed either before or after registration of the Community trade mark.¹¹¹ To apply for seniority, an applicant must be able to show that the earlier national mark is for the same sign, the same goods and services, and has the same proprietor as the Community trade mark.¹¹²

The effect of a seniority claim is that even though the national registration ceases to exist (because of lack of renewal or because it was surrendered), the proprietor of the Community trade mark continues to have the same rights as if the national mark had continued to be registered. Effectively, it allows the Community trade mark owner to let the national registration lapse without being prejudiced in any way.¹¹³ As the Board of Appeal at the OHIM said, seniority is a useful way of encouraging proprietors of national marks to use the Community system and thereby consolidate the management of their national marks.¹¹⁴ As a result of its popularity, problems have occurred in processing seniority claims and many have been let through without formal examination.¹¹⁵

3.3 EXAMINATION

Once the filing process has been completed the application is then examined. It is at this point that the procedure at the OHIM differs most from those at the UK Trade Marks Office. While UK applications are examined for both absolute and relative grounds for

¹⁰⁷ CTMR Art. 26; CTMIR r. 1.

¹⁰⁹ Annand and Norman (1998). ¹¹⁰ CTMR Art. 34. ¹¹¹ CTMR Art. 35.

¹¹² CTMR Art. 34(1) (so called 'triple-identity rule'). The OHIM only examines the question of identity of signs: Communication No. 2/00 of the President of the Office of 25 Feb. 2000 concerning the examination of seniority claims. On identity of signs, see *International Business Machines Corp/Thinkpad*, R10/1998–2 (15 Jul. 1998) para. 15. On identity of the specification, see Communication No. 1/97 of the President of the Office of 17 June 1997 concerning the examination of seniority claims. On identity of proprietorship see *BatMark, Inc/Viceroy R 5/97–1* [1998] *ETMR* 449.

¹¹³ CTMR Art. 34(2). ¹¹⁴ *BatMark, Inc./Viceroy*, R5/97–1 [1998] *ETMR* 449, 455–6.

¹¹⁵ Examination of seniority claims which was suspended has now resumed, but is confined to comparison of marks: Communication No. 2/00 of the President of the Office of 25 Feb. 2000 concerning the examination of seniority claims.

refusal, examination at the OHIM is restricted to an inquiry as to whether the application complies with the absolute grounds for refusal.¹¹⁶ The absolute grounds for refusal will apply to the mark across the whole Community, even if they only arise in one member state.¹¹⁷ Where the application fails to comply with the absolute grounds for refusal, the application may be amended or withdrawn.¹¹⁸ The Office may request that the applicant disclaim any exclusive right in a particular element.¹¹⁹

The key difference between the Community regime and the UK national one relates to the approach taken towards the relative grounds of refusal (that is those relating to conflicts with existing registrations or rights).¹²⁰ In the United Kingdom, the Registrar is able to refuse registration where the application conflicts with earlier marks. Adopting a less interventionist approach, the OHIM will not reject an application on relative grounds. Instead, the relative grounds for refusal can only be raised by third parties in opposition proceedings. The upshot of this is that while in the United Kingdom the obligation falls upon the Registrar to police applications for relative grounds, the onus of ensuring that a Community application complies with the relative grounds is placed upon third parties. That is, the obligation is placed upon the holders of prior rights who may be affected by the registration of the mark at the OHIM.

While the OHIM may not examine applications to see if the relative grounds of refusal apply, it does provide third parties (and applicants) with some assistance. In particular, the OHIM searches the Community Register for similar marks and asks member states to do the same.¹²¹ These national searches are returned to the OHIM within three months and a cumulative search report is dispatched to the applicant. The results of the OHIM's search is also sent to the owners of any rival registrations that are found. The search does not, however, lead to an examination on relative grounds. Instead, it is left up to the holders of prior rights to bring opposition proceedings¹²² or, if the mark has been registered, cancellation proceedings.¹²³ The Commission regards the national searches as expensive and unsatisfactory, and legislation has been passed making them optional from 10 Mar. 2008.¹²⁴

3.4 PUBLICATION, OBSERVATIONS, AND OPPOSITION

Once an application has successfully been examined, it will then be published in the *Community Trade Marks Bulletin*.¹²⁵ Publication takes place one month after the applicant

¹¹⁶ CTMR Art. 38; CTMIR r. 11. Absolute grounds are set out in CTMR Art. 7(1).

¹¹⁷ CTMR Art. 7(2). ¹¹⁸ CTMR Art. 38(3), Art. 44; CTMIR r. 13.

¹¹⁹ CTMR Art. 38(2). *Cahill May Roberts's Application for a Declaration of Invalidity/Medicine Shoppe International's Trade Mark*, C 172734/1 [2000] *ETMR* 794, 780.

¹²⁰ These are set out in CTMR Art. 8.

¹²¹ CTMR Art. 39. Italy, France and Germany do not do so. Apparently, the 'quality of the search reports can vary and is generally unsatisfactory': Proposal for a Council Regulation amending Regulation (EC) No. 40/9 on the Community Trade Mark 2002/0308 (CNS) (27 Dec. 2002) COM (2002) 767 final, 3; Communication from the Commission to the Council, Report on the Operation of the System of Searches Resulting from Article 39 of the Community Trade Mark Regulation (27 Dec. 2002) COM (2002) 754 final.

¹²² CTMR Art. 42. ¹²³ CTMR Art. 52.

¹²⁴ Council Regulation amending Regulation (EC) No. 40/9 on the Community Trade Mark No. 422/2004 of 19 Feb. 2004. UK Patent Office, *A Consultation Paper on the European Commission's Regulation Amending Regulation (EC) No. 40/94 on the Community Trade Mark* (April 2003).

¹²⁵ CTMR Art. 40; CTMIR Art. 85.

is provided with the search report. To encourage opposition, the OHIM informs proprietors of earlier Community trade marks (but not holders of prior national rights) of the publication.¹²⁶ At the same time, the application file, which is previously closed, is opened up for public inspection.¹²⁷

Following publication, there is an opportunity for third parties to make 'observations' on and 'opposition' to the proposed registration of the application. While a Community trade mark covers the whole Community, a single objection to the application can result in the entire application being refused. Third parties may make 'observations' explaining why the trade mark should not be registered under Article 7 (which are the absolute grounds for refusal). Although the Regulation states that the observations are to be communicated to the applicant 'who may comment on them', the OHIM has indicated that where observations raise serious doubts about registrability, the Office will re-examine the application.¹²⁸

Within three months of publication, the application may be *opposed* on relative grounds.¹²⁹ Opposition at the OHIM differs to the process in the United Kingdom in a number of ways.¹³⁰ First, only a limited set of persons is entitled to bring opposition proceedings, namely, the proprietors of earlier trade marks and their licensees, the proprietors of trade marks, and the proprietors of earlier marks or signs.¹³¹ Second, the grounds of opposition are limited to the 'relative grounds of refusal'. A person wishing to object on absolute grounds must do so by way of observations.¹³² Third, oral hearings will only occur rarely. While it was anticipated that oppositions at the OHIM would be very common, it seems that they only affect about one-fifth of all applications.¹³³

If an application to the OHIM is rejected or withdrawn, it may be converted back into a series of national applications which retain the filing date used at the OHIM.¹³⁴ Conversion is not possible, however, in those member states where the grounds of refusal of the Community trade mark relates to that state.¹³⁵ As with UK applications, it is possible for applications for a Community trade mark to be changed or amended after they have been lodged. While the way this is done at the OHIM is similar to the techniques used in the United Kingdom,¹³⁶ one important difference is that whereas disclaimers are used voluntarily by UK applicants, they are imposed (or rather 'requested') by the OHIM 'as a condition' of registration.¹³⁷ Despite this, the examination guidelines at the OHIM suggest that disclaimers will be used infrequently.¹³⁸

¹²⁶ Informing proprietors of national rights is a matter for national office, but none appear to take any action.

¹²⁷ Prior to publication, the file cannot be inspected without an applicant's consent: CTMR Art. 84.

¹²⁸ CTMR Art. 41(2); Communication No. 1/00 of the President of the Office of 25 Feb. 2000 concerning observations under Article 41 of the Community Trade Mark Regulation. *Durferrit GmbH v. OHIM*, T-244/0 (19 Apr. 2003) (para. 73).

¹²⁹ For analysis of the grounds, see Ch. 38.

3.5 REGISTRATION

In the absence of an effective opposition, the mark will be registered.¹³⁹ The date of registration is the filing date, which is the date from which matters such as duration are calculated.¹⁴⁰ As regards the Community trade mark, a proprietor is only entitled to ‘reasonable compensation’ for acts occurring between publication of the application and publication of the registration.¹⁴¹ Registration at the OHIM lasts for ten years.¹⁴² A Community trade mark may be renewed for further periods of ten years.¹⁴³ Alteration of registered marks is generally not permitted.¹⁴⁴ As in the United Kingdom, it is possible for a Community trade mark to be revoked or declared invalid after it has been registered—and this may occur either as a counterclaim in proceedings in a Community trade mark court, or by application to the Cancellation Division of the OHIM.¹⁴⁵

4 INTERNATIONAL FILING

The third way in which traders in the UK are able to protect their marks is via the international filing systems established under the 1891 Madrid Agreement and the 1989 Madrid Protocol. It should be noted at the outset that international registration does not lead to something such as an ‘international mark’, so much as facilitate the acquisition of national marks. The main advantage of international registration is that instead of trade mark holders having to file a series of applications in each of the jurisdictions where they would like protection, they are able to obtain protection in a range of jurisdictions with a single application.

4.1 THE MADRID AGREEMENT

The oldest international filing system is the 1891 Madrid Agreement.¹⁴⁶ Under the Agreement—to which the United Kingdom is *not* a party—it is possible to register a trade mark at a national level and then to apply to have the mark recognized by the WIPO in Geneva as an ‘international registration’. Despite being over 100 years old, only a relatively small number of countries have signed up to the Agreement.¹⁴⁷

To apply for international registration, the applicant must have a trade mark registered in its country of origin, which must be a contracting state of the Agreement. Applications must be in French and include: the name and address of the applicant; information about the registration in the country of origin; a reproduction of the mark; and a statement of the goods and services to which the mark is applied.¹⁴⁸ The application should also nominate the countries of the Agreement where the applicant wishes the mark to be

¹³⁹ CTMR Art. 45; CTMIR r. 23. ¹⁴⁰ CTMR Art. 46.

¹⁴⁶ Madrid Agreement Concerning the International Registration of Marks of 14 Apr. 1891.

¹⁴⁷ The Madrid Agreement covers only 56 countries. The USA and Japan are not members.

¹⁴⁸ Madrid, Art. 3(2).

protected.¹⁴⁹ The Madrid Agreement can only be used by a person or business that has headquarters or a real and effective establishment in a country that is a party to the Agreement. Given that the United Kingdom is not a party to the Madrid Agreement, UK businesses will only be able to take advantage of the system where they have a base outside the United Kingdom.¹⁵⁰

Once the national office of the country of origin is satisfied that the application is complete, it sends the international application to the International Bureau in Geneva. On receiving the international application, the International Bureau examines the application to ensure that it complies with various formalities: there is no substantive examination of the application. An application that satisfies the procedural requirements is immediately registered.¹⁵¹ The registration date is the date when the International Bureau receives the completed application.

The International Bureau then sends applications to the National Offices nominated by the applicant. Article 4 of the Agreement provides that from the date of the international registration, the application is to be treated in each of the designated countries as if it had been filed directly at that country's national office.¹⁵² Upon receipt of the international registration, the national offices have the opportunity to reject the application. Registration under the Madrid Agreement lasts for twenty years and is renewable for further twenty-year periods.¹⁵³

One of the major problems with the Madrid Agreement is that it provides for the possibility of a 'central attack'.¹⁵⁴ This means that if, within five years from the date of international registration, the mark is declared invalid or otherwise lost in the country of origin, *all* the national registrations that are based upon it are also lost. At the end of the five-year period, the opportunity for central attack ends. From this point, the non-country of origin registrations are not dependent upon the fate of the mark in the country of origin.

4.2 THE MADRID PROTOCOL

The Madrid Protocol¹⁵⁵ was established in 1989 to provide an alternative mechanism to the Madrid Agreement for the international filing of marks. In particular, it was hoped to overcome some of the perceived shortcomings of the Agreement that have led to the membership being so small.¹⁵⁶ Given that there are currently thirty-one parties to the Protocol (as distinct from fifty-six to the Agreement), the Protocol has, at least in this regard, been a success. While the Protocol and the Agreement are similar there are, as we will see, some important differences. The United Kingdom became a party to the Madrid

Protocol on 1 December 1995¹⁵⁷ and the Protocol became operational on 1 April 1996. The system established under the Protocol is run by WIPO in Geneva.

4.2.1 Application

In order to apply for international registration for a mark under the Protocol, an application for registration must have been made in a country party to the Protocol.¹⁵⁸ The pre-existing registration or application provides the 'national basis' which grounds the Protocol application. Applications for international registration are filed in the office where the national basis was filed:¹⁵⁹ the WIPO will not accept applications that are filed directly to it.¹⁶⁰ For British traders, this would normally be the UK Trade Mark Office. International applications governed exclusively by the Protocol may be either in English or French (the office of origin may, however, restrict the applicant's choice to one of these languages).

An international application can also be based upon an application or a registration at an 'intergovernmental organization',¹⁶¹ and a Council Decision has now enabled the OHIM to take advantage of this possibility.¹⁶² When effective (some time in the autumn of 2004), both applicants and holders of Community trade marks will be able to apply for international protection of their marks through the filing of an international application under the Protocol. Conversely, holders of international registrations under the Madrid Protocol will be able to apply for protection of their marks as a Community trade mark.¹⁶³

The National Office examines the international application to ensure that the international application corresponds to the basic application or registration, that is, it is for the same mark, has the same owner as, and covers the same goods and services as the 'basic application'.¹⁶⁴ An application for international registration must also designate the countries in which the mark is to be protected. Although this should be done at the application stage, further countries may subsequently be added.¹⁶⁵

Once it is satisfied that the formalities have been complied with, the National Office will then forward the application to WIPO which examines the application to ensure that it complies with the Protocol. Once it is satisfied that an application is in order, the International Bureau then places the mark on the International Register of Trade Marks, advertises the mark, and passes on details of an application to each of the designated countries listed in the application.¹⁶⁶ As with the Madrid Agreement, the application is treated in each of the designated countries as if it had been filed directly at that country's national office.¹⁶⁷ Each designated country then examines the application against its own

¹⁵⁷ In order to give effect to its obligations under the Protocol, the UK has passed delegated legislation in the form of the Trade Marks (International Registration) Order (SI 1996/714, as amended by SI 2000/138).

¹⁶⁷ Madrid Prot. Art. 4.

criteria for registration. Any such refusal can only be based on the grounds which would apply under the Paris Convention.¹⁶⁸

Countries normally have up to twelve months to notify the WIPO of any objections.¹⁶⁹ However, in accordance with a special provision, the United Kingdom has declared that the time limit to notify a refusal of protection is eighteen months.¹⁷⁰ Where a refusal to protect results from an opposition to the granting of protection, such refusal may be notified after the expiry of the eighteen-month time limit. Such a refusal is notified to WIPO which then sends notification of the refusal to the international registrant, who is able to contest, amend, and appeal the decision.¹⁷¹ Where a Registry fails to notify WIPO of a decision to refuse registration within the relevant time limit, the mark is deemed to be protected as if it had been registered by the authorities of that country.¹⁷²

Registration under the Protocol lasts for ten years,¹⁷³ with the possibility of being renewed for further ten-year periods.¹⁷⁴ Where a mark that is the subject of a national or regional registration is the subject of a later international registration and both registrations stand in the name of the same person, the international registration is deemed to replace the national or regional registration, without prejudice to any rights acquired by virtue of the latter.¹⁷⁵ This is only done if all the goods and services listed in the national or regional registration are also listed in the international registration in respect of the said contracting party. Rights in all the countries can then be renewed by a single transaction.

4.2.2 Central attack

Under the Madrid Agreement, the fate of the international registration (and all the subsidiary registrations made under it) depends on the fate of the trade mark registered in the country of origin: if it is lost, all the other registrations are also lost. While an international registration under the Protocol is vulnerable to a central attack (most obviously where the basic application is refused by the national authority),¹⁷⁶ the consequences of a successful attack are not as drastic as they are under the Agreement. As we saw above, a successful attack under the Agreement means that all of the national registrations made in pursuance of the international registration are also lost. Where a central attack is successful under the Protocol, however, it is possible to transform the international registration into a series of national or regional applications.¹⁷⁷ Under this provision, if within three months of cancellation the person who was the holder of the international registration files an application for the registration of the same mark with the Office of any of the designated territories, that application shall be treated as if it had been filed on the date of the international registration. This only takes place, however, if the goods and services listed in the application correspond to the list of goods and services contained in the international registration. The fresh application must comply with the requirements of the applicable law.

5 DECIDING WHICH ROUTE TO TAKE

Because of the interaction between these systems an applicant is faced with a complex array of possible avenues through which he can acquire trade mark protection. The most obvious of the existing routes are as follows:

- (i) application directly to the United Kingdom;
- (ii) application to a Paris Convention country, then to the United Kingdom;¹⁷⁸
- (iii) application to the OHIM leading to a CTM;
- (iv) application to a Paris Convention country, then to the OHIM;
- (v) application to a Paris Convention country, then international registration designating the UK;

In due course, two further avenues will be available:

- (i) application to a Paris Convention country, then international registration designating the OHIM; or
- (ii) application to the OHIM followed by an international application.¹⁷⁹

Decisions to register, and the choice of routes, are likely to involve commercial judgments as to the likely markets in which protection is desired compared with the cost of obtaining registrations for such territories. Probably the most significant factor determining choice of application process is the cost. If trade mark protection is required in several countries, it may be cheaper to use the Community trade mark or the Madrid Protocol than to make national applications in each country.¹⁸⁰ As well as savings with Office fees, associated savings can be achieved by using the Madrid Protocol in terms of lower costs of trade mark agents. There are also obvious advantages to the OHIM or Madrid in terms of the simplicity of completing the OHIM or Madrid forms rather than numerous national forms in various national languages. One of the advantages with the regional and international systems lies in the fact that they avoid the obligations to submit applications in the language of each country where protection is sought. Moreover, in the long term, maintenance of regional or international marks will be easier, requiring only one renewal at each instead of several. Finally, the application of the substantive or procedural law might be perceived as being more favourable at the OHIM than in the local Registry.¹⁸¹

Another current benefit with using the Madrid system relates to the speed at which applications are processed. Since strict time limits operate, the Madrid system can be quick, whereas the OHIM was not adequately prepared to cope with the numbers of applications it received initially and has built up something of a backlog.¹⁸²

¹⁷⁸ Under the 'Telle quelle' provision contained in Paris Art. 6 quinquies, a member of the Paris Convention is obliged to accept for registration any trade mark which has been duly registered in its country of origin.

¹⁷⁹ Probably from the autumn of 2004.

¹⁸⁰ Michaels, para. 3.91, 74 (basic fee for CTM about £1,660, whereas UK national fee £225).

¹⁸¹ OHIM permits broad specifications, and is more accepting of geographic marks, and marks comprising surnames.

¹⁸² See Annand and Norman (1998), 60–1. It has been suggested that the potentially high proportion of oppositions at OHIM will render the process slow and expensive: see Michaels, para. 3.90.

That is not to suggest there may not be reasons (especially for small enterprises) to use national registration systems.¹⁸³ It may be difficult to find appropriate marks to operate in all countries: trade mark lawyers love to tell anecdotes about word marks adopted in one country and transported to another without considering what the mark suggests in that territory. Moreover, it is foreseeable that valid marks will be harder to obtain at the OHIM than in some national registries, given the broader field in which the mark has to operate. Words which are distinctive in the United Kingdom may lack distinctiveness at the Community level (for example, because the word is a description in a foreign language or indicates a geographical origin). In addition, the number of similar marks in use or already registered, which form the potential basis of opposition, are likely to be substantially greater as regards Community marks than national marks. One consequence of this will be that those who are seeking protection quickly might prefer to seek national registrations, rather than begin with a filing to the OHIM, because of the substantial risk that the mark will be rejected or prove invalid at the Community level.

SUBJECT MATTER

1 INTRODUCTION

The first requirement that a sign must satisfy to be validly registered or, if it is already registered, to ensure that it is not subsequently declared invalid, is that it must comply with the definition of a trade mark in section 1(1)/Article 4 CTMR. In particular, it is necessary to show that there is:

- (i) a sign;
- (ii) which can be represented graphically; and
- (iii) which is capable of distinguishing the goods or services of one undertaking from those of other undertakings.

Failure to comply with any of these requirements means that the sign will not be registered (this is one of the absolute grounds for refusal set out in section 3(1)(a)). Alternatively, if a mark is incorrectly registered, the registration of the mark may be declared invalid under section 47(1).

Before looking at these three elements in more detail, it is important to recall that the requirement that the sign must possess the qualities of a trade mark that are set out in section 1(1)/Article 4 CTMR, is only the first of three general limitations which are placed on what can be registered as a trade mark. In addition, it is also necessary to ensure that the mark is not excluded by one of the absolute grounds of refusal found in section 3/Article 7 CTMR.¹ It is also necessary to show that the mark is not excluded by any of the relative grounds of refusal found in section 5/Article 8 CTMR.²

2 WHAT IS A SIGN?

For a trade mark to be validly registered it is necessary to show that it consists of a 'sign'. No statutory definition is given as to what is meant by this term. Indeed, one of the notable features of the current law is that there are very few *a priori* restrictions placed on what may be registered as a trade mark, the one notable exception being in relation to shapes.³ As the Board of Appeal at the OHIM said, the notion of a sign 'is to be interpreted as a very broad, open, and general term encompassing all conceivable types of marks

¹ See Ch. 37.

² See Ch. 38.

³ The new definition of what constitutes a trade mark is to be contrasted with the restrictive definition formerly found in TMA 1938, s. 68.

(including, for example, sound marks and three-dimensional marks).⁴ One of the consequences of the open-ended and flexible approach adopted under the 1994 Act and the CTMR is that the focus of attention has shifted away from the question of what is a sign to the other requirements of registrability.

The starting point for considering what may be protected as a sign is section 1, which provides a non-exhaustive list of the types of signs that may be protected as trade marks. These include words (including personal names), designs, letters, numerals, or the shape of goods or their packaging. As in the past, protection will be given to slogans such as I CAN'T BELIEVE IT'S YOGURT.⁵

While most of these are self-explanatory, one aspect of the list that is noteworthy is that it expressly states that a trade mark may consist of the shape of goods. The registration of shapes had not been allowed under the 1938 Act on the basis that a mark meant something other than the goods themselves.⁶ As a result of the changes in the 1994 Act, things such as the shape of the COCA-COLA bottle, the TOBLERONE chocolate bar, and the MINI automobile have been registered as trade marks.⁷ It should, however, be noted that the registration of shape marks is subject to a number of restrictions, which are discussed below.

While not mentioned in section 1, it is clear that colours are *prima facie* registrable where they are used as a trade mark (the main problem will be showing that the mark is distinctive).⁸ Examples of such marks include colours applied to pharmaceuticals,⁹ stripes on toothpaste,¹⁰ single colours (such as orange for 'technical and business consultancy services in the area of plant cultivation, in particular the seed sector').¹¹ Another change brought about by the 1994 Act is that it is possible to register what have oddly been referred to as 'sensory marks'; that is, smells, sounds (musical jingles for MR SHEEN and PC WORLD, and the 'beeps' on the British Telecom's speaking clock),¹² gestures, and possibly taste.

The more open style of approach adopted under the new trade mark regime has been welcomed by trade mark owners. It has also been welcomed for the fact that by increasing the features of products which may indicate source, it benefits consumers from different cultural backgrounds and with varying standards of literacy.¹³ Some, however, have questioned whether the potential problems that are raised by some of the more exotic marks are justified by the benefits that they confer on their owners.¹⁴

⁴ *Wm. Wrigley/Light Green*, R122/98-3 [1999] *ETMR* 214, para. 17. In a similar vein it was said by Jacob J in *Philips Electronics BV v. Remington Consumer Products* [1998] *RPC* 283, 298 that a sign is 'anything which can convey information'.

2.1 LIMITS ON THE REGISTRATION OF SHAPES

While in extending trade mark protection to the shape of goods trade mark law took account of the realities of consumer-buying habits, it also gave rise to a problem: that trade mark rights could operate to limit competition in ways which were contrary to the public interest. In order to avoid such undesirable effects, section 3(2)/CTMR Article 7(1)(e)¹⁵ provide a 'preliminary obstacle' to registration,¹⁶ namely that a sign shall not be registered as a trade mark if it consists exclusively of a shape which:

- (a) results from the nature of the goods themselves;
- (b) is necessary to obtain a technical result; or
- (c) gives substantial value to the goods.

To be excluded the sign must consist 'exclusively' of an excluded 'natural, functional or ornamental' shape.¹⁷ In *Philips Electronics v. Remington*,¹⁸ the ECJ reinterpreted this by asking instead 'what are the essential (functional) characteristics of the shape for which registration is sought?'. If the essential characteristics of the shape fall within the exclusions, so does the mark for which registration is sought. The effect of this is that the addition of trivial features to a shape which is otherwise excluded will not render the sign registrable.¹⁹

It should be noted at the outset that the precise scope of much of section 3(2) remains unclear. So far, only section 3(2)(b) has been the subject of a decision by the ECJ (in *Philips Electronics v. Remington*), and that decision raised as many questions as it answered. In due course, we will hopefully know more about the scope of the exclusions.

2.1.1 Where the shape results from the nature of the goods themselves

Section 3(2)(a)/Article 7(1)(e)(i) CTMR provide that a sign shall not be registered where it consists exclusively of a shape which results from the nature of the goods themselves. While the need to identify the nature of the goods may create a number of difficulties,²⁰ the logic of the section is relatively straightforward. If the shape results from the nature of the goods, the shape cannot possibly distinguish the product of one trader from another: any trader who sells goods of that type would necessarily have to use the same shape. They would have no choice as to the shape that the product took. To allow the registration of

Although s. 3 refers to shape rather than 'packaging', the ECJ has held that it applies to packaging of products which have no intrinsic shape of their own (such as liquids or granules): *Henkel's Application*, Case C-218/01 (12 Feb. 2004).

¹⁸ *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case 299/99 [2002] ECR I-5475; [2002] 2 CMLR 5.

¹⁹ Advocate General Colomer has also advocated the use of a similar notion in the context of the distinctiveness exclusions: *Koninklijke KPN Nederland NV v. Benelux-Merkenbureaus*, Case C-363/99 (31 Jan. 2002) paras. 70–74; *DKV Deutsche Krankenversicherung v OHIM*, Case C-104/00 P [2002] ECR I-7561 (paras. 51–54), explaining that 'I do so in order to make it clear that a shape that simply incorporates an arbitrary element that is negligible from a functional point of view cannot escape the prohibition'.

²⁰ The provisions presuppose that the goods have certain, almost platonic, essential characteristics which cannot be protected.

'basic shapes' or 'shapes which are indispensable to the manufacture or distribution of products'²¹ would greatly inhibit the ability of competitors working in the same field. It would also permit traders to control the respective goods themselves.²² This would be the case, for example, where a trade mark was given for the round shape for balls.

(i) *What are the 'goods themselves'?* One question that is raised by the exclusion is what is meant by the phrase, 'the goods themselves'? The way this question is answered is important given that the more narrowly the 'goods themselves' is defined, the more likely it is that the shape will correspond to the goods in question and thus be excluded. The question of what is meant by the 'goods themselves' was considered in *Philips v. Remington* both at first instance and by the Court of Appeal,²³ where the issue was whether the shape of a three-headed rotary shaver fell within the scope of section 3(2)(a).

At first instance, Jacob J said that it was possible for the 'goods themselves' to be defined either as 'three-headed rotary shavers', 'electrical shavers', 'mechanical shavers', or 'shavers' as such. While the way the goods were classified provided a useful starting point for determining what the 'goods themselves' were, Jacob J stressed that the question was not to be decided merely by reference to the way the applicant had categorized the goods in their specification. Rather, it was necessary to ask 'what are the goods as a practical business matter?' The answer to this question depended on how the goods were viewed as articles of commerce.²⁴ On the facts, Jacob J concluded that the goods were 'electrical shavers', since in business practices they were viewed as a single type of commercial article.

While agreeing with Jacob J that the goods in question were electrical shavers, the Court of Appeal placed more reliance on the way the mark was classified than on the way the goods were viewed as articles of commerce. As Aldous LJ said, 'the words "the goods" refer to the goods in respect of which the trade mark is registered. Those are the goods which it must be capable of distinguishing and in respect of which the proprietor obtains, on registration, the exclusive right to use the trade mark'.²⁵ However, Aldous LJ added the caveat that the 'purpose of the subsection is to prevent traders monopolizing shapes of particular goods and that cannot be defeated by the skill of the applicant when selecting the class of goods for which registration is sought'.²⁶

(ii) *When does a shape 'result from' the nature of the goods?* The next question to ask is when does the shape *result from* the nature of the goods? It seems that the exclusion will only apply where the designer of a product has no real or effective choice as to the shape that the product can take. This can be seen in *Philips v. Remington*, where an important factor in the Court of Appeal's decision that the shape of the razor did not fall foul of section 3(2)(a) was the fact that there were a number of different ways in which the shape of a three-headed razor could have been designed. As there were a number of shapes other than the one in question that a three-headed electric shaver could have taken, this meant that the shape 'did not result from the nature of the goods themselves' (i.e. electric shavers). As Aldous LJ explained, the reason why the trade mark was not excluded by

²¹ Annand and Norman (1998), 44.

²² *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809, 820.

²³ *Ibid.* [1998] RPC 283; [1999] RPC 809. ²⁴ *Ibid.* [1998] RPC 283, 305.

²⁵ *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809, 820.

²⁶ *Ibid.* See also *Procter & Gamble Co. v. OHIM*, T-122/99 [2000] 2 CMLR 303 (although specification for 'soaps in class 3', goods themselves were 'soap bars').

section 3(2)(a) was that there 'is no one shape, let alone that depicted in the trade mark, which results from the nature of such shavers'.²⁷ Consequently, it seems that if the applicant can demonstrate there are other shapes of the same goods on the market, no objection under section 3(2)(a) will be sustainable. In *Procter & Gamble v. OHIM*, the CFI held that a waisted bone shape was, in principle, registrable for soaps explaining that the fact that there are other shapes of soap bar in the trade without those features showed that the shape did not result from the nature of the goods.²⁸

While it is clear that a shape which is dictated by the nature of the goods will fall foul of section 3(2)(a), it is not yet clear what degree of correlation there must be between the nature of the goods and the resulting shape. It is important to note that if the exclusion only applied in situations where there is no alternative shape that a product could realistically take, this would greatly limit the ambit of section 3(2)(a). Indeed, as Aldous LJ said in *Philips v. Remington*, it is difficult to envisage shapes which would fall within the scope of the section, 'except those that are produced in nature, such as bananas'.²⁹ In this overly narrow formulation,³⁰ it is only in nature that shape and goods have the appropriate causative link. The interpretation of 'nature' as 'biological' stands in contrast to the preferable position of the Registry which, recognizing that 'goods' are culturally constituted artefacts, has tended to focus on whether there is a 'normal' or conventional shape of the goods.³¹

Further elaboration of the elements involved in Article 3(1)(e) of the Directive may be provided when the ECJ comes to answer the questions posed in a reference from Jacob J in *Société de Produits Nestlé SA v. Unilever plc*.³² Here Unilever applied to register marks for its VIENNETTA ice cream, and Nestlé opposed. Nestlé claimed the shape ought to be excluded under section 3(2)(a) of the 1994 Act as it resulted from the nature of the goods themselves. Jacob J, who seemed to be of the view that section 3(2)(a) is limited to 'naturally occurring shapes rather than artificially created shapes such as Viennetta', has asked the ECJ for clarification of the scope of the exclusion in Article 3(1)(e) of the Directive.³³

2.1.2 Where the shape is necessary to obtain a technical result

The second limitation on the types of shapes that can be registered as trade marks is set out in section 3(2)(b)/Article 7(1)(e)(ii) CTMR.³⁴ These provide that a sign shall not be registered where it consists exclusively of a shape which is necessary to obtain a technical result. In many ways section 3(2)(b) is very similar to section 3(2)(a). In *Philips v. Remington*, the ECJ explained that the rationale for the exclusion was to leave unaffected by trade mark rights 'technical solutions or functional characteristics of a product which a user is likely to seek in the products of competitors'. In turn, the exclusion would ensure that trade marks did not become obstacles 'preventing competitors from freely offering for sale

²⁷ *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809, 820.

³³ *Société de Produits Nestlé SA v Unilever plc*, Case C-7/03 (pending).

³⁴ TM Dir., Art. 3(1)(e).

products incorporating such technical solutions or functional characteristics'.³⁵ The Court also noted that the exclusion would also prevent individuals from using registration 'to acquire or perpetuate exclusive rights relating to technical solutions'.³⁶ Given this rationale, it seems that the ECJ does not see the concept of 'technical result' as limited to the meaning given to it in patent law. Instead, it interpreted 'technical result' as broadly including any desirable functional aspect of a shape. Consequently, the exclusion should encompass shapes which facilitate convenient storage or transportation of the goods, or which provide the purchaser with other 'convenience features'.

(i) *When is a shape 'necessary' to achieve a technical result?* The key issue in relation to section 3(2)(b)/Article 7(1)(e)(ii) is when is a shape *necessary* to achieve a technical result? Ultimately, the impact that the section has upon what may be registrable as a trade mark depends on how this question is answered.

In *Philips v Remington*,³⁷ the reference arose from an action brought by Philips against its competitor Remington to prevent the latter from selling three-headed rotary shavers. Philips had developed the shaver in 1966, and in 1985 had successfully registered a graphic representation of the shaver-head as a trade mark.³⁸ In 1995 Philips brought an action against Remington claiming infringement of this trade mark. Philips argued that because the function that the razor was to perform (*viz.* providing a close and effective shave) could be achieved by shapes other than that shown in the representation, the shape did not fall foul of section 3(2)(b). More generally, Philips argued that 'provided the trade mark owner can show that some other shape will also do the job, their sign will not fall within this exclusion no matter how functional it may be'. That is, if it were possible for the same result to be achieved by a different shape, then the shape in question would not fall within the exclusion.³⁹ Jacob J found for Remington, and on appeal the Court of Appeal formulated a number of questions on which it required guidance from the ECJ. In particular, the Court asked whether the restriction relating to shapes necessary to achieve a technical result could 'be overcome by establishing that there are other shapes which can obtain the same technical result' or, if not, what test was to be applied.

The ECJ interpreted the exclusion in question as intended to preclude the registration of shapes:

whose essential characteristics perform a technical function, with the result that the exclusivity inherent in the trade mark right would limit the possibility of competitors supplying a product incorporating such a function or at least limit their freedom of choice in regard to the technical solution they wish to adopt.⁴⁰

The ECJ added that the exclusion applies where the essential characteristics of the shape 'perform a technical function and were chosen to fulfil that function'.⁴¹ Finally, it stated

³⁵ *Koninklijke Philips Electronics NV v Remington Consumer Products*, Case 299/99 [2002] ECR I-5475; [2002] 2 CMLR 5 (para. 78).

³⁶ Case 299/99 (para. 82).

³⁷ *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case 299/99 [2002] ECR I-5475; [2002] 2 CMLR 5.

³⁸ The registration was made under the UK's Trade Marks Act 1938. When this Act was replaced by the Trade Marks Act 1994, the registration became a valid registration under that Act.

³⁹ As was accepted by the Swedish court in *Ide Line Aktiebolag AG v. Philips Electronics NV* [1997] ETMR 377.

⁴⁰ Case 299/99 (para. 79).

⁴¹ Case 299/99 (para. 80).

that the mere existence of other shapes which could achieve the same technical result is not of itself sufficient to overcome the ground of refusal.⁴² Given the choice between treating ‘necessary’ as describing a mandatory relationship between technical result and shape (i.e. that the shape is the only one that could perform the function) and the broader interpretation of ‘necessary’ as indicative of a causal relationship, the ECJ chose the latter.⁴³ While this clarification is helpful, ascertaining when the ECJ considers a shape to be attributable to a technical result is more difficult. If there are fifty shapes that could conceivably achieve the same technical result, then presumably the exclusion will not come into play: but what if there is a choice of only ten or five, or three?

(ii) *The perspective from which ‘necessity’ is to be judged.* While the ECJ in *Philips* made it clear that the mere possibility that more than one shape can achieve a technical function will not render a shape registrable, it failed to answer clearly the important question of the perspective that ought to be adopted when asking ‘is the shape necessary to achieve a technical result?’ The language used by the Court suggests that subsequent tribunals should form an overall conclusion taking account a variety of perspectives. In particular: first, whether the shape actually achieves a technical result (a *sine qua non* to the operation of the exception); second, whether the shape was chosen by the designer to do so; third, whether the shape is one of a limited number that a competitor could use to achieve the function. Although the judgment refers to the exclusion operating where the features ‘perform a technical function and were chosen to fulfil that function’, the subjective intention of the designer to select a shape to achieve a functional result should be neither a necessary prerequisite for the operation of the exclusion, nor of itself sufficient to activate the exclusion. The ECJ’s judgment also fails to address whether a shape is necessary to achieve a technical result if the shape is the most obvious or most economical way to achieve the result.

2.1.3 Where the shape gives substantial value to the goods

The third restriction placed on the types of shapes that may be registered as trade marks is found in section 3(2)(c)/Article 7(1)(e)(iii) CTMR. These provide that a sign shall not be registered where it consists exclusively of a shape which gives substantial value to the goods.⁴⁴ The first point to note about the exclusion is that the value attributable to the shape in its operation *as a trade mark* should not be taken into account when considering whether it falls within the scope of section 3(2)(c). As Jacob J said in *Philips v. Remington*,⁴⁵ good trade marks add value to goods—that is one of the things they are for. So one must not take this exclusion too literally. This means, for example, that while the ROLLS-ROYCE grille adds value to a ROLLS-ROYCE, it does so primarily because it signifies ROLLS-ROYCE and not because of its inherent shape. As such, it would not fall foul of section 3(2)(c).

Section 3(2)(c) therefore excludes shapes which exclusively add some sort of non-trade

⁴² Case 299/99 (para. 81).

⁴³ The jargon is adapted from that of G. Dinwoodie, ‘Federalized Functionalism: The Future of Design Protection in the European Union’ (1996) 24 *American Intellectual Property Law Association Quarterly Journal* 611.

⁴⁴ The section has been described as ‘difficult territory’: *Re Dualit’s Trade Mark Application* [1999] *RPC* 890, 903.

⁴⁵ *Philips Electronics NV v. Remington Consumer Products* [1998] *RPC* 283; approved on appeal [1999] *RPC* 809, 822.

mark value to the goods. The question of the type of non-trade mark value that section 3(2)(c) is concerned with was considered by the Court of Appeal in *Philips v. Remington*. In overruling Jacob J on this point, the Court of Appeal said that section 3(2)(c):

was aimed at preventing a trader from monopolizing by way of a trade mark registration shapes which added a substantial value to the goods over other shapes, e.g. a lampshade, a telephone designed to appeal to the eye. Such designs should be protected as registered designs or the like protection, not by trade mark registration . . . There may be overlap between [section 3(2)(c)] and [section 3(2)(b)] which excludes shapes necessary to obtain a technical result, but the purpose is different. The latter is intended to exclude functional shapes and the former aesthetic-type shapes. Thus the fact that the technical result of a shape is excellent and therefore the article can command a high price does not mean that it is excluded from registration by subsection (c).⁴⁶

The decisive question is therefore whether the shape performs a trade mark function, or whether the contribution the shape provides (i.e. its value) is limited to aesthetic considerations, such as enhancing the beauty of the product in a way that does not function as a trade mark.⁴⁷ This means, for example, that ‘goods which are purchased *primarily* because of the eye appeal of the shape—such as the shape of novelty soap, or the shape of an ornament or figurine for those goods—will fall foul of this provision’.⁴⁸ A good example of a shape which would give value of this sort to the goods is the shape of the famous lemon squeezer (*The Juicy Salif*) designed by Philip Starck, where the squeezer component is suspended between three long legs to give the appearance of a space ship.

One way to test whether a shape gives value to a product is to compare the price of the product made to the relevant shape with the price of an equivalent product which is not made to that shape. Thus, to determine the value of the shape of the COKE bottle, one could compare the price of a can of COKE with the price of a bottle of COKE (discounting the comparative cost of glass and aluminium). Such an approach was taken by the Amsterdam Court of Appeal, where it was held that differences in price between two crackers which were of equivalent taste and cost the same to manufacture could be attributed to the differences in the shape.⁴⁹ While the market offers one way of determining the value of the shape, there will be some situations where the courts will need to rely on other techniques to ascertain the value that the shape provides to the good.

The question whether the value provided by the shape is *substantial* is a question of degree. As Aldous LJ said, this ‘requires a comparison . . . to be made between the shape sought to be registered and shapes of equivalent articles. It is only if the shape sought to be registered has, in relative terms, substantial value that it will be excluded from registration’.⁵⁰ It seems that in the normal run of things a container will seldom give substantial value to a product. If the position were otherwise, the provision would exclude many shapes even though they operate to indicate source.

⁴⁶ *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809, 822.

3 CAPABLE OF BEING REPRESENTED GRAPHICALLY

The second general hurdle that must be met for a trade mark to be validly registered under section 1(1)/Article 4 is that the sign must be ‘capable of being represented graphically’. This requirement was discussed in the previous chapter (at pp. 770–4).

4 CAPACITY TO DISTINGUISH

The third and final hurdle that must be met for a trade mark to be validly registered under section 1(1)/Article 4 is that the sign must be ‘capable of distinguishing the goods or services of one undertaking from the goods or services of another’. Corresponding to this, section 3(1)(a) provides that failure to comply with any of the requirements of section 1(1) is one of the absolute grounds under which a sign will not be registered.

Following the passage of the 1994 Act,⁵¹ the British courts spent a great deal of effort trying to define ‘capacity to distinguish’ in a way that would both give it meaning but avoid it undermining the other substantive requirements relating to distinctiveness (which we examine in the next chapter). In particular, the courts sought to make sense of the inter-relationship between the requirement that a sign be ‘capable of distinguishing’ and the exclusion in section 3(1)(b) relating to marks which are ‘devoid of distinctive character’. The goal was to resolve the seeming conundrum raised by the statute which seemed to presuppose the possibility of a sign which was simultaneously ‘capable of distinguishing’ and ‘devoid of distinctive character’. The judicial efforts produced a series of inconsistent decisions, and impossible tests.⁵² Thankfully, in *Philips v. Remington*,⁵³ the ECJ has made it clear that these efforts were unnecessary.

As already noted, the reference arose from an action brought by Philips against its competitor Remington to prevent the latter from selling three-headed rotary shavers. The Court of Appeal had taken the view that the three headed rotary shaver lacked the capacity to distinguish, saying that this imposed a preliminary test that needed to be passed before asking whether a mark was devoid of distinctive character. The Court of Appeal considered that a sign needed to have some ‘capricious addition’ to render it capable of distinguishing, and that even a sign with such a capricious alteration could pass the first step, but fail the second (i.e. be devoid of distinctive character). The ECJ held that there was no ‘capricious alteration’ test in European law.⁵⁴ Second, the ECJ made it clear that if a sign was in fact distinctive (either by nature or by use) then it would be treated by definition as ‘capable of distinguishing’ the goods of one undertaking from those of others.⁵⁵ More specifically, ‘there is no category of marks which is not excluded from registration by Article 3(1)(b), (c), and (d) and Article 3(3) thereof on the ground that

⁵¹ Bently and Sherman, *Intellectual Property Law* 1st edn. (2001) pp. 769–73.

⁵² In *Dyson Ltd v. Registrar of Trade Marks* [2003] *ETMR* (77) 937, 945 (para. 16) Patten J. described the problem as having been caused by ‘an over-zealous devotion to definition’.

⁵⁴ Case C-299/99 (paras. 41–46).

⁵⁵ Case C-299/99 (para. 39).

such marks are incapable of distinguishing the goods of the proprietor of the mark from those of other undertakings⁷.

The ECJ seems to have said that Articles 2/3(1)(a) and 3(1)(b)–(d) of the Directive need to be ‘read together’. Each provides flavour to the other. Article 3(1)(a) ‘is intended essentially to exclude from registration signs which are not generally capable of being a trade mark’.⁵⁶ In this respect it is ‘like the rule laid down by Article 3(1)(b),(c),(d)’.⁵⁷ The three specific exclusions are elaborations of the basic requirement of capacity to distinguish. If a mark is devoid of distinctive character, it lacks capacity to distinguish; if a sign is descriptive it lacks capacity to distinguish, and so forth. But Article 3(1)(a) does not ‘constitute a separate ground for refusing registration in connection with lack of distinctiveness’.⁵⁸

5 THE PROTECTION OF RETAIL SERVICES AS SERVICE MARKS

Service marks, that is, signs which are used in connection with the provision of services, first became registrable in the UK as a result of the 1984 Trade Marks (Amendment) Act. Service marks are treated in the same way as trade marks by the 1994 Act. This enables the providers of professional, financial, commercial, or personal services to obtain the same statutory protection for their goodwill as is given to the manufacturers and sellers of goods.

One question that has arisen in this context is whether service marks protect the ancillary services that retailers provide such as childcare, car-parking, telephones, or toilet facilities. The question of the standing of retail services as service marks was considered in *Re Dee Corporation’s Application*.⁵⁹ In that case, the Court of Appeal held that retail services could not be registered as service marks under the (1984 amendments to the) 1938 Act. The reasoning turned, in the main, on the definition of service mark as a mark used in relation to services provided ‘for money or money’s worth’. It was argued that the costs of providing customer services, car parks, child care, toilet facilities, and a congenial shopping environment were indirectly passed on to the customers through the cost of their purchases. This was rejected on the basis that as the services were not separately charged for, they were not provided ‘for money or money’s worth’.⁶⁰

Despite considerable lobbying, the service mark provisions were not extended under the 1994 Trade Marks Act to include retail services. One change that was made under the 1994 Act which may affect the protection offered to retail services was that the ‘for money or

⁵⁶ Case C-299/99 (para. 37).

⁵⁷ Case C-299/99 (para. 38). It has been argued that this decision still leaves room for an understanding of s. 1 as concerned with whether a sign has capacity to distinguish in the abstract, whereas s. 3(1)(b)–(d) concerns whether a sign is distinctive for the particular goods or services for which registration is sought: D. Keeling, ‘About Kinetic Watches, Easy Banking and Nappies that Keep A Baby Dry’ [2003] *IPQ* 131, 134–6. *Sat. 1 v. OHIM*, Case C-329/02 P (AG Jacobs) (11 Mar. 2004) (para. 16–17).

⁵⁸ Case C-2993/99 (para. 46). In *West (trading as Eastenders) v. Fuller Smith & Turner* [2003] *FSR* (44) 816, 839 (para. 62) Arden LJ describes the phrase ‘capable of distinguishing’ as having merely an ‘epexegetical’ function.

⁵⁹ [1990] *RPC* 159.

⁶⁰ [1990] *RPC* 159, 180.

money's worth' requirement was removed from the definition of service mark. As a result, the question has arisen as to whether retail services are now protected under the 1994 Act. While this question was alluded to but not decided in one case,⁶¹ a number of reasons suggested that the substantive position remains unchanged.

One reason which suggested that the conclusions of *Re Dee* stood was that when the 1994 Act and the CTMR were passed, there was no obvious intention to expand the notion of services to encompass retail services. For example, the Annex to the Community Trade Mark Regulation says that retail services are not registrable at the OHIM.⁶² Similarly, during the passage of the 1994 Act an amendment to protect retail services was defeated.⁶³ In addition to the view that the Registry is not specifically equipped to deal with retail services,⁶⁴ it remained arguable that the very notion of retail services has self-contradictory. Since retailing involves the sale of goods, it was argued that a shop that wishes to protect retail services should simply register trade marks for the relevant goods that it sells. Another factor that weighed against retail services being protected as service marks was that even though the main basis for the *Re Dee* decision has been removed, it was supported by other subsidiary grounds that remained valid. This was particularly the case in relation to Stocker LJ's comment that an applicant for a service mark had to be in the trade of providing services. This meant that services that are incidental to, or an adjunct of, retail sales of goods are not services that it is the business or trade of the applicant to provide.⁶⁵

Rather surprisingly, in *Giacomelli Sport SpA*, the Second Board of Appeal at the OHIM has allowed a registration of a figurative mark for 'Bringing together for the benefit of others, of a variety of goods . . . to enable consumers to view and buy the products' in class 35 (which encompasses advertising, business management, business administration, and office functions).⁶⁶ The Board held that this was a 'service', rejecting the Examiner's objection that it was an activity ancillary to the sale of products in the interest of the applicant alone. The Board rejected the relevance of the Joint Statement of the Council and Commission on the ground that it did not enjoy legal status within Community law. The Board then explained that the idea of a service was the provision of something, more in the form of labour than of goods, to meet a particular need or want. Given that the Board took it to be a matter of common experience that consumers prefer the services provided by some shops over those of others, so that the activity of retailing was mutually beneficial to the retailer and the consumer, it could see no reason to exclude the activity from the concept of service. However, it did explain that the rules required that the service be described with sufficient clarity, and this would demand a reference to the field in which the service is rendered, for example, 'retail services in the field of sports goods'.

⁶¹ *Avnet v. Isoact* [1998] FSR 16, 20.

⁶² 'The Council and the Commission consider that the activity of retail trading in goods is not as such a service for which a community trade mark may be registered under this regulation'.

⁶³ Hansard (HL), Public Bill Committee, 13 Jan. 1994, cols. 3–10.

⁶⁴ There is no class for retail services, though class 42 and class 35 are possible candidates.

⁶⁵ [1990] *RPC* 159, 183; see also 180 per Slade LJ (applicants are not actually trading in the relevant services, but the services provided by them are merely ancillary to their principal trading activities); 184 per Bingham LJ.

⁶⁶ R46/1998–2 [2000] *ETMR* 271.

Following *Giacomelli Sport SpA*, and a subsequent meeting between representatives of the UK Office and the OHIM, the UK Trade Mark Registry has indicated that it has changed its practices with respect to applications relating to retail services.⁶⁷ From September 2000, the Registry has allowed applications related to services where the sector is specified, as, for example, with retailing of sports clothes, retailing of books, and so forth. Ultimately, the position will be clarified by the ECJ, a reference having been made in *Praktiker Bau-und Heimwerkermärkte AG*.⁶⁸

ABSOLUTE GROUNDS FOR REFUSAL

1 INTRODUCTION

In this chapter, we explore what are commonly referred to as the absolute grounds for refusing to register a trade mark. The absolute grounds for refusal, which are set out in section 3 of the 1994 Act (Article 3 of the Directive and Article 7 of the Regulation) are important in that they determine the types of signs that will be registered as trade marks. They are also important because one of the grounds on which a registered mark may be declared invalid is that it was registered in breach of one of the absolute grounds of refusal.¹

The absolute grounds for refusal can conveniently be grouped into three general categories. The first is concerned with whether the sign falls within the statutory definition of a trade mark found in sections 1(1) and 3(1)(a) and (2). The second category of grounds, each of which is contained in section 3(1)(b)–(d), excludes from registrability marks that are non-distinctive, descriptive, and generic. The third and more eclectic category, which covers the absolute grounds of refusal set out in section 3(3)–(6), provides that trade marks shall not be registered if they are contrary to public policy or morality, if they are likely to deceive the public, if they are prohibited by law, or if the application was made in bad faith. Special provisions also exist for specially protected emblems.

We will deal with each of these general categories in turn.

2 SUBJECT MATTER

Section 3(1)(a) provides that a sign which does not satisfy the requirements of a trade mark as set out in section 1(1)(a) will not be registrable. The types of signs that are potentially registrable are further restricted by section 3(2) which provides special rules in relation to the registration of shapes as trade marks. As these topics were dealt with in Chapter 36, it is not necessary to look at them again here.

¹ TMA s. 47. Lack of distinctiveness is a ground of invalidity, and so a registered mark may be challenged at any stage by any person, by application to the UK Registrar or before the Cancellation Division at OHIM (CTMR Art. 55), or as a counterclaim to an action based on a national or Community mark (CTMR Arts. 51, 92, and 96).

3 NON-DISTINCTIVE MARKS

The second category of absolute grounds of validity relates to what can be described as non-distinctive, descriptive, and generic marks. More specifically, section 3(1)(b)–(d) and Article 7(1)(b)–(d) of the Regulation provide that the following trade marks shall *not* be registered:²

- (b) trade marks which are devoid of any distinctive character;
- (c) trade marks which consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, geographical origin, or the time of production of the goods or of the rendering of the service, or other characteristics of the goods or service;
- (d) trade marks which consist exclusively of signs or indications which have become customary in the current language or in the bona fide and established practices of the trade.

While these provisions each have a distinct sphere of operation, they will often be applied cumulatively.³ To be valid a mark must not fall within any of the three grounds. Thus marks may be rejected on the basis of one ground, or more than one ground. Before examining each in detail it is worth noting a number of general matters which may apply equally to section 3(1)(b), (c), and (d) and therefore can be conveniently discussed at the outset.

3.1 CONFUSION AT THE ECJ

The first point that needs to be made about section 3(1)(b)–(d) is that (at the time of writing) the case law dealing with these provisions is in a state of confusion. This confusion is the result of a series of ECJ decisions which appear to take different views about the aims of, in particular, section 3(1)(c). As we will see, the effect of this confusion is to leave the law in a state of great uncertainty.

3.2 THE POSSIBLE AIMS OF SECTION 3(1)(b)–(d)

The confusion emanating from the ECJ largely relates to the goals sought to be achieved by the absolute grounds of validity in section 3(1)(b)–(d). It seems that these provisions may perform either of two tasks (or perhaps both).

² This language, taken directly from the Directive, is, in turn, derived from Paris, Art. 6 quinquies (2). See also TRIPS, Art. 15(2).

³ *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 C-55/01, [2003] RPC (45) 803 [2003] ETMR (78) 963 (paras. 45, 67); *Campina Melkunie BU v. Benelux Merkenbureau*, Case C-265/00 (12 Feb. 2004) (para. 18); *Merz & Krell GmbH, Case 517–99* [2001] ECR I-6959; [2002] ETMR (21) 231 (para. 35); *DKV Deutsche Krankenversicherung v OHIM*, Case C-104/00 P [2002] ECR I-7561 (each ground of refusal is ‘independent of the others, and must be considered separately. That does not preclude the same sign in practice being caught by more than one category’) (AG Colomer, para. 40); *Wrigley v. OHIM (Doublemint)* Case C-191/01P [2003] ETMR (88) 1068 (AG Jacobs, para. 53); *Société Des Produits Nestlé SA v. Mars UK Ltd* [2003] ETMR (101) 1235, 1250 (para. 42) (Mummery LJ) (although the grounds overlap, they are independent grounds and have to be separately examined).

The first (which we can call ‘the distinguishing function’) is that they help to ensure that trade marks function as indicators of origin.⁴ In order to act as an indicator of origin, it is necessary for consumers to be able to make a connection between a sign and a particular source or trader. For this to occur, consumers must be able to distinguish between the signs and thus the goods and services of rival traders. Seen in this light, by limiting registration to marks which are not devoid of distinctive character, descriptive or generic, section 3(1)(b)–(d) helps to ensure that protection is only granted to signs which consumers are likely to perceive as a designation of source. Accordingly, all that section 3(1)(b)–(d) requires is that, in order to be registrable, marks are, in some broad sense, individual or idiosyncratic in a way that renders them likely to be seen as indicating source. In the same way in which the idiosyncratic nature of a fingerprint, a signature, or a DNA segment helps to identify a person, the idiosyncratic nature of registered marks means that it is possible for consumers to distinguish competing goods.

The second role that the absolute grounds for refusal in section 3(1)(b)–(d) may perform (which we can call the ‘protective function’) is to minimize the negative impact that the grant of trade marks may have upon traders working in the same or related fields. If trade marks law permitted one trader to obtain property protection over non-distinctive, descriptive, or generic marks it could have a dramatic impact upon other traders. For example, if one greengrocer was given trade mark protection over the word ORANGE OR FRUIT (for oranges), it would interfere with the ability of other greengrocers to convey information about their goods or services. That is, where there are a limited number of possible ways of describing or presenting one’s goods the provision of legal monopolies over such signs might enable one trader to keep other traders completely out of the market.⁵ This might be the case not just in relation to signs comprising descriptive words, but also with basic shapes for goods, or colours. Seen in this light, by denying protection to signs that are non-distinctive, descriptive, or generic, trade marks law can ensure that competitors are able to use terms which are deemed to be ‘essential’ in the trade in describing their own goods. While the grant of trade marks necessarily restricts the use that third parties can make of signs, if this second function is relevant, section 3(1)(b)–(d) will play an important role in striking a balance between signs which can be taken from the public domain and those which cannot.⁶

Whether the law is based on one or other of these aims will often make little difference. In many situations, the same conclusions will follow from the application of either understanding. For example, invented words (KODAK for cameras, EXXON for oil) or fancy words (APPLE for computers) will be registrable, because consumers would treat those signs as distinguishing the origin of goods, and traders would have no legitimate reason to wish,

⁴ This is consistent with the idea that ss. 3(1)(b)–(d) are elaborations of the general requirement that to be registrable a sign be ‘capable of distinguishing the goods or services of one undertaking from those of other undertakings’: see pp. 798–9.

⁵ Moreover, it seems desirable in a market economy that market entrants should face as few entry costs as possible: allowing monopolization of basic and obvious descriptions, colours, or shapes might force new entrants to incur costs in developing packaging and therefore inhibit competition.

⁶ Although the protective function is usually talked about in terms of the needs or desires of other traders, it can equally be expressed in terms of a trader’s rights to free commercial expression: see *Antoine Piriomalli v. Greci Industria Alimentar SPAe/Bruschetta*, R328/2002–2 (1 Jul. 2003) (paras. 21–2) (referring to ‘everybody’s right to call things by their common name and to describe them . . . These indications, as common expressions of the current language, belong to the common and public domain’)

and certainly no need, to use them. In contrast, wholly descriptive words (WELDED MESH for welded mesh, or SOAP for soap) would not be registrable, because consumers would not see the words as distinguishing and traders might legitimately wish (or need) to use them. But between these two ends of the spectrum are a host of more problematic examples. Traders frequently seek to adopt as marks signs that carry some sort of (more or less veiled) reference to the goods or services (e.g. TREAT for sweet sauces), and it is with regard to these that the different policies may point towards different outcomes. While the average consumer might not perceive the mark as immediately descriptive of the goods (after all, a 'treat' might equally be a drink, biscuit, or confectionery), such a laudatory description may well be a sign that other traders, acting in good faith, would readily wish to select or use in advertising in relation to their own products. To marks comprising obvious variations of descriptive words (TASTEE FREEZE for ice cream), or personal names (JOHN SMITH for beer). The different policy goals might also lead to different results when applied while consumers would probably see the signs as distinguishing the goods from those offered by other traders, but it is quite foreseeable that other traders might in good faith choose the same (or very similar) signs for their own goods (especially if they happen to be called John Smith).

3.3 THE CASE LAW

Under the 1938 Act, when considering whether a mark was registrable the courts focused on the impact that monopolization of that sign would have on other traders.⁷ That is, registrability was determined primarily by reference to the 'protective function'. In contrast, much controversy has surrounded the relevance of the second principle to determinations of whether a trade mark falls within the scope of section 3(1)(b)–(d) (and equivalent provisions of the Directive and CTMR). Although the European Court of Justice is still in the process of developing its jurisprudence (and its development has certainly not been smooth so far), it now appears that both elements should be considered (at least in the context of section 3(1)(c)).⁸ A brief (and selective) chronological review is warranted.

3.3.1 Windsurfing, Baby Dry, and Doublemint

The first occasion on which the European Court of Justice considered Article 3(1)(c) of the Trade Marks Directive was in *Windsurfing Chiemsee v. Attenberger*.⁹ In this case, the question before the ECJ was whether the word CHIEMSEE, the name of a lake in Bavaria, could be a trade mark for sports clothing or whether such a mark fell within Article 3(1)(c) of the Directive. More specifically, the ECJ was asked to consider whether the application of Article 3(1)(c) depends on whether there is a 'real, current, or serious need to leave the sign or indication free'. In answering this question, the Court acknowledged that one of the aims of Article 3(1)(c) of the Directive was to protect the public interest by keeping descriptive signs or indications free for use by all traders.¹⁰ The Court observed:

⁷ Most classically, Lord Parker's test in *W. & G. Du Cros's Application* [1913] AC 624, 635.

⁸ *DKV Deutsche Krankenversicherung v. OHIM*, Case C-104/00 P, [2002] ECR I-7561 para. 2 ('the case law in this field is still at an initial stage, and very much in the process of being shaped') (Advocate General Colomer).

⁹ Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779.

¹⁰ [1999] ECR I-2779, I-2824 (para. 30).

Article 3(1)(c) of the Directive pursues an aim which is in the public interest, namely that descriptive signs or indications relating to the categories of goods or services in respect of which registration is applied for may be freely used by all, including as collective marks or as part of complex or graphic marks. Article 3(1)(c) therefore prevents such signs and indications from being reserved to one undertaking alone because they have been registered as trade marks.

It continued:

As regards, more particularly, signs or indications which may serve to designate the geographical origin of the categories of goods in relation to which registration of the mark is applied for, especially geographical names, it is in the public interest that they remain available, not least because they may be an indication of the quality and other characteristics of the categories of goods concerned, and may also, in various ways influence consumer tastes by, for instance, associating the goods with a place that may give rise to a favourable response.

However, while the Court's rationale seemed to focus on what undertakings might want or need to do in the future (the 'protective function' of Article 3(1)(c)), the ECJ held that when it came to interpreting Article 3(1)(c) the issue *was not* whether there is a real, current, or serious need to leave a sign or indication free.¹¹ Rather the relevant tribunal was to ask whether there was 'an association in the mind of the relevant class of persons between the geographic name and the category of goods in question', or where there was none at the relevant time, 'whether it is reasonable to assume that such an association may be established in the future'. The emphasis is on whether the geographical name is 'capable, in the mind of the relevant class of persons, of designating the origin of the category of goods in question'. If it is capable of designating geographical origin it is, in the absence of acquired distinctiveness, unregistrable.

The second occasion on which the ECJ considered the principles on which a mark was to be accepted or rejected was in *Baby Dry*.¹² This case arose out of an application to the OHIM to register the words *BABY DRY* for disposable diapers. The OHIM Board of Appeal had refused registration under Articles 7(1)(b) and (c) of the Regulation. The CFI had affirmed that the sign was composed exclusively of words which may serve in trade to designate the intended purpose of goods. The ECJ allowed the appeal. The Court explained that the aim of the prohibition on registration 'of purely descriptive signs or indications' was to prevent registration of 'signs or indications which, because they are no different from the usual way of designating the relevant goods or services or their characteristics, could not fulfil the function of identifying the undertaking that markets them and are thus devoid of the distinctive character needed for that function'. In contrast with *Windsurfing*, the Court in *Baby Dry* did not appear to think that the 'protective function' was relevant. It therefore concluded that Article 7(1)(c) only excluded 'those which may serve in normal usage from a customer's point of view to designate, either directly or by reference to one of their essential characteristics, goods or services such as those in respect of which registration is sought'.¹³ Even if the main part of a sign is descriptive, the Court

¹¹ Case C-109/97 (para. 35).

¹² *Procter & Gamble Co v. OHIM (Baby Dry)*, Case C-383/99 P, [2002] *ETMR* (3) 22.

¹³ Case C-383/99 (para. 39).

indicated that it would be registrable as long as there is additional material or the signs are 'presented or configured in a manner that distinguishes the resultant whole from the usual way of designating goods or services concerned or their essential characteristics'. The ECJ was of the view that *BABY DRY* was not a normal way for English speakers to refer to nappies, and so was registrable. This was so irrespective of the potential needs of other diaper-sellers to use the terms in the context of statements such as 'keeps a baby dry'. This approach treated Article 3(1)(c) as concerned purely with the 'distinguishing function': the goal of preserving a free domain of marks for general use by traders appeared to have been abandoned.

The third occasion on which the question fell for consideration was in *Doublemint*.¹⁴ As with *Baby Dry*, this case concerned an appeal from the OHIM, this time relating to an application to register *DOUBLEMINT* as a trade mark for chewing gum. The OHIM had rejected the application on the ground that the sign was descriptive and so fell within Article 7(1)(c) of the Regulation, and the Board of Appeal had confirmed that decision, but the CFI had allowed Wrigley's appeal.¹⁵ The CFI's held that *DOUBLEMINT* was registrable, taking the view that the ambiguity (over whether the sign meant that the gum was flavoured by two types of mint, or rather whether it was twice as minty) was sufficient to make the sign not exclusively descriptive. On appeal, the Court annulled the CFI decision, and referred the case back for reconsideration. The ECJ explicitly referred to the public interest basis of Article 7(1)(c), citing *Windsurfing* with approval (and not mentioning *Baby Dry*).¹⁶ The Court also re-iterated that the test was not simply whether the sign had a descriptive use at the time of the application but also whether the sign 'could be used for such purposes'. The Court concluded that a sign must be excluded if 'at least one of its possible meanings designates a characteristic of the goods or services concerned'. Importantly, this was to be determined not by whether the sign is capable of being understood by consumers as a designation of a characteristic of the goods but whether the sign was capable of being used *by other traders* to designate a characteristic of their goods or services.¹⁷ Here, both the rationale and the test prioritize the 'protective function'.

3.3.2 Appraisal

Although there are some who see these cases as consistent, progressively establishing the principles by which the Directive and Regulation are to be interpreted,¹⁸ our view is that

¹⁴ Case C-191/01P [2003] *ETMR* (88) 1068 (AG); (23 Oct. 2003) (ECJ).

¹⁵ *Wrigley v. OHIM (Doublemint)*, T-193/99 [2001] *ECR* II-417; R216/1998-1 (16 Jun. 1999) (OHIM BA).

¹⁶ Also referring approvingly to *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 C-55/01, [2003] *RPC* (45) 803 (para. 73) where the ECJ reiterated that 'the various grounds for refusing registration set out in Article 3 . . . must be interpreted in the light of the public interest underlying them' and that 'In the case of Article 3(1)(c), the aim 'which is in the public interest' is that 'descriptive signs or indications relating to the characteristics of goods or services in respect of which registration is applied for may be freely used by all, including as collective marks or as part of complex or graphic marks'. Note also *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2004] *FSR* (4) 65 (para. 52); *Campina Melkunie BV v. Benelux-Merkenbureau* Case C-265/00 (12 Feb. 2004) (paras. 34-6); *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004).

¹⁷ *Doublemint*, Case C-191/01P (para. 35).

¹⁸ According to this view, 'there was no intention, in the *Baby-Dry* judgment, to depart from the view in *Windsurfing Chiemsee*, that it is in the public interest that descriptive signs may be freely used by all'. In *Wrigley v. OHIM (Doublemint)*, Case C-191/01P [2003] *ETMR* (88) 1068 (AG), Advocate General Francis Jacobs called on the Court 'to clarify, refine and develop the indication it gave on the interpretation of Article

the cases reveal inconsistent approaches, and that the ECJ has changed its view as to the proper interpretation of the Directive. More specifically, *Windsurfing* recognizes the 'protective function' of section 3(1)(c), and *Baby Dry* does not. While *Baby Dry* specifically mentions that other traders are protected by certain defences (section 11(2) of the 1994 Act, Article 6(1)(b) of the Directive, and Article 12(b) of the Regulation),¹⁹ in *Windsurfing* these needs are recognized as going beyond descriptive uses to include uses 'as collective marks or as part of complex or graphic marks'—and so are relevant to determining whether a mark is registrable in the first place. Consequently, in our view *Baby Dry* 'brought about a considerable change in trade mark law',²⁰ and, in turn, *Doublemint* signals a volte-face, a return to some kind of orthodoxy. If this is right, given the variations in the approach taken by the ECJ, all precedential authority needs to be treated with care. While all three cases indicate that pre-harmonization cases should be regarded as being of little value in a European system that requires member states to abandon old tests and approaches for the sake of consistency in the Community,²¹ the changing interpretations by the highest court mean that post-harmonization precedents should be scrutinized to ascertain the legal basis: cases decided by rigorous adherence to the *Baby Dry* decision should also now be taken to be of dubious value.

If *Doublemint* now establishes that the 'protective function' is relevant when assessing the absolute ground of invalidity contained in section 3(1)(c) of the 1994 Act, the next question that arises is whether it is equally relevant for the other grounds of invalidity. The ECJ's comments have not yet conclusively established that they are. In *Libertel*, a case concerning the registrability of the colour orange, the Court appears to have taken 'protective function' into consideration when considering Article 3(1)(b) of the Directive.²² However, in *Henkel KgaA v. OHIM*, Advocate General Colomer stated that 'it is by no means certain' that considerations of the public interest underpin CTMR Article 7(1)(b), which is concerned with signs which cannot reliably indicate the commercial origin of the product.²³ For the Advocate General 'it may be anomalous to mention the need to preserve

7(1)(c) in *Baby-Dry*. . . [I]n my view, the effect of that judgment has been widely misunderstood'. See also *In re Bongrain Sa's Appn* (unreported, 21 Mar. 2003) (where Pumfrey J described the differences between *Baby Dry* and *Windsurfing* as ones of application rather than principle, the principle being clear: 'Articles 7(1)(b) and (c) can be surmounted by demonstrating a minimum degree of distinctiveness') and *Société Des Produits Nestlé SA v. Mars UK Ltd* [2003] *ETMR* 101 1235 (para. 22) where the Vice-Chancellor stated that 'the relevant principles are now well-established'. In *Heron Robotunits GmbH v. OHIM (Robotunits)*, T-222/02 (26 Nov. 2003) (para. 49) the CFI accepted that *Baby Dry* had not departed from *Windsurfing*.

¹⁹ This approach was questioned by Jacob J in *Nichols plc's Trade Mark Application* [2003] *RPC* (16) 301, 304 (para. 10); and the validity of the criticisms were conceded by Advocate General Francis Jacobs in *Wrigley v. OHIM (Doublemint)*, Case C-191/01P [2003] *ETMR* (88) 1068 (para. 94) (AG Jacobs). There AG Jacobs observed that '[i]n the real world, a defence under Article 12(b) might be worth rather less than its ostensible value in law'.

²² *West (Eastenders) v. Fuller Smith & Turner* [2003] *FSR* (44) 816, 825–6 (para. 21) (Pumfrey J, in the CA).

²³ *Henkel KgaA v. OHIM*, Joined Cases C-456/01P and C-457/01P; *Procter & Gamble v. OHIM*, Joined Cases C-473/01P and C-474/01P (6 Nov. 2003) (para. 78). This viewpoint is repeated by AG Colomer in *Nichols v. Registrar of Trade Marks*, Case C-404/02 (15 Jan. 2004) (paras. 42–6) and *Mag Instrument Inc v. OHIM*, Case C-136/02P (16 Mar. 2004). In *Sat.1 v. OHIM*, Case C-329/02P (11 Mar. 2004) AG Jacobs suggests that CTMR Art. 7(1)(b) is underpinned by a *different* public interest from that which informs Art. 7(1)(c). For a view that the CFI itself has frequently been too formalistic in its treatment of Articles 7(1)(b)–(d), see

availability in the context of Article 7(1)(b)'. Although this opinion means the issue remains unsettled, we proceed on the basis that the public interest also underpins the exclusion of signs from registrability because they are 'devoid of distinctive character': as we will see in due course such considerations are, in fact, especially relevant for many of the types of signs (colours, shapes, names, numerals) which fall more readily within section 3(1)(b) than section 3(1)(c). The only ECJ case dealing with section 3(1)(d) interprets that provision in the light of the 'distinguishing function' and at no point alludes to the 'protective function'.²⁴ Nevertheless, given that section 3(1)(d) is concerned with trade language, the preferable view is that the policy underpinning it is closely bound up with the protection of traders rather than the perceptions of consumers i.e. that the application of section 3(1)(d) also requires consideration of the 'protective function' of the exclusion.

If we are right, and the 'protective function' is to be taken into account when applying section 3(1)(b)–(d), the question arises whether the public interest is a mere 'ratio legis' (that is, an explanation for the law),²⁵ a source of teleological interpretation for the provisions,²⁶ or whether it establishes a second, supplementary, test? *Windsurfing* seems to have treated the public interest as an explanation for the exclusion in Article 3(1)(c) of the Directive, and the Court rather formalistically set out a different test of the meaning of Article 3(1)(c), and one very much focused on the perceptions or predicted perceptions of consumers (the distinguishing function) rather than the needs of other traders. In contrast, in *Linde* the ECJ said that the competent authority must determine 'in the light of a concrete consideration of all the relevant aspects of the application, and in particular the public interest. . . , whether the ground for refusing registration in that provision applies to the case at hand'.²⁷ Accordingly, the public interest is one factor in the application of the grounds of invalidity.²⁸ Yet another approach was taken in *Doublemint*, where the Court assessed whether DOUBLEMINT was descriptive not by asking what consumers would understand when they encounter DOUBLEMINT used in relation to chewing gum, but whether DOUBLEMINT 'was capable of being used by other economic operators to designate a characteristic of their goods'.²⁹ In effect, *Doublemint* seems to focus primarily on the 'protective function'. Other tribunals have thought it appropriate to accommodate the public interest by explicitly adding it as a second test: in such cases the tribunal assesses

whether a sign is 'devoid of distinctive character' or 'descriptive' by asking first whether the relevant consumers would regard the sign as indicating trade origin or describing some quality of the goods, and then by asking whether, nevertheless, the sign should be kept free for use by other traders.³⁰ The elevation of the public interest into an independent supplementary test has the advantage that the tribunal's reasoning is made as transparent as possible.

3.4 GENERAL APPROACH

Although the exact relationship between the 'distinguishing function' and the 'protective function' remains uncertain, in most cases establishing whether a sign is devoid of distinctive character, descriptive, or generic (and thus excluded by section 3(1)(b)–(d)) is straightforward. More specifically, the tribunal should apply each of the three exclusions by focusing first on whether the sign is capable of distinguishing the goods or services of the applicant from those of other traders; and then (at least in difficult cases) on whether the sign is one which needs to be left free for use of other traders.

As regards the first element, the focus of the tribunal is on the anticipated performance of the mark in relation to the goods or services for which it is proposed to be used and guess what the relevant class of consumers would understand from the sign. To avoid rejection under section 3(1)(b) the tribunal must conclude that the sign will be perceived as an indication that goods or services come from a single source, in other words, as a 'badge of trade origin'. Consumers will readily recognize words, such as NOXEMA (for shaving cream) or APPLE (for sound recordings), which have no relation to the goods, as indicating origin, and equally will see logos as having the same function. It is more difficult to predict whether consumers would see colours, shapes, slogans, and the like as indicating origin. To avoid objection under section 3(1)(c) the applicant will need to establish that the sign is not used (and is unlikely to be used in the future) as a description of the characteristics of the goods or services. Consequently, invented words such as MARANTZ (for hi-fi equipment), or PEPSI (for drinks), are likely to be registrable, because it is unlikely that traders could use them descriptively or that consumers would perceive them to be anything other than an indication of origin. In contrast, TREAT would be understood as describing the fact that the product was especially good, and EUROLAMB would be understood could be used as describing the fact that the product was a particular type of meat from a particular place. In between these extremes is a huge array of signs, not wholly descriptive but partly suggestive of a product quality: in such cases the tribunal will have to make a judgment as to how consumers will interpret the sign.

At least in these difficult cases, the tribunal should take account of the function of section 3(1)(b)–(d) in preserving the freedom of other traders. So far, because of the doubts over the relevance of such considerations, the ECJ has had little opportunity to specify exactly what an application of the 'protective function' requires. We have been told what the test is not: it will be recalled that *Windsurfing* made clear that European law is not the same as the pre-harmonized German law (i.e. the question is *not* whether there

³⁰ For the two stage approach, see *Hollywood Entertainment Corp/Hollywoodvideo.com*, R670/2001–2 (23 Jan. 2003) (para. 15).

is a real, current, or serious need to leave a sign or indication free).³¹ In *Libertel* and *Doublemint*, the ECJ seems to have begun to indicate what the 'protective function' requires, though there is a long way to go. In *Libertel*, the ECJ referred to certain trade marks (specifically single colour marks) giving 'an unjustified competitive advantage for a single trader',³² and so it opined that these should rarely be registrable in the absence of use.³³ In contrast, the *Doublemint* case has indicated that if the applicant's sign is *capable* of being used by *other traders* to designate a characteristic of their goods or services, it falls within the exclusion in section 3(1)(c).³⁴ While the *Libertel* test seems well-suited to the application of section 3(1)(b) to 'exotic' marks (and so would exclude all obvious shapes, such as a rectangular block or an oval shape for soap, and common colours (pink or green for soap)), the *Doublemint* test will need to be applied in cases of word marks under section 3(1)(c).

In applying *Doublemint*, the concept of 'capacity' will require further elaboration. In the *Postkantoor* case the ECJ has indicated that a sign falls within Article 3(1)(c) if it is capable of being used to designate the characteristics of goods or services, even if the characteristic in question is of peripheral significance to the goods in question. Thus *STINKY* might be unregistrable for weedkillers, even though the most important characteristic of a weed-killer is whether it is effective in killing weeds.³⁵ It should certainly not be understood as presenting a purely abstract test, but rather should be considered in the context of the existing market and foreseeable developments therein. Accordingly, signs should be regarded as unregistrable where it is reasonably foreseeable that another trader might innocently select the same or a similar mark as a trade mark or other description for its goods (even if it was not possible to show such traders needed to use those marks). This would include all obvious descriptions (*CARING*, *KIND*, or *LUXURIOUS* for soap), and possibly obvious variants of such descriptions. If this turns out to be an appropriate approach, a difficult exercise in line-drawing is inevitably required.

3.4.1 What is the mark?

In order to decide whether a sign is excluded under section 3(1)(b)–(d) it is first necessary to decide what the sign is. In many ways this is straightforward: we have seen that the sign is that for which registration is sought. This task is made somewhat easier by the fact that the applicant has to submit documentation identifying the mark, and indicating whether protection is sought as a word mark, a figurative mark, a colour mark, or a three-dimensional mark.

³¹ Case C-109/97 (para. 35). However, the Court in that case did indicate the question was whether it is reasonable to assume that the sign for which registration was being sought may be associated with the goods (geographically) in the future. The 'reasonable foreseeability' element of that test may be worth preserving in this context.

³² See also *Antoine Piromalli v. Greci Industria Alimentar SPAe/Bruschetta*, R328/2002–2 (1 Jul. 2003) (paras. 21–2) (The public interest requires that the signs may be freely used by all: refuse registration 'to avoid conceding an unjustified competitive advantage to a single trader') citing *Sat.1 v OHIM (SAT.2)*, T-323/00 [2002] ECR II-2839 (para. 36).

³³ However, since it is widely perceived that some trade marks (particularly ones which allude to quality) are better than others, a test of 'unjustified competitive advantage' seems to provide little help in establishing which marks should be free. If this is right, then it is probably best to focus on the position of competitors (rather than advantage to the trade mark owner).

³⁴ Case C-191/01P (para. 35).

³⁵ *Koninklijke KPN Nederland NV v. Benelux-Merkanbureau*, Case C-363/99 (12 Feb. 2004) (para. 102).

3.4.2 The average consumer

In making the necessary predictive assessment, the relevant class from whose perspective the sign must be assessed has been defined as comprising the average consumers of the category of goods.³⁶ In turn, the relevant consumer has been construed as 'reasonably well-informed and reasonably observant and circumspect'.³⁷ Although the consumer is assumed to be reasonably observant, the cases make clear that levels of attentiveness vary from sector to sector: the general consumer's level of attentiveness in relation to everyday goods is lower than for expensive goods.³⁸

In the case of national marks, the average consumer has the characteristics of a British person: whether marks in a foreign language will be treated as registrable or as descriptive will depend on whether the average consumer is likely to understand the meaning of the sign. In turn this will depend on the extent to which the mark is recognized in its original language, how widely the language spoken is in the United Kingdom, how familiar the word is, and how common it is for foreign words to be used in that trade.³⁹ The question of foreign equivalence is particularly important in relation to Community marks. Article 7(2) of the Community Trade Marks Regulation provides that the exclusions 'shall apply notwithstanding that the grounds of non-registrability obtain in only part of the Community'.⁴⁰ *OLUT* would thus be unregistrable as a Community mark for alcoholic beverages, given that *OLUT* means beer in Finnish.⁴¹

The tribunal must interpret the sign in the application as the notional consumer would. This process of interpretation will take into account so-called normal and fair use,

³⁶ For exceptions, see *SAT.1 Satelliten Ferschen GmbH v. OHIM*, T-323/00 [2002] ECR II-2839 (para. 38) (for some classes the relevant consumer was the 'average consumer' but as regards services in class 42 the relevant consumer was defined as 'professionals in the film and media industries') (CFI); *Bio-Id AG v OHIM*, T-91/01 [2002] ECR II-5159 (para. 25) (defining relevant public as one 'with experience' in the sector) (CFI).

³⁷ *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 and C-55/01, [2003] RPC (45) 803 [2003] ETMR (78) 963 (para. 41); *Société Des Produits Nestlé SA v. Mars UK Ltd* [2003] EWCA Civ 1072 (25 Jul. 2003) (para. 23); *Bach Flower Remedies v. Healing Herbs* [2000] RPC 513. One issue that will fall to be determined is whether the average consumer is confined to those likely to purchase an article, or those likely to acquire the goods: see *Procter & Gamble v. OHIM*, Case C-107/03P (pending) (appeal of T-63/01).

³⁸ Cf. *Henkel KgaA v. OHIM*, Joined Cases C-456/01P and C-457/01P; *Procter & Gamble v. OHIM*, Joined Cases C-473/01 P and C-474/01 P (6 Nov. 2003) (para. 62).

³⁹ For a review of past practices, see E. Gredley, 'Foreign Language Words as Trade Marks' in N. Dawson and A. Firth, *Trade Marks Retrospective: Perspective on Intellectual Property*, Vol. vii (2000), 85.

⁴⁰ One interesting question raised by the *Baby Dry* decision is whether an application for a Community trade mark that comprises two English words needs to be scrutinized from the point of view solely of English consumers (as the Court assumed) or from the point of view of consumers throughout the Community. In critical comments made after the ECJ decision, Advocate General Colomer in *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau* C-363/99 (31 Jan. 2002) (para. 68), had suggested that in Romance languages such as French it would be normal for the adjective to follow the noun (e.g. *le bébé sec*), so that the juxtaposition of baby and dry would not be regarded as unusual. Advocate General Jacobs, in *OHIM v. Wm Wrigley Jr Co (Doublemint)*, Case C-191/01 P [2003] ETMR (88) 1068 (para. 87), agreed that it may be necessary to consider non-English consumers but said he did not think it was appropriate to take as a guide to assessing registrability 'a consumer struggling with an imperfect knowledge of a foreign tongue'.

⁴¹ With the expansion of the Community in 2004, the incidence of such objections is likely to increase. Note, however, that while existing registrations are automatically extended to these countries, absolute grounds of refusal under Art. 7 (or invalidity based on Art. 51) do not operate where such grounds became applicable merely because of the accession of a new member state CTMR Art. 142a (as amended).

including use on packaging and in advertising.⁴² Thus the assessment takes account of the possibility that the mark will normally be used not only in its represented form, but also orally. Consequently the mark will be interpreted in terms of the overall impression it makes on the average consumer—orally, conceptually, and visually. In the past, British tribunals would operate a general rule that a word that was ‘phonetically equivalent’ to an unregistrable word was itself unregistrable.⁴³ It seems improbable that such an approach has survived as anything as concrete as a rule, (the Registrar, for example, being willing to accept KA for cars).⁴⁴ It will nevertheless be the case that where the goods are of the sort that are purchased orally, or advertised on the radio or television, mere visual alterations, such as misspellings, of otherwise non-distinctive marks are unlikely to render the sign registrable.⁴⁵ Indeed in *Campina Melkunie BV v. Benelux-Merkenbureau*, the ECJ has stated that when one is assessing whether a variant of a descriptive word mark is excluded under Article 3(1)(c) of the Directive one must consider the impression that is produced by the variant aurally and visually.⁴⁶

It is important to note in this respect that the sign will normally be viewed as a whole: a sign will not be rejected just because parts of the sign lack distinctiveness or are descriptive or customary in the trade.⁴⁷ Nevertheless, consumers may ignore certain elements, which they regard as trivial or insignificant.⁴⁸ Equally, consumers may readily expand abbreviated forms into their full unabbreviated form.⁴⁹ Another situation where the tribunal will have to assess how the ‘reasonably circumspect’ consumer interprets a sign is where an applicant combines, shortens, or telescopes two (or more) unregistrable terms. Although

⁴² This is the UK approach, at least.

⁴³ Thus, in pre-1994 case law, *ELECTRIX* was treated as equivalent to ‘electrics’ and hence unregistrable for such appliances: *Electric’s Appn.* [1959] RPC 283, 286 (HL).

⁴⁴ PAN 5/02 *Phonetic Equivalents of Objectionable Words (Mis-Spellings)* (18 Jun. 2002) (limiting the doctrine to common mis-spellings, informal words and ‘American’ spelling, seen as cases where the average consumer might not notice the alteration at all). This Practice Amendment Notice set out UK practice after *Baby Dry*: it will be interesting to see how this changes, if at all, after *Doublemint*. See also *Froot Loops Trade Mark* [1998] RPC 240 (where the applicant conceded that *FROOT LOOPS* should be treated as if it was *FRUIT LOOPS* but the Appointed Person said this is a significant issue which would, eventually, require determination under the 1994 Act).

⁴⁵ See PAN 5/02 *Phonetic Equivalents of Objectionable Words (Mis-Spellings)* (18 Jun. 2002) para. 5 (informal words more often heard than written down).

⁴⁶ Case C-265/00 (12 Feb. 2004) (para. 40); *Koninklijke Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004) (para. 99).

⁴⁷ *Procter & Gamble Co v. OHIM (Baby Dry)*, Case C-383/99 P, [2002] ETMR (3) 22; *Campina Melkunie BV v. Benelux-Merkenbureau*, Case C-265/00 (12 Feb. 2004) (para. 37) *Nestlé Waters France v. OHIM (Bottle shape)*, T-305/02 (3 Dec. 2003) (para. 40). In *BioId AG v. OHIM T-91/01*[2002] ECR II-5159 (para. 36) the CFI was emphatic that the tribunal should not, in the case of a compound mark, ignore any element of the compound mark because its importance was minimal in comparison to that of other elements. However, in that case the variations proved insufficient to render the sign registrable. If there exists an ‘exception to the lexical rules’ such as to make a sign ‘unusual in its structure’, that will be sufficient to render it distinctive: *BioId AG v. OHIM T-91/01*[2002] ECR II-5159 (para. 28) (appeal pending sub. nom. Case 37/03P).

⁴⁸ For UK Practice on so-called ‘surplus marks’, see PAN 6/02 *Descriptive Marks Configured or Presented in Ways that Convey Trade Mark Character* (18 Jun. 2002) (though this practice was established following *Baby Dry* and might need to be revised in the light of comments of Advocates General Colomer and Jacobs in *DKV Deutsche Krankenversicherung v. OHIM*, Case C-104/00 P [2002] ECR I-7561 and *Doublemint*). A related issue is whether what is to be assessed in the case of a shape mark is the specific mark itself, or the imperfect picture of the shape: *Procter & Gamble v. OHIM*, Case C-107/03P (pending) (appeal of T-63/01).

⁴⁹ *Bio-Id v. OHIM*, T-91/01 [2002] ECR II-5159 (holding *BIO-ID* to be devoid of distinctive character, being an abbreviation of biometric identification for software based identification systems).

consumers tend to interpret signs as a whole rather than dismembering them into their component parts, certain obvious combinations or abbreviations may be immediately translated back into their (non-registrable parts). Thus, *EUROLAMB* would immediately be interpreted as *EUROPEAN LAMB* and thus, being descriptive, be unregistrable. The Court of First Instance, too, upheld the finding of the OHIM that *COMPANYLINE* was devoid of distinctive character in relation to insurance and financial affairs, explaining that coupling two generic words together ‘without any graphic or semantic modification does not imbue them with any additional characteristic such as to render the sign, as a whole, capable of distinguishing the applicant’s services from those of other undertakings’.⁵⁰ The point at which such creations become registrable is a matter a degree: much will depend on how devoid of distinctiveness the component units are and how drastically they have been altered.

Ultimately, the assessment is one of fact. While certain types of marks (such as the shapes of goods or simple colours) will normally be non-distinctive, there will be some situations where they will be registrable. The upshot of this is that care must be taken about making broad generalizations on the basis of previous decisions. It also means that it is not possible to formulate general rules about whether types of marks will be distinctive with any precision. Another consequence of the factual nature of the distinctiveness inquiry is that it is a subject on which different minds may well take different views. In *Doublemint*, Advocate General Jacobs indicated that in many situations ‘an element of subjective judgment’ will often be required in order to determine whether a sign is within the exclusions.⁵¹

3.5 THE APPLICANT’S EVIDENCE

Distinctiveness is assessed by the Registrar or OHIM at the time of examination, or as regards a UK application, in response to opposition or observations.⁵² Distinctiveness is assessed as of the date of application.⁵³ Where an application is made and it is held that the sign lacks distinctiveness for certain goods but not others, it should be refused only as regards the goods for which it lacks distinctiveness.⁵⁴ In deciding whether a sign is

⁵⁰ *DKV Deutsche Krankenversicherung AG v. OHIM*, T-19/99 [2000] ECR II-1. See also *Harbinger v. OHIM*, T-345/99 [2000] ECR II-3525 (CFI), paras. 36–7 (*TRUSTEDLINK* a coupling of generic word and a word indicating desired quality thereof was devoid of distinctive character as regards goods and services relating to electronic commerce); *Sat.1 v. OHIM (SAT.2)*; T-323/00 [2002] ECR II-2839 (para. 49) (*SAT. 2*, a combination of elements each of which was devoid of distinctive character for broadcasting and when combined was not greater than the sum of its parts. On appeal, Case C-329/02 P (AG’s Opinion, 12 Mar. 2004).

⁵² TMA s. 38(2). Opposition at OHIM exists only on relative grounds.

⁵³ *eCopy Inc. v. OHIM*, T-247/01 [2002] ECR II-5301 (CFI). Cf. *Henkel KgaA v. OHIM*, Joined Cases C-456/01P and C-457/01P; *Procter & Gamble v. OHIM*, Joined Cases C-473/01P and C-474/01P (6 Nov. 2003) (paras. 42–4) where Advocate General Colomer suggested that distinctiveness should be assessed both at the date of application and registration, so that a sign distinctive at the filing date should be refused if it has lost its distinctiveness by the date of registration.

⁵⁴ TM Dir. Art. 13; CTMR Art. 38(1); *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case-363/99 (12 Feb. 2004) paras. 112–17 (authority may register for some goods in class but not others but may not register for specific goods only insofar as the goods or services do not possess a particular characteristic. This seems to preclude the British so-called ‘Penguin practice’ allowing registration in the form ‘PENGUIN for books (other than books about penguins)’).

excluded, the tribunal should taken account of all relevant facts and circumstances, including where relevant, opinion poll evidence.⁵⁵

3.5.1 Prior registrations

Applicants often attempt to support their case for registration by showing that similar marks have already been registered. While such evidence is often submitted in support of applications, the courts have stressed that marks always need to be considered on their own merits. It has also been stressed that the Registries are autonomous bodies and that each must decide issues of registration for itself. That is, they should not merely rubber stamp decisions made elsewhere.⁵⁶ British courts have gone one step further and said that evidence about ‘other marks on the Register is in principle irrelevant when considering a trade mark tendered for registration’.⁵⁷ Nevertheless, it seems that prior registrations may still support an application for a mark that is being added to a family of marks.⁵⁸

3.6 ‘NATURE AND NURTURE’: THE PROVISIO

The final matter of importance (which unites the grounds of absolute refusal in section 3, and, at the same time, distinguishes them from subject matter) relates to the fact that section 3(1)(b)–(d) are all subject to a proviso, namely, that a sign which falls within any of the provisions (i.e. is non-distinctive, descriptive, or generic) is not to be treated as invalid if it has, as a result of use, ‘acquired distinctive character’. In other words, the objections in section 3(1)(b)–(d) apply to the ‘inherent’ characteristics of the sign, and can be overcome if the sign comes to be understood by consumers as in fact communicating that the particular goods or services in relation to which the sign is used come from one particular trade origin. Sometimes this distinction between inherent and acquired characteristics of a sign is likened to the characteristics which an individual has from ‘nature’ and those they acquire as a result of ‘nurture’. A word perceived by consumers as intrinsically empty or meaningless (such as *ANDREX* or *NOXEMA*) will be innately distinctive from its ‘nature’, whereas a descriptive word (*LEMSIP* (for lemon drink), or *SHAKE-AND-VAC* (for carpet-cleaning powder), will only acquire ‘distinctive character’, if at all, if there has been

⁵⁵ *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case-363/99 (12 Feb. 2004) (paras. 33–7).

⁵⁶ *Audi Ag v. OHIM*, T-16/02 (3 Dec. 2003) (para. 40) (CFI) (Community not bound by decisions of member states, even decisions made under Directive); *Heron Robotunits GmbH v. OHIM (Robotunits)*, Case T-222/02 (26 Nov. 2003) (para. 52) (national registrations are a factor that can be taken into consideration and provide analytical support for the assessment of a CTM application, but should not be given ‘decisive weight’); *Sykes Enterprises Inc. v. OHIM (Real People, Real Solutions)*, T-130/0 [2002] ECR II-5179 (para. 31) (Office is not bound by its own previous decisions); *Streamserve Inc. v. OHIM* T 106/00 [2002] ECR II-723 (paras. 66–69) (relevance of previous Office decisions). So far, the ECJ has only stated that a decision in respect of the registrability of a particular mark in one member state is irrelevant when another member state is considering registration of the same mark for similar goods: *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004) (para. 43). The question of the relevance of Office practice as regards categories of marks is due to be considered in *Sat.1 v. OHIM*, Case C-329/02P (pending). For criticism of the *Streamserve* case as failing to respect EU principles of non-discrimination and equal treatment, see D. Keeling, ‘About Kinetic Watches, Easy Banking and Nappies that Keep a Baby Dry: A Review of Recent European Case Law on Absolute Grounds For Refusal to Register Trade Marks’ [2003] *IPQ* 131, 158–160.

⁵⁷ *British Sugar v. James Robertson & Sons* [1996] *RPC* 281, 305; *AD2000 Trade Mark* [1997] *RPC* 168; *In re Bongrain SA’s Appn* (21 Mar. 2003) (Pumfrey J) (irrelevant without supporting reasons). See Kerly, paras. 7–17–20, 144–6.

⁵⁸ See Practice Amendment Circular 7/00.

such use as to educate the public that the sign operates to distinguish the goods of one undertaking from those of another.

With these general principles in mind, we now turn to examine in detail the exclusions relating to signs which are intrinsically or innately lacking distinctiveness, are descriptive, or customary. After looking at these three heads, we then turn to consider how signs can be shown to have acquired distinctive character through use.

3.7 DEVOID OF DISTINCTIVE CHARACTER

Section 3(1)(b)/Article 7(1)(b) CTMR provide that trade marks which are devoid of any distinctive character shall not be registered.⁵⁹ The primary function of this exclusion is to exclude marks which do not even fulfill the ‘distinguishing function’. As the ECJ stated in *Linde, Winward & Rado*, distinctive character means ‘for all trade marks, that the mark must be capable of identifying the product as originating from a particular undertaking, and thus distinguishing it from other undertakings’.⁶⁰ The focus is therefore on how the trade mark would be perceived by the relevant public, which consists of average consumers of the goods or services in question.⁶¹ However, the exclusion is probably also to be understood as aimed at the protection of traders (particularly given its application to marks such as colours and shapes). Thus the application of section 3(1)(b) should also involve consideration of whether registration of a sign would confer an unjustified competitive advantage on the applicant.⁶²

Advocate General Colomer has said that Article 3(1)(b) excludes those signs which the average consumer ‘does not identify as reliably indicating the commercial origin of the product’.⁶³ Consequently, the provision excludes from registration those signs which would not be perceived to communicate any message (because they would just be treated as part of the goods, or the appearance thereof),⁶⁴ and those which while perceived as conveying information are not perceived as indicating information as to trade source (for example, where the sign is seen as a product number or perhaps as a slogan urging a person to do something). Accordingly the CFI has frequently stated that the exclusion relates, in particular, to signs ‘which from the point of view of the relevant public are commonly used in trade in connection with the presentation of goods or services or in

⁵⁹ The OHIM has said if there is 1 or 2% distinctive character, the sign is not ‘devoid’. In fact, the Boards of Appeal at the OHIM seems to have a narrower understanding of ‘devoid’ than the British Registry and courts. For example, laudatory words, which are treated by British courts as ‘devoid’, are rather seen by the Boards at the OHIM as falling under Art. 7(1)(c) or (d). *Guidelines concerning Proceedings before the Office for Harmonization in the Internal Market*, part B, para. 8.3.

⁶⁰ *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 C-55/01, [2003] *RPC* (45) 803 [2003] *ETMR* (78) 963 (para. 47).

⁶¹ *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004) (para. 34).

⁶² *Sat.1 v OHIM (SAT.2)*, T-323/00 [2002] *ECR* II-2839 (para. 36). But cf. *Henkel KgaA v. OHIM*, Joined Cases C-456/01P and C-457/01P; *Procter & Gamble v. OHIM*, Joined Cases C-473/01P and C-474/01P (6 Nov. 2003) (para. 78); *Nichols v. Registrar of Trade Marks*, Case C-404/02 (15 Jan. 2004) (paras. 42–6) (AG Colomer).

⁶³ *Nichols v. Registrar of Trade Marks*, Case C-404/02 (15 Jan. 2004) (para. 43).

⁶⁴ *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2003] *ETMR* (63) 807; [2004] *FSR* (4) 65.

respect of which they could be used in that way'.⁶⁵ A sign that is commonly used will not enable consumers immediately and with certainty to distinguish the goods or services of the owner of the mark to which that sign relates from those of other undertakings.⁶⁶ Signs are excluded only if they are 'devoid' of distinctive character: the tribunals have indicated that a minimal degree of distinctive character suffices for the absolute ground not to apply.⁶⁷

Although the tribunals have repeatedly indicated that the same tests are applicable to all marks, whether words, pictures, shapes, or colours, it is useful to look at the way the tribunals deal with these different types of signs. This is because 'the perception of the relevant section of the public is not necessarily the same for exotic marks, such as colours or shapes, as for words or figurative devices which bear no relation to the appearance of the goods'.⁶⁸

3.7.1 Simple signs: letters, numbers, and grammatical signs

In most cases single letters, numbers, and grammatical signs will be treated as 'devoid of distinctive character'.⁶⁹ This is because consumers would not be able to assume that such signs indicated one particular source (and also because it is foreseeable that such signs will be used by other traders).⁷⁰ This reasoning is sometimes extended to combinations of letters and numbers, abbreviations, or initials.⁷¹ When predicting how consumers would react, the Registry and the courts have taken into account factors such as the length of the series of initials, the way the combination would be pronounced, and whether they are presented as initials.⁷² Where numbers, letters, and dates might be taken by average consumers to indicate catalogue numbers, sizes, model numbers, date of production, etc., they

⁶⁵ *Rewe-Zentral v. OHIM (Lite)*, T-79/00 [2002] ECR II-705; *Sat.1 v OHIM (SAT.2)*, T-323/00 [2002] ECR II-2839 (para. 37); *Robert Bosch GmbH v OHIM*, T-79/01 and T-86/01 [2002] ECR II-4881 (para. 19); *BioID v. OHIM*, T-91/01 [2002] ECR II-5159 (para. 23).

⁶⁶ *Sykes Enterprises Inc v. OHIM (Real People, Real Solutions)*, T-130/0 [2002] ECR II-5179 (para. 22), citing *Rewe-Zentral v. OHIM (Lite)* T-79/00 [2002] ECR II-705.

⁶⁷ *SAT.1 Satelliten Ferschen GmbH v. OHIM*, T 323/00 [2002] ECR II-2839 (para. 35); *Société Des Produits Nestlé SA v. Mars UK Ltd* [2003] ETMR (101) 1235 (para. 23) ('If the mark for which registration is sought is distinctive in the relevant sense to any extent then its registration is not precluded by s. 3(1)(b)'); *Crucible Materials Co/440VR* 136/2000-3 (18 Nov. 2002) (OHIM BA) (applies if 'in no way' able to distinguish); *Colgate-Palmolive Co./Vanilla Yellow Sphere*, R880/2002-3 (28 May 2003) (para. 21) (merely the slightest distinctive character is sufficient).

⁶⁸ *Viking-Umwelttechnik GmbH v. OHIM*, T-16/00 [2002] ECR II-3715 (para. 27).

⁶⁹ *Practice Amendment Circular, PAC 5/00, Letters and Numerals*, para. 13; *Sat.1 v OHIM (SAT.2)*, T-323/00 [2002] ECR II-2839 (para. 46) ('2' devoid for broadcasts). Cf. AG Jacobs' Opinion, 12 Mar. 2004, viewing numbers as inherently distinctive. Simple letters, initials, and such might become distinctive if presented in some peculiar or individual manner: *Alfred Dunhill's Trade Mark Application* [1982] RPC 145.

⁷⁰ Note *Caterham Car Sales & Coachworks's Application/Numeral 7*, R63/1999-3 [2000] ETMR 14, 17 (number not registrable because it belongs in the public domain and forms part of the store of signs available to all traders).

⁷¹ Apparently, following *Fuji Photo Film's Application* [1998] ETMR 343, the OHIM accepts two-letter marks unless they are descriptive, and the UK Registry has brought its practice into line with that of the OHIM: *Practice Amendment Circular 5/00*, para. 9. See also *Fuji Photo Film Co/DS R294/2000-3* (31 Oct. 2000) (DS registrable for cameras); *Sun Chemical Co/ SOS*, R773/2002-1, (13 Feb. 2003) (OHIM BA) (SOS registrable for trouble-shooting services in Class 42).

⁷² *BP v. European Petrol* [1968] RPC 54, 62.

will be unregistrable.⁷³ In *AD2000 Trade Mark*,⁷⁴ an application to register AD2000 was rejected on the basis that it was ‘devoid of distinctive character’. While it was recognized that a combination of two letters and a four-figure numeral could be distinctive if it was an ‘idiosyncratic combination’, the court held that AD2000 did not meet this threshold. This was because AD2000 refers to the year which ushers in a new millennium and did not communicate the fact that the goods were those of one particular undertaking.

3.7.2 Colour marks

Simple colour marks, such as light green for chewing gum,⁷⁵ are likely to be treated as devoid of distinctive character.⁷⁶ This is because in the case of colours the sign forms part of ‘the look of the goods’, and consumers are not in the habit of assuming the origin of goods merely from the colour of packaging. Consequently, the ECJ in *Libertel* observed that ‘[a] colour *per se* is not normally inherently capable of distinguishing the goods of a particular undertaking’.⁷⁷ In addition, the ECJ has recognized that there is a strong public interest in favour of keeping colours free. This is because the number of colours actually available is limited and so a small number of trade mark registrations could exhaust the entire range of the colours available (an understanding sometimes referred to as ‘colour depletion theory’). Exclusive trade mark rights over any such colour would potentially create ‘an unjustified competitive advantage for a single trader’.⁷⁸ Consequently, in the case of a colour *per se*, ‘distinctiveness without any prior use is inconceivable save in exceptional circumstances, and particularly where the number of goods or services for which the mark is claimed is very restricted and the relevant market very specific’.⁷⁹ Prior to the judgment in *Libertel*, the CFI had allowed registration of a shade of orange in relation to ‘technical and business consultancy services in the area of plant cultivation, in particular the seed sector’ in class 42.⁸⁰ This exceptional decision may be justified given the relatively narrow scope of the specification to which the mark related.

3.7.3 Shapes

Another area where the exclusion relating to marks that are ‘devoid of distinctive character’ may have an important impact is in relation to shape marks. Although the courts have repeatedly stated that the same test is applicable to shape marks as it applied to word

⁷³ *Caterham Car Sales & Coachworks’s Application/Numeral 7*, R 63/1999–3 [2000] *ETMR* 14, 19 (use of ‘7 on car would be taken to be model number’); see also *Ford Motor’s Application/Tddi*, R33/1999–1 [2000] *ETMR* 679; *Faro Technologies/ CAM2* R 430/2000–1 (15 Sept. 2000). Cf. *Crucible Materials Co/440V*, R136/2000–3 (18 Nov. 2002) (OHIM BA) (440V registrable for metals).

⁷⁴ [1997] *RPC* 168.

⁷⁵ *Wm. Wrigley Jr./Light Green*, R122/98–3 [1999] *ETMR* 214 (the reasoning in this case being consistent with that in *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01, [2004] *FSR* (4) 65).

⁷⁶ *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2004] *FSR* (4) 65.

⁷⁷ *Ibid.*, (para. 65).

⁷⁸ *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2004] *FSR* (4) 65, (paras. 54–5).

⁷⁹ *Ibid.* (para. 66).

⁸⁰ *KWS Saat AG v. OHIM*, T-173/00 [2002] *ECR* II 3843(CFI) (rejecting registration of a shade of orange for installations for drying seeds, agricultural, horticultural, and forestry products, etc. but allowed in relation to ‘technical and business consultancy services in the area of plant cultivation, in particular the seed sector’ in class 42. The CFI took the view that ‘a colour does not attach to the service itself, services by nature having no colour, nor does it confer any substantive value’. The rejection of the mark is being appealed, *sub. nom.* Case 447/02P).

or device marks, because consumer perception of such marks is different, the result of applying the tests will not necessarily be the same.⁸¹ This is because the relevant consumers are unlikely to think of a shape as communicating at all, let alone being indicative of a particular trader's goods.⁸² As Pumfrey J has stated, in contrast with a 'word mark or a device, a mere shape can communicate further information only with difficulty'.⁸³ Consequently, the vast majority of such applications are refused.⁸⁴

In the case of shapes, an assessment of whether the shape is registrable requires first, an assessment as to whether there is anything unusual or idiosyncratic about the shape such that the relevant consumer would notice it and remember it;⁸⁵ and then, if there is such individuality, an assessment as to whether the consumer would think of the shape as indicative of source, rather than being merely functional or decorative. The results of this assessment may change as practices change, and with them consumer perceptions and expectations. Moreover, they may vary from sector to sector: a particular shape could be perceived as a trade mark in one field, but not in another.⁸⁶ However, in most cases, basic geometric shapes will not be noticed by consumers and so will not perform the origin function. It may well be that, in the light of recent ECJ case law,⁸⁷ a third stage of analysis is required: namely, an assessment as to whether the shape is one which needs to be left in the public domain.⁸⁸ However, Advocate General Colomer does not consider such a third stage to be necessary, the 'protective function' in this context being dealt with by the shape exclusions in Article 3(1)(e) of the Directive (which we reviewed in Chapter 36).⁸⁹

⁸¹ *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 C-55/01, [2003] *RPC* (45) 803 (paras. 42, 46, 49); *Glaverbel v. OHIM (Patterned Glass)*, T-36/01 [2002] *OJ OHIM* 2559; *Procter & Gamble v. OHIM* T-63/01 [2002] *ECR* II-5255 (Soap Bar Shape) (para. 40).

⁸² See e.g. *Glaverbel v. OHIM* T-36/01 [2002] *ECR* II-3877; *Procter & Gamble v. OHIM*, T-63/01 [2002] *ECR* II-5255 (Soap Bar Shape) (para. 40); *Unilever NV v. OHIM* T-194/01 (5 Mar. 2003) (para. 44). Whether the public distinguishes goods by reference to shapes is a question of fact: the public, apparently, are used to identifying vehicles by reference to the design of the grille: *Daimler Chrysler Corp v. OHIM* T-128/01 (6 Mar. 2003) para. 42. Where the onus lies is somewhat unclear: it seems that the Office may 'infer' that consumers do not normally see certain sorts of signs as an indication of origin and in such cases 'it is for the applicant for a trade mark to show that consumer's habits on the relevant market are different': *Unilever NV v. OHIM*, T-194/01 (5 Mar. 2003) (para.48).

⁸³ *In re Bongrain Sa's Appn* (unreported, 21 Mar. 2003) (para. 13).

⁸⁴ R. Burrell, H. Beverley Smith, and A. Coleman, 'Three Dimensional Trade Marks: Should the Directive be Reshaped?' in N. Dawson and A. Firth, *Trade Marks Retrospective: Perspective on Intellectual Property*, Vol. vii (2000) 139, 151–6, 166–70 (defending a presumption against such distinctiveness on policy grounds).

⁸⁵ *Colgate-Palmolive Co./Vanilla Yellow Sphere*, R880/2002–3 (28 May 2003) (paras. 32, 35) (OHIM BA) (explaining that the requirement of a 'special and unusual design' is not an independent pre-requisite but part of the assessment of whether the particular shape can lead the consumer 'to recognize them as a sign and not merely a product'.) For an example of a shape that succeeded, see *Benson Holdings Ltd/Flexible feeding bottle*, R337/2000–1 (19 Dec. 2000).

⁸⁶ The tribunal should therefore give an assessment in relation to all goods contained in the application: *Colgate Palmolive*, R215/2002–3 (27 Nov. 2002).

⁸⁷ *Wrigley v. OHIM (Doublemint)*, Case C-191/01P (23 Oct. 2003); *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 C-55/01, [2003] *RPC* (45) 803; *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2004] *FSR* (4) 65.

⁸⁸ *Ovoid Tablet*, T194/01 (para. 66); *Colgate-Palmolive Co./Vanilla Yellow Sphere*, R880/2002–3 (28 May 2003) (para. 40) ('there is a general interest in keeping simple basic designs freely available . . . Registering shapes which are very close to the commonly-used basic shapes would increase the risk of granting to one operator alone, by means of trade-mark law, exclusive right which could hinder competitors in the market for the goods concerned'.)

⁸⁹ *Nichols v. Registrar of Trade Marks*, Case C-404/02 (15 Jan. 2004) (para. 43).

Where a shape is perceived as being functional (irrespective of section 3(2)), it is almost certain to be treated as inherently non-distinctive.⁹⁰ Consumers will see a functional shape as doing a job rather than indicating source. Moreover, functional shapes are liable to be needed by other traders if they are to compete effectively.

Many non-functional shapes will also be devoid of distinctive character. In *Procter & Gamble v. OHIM*, a bar shaped as a rectangular parallelepiped with rounded edges for soap was not registrable.⁹¹ The CFI explained that the claimed shape was only a slight variation on the shapes commonly used for soaps and so would not enable the relevant public ‘to distinguish *immediately and with certainty* the applicant’s soap from those having a different trade origin’.⁹² Even if the sign was sufficiently idiosyncratic to ‘hold the consumer’s attention’ that would not of itself make the shape devoid of distinctive character. This is because, according to the CFI, the shape would be ‘primarily interpreted as a functional feature making the soap easier to grip or as an aesthetic finish’. Similar reasoning led to the refusal of registration for: the shape of a DUALIT toaster,⁹³ for a floral shape, comprising six lobes, for cheese (Saint Albray);⁹⁴ the cylindrical shape of a MAG torch;⁹⁵ and an abstract design comprising countless tiny strokes for application to the surface of glass products (showers, windows, etc.).⁹⁶ (See Figure 37.1.) In a rare counter-example, where the CFI allowed registration concerned the distinctive shape of the grille of a jeep, the CFI said that consumers had come to understand car-grilles as signs of origin, so the applicant’s grille could serve as a trade mark.⁹⁷ (See Figure 37.2.)

3.7.4 Get-up and trade-dress

Although it is not possible to say that the overall packaging of a product (‘get-up’ or ‘trade-dress’) can never be inherently distinctive, in most cases these matters will be devoid of distinctive character.⁹⁸ This is for the simple reason that (as with shapes) average consumers do not treat the majority of packaging or get-up as indicating source. Rather they treat packaging as comprising protective material which has decorative, attractive, or eye-catching features. In part, of course, this is a matter of current social practice—consumers have long been invited to focus on the literature on packaging as

⁹⁰ In *Philips v. Remington* [1999] RPC 809, 819 the Court of Appeal said that the primary meaning of the three-headed rotary shaver was ‘a three-headed rotary shaver of the design shown’ and there was no evidence that it had any other meaning.

⁹¹ *Procter & Gamble v. OHIM* T-63/01 [2002] ECR II-5255 (Soap Bar Shape).

⁹² *Ibid.*, T-63/01, (para. 43).

⁹³ *Re Dualit’s Trade Mark Application* [1999] RPC 890 (Lloyd J held that an application which related to the shape of a toaster lacked distinctive character: there was nothing about the shape alone which, apart from evidence of use, makes it inherently distinctive as a badge of origin of the applicant’s products).

⁹⁴ *In re Bongrain Sa’s Appn* (unreported, 21 Mar. 2003).

⁹⁵ *Mag Instrument Inc v. OHIM*, T-88/00 [2002] ETMR (61) 665 (on appeal, as Case C136/02).

⁹⁶ *Glaverbel v. OHIM (Patterned Glass)*, T-36/01 [2002] OJ OHIM 2559.

⁹⁷ *DaimlerChrysler AG v. OHIM (Grille)*, T-128/01 (6 Mar. 2003).

⁹⁸ According to Robert Walker LJ, ‘Get-up’ is ‘a convenient (though imprecise) expression for the characteristic style of a product which may be produced by the use of colouring, typography, materials, finishing and all other elements—apart from the text itself—that go into modern commercial design’. *Procter & Gamble v. Registrar of Trade Marks* [1999] RPC 673, 676.

Fig. 37.1 Glaverbel's 'chinchilla' design for glass

Fig. 37.2 The jeep design, held to possess distinctive character in *Chrysler Corp v. OHIM*

indicating source: as a result, the overall look of the get-up is ignored, at least in this regard.⁹⁹

In *Proctor & Gamble v. Registrar of Trade Marks*, Robert Walker LJ confirmed the rejection by the Registrar of applications for registration of a three-dimensional bottle bearing a label for floor-cleaning products in Class 3. The hearing officer described the application as having three component parts, namely, the shape of the bottle, the pattern on the label, and the colours applied to both. Having concluded that none of the three components was individually distinctive, the hearing officer observed of the combined effect that:

The shape appears in relation to the label exactly as the shape of any container for these

⁹⁹ This is well illustrated by *Tetra Laval Holdings/Eight-sided carton*, R838/2002–1 (23 Sep. 2003) where the OHIM's Board of Appeal permitted registration of an eight-sided shape for packaging in class 16 because the relevant public was 'the filling and packing industry' but rejected the application as regards milk products in class 29 because the relevant public was the general public, which would not notice the difference between the applicant's carton and the conventional four-sided carton, or if it did, would not attribute trade mark significance to it.

goods would appear in relation to the label. The position of the label is precisely where one would expect it to be. Neither of these elements are [sic] any more distinctive together than they are apart. Similarly, there is nothing distinctive about the fact that the devices indicating the sparklingly clean floor appear on the label. What remains is the arrangement of the colours red, yellow and green on the label and the appearance of these colours against the yellow and red of the container itself. I have already commented on the very small number of colours suitable for use on containers for these products. Given this small number of colours, I believe that this particular arrangement of them is not particularly novel and no less likely to be wanted by other traders than any other arrangement. The fact that alternative colour arrangements might be found does not assist.¹⁰⁰

Affirming the Registry's conclusion, Robert Walker LJ emphasized that in order to overcome an objection based on section 3(1)(b) the applicant's trade mark must constitute 'a visible sign or combination of signs which can by itself *readily* distinguish one trader's product—in this case an ordinary, inexpensive household product—from that of another competing trader. Product A and Product B may be different in their outward appearance and packaging, but if the differences become apparent only on close examination and comparison, neither can be said to be distinctive'. Here the combination was not distinctive but typical of the get-up of products used for cleaning different kitchen and bathroom surfaces.

In contrast, in *Nestlé Waters France v. OHIM (Bottle shape)*, the CFI allowed the registration of the shape of a bottle for non-alcoholic beverages.¹⁰¹ The CFI took the view that because of repeated attempts over a number of years by various traders to educate consumers into treating bottle shapes as trade marks, the average consumer is now 'quite capable of perceiving the shape of the packaging of the goods as an indication of commercial origin' if the shape possessed characteristics which are sufficient to hold their attention. The CFI reversed the OHIM's view that the bottle was commonplace, finding that the whole formed a design 'which is striking and easy to remember'. It was a combination capable of holding the public's attention and distinguishing the goods from those with a different commercial origin. As a result, the mark had a minimum degree of distinctiveness and fell outside Article 7(1)(b) of the Regulation (see figure 37.3).

The touchstone, therefore, appears to be whether traders in the sector have educated consumers to view packaging as indicative of commercial origin. If this has been achieved, then whether particular packaging is devoid of distinctive character is likely to turn on whether the get-up is sufficiently noticeable in the circumstances to catch the attention of consumers. If this is not the case, as where a compact disc of a sound recording is suddenly sold in unusual packaging, the position is problematic. On the one hand, the packaging will be memorable. On the other, it is unlikely to be perceived as an

¹⁰⁰ *Procter & Gamble v. Registrar of Trade Marks* [1999] RPC 673, 680 per Robert Walker LJ. See also *S. M. Jaleel's Trade Mark Application* [2000] RPC 471 (Appointed Person assessing shape of 'Chubby' bottle as 'visually unsurprising' and therefore lacking inherent distinctiveness); *Procter & Gamble's Application/Green & White Wash Tablet*, R718/1999-1 (20 Jun. 2000) (para. 21) (shape and visual appearance cannot perform any sort of trade mark function if they are commonplace, banal, and ordinary); *British Petroleum Co. plc/Oil pack large minale (3-D Mark)*, R60/98-2 [1999] ETMR 282; *H. J. Heinz Co.'s Application/Bottle*, R488/1999-2 (3 Aug. 2000), (para. 25) (acknowledging that there is a limited supply of bottle shapes, having regard to size, packaging, storage, and other considerations).

indication of origin. In one case at the OHIM, where registration was sought for a bottle for goods not normally sold in bottles, the Board found the sign to be devoid of distinctive character.¹⁰²

3.7.5 Names and signatures

Traditionally under UK law, surnames have been considered to be non-distinctive and thus unregistrable.¹⁰³ In part the decision to exclude surnames was motivated by the inconvenience that the grant of a right would have upon other traders who shared the same name. The courts also stressed that third parties who made legitimate use of their names ought not to be forced to rely on a defence equivalent to that contained in section 11(2).¹⁰⁴ However, under the 1994 Act more emphasis is likely to be placed on the explanation that in the case of common forenames or surnames, consumers are unable to assume that the name operates to indicate one *particular* supplier. Guidance will be provided by the ECJ in due course in response to a reference from the English High Court in *Nichols Trade Mark Application*.¹⁰⁵ In his opinion, Advocate General Colomer stated that the test employed to determine whether names are devoid of distinctive character is no

different from the general test, which is whether the specific name for which the registration is sought would be understood by consumers in the relevant sector as indicating commercial origin of the goods or services.¹⁰⁶

In determining whether a surname is distinctive, the Registry and courts have taken into account how common the surname is. (Here domestic and international telephone directories and electoral rolls have proved useful resources.) In addition, the tribunals have also taken into account the types of goods or services for which registration was sought. In certain fields, such as with solicitors or coach companies, the use of surnames is common and the Registry sees this as indicating that common surnames will not distinguish. The Advocate General has indicated that both, the commonness of the surname and the sector, are relevant factors in the determination of whether a surname is devoid of distinctive character (but simultaneously stated that commonness is not decisive).¹⁰⁷ While commonness is relevant to the consumer's likely appreciation of the name as an indication of origin, the fact that the first person to register a common name obtains an 'unfair advantage' over other traders who might wish to use the name, is, in the Advocate General's view, irrelevant.¹⁰⁸

Similar considerations apply to forenames. In certain fields, such as hairdressers, cafés, beauty salons, and massage services, forenames are very commonly used: so CATH's or ALI's for restaurant services, or TONI's or GUY's for hairdressing services, would be unregistrable in the absence of acquired distinctiveness through use.¹⁰⁹ However, full personal names are more likely to be treated as distinctive, unless they are extremely common (such as JOHN SMITH).

One peculiarity should be noted here: a full name of a famous personality may well be devoid of distinctive character. In *Elvis Presley Trade Mark*,¹¹⁰ the Court of Appeal refused to allow registration of ELVIS and ELVIS PRESLEY for toiletries, perfumes, cosmetics, and soaps. It had been argued by the applicants that as a result of changes in public awareness about character merchandising, that consumers seeing the name ELVIS would assume that the product to which it was attached was 'genuine'. That is, they would assume that the goods originated from Elvis's estate or from someone with rights granted by the estate. Laddie J was not willing to accept that this was an accurate portrayal of how the general public thought about the way the names of celebrities were used, and the Court of Appeal affirmed that view: people treat a name as part of the product which they are purchasing not as a feature that differentiates the goods of one trader from those of another. For consumers, the goods are memorabilia or mementos of which the name is an essential component, rather than being a different class of consumable commercial goods which people purchased because they came from a specific trader.¹¹¹

In those cases where a name itself lacks distinctiveness, registration may nevertheless be obtained where an application is for the name in conjunction with a device or represented

¹¹¹ [1999] RPC 567, 585. *Morcom et al.* criticize the decision and emphasize it was decided under the 1938 Act and may not apply under the 1994 Act.

in a special or particular manner so that the whole is distinctive. Perhaps the most obvious example of this is where the name takes the form of a person's signature. Signatures were specifically treated as registrable under the 1938 Act because they were seen as 'a substantially unique and frequently highly distorted way of writing the author's name. They are in a sense a private graphic tied to one person'. Under the 1994 Act a 'signature' may be registrable even if it is not written in a distinctive graphic style—a simple cursive rendition of Elvis's signature 'Elvis A. Presley' would probably be distinctive.¹¹² This may be the case even if the signature is not authentic.¹¹³

3.7.6 Slogans

As we will see, slogans will often be unregistrable because they are descriptive.¹¹⁴ However, even if the slogan is not exclusively descriptive, it may lack distinctive character. In *Nestlé v. Mars UK*,¹¹⁵ the Court of Appeal was asked to consider the inherent registrability of HAVE A BREAK for confectionery. An attempt to register the same sign had failed under the 1938 Act,¹¹⁶ and an application under the new law met with the same result. The Court of Appeal agreed with the approach and conclusions of the hearing officer that the slogan would be readily understood as 'an origin neutral invitation to consume a snack . . . whether the use is in an advertisement or on the packaging of the product'. The OHIM Board of Appeal held 100 PER CENT IRRESISTIBLE unregistrable for various foodstuffs,¹¹⁷ and the CFI rejected REAL PEOPLE, REAL SOLUTIONS for technical support services in the computer industry on the grounds that the slogan would be perceived merely as promotional.¹¹⁸ In contrast, the CFI indicated that DAS PRINZIP DER BEQUEMLICHKEIT (meaning 'the principle of comfort') would only be excluded under Article 7(1)(b) of the CTMR if it was a term 'commonly used in business communications and, in particular, in advertising'.¹¹⁹

3.8 DESCRIPTIVE MARKS

The second category of marks excluded from registration relates to what may be called 'descriptive marks'. More specifically, section 3(1)(c)/Article 7(1)(c) CTMR excludes from

¹¹² *Elvis Presley Trade Marks* [1999] RPC 567. *In re Applications by the Estate of the Late Diana, Princess of Wales* (25 Jan. 2002) (Mr. A. James) (Diana signature registrable, signatures being 'a unique sign of authenticity').

¹¹³ *Elvis Presley Trade Marks* [1999] RPC 567, 586 (though note that it was presumed to be authentic at 576; and was refused on relative grounds, 587).

¹¹⁴ In *DKV Deutsche Krankenversicherung v. OHIM*, Case C-104/00 P [2002] ECR I-7561 Advocate General Colomer indicated that word marks should in general be assessed first under Art. 7(1)(c) (para. 43) (AG). British courts have frequently found that word marks that were not descriptive under the *Baby Dry* test, were devoid of distinctive character: see, e.g. *Cycling IS . . . Trade Mark Application* [2002] RPC (37) 729; *Athermal Trade Mark* (24 Feb. 2003) (Appointed Person, Kitchin QC).

¹¹⁵ *Société des Produits Nestlé SA v. Mars UK* [2003] ETMR (101) 1235 (CA).

¹¹⁶ *Have a Break Trade Mark* [1993] RPC 217.

¹¹⁷ *Procter & Gamble Co/ 100% Irresistible*, R939/2002-2 (19 May 2003) (para. 9) (stating the Art. 7(1)(b) bars from registration signs which exclusively convey an 'informative, laudatory or promotional message').

¹¹⁸ *Sykes Enterprises Inc v. OHIM* T-130/0 [2002] ECR II-5179 (Real People, Real Solutions) (paras. 28, 30) (not descriptive, but devoid of distinctive character).

¹¹⁹ *Erpo Möbelwerk GmbH v OHIM* T-138/00 [2001] II ECR 1259 (The Principle of Comfort) (para. 46) (CFI) (the CFI also held the phrase not to be descriptive). The OHIM has appealed the decision: Case C-64/02P (pending). Followed in *Masterfoods Ltd v. Controller of Patents, Designs and Trade Marks* [2003] ETMR (84) 1016 (H Ct Ireland) (Kelly J holding TOP BREEDERS RECOMMEND IT registrable for dog food). UK Practice is explained in PAN 7/02 *Slogans* (18 June 2002).

registration trade marks which consist *exclusively* of signs or indications which may serve, in trade, to designate the (i) kind, quality, quantity, (ii) intended purpose, (iii) value, (iv) geographical origin, (v) the time of production of the goods or of the rendering of the service, or (vi) other characteristics of the goods or service. Before looking at each of these subcategories in more detail, it is necessary to make a few general comments.

While a number of different types of marks are excluded from protection by section 3(1)(c), they all consist of signs that *characterize* or *describe* goods or services. As indicated above, it is now clear that the exclusion of marks which characterize goods or services is informed not merely by the fact that such signs would not of themselves be taken or understood by consumers to indicate the origin of the goods (the distinguishing function),¹²⁰ but also by a desire to protect traders (the protective function).¹²¹ Both functions need to be considered in the application of section 3(1)(c).

3.8.1 Exclusively

Trade marks are only excluded from registration by section 3(1)(c) if they consist *exclusively* of signs which characterize the goods and services. This gives rise to the question: what is meant by ‘exclusively’?

One possible reading of ‘exclusively’ is that it means that *the whole* of the mark must be descriptive for it to be excluded. The converse of this is that if it can be shown that part of a mark is non-descriptive, then it will fall outside the remit of the section, as long as that part is not *de minimis*. Thus, marks that are made up of descriptive and non-descriptive matter may be protected. For example, DUBOSILK would not be treated as being ‘exclusively’ descriptive of silk goods because while SILK is descriptive, DUBO is invented.¹²² Ultimately, in order to fall outside the scope of the section, it is necessary for there to be an additional element which renders the totality of the mark non-descriptive. In the famous *Baby Dry* case (where the ECJ held the words BABY DRY not exclusively descriptive of diapers) the ECJ suggested that ‘any perceptible difference’ between the applicant’s sign and a descriptive term or terms is ‘apt to confer distinctive character on the combination enabling it to be registered as a trade mark’. While the words BABY and DRY each alluded to the function of diapers, because of ‘the syntactically unusual juxtaposition’ it was not a familiar expression for designating nappies nor describing their essential characteristics. The phrase was a ‘lexical invention, bestowing distinctive power on the mark so formed’.

Subsequent cases have sought to elaborate the level of ‘difference’ that will suffice to keep otherwise descriptive words outside the section 3(1)(c) exclusion. In *DKV*, Advocate General Colomer proposed that ‘a difference should be considered to be perceptible if it affects significant elements either of the appearance of the mark claimed or its semantic content’.¹²³ In *Doublemint*, Advocate General Jacobs stated that the degree of addition or alteration required to make an otherwise descriptive term registrable (as no longer

¹²⁰ As Lord Simonds explained in *Yorkshire Copper Work’s Trade Mark Application* (1954) RPC 150 ‘the more apt a word is to describe the goods of a manufacturer, the less apt it is to distinguish them from the goods of others’.

¹²¹ *Wrigley v. OHIM (Doublemint)*, Case C-191/01P (23 Oct. 2003) (para. 32) (ECJ).

¹²² *Hallgarten* (1949) 66 RPC 105, 106; *Crucible Materials Co/440V*, R136/2000–3 (18 Nov. 2002) (OHIM BA) (440V registrable for metals, because while ‘V’ stands for Vanadium and thus indicates wear resistance ‘440’ was non descriptive).

¹²³ *DKV Deutsche Krankenversicherung v. OHIM*, Case C-104/00 P, [2002] ECR I-7561, para. 51 (AG).

comprising exclusively terms which may serve as descriptions, etc.) ‘must in my view be greater than that which renders two marks similar rather than identical’.¹²⁴ In *Campina Melkunie BV v. Benelux-Merkenbureau*, the ECJ stated that the mere combination of elements which are each descriptive will not normally create a neologism which is registrable. Rather there must be some ‘unusual variation, in particular to syntax or meaning’ which produces an impression of the relevant consumer of something which is ‘sufficiently far removed from that produced by the mere combination of meanings lent by the elements of which it is composed, with the result that the word is more than the sum of its parts’.¹²⁵ The application of this test would leave the words *BABY DRY* as registrable for nappies, while rendering *DOUBLEMINT* unregistrable for chewing gum. In the former case the ‘addition’ was the ‘unusual syntactical features’ rendering the signs ‘more than the sum of its parts’. In the latter, the subtraction of the space left the sign as no more than a designation of the characteristic of it being mint-flavoured.

3.8.2 Multiple meanings

The requirement of ‘exclusivity’ does not mean that a sign is only excluded if all possible meanings of a sign fall within the exclusion. Consider, for example, a word with two or more meanings such as *PEN* (referring to a writing implement, a female swan, and a small enclosure for animals). In assessing whether *PEN* would be registrable for writing implements, the tribunal should not be simply content to find that there is one signification—that of a female swan—which is not excluded. If that were the case, then the existence of a single obscure meaning would render the mark not exclusively descriptive (and hence registrable). In *Doublemint*, the CFI indicated that a sign is only descriptive if it enables the public ‘immediately and without further reflection to detect a description of the characteristics of the relevant goods’¹²⁶: it thus held that the ambiguity in the types of mintiness (spearmint, peppermint) and the notion of doubling (the types or strength) rendered *DOUBLEMINT* registrable. On appeal, the ECJ rejected that approach, stating that a sign is excluded from registration if ‘at least one of its possible meanings designates a characteristic of the goods concerned’.¹²⁷ Following the reasoning of the Advocate General, the test in Article 7(1)(c) is not whether the sign is ‘exclusively descriptive’ but rather whether the trade mark consists exclusively of signs or indications which may have a descriptive capacity. The mere existence of another, non-descriptive meaning, is irrelevant.¹²⁸

¹²⁴ *Wrigley v. OHIM (Doublemint)*, Case C-191/01P [2003] *ETMR* (88) 1068 (para. 77) (A.G.).

¹²⁵ Case C-265/00 (12 Feb. 2004); see also *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 (12 Feb. 2004).

¹²⁶ According to the Advocate General in Case C-191/01P [2003] *ETMR* (88) 1068 (para. 41).

¹²⁷ *Streamserve Inc v. OHIM*, T-106/00 [2002] *ECR II*-723 (para. 42).

¹²⁸ Many decisions will need to be reviewed: e.g. *Easybank v. OHIM*, T-87/00 [2001] *ECR II*-1259 (para. 32) (CFI) (*EASYBANK* thought not descriptive of on-line banking services); *New Born Baby* T-140/00 [2001] *ECR II*-2927 (*NEW BORN BABY* not descriptive of dolls); *Playboy TV UK Ltd/The Adult Channel*, R722/2000-4 (3 Dec. 2001) (*THE ADULT CHANNEL* registrable for broadcasting services, because it merely alludes to the erotic material broadcast); *Bay West Paper Corp/Eco-Soft*, R1002/2002-4 (8 Sept. 2003) (*ECO-SOFT* was registrable for paper tissues, because the consumer would receive multiple messages, that the goods are ecological and soft or economical and soft or smooth and cheap or light eco-products) and *Bettys & Taylors Group/Rich Italian*, R834/2002-1 (23 Oct. 2003) (*OHIM BA* held *RICH ITALIAN* was registrable for coffee because ambiguous meanings are not descriptive).

3.8.3 'May serve': the element of futurity

Article 3(1)(c) of the Directive excludes from registration trade marks which consist of signs or indications *which may serve*, in trade, to designate the characteristics of the goods or service. The requirement that the tribunal should not only consider the current use of a term, but also its future associations, was recognized by the ECJ in *Windsurfing*, where the Court said that the relevant tribunal was to ask whether there was 'an association in the mind of the relevant class of persons between the geographic name and the category of goods in question', or where there was none at the relevant date (i.e. the date of application) 'whether it is reasonable to assume that such an association may be established in the future'.¹²⁹ In contrast, the ECJ in *Baby Dry* formulated a test based around descriptions in 'current parlance'. Any doubt cast by this on the *Windsurfing* approach has been removed by the *Doublemint* decision. There the ECJ stated that for the exclusion in Article 7(1)(c) of the CTMR to operate it is not necessary for the sign in question to actually be in use as a description of the goods or their characteristics: it is sufficient 'that such signs could be used for such purposes'.¹³⁰ The test therefore has an element of 'futurity' about it.

3.8.4 Broad specifications and disclaimers

A final general point worth noting is that when considering whether a sign is excluded, the tribunal should consider it in relation to each and every category of goods included in the specification. In many cases, a sign will be excluded only in relation to some categories of goods or services and not others. However, an application will be refused registration if it is descriptive of the characteristics of any of the goods or services in a specific category of the specification. So if an application relates to ORANGE for 'beverages', it will be refused registration on the grounds that it is descriptive (of orange-flavoured drinks) even though it would not be descriptive of apple-flavoured drinks.¹³¹ In some cases, an applicant may be able to avoid such an objection by amending the application to 'apple drinks' but not, it seems, to 'beverages (other than those made from, coloured or flavoured orange)'.

3.8.5 Excluded significations

With these general points in mind, we now turn to look at the categories of descriptive marks excluded by section 3(1)(c).

(i) *Kind, quality, or quantity*. The first group of marks excluded from registrability are those which consist exclusively of signs which may serve to designate the 'kind, quality, or quantity' of goods and services. For the most part, these provisions are self-explanatory, though, given the changing understandings of the functions of section 3(1)(c), care must be taken in relying on previous case law, even that decided since 1994. Undoubtedly, the greatest problem faced by a tribunal in this context is that of differentiating between

¹²⁹ Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779; *Sat.1 v OHIM (SAT.2)*, T-323/00 [2002] ECR II-2839 (para. 37) ('or in connection with which there exists, at the very least, concrete evidence justifying the conclusion that they are capable of being used in that manner').

¹³⁰ *Wrigley v. OHIM (Doublemint)*, Case C-191/01P (23 Oct. 2003) (para. 32) (ECJ).

¹³¹ *DaimlerChrysler AG v. OHIM* T- 355/00 [2003] ETMR (87) 1050 (where TELE AID was found descriptive of repair services for automobiles even though that category could include some situations not involving distance; but finding the words not descriptive of electrical devices for transferring data because use of such devices in remote assistance was one of many possible areas of use).

unregistrable terms (that are ‘capable of being used by other traders as’) descriptions, and registrable allusions and suggestions. In *Doublemint*, Advocate General Jacobs tentatively proffered three guidelines,¹³² and while the ECJ made no observations as to them, we consider that they are helpful way of analysing particular marks.

The first guideline requires the competent authority to consider the way in which a term relates to a product, service, or one of its characteristics. The ‘more factual and objective that relationship’ the more likely it is to be unregistrable; the ‘more imaginative and subjective’ the relationship, the more likely the term is to be registrable. *DOUBLEMINT* implied a factual relationship with the product—doubly of mint flavour—so it was at the unregistrable end of the spectrum.¹³³ In contrast, the CFI treated *ULTRAPLUS* as registrable for ovenware.¹³⁴

The second guideline concerns the way the message is conveyed. The Advocate General said that the tribunal should look at how immediately the meaning is perceived. Here the contrast is between terms which are ordinary, definite, and down-to-earth and those that require the skills of a cryptic-crossword enthusiast to detect any connection. Once again, *DOUBLEMINT* was in the former category. In contrast, the UK Court of Appeal has held that *E.S.B.* (an abbreviation of *EXTRA STRONG BITTER*) was protectable for bitter beer.¹³⁵

Finally, Advocate General Jacobs suggested that the tribunal should take into account the significance of the characteristic in relation to the product (or service). He contrasted characteristics which were essential or central to a product, as flavour would be for chewing gum, with ‘purely incidental or arbitrary’ characteristics (for example the shape or colour of chewing gum). If a designation related to the former, it would be unregistrable, if the latter the case for refusing registration would be weaker. Given that flavour was a salient characteristic of chewing gum, *DOUBLEMINT* was clearly at the unregistrable end of the spectrum. Similarly, *FROOT LOOPS* would be treated as descriptive of cereals.

Applying the three guidelines, Advocate General Jacobs concluded that the application to register *DOUBLEMINT* for chewing gum was properly rejected. The fact that the particular variety of mint, or the mode of doubling was unclear did not detract from the conclusion that the sign designates the characteristic of the goods, that is, doubled mintiness. The three factors can also be employed to explain the apparent conflict between the UK decision that *TREAT* was unregistrable for dessert sauces and the CFI decision that *ULTRAPLUS* was registrable for ovenware.¹³⁶ While both *TREAT* and *ULTRAPLUS* have a vague relation to the products, the meaning of *TREAT* is much more immediate than *ULTRAPLUS* and relates more directly to the characteristics of a dessert sauce than *ULTRAPLUS* does to ovenware.

¹³² *Wrigley v. OHIM (Doublemint)* Case C-191/01P [2003] *ETMR* (88) 1068 (para. 61) (‘I would not claim that list to be final or exhaustive’) (AG).

¹³³ Cf. *DaimlerChrysler AG v. OHIM* T-355/00 [2002] *IP & T* 928 (*Tele Aid*) (para. 28) (seeing the test as whether there is a ‘sufficiently direct and specific association’ between the sign and the goods and services).

¹³⁴ *Dart Industries Inc v. OHIM*, T-360/00 [2002] *ECR* II-3867 (*UltraPlus*) (para. 27) (‘When an undertaking extols, indirectly and in an abstract manner, the excellence of its products by way of a sign such as “UltraPlus”, yet without directly and immediately informing the consumer of one of the qualities or specific characteristics of the ovenware, it is a case of evocation and not designation’). Although laudatory terms may have a rather vague relation to the products, they will usually be unregistrable because of the second guideline, namely that the meaning is immediate.

¹³⁵ *West (Eastenders) v. Fuller Smith & Turner* [2003] *FSR* (44) 816 (though the case was based on an application of *Baby Dry* and may need reviewing in the light of *Doublemint*).

¹³⁶ *British Sugar v. James Robertson & Sons* [1996] *RPC* 281; *Dart Industries Inc v. OHIM* T-360/00 [2002] *ECR* II-3867 (*UltraPlus*), (para. 27).

Although section 3(1)(c) is most frequently applied to word marks, there is no reason why it should not also be applied to pictures, shapes, colours, and other exotic marks. In joined cases *Linde AG, Winward Industries & Rado Watch Co Ltd*,¹³⁷ the applicants sought to register three dimensional marks comprising the shape of a forklift truck, a torch, and a watch. The ECJ held that Article 3(1)(c) of the Directive was equally applicable to shape marks. Although the Court did not provide any examples, two obvious ones are the bone shape of BONIO dog biscuits, or the plastic lemon shape used by Reckitt's for their JIF lemon juice. In a UK decision, a mark comprising 'a transparent bin or collection chamber forming part of the external surface of a vacuum cleaner' was descriptive of the characteristic of the cleaner that it was 'bagless' and hence excluded.¹³⁸

(ii) *Intended purpose.* A mark which describes what the product does, suggests what the consumer is to do with the product, or outlines what happens when the product is consumed will not be registrable. Consequently, PERFECT BROW was held to be unregistrable for cosmetics because it was descriptive of the intended purpose of those products, namely, 'to render flawless the eyebrows, the eyelashes and the forehead'.¹³⁹

A word which designates the intended purpose of the goods or services will be caught by section 3(1)(c) even if the goods or services can also be used for other purposes. Thus in a case at the OHIM, FOODSAVER was held to be descriptive of a vacuum-packing machine for preserving food even though the machine could also be used for safely storing clothes.¹⁴⁰ In looking at the intended purpose, the court considers the matter from the point of view of the average consumer, rather than taking into account more marginal viewpoints.

(iii) *Value.* Trade marks which consist exclusively of signs that refer to the value of the goods or services will not be registrable. The reason for this is that consumers are unlikely to treat references to value as indications of origin. The provision also ensures that other traders are free to use common words and expressions to refer to things such as price and value. On this basis, in a pre-1994 case, an application to register BUDGET for car rental services was held to indicate the value of the service and thus to be unregistrable.¹⁴¹

(iv) *Geographical origin.* Trade mark law has long been reluctant to grant protection to signs that consist of geographical names and places.¹⁴² As Lord Simonds LC said, a manufacturer 'is not to claim for his own a territory, whether country, county, or town, which may in the future if it is not now, be the seat of manufacture of goods similar to his own'.¹⁴³ In the past, the prohibition on protecting names of geographical origin has meant that references to continents, countries, cities, towns, rivers, and occasionally even streets have been refused.

While many marks that consist of geographical names have been refused registration, it should not be assumed that there is a blanket prohibition on the registration of all

¹³⁷ *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01 C-54/01 C-55/01, [2003] ETMR (28) 354 (AG Colomer); [2003] RPC (45) 803.

geographical names. As Rigby LJ noted over a century ago, 'a word does not become a geographical name simply because some place upon earth's surface has been called by it'.¹⁴⁴ In *Windsurfing Chiemsee* the question before the ECJ was whether the word CHIEM-SEE, the largest lake in Bavaria, could be a trade mark for sports clothing or whether such a mark fell within Article 3(1)(c) of the Directive.¹⁴⁵ The ECJ said that the tribunal must assess whether a geographical name designates a place which is currently associated in the mind of the relevant class of persons with the category of goods concerned, or whether it is reasonable to assume that such an association may be established in the future.¹⁴⁶ As the ECJ explained, the exclusion does not necessarily preclude the registration of geographical names which are unknown to the relevant class of persons—or at least unknown as the designation of a geographical location—or of names in respect of which, because of the type of place they designate (say, a mountain or lake), such persons are unlikely to believe that the category of goods concerned originates there.¹⁴⁷

If there is an established connection between the place and the products in question, registration will normally be refused. In the *Windsurfing Chiemsee* case, the ECJ observed that the connection was not necessarily confined to a belief that the goods were *manufactured* in a particular place but 'might depend on other ties, such as the fact that the goods were conceived and designed in the geographical location concerned'.¹⁴⁸ For example, an application to register SAVILE ROW for spectacle frames was refused because of the proximity that spectacles had to the goods for which Savile Row in London is famous (namely, tailors' services), both being fashion items.¹⁴⁹

One key factor in deciding whether a sign of geographical origin should be excluded is the size of the place, since this affects how consumers are likely to understand the sign (and, in turn, whether other traders are likely to want to use it).¹⁵⁰ The larger the place, the more likely it is that another trader would wish to use the name. Hence the reluctance to register EUROLAMB for meat,¹⁵¹ or NORDIC for buildings and building materials,¹⁵² and the willingness to register TOTTENHAM for various goods (all relating to Tottenham Hotspur Football Club).¹⁵³

Where a connection exists between place and the products in issue, a realistic assessment should be made of the likelihood of other traders coming to trade in the locality. Thus, THE GLENLIVET was deemed to be registrable for water on the basis that there were many other places where water bottlers could operate.¹⁵⁴ In contrast, where there is no connection, such as with TENERIFFE for boiler plates, MONTE ROSA for cigarettes,

¹⁴⁴ *Magnolia Metal's Trade Mark* [1897] 2 Ch 371, 14 RPC 621, 627. ¹⁴⁵ [1999] ECR I-2779.

¹⁴⁶ [1999] ECR I-2779, 2824-5 (paras. 29–31). ¹⁴⁷ [1999] ECR I-2779, 2825 (para. 33).

¹⁴⁸ [1999] ECR I-2779, 2826 (para. 36). ¹⁴⁹ *Savile Row Trade Mark* [1998] RPC 155.

¹⁵⁰ According to the *Practice Amendment Circular 7/99* the UK Registry relies on the following guidelines: a place in the UK with a population of under 10,000 is not usually treated as an indication of geographic origin; nor is a place in a European country of under 100,000.

¹⁵¹ [1997] RPC 279.

¹⁵³ *Tottenham Trade Mark* (6 Jan. 2003) (Appointed Person, Prof. Annand).

¹⁵⁴ *The Glenlivet Trade Mark* [1993] RPC 461. Cf. Lord Simonds rather stricter formulation in *Yorkshire Copper Work's Trade Mark Application* [1954] RPC 150, 154 to the effect that 'a geographical name can only be inherently adapted to distinguish the goods of A when you can predicate of it that it is such a name as it would never occur to B to use in respect of similar goods'.

SWEDISH FORMULA for cosmetics the signs will be registrable.¹⁵⁵ Even the names of sizeable places may be registrable if there is no realistic connection with the goods concerned: an example that has often been given is that of NORTH POLE for bananas.¹⁵⁶

(v) *The time of production of the goods or the time of rendering of the services.* While the precise scope of this exclusion is unclear, it seems that it might prevent registration of marks meaning centuries,¹⁵⁷ decades (THE NINETIES),¹⁵⁸ years (AD 2000), seasons (AU PRINTEMPS DE PARIS for articles of clothing),¹⁵⁹ public holidays (HAPPY CHRISTMAS), and days of the week (such as SUNDAY for a newspaper).

(vi) *Other characteristics.* The final part of section 3(1)(c) excludes signs which exclusively serve to designate 'other characteristics' of the goods or service. While the other sub-categories of section 3(1)(c) are very broad, it seems that this residual part of the section might exclude descriptions of flavour, shape, colour, or packaging.¹⁶⁰ In *OHIM v. Zapf Creation*, Advocate General Jacobs advised the ECJ to annul the CFI's finding that NEW BORN BABY was not excluded from registration for toys and accessories for dolls under Article 7(1)(c) of the Regulation.¹⁶¹ While the Advocate General agreed that NEW BORN BABY was not a description of toys, he considered that the word-combination was unregistrable because it was a reference to the 'characteristics' of the goods, namely that the toys represented or looked like new born babies. It is notable that he considered that this was an essential characteristics of the goods (a contrast with the ECJ decision in *Postkantoor*, which indicated that the commercial significance of a characteristic was irrelevant when deciding whether it was excluded).

3.9 CUSTOMARY AND GENERIC MARKS

Section 3(1)(d)/Article 7(1)(d) CTMR provide that 'trade marks which consist *exclusively* of signs or indications which have become customary in the current language or in the bona fide and established practices of the trade' shall not be registrable.¹⁶² Although it has been stated by the ECJ that the reason for this exclusion is that such signs are 'incapable of distinguishing' the goods or services of one undertaking from those of another,¹⁶³ it should be noted that the section is especially concerned with the languages and practices 'of the trade'. In our view, the so-called 'protective function' also underpins this exclusion: signs which are customary in the trade are ones which other traders should be free to use.

¹⁵⁵ *Crosfield* (1909) 26 RPC 837, 856; *Procter & Gamble/Swedish Formula* R 85/98–2 [1999] ETMR 559.

¹⁶⁰ *Black N' Red Trade Mark* [1993] RPC 25, unregistrable for printed matter.

¹⁶¹ Case C-498/01 P (19 Feb. 2004).

¹⁶² The terms of this category are not dissimilar to those of TMA s. 46 on revocation (on which see below at pp. 898–900), though the differences are worthy of note. This ground covers not merely names but all marks, and customary in the 'current language' (which may not be confined to trade). Customary usage must relate to usage in the UK: Case O/348/99 reported in (2000) CIPAJ 34.

¹⁶³ See *Merz & Krell GmbH*, Case 517–99 [2001] ECR I-6959; [2002] ETMR (21) 231.

However, in contrast with the operation of the protective function under section 3(1)(c), the terms of section 3(1)(d) refer to the meaning that has developed by the time of registration. Consequently, the possibility of the sign becoming a designation in the future is not relevant.

While the scope of the section has yet to be fully explored, it seems that it will cover so-called 'generic' marks. A mark, particularly a name mark, is generic if though when it was first adopted it was distinctive, over time it has come to designate a genus or type of product rather than a particular product originating from a particular source. Well-known examples include LINOLEUM, YO-YO, ASPIRIN, and CELLOPHANE. One of the features of a generic mark is that it is no longer capable of distinguishing the goods or services of different traders. Where a word comes to describe a class of products, it can no longer be relied upon to separate the products in the class from each other. This can be seen, for example, in *Re Gramophone Company's Application*,¹⁶⁴ where the Gramophone Company's application to register GRAMOPHONE as a mark for what were then known as 'disc-talking machines' (i.e. record players) was rejected. The reason for this was that from the public's (but not the trade's)¹⁶⁵ perspective, GRAMOPHONE was the general term used to describe 'disc-talking machines', rather than the name of a particular machine made by a particular manufacturer. This was shown by the fact that GRAMOPHONE appeared in dictionaries, newspapers, patent specifications, and court decisions as a general term for 'disc-talking machines'. Indeed, even the applicants used the word to describe the goods for which they sought coverage.

Quite what is covered by section 3(1)(d) beyond 'generic' marks is less than clear. In *Merz & Krell*,¹⁶⁶ the German Registry had rejected an application to register BRAVO for writing implements and the Bundespatentsgericht referred a question to the ECJ on the scope of Article 3(1)(d) of the Directive. Essentially, it wanted to know whether in the case of terms, like BRAVO, (which were used purely as terms of praise or as incitements to purchase or in advertising), there was a requirement that before they fell within Article 3(1)(d) they had to be understood by the trade *as descriptions of specific goods and services*. The ECJ answered that the application of the provision needed to be considered in relation to the mark and goods or services concerned.¹⁶⁷ However, the exclusion was not confined to terms which *described* the properties or characteristics of the goods or services covered by them: the exclusion covered sign which 'designate' the characteristics of the goods or services. The ECJ failed, however, to elaborate of the distinction between a description and a designation. Presumably, designation involves a looser association with the goods or services than description. The ECJ also said that while the term need not describe the goods (as under Article 3(1)(c)) the mere use of the term in advertising did not of itself indicate that the term 'designated' the goods concerned.¹⁶⁸ Pure use in advertising was

¹⁶⁴ [1910] 2 Ch 423.

¹⁶⁵ The trade considered the word to be the name of the article when made by the particular manufacturer (other manufacturers were using marks such as DULCEPHONE and CORONAPHONE). The difference in the understandings held by the public and the trade was largely explicable by the aggressive manner in which the company had asserted its rights against other traders.

¹⁶⁶ Case 517-99 [2001] ECR I-6959; [2002] ETMR (21) 231 (paras. 36-40).

¹⁶⁷ *Ibid.*, Case 519/99, (para. 29).

¹⁶⁸ Prior to *Bravo*, the OHIM excluded laudatory words, such as 'best', 'perfect', 'supreme', or 'superfine' under Article 7(1)(d) on the basis that they are customary in the trade.

immaterial to the consideration of whether the sign had become a designation for the goods or services.

Section 3(1)(d) may occasionally exclude pictorial marks. In the *RFU & Nike v. Cotton Traders*, a registration by the Rugby Football Union of an image of a rose for clothing was held to be invalid. Evidence of sales by undertakings not associated with RFU of shirts bearing a rose crest indicated that it was customary to associate the rose with the England rugby team. Consequently, the sign was customary and not distinctive of the goods of the RFU.¹⁶⁹ Where a picture is made up of a conventional representation of the *category* or *type* of product, or a scene widely associated with its production, it is also unlikely to be registrable. Thus, applications relating to a picture of grapes and vine leaves for wine, flowers for perfume, and cats and dogs for pet food, would almost certainly be rejected.¹⁷⁰

3.10 USED MARKS: ACQUIRED DISTINCTIVENESS

So far in our discussions of section 3(1)(b)–(d), we have been concerned with whether marks are inherently registrable. That is, we have been looking at marks in their ‘natural’ or unused state. In this section we turn to look at the ways in which an inherently unregistrable mark can become registrable through use.

As we mentioned earlier, while a mark may inherently be unregistrable because it is non-distinctive, descriptive, or generic, it is possible for it become registrable through use. As the proviso to section 3 under the 1994 Act states ‘a trade mark shall not be refused registration . . . if, before the date of application for registration, it has in fact acquired a distinctive character as a result of the use made of it’. Similarly, section 47(1) provides that a mark which is wrongly entered into the Register (because it lacks inherent distinctiveness) shall not be declared to be invalid where the mark has acquired distinctiveness after registration. The result of these provisions is that even if a mark is inherently lacking indistinctiveness, it is now possible to register a mark if it does *in fact* become distinctive.

Consequently, the only question that needs to be asked where a mark has been used is: has the mark in fact acquired a distinctive character?¹⁷¹ The inquiry in relation to used marks is exclusively concerned with customer perception (i.e. the ‘distinguishing function’): the ‘protective function’ (the needs of other traders) is irrelevant.¹⁷² As a result, consumer recognition becomes the litmus test for whether a mark is registrable.¹⁷³ The primary goal is to minimize consumer confusion by preventing other traders from using a

¹⁶⁹ [2002] *ETMR* (76) 861, 876 (Lloyd J).

¹⁷⁰ *Union Laitiere Normande's Trade Mark* [1993] *RPC* 87 (a mark for dairy products which was made up of a pastoral landscape scene was unregistrable under TMA 1938). In contrast, a stylized picture of a tooth was held to be registrable for pharmaceuticals: *Fertin A/S's Application*, R382/1999–1 [2000] *ETMR* 652.

¹⁷¹ Note that it is not necessary to know the identity of the source, only that the product or service comes from a single source: see, e.g. *Messiah From Scratch Trade Mark* [2000] *RPC* 44, 51 (para. 30) (Appointed Person, Thorley QC). This is sometimes termed the ‘anonymous source doctrine’.

¹⁷² *Windsurfing Chiemsee Produktions v. Attenberger*, Joined Cases C-108 and 109/97 [1999] *ECR I-2779*, I-2829 (para. 48); *Audi Ag v. OHIM*, T-16/02 (3 Dec. 2003) (para. 50). The competitive needs of traders are accommodated, if at all, through the few exclusions as regards shape marks and the defences to infringement contained in TMA s. 11.

¹⁷³ The ability for marks to become registrable through use which is provided for under the 1994 Act is in marked contrast to the position under the 1938 Act, where it was held that certain marks could never become registrable irrespective of how distinctive they were ‘in fact’: *York TM* [1984] *RPC* 231.

similar mark. To succeed in a claim that a mark has become registrable through use, an applicant must be able to show that irrespective of how the mark was perceived in its natural state, the mark now operates as a trade mark. That is, an applicant must be able to show that the primary significance of the word or sign indicates a source rather than, for example, merely describing or praising the product. It must have acquired 'secondary meaning'. In *Windsurfing*,¹⁷⁴ the ECJ explained that an unregistrable name (in that case a geographical one) 'may be registered as a trade mark if, following the use which has been made of it, it has come to identify the product in respect of which registration is applied for as originating from a particular undertaking and thus to distinguish that product from goods of other undertakings'. In effect, the trader must be able to show that they have appropriated the word and given it a new meaning. In this sense all that the law is doing is recognizing what has already happened in practice.¹⁷⁵

3.10.1 Displacement of the primary meaning

While the various authorities make it clear that to be registrable a sign must have become distinctive, there is less guidance as to the nature of the relationship between the old and new meanings. At the most extreme some authorities seem to suggest that the new trade mark meaning must have completely replaced the original meaning. This seems to be what Jacob J required in *Philips v. Remington*¹⁷⁶ when he said that 'unless the word, when used for the goods concerned, has in practice displaced its ordinary meaning, it will not properly denote the trader's goods and none other'.¹⁷⁷ However, to require that there be nothing left of the original meaning in any circumstances would be going too far (and, indeed would be inconsistent with the idea that allusive marks will be registrable as long as the immediate impression given to consumers is not exclusively descriptive).¹⁷⁸ Other authorities acknowledge that it is possible for a sign to become distinctive even though the 'primary meaning' still exists. For example, in *Windsurfing Chiemsee*, the ECJ explained that where a geographical name has come to identify the product as originating from a particular undertaking and thus to distinguish that product from goods of other undertakings, the geographical designation 'has gained a new significance and its connotation, no longer *purely descriptive*, justifies its registration as a trade mark'.¹⁷⁹ The critical displacement of meaning is that which operates when the sign is used in relation to the particular goods or services and the question is whether in such a situation the average consumer of

¹⁷⁴ [1999] ECR I-2779, I-2829.

¹⁷⁵ In *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case C-299/99 [2002] ECR I-5475, the ECJ stated that the tribunal is to assess acquired distinctiveness 'in the light of the presumed expectations of an average consumer of the category of goods or services in question, who is reasonably well-informed and reasonably observant and circumspect'. This seems strange because acquired distinctiveness is normally a factual inquiry, rather than one dependent on a legal construct. Nevertheless, it is a way of screening out the views of real people who are either very attentive or very inattentive (the famous 'moron in a hurry').

¹⁷⁶ [1998] RPC 283.

¹⁷⁷ Having said this a distinctive mark may contain other messages, such as suggestions or allusions as to quality or origin. As long as these are not deceptive, and thus contrary to TMA s. 3(3)(b), registration may proceed. See below at pp. 843–4.

¹⁷⁸ *West (Eastenders) v. Fuller Smith & Turner* [2003] FSR (44) 816, 841 (para. 68) (Arden LJ); Kerly, paras. 7–103–112, 179–83.

¹⁷⁹ [1999] ECR I-2779, 2829 (para. 47); *Messiah From Scratch Trade Mark* [2000] RPC 44, 51 (para. 30) (Appointed person, Thorley QC).

the product immediately understands the sign as referring to source. In *Bach Flower Remedies*,¹⁸⁰ the Court of Appeal explained that a mark would not have acquired 'distinctive character' where the meaning to consumers remained ambiguous.¹⁸¹

3.10.2 Extent of recognition

It is clear that for an unregistrable mark to become registrable, it is necessary for consumers to think about the sign as an indication of origin. One question that arises is how widespread must the consumer recognition be? In *Windsurfing*, the ECJ said that the question is whether 'the relevant class of persons, or at least a *significant proportion* thereof, identify goods as originating from a particular undertaking because of the trade mark.'¹⁸² The ECJ made it clear that it is not possible to say whether a mark is distinctive by reference to predetermined percentages. This is because the evidence that is needed to support a claim that a mark has become registrable through use (or where wrongly registered that it deserves to stay on the register) depends on how descriptive (etc.) the mark is in its 'natural' state. Thus, if the objections to the word are not strong, then it is likely that less evidence of acquired distinctiveness will be required. However, the more descriptive a mark is, the more convincing must be the evidence of acquired distinctiveness. In *Windsurfing*, the ECJ said that where a geographical name is very well known, it can acquire distinctive character only if there has been longstanding and intensive use of the mark by the undertaking applying for registration.¹⁸³

It seems that the degree of recognition required will vary depending on the reason why the mark was unregistrable in its 'natural state'. In *Unilever's (Striped Toothpaste No. 2) Trade Marks*,¹⁸⁴ Hoffmann J considered whether images of red-and-white striped toothpaste, which were inherently non-registrable, had become distinctive through use.¹⁸⁵ In evidence it was shown that the applicant had produced the striped toothpaste since 1960 and that over that period had mounted an extensive advertising campaign. Unilever also produced survey evidence which showed that 50 per cent of the sample population associated the stripes with SIGNAL toothpaste. Hoffmann J indicated that this was not sufficient in itself to render the images registrable. The reason for this was that the evidence of association did not explain how the public would react 'if a product with a similar feature came upon the market'. However, the judge said that 'if the evidence can be treated as showing that for half the population the marks were distinctive of SIGNAL in the sense that they served to distinguish the SIGNAL brand from other goods, that should be enough'.¹⁸⁶

While it was suggested in *Unilever* that 50 per cent recognition was sufficient for an

¹⁸⁰ [2000] RPC 513.

¹⁸¹ See also *Ty Nant Spring Water's Application*, R5/1999-3 [1999] ETMR 974, 980 (para. 26) (sign must have an unequivocal, certain, and definitive meaning in the minds of the relevant consumers). In *Société Des Produits Nestlé SA v. Unilever* [2003] ETMR (53) 681, 697 (Vienetta), Jacob J held that the shape of an ice cream had not acquired distinctiveness where some consumers thought other shapes were also by Vienetta. But the fact that consumers associate another mark incorrectly with a particular trader, does not mean that trader should not be able to protect the signs with which consumers correctly associate with it.

¹⁸² [1999] ECR I-2779, 2830 (para. 52); *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case C-299/99 [2002] ECR I-5475 (para. 65) (substantial portion of the relevant class).

¹⁸³ [1999] ECR I-2779, I-2830 (para. 50).

¹⁸⁴ [1987] RPC 13.

¹⁸⁵ While not exactly clear, it seems that this was because the mark was non-distinctive.

¹⁸⁶ [1987] RPC 13, 21.

inherently non-distinctive mark to become registrable through use, it seems that in other circumstances this may not be enough. For example, in *British Sugar v. Robertson*,¹⁸⁷ Jacob J had to decide whether the term TREAT, which was by its nature laudatory, had become registrable through use. Jacob J explained that the question was whether the sign had acquired a sufficiently distinctive character was a question of degree. In particular he said that with laudatory, descriptive, or common words, it was necessary to produce evidence of compelling rather than extensive use. More specifically, Jacob J said that for a mark that was inherently non-distinctive to be registrable, it must have come to be recognized by a substantial majority of people. For Jacob J, if 90 per cent of people took the word to be a trade mark this would have been enough to say it had a 'distinctive character'. However, in this case, British Sugar's claim that 60 per cent of the public recognized TREAT as a designation of source was not sufficient.

3.10.3 The relevant consumers

On general principles, distinctiveness needs to be acquired across the full range of goods or services for which registration is sought. The fact that a descriptive sign acquires distinctiveness for some goods, does not lead to the conclusion that it is registrable for other goods. This principle may cause problems where a mark is used in relation to goods or services targeted at a niche market, because the sign might come to be known by an élite, but not by the mass of consumers of goods of the relevant type. For example in *Salvatore Ferragamo Italia SpA*,¹⁸⁸ the applicant sought registration of a bow which it had used on its shoes for the previous twenty years. While there was plenty of evidence of use, and of advertising in élite magazines, it was by no means evident that ordinary purchasers of shoes would have been familiar with the mark. It would, however, be at odds with the aims of trade mark law to have confined the applicant's specification to 'luxury' shoes, since clearly one of aims of giving protection would be to allow a proprietor to prevent others using the sign (here the bow) on cheap versions of the product. As it was, the OHIM held that the mark had acquired distinctiveness, likening it to marks such as ROLEX and ROLLS-ROYCE. The implication seems to be that the Board thought that the bow had in fact become familiar not just to the élite purchasers of luxury shoes, but the broader public. As such, the decision leaves unclear the trickier situation where evidence shows the mark is known *only* to the élite customers.

Where an application for a Community trade mark is based on acquired distinctiveness, it is necessary to demonstrate distinctiveness in all relevant states where the mark is inherently non-distinctive. In *Ford Motor's Application/Options*,¹⁸⁹ the applicant sought to register OPTIONS for (*inter alia*) insurance services. When the examiner objected that the sign was devoid of distinctive character in French and English, the applicant filed evidence of use in a number of countries, including the United Kingdom, but not France. The applicant asserted that acquired distinctiveness in the United Kingdom was sufficient to establish distinctiveness in a substantial part of the European Community, and that was all that was required under Article 7(3) of the CTMR. However, the Court of First Instance, affirming the opinion of the OHIM refusing registration, held that in order to be accepted

¹⁸⁷ [1996] RPC 281.

¹⁸⁸ R254/1999-1 (14 Apr. 2000).

¹⁸⁹ T-91/99 [2000] 2 CMLR 276. See also *Audi Ag v. OHIM (TDI)*, T-16/02 (3 Dec. 2003) (paras. 52, 60, 66).

for registration a sign must possess distinctive character throughout the Community. Since the mark lacked distinctiveness in France, it was not registrable as a Community mark.¹⁹⁰ In the case of shape, colour, and other exotic marks which are inherently lacking distinctiveness throughout the Community, the principle that acquired distinctiveness must be established for the whole Community constitutes a serious obstacle to registration (and will become more onerous still when the Community expands).¹⁹¹

3.10.4 Types of supporting evidence

A number of different types of evidence may be used to support a claim for registrability through use. In *Windsurfing Chiemsee*,¹⁹² the ECJ listed the following considerations: the market share held by the mark; how intensive, geographically widespread and longstanding use of the mark has been; the amount invested by the undertaking in promoting the mark; the proportion of the relevant class of persons who, because of the mark, identify goods as originating from a particular undertaking; and statements from chambers of commerce and industry or other trade and professional associations.

(i) *Evidence of use.* Acquired distinctiveness must be proved 'on the basis of specific and reliable data'.¹⁹³ A tribunal may take into account evidence of the length of time the product has been on the market, the volume of the goods marketed, or the extent of services provided. Such evidence might be supplied by way of statutory declarations. Typically, examples of uses on packaging, marketing, and advertising, as well as details of expenditure will also be submitted. However, the critical evidence concerns the impact of such activities. Consequently, the CFI has observed that 'initiatives by the proprietor are to be taken into consideration insofar as they produce objective results in terms of the perception of the sign amongst the relevant public'. In the absence of evidence of the impact of a proprietor's actions, a tribunal will be reluctant to infer acquired distinctive character.¹⁹⁴

In order for a mark to become registrable through use, it is necessary to show that the public has come to think of the sign as designating origin. In order for that to occur the applicant must have used the sign as a mark.¹⁹⁵ While there are a number of ways by which this transformation can come about, there are four types of use that remain problematic. These are where the sign is used as an advertising slogan rather than as a trade mark, where the use is decorative, where the mark is a shape, and where the use is in combination with a dominant mark.

(ii) *Use as an advertising slogan.* Where a sign is used as an advertising slogan, it is unlikely

¹⁹⁰ T-91/99 [2000] 2 CMLR 276, 281 (para. 24).

¹⁹¹ *Mars Inc/Shape of Dog Treats*, R927/2001-2 (12 Dec. 2002); *BP plc/Green Striplight* R15/2001-4 (3 Dec. 2002) (only submitted evidence relating to eight member states). Note however, in para. 27, a recognition of the possibility of over-spill of reputation.

¹⁹² [1999] ECR I-2779 I-2830 (para. 51).

¹⁹³ *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case C-299/99 [2002] ECR I-5475; *PC Connection Inc's Appn*, R194/1998-3 [2000] ETMR 362 (OHIM BA).

¹⁹⁴ *Alcon Inc. v. OHIM*, Case T-237/01 (5 Mar. 2003) (para. 55). The case is being appealed to the ECJ, Case C-192/03.

¹⁹⁵ *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case C-299/99 [2002] ECR I-5475 (para. 64) ('as a result of use of the mark as a trade mark, and thus as a result of the nature and effect of it'). On controversies surrounding 'use as a mark' in the infringement context, see pp. 912-14.

that this will transform an inherently unregistrable mark into one that is registrable. For example, in *Have a Break Trade Mark*,¹⁹⁶ an application by Rowntree Mackintosh to register HAVE A BREAK for chocolate biscuits was refused. This was despite the fact that the slogan had been used since 1957 in advertising as part of the phrase ‘Have a break, have a KIT KAT’, and that survey evidence indicated a high degree of association between HAVE A BREAK and the products on which the mark appeared—KIT KATS. Whitford J said that the mark in suit could not be accepted as a mark because the words were primarily used to advertise KIT KATS, rather than designate the origin of the goods. As such, Whitford J found that the use of the words, which were in their natural state non-distinctive, had not made them distinctive. When Rowntree made a further application under the 1994 Act, the Court of Appeal affirmed the hearing officer’s view that the mark was inherently devoid of distinctive character, but was uncertain about the conclusions on acquired distinctiveness.¹⁹⁷ The hearing officer had held that there was no acquired distinctiveness for the sign HAVE A BREAK, because the applicant had always used it as part of the composite phrase ‘Have a break, Have a KIT KAT’. According to the hearing officer, that use could not establish acquired distinctiveness for the three words HAVE A BREAK. Faced with conflicting authority from the OHIM,¹⁹⁸ the Court of Appeal decided to refer the issue to the ECJ. More specifically, the Court has asked the ECJ whether the distinctive character of a mark ‘may be acquired following or in consequence of the use of that mark as part of or in conjunction with another mark?’ Since this question was implicitly answered in the affirmative in *Phillips v. Remington*, where the ECJ considered the acquired distinctiveness of a three-headed rotary shaver which was normally used with the PHILLISHAVE mark, it is to be hoped that the ECJ will go further and provide guidance as to *when* such uses will render the sign distinctive.¹⁹⁹

(iii) *Decorative use*. Where a name or image is primarily used for ornamental or decorative purposes, it is unlikely that this will transform an inherently unregistrable mark into a registrable one. This can be seen, for example, in *Elvis Presley Trade Marks*:²⁰⁰ a decision which has important ramifications for character and personality merchandising. In this case it was held that longstanding use of various ELVIS marks on soap products did not render them distinctive. As Laddie J explained, the names were understood not to indicate source but to refer to the superstar:

When a cup is offered for sale bearing the legend ‘Elvis Presley/1935–1977’ the use of the musician’s name does not perform the function of enabling a customer to distinguish that cup as a cup emanating from Enterprises from other memorabilia from other suppliers. It is not an indication of trade origin at all.

(iv) *Shapes*. Particular problems have arisen when attempting to show that a shape has acquired distinctiveness through use, that a shape has acquired distinctiveness. *Phillips v. Remington*,²⁰¹ the ECJ was asked for guidance as to whether a sign could acquire

¹⁹⁶ [1993] RPC 217.

¹⁹⁸ *Ringling Bros-Barnum & Bailey Combined Shows*, R111/2000–2 (23 May 2001) (THE GREATEST SHOW ON EARTH which had been consistently used with proprietor’s mark nevertheless acquired distinctiveness).

¹⁹⁹ As Jacob J stated in the Vienta case, ‘what needs clarification is what more is needed’: *Société des Produits Nestlé SA v. Unilever* [2003] ETMR (53) 681, 695 (para. 42).

²⁰⁰ [1997] RPC 543 esp. at 555.

²⁰¹ Case C-299/99 [2002] ECR I-5475.

distinctiveness where a trader had been the only supplier of particular goods to the market. Philips had previously been the only seller of three-headed shavers, and there was evidence that as a consequence the public associated the shape with Philips. The potential problem with this evidence being taken as indicative of distinctiveness lay in the fact that Philips had previously operated a monopoly, so that it had not been possible to ascertain how consumers would have understood the three-headed shape if it had been presented to them by traders other than Philips. The ECJ acknowledged that extensive use of the shape ‘*may be sufficient to give the sign a distinctive character*’, but hinted that it might be difficult to demonstrate that a substantial portion of the relevant class of persons associated the shape with a specific trader or believed that goods of that shape come from the trader. Because distinctiveness can only be acquired as a result of use of the mark *as a trade mark*, it seems that, on the facts of *Philips*, the mark had not acquired distinctiveness. While there may have been evidence of ‘familiarity’ with the shape, and even ‘association’ of the shape with Philips, it seems unlikely that this derived from use of the three-head shape *as a trade mark*.

A further reference to the ECJ has also been made by Jacob J in *Société de Produits Nestlé S.A. v. Unilever plc*.²⁰² Here Unilever applied to register marks for its VIENNETTA ice cream, and Nestlé opposed. Unilever had submitted evidence of recognition. Jacob J has asked the ECJ whether in circumstances where the shape of a product is merely shown to be recognized, that is sufficient to prove that it has acquired distinctive character. Given what the ECJ said in *Philips*, the answer would appear to be ‘no’. Assuming that would be the ECJ’s answer, Jacob J also asked whether it is necessary to prove that the shape is used and relied upon by the relevant public as a guarantee of trade origin? A positive answer to this question would be consistent with existing ECJ jurisprudence. Jacob J’s third question is more problematic. In it he asked whether if the public recognize a shape as the product of one trader, but a significant minority also regards other shapes in use by other traders as the shape applied for, it can be said that the shape mark has acquired a distinctive character?

(v) *Use in combination with other marks*. It is much easier to establish distinctiveness through use where the mark is either the only mark, or is the most prominent mark adjoining the product or associated with the services. The reason for this is that if there are a number of marks that potentially identify source, it becomes more difficult to establish which amongst them operates as a trade mark. In *Alcon Inc. v. OHIM*,²⁰³ the issue before the CFI was whether BSS (which the Court found inherently descriptive for contact lens fluid because it meant ‘balanced salt solution’) had acquired distinctiveness through use. Alcon provided evidence of use of the sign in the form ALCON BSS and ALCON BSS PLUS. The Court noted that the ‘complexity of the formula . . . might at most indicate that it [Alcon] considers that the BSS mark has not acquired a sufficient degree of distinctiveness to be used without any additional element to identify the product’.²⁰⁴ The Court of

²⁰³ Case T-237/01 (5 Mar. 2003). The case is being appealed to the ECJ, Case C-192/03.

²⁰⁴ *Ibid.*, para. 59. See also *Philips Electronics NV v. Remington Consumer Products* [1998] *RPC* 283; [1999] *RPC* 809 (use of the three-headed rotary shaver did not establish the shape as a distinctive trade mark because the shaver was almost always marketed as the PHILISHAVE); *Wickes plc’s Trade Mark Application* [1998] *RPC* 698 (squarish shape of a book); *Mars Inc/Shape of Dog Treats*, R927/2001–2 (12 Dec. 2002) (dog treats sold in bags with RODEO mark);. See R. Burrell, H. Beverley Smith, and A. Coleman, ‘Three Dimensional Trade

Appeal has also referred a related question to the ECJ as to whether acquired distinctiveness can result from use of a mark as part of or in conjunction with another mark.²⁰⁵ It is expected that the Court will answer that such signs *can* acquire distinctive character, but that the applicant must prove that they have come to be relied on by consumers as indicating origin.

(vi) *Advertising expenditure.* Although the ECJ specifically stated that tribunals may take account of the amount invested by the undertaking in promoting the mark, British courts have been more sceptical as to the value of matters such as advertising expenditure or evidence of sales success as indicators of acquired distinctiveness. This is because evidence of use will not inevitably lead to a finding of distinctiveness *through* use. As Jacob J said in *British Sugar v. Robertson*,²⁰⁶ it is not the extent of promotional efforts so much as the effect on consumers that is crucial. Consequently, evidence that the word TREAT had been used for five years did not, on its own, demonstrate that the mark had become a badge of trade origin.

(vii) *Evidence of the trade.* Moreover, although the ECJ also refers to the relevance of 'statements from chambers of commerce and industry or other trade and professional associations', UK courts have treated these as only of marginal significance.²⁰⁷ The reason for this is that the relevant class of persons is not trade buyers, but the average customer of the product.²⁰⁸

(viii) *Consumer surveys.* Since the inquiry is focused upon consumer attitudes to the sign, direct evidence from consumers and consumer surveys will most likely prove to be of value. The ECJ has stated that in this context 'Community law does not preclude the competent authority, where it has particular difficulty in that connection, from having recourse, under the conditions laid down by its own national law, to an opinion poll as guidance for its judgment'.²⁰⁹ Under UK law, opinion polls are accepted but must be scrutinized with considerable care.²¹⁰

4 OTHER ABSOLUTE GROUNDS OF INVALIDITY

The third and more eclectic category of absolute grounds of refusal are set out in section 3(3)–(6) of the 1994 Act. These provide that trade marks shall not be registered if they are contrary to public policy or morality, if they are likely to deceive the public, if they are

prohibited by law, or if the application was made in bad faith. Special provisions also exist for specially protected emblems.

4.1 PUBLIC POLICY AND MORALITY

Section 3(3)(a) provides that a trade mark shall not be registered if it is contrary to public policy or to accepted principles of morality.²¹¹ In *Philips v. Remington*, Jacob J said the notion of ‘public policy’ was confined to the type of matters covered by the French legal term *ordre public*, and was not concerned with economic grounds of objection, such as the effect that registration would have on competition. An example of the kind of matter that might fall within the public policy objection is provided by the pre-1994 Act case, *Re Application by L. Edwards Trade Mark*.²¹² In that case, the registered owner of JARDOX for disinfectants opposed the registration of JARDEX for meat extracts on the basis that as the names were similar, there was a likelihood of confusion. While this argument failed, the Registrar nevertheless exercised his discretion and refused to register JARDEX. He did this on the basis that if someone confused the two products the consequences might be disastrous. The Registrar felt that although the likelihood of a mix-up was remote, the law should not do anything that might increase the possibility of such an error taking place. While the Registrar’s discretion has been removed under the 1994 Act, it seems that a similar conclusion could be reached on public policy grounds.

The Registry will also refuse signs that contravene the accepted principles of morality.²¹³ Advocate General Colomer has suggested that BABY KILLER would be unregistrable on this ground for a pharmaceutical abortifacient.²¹⁴ In both the OHIM and the UK system, the tribunal have tried to distinguish marks which contravene principles of morality (and are therefore unregistrable) from those which are merely in poor taste.²¹⁵ For example, the OHIM Board of Appeal accepted, as registrable, DICK AND FANNY for clothing: this was merely in poor taste, having a ‘rather smutty flavour’. The Board was particularly taken by the fact that the words ‘merely designate things’ rather than proclaiming an opinion, inciting behaviour, or conveying an insult.²¹⁶ Similarly, in *Ghazilian’s Application*,²¹⁷ the Appointed Person distinguished between an offence which amounts only to distaste, and that which would ‘justifiably cause outrage or would be subject of justifiable censure as being likely significantly to undermine current religious, family or social values’. Only the latter would be a basis for a rejection. Simon Thorley QC there suggested that a mark might be rejected if it would cause a high degree of outrage to a small section of the community, or a lower level of outrage to a larger section. Given that starting point, readers might be surprised to discover that in the case in front of him, Simon Thorley QC

²¹¹ Note also that a trade mark which contains a representation of one of the flags of the countries of the UK, the use of which would be ‘grossly offensive’ shall not be registered: TMA s. 4(2).

²¹⁴ *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case C-299/99 [2002] ECR I-5475 (para. 18) (AG Colomer).

²¹⁵ Though the OHIM’s examination guidelines, para. 8.7, provide as examples of signs that should be rejected swearwords, or images that are racist or blasphemous. For a lengthy account of the US case law, see T. Davis, ‘Registration of Scandalous, Immoral and Disparaging Matter under Section 2(a) of the Lanham Act: Can One Man’s Vulgarity Be Another’s Registered Trademark?’ (1993) 83 *TM Rep* 863.

²¹⁶ *Dick Lexic Ltd/Dick & Fanny*, R111/2002–4 (25 Mar. 2003).

²¹⁷ [2002] RPC (33) 628, 638 (para. 49).

held TINY PENIS to be unregistrable for clothes. He explained that use of the words would undermine an important social value, namely, that anatomical terms for parts of the genitalia should be available for serious (educational) use and not tainted by ‘use as a smutty trade mark for clothing’.²¹⁸ Applying the test established in *Ghazilian*, the Registry subsequently refused to register JESUS for clothing, because such use would significantly undermine to an accepted social and religious value, namely the belief that JESUS is the Son of God whose name should not be debased.²¹⁹

4.2 DECEPTIVE MARKS

Section 3(3)(b) states that a trade mark shall not be registered if it is ‘of such a nature as to deceive the public (for instance as to the nature, quality or geographical origin of the goods or service)’.²²⁰ This prohibition tends to be applied to marks which, though distinctive, contain some kind of suggestion or allusion that is inaccurate. The risk of deception must be a real one. According to the ECJ, the provision presupposes ‘the existence of actual deceit or of a sufficiently serious risk that the consumer will be deceived’.²²¹ This is likely to be assessed from the viewpoint of the consumer who is reasonably well-informed, observant, and circumspect. Consequently, mere advertising ‘puff’, as lawyers call it, as was present in the application KENCO THE REAL COFFEE EXPERTS, will not be misleading.²²² The exclusion has been applied to signs which misleadingly suggest official approval, that goods are made out of particular materials, or come from particular locations.

In one case, the OHIM Board of Appeal refused registration of INTERNATIONAL STAR REGISTRY for goods and services related to the recording of data on the ground that it appeared to create the impression that the names given to stars enjoyed some sort of official status.²²³ The applicant had offered a service of naming (‘christening’) stars after nominated persons, though the names were not used by the astronomical community. The inherently misleading nature of the name was found to have been augmented by the way in which the applicant had advertised its services, describing itself as an organization ‘authorised to “christen” the stars’, and stating that the record would be deposited in Switzerland.²²⁴

A trade mark application may also be refused if it relates to a sign which suggests that the goods are made of a particular material and they are not (particularly where the material would be a significant factor for a purchaser.) Consequently the OHIM Board rejected an appeal from a decision refusing registration of TITAN (which means ‘titanium’ in German, Swedish, and Danish) for building units made of non-metallic materials. The

²¹⁸ The reasoning is therefore consistent with the result at the OHIM in *Dick Lexic*, since DICK and FANNY are not proper anatomical terms for genitalia.

²¹⁹ *In re Basic Trademark SA’s Application*, O/211/03 (21 Jul. 2003). Would the decision have been different if the Church of England was the applicant? If so, why should this make a difference?

²²² *Kraft Jacobs Suchard Ltd’s Application; Opposition by Nestlé UK* [2001] ETMR (54) 585 (the opponent’s liking to think of themselves as the real experts). The suggestion must be likely to lead to a real expectation on the part of the average consumer: *Choco Circus Trade Mark* (13 May 2002) (TM Registry).

²²³ See also *Vitasafe TM* [1963] RPC 256 (VITASAFE for vitamin preparations refused because it suggested official approval).

²²⁴ *International Star Registry of Illinois/International Star Registry*, R468/1999–1 (4 Apr. 2001).

term was misleading because consumers could be led into taking an interest in the products on the basis of an indication that they were made of titanium.²²⁵ If the misdescription is obvious and is such that it would immediately be corrected by further observations by the consumer, such misdescriptions will not render the sign invalid.²²⁶

Another situation in which a trade mark may be refused is if it gives rise to a real, but inaccurate, expectation that the goods come from a particular locality. For example, an application to register MCL PARFUMS DE PARIS for toiletries including perfumes was refused by the UK Registry, on the grounds that the mark created an expectation that the perfume would be manufactured in Paris, so that (if they were not) the trade mark would deceive the public not only as to the geographic origin of the goods but also as to their nature and quality.²²⁷ Similarly the OHIM refused to register ARCADIA for wine, Arcadia being a Greek region known for wine: the name was either descriptive of geographical origin or, if limited as proposed by the applicant to cover only Italian wines, misleading because the wines did not come from Arcadia.²²⁸ The refusal of signs involving geographical misdescriptions parallels the role of section 3(4) discussed below. However, the circumstances in which the owner of a protected designation of origin can object to use of that designation or a similar one, may be broader than the situations in which a mark will be treated as misleading.²²⁹

4.3 MARKS PROHIBITED BY LAW

Section 3(4) provides that 'a trade mark shall not be registered if or to the extent that its use is prohibited in the United Kingdom by any enactment or rule of law or by any provision of Community law.' Thus a mark will not be registered if it is unlawful under statutes such as the Trade Descriptions Act 1968, Plant Varieties Act 1997, or the Hall-marking Act 1973. The illegality must be intrinsic or inherent in the mark, rather than in the goods for which its use is proposed.²³⁰ The reference to Community law prevents the registration of 'protected designations of origin' and 'geographical indications' for wines, spirits, agricultural products, and food.²³¹

²²⁵ *Portakabin Ltd/Titan* R789/2001-3 (23 Jan. 2002) (OHIM BA). See also *China-Therm Trade Mark* [1980] FSR 21, (CHINA-THERM refused for plastic cups and tumblers under TMA 1938); *L'Oreal v. Beiersdorf AG/Poudre Libre Naturelle* C000835728/1 (19 Sept. 2000) (para. 19) (POUDRE LIBRE NATURELLE descriptive of cosmetics in powder form and misleading for 'cosmetics, except for products consisting of powder'). Cf. *Lord Corp/Metaljacket*, R314/2002-1 (23 Oct. 2002) (ambiguous mark METALJACKET for non-metallic coatings for metals not misleading).

²²⁶ *Pound Puppies Trade Mark* [1988] RPC 530. The Registry will not assume that the proprietor is likely to use the sign in a deceptive way, but rather will take a 'realistic and pragmatic view': *Rollback Trade Mark* (10 May 2002) (TM Registry).

²³⁰ *Arthur Fairest's Appn.* (1951) 68 RPC 197 (Lloyd Jacob J).

²³¹ See Ch. 43. See, e.g. *Re Mezzacorona Trade Mark* (18 Dec. 2002) (Appointed Person, Thorley QC). CTMR Art. 7(1)(j) states that if the trade mark is for wine or spirits and consists of or contains a geographical identification for wines or spirits and the wines or spirits in the application could be from a different source the examiner must object. See, e.g. *René Barbier SA/Duque de Villena*, R1220/2000-2 [2003] OJ OHIM 1927.

4.4 BAD FAITH

According to section 3(6), a trade mark shall not be registered, if or to the extent that, the application is made in bad faith.²³² In a number of cases under the 1994 Act, it has been suggested that the concept of bad faith might be narrowly understood as requiring ‘dishonesty’ or at most ‘conduct falling short of acceptable commercial behaviour’.²³³ A narrow construction seems appropriate given that the harmonized regime draws a distinction between absolute and relative grounds of refusal. A broad interpretation of bad faith is likely to undermine the distinction, insofar as it introduces issues of priority between competing claims into the Registrar’s determination of absolute objections. The cases can be placed in three categories: where there is no intention to use the mark, where the applicant was aware that a third party intended to use the mark, and (more doubtfully) where the mark relates to a well-known person.²³⁴

4.4.1 No intention to use the mark

The first situation where a mark may be refused because it was applied for in bad faith is where the applicant had no intention of using the mark in trade. Such applications are said to be in ‘bad faith’ because the applicant declares, under section 32(3), that the trade mark is being used or that the applicant has a bona fide intention to use the mark in relation to those goods or services. If there is no such intention, the declaration is dishonest and the dishonesty taints the application.²³⁵

The most obvious situation of lack of intent to use occurs where a person applies to register a mark with the intent either of preventing a competitor registering the mark or selling (or ‘trafficking in’) the registered right. So for example, where an antique dealer realized that DEMON ALE was an anagram of ‘lemonade’ and applied to register DEMON ALE as a mark, with a view to selling the mark and with no intention of brewing, the Appointed Person held that the application was in bad faith.²³⁶

As well as regulating the ‘stockpiling’ and ‘trafficking’ in marks,²³⁷ the requirement of good faith can be used to prevent the registration of ‘ghost marks’, that is, the registration of marks that are similar to an unregistrable mark which the trader is in fact using. This can be seen, for example, in *Imperial Group v. Philip Morris*, a leading case on this point under the 1938 Act. While Imperial wished to market a cigarette called MERIT, their legal

²³² Pursuant to optional provision in TM Dir. Art. 3(2)(d). CTMR, Art. 51 (registration liable to be declared invalid where application was made in bad faith). Don & Low Nonwovens* [1999] *RPC* 367, 379 (which has become the classic statement); *Knoll AG’s Trade Mark* [2003] *RPC* (10) 175, 182 (para. 27) (Neuberger J); *Société des Produits Nestlé S.A. v. Unilever* [2003] *ETMR* (53) 681 (Vienetta) (para. 7) (Jacob J); *R v. Reef Trade Mark* [2002] *RPC* (19) 387 (Pumfrey J) (applicant’s conduct must be reprehensible). For broader views: *Road Tech. Computer Systems v. Unison Software UK* [1996] *FSR* 805; *Postperfect Trade Mark* [1998] *RPC* 255; *Artistic Upholstery v. Art Forma (Furniture)* [1999] 4 *All ER* 277, 290.

²³⁴ *Société des Produits Nestlé SA v. Unilever* [2003] *ETMR* (53) 681 (Vienetta) (para. 7) (using trade mark registration to extend patent monopoly ‘miles from bad faith.’)

²³⁵ *Demon Ale Trade Mark* [2000] *RPC* 345; *In re Ferror SPA’s Trade Marks (Kinder)*, (10 Sept. 2003) SRIS O/279/03 (Kitchin QC) (para. 25). Cf. *Knoll AG’s Trade Mark* [2003] *RPC* (10) 175, 185 (paras. 33–4) (Neuberger J) (warning against relying on the s. 32(3) declaration on the basis that the requirement ‘may be inconsistent with the Directive’).

²³⁶ *Ibid.*

²³⁷ *In re Ferror SPA’s Trade Marks (Kinder)*, (10 Sept. 2003) SRIS O/279/03 (Kitchin QC) (para. 25) (a case of stock-piling of KINDER related marks).

advisers warned them that such a mark was unregistrable. To protect themselves they decided to register *NERIT* as a ghost mark. This was done in the belief that they would be able to prevent competitors from using the mark *MERIT* on the ground that it would be so similar to *NERIT* as to cause confusion. Imperial succeeded in gaining registration for *NERIT* and subsequently brought an action against Philip Morris to prevent it using the *MERIT* mark. The Court of Appeal not only refused relief, but also ordered that the *NERIT* mark be revoked. There was, according to Lawton LJ, neither a trade mark which was 'proposed to be used' nor any bona fide intent to use the mark. Brightman LJ explained that in order to maintain a trade mark there needed to be a real intention to use the mark, not an uncertain or indeterminate possibility. As regards the notion of bona fide intent to use, he explained that this required genuine rather than honest intent.²³⁸

The requirement that a person intends to use the sign means that an application is likely to be refused where a person applies to register a sign at a time when they are clearly unable to use that sign for the goods or services in question. For example, in *Mickey Dees (Nightclub) Trade Mark*,²³⁹ Michael Dyer, an employee at a nightclub called *MICKEY DEES*, was held to have lacked good faith when he registered the words *MICKEY DEES* for nightclub services. Given that the applicant did not own any nightclub, he could not show any realistic intent to provide nightclub services. However, the registration was allowed to stand as regards the provision of singing and musician services by an entertainer, because the applicant could in good faith intend to carry on such a trade.

The final circumstance in which a person will be held to have registered a mark with no bona fide intention to use it is where the specification of goods and services is unduly broad. Nevertheless, the UK courts have emphasized that merely drafting a specification broadly will not mean that the application is in bad faith: to say one intends to use a mark, for example, for pharmaceutical substances where one intends to use the mark only in relation to a specific category of pharmaceutical products is not sufficient to warrant a finding of bad faith.²⁴⁰ Consequently, a line is drawn between excessively wide specifications, and ones which merely provide room for some possible brand-extension. As a matter of routine, the Registry objects only to specifications in the form of 'all goods/services in class X', claims to 'machines', 'electrical apparatus', and 'services that cannot be classified in other classes'.²⁴¹ The British practice should be contrasted with that of the OHIM, which declined to cancel broad registrations on the ground of bad faith in the *Trillium* decision.²⁴²

4.4.2 Knowledge of third-party claims

The second situation where an applicant may be held to lack good faith is where the applicant is aware that a third party intends to use and/or register the mark. Here the

²³⁸ *Imperial Group v. Philip Morris & Co.* [1982] FSR 72.

²³⁹ *Mickey Dees (Nightclub) Trade Mark* [1998] RPC 359. Cf. *R. v. Reef Trade Mark* [2002] RPC (19) 387, 395 (para. 12) (Pumfrey J) (where claim that application was in bad faith because the applicant intended decorative use only, rather than trade mark use, was rejected because proposed use was 'at worst equivocal').

²⁴⁰ *Knoll AG's Trade Mark* [2003] RPC (10) 175, 182 (para. 27) (Neuberger J). Cf. *Betty's Kitchen Coronation Street Trade Mark* [2000] RPC 825 (finding application to have been in bad faith because no intention to use all four words together as a single mark, and only used on some of goods).

²⁴¹ PAN 8/02 (19 Jun. 2002); Practice Amendment Circular PAC 10/00, *Examination of wide specifications and objections under Section 3(6) of the Act*. See above at p. 769.

²⁴² Criticized in Kerly, paras. 7–228–231, p. 769.

rationale is that the applicant cannot claim, in good faith, to be the owner of the sign for the goods or services. However, because the Act has no concept of proprietorship prior to application, the notion of 'owner' here seems to find its basis in ideas of honest business practice.²⁴³

The most obvious situation where an application may be treated as being in bad faith is where it is in breach of the terms of a relationship between the applicant and the third party and the registration would give rise to a breach of trust between them. This might be the case where the applicant is an employee or an agent.²⁴⁴ Moreover, it seems that the Registrar will use section 3(6) as a basis for rejecting an application even where such registration falls short of being a breach of any legal obligation:²⁴⁵ for example, to prevent a distributor registering a mark, or an employee from registering a sign which would be useful to their employer.²⁴⁶ In one case, where the applicant had come up with the name BLACK MIX for a radio programme which, for a time, he produced, but which was edited and broadcast by the BBC, the Registry regarded the applicant's application to register MIX FM BLACK MIX as lacking good faith.²⁴⁷

Another situation where an application may be rejected on the basis that it was made in bad faith is where the applicant copies a mark being used abroad with the intention of pre-empting the foreign user who intends to trade in the United Kingdom.²⁴⁸ In *Kundry SA's Application: Opposition by the President and Fellows of Harvard College*,²⁴⁹ the UK Registry rejected an application to register JARVARD for clothing, on the basis that the application was an attempt to make use of the opponent's reputation associated with the word 'Harvard'. The applicant failed to produce any evidence to refute allegations of bad faith, and the Registry thought that the application should be refused. It is not clear, however, that such cases should necessarily be treated as examples of applications made in bad faith. While the application may savour of sharp practice, it is not clear why reliance on strict

Note also that there are certain special provisions that an application for registration of a trade mark by an agent or representative of a person who is the proprietor of the mark in a Convention country is to be refused if that proprietor opposes the application: TMA s. 60, which implements Art. 6 bis of the Paris Convention. See *Travel Pro Trade Mark* [1997] RPC 864; *Golf Courts Trade Mark* (7 Apr. 2003) SRIS O/279/03 (Appointed Person, Prof. Annand). CTMR Art. 8(3).

²⁴⁵ *Gromax Plasticulture v. Don & Low Nonwovens* [1999] RPC 367 (bad faith includes dealings which fall short of the standard of acceptable commercial behaviour observed by reasonable and experienced men in the field). See also *Mary Wilson Enterprises Inc's Trade Mark Application* [2003] EMLR (14) 259 (bad faith application to register THE SUPREMES contrary to agreement with Motown Records); *Saxon Trade Mark* [2003] FSR (39) 704 (bad faith application by former member of heavy metal band to register SAXON which Laddie J considered to be a partnership asset).

²⁴⁶ *Mickey Dees (Nightclub) Trade Mark* [1998] RPC 359 (manager of nightclub could not have claimed in good faith to be the owner of the sign for nightclub services) (possibly a breach of his duty of fidelity); *Gromax Plasticulture v. Don & Low Nonwovens* [1999] RPC 367 (bad faith on part of distributor not established).

²⁴⁷ *Mix FM Black Mix Trade Mark*, O/084/00 (2000) CIPAJ 403. See also *China White Trade Mark* [2004] FSR (13) 225 (TM Registry).

²⁴⁸ See the notes on clauses prepared when the 1994 Act was being enacted, cited in *Mickey Dees (Nightclub) Trade Mark* [1998] RPC 359. This situation was dealt with under the 1938 Act either under provisions dealing with 'the proprietor' of the mark, or under the Registrar's discretion: *Brown Shoe's Appn.* [1959] RPC 29. As these notions no longer exist in the 1994 Act, there is a possibility that they may be dealt with under the good-faith requirement.

²⁴⁹ [1998] ETMR 178.

legal rights should be viewed as 'bad faith'. Moreover, given that the Registry found that the two signs were not confusingly similar, to treat applications such as these as examples of bad faith threatens to undermine the distinction between absolute and relative grounds.²⁵⁰

4.4.3 Well-known persons

It has been suggested that there is a third situation in which an applicant might be treated as lacking good faith, namely where the mark incorporates the name or image of a well-known person without their agreement.²⁵¹ However, since UK law does not recognize a right of personality or property in personal names, it is unclear why registration of such a name should be deemed of itself to indicate bad faith.²⁵² Perhaps such applications should be treated as *prima facie* in bad faith, and thus rejected on the assumption that the applicant does not intend to use the mark but merely is seeking to sell the mark to the personality in question. If this approach is taken, such registrations should be permitted if the applicant provides supporting evidence of an intention to actually use the mark for goods. In such cases, consideration should also be given to whether the application lacks distinctiveness, and whether relative grounds of refusal might be available.

4.5 SPECIAL EMBLEMS

Section 4 excludes from registration trade marks that consist of 'specially protected emblems'.²⁵³ These include various signs connected to the Crown (the Royal arms, the Royal crown and flags, any representation of any member of the Royal family, or any other sign suggesting that the applicant has Royal patronage); various national and international emblems and flags;²⁵⁴ and coats of arms. Sections 57 and 58 contain a similar list of excluded emblems, flags, etc. for other Convention countries.²⁵⁵

²⁵⁰ Cf. *Re C. A. Sheimer's Trade Mark Application (Opposition by Visa International)* [2000] RPC 484 (where the Appointed Person asserted that an opposition based on s. 3(6) for taking advantage of another's reputation would not add anything to an objection on relative grounds, because it was only if the relative grounds were sustainable that one could say the applicant was likely to achieve their aim of free-riding on the opponent's reputation).

²⁵¹ *TMR Work Manual*, ch. 6, para. 9.11. The argument was unsuccessful in *Farley's Application* [2002] ETMR (30) 336 (TM Registry).

²⁵² Kerly paras. 7–222–227, 223–5.

²⁵³ In accordance with Art. 6 ter of the Paris Convention, TRIPS Art. 15(2); CTMR, Art. 7(1)(h).

²⁵⁴ TMA s. 4(2) and (3).

²⁵⁵ R. Coombe, 'Tactics of Appropriation and the Politics of Recognition in Late Modern Democracies' (1993) 21 *Political Theory* 411 analyses the way these specially protected emblems are enforced or not so as to illustrate the political role of such symbols. Her analysis, however, has little to say about the interaction between such regimes and the general trade mark system.

38

RELATIVE GROUNDS FOR REFUSAL

1 INTRODUCTION

In this chapter, we explore the relative grounds for refusing to register a trade mark. The relative grounds for refusal, which are set out section 5(1)–(4) of the 1994 Act and Article 8 of the CTMR, are important insofar as they provide reasons why a mark may not be registered. They are also important because they can form the basis of an application to have a mark which has been registered declared invalid.¹

The relative grounds for refusal help to ensure that the protection given to trade mark owners does not conflict with any pre-existing marks or with any rights that exist in the mark (or sign). They do this by ensuring that a mark should not be registered if it is similar to a pre-existing mark, or if it conflicts with any legal rights that exist in the mark. If a trader was able to gain protection over a mark which was already protected, it would undermine the protection given to the owner of the earlier trade mark. If dual protection was allowed in an identical or similar sign, it would also mean that trade marks would not be able to function to indicate origin. This is because if two traders had rights in the same mark, when consumers were faced with the mark attached to a product they would be unable to determine which of the two traders had made the product.²

The relative grounds for refusal mirror the provisions dealing with trade mark infringement. In particular, sections 5(1), 5(2), and 5(3) correspond to sections 10(1), 10(2), and 10(3), which deal with trade mark infringement.³ Effectively, the relative grounds for refusal enable the owner of an earlier mark (A) to prevent the registration of a sign by another (B) where the use of that sign would infringe the rights of the earlier mark owner (A). As well as being sensible and convenient,⁴ one of the consequences of this symmetry is that much of the case law on infringement is relevant to the relative grounds for refusal.⁵ As such, in this chapter we draw upon trade mark infringement cases where relevant.

¹ TMA s. 47(2)(a), (b); CTMR Art. 51.

² It should be noted that although a mark may fall foul of one of the relative grounds for refusal, TMA s. 5(5) provides that an owner of the earlier trade mark or other earlier rights in the mark or sign can always consent to the registration of a later mark.

³ *Balmoral Trade Mark* [1999] *RPC* 297, 299.

⁴ It should be noted that the symmetry is disrupted in relation to well-known marks, which may be the basis of relative grounds of refusal in circumstances which would not amount to infringement under TMA s. 56(2).

⁵ *SA Société LTJ Diffusion v. SA Sadas*, Case C-291/00 [2003] *ETMR* (83) 1005; [2003] *FSR* (34) 608 (para. 43) (ECJ), (para. 19)(AG).

The relative grounds for refusal fall into two general categories: those concerned with ‘earlier trade marks’ (sections 5(1)–(3) and Article 8(1) and (5) of the CTMR); and those concerned with ‘earlier rights’ (section 5(4) and Articles 8(4) and 52(2) of the CTMR). We deal with each in turn.

2 RELATIVE GROUNDS IN RELATION TO EARLIER TRADE MARKS

The relative grounds for refusal in relation to earlier trade marks are found in sections 5(1)–(3) and Articles 8(1) and (5) of the CTMR. These provide that a trade mark shall not be registered if, when compared with an earlier mark, it is found that:

- (i) the marks are identical *and* the goods or services are identical: section 5(1)/Article 8(1)(a);
- (ii) the marks are identical, *and* the goods or services are similar, *and* there is a likelihood of confusion, which includes the likelihood of association, with the earlier mark: section 5(2)(a)/Article 8(1)(b);
- (iii) the marks are similar, *and* the goods or services are either identical or similar, *and* there is a likelihood of confusion, which includes the likelihood of association, between the marks: section 5(2)(b)/Article 8(1)(b);
- (iv) the marks are either identical or similar, *and* the goods or services are not similar, *and* where the earlier trade mark has a reputation and use of the applicant’s mark would take unfair advantage of, or be detrimental to, the distinctive character or the repute of the earlier trade mark: section 5(3)/Article 8(5).

2.1 DOUBLE IDENTITY: SECTION 5(1)/ARTICLE 8(1)(A)

The first relative ground for refusal, the so-called ‘double identity’ ground,⁶ is found in section 5(1) and Article 8(1)(a) of the CTMR. This provides that a trade mark shall not be registered if it is identical to an earlier trade mark *and* the goods or services for which the trade mark is applied for are identical to the goods or services for which the earlier trade mark is protected. As earlier trade marks are protected unconditionally as against a later application to register an identical mark for identical goods and services, there is no need to prove confusion.⁷

In considering whether a mark falls foul of section 5(1)(a)/Article 8(1)(a), three questions arise:

- (i) What is an ‘earlier trade mark’?
- (ii) When are marks ‘identical’? and
- (iii) When are the goods and services ‘identical’?

⁶ Hobbs QC in *In re Direct Wines Application*, O-306-03 (13 Oct. 2003) (para. 13).

⁷ The rationale for this is that confusion will necessarily result: TRIPS, Art. 16(1); TM Dir., Recital 10; *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207, 249.

2.1.1 What is an earlier trade mark?

The first question to ask in relation to section 5(1)/Article 8(1)(a) is, what is an 'earlier trade mark'? In the United Kingdom, an 'earlier trade mark' is defined as:

- a registered British mark, international trade mark (i.e. a mark registered under the Madrid Protocol designating the United Kingdom),⁸ or Community trade mark which has a priority date earlier than the trade mark in question⁹—section 6(1)(a);
- a Community trade mark which has a valid claim to seniority from an earlier registered trade mark or international trade mark (UK)¹⁰—section 6(1)(b);
- an application for marks which, when registered, would be an earlier trade mark¹¹—section 6(2); and
- a trade mark which is entitled to protection as a well-known trade mark—section 56(1). In contrast with the previous categories, such marks need not be registered. Limitations exist as to who can qualify as the proprietors of well-known marks.¹²

If the registration of a mark falling within the first two categories, *viz.* sections 6(1)(a) or (b) has lapsed, the mark can form the basis of an objection for a period of one year after expiry. However, this will not be the case if the Registrar is satisfied that there was no bona fide use of the mark during the two years immediately preceding expiry.¹³

In relation to Community trade marks, 'earlier trade marks' include trade marks registered in member states, at the Benelux Trade Mark Office, and under the Madrid Agreement and the Madrid Protocol in a member state.¹⁴ While an earlier trade mark includes well-known marks, the ability of the owner of an earlier well-known mark to oppose registration in relation to dissimilar goods or services is confined to situations where the mark has been registered.¹⁵ Finally, it should be noted that where an applicant for a Community mark is faced with an opposition on relative grounds on the basis of an earlier trade mark registered more than five years previously, the applicant can demand that the opponent produces evidence of use of the trade mark in the previous five years or proper reasons for non-use. If the opponent fails to do so, the opposition will be rejected.¹⁶

2.1.2 Are the marks identical?

The second question to ask in relation to section 5(1)/Article 8(1)(a) is: are the marks identical? In answering this question, it is necessary to compare the representation of the earlier trade mark contained in the registration certificate with the trade mark which has

⁸ TMA s. 53. ⁹ TMA s. 51. ¹⁰ TMA s. 6(1)(b). See above at pp. 779–81.

¹¹ TMA s. 6(2). On procedure of the UK Office in relation to applications, see Practice Amendment Circular PAC 1/99 Conflicting earlier trade marks under s. 5(2) of the Act—earlier marks still pending.

¹² TMA s. 56(1) (as amended by the Patents and Trade Marks (WTO) Regulations 1999 (SI 1999/1899)). See above at pp. 723–4. *Paco/Paco Life in Colour Trade Marks* [2000] *RPC* 451.

¹³ TMA s. 6(3). The concept of genuine use is explored at some length at pp. 889–92 in the context of revocation.

¹⁴ CTMR Art. 8(2).

¹⁵ CTMR Art. 8(5); TRIPS Art. 16(3).

¹⁶ CTMR Art. 43(2).

been applied for (or, in the case of infringement, that being used by the defendant).¹⁷ In contrast with the position on infringement,¹⁸ where the court has to decide on the parameters of the defendant's sign, in the context of assessing relative grounds of validity the comparison is between the earlier trade mark (as registered) and the sign in the applicant's application. The two marks are considered as a whole: nothing in the applicant's mark is ignored.¹⁹

While few problems are likely to arise in determining whether marks are identical, one particular issue warrants consideration, that is, whether marks that are slightly different may nonetheless still be treated as being identical. While specific provisions exist which prevent a mark that is similar to an earlier mark from being registered, the reason why owners of earlier marks may wish to argue their case under section 5(1)/Article 8(1)(a) is that unlike the other relevant relative grounds, there is no need to prove confusion. Given this, it would seem reasonable for the courts to construe section 5(1)/Article 8(1)(a) narrowly. Applying such a logic, in *SA Société LTJ Diffusion v. SA Sadas*, the ECJ²⁰ concluded that the criterion 'must be interpreted strictly. The very definition of identity implies that the two elements should be the same in all respects'.²¹ The Court then elaborated that there is identity where a sign reproduces 'without any modification or addition, all the elements constituting the [trade mark]'.²² However, it qualified this strict interpretation by observing that the test is to be applied from the viewpoint of the average consumer, and that person will usually assess two signs globally, looking at the overall impression. Consequently 'insignificant differences between the sign and the trade mark may go unnoticed by the average consumer'. The existence of such 'insignificant differences', then, would not cause the signs to be lacking in identity.²³ It is a question of fact whether consumers would see differences as significant: UK courts, albeit before the ECJ decision, held that *ORIGIN* was not identical to *ORIGINS* and, after *LTJ* (though without citing it), that *ANIMAL* was not identical to *ANIMALE*.²⁴ In some cases, however, the courts have extended the scope of section 5(1)/Article 8(1)(a) to include marks that are not exact replicas of each other. For example, in one case where the words *WET WET WET* were reproduced in different typefaces, the two marks were nevertheless held to be identical.²⁵

¹⁷ Disclaimed matter in the earlier trade mark will usually be ignored: *Torremar Trade Mark* [2003] *RPC* (4) 89, 98 (para. 29); *Paco/Paco Life in Colour Trade Marks* [2000] *RPC* 451; *The European v. The Economist Newspaper* [1998] *FSR* 283, 289. Cf. *Chantilly Polo Club Device/Beverly Hills Polo Club Device*, R714/2000-1 (10 May 2001) (disclaimer does not affect assessment of confusing similarity).

¹⁸ See pp. 905-7.

¹⁹ *Royal County of Berkshire Polo Club Application; Opposition by Polo Lauren Co.* [2001] *RPC* (32) 643 (applicant's sign *ROYAL BERKSHIRE POLO CLUB* was not even similar to *POLO*, because consumers would not realize it contained the word *POLO*).

²⁰ *SA Société LTJ Diffusion v. SA Sadas*, Case C-291/00 [2003] *ETMR* (83) 1005; [2003] *FSR* (34) 608.

²¹ *Ibid.*, para. 50. The Advocate General also favoured a strict interpretation, both based on the dictionary meaning of the term identical and the scheme, history and context of the Directive.

²² *Ibid.*, para. 51.

²³ Advocate General Jacobs, at para. 47 had referred to the existence of identity where 'any differences are minute and wholly insignificant, so that the average consumer would not find any noticeable difference between the two'.

²⁴ *Origins Natural Resources v. Origin Clothing* [1995] *FSR* 280, 284; *H. Young v. Medici* (14 Jul. 2003) (Jacob J) ('self-evidently not identical' because of different pronunciation and foreign 'feel' of *ANIMALE*).

²⁵ *Bravado Merchandising Services v. Mainstream Publishing (Edinburgh)* [1996] *FSR* 205, 214-15. See also *Lifesytems Trade Mark* [1999] *RPC* 851, 857 (the 'general perception' of *LIFE-SYSTEMS* would be identical to that of *LIFE SYSTEMS*). Both should survive *LTJ Diffusion*.

2.1.3 When are goods or services identical?

The third element that must be proved for a mark to fall foul of section 5(1)/Article 8(1)(a) is that the goods or services for which the mark is applied for must be identical with the goods or services for which the earlier mark is protected. If the category of goods or services protected by an earlier trade mark is broader than, but includes, the category of goods or services to which the application relates, then the applicant's goods are identical with those of the earlier mark. So, if an earlier trade mark relates to 'broadcasting services', a later application relating to radio broadcasting services would be understood as being identical.²⁶

It is important to note that the section refers to the goods or services *protected by* the earlier trade mark. This language was chosen to ensure that the section covered well-known marks (which may not have been registered). In the case of other earlier marks, the use of the term 'protected' introduces an unfortunate ambiguity. This is because while one would have expected the comparison to be between the goods or services identified in the specifications, there is a possibility that the goods or services 'protected by' a registered mark might extend beyond those that are identified in the specification.

The question of whether goods or services are identical presents few problems. The way in which this question is approached can be seen in *British Sugar v. Robertson*.²⁷ In that case, the claimant company, which had registered TREAT for dessert sauce or syrup in Class 30, claimed that the defendant had infringed by using the mark on a toffee-flavoured spread. Jacob J held that although the spread might be used as a dessert sauce, a spread was not the same as a dessert sauce or syrup. Since Robertson's spread was packed in a jam jar and placed on the shelves with jams, Jacob J held that it was not identical to a dessert sauce. Jacob J found assistance in the classification system to support his conclusion that the goods were not identical. In particular, Jacob J's conclusion was reinforced by the fact that while the claimant's syrup was registered in class 30, the defendant's spread would have fallen within class 29.²⁸

While the way the mark is registered may provide guidance in determining whether goods or services are identical, it is important that the language of the trade mark specification not be taken at face value.²⁹ This is because although the goods or services may be described in the same terms, in some situations they may in fact cover different goods or services. In other cases, different terms may encompass identical goods or services. As Jacob J explained, instead of construing the words literally, 'when it comes to construing a word used in a trade mark specification, one is concerned with how the product is, as a practical matter, regarded for the purposes of trade'.³⁰

²⁶ *Discovery Communications v. Discovery* [2000] ETMR 516 (need to assume normal and fair use across whole of specification).

²⁷ [1996] RPC 281.

²⁸ [1996] RPC 281, 289–90. See also *Avnet v. Isoact* [1998] FSR 16, 19.

²⁹ The interpretation of the specification is done as of the date on which the acts complained of started, rather than the date of registration: *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207, 245 (para. 112) (Pumfrey J).

³⁰ [1996] RPC 281, 289. See also *Omega SA v. Omega Engineering Inc* (3 Jun. 2003) (para. 4); *Beautimatic International v. Mitchell International Pharmaceuticals* [1999] ETMR 912, 921 ('skin-lightening cream' and 'dry-skin lotion' were identical to earlier trade registration relating to 'toilet preparations and cosmetics'); *Associated Newspapers v. Express Newspapers* [2003] FSR (51) Laddie J (para. 66) (newspapers 'for sale in England and Wales' not identical to 'free newspapers').

2.2 CONFUSING SIMILARITIES: SECTION 5(2)/ARTICLE 8(1)(B)

According to section 5(2)/Article 8(1)(b) (which correspond to Article 4(1)(b) of the Directive) a trade mark shall not be registered where it is:

- (i) identical or similar to an earlier trade mark;
- (ii) is to be registered for goods or services similar to those for which the earlier trade mark is protected; *and*
- (iii) there exists a likelihood of confusion on the part of the public, which includes the likelihood of association with the earlier trade mark.

In considering whether a mark falls foul of section 5(2)/Article 8(1)(b), a number of questions arise. We have already considered what is meant by an 'earlier trade mark' and the situations where marks and services will be 'identical'. As such, it remains only to consider when are goods or services 'similar', when marks are 'similar', and what is meant by 'likelihood of confusion'?

Before looking at these in more detail, it is important to note that in *Canon Kabushiki Kaisha v. Metro-Goldwyn-Mayer*,³¹ the European Court of Justice said the various elements of Article 4(1)(b) of the Directive are interdependent. This means that difficulties in proving one of the requirements may be offset by the way one of the other requirements is met. For example, low levels of similarity between goods might be offset by high degree of similarity between marks. As a result of this interdependence, the various tribunals have insisted that section 5(2) should be understood as posing a single composite question: are there similarities (in terms of marks and goods and services) which would combine to create a likelihood of confusion if the earlier trade mark and the sign subsequently presented for registration were used concurrently in relation to the goods or services for which they are respectively registered and proposed to be registered?³²

2.2.1 Similarity of marks

Having acknowledged that similarity of marks is always to be assessed as one element of a global question (are the marks and goods/services so similar as to be likely to cause confusion?), the case law provides some guidance on when marks will be treated as similar. The tribunal should take account of the degree of aural, visual, or conceptual similarity, as well as the inherent or acquired distinctiveness of the mark.³³ Of these, in *Sabel v. Puma*, the ECJ said that the most important factors to be taken into account when comparing marks were the distinctive and dominant components of the marks in question.³⁴ Non-distinctive parts should be discounted. The comparison is done from the point of view of the average consumer of the goods concerned. As a result, the signs are to be compared

³¹ Case C-39/97 [1999] 1 CMLR 77, 95. See also *Marca Mode CV v. Adidas AG*, Case C-425/98 [2000] 2 CMLR 1061, 1084.

³² *Balmoral Trade Mark* [1999] RPC 297, 301; *Audi-Med Trade Mark* [1998] RPC 863, 872 (similarity of marks must be considered globally with the other relevant factors, for otherwise the question of whether one mark is similar to another begs the question 'similar enough for what?').

³³ *Sabel BV v. Puma AG, Rudolf Dassler Sport*, Case C-251/95 [1997] ECR I-6191, I-6224 (hereafter *Sabel v. Puma*). Consequently, the Appointed Person, Geoffrey Hobbs QC has described the question as whether the signs are 'distinctively similar': see, e.g. *In re Bayer AG's Application* (XAROCID) SRIS O/140/03.

³⁴ *Sabel v. Puma*, Case C-251/95 [1997] ECR I-6191, I-6224 (para. 23) (but not extraneous matter such as disclaimers).

taking into account the various ways that consumers use and interpret them. In most cases when marks are being compared they will be looked at as a whole in the contexts in which they can foreseeably be used.³⁵ As the ECJ observed in *Sabel v. Puma*, the average consumer normally perceives a mark as a whole and does not proceed to analyse its various details.³⁶ One of the consequences of looking at the marks as a whole is that the courts will not necessarily examine the marks in too much detail.³⁷

(i) *Visual, aural, and conceptual similarity.* The marks should be assessed from the point of view of their visual, aural, and conceptual similarities. The relative importance of each sort of similarity will vary with the circumstances in hand. In the case of device marks, visual similarity will usually be the most important factor, whereas in the case of composite marks there will often be a tendency to emphasize the textual elements.³⁸ In the case of certain kinds of goods, such as clothes, visual similarity between the marks in issue will be the most important form of similarity.³⁹ In contrast, with restaurant services (where word-of-mouth recommendation is highly important), it is likely that phonetic similarity will be a key.⁴⁰ Each case is therefore to be viewed in its own context. However, the ECJ has ruled that, in an appropriate case, mere aural similarity may make marks so similar as to be likely to cause confusion.⁴¹

In the case of word marks, a determination of visual similarity typically involves looking at the length of the marks; their structure (whether there are the same number of words);

³⁵ *De Cordova v. Vick Chemical Co.* (1951) 68 RPC 103, 106 per Lord Radcliffe ('marks are remembered rather by general impressions or by some significant detail than by any photographic recollection of the whole').

³⁶ *Sabel v. Puma*, Case C-251/95 [1997] ECR I-6191, I-6224 (para. 23).

³⁷ One important question is whether marks relating to pharmaceuticals are to be treated differently. In some cases it has seemed that the courts are willing to find marks similar on lower levels of evidence because of the potential consequences of confusion. However, the OHIM BA has taken the opposite view: in many cases the relevant public comprises pharmacists who are particularly attentive, so minor differences can render signs dissimilar: *Bausch & Lomb Pharmaceuticals Inc v. Biofarm*, R370/2002-3 (5 Feb. 2003) (paras 30-1) (ALREX and ARTEX not confusingly similar). In the *OROPRAM Trade Mark* SRIS 0/208/02, the Appointed Person, Prof. Annand, said that pharmaceutical gave rise to no special considerations: a conclusion followed uncritically by Hobbs QC in *EPISAT Trade Mark* SRIS O/312/03 (18 Sept. 2003).

³⁸ On the basis that 'words "speak louder" than devices': *Oasis Stores' Trade Mark Application* [1998] RPC 631, 644; *Claudia Oberhauser v. OHIM*, T-104/01 [2002] ECR II-4359 (esp. para. 47) (word mark FIFTIES refused registration for denim clothing because of similarities with composite mark including words MISS FIFTIES in lower part, where latter had been registered for clothing); *Matratzen Concord GmbH v. OHIM*, T-6/01 [2002] ECR II-4335 (composite mark, comprising MATRATZEN MARKT CONCORD and including figure carrying mattress, was unregistrable in face of opposition from owner of word mark MATRATZEN, because the word MATRATZEN was the dominant feature of the applicant's composite mark) (on appeal, Case C-3/03P); *Tiffany & Co v. Emballages Mixtes et Plastiques Sarl*, R1018/2000-3 (3 Dec. 2002) (para. 39-40) (emphasizing verbal elements while simultaneously observing that this cannot be a general rule). For an obligatory counter-example, see *Vedial SA v. OHIM*, T-110/01 (12 Dec. 2002) (the word mark SAINT-HUBERT-41 was dissimilar to a composite mark of a chef and the word HUBERT) (on appeal to ECJ as Case C-106/03).

³⁹ *Phillips-Van Heusen Corp. v. OHIM* T-292/01 (14 Oct. 2003) (para. 55) (BASS for footwear and clothing permitted despite opposition by owner of PASH for clothing made of leather, in part because aural similarities of little significance in clothing sector); cf. *Claudia Oberhauser v. OHIM*, T-104/01 (October 23, 2002) (esp. para. 48) (in context of clothing CFI dismissive of figurative elements of sign, which would be interpreted as decorative features).

⁴⁰ *Mystery Drinks GmbH v. OHIM*, T-99/01 [2004] ETMR (18) 217 (para. 48).

⁴¹ *Lloyd Schuhfabrik Meyer v. Klijsen Handel BV*, Case C-342/97 [1999] 2 CMLR 1343. For an example, see *Mystery Drinks GmbH v. OHIM*, T-99/01 (15 Jan. 2003) (figurative mark MYSTERY with stylized M and MIXERY were neither conceptually nor visually similar, but were aurally similar, and in the field of beverages this was sufficient).

and whether the same letters are used. The courts also bear in mind that consumers may not be able to remember a mark perfectly (this is called the notion of ‘imperfect recollection’). The average consumer only rarely has the chance to make a direct comparison between marks, and so must place his trust in the ‘imperfect picture of them that he has kept in his mind’.⁴² In many cases this means that while at first glance two marks may appear to be dissimilar, when the possibility of imperfect recollection is taken into account, the marks may in fact be similar. While the courts have used the notion of imperfect recollection to expand the ambit of protection given to earlier marks, they are always mindful of the need for the marks to be similar.

When comparing marks aurally, tribunals have tended to carry out a quantitative assessment: do the two signs have more syllables in common than not? For example, the CFI held that *GIORGO AIRE* was not aurally similar to *MISS GIORGI* because only one syllable out of four was the same;⁴³ whereas *MYSTERY* and *MIXERY* were treated as similar.⁴⁴ In a short word, a slight variation may be sufficient to render the marks dissimilar: for example *BASS* and *PASH* were treated as dissimilar by the CFI, though in a different case it held *iLS* to be similar to *ELS*.⁴⁵ In assessing similarity, the tribunal will typically be more influenced by the first than last syllable. So the CFI treated *BUD* and *BUDMEN* as similar, *OHIM* treated *EUCERIN* and *EUDERMIN* as similar because of the common start, and the English High Court held *VIAGRA* and *VIAGRENE* to be similar.⁴⁶ Consistently with this logic, the CFI held words with common endings—*NUTRIDE* and *TUFFTRIDE*, *ASTERIX* and *STARIX*—not to be similar.⁴⁷ In other cases, similarity of the first syllable has proved insufficient to establish similarity, (for example, it was held by the CFI that *GIORGI LINE* was not similar to either *GIORGI AIRE*, and by the UK Registry that *POLACLIP* was not similar to *POLAROID*) and similarity only in the second syllable has been sufficient to establish similarity overall (*OXBRIDGE* and *BRIDGE* being found similar).⁴⁸ These

OHIM*, T-156/01 (9 July 2003) (*GIORGI* was not though particularly distinctive for perfumes); *Polaclip Trade Mark* [1999] RPC 282, 289 (the Registrar accepting that the ‘pola’ element would be understood as a reference to the polarizing effect of reducing glare); *Dunsford-Wesley v. Manufacturas Antonio Gassol SA*, R310/2000–4 (28 Jan. 2003). See also *George Trade Mark* (23 Sept. 2002) SRIS O/532/02 (*GEORGE* not similar to *GIORGIO*, both for perfumes); *Ener-Cap* [1999] RPC 362.

counter-examples are a useful reminder that the rulings are fact-specific, so previous decisions are helpful only to provide a sense of the standards being applied: they have virtually no value as precedents.

Because similarity is assessed conceptually as well as visually and phonetically, in thinking about whether marks are similar, it is necessary to take account of the ideas that lie behind or inform the earlier mark. The important role that non-visual features may play in deciding whether marks are similar can be seen in *Sir Terence Conran v. Mean Fiddler Holding*.⁴⁹ Sir Terence, who had registered the word ZINC in respect of planning, design, and interior design of restaurants, brought an action for summary judgment against the defendant who had opened a wine bar called the ZINCBAR (with the letters zn located on one side of the fascia on the premises). In granting relief, Robert Walker J explained that the chemical symbol for the element zinc, 'Zn' (as well as 'ZN'), in addition to phonetic equivalents such as sinc and sync, were similar to ZINC.⁵⁰ In other situations, conceptual dissimilarity, as for example where one mark has a meaning but its comparator does not, may counteract aural or visual similarity.⁵¹

(ii) *Distinctiveness*. The question of whether marks are similar will often be dependent on the inherent or acquired distinctiveness of the mark.⁵² This has a number of effects.⁵³

First, the less distinctive the earlier trade mark, the less literal or visual alteration is necessary to ensure that the later mark is not similar. For example, if the earlier trade mark involves an adaptation of a descriptive word, it may well have a limited capacity to summon up source.⁵⁴ This can be seen in *The European v. The Economist Newspaper*⁵⁵ which concerned a device mark comprising the words THE EUROPEAN. There were a number of notable features of the mark. These included the fact that all the letters of the title were in

⁴⁹ [1997] FSR 856.

⁵⁰ See also *Fountain Trade Mark* [1999] RPC 490, 495 (FONT FOUNTAIN and FOUNTAIN both used in relation to computer hardware and peripheral devices alluded 'to the idea or image of a gushing jet or spray of water').

⁵¹ *Phillips-Van Heusen Corp. v. OHIM*, T-292/01 (14 Oct. 2003) (BASS not similar to PASH, despite visual aural similarities, because the former was understandable as a musical reference, whereas the latter either had no meaning or referred to a German dice game); *Vedial SA v. OHIM* T-110/01 (12 Dec. 2002) (para 57–8) (the word mark SAINT-HUBERT-41, suggesting saint or a place, was conceptually dissimilar to a composite mark of a chef and the word HUBERT, a common name) (on appeal to ECJ as Case C-106/03). See also *Kay Land Srl v. Buksnedkeren ApS*, R1150/2000–2 (14 Jan. 2003) (H2O and PRH2OOF not similar, being opposites).

⁵² Even if this does not render the mark well-known: *Lacer SA v. Biolase Technology*, R1074/2000–3 (4 Jun. 2003) (para. 75).

⁵³ The status of some of these propositions, that is whether they are legal rules, presumptions of fact, or merely guidelines, has been a matter of dispute. Given the ECJ's role, particularly on references from member states, it has been assumed that some statements must be propositions of law. In *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207, 241 (para. 103), when referring to the ECJ's statements as regards the relevance of distinctiveness to a finding of likelihood of confusion, Pumfrey J stated: 'This is a very surprising proposition (and perhaps only a presumption of fact, since this cannot be a legal issue), since normally it is easier to distinguish a well-known mark from others close to it. But it seems to make more sense when one comes to consider device marks.'

⁵⁴ *Laboratoires RTB, SL, v. OHIM*, T-156/01 (9 July 2003) (para. 81) (GIORGIO AIRE not similar to GIORGI LINE because the common components were not distinctive given the prevalence of Italian names in the perfumery market). *Furnitureland v. Harris* [1989] FSR 536, 543 (FURNITURE LAND and FURNITURE CITY NOT similar).

⁵⁵ [1998] FSR 283.

upper case; the word 'the' was in much less prominent print than the word 'European'; a dove holding a copy of a newspaper in its beak appeared at the top of the letter 'O'; and an image of the world appeared at the bottom of the letter 'O'. In an action for infringement, the question arose as to whether the claimant's mark was similar to the words THE EUROPEAN VOICE, which the defendants used for their newsletter. Affirming the judgment of Rattee J,⁵⁶ the Court of Appeal held the signs were not similar, chiefly because the only correspondence was in the descriptive term 'European'.⁵⁷ Another factor that influenced the Court was the fact that whereas the claimant used the term 'European' as a noun, it was used by the defendant as an adjective (in conjunction with the word 'voice').⁵⁸ The Court rejected the claimant's submission that the word 'European' constituted an essential feature of the registered mark.⁵⁹ Although it was the most prominent part of the device, it was not a distinctive 'made-up' word. Instead, it was an ordinary word commonly used in the English language.⁶⁰ Where the distinctiveness of the earlier trade mark is very low, the later mark will have to be in close proximity for it to be similar, as with THERMAWEAR and THERMAWARM.⁶¹

Second, if the earlier mark is highly distinctive, then a mark that has been substantially modified might nonetheless still be similar.⁶² In *De Cordova v. Vick Chemical Co.*,⁶³ the claimant was the proprietor of a device mark consisting of the words VICKS VAPORUB SALVE and a triangle with the words VICKS CHEMICAL COMPANY printed on the sides. They were also owners of a word mark, VAPORUB. The Privy Council held that the appellant had infringed the first of the claimant's marks by importing and marketing jars of ointment under the name KARSOTE VAPOUR RUB. Lord Radcliffe explained that VAPORUB was (at least at the time of registration) a fancy word, and evidence established that the public treated VAPORUB as being synonymous with VICKS VAPORUB.⁶⁴ As VAPORUB was an essential feature, or a material or substantial element, of the trade mark, the marks were similar.

Third, the chance of there being a likelihood of confusion on the basis of the ideas (or concepts) that underlie a mark is particularly influenced by the distinctiveness of the

⁵⁶ [1996] FSR 431. ⁵⁷ [1998] FSR 283, 293. ⁵⁸ *Ibid.*

⁵⁹ [1998] FSR 283, 289. ⁶⁰ [1998] FSR 283, 292.

⁶¹ See *Thermawear v. Vedonis* [1982] RPC 44, 55–6 (VENDONIS THERMAWARM similar to claimant's registered mark THERMAWEAR for underwear); *Associated Newspapers v. Express Newspapers* (11 Jun. 2003) (para. 73) (LONDON EVENING MAIL not sufficiently similar to THE MAIL ON SUNDAY, but EVENING MAIL was similar); *In re Michael Evangelus Clarke's Application* SRIS 0/154/03 (9 Jun. 2003) (MICHAEL VAN CLARKE not sufficiently similar to NICKY CLARKE, both for hairdressing services, because the two names were common).

⁶² *Sabel v. Puma*, Case C-251/95 [1997] ECR I-6191, I-6224 (para. 24); *Lloyd Schuhfabrik Meyer & Co. v. Klijsen Handel BV*, C-342/97 [1999] 2 CMLR 1343, 1357–8 (paras. 21–2); *Canon Kabushiki Kaisha, Japan v. Pathé Communications*, Case C-39/97 [1999] 1 CMLR 77, 95 (paras. 17–18). The UK courts, while acknowledging the status of the Court making these statements, has frequently described it as a 'presumption of fact', and thus not a substitute for a proper analysis. Some famous signs, such as David Beckham or Coca-Cola are so famous that no one would think Dave Beckham or Roco-Cola was similar. See, e.g. *Kundry SA's Application* [1998] ETMR 178, 185 (JARVARD not similar to HARVARD even given the latter's reputation); *Les Éditions Albert René v. OHIM* Case T-311/01 (22 Oct. 2003) (esp. para. 58) (where fame of earlier mark ASTERIX meant it was extremely unlikely that there could be any confusion by use of the word STARIX); *Vedial SA v. OHIM*, T-110/01 (12 Dec. 2002) (fame of SAINT-HUBERT-41 Mark could not alter the global assessment of likelihood of confusion given the finding that the sign was visually, aurally and conceptually dissimilar to a composite mark of a chef and the word HUBERT) (on appeal to ECJ as Case C-106/03).

⁶³ (1951) 68 RPC 103.

⁶⁴ (1951) 68 RPC 103, 106. Approved in *Wagamama v. City Centre Restaurants* [1995] FSR 713, 733.

earlier mark:⁶⁵ in *Sabel v. Puma*, which concerned two images of bounding felines, the ECJ suggested that *if* the earlier mark was well known by the public and/or the image of the puma was imaginative, conceptual similarity might be sufficient to give rise to a finding of a likelihood of confusion. (See Figure 38.1 below at p. 864.)⁶⁶

Fourth, although the comparison is to be made between the particular mark registered and the sign applied for,⁶⁷ the relevance of acquired distinctiveness may permit the tribunal to consider the earlier mark in the context of a 'family of marks'. Most readers will be familiar with the range of 'easy' services EASYJET (an airline), EASYINTERNET (Internet cafés), etc. provided by what was the 'Easy' group. On the assumption that these are registered as trade marks, it might be that the existence of a 'family' allows each mark (the inherent distinctiveness of which is weak) to reinforce each other and gain a broader scope of protection than they would otherwise have. This might mean that an application by a third party for EASYBANK would be refused. This has been accepted in principle by one of the Appointed Persons,⁶⁸ though other authorities reject this approach as wrongly conflating passing off and trade marks law.⁶⁹ Guidance from the ECJ would be helpful.

2.2.2 When are goods or services similar?

The question of whether goods or services are similar depends on the facts of the case. When deciding whether a trade mark application falls foul of one of the relative grounds for refusal, the comparison is normally between the goods or services for which the earlier mark has been registered and the goods or services to which the application relates. This is largely a paper exercise. However, where a mark has been used the court will usually compare the defendant's goods as they have actually been used with the goods in the claimant's specification. This requires the court to interpret the specification and then to characterize the defendant's goods or services to see if they fall within the specification.

In *Canon Kabushiki Kaisha v. Pathé Communications*, the Japanese company, Canon, opposed MGM's registration of the sign CANNON for films in the German Trade Mark Registry. The opposition was based upon Canon's registration of CANON for 'still and motion picture cameras and projectors, television filming and recording devices, etc'. The German Bundespatentgericht held that the goods were not similar. On appeal, the Bundesgerichtshof asked the ECJ for a preliminary ruling on the interpretation of Article 4(1)(b) of the Directive (which is the equivalent of section 5(2)(a)/Article 8(1)(b)). In response, the ECJ explained that when the tribunal assesses the similarity of the goods or services concerned, 'all the relevant factors relating to those goods and services themselves should be taken into account. Those factors include, *inter alia*, their nature, their end users, and their method of use and whether they are in competition with each other or are complementary'.⁷⁰ Moreover (and in contradiction to the approach that had been taken in

Kinder are Learning Centers Inc (Kinder Care Device/Kinder)*, R1004/2000–1 (20 Oct. 2003) (para. 22).

⁶⁹ *Associated Newspapers v. Express Newspapers* (11 June 2003) (Laddie J) (para. 72).

⁷⁰ *Canon Kabushiki Kaisha v. Metro-Goldwyn-Mayer*, Case C-39/97 [1999] 1 CMLR 77, 95 (para. 17).

the UK courts), the tribunal should also take into account 'the distinctive character of the earlier trade mark, and in particular its reputation' when determining whether the similarity 'between the goods or services covered by the two trade marks is sufficient to give rise to the likelihood of confusion'.⁷¹

British Sugar v. Robertson illustrates how the courts have applied the factors in the case of a non-distinctive mark (namely TREAT). There the question was whether a sweet syrup to be poured over desserts was similar to a sweet-flavoured spread. Jacob J concluded that the goods were not similar,⁷² explaining that the goods were used differently (the spread could be used on desserts but would generally not be); were not in direct competition; were located in different places in supermarkets (the spread with jams, the dessert sauce with desserts); were physically different (the spread was more viscous than the sauce); and were treated differently by market researchers. In contrast, in *Balmoral Trade Mark*, whisky and wine were held to be similar goods: although the two products have very different producers, it is common to find them being bought and sold by the same merchants, and sold through the same outlets.⁷³

It is clear that the fact that goods or services are registered in different classes does not inevitably mean that they are not similar. For example, the CFI held that the development of correspondence courses was similar to educational textbooks and printed materials.⁷⁴ Similarly, the OHIM held that 'buckles for footwear and garments' in Class 26 were similar to 'boots and shoes' in Class 25, because the products were 'logically connected' in the sense that they are meant to be or could be viewed by the average consumer as operating within the same market.⁷⁵ The fact that the signs relate to different classes is irrelevant because the way the goods or services are classified is an administrative matter, whereas the question of whether goods or services are similar is an issue for substantive law. It is also clear that if an earlier trade mark relates to goods whereas the applicant's mark relates to services, they may nonetheless still be similar (and vice versa).⁷⁶ In one

⁷¹ [1999] 1 CMLR 77, 95 (para. 18). In *Pfizer v. Eurofood Link (UK)* [2000] ETMR 187, Simon Thorley QC came to the conclusion that a herbal beverage sold as VIAGRENE was similar to the claimant's pharmaceutical product, VIAGRA. The court was influenced particularly by the defendant's marketing of the beverage as potentially stimulating the libido of its drinkers, so that, like VIAGRA, VIAGRENE would enhance a person's love life.

⁷² [1996] RPC 281, 297. From a European perspective it seems this was 'a very narrow construction': A. Kur, 'Harmonization of Trade Mark Law in Europe—An Overview' (1997) 28 IIC 1, 22. Contrast, in particular, *Vedial SA v. OHIM*, T-110/01 (CFI) (12 Dec. 2002) (edible fats were similar to vinegars and sauces, *inter alia*, because they are offered for sale on the same shelves) (on appeal to ECJ as Case C-106/03); and *Pedro Díaz v. OHIM*, T-85/02 (condensed milk and cheese held similar because they are in the same family of 'milk products' so consumers might think they both come from the same enterprise).

⁷³ *Balmoral Trade Mark* [1999] RPC 297, 302. Note also *Thomson Holidays v Norwegian Cruise Lines* [2003] RPC (32) 586 (CA); *Loewe SA's Application; Opposition by Logoathletic Inc*, B37889 [2000] ETMR 40, 43 (OHIM treating footwear and clothing as similar because frequently manufactured by same enterprises, serve similar purposes and both destined for public at large).

⁷⁴ *Institut für Lernsysteme GmbH v. OHIM*, T-388 (CFI) (23 Oct. 2002) (development of correspondence courses was identical service to provision of educational services and similar to educational textbooks and printed materials) (on appeal to ECJ as Case C-3/03).

⁷⁵ *Zanella SNC's Application; Opposition by Zanella Confezioni SpA*, B 42053 [2000] ETMR 69, 72.

⁷⁶ The characterization of a defendant's activities may be such that it can be said that he is using the sign in relation to both goods and services. For example, a garage which advertises that it repairs BMW vehicles can be seen as using the sign BMW in relation both to cars and repairing services: *Bayerische Motorenwerke AG v. Ronald Karel Deenik*, Case C-63/97 [1999] 1 CMLR 1099, 1122–23 (paras. 38–42).

case, an application for the sign BALMORAL for wines was rejected because of the existence of an earlier trade mark BALMORAL for bar services.⁷⁷

In contrast with *British Sugar v. Robertson*, which requires assessment of similarity of marks and goods to be undertaken as separate stages of the analysis,⁷⁸ the *Canon* decision suggests that there is an interdependence between distinctiveness and the question of whether goods and services are similar. This proposition has met with some resistance.⁷⁹ Although it may be true that in the case of a well-known mark consumers might regard there to be a likelihood of confusion by use of that mark on a broader spectrum of goods, it has been argued that there must be a point at which goods and services simply cannot be described as similar. As Patten J has stated, '[t]he distinctiveness and strength of the earlier mark may lessen the degree of similarity required but it does not eliminate it'.⁸⁰ Other critics see the approach in *Canon* as creating undesirable bureaucratic difficulties and uncertainties. Insofar as it links similarity of goods and services to levels of distinctiveness all decisions on similarity take on an individuality/specificity that renders them unsuitable as guides in subsequent cases. The issue is likely to be reviewed again by the ECJ before long.⁸¹

2.2.3 Likelihood of confusion

The final, and critical, element that has to be shown for a mark to fall foul of section 5(2)/Article 8(1)(b) is that (as a result of the similarities) there is 'a likelihood of confusion on the part of the public, which includes the likelihood of association with the earlier trade mark'.

(i) *Standpoint of interpretation: who must be confused?* The likelihood of confusion is considered from the point of view of the average consumer of the products concerned, comparing the marks as a whole. As the ECJ observed in *Sabel v. Puma*,⁸² 'the average consumer of the type of goods or services in question plays a decisive role in the global appreciation of the likelihood of confusion'. In subsequent decisions the ECJ has said that the average consumer is reasonably well-informed and 'reasonably observant and circumspect'.⁸³ While acknowledging that the characteristics of the average consumer may vary

⁷⁷ *Balmoral Trade Mark* [1999] RPC 297, 301.

⁷⁸ [1996] RPC 281, 194 where Jacob J stated that 'the question of similarity of goods is wholly independent of the particular mark the subject of registration'.

⁷⁹ *DaimlerChrysler AG v. Alavi* [2001] RPC (42) 813 (para. 80); *R v. Reef Trade Mark* [2002] RPC (9) 387 (para. 14); *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207, 241 (para. 103) (Pumfrey J: 'I have difficulty understanding how [distinctiveness] can affect the similarity of goods, but that is the law').

⁸⁰ *Sihra's Trade Mark Application* [2003] RPC (44) 789 (Patten J.) (paras. 12, 15); *Harding v. Smilecare* [2002] FSR (37) 589 P.W. Smith QC (para. 71) (similarity a threshold); Kerly (paras. 8–48–50) (arguing that para. 22 of *Canon* itself recognizes similarity of goods as a threshold). The CFI has said something similar as regards the relationship between interdependence and the similarity of signs: *Les Éditions Albert René v. OHIM*, T-311/01 (22 Oct. 2003) (esp. para. 61); *Vedial SA v. OHIM* T-110/01 (12 Dec. 2002) (para. 65); *Fin. Ing SRL v. Disney Enterprises*, R282/2002–4 (20 May 2003) (para. 160) (identity of goods could not render PROFESSOR PORTER similar to REPORTER). Sitting as Appointed Person, Geoffrey Hobbs QC has frequently stated that 'similarities between marks cannot eliminate differences between goods and services': see e.g. *Raleigh International Trade Mark* [2001] RPC 202, 211 (para. 21).

⁸¹ *Vedial SA v. OHIM*, Case C-106/03P (pending).

⁸² *Sabel BV v. Puma AG*, Case C-251/95 [1997] ECR I-6191, 6224 (para. 23).

⁸³ *Lloyd Shuhfabrik Meyer v. Klijsen Handel BV*, Case C-342/97 [1999] 2 CMLR 1343, 1358 (para. 26).

with the sector concerned,⁸⁴ Community law applies its own understanding of the consumer, rather than focusing on actual consumers (who may be ignorant or uninterested). There is no confusion if only a minority of particularly inattentive consumers might possibly be confused.⁸⁵ Beyond this, however, there has been as yet little discussion of the characteristics that ought to be attributed to the average consumer.

(ii) *What must the public be confused about?* The next question to consider is what is meant by ‘likelihood of confusion’ in section 5(2)/Article 8(1)(b)? In its ‘classic’ form, consumers must be confused about the source or origin of the goods or services—that is, they must be confused as to the designer, manufacturer, selector, or supplier of the goods or services. In other words, classic confusion is concerned with the situation where consumers believe that the goods or services emanate from one organization, but they, in fact, come from a different independent organization. This classic form of confusion has been extended so as to accommodate broader understandings of the source of goods or services. Consequently, a person will be confused for the purposes of section 5(2) if they incorrectly assume that there is some broader kind of *economic connection* between the users of marks,⁸⁶ for example, that the goods are being provided by a subsidiary or licensee of the trade mark owner.⁸⁷ Confusion might also arise, if the use of a sign leads consumers to believe that a person’s repair business is ‘authorized’ by the trade mark owner.⁸⁸

In considering whether there is a likelihood of confusion, the tribunals must consider whether there is a genuine and properly substantiated likelihood of confusion:⁸⁹ it is not enough that confusion is hypothetical and remote.⁹⁰ The term ‘likelihood’ indicates probability rather than possibility.⁹¹ However, it should be noted that while the English version of the Directive refers to ‘likelihood’, the other language versions use the terms ‘risk’ or ‘danger’. In *Marca Mode* the Advocate General suggested that little would turn on these different terminologies and, giving judgment, the ECJ indicated that the mere inability to rule out the possibility of confusion was not sufficient.⁹² Although the ECJ has yet to indicate exactly what proportion of the relevant public must be confused, Jacob J has

⁸⁴ *Reed Executive plc v. Reed Business Information Ltd* [2003] *RPC* (12) 207, 241 (para. 103) (Pumfrey J: ‘a 50 pence purchase in the station kiosk will involve different considerations from a once-in-a-lifetime expenditure of £50,000’); *Ferrero SpA v. Kinder are Learning Centers Inc (Kinder Care Device/Kinder)*, R1004/2000–1 (20 Oct. 2003) (para. 14) (consumer of sweet snacks might have poor linguistic skills and be less attentive). The question of whether consumers are confined to likely purchasers, or can encompass a broader section of the public—those likely to be confronted with the mark—will be before the ECJ in *Vedial SA v. OHIM*, Case C-106/03P (pending).

boldly asserted that for trade mark infringement 'it is enough if a significant proportion of the public, exercising reasonable care, is confused'.⁹³

(iii) *Is 'mere association' confusion?* Perhaps the most hotly contested issue since the adoption and implementation of the Directive has been the question of what Article 4(1)(b) of the Directive/section 5(2) means when it says that 'likelihood of confusion includes the likelihood of association with the earlier trade mark'? In particular, the debate focused on the question of whether likelihood of association is a separate ground of objection, that the proprietor of an earlier mark can rely on to oppose a later application, even where they cannot demonstrate a likelihood of confusion as to origin.⁹⁴ The proponents of the view that mere association would suffice suggested that the provision needed to be construed *via* the Directive, through the EC Council Minutes,⁹⁵ and back to its origins in European law, particularly to Benelux trade mark law.⁹⁶ When section 5(2)(a) is interpreted purposively, it is said to lead to the conclusion that a mark could be rejected in situations where there was merely a conceptual association between marks, even though the consumers may not have been confused.⁹⁷

The issue came before the European Court of Justice in *Sabel v. Puma*,⁹⁸ an Article 177 reference to the Court by the German Bundesgerichtshof. Sabel had applied to the German Registry to register a picture mark of a 'bounding feline' with the word SABEL beneath it for leather products and clothing. Puma opposed the application on the basis that they were the proprietors of an earlier pictorial mark that had been registered in Germany for 'leather and imitation leather, goods made therefrom (bags) and articles of clothing'.

It was common ground that Puma's mark was not particularly well known (this was not the familiar Puma mark used on sportswear). While the Bundesgerichtshof provisionally considered that no likelihood of confusion existed between the two marks, they sought to ascertain from the ECJ the importance to be given to the idea or concept that the image conveys (in the present case, a 'bounding feline') in determining the likelihood of confusion. More generally, they asked the ECJ to consider whether in the absence of likelihood of confusion, a mark could nonetheless still be refused under Article 4(1)(b)/section 5(2) merely on the basis of the conceptual association that the public might make between the two marks. The question, in short, was whether a mark could be refused on the basis that there was a likelihood of association but no likelihood of confusion between the marks.

After considering submissions from a number of member states, and particularly influenced by the fact that the tenth Recital to the Directive states that 'likelihood of confusion . . . constitutes the specific condition for such protection', the European Court of Justice

⁹³ *Société de Produits Nestlé SA v. Unilever plc* [2003] *ETMR* 681, 692 (para. 30).

⁹⁴ The debate flared particularly intensely around the decision in *Wagamama*. See, e.g. P. Prescott, 'Has the Benelux Trade Mark Law been Written into the Directive?' [1997] *EIPR* 99; P. Harris, 'UK Trade Mark Law: Are You Confused?' [1995] *EIPR* 601; A. Kamperman Sanders, 'Back to the Dark Ages of Trade Mark Law' [1996] *EIPR* 3 and 'The Return to Wagamama' [1996] *EIPR* 521.

Fig. 38.1 *Sabel v. Puma* Case

held 'that the concept of likelihood of association is *not* an alternative to that of likelihood of confusion, but serves to define its scope'.⁹⁹

Although, the ECJ's conclusion was relatively clear in its tenor,¹⁰⁰ the proponents of the argument that association might constitute a distinct basis for opposition (or infringement) took heart from paragraph 24 of the judgment where the Court said that, in the case of a particularly distinctive mark, it is not impossible that the conceptual similarity resulting from the fact that two marks use images with analogous semantic content may give rise to a likelihood of confusion.¹⁰¹ However, following the ECJ decision in *Marca Mode*, it has been made crystal clear that paragraph 24 in no sense tempers the

⁹⁹ This form of words has produced a strange array of re-interpretations, most of which are a consequence of different understandings of 'association' and 'confusion'. For example, in *Shira's Trade Mark Application* [2003] *RPC* (44) 789 (INTEL-PLAY/INTEL) it was said that association is likely to be the first step towards confusion but it is not sufficient. If association was being used to describe the recognition of a connection between two signs (rather than two sources) the statement is unobjectionable. In *Durferrit v. OHIM*, T-224/01 (9 Apr. 2003) (para. 62) (CFI) the CFI stated that confusion is a specific case of association. Here confusion is used narrowly to refer to a belief that the goods emanate from a single undertaking whereas association is understood broadly as a belief that goods come from associated undertakings. In *Reed Executive plc v. Reed Business Information Ltd* [2003] *RPC* (12) 207, 241 (para. 103) Pumfrey J stated that '[t]he phrase "likelihood of association" is an explanation of the kind of confusion as to origin with which the provision is concerned. It is not a different type of infringement from confusion as to origin'. *Premier Brands v. Typhoon* [2000] *FSR* 767, 793. Cf. *Premier Luggage & Bags v Premier Co (UK)* [2003] *FSR* (5) 69, 89 (para. 46) (treating 'association' as an additional requirement above 'confusion') (Chadwick LJ).

¹⁰⁰ A. Carboni, 'Confusion Clarified' [1998] *EIPR* 107 (describing the judgment as United Kingdom 1, Benelux 0); C. Pickering, *Trade Marks in Theory and Practice* (1998), 23–24.

¹⁰¹ C. Gielen, 'A Benelux Perspective' [1998] *EIPR* 109.

fundamental principle that the mere existence of association will not suffice in the absence of genuine and substantiated likelihood of confusion. In particular, the existence of a likelihood of association between two marks does not give rise to a presumption of confusion.¹⁰²

(iv) *Proving confusion.* The question of whether consumers are likely to be confused is an issue that is to be decided by the tribunal. As Sir Raymond Evershed MR said in *Electrolux Limited v. Electrix Limited*,¹⁰³ the question of whether a mark is likely to be confused with another mark is 'a matter upon which the judge must make up his mind and which he, and he alone, must decide. He cannot, as it is said, abdicate the decision in that matter to witnesses before him'.¹⁰⁴

The nature of the inquiry into whether there is a likelihood of confusion will vary depending on whether the mark has been used. Normally (although not necessarily), where the relative grounds are heard by the Registrar the mark will not have been used, thus there will be no evidence of actual confusion. In contrast, where it is argued that a mark should be declared invalid after registration because it falls foul of a relative ground for refusal, it is highly likely (as with an infringement action) that the mark will have been used and thus there ought to be evidence of actual confusion.

In the absence of evidence, the tribunal makes an intuitive and speculative judgment about whether there is a likelihood of confusion. In so doing, the tribunals assume that the marks are used in a normal and fair way (as was the case under the 1938 Act).¹⁰⁵ The reason for assuming normal and fair use is that:

[unless] one assumes notional use of the earlier mark, the answer to the question of whether a later trade mark gives rise to a likelihood of confusion on the part of the public will always be no. If the public have never seen the earlier mark the later mark cannot cause confusion. Thus it is necessary to assume use of the earlier mark (and the later mark) when considering the likelihood of confusion.¹⁰⁶

In situations where the mark has been used, the courts will usually be able to draw on different forms of evidence to help them decide whether there is confusion. For example, the tribunal might be informed by evidence of actual confusion where the applicant has used the mark prior to the application, or in a post-grant application for a declaration of invalidity. In some cases, the absence of evidence of actual confusion *may* also be probative. For example, in *Baywatch* the judge was strongly influenced by the fact that there was no evidence that the public had confused the BAYWATCH series with the BABEWATCH adult channel series.¹⁰⁷ It should be noted that an inability to produce evidence of confusion is not always fatal to an action. As Millett LJ said in *The European v. The Economist Newspaper*,¹⁰⁸ the '[a]bsence of evidence of actual confusion is rarely significant, especially in a trade mark case where it may be due to differences extraneous to the plaintiff's registered trade mark'.¹⁰⁹ Such extraneous reasons include the possibility that the market conditions

¹⁰⁸ [1998] FSR 283. ¹⁰⁹ [1998] FSR 283, 291.

are such that actual instances of confusion are unlikely.¹¹⁰ There is also a possibility that the confusion has been so complete that customers are not conscious of their mistakes. In other cases, the appropriate evidence may simply be too difficult to obtain.

The evidence presented to the courts may take a number of different forms. A claimant will be in a strong position if they can produce testimony of a reasonably prudent purchaser who was in fact confused, or provide examples of conduct probative of actual confusion (such as telephone calls to the registered proprietor about the defendant's goods or services,¹¹¹ or misdirected letters).

The courts are also likely to be faced with expert evidence. The extent to which such evidence is admissible is unclear. It has long been held that expert evidence must not relate to the key question of whether the use is confusing. Instead, it should be confined to factual explanations of things such as how the trade is structured. However, doubt was thrown on this in *Guccio Gucci SpA v. Paolo Gucci*¹¹² when Sir Nicolas Browne-Wilkinson V-C said that the court may rely on evidence from experts where the court requires specialist knowledge. This was because it is 'the function of the expert to instruct and inform the court as to those things which the court would otherwise not know'.¹¹³ The Vice-Chancellor said that where the case concerns an area of which the judge is ignorant (in this case Browne-Wilkinson V-C had little knowledge of the designer-label market), it was legitimate to produce evidence of the likelihood of confusion from experts.¹¹⁴

While this approach was largely approved in *The European v. The Economist Newspaper*,¹¹⁵ doubts were raised about the admissibility of expert evidence on the critical question of whether the marks were confusingly similar. At first instance, Rattee J was presented with evidence from people in the newspaper trade (including two editors and a former editor of national newspapers) that members of the public were likely to be confused into thinking that THE EUROPEAN and EUROPEAN VOICE were associated (or that the latter was a supplement of the former). The Court of Appeal said that this evidence was almost entirely inadmissible. This was because it related to the question of whether the marks were confusingly similar, rather than explaining the 'special features of [the] market of which the judge may otherwise be ignorant'.¹¹⁶ It is therefore unclear the extent to which Browne-Wilkinson V-C's view that trade evidence is admissible in areas with which a judge is unfamiliar, *even* if it pertains to the issue of confusing similarity,¹¹⁷ remains good law.

Parties often also lead survey evidence as to whether marks are confusingly similar. The courts have not been consistent in their assessment of the relevance or weight to be given to such evidence. It should be noted that the rules of evidence apply in application proceedings before the Registrar as much as in the courts.¹¹⁸ A particular problem that

¹¹⁰ As where the purchase of washing soap was rationed, but detergent could be bought freely: *Lever Bros., Port Sunlight v. Sunniewite Products* (1949) 66 RPC 84, 91.

¹¹¹ The evidence of calls to the claimant's office did not demonstrate confusion, partly because it was not clear why the callers had called and when the caller was told that they speaking to *The European* newspaper, they knew that this was not the same as *European Voice* and hung up.

arises in relation to survey evidence is that it may be excluded on the basis that it is hearsay.¹¹⁹ If proper procedures are followed, however, survey evidence is normally not excluded because it is hearsay. The fate of the evidence often depends on the nature of the survey, and the courts are conscious of the difficulties in formulating, executing, and interpreting such surveys.¹²⁰

2.3 PROTECTION OF NON-ORIGIN FUNCTIONS: SECTION 5(3)/-ARTICLE 8(5)

The third absolute ground for refusal is found in section 5(3)/Article 8(5) CTMR. Section 5(3) implements the optional Article 4(4)(a) of the Directive.¹²¹ The section recognizes that the value of a trade mark may lie not simply in its ability to indicate source, but also in 'the image conveyed by the trade mark', its so-called 'advertising function'.¹²² As the OHIM Board of Appeal has stated, a trade mark is 'a vehicle for communicating a message to the public, and itself represents financial value. This message is incorporated into the trade mark through use, especially for advertising purposes, which enables the trade mark to assume the message itself, whether informatively or symbolically. The message may refer to the product's qualities, or indeed to intangible values such as luxury, lifestyle, exclusivity, adventure, youth etc . . .'.¹²³ Section 5(3) introduces protection for the 'advertising function' by protecting the mark against various forms of use, including 'dilution', perhaps for the first time in English law.¹²⁴ The protection encompasses: the prevention of unjust enrichment where a trader takes unfair advantage of the repute of the mark; the erosion of a mark's distinctiveness by its use on the goods of another (what is referred to as 'blurring'); and also the related concept of 'tarnishment', whereby the repute or goodwill associated with a mark becomes tainted by its use in connection with products of an unsavoury quality, or as a consequence of being portrayed in an unwholesome context. We will return to these concepts in the course of this chapter.

Section 5(3)/Article 8(5) provide that a trade mark will not be registered where:

- (a) the later mark is identical with or similar to an earlier mark;
- (b) the later mark is to be registered for goods or services which are *not similar* to those for which the earlier mark is protected;

¹¹⁹ *Oasis Stores' Trade Mark Application* [1998] *RPC* 631, 637.

¹²⁰ For example, in *Imperial Group plc v. Philip Morris* [1984] *RPC* 293, 310. The courts have been sceptical about other techniques used to measure confusion. These have been treated as largely irrelevant to a determination that it is said is concerned with the realities of the marketplace. See, e.g. *Laura Ashley v. Coloroll* [1987] *RPC* 1, 10 ff. (rejecting evidence obtained by using 'tachistoscope').

¹²¹ *General Motors Corporation v. Yplon*, Case C-375/97 [1999] 3 *CMLR* 427, 443 (para. 29).

¹²² *Ferrero SpA v. Kinder are Learning Centers Inc. (Kinder Care Device/Kinder)*, R1004/2000-1 (20 Oct. 2003) (para. 24); *Souza Cruz SA v. Hollywood SAS (Hollywood/Hollywood)*, R283/1999-3 (25 Apr. 2001) (paras. 64-7).

¹²³ *Souza Cruz SA v. Hollywood SAS (Hollywood/Hollywood)*, R283/1999-3 [2002] *ETMR* (64) 705 (para. 7); *Elleni Holding BV v. Sigla SA (Vips/Vips)*, R1127/2000-3 (1 Apr. 2003) (para. 41).

¹²⁴ T. Martino, *Trademark Dilution* (1996), ch. 12. The doctrine of dilution is, however, often said to have its inspiration in cases such as *Eastman Photographic Materials Co. v. John Griffiths Cycle Corporation* (1898) 15 *RPC* 105 (KODAK confusing on bicycles); and *Hack's Application* (1914) 58 *RPC* 91 (Proprietor of BLACK MAGIC registered for chocolates succeeded in opposing an application to register the same mark for 'laxatives other than laxatives made with chocolate').

- (c) the earlier trade mark has a reputation in the United Kingdom, or in the case of a Community trade mark, in the European Community;
- (d) the use of the later mark must either take unfair advantage of, or be detrimental to, the distinctive character or the repute of the earlier trade mark; and
- (e) the use of the later mark is without due cause.

While we have already addressed some of the issues raised by section 5(3)/Article 8(5) (such as what is an earlier trade mark, and the situations where marks may be identical or similar),¹²⁵ the section introduces some new issues yet to be considered. These are:

- (1) When are goods or services *not* similar?
- (2) When does a mark have reputation?
- (3) When will use of a mark (i) take unfair advantage of, or (ii) be detrimental to the distinctive character or reputation of the mark?
- (4) When is a mark used with 'due cause'?

Before looking at these it might be worth observing that a critical feature of section 5(3), and one which distinguishes it from section 5(2), is that there is no requirement for the earlier trade mark holder to prove a likelihood of confusion. After some early UK decisions suggesting that is necessary to demonstrate a *likelihood of confusion* for an application to be rejected under section 5(3)/Article 8(5),¹²⁶ the European Court of Justice has indicated repeatedly that confusion is not a prerequisite to liability under Article 5(2) of the Directive (the infringement counterpart to Article 4(4)(a)).¹²⁷ Most recently, in *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, the ECJ has stated that 'unlike Article 5(1)(b) of the Directive, which is designed to apply only if there exists a likelihood of confusion on the part of the public, Article 5(2) of the Directive establishes, for the benefit of trade marks with a reputation, a form of protection whose implementation does not require the existence of such a likelihood'.

2.3.1 Dissimilar, similar or identical goods

Although section 5(3) says that the relative ground for refusal apply where 'a trade mark is to be registered for goods which are *not similar* to those for which the earlier trade mark is protected', in *Davidoff & Cie SA v. Gofkid*, the ECJ held that the provision also

¹²⁵ In principle, 'similarity' of marks might be treated differently when considering s. 5(2) and 5(3), because in the former case it is part of a global test undertaken to establish a likelihood of confusion, whereas in the latter it relates simply to establishing an association such as to give rise to potential detriment to the earlier mark owner, or unfair advantage to the later applicant or user. However, in *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 [2004] 1 CMLR (4) 448 (paras. 27–31), the ECJ has confirmed that a similar analytical approach is called for: the condition of similarity requires the existence of elements of visual, aural, or conceptual similarity such that, appreciated globally, establishes a link in the minds of the relevant section of the public between the signs. What has been said above in relation to the similarity of signs for s. 5(2) of the 1994 Act is therefore applicable, *mutatis mutandis*, to s. 5(3).

¹²⁶ *BASF v. CEP* [1996] ETMR 51 (neither the distinctive character nor the reputation of the claimant's mark is adversely affected when there is no risk of relevant confusion); *Baywatch Production v. The Home Video Channel* [1997] FSR 22.

¹²⁷ *Sabel v. Puma* [1997] ECR I-6191, I-6223 (para. 20–1, 48); *Marca Mode CV v. Adidas AG*, Case C-425/98 [2000] 2 CMLR 1061, 1083 (para. 36); *General Motors Corporation v. Yplon*, Case C-375/97 [1999] 3 CMLR 427.

applied where the goods or services of the parties were similar (or identical).¹²⁸ The case concerned an action by Davidoff to annul Gofkid's DURFFEE mark based on an earlier stylized DAVIDOFF mark. The referring court considered the marks similar (a finding that itself might seem questionable under current British and CFI jurisprudence),¹²⁹ but needed to know whether it could apply Article 5(2) if there was no proof of likelihood of confusion. In a relatively short judgment, which declined to follow the opinion of Advocate General Jacobs, the Court held that the provision applied to goods that were similar and identical, as well as in cases where there was no similarity. In so doing the ECJ sought to ensure there was no gap in protection. A proprietor of a mark with a reputation is given stronger protection by Article 5(2) 'against impairment of the distinctive character or repute of the marks in question'.¹³⁰ The proprietor of such a mark has a legitimate interest in protecting this distinctive character even if proof of a likelihood of confusion is difficult. Since Article 5(1)(b) has been given a narrow interpretation, the ECJ reasoned, such a proprietor should be able to rely on Article 5(2).

The decision in *Gofkid* has been affirmed in *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*.¹³¹ This case arose out of Adidas's attempts to enforce its trade mark comprising three parallel stripes of equal width for clothing, on this occasion against a firm marketing clothes bearing two stripes of equal width. Adidas, aware that there might be difficulty in proving source-confusion, sought to rely on Article 5(2) of the Directive. The Hoge Raad sought guidance as to whether if a member state adopts Article 5(2) for non-similar goods, it must also apply it to identical and similar goods. Despite interesting submissions to the contrary from the British government (which emphasized the optional status of Article 5(2)), the ECJ held that where a member state elects to confer protection on marks with a reputation, it must cover the use of the mark on goods or services which are identical and similar, as well as those which are dissimilar. The option 'relates to the principle itself of granting greater protection to marks with a reputation, but not to the situations covered by that protection when the Member State grants it'.¹³²

The elimination of the requirement of 'dissimilarity' means that all marks 'with a reputation' benefit from a different infringement/relative grounds of validity regime, which is not dependent on confusion. The case will therefore undercut in cases of reputation, the impact of cases like *Sabel v. Puma* and *Marca Mode* which confined Article

¹²⁸ Case C-292/00 [2003] ECR I-389. The decision has been welcomed in some quarters: J. Cornwell, 'The *Davidoff v Gofkid* Case' [2003] *EIPR* 537 ('a welcome and common sense move to rectify a long-perceived defect in the drafting of the Directive'); A. Griffiths, 'The Impact of the Global Appreciation Approach on the Boundaries of Trade Mark Protection' [2001] *Intellectual Property Quarterly* 326, 346-7 and 360 (arguing that, given the distinct purposes of s. 10(2) and (3) of the UK Trade Marks Act 1994, as well as the distinct interests the two provisions protect, the limitation of s. 10(3) to dissimilar goods imposed an illogical, arbitrary and unstable boundary); H. Norman, '*Davidoff v. Gofkid*: Dealing With the Logical Lapse or Creating European Disharmony?' [2003] *IPQ* 342 (generally approving, but concerned about how the case will be interpreted). It was less well-received by others. See C. Morcom, 'Extending Protection for Marks Having a Reputation' [2003] *EIPR* 279 (result contrary to what was intended by the legislators); M. Spence, 'Section 10 of the Trade Marks Act 1994: Is There really a Logical Lapse?' [2001] *EIPR* 423, 425-6 (defending the plain interpretation of the statute and denying there is a 'logical lapse').

¹²⁹ H. Norman, '*Davidoff v. Gofkid*: Dealing With the Logical Lapse or Creating European Disharmony?' [2003] *IPQ* 342, 345-6.

¹³⁰ Case C-292/00 [2003] ECR I-389, para. 22.

¹³² para. 20.

4(1)(b) and 5(1)(b) of the Directive to situations of confusion.¹³³ The issues will become whether the earlier mark has a reputation, and whether there is a serious likelihood that the applicants' use will take 'unfair advantage' or be 'detrimental' to the distinctive character or repute of the mark. In his opinion in *General Motors Corporation v. Yplon*,¹³⁴ Advocate General Jacobs emphasized that in applying Article 5(2) it was important to give full weight to each of the elements. It is to these 'very strict conditions' that we now turn.¹³⁵

2.3.2 Reputation

The next requirement that must be satisfied for a mark to fall foul of section 5(3)/Article 8(5) is that it has to be shown that the earlier trade mark has a 'reputation in the UK or in the case of a Community trade mark, in the European Community'. The concept of 'reputation' is a new one to British trade mark law. With many marks, such as AUDI,¹³⁶ EVER-READY,¹³⁷ VIAGRA,¹³⁸ VISA,¹³⁹ INTEL,¹⁴⁰ and TYPHOON,¹⁴¹ as well as Adidas AG's 'three-stripe mark',¹⁴² there will be few problems in establishing reputation. In other cases, however, it may prove to be more problematic.

The task of ascertaining whether a mark has a reputation has been made somewhat easier as a result of the decision in *General Motors Corporation v. Yplon*,¹⁴³ where the Court of Justice responded to a reference from Belgium asking how the concept of reputation was to be interpreted. The reference was prompted by an application by General Motors, the proprietor of the sign CHEVY for motor vehicles, to restrain Yplon from using the identical sign for etergents. The Court stated that 'reputation' involved some kind of knowledge threshold, so that 'a mark would have a reputation where it was known by a significant part of the public concerned by the products or services covered by the trade mark'.¹⁴⁴ It was only when there was a 'sufficient degree of knowledge of the mark that the public, when confronted with the later trade mark may possibly make an association between the two trade marks, even when used for non-similar products or services, and that the trade mark may consequently be damaged'.¹⁴⁵

The Court also said that a realistic assessment of whether a mark had a reputation could

¹³³ *Sabel v. Puma*, Case C-251/95 [1997] ECR I-6191; *Marca Mode CV v. Adidas AG*, Case C-425/98 [2000] 2 CMLR 1061.

¹³⁴ *General Motors Corporation v. Yplon*, Case C-375/97 [1999] 3 CMLR 427, 437 (para. 42) (AG). In *Ferrero GmbH v. Duplo (Duplo/Duplo)*, R802/1999-1 (5 Jun. 2000) (para. 17) the OHIM Board of Appeal described the protection of marks in relation to dissimilar goods as 'an exception to one of the fundamental principles of European trade mark law. The relevant provisions must therefore be interpreted strictly'.

not simply be based on quantitative criteria, such as the number of people who are aware of the mark. Instead, the question of whether a mark has reputation should be determined on the basis of a number of different criteria. These included ‘the market share held by the trade mark, the intensity, geographical extent, and duration of its use, and the size of the investment made by the undertaking in promoting it’.¹⁴⁶ The Court also made it clear that while the reputation must exist in the member state, it need not exist throughout the territory: it is sufficient if the reputation exists in a substantial part of it.

One question that has arisen in this context concerns the relationship between a mark with *reputation* and a mark that is *distinctive* or *well known*. It seems that reputation requires something more than distinctiveness which is a qualifying requirement for registrability. At the very least, the notion of reputation implies actual use (rather than mere registration) of the earlier trade mark—though not necessarily use in the UK.¹⁴⁷

The difference between marks with reputation and marks that are well known is less easy to clarify.¹⁴⁸ On one interpretation, reputation should have a higher threshold than is applied to well-known marks.¹⁴⁹ This is what the UK government indicated when the provision was adopted.¹⁵⁰ Others have said that reputation imposes a related but different standard from that which applies to well-known marks: the latter being concerned with the quantity of consumer knowledge, whereas reputation refers to a qualitative criterion that has been described as ‘symbolic character’.¹⁵¹ A third interpretation, based upon the Dutch version of the Directive, treats reputation as involving a significantly lower threshold than well-known marks: the former having the meaning of ‘known’, the latter ‘generally known’.¹⁵² While not rejecting the second approach, the latter view received the approval of Advocate General Jacobs when he said ‘although the concept of a well-known mark is itself not clearly defined, a mark with “reputation” need not be as well known as a well-known mark’.¹⁵³ In its judgment, however, the Court of Justice did not explicitly consider the relationship between the concepts of ‘reputation’ and being ‘well known’.

2.3.3 Unfair advantage or detriment

The third requirement that must be met for a mark to fall foul of section 5(3) is that it must be shown that the use of the later mark *either*:

¹⁴⁶ Case C-375/97 [1999] 3 CMLR 427, 443 (para. 27). For application of the criteria, see *Pebble Beach Co. v. Lombard Brands* [2003] ETMR (21) 252 (CS, Outer House).

¹⁴⁷ See the discussion of reputation and goodwill at pp. 714–23 above.

¹⁴⁸ See, e.g. *Marca Mode CV v. Adidas AG*, Case C-425/98 [2000] 2 CMLR 1061, 1083 (para. 36), where the ECJ refers to TM Dir. Art. 5(2) as establishing a form of protection without confusion ‘for the benefit of well-known trade marks’. Similar sloppiness is found in *Davidoff & Cie SA v. Gofkid*, Case C-292/00 [2003] ECR I-389; [2003] 1 CMLR (35) 1039; [2003] FSR (28) 490 (para. 25).

¹⁵³ *General Motors Corporation v. Yplon*, Case C-375/97 [1999] 3 CMLR 427, 434–5, 436 (Advocate General, paras. 32, 33, and 37). The status of being ‘well-known’ is treated as exceptional: see pp. 723–4.

- (i) takes unfair advantage of the earlier trade mark;
- (ii) is detrimental to the distinctive character of the earlier trade mark; *or*
- (iii) is detrimental to the reputation of the earlier trade mark.

We will deal with each of these in turn.

(i) *Unfair advantage.* One way in which section 5(3)/Article 8(5) can be invoked is by showing that the use would take ‘unfair advantage’ of the earlier mark. The need to show unfair advantage prevents a later mark from taking a free-ride on the reputation of the earlier mark.¹⁵⁴ A number of points need to be kept in mind when thinking about whether the use of a later mark would take unfair advantage of the distinctive character or reputation of the earlier trade mark. The first is that it is necessary for an opponent to show that the applicant’s use would take unfair advantage of the repute or distinctive character of the mark. Although the Advocate General has stated that it ‘is not obvious that there is any real difference between taking advantage of a mark’s distinctive character and taking advantage of its repute’,¹⁵⁵ in most cases the opponent will need to establish the nature of the ‘repute’ attached to the mark.

The second point to note is that opponent must establish that consumers would link the applicant’s mark with the opponent’s (or, in infringement proceedings the defendant’s mark with the proprietor’s). Consequently, the marks must be sufficiently similar so that the relevant public establishes a link between the sign and the mark.¹⁵⁶ Moreover, the link will probably be easier to establish the greater the degree of similarity of goods or services.¹⁵⁷ Without the link there can be none of the ‘cross-pollination’ needed to transfer value to the applicant (or defendant).¹⁵⁸

The third point is that merely establishing a link will not, of itself, suffice: the opponent must establish that the link leads to a transfer of value or repute from the opponent to the defendant: mere non-origin association is *not* sufficient to establish unfair advantage. Simply being reminded of a similar trade mark with a reputation does not necessarily amount to taking unfair advantage of the repute of that mark.¹⁵⁹ In *Oasis Stores* the opponents, who were the proprietors of the EVER READY mark for batteries, argued that the applicant would be taking advantage of their reputation by selling condoms under the EVERREADY mark. This was because most people seeing the applicant’s mark would think of the opponent. The Registrar rejected this argument. In so doing he said, ‘[s]ection 5(3)

¹⁵⁴ *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 (10 July 2003) (para. 39) (AG); *Ferrero SpA v. Kinder are Learning Centers Inc. (Kinder Care Device/Kinder)*, R1004/2000–1 (20 Oct. 2003) (para. 26) (‘The scenario of unjust enrichment or unfair advantage occurs where a third party exploits the reputation of the earlier mark to the benefit of its own marketing efforts. In practice, the third party “hooks on to” the renowned mark and uses it as a vehicle to incite consumers’ interest in its own, albeit different, products’).

¹⁵⁵ *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 (10 Jul. 2003) (para. 39) (AG).

¹⁵⁶ *Ibid.*

¹⁵⁷ *Souza Cruz SA v. Hollywood SAS (Hollywood/Hollywood)*, R283/1999–3 [2002] *ETMR* (64) 705 (para. 82); *Audi-Med Trade Mark* [1998] *RPC* 863, 874 (reputation would not easily transfer from cars to deafness aids).

¹⁵⁸ *Hobbs QC in In re Direct Wines Application*, O/306/03 (13 Oct. 2003) (no sufficient link between LE XV DU PRÉSIDENT and the opponent’s mark PRÉSIDENT).

¹⁵⁹ *Ibid.*

was clearly not intended to have the sweeping effect of preventing the registration of *any* mark which was the same as, or similar to a trade mark with reputation'.¹⁶⁰ The Registrar added that the opponents would have had a greater chance of success if they could have pointed to an aspect of their reputation for batteries, etc. which was likely to benefit the applicant's, mark to some extent.¹⁶¹

To establish that the applicant has benefited from the earlier mark (which is treated as the equivalent of showing unfair advantage), it is necessary to point to some specific conceptual connection between the reputation of the earlier mark and the goods in respect of which the applicant's mark is to be used.¹⁶² For example, where an applicant proposed to sell drinks in a bottle shaped as a football boot which bore the opponent's well-known 'three-stripe mark', the fact that the applicant's specification would cover isotonic drinks helped to establish a 'sporting connection' such that consumers would be likely to believe that there was some connection in trade between the parties.¹⁶³ Moreover, the Registry took the view that the applicant's get-up was calculated to bring the opponent's mark to mind, and so was 'precisely the sort of parasitic use that section 5(3) was intended to provide protection against'. Similarly, the OHIM Board of Appeal has held that an application to register COSMOPOLITAN COSMETICS for cosmetics would be likely to take unfair advantage of the opponent's reputation associated with its mark COSMOPOLITAN for women's magazines. This was because the magazine was better known than the applicant's goods, both used essentially the same trade mark, and the reputation of the first would facilitate the sale of the applicant's goods. This advantage was regarded as unfair because it was based on the opponent's fame, rather than the applicant's own marketing efforts.¹⁶⁴

In contrast, if the earlier and later marks are descriptive or suggestive, it should not be assumed that the link transfers value from the opponent to the applicant.¹⁶⁵ For example, in *Audi-Med Trade Mark*,¹⁶⁶ Audi opposed the registration of AUDI-MED for hearing aids on the grounds that it would take unfair advantage of the distinctive character or reputation of the AUDI mark. The opponents said that the advantage resulted from the association of AUDI with high technology. Rejecting their claim, the Registry said it would be especially difficult to show an 'unfair advantage' where the marks were both utilizing ordinary as opposed to invented words. In such circumstances the applicant, like the opponent, is better seen as taking advantage of words in the public domain, rather than taking advantage of the distinctive character of the opponent's mark.¹⁶⁷ Would a person who advertises 'next to Marks & Spencer's' be taking 'unfair' advantage of the repute of the mark, or merely advantage of public familiarity with the location of the store?¹⁶⁸

¹⁶⁰ *Ibid.*; approved in *C. A. Sheimer (M.) Sdn Bhd's Trade Mark Application* [2000] RPC 484, 505 (where it was held the seller of condoms might gain attention by using the VISA mark, but in the absence of a marketing advantage this was not an 'unfair advantage').

¹⁶¹ *Oasis Stores' Trade Mark Application* [1998] RPC 631, 649. ¹⁶² *Ibid.*

See also *Pebble Beach Co. v. Lombard Brands* [2003] ETMR (21) 252, 263 (para. 19) (geographical and descriptive reasons for using a sign may mean advantage is not unfair).

¹⁶⁶ [1998] RPC 863. ¹⁶⁷ *Oasis Stores' Trade Mark Application* [1998] RPC 631, 649.

¹⁶⁸ *Kamper v. C&A* (1976) 7 IIC 427 (Court of Appeal of Amsterdam).

Fourth, the benefit that the later mark derives from the earlier mark must be 'significant'.¹⁶⁹ Although it is unnecessary for an opponent to show that the applicant intends to appropriate value, in deciding whether use of a later mark takes unfair advantage of an earlier mark, the intention of the applicant (or infringer) is likely to be an important factor.¹⁷⁰ If there is no plausible reason for an applicant to use the mark other than its apparent connection to the earlier trade mark, then it may be reasonable to assume that the applicant intends to take a free-ride, and they regard the benefit as substantial.

(ii) *Detrimental to the distinctive character of the earlier mark.* Another option available for an opponent is to show that the use of the later mark would be detrimental to the distinctive character of the earlier mark. This is usually referred to as 'dilution' or 'blurring'.¹⁷¹ Dilution has been described as:

the gradual whittling away or dispersion of the identity and hold upon the public mind of the mark or name by its use upon non-competing goods. The more distinctive or unique the mark, the deeper is its impress upon the public consciousness, and the greater its need for protection against vitiation or dissociation from the particular product in connection with which it has been used.¹⁷²

The rationale for this is that the use of the mark on different goods may erode the distinctiveness of the earlier mark. That is, the unauthorized use on similar or dissimilar products may undermine an established trade mark's uniqueness and thus its selling power and 'commercial magnetism'. As Schechter said, 'if you allow Rolls Royce Restaurants, and Rolls Royce cafeterias, and Rolls Royce pants and Rolls Royce candy, in ten years you will not have the Rolls Royce mark any more'.¹⁷³

While the idea of damage to distinctiveness has an intuitive appeal and has been accepted by the Advocate General,¹⁷⁴ it is nonetheless controversial. According to Pumfrey J, '[i]t raises difficult conceptual issues'.¹⁷⁵ Indeed, there are many who deny that in the

¹⁶⁹ *Oasis Stores' Trade Mark Application* [1998] *RPC* 631, 649; *DaimlerChrysler AG v. Alavi* [2001] *RPC* (42) 813, 842 (para. 89) (benefit from use of MERC on shirts was 'so minor as to be negligible').

¹⁷⁰ Cf. *DaimlerChrysler AG v. Alavi* [2001] *RPC* (42) 813, 842 (para. 89) ('the assessment of unfair advantage must be an objective one: the defendant's intention is not relevant'); *Mühlens GmbH v The Hearst Corpn. (Cosmopolitan Cosmetics/Cosmopolitan)*, R552/2000-4 (26 Jul. 2001) (para. 20) ('it is not necessary to prove any intention, on the part of the owner of the later mark, to take that advantage').

¹⁷¹ *Premier Brands UK v. Typhoon Europe* [2000] *FSR* 767, 787 (blurring occurs where the distinctiveness of a mark is eroded); *DaimlerChrysler AG v. Alavi* [2001] *RPC* (42) 813 (para. 88); *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 (10 Jul. 2003) (para. 37) (AG); *Souza Cruz SA v. Hollywood SAS (Hollywood/Hollywood)*, R283/1999-3 [2002] *ETMR* (64) 705 (para. 105). One example of detriment primarily relevant to infringement concerns uses of a proprietor's mark to describe products or as verbs rather than to indicate their source. Such uses are liable to lead to a mark becoming generic and thus damaging its distinctive character. Where the use is in newspapers, dictionaries, and other literature, a national (as opposed to Community) trade mark owner will often have to rely on the dilution provision to protect the mark from use as a generic description: T. Martino, *Trademark Dilution* (1996), 115-19.

¹⁷² F. Schechter, 'The Rational Basis of Trademark Protection' (1927) 40 *Harvard LR* 813, 825.

¹⁷³ Hearings before the House Committee on Patents, 72nd Cong., 1st Sess. 15 (1932) *cited, inter alia*, in T. Martino, *Trademark Dilution* (1996).

¹⁷⁴ *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 (para. 37) (AG Jacobs); *Marca Mode CV v. Adidas AG*, Case C-425/98 [2000] *All ER (EC)* 694, 707, (para. 44), the Advocate General describes dilution as 'the blurring of the distinctiveness of a mark such that it is no longer capable of arousing immediate association with the goods for which it is registered and used'.

¹⁷⁵ *DaimlerChrysler AG v. Alavi* [2001] *RPC* (42) 813, 844 (para. 93). According to Neuberger J, one must be careful of applying the concept of dilution 'too blindly': *Premier Brands UK v. Typhoon Europe* [2000] *FSR* 767, 802.

absence of confusion or tarnishment that any real or verifiable damage would occur, for example, if the ROLLS ROYCE mark were used for restaurants.¹⁷⁶ The assumption that the use of ROLLS ROYCE for restaurants dilutes the earlier mark suggests that all uses on dissimilar goods ought to be prohibited by the owner of a mark with reputation. As the Registrar said in *Oasis Stores*:

[a]ny use of the same or similar mark for dissimilar goods or services is liable, to some extent, to dilute the distinctiveness of the earlier mark. [Section 5(3)] is clearly not intended to have the sweeping effect of preventing the registration of any mark which is the same as, or similar to, a trade mark with a reputation. It is a matter of degree.¹⁷⁷

For an opponent to establish that the distinctive character of the earlier mark has been diminished, the applicant must propose to use a mark that is identical or similar to the earlier mark.¹⁷⁸ It also needs to be shown that the earlier mark has a reputation for a limited category of goods, so that if consumers heard the name they would automatically assume the person was referring to a particular product (for example, ROLLS-ROYCE for a luxury car, or TIFFANYS for jewellery). In these instances, dilution by blurring might occur because the owner of the earlier trade mark would no longer be able to rely on the singularity of that association.

In *Oasis Stores*, the Registrar stressed that the question to ask was whether registration and use of the applicants' mark would have a detrimental effect on the distinctive character of the opponents' mark *for the goods* in respect of which it enjoys a reputation.¹⁷⁹ In the ROLLS-ROYCE example, this would mean that the question would be whether the use of ROLLS-ROYCE *for restaurants* had a detrimental effect on the distinctiveness of ROLLS-ROYCE *for cars*. It is difficult to see how it could do so. It is not surprising, therefore, that the Registrar concluded that even if the use of EVERREADY for condoms became widespread, EVER READY would 'remain just as distinctive for batteries as it ever was'. The Registrar reached a similar conclusion with respect to the impact of AUDI-MED for *hearing aids* on the distinctive character of AUDI *for cars* (which were the goods and services for which the mark enjoys a reputation).¹⁸⁰

The Registrar's reasoning means that it will be very difficult to establish detriment through blurring. Indeed, it seems that the classic examples of dilution, such as the use of LEGO for irrigation equipment or CHAMPAGNE for perfume, would fail the test. This is because these uses would not reduce the ability of the earlier mark to distinguish children's toys or sparkling wines. In effect, the Registry seems to have reincorporated a confusion requirement into the concept of detriment.¹⁸¹

¹⁷⁶ T. Martino, *Trademark Dilution* (1996), ch. 8. Martino's own proposal, for a limited category of marks to receive such protection and for a special register, is outlined at 82–5.

¹⁷⁷ *Oasis Stores' Trade Mark Application* [1998] RPC 631, 649.

¹⁷⁸ In cases of similar marks, such as ΤΥΡΗΟΟ and ΤΥΡΗΟΟΝ, blurring is even more difficult to establish: *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 802.

¹⁷⁹ *Oasis Stores' Trade Mark Application* [1998] RPC 631, 650. See also *Ferrero GmbH v. Duplo (Duplo/Duplo)* R802/1999–1 (5 Jun. 2000) (no dilution of DUPLO for chocolate bars by use in relation to printing equipment).

¹⁸⁰ *Audi-Med Trade Mark* [1998] RPC 863, 873.

¹⁸¹ In *Oasis Stores' Trade Mark Application* [1998] RPC 631, 649, it was said that in considering the question of detriment, it was appropriate to consider the inherent distinctiveness of the earlier trade mark; the extent of the reputation that the earlier mark enjoys; the range of goods or services for which the earlier

(iii) *Damage to reputation.* The third option for an opponent is for them to show that the use of the later mark would be detrimental to the repute of the earlier mark. Damage to reputation, which is often called degradation or ‘tarnishment’, exists if the subsequent use reflects badly on the earlier mark.¹⁸² In *Souza Cruz SA v. Hollywood SAS (Hollywood/Hollywood)*, the OHIM Board of Appeal set out three ways in which tarnishment might take place.¹⁸³

Firstly, there might be a link with goods of poor quality or which evoke undesirable or questionable mental associations which conflict with the image generated by the proprietor’s mark. This would be the case where the mark is used on ineffective goods,¹⁸⁴ but there might equally be damage to reputation where there is some other negative association with goods. In the *Hollywood* case itself, it was found that the repute of the proprietor’s mark HOLLYWOOD for chewing gum, which had an image of ‘health, dynamism and youth’, would have suffered if the applicant were permitted to register the same mark for tobacco. The Board explained that ‘no worse association can be imagined for a confectionery manufacturer than one with products capable of causing death’.¹⁸⁵ A further example of tarnishment is where a mark is used so as to be at risk of it becoming ‘the butt of misplaced humour and even ridicule’.¹⁸⁶

Second, the OHIM said there would be tarnishment where the mark is linked with goods which are incompatible with the quality or prestige associated with the trade mark (even though it is not inherently unpleasant). An example of this form of ‘tarnishment’ was found to occur where INTEL, a mark associated with high technology, was used on unsophisticated goods.¹⁸⁷ Third, the OHIM stated that a mark will be tarnished if ‘its word or figurative element is amended or altered in a negative way’.

mark enjoys a reputation; the uniqueness or otherwise of the mark in the marketplace; whether the respective goods/services, although dissimilar, are in some way related or likely to be sold through the same outlets; and whether the earlier trade mark will be any less distinctive for the goods/services for which it has a reputation than it was before.

¹⁸² *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 (10 Jul. 2003) (para. 38) (AG Jacobs); *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 798 (Neuberger J referring to tarnishing, where the attraction and the capacity of the mark to stimulate the desire to buy is impaired). See T. Martino, *Trademark Dilution* (1996), 60–3 (describing this as the judicially favoured facet of dilution, but arguing that ‘tarnishment’ is doctrinally confused); R. Moskin, ‘Dilution or Delusion: The Rational Limits of Trade Mark Protection’ 83 *TMR* 122 (most cases of tarnishment assume the consumers draw a link between trade mark owner and the unwholesome product).

¹⁸³ R283/1999-3 [2002] *ETMR* (64) 705 (para. 85–6); *Elleni Holding BV v. Sigla SA (Vips/Vips)*, R1127/2000–3 (1 Apr. 2003) (para. 43).

¹⁸⁴ *Pfizer v. Eurofood Link (UK)* [2000] *ETMR* 187. The European Court of Justice recognized the possibility of damage in this way in *Parfums Christian Dior SA v. Evora BV*, Case C-337/95 [1997] *ECR* I-6013 (para. 43).

¹⁸⁵ R283/1999–3 (25 Apr. 2001) (para. 95). See also *E. R. Squibb & Sons v. Pharmalife Italia (Lipostat/Lipostatin)*, R1007/2000–1 (30 Nov. 2001) (para. 17) (tarnishment where repute of claimant’s mark LIPOSTAT for anti-cholesterol tablets is associated with applicant’s LIPOSTATIN used for bleaching or abrasive products). Note also, *Colgate Palmolive v. Lucas Bols Claeryn/Klarein* (1976) IIC 420 (KLAREIN for detergent would tarnish CLAERYN for gin because ‘no one likes to be reminded of a detergent when drinking their favourite tippie’). This case was referred to with seeming approval in *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 (10 July 2003) (para. 38) (AG Jacobs); *British Sugar plc v. James Robertson & Sons* [1996] *RPC* 281, 295; *Premier Brands UK v. Typhoon Europe* [2000] *FSR* 767, 787.

¹⁸⁶ *Oasis Stores’ Trade Mark Application* [1998] *RPC* 631, 652. In *Corgi Trade Mark* [1999] *RPC* 549, 559 the Appointed Person linked the concept of detriment to ‘discredit’ and ‘denigration’.

¹⁸⁷ *Sihra’s Trade Mark Application* [2003] *RPC* (44) 789.

The owner of the earlier trade mark must establish that the negative association will be real, not fanciful. This involves not merely substantiating the existence of a particular image in the earlier mark, but also the way in which the later mark will bring about the damage. For example in *DaimlerChrysler v. Alavi*, the defendant's use of MERC on its shop web site, which had links to skinhead sites, was not detrimental to the repute of the claimant for high quality engineering, because nothing would actually 'rub off' on the MERC OR MERCEDES sign.¹⁸⁸ Similarly, in *Oasis Stores*¹⁸⁹ the Registry accepted the EVER-READY mark for contraceptives for registration, despite an opposition by the owner of a similar mark for batteries. The Registrar said that in order to succeed under section 5(3) the earlier trade mark owner needed to show that its reputation would be 'damaged or tarnished'. Although the purchase of condoms may once have been a source of embarrassment, the Registrar thought that the stigma associated with condoms had decreased. As a result, it was implausible to believe that a significant number of people would be so embarrassed by the fact that EVERREADY was used as a trade mark for contraceptives that they would be less likely to choose EVER READY batteries.¹⁹⁰ The *Oasis Stores* decision should be contrasted with *C. A. Sheimer (M.) Sdn Bhd's Trade Mark Application*,¹⁹¹ where the Appointed Person allowed VISA International's opposition to the applicant's mark VISA for condoms on the ground that it would 'burden VISA International's own use of its earlier registered mark with connotations of birth control and sexual hygiene that would alter perceptions of the mark negatively from the point of view of a provider of financial services . . . Visa International should not have to carry the burden of advertising condoms and prophylactics at the same time as it promotes its own services'.

2.4 WITHOUT 'DUE CAUSE'

Once an opponent has established that its earlier mark has a reputation, and that use of the applicant's mark will take unfair advantage of, or be detrimental to, the earlier mark, the obligation then falls upon the applicant to show that the use would not be 'without due cause'.¹⁹² While some individual instances of use might be justifiable (particularly in relation to an action for infringement),¹⁹³ it is difficult to imagine many situations where registration of a mark would be justifiable in the face of evidence that it takes unfair advantage of, or is detrimental to the distinctive character or repute of the mark. In *Premier Brands UK v. Typhoon Europe*,¹⁹⁴ Neuberger J held that the phrase 'without due cause' required an applicant (or in the case of an alleged infringer, the defendant) to show some justifiable reason for using its sign in relation to its goods even though this was unfair or detrimental to the earlier mark. The decision to select a particular mark in good

¹⁸⁸ *DaimlerChrysler AG v. Alavi* [2001] RPC (42) 813 844 (para. 94).

¹⁸⁹ [1998] RPC 631.

¹⁹⁰ *Oasis Stores' Trade Mark Application* [1998] RPC 631, 651. In *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 799–801 Neuberger J held that the mark ТУРНОО was not tarnished by the use of ТУРНОО on kitchenware, because it was unlikely that this would trigger an unfortunate connection with the destructive force of typhoons. But Adidas's three-stripe mark would be tarnished by its use in connection with alcohol: *Inlima SL's Application; Opposition by Adidas AG* [2000] ETMR 325, 336.

¹⁹¹ [2000] RPC 484, 506–7.

¹⁹² *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 792.

¹⁹³ One example of a situation where a mark might be used without due cause is where there has been longstanding use. See *In re St. Leonard Motors Ltd's Application* (6 Aug. 1999) (TM Registry).

¹⁹⁴ [2000] FSR 767, 789–92. In the context of infringement, it may be that ownership of a registered mark (albeit one that is subject of a pending invalidity action) may be 'due cause': *Pebble Beach Co. v. Lombard Brands* [2003] ETMR (21) 252 267–8 (para. 30).

faith would not justify its registration (or continued use). Consequently, assuming TEL's use of TYPHOON for kitchenware took unfair advantage of the claimant's registered mark TYPHOON, the fact that TEL selected the sign in good faith did not mean its use was with 'due cause'. This was, in part, because TEL had failed to conduct searches. The OHIM seems to have imposed an even more onerous test of 'due cause'. In the *Hollywood* case, the OHIM Board of Appeal indicated that an earlier mark is only used with due cause where it can be shown that the applicant is 'obliged to use the sign in question, such that, notwithstanding the detriment caused to the proprietor of the earlier trade mark, the applicant cannot reasonably be required to abstain from using the trade mark, or that the applicant has a specific right to use the sign'.¹⁹⁵ Mere suitability, or existing use elsewhere, is not 'due cause'.

3 EARLIER RIGHTS

In addition to refusal on the basis of earlier trade marks, a mark may also be rejected on the basis that it conflicts with 'earlier rights'. The relative grounds for refusal in relation to *earlier rights* are found in sections 5(4)(a) and 5(4)(b), and Articles 8(4) of the CTMR respectively.¹⁹⁶ These provide that a trade mark shall not be registered where the use of the applicant's mark would be restrained under the law of passing off—section 5(4)(a)/Article 8(4)—or by some other right, such as copyright—section 5(4)(b)/Article 52(2). We consider each in turn.

3.1 UNREGISTERED MARKS

Section 5(4)(a) provides that a trade mark shall not be registered if, or to the extent that, its use in the United Kingdom is liable to be prevented by virtue of any rule of law (in particular, the law of passing off) protecting an unregistered trade mark or other sign used in the course of trade. It seems this section is intended to implement Article 4(4)(b) of the Directive, though that provision uses the narrower language of 'rights to a non-registered trade mark'.¹⁹⁷

Section 5(4)(a) will cover passing off,¹⁹⁸ if the requisites of goodwill, misrepresentation, and likely damage can be established.¹⁹⁹ In the case of Community trade marks, the owners of rights in unregistered marks may only oppose registration if the sign is 'of more than mere local significance'.²⁰⁰ The burden of proving the existence of the earlier right

¹⁹⁵ *Souza Cruz SA v. Hollywood SAS (Hollywood/Hollywood)*, R283/1999-3 [2002] ETMR (64) 705 (para. 85-6). This is very similar to the approach taken by the Benelux court in *Colgate Palmolive v. Lucas Bols Claeryn/Klarein*, (1976) IIC 420. See also *Mülhens GmbH v The Hearst Corp. (Cosmopolitan Cosmetics/Cosmopolitan)*, R552/2000-4 (26 Jul. 2001) (para. 18).

¹⁹⁶ CTMR, Art. 52(2) recognizes the equivalent relative ground for invalidity.

¹⁹⁷ *Wild Child Trade Mark* [1998] RPC 455, 457. See also CTMR, Art. 8(4).

¹⁹⁸ Note *Interlotto (UK) v. Camelot Group plc* [2004] RPC 186 (CA) (Even if opponent cannot establish a relative ground of refusal as of the date of the application, the opposition should succeed if the opponent can establish it before the date of registration).

¹⁹⁹ See Chs. 32-4 above. On the difficulties with assessing this on paper, see *R v. Reef Trade Mark* [2002] RPC (19) (387) (paras. 27-28).

²⁰⁰ CTMR, Art. 8(4). Cf. *Saxon Trade Mark* [2003] FSR (39) 704 (Laddie J) (para. 32) (trader in Plymouth using same name as trader in Manchester, where trades do not compete because of their geographical separation, can prevent registration by the latter of the mark as a trade mark, because the letters 'normal and fair use' would include use in Plymouth.)

falls upon the opponent. In this context it is important to note that ‘in an action for passing off the likelihood of misrepresentation and the prospect of damage to goodwill must be sufficiently real and substantial to warrant the intervention of the court’.²⁰¹ Although it may be more costly and time-consuming to base an opposition on section 5(4) rather than 5(2), there may be advantages from so doing in that the court may focus more upon how the mark has been used by the opponent, and understood by the public. Arguments based on the reputation accruing to ‘families’ of marks are therefore more likely to succeed under section 5(4), than when the comparison is the largely paper-based one founded on section 5(2).²⁰²

3.2 COPYRIGHT, DESIGN RIGHT, AND REGISTERED DESIGN RIGHT

Section 5(4)(b) states that a trade mark shall not be registered if, or to the extent that, its use in the United Kingdom is liable to be prevented ‘by virtue of any earlier right . . . in particular by virtue of the law of copyright, design right or registered designs’. This provision is permitted by, but does not take complete advantage of, Article 4(4)(c) of the Directive.²⁰³ In contrast, there is no provision for opposition on this ground at the OHIM. Article 52(2) of the CTMR does, however, recognize conflict with earlier rights as a ground of invalidity.

If someone owns copyright in the design of a device, the effect of section 5(4)(b) is that the applicant cannot obtain protection for the device as a trade mark without their consent. For example, in *Karo Step Trade Mark*,²⁰⁴ an applicant succeeded in having a registered proprietor’s device mark cancelled on the basis that they owned artistic copyright in the mark.²⁰⁵ Similarly, in *Oscar Trade Mark*²⁰⁶ the Academy of Motion Pictures successfully opposed the registration of a device mark comprising a silhouette of the famous Oscar statue given out at the annual Academy Awards. Graham J held that the statue was protected by copyright as a sculpture and that the silhouette device had been copied from it.²⁰⁷ It should be recalled that because single invented words and short phrases do not ordinarily provide information, instruction, or literary pleasure they are not usually protected by copyright as literary works.²⁰⁸ Section 5(2)(b) will not therefore enable the creator of a word or short phrase to prevent someone else from using the word or short phrase as a trade mark.²⁰⁹

²⁰¹ *Corgi Trade Mark* [1999] RPC 549, 557.

²⁰² *In re K2 Ski Sport + Mode GmbH’s Application* (16 Apr. 2003) (Thorley QC) (describing the s. 5(2) comparison as ‘aseptic’).

²⁰³ In particular, there is no ground of objection in UK law based on a person’s right to ‘names’ or ‘personal portrayal’ because such rights have not received recognition as doctrines separate from passing off.

²⁰⁴ [1977] RPC 255.

²⁰⁵ [1977] RPC 255, 273. See also *Hutchinson Personal Communications v. Hook Advertising* [1996] FSR 549; *Team Lotus Ventures’s Application; Opposition of Group Lotus* [1999] ETMR 669. For further discussion, D. Lyons, ‘Copyright in Trade Marks’ [1994] EIPR 21.

²⁰⁷ *Ibid.*, 439, 440.

²⁰⁸ See above at pp. 61–2.

²⁰⁹ But see TMA s. 3(6), discussed at pp. 845–8 above.

4 OVERCOMING THE RELATIVE GROUNDS FOR REFUSAL

Where there is a conflict between an application and an earlier mark or right, the Registry will normally refuse registration.²¹⁰ This is not the case, however, where the proprietor of the earlier mark or right consents to registration. A conflicting later mark may also be registered where an applicant can show that there has been honest concurrent use of the trade mark.

4.1 CONSENT

Section 5(5) provides that although a mark may fall within the scope of one of the relative grounds for refusal, the later mark may nonetheless still be registered if the owner of the earlier trade mark or other earlier rights consents to the registration.

4.2 HONEST CONCURRENT USE

While an application that conflicts with an earlier mark or earlier rights will normally fall foul of one of the relative grounds for refusal, section 7 creates an exception in situations where there has been an 'honest concurrent use' of the mark. Honest concurrent use, which is neither required by nor alluded to in the Directive, recognizes that two parties might innocently use competing marks on similar goods and services for a period of time before either or both seek to register the mark. It should be noted that the provision is more limited in scope than it was in the past.²¹¹ It should also be noted that the exception does not apply to absolute grounds for refusal.²¹² The section will cease to apply should an order be made under section 8 (which confers on the Secretary of State the power to order that the relative grounds only be raised by proprietors of earlier trade marks or other rights in opposition proceedings).²¹³

The obligation falls upon the applicant to convince the Registrar that there has been an 'honest concurrent use'. 'Honest concurrent use' is defined in section 7(3) as a use that would have formerly amounted to an honest concurrent use for the purposes of section 12(2) of the 1938 Trade Marks Act. Under the 1938 Act, the Registrar was given a discretion to permit the registration of identical or confusingly similar marks for the same goods in the case of honest concurrent use (or other special circumstances).²¹⁴ It seems that the applicant must demonstrate that the use was honest *and* concurrent (either with the existence of the earlier trade mark or its use).²¹⁵ In considering whether there has been an honest concurrent use, the criteria that were taken into account under the 1938 Act (and therefore continue to be relevant) include:

- (a) the length of use;²¹⁶

²¹⁰ TMA s. 5(5).

²¹¹ See Annand and Norman (1994), 107–8.

²¹² TMA s. 7(4)(a).

²¹³ TMA s. 7(5).

²¹⁴ See *Alexander Pirie & Sons's Application* (1933) 50 RPC 147.

²¹⁵ *Origins Natural Resources On v. Origins Clothing* [1995] FSR 280, 287.

²¹⁶ *Buler Trade Mark* [1975] RPC 225.

- (b) the amount of use;
- (c) the area in which the mark was used;
- (d) the degree of confusion (present, absent, or likely);
- (e) ‘the honesty of the concurrent user’;²¹⁷
- (f) the existence of actual confusion;
- (g) ‘the degree of likely confusion’; and
- (h) the impact that registration would have on the public.

The operation of section 7 is likely to be of comparatively minor significance. This is because it only applies as between applicants and the Registrar. If the owner of the earlier trade mark or earlier right objects to an application after it has been accepted and published, then the honest concurrent use will be of no assistance to the applicant. In these cases, the Registrar must refuse to proceed with the application.²¹⁸ Section 7(3) says that honest concurrent use does not affect the making of an application of a declaration of invalidity under section 47(2). As such, the owner of a prior mark or right is still able to challenge registration under section 47(2) subject, however, to the defence of acquiescence. Any sympathy the tribunal has for an applicant is likely to be expressed in a finding that the likelihood of confusion was small. Alternatively, the tribunal might adapt the doctrine of acquiescence so as to estop the opponent from objecting to the registration.

²¹⁷ Note that while knowledge of the earlier registration is relevant, it is not necessarily conclusive of dishonesty by the applicant: *Bali Trade Mark (No. 2)* [1978] FSR 193.

39

REVOCATION

INTRODUCTION

In spite of the examination process, the trade mark register is not a guarantee of the validity of trade marks.¹ As such, a registered trade mark can always be removed from the register after registration. There are two reasons why a mark might be removed from the register. The first is if it is held to be *invalid*. The grounds for invalidity are set out in section 47 of the 1994 Act and Articles 51–2 of the CTMR. These provide that a mark may be declared to be invalid on the basis that it was registered in breach of one of the absolute or relative grounds for refusal: topics which were dealt with earlier.²

The second reason why a mark might be removed from the register, which is the focus of this chapter, is if it is ‘revoked’. There are four grounds for revocation and these are found in section 46 and Article 50 of the CTMR (which largely correspond to the provisions in Articles 10 and 12 of the Directive). Section 46/Article 50 provide that a mark may be revoked (in relation to all or some of the goods and services in respect of which they are registered)³ on the ground that:

- (i) the trade mark has not been used for five years following the date of completion of the registration (*non-use*);
- (ii) use of the trade mark has been suspended for an uninterrupted period of five years;
- (iii) the trade mark has become the ‘common name in the trade’ (*generic*); or
- (iv) the trade mark has been used in a way so that it is liable to mislead the public (*deceptive*).⁴

Section 7(4) of the Act provides that an application for revocation may be made by any person, and may be made either to the Registrar or the court.⁵ The onus of proving that a

¹ TMA s. 70.

² See Chs. 36–8. TMA s. 47(6) provides that where the registration of a trade mark is declared invalid to any extent, the registration shall to that extent be deemed never to have been made.

³ TMA s. 46(5); CTMR, Art. 50(2).

⁴ Under CTMR, Art. 50 a further ground for revocation exists where the proprietor no longer satisfies the requirements of CTMR, Art. 5 as regards status. The Commission has issued a proposal to remove the conditions set out in Art. 5, and if that occurs, this ground of revocation will also be eliminated.

⁵ As regards CTMs, an application for revocation may be made either directly to the Cancellation Division of the OHIM or by way of counterclaim to an action for infringement: CTMR, Arts. 50(1) and 95(1). Non-use can also be put in issue in opposition proceedings at the OHIM: CTMR, Art. 43(2).

mark should be revoked falls upon the party seeking revocation of the mark.⁶ In relation to revocation for non-use, however, section 100 modifies the general position by stating that the proprietor must show the use that has been made of the registered mark.⁷ It should be noted that, while the section appears to confer a discretion on the Registrar to leave an otherwise revocable mark on the register (but not to remove a mark which is not revocable), Neuberger J has concluded that no such discretion exists.⁸ Even if this conclusion turns out to have been mistaken,⁹ any discretion which does exist is likely to be exercised rarely.¹⁰

With these general points in mind, we now consider the grounds on which a registered mark may be revoked. It is convenient to deal with the two non-use grounds together.

2 NON-USE

The first ground on which a mark may be revoked is on the basis of 'non-use'. Revocation for non-use reflects the notion, also found in the law of passing off, that protection for marks is justified as a result of their use.¹¹ As the ninth Recital to the Community Trade Mark Regulation explains 'there is no justification for protecting earlier trade marks except where the marks are actually used'. It is only by virtue of use that marks come to communicate information to consumers, and thus operate in a way which merits legal protection.¹² Consequently, if a mark is not put into use within a reasonable period of registration or use comes to be suspended, there is no good reason for preventing another trader from adopting that mark. Revocation for non-use helps to ensure that such unused marks, as well as marks which have been registered and used, but where use has ceased,¹³ can be removed from the register so that other traders can safely use similar, as well as identical, marks.¹⁴ Revocation for non-use also ensures that opportunistic stockpiling of good marks is fruitless.¹⁵

⁶ TMA s. 72. Nevertheless, it was held in *Softa Trade Mark* [1996] RPC 457 that where the registered proprietor entered no defence that, prima facie, the application to remove is valid.

⁷ *Reversing Nodoz Trade Mark* [1962] RPC 1, 5. But there is no equivalent in the CTMR: see Annand and Norman (1998), 142.

⁸ *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 811; *Zippo Trade Mark* [1999] RPC 173, 184 (Registry); *Cabanas Havana (Device) Trade Mark* [2000] RPC 26, 34; *A. J. & A. M. Levy's Trade Mark (No. 2)* [1999] RPC 38; *Anglian Mode Trade Mark* SRIS O/181/00 (19 May 2000); *Platinum Trade Mark*, O/133/01 (15 Mar. 2001) (para. 45).

⁹ The question had been referred to the ECJ in *Scandecor Developments v. Scandecor Marketing* [2002] FSR (7) 122 paras. 55 and 67), but the case was settled.

¹⁰ *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 812 (Neuberger J explaining how he would exercise discretion if, contrary to his holding, he had one); *Lyons' Application* [1959] RPC 120.

¹¹ *Invermont Trade Mark* [1997] RPC 125; *Cabanas Havana (Device) Trade Mark* [2000] RPC 26, 34. TM Dir. Recital 8 refers to a desire to reduce the number of registered marks.

¹² See S. Carter, 'The Trouble with Trademark' (1989–90) 99 *Yale LJ* 759 (arguing that the protection of marks that convey no information to consumers carries significant, but rarely mentioned, costs by depleting market language and raising substantial barriers to entry).

¹³ Jacob J graphically referred to these signs as 'abandoned vessels in the shipping lanes of trade': *Re Laboratories Goemar SA* [2002] ETMR 34.

¹⁴ Given that the OHIM allows applications for very broad specifications, revocation is likely to play a very significant role in restricting the rights of trade mark proprietors within appropriate confines.

¹⁵ As we saw in Ch. 37, the UK treats applications without intent to use the mark as made in bad faith,

2.1 THE RELEVANT PERIOD OF NON-USE

As indicated, there are two distinct grounds of non-use. The first ground for non-use is set out in section 46(1)(a)/Article 50(1)(a),¹⁶ which provides that a trade mark may be revoked on the basis that ‘within the period of five years following the date of completion of the registration procedure it has not been put to genuine use in the United Kingdom, by the proprietor or with his consent, in relation to the goods or services for which it is registered, and there are no proper reasons for non-use’. In order for a mark to be revoked under section 46(1)(a), it is necessary to show that in the five-year period after registration the mark has not been put to genuine use.¹⁷ The fact that the non-use must be for a five-year period recognizes that the registrant should be given a reasonably lengthy period of time in which to arrange the use of the mark.

The second ground of revocation for non-use is found in section 46(1)(b). This states that a mark may also be revoked where ‘use has been suspended for an uninterrupted period of five years, and there are no proper reasons for non-use’. In order for a mark to be revoked on this ground, it is necessary to show that use of the mark has been suspended for an uninterrupted period of five years.¹⁸ The fact that the non-use must be for a five-year period recognizes that the goodwill built up from the use of a mark does not immediately disappear when the owner stops using the mark.¹⁹

A mark will not be revoked on the basis of non-use if use is commenced or resumed after the expiry of the five-year period and before the application for revocation is made.²⁰ Section 46(3) goes on to say, however, that the commencement or resumption of use is to be disregarded if it takes place ‘within the period of three months before the making of the application’. This provision will not apply, however, ‘where preparations for the commencement or resumption began before the proprietor became aware that the application might be made’. The three-month cut-off period operates to prevent trade mark proprietors who have not used the mark from defeating an application for revocation for non-use by (re)-commencing use as soon as they get wind of the interest of the applicant. An applicant is thus theoretically able to write to the proprietor before they apply to have a mark revoked and ask whether there has been any use of the mark. In so doing, they will be safe in the knowledge that although their inquiry may prompt the trade mark proprietor to use the mark, this will not defeat their application for non-use.

contrary to section 3(6), and thus treats any resulting registration as liable to be held invalid. However, ‘bad faith’ can be difficult to establish in cases of ‘greedy’ rather than dishonest applications, and s. 46 is better suited to dealing with such cases. While revocation for non-use has sometimes also been said to reflect a public interest in maintaining the register as a reflection of enforceable marks (see, e.g. *Imperial Group v. Philip Morris* [1982] FSR 72, 84), the truth is that neither the national or Community registers come close to mirroring the enforceable marks. Cf. D. Vaver, ‘Summary Expungement of Registered Trade Marks on the Ground of Non-Use’ (1983) 21 *Osgoode Hall LJ* 17, 23 (discussing Canadian trade marks law).

¹⁶ TM Dir. Art. 10(1). For the international standards limiting such powers, see Paris, Art. 5C; TRIPS, Art. 19.

¹⁷ TM Dir. Art. 12. ¹⁸ *Ibid.*

¹⁹ Note the corresponding rules in relation to passing off at pp. xxx–x above.

²⁰ TMA s. 46(3). But the ECJ has recognized that use after this period may be of relevance when assessing the extent to which use during the relevant period was genuine: *La Mer Technology Inc. v. Laboratoires Goemar SA*, Case C-259/02 (27 Jan. 2004) (para. 31).

One question that has arisen is whether it was possible to register the same mark twice. If so, the further question arises: how does this impact on the five-year non-use rule? In *Origins Natural Resources v. Origin Clothing*²¹ the claimant, who had taken an assignment of a mark registered for various clothes in Class 25, applied to register the same mark for a wider range of clothes. The defendant argued that this should not be allowed because it would undermine the five-year non-use rule. Jacob J disagreed, saying:

[I]f a man were to keep registering the same mark with no genuine intention of using it then he would lose his mark . . . If, on the other hand, a man had registered a mark with a bona fide intention to use it and found himself unable to use it for a number of years so that the mark was removable . . . but he still had genuine plans to use the mark then I see no reason why he should not apply again.²²

2.2 WHAT IS USE OF THE MARK?

The next question to ask in relation sections 46(1)(a)–(b)/Article 50(1)(a) is what is meant by ‘use’ of the mark? One preliminary point to note is that not all uses of a trade mark which would infringe (if done by a third party) amount to use for the purposes of defending an application for revocation.

(i) *Use*. The most obvious way a registered proprietor will be able to show use is by demonstrating sales of articles that are marked with the sign. Other uses, such as advertising, may also be sufficient (as long as they are in connection with the anticipated sale of products bearing the mark or provision of services). Preparatory acts, such as gearing up a business to launch a product, are probably insufficient at least if they are internal to the trade mark owner’s organization.²³ Similarly, negotiations between businesses referring to possible licensing of a mark do not count as use of the mark for the purposes of section 46.²⁴ In the only ECJ decision yet to deal with the issue of use, *Ansil BV v. Ajax Brandbeveiliging BV*, the Court indicated that use required:

use of the mark on the market for the goods or services protected by that mark and not just internal use by the undertaking concerned . . . Use of the mark must therefore relate to goods or services already marketed or about to be marketed and for which preparations by the undertaking to secure customers are under way, particularly in the form of advertising campaigns.²⁵

One interesting question that may need to be decided in due course is whether ‘oral use’ is relevant. Under section 103(2) of the Act use is said to include ‘use . . . otherwise than by

²¹ [1995] FSR 280.

²² [1995] FSR 280, 284. This approach was affirmed under New Zealand law by the Privy Council in *Cussons (New Zealand) v. Unilever* [1998] RPC 369 (though indicating that the Registrar might exercise its discretion to refuse such a registration which was being made for no good reason).

²³ Cf. *Hermes Trade Mark* [1982] RPC 425.

²⁴ *Philosophy Inc v. Ferretti Studios* [2003] RPC (15) 287, 295–6 (paras. 18, 21) (Peter Gibson LJ); *Platinum Trade Mark*, O/133/01 (15 Mar. 2001) (paras. 37–9). If this does count as use, it is not ‘genuine use’.

²⁵ Case C-40/01 [2003] ECR I-2439; [2003] ETMR (85) 1032; [2003] RPC (40) 717 (para. 37).

means of a graphic representation'. This would suggest that oral use might suffice,²⁶ but in *Anheuser-Busch v. Bedejovicky Budvar* Simon Thorley QC said that whether oral use by customers counts as use for section 46(1) 'raised complex questions of trade mark law'.²⁷

(ii) *Use as a trade mark*. It seems that 'use' must be 'as a trade mark' in the sense of indicating trade origin of the goods or services in question. Consequently, use as a corporate name will not justify maintenance of the mark.²⁸ In turn, evidence of use of mark on the top of invoices, with addresses, etc. are of little assistance in proving genuine use.²⁹ The use of marks to decorate products—or which would be understood (by the average consumer) in that way will not amount to 'genuine use'.

(iii) *Use via associated marks*. Trade mark owners might wish to modify their trade marks in accordance with changing fashions and styles. As long as the changes do not alter the distinctive character of the mark, the use of the modified mark will be recognized as use of the registered mark.³⁰ Section 46(2) explains that 'use of a trade mark includes use in a form differing in elements which do not alter the distinctive character of the mark in the form in which it was registered'.³¹ According to Lord Walker, in *Anheuser-Busch v. Bedejovicky Budvar*,³² it is for the tribunal to first ascertain the points of difference between the mark as used and the mark as registered. Having done this, the tribunal should ask whether the differences alter the distinctive character of the mark as registered. The distinctive character in issue is what makes the mark 'in some degree striking and memorable'. This is judged from the point of view of the Registrar (rather than the average consumer) who is concerned with 'the mark's likely impact on the average consumer'.³³

The question of whether a change to a mark alters the distinctive character of a mark is one of 'first impression' (and thus one which an appeal court should be reluctant to overturn).³⁴ Much will depend upon the type of mark (whether a word or device mark), the way the mark is typically used and understood (whether visually, aurally, or

²⁶ *Ensure Plus Trade Mark* (26 Sept. 2002) (para. 39) (TM Registry); Kerly para. 9–51.

²⁷ [2002] *RPC* (38) 748 (para. 51). See also *Second Skin Trade Mark* [2002] *ETMR* (CN3) 326 (TMR) (even if oral use would suffice, mere use by customers would not).

²⁸ e.g. *Magrinya v. Sportsmania (MANIA/Sportsmania figurative mark)* OHIM Opp. Div. Decision No. 1042/2001 (25 Apr. 2001).

²⁹ *Carlisle Corp v. Ibertrade Management Corp SL*, R791/2000-1 (13 Dec. 2001) para. 22; *Orient Express Trade Mark* [1996] *RPC* 25, 42. In *Euromarket Designs Inc v. Peters* [2000] *ETMR* 1025 (para. 56), Jacob J stated that use as a shop name was not use in relation to goods.

³⁰ *Ramon Baragña Gomez v. Kaba Schliessysteme AG*, R150/2000-1 (22 Nov. 2001) para. 18 ('From time to time changes in consumer tastes will incline traders to modernise their trade marks. Trade mark law recognises this fact and permits, without prejudice to proprietors, non-material variations in the use of their marks. At the same time the rule concerned clearly sets limits to what alterations are acceptable, at least in the context of use').

³¹ TM Dir., Art. 10.

³² *Anheuser-Busch v. Bedejovicky Budvar* [2003] *RPC* (25) 477, 490 (para. 41).

³³ *Ibid.* Sir Martin Nourse said that the Registrar's failure to apply the right test would not have affected his view of the mark because the registrar 'would necessarily have to view the matter through the eyes of the average consumer'.

³⁴ *Ibid.* In the *Matter of Morny's Trade Marks* (1951) 68 *RPC* 55, 131 (where a word mark was registered in capitals, use in lower case was taken not to alter the distinctive character); *Elle Trade Marks* [1997] *FSR* 529; *Cabanas Habana (Device) Trade Mark* [2000] *RPC* 26, 31.

conceptually), and the way the mark is varied.³⁵ To change the distinctive character of the mark, it is necessary to alter the identity or individuality of the mark. In the case of short or simple marks, or marks with very little distinctive character, a slight modification may mean that use will not sustain the registration. So, for example, the CFI has held that the mark J. GIORGI was not used on invoices which bore the terms GIORGI, MISS GIORGI or GIORGI LINE because the distinctive character of the J. GIORGI mark was affected by such uses.³⁶ ('Giorgi' was viewed as a common name and so of low inherent distinctiveness.) In contrast, in the case of a word and device mark, substantial alteration to the device may have little impact if the average consumer sees the word as dominating the mark. This was the case in the *Budweiser* case where a registration of BUDWEISER BUDBRÄU in a stylised form was successfully maintained by relying on use of the words in block capitals as a circular surround to a device consisting of a castle and shield.³⁷ Similarly, in *Tiffany & Co/ Emballages Mixtes et Plastique s.a.r.l.*, the OHIM Board of Appeal held that registration of lower case 'tiffany' in stylized script surrounded by a thin black line retained vitality (for opposition purposes) because of use of TIFANY in white capitals in a standard font set against a black background with angled edges.³⁸ Despite the differences between the mark as registered and the mark as used, the OHIM Board of Appeal said that the stylization of the registered mark was 'not very exciting or striking' so that the word element was the dominant and distinctive part. On this basis, the Board characterized the modified form as 'modernisation' which did not effect the appreciation of the earlier mark.

Under the 1938 Act, the UK tribunals were keen to prevent the maintenance of 'ghost marks', a technique used to provide indirect protection to non-registrable marks. This may occur where a person discovers that for one reason or another, they cannot register the mark they wish to trade under. One option in these circumstances is for the trader to trade under the unregistrable mark and at the same time attempt to register a similar mark. Based upon the fact that trade mark protection includes marks which are similar, the trader would hope to be able to use the registered mark indirectly to protect the mark that they are actually trading under. So, in one case where it was impossible to register HUGGERS as a mark for clothing (the term describing the closeness-of-fit) the trader

³⁵ The case law, particularly at the OHIM, provides endless examples. See, e.g. *Pescanova SA v. Unilever plc (El Capitan Pescanova/Captain, Captain Birds Eye)*, R89/2000-1 (23 Apr. 2001 para. 20), (use of CAPTAIN BIRDS EYE did not involve use of CAPTAIN); *Espe Dental Aktiengesellschaft v. Chameleon Dental Products Inc*, R129/2000-1 (6 Apr. 2001) (use of VISIOFI-SEAL, VISIOFI-MOLAR, etc. were uses of VISIO which did not alter its distinctive character); *Freixenet SA v. Cantina Produttori di Valdobbiadene* R206/2000-3 (12 Sept. 2001) (use of DUBOIS MINUTO for wine was use of MINUTO.)

³⁶ *Laboratorios RTB, SL, v. OHIM*, T-156/01 (9 Jul. 2003) (para. 44). The UK Registry took use of 2ND SKIN into account for the registration of SECOND SKIN: *Second Skin Trade Mark* [2002] ETMR (CN3) 326 (TM Registry).

³⁷ The Registrar accepted that the use of the words in this way was use of the mark in a form which did not alter its distinctive character, because the average consumer would view the graphic as use of the words (the underlining and different fonts not detracting from, or adding anything to, 'the central message'). In the Court of Appeal, Sir Martin Nourse observed that the Registrar had legitimately found that 'the words have a dominance which reduces to insignificance the other recognisable elements'. Lord Walker said that if it had been for him to decide he would have taken a view more like that of the judge than the Registrar: but since the Registry had not erred in principle, it was not for the High Court or the Court of Appeal to replace the Registrar's assessment with its own.

³⁸ R1018/2000-3 (3 Dec. 2002). The case was one under CTMR Art. 43(2) (where an applicant resists opposition by requiring the opponent to prove use in the previous five years).

registered HUGGARS. In due course, the question arose as to whether use of HUGGERS could justify maintenance of the HUGGARS mark.³⁹ While noting there was no phonetic distinction, Mummery J observed that as much of the use of the mark was visual, it should be regarded primarily in such a context. Moreover, the concept suggested by the marks differed substantially with HUGGERS easily associated with clothing and HUGGARS less obviously so. Consequently, altering a single letter of a word was held to have substantially affected its identity, so that the HUGGARS mark was revoked.⁴⁰

(iv) *Use by a licensee.* One question that arises in relation to the operation of section 46(1)(a)–(b)/Article 50(1)(a) is whether the proprietor of a mark can rely upon use by a licensee to ensure that a mark is not revoked because of non-use.

When confronted with the licensing of marks in the nineteenth and early part of the twentieth century,⁴¹ the courts suggested that as licensing would deceive the public as to the origin of the goods, the licensed mark would be invalid. Under the 1938 Act, however, trade mark owners were given the power to assign their marks. Specific provisions were also introduced which enabled licensees to register their interests. When duly registered, licensees were known as ‘registered users’. Being listed as a registered user had a number of benefits, notably that the use of the mark by a registered user enabled the proprietor to resist an action for non-use. The registered-user agreements had to be submitted to and be approved by the Trade Marks Registry: a requirement that not all trade mark owners knew about or wanted to comply with. As a result, the question arose as to whether the proprietor of a mark could rely upon use by an unregistered licensee to ensure that the mark was not revoked for non-use. In *Radiation Trade Mark*,⁴² the Comptroller-General held that use by subsidiaries in a group of companies was use which could be ascribed to the controlling company. In *Bostitch Trade Mark*,⁴³ Lloyd Jacob J took the view that because the registered-user provisions were permissive, not mandatory, there was nothing ‘to justify the view that an arrangement between a registered proprietor of a trade mark and a party concerned to use such mark requires to be registered, still less that in the absence of registration, its affect upon the validity of the mark, if called in question, will be in any way different’. Although non-use was not an issue in that case, it seems clear that the quality control exercised by the proprietor was such that use by the unregistered licensee would have been sufficient to justify maintenance of the registration.⁴⁴

The 1994 Act abolished the registered-user requirement. As well as bringing about a more liberal approach to licensing in general, the 1994 Act also increased the number of situations where licensing can count as a use by the trade mark proprietor. As the 1994 Act

³⁹ *Huggars Trade Mark* [1979] FSR 310. See also *Imperial Group v. Philip Morris* [1982] FSR 72 where a registration of NERIT as a ghost mark for MERIT, an unregistrable, laudatory mark was revoked for lack of a bona fide intent to use.

⁴⁰ *Arnold Trade Mark*, O/474/01; *Dialog Trade Mark*, O/084/02.

⁴¹ *Bowden Wire v. Bowden Brake* (1914) 31 RPC 385; see *Scandecor Developments v. Scandecor Marketing* [2002] FSR 122.

⁴² *Radiation Trade Mark* (1930) 47 RPC 37.

⁴³ [1963] RPC 183, 195. In *Trooper Trade Mark* [1994] RPC 26, 31, Mr Harkness interpreted *Bostitch* as indicating that ‘registration of a user is not necessary provided that the arrangements between the parties are such that registration could be effected if the parties so wished’. A more restrictive approach was taken in *McGregor Trade Mark* [1979] RPC 36.

⁴⁴ Cf. *Job Trade Mark* [1993] FSR 118 (insufficient control of registered users in relevant period meant use did not accrue to registered proprietor).

says that there must be use by the proprietor or with *their consent*, it seems that use by a licensee will be sufficient to ensure that a mark is not revoked for non-use.⁴⁵

2.3 GENUINE USE

For a mark to remain on the register, it is necessary to show that it has been put to genuine use in the UK (or, in the case of a Community mark, in the Community).⁴⁶ Two understandings of ‘genuine use’ have been employed in the case law.⁴⁷ According to the first understanding, any use which is not artificial, fictitious or merely to retain the mark will suffice. In contrast, the second view of ‘genuineness’ of use, demands real substantial use in the marketplace, such as to bring the mark to the attention of consumers. Sometimes these tests are articulated in terms of the subjective genuineness of the use (where the test is whether there was honest intent) and objective genuineness (where the test is ordinary commercial standards).⁴⁸ The key difference is that if the test is honest use, it can be *de minimis* (though it is also possible that substantial use in a trade mark protection programme might be disregarded); in contrast, for objective genuineness, there must be substantial use (though what is ‘substantial’ will vary from sector to sector).⁴⁹

The ‘objective’ approach seems to have been taken in the three CFI decisions which have dealt with the issue under the Regulation.⁵⁰ In *Harrison v. Kabushiki Kaisha Fernandes*,⁵¹ for example, the CFI stated that genuine use implied:

real use on the market concerned for the purpose of identifying the goods and services. Genuine use is therefore to be regarded as excluding minimal or insufficient use when determining that a mark is being put to real, effective use on a particular market . . . [I]f the trade mark is not objectively present on the market in a manner that is effective, consistent over time and stable in terms of the configuration of the sign, so that it cannot be perceived by consumers as an indication of the origin of the goods or services in question, there is no genuine use of the trade mark.⁵²

Applying this test, the CFI held that evidence which comprised a programme for the Frankfurt Music Trade Fair which named HIWATT as an exhibitor, failed to show use of HIWATT in Germany. The CFI agreed with the OHIM Board of Appeal that this did not prove that there were HIWATT amplifiers in Germany, only that a company called HIWATT

⁴⁵ TM Dir. Art. 10(3); TRIPS, Art. 19(2).

⁴⁶ As well as ‘genuine’, different language versions of CTMR Art. 50 talk about use which is ‘serieux’, ‘ernsthaft’, ‘effettivo/seriamente’, ‘efectivo’, ‘serio’, ‘normaal’, ‘reel’ or ‘verkligt’ (in French, German, Italian, Spanish, Portuguese, Dutch, Danish, and Swedish). The Italian text uses the term ‘effettivo’ in relation to Art. 50, and ‘seriamente’ for Art. 43(2).

⁴⁷ L. Bently and R. Burrell, ‘The Requirement of Trade Mark Use’, (2002) 13 *Australian Intellectual Property Journal* 181; L. Bently, ‘Use and the Community Trade Mark: What is its Role? What Should it be?’, Paper delivered at Fordham University, April 2002.

⁴⁸ *Gerber Trade Marks* [2003] RPC (34) 637, 641 (Auld LJ) (a 1938 Act case).

⁴⁹ In assessing genuineness, assessment should be from point of view of average consumer and regard should be had to the expectations of the public as to the manner in which they are marketed and their points of sale: *Tiffany & Co/Emballages Mixtes et Plastique Sarl*, R1018/2000–3 (3 Dec. 2002).

⁵⁰ *Harrison v. Kabushiki Kaisha Fernandes*, T-39/01 (12 Dec. 2002); *Jean M. Goulbourn v. OHIM*, T-174/01 [2004] ETMR (16) 190; *Laboratorios RTB, SL v. OHIM*, T-156/01 (9 Jul. 2003). All three cases were concerned with CTMR Art 43(2).

⁵¹ *Harrison v. Kabushiki Kaisha Fernandes*, T-39/01 [2002] ECR II-5233 (CFI).

⁵² *Ibid.*, para. 36. See *Laboratorios RTB, SL v. OHIM*, T-156/01 (9 July 2003) (para. 35).

had representatives at the trade fair. Even if the evidence was construed favourably it only indicated a sporadic or occasional presence on the market—rather than consistent, stable, and real use—and therefore it did not indicate genuine use. However, in another case, the CFI was prepared to infer that the proprietor had made genuine use of COCOON for clothing in France, on the basis of evidence comprising mail order catalogues, distributed in millions of copies showing, the mark used for clothing for pregnant women. This indicated genuine use, that is, that the mark had been used publicly and outwardly for the purpose of ensuring an outlet for the goods or services which it represents.⁵³

In contrast, in *Ansul BV v. Ajax Brandbeveiliging BV* the ECJ seems to have set a lower standard. Ansul had registered the mark in the Benelux 1971 for fire extinguishers and associated products. However, it not sold any extinguishers since 1989. Nevertheless, Ansul had sold component parts for the extinguishers, repaired and maintained them, and used the mark MINIMAX on invoices in relation to such services. A German company, called Minimax GmbH had made and sold fire extinguishers and had owned a German registration for MINIMAX for fifty years. In 1994, Ajax, a subsidiary of the German company, began to use the MINIMAX trade mark in the Netherlands. Ajax sought revocation of Ansul's 1971 registration, and Ansul sought an injunction against Ajax to prevent it using the MINIMAX mark in the Benelux countries. The outcome of the case depended on whether Ansul's mark had been put to genuine use in the period after 1989, when it had been used in relation to components and repairs. The referring court wanted to know whether this could be a genuine use.

The ECJ stated that the notion of genuine use required a uniform interpretation throughout the Community. It said that token use, serving solely to attempt to preserve rights, was not genuine use.⁵⁴ Genuine use must be consistent with the essential function of a trade mark, to guarantee the identity of the origin of goods or services to the consumer. It concluded that such use required 'use of the mark on the market for the goods or services protected by that mark and not just internal use by the undertaking concerned . . . Use of the mark must therefore relate to goods or services already marketed or about to be marketed and for which preparations by the undertaking to secure customers are under way, particularly in the form of advertising campaigns'.⁵⁵ Moreover, the Court observed that when assessing whether use was genuine it was necessary to take account of all the facts and circumstances to decide whether 'the commercial exploitation of the mark is real, in particular whether such use is warranted in the economic sector concerned to maintain or create a share in the market for the goods or services protected by the mark'.⁵⁶ Use of a mark need not always be quantitatively significant for it to be genuine. Finally, the Court indicated that use in relation to components or after-sales services, could be use which 'related to' goods even though the goods for which the mark was registered were no longer being sold. The Court declined to say anything about the specific case between Ansul and Ajax, pointing out that this was a matter for the national courts.

The ECJ seems to have set the threshold of genuine use at a lower level than the CFI, though it remains unclear whether the ECJ meant to endorse fully the subjective approach to genuine use. The CFI calls for evidence of 'real use', whereas the ECJ seems to exclude only 'token uses'. More importantly, whereas in *Hiwatt* the CFI demanded that the use be

⁵³ *Jean M. Goulbourn v. OHIM*, T-174/01 [2004] *ETMR* (16) 190 (CFI).

⁵⁴ *Ibid.*, para. 36.

⁵⁵ *Ibid.*, para. 37.

⁵⁶ *Ibid.*, para. 38.

not minimal, the ECJ in *Ansul v. Ajax* was careful not to set any quantitative criterion, noting that the quantity of use would need to be assessed by reference to the sector concerned.⁵⁷ Finally, while the CFI in *Hiwatt* demanded evidence of use which was ‘consistent over time’, the ECJ in *Arnul* seems to have indicated that genuine use might exist where there is use in advertising prior to launch of the product on the market.

A similar debate has been taking place in the British courts, where the focus has tended to be on whether the new statutory wording—‘genuine use’—imposes a different test from that employed under the 1938 Act where the test was ‘bona fide’ use.⁵⁸ In *Re Laboratories Goemar SA*, Jacob J was asked whether there was ‘genuine use’ sufficient to resist a section 46 revocation action of the sign LABORATOIRE DE LA MER for cosmetics containing marine products.⁵⁹ The proprietor was a French company specializing in seaweed products and had made only a small volume of sales worth £800 to a Scottish agent. Jacob J took the view that ‘genuine’ meant not merely designed to maintain the mark. Considering it appropriate to follow the principle adopted in the cases decided under the 1938 Trade Marks Act,⁶⁰ Jacob J held that as long as the sales were not artificial, they constituted genuine use. He said there was no requirement that the sales be more than *de minimis*. He explained that he did not think this approach was inconsistent with the policy behind the legislation. However, recognizing that other language versions of the Directive (which emphasize the seriousness and effectiveness of the use) implied that the use must be ‘more than very slight . . . [and] . . . that insubstantial does not count’, he referred the issue to the European Court of Justice. The ECJ responded that even minimal use, not quantitatively significant can qualify as genuine ‘on condition that it is deemed to be justified, in the economic sector concerned, for the purpose of preserving or creating market share for the goods or services protected by the mark’. That requires an assessment by the national court, on the facts in front of it. In certain cases, the criterion might be met by use of a mark by a single client, but it would have to appear that the operation had ‘a genuine commercial justification for the proprietor of the mark’. However, the need

⁵⁷ This was the approach under the 1938 Act: see, *Concord Trade Mark* [1987] FSR 209 (one and a half million cigarettes a very small quantity by the standards of the trade); *Imperial Group v. Philip Morris* [1982] FSR 72 (two periods of marketing cigarettes under the NERIT name where there was no press advertising, and the volume of sales was small when compared with a real launch was not ‘real commercial use on a substantial scale’ but a colourable stratagem lacking bona fide).

⁵⁸ TMA 1938, s. 26. In *Gerber Trade Marks* [2003] RPC (34) 637, Auld LJ stated that the old case law ‘may be of some relevance to—or “provide a general feel” for the interpretation and application of the closely corresponding test of “genuine use”’ and, at 648, suggested that ‘the key to the test of bona fide use under the 1938 Act, and possibly that of “genuine use” under the new law, is whether . . . it can be described as a “pretended use”. Whether something is a pretence necessarily requires an examination of intention or motive. It is not something to be judged by “ordinary commercial standards” . . .’.

⁵⁹ *Re Laboratories Goemar SA* [2002] ETMR 34. The Court of Appeal, noting that it was for the proprietor to prove use, held that the supply of 500 bottles of perfume bearing the sign but which did not appear to be for ordinary commercial sale was not sufficient proof. The Court gave no clear articulation as to whether it thought use must be ‘subjectively’ or ‘objectively’ genuine, but seems to have been of the view that if the samples were to be ‘used in the ordinary commercial way in which samples are used to induce sales in real trade’, there would have been use: *Philosophy Inc v. Ferretti Studios* [2003] RPC (15) 287, 296 (para. 21) (Peter Gibson LJ).

⁶⁰ See also *Premier Brands UK Ltd v. Typhoon Europe Ltd* [2000] FSR 767, 807 (‘“genuine” carries with it a contradistinction to “colourable” or possibly, “de minimis”’ and finding use was genuine ‘in that the goods were supplied, in part, for their own intrinsic merit and distributed with a view to making a profit’).

for such an assessment on the facts precludes any *a priori*, abstract, quantitative threshold.⁶¹

2.4 USE IN RELATION TO THE GOODS OR SERVICES FOR WHICH THE MARK IS REGISTERED

To ensure that a mark is not revoked because of non-use, the mark must be used ‘in relation to the goods or services for which the mark is registered’. This raises two questions. First, does use on similar goods count as a relevant use? And second, what is meant by use *in relation to* goods and services?

As regards the first question, the position is that use in relation to similar goods is *not* use in relation to the goods for which the mark is registered. This represents a more restrictive approach than was adopted under the 1938 Act, where use of the mark in relation to ‘goods of the same description’ could assist an owner when attempting to resist revocation. It also raises a further question, namely, what are the goods for which a mark is registered? Where a specification is broader than the uses that have been demonstrated, the court can revoke the mark with respect to the goods for which it has not been used.⁶²

The second question that arises here is: what is meant by the phrase use *in relation to* the goods or services for which the mark is registered? In particular, if a proprietor uses the registered mark on promotional goods, the question arises whether this amounts to use *in relation to* those goods or only in relation to the goods which are being promoted?⁶³

The OHIM position is illustrated by the decision in *Henrique & Oliveira v. Twelve Islands Shipping (Malibu device/coconut tree device)* where the opposition was based on a number of registrations of the MALIBU device mark (a coconut tree on a small island) for clothing.⁶⁴ In the face of a request for proof of use, the opponent submitted evidence of ‘sales and promotional materials’ indicating disposal of 2,111 T-shirts in Germany, 1,024 in Ireland and 625 in the United Kingdom. The Opposition Division held that these did not constitute genuine use in relation to clothes. The Opposition Division reasoned:

[T]he clothing distributed by the opponent at promotional events could never be considered use in connection with clothing, as the clothing is merely an instrument for the marketing of the MALIBU trade mark in connection with drinks. It should be noticed that the representations of the articles of clothing submitted by the opponent do not show the MALIBU trade mark in the label of the neck of the garment. A MALIBU logo T-shirt given freely at promotional events is, and will be perceived by consumers as, an article of clothing promoting a brand for a drink rather than a sign distinguishing a particular clothing manufacturer from its competitors. Thus it cannot be considered as use of the trade mark in connection with clothing.

In contrast, in *Premier Brands UK v. Typhoon Europe*, Neuberger J answered the question whether the use was ‘in relation to’ the proprietor’s goods by looking at how consumers would understand the use (rather than by focusing on the proprietor’s purpose). In this

⁶¹ *La Mer Technology Inc v. Laboratoires Goemar SA*, Case C-259/02 (27 Jan. 2004) (paras. 21–7).

⁶² TMA s. 46(5); CTMR Art. 13.

⁶³ See also *Young v. Medici* (14 Jul. 2003) (Jacob J) para. 3 (no use for boxes and packaging by selling trade-marked goods in packaging).

⁶⁴ Decision No. 374/2001 (14 Feb. 2001).

case, the proprietor of the TY.PHOO mark for domestic utensils and containers resisted revocation by claiming it had used the mark on tea canisters, biscuit barrels, etc. Neuberger J said the question was whether 'the use of TY.PHOO on the goods conveys to members of the public that the source of the well-known TY.PHOO mark for tea is responsible for, and in some way guarantees, the quality of the goods?'. While the public would understand the use as promoting TY.PHOO tea, the Court said it did not follow that the public would not *also* assume that the goods had been marketed by or with the approval of the makers of TY.PHOO tea.⁶⁵

2.5 PLACE OF USE

In relation to British marks, the relevant use must take place in the UK.⁶⁶ Use of a trade mark includes situations where the mark is affixed to goods or to the packaging of goods in the UK solely for export.⁶⁷ An advertisement released in a foreign jurisdiction may also constitute use, so long as the advertisement is available in the United Kingdom. For example, in *Elle Trade Marks*⁶⁸ the proprietor of the mark ELLE for soap and perfume sought to rely on the fact that soaps and other cosmetics branded with ELLE had been offered for sale in the French edition of a well-known woman's magazine of which the appellants were also proprietors. It was accepted that the French edition was sold in the United Kingdom and that it contained an advertisement for ELLE soap which could be obtained by readers in Britain either by going to Paris or by ordering it by phone. Although there was no evidence of actual sale, Lloyd J held that this was a genuine use within the relevant class of goods. In contrast, mere use on an Internet site is not use in the United Kingdom: as the Registrar, Mr Salthouse, has said, were the position otherwise 'the simple creation of a web site would provide use in every country in the world on the basis that it could be accessed globally'.⁶⁹ It seems that in such cases what is required is evidence of a site targeting at customers in the United Kingdom.⁷⁰

2.6 PROPER REASONS FOR NON-USE

Section 46(1)(a)–(b)/Article 50(1)(a) provide that failure to use the mark will not affect the fate of a mark if there are 'proper reasons for non-use'.⁷¹ The circumstances were probably not defined with greater specificity because it was thought impossible to

⁶⁵ [2000] FSR 767, 807. See also *Elle Trade Marks* [1997] FSR 529 (Where a women's magazine called ELLE gave away complimentary samples of perfumes bearing the name of another manufacturer, MONSOON, the magazine was unable to resist an application for revocation of the mark ELLE which had also been registered for perfumes. Lloyd J explained that 'the mark was used, if in any context at all other than the magazine, in relation to the promotion of the event and not the particular goods to be used or offered in connection with the event').

⁶⁶ In relation to Community trade marks, CTMR, Art. 9 does not specify where the use should take place. However, a minute of the Council of Ministers says that genuine use in one member state is to be treated as genuine use in the Community. Cornish and Llewelyn (5th edn.), 693, in contrast, argues that use should be in more than one member state.

⁶⁷ TMA s. 46(2). Cf. below at p. 907.

⁶⁸ [1997] FSR 529. Cf. below at p. 907.

⁶⁹ *Platinum Trade Mark*, O/133/01 (15 Mar. 2001) (para. 35).

⁷⁰ *Euromarket Designs v. Peters* [2000] ETMR 1025.

⁷¹ Under the 1938 Act a similar exclusion was made where non-use was attributable to 'special circumstances in the trade'.

anticipate all the situations which might arise that could justify failure to use a mark over five years.⁷² The trade mark owner must establish, first, that the alleged reason was of a type regarded as 'proper' and second, that the non-use was attributable to the alleged reason.

2.6.1 Reasons regarded as proper

Interpreting the notion of 'proper reasons' in the light of Article 19 of the TRIPS Agreement,⁷³ 'proper reasons' must include reasons based on the existence of *obstacles* to use arising *independently of the will of the proprietor*. The British tribunals, OHIM and CFI have gone further than this, and indicated that these are the only reasons which will be regarded as proper.⁷⁴

Classic examples of such obstacles (mentioned in Article 19) are 'import restrictions or other government requirements'.⁷⁵ These are typically outside the trade mark proprietor's control.⁷⁶ For example, the OHIM was satisfied that there were proper reasons for non-use of the mark DIADUR, registered for pharmaceuticals, where an application had been made to the Spanish Ministry of Health on 29 May 1996 and had not been granted as of the end of the five year period (10 May 1999).⁷⁷ External obstacles to use need not be ones imposed by the state: the UK Registry held that there were proper reasons for non-use of TEAM LOTUS where the proprietor had applied for but been refused entry to Formula 1 racing.⁷⁸

On the other hand, classic examples of circumstances which are not regarded as arising

⁷² *Ercros SA v. Banco Akros SpA (Ercros/Akros)*, Decision No. 3500/2002 (29 Nov. 2002) (Opposition Division). In the UK, the term 'proper' has been said to mean 'apt, acceptable, reasonable, and justifiable in all the circumstances': *Invermont Trade Mark* [1997] RPC 125, 130.

⁷³ TRIPS, Art. 19 states that 'Circumstances arising independently of the will of the owner of the trademark which constitute an obstacle to the use of the trademark, such as import restrictions or other government requirements for goods or services protected by the trademark, shall be recognised as valid reasons for non-use'.

⁷⁴ In *Cernivet Trade Mark* [2002] RPC (30) 585, Geoffrey Hobbs QC, the Appointed Person, has argued that this is part of European trade marks law. See also *Philosophy di Alberta Ferretti* [2003] RPC (15) 287, 297 (para. 25) (CA); *Ensure Plus Trade Mark* (26 Sept. 2002) (para. 50) (TM Registry); *Ercros SA v. Banco Akros SpA (Ercros/Akros)*, Decision No. 3500/2002 (29 Nov. 2002) (OHIM Opposition Division); *Tomen Corpn v. Francisco de Novaes de Cunha (Centurion/Centrio)*, Decision 3767/2002 (18 Dec. 2002) (OHIM Opposition Division). However, while Art. 19 tells a tribunal about certain circumstances which shall be treated as 'proper reasons for non-use', there is no indication that it is to be thought of as exhaustive. This was more explicit in the Draft of 23 Jul. 1990: see Gervais, 178–8.

⁷⁵ TRIPS, Art. 19. The OHIM has said '[i]mport restrictions, such as a trade embargo or other government requirements, such as a State monopoly which impede any kind of use, or a state prohibition of the sale of goods for reasons of health or national defence are examples of proper reasons for non-use. Typical cases in this respect are regulatory procedures, which the owner has to pass before offering the relevant goods for sale on the market': *Tomen Corpn v. Francisco de Novaes de Cunha (Centurion/Centrio)*, Decision No. 3767/2002 (18 Dec. 2002) (OHIM Opposition Division) (where the proprietor failed to substantiate its claim).

⁷⁶ However, if the circumstances which the trade mark proprietor claims justify non-use transpire not to be temporary, and may continue indefinitely (as with the US trade embargo on Cuba which was first imposed in 1962), those circumstances lose their capacity to justify non-use because they come to be 'the normal conditions in the trade': *Cabanas Habana (Device) Trade Mark* [2000] RPC 26, 33.

⁷⁷ *Alza Corpn. v. Almirall-Prodesfarma SA (Viadur/Diadur)*, R745/2001–2(9 July 2003); *Invermont Trade Mark* [1997] RPC 125, 130 (non-use said to be justified under the 1994 Act to include 'delays occasioned by some unavoidable regulatory requirement, such as the approval of a medicine').

⁷⁸ *Team Lotus Trade Mark* (29 May 2003) (TM Registry).

‘independently of the will of the owner of the trade mark’ include ‘lack of resources, financial problems, lack of staff or marketing problems’.⁷⁹ These kinds of difficulties are regarded as being within a proprietor’s control because they are matters which constitute ‘a natural part of running a business’.⁸⁰ In a similar vein, the UK Registry has found that the proprietor had failed to demonstrate proper reasons for non-use where its explanation was that there had been difficulties in generating funds for the development of new lighting products;⁸¹ where it had encountered difficulties in obtaining licences and finance to open a night club;⁸² or where it had been deterred from relaunching the *ANGLIAN MODE* magazine because of the economic recession in the early 1990s.⁸³ This is because these are matters which are ‘within the businessman’s own control’, for which they should plan accordingly.⁸⁴

In between the obvious cases of proper reasons (war, embargoes) and clearly unsatisfactory ones (economic difficulties) are more difficult situations. One issue which will need to be determined is whether ‘independence of the will’ can ever cover reasons associated with the trade mark owner’s business. The CFI has stated that ‘the concept of proper reasons . . . must be considered to refer essentially to circumstances unconnected with the trade mark owner which prohibit him from using the mark, rather than to circumstances associated with the commercial difficulties he is experiencing’.⁸⁵ However, British tribunals have been slightly more flexible in their interpretation of ‘proper reasons’, interpreting it as covering not just abnormal situations in the industry or the market, but ‘perhaps some temporary but serious disruption affecting the registered proprietor’s business’.⁸⁶ The British tribunals have sometimes been more generous in their understanding of ‘proper reasons’: so Park J held there were proper reasons for non-use of the proprietor’s *MAGIC BALL* mark where a satisfactory system for manufacturing the product had been subject to delays;⁸⁷ and the Registry held that there were proper reasons for non-use of *TEAM LOTUS* where it was difficult to gain admission to a market (Formula 1 racing) with high barriers to entry, though persistent attempts were made.⁸⁸

⁷⁹ *Ercros SA v. Banco Akros SpA (Ercros/Akros)*, Decision No. 3500/2002 (29 Nov. 2002) (Opposition Division).

⁸⁰ *Ercros SA v. Banco Akros SpA (Ercros/Akros)*, Decision No. 3500/2002 (29 Nov. 2002) (Opposition Division). Insolvency proceedings, which meant the proprietor could no longer control the business, were therefore held by the OHIM to be not a proper reason for non-use of a mark. It is difficult to see that insolvency proceedings can be described as ‘dependent of the will of the trade mark owner’.

⁸¹ *Questo Trade Mark* (5 May 1999) (TM Registry). In *Team Lotus Trade Mark* (29 May 2003) the Registrar observed that ‘having a business proposition but simply being unable to find a taker is unlikely to be enough to constitute proper reasons for non-use’.

⁸² *Platinum Trade Mark*, O/133/01 (15 Mar. 2001) (TM Registry).

⁸³ *Anglian Mode Trade Mark SRIS*, O/181/00 (19 May 2000) ‘economic downturns, the cyclical nature of some industries, exchange rate movements, interest rate variations and the like . . . constitute part of the normal range of risks that must be accepted as part and parcel of running a business . . . they do not constitute a proper reason for non-use of a trade mark over an extended period of time’.

⁸⁴ *Invermont Trade Mark* [1997] RPC 125. Similarly, in *Philosophy di Alberta Ferretti* [2003] RPC (15) 287, 298 (para. 25) (CA), the Court of Appeal has stated that: ‘A proprietor who does nothing for most of the five-year period and then embarks on a procedure known to be lengthy but intended to lead to goods bearing the mark being produced for sale cannot . . . say that the ordinary commercial delays in producing a new product bearing the mark amounted to proper reasons for non-use for the five year period’.

⁸⁵ *Laboratorios RTB, SL v. OHIM*, T-156/01 (9 Jul. 2003) (para. 41).

⁸⁶ *Invermont Trade Mark* [1997] RPC 125, 130.

⁸⁷ *Magic Ball Trade Mark* [2000] RPC 439.

⁸⁸ *Team Lotus Trade Mark* (29 May 2003) (TM Registry).

2.6.2 The alleged reason must cause non-use

In order to defend an unused mark from revocation, it is necessary to show that the non-use resulted from the circumstances in question.⁸⁹ In other words, the proprietor must persuade the tribunal that they would have used the mark had the obstacle not existed. More specifically, the proprietor should show that they would have used (or licensed the use of) the mark (or one not differing from its so as to alter its distinctive character) across the full range of the specification (or that part for which it wishes to retain the registration).⁹⁰ In deciding whether this is proved, the tribunal will examine 'the nature and the severity of the obstacles faced and the nature and extent of the registered proprietors' efforts to overcome them'.⁹¹

Although the relevant circumstances justifying non-use need not exist for the whole of the five-year period, if the alleged reason for non-use only operated briefly, the proprietor will have problems persuading a tribunal that the 'obstacle' was in fact a real reason for non-use.⁹² In these cases, the tribunal will pay particular attention to the behaviour of the proprietor during the period when the obstacle did not exist (if any). For example, where a trade embargo on Cuban goods was imposed twenty-six years after registration of the mark in issue, and there was no evidence of use in the period leading up to the embargo, the Trade Marks Registry held that the embargo was not a 'proper reason for non-use' and ordered revocation.⁹³ It was necessary to show that the proprietor would have used the mark on the goods or services for which the mark was registered, had the restrictions not existed.⁹⁴ Similarly, in *Cernivet Trade Mark*, the Appointed Person held that problems with regulatory approval were not the cause of non-use where competition (from antibiotic growth promoters) would by itself have stopped the introduction of the proprietor's product into the UK market.

Proper reasons for non-use must pertain to the whole of the specification, if the registration is to be maintained in that breadth. So, non-use of a mark for cigarettes was not justified where health regulations merely limited the tar content of cigarettes, because such

⁸⁹ *Cernivet Trade Mark* [2002] RPC (30) 585, 596 (para. 51); *Laboratorios RTB, SL v. OHIM*, T-156/01 (9 July 2003) (para. 41) ('the concept of proper reasons . . . must be considered to refer essentially to circumstances . . . which prohibit [the trade mark owner] from using the mark . . .') (CFI).

⁹⁰ *Cabanas Habana (Device) Mark* [2000] RPC 26, 33 (where use of the mark in a modified form, by removing the word HABANA, was treated as relevant. M Foley said 'if as it stated, it is necessary to judge matters in a business sense, it is in my view wholly appropriate to take into account reasonable alternatives that may have enabled the mark to be used, if those alternatives are commercially viable or established practice in trade').

⁹¹ *Team Lotus Trade Mark* (29 May 2003) (para. 42) (TM Registry).

⁹² In *Philosophy di Alberta Ferretti* [2003] RPC (15) 287, 298 (para. 25) (CA), the Court of Appeal has stated that: 'A proprietor who does nothing for most of the five-year period and then embarks on a procedure known to be lengthy but intended to lead to goods bearing the mark being produced for sale cannot . . . say that the ordinary commercial delays in producing a new product bearing the mark amounted to proper reasons for non-use for the five year period'. For a discussion of different approaches to whether the reason must exist across the whole five-year period or only part, see Kerly paras. 9-64-6.

⁹³ *Ibid.* Cf. *Alza Corp. v. Almirall-Prodesfarma SA (Viadur/Diadur)*, R745/2001-2 (9 July 2003) (proper reason need only exist in relevant five years so tribunal was not incorrect to ignore inactivity in preceding 20 years).

⁹⁴ *In re Trade Mark of James Crean* (1921) 38 RPC 155 Sargant J (failure to use ALADDIN mark on soap was not due to special circumstance of war because of lack of evidence that it would have been used had war not intervened).

regulations did not prevent use of the mark on cigarettes in general.⁹⁵ However, a tribunal may choose to permit the registration to be maintained for those goods or services where non-use was justified. For example, in the *Team Lotus* case, the proprietor's registration was for 'advertising services in Class 35', but its efforts had (unsuccessfully) been directed towards gaining entry for its team to the Formula 1 motor racing championships: if successful, advertising activities would have followed as a matter of course. The Trade Marks Registry accepted that the peculiar barriers were a proper reason for non-use in relation to advertising in connection with Formula 1, though they would not have justified non-use for advertising in general or advertising related to motor racing. The Registry allowed maintenance of the mark but only in relation to advertising services included in Class 35, 'all relating to Formula One motor racing'.⁹⁶

2.7 REWRITING THE SPECIFICATION

More difficult questions arise where the proprietor can demonstrate use (or proper reasons for non-use) for part only of the goods or services of the specification. If the Registry is to limit the scope of the registration there arise issues of characterization of the goods for which the sign has actually been used. In many cases this should be straightforward: for example there may be a registration for clothing and drinks, but only use in relation to drinks, so the mark is struck off for clothing. But what if there is a registration for alcoholic drinks, but use only in relation to whisky? Should the specification be rewritten? Should it limit the party to whisky? or malt whisky? or Scottish single malt whisky? This problem initially prompted a division amongst the opinions of some of the United Kingdom's High Court intellectual property judges, some being willing to rewrite the specification,⁹⁷ while others were only prepared to eliminate items from the proprietor's existing list.⁹⁸ In *Thomson Holiday v. Norwegian Cruise Line*, the Court of Appeal has now expressed its approval of the former approach.⁹⁹ In that case the proprietor's mark was FREESTYLE for arrangement and booking of travel tours and cruises. It had only used the mark in relation to package holidays for young groups (akin to 18–30 holidays) though some holidays included skiing. Aldous LJ held that it was for the court or tribunal to look at the actual use by the proprietor and to arrive at a 'fair specification' having regard to that use. In determining what was fair the tribunal should 'limit the specification so that it reflects the circumstances of the particular trade and the way the public would perceive the use'. One useful approach is to ask how the notional consumer would describe the proprietor's use. In the particular case, Aldous LJ rejected suggestions that the proprietor's use would be described as 'land-based holidays', or 'holidays excluding cruises' and decided to limit the specification to 'package holidays'.¹⁰⁰

⁹⁵ *K-2 Trade Mark* [2000] RPC 413, 421.

⁹⁶ *Team Lotus Trade Mark* (29 May 2003) (TM Registry).

⁹⁷ *Daimler v. Alavi* [2001] RPC 813; *Decon Laboratories Ltd v. Fred Baker Scientific Ltd* [2001] RPC 17 (Pumfrey J.); *Minerva Trade Mark* [2000] FSR 734 (Jacob J).

⁹⁸ *Premier Brands UK Ltd v. Typhoon Europe Ltd* [2000] FSR 767 (Neuberger J).

⁹⁹ [2003] RPC (32) 56. See also *Young v. Medici* (14 Jul. 2003) (Jacob J) ('The whole exercise consists in the end of forming a value judgment as to the appropriate specification having regard to the use which has been made').

¹⁰⁰ For other examples, see *Young v. Medici* (14 Jul. 2003) (Jacob J) (holding that clothing is a fair description and refusing to confine the specification to 'casual clothing' or 'surf-type clothing'); *David West (trading*

3 GENERIC MARKS

The second reason why a mark may be revoked is because it has become generic. That is, it may have come to designate a genus or type of product rather than a particular product from a particular source.¹⁰¹ As section 46(1)(c)/Article 50(1)(b) says, a mark may be revoked on the ground ‘that in consequence of the acts or inactivity of the proprietor, it has become the common name in the trade for a product or service for which it is registered’. Examples of marks that have become generic include GRAMOPHONE,¹⁰² LINOLEUM,¹⁰³ SHREDDED WHEAT,¹⁰⁴ and BACH FLOWER REMEDIES.

It has been argued that the revocation of generic marks is not justifiable. For example, Pendleton has suggested that the arguments for expungement of generic marks seem ‘weak but rarely examined’.¹⁰⁵ Moreover, he argues that the rule is ‘an open invitation to commercial sharp practice through campaigns by a competitor to render a successful mark generic’. In contrast, others have suggested that while the arguments for the revocation of generic trade marks may not have been well articulated,¹⁰⁶ consumers and competitors would be harmed if generic marks were allowed to stay on the register. This is because where a mark has become generic, it loses its capacity to distinguish one trader’s goods or services from those of another.

The harm to consumers lies in the possible responses that a seller would give if consumers asked for the trade-marked product by its generic name. If consumers are only offered the trade mark owner’s version of the product, consumers are not being offered the full range of prices, qualities, etc. that are available.

Another problem that arises where a mark becomes generic is that competitors are not legally able to use the term that most consumers use to refer to the product. While competitors may be able to develop alternative names for the product, explain the situation to the consumer, or take licences from the trade mark holder, these are potentially ineffective and costly.¹⁰⁷

as Eastenders v. Fuller Smith [2003] FSR (44) 816 (limit from beer to bitter beer); *Associated Newspapers v. Express Newspapers* [2003] FSR (51) (para. 62) rejecting argument that THE MAIL had only been used for national Sunday newspapers for sale so should be restricted to such—existing specification ‘newspapers for sale’ was satisfactory).

¹⁰¹ TM Dir. Art. 12(2)(a).

¹⁰² [1910] 2 Ch 423. See *Björnekulla v. Pocodia*, Case C-371/02 (AG Léger, 13 Nov. 2003) (para. 50).

¹⁰³ (1878) 7 Ch D 834 (passing off: no misrepresentation by use of generic term to describe goods).

¹⁰⁴ (1940) 57 RPC 137.

¹⁰⁵ M. Pendleton, ‘Excising Consumer Protection—The Key to Reforming Trade Mark Law’ (1992) 3 AIPJ 110, 116.

¹⁰⁶ R. Folsom and L. Teply, ‘Trademarked Generic Words’ (1980) 89 *Yale LJ* 1323, 1326 (suggesting that the courts and others ‘have long relied on broad assumptions and generalisations that do not satisfactorily articulate the harm caused by trade-marked generic words’).

¹⁰⁷ Folsom and Teply argue that the question of whether a mark is generic should be decided by reference to any harm that may be caused. On this basis, the question would be whether ‘the challenged mark substantially increases ultimate consumer search costs or raises real entry barriers to new firms’. R. Folsom and L. Teply, ‘Trademarked Generic Words’ (1980) 89 *Yale LJ* 1323, 1352.

3.1 NAME

For a mark to be revoked on the basis that it has become generic, it is necessary to show that it has become the common *name* in the trade for a product or service for which it is registered. Given that marks that become generic are often name marks, the fact that section 46(1)(c)/Article 50(1)(b) is limited to ‘names’ is not surprising. It is possible to imagine situations, however, where the use of certain colours on the packaging of types of milk or varieties of crisps may become generic. It is also possible that as a result of the standardization of technology aspects of computer-user interfaces, such as icons, might become generic. While consumers and competitors would suffer if colours or images remained protected as trade marks despite being generic, as section 46(1)(c) only refers to ‘names’, it seems that such marks can not be revoked on the basis that they have become generic.

3.2 COMMON IN THE ‘TRADE’

The wording of section 46(1)(c)/Article 50(1)(b) suggests that the name must have become common in the *trade*—rather than amongst the public. The importance of this difference can be seen from *In re Gramophone Company’s Application*,¹⁰⁸ which concerned an application to register the mark GRAMOPHONE for sound-recording and reproducing instruments. Parker J explained that the public understood the word GRAMOPHONE to mean disk-talking machines operating disk recordings rather than the name of a particular manufacturer. This was shown by the fact that the word appeared in dictionaries, newspapers, patent specifications, and even court decisions as a general term for disk-talking machines. Indeed, even the applicants had used the word to describe the goods for which they sought coverage. Thus, when judged from the public’s perspective, the word had become generic. In contrast, the trade considered GRAMOPHONE to be the name of a disk-talking machine made by the particular manufacturer (other manufacturers were using marks such as DULCEPHONE and CORONAPHONE). Thus, when looked at from the trade perspective, the mark would not have been generic.¹⁰⁹

The question of whether genericism is decided solely from the perspective of the trade has now been referred to the ECJ in a case concerning the mark BÖSTONGURKA for pickled gherkins.¹¹⁰ The critical question is what constitutes the relevant trade where a product is handled at several stages before it reaches the consumer. The Advocate General has indicated that, from a reading of different language versions of the Directive, the views of consumers are as relevant as those of the trade.¹¹¹ It is the hope the ECJ will adopt this stance.

3.3 THE REQUIREMENT OF FAULT

Even if a mark has become the common name in the trade for a product or service for which it is registered, the mark will only be revoked if it has become generic as ‘a

¹⁰⁸ [1910] 2 Ch 423.

¹⁰⁹ The difference in the understanding held by the public and the trade was largely explicable by the aggressive manner in which the company had asserted its rights against other traders.

¹¹⁰ *Björnekulla Fruktindustrier Aktiebolag v. Pocodia Food Aktiebolag*, Case C-371/02 (pending).

¹¹¹ AG Léger (13 Nov. 2003).

consequence of the acts or inactivity' of the proprietor. This would be the case, for example, where a mark becomes the common name in the trade because the proprietor used the mark as a description of the product in their own advertising or labelling.

Given this, owners need to be vigilant that they do not allow their trade marks to become the common name in the trade for the goods or services in question. Sometimes it is said that the trade mark proprietor should ensure the mark is consistently used as an adjective and not as a noun. It is a moot point whether a failure to correct consumer, as opposed to trade, habits is a relevant form of inactivity. In certain respects it is difficult to see why such 'policing' should make any difference to whether a trade mark should remain on the register. For some commentators, money spent on policing is wasted and should be a factor in support of, rather than against, revocation.¹¹² In part this is because 'from an economic perspective, such measures normally do not stimulate demand for a firm's product and are therefore economically inefficient'.¹¹³ However, the requirement of policing might be justified on the basis of the general principle that property should not be lost without acquiescence on the part of the owner.

4 MISLEADING USES

The third reason why a mark may be revoked is on the basis that it has been used in a way which misleads the public. To this end, section 46(1)(d)/Art. 50(1)(c) CTMR says that a mark may be revoked where:

in consequence of the use made of it by the proprietor or with his consent in relation to goods or services for which it is registered, it is liable to mislead the public, particularly as to the nature, quality, or geographical origin of the goods or services.¹¹⁴

Section 46(1)(d) corresponds to the absolute ground of refusal in section 3(3)(b), but recognizes that changes may occur after registration which mean that the mark becomes misleading.

4.1 REQUIREMENT OF FAULT

In order for a mark to be revoked under section 46(1)(d), the mark must have become misleading *either* as a result of the acts of the proprietor *or* as a result of acts done with their consent.¹¹⁵ Given that a mark can become misleading as a result of the conduct of third parties, it is good counsel for trade mark owners to include provisions in their licence agreements which ensure that the licensee does not misuse the mark in a way which might jeopardize the mark's viability.

¹¹² R. Folsom and L. Teply, 1354. ¹¹³ *Ibid.*

¹¹⁴ TM Dir. Art. 12(2)(b). See above at pp. 843–4.

¹¹⁵ In *Bostitch Trade Mark* [1963] *RPC* 183, the licensee had begun selling certain articles of his own manufacture without the permission of the trade mark owner. Such actions would not be such as to render the proprietor's mark liable to be expunged.

4.2 MISLEAD THE PUBLIC

In order for a mark to be revoked under section 46(1)(d), it must be shown that the use misleads the public, particularly as to the nature, quality, or geographical origin of the goods or services. A mark may become misleading, for example, where a garment made entirely of wool, to which the mark ORLWOOLA is affixed, is subsequently manufactured with other materials (e.g. nylon): the connotation of an homogenous woollen garment arising from the verbal pronunciation of the mark ('all wool' with a meaningless suffix) is misleading as to the true nature of the goods.¹¹⁶ A mark may also be misleading where a proprietor alters the geographical location of their business in such a way that a mark that was formerly suggestive of origin becomes deceptive. In thinking about the situations where a use may be misleading, it is helpful to bear in mind Lloyd Jacob J's comments in *Bostitch' Trade Mark*.¹¹⁷

There is nothing in the Trade Marks Act or in the principles of trade mark law which have been developed thereunder which requires a proprietor of a registered trade mark to refrain from introducing modifications or variations in the goods to which he applies his mark or in the manner in which they reach the market. If he should find it convenient to transfer manufacture from one locality to another, or procure his supplies from sub-contractors, or arrange for assembly of completed articles by someone of his choice in lieu of doing it himself, these and a vast number of other changes in procedure are his sole concern. His mark only becomes vulnerable in this connection if he permits its use in a manner that is calculated to deceive or cause confusion.

One question that arises in this context is whether a use which misleads the public as to the *trade origin of the goods* or services constitutes a misuse for the purposes of section 46(1)(d). If so, this gives rise to the further question of whether the very act of licensing a mark would justify removal under section 46(1)(d).¹¹⁸ These questions were considered by the House of Lords in *Scandecor Developments AB v. Scandecor Marketing AB*.¹¹⁹ In that case, an international group of companies operated in a way that afforded a degree of autonomy to its subsidiaries. While the international company held the marks, the local companies dealt with retailers. When one of the subsidiaries was sold off and the parent company refused to continue to license the mark to it, the (former) subsidiary argued (in a counterclaim to the claimant's action for infringement) that by allowing the defendant to affix the trade mark to its goods, the claimant had allowed the trade marks to become deceptive. More specifically, it was argued that the mark had come to acquire distinctiveness in relation to the defendant's, rather than the claimant's, goods. As trade marks operate as indications of origin, the defendant therefore asserted that the claimant's mark had become misleading and should be revoked.

The House of Lords held that it was not possible to reach a conclusion in the case without first receiving guidance from the ECJ. In particular, it said that before it could decide whether the use by the proprietor of the mark was misleading as to the origin of the

¹¹⁶ *Orwoola Trade Mark* (1909) 26 RPC 683.

¹¹⁷ *Bostitch Trade Mark* [1963] RPC 183, 197.

¹¹⁸ It has been argued that 'although misleading trade origin is not listed . . . the wording . . . could be interpreted to include such deception . . . uncontrolled use will still render the mark deceptive as to trade origin (and so "liable to mislead the public")'. H. Norman, 'Trade Mark Licences in the UK' [1994] *EIPR* 154, 158.

¹¹⁹ [2002] *FSR* (7) 122.

goods it was necessary to obtain guidance as to what criteria are to be applied in determining whether a trading relationship comprises a single ‘undertaking’. This was of importance because if the claimant and defendant were to be regarded as a single ‘undertaking’, then the use of the mark was probably not misleading as to the origin of the goods.¹²⁰ Moreover, if the undertakings were different, guidance would be needed on the second (central) issue: whether use of a mark by a bare licensee (ie without quality control being exercised by the trade mark owner) necessarily rendered a trade mark liable to mislead. Lord Nicholls was clear that in his view such use was not inherently liable to mislead, at least during the term of any such exclusive licence. However, at the end of the licence, whether the trade mark would become misleading would depend on how the respective parties operated, in particular whether the former licensee carried on trading in the relevant goods or services. If customers of the former licensee associated goods bearing the mark, incorrectly, with the former licensee the mark will have become deceptive.¹²¹ Whether it does so is, according to Lord Nicholls, a question of fact. However, given that the general issue was one that had not been before the ECJ, the House of Lords referred the question to the ECJ. Unfortunately, the case was settled before the ECJ was able to provide any guidance.

5 EFFECT OF REVOCATION

Section 46(6) states that the rights of the proprietor cease to have effect from the date of application for revocation or if the registrar or court is satisfied that the grounds of revocation existed at an earlier date, that date.¹²² If a party wants revocation to take effect from a date earlier than the date of application for revocation, it should explicitly allege that the grounds for revocation existed at the earlier date.¹²³ The importance of this can be seen in *Riveria Trade Mark*.¹²⁴ There the mark RIVERIA, registered as of 1973, was the successful basis of an invalidity objection to a registration of FRANCO’S RIVERIA CONE which had been registered as of 2000. Just over a month later, RIVERIA was held to be revocable for non-use, with effect from May 2001 (the date of application for revocation). The later revocation was, however, unable to affect the earlier holding as to the validity of FRANCO’S RIVERIA CONE. Had revocation been sought with earlier effect, however, the position might have been different.

¹²⁰ [2002] FSR (7) 122,140–141 (paras 51–3).

¹²¹ For a related issue, see *Elizabeth Emanuel Trade Mark* SRIS, O-196–03 (27 Jun. 2003) (whether public association with world famous designer Elizabeth Emanuel could be a basis for revoking a mark, ELIZABETH EMANUEL, which she had herself registered and subsequently assigned). Now referred to the ECJ.

INFRINGEMENT

1 INTRODUCTION

Although the registered trade mark regime started life as a formalized version of the law of passing off, there is no area where the two regimes diverge more than in their treatment of infringement. Indeed, the rights granted to the owners of registered trade marks have expanded to such an extent that it could be said that they now confer a form of quasi-copyright protection which protects traders rather than consumers.

The rights of the owner of a British trade mark are set out in sections 9 and 10 of the 1994 Act and the rights conferred on the owner of a Community trade mark (which are largely the same as those given to UK trade mark owners) in Article 9 of the CTMR.¹ Community trade marks are enforced in national courts which have been designated as ‘Community trade mark courts’.² When dealing with the infringement of a Community trade mark, the national courts apply the Community Trade Mark Regulation supplemented where appropriate by national law.³ When sitting as a Community Trade Mark Court, national courts are invested with the jurisdiction to grant relief in the territory of any member state.⁴ Where an alleged infringement takes place in different member states, the appropriate forum is determined by jurisdictional rules which are similar to those operating under the Brussels Convention. Normally, it will be the state of the defendant’s domicile.⁵

While trade mark infringement proceedings will normally be brought by the owner of the mark,⁶ it is also possible for an action to be brought by an exclusive licensee.⁷ Where a licensee is not entitled to bring proceedings in their own right, they are usually able to call on the proprietor to take proceedings on their behalf.⁸

Proceedings to enforce a trade mark may be brought as soon as a mark is registered. It

¹ These provisions apply equally to marks that were registered under the 1938 Act. See Sched. 3, para. 4, subject to certain savings as regards ‘existing uses’. Sections 9–10 need to be read with sections 11–13, though these are discussed in Ch. 41.

² Community Trade Mark Regulations 1996 (SI 1996/1908) (designating the High Court and Court of Session).

³ CTMR, Art. 97. ⁴ CTMR, Art. 99(2).

⁵ CTMR, Art. 93. These matters are considered in detail at pp. 1076–82.

⁶ A co-proprietor may bring an action but must join other co-proprietors either as co-plaintiffs or defendants: TMA s. 23(5). A co-proprietor will not normally be liable for infringement: TMA s. 23(1).

⁷ TMA s. 31 (where provision is made to that effect in the licence). No provisions are made under the Directive, and national laws take diverging approaches: A. Kur, ‘Harmonization of the Trade Mark Laws in Europe—An Overview’ (1997) 28 *IIC* 1.

⁸ TMA s. 30; CTMR, Art. 22.

should be noted that the rights of the proprietor are enforceable against third parties with regard to acts done after the date of registration (which is the date of filing).⁹ The rights continue for ten years from registration¹⁰ and may be renewed, possibly indefinitely, for further ten-year periods.¹¹ Similar principles apply in relation to Community trade marks, with the exception that the proprietors of Community trade marks are only entitled to 'reasonable compensation' for acts that occur between publication of the application and registration.¹²

2 INFRINGING ACTS

The circumstances in which a mark may be infringed are set out in sections 10(1)–(3) and Article 9 of the CTMR. Before looking at the circumstances in which a trade mark may be infringed, it is important to note that to infringe there is no requirement of knowledge, intention, or derivation on the part of the defendant. This is because, as with patents and registered designs, liability for trade mark infringement is strict: the monopoly is an 'absolute' one. Moreover, and in contrast with passing off, there is no need for a trade mark owner to demonstrate damage. Indeed, a trade mark owner is able to commence an action for infringement even though the mark has not been used. It is also important to note section 10(1)–(3) clearly provide that in order to infringe, it must be shown that the defendant used the mark 'in the course of trade'. We discuss the meaning of this phrase below.

In order to determine whether a trade mark has been infringed, it is necessary to compare the registered mark with the alleged infringing sign. The circumstances in which a mark may be infringed are set out in sections 10(1)–(3). These are where:

- (i) the marks are identical *and* the goods or services are identical: section 10(1)/Article 9(1)(a);
- (ii) the marks are identical *and* the goods or services are similar *and* there is a likelihood of confusion, which includes the likelihood of association, with the registered mark: section 10(2)(a)/Article 9(1)(b);
- (iii) the marks are similar, *and* the goods or services are either identical or similar, *and* there is a likelihood of confusion, which includes the likelihood of association, between the marks: section 10(2)(b)/Article 9(1)(b);
- (iv) the marks are either identical or similar, *and* the goods or services are not similar, *and* where the registered trade mark has a reputation in the United Kingdom, and use of the defendant's mark would take unfair advantage of, or be detrimental to, the distinctive character or the repute of the registered trade mark: section 10(3)/Article 9(1)(c).

⁹ TMA s. 9(3). No criminal liability can be incurred for acts done before the date of publication of the registration.

¹⁰ TMA s. 42.

¹¹ TMA s. 43 deals with renewal. Six months after expiry of the mark, if there has been failure to renew it, the mark is removed from the register. Nevertheless TMR r. 30 permits restoration of the mark on application within 6 months of removal.

¹² CTMR Art. 9(3).

The grounds for infringement in section 10(1)–(3) mirror the relative grounds for refusal in section 5(1)–(3). One of the consequences of this is that a mark will fall foul of the relative grounds for refusal in exactly the same circumstances where use of the later mark would amount to an infringement under section 10(1)–(3). Another consequence of the fact that the relative grounds for refusal mirror the provisions dealing with infringement is that the concepts used when deciding whether a mark has been infringed are the same as are used when deciding whether a mark falls within one of the relative grounds for refusal. As we have already looked at the concepts that arise in deciding whether a mark will be refused on relative grounds in Chapter 38, it is not necessary to look at them again here. However, two key differences exist between an action for infringement and the relative grounds for refusal: the first relates to the need to identify the defendant's mark (a task that, in the context of relative grounds of validity, the applicant for the later mark carries out); the second difference is that to establish infringement, it is necessary to show that the mark was 'used in the course of trade'. We treat each in turn.

3 WHAT IS THE DEFENDANT'S SIGN?

In determining whether a person infringes a registered trade mark it is necessary to compare the sign as registered with the sign used by the defendant. The question of exactly what the defendant's sign is of most importance when considering section 10(1)—the 'double identity' provision: if the marks and goods/services are identical, then a defendant will infringe irrespective of any confusion. However, the determination of exactly what the defendant's sign is can prove problematic.¹³ This is because, in the past, courts have sometimes ignored or disregarded added or extraneous matter in the later mark. For example, in *British Sugar v. Robertson*, Jacob J held that the words ROBERTSON'S TOFFEE TREAT were identical to the claimant's registered mark TREAT. The fact that Robertson used the word TREAT with additional matter (ROBERTSON'S TOFFEE) did not make it a non-identical use.¹⁴ It seems that such an approach will rarely, if ever, be justified after the ECJ's decision in *LTJ Diffusion*. There, the owners of a figurative mark including the word ARTHUR in handwritten form for clothes brought infringement proceedings against a company selling children's clothing under the name ARTHUR ET FÉLICIE. The French court sought clarification as to whether Article 5(1)(a) covers only identical reproduction without addition, or can extend to reproduction of the sign with added matter. The ECJ in stating that there is identity where a sign reproduces 'without any modification or addition, all the elements constituting the [trade mark]',¹⁵ seems to imply that there is no doctrine of 'added matter' or 'ineffective addition'. Although the Court's decision

¹³ Disclaimed matter in the earlier trade mark will usually be ignored: *Saville Perfume v. June Perfect and F. W. Woolworth* (1941) 58 RPC 147; *The European v. The Economist Newspaper* [1998] FSR 283, 289.

¹⁴ [1996] RPC 281, 293 approving Sir Wilfred Greene MR's statement in *Saville Perfume v. June Perfect and F. W. Woolworth* (1941) 58 RPC 147, 161 '[o]nce a mark is shown to offend, the user of it cannot escape by showing that by something outside the actual mark itself he has distinguished his goods from those of the registered proprietor'. See also, *Asprey v. Gerrard v. WRA (Guns)* [2001] IP&T 1273, 1279; [2002] FSR (30); [2002] FSR (31) CA (WILLIAM R. ASPREY identical to ASPREY); *Thomson Holidays v. Norwegian Cruise Lines* [2003] RPC (32) 586, 599 (para. 44) (D's use of FREESTYLE CRUISING and NCL FREESTYLE CRUISING was identical to claimant's registered mark FREESTYLE).

¹⁵ *Ibid.*, para. 51.

provides no specific guidance as to whether the defendant's sign was ARTHUR or ARTHUR ET FÉLICIE, the clear implication is that it is to be regarded as the latter.

While the *LTJ* diffusion case indicates that Member States are not free to ignore added matter, it gives virtually no guidance on the critical question of how a tribunal is to identify the parameters of the defendant's mark. If we consider simple examples of signs featured in advertising or on packaging, it will be very rare for the sign to appear by itself, without any other material (slogans, images, colouring, decoration, ingredients, instructions, etc.). Nevertheless the mere proximity of other material surely does not mean that a defendant's use of a sign in non-identical. Consequently some rules or practices will need to be adopted to help tribunals to decide the limits of the defendant's sign. Perhaps the most plausible guide is that a tribunal will only be justified in ignoring extraneous matter if it would, in the eyes of the average consumer, not be regarded as being part of the sign. One factor would be whether the matter is visually or syntactically interlinked so as to be perceived as part of a single visual or semiotic entity (for example, the use of the same font might suggest words form part of a single sign, the use of different fonts suggesting the opposite). Another is whether the element is perceived as functioning in a distinct way: this might be the case if the extraneous matter were regarded as having no trade mark significance, for example, where it is regarded as a list of ingredients or instructions, or a description or designation of the product.¹⁶ Thus in the case of a person using the words CHOCOLATE BENTLYS on packets of biscuits, a tribunal may treat the word 'chocolate' as a description of the product flavour and not as part of the mark (especially if BENTLYS appeared in a more pronounced or noticeable script than 'chocolate' or the defendant also sold STRAWBERRY BENTLYS). In contrast, if a person used LIONEL BENTLY'S CHOCOLATE a tribunal would not be justified in treating 'Lionel' as not being part of the defendant's sign (so that if the claimant's registered mark is BENTLY there would be no identity of marks).¹⁷ This is because the average consumer would appreciate that the forename and surname were linked in such a way as to identify the goods as having emanated from Lionel Bently (as opposed to Helen Bently). Applying this approach, the outcome in *British Sugar v. Robertson* is not necessarily wrong (even if the reasoning cannot survive *LTJ*). As mentioned, in that case ROBERTSON'S TOFFEE TREAT was considered to be identical to TREAT. Given the different scripts employed on the defendant's product, this can be justified on the basis that the average consumer would understand 'toffee' as a flavour, rather than having trade-mark significance and Robertson's, possibly as a 'house' mark.¹⁸ Where it is unclear whether consumer's would consider an element to be outside the mark, the 'strict' approach in *LTJ* suggests that the tribunal should treat the mark as a whole, and the

¹⁶ *Aktiebolaget Volvo v. Heritage (Leicester)* [2000] FSR 253, 259 (INDEPENDENT VOLVO SPECIALIST identical to VOLVO) (the result, but not the reasoning, may survive the ECJ decision in *LTJ*); *Decon Laboratories v. Fred Baker Scientific* [2001] RPC 17 (registration for DECON, which the proprietor used in combination, e.g. as DECON 90, DECONMATIC, DRI-DECON, DECON ACID RINSE, was treated as infringed under s. 10(1) by defendant's use of DECON-AHOL and DECON-CLEAN. Pumfrey J treated the suffixes as referring to the nature and quality of the goods themselves and having no trade mark significance).

¹⁷ *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207, 241 (para. 102) (Pumfrey J suggesting that his decision in *DaimlerChrysler* and *Decon Laboratoies* would turn out to be insufficiently nuanced in the light of ECJ decision in *LTJ* and focusing attention on whether REED ELSEVIER logo was similar to claimant's REED mark rather than addressing identity issue).

¹⁸ See *Reed Executive plc v. Reed Business Information* [2004] EWCA Civ 159; *Compass Publishing v. Compass Logistics* (24 March 2004).

comparison should be under section 10(2) not section 10(1).¹⁹ If the rationale for section 10(1) is to improve simplicity of decision-making, its application should be confined to obvious cases: complex tests of ‘identity’, with commensurably protracted debate, are inappropriate.

4 USED IN THE COURSE OF TRADE

In order to infringe, the mark must be *used in the course of trade*. This is a prerequisite for *all* of the grounds of infringement in section 10(1)–(3)/Article 9. In order to sustain an action for infringement of a British trade mark, the infringing act must take place in the United Kingdom.²⁰ For the most part, this is relatively straightforward. One difficulty that should be noted concerns the situation where an advertisement shown outside of the United Kingdom spills into Britain. This problem is likely to be particularly difficult in relation to Internet advertising, as a result of which foreign sellers can be accessed from the United Kingdom. Although such uses might appear *per se* to constitute a use in the United Kingdom, Jacob J has indicated that he considers a *per se* rule to be inappropriate. In each case, ‘there must be an enquiry as to what the purpose and effect of the advertisement in question is’.²¹ Consequently, an advertisement by an Irish shop in a magazine with circulation in the United Kingdom as well as the Republic of Ireland, was held not to infringe the claimant’s UK trade mark, either because it was not in ‘use’ in the United Kingdom or because it was not in use in the course of trade in the United Kingdom. Similarly, the shop’s Irish web site did not infringe the claimant’s mark, merely because the site could be visited by Internet users from the United Kingdom. However, had the Irish shop targeted UK customers, provided prices in sterling, offered international sales and distribution, Jacob J might have held that there was use in the course of trade in the United Kingdom.

A second difficulty relates to the situation where packaging bearing another’s mark is made in the United Kingdom, though the goods are intended to be used in trade overseas. It seems that a person will infringe where, in the United Kingdom, they apply a registered mark to goods, or to packaging for goods which are packaged in the United Kingdom,²² because in those circumstances the mark is used ‘in relation’ to the goods. However, a mark is not used ‘in relation to goods’ where it is merely applied to packaging materials, and the goods are to be packaged outside the United Kingdom.²³ In that case there is no use in relation to the claimant’s goods in the United Kingdom.

The fact that the use must take place ‘in the course of trade’ serves to restrict the scope

¹⁹ In our view, the conclusions on identity in *Asprey v Gerrard v. WRA (Guns)* [2001] *IP&T* 1273, 1279; [2002] *FSR* (30); [2002] *FSR* (31) (CA) (WILLIAM R. ASPREY identical to ASPREY); *Thomson Holidays v. Norwegian Cruise Lines* [2003] *RPC* (32) 586, 599 (para. 44) (that D’s use of NCL FREESTYLE CRUISING was identical to claimant’s registered mark FREESTYLE); *AAH Pharmaceuticals v. Vantagemax plc* [2002] *ETMR* (CN7) 662 [2003] *ETMR* 205 (VANTAGEREWARDS identical to VANTAGE) must be questionable after the ECJ decision in *LTJ Diffusion*.

²⁰ TMA s. 9(1). And the Isle of Man: TMA s. 108(2).

²¹ *Euromarket Designs Incorporated v. Peters & Anor* [2001] *FSR* 288.

²² *George Ballantine v. Ballantyne Stewart* [1959] *RPC* 273, 279 (no need for confusion to occur in UK as long as wrongful act occurs in jurisdiction).

²³ TMA s. 10(5), as interpreted in *Beautimatic International v. Mitchell International Pharmaceuticals and Alexir Packaging* [1999] *ETMR* 912, 919–20.

of protection given to trade mark owners. In so doing, it helps to minimize the impact that trade marks have upon non-commercial uses that are made of the sign. In thinking about whether a mark has been used in the course of trade, a number of questions arise. These are:

- (i) what kind of uses are covered?
- (ii) what is meant by ‘in the course of trade’?
- (iii) does use of a sign require use as a trade mark?

4.1 KINDS OF USE

The starting point for considering what is meant by ‘use in the course of trade’ is section 10(4)/Article 9(2), which provides a non-exhaustive list of the situations where a person uses a sign.²⁴ These are where someone:

- (a) affixes the sign to the goods or to the packaging thereof;
- (b) offers or exposes goods for sale, puts them on the market or stocks them for these purposes under the sign, or offers or supplies services under the sign;
- (c) imports or exports goods under the sign; or
- (d) uses the sign on business papers or in advertising.

4.1.1 Where the sign is affixed to goods

Section 10(4)(a)/Article 9(2)(a) provides that a sign is used where it is affixed to the goods or the packaging thereof. This is probably the most common form of trade mark infringement. This would occur, for example, where a counterfeiter places scented liquid in bottles to which they have attached the CHANEL label.²⁵ In order to affix a sign to goods, it seems that the defendant must engage in some positive act, such as stamping, engraving, or gluing a label onto the goods. To ‘affix a sign’, the mark must be used directly rather than indirectly on the goods; it is not enough if a mark incidentally appears on the defendant’s goods. This can be seen in *Trebor v. Football Association*,²⁶ an infringement action involving the Football Association’s ‘three-lion’ logo. The action arose when a sweet manufacturer, Trebor, included photographs of footballers in packets of sweets it sold. The Football Association argued that as some of the footballers were wearing the English team strip, which had the three-lion logo attached to it, this amounted to an infringement of its mark. In dismissing the action, Rattee J explained that Trebor was ‘not even arguably using the logo, as such, in any real sense of the word “uses”, and [was] certainly not . . . using it as a sign in respect of its cards’. Rattee J added that it was ‘unreal’ to suggest that Trebor was affixing the English football logo to its cards, and therefore to goods, within the meaning of section 10(4)(a).²⁷ Whether this reasoning will be extended to situations

²⁴ TM Dir., Art. 5(3); CTMR, Art. 9(2).

²⁵ Although such use does not of itself affect the essential function of the trade mark, Judge Prescott QC has explained that its purpose ‘is precautionary: it intends to prevent the mischief—the deception of consumers—by destroying it in the egg’. See *Glaxo Group v. Dowelhurst* (31 July 2003) (para. 97).

²⁶ [1997] FSR 211.

²⁷ In *Conde Nast Publications v. Luxottica (UK)* (1997), Master Moncaster rejected a broad interpretation of Rattee J’s decision, confining it to cases where there was no act of ‘affixing’ the sign to the goods.

where a mark is deliberately used in the background, such as where a model in a pornographic magazine wears a T-shirt with the M&M logo on it, is yet to be determined. As this would not be an incidental or accidental use, it would most probably fall within section 10(4)/Article 9(2)(a).

Affixing a trade mark owner's mark to packaging but not to goods is not an infringement under section 10(4)(a), but falls under section 10(5). This states that a person who applies the mark to 'material intended to be used for labelling or packaging goods, as business paper or for advertising goods or services' is liable for any infringing use of the material. Unlike an action for primary infringement where knowledge is not a relevant factor, secondary infringement under section 10(5) only arises where the person who applied the mark 'knew or had reason to believe that the application of the mark was not duly authorized by the proprietor or a licensee'.²⁸

4.1.2 Use 'under the sign'

Section 10(4)(b)/Article 9(2)(b) provides that a person uses a sign where they offer or expose goods for sale, put them on the market or stock them for these purposes 'under the sign', or offer or supply services 'under the sign'. Section 10(4)(c)/Article 9(2)(c) adds that a sign is also 'used' when someone imports or exports goods under the sign. The key concept in section 10(4)(b) and (c) is that the goods are dealt with *under the sign*. This suggests that although a sign may not be physically attached to the goods in question, a sign may nonetheless still be 'used' where it is placed in proximity to, or is connected with, the goods. This would be the case, for example, where it is sold from a place which is called by the sign.

One question that arises here is whether section 10(4)(b)/Article 9(2)(b) would apply in situations where a consumer specifically asks for a product by a particular trade name, but is supplied with a competing product. This would be the case, for example, where in response to a request for a particular brand of pharmaceutical, such as the painkiller NUROFEN, customers were provided with the generic product IBUPROFEN. While this would undermine the value of the mark, it is unlikely that this would be treated as a situation where a mark was sold 'under a sign' for the purposes of section 10(4)(b)/Article 9(2)(b).

Although the situations where goods are used under a sign are potentially very wide, the scope of section 10(4)(b)/Article 9(2)(b) is limited by the fact that the defendant must play a direct and positive role in ensuring that a connection is drawn between the sign and the goods in question. It is not enough that the connection is incidental or accidental. This can be seen, for example, in *Trebor v. Football Association*,²⁹ where the decision that the sweet manufacturer had not put 'the cards on the market under the sign comprising the England logo within section 10(4)(b)' was influenced by the fact that the inclusion of the sign on the card was not a direct consequence of the manufacturer's actions. That is, the sign was there because the player was wearing the shirt when the photograph was taken, rather than being a direct result of the defendant's actions. In these circumstances it is

²⁸ The knowledge requirement is in similar terms to that employed in the context of copyright. See *Beautimatic International v. Mitchell International Pharmaceuticals and Alexir Packaging* [1999] *ETMR* 912 and, more generally. See pp. 188–9.

²⁹ [1997] *FSR* 211.

more accurate to say that the goods were sold *with*, rather than *under*, the sign. On this basis, it seems that if a photograph of a cricketer with the trade mark of the team sponsor on their shirt appeared on the cover of a book, this would not amount to a 'use' of the mark under section 10(4)(b)/Article 9(2)(b).

4.1.3 Import or export

Section 10(4)(c) states that a sign is also 'used' when someone imports or exports goods under the sign.³⁰ This provision is important because it means that a trade mark owner can prevent the importation of goods which bear the mark into the United Kingdom. As we will see, this right can sometimes be used even where those goods have been marketed elsewhere with the trade mark owner's consent. The consequence of this right is that a trade mark owner is empowered through this right to divide up markets on a territorial basis (and thus, possibly, to set prices differently for each territory). However, while a person need not have title to the goods to be treated as an importer,³¹ mere transporting a product bearing a trade mark through a territory (i.e. where the destination is somewhere else) is not an infringing use.³²

4.1.4 Use on business papers or in advertising

Section 10(4)(d)/Article 9(2)(d) provides that a person uses a sign where they 'use the sign on business papers or in advertising'. It seems that 'use on business papers' covers things such as use on letterheads, envelopes, and invoices.³³ Whether such uses are 'in relation to goods' will depend on whether they refer to the goods (as opposed, for example, merely to the packaging).³⁴ As section 103(2) provides that references to use of a trade mark includes use otherwise than by means of a graphic representation, this means that oral offers and oral advertisements also fall within the notion of use. It seems that section 10(4)(d) would also encompass the use of 'meta-tags' to attract people to a particular web site.³⁵

One of the notable features of section 10(4)(d)/Article 9(2)(b) is that unlike the other examples listed in section 10(4)/Article 9(2), the section makes no mention of the goods. This means, for example, that where someone uses a sign on an advertising billboard they will infringe, even though the goods are not pictured. In these circumstances, it seems that it is only necessary for the advert to 'relate to' goods of a relevant kind. This would probably be the case where a trade mark for cigarettes is used in an anti-smoking campaign.³⁶ Similarly, use of a mark in comparative advertising will *prima facie* be use of the

³⁰ CTMR, Art. 9(2)(c)

³¹ *Miller Brewing Co. v. The Mersey Docks and Harbour Co.* [2004] FSR (5) 81, 98 (para. 68) (where person ordered goods, organized a letter of credit to pay for them, and had intended to take delivery).

³² *Glaxo Group v. Dowellhurst* (31 July 2003) (paras. 95–6) (Judge Prescott QC). Cf. *Waterford Wedgwood v. Nagli* [1988] FSR 92. See also p. 525 above.

³³ *Broad v. Graham (No. 2)* [1969] RPC 295, 298; *Cheetah Trade Mark* [1993] FSR 263; *Beautimatic International v. Mitchell International Pharmaceuticals and Alexir Packaging* [1999] ETMR 912, 925 (invoices).

³⁴ *Ibid.*, 927.

³⁵ *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207 (Pumfrey J) ('the concept of use is wide enough to cover invisible use in meta-tags which is invisible in the search results') (on appeal); *Roadtech v. Mandata* (2000) CIPAJ 346.

³⁶ *Gallaher (Dublin) v. Health Education Bureau* [1982] FSR 464.

trade mark and hence infringe the rights of the trade mark owner (though there is a special defence in the 1994 Act which we look at later).³⁷

4.1.5 Use on the Internet

Use on web sites will almost certainly count as infringing use. This may be because there is an offer of goods 'under the sign' or use 'in advertising' or simply because this is a use of the same sort as those contained in the illustrative list provided by section 10(4) (Article 6(3) of the Directive and Article 11(2) of the CTMR). Use as a domain name is also likely to be regarded as infringing use.³⁸ It has been held that the use of a registered sign as a 'meta tag' to attract search engines to a particular site also constitutes an infringing use (even though the use is not visible and simply leads the search engine to prioritize the sites it finds in a particular order) at least where the sign is visible in the search result.³⁹

4.2 IN THE COURSE OF TRADE

In order to infringe the sign must be used 'in the course of trade'.⁴⁰ As 'trade' is defined to include 'any business or profession',⁴¹ it would presumably not cover social or domestic uses. Indeed, in *Arsenal v. Reed*, the ECJ stated that a sign had been used in the course of trade here it had been used 'in the context of commercial activity with a view to economic advantage and not as a private matter'.⁴² It remains to be seen whether use by public bodies, such as those responsible for health education, will amount to a trade use.⁴³ It also remains unclear whether use of a sign in art or music, as with Warhol's famous depictions of Campbell's soup cans or pop group Aqua's use of the mark BARBIE in its song 'Barbie Girl' would constitute use 'in the course of trade'. In *Arsenal v. Reed*, Advocate General

³⁷ It should be noted that even though the CTM and Directive contain no provision equivalent to TMA s. 10(6) the same result should be reached as regards a CTM: a statement in the Council and Commission minutes relating to the Community Trade Mark Regulation suggested that comparative advertising involving a Community Trade Mark will not constitute an infringing act in relation to that mark. Statement 7, Council and Commission minutes to the Council of Ministers Meeting Relating to the CTMR. *OHIM OJ* (1996) 615. In the absence of any distinct feature in the text of the Regulation this conclusion might be reached either on the basis that the use does not affect the essential function of the proprietor's trade mark or alternatively by virtue of Article 12(b).

³⁸ See, e.g. *BT v. One in a Million* [1999] 1 *WLR* 903 (a case of cybersquatting, where the CA held there to be a threatened infringement: even if use was not for the same goods or services, there would be liability under TMA s. 10(3)); *Bonnier Media v. Smith* [2002] *ETMR* (86) 1050; 1069–70 (where D was proposing to use web site with very similar name to provide similar services); *Musical Fidelity v. Vickers (David)* (8 May 2002) (Rimer J) (para. 22) (claimant, proprietor of mark MUSICAL FIDELITY for audio equipment granted summary judgment against defendant hi-fi seller who advertised business on the web via the domain name www.musicalfidelity.co.uk (a portal to his own site)). For discussion of cybersquatting in the context of passing off, see pp. 749–50. For discussion of dispute resolution outside the court system, see pp. 1083–5.

³⁹ *Reed Executive plc v. Reed Business Information* (20 May 2002) [2003] *RPC* (12) 207, 248–9 (paras. 127–135).

⁴⁰ TM Dir. Art. 5(1); CTMR Art. 9(1). In *Reed Executive plc v. Reed Business Information Ltd* [2003] *RPC* (12) 207, 248 Pumfrey J took the phrase to require that 'the sign is to be used for business purposes'.

⁴¹ TMA s. 103(1).

⁴² Case C-206/01 [2002] *ECR* I-10273; [2003] Ch 454; [2003] 3 *WLR* 450; [2003] 1 *CMLR* (12) 345 para. 40.

⁴³ *Gallaher (Dublin) v. Health Education Bureau* [1982] *FSR* 464 (argument that use in an anti-smoking educational campaign was not 'in the course of trade' rejected because the words 'in the course of trade' were not then present in the definition of the exclusive rights of a trade mark proprietor).

Colomer suggested that such uses would not be ‘in the course of trade’, but given that the ECJ subsequently suggested that uses which are in the context of commercial activity with a view to economic advantage are ‘in the course of trade’, it seems that these artistic uses would be in the course of trade. Whether they would infringe would depend upon whether they affected one of the essential functions of the mark, and whether they were covered by a defence under section 11.⁴⁴

One question that arises in this context is whether the inclusion of a trade mark in a dictionary or an encyclopedia amounts to a use in ‘the course of trade’. While this may appear to be a contrived or inconsequential question, trade mark owners are often very keen to control such uses. This is because when a mark appears in a dictionary or an encyclopedia, it increases the chance of the mark being used to refer to a product, rather than as a brand of the product. In so doing, it increases the chance of a mark being removed from the Register because it has become generic. While the inclusion of a trade mark in dictionaries and encyclopedias was not treated as being a use in the course of trade under the 1938 Act,⁴⁵ the position under the 1994 Act is unclear. The Community Trade Mark Regulation has recognized trade mark proprietors’ interests by providing them with the specific right to have such works indicate that the mark is a registered mark.⁴⁶

4.3 USE AS A MARK?

The use of a sign as a trade mark, that is to indicate origin, will constitute a relevant use. However, some controversy and uncertainty surrounds the question whether, and if so which, other uses should constitute infringements. According to the ECJ, whether other uses will infringe depends upon whether the use affects or is liable to affect the functions of the trade mark, ‘in particular its essential function of guaranteeing to consumers the origin of the goods’.⁴⁷ Unfortunately, the ECJ has yet to tell us exactly what functions of a trade mark are protected under the harmonized European regime.

Certain uses for purely descriptive purposes are excluded.⁴⁸ In *Hölterhoff v. Freiesleben*,⁴⁹ the trade mark owner of the words SPIRIT SUN and CONTEXT CUT for ‘precious stones for further processing as jewellery’ had brought an action alleging infringement by Hölterhoff as a result of certain commercial dealings in which he had been asked to cut diamonds in the shape of SPIRIT SUN. The dealings were oral, and neither the customer nor the jeweller considered the term SPIRIT SUN to indicate that the goods came from the claimant. The European Court of Justice, in a decision focused on the specific facts that underpinned the

⁴⁴ Case C-206/01 [2002] ECR I-10273; [2003] 1 CMLR (12) 345; para. 40 (ECJ). See also *Travellex Global and Financial Services Ltd. & Interpayment Services Ltd. v. Commission* Case T-195/00 (10 Apr. 2003) (paras. 93–104) (dismissing an action alleging infringement of the claimant’s trade mark by the Commission’s activities in promoting the Euro, on the basis that the use of the Euro symbol was not use in the course of trade in this sense).

reference (so that it was not necessary to 'discuss further what constitutes the use of a trade mark'⁵⁰) held that:

Article 5(1) is to be interpreted as meaning that the proprietor of a trade mark cannot rely on his exclusive right where a third party, in the course of commercial negotiations, reveals the origin of goods which he has produced himself and uses the sign in question solely to denote the particular characteristics of the goods he is offering for sale so that there can be no question of the trade mark used being perceived as a sign indicative of origin.

While an oral use of a registered mark to describe the shape of a product may not affect the essential function of that mark, use of a registered mark on clothing even though not understood as indicating origin (but where the sign could circulate in trade beyond the initial purchasers) has been treated as likely to affect the essential function of the mark to indicate that clothing bearing it came from the trade mark owner. In *Arsenal FC plc v. Matthew Reed*,⁵¹ Arsenal FC which owned the trade mark for ARSENAL in respect of clothing and footwear, brought an action for infringement against a stall holder, Reed, who sold scarves bearing the mark from a stall located outside Arsenal's ground. The evidence indicated that the marks were not perceived by purchasers as indicating that the goods were made or supplied by the club: rather they were seen as badges of support, loyalty, or affiliation, used to indicate that those who possessed them supported Arsenal FC. On a reference to the ECJ, the Court indicated that the exercise of a trade mark owner's right was confined to cases in which a third party's use of the sign affects or is liable to affect the functions of the trade mark, in particular its essential function of guaranteeing to consumers the origin of the goods.⁵² The Court then went on to make some observations on the case itself. It noted that the use of the sign takes place in the context of sales to consumers 'and is obviously not intended for purely descriptive purposes'.⁵³ The use was 'such as to create the impression that there is a material link in the course of trade between the goods concerned and the trade mark proprietor'.⁵⁴ This was so, even if the initial consumers were not confused because 'some consumers, in particular if they come across the goods after they have been sold . . . and taken away from the stall . . . may interpret the sign as designating Arsenal FC as the undertaking of origin of the goods'.⁵⁵ So the use was liable to jeopardize the guarantee of origin which constitutes the essential function of the mark.⁵⁶ Interpreting the ECJ's judgment, the Court of Appeal held that Reed had infringed Arsenal's trade mark.⁵⁷ According to the Court of Appeal, unchecked, non-descriptive use would damage the trade mark because it 'can no longer guarantee origin'. The 'wider and more extensive the use, the less likely the trade marks would be able to perform their function'.

Shortly after the Court of Appeal judgment in *Arsenal*, the House of Lords gave its decision in *R v. Johnstone*.⁵⁸ This concerned a criminal action against a bootlegger, who had made and sold recordings of (*inter alia*) performance of Bon Jovi. It was alleged that

⁵² *Ibid.*, para. 51.

⁵³ Case C-206/01 para. 55.

⁵⁴ *Ibid.*, para. 56.

⁵⁵ *Ibid.*, para. 58.

⁵⁶ *Ibid.*, para. 62.

⁵⁷ *Arsenal FC plc v. Reed (No. 2)* [2003] EWCA Civ 96 (May 21, 2003) reversing Laddie J's judgment [2003] 1 CMLR 13; [2003] 1 All ER 137.

⁵⁸ [2003] 1 WLR 1736; [2003] 3 All ER 884; [2003] FSR (42) 748.

by using the words Bon Jovi on the CDs, the defendant had infringed the trade mark for BON JOVI. Having held that criminal infringement required that there be civil infringement, the House of Lords found that on its reading of the ECJ's judgment in *Arsenal* this required that the defendant had used the mark as trade mark. According to Lord Nicholls, 'non-trade mark use is not within section 10(1)–(3)'.⁵⁹ More specifically, Lord Nicholls stated,⁶⁰

[T]he exclusive rights granted to the proprietor of a registered trade mark are limited to use of a mark likely to be taken as an indication of trade origin. Use of this character is an essential pre-requisite to infringement. Use of a mark in a manner not indicative of trade origin of goods or services does not encroach upon the proprietor's monopoly rights.

Whether a use is use to indicate origin is, according to their Lordships, a question of fact ('of a fairly complex sort').⁶¹ In most cases deciding whether a use indicates source will be relatively straightforward. However, this was not so with the facts in front of the House, concerning indications as to who performed on the bootleg recordings: such use might be purely descriptive of the contents of the disc and nothing more, or might indicate origin. The House did not have to decide whether there had been trade mark use (for Johnstone had not been allowed by the trial judge to substantiate this submission, so his conviction was unsafe). However, Lord Walker suggested some factors which might be relevant: the prominence of the mark, use of other marks, the terms and prominence of any disclaimer and any other matters 'going to the alleged infringer's good faith and honesty'.⁶²

The House of Lords' decision in *Johnstone*, and the ECJ and Court of Appeal decision in *Arsenal* share much common language. To infringe a trade mark there must be use which affects the essential function of the mark, and a purely descriptive use will not do so. However, the House of Lord in *Johnstone* is much clearer that the only use which implicates a trade mark function is use to indicate origin. In contrast, for the ECJ indication of origin is *one* of the essential functions of a trade mark (the others being left unarticulated). Moreover, the House of Lords failed to indicate whether it shared the ECJ's view that post-sale confusion can jeopardize the essential function of the mark (so that a sign can indicate origin, even if no one *purchasing* the goods is deceived).

5 SECONDARY INFRINGEMENT

In addition to the various forms of primary infringement set out in sections 10(1)–(3), trade mark owners are also given protection against forms of secondary or indirect infringement. Section 10(5) provides that a person who applies the mark to 'material intended to be used for labelling or packaging goods, as business paper or for advertising goods or services' is liable for any infringing use of the material. Unlike an action for primary infringement where knowledge is not a relevant factor, secondary infringement

⁵⁹ [2003] FSR (42) 748 para. 17.

⁶⁰ [2003] FSR (42) 748, 755 para. 13.

⁶¹ [2003] FSR (42) 748, 778 para. 87 (*per* Lord Walker).

⁶² The reference to 'good faith and honesty' seems odd in the context of determining whether use indicates origin as opposed to the distinct defence of descriptive use under TMA s. 11(2)(b). Unfortunately, the distinction between the two issues is elided in *Johnstone*: Lord Nicholls, at 755 (para. 8) stating that ss. 9–13 'comprise a fasciculus of sections setting out the effect of a registered trade mark'.

under section 10(5) only arises where the person who applied the mark 'knew or had reason to believe that the application of the mark was not duly authorized by the proprietor or a licensee'.⁶³ A defendant may also indirectly infringe the rights in a trade mark where they act as a joint tortfeasor. This notion is reviewed in Chapter 46.

⁶³ The knowledge requirement is in similar terms to that employed in the context of copyright. See Ch. 8.

41

TRADE MARK DEFENCES

1 INTRODUCTION

In this chapter we explore the various defences that are available to a person who has been charged with trade mark infringement. While the defences to trade mark infringement have always been important, the expansion in the scope of protection in trade marks provided in the 1994 Act means that defendants are likely to try and rely on the defences provided much more frequently.¹ It should be noted that a common tactic for a defendant who is accused of infringement is to assert that the claimant's registered right was invalidly registered or that it ought to be revoked.² These issues have been considered in Chapters 36–9.

2 COMPARATIVE ADVERTISING

Comparative advertising is the term used to describe advertisements where the goods or services of one trader are compared with the goods or services of another trader.³ To show the advertiser's wares in a favourable light, comparative advertisements usually emphasize differences in things such as price, value, durability, or quality. In so doing, advertisers often refer to the competitor's products or services by their trade mark. Under the 1938 Trade Marks Act, use of a trade mark in comparative advertising was treated as an infringement of the owner's rights (subject to a number of minor exceptions).⁴ This was based on a belief that a person engaged in comparative advertising was free-riding on the other trader's goodwill. Over time, a debate developed as to whether comparative advertising should be allowed. One of the arguments made in favour of comparative advertising was that it would increase consumer knowledge and promote fair competition. Eventually,

¹ The debate over the appropriate test of distinctiveness, explained at pp. 803–10, has been informed by different views as to the scope and usefulness of the defences: see, especially, *Procter & Gamble v. OHIM (Baby Dry)* Case C-382/99 P [2002] RPC 369; *Wrigley v. OHIM (Doublemint)* [2003] ETMR (88) 1068 (AG); *Nichols plc's Trade Mark* [2003] RPC (16) 301, 305–6.

² Note also CTMR Art. 95(3) providing a limited defence short of a counterclaim for revocation or invalidity.

³ See A. Ohly and M. Spence, *The Law of Comparative Advertising* (2000); P. Spink and R. Petty, 'Comparative Advertising in the European Union' (1988) 47 *International and Comparative Law Quarterly* 855; B. Steckler and F. Bachmann, 'Comparative Advertising in Germany with Regard to European Community Law' [1997] *EIPR* 578.

⁴ TMA 1938, s. 4.

the arguments in favour of allowing comparative advertising won out. As a result, section 10(6) was introduced into the 1994 Act.⁵

Section 10(6) provides that nothing in the provisions dealing with infringement shall be construed as preventing the use of a registered trade mark for the purpose of identifying goods or services as those of the proprietor or a licensee. This is subject to the proviso that:

[A]ny such use otherwise than in accordance with honest practices in industrial or commercial matters shall be treated as infringing the registered trade mark, if the use without due cause takes unfair advantage of, or is detrimental to, the distinctive character or repute of the trade mark.

Section 10(6) differs from the other defences in two respects. The first is that the onus initially falls on the claimant to prove that the defence does not apply.⁶ Section 10(6) also differs from the defences in sections 11 and 12 in that it has no parallel in the Directive.⁷ Indeed, section 10(6) has been described as a 'home-grown' provision which was introduced to permit comparative advertising.⁸ While it is potentially much broader,⁹ we will limit our examination to the impact that it has on comparative advertising.

In order for a person engaged in comparative advertising to be able to rely on the section 10(6) defence, they must be able to show that:¹⁰

- (i) the trade mark is used for the purpose of identifying goods or services as those of the proprietor or a licensee;
- (ii) the use is in accordance with 'honest practices in industrial and commercial matters'; or,
- (iii) the use does not 'without due cause, take unfair advantage of, and is not detrimental to, the distinctive character or repute of the mark'.

We examine each aspect in turn.

⁵ The Court of First Instance has referred to the benefits of comparative advertising when considering whether regulations governing the conduct of European patent attorneys (the Institute of Professional Representatives before the EPO aka the EPI) breach Art 81 EC: *Institute of Professional Representatives before the EPO v. E.C. Commission*, T-144/99 [2001] 5 CMLR (2) 77, 90 (para. 73–79).

⁶ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 315, 318. Presumably, not however, that the use was with 'due cause': *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 792.

⁷ It is said to have been permitted as a result of Art. 6(1)(b): *British Airways v. Ryanair* [2001] FSR (32) 541; *Levi Strauss & Co. v. Tesco Stores Ltd* [2002] 3 CMLR (11) 281; [2003] RPC (18) 319; [2002] ETMR (95) 1153 (para. 37). Though note CTMR Art. 9(2) and minutes attaching to it, suggesting that 'comparative advertising' is not a relevant form of use. To the extent that comparative advertising is accurate, not deceptive, and does not take advantage of or prejudice the repute of the mark, it may not affect the 'essential function' of the mark: see pp. 912–14.

⁸ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 315 (primary object is to allow comparative advertising); *Vodafone Group v. Orange Personal Communication Services* [1997] FSR 34, 39.

⁹ It had been argued that TMA s. 10(6) permitted dealings in parallel imports from outside the EEA and advertising and other commercialization of parallel imports from within the EEA: see, e.g. *Glaxo Group v. Dowelhurst (No. 2)* [2000] FSR 529, 588. But Pumfrey J has rejected any such broad application: *Levi Strauss & Co. v. Tesco Stores Ltd* [2002] 3 CMLR (11) 281; [2003] RPC (18) 319; [2002] ETMR (95) 1153 (paras. 34, 36) (need to construe s. 10(6) narrowly so as to comply with Arts. 5–7 of the Directive); *PAG Ltd v. Hawk-Woods Ltd* [2002] FSR (46) 723, 729 (para. 24) (s. 10(6) may have to be construed 'highly restrictively'). Cf. *Scandecor Development AB v. Scandecor Marketing AB* [2002] FSR (7) 122, 131 (para. 15) (Lord Nicholls) ('Re-selling goods bearing the manufacturer's mark is not an infringement of that mark: see section 10(6)').

¹⁰ In *Barclays Bank v. RBS Advanta* [1996] RPC 307, 313 Laddie J referred to TMA s. 10(6) as a 'mess'.

2.1 TO IDENTIFY GOODS OR SERVICES AS THOSE OF THE PROPRIETOR OR A LICENSEE

The requirement that the defendant must use the mark for the purposes of identifying the goods or services as those of the proprietor or a licensee has not yet received any judicial analysis. It clearly encompasses the simple case of comparative advertising where the mark is used 'as a mark'. For example, where Ryanair advertised its products with the words 'Expensive BA', it was using BA to identify the air-transport services of British Airways.¹¹

2.2 HONEST PRACTICES

The section 10(6) defence does not where the trade mark is used otherwise than in accordance with 'honest practices in industrial and commercial matters'. This proviso to section 10(6) was drawn from Article 10 bis of the Paris Convention, which deals with unfair competition, and Article 6 of the Directive, which deals with defences. The requirement that the mark be used in accordance with 'honest practices in industrial and commercial matters' is also a proviso to the defences in section 11.

While the decisions on this point are not entirely consistent, it seems that the question of whether a mark has been used in accordance with honest practices in industrial and commercial matters is decided from the perspective of the reasonable consumer.¹² This means that the examination is neither dependent on the subjective intention of the advertiser, nor decided according to industry standards or on the basis of external criteria such as the Consumer Credit Act.¹³ Rather, the test is whether an average consumer, who is reasonably well informed and reasonably observant and circumspect, would be likely to say that the advertisement is not honest.¹⁴ The cases so far leave undecided whether the reasonable reader is to make that assessment in the light of the full facts,¹⁵ or only in the light of the facts available to the advertiser at the time of the statement.¹⁶

In deciding whether a mark has been used in accordance with honest practices in industrial and commercial matters, it is assumed that consumers will ignore claims that are considered to be exaggerated, hyperbole, or 'hot-air'.¹⁷ The degree of hyperbole that is acceptable varies according to the product in question. While there may be exceptions,

¹¹ *British Airways v. Ryanair* [2001] FSR (32) 541. But cf. at para. 35 where Jacob J., in fact, said of the 'Expensive BA***DS' advert that it was 'in any event just use of the mark in relation to the proprietor' (and for that reason non-infringing). Section 10(6) does not justify selling goods originating from the same manufacturing source as the trade mark proprietor's with the latter's mark: *Primark Stores v. Lollypop Clothing* [2001] FSR 637.

¹² *Vodafone Group v. Orange Personal Communications Services* [1997] FSR 34; *Macmillan v. RCN Publishing* [1998] FSR 9, 13.

¹³ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 316.

¹⁴ *British Airways v. Ryanair* [2001] FSR (32) 541 (paras. 31–2).

¹⁵ *Ibid.*, 315; *Vodafone Group v. Orange Personal Communications Services* [1997] FSR 34. Cp. *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207 (para. 125) (examining the proviso in context of section 11(2)(a)).

¹⁶ *Cable & Wireless v. British Telecommunications* [1998] FSR 383, 391 (Jacob J); R. Meade, 'Comparative Advertising in the UK: The New Law in Its Infancy' (1997–8) *Yearbook of Media and Entertainment Law* 247, 253.

¹⁷ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 316; *British Airways v. Ryanair* [2001] FSR (32) 541 (para. 32).

consumers would normally not subject advertisements to minute textual examination.¹⁸ In circumstances where material was intended or was likely to be read together, the material should be considered as a whole.¹⁹ As Laddie J said in *Barclays Bank v. RBS Advanta*, if the law were otherwise, a person could avoid liability by dividing their advertisement into two parts: one with the misleading comparison, the other with the reference to the trade mark.

While the question of whether a mark has been used honestly always depends on the facts of the case, it has been suggested that if an advertisement was ‘significantly misleading’, it would not be regarded as having been used in accordance with honest practices.²⁰ In one case, it was said that the failure of the defendant to mention ancillary benefits such as vehicle recovery and overseas emergency assistance did not mean that an advertisement for credit services was significantly misleading.²¹ In another case, a comparison of the prices of flights to Frankfurt without mentioning that the flights were to two different airports (one substantially further away than the other) was not regarded as a ‘significantly unfair comparison’.²² However, in another case, the use of graphs in advertising purporting to depict independent tests of the suction of vacuum cleaners when in fact only the claimant’s vacuum cleaner had been tested and then using kaolin powder, the court held that the advertisement was thoroughly misleading and thus not in accordance with honest practices.²³

2.3 UNFAIR ADVANTAGE OR DETRIMENT

The third element of section 10(6) states that the defence will not apply if the use ‘takes unfair advantage of, or is detrimental to, the distinctive character or repute of the mark’. In *Barclays Bank v. RBS Advanta*, Laddie J took the view that in most cases the second half of the section 10(6) proviso added nothing of significance to the first half. The effect is that even if an advertisement is derogatory, it will not infringe unless it is not in accordance with honest practices. This was a situation graphically illustrated by the advertisement of Ryanair comparing its low prices with those of British Airways through the terms ‘Expensive BA****DS’.²⁴ As we have already discussed the concepts of unfair advantage

¹⁸ *British Airways v. Ryanair* [2001] FSR (32) 541 (para. 30); *British Telecommunications v. AT&T Communications (UK)* (unreported, Dec. 1996) (AT&T published adverts asserting that it was ‘up to 40% cheaper’ but in fact was only that much cheaper on a small number of international calls. Judge Michael Crystal QC dismissed the complaint. The literature was predominantly puff and the specific statement was true—even though it was embedded in a cloud of puff).

¹⁹ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 318 (brochure and leaflet); *British Airways v. Ryanair* [2001] FSR (32) 541 (para. 30).

²⁰ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 315.

²¹ *Ibid.*, 307. See also *British Airways v. Ryanair* [2001] FSR 541.

²² *British Airways v. Ryanair* [2001] FSR 541, 556 (para. 43).

²³ *Emaco and Aktiebolaget Electrolux v. Dyson Appliances* [1999] ETMR 903.

²⁴ *British Airways v. Ryanair* [2001] FSR (32) 541, 554 (para. 35) (Jacob J, in fact, said that this was not actionable as trade mark infringement because it was ‘saved by section 10(6)’. See H. Carty, ‘Registered Trade Marks and Permissible Comparative Advertising’ [2002] EIPR 294, 298 (‘the wording of section 10(6) clearly goes beyond prohibiting use of registered trade marks simply where misinformation is the allegation’). See also M. Spence, ‘Two Australian Comparative Advertising Cases: The View from Europe’ [2001] EIPR 539, 541 (‘It is hard to imagine a use that might do more to tarnish a trade mark, is more “detrimental” to its character or repute, than incorporating it into a swear word’). In Carty’s view, the Comparative Advertising Directive also requires such a construction.

and detriment to distinctive character in the context of the doctrine of dilution set out in sections 5(3) and 10(3),²⁵ it is not necessary to look at again.

2.4 THE EC DIRECTIVE ON COMPARATIVE ADVERTISING

In 1997, the European Parliament and Council passed a Directive relating to comparative advertising.²⁶ In principle, the Directive requires member states to permit comparative advertising,²⁷ but does so only if the advertisement satisfies the eight conditions specified in Article 3a. These are that:

- (a) it is not misleading according to Articles 2(2), 3, and 7(1) (these oblige member states to provide a minimum of protection against 'misleading' advertising though leave that concept undefined);²⁸
- (b) it compares goods or services meeting the same needs or intended for the same purpose;
- (c) it objectively compares one or more material, relevant, verifiable, and representative features of those goods and services, which may include price;
- (d) it does not create confusion in the market place between the advertiser and a competitor or between the advertiser's trade marks, trade names, other distinguishing marks, goods, or services and those of a competitor;
- (e) it does not discredit or denigrate the trade marks, trade names, other distinguishing marks, goods, services, activities, or circumstances of a competitor;²⁹
- (f) for products with designation of origin, it relates in each case to products with the same designation;
- (g) it does not take unfair advantage of the reputation of a trade mark, trade name, or other distinguishing marks of a competitor or of the designation of origin of competing products;³⁰ and,

²⁵ *Barclays Bank v. RBS Advanta* [1996] RPC 307, 314–15. Laddie J rejected as helpful the example of dishonest unwarranted flattery as being a case where the use would be dishonest but not take unfair advantage or be detrimental to the mark. Laddie J said such a use would be honest. This view was approved by Jacob J in *Vodafone Group v. Orange Personal Communications Services* [1997] FSR 34, 39–40.

²⁶ The Directive amends Directive 94/450/EEC. Prior to that the laws of member states varied dramatically: comparative advertising was basically permitted in Ireland, Austria, and Switzerland but was illegal in Italy, Germany, and Benelux. These differences were perceived as obstacles to the free movement of goods. For background, see A. Ohly and M. Spence, *The Law of Comparative Advertising* (2000).

²⁷ Article 2a defines 'comparative advertising' as 'any advertising which explicitly or by implication identifies a competitor or goods or services offered by a competitor'.

²⁸ See *Pippig Augenoptik GmbH & Co. KG v. Hartlauer Handelsgesellschaft mbH*, Case C-44/01 [2004] ETMR (5) 65 (para. 53) (failure to state the brand sold by the competitor may render the comparison misleading where the brand might significantly affect the buyer's choice and the comparison concern products whose brand names differ considerably in the extent to which they are known); (para. 65) (there is no need for the goods to come from the same distribution channel). Ohly and Spence, *The Law of Comparative Advertising*, 60–1.

²⁹ See *Pippig Augenoptik GmbH & Co. KG v. Hartlauer Handelsgesellschaft mbH*, Case C-44/01 [2004] ETMR (5) 65 (para. 80) (comparing prices cannot do so, and inclusion of another trader's logo is permissible for purposes of such comparison).

³⁰ See *Toshiba Europe GmbH v. Katun Germany GmbH*, Case C-112/99 [2002] 3 CMLR (7) 164 (giving guidance for national court to help it determine whether product numbers were 'distinguishing marks'; and

- (h) it does not present goods or services as imitations or replicas of goods or services bearing a protected trade mark or trade name.

These conditions are to be interpreted in the sense most favourable to the comparative advertiser.³¹

The Directive was implemented in the UK by the Control of Misleading Advertisements (Amendment) Regulations 2000.³² This allows complaints to be made to the Office of Fair Trading in cases of comparative advertisement which do not satisfy the criteria in regulation 4A (reflecting the conditions in Article 3A of the Directive). As we will see, complaints to the Office can be made by various self-regulatory bodies, such as the Advertising Standards Authority, which enforce codes which reflect the terms of the Directive. It should be noted that the Regulation explicitly states that it does not confer or derogate from any independent right of action in civil proceedings. Section 10(6) of the 1994 Act has not modified.³³

2.5 BRITISH CODE OF ADVERTISING

As already indicated, trade mark law forms part of a patchwork of provisions which regulate comparative advertising.³⁴ One of the most important of these is the British Code of Advertising (BCA), which was drafted by the Committee on Advertising Practice and is administered by the Advertising Standards Authority (ASA).³⁵ The British Code of Advertising establishes what is primarily a self-regulatory system, and was drawn up by representatives from relevant trade and professional bodies. The Code applies to advertisements in newspapers and other printed publications, cinema and video commercials, and promotions.³⁶ It does not apply, however, to broadcast commercials (which are the responsibility of OFCOM which operates similar codes), to advertisements in foreign

indicating that a trader would take unfair advantage if the advert gave the public the false impression of a relationship between the advertiser and the trade mark owner); *Pippig Augenoptik GmbH & Co. KG v. Hartlauer Handelsgesellschaft mbH*, Case C-44/01 [2004] *ETMR* (5) 65 (para. 84) (can use competitor's name, reproduce logo and picture of shopfront).

³¹ *Toshiba Europe GmbH v. Katun Germany GmbH*, Case C-112/99 [2002] 3 *CMLR* (7) 164 para. 37.

³² SI 2000/914 amending the Control of Misleading Advertisements Regulations (SI 1998/915). See P. Carey, 'Comparative Advertising: European Harmonization' [2000] *Ent LR* 21.

³³ Recitals 13–15 of Directive 97/55/EC indicate that advertising which complies with the Directive will not infringe the rights of a trade mark owner under TM Dir. Art. 5. See *BA v. Ryanair* [2001] *FSR* (32) 541. Is this because such advertising will not affect the 'essential function' of the mark (see pp. 912–14), or because such use is descriptive and therefore falls under Art. 6(1)(b)? Carty has argued that the section should be read in line with the Comparative Advertising Directive: H. Carty, 'Registered Trade Marks and Permissible Comparative Advertising' [2002] *EIPR* 294.

³⁴ See D. Fitzgerald, 'Self Regulation of Comparative Advertising in the UK' [1997] *Ent LR* 250; A. Ohly and M. Spence, *The Law of Comparative Advertising* (2000), 6–7, 97–101. Note also the role of passing off and malicious falsehood: though in general there has been a reluctance to intervene, the latter cause of action requiring as it does proof of malice. Indeed, in *Cable & Wireless v. British Telecommunications* [1998] *FSR* 383 Jacob J queried what a claim based on malicious falsehood could add to one based on trade mark infringement. See also *BA v. Ryanair* [2001] *FSR* 32 (paras. 9–14).

³⁵ This is now in its 11th edition (2003). This can be accessed at the ASA web site: <http://www.asa.org.uk>.

³⁶ BCA, para. 1.1.

media, to health-related claims in advertisements, and to promotions addressed only to the medical and allied professions.³⁷

On the premise that comparative advertising ought to be permitted in the interests of vigorous competition and public information,³⁸ the British Code of Advertising permits comparative advertising so long as the comparisons comply with the terms of the Comparative Advertising Directive.³⁹ Comparative advertising is also subject to the general provisions of the Code that requires that all advertisements:

- (i) be legal, decent, honest, and truthful;⁴⁰
- (ii) respect the principles of fair competition generally accepted in business;⁴¹
- (iii) do not mislead by inaccuracy, ambiguity, exaggeration, omission, or otherwise;⁴²
- (iv) do not unfairly attack or discredit other businesses or their products;⁴³ and,
- (v) do not make unfair use of the goodwill attached to the trade mark, name, brand, or the advertising campaign of any other business.

Conformity with these requirements is assessed according to the advertisement's probable impact, taken as a whole and in context. The impact that an advertisement has will depend on the audience, the medium, the nature of the product, and any additional material distributed at the time to consumers.⁴⁴ Before releasing an advertisement, advertisers must have documentary evidence to prove all claims, whether direct or implied, that are capable of being objectively substantiated.⁴⁵ The adequacy of this evidence will be judged on the basis of whether it supports both the detailed claims and the overall impression created by the advertisement.

The ASA investigates complaints against advertisements and promotions in non-broadcast media.⁴⁶ The ASA's rulings may request that a company withdraw or amend its advertisements or promotions.⁴⁷ The judgment of the ASA Council on interpretation of the Code is final, though there is some provision for appeal. A number of sanctions exist to counteract advertisements and promotions that conflict with the Code. The media may deny access to space, the publication of a ruling on the ASA's web site may generate adverse publicity, trading sanctions may be imposed or recognition revoked by the advertiser's, promoter's, or agency's professional association, and financial incentives provided by trade, professional, or media organizations may be withdrawn.⁴⁸

³⁷ BCA, para. 1.2. Ofcom took over the duties of the Radio Authority, Broadcasting Standards Commission, and Independent Television Commission at the end of 2003. For the time being Ofcom continues to enforce the codes formerly used by those bodies. With respect to comparative advertising, those codes follow the terms of the Comparative Advertising Directive. Radio Authority, *Advertising and Sponsorship Code* (2000) section 6; ITC, *Advertising Standards Code* (2002) para. 5.4.6. However, in *The Future Regulation of Broadcast Advertising*, Ofcom proposes to contract out the regulation of advertising to the ASA.

³⁸ *Ibid.*, para. 18.

³⁹ *Ibid.*, paras. 18.1–5, 20.1–2 and 21.2.

⁴⁰ *Ibid.*, paras. 2.1, 4.1, 5.1–3, 6.1, 7.1. The Code requires advertisers and promoters to ensure that all their advertisements and promotions are legal, but the ASA is not a law-enforcement body. Any matter that principally concerns a legal dispute will normally need to be resolved through law-enforcement agencies or the courts.

⁴¹ *Ibid.*, para. 2.3.

⁴² *Ibid.*, para. 7.1.

⁴³ *Ibid.*, para. 20.1.

⁴⁴ *Ibid.*, para. 1.4b.

⁴⁵ *Ibid.*, para. 3.1.

⁴⁶ *Ibid.*, paras. 60.4, 60.6, 60.28 ff. Complaints are normally not pursued if the point at issue is the subject of simultaneous legal action: BCA, para. 60.32.

⁴⁷ *Ibid.*, para. 61.1 ff.

⁴⁸ BCA, para. 61.1–9.

The self-regulatory system is reinforced by the 1988 Control of Misleading Advertisements Regulations.⁴⁹ Under these Regulations, if a misleading advertisement or promotion continues to appear after the Council has ruled against it, the ASA can refer the matter to the Office of Fair Trading which can seek an undertaking from anyone responsible for commissioning, preparing, or disseminating it, that it will be discontinued. If this is not given or is not honoured, the Office of Fair Trading can seek an injunction from the courts to prevent its further appearance.⁵⁰

3 USE OF A REGISTERED MARK

The next defence to a claim of infringement of a UK trade mark is set out in section 11(1). This provides that a trade mark is not infringed by the use of another registered trade mark in relation to goods or services for which the latter mark is registered. In effect, section 11(1) provides that registration gives a defence to an action for infringement. This is in contrast to the situation in copyright law where a person can simultaneously exploit their own work and infringe someone else's. The immunity conferred by registration acts as an incentive for traders to apply for trade mark registration.

Where a defendant relies on the section 11(1) defence, the claimant will usually respond by challenging the validity of the registered mark under section 47(6). The ability of the claimant to nullify the section 11(1) defence by challenging the validity of the defendant's registration may be restricted if the claimant has acquiesced in the use of the later trade mark. This is because where the owner of an earlier trade mark has knowingly acquiesced in the use of the mark for a continuous period of five years, section 48 of the 1994 Act provides that they lose the ability to apply for a declaration that the registration is invalid, or to oppose the use of the mark.⁵¹ Unless the defendant's registration was in bad faith, where a claimant has acquiesced in the use of the later mark they lose the ability to rely upon the section 11(1) defence.

While there is no equivalent to section 11(1) in the Community Trade Mark Regulation, it does contain a provision dealing with acquiescence.⁵² This disentitles the proprietor from 'opposing the use of the later mark in respect of the goods or services for which the later trade mark has been used'. As such, the effect as regards marks that have long been in use is the same as in the United Kingdom.

⁴⁹ Control of Misleading Advertising Regulations 1988 (SI 1988/915) (as amended by the Control of Misleading Advertisements (Comparative Advertising) Regulations 2000 (SI 2000/914)).

⁵⁰ The OFT may also utilize the Stop Now Orders (EC Directive) Regulations 2001 (SI 2001/1422).

⁵¹ TM Dir., Art. 9.

⁵² CTMR, Art. 53. See Annand and Norman (1998), 185–9.

4 USE OF NAME OR ADDRESS

In contrast with the law of passing off,⁵³ trade mark law provides a defence to a claim to infringement where a person uses their own name. Section 11(2)(a) (or, with respect to Community marks Article 12(a) of the CTMR) provides that a registered trade mark is not infringed by 'the use by a person of his own name or address'.⁵⁴ As with all of the defences in section 11, this is subject to the proviso that the use is 'in accordance with honest practices in industrial or commercial matters'.⁵⁵

These provisions apply not only to personal names *per se*, but also to the use of business and company names.⁵⁶ According to Jacob J, just as a person's name is pretty well fixed by birth and by usage, a company which has used its name and built up goodwill is equally stuck with that name, and therefore equally entitled to such a defence. Nevertheless, the issue cannot be regarded as totally resolved, given the comments during the passage of the Community Trade Mark Regulation, to the effect that the equivalent provision was confined to the use of personal names.⁵⁷ Even more doubt exists over whether the section 11(2)(a) defence would apply to the use of a nickname.⁵⁸

In order for the section 11(2)(b) defence to apply, the use must be in accordance with honest practices in industrial and commercial matters. As we saw in the context of section

⁵³ *Joseph Rodgers v. W. N. Rodgers* (1924) 41 RPC 277; *Baume v. Moore* [1958] Ch 907 (passing off but no trade mark infringement); *Parker Knoll v. Knoll International* [1962] RPC 265 (passing off but no trade mark infringement); *Biba Group v. Biba Boutique* [1980] RPC 413 (whatever the general position there is no defence to passing off if defendant uses first name or nickname); *NAD Electronics Inc. v. NAD Computer Systems* [1997] FSR 380, 392.

⁵⁴ See also TM Dir., Art. 6(a). Goldberg, 'The Right to Use One's Own Name in Business' (1984) 32 *Names (Journal of the American Name Society)* 156 (explaining transition in US cases from sacred right to own name, to recognition of public interest in avoiding confusion, so that current law tends to take a compromise position of requiring a defendant to use its full name or a disclaimer to minimize potential confusion).

⁵⁵ The wording of the proviso derives from Paris, Art. 10 bis.

⁵⁶ *Euromarket Designs Incorporated v. Peters & Anor* [2001] FSR 288, 299; *Daimlerchrysler AG v. Alavi* [2001] RPC (42) 813, 846 (paras. 100, 102); *Premier Luggage & Bags Ltd v. Premier Company (UK) Ltd* [2003] FSR (5) 69, 88 (para. 43) (CA). On the other hand, in *NAD Electronics v. NAD Computer Systems* [1997] FSR 380 Ferris J said that it was 'far from clear' that use of a corporate name fell within the defence. In *Scandecor Developments v. Scandecor Marketing* [2002] FSR (7) 122, 141–2 (para. 54), 144 (para. 65), both Lord Nicholls and Lord Scott stated they favoured the view that a company can claim the benefit of the own name defence but that the issue was not *acte clair* so needed to be referred to the ECJ. Unfortunately, the case was settled, so the ECJ has yet to reveal its answer. See also *Reed Executive plc v. Reed Business Information Ltd* [2003] RPC (12) 207 (paras. 122–3) (suggesting a reference would be necessary but at para. 126 applying defence to use on invoices where no one would be misled).

⁵⁷ *OJ OHIM* 5/96 at 609, 615. The question has been referred to the ECJ, though Advocate General Colomer found it unnecessary to decide on the facts that form the basis for the reference: *Nichols v. Registrar of Trade Marks*, Case C-404/02 (15 Jan. 2004) (AG), (ECJ pending).

⁵⁸ In *NAD Electronics v. NAD Computer Systems* [1997] FSR 380, Ferris J doubted that Hossain Afkami Aghda could rely on the defence to use the NAD sign on the basis that he was commonly known as Nader Aghda or Nad. In *Premier Luggage & Bags Ltd v. Premier Company (UK) Ltd* [2003] FSR (5) 69, 88–9 (para. 44) the Court of Appeal held that use of the terms 'Premier Luggage' and 'Premier Luggage Company' fell outside the defence, given the firm's name was 'The Premier Company (UK) Ltd'. Dropping the 'Ltd' alone would probably not have jeopardised the availability of the defence: see *Scandecor Developments AB v. Scandecor Marketing Ltd* [1998] FSR 500, 521–2 per Lloyd J; *Daimlerchrysler AG v. Alavi* [2001] RPC (42) 813, 846 (para. 100).

10(6), this is an objective requirement.⁵⁹ It is likely that use would not be regarded as honest if the defendant copied the mark, or before commencing use the user was aware of the existing trade mark registration.⁶⁰ The Court of Appeal has stated that ‘however honest his subjective intentions may be, any use of his own name which amounts to passing off cannot be in accordance with honest practice in industrial and commercial matters’.⁶¹ Such a rule may go too far, especially in the light of the ECJ ruling on the proviso in the context of section 11(2)(b), discussed below.

5 DESCRIPTIVE USES

The next defence to an action for trade mark infringement is set out in section 11(2)(b) (and, for Community marks, Article 12(b) of the CTMR).⁶² This provides that a registered trade mark is not infringed where the mark is used to indicate the kind, quality, quantity, intended purpose, value, geographical origin, the time of production of goods or of rendering of services, or other characteristics of goods or services.⁶³ This is subject to the proviso that the use is in accordance with honest practices in industrial or commercial matters. If a descriptive term becomes registrable because it has acquired a secondary meaning, the section 11(2)(b) defence ensures that the rights conferred on the proprietor do not restrict other traders from using the same word or sign to describe goods or services. That is, it limits the extent to which a descriptive word can be taken from the public domain.

The section 11(2)(b) defence applies in situations where traders use the trade mark to describe their own goods, for example where in the face of the trade mark *BABY DRY* registered for diapers advertises a competitor advertises its own nappies with the slogan ‘guaranteed to keep your baby dry’.⁶⁴ It also applies where a person uses the mark to describe the claimant’s goods (as with ‘*PAMPERS* soak up twice as much liquid as *BABY DRY*’).⁶⁵ It had been held that the defence could not apply where the defendant used the mark as a trade mark in relation to their own goods.⁶⁶ However, in *Gerolsteiner Brunnen*

⁵⁹ *Reed Executive plc v. Reed Business Information Ltd* [2003] *RPC* (12) 207 (para. 125) (‘the only question is whether [the] practice would be considered to be honest by somebody in full possession of the facts’). But note *Nichols plc’s Trade Mark* [2003] *RPC* (16) 301, 306, where Jacob J viewed the issue as awaiting resolution by the ECJ.

⁶⁰ *Euromarket Designs Incorporated v. Peters & Anor* [2001] *FSR* 288, 300–1 (paras. 41–2).

⁶¹ *Asprey & Garrard v. WRA (Guns)* (para. 49) (Peter Gibson LJ); *Daimlerchrysler AG v. Alavi* [2001] *RPC* (42) 813, 846 (use which is unnecessary or creates any misrepresentation in the public mind would not be permitted); *Reed Executive plc v. Reed Business Information Ltd* [2003] *RPC* (12) 207 (para. 125) (if deception of consumer the use of corporate name is outside the defence).

⁶² See also *TM Dir.*, Art. 6(b).

⁶³ The equivalent ‘fair use’ defence in the USA, Lanham Act (1946) s. 33(b)(4), is available only in actions involving descriptive terms and only when the term is used in its descriptive sense.

⁶⁴ *British Sugar v. James Robertson & Sons* [1996] *RPC* 281.

⁶⁵ For example, in comparative advertising: *British Sugar v. James Robertson & Sons* [1996] *RPC* 281, 298. In *PAG Ltd v. Hawk-Woods Ltd* [2002] *FSR* (46) 723 where the defendant was selling reconditioned batteries originally supplied by the claimant the defence failed because the goods were no longer appropriately described as the goods of the proprietor.

⁶⁶ *The European v. The Economist Newspaper* [1998] *FSR* 283, 291–2 (Millet LJ), stating that the purpose of section 11(2)(b) is ‘to permit the fair use of the plaintiff’s registered mark to indicate the characteristics of the defendant’s goods or services, for example, in an advertisement, but not . . . to perform the dual function of

GmbH & Co. v. Putsch GmbH, a three-judge chamber of the ECJ held that use of a sign could fall within the defence if the use was as an indication of geographical origin (even if the sign also fulfilled the role of indicating trade origin). In that case, the claimant had registered GERRI for mineral water and brought an action against the defendant for selling bottled water bearing the mark KERRY SPRING. On the assumption that there was such aural similarity between the marks as to create a likelihood of confusion, the Bundesgerichtshof asked the ECJ whether Article 6(1)(b) of the Directive could apply where a trader used the sign ‘as a trade mark’. Although the judgment is hardly explicit in its answer, the ECJ seems to have accepted that the sign KERRY SPRING was an indication of geographical origin within Article 6(1)(b), even though it was also being used as a mark. The fact that a sign is used additionally as a mark is a factor pertinent to the assessment of whether the use is in accordance with honest practices, rather than whether the sign indicated geographical origin.⁶⁷

A descriptive use will only provide a defence if it is in accordance with ‘honest practices in industrial and commercial matters’. In *Gerolsteiner Brunnen GmbH & Co. v. Putsch GmbH*, the ECJ stated this expresses ‘a duty to act fairly in relation to the legitimate interests of the trade mark owner’.⁶⁸ Even though use is ‘as a trade mark’, or may cause confusion, this will not of itself necessarily render the use to be other than in accordance with honest practices. Rather an ‘overall assessment’ needs to be made, and this will include an examination of the get up used by the parties to determine whether the use of the indication of geographical origin ‘might be regarded as unfairly competing with the proprietor of the trade mark’.

6 USE TO INDICATE THE INTENDED PURPOSE OF A PRODUCT OR SERVICE

Section 11(2)(c)/Article 12(c) of the CTMR provides that a registered trade mark is not infringed where the defendant finds it necessary to use the trade mark to indicate the intended purpose of a product or service (in particular, as accessories or spare parts).⁶⁹ This is subject to the proviso that the use must be in accordance with honest practices in industrial or commercial matters. In effect, this defence recognizes that while a trader may not be formally linked to the trade mark owner, they may find it necessary to refer to the trade mark as a part of the normal course of their trade. This would occur, for example,

indicating both the characteristics and the trade origin of the defendant’s goods’). See also *British Sugar v. James Robertson & Sons* [1996] RPC 281, 299; *BA v. Ryanair* [2001] FSR (32) 541, 548 (para. 20); *Discovery Communications Inc. v. Discovery FM* [2000] ETMR 516, 521 (rejecting argument that DISCOVERY FM was used to indicate geographic origin, because it could be equated with Dundee and because use by defendant was clearly used as a trade mark). But cf. *Beautimatic International v. Mitchell International Pharmaceuticals and Alexir Packaging* [1999] ETMR 912, 930 (there may be exceptions in the case of semi-descriptive marks).

⁶⁷ Case C-100/02 (7 Jan. 2004) (ECJ, 5th Chamber). No reference was made to dicta in *Windsurfing Chiemsee* [1999] ECR-I 2779 (para. 28).

⁶⁸ *Ibid.*, Case C-100/02, (para. 24).

⁶⁹ See also TM Dir., Art. 6(c). This would also count as comparative advertising within that Directive: *Toshiba Europe GmbH v. Katun Germany GmbH* Case C-112/99 [2002] 3 CMLR (7) 164, paras. 32–40, since it implicitly states that the two products have equivalent technical features.

where a trader sells spare parts for a particular type of product.⁷⁰ In these circumstances, the trader will wish to inform consumers that the parts fit particular products. The most efficient way this can be done is by referring to the trade mark for that product. Another situation where it will be necessary to use a trade mark in the course of trade is where a trader repairs a particular brand of goods (such as SONY televisions). If trade mark owners were able to control such uses, it would unfairly restrict trade. As the ECJ said, the defence in Article 6(1)(c) of the Directive seeks to reconcile the 'fundamental interests of trade mark protection with those of the free movement of goods and freedom to provide services'.⁷¹

The nature of this defence was considered by the ECJ in *BMW v. Deenik*.⁷² The defendant in this action ran a garage that specialized in repairing and maintaining BMW cars. Notably, he was not a part of the official BMW dealer network. BMW claimed that when the defendant described himself as specialized in the repair and maintenance of BMWs, he made unlawful use of the BMW mark. The ECJ disagreed, explaining that in these circumstances the defendant could rely on the defence in Article 6(1)(c) of the Directive. This was because the defendant could not communicate the fact that he repaired and maintained BMW cars without using the BMW mark.⁷³ In relation to the question of whether the use was *necessary* to indicate the intended purpose, the ECJ said that 'if an independent trader carries out the maintenance and repair of BMW cars or is in fact a specialist in the field, that fact cannot in practice be communicated to his customers without using the BMW mark'.⁷⁴

The ECJ added, however, that the use of another person's trade mark for the purpose of informing the public of the repair and maintenance of goods covered by the mark is subject to a number of conditions.⁷⁵ In particular, the Court said that a garage should be free to use the BMW mark to bring its services to the attention of the public, unless the use of the mark was contrary to honest practices. The ECJ said that a use would be contrary to honest practices where it gave rise to the impression that there is a commercial connection between the trader and the trade mark owner.⁷⁶ That is, the trader must not use the mark in a way that suggests that the trader's business is affiliated with the trade mark owner's business. The ECJ said that this was a question of fact to be decided by national courts.⁷⁷ The ECJ added that if there is no risk that the public will be led to believe that there is a commercial connection between the trader and the trade mark proprietor, the mere fact that the trader derived an advantage from using the mark (for example because the advertisements lend an aura of quality to their business) would not of itself mean that the use was dishonest.⁷⁸

⁷⁰ *PAG Ltd v. Hawk-Woods Ltd* [2002] FSR (46) 723, 729 (Pumfrey J) (reconditioning of batteries might have justified use of language such as 'suitable for apparatus equipped with PAG LOKS' but would not justify retaining the word PAG LOKS on batteries when resold).

⁷¹ *Bayerische Motorenwerke AG and BMW Nederland BV v. Ronanl Karel Deenik*, Case C-63/97 [1999] 1 CMLR 1099, 1127 (para. 64).

⁷² *Ibid.*, 1099. A further reference is pending in *The Gillette Company v. LA Laboratories Ltd OY*, Case-228/03 (asking the Court to provide guidance on what is meant by spare parts and accessories, what else is covered apart from those items, and when use of a mark is 'necessary').

⁷³ *Ibid.*, 1125-6 (para. 54).

⁷⁴ *Ibid.*, 1113-14 (Advocate General para. 54), 1126 (para. 60).

⁷⁵ *Ibid.*, 1127 (para. 63).

⁷⁶ *Ibid.*, 1125, 1127 (paras. 52 and 64).

⁷⁷ *Ibid.*, 1126 (para. 55).

⁷⁸ *Ibid.*, 1125 (para. 53). The Düsseldorf Court of Appeals has given an enlightening decision allowing a seller of Mercedes cars to use its device mark, the famous three pronged star, in advertising: *Mercedes Star* (5 Jul. 2001) (2003) 34 IIC 438.

In *Aktiebolaget Volvo v. Heritage (Leicester)*,⁷⁹ the High Court granted summary judgment against a former Volvo dealer, who, when the dealership had come to an end in 1995 referred to himself as an 'Independent Volvo Specialist'. Applying the proviso, Rattee J said that the test was whether a reasonable motor-car service provider would think what the defendant had done was honest. Given the surrounding circumstances, including the fact that the defendant had sent out a series of letters which implied a continued trade connection with Volvo, Rattee J concluded that the defendant had no arguable case.

7 LOCAL USES

Section 11(3) provides that a UK registered trade mark is not infringed by the use in a particular locality of an earlier right which only applies in that locality.⁸⁰ An earlier right applies in a locality 'if, or to the extent that, its use in that locality is protected by virtue of any rule of law (in particular, the law of passing off)'. The defence only arises if the use of the earlier right began before both the use and the registration of the claimant's mark. It should be noted that it is not necessary to show that the defendant could have brought an action for passing off. Since the courts seldom provide injunctive relief confined to a particular locality, it seems that if defendants can bring themselves within this section then the defence may apply throughout the United Kingdom.

The relationship between local uses and Community trade marks is complex. While the Regulation does not have an equivalent to the earlier rights defence contained in national law, Article 106 allows the owner of any earlier right to rely on national law against the Community trade mark owner.⁸¹ Thus, the owner of a national mark who has not opposed the grant of a Community mark⁸² may utilize its national rights in national fora to prevent use of that Community mark (including, presumably an action for infringement against it). This is subject, however, to the principle of acquiescence: that is, five years of continuous use by the owner of the Community trade mark in the member state where the earlier right operates.⁸³ These provisions will be of increasing importance with the expansion of the Community in 2004. When this occurs, existing registrations of Community marks will automatically apply to the ten new territories. However, Article 106 will operate to protect those who previously were operating in those territories from the otherwise potentially devastating effect of such automatic extension.

⁷⁹ [2000] FSR 253.

⁸⁰ TMA s. 11(3). This reflects TM Dir. Art. 6(2). In *Daimlerchrysler AG v. Alavi* [2001] RPC (42) 813, 848 (para. 107) Pumfrey J stated that he had difficulty in understanding the difference between marks of merely local significance and non-local marks.

⁸¹ As defined in CTMR, Art. 8. However, while this excludes mere local rights, CTMR, Art. 107 provides similar protection for earlier rights which only apply to a particular locality, which presumably encompasses earlier rights of mere local significance: the law of the member state concerned may be utilized to prevent use of the Community mark in the territory in question.

⁸² As we saw at p. 878, according to CTMR Art. 8(4) use of rights of no more than mere local significance cannot prevent registration on relative grounds.

⁸³ CTMR, Art. 53(2).

8 EXHAUSTION

Traditionally, trade marks have been territorial in nature, so that a proprietor may own distinct rights in different territories. Typically, those rights have included the right to prevent the importation of goods bearing the mark into the territory where the rights apply.⁸⁴ This led to the situation where the owner of a trade mark was able to use the rights in territory (A) to prevent the importation of goods from another territory (B). This was the case *even where* the goods had been put on the market in territory (B) with the consent of the owner. In practice, there are a number of reasons why the importation of goods from one country to another may be desirable. The most obvious is where the price of the goods is cheaper in one territory (B) than another (A), or where demand in the second territory (A) is not being met. At first glance, it seems that if importation was permitted, it would be to the advantage of all concerned. The public in territory (A) would benefit from cheaper products, while the trade mark owner's interests would be satisfied by sale in country (B). However, first impressions give way to more complex realities. This is because trade mark owners may have good reasons for wishing to divide markets up and to prevent parallel importation.⁸⁵ Given that it may be difficult to differentiate between legitimate and counterfeit goods at the border, parallel importation may also weaken the trade mark owner's capacity to prevent the importation of counterfeit goods.

8.1 DEVELOPMENT OF THE BASIC RULES

Prior to the adoption of the Directive, the European Court of Justice developed a series of sophisticated rules which detailed the situations where the owner of a national trade mark for country (A) could prevent goods put on the market elsewhere in the Community (B) from being distributed in country (A).⁸⁶ Since Article 7 of the Directive and section 12 of the 1994 Act embody the notion of exhaustion developed under the case law, it is worth noting the basic features of that case law.

The jurisprudence that developed prior to the passage of the Directive recognized the conflicting demands of Articles 30 and 36 of the Treaty of Rome. Under Article 30 of the Treaty (now Article 28 EC), 'quantitative restrictions on imports or measures having equivalent effect' are prohibited. However, under Article 36 of the Treaty (now Article 30 EC), prohibitions or restrictions on imports between member states that are justified on grounds of the protection of industrial and commercial property are permissible. This is on the proviso that they do not constitute a means of arbitrary discrimination or a disguised restriction on trade between member states.

As we observed in Chapter 1, in drawing a compromise between the demands of the

⁸⁴ TMA s. 10(4)(c); CTMR Art. 9(2)(c); TM Dir. Art. 5(3)(c).

⁸⁵ In the case of pharmaceuticals, the price differentials are largely the result of the fact that regulatory mechanisms for price setting differ on a national basis. If parallel importing were always possible, effectively the trade mark owner would have to live with the lowest price set by any of the national authorities. On the legality of controlling markets by restricting supply, see *Bayer AG v. Commission*, T-41/96 [2001] *All ER (EC)* 1 (CFI), Joined Cases C-2/01 P and C-3/01 P (6 Jan. 2004).

⁸⁶ See Ch. 1 esp. at pp. 12–15. See generally T. Hays, *Parallel Imports* (2003).

internal market and national industrial property rights,⁸⁷ the European Court of Justice recognized the principle of exhaustion of rights, where the goods were placed on the market under a trade mark with the consent of the trade mark proprietor.⁸⁸ On the other hand, in order to ensure that trade marks continue to function as indicators of origin and as guarantors of quality to the consumer,⁸⁹ the European Court of Justice also said that the rights were not exhausted where the trade mark owner had a legitimate reason for opposing further circulation of the goods.⁹⁰

The principle of exhaustion represents a compromise between a respect for national rights and an attempt to ensure that those rights are not used to restrict trade across borders. To reach this compromise, the jurisprudence relies on the notion of the 'specific subject matter' of a trade mark. In the Community's view, the essential purpose of a trade mark is to guarantee that the owner has the exclusive right to use that mark for the product for the first time. The trade mark owner can therefore prevent competitors from taking unfair advantage of the status and reputation of the trade mark by selling products illegally bearing the mark. However, once the goods are placed on the market with the proprietor's consent, the trade mark has done its job. As such, the 'specific subject matter' of the trade mark is exhausted. Exhaustion means that trade mark rights cannot be used to prevent further trade in the goods. This is subject to the proviso that the owner of the mark may be able to control further use of the mark where that use implicates some other aspect of the specific subject matter protected by the trade mark right.

This jurisprudence on exhaustion of the rights was carried over into Article 7(1) of the Directive⁹¹ and section 12(1) of the 1994 Act.⁹² This provides that a 'registered trade mark is not infringed by use of the trade mark in relation to goods which have been put on the market in the European Economic Area under that trade mark by the proprietor, or with his consent'.⁹³ As with the pre-Directive jurisprudence, the principle of exhaustion found in Article 7(1) and section 12(1) is subject to the general rider that in certain circumstances the rights of the owner will not be exhausted. As Article 7(2) says 'Para-

⁸⁷ *Bristol-Myers Squibb v. Paranova A/S and C. H. Boehringer Sohn, Boehringer Ingelheim KG and Boehringer Ingelheim A/S v. Paranova A/S, and Bayer Aktiengesellschaft and Bayer Danmark A/S v. Paranova A/S*, Joined Cases C-427/93 and C-429/93 [1996] ECR I-3457, I-3528 (para. 31) (hereafter *Bristol-Myers Squibb v. Paranova*).

⁸⁸ The principle of exhaustion applies where the same person owns the mark in the country of import and export. It also applies where the parties are economically linked, for example as subsidiaries of the same group: *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] ECR 1147. However, economic linkage does not cover the situation where an assignment of the trade mark rights has occurred: *IHT Internationale Heiztechnik v. Ideal Standard*, Case C-9/93 [1994] ECR I-2789, I-1850-1 (paras. 43-5). The doctrine of common origin recognized in *Hag I*, *Van Zuylen Freres v. Hag AG*, Case 192/73 [1974] ECR 731 can now be regarded as otiose: Case C-10/89 *CNL-Sucal v. Hag (Hag II)* [1990] ECR I-3711, I-3759 (para. 19).

⁸⁹ See e.g. *Hoffmann-La Roche v. Centrafarm*, Case 10/89 [1978] ECR 1139 (para. 7); *Pfizer v. Eurim-Pharm*, Case 1/81 [1981] ECR 2913, 2925-6 (para. 7); *Hag II* [1990] ECR I-3711, I-3758 (para. 14); and *IHT Internationale Heiztechnik*, Case C-9/93 [1994] ECR I-2789, I-2847 (para. 33).

⁹⁰ See *Hoffmann-La Roche v. Centrafarm*, Case 102/77 [1978] ECR 1139; *Centrafarm v. American Home Products Corporation*, Case 3/78 [1978] ECR 1823.

⁹¹ *Bristol-Myers Squibb v. Paranova A/S*, Case C-427/93 [1996] ECR I-3457, 3529 (rejecting argument that exhaustion under TM Dir. Art. 7 only permitted the resale of goods, not repackaging and thus represented a change from the existing ECJ jurisprudence).

⁹² CTMR Art. 13. To the extent that TM Dir. Art. 7 is narrowly drafted, Arts. 28 and 30 EC operates as previously: see *Pharmacia & Upjohn SA v. Paranova*, Case C-379/97 [2000] 1 CMLR 51, 81 (para. 28).

⁹³ Although TM Dir. Art. 7(1) refers to marketing in the Community, the principle of the exhaustion of rights was extended for certain purposes to the EEA. See Ch. 1.

graph 1 shall not apply where there exist legitimate reasons for the proprietor to oppose further commercialisation of the goods, especially where the condition of the goods is changed or impaired after they have been put on the market'.⁹⁴

8.2 LEGITIMATE REASONS TO PREVENT FURTHER DEALINGS IN GOODS BEARING THE MARK

Trade mark owners are only able to utilize their rights to prevent further dealings of goods bearing their mark which have been placed on the market, when there are 'legitimate reasons' to do so. The mere fact that the further dealing is to another trader's advantage is not a legitimate reason for the trade mark owner to prevent the use from taking place. There are a number of situations where a trade mark owner may have a legitimate reason to oppose further dealings in goods bearing the mark. These include situations where the goods are altered or repacked, or where the mark is altered, or where the goods or services are advertised. We will consider each in turn.

8.2.1 Altering the goods

One situation where a trade mark owner has a legitimate reason to oppose further dealings of a mark is where the condition of the goods has been changed or impaired after they have been put on the market. For example, a trader which manufactures and sells video-game consoles under a particular registered mark in France, may wish to prevent another trader from exporting the console from France to the United Kingdom, opening the packaging, adding adaptors to enable the console to work in the United Kingdom, and selling the repackaged goods. The trade mark owner may have a legitimate reason to object to the resale of such goods, for example, if the adaptor is of a different standard to that which the trader would supply in the authorized UK packages—at least where the repackaged goods do not clearly indicate the origin of the adaptors.⁹⁵ If the owner was unable to control such acts, the role that the mark plays in enabling the trade mark proprietor to control the quality of products placed on the market under the mark would be undermined.

8.2.2 Repackaging

Another situation where a trade mark owner may have a legitimate reason to control further dealings is where the goods are repackaged.⁹⁶ In *Bristol-Myers v. Paranova*⁹⁷ Bristol-Myers marketed pharmaceutical products in various member states. Bristol-Myers was the

⁹⁴ TMA s. 12(2) is slightly different in its wording: 'sub-section 12(1) does not apply where there are legitimate reasons for the proprietor to oppose further dealings in the goods'. The main difference is that while s. 12(2) allows a trade mark owner to oppose 'further dealings' with goods bearing their mark where there are legitimate reasons to do so, Art. 7 refers to further 'commercialization of goods'. It seems that the difference in language does not affect the scope of the provisions. Both terms encompass the importation, resale, and advertising of goods bearing the trade mark.

⁹⁵ *Sony Computer Entertainments v. Tesco Stores* [2000] *ETMR* 104.

⁹⁶ See P. Koutrakos, 'In Search of a Common Vocabulary in Free Movement of Goods: The Example of Repackaging Pharmaceuticals' [2003] *ELR* 53; N. Gross and L. Harrold, 'Fighting for Pharmaceutical Profits' [2002] *EIPR* 497; C. Stothers, 'Are Parallel Imports Bad Medicine? Repackaging of Trade-Marked Pharmaceuticals within the EU' [2002] *ECLR* 417; D. McCann, 'Parallel Imports and Repackaging of Pharmaceutical Products' [2002] *ICCLR* 363.

⁹⁷ [1996] *ECR* I-3457. Consequently Art. 7 applied to repackaging, not simply resale.

owner of certain trade marks for those pharmaceuticals in Denmark. Paranova purchased products sold by Bristol-Myers in member states, such as Greece and the United Kingdom, where the prices were relatively low and then imported them into Denmark. The pharmaceuticals had originally been marketed as tablets in blister packs, flasks, phials, and ampoules. For the purposes of sale in Denmark, Paranova repackaged all the pharmaceuticals in new external packaging. In so doing, Paranova gave the pharmaceuticals a uniform appearance, namely, white with coloured stripes corresponding to the colours of the manufacturers' original packaging. The new packaging displayed the respective trade marks of the manufacturer (*viz.* Bristol-Myers). It also included statements that the products had been manufactured by Bristol-Myers and were imported and repackaged by Paranova. Bristol-Myers claimed that the importation infringed various trade marks that they had registered in Denmark. The matter was referred to the ECJ for consideration.

The ECJ began by noting that Article 7(1) provides that the owner of a trade mark cannot rely on their rights in the mark to prevent the importation or marketing of a product which has been put on the market in another member state by them or with their consent. The Court went on to point out that derogations from the fundamental principle of free movement of goods are only permitted in order to safeguard the rights which constitute the specific subject matter of that property.

With respect to repackaging of goods bearing the trade mark, the ECJ said that 'account must be taken of the essential function of the trade mark, which is to guarantee to the consumer or end user the identity of the trade-marked product's origin by enabling him to distinguish it without any risk of confusion from products of different origin'. That guarantee of origin means that consumers or end-users can be certain that the original condition of a trade-marked product offered to them has not been interfered with or affected by a third party.⁹⁸ The specific subject matter of a trade mark includes the right to oppose any use of the trade mark that was liable to impair the role it played in guaranteeing the origin of the goods. In particular, the ECJ said that the owner should be able to ensure that the product has not been interfered with in such a way as to affect the original condition of the product. As a result, the ECJ said that the trade mark owner could prevent the parallel importation of repackaged goods. The upshot of this was that a trade mark proprietor may rely on their rights to prevent the parallel importation of a product put on the market in another member state, where the importer has repackaged the product in new packaging to which the trade mark has been reattached. Although Laddie J has questioned the logic of a rule which allows a trade mark owner to prevent parallel importation of goods where there is no identifiable damage to the trade mark,⁹⁹ the position was reaffirmed by the ECJ in *Boehringer Ingelheim KG v. Springward*.¹⁰⁰

⁹⁸ [1996] ECR I-3457, I-3532-3 (para. 47).

⁹⁹ *Glaxo Group v. Dowelhurst (No. 2)* [2000] FSR 529, 564 (Laddie J would require the trade mark owner to prove confusion or damage to the reputation of the trade mark).

¹⁰⁰ *Boehringer Ingelheim KG, Boehringer Ingelheim Pharma KG v. Springward Ltd*, Case 143/00 and *Merck, Sharp & Dohme GmbH v. Paranova Pharmazeutica Handels GmbH*, Case 443/99 [2003] Ch 27; [2002] 3 WLR 1697; [2002] All ER (EC) 581; [2002] ETMR (80) 933; [2002] FSR (61) 970 (para. 30) (repackaging by its very nature puts at risk the guarantee of origin, and therefore is prejudicial to the specific subject-matter of the mark irrespective of the actual effects of the repackaging by the parallel importer). In his judgment of 6 Feb. 2003, Laddie J has called this 'an irrebuttable presumption that repackaging [is] prejudicial to the specific subject matter of the mark'.

The ECJ acknowledged that this may create problems insofar as it enables owners to exercise their rights in a way that constitutes a disguised restriction upon the free movement of goods under Article 30 EC (formerly Article 36 of the Treaty). To ensure that this did not occur, the ECJ said that the owner could *not* prevent the parallel importation of repackaged goods where the use of the trade mark right by the owner contributes to the artificial partitioning of the markets between member states. In so doing, the ECJ limited the scope of the trade mark owner's rights.

To ensure that this derogation from the owner's rights did not adversely affect the subject matter of the trade mark, the ECJ said that parallel importation of repackaged goods is only permissible where the parallel importer satisfies certain conditions. These are that:

- (1) the repackaging does not adversely affect the original condition of the product;
- (2) the parallel importer complies with certain obligations as to labelling and provision of samples; and
- (3) the quality of the repackaging does not adversely impact on the reputation of the mark.¹⁰¹

After looking at the question of what is meant by 'artificial partitioning of the market', we will look at each of the three conditions imposed on the parallel importer.

(i) *Artificial partitioning of the markets between member states.* Repackaging by a parallel importer is only justified where and insofar as it is necessary to avoid artificial partitioning of the market.¹⁰² The test for whether there has been an 'artificial partitioning' of the markets is decided by objective standards. This means that the importer does not need to show that the trade mark owner deliberately intended to partition the markets between member states. The ECJ said that partitioning is artificial if it cannot be justified by the need to safeguard the essential function of the trade mark. In other words, the power of the trade mark owner should only be limited insofar as the repackaging undertaken by the importer is *necessary* to market the product in the member state of import.¹⁰³

One situation where repackaging would be justified is where the goods are marketed in a different packaging in one member state from that used in another member state. In this situation, the goods may not be able to be sold in the second member state unless they are repackaged. In these circumstances reliance on a trade mark to prevent repackaging would contribute to the partitioning of markets between member states (even if that were not the deliberate intention of the rights-owner).¹⁰⁴ For example, if a whisky was marketed as 'pure whisky' in one country, but regulations in another member state meant that the

¹⁰¹ [1996] ECR I-3457, I-3533–4 (para. 54).

¹⁰² [1996] ECR I-3457, I-3535 (para. 56); *Frits Loendersloot, trading as F. Loendersloot Internationale Expeditie v. George Ballantine & Son*, Case C-349/95 [1997] ECR I-6227, 6255 (para. 29). But cf. *Glaxo Group v. Dowelhurst (No. 2)* [2000] FSR 529, 564, 571, 576–7 where Laddie J argued that the issue of necessity only arises if the use damages the specific subject matter of the trade mark.

¹⁰³ 'The trade mark proprietor's opposition to the repackaging is not justified if it hinders effective access of the imported product to the market of that state': *Boehringer Ingelhem v. Swingward*, para. 46 (ECJ). See D. Dryden and S. Middlemiss, 'Parallel Importation of Repackaged Goods: Is "Necessity" Really Necessary?' [2003] *JBL* 82.

¹⁰⁴ *Bristol-Myers* [1996] ECR I-3457, I-3536 (para. 57).

whisky could not be described as 'pure', it would be necessary to remove the word 'pure' from the packaging before the product could be imported into the latter state.¹⁰⁵

Equally, a trade mark owner cannot oppose the repackaging of a product where the size of the original packet cannot be marketed in the member state of importation.¹⁰⁶ This would occur, for example, where the size of the packaging was dictated by national regulations. It is unclear whether consumer familiarity with one size or type of packaging would justify the need for repackaging. In *Bristol-Myers* the ECJ has made it clear that a 'need' to repackaging may exist even where a number of different types of packaging are used in the state of importation. This is so even if this includes the form of packaging in which the goods in question have been marketed.¹⁰⁷ The reason for this is that 'partitioning of the markets would exist if the importer were able to sell the product in only part of his market'.¹⁰⁸ This suggests that repackaging may be justified in response to consumer practices, in the same way as it is justified so as to meet national regulations on packaging. In *Boehringer Ingelheim KG v. Springward*,¹⁰⁹ the ECJ indicated that while consumer resistance would not always constitute an impediment to effective market access such as to render repackaging necessary, it might do so. More specifically, it stated 'there may exist on a market, or on a substantial part of it, such strong resistance from a significant proportion of consumers to relabelled pharmaceutical products that there must be held to be a hindrance to effective market access'.¹¹⁰

Repackaging is not justified if effective marketing in the state of importation could be achieved with a less radical alteration of the product.¹¹¹ For example, a trade mark owner can legitimately oppose the repackaging of the product where the importer is able to achieve the desired results merely by affixing new labels to the original packaging.¹¹² Thus, if labelling rules in the member state of destination require additional information to be given to that which is on the original label, it may not be necessary to remove or replace the original labels. This is because the mere application of a sticker with the additional

¹⁰⁵ *Frits Loendersloot v. George Ballantine & Son*, Case C-349/95 [1997] ECR I-6227, I-6260 (para. 45).

¹⁰⁶ *Bristol-Myers* [1996] ECR I-3457, I-3534-5 (para. 53). This is a matter of fact for the national tribunal to determine: *Aventis Pharma Deutschland GmbH v. Kohlpharma GmbH and MTK Vertriebs-GmbH*, Case C-43/00 [2002] 3 CMLR 24; [2003] ETMR 11 (where claimant's sold insulin in Germany in packs of 10 cartridges of 3ml and in France in 5 cartridges of 3 ml and the defendant imported packages from France to sell in Germany, where they were repackaged as 10s, the Advocate General said that 'if the only possible "retail units" in which Insuman cartridges . . . could be marketed in Germany were [in packs of 10] . . . [s]uch repackaging would accordingly be unequivocally necessary'. Whether they were the only 'retail units which could enable the defendants to access the German market or whether selling five packs would do so, was a matter to be assessed by the national court).

¹⁰⁷ *Ibid.*, para. 54.

¹⁰⁸ *Ibid.*, para. 54.

¹⁰⁹ *Boehringer Ingelheim KG, Boehringer Ingelheim Pharma KG v. Springward Ltd* Case 143/00 and *Merck, Sharp & Dohme GmbH v. Paranova Pharmazeutica Handels GmbH*, Case 443/99 [2003] Ch 27; [2002] 3 WLR 1697; [2002] All ER (EC) 581; [2002] ETMR (80) 933; [2002] FSR (61) 970 (para. 30) (repackaging by its very nature puts at risk the guarantee of origin, and therefore is prejudicial to the specific subject-matter of the mark irrespective of the actual effects of the repackaging by the parallel importer).

¹¹⁰ *Ibid.*, paras. 51-2. This was consistent with Advocate General Jacobs opinion, 12 Jul. 2001, paras. 117-9.

¹¹¹ *Bristol-Myers* [1996] ECR I-3457, 3532 (para. 46). This may depend on interpretation of any central marketing authorization: *Aventis Pharma Deutschland GmbH v. Kohlpharma GmbH and MTK Vertriebs-GmbH*, Case C-43/00 [2002] 3 CMLR 24; [2003] ETMR 11 (where authorization allowing sale of pharmaceutical in packs of 10 cartridges would not be achieved by selling cartridges in two bundles of 5).

¹¹² *Bristol-Myers* [1996] ECR I-3457, 3532 (para. 45).

information to the product may suffice.¹¹³ Repackaging does not appear to be justified simply because it would make parallel importing easier or more convenient. For example, repackaging is not justified so as to prevent the manufacturer from tracing the goods.¹¹⁴

The question has arisen as to whether the rule that the repackaging must be 'the minimum necessary' requires tribunals to make judgments about the details of specific designs. In *Glaxo Group v. Dowelhurst* Laddie J held that the rule of necessity was to be applied in this way, and that repackaging was only to be 'tolerated to the extent that it could be shown to inflict the minimum collateral damage on the mark'.¹¹⁵ Having held re-boxing to be necessary, Laddie J sought to limit the ability of the parallel importer to use the opportunity provided by repackaging to build up its own brand (referred to here as 'co-branding') or diminish the prominence of the claimant's mark (so-called 'de-branding'). In so doing, he found himself driven to determine the precise form of repackaging which it would be acceptable for a parallel importer to use. He held that re-boxing in plain white boxes was acceptable, but had doubts about other aspects such as removal of the claimant's mark from the front to the back of the pack (which might lead to de-branding), or use of the importer's own name prominently, or use by the parallel importer of a common get-up for its products (which were likely to build up the reputation of the importer). In contrast, in *Paranova AS v. Merck*,¹¹⁶ the EFTA Court has held that necessity is the trigger that gives a parallel importer a right to repackage, and that the nature of the re-packaging is subject to a distinct set of considerations (which focus on protection of the trade mark as a guarantee of origin, including its reputation). At that stage it does not matter that the parallel importer gains advantage, but only that the repackaging does not prejudice the reputation of the trade mark.

(ii) *Whether the original condition of the product is adversely affected.* As we have noted, Article 7(2)/section 12(2) allow trade mark owners to prevent the sale of repackaged goods 'where the condition of the goods is changed or impaired'. This impacts on repackaging cases through the requirement that the repackaging must not affect the condition of the goods. If the repackaging is carried out in such a way that it does not affect the original condition of the product inside the packaging, the ability of the trade mark to function as an indication of origin is safeguarded. If the goods are altered, however, then the essential function of the trade mark would be compromised if the trade mark owner was not permitted to prohibit further circulation of the altered goods.¹¹⁷

¹¹³ *Ibid.*, (para. 55).

¹¹⁴ *Frits Loendersloot v. George Ballantine & Son*, Case C-349/95 [1997] ECR I-6227, I-6258-9 (para. 42). Cf. *Zino Davidoff v. AG Imports* [1999] 3 All ER 711, 731-2 (in a case where the trade mark owner was deemed to have consented to importation of goods into the EEA from outside, Laddie J held that the trade mark owner could not object to the removal of product code reference numbers since this did not affect the 'physical or mental condition' of the goods).

¹¹⁵ 6 Feb. 2003. Laddie J later allowed an application to vary the order to permit the use of colour pink on the box (11 Jul. 2003) [2003] EWHC 2109 and the Court of Appeal referred the issue to the ECJ: [2004] EWCA Civ 129. See also *Glaxo Group v. Europharm* (9 May 2003) [2003] EWHC 1037 (Lawrence Collins J) (para. 32) ('I have not been persuaded that any part of Laddie J's judgment is wrong'). For commentary, see N. Gross and L. Harrold, 'Boehringer Ingelheim v. Swingward: Repackaging Revisited' [2003] EIPR 582 (seeing Laddie J's differentiation between repackaging and relabelling as unjustified under ECJ jurisprudence).

¹¹⁶ Case E-3/02 (8 Jul. 2003).

¹¹⁷ *Frits* [1997] ECR I-6227, I-6255 (para. 28).

Consequently, a trade mark owner may oppose any repackaging of their goods which involves either a risk that the product inside the package may be tampered with, or that the original condition of their goods is adversely affected.¹¹⁸ This is sometimes referred to as the doctrine of 'adverse effects'. In order to constitute a legitimate reason for a trade mark owner to oppose further commercialization of goods that have been repackaged, the risks of adverse effects must be *real*. The hypothetical risk of isolated error will not do. An example is this provided by *Bristol-Myers Squibb v. Paranova* where it was argued that the repackaging of blister packs might affect the condition of the drugs. It was suggested that by combining blister packs with different use-by dates into single sets, this might lead to the sale of products which might have been stored for too long. The Court of Justice did not consider this to be a real risk.

To determine whether the repackaging adversely affects the original condition of the product, both the nature of the product and the method of repackaging must be taken into account. Parallel importation is permissible where the repackaging only affects the external layer leaving the inner packaging intact, or where the repackaging is carried out under the supervision of a public authority in order to ensure that the product remains intact. Similarly, the addition of accurate information by the repackager will not constitute a legitimate reason to oppose the further circulation of the goods.¹¹⁹

The ECJ has recognized that the original condition of the product inside the packaging might be indirectly affected where the repackaged product omits important information, or gives inaccurate information about the nature, composition, effect, use, or storage of the product.¹²⁰

(iii) *The parallel importer must comply with certain obligations.* The decision that trade mark owners may not rely on their rights to oppose the marketing of products repackaged by an importer where it leads to artificial partitioning of the market is essential to ensure the free movement of goods. To protect the owner against misuse, the ECJ said that the parallel importation of repackaged goods ought only to be recognized insofar as the importer complies with certain requirements.¹²¹

Since it is in the trade mark owner's interest that consumers or end-users should not be led to believe that the owner is responsible for the repackaging, the ECJ said that the packaging should indicate both who manufactured the product,¹²² and who repackaged the product. That indication must be clearly shown on the repackaged product,¹²³ and be printed in such a way as to be understood by a person with normal eyesight, exercising a normal degree of attentiveness.¹²⁴ It is not necessary that a statement be made that the repackaging was carried out without the authorization of the trade mark owner.¹²⁵ In the

¹²⁴ *Bristol-Myers* [1996] ECR I-3457, I-3539 (para. 71).

¹²⁵ *Ibid.* (para. 72).

Playstation case,¹²⁶ it was said that the statement ‘This product has been opened to fit an adaptor to enable it to be used in the UK three-pin power sockets and to include an optional RFU adaptor repacked for Tesco Stores UK’ was probably insufficient to discharge the onus on the importer/seller of dispelling any impression that the trade mark owner was responsible for it.

The ECJ also said that the trade mark owner must be given advance notice that the repackaged product is being put on sale.¹²⁷ The owner may also require that they be supplied with a specimen of the repackaged product before it goes on sale. This enables the owner to check that the repackaging does not affect the original condition of the product or damage the reputation of the trade mark. This also affords trade mark owners with a better opportunity to protect themselves against counterfeiting.¹²⁸

In *Frits Loendersloot v. George Ballantine*, which concerned the relabelling of alcoholic drinks, the ECJ suggested that while in the case of pharmaceuticals it was necessary for a parallel importer to comply with the requirements set out in *Bristol-Myers*, it might not be necessary to do so in the case of other goods.¹²⁹ The Court agreed that the various requirements were intended to reflect the legitimate interests of the trade mark owner with regard to pharmaceutical products. In the case of the parallel importation of alcohol, the interests of the trade mark owner, particularly to combat counterfeiting, only required that the relabeller/importer provide them with prior notice that the relabelled products are to be put on sale.

In order for marketing of repackaged trade-marked goods to be permissible, the trade mark owner must be given notice, and provided with samples of the proposed packaging. In *Glaxo*, Laddie J. had taken the view that in the case of pharmaceutical marketing, this notice did not have to be provided directly by the parallel importer: it was sufficient if the Medical Controls Agency informed the trade mark owner.¹³⁰ The ECJ, agreeing with Advocate General Jacobs,¹³¹ did not accept Laddie J’s view. Rather, the Court said it is incumbent on the parallel importer itself to give notice.¹³² Moreover, whereas Laddie J had suggested that a period of two-three days notice would suffice, the ECJ preferred a longer time-frame. Having observed that the requirement period of notice and the requirement of samples were designed to enable the proprietor to protect its legitimate interests, the ECJ said that the notice period must provide the proprietor with ‘a reasonable time to react to the intended repackaging’. The Advocate General had suggested three-four weeks, but the Court indicated that on the evidence before it, were a sample provided along with the notice, a period of fifteen working days would be a reasonable time.¹³³

(iv) *Quality of packaging*. Another factor that may influence whether a parallel importer falls outside of Article 7(2)/section 12(2) relates to the standard of repackaging. Although

¹³⁰ [2000] FSR 529, 583–4, 586.

¹³¹ Case C-143/00 Advocate General Francis Jacobs, 12 Jul. 2001, paras. 131–3.

¹³² *Ibid.*, para. 64 (ECJ).

¹³³ *Ibid.*, para. 67 (ECJ). In *Glaxo v. Dowelhurst* (6 Feb 2003), Laddie J favoured a period of 7 days for cases of relabelling, but this was overturned on appeal: [2004] EWCA Civ 129 (para. 127).

not specifically in issue in *Bristol-Myers*,¹³⁴ the ECJ recognized ‘the possibility that the reputation of the trade mark and thus of its owner may nevertheless suffer from an inappropriate presentation of the repackaged product’.¹³⁵ This is particularly the case where the repackaging is defective, untidy, or poor quality. As such, the ECJ acknowledged that poor presentation might constitute a legitimate reason for the trade mark owner to object to the further circulation of the goods. The ECJ saw this as an element of the ‘specific subject-matter’ of the trade mark right.¹³⁶ However, the Court said that when assessing whether the presentation of the repackaged product is liable to damage the reputation of the trade mark, it is necessary to take account of the nature of the product and its market.¹³⁷ In the case of pharmaceutical products that are marketed directly to the public, packaging could be crucial in maintaining or inspiring public confidence in the quality and integrity of the product. In these cases, defective, poor-quality, or untidy packaging could damage the trade mark’s reputation.¹³⁸ However, where a pharmaceutical is sold to hospitals, the presentation of the product will be of little importance.¹³⁹ In the intermediate situation, where the product is sold on prescription through pharmacies, presentation may be important to consumers even though some degree of confidence in the quality of the product would flow from the fact that the products were only sold on prescription.¹⁴⁰

8.2.3 Rebranding

Another situation where the trade mark owner may have a legitimate reason to restrict further dealings of goods bearing their trade mark arises where the parallel importer alters the mark. This issue was discussed by the ECJ in *Pharmacia & Upjohn v. Paranova*. This action arose from the fact Upjohn marketed an antibiotic called clindamycin throughout the Community. Upjohn used the trade mark DALACIN in Denmark, Germany, and Spain, and the trade mark DALACINE in France. Paranova bought clindamycin capsules in France, which had been put on the market there by Upjohn under the DALACINE trade mark. Paranova bought the clindamycin with the intention of reselling the antibiotic in Denmark. In importing the drug into Denmark, Paranova sold it under the different name of DALACIN, the mark that Upjohn used in Denmark. As part of a trade mark infringement action brought by Upjohn against Paranova, the question arose as to whether Paranova could reaffix the mark in this manner. The issue was referred to the Court of Justice.¹⁴¹

The ECJ said that there is no ‘objective difference between reaffixing a trade mark after repackaging and replacing the original trade mark by another which is capable of justifying the artificial partitioning being applied differently in each of these cases’.¹⁴² As such, the question of whether a parallel importer could reaffix trade marks was to be decided by the same principles that were set out in the *Bristol-Myers* decision. The ECJ noted that the trade mark rights in the importing state may allow the proprietor of the trade mark to prevent the mark being replaced. They also noted that the rights of the trade mark owner cannot be used, however, where they give rise to an artificial partitioning of the market between member states. The ECJ said that the question of whether there had been an artificial partitioning of the market was to be decided in the way as set out in *Bristol-Myers*.

¹³⁴ *Bristol-Myers* [1996] ECR I-3457, I-3540 (para. 75); *Frits* [1997] ECR I-6227, I-6255 (para. 29).

¹³⁵ *Bristol-Myers* [1996] ECR I-3457, I-3540 (para. 75). ¹³⁶ *Ibid.*

¹³⁷ *Ibid.* ¹³⁸ *Ibid.* (para. 76). ¹³⁹ *Ibid.* (para. 77).

¹⁴⁰ *Ibid.* ¹⁴¹ [2000] CMLR 51. ¹⁴² [2000] CMLR 51, 82 (para. 37).

As such, the ECJ said that to justify reaffixing a trade mark as Paranova had done, the parallel importer needs to be able to show that the circumstances prevailing at the time of marketing were such that it was objectively necessary for them to replace the original trade mark to ensure that the product in question could be placed on the market by the parallel importer. In so doing the ECJ made it clear that the suggestion that had been made in *American Home Products* that to justify reaffixing the mark, the parallel importer had to prove that the owner had a subjective intention to divide up the market was not correct.¹⁴³

While the question of whether the relevant circumstances existed to justify rebranding was to be decided by national courts, the ECJ said that the 'condition of necessity' would be satisfied if, for example, consumer protection legislation prohibited use of the mark, or use of the mark was not allowed because it was misleading (here the language differences between member states becomes important).¹⁴⁴ The ECJ added that the requisite 'conditions of necessity' did not exist, however, if the replacement of the trade mark was 'explicable solely by the parallel importer's attempt to secure a commercial advantage'.¹⁴⁵

8.2.4 Advertising the goods

Another situation where the trade mark owner may have a legitimate reason to restrict further dealings in relation to goods bearing their trade mark is where the goods are advertised. The situations where the owner may have legitimate reasons to restrict such advertisements was discussed by the ECJ in *Christian Dior v. Evora*.¹⁴⁶ Evora operated a chain of chemist shops in the Netherlands. While not officially appointed as an official distributor of Christian Dior products, the Evora shops sold Dior perfumes (such as DUNE and FAHRENHEIT) obtained by means of parallel imports. When Evora advertised that it was selling Dior products, Dior claimed that Evora had thereby infringed Dior's trade marks associated with the perfumes.

The ECJ said that the proprietor is able to object to such advertising if there are 'legitimate reasons' for doing so. The ECJ held that the damage done to the reputation of a trade mark through subsequent advertising may in principle be a legitimate reason within Article 7(2) to allow the proprietor to oppose further commercialization of goods which have been put on the market in the Community by them or with their consent.¹⁴⁷ After referring to the case law concerning the repackaging of trade-marked goods, the ECJ said that:

[A] balance must be struck between the legitimate interest of the trade mark owner in being protected against resellers using his trade mark for advertising in a manner which could damage the reputation of the trade mark and the reseller's legitimate interest in being able to resell the goods in question by using advertising methods which are customary in his sector of trade.¹⁴⁸

In the case of prestigious luxury goods, resellers must endeavour to prevent their advertising from affecting the value of the trade mark by detracting from the allure and

¹⁴³ *Centrafarm v. American Home Products*, Case 3/78 [1978] ECR 1823, 1841–2 (paras 21–3) (suggesting some subjective action by the trade mark owner to partition is required).

¹⁴⁴ [2000] CMLR 51, 83 (para. 43). For cases before the German Supreme Court, see (2003) 34(5) *IIC* 559 (zantec/zantic).

¹⁴⁵ *Ibid.* (para. 44).

¹⁴⁶ *Parfums Christian Dior SA v. Evora BV*, C-337/95 [1997] ECR I-6013.

¹⁴⁸ *Ibid.*, I-6049 (para. 44).

prestigious image of the goods in question, and from their aura of luxury.¹⁴⁹ However, if the reseller is merely employing techniques that are customarily used for goods of the kind but not necessarily of the same quality in issue, then an objection to such advertising is only legitimate if it ‘*seriously damages* the reputation of the trade mark’.¹⁵⁰ The Court suggested that this would occur if in advertising goods bearing the mark, the trade mark was placed in a context which seriously detracted from the image which the trade mark owner had succeeded in creating around his or her trade mark.¹⁵¹

8.3 PARALLEL IMPORTATION OF TRADE-MARKED GOODS AND COPYRIGHT IN LABELS

While a parallel importer may be entitled to relabel goods for resale, the question may arise as to whether the proprietor can prevent importation by relying on any copyright they have in the label. Since the parallel importer would presumably reproduce and issue copies of such labels, there is a *prima facie* infringement of copyright.¹⁵² Nevertheless, a different approach has been taken in relation to labels. This can be seen in *Christian Dior v. Evora*¹⁵³ where Christian Dior sought to rely on its copyright in the picture marks to prevent Evora from reproducing their marks on advertising leaflets. The ECJ held that in these circumstances ‘the protection conferred by copyright as regards the reproduction of protected works in a reseller’s advertising may not . . . be broader than that which is conferred on a trade mark owner in the same circumstances’.¹⁵⁴ The ECJ added that the holder of copyright may not oppose the use of a trade mark by a reseller who habitually markets articles of the same kind but not necessarily of the same quality as the protected goods unless it is established that the use of those goods seriously damages their reputation.¹⁵⁵

8.4 INTERNATIONAL EXHAUSTION

The scope of Article 7 of the Trade Marks Directive and section 12 of the 1994 Act is confined to products placed on the market in the EEA.¹⁵⁶ It does not matter that the product bearing the mark has been manufactured in a non-member country if it has been

¹⁴⁹ *Ibid.* (para. 45).

¹⁵⁰ *Ibid.*

¹⁵¹ *Ibid.*, I-6050 (para. 47). In *BMW v. Deenik*, Case C-63/97 [1999] *CMLR* 1099, 1127 (para. 64) the ECJ added that if there is no risk that the public will be led to believe that there is a commercial connection between the trader and the trade mark proprietor, the mere fact that the trader derived an advantage from using the mark (for example because the advertisements lend an aura of quality to their business) would not of itself mean that the use was dishonest.

¹⁵² Moreover, the normal jurisprudence of the ECJ would protect those rights as forming the ‘specific subject matter’ of copyright. See Ch. 1.

¹⁵³ *Dior SA v. Evora BV* [1997] *ECR* I-6013.

¹⁵⁴ *Ibid.*, I-6053 (para. 58).

¹⁵⁵ *Ibid.* (para. 59).

¹⁵⁶ Since the rules differ so dramatically, it is important to know when goods are placed on the market in the EEA and when outside it. In *Glaxo Group v Dowelhurst Ltd* (31 Jul. 2003) Judge Prescott QC held that trade-marked anti-retrovirals had been placed on the market in the Community where they were sold and delivered to a party in France so that property had passed, even though there was an understanding that the purchaser was to re-sell them in Africa—‘whether the transaction is wholesale or retail is irrelevant’. The question whether goods have been placed on the market when they are sold subject to a condition that they are not to be resold in the Community has been referred to the ECJ in *Peak-Holding AB v. Axolin-Elinor AB*, Case 16/03 (pending).

lawfully put on the market in the member state from which it has been imported by the owner of the mark or with their consent.¹⁵⁷ Article 7 gives no explicit guidance as to what happens if the product is imported from outside the EEA and has not yet been placed on the market in the EEA with the consent of the trade mark owner. It is to this issue that we now turn.

8.4.1 Background

Prior to the passage of the Directive, the question of international exhaustion was a matter for individual member states.¹⁵⁸ The Commission's original proposal would have imposed international exhaustion. That is, trade mark owners would not have been permitted to oppose the resale of products which had been put on the market with their consent anywhere in the world.¹⁵⁹ The Commission subsequently changed its view, and its amended proposal explicitly limited the exhaustion principle to goods that had been put on the market 'in the Community'.¹⁶⁰ This left unclear the position in relation to goods placed on the market outside the Community.¹⁶¹

8.4.2 *Silhouette v. Hartlauer*

This issue was addressed in *Silhouette International v. Hartlauer*,¹⁶² where the ECJ was called upon to decide whether the principle of international exhaustion applied under the Directive.¹⁶³ *Silhouette* manufactured high-quality fashion spectacles which it distributed worldwide under the trade mark SILHOUETTE. The claimant was the registered proprietor for the mark in Austria and many other countries. *Silhouette* sold an out-of-date range of frames to a firm in Bulgaria. The defendant, *Hartlauer*, acquired the out-of-date frames from the Bulgarian firm and then imported them into Austria for resale.¹⁶⁴ *Silhouette* sought an order prohibiting *Hartlauer* from marketing the spectacles in Austria under its trade mark. They did this on the basis that the frames had not been put on the market in

¹⁵⁷ *Phytheron International SA v. Jean Bourdon SA*, Case C-352/95 [1997] ECR I-1729, I-1748 (para. 21).

¹⁵⁸ *EMI Records v. CBS United Kingdom*, Case 51/75 [1976] ECR 811, 845 (case law under Arts. 28–30 EC (formerly Arts. 30–6 of the Treaty) could not be transposed to imports from third countries).

¹⁵⁹ [1980] OJ C 351/80 Art. 6; for the Explanatory Memorandum, see COM(80) 635 final.

¹⁶⁰ COM (84) 470 final of 31 Jul. 1984; [1985] OJ C 351, 4. Apparently the proposal to so limit the provision was first mooted by the Economic and Social Committee. In *Silhouette International Schied v. Hartlauer Handelsgesellschaft*, Case C-355/96 [1998] 2 CMLR 953, 966 (para. 47) the Advocate General stated that: 'No doubt considerations of commercial policy and concern about the possible lack of reciprocity were among the reasons why the provision for international exhaustion which featured in the Commission's original proposal was not maintained'.

¹⁶¹ See cites in N. Shea, 'Does the First Trade Marks Directive Allow International Exhaustion of Rights?' [1995] *EIPR* 463, n. 6. Advocates of international exhaustion include F.-K. Beier, 'Industrial Property and the Free-Movement of Goods in the Internal European Market' (1990) 21 *IIC* 131; J. Rasmussen, 'The Principle of Exhaustion of Trade Mark Rights Pursuant to Directive 89/104 (and Regulation 40/94)' [1995] *EIPR* 174.

¹⁶² [1998] 2 CMLR 953, Case C-355/96. For commentary: A. Carboni, 'Cases about Spectacles and Torches: Now, Can We See the Light?' [1998] *EIPR* 471.

¹⁶³ The question had already been decided differently by the EFTA court in *Mag Instrument v. California Trading Company Norway* [1998] 1 CMLR 331, Case E-2/97 (para. 28) where the court concluded that it was for each of the EFTA states to decide whether to introduce or maintain the principle of international exhaustion with regard to goods originating outside the EEA.

¹⁶⁴ See T. Hays and P. Hansen, 'Silhouette is not the Proper Case Upon which to Decide the Parallel Importation Question' [1998] *EIPR* 277 (detailing factual background and arguing the case was one of re-importation).

the EEA by it or with its consent. As such, they had not exhausted their trade mark rights. *Silhouette* argued that the Directive provides that such rights can be exhausted only by reason of marketing within the EEA.

The Supreme Court of Austria sought a ruling from the ECJ as to whether Community law requires member states to provide for exhaustion only when the goods have been marketed in the EEA, or whether member states may (or perhaps must) provide for exhaustion when the goods have been marketed in a third country. Reaching the opposite conclusion to the EFTA court, the ECJ rejected the argument that the Directive left the member states free to provide for exhaustion in their national law. In the light of the first and ninth Recitals, the ECJ said that Articles 5 to 7 of the Directive must be construed as ‘embodying a complete harmonization of the rules relating to the rights conferred by a trade mark’.¹⁶⁵ A single rule was also necessary to safeguard the functioning of the internal market. Given the terms of Article 7, the only plausible harmonized rule was that member states are obliged to confer on trade mark owners the ability to prevent importation of trade-marked goods from outside the EEA (even where the same trade mark owner has consented to that marketing).¹⁶⁶

8.4.3 Consent

Although *Silhouette* made clear that member states were not to apply rules of international exhaustion, it took another ECJ decision to clarify the next logical question: what amounts to consent to importation of goods into the European Economic Area? In *Zino Davidoff*,¹⁶⁷ Laddie J asserted that even though, in principle, the trade mark owner has the right to stop importation into the EEA of goods not previously marketed in the EEA by or with his consent, this right cannot be used where the trade mark owner had consented to such importation: and remarkably he held that, at least under English law, consent existed where the proprietor ‘has agreed, expressly or otherwise to such entry, or he has, directly or otherwise, placed the goods in the hands of a third party under conditions which give the third party a right to distribute and onward sell them without restriction’. In effect, in the absence of full and explicit restrictions being imposed on the purchasers at the time of purchase, according to Laddie J a trade mark owner is treated as impliedly consenting to further distribution of those goods (including their importation into the EEA). On the facts of the case, placing goods on the market in Singapore was sufficient consent to their importation into the EEA.

The ECJ, following the logic of *Silhouette*, rejected Laddie J’s approach.¹⁶⁸ First, it held that it was implicit from the Directive that there must be a harmonized concept of consent

¹⁶⁵ [1998] 2 CMLR 953, 977 (para. 25).

¹⁶⁶ The decision of the Court of Justice received a mixed response. It was variously described as ‘a welcome relief for trade mark owners’ and as bad news for consumers: C. Steele, ‘Fortress Europe for Trade Mark Owners’ (1998) (Aug.) *Trademark World* 14, 16.

¹⁶⁷ *Zino Davidoff v. A. & G. Imports* [1999] 3 All ER 711.

¹⁶⁸ Joined Cases C-414/99 and C-416/99 [2002] Ch 109; [2001] ECR I-8691; [2002] 1 CMLR 1. For commentaries, see P. Dryberg and G.T. Petursson, ‘What is Consent? A Note on Davidoff and Levi Strauss’ (2002) 27 *ELR* 464 (generally approving of the decision); T. Aplin, ‘The Scope of Consent in Article 7(1) of the Trade Marks Directive’ (2002) 61 *CLJ* 531; N. Gross, ‘Trade Mark Exhaustion: The Final Chapter’ [2002] *EIPR* 93 (describing the decision as a clear victory for brand-owners); D. Kalley, ‘Levi Strauss v Tesco: At A Difficult Juncture of Competition, IP and Free Trade Policies’ [2002] *ECLR* 193 (criticizing the narrow reasoning of the Court, especially its failure to consider competition and trade issues)

in this context.¹⁶⁹ Second, the ECJ held that consent need not be express but could be implied. Nevertheless, that consent must indicate an intention to renounce one's right to object to the importation of the good into the EEA unequivocally.¹⁷⁰ Consequently, while consent could in some cases be inferred from facts and circumstances prior to, simultaneous with or subsequent to the placing of goods on the market outside the EEA, consent could not be implied from the failure to express positively that goods were not to be imported into the EEA or from silence. In effect, it will be very difficult for a parallel importer to persuade a court that consent exists in the absence of evidence of express agreement. (One example might be a situation where the trade mark owner has known about, but not objected to, a continuous practice of importation of trade-marked goods into the EEA).¹⁷¹

8.4.4 Proving consent

The *Davidoff* decision seemed to imply that a trader operating within the EEA who is faced with an allegation that the goods have been imported from outside the EEA, must be able to show that a trade mark proprietor has consented to the circulation of goods in the EEA. In *van Doren + Q GmbH v lifestyle + sportswear Handelsgesellschaft mbH*,¹⁷² the ECJ indicated that the issue of the onus of proof was one for member states, but that the national rule should not itself inhibit the free movement of goods within the EEA. Here, Stüssy Inc, a company based in California, owned the mark *stüssy* for clothes and Van Doren were the exclusive distributors of the *stüssy* clothes for Germany. Lifestyle was selling *stüssy* clothes in Germany, and Van Doren claimed there was trade mark infringement. Van Doren alleged the goods came from the United States, whereas Lifestyle alleged it had sourced them in the EEA (so that the trade mark rights were exhausted), but refused to name its suppliers. Under German law it was for the defendant to prove exhaustion, though the Appeal Court had sought to place some onus on the claimant. The Bundesgerichtshof therefore asked the ECJ whether Article 28 EC required there to be an exception to the rule that the full burden of proof fall on the defendant. First, the Court held that the German rule of evidence is consistent with Community law, including Articles 5 and 7 of the Directive. However, the Court qualified this by stating that such a rule of evidence might need to be qualified where its application might lead to 'a real risk of partitioning of national markets'. In such circumstances, Article 28 EC requires the rule of evidence to be qualified, and instead, a national court should divide up the different matters to be proved. More specifically, the onus would first fall on the proprietor of the

¹⁶⁹ para. 43. ¹⁷⁰ para. 45.

¹⁷¹ See also *Levis v. Tesco*s [2002] 3 CMLR 11; [2002] ETMR (95) 1153 where *Davidoff* was applied. There *Levis* sought summary judgment. *Tesco*s, sought to resist, arguing that it had a defence under s. 10(6) of the UK Act, in particular taking account of the Human Rights Act 1998 (and its recognition of a right to property in Art. 1 of the First Protocol to the ECHR and the right to freedom of expression under Art. 10 ECHR). It also argued that Art. 7 of the Directive was invalid. Pumfrey J rejected these arguments. He took the view that s. 10(6) being a homegrown provision, was to be construed narrowly and confined in its application to 'comparative advertising'. Pumfrey J also took the view that rule against international exhaustion, though controversial, was a justifiable limitation to the right of private property in the public or general interest and was not a disproportionate or intolerable restriction on the right. Pumfrey J also thought the argument based on freedom of expression was 'devoid of any substance'. Finally, he found the argument that Art. 7 of the Directive conflicted with the Treaty to be 'hopeless'.

¹⁷² Case C-244/00 [2003] 2 CMLR (6) 203; [2003] ETMR (75) 922. The importance of this issue was highlighted by Thomas Hays: T. Hays, 'The Burden of Proof in Parallel Importation Cases' [2002] EIPR 353.

mark to prove that the goods were first marketed outside the EEA. It would then be for the parallel importer to prove consent to subsequent importation of the products.

The ECJ gave an example of a situation where there could be such a risk of partitioning so as to qualify the general approach, that is, where European marketing is by way of an exclusive distribution system. In such cases, the effect of requiring the parallel importer to prove consent is tantamount to requiring it to reveal its sources (and hence expose the breaches in the trade mark owner's exclusive distribution system). Such exposure would enable the trade mark proprietor to remove its leaky distributor from the supply chain and thus prevent the parallel importer from obtaining supplies in this way. In such cases, therefore, the ECJ requires the trade mark proprietor to prove that the goods were not first marketed in the EEA. It might do so by referring to batch numbers, or other characteristics which demonstrate that first marketing was outside the EEA.

8.4.5 Competition rules

Finally, it should be noted that there are certain unresolved issues concerning the inter-relationship between European trade mark policy and European competition law, particularly Article 81 EC. The relevance of the latter was made clear by the ECJ in the *Javico v. Yves St Laurent* decision.¹⁷³ There, Yves St Laurent sought to terminate a distribution contract with Javico under which Javico undertook to sell products only in Russia and the Ukraine, because it had been discovered that some of the products had found their way to the United Kingdom. The Cour d'Appel of Versailles sought the advice of the ECJ as to whether such a contract might be prohibited by Article 81. The ECJ held that the agreement had as its object the restriction of competition, so the key question was whether it was capable of affecting trade between member states. If the agreement specifically prohibited imports into the EEA, it would have as its object the restriction of competition in the EEA and would be likely to be void. However, here the contract specified there were to be no sales outside the territory (whether to the EEA or not). Consequently, the Court said the question was what was the 'effect' of the agreement. This involved assessing the economic context, particularly the relative position and importance of the parties on the market in question. If the effects were insignificant, the contract would be outside the prohibition and hence valid. If the Community market is oligopolistic, or the price differentials are significant, it is necessary to examine the likely impact of the disputed contract. If the market outside the Community is relatively small compared to that within the Community, the impact is likely to be insignificant. However, assessing such matters is the task of national courts.

While in *Silhouette*, the ECJ has clearly indicated trade marks law should enable a proprietor to keep legitimate goods first marketed outside the EEA out of the market, when examining competition policy the ECJ in *Javico* has suggested that agreements which prohibit marketing in the EEA are contrary to Article 81 EC (formerly Article 85 of the Treaty). The two policies are in conflict, and the likely reconciliation is through a limited application of *Javico*. In any case, *Davidoff* reduces the likely application of *Javico* for two reasons: firstly, because the definition of consent (and onus of proof issues) means that the trade mark proprietor need not support his trade mark rights through contractual prohibitions on importation into the EEA, and so can avoid Article 81 (which applies to

¹⁷³ *Javico International and Javico AG v. Yves St Laurent Parfums SA*, Case C-306/96 [1998] ECR I-1983.

agreements rather than unilateral acts).¹⁷⁴ Second, because even if a contract selling goods outside the EEA obliges the purchaser not to resell within the EEA, it is arguable that such a clause has no effect on competition over-and-above that attributable to the proprietor's rights under trade mark law.¹⁷⁵

8.4.6 Reform?

Following the *Silhouette* decision, the European Commission raised the question of reform of the rules relating to international exhaustion. It commissioned a study of the economic effects of changing to international exhaustion, which, in turn, indicated that the issues were complex (there might be effects not just on pricing, but also on matters such as product quality or after-sales services), but that the price-benefits to consumers of changing the regime would probably be limited (in some sectors up to 2 per cent).¹⁷⁶ The Commission then consulted widely with member states and interested parties, mooted various possible options, such as having international exhaustion only for certain products (for example, excluding pharmaceuticals and sound recordings).¹⁷⁷ However, in May 2000, Commissioner Bolkestein informed the ministers at a meeting of the Internal Market Council that the Commission did not propose any action in this field.

9 OTHER DEFENCES: TRANSITIONAL AND GENERAL

The proprietor of an existing trade mark registered under the 1938 Trade Marks Act is given the benefit of the extended rights contained in sections 9 to 12 of the 1994 Act. Transitional provisions in Schedule 3, paragraph 4(2) state that it is not an infringement of such a mark 'to continue after commencement any use which did not amount to infringement of the existing registered mark under the old law'. In so far as the rights contained in sections 9 and 10 are broader, or the defences contained in sections 11 and 12 are narrower, care must be taken as regards continued use of old marks. For example, a person who continues to use a mark for dissimilar goods, who would now be liable under section 10(3), is able to continue such use after 31 October 1994. Similarly a defendant who bona fide uses a company name may be able to rely on the old law of bona fide use of one's own name, even if the defence under the 1994 Act is confined to personal names. In either case the defendant must demonstrate continuous use, though a small hiatus in a long use may be ignored.¹⁷⁸ The defence is not confined to precisely the same use, but will not cover uses which are 'different in kind': thus non-infringing use of a mark in advertising prior to 1994 was held not to justify use on a web site after 1997.¹⁷⁹

EXPLOITATION AND USE OF TRADE MARKS

1 INTRODUCTION

Given that the law of registered trade marks developed from the law of passing off, it is not surprising that it has long carried with it limitations derived from the law of passing off. One such limitation is that passing off does not protect property in the mark. Instead, it protects traders against misrepresentations affecting a distinct proprietary interest, namely, 'goodwill'. While this limitation has gradually been removed from the law of registered trade marks, (trade marks are now treated as forms of property in their own right),¹ the law relating to the exploitation of trade marks has yet to embrace wholeheartedly the idea that a trade mark is an asset over which its proprietor should have full control.² Although it is now common practice for trade marks to be included on the balance sheet of companies,³ the law still imposes a number of restrictions on the use that can be made of marks. We begin this chapter by looking at the ownership of trade marks, focusing in particular on the problems that arise in relation to co-ownership. After going on to look at the ways in which trade marks can be exploited, we will focus on the limitations placed on the uses that can be made of a trade mark.

Before examining these matters in more detail, it is worth observing that while the exploitation of British trade marks is governed by the 1994 Trade Marks Act, the Community Trade Mark Regulation only sets out a partial code for dealing with Community marks. In the absence of harmonized Community laws on transfers, assignments, security interests, testamentary dispositions, and insolvency, the drafters of the Regulation decided that the most appropriate approach would be for transactions in relation to Community trade marks to be governed by the laws of the most closely connected member state. As a result, transactions of Community marks will normally be dealt with by the laws of the country in which the proprietor has their seat or domicile on the relevant date.⁴

2 OWNERSHIP

2.1 PROPRIETORSHIP

The owner of a trade mark is the person who registers it. In contrast with patent law, which recognizes the concept of the 'inventor' and 'person entitled' as entities which have an existence prior to (and thus independently of) the application for a patent, the 1994 Act does not recognize that a trade mark may have a proprietor before an application is made. In short, the Act treats the first person to register as the proprietor; and the only proprietor is the registered proprietor. Where there is competition as to who should be entitled to a trade mark, those disputes are decided by reference to the relative grounds of invalidity, and by the requirement that all applications be made in good faith.

2.2 CO-OWNERSHIP

One potential problem which arises in the exploitation of a trade mark is when the mark is owned by two or more parties. In these circumstances, the question arises as to whether one co-owner can utilize the trade mark without the consent of other co-owners. Where there is no contract between two or more co-owners of a trade mark, the 1994 Trade Marks Act declares that each of the co-owners is 'entitled to an equal undivided share in the registered trade mark'.⁵ This means that each owner is permitted 'by himself or his agents, to do for his own benefit and without the consent of or the need to account to the other or others, any act which would otherwise amount to an infringement of the registered trade mark'.⁶ The power and immunity given to each co-proprietor is limited because the joint owner cannot, without the consent of the other co-owner(s), license others to use the trade mark.⁷

Two points are worth noting about the co-ownership of trade marks. The first is that the position with regard to co-ownership of Community marks is unclear. Article 16 refers to 'joint' proprietorship, which has been taken by some to be a reference to the fact that they hold as joint tenants rather than as tenants in common.⁸ However, since the aim of Article 16 is to determine the national laws under which dealings in a mark fall to be assessed, the better view is that if the first-named joint proprietor is from the United Kingdom, the UK provisions on joint ownership apply. That is, the joint proprietors are deemed to be tenants in common.

The second point is that co-ownership of trade marks presents the possibility of two distinct traders using the same mark simultaneously in relation to the same categories of goods. Although this is unlikely in the normal course of events, such a situation is quite plausible where, for example, when a partnership breaks down, a disgruntled co-owner might use the same mark on goods of a lower quality. With formerly related but now unrelated businesses selling goods under the same sign, the rules on co-ownership are likely to create confusion in the marketplace.⁹ Given that this is exactly the sort of

⁵ TMA s. 23.

⁶ TMA s. 23(3).

⁷ TMA s. 23(4).

⁸ Annand and Norman (1998), 237.

⁹ J. T. McCarthy, 'Joint Ownership of a Trademark' (1983) 73 *TM Rep* 1.

confusion which trade marks law is designed to prevent, it might be questioned why the 1994 Trade Marks Act preferred this form of co-ownership. Perhaps it was foreseen that because such fragmented use of the same sign might render the mark liable to revocation, the co-owners were likely to reach a solution that minimized consumer confusion and thus protect the mark.¹⁰

3 MODES OF EXPLOITATION

Trade marks and trade mark applications can be exploited in a number of different ways.¹¹ Perhaps the most common technique is for owners to exploit the mark themselves. Trade marks may also be assigned, licensed, mortgaged, or devolve by operation of law (notably through death or bankruptcy).¹² We will look at each in turn.

3.1 SELF-EXPLOITATION

One of the most common ways trade marks are used is for the owner to exploit the mark themselves. Often this will involve the owner making the goods, applying the mark, and selling the goods. While a trade mark owner may do all of these acts themselves, they often use third parties. For example, a trade mark owner will use goods manufactured by someone else, a 'contract manufacturer', to which they apply their marks. In these circumstances, the mark is not used to indicate that the goods were manufactured by the trade mark owner. Instead, the mark indicates that the goods were selected and approved by the trade mark owner.¹³ By and large, such relationships are not problematic. However, if they break down, for example, through bankruptcy or failure to meet contractual stipulations, difficulties may arise in determining whether parties other than the trade mark owner can sell the goods that have been marked with the trade mark proprietor's consent.¹⁴

Trade mark proprietors use a number of strategies when placing their goods on the market. In many instances, they will be happy for the goods to reach the market by any means. In other cases, however, to maintain the allure of the product they may wish to restrict distribution to particular persons. This is the case with perfumes, which many manufacturers have deemed unsuitable for sale in certain kinds of outlets such as supermarkets.¹⁵

Once the goods are on the market in the EEA, the rights of the trade mark owner are exhausted. Usually, therefore distributors of the trade-marked goods do not need permission to sell goods bearing the mark. A trade mark owner may, however, wish to control

¹⁰ For other criticisms of the provision on tenancy in common, see Annand and Norman (1994), 189–90.

¹¹ For a discussion of the many issues that may arise in the exploitation of trade marks, see N. Wilkof, *Trade Mark Licensing* (1995).

¹² TMA s. 24(1); CTMR Art. 21 (bankruptcy).

¹³ Indeed, Millett J has noted that a trade mark owner 'may have the components made by one company, assembled by another, the trade mark affixed by a third and the goods marketed by a fourth'. *Accurist Watches v. King* [1992] FSR 80, 88.

¹⁴ As in *Accurist Watches v. King* [1992] FSR 80 (sale by manufacturer in exercise of retention of title clause); N. Wilkof, *Trade Mark Licensing* (1995), ch. 8.

¹⁵ *Ibid.*, ch. 7.

certain uses of the mark by such a distributor. As we noted in Chapter 41, there will be limitations on the ways in which the distributor may use the mark in advertising, and as regards any alteration of the goods.

3.2 ASSIGNMENT

An assignment is a transfer of ownership of the trade mark (or application). As a result of an assignment, the assignee stands in the shoes of the assignor and is entitled to deal with the trade mark as they please. In contrast with a licence where the licensor retains an interest in the trade mark, once a trade mark owner has assigned the trade mark they no longer have any interest in, or responsibility to maintain, the trade mark.¹⁶

Assignments of trade marks can occur without any corresponding transfer of business or goodwill.¹⁷ This is a critical difference between passing off and registered trade marks. An owner of an unregistered mark can only assign the benefit of the mark by assigning the goodwill of the business with which it has been used. This common-law distrust of the trading in marks reflects the understanding that marks are protected because they operate in the consumers' eyes as indications of source. Following this logic, if assignments were allowed it would create confusion as to source of the goods or services. With registered trade marks being treated more and more as assets, this rationale for restricting assignments carries less weight.

An assignment can be made in part or in a limited manner. A national trade mark may be assigned in relation to part of the goods and services for which the mark is registered, limited in the manner of its use,¹⁸ or geographically (subject to compliance with the Treaty of Rome).¹⁹ In contrast, a Community trade mark must be dealt with 'in its entirety, and for the whole area of the Community'.²⁰

In order for an assignment to be valid, it must be in writing and signed by the assignor. In the case of a Community mark, the assignment must be signed by all the parties to the transaction.²¹ In situations where the trade mark or application is owned by more than one party, each co-owner can only assign their share and then only if the others consent to such an assignment.²² It follows that a full assignment of a mark would require the cooperation and signatures of all co-owners. While the assignment does not need to be registered to be effective, there are a number of advantages that follow from registration: these are reviewed below. With respect to the assignment of Community marks, the OHIM is obliged not to register any transfer which is likely to mislead the public as to the nature, quality, or geographical origin of the goods or services in respect of which it is registered. In contrast, the UK Registry has relinquished even a minimal supervisory role.²³

¹⁶ TMA s. 24; CTMR, Art. 24.

¹⁷ TMA s. 24(1); CTMR, Art. 17. The change was first brought about in the UK by TMA 1938, s. 22.

¹⁸ TMA s. 24(2). ¹⁹ TMA s. 24(2)(b). ²⁰ CTMR, Art. 16(1).

²¹ TMA s. 24(3) (must be signed by assignor); CTMR, Art. 17(3) (must be signed by parties to the contract).

²² TMA s. 23(4).

²³ For refusal of transfer to be justified such deception must be clear from the transfer documents. Moreover, the OHIM should accept the transfer insofar as the transferee agrees to limit registration of the Community mark to goods or services in respect of which it is registered: CTMR, Art. 17(4). In addition, under Art. 17(2) of the Regulation a presumption exists that a transfer of the whole of an undertaking includes the transfer of the Community trade mark.

3.3 VOLUNTARY LICENCES

Another common mode of exploitation is for a trade mark owner to grant a licence which enables others to carry out specified activities in relation to the mark. The licensing of trade marks, which facilitates merchandising, franchising, and distribution agreements more generally, is at the heart of a multi-billion pound industry,²⁴ that ‘pervades the way . . . goods and services are distributed, marketed and sold, both domestically and internationally’.²⁵ At a basic level, a licence is merely a permission to do an act that would otherwise be prohibited without the consent of the trade mark owner. A licence enables the licensee to use the trade mark for specified goods or services without infringing. So long as the use falls within the terms of the licence, the licensee is immune from an action by the trade mark owner.²⁶ The terms of a voluntary licence are, for the most part, up to the parties to determine and thus will depend on the needs, capacities, and wishes of the parties.²⁷

However, under trade mark law a licence amounts to much more than a mere permission to use a mark. In the absence of an agreement to the contrary, a trade mark licence binds a successor in title to the grantor’s interest.²⁸ In addition, the 1994 Act enables a licensee of a trade mark to enforce their rights against third parties.²⁹ Given the almost proprietary nature of a trade mark licence,³⁰ it is not surprising that the law requires the licence to be in writing for it to be ‘effective’.³¹ A licence need not be registered to be valid as against the licensor, but there are several advantages from registration, which are discussed below.³²

Licences may take many forms: from a one-off permission through to an exclusive licence. Licences³³ (even of Community trade marks) may be limited geographically,³⁴ temporally, in relation to particular goods or services, or as to manner of use.³⁵

Of the different forms of licence, perhaps the most significant (in terms of law, at least), is the ‘exclusive licence’. An exclusive licence is an agreement according to which the registered proprietor of a trade mark not only confers permission on the licensee to use the trade mark, but also promises that they will not grant any other licences and that they will not exploit the mark themselves.³⁶ The legal consequence of this is that an exclusive licence confers a right in respect of the trade mark *to the exclusion of all others including the licensor*. In some ways it is the intangible property’s equivalent to a ‘lease’.³⁷

²⁴ G. Battersby and C. Grimes, ‘Merchandising Revisted’ (1986) 76 *TM Rep* 271, 275.

²⁵ N. Wilkof, *Trade Mark Licensing* (1995), 1.

²⁶ *Sport International v. Inter Footwear* [1984] 2 *All ER* 321.

²⁷ If provision is made for such action, the law recognizes that a licensee may grant sublicences. TMA s. 28(4).

²⁸ TMA s. 28(3); CTMR Art. 23(1). But note Art. 23(2).

²⁹ TMA s. 30; CTMR Art. 22(3).

³⁰ See N. Wilkof, *Trade Mark Licensing* (1995), ch. 12. For discussion of the distinction between licences and proprietary interests in the context of relief from forfeiture see esp. paras. 12.33–7, 232–5.

³¹ TMA s. 28(2). Presumably the law will continue to recognize implied licences and oral consents, as well as to apply the traditional principles relating to estoppel.

³² Where there are joint proprietors, all of them must consent to any licence: TMA s. 23(4)(a).

³³ TMA 28(1)(b); TM Dir. Art. 8(1); CTMR Art. 22(1).

³⁴ TMA s. 28(1)(b); CTMR Art. 22(1).

³⁵ TMA s. 28(1).

³⁶ TMA s. 29(1). See *Scandecor International v. Scandecor Marketing* [2002] *FSR* 122 (para. 14).

³⁷ For an analogy between a franchise agreement and a lease of ‘goodwill’ see *Kall-Kwik Printing (UK) v. Frank Clarence Rush* [1996] *FSR* 114.

An exclusive licence confers powers on the licensee that are equivalent to those of an assignee.³⁸ Undoubtedly the most significant aspect of this is that unlike a mere licensee,³⁹ an exclusive licensee can sue infringers without having to persuade the proprietor to take action on their behalf.⁴⁰ An exclusive licensee is given the same rights as an assignee and therefore has the right to bring proceedings in respect of any infringement that occurs after the date of the licence agreement. Indeed, an action can be brought by both the trade mark proprietor and an exclusive licensee.⁴¹ The statute provides guidance where concurrent rights exist.⁴²

Although the law distinguishes between bare, contractual, and exclusive licences, commercial dealings are less precise in the way the term 'licence' is used. Indeed it has been said that 'both business executives and lawyers use the word "licence" indiscriminately and conclude agreements they call "licences" when no licence is really necessary'.⁴³ From a commercial point of view, it is possible to characterize licences and similar arrangements in a more functional manner as product trade mark licences, franchise agreements, and distributorship agreements.⁴⁴

Under a 'product trade mark licence', the licensee will manufacture the product and be permitted to apply the mark to it. This often occurs with character merchandising, and also with the manufacture of many products (such as soft drinks, where the trade mark owner supplies the syrup but the licensee makes up, bottles, and sells the drink). Product trade mark licences are also often linked to licences of patents and technology.

It has been said that franchising accounts for a third of the United Kingdom retail turnover.⁴⁵ Under a franchise agreement, the franchisor provides the framework within which the franchisee operates. While the nature of the agreement varies from case to case, the franchisor effectively provides the shell within which the business operates. The franchisor may provide things such as the corporate image (including the mark), the advertising, training, premises, know-how, and support service.⁴⁶ Familiar examples of franchises include PRONUPTIA's wedding attire, KALL-KWIK photocopying shops, and PIERRE VICTOIRE restaurants.⁴⁷

A 'distribution agreement' is merely a means by which a producer regulates how their goods reach the market.⁴⁸ Although distribution agreements are not usually trade mark licences, such agreements may include clauses requiring the distributor to sell the goods under the producer's trade mark in a manner specified by the producer. Alternatively, they may require a licensee to use particular distributor's marks.⁴⁹ In order to protect the

⁴⁶ *Kall-Kwik Printing (UK) v. Frank Clarence Rush* [1996] *FSR* 114.

⁴⁷ Franchises have been subdivided into three categories: 'service franchise agreements' which concern the supply of services (e.g. KALL-KWIK); 'production' or 'industrial franchise agreements' which concern the manufacturing of goods; and 'distribution franchise agreements', which involve the sale of goods (e.g. PRONUPTIA).

⁴⁸ In some circumstances, distribution franchises can share many facets of distribution agreements. R. Joliet, 'Trademark Licensing Agreements under the EEC Law of Competition' (1983–4) 5 *Northwestern Journal of International Law and Business* 755, 764–5.

⁴⁹ *Consten & Grundig v. EC Commission*, Case C-56/64 [1966] *CMLR* 418.

reputation of the brand, a supplier may restrict distribution to certain specialist shops: a recent example has been the refusal of perfume manufacturers to supply supermarkets.

3.4 MORTGAGES

Like other forms of property, trade marks may be used as security for a debt.⁵⁰ This can be a useful technique which enables the proprietors of trade marks to raise funds. One form of such security is the legal mortgage, which involves an assignment of the trade mark by the trade mark owner (mortgagor-borrower) to the mortgagee-lender. This is subject to a condition that the trade mark will be reassigned to the mortgagor when the debt is repaid (or as the law says 'on redemption'). It is important that the assignment reserves for the mortgagor a right to continue using the trade mark. This is probably best achieved by reservation of an exclusive licence.⁵¹ An alternative form of security is to subject the trade mark to a 'charge',⁵² in which case there is no assignment. Instead, the chargee gains certain rights over the trade mark. In the case of both forms of security, to be valid the transaction must be in writing and signed by the parties.⁵³ Where there are joint proprietors, all of them must consent to the grant of a security interest.⁵⁴ While such an interest need not be registered to be valid, there are advantages from registration which are reviewed below.

3.5 TESTAMENTARY DISPOSITIONS

Because a trade mark is personal property, it is capable of passing on the death of the proprietor either by will or according to the rules applicable in cases of intestacy. In the case of the death of one co-owner, because they hold the trade mark as tenants in common (rather than as joint tenants),⁵⁵ the share of the deceased co-owner passes along with the rest of its estate rather than accruing to the other co-owners. In devolving the trade mark, the personal representative must sign a written assent. It appears that a Community trade mark will pass in accordance with the laws of the country in which the proprietor was domiciled at their death.⁵⁶

3.6 REGISTRATION OF INTERESTS AND TRANSACTIONS

We observed earlier that trade mark registration performs a number of different functions.⁵⁷ It helps to overcome difficulties in proving the existence of goodwill, allocates priorities between competing traders wishing to secure rights over a particular trade mark, and acts as a repository of information which alerts third parties who might independently wish to use the same or a similar mark about the proprietor's rights. While in the past another, perhaps the chief, concern of registration (particularly of trade mark licences) was to restrict trafficking in marks (and thus to protect consumers from

⁵⁰ TMA s. 24(4); CTMR, Art. 19(1). See further: Morcom *et al.*, para. 11.1; C. Smith, 'Trade Marks as Collateral in the United Kingdom', in D. Campbell, H. Harmeling, and E. Keyzer (eds.), *Trademarks: Legal and Business Aspects* (1994), 247.

⁵¹ *Ibid.*, 250–2 (advising that the legal mortgage technique be avoided).

⁵² TMA s. 24(5).

⁵³ TMA s. 24(3)–(5).

⁵⁴ TMA s. 23(4).

⁵⁵ TMA s. 23(1).

⁵⁶ CTMR, Art. 1(a).

⁵⁷ See above at p. 766.

deception), under the 1994 Act the supervisory role of the Registrar has been reduced to virtually nothing. As a result, registration is now primarily concerned with providing public information and securing priorities between competing rights-holders, or as the White Paper put it, with 'legal transparency'.⁵⁸

Although legal transparency might be an admirable goal, because there is no statutory obligation to register marks or transactions therewith, and indeed transactions are valid in the absence of registration, the register cannot be said to operate as a 'mirror' of legal rights over commercial signs in the way the Land Registration system purports to be a reflection of proprietary rights over real property. Nevertheless, the usefulness of the Register is ensured because of the existence of incentives for parties to transactions in marks to enter them on the Register. This is because as unregistered transactions are vulnerable to later dealings, it is highly advisable to register them immediately.⁵⁹ Registrable transactions are listed in section 25(2) as assignments, the making of assents, the granting of securities, and the grant of licences.⁶⁰ Notice of trusts may not be registered.⁶¹

While similar transactions may be registered on the UK Register and at the OHIM, the consequences of failing to register a transaction differ between the two regimes. As such, they will be considered separately. Registration of transactions with regards to UK marks at the UK office has three distinct effects. First, registration ensures that the interest of the registrant survives further inconsistent transactions in relation to the mark. More specifically, section 25(3) states that an unregistered transaction is 'ineffective' as against a person acquiring a conflicting interest in or under the mark in ignorance of it.⁶² Second, as regards licences, registration enables the licensee to acquire the full scope of available rights and remedies.⁶³ Third, financial remedies (damages and accounts of profits) are withheld from assignees and licensees who do not register promptly, that is within six months of the transaction, as regards any acts of infringement that occur prior to registration.⁶⁴

According to the Community Trade Mark Regulation, similar consequences flow from non-registration of transactions affecting Community marks. Article 23 states that transfers, grants of security, and licences of Community marks shall only have effect *vis-à-vis* third parties after entry in the Register, unless that third party knew of the relevant transaction at the date on which they acquired their interest. The effect of levies of execution and bankruptcy on third parties are matters for the law of the relevant member states.

A special incentive to register is placed on transferees of Community marks. According to Article 17(6), as long as the transfer has not been entered in the OHIM, the successor may not invoke the rights arising from registration of the Community trade mark. It is

⁵⁸ White Paper, *Reform of Trade Marks Law*, Cm. 1203 (1990), para. 4.38.

⁵⁹ See N. Wilkof, *Trade Mark Licensing* (1995), chs. 3 and 4.

⁶⁰ The Community Trade Mark Regulation provides that on request of one of the parties the following shall be entered on the register and published: a transfer, security, levy of execution, licence (or transfer thereof): CTMR, Arts. 17(5), 19(2), 20(3), 21(2), 22(5).

⁶¹ TMA s. 26.

⁶² The effect of this can be illustrated as follows: A assigns the trade mark to B on 1 Jul. 1998, and A then licenses the trade mark to C on 1 Aug. 1998; B had not registered the assignment, and C had no knowledge of it on 1 Aug. B is bound by C's licence. See Wilkof, *Trade Mark Licensing*, 60.

⁶³ TMA s. 25(3)(b).

⁶⁴ TMA s. 25(4). This corresponds to PA s. 68, discussed above at pp. 553–4.

important to note that the OHIM must not register any transfer that is likely to mislead or deceive the public as to the nature, quality, or geographical origin of the goods or services in respect of which it is registered.⁶⁵ For refusal of a transfer to be justified, the deception must be clear from the transfer documents. Moreover, the OHIM should accept the transfer insofar as the transferee agrees to limit the registration of the Community mark to goods or services in respect of which it is registered.

3.7 COMPULSORY LICENCES

In contrast with other areas of intellectual property law such as designs, copyright, and patents, there are no compulsory licences in relation to trade marks.⁶⁶

4 LIMITS ON EXPLOITATION

The terms and conditions under which a trade mark is exploited are usually determined contractually by the parties: the 1994 Trade Marks Act merely provides a shell within which parties are able to manoeuvre. Where parties have agreed upon the way a trade mark is to be exploited, the law has been loath to substitute its view of what should have been agreed. Having said this, as with all forms of intellectual property law, the power conferred by trade mark law on a proprietor is limited in a number of ways.

The restrictions imposed by British trade mark law are changing. Whereas the law previously imposed a number of impediments on the licensing of marks, after the liberalization effected by the 1994 Act, the major restriction on licensing arises through the operation of the revocation provisions contained in section 46.⁶⁷ This is because if the terms or extent of the licensing (or assignment) are such that the mark becomes deceptive, the registration may be revoked. As a result, in exploiting a trade mark, the proprietor should take care to ensure the mark does not become deceptive or generic. In order to avoid the mark becoming deceptive, trade mark owners would be wise to include quality control provisions in any licences they grant, and to operate some sort of monitoring policy to ensure that those standards are complied with.

Another important limitation placed on the use that can be made of a trade mark is provided by UK and European competition law. In the next section we outline the general nature of these regulations, before considering the ways in which these regimes treat a selection of commonly used trade mark licence terms.

4.1 EC COMPETITION LAW

The key provision of European competition law affecting trade mark licences and exploitation agreements is Article 81 EC (formerly Article 85 of the EC Treaty). This renders void all agreements that affect trade between member states and which have the object or effect of preventing, restricting, or distorting competition within the Common Market. The

⁶⁵ CTMR Art. 17(4).

⁶⁶ But note *Der Grüne Punkt–Duales System Deutschland AG v. Commission*, T-151/01R (15 Nov. 2001) (Commission order allowing use of collective mark).

⁶⁷ See at pp. 900–2.

issue of whether an element in an agreement 'restricts trade' is usually looked at by the Commission in terms of whether it restricts the activities of the parties to the agreement (or third parties) to an 'appreciable extent'.⁶⁸

For minor agreements, the Commission has issued a Notice on Agreements of Minor Importance, which treats agreements between firms who are not competitors as falling outside of Article 81(1) if the market share held by each of the parties does not exceed 15 per cent on any of the relevant markets affected by the agreement. This does not apply, however, where those agreements contain provisions relating to resale price-fixing or territorial protection.⁶⁹

Even if an agreement falls within the Article 81 EC (formerly Article 85 EC) prohibition, it may nonetheless fall within one of the block exemptions issued by the Commission. The two block exemptions that are relevant relate to:

- (i) Technology transfer agreements (Block Exemption 240/96);⁷⁰
- (ii) Vertical agreements (Block Exemption 2790/1999).

We have considered the Technology Transfer Regulation in Chapter 22. Here it should be noted that the Technology Transfer Regulation only applies where trade marks are ancillary to the main purpose of the agreement, namely, the licensing of patents or know-how.⁷¹ If trade marks are a central component, the agreement cannot fall within the Block Exemption.⁷² However, much more important for trade mark licences is the Commission Regulation 2790/99 on the application of Article 81(3) of the Treaty to Categories of Vertical Agreements and Concerted Practices.⁷³ The idea behind this block exemption is that vertical restraints often have positive consequences by increasing interbrand competition and are only anti-competitive in limited circumstances such as where the supplier has a high level of market power. Consequently, the Regulation provides for the exemption of

⁶⁸ This is often called 'freedom of action theory' and has been widely criticized as casting the prohibition too broadly. The Court e.g. in *Javico v. Yves Saint Laurent*, Case C-306/96 [1998] ECR I-1983 (paras. 23–6), has tended to look at the effect in the market, and has treated a number of agreements as falling outside Art. 81(1) because they are objectively necessary for particular kinds of transactions. For discussion, see N. Green, 'Article 85 of the EC Treaty in Perspective: Stretching Jurisdiction, Narrowing the Concept of a Restriction and Plugging a Few Gaps' [1988] ECLR 190; H. P. Lugard, 'Vertical Restraints under EC Law: A Horizontal Approach' [1996] 17 ECLR 166. The Commission seems to be signalling a change towards a less formalistic approach: see R. Whish, 'Regulation 2790/99: The Commission's "New Style" Block Exemption for Vertical Agreements' (2000) 37 CMLR 887, 889–90.

⁶⁹ [2001] OJ C 368/13. Below the threshold, the Commission considers that the competition authorities of member states should provide primary supervision.

⁷⁰ Regulation 240/96 of 31 Jan. 1996 on the Application of Art. 85(3) of the Treaty to certain categories of Technology transfer agreements. See above at pp. 556–60.

⁷¹ TT Reg. Art. 1(1); Recital 6 ('when such additional licensing contributes to the achievement of the objects of the licensed technology and contains only ancillary provisions').

⁷² *Moosehead/Whitbread* [1990] OJ L 100/36 (where the agreement was held to fall outside the Know How Block Exemption because the trade mark licence was central to the agreement). See R. Subiotta, 'Moosehead/Whitbread: Industrial Franchises and No-Challenge Clauses Relating to Licensed Trade Marks under EEC Competition Law' [1990] 11 ECLR 226.

⁷³ This was adopted on 22 Dec. 1999 and entered into force on 1 Jun. 2000, replacing the previous Block Exemptions on Distribution (Regulation 1983/83 [1983] OJ L 173/1), and Franchising (Regulation 4087/88i [1988] OJ L 359/46) which had lapsed in May 2000. Note also the Commission's Guidelines on Vertical Restraints 2000/C 291/1 (OJ 13 Oct. 2000). For a review, see R. Whish, 'Regulation 2790/99: The Commission's "New Style" Block Exemption for Vertical Agreements' (2000) 37 CMLR 887.

many agreements where the market share of the supplier is under 30 per cent.⁷⁴ Nevertheless, even some agreements between small undertakings will not be exempt where they include provisions on the 'hard core' list (for example, fixing-price and strict territorial restraints): these are prohibited in all agreements.⁷⁵

The Regulation applies to vertical agreements which are defined as agreements or concerted practices entered into between two or more undertakings each of which operates, for the purposes of the agreement, at a different level of the production or distribution chain, and relating to the condition under which the parties may purchase, sell, or resell certain goods or services.⁷⁶ However, while it is explained that this covers agreements containing provisions which relate to the assignment to the buyer or use by the buyer of intellectual property rights, those provisions must be directly related to the use, sale, or resale of goods or services by the buyer or its customers. However, the Block Exemption does not apply if those provisions relating to intellectual property constitute the primary object of such agreement.⁷⁷ It should be noted, then, from the outset that the Block Exemption does not cover many trade mark transactions: it does not cover assignments, nor such things as merchandising arrangements.⁷⁸ However, for the most part it will be potentially applicable to franchising and distribution agreements, where trade mark issues often arise, but the provisions are directly related to the use, sale, or resale of goods or services.⁷⁹

If the agreement constitutes a vertical restraint, does not contain a forbidden ('hard core') term, and does not fall outside the market share limitation, then the agreement is exempt. This is so irrespective of the other terms of the agreement: the exemption works on the basis that anything not forbidden is permitted. If, on the other hand, the Block Exemption does not apply, a restrictive agreement may be contrary to Article 81.⁸⁰

4.2 UK COMPETITION LAW

British competition law is made up of a complex mixture of common law principles restricting the terms that may legitimately be imposed in contracts, such as the doctrine of restraint of trade, and statutory interventions, of which the most important is the Competition Act 1998. This Act establishes a system that parallels European competition law, by enacting a provision equivalent to Article 81 EC (formerly Article 85 of the Treaty).⁸¹ However, most vertical agreements are exempted from this by the Competition Act (Land and Vertical Restraints Exclusion) Order 2000.⁸² In addition, an agreement will be deemed to be exempt from the national prohibition if it is exempt from the Community prohibition.⁸³

⁷⁴ VR Reg. Art. 3. In the case of an 'exclusive supply obligation' the relevant share is that of the purchaser. Under VR Reg. Art. 8 the Commission may withdraw the benefit of the block exemption where 50% of the market is covered by similar agreements.

⁷⁵ VR Reg. Art. 4. Where an agreement includes a term under Art. 5, these can be severed.

⁷⁶ VR Reg. Art. 2(1). ⁷⁷ VR Reg. Art. 2(3).

⁷⁸ Guidelines on Vertical Restraints, para. 32. But, at para. 43, the Commission intimates such agreements would be treated in a similar way.

⁷⁹ Guidelines on Vertical Restraints, paras. 42–4 (on franchising).

⁸⁰ There is no longer a system of notification. ⁸¹ Competition Act 1998, s. 2.

⁸² SI 2000/310. See P. Freeman and R. Whish (eds.), *Butterworths Competition Law* Div. 1, paras. 637–64.

⁸³ Competition Act 1998, s. 10 (parallel exemptions).

4.3 COMMONLY USED TRADE MARK LICENCE TERMS

In this section, we look at terms which are commonly used in trade mark licence agreements and the approach that competition law takes towards them.

4.3.1 Exclusivity

A trade mark licence commonly includes terms guaranteeing the licensee the exclusive right to sell the goods or provide the services under the mark in a particular territory, such as the United Kingdom. It may also include associated undertakings by the licensor not to put the goods on the market under the same mark in that territory, or compete with the licensee by providing the same services. In turn, the licensee may undertake not to sell goods bearing the mark in territories of other licensees.⁸⁴ The inclusion of a guarantee of exclusivity may be important to a licensee who has to make a considerable investment in the establishment of production facilities (in the case of trade mark product licences) or retail outlets (in the case of distribution or service franchisees). In these cases the licensee may wish to ensure that they have a reasonable degree of control over the relevant market. In the absence of exclusivity, the licensee would not only be exposed to competition that exists in the market in the goods or services, but also to competition from others dealing in goods or services bearing the brand name, and (not surprisingly) may prefer not to risk such investment. Consequently, exclusivity agreements may encourage the production and dissemination of goods and services with the mark into the market—and thus foster competition. Simultaneously, exclusive licences cause little detriment to third parties because the trade mark owner had such exclusivity as a result of the ownership of the trade mark. On the other hand, exclusive licensing—by dividing up territories—may have serious detrimental effects on the achievement of the internal market.

The Block Exemption on Vertical Restraints recognizes a compromise position. Article 4(b) states that the exemption will not be available where the object of the agreement is ‘the restriction of the territory into which, or of the customers to whom, the buyer may sell the contract goods and services’. However, it is permissible to impose a restriction on active sales into ‘the exclusive territory or to an exclusive consumer group reserved to the supplier or allocated by the supplier to another buyer where such a restriction does not limit sales by the customers of the buyer’. The key distinction is thus between ‘passive’ and ‘active’ sales, that is, between sales that are a response to customer action, and sales that involve the trader actively approaching the customer.⁸⁵ The basic idea underpinning the various exemptions is that an agreement is only exempt if the prohibition is limited to active selling outside the territory.

4.3.2 Manufacturing standards

To ensure that certain standards are maintained, a trade mark proprietor who is either involved in franchising or licensing others to manufacture and sell goods to which a mark is applied, will often wish to impose conditions on the manufacture or operation of the

⁸⁴ R. Joliet, ‘Trademark Licensing Agreements under the EEC Law of Competition’ (1983–4) 5 *Northwestern Journal of International Law and Business* 755, 789–90 distinguishes between territorial licences, exclusive territorial licences, and territorial sales restrictions.

⁸⁵ Guidelines on Vertical Restraints, para. 50 (advertising and Internet selling is treated as passive).

licensee's business.⁸⁶ Since one of the functions of a mark is to guarantee quality, such clauses are readily justified and, in general, are not treated as restrictions on trade. However, because such clauses might require the licensee to purchase ingredients, components, or other material from certain limited sources, such obligations may look like anti-competitive tie-ins. Nevertheless, the competition authorities have treated such clauses with less severity than they have in respect to patent agreements that include tie-ins.⁸⁷

If such clauses are caught by Article 81, the Block Exemption on Vertical Restraints appears to permit them as long as they are not too long in duration or too extensive in scope. Article 5(a) excludes from the Block Exemption 'any direct or indirect non-compete obligation, the duration of which is indefinite or exceeds five years'. Article 1 defines 'non-compete' obligations as including 'any obligation on the buyer to purchase from the supplier or from an undertaking designated by the supplier more than 80 per cent of the buyer's total purchases of the contract goods or services and their substitutes on the relevant market'. Consequently, in many cases such clauses will be permissible.

4.3.3 Non-competition

A trade mark owner may be keen to prevent licensees from selling other goods. In *Campanari* the Commission approved such a clause on the ground that it would ensure that licensees focused on selling the licensed product. The Commission said that although such clauses in patent licences might be objectionable on the basis that they constituted barriers to technical and economic progress, such a prohibition in trade marks licences 'makes for improved distribution of the relevant product in the same way as do exclusive distribution agreements'.

Trade mark owners might also wish to protect their interests by prohibiting licensees from competing in the same goods after termination of the licence. This is particularly desirable where the licence of the trade mark has been part of a deal involving trade secrets. It may be equally desirable to protect the trade mark owner's goodwill. Under the Block Exemption, it seems such restrictions are permitted in limited circumstances. First, the restriction must not exceed one year, it must be confined to sales of competing goods or services from the point of sale at which the buyer operated during the contract period, and the restriction must be indispensable to protect 'know-how' transferred from the supplier to the buyer.⁸⁸ In the case of more severe restrictions, individual exemptions will be required.

In domestic law such matters are also governed by the doctrine of restraint of trade which requires restraints to be reasonable having regard to the legitimate interests of the parties and the public interest. In *Kall-Kwik Printing (UK) v. Rush*,⁸⁹ a franchise agreement for a photocopying shop contained a restraint not to engage directly or indirectly in any business competitive with the business of the franchisor. It also said that the restraint operated within a ten-mile radius of the premises of any franchisee of the franchisor for

⁸⁸ VR Reg. Art. 5(b). This obligation is without prejudice to the possibility of imposing a restriction which is unlimited in time on the use and disclosure of know-how which has not entered the public domain.

⁸⁹ [1996] FSR 114.

two years after termination. During the term of the franchise, the franchisee set up a competing shop a short distance from the franchised premises. The court held that the clause was too widely drawn geographically. This was because since the franchisor had 191 franchisees, the effect of the clause would have been tantamount to a nationwide prohibition. However, the judge construed the clause as being confined to businesses competitive with that of the business and this allowed him to uphold it. Judge Cooke said he considered the two-year period to be reasonable.⁹⁰

4.3.4 No-challenge clauses

Trade mark licence agreements often include undertakings prohibiting the licensee from challenging the validity of the registration. These are known as 'no-challenge clauses'. These are not dealt with in the Block Exemption, and are probably permissible. In *Moosehead/Whitbread*,⁹¹ a no-challenge clause was upheld in the context of a trade mark licence between the Canadian beer manufacturer and its UK licensee. A distinction was drawn in the case between obligations not to contest the validity of the registration and no-challenge clauses concerned with the ownership of the mark. Clauses challenging ownership did not contravene Article 85 of the EC Treaty (now Article 81 EC), because, according to the Commission, they did not restrict competition. However, a clause preventing the challenge to the validity of the mark might be a restriction within Article 81. In the case itself, the Commission held that as the obligation related to both, it did not constitute an appreciable restriction on competition. In the main this was because the MOOSEHEAD mark was new to the market. We will return to the question of no-challenge clauses in the context of trade mark delimitation agreements which are discussed below.

4.3.5 Price restrictions

A trade mark owner may wish to restrict the price at which the licensee sells the trade-marked product. Such restrictions are treated as anti-competitive under Article 81(1) EC, and exemptions are not possible under Article 81(3) unless the agreement allows consumers a fair share of resulting benefit. Unsurprisingly, such terms fall in the 'hard core' prohibited terms, which if present prevent an agreement from benefiting from the block exemption on vertical restraints.⁹² Nevertheless, it is possible for an agreement to contain price recommendations. Similarly, under the 1998 Competition Act agreements which 'directly or indirectly fix purchase or selling prices' are specifically referred to as examples of prohibited agreements under section 2(2)(a).

4.4 TRADE MARK DELIMITATION AGREEMENTS

In the previous section we examined the application of competition regulations to various common clauses in vertical arrangements relating to trade marks, that is to agreements which operate down the chain from manufacturer to consumer, such as those between

⁹⁰ *Kall-Kwik (UK) v. Bell* [1994] FSR 674 (18 months not unreasonable restraint); *Prontaprint v. London Litho* [1987] FSR 315 (3 years).

⁹¹ Commission Decision of 23 Mar. 1990; [1990] OJ L 100/36; [1991] 4 CMLR 391. See R. Subiotto, 'Moosehead/Whitbread: Industrial Franchises and No-Challenge Clauses Relating to Licensed Trade Marks under EEC Competition Law' [1990] 11 ECLR 226.

⁹² VR Reg. Art. 4(a).

trade mark owner and franchisee or distributor. We now need briefly to consider horizontal arrangements, that is arrangements at the same level of distribution between competing manufacturers/trade mark owners. These are generally treated as much more likely to be anti-competitive. Our interest in them extends as far as 'consent agreements' or 'trade mark delimitation agreements'. Trade mark delimitation agreements are contracts between owners of similar marks which are intended to settle conflicts (or potential conflicts) between them.⁹³ While these arrangements may not be licences at all, because they contain many terms similar to those found in licence agreements which are regulated by competition law, we will consider them in this section.⁹⁴

There seem to be a number of typical ways of resolving such conflicts:

- (i) By agreeing that one party will use the mark only in one field, and the other in a distinct field, so as to avoid the possibility of overlap.
- (ii) By agreeing that only one party use the mark, so that the other must adopt a new mark.
- (iii) By agreeing that one party will use the mark in a particular geographical area, and the other in a different geographical domain.
- (iv) By agreeing that each will only use the mark with specified get-up, so that consumer confusion is minimized.

The contents of trade mark delimitation agreements will vary, but in each case will need to be scrutinized under both European and domestic law. As regards European competition law, the key provision is Article 81 EC. The Commission and the Court of Justice have indicated that such settlement agreements may be acceptable because by resolving protracted litigation between the parties, they eliminate restraints on competition and the Internal Market that conflicting rights under national laws may cause.⁹⁵ The Commission has indicated, however, that in forging the compromise the enterprises should try and reach the least restrictive solution possible.⁹⁶

If the agreement restricts competition or produces market-sharing it will contravene Article 81(1). Whether the agreement restricts competition has been said largely to depend on the use to which the mark was previously being put. In *BAT Cigaretten-Frabirk GmbH v. EEC*,⁹⁷ for example, an agreement restraining a Dutch competitor of BAT from using its *TOLTECS* mark in Germany was an unlawful restraint, because BAT's *DORCET* mark was dormant (or unused). Where, however, the party who submits to the restraint has not used the mark (or was not utilizing it to a significant extent), the Commission has taken the view that assignment of that mark to the other party will not amount to a restriction on the assignor's ability to compete.⁹⁸ Indeed, the Commission seems to take the view that an

⁹⁵ *BAT Cigaretten-Frabirk v. EEC* [1985] *FSR* 533, 541 (para. 33).

⁹⁶ Commission Decision 78/193/EEC of 23 Dec. 1977 relating to a proceeding under Article 85 (Penneys) [1978] *FSR* 385, 395.

⁹⁷ [1985] *FSR* 533.

⁹⁸ Commission Decision 78/193/EEC of 23 Dec. 1977 relating to a proceeding under Article 85 (Penneys) *OJ L* 60/19 [1978] 2 *CMLR* 100; [1978] *FSR* 385, 396.

unused mark has no value and a person can simply choose a different mark for their goods or services.

However, in most cases of conflict both parties will have been using their marks to some extent. As indicated, the Commission then favours the least restrictive solution. If conflict can be avoided by the parties merely agreeing to utilize different 'get-up', that is likely to receive the Commission's approval.⁹⁹ Alternatively, it may be that the conflict can be settled by assigning one mark to one party and a different mark to another. Although the effect will be to force the party to re-establish goodwill under other marks and this may have a restrictive effect bringing it within Article 81, such an arrangement might be acceptable if there is a transitional phasing out and/or the party is allowed to continue using the name as a trade name. It seems that the Commission looks least favourably on agreements that give different parties use of the mark in different parts of the Common Market.¹⁰⁰ It also has indicated that it disapproves of widely drawn or lengthy 'no-challenge' clauses.¹⁰¹

As regards UK law, trade mark delimitation agreements have heretofore been treated as enforceable commercial contracts. The only ground for objection that seems to have been raised in the case law is restraint of trade. While in principle this would require a person imposing a restraint to demonstrate it is reasonable, according to the Court of Appeal in *WWF-World Wide Fund for Nature v. World Wrestling Federation Entertainment Inc* there is a presumption that the restraint represents a reasonable division of their interests. Consequently, the defendant must show that the restraint is unreasonable, for example, by demonstrating there was no goodwill to justify the restraint.¹⁰² In *Apple Corp. Ltd. v. Apple Computer Inc.*¹⁰³ when considering various difficult procedural questions concerning litigation over a consent agreement, the Court of Appeal held that restraints contained in such agreements were legitimate only where they were necessary to protect the legitimate interests of the parties. The ownership of registered marks would not of itself justify such an agreement: rather the restraint would be justified only where it was necessary to protect the goodwill of the restrainer. As a consequence, such a restraint would be justified only where the mark had been used. The Court of Appeal observed that the approach under Article 85 of the EC Treaty (now Article 81 EC) and under the common law were largely similar.¹⁰⁴

⁹⁹ Commission Decision 78/193/EEC of 23 Dec. 1977 relating to a proceeding under Article 85 (Penneys) [1978] FSR 385.

GEOGRAPHICAL INDICATIONS OF ORIGIN

1 INTRODUCTION

Over time, the EU has introduced a raft of measures to control the way agricultural products are described and labelled. These vary from laws regulating the marketing standards for olive oil¹ and the labelling of beef products,² through to complicated laws that regulate the description, designation, presentation, and protection of wines.³ In this chapter we look at two specific regimes that form part of this overarching legal framework. First, we look at the scheme developed by the EU to regulate geographical designations.⁴ These are the names that are used to describe foods and other agricultural products that originate from particular geographic areas. Some well-known regional products include Kalamata Olives, Feta Cheese, and Parma Ham. Second, we briefly look at the schemes developed by the EU to protect the names of traditional foods and recipes.

While it may seem, depending on one's age, as if Elizabeth David or Jamie Oliver invented geographical or traditional designations, in fact they have a very old lineage. This is especially the case in countries such as Spain, France, Italy, Portugal, and (to a lesser extent) Germany. Given the important role that food and agricultural products play in all cultures, it is not surprising that special legal regimes have long been used to regulate geographical designations. For example, special legislation existed in fourteenth century France to protect Roquefort Cheese. Over time a number of different legal regimes have been used to regulate geographical designations. In common law countries, the names of agricultural products and foodstuffs have been protected by passing off, trade marks, and certification marks.⁵ While civil law countries have relied on collective marks and unfair competition, they have also developed more specialized regimes, such as appellation of

¹ Regulation 2815/98 Concerning marketing standards for olive oil [1998] *OJ L* 349, 56 (regulates designations of origin on the labelling and packaging of virgin and extra virgin olive oils).

² Regulation 1760/2000 Establishing a system for the identification and registration of bovine animals and regarding the labelling of beef and beef products [2000] *OJ L* 204, Recital 31, Art. 16(6).

³ Regulation 1493/1999 On the common organisation of the market in wine [1999] *OJ L* 179; Regulation 753/2002 Laying down certain rules for applying Regulation 1493/1999 as regards the description, designation, presentation and protection of certain wine sector products [2002] *OJ L* 118; Regulation 1607/2000 Laying down detailed rules for Implementing Regulation 1493/1999 [2000] *OJ L* 185.

⁴ Regulation 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [1992] *OJ L* 208/1.

⁵ See N. Dawson, 'The Parma Ham Case: Trade Descriptions and Passing Off—Shortcomings of English Law' [1991] *EIPR* 487; F. Gevers, 'Geographical Names and Signs Used as Trade Marks' [1990] *EIPR* 285.

origin, to regulate the use that is made of agricultural names. Civil law countries have also entered into a series of bilateral and (occasionally) multilateral treaties that recognize rights in the names given to wines, cheeses, olive oils, and other agricultural products. More recently, the EU has introduced a series of Regulations to standardize the protection available for regional and traditional food names within Europe.

One of the questions that sometimes arises in discussions about the legal regimes that regulate geographical designations is their status as a form of intellectual property. While the Paris Convention expressly includes agriculture within its remit,⁶ there are still some who doubt whether the laws covering geographical designations properly belong within intellectual property law. In Europe, there is little doubt that this is the case given that both the European Court of Justice and the House of Lords have explicitly acknowledged that the geographic designations protected under European law are forms of intellectual property.⁷ The laws regulating geographic designations also share a number of conceptual similarities with other areas of intellectual property. For example, they share with certification and collective marks the idea that rights are controlled by groups or collectives, rather than individuals. As we will see below, one of the defining features of protected designations of origin and appellations of origin is that they presuppose an exclusive link between product and place. As with the idea of the unique expression of the author or the novelty of patented inventions, the 'uniqueness' of the intangible property ensures that the granting of property rights does not jeopardize the rights of third parties.

In this chapter, we focus on the names given to agricultural products and foodstuffs. However, it is important to note that geographic designations potentially apply to all products. This has led to the interesting suggestion that indigenous creations could be protected via a style of law modelled on geographic designations. This is an interesting possibility since it recognises both collective rights, as well as a connection between 'product' and 'place', which are so important for many indigenous groups.

1.1 TYPES OF PROTECTION

There are subtle and often important differences between the various forms of legal protection that have been adopted to protect the names given to agricultural products and foodstuffs. While the enactment of European legislation regulating the naming of wines, spirits, and agricultural products has gone some way towards alleviating this problem in Europe, widely different approaches are still adopted elsewhere. The failure of the WTO negotiations in Cancùn, combined with the hostile reception that greeted the EU proposal to extend the level of protection required under TRIPS, suggests that this situation is likely to continue for some time in the future. Given this it may be helpful to define some of the key terms used in this area.

An *indication of source*—which is also known as an *indication of provenance* or as a *simple* or *qualified geographical indication of origin*—is the most general of the terms used

⁶ Art. 1(3) Paris Convention (Industrial property shall apply not only to industry and commerce proper but also to agriculture and to manufactured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers and flour).

⁷ Lord Hoffmann said in *Consorzio del Prosciutto di Parma v. Asda Stores Ltd* [2002] FSR 3, 38, para. 6 (HL) 'a PDO is a form of intellectual property right'.

to describe geographical designations.⁸ A defining feature of an indication of source is that it connects a product to a particular geographical location: there is no requirement that there be any correlation between the characteristics or quality of a product and the place that the product originated from. Instead, an indication of source simply informs consumers that the product bearing the sign comes from a particular place, region, or country.⁹ As a result, 'indication of source' is broader than both appellations of origin and geographical indications.

Another term used to describe geographical designations is *geographical indication of origin (GI)*. Article 22(1) of TRIPS defines geographical indications as 'indications, which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin'.¹⁰

An *appellation of origin* is a specific type of geographical indication.¹¹ An appellation of origin is the 'geographic name of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially due to the geographical environment, including natural and human factors'.¹² The defining feature of an appellation of origin is that the 'product for which an appellation of origin is used must have a quality and characteristics which are due exclusively or essentially to its geographic environment'.¹³

An indication of source is the most general of these three modes of protection: it simply signals that a product originates from a particular geographic location (e.g. French perfume). In contrast, geographical indications of origin and appellations of origin both require that the geographic location must imbue the product with particular traits or characteristics. Where they differ is in terms of the nature of the relationship and the types of traits that they recognize. In particular, with an appellation of origin the quality or characteristics of the product must be exclusively or essentially due to the geographical environment. That is, there must be a link between product and place. In contrast, geographical indications of origin extend beyond the quality of the product to include 'reputation or other characteristic of the good'. By shifting the focus beyond the strict connection of product to place, it subtly changes the nature of the protected interest away from something which mirrors the model of creation used in patents, copyright, and design law, to something more akin to that used in trade mark law.¹⁴

As part of its ongoing reform of agricultural policy in Europe, the EU has passed a series of laws that regulate geographic designations. In so doing, the EU introduced a number of

⁸ Used in the Paris Convention and the Madrid Agreement for the Repression of False or Deceptive Indications of Source of Goods of 1891.

⁹ See *Exportur*, Case C-3/91 [1992] 1 ECR 5529, para. 11; *Jacques Pistre*, Case C-321-324/94 [1977] CMLR 565, 587 (ECJ).

¹³ For comparisons see F. Gevers, 'Geographical Names and Signs used as Trade Marks' [1990] *EIPR* 285.

¹⁴ On the different models of creation used in intellectual property (other than trade marks) see Sherman and Bently, 166-172.

new terms into the legal lexicon. The first is the *protected designation of origin* or PDO.¹⁵ This is the term used to describe a designation of origin that has been registered under the 1992 EU *Regulation on the protection of geographical indications and designations of origin for agricultural products and foodstuffs* (hereinafter the 'GI Regulation').¹⁶ In this context a 'designation of origin' is defined as the name of a region, a specific place or, in exceptional cases, a country used to describe an agricultural product or foodstuff. To qualify as a PDO, the named product must originate in that region, specific place, or country. It is also necessary to show that the quality or characteristics of the product are 'essentially or exclusively due to a particular geographical environment with its inherent natural and human factors' and that the production, processing, and preparation take place in the defined geographical area.

Another new term introduced by the EU is *protected geographical indication* or PGI. This is the term that is used to describe a designation of origin that has been registered under the GI Regulation. Geographical indications are defined as the name of a region, a specific place or, in exceptional cases, a country used to describe an agricultural product or foodstuff. To qualify for protection, a geographical indication must originate in that region, specific place, or country. The product or foodstuff must also possess a specific quality, reputation, or other characteristic attributable to that geographical origin. It is also necessary to show that the production, processing, or preparation takes place in the defined geographical area.¹⁷

The third term introduced by the EU is the so-called *certificates of special character* (CSC). This is the term given to traditional foods and recipes registered under the 1992 EU *Regulation on certificates of specific character for agricultural products and foodstuffs* (hereinafter the *Traditional Foods Regulation*).¹⁸ Specific character means 'the features or set of features which distinguishes an agricultural product or a foodstuff clearly from other similar products or foodstuffs belonging to the same category'. For a name to be registered as a certificate of special character it must be specific, express the specific character of the foodstuff or product, and be traditional or established by custom.¹⁹ As well as granting rights over use of the registered name, registration as a certificate of special character also enables producers to use the designation *Traditional Speciality Guaranteed* (TSG) and the accompanying logo (see Figure 43.1).

1.2 INTERNATIONAL TREATIES

In this section we look at some of the more important of the international treaties that impact upon the legal regulation of geographic designations.²⁰

¹⁵ This is the translation of *Appellation d'Origine Contrôlée* (AOC).

¹⁶ EU Regulation 2081/92 of 14 Jul. 1992 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [1992] *OJ L* 208/1.

¹⁷ GI Regulation (2081/92) Art. 2(2)(b).

¹⁸ Regulation 2082/92 of 14 Jul. 1992 on certificates of specific character for agricultural products and foodstuffs [1992] *OJ L* 201/9.

¹⁹ *Ibid.*, Art. 2(1).

²⁰ There are a number of other treaties. See, e.g. 1951 Stresa Convention on Designations of Origin for Cheese.

Fig. 43.1 PDO, PGI, and TSG logos

1.2.1 Paris Convention for the Protection of Industrial Property

The 1883 Paris Convention provides for limited protection over geographical designations. Article 1(2) provides that the protection of industrial property has as its purpose, *inter alia*, indications of source or appellations of origin. Article 10(1), read in conjunction with Article 9, provides for the seizure of goods on importation where there is 'direct or indirect use of a false indication of the source of the goods'. These provisions are limited to false indications: they make no reference to the situation where a term is translated, or where the name is accompanied by words such as 'type', 'like' or 'style'. It has been argued that use of a false indication of source may constitute an act of unfair competition covered by Article 10 bis (2)(3).

1.2.2 Madrid Agreement for the Repression of False or Misleading Indications of Source on Goods

The Madrid Agreement for the Repression of False or Misleading Indications of Source on Goods (the Madrid Agreement), finalized in Madrid in 1891, aims to protect consumers against false indications of source of goods.²¹ The Madrid Agreement requires seizure or import prohibition of all goods bearing a false or misleading indication. The question of whether an indication has become generic is decided by member states, with the exception of regional appellations for wine, which cannot be declared to be generic.

The primary aim of the Madrid Agreement is to protect consumers from being misled. To this end, the Madrid Agreement was designed to cover all false indications of source, irrespective of the intent of the user. When the Madrid Agreement was drafted, this was particularly important given that prior to the Lisbon revision of the Paris Convention in 1958, Article 10 of the Paris Convention only protected indications of source if there was fraudulent intent. However, with the Lisbon revision in 1958, Article 10 of Paris Convention now protects indications of source without the need to show fraud. As a result, the continuing need for the Madrid Agreement was thrown into doubt.²²

1.2.3 Lisbon Agreement for the Protection of Appellations of Origin and their International Registration

The Lisbon Agreement for the Protection of Appellations of Origin and their International

²¹ 14 April 1891, revised in Washington 2 Jun. 1911, The Hague (6 Nov. 1925), London (2 Jun. 1934), Lisbon (31 Oct. 1958), Additional Act of Stockholm (14 Jul. 1967). There are currently 33 members of Madrid, including the UK, France, and Germany.

²² See M. Laffer, *International Treaties on Intellectual Property* (1990), 270.

Registration (the Lisbon Agreement), which was concluded on 31 October 1958,²³ establishes an international system for the protection of appellations of origin.²⁴ The Agreement defines an appellation of origin as 'geographic name of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially due to the geographical environment, including natural and human factors'.²⁵

Article 1 of the Lisbon Agreement provides that member states must protect the appellations of origin of other member states that are registered at WIPO. For a name to be placed on the international register administered by WIPO, an appellation of origin must first be protected in its country of origin. An application for registration at WIPO can only be made by the relevant administrative agencies in the member states, who act on behalf of the group who 'owns' the appellation. The appellation is published and member states are notified of the registration. Upon notification, member states have twelve months to make a declaration that they are unable to protect the appellation. If no declaration is made, the member state must protect the appellation of origin, so long as it is protected in its country of origin.

The Lisbon Agreement requires member states to provide protection against misleading use of a protected appellation of origin. While the Madrid Agreement was primarily concerned with the protection of consumers, the Lisbon Agreement also protects producers against misuse, even where consumers may not be deceived about the nature or origin of the product.²⁶ More specifically, the Lisbon Agreement requires member states to protect against usurpation or imitation, even if the true origin of the product is indicated (e.g. Cornish clotted cream made in Queensland), or if the appellation is translated or accompanied by terms such as 'kind', 'type', 'make', or 'imitation'.²⁷

1.2.4 TRIPS

Perhaps the most important international treaty in this area, not the least because of its broad membership, is the 1994 TRIPS Agreement. TRIPS requires member states to provide legal means for interested parties to prevent (i) the use of any means in the designation or presentation of a good that indicates or suggests that a good originates in a geographic area other than the true place of origin in a manner that misleads the public as to the geographical origin of the good; or (ii) any use that constitutes an act of unfair competition within the meaning of Article 10 bis of the Paris Convention (1967). As we saw earlier, geographic indications are defined as 'indications, which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin'.²⁸ It is important to note that TRIPS applies to all products, and not just agricultural products or foodstuffs.

A notable feature of the TRIPS Agreement is that it provides for higher levels of protec-

²³ Revised in Stockholm on 14 Jul. 1967 (amended 28 Sept. 1979). There are currently 20 members.

²⁷ Lisbon Agreement, Art. 3. ²⁸ TRIPS, Art. 22(1).

tion for wines and spirits than for other agricultural products. In particular, Article 23 requires member states to provide protection even where the true origin of the goods is indicated, the geographical indication is used in translation, or is accompanied by expression such as 'kind', 'type', 'style', 'imitation', or the like. It also requires member states to determine the status of homonymous names. Article 23(4) also provides that the TRIPS Council should undertake negotiations for the establishment of a multilateral system of notification and registration for wines. Article 24 sets out certain exceptions (for example in relation to overlap between geographical indications and trade marks).

Despite protests from the United States and other WTO members, at the 2001 WTO Ministerial Conference in Doha, a group of WTO members, led by the EU, succeeded in increasing the likelihood that the current regime of geographical indication protection would be revised.²⁹ In particular, the Doha Declaration set a mandate for the negotiation of a multilateral system of notification and registrations of geographical indications for wines and spirits, and the possibility of extending the higher level of protection currently given to wines and spirits under Article 23 TRIPS to all agricultural products.³⁰ In a sense, what was being proposed was that TRIPS should adopt the approach currently adopted in Europe as a global standard. It was also decided that the deadline for completing the negotiations was the Fifth Ministerial Conference to be held in Cancún in 2003.³¹

These proposals to amend TRIPS met with a degree of hostility, particularly from ex-British colonies who have little to gain (at least directly) from these changes. The hostility was exacerbated by the fact that in the lead up to the Ministerial Conference in Cancún, the EU put forward a list of forty names that were to be given absolute protection. Given this divergence of opinion among WTO members (there is a dispute over whether there was even a mandate to launch negotiations on extension), it was not possible to reach a consensus on this issue at the Ministerial Conference of Cancún. As such, it may be some time before the proposed extension of TRIPS takes place (if at all).³²

1.2.5 Bilateral agreements

The EU has entered into a number of bilateral agreements to protect agricultural products and foodstuffs. For example, the EU has negotiated treaties with Australia (wine),³³ Chile (wines, spirit drinks, and aromatized drinks),³⁴ and Mexico (spirits).³⁵ Given the limited membership of the international treaties regulating geographic designation, and the impasse in the TRIPS negotiations at Cancún, the EU may now look more closely at bilateral agreements as a way of protecting European products in other jurisdictions.

2 GEOGRAPHICAL DESIGNATIONS FOR AGRICULTURAL PRODUCTS AND FOODSTUFFS

In this section, we look at the legal framework established by the EU to regulate regional food specialities. More specifically, we look at the system for the protection of geographical food names created by the GI Regulation, which came into force on 26 July 1993.³⁶

Two types of designation are protected under the GI Regulation. The first are ‘designations of origin’, which are called protected designations of origin (PDO) once they are registered.³⁷ A designation of origin is defined as the name of a region, a specific place or, in exceptional cases, a country used to describe an agricultural product or foodstuff. To qualify for protection as a PDO, the named product must originate in the defined region, specific place, or country. It is also necessary to show that the quality or characteristics of the named product are essentially or exclusively due to a particular geographical environment with its inherent natural and human factors. It is also necessary to show that the production, processing, and preparation take place in the defined geographical area.³⁸ A number of different product names have been registered as PDOs in the United Kingdom. These include Cornish Clotted Cream, West Country farmhouse Cheddar cheese, Jersey Royal Potatoes, Shetland lamb, and White Stilton.³⁹ Some other well known PDOs include Roquefort cheese (France), Gorgonzola (Italy), Feta (Greece), Camembert de Normandie (France), Kalamata olives (Greece), Chianti Classico olive oil (Italy), and Prosciutto de Parma (Italy).

The second type of designation protected by the GI Regulation are known as ‘geographical indications’. Once a geographical indication is registered, it is known as a ‘protected geographical indication’ (or PGI). Geographical indications are defined as the name of a region, specific place or, in exceptional cases, a country, used to describe an agricultural product or foodstuff. To qualify for protection a geographical indication must originate in that region, specific place, or country. The product or foodstuff needs to possess a specific quality, reputation, or other characteristic attributable to that geographical origin and the production. It is also necessary to show *either* that the production, processing *or* preparation takes place in the defined geographical area.⁴⁰ A number of different geographical names have been registered as PGIs in the United Kingdom. These include Newcastle Brown Ale, Rutland Bitter, Whitstable Oysters, Scottish Beef, and Welsh Lamb.⁴¹

³⁶ GI Regulation (2081/92) (Regulation No. 2081/92 of 14 July 1992 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [1992] *OJ L* 208/1). See B. Schwab, ‘The Protection of Geographical Indications in the European Economic Community’ [1995] *EIPR* 242;

³⁷ This is the translation of *Appellation d’Origine Contrôlée* (AOC).

³⁸ GI Regulation (2081/92), Art. 2(2)(a).

³⁹ Other British PDOs include Orkney Beef; Orkney Lamb; Blue Stilton Cheese; Beacon Fell Lancashire Cheese; Swaledale Cheese; Swaledale Ewes Cheese; Bonchester Cheese; Buxton Cheese; Dovedale Cheese; and Single Gloucester.

⁴⁰ GI Regulation (2081/92), Art. 2(2)(b).

⁴¹ The other PGIs are Scottish Lamb; Welsh Beef; Teviotdale Cheese; Dorset Blue Cheese; Exmoor Blue Cheese; Herefordshire Cider; Herefordshire Perry; Worcestershire Cider; Worcestershire Perry; Gloucestershire Cider; Gloucestershire Perry; Kentish Ale; and Kentish Strong Ale.

As Lord Hoffmann said, 'a PGI is similar to a PDO except that the causal link between the place of origin and the quality of the product may be a matter of reputation rather than verifiable fact'.⁴² Another difference is that while the production, processing, and preparation of a PDO *all* need to take place in the named geographic area, with a PGI it is only necessary for the production, processing *or* preparation to take place in the named area. Yet another difference is that while PDOs accommodate traditional non-geographic designations, no such provision is made in the case of PGIs (see p. 975 below).

As with most legal regimes, the GI Regulation performs a number of different roles. On one level it aims to ensure that consumers are able to rely upon the names of goods as indicators of the quality of the items they are purchasing. This enables consumers to purchase quality products with guarantees as to the methods of production and origin. The GI Regulation also performs an educative role, insofar as it informs consumers about the origin and quality of agricultural products. Surveys on consumer purchasing practices carried out by the EU in 1995 and 1998 suggest that the Regulation is delivering on at least some of these aims. These surveys showed that consumers had some knowledge of the scheme, and that they were willing to pay more for products bearing the PDO/PGI label. This was particularly the case with older wealthier consumers, who were more likely to purchase protected regional products.⁴³ The surveys also found that people were more likely to purchase products from the area in which they lived.

The GI Regulation also aims to protect producers against piracy and unfair competition. In so doing it aims to encourage investment in the production of quality local products. This is reflected in the fact that registered names are protected even where consumers are not misled about the origin of the goods. Another important and often overlooked feature of the GI Regulation is that it helps to promote and protect agricultural heritage in Europe. Indeed as the European Parliament said, designations of origin 'form part of a rich national heritage, which must be preserved'.⁴⁴ While the scheme has not been as popular in the UK as in some other member states,⁴⁵ it has generated interest in regional and traditional foods in the UK.⁴⁶ At a more general level, the Regulation forms part of the Community's Agricultural Policy.⁴⁷ More specifically, it is designed to encourage the diversification of agricultural production and promote products having certain characteristics to the benefit of the rural economy, particularly small farmers in disadvan-

Kolia, 'Monopolising Names: EEC Proposals on the Protection of Trade Descriptions of Foodstuffs' [1992] *EIPR* 233, 234.

⁴⁵ Of the 570 or so names registered by March 2002, only 33 products originated from the UK. 'Food Quality: Commission proposes better protection for geographical names', IP/02/422 (15 Mar. 2002). The full list of protected names is available at <http://europa.eu.int/qualityfood>.

⁴⁶ L. Mason with C. Brown, *Traditional Foods of Britain: An Inventory* (1999) (part of a Europe-wide initiative to list foods and food products produced in one place for three generations or more).

⁴⁷ It is also part of a suite of laws regulating the naming of foods. See C. Lister, 'The Naming of Foods: The European Community's Rules for Non-Brand Food Product Names' [1993] *ELR* 179.

taged, outlying, and upland areas.⁴⁸ The development of distinctive products is particularly important given the rapid market liberalization that is taking place in the agricultural sector.⁴⁹

While the scheme has attracted a lot of support, it is not without its critics. For example it has been suggested that insofar as the Regulation allows product names to be used as ‘protective devices’⁵⁰ it introduces significant new ‘barriers to compositional and processing innovation’.⁵¹ In particular ‘competing manufacturers offering costs or nutritional advantages will be required to overcome the special benefits’ of registration.⁵² While the GI Regulation allows for the protection of new designations, to date most of the names registered are from established producers. This has led to critics to complain that the Regulation is not, as is claimed, an attempt to re-orientate European agriculture. Rather, it is ‘an effort to agree to mutually acceptable allocation of monopolies to each Member State in accordance with the interests which it represents’.⁵³

2.1 REGISTRATION

For a name to be protected as a designation of origin or as a geographical indication, it must be registered. Once a name is registered, it is automatically protected in all member states. It also enables parties who comply with the relevant rules to use the appropriate EU logo (see Figure 43.1). When the GI Regulation was first passed, a name could be registered using one of two routes: either the ‘normal registration process’ under Article 5, or the Article 17 ‘accelerated (or simplified) process’. As we will see, the accelerated process was abolished in 2003. However, names that were previously registered under the accelerated process continue to receive the same levels of protection as they received previously.⁵⁴

2.1.1 Who can apply for registration?

Applications for registration may be made by groups of producers or processors. A group is defined as ‘any association, irrespective of its legal form or composition, of producers and/or processors working with the same agricultural product or foodstuff’.⁵⁵ Individuals are also able to apply for registration so long as they comply with the procedures established under Article 15.⁵⁶ Groups or individuals are only able to apply

⁴⁸ See *Opinion of the Committee of the Regions on the Protection of geographical indications and designations of origin for agricultural products and foodstuffs*, Opinion COR/2001/58 (14 Nov. 2001). The romantic notion of the ‘farmer’ is evoked here in much the same way as the ‘author’ is used in copyright law.

⁴⁹ *Opinion of the Economic and Social Committee on the Proposal for a Council Regulation amending Regulation No. 2081/92 COM (2002) 139 final—2002/0066* (17 Jul. 2002), para. 2.10.

⁵¹ *Ibid.*

⁵² *Ibid.*

⁵³ See M. Kolia, ‘Monopolising Names: EEC Proposals on the Protection of Trade Descriptions of Foodstuffs’ [1992] *EIPR* 233, 238. The comments made about the Commission’s policy on the quality of food, namely that it is ‘[g]uided by parochialism, sentiment or fading memories of childhood pleasures’, might also apply here. See C. Lister, ‘The Naming of Foods: The European Community’s Rules for Non-Brand Food Product Names’ [1993] *ELR* 179, 200.

⁵⁴ Regulation 692/2003 (8 Apr. 2003), Art. 1(15).

⁵⁵ GI Regulation (2081/92), Art. 5(1).

⁵⁶ *Ibid.* Applications can be made with another member state or with a third country that complies with the procedure set out in Art. 15 (as amended).

for registration in respect of agricultural products and foodstuffs that they ‘produce or obtain’.⁵⁷

Special provisions are made for the fact that geographical areas may not coincide with geopolitical borders. While the scheme envisages that applicants will ordinarily be from one member state, groups or individuals in different member states are able to lodge a joint application where the geographical area extends beyond a single member state.⁵⁸ Unless a decision was ‘tainted by manifest error’ it is for national courts, rather than the European Court of Justice, to rule on the lawfulness of an application for a protected designation, such as the way geographical boundaries are drawn.⁵⁹ In some circumstances it is possible for geographical indications or designations of origin from countries outside of the EU to be registered in Europe. To be eligible to apply for registration, the non-EU country must provide equivalent protection to that which is provided under the GI Regulation.⁶⁰ To date, no product or foodstuff names from outside of Europe have been registered under the scheme.

2.1.2 The product specification

One of the central elements of the scheme established under the GI Regulation is the ‘product specification’. The specification performs a number of different roles. During the registration process, it sets out the information that is used to determine whether a name should be protected. Once a name is registered, the specification, which contains a detailed definition of the protected product, sets out the standards that producers and processors must comply with if they wish to use the protected name. As a corollary, the specification also helps to delineate the scope of protection. That is, it provides the basis for ascertaining the scope of the intangible interest conferred by registration.⁶¹

Article 4(2) provides a non-exhaustive list of the information that needs to be included in a product specification. In particular the product specification must contain information about:

- The name of the agricultural product or foodstuff, including the designation of origin or the geographical indication.
- A description of the agricultural product or foodstuff including the raw materials, principal physical, chemical, microbiological, and/or organoleptic characteristics.⁶²
- The definition of the geographical area.⁶³
- Evidence that the agricultural product or the foodstuff originates in the named geographical area.⁶⁴

⁵⁷ Within the meaning of GI Regulation (2081/92), Art. 2(2)(a) or (b) and Art. 5(2).

⁵⁸ GI Regulation (2081/92), Art. 5(5) (inserted by Regulation 692/2003 Art. 1(3)).

⁵⁹ See *Carl Kuhne (and Others) v. Jutro Konservenfabrik*, Case C-269/99 [2001] ECR I-9517 (ECJ) (the decision as to where boundaries were to be drawn in relation to the PGI Spreewald Gherkins was not a matter for the ECJ but for the German courts).

⁶⁰ Art. 12. Art. 12(3) and Art. 12a-12d, introduced in 2003, set out the registration process for applicants from non-EU countries.

⁶¹ *Consorzio del Prosciutto di Parma v. Asda* Case C-108/01 (20 May 2003), paras. 46–7 (ECJ).

⁶² Organoleptic is an effect or impression produced by any substance on the organs, or the organism as a whole.

⁶³ GI Regulation (2081/92), Art. 2(4).

⁶⁴ *Ibid.*, Art. 2(2)(a) or (b) (whichever is applicable).

- A description of the method of obtaining the agricultural product or foodstuff and, if appropriate, the authentic and unvarying local methods, as well as information concerning the packaging, if the group making the request determines and justifies that the packaging must take place in the limited geographical area to safeguard quality, ensure traceability or ensure control.⁶⁵
- Details showing the link with the geographical environment or the geographical origin.⁶⁶
- The nominated inspection body.⁶⁷
- Any specific labelling details.
- Any other requirements laid down by the Community and/or national law.

2.1.3 Normal registration

There are a number of steps that must be undertaken for an agricultural product or foodstuff name to gain protection under the normal registration process. Applicants must submit an application form and a product specification to the relevant National Agency.⁶⁸ The application form is then examined by the relevant National Agency to see whether it is 'justified' in light of the criteria for protection.⁶⁹ If approved, the application and supporting documentation are submitted to the Commission for final approval. The Commission then undertakes a formal examination of the application to determine whether it includes all the particulars provided for in Article 4. In making its decision, the Commission may seek advice from a specially constituted scientific committee.⁷⁰ If the Commission decides that the name qualifies for protection, a summary sheet is published in the Official Journal of the European Communities.⁷¹ Once the summary of the specification is published in the Official Journal, third parties have six months in which they are able to object to the registration on the basis that the name does not comply with criteria for protection in Article 2.⁷² If the Commission feels that an objection is valid, the application is sent back to the member state for resolution.⁷³ If an acceptable solution is found, the 'summary

⁶⁵ Ibid., Art. 4(2)(e) (the later part of the Article dealing with packaging was introduced by Regulation 692/2003, Art. 1(2) (8 Apr. 2003) *OJL* 99/1).

⁶⁶ Ibid., Art. 2(2)(a) or (b). ⁶⁷ See Ibid., Art.10.

⁶⁸ Ibid., Art. 5(2)(3). A parallel registration process exists where applications are made from groups from outside of the EU: Art. 12a-d (introduced by Regulation 692/2003, Art. 1(11)); GI Regulation (2081/92), Art. 5(5). The relevant application form and contact points for England, Scotland, Wales and Northern Ireland are available at www.defra.gov.uk/foodrin/foodname/intro.htm. In Scotland, the application form is submitted to the Scottish Office of Agriculture, Environment and Fisheries. No charge is made to have a product name registered.

⁶⁹ GI Regulation (2081/92), Art. 5(5).

⁷⁰ Ibid., Art. 6(1). The decision is to be made within 6 months.

⁷¹ This includes the name and address of the applicant, the name of the product, the main points of the application, references to the national provisions governing the preparation, production or manufacture of the product, and, if necessary, the reasons for the decision: GI Regulation (2081/92), Art. 6(2). As we will see, the fact that a summary of the specification, rather than full specification, is published has cast some doubt over the validity of the scheme.

⁷² Third parties are able to object to the registration on the basis that the name does not comply with conditions/criteria for protection in GI Regulation (2081/92) Arts. 2, 7(1). See *La Conquete v. Commission*, T215/00 (30 Jan. 2001) (CFI), paras. 44–47. The right to object to the registration of a geographical indication or a designations of origin is available to citizens of all WTO member countries, so long as the member country provides equivalent protection to that which is provided under Regulation 2081/92.

⁷³ GI Regulation (2081/92), Art. 7(5).

sheet' for the product is republished in the Official Journal to confirm that the product is registered. If unresolved within three months, the matter is passed to the EU Regulatory Committee to decide whether the name ought to be registered taking account of 'traditional fair practice' and the 'actual likelihood of confusion'.⁷⁴ If no valid objections are made to the proposed registration, the name of the group and the relevant inspection agency are entered into the *Register of Protected Designations of Origin and Protected Geographical Indications*, which is kept by the Commission.⁷⁵ The Commission then publishes the names entered in the Register in the Official Journal. Once registered, the product name is automatically protected in all member states.

2.1.4 Accelerated registration

In addition to the normal registration process established under Article 5, the GI Regulation (as enacted) also provided for a fast track or accelerated registration process.⁷⁶ The aim of the accelerated procedure was to ensure that names that had been protected in member states prior to the enactment of the GI Regulation were registered at the Community level. It was also meant to encourage the rapid harmonization of the national legal systems of the member states.

As we mentioned before, the accelerated registration process established under Article 17 was abolished in 2003.⁷⁷ This did not affect, however, the validity of the names that had previously been registered under the accelerated process. The main reason why the accelerated process was abolished was because it did not provide for a right of objection, which was said to be 'an essential requirement for protecting acquired rights and preventing injury on registration' and for legal security and transparency.⁷⁸

For a name to be registered under the accelerated process, member states had to notify the Commission of the names they wished to have protected. To be eligible for registration, it was necessary to show that the name was already protected in the member state or, where protection was not available, that the name was established by usage. So long as the names complied with the requirements for protection, they were subsequently entered onto the Register.⁷⁹ Unlike the situation where a name is registered under the normal process, there was no opportunity for third parties to object to the registration where the accelerated process was used. Another important difference between the two modes of registration relates to the information disclosed during the registration process. As we saw before, under the normal registration process, a summary of the specification is published in the Official Journal.⁸⁰ In contrast, the only information published in the

⁷⁴ *Ibid.*, Art. 7(5)(b).

⁷⁵ *Ibid.*, Art. 6(4). The method used by the Commission to enter names into the register was established by *Regulation 2400/96 on the entry of certain names in the Register of protected designations of origin and protected geographical indications provided for in Council Regulation 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs* (17 Dec. 1996) *OJ L* 327, 11. Names that are registered are added (by successive amendments to Regulation 2400/96) to the Annex to the GI Regulation, thereby amending the Register.

⁷⁶ See Communication to Traders involved with designations of origin and geographical indications for agricultural products and foodstuffs concerning the simplified procedures as laid down in Article 17 of Council Regulation (EEC) No. 2081/92 (9 Oct. 1993) *OJ C* 273.

⁷⁷ Regulation 692/2003, Art. 1(15) (8 Apr. 2003).

⁷⁸ *Ibid.*, Recital 13.

⁷⁹ GI Regulation (2081/92), Arts. 2 and 4.

⁸⁰ *Ibid.*, Art. 17(2): deleted by Regulation 692/2003, Art. 1(15).

Official Journal under the simplified process was the protected name, the type of product or foodstuff to which the name attaches, the member state who forwarded the application, the type of protection granted (PDO or PGI), and details of the relevant inspection body.⁸¹

The limited nature of the information published under the accelerated process was the subject of two recent European Court of Justice decisions. The first of these was *Consorzio del Prosciutto di Parma v. Asda*.⁸² The applicants in the case, the Consorzio del Prosciutto di Parma (the 'Consorzio'), is an association of producers of Parma ham. The Consorzio supervises and enforces rules and regulations promulgated under Italian law concerning the production and marketing of Parma ham. The Consorzio made use of the accelerated registration process and applied to have 'Prosciutto di Parma' registered as a PDO. After the Italian government sent the name to the Commission, 'Prosciutto di Parma' was registered as a PDO on 21 June 1996.⁸³ The only information published in the Official Journal was the fact that the name had been registered. Details of the inspection structures were published in the Official Journal in October 1996.⁸⁴ In contrast, the specification—an 84-page document in Italian—contained detailed information about the conditions that had to be complied with before anyone could use the name 'Prosciutto di Parma'. Amongst other things, the specification said that if ham was sliced and sold in packets, to be called 'Prosciutto di Parma', the slicing and packaging had to take place in the geographical area (a topic which we return to below).

The dispute arose when a UK based company, Hygrade, purchased Parma ham (which is the English translation of Prosciutto di Parma) that had been boned, but not sliced, from an Italian member of the Consorzio. There was no dispute that the hams were properly made and authentic. Problems arose, however, when Hygrade sliced the ham in the United Kingdom, placed it into packets, and then sold it to the British supermarket chain, Asda. The ham was then sold in Asda's supermarkets, where the packet bore the phrase 'ASDA: A taste of Italy' and 'PARMA HAM Genuine Italian Parma Ham'. The back of the packet read 'PARMA HAM. All authentic Asda continental meats are made by traditional methods to guarantee their authentic flavour and quality' and 'Produced in Italy, packed in the UK for Asda Stores'. The Consorzio brought an action under the GI Regulation to prevent Asda from calling the ham that had been sliced in the United Kingdom 'Parma ham'. In response Asda argued that they were not bound by the terms of the specification since the relevant conditions had not been disclosed in an appropriate manner.

After losing at first instance and in the Court of Appeal, the Consorzio appealed to the House of Lords, who referred a number of questions to the ECJ. In particular, the Lords asked whether Asda was bound by the terms of the specification, given that the conditions that the Consorzio were attempting to rely upon were not readily available to the public.⁸⁵ Importantly, nothing was published in official EU publications which said that the name could only be used where the ham was sliced and packaged in the defined geographical

⁸¹ See Annex to *Regulation 1107/96 (12 Jun. 1996) on the registration of Geographical Indications and Designations of Origin under the procedure laid down in Article 17 of Council Regulation (EEC) No. 2081/92 (21 Jun. 1996)*, OJ L 148, (as amended).

⁸² Case C-108/01 (20 May 2003) (ECJ).

⁸³ *Regulation 1107/96 of 12 Jun. 1996 on the registration of geographical indications and designations of origin under the procedure laid down in Article 17 of Regulation 2081/92 [1996] OJ L 148/1.*

⁸⁴ This simply referred to, and gave the address of, the Consorzio.

⁸⁵ Apparently, the specification was not readily available in English.

area. The ECJ accepted this argument and held that Asda were not bound by the specification. The ECJ said that while the GI Regulation was directly applicable in member states, 'the requirement of legal certainty means that Community rules must enable those concerned to know precisely the extent of the obligations which they impose on them.'⁸⁶ The problem with accelerated registration was that it did not provide for the publication of either the specification or extracts from the specification. Instead, all that is published under the simplified procedure was the protected name, the type of product or foodstuff to which the name attaches, the member state who forwarded the application, the type of protection granted (PDO or PGI), and details of the relevant inspection body. This meant that third parties were not in a position where they could readily access information which (potentially) affected them. This was made worse by the fact that translations of the Italian specification were not generally available.⁸⁷ As a result of this lack of transparency, third parties could not reasonably ascertain what their legal obligations were. Given this, the ECJ said that the conditions set out in the product specification 'could not be relied on against economic operators, as it was not brought to their attention by adequate publicity in Community legislation'.⁸⁸ That is, Asda were able to slice and package ham in the United Kingdom and sell it as 'Prosciutto di Parma' or as Parma ham.

Similar issues were also raised by the ECJ in the *Ravil* decision, which concerned the grating of 'Grand Padano' cheese (which had been registered under the accelerated process) outside of the nominated geographical area. The specification said, *inter alia*, that the name 'Grand Padano' could only be used where the cheese was grated in the nominated geographical area. While the ECJ accepted that protection did, in principle, mean that the name could only be used where the cheese was grated in the defined area, this could not be relied upon against 'economic operators as it was not brought to their knowledge by adequate publicity in Community legislation'.⁸⁹

These decisions have important consequences for names that have been registered under the fast track process. In particular the ECJ rulings suggest that while the names may still be valid, they cannot be enforced against third parties.⁹⁰ One way in which the problem could be resolved is if summary specifications of the names registered under the accelerated process were published in the Official Journal (or some equivalent forum). In the meantime, there must be serious doubts over the effectiveness of the names registered under the accelerated process. While the Court said that the issues raised in the decisions touch 'the very essence of the legislation and call into question the entire registration system laid down by Regulation 2081/92',⁹¹ given the nature of the information published under the normal registration process, it is unlikely that the ECJ decisions will have any impact on names registered under the normal process.⁹²

⁸⁶ *Consorzio del Prosciutto di Parma v. Asda*, Case C-108/01 (20 May 2003), para. 89 (ECJ) citing *UK v. Commission* Case C-209/96 [1998] ECR I-5655, para. 35.

⁸⁷ *Consorzio del Prosciutto di Parma v. Asda*, [2002] FSR 3, 61 para. 79 (Lord Scott) (HL).

⁸⁸ *Ibid.*, para. 99. See also *Ravil v. Bellon*, Case C-469/00 [2003] ECR I-5053, para. 97 (ECJ).

⁸⁹ *Ravil v. Bellon*, Case C-469/00 [2003] ECR I-5053, para. 104 (ECJ).

⁹⁰ Although the matter was not dealt with explicitly, it seems that the 'knowledge' was viewed objectively.

⁹¹ *Consorzio del Prosciutto di Parma v. Asda*, Case C-108/01 (20 May 2003), para. 84 (ECJ).

⁹² Many of these problems would have been overcome if the suggestion to establish a databank of applications and names registered, including the relevant product specifications, had been adopted. See Committee on Agricultural and Rural Development, *Report on the proposal for a Council Regulation amending Regulation 2081 COM (2002) 139 C5-0178/2002–2002/0066(CNS) Final*, amendment 14, 14.

2.2 CRITERIA FOR PROTECTION

There are a number of different criteria that must be satisfied for a name of an agricultural product or foodstuff to be registered as a geographical indication or a designation of origin. When thinking about the threshold that must be satisfied for a name to be registered, it is helpful to distinguish between criteria relating to the ‘name’, and criteria that apply to the ‘agricultural product or foodstuff’ to which the name applies. We will look at each of these in turn.

2.2.1 Limitation on names

There are a number of restrictions that are placed on the types of names that are registrable under the Regulation.

(i) *Geographic name.* The first point to note is that the GI Regulation only applies to geographic names,⁹³ which are defined as names of regions, specific places, or in exceptional cases, countries (the latter was introduced to accommodate very small countries such as Luxembourg⁹⁴). As such, it would not be possible to register the name of a member state (France) nor a fictitious or invented name. Similarly, where numbers were added to a geographical designation to differentiate mineral waters from the same area, the names were rejected on the basis that they were not ‘geographical names’.⁹⁵ Article 2(3) creates an exception to the general rule that only geographic names are registrable. In particular, it provides that traditional non-geographical names designating an agricultural product or foodstuff originating in a region or a specific place, shall be considered to be a designation of origin.⁹⁶ For example ‘Feta’, which is derived from the Latin and means ‘to slice’, does not designate a geographic place. Nonetheless it was said to be *prima facie* registrable under Article 2(3) as a traditional non-geographic name.⁹⁷

(ii) *Non-generic names.* A name will not be registered as a protected designation where it is generic.⁹⁸ The name of an agricultural product or foodstuff is generic where it has become the common name of, or the term commonly used to describe, an agricultural product or foodstuff.⁹⁹ That is, a name is generic where it designates the product *as such*

⁹³ It has been said that this refers to ‘homogeneous areas’: *Italian Republic v. Commission*, C-99/99 (14 Dec. 2000).

⁹⁴ Advocate General Jacobs, *Commission v. Germany*, Case C-325/00 (14 March 2002).

⁹⁵ The names were Dauner Quelle I, Dauner Quelle II, and Dauner Quelle III. See Recitals 1–4, Regulation 1285/2001 (28 Jun. 2001) rejecting a list of applications for the registration of designations communicated under Art. 17, GI Regulation 2081/92.

⁹⁶ GI Regulation 2081/92, Art. 2(3). It also adds that ‘the quality or characteristics of which are essentially or exclusively due to a particular geographical environment with its inherent natural and human factors, and the production, processing and preparation of which take place in the defined geographical area’.

⁹⁷ Cf. Advocate General La Pergola, *Denmark v. Community*, Joined Cases C-289/96 C-293/96 and C-299/96 [1999] ECR I-1541, para. 7 (arguing, on substantive grounds, that Feta should not have been registered).

⁹⁸ GI Regulation 2081/92, Art. 3(1).

⁹⁹ See *Denmark v. Commission of the European Communities*, Case C-289/9 [1999] ECR I-1541. Marketing of a cheese in France labelled as ‘parmesan’ which did not comply with the specification for the PDO ‘Parmigiano Reggiano’ (registered by Italy under the accelerated Art. 17 process). The German government argued that ‘parmesan’ was generic insofar as it had become the common name for a foodstuff. The ECJ said that Germany had not provided sufficient evidence to conclude that Parmesan was generic. See also Opinion of Advocate General Ruiz-Jarabo Colomer in *Canadane Cheese Trading v. Kouri*, Case C-317/95 [1997] ECR I-4681.

without involving, in the view of the public, any reference to the geographic origin of the product.¹⁰⁰ This is the case even though the name originally related to the place or region where the product or foodstuff was originally produced or marketed. On this basis names such as Cheddar, Brie, Camembert, Edam, Emmentaler, and Gouda would be generic and thus unregistrable.¹⁰¹ While it is not possible to register names that are generic *per se*, it is possible to register a geographical name that incorporates a generic name.¹⁰² For example, Cheddar is a generic form of hard cheese and as such would not be eligible to be registered either as a PDO or PGI. Nonetheless, West Country farmhouse Cheddar Cheese has been registered as a PDO.¹⁰³

A range of factors must be taken into account when deciding the essentially evidential question of whether a name has become generic. These include the situation in the member state in which the name originates and in areas where the product is consumed; the situation in other member states; and relevant national and Community laws. Once a name is registered, it cannot become generic.¹⁰⁴

(iii) *Homonymous names.* Special rules exist in relation to the registration of homonyms of names that are already registered:¹⁰⁵ that is, names that are spelt or pronounced in the same way. While there is no guidance as to the degree of similarity that is needed for these rules to apply, the Recitals to the 2003 amendments speak of geographical names that are ‘entirely or partially homonymous’.¹⁰⁶

A homonymous name that meets the requirements of the Regulation can be registered, so long as there is a clear distinction (in practice) between the name on the register and the (subsequent) homonymous name. However, if a homonymous name misleads the public into believing that products come from another territory, it will not be registered. This is the case even if the name is used accurately for the territory in question.¹⁰⁷ In deciding whether a homonymous name will be registered, the Regulation says that it is necessary to have ‘regard to the need to treat the producers equitably and not to mislead consumers’,¹⁰⁸ as well as taking into account local and traditional usage and the actual risk of confusion.

¹⁰⁰ *Denmark v. Community* Joined Cases C-289/96, C-293/96, and C-299/96 [1999] ECR I-1541, para. 36.

¹⁰¹ As is required by GI Regulation 2081/92, Art. 3(3), a non-exhaustive indicative list of the names of agricultural products and foodstuffs regarded as generic was presented by the Commission in 1996. However, it was not passed. See Proposal for a Council Decision drawing up a non-exhaustive, indicative list of the names of agricultural products and foodstuffs regarded as being generic, as provided for in Article 3(3) of Council regulation No. 2081/92 COM/96/0038/FINAL (6 Mar. 1996), not published in the *OJ*. This included Brie, Camembert, Cheddar, Edam, Emmentaler, and Gouda. See *Denmark v. Community* Joined Cases C-289/96, C-293/96, and C-299/96 (16 Mar. 1999), para. 44.

¹⁰² In *Denmark v. Community* Joined Cases C-289/96, C-293/96, and C-299/96 [1999] ECR I-1541, the ECJ stressed that all of the factors had to be taken into account.

¹⁰³ The Registration of ‘Feta’ which had been registered to Greece under Regulation 1107/96, was annulled because the Commission had not taken account of all the factors listed in Article 3(1) when deciding whether the name should be registered. *Denmark v. Community*, Joined Cases C-289/96, C-293/96, and C-299/96 [1999] ECR I-1541, para. 103. Feta was reinstated as a PDO by the Commission on 14 Oct. 2002 by Regulation 1829/2002 Amending the Annex to Regulation 2081/92 with regard to the name ‘Feta’ [2002] *OJ L 277*.

¹⁰⁴ GI Regulation 2081/92, Art. 13(2).

¹⁰⁵ See Proposal for a Council Regulation amending Regulation (EEC) 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs COM(2002) 139 Final *OJ C 181 E* (30 Jul. 2002).

¹⁰⁶ Regulation 692/2003 (8 Apr. 2003), Recital 4.

¹⁰⁷ GI Regulation 2081/92, Art. 6(6).

¹⁰⁸ *Ibid.*, Art. 6(2)(e) (introduced by Reg. 692/2003 Art. 1(5) (8 Apr. 2003) *OJ L 99/1*).

(iv) *Plant or animal names.* A name that conflicts with the name of a plant variety or an animal breed which is likely to mislead the public as to the 'true origin' of the product may not be registered.¹⁰⁹

(v) *Trade marks.* As we will see, special rules were developed to prevent the dual protection of geographic names under both the GI Regulation and as a trade mark. A designation of origin or geographical indication will not be registered where, in the light of a trade mark's reputation, renown, and the length of time it has been used, registration is liable to mislead consumers as to the true identity of the product.¹¹⁰

2.3 AGRICULTURAL PRODUCTS OR FOODSTUFFS

There are also a number of restrictions placed on the types of agricultural products and foodstuffs that can be protected under the GI Regulation.

2.3.1 Subject matter

The first and most general restriction is that the GI Regulation only applies to certain agricultural products and foodstuffs. More specifically the Regulation only applies to three general categories of products and foodstuffs.¹¹¹ The first is agricultural products intended for human consumption.¹¹² The second are the foodstuffs listed in Annex I to the GI Regulation. These are beer, beverages made from plant extracts, bread, pastry, cakes, confectionary, and other bakers' wares, natural gums and resins, mustard paste, and pasta. The third and final group is the agricultural products listed in Annex II to the GI Regulation. These are hay, essential oils (e.g. lavender oil), cork, cochineal (a raw product of animal origin),¹¹³ flowers and ornamental plants,¹¹⁴ wool, and osier (a type of willow).

The GI Regulation does not apply to wines (with the exception of wine vinegars), or to spirits (which are governed by specific legislation).¹¹⁵ When the GI Regulation was first enacted it applied to the names of mineral and spring water. However, as a result of problems such as the use of identical names for different waters and the use of invented names,¹¹⁶ the GI Regulation was amended to exclude mineral and spring waters from the types of products that are protectable.¹¹⁷

2.3.2 The product or foodstuff must originate from the named place

To qualify for protection, the agricultural product or foodstuff must originate from the

¹⁰⁹ *Ibid.*, Art. 3(2).

¹¹⁰ *Ibid.*, Art. 14(3).

¹¹¹ *Ibid.*, Art. 1(1). The Commission may amend Annex I and II of the Regulation with the assistance of a Regulatory Committee. Art. 1(1) (as amended).

¹¹² These are listed in Annex I to the Treaty establishing the European Economic Community.

¹¹³ Regulation 1068/97 *OJ L* 156 (13 Jun. 1997).

¹¹⁴ Regulation 2796/2000 *OJ L* 324 (21 Dec. 2000).

¹¹⁵ Regulation 2081/92, Art. 1(1).

¹¹⁶ See Recitals 1–4, Regulation 1285/2001 (28 Jun. 2001) rejecting a list of applications for the registration of designations communicated under Art. 17 of the Council Regulation 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs (29 Jun. 2001) *OJ L* 176. Germany applied to have 314 names registered under the accelerated Art. 17 process: 125 of the names were not designations of origin, 15 names which included 'numbers' to distinguish names of the same designation were rejected because they were not geographic names.

¹¹⁷ Names of mineral and spring waters already registered will continue in force until 31 December 2013. Regulation 692/2003, Art. 2, (8 Apr. 2003) amending Regulation 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs.

named geographical area; be it a region, specific place, or country.¹¹⁸ That is, a name will not be protected where the product comes from outside of the geographic area. An exception is made to the requirement that the agricultural product or foodstuff must originate from the named geographic area in the case of ‘raw materials’ (which are defined as live animals, meat, and milk).¹¹⁹ In particular, where the raw materials of a product originate from a geographical area that is larger than or different to the processing area, the product name may still be protected. For this to occur the production area of the raw materials must be limited; there has to be special conditions for the production of the raw materials; and inspection arrangements need to be in place to ensure that these conditions are adhered to.¹²⁰ It is also necessary to show that the designation in question was either already protected or capable of being protected as a designation of origin in the member state. If no such scheme exists, it is necessary for the product to have a proven, traditional character and an exceptional reputation and renown.¹²¹

2.3.3 Quality or character of the product or foodstuff

For a name to be protected under the GI Regulation, it is necessary to show that the nominated geographic area imbues products from that region with certain characteristics or traits. The requirement that there must be a link between product and place means that an abstract and general name, such as ‘Mountain’, which transcends geographical areas would not qualify for protection since there is no link between the quality or characteristics of the product and its specific geographical origin.¹²² Similarly, the fact that a product or foodstuff is closely linked to a country’s traditional gastronomy, as distinct from a geographic area, would not, of itself, show the necessary connection to place.¹²³

The nature of the relationship between product and place necessary for a name to be registered is different in relation to designations of origin (PDOs) than geographic indications (PGIs). In relation to *designations of origin*, it is necessary to show that ‘the quality or characteristics of the product are essentially or exclusively due to a particular geographical environment with its inherent natural and human factors’.¹²⁴ As Advocate General La Pergola said, ‘the relationship between product and territory must be *exclusive*, in the sense that the product must have been conceived of, developed, and established exclusively in that area and nowhere else. Only this exclusive relationship justifies the grant of a collective monopoly. Precisely by virtue of the place where they are established’.¹²⁵ In contrast, for a name to qualify as a *geographical indication*, it is only necessary to show that the product which the name refers to ‘possesses a specific quality, reputation, or other characteristics attributable to that geographical origin’.¹²⁶

¹¹⁸ GI Regulation 2081/92, Art. 2(2)(a).

¹¹⁹ Ibid., Art. 2(5) (the possibility of applying for protection under this head ended on 26 Jul. 1995).

¹²⁰ Ibid., Art. 2(4). ¹²¹ Ibid., Art. 2(6).

¹²³ Opinion of Advocate General La Pergola, *Consorzio per la Tutela del Formaggio Gorgonzola v. Kaserei Champignon Hofmeister*, Case C-87/97 [1999] ECR I-1301, para. 9.

¹²⁴ GI Regulation (2081/92), Art. 2(2)(a).

¹²⁵ Opinion of Advocate General La Pergola, *Consorzio per la Tutela del Formaggio Gorgonzola v. Kaserei Champignon Hofmeister*, Case C-87/97 [1999] ECR I-1301, para. 7.

¹²⁶ GI Regulation (2081/92), Art. 2(2)(a).

2.3.4 Place of production

Another factor that must be satisfied for a name to be registered relates to the place where the named agricultural product or foodstuff is produced. Again, different standards apply depending on whether a name is to be registered as a PDO or a PGI. In relation to *designations of origin*, the production, processing *and* preparation all need to place in the named geographical area.¹²⁷ In contrast, to be protected as a *geographical indication* it is only necessary for the production, and/or processing and/or preparation to take place in the defined geographical area.¹²⁸

2.4 EXPLOITATION

One of the distinguishing features of the scheme established under the GI Regulation is that it does not confer the right to use a registered name either on particular individuals or a specific group. Rather, it confers the right to use the registered name and the relevant logo on *any* undertaking whose products fulfil the prescribed geographical and qualitative requirements.¹²⁹ That is, the right is not addressed to specific producers, but to an abstract group.¹³⁰ This means that producers who were not part of the original application are able to use a protected name, so long as their products conform to the registered specification.¹³¹ It also means that the interest in a protected name cannot be licensed or assigned to a third party (especially outside of the nominated geographic area). While the Regulation may, in theory, enable anyone to use a registered name if they comply with the specification, in practice however, agricultural cooperatives, cartels of producers, or state interests may impose restrictions on the ability of third parties to produce or process agricultural products and foodstuffs.¹³²

2.5 INFRINGEMENT

In this section we look at the situations where a registered name will be infringed (or misused). In particular we consider who is entitled to sue in case of abuse, the scope of protection, and the situations where the name will be infringed.

2.5.1 Who is entitled to sue?

One of the defining characteristics of the regime established under the GI Regulation is that there is no 'owner' *per se*. Rather, anyone who complies with the specification is eligible to use the name. It is clear that producers and processors using a registered name are able to sue to prevent abuses. One question that has arisen is whether organizations formed to represent producers are also entitled to sue to protect a registered name. While there has yet to be a clear ruling on the matter, it seems that representative organizations

¹²⁷ *Ibid.* ¹²⁸ *Ibid.*, Art. 2(2)(b).

¹²⁹ *La Conquête v. Commission*, T-215/00 (30 Jan. 2001), para. 32 (CFI).

¹³⁰ *Ibid.*, paras. 32–33.

¹³¹ To be eligible to use a protected designation of origin (PDO) or a protected geographic indication (PGI), an agricultural product or foodstuff must comply with the specification: GI Regulation (2081/92), Arts. 4(1), 8.

¹³² See M. Kolia, 'Monopolising Names: EEC Proposals on the Protection of Trade Descriptions of Foodstuffs' [1992] *EIPR* 233.

might not be able to bring a representative action on behalf of their members.¹³³ Nonetheless, they might be able to sue if they can establish that they had sufficient interest in their own right. An organization might be able to do this if they could show that their membership would drop or their reputation would suffer if they did not attempt to protect a name used by their members.¹³⁴ In the meantime, if a representative organization wished to sue to protect a registered name, to avoid any doubts it would be advisable for them to join a producer or processor to the action.

2.5.2 Scope of protection

The starting point for ascertaining the scope of protection available for a PDO/PGI is the product specification. While the specification helps to delineate the scope of the intangible property protected by the GI Regulation, the mere fact that something is included in a specification does not mean that it is automatically protected. This is because the only matters within a specification that are relevant are those that impact upon the quality of the product. This is important given, as Lord Hoffmann said, that the product specification is a 'discursive document', meaning that it contains information that is not intended to be enforceable.¹³⁵ For example the 84-page specification submitted in support of the registration of *Prosciutto di Parma* as a PDO included information on the history of the pig in the Po Valley, details about breeding and slaughtering, as well as how the ham was to be cured, stored, and sliced.

In other registration based intellectual property regimes, such as patents and trade marks, one of the key issues in an infringement action is how the registered documents are to be interpreted. For example, in patent law a lot of attention is given to whether the claims should be read literally, purposively, and so on. Less problematic, but equally important, is the question of the types of activities that fall within the owner's exclusive control. In relation to names registered under the GI Regulation such issues are dealt with by Article 13. This sets out both the types of activities that infringe, and also how the underlying property interest is to be construed. While there will undoubtedly be situations where the courts are called upon to decide how a name should be interpreted or whether products are the same, most of these issues are dealt with by Article 13.

Registered names are protected against any direct or indirect commercial use in respect of products not covered by the registration.¹³⁶ This is subject to the proviso that the products are 'comparable' to the registered product, or using the name exploits the reputation of the protected name. Registered names are also protected against any 'misuse, imitation, or evocation'.¹³⁷ This is the case even if the true origin of the product is indicated (Cornish Clotted cream made in Spain); the name is translated; or the name is accompanied by an expression such as 'style', 'type', 'method', 'as produced in', 'imita-

¹³³ See *Consorzio del Prosciutto di Parma v. Marks and Spencer* [1990] FSR 530, 536.

¹³⁴ See *Consorzio del Prosciutto di Parma v. Marks and Spencer* [1991] RPC 351, 368 (CA) ('the Consortium did have sufficient interest of its own to protect in passing off proceedings' ... 'the prevention of the reductions in its membership, both present and future, which would or might result from a perception among producers that it was not doing its best to further their interests', per Nourse LJ).

¹³⁵ See Lord Hoffmann, *Consorzio del Prosciutto di Parma v. Asda Stores Ltd* [2002] FSR 3, 49 para. 29 (HL).

¹³⁶ GI Regulation (2081/92), Art. 13(1)(a).

¹³⁷ *Ibid.*, Art. 13(1)(b). Where a registered name contains within it a generic name, the use of the generic name is not contrary to Art. 13(1)(a)(b).

tion', or something similar. A name is 'evoked' where the term used to designate a product incorporates part of a protected designation, so that 'when a consumer is confronted with the name of a product, the image triggered in his mind is that of the product whose designation is protected'.¹³⁸ As the ECJ said, it 'is possible for a protected designation of origin to be evoked where there no likelihood of confusion between the products concerned'. This was the case 'even where no Community protection extends to the parts of the designation which are echoed in the term or terms in issue'.¹³⁹ On this basis, the ECJ held that the name *Gorgonzola* (which was a protected designation) was evoked, and thus infringed, where the phonetically and visually similar name *Cambozola* was used in relation to a soft blue cheese that looked like Gorgonzola.¹⁴⁰

Article 13(1)(c), which focuses on the product to which the name attaches, provides that registered names are protected against 'any other false or misleading indication of the provenance, origin, nature or essential qualities of the product, on the inner or outer packaging, advertising material or documents relating to the product concerned, and the packaging of the product in a container liable to convey a false impression as to its origin'.¹⁴¹ Finally, registered names are also protected against 'any other practice liable to mislead the public as to the true origin of the product'.¹⁴²

(i) *Secondary uses of agricultural products.* One issue that has attracted a lot of attention is whether registration confers protection over what might be called secondary uses of an agricultural product. While it may be acceptable for a specification to stipulate that a name can only be used if the product was grown and processed in the nominated geographic area, is it also acceptable for the specification to stipulate that secondary activities—such as grating, slicing, bottling, or packaging of products—must also be carried out in the region? Is it acceptable, for example, for a specification to state that the name Parma ham can only be used in relation to sliced ham where the slicing takes place in the nominated geographic area? What about the slicing of ham in a delicatessen, a restaurant, or at home? Put differently, at what point in the food chain are the rights in a name exhausted?

The question of whether protection should extend to secondary uses was considered by the ECJ in the *Parma Ham* and the *Ravil* decisions. In both cases, the ECJ's starting point was to note that secondary activities carried out in relation to agricultural products have the potential to harm the quality and thus the reputation of the designation of origin.¹⁴³ That is, the ECJ accepted that the grating of cheese,¹⁴⁴ and the slicing and packaging of ham had the potential to impact upon the quality of the final product. They also added that if controls were not exercised over the way the particular activity was carried out, consumers would have no guarantee of the quality of the product other than the word of the retailer. It might also undermine the reputation of the protected name. Given this, the ECJ held that the requirement that secondary activities be carried out in the region was

¹³⁸ Opinion of Advocate General La Pergola, *Consorzio per la Tutela del Formaggio Gorgonzola v. Kaserei Champignon Hofmeister*, Case C-87-97 [1999] ECR I-1301, para. 25.

¹³⁹ *Ibid.*, para. 26.

¹⁴⁰ *Ibid.*, para. 27.

¹⁴¹ GI Regulation (2081/92), Art. 13(1)(c).

¹⁴² *Ibid.*, Art. 13(1)(d).

¹⁴³ In *Consorzio del Prosciutto di Parma v. Asda*, Case C-108/01 (25 Apr. 2002) and *Société Ravil v. Bellon Import*, Case C-469/00 [2003] ECR I-5053, Advocate General Alber was not willing to extend the scope of protection to secondary factors such as packaging and grating, focusing instead on the 'uniqueness' of the product in relation to the environment in which it was produced.

¹⁴⁴ *Ravil v. Bellon*, Case C-469/00 [2003] ECR I-5053 (ECJ).

justifiable, so long as they were required to protect or preserve the quality of the agricultural product or foodstuff. In both cases the ECJ found that the requirement that the secondary activity (the slicing of the ham and the grating of the cheese) be carried out in the nominated geographical area was necessary to ensure the quality of the products in question.

One situation where quality is at issue is where the transportation of a product outside of a region creates risks to the quality and thus the reputation of the product. Where wine is transported in bulk, which is required if the wine is to be bottled outside the region, this increases the risk of oxidization.¹⁴⁵ The quality of the wine might also be affected by variations in temperature that arise during transportation. Similar problems might arise where delays between the picking and processing of a fruit undermine the quality of the end product (as with olive oil).¹⁴⁶

Any remaining doubts there might have been about whether registration covers secondary activities was resolved when the GI Regulation was amended in 2003 to state that producer groups are able to indicate in their specifications that packaging shall take place solely in the defined geographical area. ('Packaging' refers to the operations needed to prepare the product for sale, such as bottling or canning).¹⁴⁷ Echoing the reasoning of the ECJ, the GI Regulation says that this can only be done where it necessary 'to safeguard quality, ensure traceability, or ensure control'.¹⁴⁸

2.6 MONITORING AND ENFORCEMENT

Member states are required to implement objective and impartial inspection structures to monitor products and foodstuffs that are registered.¹⁴⁹ Applicants are required to nominate an independent inspection body, who will undertake regular inspections of their registered products to ensure that the requirements of the specification are being met. Inspection costs are borne by the producers using the protected name. The nominated Inspection Body can either be a public body (such as a local Trading Standards Officers or an Environmental Health Department), or a private body (who must comply with the appropriate standards¹⁵⁰). In the UK, the task of enforcement has been delegated to the Trading Standards Services under Article 10(1) of the GI Regulation.¹⁵¹ If an inspection body finds that a producer is not complying with the registered specification, they are

¹⁴⁵ See *Belgium v. Spain*, Case C-388/95 (16 May 2000) (ECJ) (re-bottling of Rioja wine).

¹⁴⁶ A more difficult situation arises, however, where it is technically feasible for the secondary activities to be carried on outside of the nominated geographical area. The ECJ has consistently said that controls undertaken outside of the geographical area provide fewer guarantees as to the quality and authenticity than those carried on within the nominated geographic area. They have also said that it was not reasonable to expect producers to have to monitor and supervise the way their products were prepared throughout the Community.

¹⁴⁷ Opinion of the Economic and Social Committee on the Proposal for a Council Regulation amending Regulation 2081/92 COM (2002) 139 final–2002/0066 (17 Jul. 2002), para. 2.6.

¹⁴⁸ GI Regulation (2081/92), Art. 4(2)(e). The later part of the Article dealing with packaging was introduced by Art. 1(2) Regulation 692/2003 (8 Apr. 2003) *OJ L* 99/1. In the Parma Ham decision, the Lords accepted that protection would not extend to the slicing of ham in restaurants and delicatessens, as this was not something that a specification ought to be able to control. See Lord Scott of Foscote, *Consorzio del Prosciutto di Parma v. Asda Stores Ltd* [2002] *FSR* 3, 62 para. 85 (HL).

¹⁴⁹ GI Regulation (2081/92), Art. 10(1). ¹⁵⁰ European Standard EN 45011.

¹⁵¹ *Consorzio del Prosciutto di Parma v. Asda* [1998] *FSR* 697, 709.

obliged to ensure that the GI Regulation is complied with.¹⁵² While UK government representatives said in 1998 that that ‘a statutory instrument will be implemented to give Trading Standards Officers power to bring prosecution for breach of [the GI Regulation]’, to date no such instrument has been passed.¹⁵³ As such, it is not clear whether and, if so, on what basis Trading Standards Officers are able to ensure that a product complies with its specification.¹⁵⁴

2.7 AMENDMENT AND CANCELLATION

There are two situations where the Commission is able to amend or cancel a registration. Firstly, the Commission is given a general power to amend a specification to take account of matters such as scientific and technical developments, or to redefine a geographical area.¹⁵⁵ The second situation is if ‘a condition laid down in a product specification is not being met’. This process is triggered when one member state complains to the member state who made the original application that a specification is not being complied with. If there are repeated irregularities or the member states cannot reach agreement, the matter is referred to the Commission, who after examination takes ‘the necessary steps’ including ‘cancellation of the registration’.¹⁵⁶ There are two circumstances where a registered name may be cancelled. The first is where the member state that submitted the original application decides that a request for cancellation is justified.¹⁵⁷ The second is where compliance with the specifications ‘can no longer be ensured’. This might occur, for example, if a member state failed to implement appropriate inspection structures, or was unable to prevent repeated irregularities. Notification of the cancellation of a name is published in the Official Journal.

2.8 REMEDIES

While other member states have implemented legislation setting out the penalties and remedies where a registered name is infringed, to date no such legislation has been introduced in the United Kingdom. In the absence of specific provisions, applicants would need to rely on common law/equitable remedies.¹⁵⁸ This might include an injunction, an action for unjust enrichment, breach of statutory duty, or some equivalent order. An interesting development relates to the possibility of cross-border injunctions to enforce and protect

¹⁵² GI Regulation (2081/92), Art. 10(4).

¹⁵³ ‘A statutory instrument will be implemented to give Trading Standards Officers power to bring prosecution for breach of [the GI Regulation] and that MAFF is the competent UK authority and delegates the task of enforcement to Trading Standards Services under Art. 10(1) of the Council Regulation’. *Consorzio del Prosciutto di Parma v. Asda* [1998] FSR 697, 709.

¹⁵⁴ An action for infringement might be brought under existing legislation such as ss. 14 and 15 of the Food Safety Act 1990, the Food Labelling Regulations (SI 1996/1499) or s. 1 of the Trade Description Act 1968. See *Consorzio del Prosciutto di Parma v. Asda Stores Ltd* [1998] FSR 697, 709.

¹⁵⁵ GI Regulation (2081/92), Art. 9. This occurs at the request of a member state. However the language suggests that other grounds would be considered.

¹⁵⁶ *Ibid.*, Art. 11(4). ¹⁵⁷ *Ibid.*, Art. 11(a).

¹⁵⁸ Lord Hoffmann said that enforcement depends on the fact that Art. 8 of the GI Regulation lays down a clear rule and upon a general principle that the courts of the member states are obliged to provide remedies to enforce community rights. *Consorzio del Prosciutto di Parma v. Asda Stores Ltd* [2002] FSR 3, 48 para. 25 (HL).

names registered under the Regulations. In one decision, an Italian court (the Court of Bolzano) granted injunctive relief against defendants residing outside of Italy (but within the EU). This was done on the basis that the GI Regulation was directly and immediately applicable in all member states. The Court also said that as infringing acts would be equally sanctioned by courts in the defendant's country, it gives rise to rights directly enforceable against any EU citizen.¹⁵⁹

2.9 RELATION WITH OTHER REGIMES

Member states are able to maintain national protection of names communicated until such time as a decision on registration has been taken.¹⁶⁰ Once a name has been registered at the Community level, national rules cease to apply.¹⁶¹ However, it is possible for a name to be protected under national rules during a transitional period of up to five years.¹⁶² In some situations, the Commission may allow an existing (unregistered) name to coexist with an identical registered name for a period not exceeding fifteen years. For this to occur, it must be shown that the identical unregistered name has been used consistently and equitably for at least twenty-five years prior to the entry into force of the GI Regulation (i.e. 26 July 1993); that the unregistered name has never been used to profit from the reputation of the registered name; and that the public has not been nor could be misled as to the true origin of the product. It is also necessary to show that the problems resulting from the use of the identical names was raised before the name was registered. The ongoing use of an identical unregistered name will only be allowed 'where the country of origin is clearly and visibly indicated on the label'.¹⁶³ The GI Regulation does not preclude member states from entering into bilateral agreements with non-member countries,¹⁶⁴ or from protecting 'simple' or 'qualified' geographical indications of source under national laws.¹⁶⁵

A name cannot be registered as a PDO or a PGI if, in good faith, a similar trade mark already exists, has been applied for, or established by use, which, because of its reputation and renown or length of time it has been used, might lead to confusion as to the true identity of the product.¹⁶⁶ Conversely, a name that has been registered as a designation of

Warsteiner Brauerei Haus Cramer*, Case C-312/98 (25 May 2000), para. 35; *Jacques Pistre*, Case C-321–324/94 (7 May 1997) [1997] 2 *CMLR* 565.

¹⁶⁶ Section 3(1)(c) of the 1994 Trade Marks Act says that trade marks that consist exclusively of signs or designations which serve to indicate geographical origin should not be registered. See above pp. 830–2.

origin or a geographical indication under Regulation 2081/92 cannot be subsequently registered as a trade mark so long as the product to which the name attaches is the same. It is also necessary to show that if the name was registered as a trade mark that it would fall within the scope of the protection offered to the PDO or PGI.¹⁶⁷

3 CERTIFICATES OF SPECIAL CHARACTER

In this section we turn our attention away from geographical designations to look at the EU scheme designed to protect the names of traditional foods and recipes. This scheme, which was established by the Traditional Foods Regulation, came into force on 24 July 1993.¹⁶⁸ Unlike the situation with protected designations of origin and protected geographical indications, there is no need to establish a link between the named product and the nominated geographical area to qualify for protection as a certificate of specific character. Instead, registration depends on a product having traditional features or characteristics. To date, the scheme has not proved to be very popular. ‘Traditional Farmfresh Turkey’ is the only product so far to receive protection as a certificate of specific character in the United Kingdom.¹⁶⁹ Other products that have been protected as certificates of specific character include Mozzarella (cheese) and Jamon Serrano (meat). Names that are registered as certificates of special character are able to use the description ‘Traditional speciality guaranteed’ (TSG) and the accompanying logo (see Figure 43.1, p. 966).

3.1 REGISTRATION

For a name to be protected as a certificate of special character, it must be registered. Unlike the case with the registration of PGIs and PDOs, it is only possible for a group to apply to register a certificate of special character.¹⁷⁰ As part of this process, the group must submit a product specification that contains the name of the product, a description of the method of production and the product (including traditional characteristics, raw materials, and ingredients), and details of the inspection procedures that will be used.¹⁷¹ The application for registration is submitted to the competent authority in the member state.¹⁷² After examination, the application is sent to the Commission who, in turn, sends a translation of the application to the other member states. The Commission also publishes the main points of the application in the Official Journal.¹⁷³ Third parties have five months from the

On relationship with domain names see WIPO document SCT/2/9, para. 115; M. Hopperger, ‘International Protection of Geographical Indications: The Present Situation and Prospects for Future Developments’ (1999), *WIPO Symposium, South Africa*, 17.

¹⁶⁷ Art. 14 (as amended). For the position in Australia, see S. Stern, ‘The Overlap Between Geographical Indications and Trade Marks in Australia’ (2002) 2 *Melbourne Journal of International Law* 224. The date at which conflict is judged is the date of submission of the application for registration (instead of the date of notice conferring the right as was initially the case Art. 14(1)(2) (amended by Regulation 692/2003 (8 Apr. 2003), Art. 13(a)(b)).

¹⁶⁸ Traditional Foods Regulation (2082/92) of 14 Jul. 1992 on certificates of specific character for agricultural products and foodstuffs [1992] *OJ L* 208, which came into force on 24 Jul. 1993.

¹⁶⁹ It might apply to products such as Worcestershire sauce.

¹⁷⁰ Group is defined in Traditional Foods Regulation (2082/92), Art. 2(2).

¹⁷¹ *Ibid.*, Art. 6.

¹⁷² In the UK this is the same as for PGIs and PDOs. See above pp. 973–4.

¹⁷³ Traditional Foods Regulation (2082/92), Art. 8(1).

date of publication to object to the proposed registration. If no one objects to the proposed registration, the name is entered into the Register of Certificates of Specific Character.¹⁷⁴ Once registered a certificate of special character can be amended or cancelled.¹⁷⁵ Where an objection is made, it is initially up to the relevant member states to resolve the matter ‘amicably’. Failing that, the matter is sent to the Commission for resolution.¹⁷⁶ In order to safeguard established rights, the Traditional Foods Regulation provides that if there are any valid formal objections to the application by third parties who are shown to be economically disadvantaged, the scope of protection may be limited. In these cases, registration will only confer rights to use the Community Symbol and the description ‘traditional speciality guaranteed’. It will not, however, confer exclusive use of the name.¹⁷⁷

3.2 CRITERIA FOR PROTECTION

To qualify for a certificate of special character, a name must be both specific¹⁷⁸ and also ‘express the specific character of the agricultural product or foodstuff’.¹⁷⁹ It is also necessary for the name to be ‘traditional’. In this sense it must comply with any relevant national provisions or be established by custom.¹⁸⁰ A name will not be registered if it is protected by the GI Regulation, or if it merely refers to claims of a general nature used for a set of agricultural products or foodstuffs (or to those provided by specific Community legislation).¹⁸¹ Names that are misleading will not be registered. This would be the case where the name refers to obvious characteristics of the product, does not correspond to the specification, or to consumer expectations about the characteristics of the product.

Certificates of specific character are granted for two classes of agricultural products and foodstuffs. The first are the agricultural products intended for human consumption listed in Annex II to the Treaty establishing the EU.¹⁸² The second are the foodstuffs listed in the Annex to the Traditional Foods Regulation. These are beer; chocolate and other food preparations containing cocoa; confectionary, bread, pastry, cakes, biscuits, and other baker’s wares; pasta, whether or not cooked or stuffed; pre-cooked meals; prepared condiment sauces; soups or broths; beverages made from plant extracts; ice cream and sorbets.¹⁸³

To qualify for protection, the product or foodstuff must have a ‘specific character’. That is, it must exhibit features that clearly distinguish it from similar products or foodstuffs.¹⁸⁴ The specific character of the agricultural product or foodstuff cannot be due to either the way it is presented, its provenance or geographic origin, or solely to the application of a technological innovation.¹⁸⁵ To be eligible for registration, agricultural products and foodstuffs must be produced using traditional raw materials. Alternatively, they must be characterized by a traditional composition or a mode of production and/or processing that

¹⁷⁴ Established under *ibid.*, Art. 3 and Regulation 2301/97 (the register is an Annex to the Regulation that is amended to add new names).

¹⁷⁵ Traditional Foods Regulation (2082/92), Arts. 10, 11.

¹⁷⁶ *Ibid.*, Arts. 9(2), 19. ¹⁷⁷ *Ibid.*, Art. 13(2).

¹⁷⁸ Such as pumpernickel or haggis (examples given by DEFRA).

¹⁷⁹ Traditional Foods Regulation (2082/92), Art. 5(1) (corn fed chicken).

¹⁸⁰ *Ibid.*, Art. 5(3). ¹⁸¹ *Ibid.*, Art. 5(2).

¹⁸² These were initially listed in Annex I to the Treaty establishing the European Economic Community.

¹⁸³ Traditional Foods Regulation (2082/92), Art. 1(1) and Annex. ¹⁸⁴ *Ibid.*, Art. 2(1).

¹⁸⁵ *Ibid.*, Art. 4(2)(a),(b).

reflects a traditional type of production and/or processing.¹⁸⁶ To qualify for a certificate of special character, the product or foodstuff must comply with a product specification.¹⁸⁷ It is also necessary for inspection structures to be in place that ensure that products comply with the specification.¹⁸⁸

3.3 SCOPE OF PROTECTION

Producers who comply with the product specification have the exclusive use of the name, the description 'traditional speciality guaranteed', and the accompanying logo. Registered names are protected against any practice liable to mislead the public, and against any misuse or misleading use of the registered name. However, if parties who are economically disadvantaged object to the application, applicants can ask for limited protection. In these circumstances producers will only be able to use the Community Symbol and the indication 'traditional speciality guaranteed'. They will not, however, have exclusive use of the name.

¹⁸⁷ *Ibid.*, Art. 6(1).

¹⁸⁸ *Ibid.*, Art. 14(1),(2).

PART V

**CONFIDENTIAL
INFORMATION**

1 INTRODUCTION

Up until now, the law has refused to recognize a property right in ideas or information. Nevertheless, a person who generates ideas or has in their control previously undisclosed information will have the ability to prevent others from using or disclosing those ideas or that information if they can demonstrate that the latter is bound by an obligation. The common law of breach of confidence determines when such obligations exist. Because the action is largely concerned with the imposition of obligations, as long as the idea or information is (and remains) secret, there are few restrictions placed on the type of subject matter that can be protected. Accordingly, the action for breach of confidence is broad ranging and has been used in relation to personal, commercial, technical information, as well as trade secrets, know-how, and information about the government. As Keene LJ said, 'breach of confidence is a developing area of the law, the boundaries of which are not immutable but may change to reflect changes in society, technology and business practice.'¹

Because the action is so broad ranging, it performs a number of different roles and protects a variety of interests. In so far as the action provides a space in which ideas can be tested and developed without fear of appropriation, it enables organizations to invest in and carry out research (and thus operates as an important supplement to the statutory intellectual property regimes).² In some cases, confidentiality encourages information to be disclosed to a small circle of confidants. More often, however, the action operates to restrict disclosure³ in order to protect individual autonomy, personality, and privacy.⁴ By encouraging respect for agreements, it also promotes fair competition.⁵ As such, breach of confidence has done some of the work that unfair competition law does in other legal systems.⁶ Breach of confidence also performs many of the tasks performed by a general right of privacy.

The origins of the breach of confidence action are obscure. Recent work has highlighted two possible genealogies. The first traces the action to a series of eighteenth-century decisions dealing with common law copyright in unpublished works,⁷ where rights over undisclosed information were first recognized.⁸ A second history, espoused by Megarry J

¹ *Douglas v. Hello!* [2001] QB 967, 1011 para. 165 (CA); [2001] EMLR 199, 251.

² The action presents the possibility of a person gaining some limited protection as regards intellectual creations which for some reason are not covered by statutory regimes, e.g. business ideas: *Wheatley v. Bell* [1984] FSR 16. For empirical evidence of growing use of secrecy as a means of protecting inventions, see W. Cohen, R. Nelson and J. Walsh, *Protecting their Intellectual Assets: Appropriability Conditions and why U.S. Manufacturing Firms patent (or not)* NBER Working Paper w7552 (Feb. 2000).

⁶ See J. Reichman, 'Legal Hybrids between Patent and Copyright Paradigms' (1994) 94 *Columbia LR* 2432.

⁷ G. Hammond, 'The Origins of the Equitable Duty of Confidence' (1979) 8 *Anglo-American Law Review* 71; S. Ricketson, 'Confidential Information—A New Proprietary Interest?' (1977–8) 11 *Melbourne University LR* 223, 233–5.

⁸ But this was limited to unpublished ideas which were in recorded form, either in manuscript or otherwise: *Abernethy v. Hutchinson* (1824) 1 *H & Tw* 28; 47 *ER* 1313.

in *Coco v. Clark*,⁹ traces the action back to the sixteenth century, when in speaking about the general jurisdiction of the Court of Chancery (or conscience) Sir Thomas More said ‘three things are to be helped in conscience; Fraud, Accident and things of confidence’. Although it is not possible to trace a line of cases back that far, a number of modern commentators have adopted the corresponding view that the action of breach of confidence is an application of a broader notion of good faith.¹⁰ While the origins of the action may be obscure, it is clear that by the mid-nineteenth century the courts had developed a series of principles that were relied upon to protect what we now call confidential information. For example, in the 1849 decision of *Prince Albert v. Strange*, Lord Cottenham LC ordered that publication of a catalogue describing Prince Albert’s etchings be restrained, noting that ‘this case by no means depends solely upon the question of property, for a breach of trust, confidence, or contract would itself entitle the plaintiff to an injunction’.¹¹

1.1 INTERNATIONAL INFLUENCES

Until recently the action for breach of confidence has largely fallen outside the remit of international treaties. This situation changed, however, as a result of the fact that the 1994 TRIPS Agreement requires members to afford protection to those who lawfully control ‘undisclosed information’.¹² More specifically, Article 39 of TRIPS states that in the course of providing protection against unfair competition (as required by Article 10 bis of the Paris Convention), members shall provide natural and legal persons with the possibility of preventing information lawfully within their control from being disclosed to, acquired by, or used by others without their consent in a manner contrary to honest commercial practices. Article 39 requires information to be protected if it is secret, has commercial value because it is secret, and has been subject to reasonable steps to keep it secret.¹³ Although British law probably complies with Article 39, where there is doubt (such as in relation to the obligations of third parties) Article 39 may influence the way the case law is interpreted.

1.2 DOCTRINAL BASIS OF THE ACTION

One issue that has preoccupied commentators over the last few decades is the doctrinal basis of the action.¹⁴ In particular, commentators have discussed whether breach of confidence has its roots in contract, tort, property, or equity.¹⁵ While these debates may appear

⁹ [1969] RPC 41; *Fraser v. Evans* [1969] QB 349.

¹⁰ *Seager v. Copydex (No. 1)* [1967] 2 All ER 415.

¹² See R. Krasser, ‘The Protection of Trade Secrets in the TRIPS Agreement’, in Beier and Schriker, 216–25.

¹³ The question of whether Argentinean law provides appropriate protection for undisclosed test data submitted for marketing approval under TRIPS, Art. 39.3 is one of the issues raised in dispute at the WTO: *US v. Argentina* WTO DS/171.

¹⁴ As one commentator has put it, ‘[t]he action for breach of confidence is something of an orphan. Various theories have been advanced about the correct jurisprudential foundation but no consensus is yet apparent.’ J. McDougall, ‘The Relationship of Confidence’, in D. Waters (ed.), *Equity, Fiduciaries and Trusts* (1993), 157.

¹⁵ Gurry, 23–62.

to be sterile, the decision as to the appropriate doctrinal basis of the action may have important consequences when it comes to matters such as conflicts of laws and limitation periods.¹⁶ It has also been said that the failure to identify a single doctrinal or conceptual basis for the action is the reason why so many aspects of the action are unclear. In particular, the conceptual uncertainty is said to be the reason why there is confusion about the liability of third-party recipients, strangers, bona fide purchasers of information, and the remedies which are available to a confider.¹⁷

Instead of attempting to locate an assumed but ever-elusive doctrinal basis for breach of confidence, a preferable option is to treat breach of confidence as a separate cause of action in its own right.¹⁸ This approach, which has found support in Canadian courts,¹⁹ would mean that the action was not dependent upon a particular jurisdictional basis. The advantage of seeing breach of confidence as a *sui generis* action is that the courts would not be hidebound by particular conventions or models. As such, they could tailor rules to the circumstances as and when they present themselves.

It may also be more fruitful to consider whether the existing law could be reorganized so as to make it more comprehensible, predictable, or just. One possibility would be to divide breach of confidence into several related actions. In so doing the courts could better attune the rules to the interests involved and thereby provide greater clarity and certainty. Such an approach would recognize that different rules apply to different types of information; notably personal,²⁰ commercial,²¹ or government information. This could take place along similar lines to the changes that took place in the United States during the last century.²²

1.3 BREACH OF CONFIDENCE AND PRIVACY

While breach of confidence performs many, but not all,²³ of the tasks that might otherwise be performed by a tort of privacy,²⁴ there have long been calls for the introduction of a general tort of privacy into British law.²⁵ As Sedley LJ said ‘we have reached a point at

²³ *Peck v. UK* (2003) 13 *BHRC* 669 (ECHR) (British law of confidence did not provide adequate remedy where a party had been filmed using a CCTV camera); cf. *Earl Spencer v. UK* (1998) *EHRR* CD 105 (law of confidence provided adequate remedy to restrain the publication of private information).

²⁴ See *Duchess of Argyll v. Duke of Argyll* [1967] 2 *Ch* 302; *Stephens v. Avery* [1988] *Ch* 499; cf. *Kaye v. Robertson* [1991] *FSR* 62.

²⁵ See generally T. Pinto, ‘The influence of the European Convention in Human Rights on Intellectual Property Rights’ [2002] *EIPR* 209; G. Phillipson, ‘Transforming Breach of Confidence? Towards a common law right of privacy under the Human Rights Act’ [2003] *MLR* 726; M. Richardson, ‘Whither Breach of Confidence: A right of privacy for Australia?’ [2002] *Melbourne University LR* 20; R. Singh and J. Strachan, ‘The Right to Privacy in English Law’ [2002] *EHLR* 129; T. Aplin, ‘Breach of Confidence and Privacy: the Impact of the Human Rights Act’ [2002] *Intellectual Property Forum* 26.

which it can be said with confidence that the law recognises and will appropriately protect a right of personal privacy'.²⁶ The prospects of British law recognizing a tort of privacy, at least one developed by the courts, received a serious setback in the recent House of Lords decision of *Wainwright v. Home Office* where after speaking critically about a general right to privacy, Lord Hoffmann rejected 'the invitation to declare that since at the latest 1950 there has been a previously unknown tort of invasion of privacy'.²⁷ As such, the question of whether there was a high-level principle of invasion of privacy 'would have to wait another day'.²⁸

Although it is unlikely that a tort of privacy will be recognized in the UK, at least for some time, in recent years British courts have developed the law of confidentiality in such a way that it provides better protection for personal and private information. As Keene LJ said in *Douglas v Hello!*:

Whether the resulting liability is described as being for breach of confidence or for breach of a right of privacy may be little more than deciding what label is to be attached to the cause of action, but there would seem to be merit in recognising that the original concept of breach of confidence has in this particular category of cases now developed into something different from the commercial and employment relationships with which confidentiality is mainly concerned.²⁹

In developing the law of confidentiality so as to protect personal information, the courts have modified the traditional requirements of the action. While the law is still evolving, to date there have been three changes in the way the law of confidence deals with personal information. The first is that the courts have been willing to impose obligations of confidentiality and non-disclosure on recipients of 'private' information where there is no relationship between the parties. This is the case even where the recipient acquired the personal information from legitimate sources. Drawing upon equitable principles of respect for personal autonomy and safety and the 1998 Human Rights Act, the courts have looked at the consequences of disclosure when deciding whether strangers should be placed under an obligation of confidentiality.³⁰ While this action has primarily been used to prevent disclosure in the press, there is no reason why it will not be applied in other circumstances. The second change is that where the parties are in a relationship, the courts have placed more of an emphasis on the *nature* of that relationship when determining the scope of the obligation. Third, in deciding whether to grant relief, drawing on Article 10 of the Convention on Human Rights the courts have looked more closely at the impact that non-disclosure might have on the defendant's freedom of expression.

While the recent decisions dealing with personal and private information have given 'a new strength and breadth to the action',³¹ there are a number of unresolved issues. For

²⁷ *Wainwright v. Home Office* [2003] UKHL 53; [2003] All ER 279, para. 35 (favouring specific legislative remedies rather than a general tort of privacy).

²⁸ *Ibid.*, para. 30.

²⁹ *Douglas v. Hello!* [2001] QB 967, 1012 para. 166 (CA).

³⁰ British courts have 'absorbed the rights which Article 8 and 10 [of the Human Rights Convention] protect into the long-established action for breach of confidence'. *A v. B* [2003] QB 195, 202 para. 4 (CA). Art. 6 requires the courts, as public authorities, not to act in a way which is incompatible with a Convention right.

³¹ *A v. B* [2003] QB 195, 202 para. 4 (Lord Woolf CJ) (CA).

example, it is unclear whether these developments apply to the action generally,³² or whether we are witnessing the development of a *special category* of breach of confidence.³³ If so, the question arises: how is the scope of the new category to be ascertained? If it is drawn from Article 8 of the European Convention on Human Rights (which provides respect for private and family life) then presumably the easiest way to determine whether information is ‘deserving of protection would simply be to enquire whether it is within the sphere of “private life” under Article 8, as expounded in the Strasbourg jurisprudence’ on human rights.³⁴ If not, then it is necessary to have some way of determining whether information is private. In many situations this will be straightforward. This would be the case, for example, with information about a person’s health, their personal relationships, and their finances.³⁵ In other cases, however, particularly with celebrities, problems arise in distinguishing the private from the public. What should the law do, for example, where the image rights to a celebrity wedding (Michael Douglas and Catherine Zeta Jones) are pre-sold for a considerable amount of money? Should the wedding be treated as a commercial secret, a private event, or as ‘a hybrid kind in which by reason of it having become a commodity, elements that would otherwise have been merely private become commercial’?³⁶ Similarly, how should the law deal with a person who has actively courted publicity about their private life? Should the celebrity be able to prevent disclosure of personal information that undermines the public image that they have cultivated of themselves? The key question here is whether the law is protecting the private sphere or whether non-disclosure is sought to protect a valuable ‘brand’.

1.4 DATA PROTECTION LEGISLATION

A discussion of the protection of personal confidential information cannot be seriously conducted without reference to the Data Protection Act 1998, which controls the way information about living identifiable persons is used. This became clear after *Campbell v. MGN*, where as well as relying on the common law action for breach of confidence, Naomi Campbell also sought relief under the Data Protection Act 1998.³⁷ While the action did not

³² In *R v. Broadcasting Standards Commission ex p. British Broadcasting Corporation* [2000] 3 WLR 1327, Lord Woolf MR held that the Broadcasting Standards Commission could take into consideration a company’s privacy when censoring the BBC (para. 42). Hale LJ was happy that corporate ‘privacy’ could fall within the broadcasting standards regime, but noted that there might be other contexts where ‘the concept should be limited to human beings, whose very humanity is defined by their own particular consciousness of identity and individuality, their own wishes and feelings’. See also AG Mishco in *Hoechst AG v. Commission of the European Communities*, Cases 46/87 and 227/88 [1989] ECR 2859, 2884–96; *Niemitz v. Germany* (1992) 16 EHRR 97.

³³ In *Douglas v. Hello! (No 3)* [2003] 3 All ER 996, para. 186 Lindsay J took less of an IP focus and said that earlier cases such *Douglas v. Hello!*, *Venables*, and *Campbell* ‘represent a fusion between pre-existing law of confidence and rights and duties arising under the Human Rights Act 1998’.

³⁴ G. Phillipson, ‘Transforming Breach of Confidence? Towards a common law right of privacy under the Human Rights Act’ [2003] MLR 726, 734.

³⁵ According to the Court of Appeal, it will usually be obvious whether a person’s private life is involved; *A v. B* [2003] QB 195, 206, para. 11 (guideline vii) (CA); *Campbell v. MGN* [2003] QB 633, 660, para. 51 (CA).

³⁶ *Douglas v. Hello! (No. 3)* [2003] 3 All ER 996, para. 227. Common law obligation to keep a confidence is ‘conceptually quite different’ from the requirements of Art 8(1) in the ECHR: *R v. Plymouth City Council* [2002] 1 WLR 2583, 254, para. 33.

³⁷ [2003] 1 All ER 224, para. 72–138. Also applied in *Douglas v. Hello! (No. 3)* [2003] 3 All ER 996, paras. 230–39 (no defence to compensation). See generally M. Tugendhat, ‘The Data Protection Act and the Media’ [2000] *Yearbook of Copyright and Media Law* 135.

succeed in *Campbell*, it highlights an alternative cause of action that may be, and indeed has been used, in other situations where a person's image have been used without their permission.

The Data Protection Act contains eight data protection principles. These state that data must be: processed fairly and lawfully; obtained and used for only specified and lawful purposes; adequate, relevant and not excessive; accurate, and where necessary, kept up to date; kept for no longer than necessary; processed in accordance with individuals rights (as defined); kept secure; and may only be transferred to countries that offer adequate data protection.

2 ELEMENTS OF THE ACTION

However confused the details of the law relating to breach of confidence may be, its basic traditional framework is now well established. According to the seminal case of *Coco v. Clark*, in order to establish a claim for breach of confidence, the claimant must show that:

- (1) the information is capable of being protected;
- (2) the defendant owes the claimant an obligation to keep the information confidential;
and
- (3) the defendant used the information in a way that breached that duty.³⁸

Once these three factors have been proved, a defendant may raise a defence, the most significant being that the disclosure was justified in the public interest.

In the next three chapters we will explore the elements of breach of confidence in more detail. Thus, in Chapter 44 we look at the type of information that is capable of being protected by the action. In Chapter 45, we look at the situations where a duty of confidence arises between the parties. In Chapter 46 after looking at whether the duty of confidence has been breached, we examine the defences to breach. We finish by looking at the remedies available.

³⁸ *Coco v. Clark* [1969] RPC 41. It is important to note that there is a degree of fluidity in its application. For example, faced with similar facts, one court might justify its conclusion on the ground that the defendant is not under a duty, while another court would accept that the defendant was under a duty of confidentiality, but either limit the duty so as not to cover the defendant's conduct or provide a defence.

44

IS THE INFORMATION CAPABLE OF BEING PROTECTED?

1 INTRODUCTION

The first factor that must be shown in a breach of confidence action is that the information is capable of being protected. Before being in a position to do this, it is necessary to identify the information in issue. As O'Connor J said, 'it was essential that the claimant should make it absolutely clear and certain what it was that he alleged to be confidential [and] which he sought to protect'.¹ This is not an inquiry into the quality of the information *per se*, so much as a preliminary examination as to whether the information has been identified in such a way that the action can proceed. As such, it is akin to the question of what is a work in copyright law.

If a claimant does not identify the information in sufficient detail, their action may be struck out on the basis that it is speculative and an abuse of process.² Failure to identify the information may also lead the court to refuse to grant an injunction. For example, in *Suhner v. Transradio* the claimants gave the defendant 246 drawings saying that about 100 of the documents contained confidential drawings and that part of the information in the other 146 documents was confidential. The court refused to grant an injunction primarily because 'it was very difficult to know precisely what information it is which the plaintiffs say is confidential'.³ Laddie J reiterated this position in the *Ocular Sciences*⁴ decision where he said that the claimant should give full and proper particulars of all confidential information that he intended to rely upon. The reason for this was that unless the confidential information was properly identified, the injunction might be of uncertain scope and difficult to enforce. The absence of 'proper particulars of claim' could also compromise a defendant's ability to defend himself. On this the basis, Laddie J said that if the claimant failed to give proper particulars, it was open to the court to infer that the purpose of the

¹ *PA Thomas v. Mould* [1968] QB 913, 922. See also *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 359–69; *CMI-Centers for Medical Innovation v. Phytopharm* [1999] FSR 235, 243.

² *John Zinc v. Lloyds Bank* [1975] RPC 385; *Inline Logistics v. UCI Logistics* [2002] RPC 611, 620, para. 29; *The Gadget Shop v. The Bug.Com* [2001] FSR 383, 405 (need to identify confidential information with precision so that the defendant can know the allegation against him).

³ *Suhner v. Transradio* [1967] RPC 329, 334.

⁴ *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 359.

litigation was harassment rather than the protection of the claimant's rights. On this basis the action could be struck out as an abuse of process.⁵

With the exception of trivial or immoral information, no restrictions are placed on the *subject matter* that is protected by breach of confidence. As a result, the action has been used to protect a variety of subject matter: the idea for a new type of 'carpet grip';⁶ a concept for a new television programme;⁷ the genetic structure of a nectarine tree;⁸ medical lectures;⁹ customer lists; marital secrets;¹⁰ the cultural and religious secrets of an Aboriginal Community;¹¹ and a report by the Department of Education on employment conditions.¹²

Information is protected irrespective of the *format* in which it appears. Thus, the action applies equally to information when embodied in writing,¹³ drawings,¹⁴ photographs,¹⁵ goods or products, or where it has been disclosed orally.¹⁶ It is also clear that the information does not need to be fixed or in a permanent form. As such, the information may be written, oral, encrypted, embodied in physical objects (whether it be the genetic code of a tree or the design of a product), or take shape as a formulae, a plan, or a sketch.

While there are very few restrictions placed on the subject matter that is capable of being protected and the format that the information needs to take, there are four limitations placed on the *type* of information that may be protected under the action. These are where the information is trivial, immoral, vague, or in the public domain. We will deal with each in turn.

2 TRIVIAL INFORMATION

The first limit placed on the type of information that is protected by breach of confidence is that the courts may not protect information that is trivial. In *Coco v. Clark* Megarry J said he doubted 'whether equity would intervene unless the circumstances are of sufficient gravity; equity ought not to be invoked to protect trivial tittle-tattle, however confidential'.¹⁷ In the context of trade secrets, the courts have occasionally suggested that to be protectable an idea must be economically valuable or 'commercially attractive'. The trivia exception has had little impact upon the information protected by breach of confidence. This is because the courts have been reluctant to label information as trivial. The potential scope of the exception is further restricted by the fact that it has been suggested that it would never apply to government information. The reason for this is that it is impossible

for the court to determine whether such information is important or not.¹⁸ As part of the new approach adopted in relation to personal information, in *Mills v. MGN* the court held that the address of Heather Mills (model and wife of Paul McCartney) was protectable despite the 'relatively trivial character of the information'.¹⁹

3 IMMORAL INFORMATION

It also seems that the courts will not enforce obligations of confidentiality relating to matters that are grossly immoral.²⁰ However, in the absence of a generally accepted code of morality the courts have said that they should be extremely careful about castigating certain types of behaviour on the basis that it is immoral.²¹ As such, as with the trivia exclusion, it seems that the exclusion of immoral information will have little impact upon the information protected by the action.

4 INFORMATION THAT IS VAGUE

In many cases, the information protected by breach of confidence is detailed and specific. Information of this nature presents few problems. Thus, detailed plans of a prototype engine shown by an inventor to a manufacturer or a detailed formula for a new pharmaceutical may be protected. However, breach of confidence also applies to more general ideas and concepts such as a proposal for a new television series. The problem here is that if a claimant was able to impose confidentiality over very general ideas, this may enable them to impose unjustifiable burdens on anyone who received the information in confidence. To protect against this, the courts have said that the law will not protect information that is vague or general. More specifically, the courts have said that an aspiration or a desirable goal the flavour of which can be captured in the phrase 'Wouldn't it be great if . . .' would not be protected by the action.²² Instead, such information is in the public domain, free to be used by all. It should be noted that the courts have been careful to stress that vagueness and simplicity are not the same thing.²³

The exclusion of vague information can be seen in *De Maudsley v. Palumbo*.²⁴ The claimant in this case argued that the defendants, who ran the dance club called the Ministry of Sound, had appropriated his ideas for a new type of dance club that the claimant had told the defendant about at a dinner party. The claimant's idea for the new dance club consisted of five features. These were that the club would legally be open all

¹⁸ *Attorney General v. Guardian Newspapers* [1990] AC 109, 269 (Lord Griffiths). Cf. Lord Goff (recognizing exclusion but limiting it to trivia of the most humdrum kind).

¹⁹ *Mills v. News Group Newspapers* [2001] EMLR 957. (When considering whether the information should be disclosed, the trivial nature of the information was weighed against the serious risk that stalkers posed if the address was disclosed).

²⁰ Following from decisions in copyright law: see pp. 1111–13.

²³ *De Maudsley v. Palumbo* [1996] FSR 447, 456; *Cranleigh Precision Engineering v. Bryant* [1965] 1 WLR 1293, 1309, 1310.

²⁴ *De Maudsley v. Palumbo* [1996] FSR 447.

night; be very large and fitted out in hi-tech industrial warehouse style; incorporate separate areas for drinking, dancing, and socializing; have an enclosed dance area where the sound quality would be high; and employ top-quality disc jockeys. Knox J held that all five features of the claimant's ideas were 'individually too vague' and thus not protectable. With the exception of the idea that the club would be legally open all night, he also said that the ideas were not novel. A similar approach was adopted in *Secton v. Delawood*.²⁵ In this case the claimant company, who was involved in developing methods of separating oil and water, brought an action against the defendants, who were former employees, from working in the same field. The court refused to grant relief, holding that a bare goal, purpose, or possibility, a mere speculative idea, was not capable of being protected as a trade secret.

While general ideas may not be protected by breach of confidence, this does not mean that all ideas or concepts are therefore excluded. Indeed, one of the notable features of the action is that unlike other areas of intellectual property such as copyright, breach of confidence provides protection over some of the more abstract aspects of the creative process. As with similar inquiries in other areas of intellectual property law, the difficult question is determining where and how the boundary is to be drawn between detailed information (which is clearly protectable) and very general ideas (which are not).

In thinking about how the dividing line is to be drawn, the courts have said that to be protected a concept or idea must be 'sufficiently developed to be capable of being realized'.²⁶ That is, it is necessary to go beyond simply identifying a desirable goal and to show a 'considerable degree of particularity in a definitive product'.²⁷ This can be seen, for example, in *Fraser v. Thames TV*, which concerned an idea for a TV series about the formation of a female rock group and the subsequent experiences of the members. Hirst J said 'that to be capable of protection the idea must be sufficiently developed, so that it would be seen to be a concept that has at least some attractiveness for a television programme and which is capable of being realised in actuality'. Similarly, in *Talbot v. General Television*, it was held that a new concept for a TV series was protectable because it was 'capable of being realized in actuality'.²⁸ The requirement that the idea must be capable of being realized 'as an actuality' has been taken to mean that the idea was capable of being transformed into 'a finished product in the relevant medium'.²⁹

Perhaps the best way to get a sense of the level of detail needed for an idea to be protected is to look at the way the issue has been construed in the cases. We have already seen above how in *Palumbo* the claimant's ideas for a new dance club were held to be too vague to be protected. In contrast, in *Talbot* the court held that the proposal for a new television programme was sufficiently developed to be the subject of confidence. In this

²⁵ *Secton Pty v. Delawood Pty* (1991) 21 IPR 136, 155 (Supreme Court of Victoria). See also *Intelsec Systems v. Grechi-Cini* [1999] 4 All ER 11, 31 (suggestion that flame detection could be developed as well as smoke detection was too vague to be capable of protection as a trade secret). Cf. the simple idea developed into the finished business plan in *Wheatley v. Bell* [1984] FSR 16.

²⁶ These requirements trace their origin to the comments of Harris J in the Supreme Court of Victoria in *Talbot v. General Television Corp.* [1981] RPC 1.

²⁷ *De Maudsley v. Palumbo* [1996] FSR 447.

²⁸ *Talbot v. General Television Corp Pty* [1981] RPC 1, 9.

²⁹ *De Maudsley v. Palumbo* [1996] FSR 447. Knox J distinguished between a 'mental product', that could be protected, and a mere 'aspiration', which could not.

case, the claimant approached the defendant with an idea for a TV series about real-life millionaires. While the claimant subsequently sent the defendant a more detailed outline, this did not add very much of substance to the initial idea.³⁰ As such, it seems that the general proposal for a new type of programme involving real-life millionaires would have been protected in its own right. In effect this is what transpired in *Fraser v. Thames TV* where it was held that the claimant's concept for an idea for a TV series about the formation of a female rock group was specific enough to be protected.

The level of detail required for an idea or concept to be protectable varies depending on the case in hand. Speaking about the level of detail needed for a proposal for a television programme to be protected, Hirst J said 'I do not think that' the requirement of actuality 'necessitates in every case a full synopsis. In some cases the nature of the idea may require extensive development of this kind in order to meet the criteria. But in others the criteria may be met by short unelaborated statement of an idea'.³¹ One factor that will influence the level of specificity required is the way information is normally treated in the industry in question. Thus, in *Fraser v. Thames TV* Hirst J said that the fact that it was normal practice in the theatre, television, and film industries to treat general proposals for new programmes as if they were protected was an important factor in him reaching the conclusion that the information was in fact protected.³²

In some cases, the courts have suggested that the test for whether an idea or concept is sufficiently developed to be protectable is to consider whether the idea or concept is 'attractive'.³³ However, as Knox J pointed out in *Palumbo*, this requirement 'doesn't advance things much because if the element is missing it is hardly likely to be appropriated'.³⁴ The flip side of this is that if a defendant uses the information this would be proof of its attractiveness. As such, the relative attractiveness of the information adds little to the inquiry.

5 INFORMATION IN THE PUBLIC DOMAIN

One of the most important restrictions placed on the information that is protected by breach of confidence is that the action does not apply to material that is in the public domain. As Laddie J said '[p]rima facie, information that is in the public domain is not capable of being treated as confidential'.³⁵ The upshot of this is that however confidential the circumstances of communication, 'there can be no breach of confidence in revealing to others something which is already common knowledge'.³⁶ In more positive terms, this means that to be protected the information must be relatively secret.

The notion of public domain has a different meaning in relation to breach of confidence than it does in other areas of intellectual property law. Before looking at what is meant by the public domain in this context, it should be noted that the status of the

³⁰ *Fraser v. Thames TV* [1983] 2 All ER 101, 121.

³¹ *Ibid.*

³² *Ibid.*, 121–2.

³³ *Talbot v. General Television Corp Pty* [1981] RPC 1, 9.

³⁴ *De Maudsley v. Palumbo* [1996] FSR 447, Knox J. This requirement seems similar to the one that information is not 'trivial'.

³⁵ *CMI-Centers for Medical Innovation v. Phytopharm* [1999] FSR 235, 255. See also *Attorney General v. Guardian Newspapers* [1990] AC 109, 282.

³⁶ *Coco v. Clark* [1969] RPC 41, 47.

information is a question of fact, not intention. Consequently, information is still capable of being protected even though the confider intended the information to be published, but failed to do so.³⁷ Conversely, if material is in the public domain, it does not matter that the confider intended, but failed, to keep the information secret.³⁸

5.1 'RELATIVE SECRECY'

In patent law a single disclosure to one person is sufficient to place the information in the public domain and thus to destroy the novelty of an invention. In contrast, breach of confidence is built around a notion of 'relative secrecy'. In essence this means that it is possible for a number of people to know about the 'secret' and the information still not be in the public domain. The upshot of this is that the fact that information has been disclosed to a number of people does not necessarily mean that the information is incapable of being treated as confidential. For example, in *Prince Albert v. Strange*³⁹ the court held that while Prince Albert had disclosed details of his engravings to friends and relatives, this did not destroy the confidentiality that existed in the information.

The crucial question is how widespread must the information be for it to lose its status as a secret and for it to fall into the public domain? The degree of publication required before secrecy is lost depends on a range of different factors. These include the type of information; the section of the public who have an interest in knowing about the information;⁴⁰ the domain in which the information was published; the degree of publication within that domain; the form in which the information is published; and the vigour with which the information is likely to be pursued within that domain.⁴¹ It is important to note that a partial disclosure only deprives that part of the information disclosed of its confidentiality.⁴²

A personal secret might be of interest to many more people than a trade secret, which is only likely to be of interest to competitors. Thus, a court may treat personal information as being relatively secret even though a lot of people know about it.⁴³ This arose in *Franchi v. Franchi*⁴⁴ where the court was called upon to consider whether information was still confidential after it had been published in a patent specification in Belgium, but before it had been published in the United Kingdom. It was held that the fact that the information was in the public domain in another country might be relevant when considering whether

³⁷ A mere intention to publish in due course should not deprive information of its confidential status, despite the Court of Appeal's decision in *Times v. Mirror Group* [1993] *EMLR* 443. For criticism, see J. Rubinstein, 'The Downing Street Years: A Mole's Charter' [1993] *Ent LR* 189.

³⁸ It is clear that if the confider publishes the information, the obligation comes to an end: *Mustad v. Allcock and Dosen* (1928) [1963] 3 *All ER* 416.

³⁹ (1849) 2 *DeG & Sm* 652; 64 *ER* 293 (Knight Bruce LJ); (1949) 1 *Mac & G* 25; 41 *ER* 1171 (Cottenham LC).

⁴⁰ In *Ryan v. Capital Leasing* (High Court of Ireland, 2 Apr. 1993) it was said that the public domain means that 'the information is well known to that section of the public which has an interest in knowing the information.' See P. Lavery, 'Secrecy, Springboards and the Public Domain' [1998] *EIPR* 93.

⁴¹ Dean, 123–9.

⁴² *House of Spring Gardens v. Point Blank* [1983] *FSR* 213, 255; *AG v. Times Newspapers* [2001] 1 *WLR* 885, 892–3 (CA).

⁴³ *G v. Day* [1982] 1 *NSWLR* 24 (ephemeral revelation on TV did not deprive information of confidential status).

⁴⁴ [1967] *RPC* 149.

the information was confidential in the United Kingdom. The court also held that because patent agents were in the habit of inspecting foreign specifications, the information was in the public domain. As Internet use grows, it will be increasingly difficult for a claimant to establish that information known in one place is confidential elsewhere.⁴⁵

Another factor that may be useful in indicating whether information remains confidential is the extent to which further publication would harm the claimant. In some cases, the requirement of harm and the finding that the information is confidential have operated as alternative grounds. This can be seen, for example, in the *Spycatcher* decision. Peter Wright, who was under an obligation of confidentiality as a member of the Security Services, wrote a book called *Spycatcher*. The book was published in Australia, Ireland, and the USA. The *Sunday Times* began to serialize the book in England and the *Guardian/ObsERVER* sought to repeat the story. The Attorney General sought an injunction to prevent publication. Lord Keith said that the continued serialization of the book would not be a breach of confidence. This was because it would not have caused any further damage to the government.⁴⁶

5.2 THE SPRINGBOARD DOCTRINE

Another situation where the breach of confidence action may provide protection over information that is in the public domain is where one party uses information that they have obtained in confidence to steal a march on competitors. This issue is dealt with by the so-called springboard doctrine. In essence the doctrine aims to ensure that a person who breaches a duty of confidence is not able to benefit from the breach. As Lord Denning said in *Seager v. Copydex*,⁴⁷ a person who obtained the information from a private source should not be in a better position than someone who went to the public source. The effect of the doctrine is to prevent a person who obtained the information from a private source from getting a headstart without paying for it. As Roxburgh J said in *Terrapin v. Builders' Supply Co.*

a person who has obtained information in confidence is not allowed to use it as a springboard for activities detrimental to the person who made the confidential communication, and a springboard it remains even when all the features have been published or can be ascertained by actual inspection by any member of the public.⁴⁸

The claimants in this case manufactured prefabricated portable buildings. As part of a joint venture the claimants gave the defendants detailed technical information about the

⁴⁵ 'The truth of the matter is that in the contemporary world of electronics and jumbo jets news anywhere is news everywhere': *Attorney General v. Guardian Newspapers* [1987] 1 WLR 1248, 1269 per Browne-Wilkinson V-C. Cf. *Attorney General v. Turnaround Distributors* [1989] FSR 169 (publication of book in Ireland did not render it unarguable that the book was confidential in the UK)—a pre-*Spycatcher* case.

⁴⁶ *Attorney General v. Guardian Newspapers* [1990] AC 109, 260. Lord Keith said that in relation to government secrets, it was necessary to show that there was a public interest in restraining disclosure and that given that no harm would occur, this was absent.

⁴⁷ *Seager v. Copydex (No. 1)* [1967] 2 All ER 415, 417. See also *Schering Chemicals v. Falkman* [1982] QB 1, 15–16 (per Denning MR, dissenting).

⁴⁸ [1967] RPC 375, 391. See also *Saltman v. Campbell Engineering* [1948] 65 RPC 203 (The defendant could have taken the leather punch to pieces and constructed drawings, but had not done so, and thus was liable).

prefabricated buildings. When the relationship broke down and the defendants continued to manufacture the buildings, the claimants sued for breach of confidence. The defendants claimed that the information was no longer capable of being protected by breach of confidence. This was because the claimants had sold buildings to members of the public (which could be dismantled to reveal the details) and also published a brochure that disclosed the technical details of the buildings. In short, they argued that as the information was now in the public domain, it was no longer capable of being protected. Roxburgh J held that to obtain information equivalent to that initially given to the defendant, the defendant would have had to dismantle a portable building and construct tests. The initial information gave the confidant a head start over a member of the public. Under the springboard doctrine, the defendants were to be placed under a special disability to ensure that they did not get a head start over competitors.

The springboard doctrine attempts to prevent a person from using any special information they may have obtained in confidence from gaining an advantage over others who would have had to obtain the information by other means (such as reverse engineering the publicly available embodiment of the information).⁴⁹ The doctrine serves two policies. It promotes the integrity of confidential relations by minimizing any benefits that can be gained by a confidant utilizing information obtained in confidence. It also promotes fair relations between potential competitors.⁵⁰

The springboard doctrine has a number of important limitations. The first is that the restrictions imposed on private information do not last forever.⁵¹ In *Potters Ballotini v. Weston Baker*⁵² Lord Denning explained that '[a]lthough a man must not use such information as a springboard to get a start over others, nevertheless the springboard does not last forever. If he does use it, a time may come when so much has happened that he can no longer be restrained.' Accordingly, the appropriate remedy was to restrict the confidant from using the information for a limited time. The appropriate period is calculated by reference to the time that it would take to discover the information from legitimate public sources.⁵³ The second limit on the action is that because of the difficulties in calculating the duration of the confidant's head start and the problems of enforcing it by way of injunction, the courts have indicated that they prefer to give monetary rather than injunctive relief.⁵⁴

So far, we have focused on situations where a person acquires information in confidence

⁴⁹ The law could reach the same result if it recognized that a recipe or formula may still be 'relatively secret' even though products made to the recipe are on the market and are such that they can be analysed to ascertain the secret recipe. However, recent case law suggests that such information is no longer confidential: *Mars v. Teknowledge* [2000] FSR 138. But cf. *Murray v. Yorkshire Fund Managers* [1998] 1 WLR 951, 960, per Nourse LJ: 'In my view the springboard principle can have no application where, as here, the information has ceased to be confidential'.

⁵⁰ *Aquaculture v. New Zealand Mussel Co.* (1985) 5 IPR 353, 383 ('a principle, founded on the concept of fairness'). Dean, 143 describes the springboard doctrine 'as close to a *de facto* doctrine of unfair competition as Anglo-American courts have come'.

⁵¹ *Sun Valley Foods v. John Philip Vincent* [2002] FSR 82 (application for springboard relief rejected because the advantage the defendants received from the misuse of the information was ephemeral and short term in nature).

⁵² [1977] RPC 202.

⁵³ If reverse engineering is not a possibility, the springboard metaphor is inappropriate: *Electro Cad Australia v. Mejati RCS SDN BHD* [1999] FSR 291, 307.

⁵⁴ *Coco v. A. N. Clark (Engineers)* [1969] RPC 41, 47.

that could *later* be located from public sources. However, the springboard doctrine has also been extended to situations where the confidential information was itself collated from public sources (rather than where private information has been disclosed to the public in a different form).⁵⁵ In *Roger Bullivant v. Ellis*,⁵⁶ the defendant had taken a copy of the list of customers from his employer during the course of his employment. While each of the names could have been acquired from public domain sources such as professional and trade directories, Falconer J granted an injunction to prevent the defendant from taking unfair advantage of the information. The Court of Appeal allowed the appeal and discharged the injunction saying that such an injunction should not normally extend beyond the period for which the unfair advantage is expected to continue.⁵⁷

5.3 ENCRYPTED INFORMATION

Another situation where questions about the status of information arise is where information is encrypted. What is the effect of disclosing information in an encrypted form? If a person places encrypted information in the public domain, does this mean that the information is secret and potentially protectable? Or does it mean that the information is published and thus not protectable?

The question of whether the encrypted information that is in the public domain is capable of being protected by the law of confidentiality was considered in *Mars v. Teknowledge*.⁵⁸ The claimants in the case designed and manufactured coin-receiving and -changing mechanisms (which are used in vending machines). The mechanisms included 'discriminators' that function to determine the authenticity and denomination of a coin fed into the machine. One of the problems with the discriminators was that whenever there was a change in the coinage, they had to be reprogrammed. The claimants developed a new discriminator (called the 'Cashflow') which had the ability to be reprogrammed for new coin data. Cashflow consisted of 'a data layout, a serial communications protocol and an encryption system to make it difficult for third parties to find out by reverse engineering how to recalibrate (reprogram) the Cashflow discriminator'. Importantly, none of this information was published directly by the claimants. The defendant had broken the encryption system and reverse engineered the Cashflow discriminator. The claimants brought an action arguing, *inter alia*, that the defendant's activities by way of reverse engineering amounted to a breach of confidence.

Jacob J held that the encrypted information in the Cashflow machine did not have the necessary quality of confidence. After noting that the machine was freely available on the market,⁵⁹ Jacob J said that '[a]nyone with the necessary skill to de-crypt had access to the information. The fact that only a few have those skills is . . . neither here nor there. Anyone can acquire the skills and, anyway, a buyer is free to go to a man who has them'.⁶⁰

⁵⁵ But cf. *Schering Chemicals v. Falkman* [1982] QB 1.

⁵⁶ [1987] FSR 172.

⁵⁷ [1987] FSR 172, 184.

⁵⁸ [2000] FSR 138.

⁵⁹ For consideration of the situation where the product has been hired rather than sold, so the product is not 'freely available', see *K. S. Paul (Printing Machinery) v. Southern Instruments (Communications)* [1964] RPC 118 (in accordance with a hiring agreement, the claimant supplied a telephone-answering machine to the defendant, but with a specific obligation not to interfere with it. In breach of that the defendant allowed another to remove it and examine it. The court granted an interim injunction).

⁶⁰ *Mars v. Teknowledge* [2000] FSR 138, 149.

On this basis, Jacob J concluded that as the information had been published, it was not capable of being protected.

The courts have adopted a similar approach in situations where the information is embodied in an object in the public domain that can only be accessed through reverse engineering.⁶¹ The cases have suggested that where information is embodied (or hidden) in a machine or a product which is in the public domain, the information is also in the public domain and thus not capable of being protected. The upshot of this is that information will be treated as having been published and thus in the public domain, even though it can only be accessed through a process of decryption or reverse engineering.

These decisions, if followed, will restrict the use that can be made of the breach of confidence action to regulate information on the Internet. Given that genetic information in biological matter is 'in the public domain', these decisions may also have important ramifications for the use of the action in respect of biotechnological inventions. It would not be very difficult, however, for a court to use the notion of 'relative secrecy', to reach a different conclusion.⁶²

5.4 PUBLIC INFORMATION THAT BECOMES PRIVATE

In patent law, the standard for deciding whether information is in the public domain is absolute. This means that once information is in the public domain it can never become secret. In contrast, with the breach of confidence action the test for whether information is in the public domain is more flexible. As a result, the status of information may change over time. This means that it is possible for information that is in the public domain to become secret. This may occur because the public forgets the information, or because the individuals that make up the relevant public change. For example, in *Schering Chemicals v. Falkman*⁶³ details that a drug called PRIMODOS, which Schering manufactured for use as a pregnancy test, had damaged unborn children had been widely publicized between 1975 and 1978. In order to improve its image which had been damaged by the adverse publicity, Schering engaged a public relations firm, Falkman, to train its staff in the handling of television interviews in relation to the drug. One of Falkman's employees approached Thames TV with a view to making a documentary about Schering and PRIMODOS. Even though the information which the programme was based upon could have been derived from public sources, the Court of Appeal granted Schering an injunction on the grounds of a breach of confidence. Shaw LJ stated that 'to revive the recollection of matters which may be detrimental or prejudicial . . . is not to be condoned because the facts are already known and linger in the memories of others'.⁶⁴

5.5 DISCLOSURE BY THE CONFIDANT

For some time, it was thought that where information had entered the public domain as a result of a breach of confidence that this did not affect the status of the information. While the information may have been *public knowledge*, the fact that the information entered the

⁶¹ *Saltman Engineering v. Campbell Engineering* (1948) 65 RPC 203.

⁶² Cf. *Ackroyds v. Islington Plastics* [1962] RPC 97, 104 (if what is in the public domain needs reverse engineering, that information ought to be treated as relatively secret).

⁶³ [1982] QB 1.

⁶⁴ [1982] QB 1, 28.

public domain wrongfully meant that it was not *public property*.⁶⁵ This meant that the information remained confidential in spite of the fact that it was widely available. Others argued that once information was in the public domain, it was not capable of being protected by the action. This was the case even where disclosure arose through a breach of confidence.

Most of the confusion as to whether information disclosed through a breach of confidence is still be capable of being protected by the action was resolved in *Spycatcher*.⁶⁶ In this decision, the House of Lords held that once information was in public domain the courts could not restrain further publication.⁶⁷

Even though information that enters the public domain via a breach of confidence is not capable of being protected by the action, this does not mean that the confidant is thereby absolved of liability. In these circumstances, the confidant has clearly committed a wrong and will be subject to the regular remedies for breach of confidence. Some cases have referred to the provision of remedies against the confidant in these circumstances as ‘the springboard doctrine’.⁶⁸ The idea being that a person who obtained information in confidence is not allowed to use it as a springboard for activities detrimental to the person who made the confidential communication. We prefer to reserve the springboard metaphor for a different category of cases (which were discussed above). We will look at the remedies against an errant confidant when we look at remedies for breach of confidence later.

5.6 COMPILATIONS OF PUBLIC DOMAIN INFORMATION

While information that is in the public domain will not be protected by the breach of confidence action, a distinction is drawn between public domain information (which is not protected) and information that builds upon public domain information (which may be protected). It is clear that where someone collects, arranges, or elaborates on elements that are already in the public domain that the resulting information is capable of being protected.⁶⁹ As Lord Greene MR said in *Saltman Engineering*,⁷⁰ ‘it is perfectly possible to have a confidential document . . . which is the result of work done by the maker on materials which may be available for the use of anybody’. He added that ‘what makes it confidential is the fact that the maker of the document has used his brain and thus produced a result which can only be produced by somebody who goes through the same process.’ In a similar vein, Megarry J said in *Coco v. Clark* that ‘something constructed solely from materials in the public domain may possess the necessary quality of

⁶⁵ *Cranleigh Precision Engineering v. Bryant* [1964] 3 All ER 289 and *Speed Seal Products v. Paddington* [1986] FSR 309 appeared to support the proposition that a confider could not be released from an obligation of confidentiality by their own acts.

⁶⁶ *Attorney General v. Guardian Newspapers* [1990] AC 109. For commentary, see G. Jones, ‘Breach of Confidence—after *Spycatcher*’ (1990) 42 *Current Legal Problems* 48; Dean, 161–2.

⁶⁷ Lord Goff held that once information was widely available there could be no obligation respecting it. This was because the subject matter of the obligation had vanished.

⁶⁸ *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 399.

⁶⁹ TRIPS, Art. 39(2) requires protection to be granted only where information is ‘secret in the sense that it is not, as a body or in the precise configuration and assembly of its components, generally known among or readily accessible to persons within the circles that normally deal with the kind of information in question’.

⁷⁰ (1948) 65 RPC 203, 215.

confidentiality . . . But whether it is described as originality or novelty or ingenuity or otherwise, I think there must be some produce of the human brain which suffices to confer a confidential nature upon the information'.⁷¹

It is clear that not all acts of compilation will produce results that are capable of being protected. Indeed, as Knox J has said, 'a combination of features which were not individually novel does not automatically become novel by being added together'.⁷² The status of compilations of public domain information was considered in *Ocular Sciences v. Aspect Vision*.⁷³ In this case, the claimant asserted that a booklet that contained a compendium of the detailed dimensions of the range of the claimant's contact lenses was confidential. This was the case even though each of the lenses had been put on the market. The claimant argued that to obtain even a small amount of the information contained in the booklet a lens manufacturer would need to analyse thousands of lenses, a process that would take considerable time and effort. Laddie J said that he had great doubts as to whether 'a mere mechanical collection of data which is in the public domain' could be confidential.⁷⁴ He added that *Saltman* and *Coco* do not establish that the compilation of public domain information is always enough to confer confidentiality. While valuable and novel ideas could be produced by the judicious selection and combination of a number of items which are separately in the public domain and that such ideas would be capable of being the subject of an obligation of confidence, they would only be such if they were the 'product of the skill of the human brain'. In contrast, Laddie J said that a 'mere non-selective list of publicly available information should not be treated as confidential even if putting it together involves some time and effort. No relevant skill is employed'.⁷⁵

As is the case with the copyright protection for facts, the difficult question is knowing the type and level of labour that needs to be exerted on public domain material for the resulting information to be capable of being protected.⁷⁶ While this topic has attracted very little attention, it seems that the threshold for protection is low.⁷⁷ This can be seen in *Talbot*,⁷⁸ where the court was called upon to decide whether a proposal for a television programme about real-life millionaires was capable of being protected by the action. While similar television programmes had already been made, the court held that the claimant's programme had a 'commercial twist' or a 'particular slant' that distinguished it from pre-existing programmes. The unique feature of the proposal was that as part of the programme successful [sic] millionaires, such as Alan Bond and Neil Diamond, were to give the recipe for their success.

5.7 PRIVATE INFORMATION ABOUT PUBLIC INFORMATION?

The account so far has left at least one issue unexplained. This relates to the level of protection to be afforded to private information about public information. In *Cranleigh Precision Engineering v. Bryan*⁷⁹ the defendant had been managing director of the claimant

⁷¹ [1969] RPC 41, 47. ⁷² *De Maudsley v. Palumbo* [1996] FSR 447, 459.

⁷³ [1997] RPC 289. ⁷⁴ [1997] RPC 289, 374. ⁷⁵ [1997] RPC 289, 375.

⁷⁶ See pp. 98–101. Note also that the springboard notion may limit relief in such cases.

⁷⁷ In *International Scientific Communications v. Pattison* [1979] FSR 429, 434 per Goulding J ('the lists with which I am concerned embodied enough labour of composition, experience of the trade, and practical utility to fall into the class of confidential trade information').

⁷⁸ *Talbot v. General Television Corp* [1981] RPC 1, 9. See also *Fraser v. Thames TV* [1983] 2 All ER 101.

⁷⁹ [1964] 3 All ER 289.

firm that manufactured swimming-pools made according to a patent owned by the company. In the course of his employment, the defendant learned of a prior grant of a patent for similar swimming-pools. Instead of informing the claimant, the defendant set up a rival business and purchased the patent. The claimant sought an injunction to restrain the defendant from making use of information received in his capacity of managing director, in particular 'the knowledge of the possible effect to and on the [claimant] of the existence and publication of the specification'. Roskill J granted an injunction preventing the defendant from making use of the patent.⁸⁰ In so doing, Roskill J rejected the defendant's argument that because the information related to the patent that was in the public domain, the information in question was also in the public domain.

Although *Cranleigh* was initially interpreted as supporting the proposition that confidants could not be released from an obligation of confidentiality by their own acts,⁸¹ subsequent case law has rejected this approach. How then are we to explain the result in *Cranleigh*? If we ignore the easy option of arguing that it was wrongly decided, two alternative ways of explaining the decision present themselves. According to the first view, the defendant was under a fiduciary duty that meant that instead of taking advantage of the opportunity for himself, he should have exploited the patent for his employer. *Cranleigh* can also be explained as a case concerning confidential private information about public information. While information about the patent was in the public domain, the impact (and thus the value) of the patent depended on private information that the defendant had acquired through his employment with the claimants. As such, what was protected here was not the information disclosed in the patent *per se*, so much as the information about the consequences and importance of the patent to the defendant, which depended on information that was not in the public domain.⁸²

6 NOVEL AND ORIGINAL INFORMATION?

One of the key differences between breach of confidence and the statutory forms of intellectual property relates to the qualitative restrictions placed upon the intangible property that is protected. For example, novelty and non-obviousness play a key role in limiting the inventions that are patentable. Similar restrictions exist in all the other areas we have covered in this book. With the exception of the information that is vague and in the public domain, there are few restrictions imposed on the information that is protected. In a number of recent cases, however, the courts have begun to use language that suggests that they are working towards the imposition of some type of qualitative restriction upon the type of information protected by the action. For example, in *Coulthard v. Disco Mix*,⁸³ the High Court held that information relating to the techniques the defendant used for creating mega-mixes was not confidential. The technique involved the defendant listing the recordings, identifying the beat and key of each song, and then mixing the songs together

⁸⁰ More specifically, 'from overtly making use of their acquisition of [the patent] or any licence granted in respect thereof in support of or in connection with sales . . . etc. of above-ground swimming-pools in competition with the plaintiff's above-ground swimming-pools': [1964] 3 *All ER* 289, 303.

⁸¹ See *Speed Seal Products v. Paddington* [1986] *FSR* 309 (claim to injunctive relief might be justified where facts alleged that confidant had himself published the confidential designs for couplings).

⁸² [1965] 1 *WLR* 1293, 1312–14.

⁸³ [1999] 2 *All ER* 457.

in an order that enabled them to be blended smoothly. Judge Sher QC doubted that information about the techniques used by the claimant in creating mega-mixes would be protected. The reason for this was that the techniques were 'pretty obvious once one is setting out to create a beat-mix'.⁸⁴ In other contexts, the courts have also spoken of the need for information to be *original* and *novel*. For example, in *De Maudsley v. Palumbo*⁸⁵ Knox J said that with the exception of the idea that the club would be legally open all night, the ideas were not novel.⁸⁶ The courts have also used the novelty and originality as a way of gauging whether information that builds upon public domain material is capable of being protected.

It is difficult to know what to make of these statements. In part this is because the language of the decisions is unclear. Another problem is that most of the comments were *obiter* with little, if anything, turning on them. For the most part, it seems that such criteria seem to be most appropriate in relation to trade secrets and commercial information. The requirements seem superfluous in relation to personal information: there seems to be little that could be gained from asking whether information about a person's sexual preferences is 'obvious' or 'novel'.

In thinking about the potential relevance of novelty and related criteria to the information that is capable of being protected by breach of confidence, it is helpful to ask what purpose could they serve? That is, what is to be gained from looking at breach of confidence in this way? Unlike the situation with patents, the obligation of confidentiality only applies to those who are in a confidential relationship with the claimant. As such, the consequence of protecting information that is not novel is much more limited than with patents. Having said that, problems could still arise if protection was given over information that was not novel. For example, in the absence of any restrictions as to the need for novelty (or obviousness), what would happen if a person approached a publisher and said, in confidence, 'I have an idea to write a textbook on intellectual property law'? In the absence of a novelty requirement, there is a possibility that the publisher could be prevented from commissioning other authors from working in the area.⁸⁷ This consequence seems particularly undesirable where there are only very few people who have the potential to exploit a particular idea (here, legal publishers). Whether the novelty (etc.) requirement is intended to meet such concerns, and, if it is, the degree to which the law succeeds in protecting the public from such restraints, is far from clear.

⁸⁴ [1999] 2 *All ER* 457, 474. (The claimant had not argued that the idea of a mega-mix was confidential.)

⁸⁵ *De Maudsley v. Palumbo* [1996] *FSR* 447.

⁸⁶ *Ibid.*, 456 (the idea 'must contain some significant element of originality').

⁸⁷ Though the publisher would not be prevented from going ahead with an identical proposal independently put forward by another author.

45

OBLIGATION OF CONFIDENCE

1 INTRODUCTION

The second element that must be proved in a breach of confidence action is that the defendant was under a legal (as opposed merely to a moral) obligation of confidentiality.¹ While the rights recognized by copyright, patents, designs, and trade marks apply against anyone who deals with the intangible property within the relevant jurisdiction, the breach of confidence action only applies to those who receive information in confidence. As we will see, a different position now holds in relation to personal and private information. In describing the situations where an obligation of confidentiality will arise, it is common practice to focus on the nature of the relationship between the parties. In following this model, we look at look at the duties that arise where the parties are in a direct relationship, where there is an indirect relationship, and where there is no relationship between the parties. We then look at the duties that arise when the parties are in an employment relationship and the special duties owed by statutory bodies who gather information.

2 DIRECT RELATIONSHIP

The first and most straightforward situation where a duty of confidence may arise is where the parties are in a direct relationship with each other. In these circumstances a duty of confidence may arise contractually, as a result of the type of relationship that exists between the parties, or because of the way the information is communicated. We will deal with each in turn.

2.1 CONTRACTUAL PROVISIONS AS TO CONFIDENTIALITY

A person may be under a contractual obligation not to use or disclose information. The contractual conditions of confidentiality may be express or implied.² Express obligations typically arise in employment contracts (which we look at later) and in the licensing of

¹ See *Attorney General v. Jonathan Cape* [1976] QB 752; *Malone v. Metropolitan Police Commissioner* [1979] Ch 344.

² An express confidentiality agreement may however be void. In the case of software, for example, a click-wrap restriction prohibiting decompilation may be void. See p. 283.

know-how. The relationship between banker and customer is an example of a situation where an obligation of confidentiality will normally be implied into the contract.³

2.2 INTRINSIC NATURE OF THE RELATIONSHIP

In some cases, an obligation of confidentiality arises as a result of the type of the relationship that exists between parties. More specifically, an obligation of confidentiality might exist as part of a fiduciary relationship that exists between the parties. A 'fiduciary relationship' is an equitable relationship in which one party has a duty to act for the benefit of another,⁴ and arises, for example, between doctor and patient; priest and penitent; solicitor and client; husband and wife;⁵ and trustee and beneficiary.⁶ It is unclear whether the duty also applies to other types of personal relationships⁷, particularly to transient or commercial sexual relationships.⁸

The manner in which the law of confidence and the law of fiduciaries interrelate is unclear.⁹ Some courts and commentators have suggested that all confidential obligations are examples of fiduciary obligations.¹⁰ However, such conflation seems inappropriate given that a number of persons normally subject to obligations of confidentiality (such as employees)¹¹ are not normally treated as fiduciaries.¹² It would seem preferable, at least for the sake of clarity, to keep the notions of 'fiduciaries' and 'confidences' distinct. In any case, the pressure to merge the two categories may well diminish if the courts accept that the remedy of a constructive trust is available for a breach of confidence, rather than only for a breach of fiduciary duty.¹³

2.3 FROM THE MANNER OF COMMUNICATION

In some cases, an obligation of confidence may arise from the way the information is communicated between the parties.¹⁴ In these circumstances, the test for whether there is a

³ *Tournier v. National & Provincial Bank* [1924] 1 KB 461.

⁴ See *Bristol and West Building Society v. Mothew* [1998] Ch 1, 18.

⁵ *Argyll v. Argyll* [1967] Ch 302.

⁶ *Boardman v. Phipps* [1967] 2 AC 46.

⁷ See *M. & N. Mackenzie v. News Group Newspapers* (18 Jan. 1988) (a homosexual relationship did not give rise to a duty of confidence). But cf. *Stephens v. Avery* [1988] 2 All ER 477; *Barrymore v. News Group Newspapers* [1997] FSR 600, 602 (disclosures in all personal relationships fall within 'limited purpose' test, and hence are confidential).

⁸ *Theakston v. MGN* [2002] EMLR 398, 419 para 64. In part, this will depend on the nature of the relationship (sex within marriage giving rise to different obligations than transient or commercial sexual relations). While the position is not clear, in some cases the courts have said that it is not inherent in the nature of a sexual relationship that anything that transpires within it is confidential. See below at pp. 1034–5.

⁹ For a thorough review see D. Klinck, 'Things of Confidence: Loyalty, Secrecy and Fiduciary Obligations' (1990) 54 *Saskatchewan LR* 73 (a confidant is a type of fiduciary). Cf. G. Hammond, 'Is Breach of Confidence Properly Analysed in Fiduciary Terms?' (1979) 25 *McGill LJ* 244; J. Glover, 'Is Breach of Confidence a Fiduciary Wrong?' (2001) 21(4) *Leg Studs* 594 (stressing importance of keeping breach of confidence and the law of fiduciaries separate). See also Gurry, 158–62; Dean, 21 (the debate is 'largely sterile').

¹⁰ *Schering v. Falkman* [1982] 1 QB 1, 27; *Attorney General v. Blake* [1998] 1 All ER 833, 843 (not discussed by the House of Lords); *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 413.

¹¹ *Balston v. Headline Filters* [1990] FSR 385. But cf. *Attorney General v. Blake* [1998] 1 All ER 833, 842 (employees are fiduciaries).

¹² *Indata Equipment Supplies v. ACL* [1998] FSR 248, 256, 262, 264 (breach of confidence despite lack of fiduciary relationship); following Sopinka J in *Lac Minerals v. International Corona Resources* [1990] FSR 441.

¹³ See pp. 1049–51 below.

¹⁴ e.g. in *Seager v. Copydex* [1967] 2 All ER 415.

duty of confidence is to ask, would a reasonable recipient have realized that the information was given to them in confidence? As Megarry J said in *Coco v. Clark*:¹⁵

It seems to me that if the circumstances are such that any reasonable man standing in the shoes of the recipient of the information would have realized that upon reasonable grounds the information was being given to him in confidence, then this should suffice to impose upon him the equitable obligation of confidence.

The question of whether a reasonable person would consider the information to have been communicated to them in confidence always depends on the facts of the case. Perhaps the most straightforward situation is where a party makes an *express* statement that the information is confidential. In these circumstances a defendant would find it very difficult to show that a reasonable confidant would not think that they were under an obligation of confidence.¹⁶

An obligation of confidence may also be *inferred* from the circumstances in question. When considering whether a reasonable person would infer that the information was confidential from the circumstances, the courts will take account of commonly held views, usages, and practices of the industry or trade in question. The way the parties understand their moral obligations may also be relevant.¹⁷ While the question of whether the reasonable person would infer that the information is confidential always depends on the facts in hand, it may be helpful to outline some examples.

(i) *Normal conversation*. Where a person blurts out information in public, no obligation of confidentiality would arise.¹⁸ Equally, where information is disclosed in an informal, social-setting, normally no obligation would arise.¹⁹

(ii) *Disclosures for a limited purpose*. In most instances, where a person reveals information to someone for a limited purpose this will give rise to an obligation that the information only be used for that purpose.²⁰ This is because where information is supplied for a specific purpose, the reasonable confidant would readily infer that the information should not be used for another purpose. This is sometimes referred to as the 'limited purpose' test. There may be circumstances, however, where this is not the case. In particular, where the information could be protected by copyright, patent, or design protection a reasonable recipient might not assume that the information was given to them under an obligation of confidence.²¹

(iii) *Encrypted material*. Until recently little attention has been given to the question of

¹⁵ *Coco v. A. N. Clark (Engineers)* [1969] RPC 41, 48.

¹⁶ *Stephens v. Avery* [1988] 2 All ER 477 (where the plaintiff expressly declared that the information was to 'go no further'). But if the stipulation is unreasonable an obligation might not arise: *Dunsford and Elliott v. Johnson* [1978] FSR 143, 148; *Yates Circuit Foil Co. v. Electrofoils* [1976] FSR 345, 380.

¹⁷ *Fraser v. Thames TV* [1983] 2 All ER 101, 121–2; *De Maudsley v. Palumbo* [1996] FSR 447, 457. Cf. *Carflow Products (UK) v. Linwood Securities (Birmingham)* [1996] FSR 424.

¹⁸ *Coco v. A. N. Clark (Engineers)* [1969] RPC 41, 48.

¹⁹ *De Maudsley v. Palumbo* [1996] FSR 447, 458.

²⁰ *Ackroyds London v. Islington Plastics* [1962] RPC 97 (supply of plastic moulding tool for use in manufacture of 'swizzle sticks' (used to stir cocktails) not to be used for other purposes); *Barrymore v. News Group Newspapers* [1997] FSR 600, 602 (disclosure of information in a personal relationship was 'for the relationship and not for a wider purpose').

²¹ *Carflow Products v. Linwood Securities* [1996] FSR 424.

whether a person who receives encrypted information is thereby placed under a duty of confidence. The question here is whether a reasonable confidant who received encrypted information would take the fact that the information had been encrypted to mean that there was a duty of confidence in relation to the information. For example, would a person who visited an electronic bulletin board that contained encrypted information (that was only readily available via password), be thereby placed under a duty of confidence in relation to that information? In order to answer these questions positively, it would be necessary to treat the fact that the information was encrypted as equivalent to a sign saying 'confidential—you may not de-encrypt'. Similar questions also arise where information is embodied in a machine or a product and can only be obtained through reverse engineering.

One of the few decisions to consider issues of this nature was *Mars v. Teknowledge*.²² As we saw earlier,²³ this was a breach of confidence action brought in relation to encrypted information embodied in the coin-receiving and -changing mechanisms used in vending machines. The question arose as to whether a person buying a machine that contained the encrypted information was under an implied duty of confidentiality in relation to the information. In effect the question was whether a reasonable recipient would consider the fact that the information had been encrypted to mean that they were under an obligation of confidentiality in relation to the information. Applying the reasonable person test, Jacob J said that the information embodied in the machine was *not* obviously confidential. More specifically Jacob J said:

I cannot see why the mere fact of encryption makes that which is encrypted confidential or why anyone who de-crypts something in code, should necessarily be taken to be receiving information in confidence. He will appreciate that the source of the information did not want him to have access, but that is all.²⁴

It is possible, however, that the circumstances of communication might be such that the reasonable confidant might assume that the information was given to them in confidence. The question of whether the fact of encryption gives rise to an implied duty of confidence is similar to the situation where someone uses other forms of technology (such as a fence) to protect the information. If this analogy is accepted, Jacob J's reasoning here is at odds with *Franklin v. Giddens*. As we will see, in this decision a duty of confidence was implied from the conduct of the defendant when he stole a branch that contained confidential genetic information from a nectarine tree in the claimant's orchard.

A subjective standard?

While in most cases the courts have favoured the objective standard of the reasonable-person test, in some cases the courts have taken into account the subjective expectations of the parties. For example, in *Schering Chemicals v. Falkman* Shaw LJ said that an obligation of confidence would be imposed in circumstances where the information 'is regarded by the giver and recognised by the recipient as confidential'.²⁵ In *Carflow Products v. Linwood*

²² [2000] FSR 138.

²³ See above at pp. 1007–8.

²⁴ [2000] FSR 138, 150.

²⁵ Cf. *De Maudsley v. Palumbo* [1996] FSR 447, 458.

*Securities*²⁶ the question arose as to whether the demonstration of a car-lock device took place in circumstances of confidence. Jacob J acknowledged that there were two possible approaches to determining whether an obligation arose. The court could *either* examine what the parties thought they were doing, *or* focus on what a reasonable person would have thought the parties were doing. According to Jacob J, the key difference between the two approaches is that the former takes into account the subjective unspoken views of the parties. While such subjective views would not be relevant in relation to decisions concerning the making of a contract, however because ‘equity looks at the conscience of the individual’, subjective views were relevant in relation to the equitable obligation of confidence.

Jacob J acknowledged that on the facts of *Carflow* it did not matter whether the problem was approached using a subjective or objective test. In other cases, however, the different tests (or some permutation thereof) may lead to different results. As such, it would be helpful to have some clarification as to which of the two approaches should be applied.

3 THIRD-PARTY RECIPIENTS

One of the most difficult issues that arises in this area of law concerns if and when parties outside an initial confider–confidant relationship will be bound by a duty of confidence.²⁷ More specifically, if a person owing an obligation of confidence discloses confidential information to a third party, what factors determine when that third party will be treated as being subject to an obligation not to use or disclose the information?²⁸

In deciding whether a third-party recipient is under a duty of confidence, the courts have said that a third party who lacks good faith is bound by an equitable obligation of confidence. Sometimes this principle is said to ‘derive’ from the doctrine that it is equitable fraud in a third party knowingly to assist in breach of trust, confidence or contract by another.²⁹ On other occasions, the courts have rejected the suggestion that third-party liability should be decided by analogy to traditional trust rules concerning the liability of those involved in a breach of trust.³⁰ Rather, the question of whether a third-party recipient is bound by a duty depends on the circumstances of the case.³¹ While this should be borne in mind, we will outline some of the more important factual situations that may arise.

²⁶ [1996] FSR 424. See J. Phillips, ‘Opportunity Knox’ (1997) 1 *IPQ* 134 (pointing out that *De Maudsley v. Palumbo* [1996] FSR 447, in preferring an objective test, is more consistent with existing authorities than *Carflow Products v. Linwood* [1996] FSR 424).

²⁷ J. Stuckey, ‘The Liability of Innocent Third Parties Implicated in Another’s Breach of Confidence’ (1981) 4 *University of New South Wales LJ* 73; S. Ricketson, ‘Confidential Information: A New Proprietary Interest?’ (1977–8) 11 *Melbourne University LR* 223, 244–5.

²⁸ If a third party has actively sought the information, it may be that they will have committed the tort of inducing breach of contract: see *British Industrial Plastics v. Ferguson* [1940] 1 *All ER* 479.

²⁹ *Campbell v. MGN* [2003] QB 633, 662 para. 66 (CA) (citing Toulson and Phipps, *Confidentiality* (1996)). For criticisms of *Campbell* see R. Arnold, ‘Circumstances Importing an Obligation of Confidence’ (2003) 119 *LQR* 193.

³⁰ *Valeo Vision Société Anonyme v. Flexible Lamps* [1995] *RPC* 205; *Wheatley v. Bell* [1984] FSR 16. Cf. *AG v. Guardian Newspapers* [1987] 1 *WLR* 1248, 1264 per Browne-Wilkinson V-C (‘equitable property’); *Morison v. Moat* (1851) *Hare* 241; 68 *ER* 492.

³¹ W. Cornish, ‘Protection of Confidential Information in English Law’ (1975) 6 *IIC* 43, 53.

(i) An indirect recipient of the information who is aware of its confidential status will normally be bound by a duty of confidence. In *Spycatcher*, Lord Keith said '[i]t is a general rule of law that a third party who comes into possession of confidential information which he knows to be such, may come under a duty not to pass it on to anyone else'.³² There has, thankfully, been none of the precise discussion as to levels of knowledge that give rise to a duty, though it seems a duty should be imposed on any person who was grossly negligent in failing to know that a breach of confidence was involved.³³ However, it has been said that a recipient would not be bound if they were careless, naïve, or stupid or merely knew of an assertion that a breach of confidence had occurred.³⁴

(ii) If a person receives information innocently, but subsequently discovers that the information is confidential, they will be bound by a duty of confidence.³⁵ For example, in *English & American v. Herbert Smith*,³⁶ the papers of the counsel acting for the claimants in an action pending in the Commercial Court were mistakenly sent to the solicitors for the other side, Herbert Smith. The solicitors, who were the first defendants in this case, realized the mistake but were instructed by their clients to inspect the papers. The claimant sought an interim injunction preventing the solicitors from using information derived from the privileged documents. Browne-Wilkinson V-C granted the injunction on the ground that it did not matter whether the defendants were innocent when they received the documents, given that later use of the information was unconscionable.

(iii) It seems that the courts might grant an injunction, but not damages against a bona fide purchaser.³⁷ In *Valeo Vision Société Anonyme v. Flexible Lamps*³⁸ Valeo, who designed and manufactured lights for cars, disclosed details of the design to M. In turn, M revealed details of the lights to the defendant who produced similar lights. Valeo sued the defendant for breach of confidence. Aldous J held that the information was confidential and that despite being a bona fide purchaser the defendant was subject to a duty of confidentiality. In so doing Aldous J drew a distinction between a duty that will give rise to injunctive relief and one that would result in an award of damages. Aldous J indicated that while when deciding whether to grant injunctive relief the bona fide purchaser rule was too narrow, in order to get damages the conscience of the defendant had to be affected. On the facts, the plaintiff failed to establish that the defendant knew that the information they used 'was the confidential property of the plaintiff nor did it know that it should not be used without the plaintiff's consent'.³⁹

(iv) Little attention has been given to the question of whether a third-party recipient of information is under an obligation when the information is communicated to them by a person who is not bound by an obligation of confidence. In so far as the duty may arise as

³² *Attorney General v. Guardian Newspapers* [1990] AC 109, 260 (Lord Keith), 268 (Lord Griffiths).

³³ See fn. to Art. 39 TRIPS. Note also *Attorney General v. Guardian Newspapers* [1990] AC 109, 281–2 (knowledge includes circumstances where the confidant has deliberately closed his eyes to the obvious); *Thomas v. Pearce* [2000] FSR 718 (awareness or willingness to turn a blind eye).

³⁴ *Ibid.*, 721; *Fraser v. Thames TV* [1983] 2 All ER 10; see also *Union Carbide v. Naturin* [1987] FSR 538, 549.

³⁸ [1995] RPC 205.

³⁹ [1995] RPC 205, 226.

a consequence of the knowledge of the defendant, it is foreseeable that an innocent party might communicate information to a third party who would be aware of the significance of the information. In some cases, the courts have been willing to assume that a third party is bound without investigating the position of the communicator. For example, in *Prince Albert v. Strange*,⁴⁰ it was held that a third party who proposed to publish the catalogue of Prince Albert's etchings was under an obligation of confidence. This was the case even though no evidence was available as to how he came by the material.⁴¹ However, this and related cases can be explained on the basis that the courts assumed that the information had been communicated by a wrongdoer.

4 WHERE THERE IS NO RELATIONSHIP BETWEEN THE PARTIES: STRANGERS

A person may come by confidential information without having it imparted to them by the confidant, or by a person owing an obligation of confidence.⁴² For example, a burglar might uncover confidential files, or a member of the public might find a confidential document in the street. In some cases, it is possible for a duty of confidence to arise even though there is no relationship between the parties.

The case law dealing with the question as to whether (and, if so, when) a stranger comes under an obligation of confidentiality is unclear. A decision of authoritative status would be of great benefit in this area. At a very general level, the courts have adopted three different approaches when deciding whether a stranger in receipt of confidential information falls under a duty of confidence. The first focuses on the conduct of the stranger in acquiring the information. Here the courts have looked at whether the stranger has *acted illegally*. The second line of cases focuses on whether the stranger *knew* that the information was confidential. Third, the courts have begun to develop a distinct set of principles in cases involving personal and private information. As we will see, the courts have been willing to impose an obligation of confidentiality on recipients of information, even where they were not in any relationship with the claimant and where the information was acquired legitimately. Here, the courts have looked at the consequences of disclosure and the possible harm that it might cause in deciding whether the information should be treated in confidence.

4.1 THE WAY THE INFORMATION WAS OBTAINED

In some cases, the courts have focused on the conduct of the person who acquired the information. More specifically, the courts have looked at whether the stranger has acted

⁴⁰ (1849) 2 *De G & Sm* 652; 64 *ER* 293 (Knight Bruce LJ); (1849) 1 *Mac & G* 25; 41 *ER* 1171 (Cottenham LC). See also *Times v. Mirror Group Newspapers* [1993] *EMLR* 443.

⁴¹ Similarly, in *Times v. Mirror Group Newspapers* [1993] *EMLR* 443, the court assumed that the *Daily Mirror* came under an obligation of confidence with regard to the manuscript of Margaret Thatcher's *Diaries*, even though the source of the copy was undisclosed.

⁴² G. Wei, 'Surreptitious Takings of Confidential Information' (1992) 12 *Leg Studs* 302; M. Richardson, 'Breach of Confidence, Surreptitiously or Accidentally Obtained Information and Privacy: Theory Versus Law' (1994) 19 *Melbourne University LR* 673.

illegally: if the stranger acted illegally they come under an obligation, if the stranger acted legally they do not. This can be seen by contrasting two cases of telephone tapping: *Malone v. Commissioner of Metropolitan Police*⁴³ and *Francome v. Mirror Group Newspapers*.⁴⁴ In the first case, the police tapped a telephone line and as a result prosecuted the claimant for handling stolen goods. The claimant sued the police for breach of confidence.⁴⁵ The court held that the police did not come under an obligation of confidentiality. Megarry V-C said it ‘seems to me that a person who utters confidential information must accept the risk of any unknown overhearing that is inherent in the circumstances of communication’. Deliberate tapping was one such risk and, as such, no obligation of confidentiality arose.⁴⁶ In contrast, in *Francome v. Mirror Group Newspapers*⁴⁷ it was a private investigator (rather than the police) who was investigating breaches of Jockey Club rules who illegally tapped a phone conversation of a jockey. The jockey concerned sought an interim injunction to prevent disclosure of the information. The Court of Appeal distinguished *Malone* and held that in these circumstances there was a serious question to be tried. Fox LJ noted that *Malone* was concerned with a case of authorized tapping rather than, as with the case in hand, with illegal tapping by private persons. He also observed that ‘[i]t must be questionable whether the user of a telephone can be regarded as accepting the risk of that in the same way as, for example, he accepts the risk that his conversation may be overheard in consequence of the accidents and imperfections of the telephone system itself’.⁴⁸

The different conclusions in *Francome* and *Malone* seem to depend on a distinction between a person who obtains information lawfully—who does not come under an obligation—and a person who obtains information unlawfully, who is subject to a duty of confidence. It seems that this position needs to be refined in the light of recent decisions concerned with the question of what is meant by a person acting ‘legally’ where the information was acquired under statutory powers. While we look at this in more detail later in the chapter, it should be noted here that the courts have held that the information may only be used for the purposes for which the powers are conferred.⁴⁹ These cases suggest that the police in *Malone* were under an obligation of confidentiality not to use the information for purposes other than those for which their powers existed. Use of the information in prosecuting the claimant for handling stolen goods was clearly furthering those purposes and as such was permissible. Consequently, where a stranger sets out to acquire information they come under a limited obligation when the acquisition is based on legal authority, and under a broader obligation when it is illegal.

4.2 KNOWLEDGE OF THE STRANGER

In a second line of cases, instead of focusing on whether the stranger acted illegally, the courts have looked at whether the stranger had *knowledge* that the information was confidential. In *Attorney General v. Guardian (No. 2)*, Lord Goff said:

⁴³ [1979] 1 Ch 344. ⁴⁴ [1984] 1 WLR 892.

⁴⁵ Other claims were based on privacy, property, and human rights. The case prompted an application to the European Court of Human Rights—*Malone v. United Kingdom* (1984) 7 EHRR 14—and the government responded to criticism therein with the Interception of Communications Act 1985.

⁴⁶ [1979] 1 Ch 345, 376. ⁴⁷ [1984] 1 WLR 892. ⁴⁸ [1984] 1 WLR 892, 900.

⁴⁹ *Marcel v. Commissioner PM* [1992] 2 WLR 50; *Hoechst v. Chemiculture* [1993] FSR 270.

I start with the broad general principle (which I do not intend in any way to be definitive) that a duty of confidence arises when confidential information comes to the knowledge of a person (the confidant) in circumstances where he has notice, or is held to have agreed, that the information is confidential, with the effect that it would be just in all the circumstances that he should be precluded from disclosing the information to others . . . I have expressed the circumstances in which the duty arises in broad terms, . . . to include certain situations, beloved of law teachers—where an obviously confidential document is wafted by an electric fan out of a window into a crowded street, or where an obviously confidential document, such as a private diary, is dropped in a public place, and is then picked up by a passer-by.⁵⁰

According to Lord Goff the key factor is not whether the stranger is acting illegally. Rather, it is whether the stranger knows that the information is private or confidential. As such, the question is whether ‘anything reasonably leads the observer to realize that what he or she observes is confidential’.⁵¹ This question arose in *Shelley Films v. Rex Features*⁵² where the claimant, who was producer of the film *Frankenstein*, sought to restrain the defendant, a photographic agency, from publishing copies of a photograph of Robert De Niro, which had been taken without authority by a stranger during filming. The defendant argued that neither they nor the photographer were under a duty of confidence. Judge Mann QC held that there was a ‘serious question to be tried’. He noted that the photographer was not an invitee on the film set and that it could be assumed that he saw the signs at the entrance to the film studios and on the film set that said ‘Absolutely No Photography—All Films will be confiscated’ and ‘No Admittance—Access to Authorized Persons only’. Judge Mann QC said that it was impossible not to conclude that this might have fixed the photographer with knowledge that the claimant regarded the information as confidential. One of the interesting things about this decision, especially when compared with *Francome*, is that instead of emphasizing the illegality of the means by which the photograph was taken, the Judge focused on the fact that the photographer had knowledge that the claimant considered the images to be confidential. A similar approach has been adopted in the recent cases dealing with personal information. As Lord Woolf said in *A v. B*, a duty of confidence will arise ‘whenever the party subject to the duty is in a situation where he either knows or ought to know that the other person can reasonably expect his privacy to be protected. This could be express or inferred. It can arise where there is intrusion, bugging or the use of surveillance techniques’.⁵³

A similar tendency to focus on whether the stranger had knowledge about the confidential nature of the information, rather than on the means by which the information was acquired, can be seen in *Hellewell v. Chief Constable of Derbyshire*.⁵⁴ In this case the claimant brought an action against the police for breach of confidence in revealing mugshots to the public. The case involved a simple application of the authorities, dealing with

⁵⁰ [1990] AC 109, 281–2.

⁵¹ M. Richardson, ‘Breach of Confidence, Surreptitiously or Accidentally Obtained Information and Privacy: Theory Versus Law’ (1994) 19 *Melbourne University LR* 673, 699.

⁵² *Shelley Films v. Rex Features* [1994] EMLR 134.

⁵³ *A v. B* [2003] QB 195, 207 (guidelines ix–x). See also *Douglas v. Hello! (No. 3)* [2003] 3 *All ER* 996, para. 197 (as elaborate steps were taken to prevent uninvited guests and to prevent photography, the Douglas-Jones wedding was said to radiate ‘confidentiality’).

⁵⁴ [1995] 1 *WLR* 804.

the duty owed by a statutory body who obtains information.⁵⁵ Under this approach, the police were under a limited duty of confidentiality not to use the mugshots other than for police purposes. However, Laws J acknowledged the statement of Lord Goff in *Spycatcher* concerning 'finders of information' and added:

If someone with a telephoto lens were to take from a distance and with no authority a picture of another engaged in some private act, his subsequent disclosure of the photograph would, in my judgment, as surely amount to a breach of confidence as if he had found or stolen a letter or diary in which the act was recounted and proceeded to publish it.⁵⁶

This dictum was, like Lord Goff's in *Spycatcher*, unnecessary to decide the case in hand. Nevertheless, both seem to reveal a growing use of the doctrine of confidentiality to mitigate against the absence of a law of privacy. While useful in some respects, this may cause problems, not least because Laws J's statements are cast very generally. Not only is it left unclear what amounts to a private act,⁵⁷ but an approach of this sort might result in the imposition of liability on a commercial operator who dismantled a competitor's product in the knowledge that their competitor regarded the product as embodying details of a secret process.⁵⁸ It is in this area that retaining a single doctrine of breach of confidence poses the most problems. Either the obligation arises in limited circumstances so that privacy interests are neglected, or the obligation is cast so broadly that (desirable) competitive activity might be inhibited.

It should be reiterated that knowledge that another person regards information as confidential will not always give rise to an obligation of confidence. This is because the information in question must also have the 'necessary quality of confidence'. In *Creation Records v. News Group Newspapers*⁵⁹ Lloyd J acknowledged that merely because a well-known person tries to stop people taking photographs of them it does not follow that any picture taken in evasion or defiance of those attempts is in breach of confidence.⁶⁰

On the facts in *Creation Records*, the High Court granted the deviser of the artwork for the cover of an Oasis album (see Figure 3.1, p. 57 above) an interim injunction restraining the *Sun* newspaper from publishing photographs surreptitiously taken at the claimant's photo-shoot. This was on the ground that the *Sun*'s photographs were obtained in circumstances of confidentiality. In Lloyd J's view, the situation was quite distinct from the case of photographs of a public figure in a public place. Although the photographer was lawfully at the hotel and had not been told that he should not take photographs (indeed, the taking of photographs was tolerated before the shoot began), the claimant's evidence showed that

⁵⁵ *Marcel v. Commissioner of Police of the Metropolis* [1992] 2 WLR 50; *Hoechst v. Chemiculture* [1993] FSR 270.

⁵⁶ [1995] 1 WLR 804, 807.

⁵⁷ Presumably an act that occurs in a public place cannot be a private act: see *Woodward v. Hutchins* [1977] 1 WLR 760, 764.

⁵⁸ However, *Mars v. Teknowledge* [2000] FSR 138 seems to avoid these difficulties by treating any information obtained in this way as lacking the necessary quality of confidence.

⁵⁹ [1997] EMLR 444.

⁶⁰ [1997] EMLR 444, 455. One explanation for this is that such a photograph would not involve any confidential information: in contrast, in *Hellewell*, for example, it is not the mugshot that is confidential so much as the information conveyed by the mugshot that the plaintiff was known to the police. Likewise, in the example given by Laws J in that case, the information would be that the person had participated in the particular private act. No such information is conveyed by the publication of a public act of a public figure.

during the shoot a tighter security regime had been imposed to prevent photographs being taken.⁶¹ While Lloyd J accepted that those who were allowed to observe the scene could have described the picture in writing or made a sketch of it from memory, this did not mean that they were free to take photographs. According to the Judge to be able to record it as a photographic image is different in kind, not merely in degree, from being able to relate it verbally or even by way of a sketch. That is above all because it was in photographic form that it was intended to be preserved for the group. It is the photographic record of the scene, the result of the shoot in fact, that was to be confidential.⁶²

In contrast with the taking of a photograph of a public figure in a public place, the obligation appears to have arisen because the effort involved in arranging the objects with a view to taking the photographs for the album cover meant that the specific image (as opposed to its general nature) was original and hence confidential. It also arose because the photographer knew the particular purpose for which the shoot was being held.

4.3 PERSONAL INFORMATION AND THE CONSEQUENCES OF DISCLOSURE

The third situation where strangers may be placed under a duty of confidentiality is in relation to personal and private information. As we mentioned earlier, a number of changes have taken place in the way the breach of confidence action is applied to personal and private information. One important change is that in determining what information is confidential, the courts have taken account of Articles 8 and 10 of the European Convention on Human Rights. As Lord Woolf said in *A v. B*, 'the manner in which the two articles operate is entirely different. Article 8, which provides respect for private and family life, 'operates so as to extend the areas in which an action for breach of confidence can provide protection for privacy. It requires a generous approach to situations in which privacy is to be protected'. In contrast Article 10, 'operates in the opposite direction. This is because it protects freedom of expression and to achieve this it is necessary to restrict the area in which remedies are available for breach of confidence'.⁶³

Another important change is that it is 'no longer a necessary element of the cause of the action that the [personal] information arises from a confidential relationship'.⁶⁴ Instead, the courts have focused on the *consequences* of disclosure as the basis for determining whether a defendant is under an obligation of confidentiality. As Sedley LJ said in *Douglas v. Hello!*, the 'law no longer needs to construct an artificial relationship of confidentiality between intruder and victim: it can recognize privacy itself as a legal principle drawn from the fundamental value of personal autonomy'.⁶⁵ In *Wainwright v. Home Office*, Lord Hoffmann said that Sedley LJ's remarks suggested that, 'in relation to the publication of personal information obtained by intrusion, the common law breach of confidence has reached the point at which a confidential relationship has become unnecessary'.⁶⁶ This has been extended beyond information obtained by intruders to include personal information generally.

⁶¹ [1997] *EMLR* 444, 455.

⁶² *Ibid.*

⁶³ *A v. B* [2003] *QB* 195, 203 (CA).

⁶⁴ *Mills v. MGN* [2001] *EWHC Ch* 412, para. 26.

⁶⁵ *Douglas v. Hello!* [2001] 2 *WLR* 992, 10255 para. 125–26 (Sedley LJ); cf. Brookes LJ, para. 95; Keene LJ paras. 165–7.

⁶⁶ *Wainwright v. Home Office* [2003] *UKHL* 53; [2003] *All ER* 279, para. 20 (HL) While Lord Hoffmann said that this did not give rise to a separate tort of privacy, he did not say anything to suggest that he disagreed with this change.

A striking example of the application of this new principle is provided by *Venables v. News Group Newspapers*:⁶⁷ an application to restrain the publication of the new identities and the whereabouts of Venables and Thompson, the notorious murderers of the toddler Jamie Bulger, after they were released from prison. As the Butler-Sloss P noted, the horrific nature of the crime and the fact that it attracted and continues to attract a lot of attention meant that if the information was disclosed there was a ‘real and strong possibility of serious harm and death’. In considering whether to allow publication, Butler-Sloss P said that ‘the duty of confidence may arise in equity independently of a transaction or relationship between parties . . . Under the umbrella of confidentiality there will be information which may require a special quality of protection’. That is, the ‘court does have the jurisdiction, in exceptional cases, to extend the protection of confidentiality of information, even to impose restrictions of the press where not to do so would be likely to lead to serious physical injury, or to death, of the person seeking the confidentiality, and there is no other way to protect the applicants other than by seeking relief from the courts’.⁶⁸ On the facts Butler-Sloss P held that the grave and possibly fatal consequences of disclosure warranted treating the information as confidential.

A similar approach was taken in *Mills v. MGN*, which involved an application by Heather Mills (model and wife of Paul McCartney) to stop the Sun newspaper from publishing details of her address, which they had obtained legitimately.⁶⁹ (Mills was concerned about the risks posed by stalkers.) The court said the fact that the newspaper had not learnt of the ‘address from or through some person who learned of it through some confidential transaction’ did not matter, since ‘it is no longer a necessary element of the cause of the action that the information arises from a confidential relationship’.⁷⁰ Following *Venables*, the court said that the risk of injury or death to Mills meant that there was jurisdiction to restrain a newspaper from publishing her address.

The consequences of disclosure have also been taken into account in less extreme situations to determine whether a party should be able to disclose personal information.⁷¹ In these cases, the courts have said that the test for determining whether the defendant is under an obligation of confidentiality is if the disclosure would be ‘highly offensive to a reasonable person of ordinary sensibilities’.⁷² That is, private facts should not be disclosed if a fair-minded person would consider it offensive to disclose them. This test was applied in *Campbell v. MGN* where the court said that an unauthorized photograph of a street scene featuring Naomi Campbell was invasive but not confidential.⁷³ They also said that

⁶⁷ *Venables v. News Group Newspapers* [2001] 2 WLR 1038. For proceedings for contempt of court in relation to subsequent disclosure see *Venables v. News Group Newspapers* (4 Dec. 2001) (QB).

⁶⁸ *Venables v. News Group Newspapers* [2001] 2 WLR 1038, 1064–5, paras. 80–1.

⁶⁹ *Mills v. MGN* [2001] EWHC Ch 412.

⁷⁰ *Mills v. MGN* [2001] EWHC Ch 412, para. 26.

⁷¹ Liability for breach of confidence can arise from ‘the nature of the subject matter or the circumstances of the defendant’s activities’. *Theakston v. MGN* [2002] EMLR 398, 410 para. 28 quoting Keene LJ in *Douglas v. Hello!* [2001] QB 967, para. 166 (CA).

⁷² *Campbell v. MGN* [2003] QB 633, 659–60 paras. 47–51 (taken from Gleeson LJ in *Australian Broadcasting Corporation v. Lenah Game Meats* (2001) 185 ALR 1, 13, para. 42) (this test is drawn from the US Restatement of Torts). For criticisms of the way this decision has been used see Lindsay J in *Douglas v. Hello!* (No. 3) [2003] EWHC 786 (Ch); [2003] 3 All ER 996, paras. 189–91 (reverting to the three tests in *Coco v. Clark* [1969] RPC 41).

⁷³ *Campbell v. MGN* [2003] QB 633, 661, paras. 54–5 (CA).

disclosure of her attendance at Narcotics Anonymous did not ‘shock the conscience’ enough to ‘justify the intervention of the court’.⁷⁴

While when dealing with personal information it is no longer necessary to show that the parties are in a relationship of confidence, this does not mean that it is no longer possible to disclose information of a personal and private nature. Rather, what has happened is that decisions about whether private information is able to be disclosed have shifted from the threshold question of whether the defendant is under a legal obligation of non-disclosure, to the secondary question of whether that legal obligation has been breached. In particular, in their recent dealings with personal information the courts have concentrated on the scope of the obligation and also whether that obligation is trumped by other interests (such as freedom of expression). We look at these issues below.⁷⁵

5 EMPLOYEES

As we mentioned earlier, special considerations apply in relation to the application of the breach of confidence action between employer and employee. As different obligations are imposed on an employee during employment than after the employment relationship, we will deal with each separately.

5.1 DURING THE COURSE OF EMPLOYMENT

5.1.1 Express duties during employment

In many cases, the contract of employment will include express provisions dealing with the nature and scope of the duty of confidence owed by the employee to the employer. During the period of employment, the courts will enforce the express terms of the contract.⁷⁶ Any express terms imposing a duty of confidentiality upon the employee (it is rare for an employer to be under equivalent duty) are subject to the general rules of contract.

5.1.2 Implied duties during employment

While a contract may not contain express clauses imposing a duty of confidentiality upon an employee, this does not mean that employees will not be bound by a duty of confidence. This is because in some cases the courts may imply a duty of confidence into the employment relationship. The courts have said that employees are under an implied duty of fidelity to their employers.⁷⁷ The duty of fidelity will prevent employees from

⁷⁴ *Campbell v. MGN* [2003] QB 633, 661, para. 56 (CA).

⁷⁵ Where the parties are in a relationship, traditional criteria are still used to decide whether private information is to be treated as confidential. Thus in *A v. B* [2003] QB 195, 207 para. 11 (guidelines ix–x) the Court of Appeal held that ‘a duty of confidence will arise whenever the party subject to the duty is in a situation where he either knows or ought to know that the other person can reasonably expect his privacy to be protected’. This could be express or conferred. It can arise where there is an intrusion, bugging or the use of surveillance techniques.

⁷⁶ But note the Public Interest Disclosure Act 1998, s. 1, introducing Employment Rights Act 1996 s. 43J (agreement void insofar as it purports to preclude a worker from making a protected disclosure).

⁷⁷ *Robb v. Green* [1895] 2 QB 315, 320; *Thomas Marshall v. Guinle* [1979] 1 Ch 227.

disclosing information and from competing with their employers. According to the Court of Appeal,

The employer is entitled to the single-minded loyalty of their employee. That employee must act in good faith; they must not make a profit out of their trust; they must not place themselves in a position where their duty and their interest may conflict; they may not act for their own benefit or the benefit of a third party without the informed consent of their employer.⁷⁸

The courts have sometimes imposed more onerous obligations on more senior employees, primarily because of the fiduciary duty that they owe to their employer.⁷⁹

5.2 POST-EMPLOYMENT

Once the employment relationship is terminated different considerations apply. On the one hand, employers have an interest in controlling the use that an employee is able to make of information they acquired during the course of their employment. At the same time, this has been balanced against the fact that it would be unfair to enable employers to prohibit an employee from working in the same area again. This would effectively be the result if employers were able to control more generic skills that an employee may have gained during the course of their employment. If an employer repudiates the contract, it is unclear whether confidentiality obligations survive at all.⁸⁰

5.2.1 Express obligations post termination: restraint of trade

In order to protect themselves, employers will normally include in their contract of employment a clause, usually referred to as a restrictive covenant, to the effect that the employee will not work in the same industry for a specified period after termination.⁸¹ While recognizing the importance of such clauses, the law also recognizes that employees should be free to make use of the personal skills, knowledge, experiences, and abilities gained in the course of their employment.⁸² The courts have attempted to navigate these conflicting goals through the doctrine of restraint of trade.⁸³ In essence this provides that a restrictive covenant will be struck down if the obligations go beyond what is reasonably necessary to protect the employer's interests. More specifically, a restraint of trade clause

⁷⁸ *Attorney General v. Blake* [1998] 1 All ER 833 (not considered by HL on appeal). See esp. *Hivac v. Park Royal Scientific Instruments* [1946] Ch 169.

⁷⁹ *Balston v. Headline Filters* [1990] FSR 385.

⁸⁰ See *Campbell v. Frisbee* [2002] EMLR 31 (arguable defence that obligations did not survive post breach such that summary judgment was inappropriate); *Rock Refrigerator Ltd v. Jones* [1977] 1 All ER 1; *General Billposting Company Ltd v. Atkinson* [1909] AC 118 (restrictive covenants unenforceable)

⁸¹ Since an obligation specifically not to disclose trade secrets will rarely provide satisfactory protection: *Littlewoods Organisation v. Harris* [1978] 1 All ER 1026.

⁸² *Herbert Morris v. Saxelby* [1916] AC 688; *Attwood v. Lamont* [1920] 3 KB 571.

⁸³ See above, pp. 274–6. The doctrine is alleged to date back to *Dier's Case* (1414) 2 Hen. V 5, pl. 26, but its modern form derives from *Mitchel v. Reynolds* (1711) 1 P. Wms. 181 which has been described as the 'carta' of the law. See N. H. Moller, *Voluntary Covenants in Restraint of Trade* (1925) 5.

will only be enforceable if it is appropriately limited as to time,⁸⁴ geographical applicability,⁸⁵ and the scope of activities.⁸⁶

The operation of the doctrine can be seen from *Mont v. Mills*.⁸⁷ In this case, the defendant had been employed in the paper tissue industry for twenty years. He left the claimant company and signed a severance agreement, under which he received a large sum of money. The agreement also said that the defendant was required not to join another company in the tissue industry for one year. The defendant failed to honour this promise and became joint managing director of a competitor, whereupon the claimant sought an injunction. The Court of Appeal held that the severance agreement was unenforceable on the basis that it was an unjustifiable restraint of trade. This was because the undertaking was not limited as regards geographical area or the nature of activities to which it applied. The court declined to construe the clause in favour of the employee: for to do so provided employers with no incentive to impose restraints in appropriately limited terms.⁸⁸ Simon Brown LJ noted that the fact that the company had paid the ex-employee during the period of restraint did not prevent the agreement from being unenforceable. The law's concern was not merely that all persons should be able to earn a living. If that were the only policy, the law would permit an employer to buy restraint. Rather, Simon Brown LJ argued that '[p]ublic policy clearly has regard to the public interest in competition and in the proper use of an employee's skills'.⁸⁹

'Garden Leave'

The level of duty owed by employees to their employers differs markedly depending on whether or not they are employed.⁹⁰ If a company wishes to restrain an employee from entering into similar employment, the most effective mechanism is for them to retain them as an employee.⁹¹ This is often done by placing employees on 'garden leave'. This occurs where an employee remains as a paid employee for a specified period of time, during which they are not required to attend work or carry out normal duties. In contrast with post-termination provisions, 'garden leave' clauses are not normally subject to the doctrine of restraint of trade: they are enforceable. Even so, questions remain as to what remedy is appropriate to enforce the contract.⁹² In *GFI Group v. Egglestone*,⁹³ where an employee was required to give twenty weeks' notice, the court granted an injunction to

⁸⁴ But in *Attorney General v. Blake* [2000] 3 WLR 625, 647 Lord Hobhouse said a lifelong obligation on a member of the Intelligence Service not to divulge any official information gained as a result of his employment was justified and thus not an unlawful restraint of trade.

⁸⁵ *Commercial Plastics v. Vincent* [1964] 3 All ER 546 (in absence of geographical limitation the restraints will be read as worldwide, in which case they will usually be void); *Lansing Linde v. Kerr* [1991] 1 All ER 418, 426 (facts would justify restraint in western Europe only).

⁸⁶ *Fellowes v. Fisher* [1976] QB 122, 129 (restrictive covenant purporting to restrain conveyancing clerk on one-year contract from working in 'legal profession' in districts of Walthamstow and Chingford for 5 years was too broad in scope, in geographical coverage and in duration). Cf. *Poly Lina v. Finch* [1995] FSR 751 (clause prohibiting defendant from engaging in any trade or business which was in competition with the plaintiff for one year held to be valid).

⁸⁷ [1993] FSR 577. ⁸⁸ [1993] FSR 577, 585. *Lansing Linde v. Kerr* [1991] 1 All ER 418, 429.

⁸⁹ [1993] FSR 577, 587.

⁹⁰ In some cases prompting an innocent employer to refuse to accept a repudiatory breach of contract by the employee: *Thomas Marshall v. Guinle* [1979] 1 Ch 227 (Megarry V-C).

⁹¹ *Balston v. Headline Filters* [1990] FSR 385, 416.

⁹² *Credit Suisse Asset Management v. Armstrong* [1996] ICR 882, 892–4. ⁹³ [1994] FSR 535.

prevent the employee from working for a competitor for three months after he had given notice of resignation. Here, the court was influenced by the high pay the employee received and the fact that the agreement had been negotiated between the parties (rather than imposed by the employer). Although the courts recognize the employee's interest in exercising their skills, a 'garden leave' clause will be enforced if failure to do so would harm the employer. The courts have suggested that an employer can utilize both a 'garden leave' provision and restrictive covenant, though the existence of the 'garden leave' clause may be taken into account when determining the reasonableness of the restrictive covenant.⁹⁴

5.2.2 Implied obligations post termination

In the absence of an express duty of confidence in the contract of employment, the courts may imply certain limited obligations on the use that an ex-employee can make of information acquired during the course of their employment. In a normal business context,⁹⁵ the obligations imposed are primarily limited to the use that can be made of trade secrets.

The classic authority on the position of ex-employees is *Faccenda Chicken v. Fowler*.⁹⁶ In this case the claimant, who sold fresh chickens from refrigerated vans, attempted to prevent a former employee from participating in a competing venture. The claimant argued that in so doing the ex-employee was utilizing confidential information concerning the customers, prices, products sold, and so forth. As the ex-employee's contract contained no restrictive covenant, the Court of Appeal was called upon to decide the scope of implied post-termination obligations. The Court of Appeal held that an ex-employee's obligations were confined to 'trade secrets', which includes things such as chemical formulae,⁹⁷ secret manufacturing process,⁹⁸ designs and special methods of construction,⁹⁹ and 'other information of a sufficiently high degree of confidentiality to amount to a trade secret'.¹⁰⁰

In *Faccenda*, the Court of Appeal said that in deciding whether information amounts to a trade secret, the court should consider four factors. The *first* is the nature of the employment. Under this heading the court would consider things such as how near the employee is to the 'inner counsel' of the employer. This is because information only made available to trusted employees is more likely to constitute a trade secret than information disclosed to shop-floor workers. The *second* factor to consider is the nature of the information. To be capable of protection the information must be defined with some degree of precision. Protection will not be available for general business methods and practices.¹⁰¹ It has been said that just because the information is technical does not mean that it relates to trade secrets. If an employee is an expert or specialist, their general skill and knowledge

⁹⁴ *Credit Suisse Asset Management v. Armstrong* [1996] ICR 882 (but that does not mean that there is automatic set off of garden leave period when considering reasonableness of a post-term covenant).

⁹⁵ Cf. *Attorney General v. Blake* [1998] 1 All ER 833 (in secret service context duty of confidence survives as long as the information remains confidential).

⁹⁶ *Faccenda Chicken v. Fowler* [1987] 1 Ch 117.

⁹⁷ *Amber Size & Chemical Co. v. Menzel* [1913] 2 Ch 239.

⁹⁸ *Herbert Morris v. Saxelby* [1916] AC 688, 701.

⁹⁹ *Reid and Sigrist v. Moss and Mechanism* (1932) 49 RPC 461.

¹⁰⁰ *Printers & Finishers v. Holloway* [1965] RPC 239, 253; *Faccenda Chicken v. Fowler* [1987] 1 Ch 117, 136.

¹⁰¹ *Lancashire Fire v. S. & A. Lyons* [1996] FSR 629, 668; *Aveley/Cybervox v. Boman and Sign Electronic Signal* [1975] FSR 139; *Searle & Co. v. Celltech* [1982] FSR 92.

might extend into the field of formulae, blends, and chemical processes.¹⁰² The *third* factor to consider is whether the employer impressed on the employee the confidentiality of the information. If information was specifically designated as a trade secret by the employer, it is more likely to be treated as such by the courts. However, the courts have noted that 'it would be unrealistic to expect a small and informal organization to adopt the same business disciplines as a larger and more bureaucratic concern.'¹⁰³ In the case of small businesses, the courts may treat information as a trade secret even though the employer did not identify it as such. The *fourth* and final consideration taken into account when assessing whether information is a trade secret is whether the information can be easily isolated from other information (such as the employee's own stock of knowledge, skill, and expertise) which the employee is free to use or disclose.¹⁰⁴

One issue which remains undecided is whether the obligations implied into an employment contract for the post-termination period changes when an ex-employee intends to disclose rather than use the information. Because the policy considerations that restrict implied, post-termination obligations to trade secrets aim to promote the mobility of labour and socially productive use of skills it seems that the courts will be less generous to an ex-employee who sells information or exposes it gratuitously.¹⁰⁵

6 STATUTORY OBLIGATIONS AND PUBLIC BODIES

Obligations of confidentiality can be imposed by statute.¹⁰⁶ Where a statute permits a public body to acquire information, the statutory body is under a duty of confidentiality only to use the information to satisfy the statutory purpose. In *Marcel v. Commissioner of Police of the Metropolis*,¹⁰⁷ as part of a criminal investigation concerning a property development in the Docklands, the police obtained information from the claimant under powers conferred by the 1984 Police and Criminal Evidence Act. The police disclosed the information to a third party, who was bringing a civil action related to the property developments against Marcel (the claimant in this case). The claimant objected to the police's revelation of the information. The Court of Appeal held that public officers who exercise such powers for public purposes come under a duty of confidentiality which prevents them from using the information for other purposes without the consent of the confider. The powers to seize and retain are conferred for the better performance of public functions by public bodies and cannot be used to take information available to private individuals for their private purposes. The purpose for which the information can be used is a matter of statutory interpretation. As Sir Christopher Slade explained in *Marcel*, the

¹⁰² *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 385 Laddie J (court should guard against imposing more stringent restraints on more technical employees).

¹⁰³ *Lancashire Fire v. S. & A. Lyons* [1996] FSR 629, 668.

¹⁰⁴ *Printers and Finishers v. Holloway* [1965] RPC 239.

¹⁰⁵ *Faccenda Chicken v. Fowler* [1986] 3 WLR 288, 301; *United Indigo Chemical Co. Ltd v. Robinson* (1932) 49 RPC 178, 187.

¹⁰⁶ These may be expressly stated in the statute, as for example in the Trade Descriptions Act 1968, s. 29; Consumer Credit Act 1974, s. 174; Building Societies Act 1986, s. 53; Competition Act 1998, s. 55 (each making disclosure of information gained using specified powers a criminal offence).

¹⁰⁷ [1992] 2 WLR 50; *Hellewell v. Chief Constable of Derbyshire* [1995] 1 WLR 804; *Bunn v. BBC* [1998] 3 All ER 552, 556.

only purposes for which the information could be used were those contemplated by the relevant legislation. However, on the facts these were defined broadly as including purposes 'reasonably incidental' to the investigation and prosecution of crime: matters that he was happy to label as 'police purposes'.

Another example of the obligation of confidence that may be imposed on a statutory body is provided by *Hoechst v. Chemiculture*.¹⁰⁸ Here, Morritt J took a broad view of the purpose of the powers conferred by the 1985 Food and Environmental Protection Act. Using these powers, the Health and Safety Executive obtained information from the defendant. The Executive subsequently disclosed the information to the claimant who, in turn, used the information in support of an Anton Piller application as regards trade mark infringement against the defendants.¹⁰⁹ Morritt J recognized that the Health and Safety Executive was under an obligation of confidentiality. However, he took the view that the claimant's action for trade mark infringement fulfilled similar purposes to the Act. This was because the claimant had been licensed to sell the herbicide by the Health and Safety Executive and the containers it used had been approved. The defendant, who had not been licensed to use the herbicide, was using the claimant's mark 'Cheetah' on different containers from those of the claimant.

¹⁰⁹ See below at pp. 1064–6 for further explanation as to Anton Piller/seizure orders.

46

BREACH, DEFENCES, AND REMEDIES

1 INTRODUCTION

In this chapter, we complete our examination of the breach of confidence action. After looking at the third factor that a claimant must show to sustain an action, namely that the obligation of confidence has been breached, we look at the defences that a defendant may rely upon to escape liability. Finally, we look at the remedies available where a duty of confidence has been breached.

2 HAS THE OBLIGATION OF CONFIDENCE BEEN BREACHED?

The third and final factor that must be shown to establish breach of confidence is that the obligation of confidence has been breached.

2.1 THE SCOPE OF THE OBLIGATION

In order to determine whether the duty of confidence has been breached it is first necessary to determine the scope of the obligation. At its most general, the duty of confidence prohibits the use and disclosure of the confidential information. While the scope of the obligation may restrict use and disclosure, it does not apply to the acquisition of information.¹ This may mean that British law fails to comply with Article 39 of TRIPS which speaks of the disclosure, *acquisition*, or use of information.

While the scope of the action *potentially* extends to any use or disclosure of the information, the scope of the obligations that are *actually* imposed upon an individual always depends on the facts of the case. In some circumstances, the obligation may provide that the confidential information should not be used or disclosed in any circumstances. In other situations, the confidant may only use the information for limited purposes, or for a limited period of time. Despite its importance, the question of how the scope of the obligation is determined has received very little attention.

¹ See also *R v. Layton* (*The Times*, 3 Mar. 1993) (industrial espionage not a crime). See V. Tunkel, 'Industrial espionage: What Can the Law Do?' [1993] *Denning LJ* 99; Law Commission Consultation Paper No. 150, Pt. VII.

Perhaps the most straightforward situation is where the obligation arises as a result of an *express* term in a contract or an express obligation in equity.² In these situations, the scope of the obligation depends on the way the relevant provisions are interpreted. The task of determining the scope of the obligation becomes more difficult where the obligation is *implied* into a contract or imposed by equity. Presumably, in these cases the scope of the obligation would depend on the views of the reasonable person in the circumstances.

One area that warrants special attention is where the scope of the obligation arises via the so-called 'limited purpose test'.³ As we saw earlier, where information is imparted for a limited purpose, this may give rise to an obligation of confidence. Where information is supplied for a specific purpose, one can readily infer that the information should not be used for another purpose. In these circumstances, if the information is used for any purpose other than the limited one for which the information was imparted there may be a breach. In many cases, it will be clear from the circumstances that the confidant actually knew that the information being disclosed to them was only to be used for a restricted purpose. In other cases, the scope of the obligation is determined by the objective standard of what the confidant *ought* to have known. This can be seen from the Australian decision of *Smith Kline & French v. Department of Community Health*.⁴ In this case the pharmaceutical company SK&F applied to the Australian Department of Community Services and Health for permission to market certain drugs. As part of the application process, SK&F supplied the Department with information concerning the drug. The Department of Community Services later proposed to use that information to decide whether it should authorize a different company to sell a related drug. SK&F argued that in so doing the Department had breached the duty of confidence they owed to them. The reason for this was that SK&F had only disclosed the information to the Department for one specific purpose: namely, to enable their drug to be approved. The court refused the claimant's application for an injunction. The Federal Court said that the scope of the obligation was not to be determined by the subjective views of the confider (here SK&F). Instead, it was to be decided by the objective standard of what the confidant knew or ought reasonably to have known in the circumstances. As such, the question to be considered was whether the relevant officers of the Department ought to have known that the data furnished by SK&F was disclosed for a limited purpose (thus excluding the practice of the Department of using the data to evaluate other applications).

In so doing it was suggested that a number of factors should be taken into account when determining the scope of the obligation. These include whether the information was supplied gratuitously or for a consideration; whether there were any past practices that gave rise to an understanding that the use was limited; how sensitive the information was; whether the confider had any interest in the purpose for which the information was to be used; and whether the confider expressly warned the confidant against a particular disclosure or use of the information.

On the facts, the Federal Court held that the scope of the obligation did not restrict the Department's use of the information to the SK&F application. Two factors influenced the Court in deciding that the equitable obligation had not been breached. The first was that

² See Gurry, 116.

³ See above at p. 1015.

⁴ [1990] FSR 617, 647; 20 IPR 643. For the equivalent UK decision, see *R v. Licensing Authority, ex p. Smith Kline & French Laboratories* [1989] FSR 440, 446 (obligation of confidence interpreted as of limited scope).

previous practices (SK&F themselves had submitted latter applications where the Department relied upon information supplied earlier by SK&F) meant that 'it went without saying that the Department would look back at data that had already been submitted'.⁵ The second factor was that the court stressed that in determining the scope of the obligation, it was necessary to 'have regard to the effect of the legal framework within which the parties were dealing'. The Court added that it would 'be slow to attribute to a regulatory authority knowledge that a party dealing with it expected it to act in a manner which would inhibit it in the exercise of its legal powers and obligations'.⁶

The question of the way in which the scope of the obligation should be determined was also considered by the Court of Appeal in *Source Informatics*. In this case Source collected information about doctors' prescribing habits and patterns, which it then sold to pharmaceutical companies so that they could market their products more effectively. In return for a fee, pharmacists collated the relevant information from the prescription forms that had been completed by doctors and forwarded it to Source. Importantly, the information sent to Source did not include the name of the patients. The Department of Health issued a policy document that said that this process amounted to a breach of patient confidentiality. Source brought an action for judicial review challenging the Department's policy. In particular, they argued 'that disclosure by doctors or pharmacists to a third party of anonymous information (that is information from which the identity of the patients may not be determined), does not constitute a breach of confidentiality'. At first instance, the Department's policy was upheld. However, the Court of Appeal overturned the decision.⁷

Simon Brown LJ began by noting that while the reasonable person test was useful in determining whether there is a duty of confidence, it did not give guidance as to the scope of the obligation of confidentiality. In considering how the scope of the obligation was to be determined Simon Brown LJ said that 'the touchstone by which to judge the scope of [the confidant's] duty and whether or not it has been fulfilled or breached is his own conscience, no more and no less'. On the facts this meant it was necessary to ask 'would a reasonable pharmacist's conscience be troubled by the proposed use to be made of patients' prescriptions? Would he think that by entering Source's scheme he was breaking his customers' confidence, making unconscientious use of the information they provide?'.⁸ If the language used here is stripped bare, the test proposed is the same objective standard as put forward in *Smith Kline & French*.

Given this, it would be reasonable to assume that Simon Brown LJ would have then gone on to consider what the reasonable pharmacist knew or ought reasonably to have known in the circumstances.⁹ Instead of adopting such an approach, Simon Brown LJ turned to focus on the type of information in question. In particular he said that in relation to personal information, 'the concern of the law is to protect the confider's personal privacy'. Simon Brown LJ went on to say that the 'patient [has] no property in the information and no right to control its use provided only and always that his privacy is not put at risk'.¹⁰ Using the language of rights, the Court held that the scope of the

⁵ [1990] FSR 617, 646. ⁶ [1990] FSR 617, 647.

⁷ *R v. Department of Health, ex p. Source Informatics* [2000] 1 All ER 786 (CA). ⁸ *Ibid.*, 796 (CA).

⁹ *S.K. & F. v. Department of Community Services and Health* (1991) 99 ALR 679, 691. Followed in *R v. Department of Health, ex p. Source Informatics* [2000] 1 All ER 786, 793 (CA).

¹⁰ *Ibid.*, 797 (CA).

obligation was limited to uses that would affect the confider's personal privacy. On the facts, the Court of Appeal held that as the information had been used anonymously, the patient's privacy was safeguarded. The reasonable pharmacist's conscience ought not to have been troubled. As such, there was no breach of confidence. Despite the gesture towards the use of an objective standard of the reasonable pharmacist, the Court of Appeal relied more on the *a priori* language of rights (the patient's right of privacy) than on what a reasonable pharmacist would have concluded from the circumstances.¹¹

One area where problems may arise is where a number of people jointly generate information and one party later wants to develop it, but the others do not. For the most part this question is decided in terms of the nature of the relationship between the parties. This can be seen in *Murray v. Yorkshire Fund Managers*.¹² In this case, a group of businessmen (including the claimant) developed a plan to take over an ailing business. While the financial backers were happy with the remainder of the team, they refused to work with the claimant. The claimant brought an action for breach of confidence arguing that confidential information was disclosed to the defendant for the limited purpose of deciding whether the financier should invest in the venture disclosed in the business plan.¹³ Rejecting this approach, Nourse LJ observed that there had never been a binding agreement that all the members would continue to participate in the project, so that any of them could have withdrawn. He therefore concluded that the confidential information came into being for the purpose of facilitating the project and was best viewed as 'an adjunct of a relationship'. It followed that when the claimant was excluded from the relationship, he lost the ability to control how the information was used.

The Court of Appeal decision should not be taken to be endorsing a view that one of several 'owners' of confidential information may use or exploit that information without the approval of the other 'co-owners'.¹⁴ Such a rule would raise complicated questions about who generated and contributed what information, and when such information came to be 'co-owned'.¹⁵ Rather, the Court of Appeal appears to have been attempting to produce a solution based on the expectations of the parties. This is also a sensible approach, in that if a different conclusion had been reached, it would have led to the unacceptable position where one member of a team could prohibit the remaining members from using the information. If an individual member of a team has problems with the way jointly developed information is to be used, they should deal with it contractually at the outset of the arrangement.

2.1.1 Scope of the duty in relation to personal information

A range of factors affect the scope of the duty of confidentiality that is afforded to personal information.¹⁶ As the Court of Appeal said in *Campbell v. MGN*, in determining the scope

¹¹ The Court of Appeal may have reached the same conclusion if they looked at the conclusions a reasonable pharmacist would have reached from the circumstances.

¹² [1998] 1 WLR 951.

¹³ In *Murray v. Yorkshire Fund Managers* [1998] 1 WLR 951, 960 Schiemann LJ observed that '[I]nsofar as [the plaintiff] submitted that the recipient of confidential information is not ever entitled to use it for his own benefit, that submission is clearly too wide'.

¹⁴ Cf. *Heyl-Dia v. Edmunds* (1899) 81 LT 579 (drawing analogy between co-ownership of trade secrets and co-ownership of patent).

¹⁵ Moreover, if the rule was applied for example to marital secrets, it would be a licence to 'kiss and tell'.

¹⁶ *Theakston v. MGN* [2002] EMLR 398, 418, para. 58.

of a duty of confidentiality it is necessary to have regard to both Articles 8 and 10 of the European Convention on Human Rights.¹⁷ The courts have also focused on the nature of the relationship that exists between the parties in determining the scope of a duty of confidentiality. This is particularly the case in relation to shared personal information generated by intimate relationships.¹⁸ In particular, the courts have emphasized the stability of the relationship as a factor that shapes the strength of the obligation: the more stable the relationship, the greater will be the significance that is attached to it.¹⁹ At one extreme are marital relationships of some duration and stability, where the scope of the obligation will be the strongest. At the other extreme are one-night stands or visits to prostitutes which represent the ‘outer limits of what is confidential’.²⁰ In these circumstances, the scope of the obligation will, in the Court of Appeal’s words, be ‘modest’.²¹ This can be seen in *A v. B*, a decision where a married professional footballer attempted to suppress publication of the fact that he had had casual affairs with C and D. While the court (reluctantly) accepted that C owed A a duty of confidentiality, they said that ‘the degree of confidentiality to which A was entitled to was very modest’. This was because ‘[r]elationships of the sort which A had with C and D are not the categories of relationship which the courts should be astute to protect’.²²

2.2 HAS THE OBLIGATION BEEN BREACHED?

Once the scope of the obligation has been ascertained, it is then possible to consider whether the obligation has been breached. This is primarily a factual question. Before looking at this in more detail, it is important to note three things.

2.2.1 Derivation

The first is that in order for a breach of confidence to occur, the information used by the defendant must have been *derived* from the confider’s information and not from some other source. If the information has been independently generated, there is no breach. In *CMI-Centers v. Phytopharm*, Laddie J noted that there are three ways of proving that a defendant has used the confidential information.²³

- (1) The first is to show *direct evidence* of derivation. This would stem, for example, from an employee of the defendant who had seen the information being copied and then used.
- (2) The second way of proving derivation is *indirect*. For example, if the protected

¹⁷ *Campbell v. MGN* [2003] QB 633, 634.

¹⁸ *A v. B* [2003] QB 195, 204, para. 11 (guidelines). ¹⁹ *Ibid.* (guideline xi).

²⁰ *Theakston v. MGN* [2002] EMLR 398, para. 61. The lower the degree of confidentiality, the less likely it will be that an injunction will be granted.

²¹ Ouseley J said ‘It may well be that the very concept of a relationship for the purposes of confidentiality is simply inapplicable to such transitory or commercial sexual relations’: *Theakston v. MGN* [2002] EMLR 398, para. 57. Contrast Jack J who said that the law should afford the protection of confidentiality within marriage and, in the context of modern sexual relations, it should be no different with relationships outside marriage: *A v. B* [2001] 1 WLR 2341, 2354, para. 56 (focusing on the nature of the information rather than the nature of the relationship).

²² *A v. B* [2003] QB 195, 217, para. 45 (CA).

²³ *CMI-Centers for Medical Innovation v. Phytopharm* [1999] FSR 235, 257–8.

information contained a 'significant fingerprint',²⁴ and the defendant's use bears the same fingerprint, the court will infer that the defendant derived its product (etc.) from the claimant. For example, the defendant's product may have dimensions, a design, composition, or behaviour which is only to be found in the claimant's and which is consistent with the use of the information and inconsistent with use of non-contaminated sources. Laddie J also said that it may be possible to show that the defendant has gone to all the same suppliers and customers as the claimant and that it would be 'highly unlikely that the same group would have been approached had the defendant been working from uncontaminated sources'.²⁵

- (3) Third, a claimant may be able to 'persuade the court that the defendant could not have got to the position they have with the speed he has had he simply started from legitimate sources and worked everything out for himself'.²⁶

2.2.2 The defendant's state of mind

The second general point to note is that the defendant's state of mind is not relevant when determining breach.²⁷ There is no need for a claimant to show that the breach was conscious or deliberate. Thus, it does not matter if the defendant acted in good faith, did not know that the information was confidential, or used the information accidentally²⁸ or subconsciously.²⁹

2.2.3 Breach and damage?

The third point to note is that it remains unclear whether for a disclosure to be actionable, a claimant must show that they were harmed by the disclosure. That is, the question has arisen as to whether damage is an essential part of the action. The way this question is answered depends on the type of information in question. It also depends on how 'damage' and 'harm' are defined.³⁰

In the case of *government secrets* the Crown must demonstrate a public interest in restraining disclosure.³¹ In *Attorney General v. Guardian (No. 2)*,³² Lord Keith refused the government's claim to an injunction on the ground that it was necessary for the government to prove damage from the continued publication of *Spycatcher*, and it could prove none.

While there has been little discussion of this issue in other areas, it seems that is only necessary to show harm in relation to government secrets. In the case of *personal secrets*,

²⁴ Ibid. *Berkeley Administration v. McClelland* [1990] FSR 505, 528 the judge was not satisfied that associate of ex-employees' figures were so similar to the claimant's that they must have been derived.

²⁵ *CMI-Centers for Medical Innovation v. Phytopharm* [1999] FSR 235, 258; *Talbot v. General Television Corp* [1981] RPC 1, 17.

²⁶ *CMI-Centers for Medical Innovation v. Phytopharm* [1999] FSR 235, 257–8.

²⁷ But *mens rea* is often a component when establishing the defendant's obligation. See above, pp. 1014–19, 1020–23.

²⁸ A confidant cannot escape liability by arguing that the disclosure was accidental: *Weld-Blundell v. Stephens* [1919] 1 KB 520.

²⁹ *Seager v. Copydex* [1967] 2 All ER 415; *Talbot v. General Television Corp* [1981] RPC 1, 17.

³⁰ *Attorney General v. Guardian Newspapers* [1990] AC 109, 281–2 (Lord Goff).

³¹ *Lord Advocate v. The Scotsman Publications Ltd* [1989] FSR 580.

³² *Attorney General v. Guardian Newspapers* [1990] AC 109, 260 (Lord Keith).

however, it seems that there is no need to prove damage. For example, in *Spycatcher* Lord Keith took the view that there is no need to prove detriment, so that a person ought to be able to prevent a breach of a personal confidence which would show them up in a good light, for example one which revealed that the confider had given large sums to charity.³³ In another case, where a hospital employee disclosed personal information relating to a colleague,³⁴ Rose J held that neither detriment nor potential detriment in the use of the information was necessary. In these circumstances, detriment occurred because the records were leaked. It was also recently said in relation to commercial information that detriment was 'not an essential constituent of a claim for a breach of confidence'. The Court of Appeal added that if detriment is a requirement the diversion of business opportunities could amount to a detriment to the person imparting the confidential information.³⁵

Has the confidential information been misused?

For the most part, the question of whether confidential information has been misused is relatively straightforward. Thus, if someone who is given an unpublished manuscript in confidence is told not to use or disclose it and they publish the manuscript, they will be in breach. Having said that, there are a number of areas that are unclear which warrant attention.

Where the information used or disclosed is different

Where the information used or disclosed by the defendant is identical (or very similar) to the confidential information, few problems arise in determining breach. If the action were limited to identical uses, it would enable a defendant to avoid liability by changing the information slightly. To ensure that this does not occur, the law has long recognized that the information used or disclosed by the defendant need not be identical to the confidential information. It is clear, for example, that the information can appear in another format and still breach. Thus, a change of language or a product built to a plan may be actionable. As is the case with all forms of intellectual property, the difficult question is determining how different the information can be and there still be a breach. Here the courts need to consider both the interests of the confider as well as the interests of the person making the disclosure. It seems clear that the way this question is answered will change depending on the nature of the information in question. Thus where the information is personal in nature, it seems that the level of 'similarity' required need not be great. Here, what matters is the substance of the message. In the case of technical trade secrets, however, in order to avoid hampering competition, the courts may be less willing to construe the scope of protection as broadly.

Partial uses

One situation where questions about the similarity of the information arise is where the defendant only uses part of the confidential information. In this situation, the information ultimately used is different from the information that was originally disclosed by the claimant. The case law has not considered this issue in much detail. It seems, however, that the answer will vary with the circumstances of the case. If the claimant's confidential

³³ *Ibid.*, 256; *Coco v. A. N. Clark* [1969] RPC 41.

³⁴ *X Health Authority v. Y* [1988] RPC 379, 391–2.

³⁵ *Federal Bank of the Middle East v. Hadkinson* [2000] 2 All ER 395, 413–14.

information is the product of a lot of work, a defendant might infringe if they use a part of the information.³⁶ However, if the confidential information was the product of very little effort, it is likely that there will only be a breach of confidence if all (or most) of the information was used. An approach of this nature was supported by the Court of Appeal in *Source Informatics* when Simon Brown LJ agreed with the comment that ‘a confidant will be liable for breach of his duty if he misuses *only part* of the confidential information which has been disclosed to him, provided that the misuse relates to a *material* part of the information’.³⁷

The question of whether partial use of information could constitute a breach was considered in *De Maudsley v. Palumbo*.³⁸ As we saw earlier,³⁹ this was a breach of confidence action brought in relation to an idea for a nightclub (which was rejected because the information was too vague). The court suggested that to breach the defendant would have needed to have used substantially the same idea. The defendant had only adopted two of the five features of the claimant’s idea for a nightclub (namely that the club was to be open all night and have separate dancing areas). Knox J held that (in these circumstances) partial use would not be sufficient to constitute an unauthorized use for the purposes of breach of confidence. The judge also took into account that the defendant had added a number of important features, such as the idea that the club would not sell alcohol and that admission be limited to those over twenty-one.

Where the defendant alters the confidential information

Another situation where questions about the nature of the breach arise is where the defendant adds to or alters the confidential information. In these cases, the information ultimately used or disclosed is different from the information that was originally disclosed by the claimant. In *Ocular Sciences*, Laddie J took the view that it was a question of fact whether the use of a derived product should be treated as a use of the information employed in its creation.⁴⁰ He said:

It is not every derived product, process or business which should be treated as a camouflaged embodiment of the confidential information and not all ongoing exploitation of such products, processes or business should be treated as continued use of the information. It must be a matter of degree whether the extent and importance of the use of the confidential information is such that continued exploitation of the derived matter should be viewed as continued use of the information.⁴¹

It seems that similar reasoning would apply in other situations where the information used by the defendant is different from the information that was originally disclosed by the claimant. Following similar logic, the courts have held that information about etchings was replicated when it appeared in a catalogue containing descriptions of those etchings.⁴² In another case, it was held that information about the processes for making sausage casings was used by the importation of sausage casings which had been bought from a

⁴¹ [1997] RPC 289, 404.

⁴² *Prince Albert v. Strange* (1849) 2 DeG & Sm 652; 64 ER 293 (Knight Bruce LJ); (1849) 1 Mac & G 25; 41 ER 1171 (Cottenham LC).

manufacturer who had wrongfully used that information.⁴³ However, it has been held that the use of a confidential computer program did not justify broader relief relating to the defendant's business that had benefited from previous use of the program. The problem here was that there was no evidence that the program made any significant contribution to the business.⁴⁴

Non-action

One question that has yet to be considered is whether non-action amounts to a use. Would it be a breach of confidence if on the strength of confidential information a person decided *not* to act in a particular way? For example, if someone was told confidential information that showed that the value of a building that they were planning to buy was about to decrease, would they be liable for breach if on the basis of the information they decided not to buy the building? While this issue has not been addressed directly, Lord Hoffmann noted in relation to the 1984 Data Protection Act that a 'person who refrains from entering a field with a notice saying "Beware of the Bull" is using the information obtained from the notice'.⁴⁵ Whether similar reasoning would be used in relation to breach of confidence is unclear. If the courts were willing to treat failure to act as an actionable use, it would be necessary for a claimant to demonstrate that the defendant had previously set upon a particular course of conduct from which they subsequently withdrew. In the example above, a claimant would need to show that the defendant had set out to purchase the building and that the reason why they subsequently decided not to purchase it was because of the confidential information and not some other reason.

3 DEFENCES

Once it is established that a defendant has breached their obligation of confidentiality, the only way they can escape liability is if they can show that they fall within one of the defences which are available to them. These include consent or authorization to use the information, disclosure in the public interest, as well as a number of other equitable and statutory immunities. We examine these in turn.

3.1 CONSENT OR AUTHORIZATION

If a defendant is able to show that the claimant consented to or authorized the use of the information, they will be exempt from breach. Consent to the use or disclosure of information can arise through an express licence, or from a release from liability. An express licence might be contractual in nature, as with a technology-licensing agreement,⁴⁶ or gratuitous.⁴⁷ Consent or authorization might also be implied from the circumstances. The

⁴³ *Union Carbide Corp. v. Naturin Ltd.* [1987] FSR 538, 547.

⁴⁴ *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 403.

⁴⁵ *R v. Brown (Gregory)* [1996] AC 543.

⁴⁶ One question which has proved to be problematic is that of determining the position of the parties when the agreement comes to an end: *Torrington Manufacturing Co. v. Smith* [1966] RPC 285 (once agreement terminated there was no right to continue to use the confidential information); *Regina Glass Fibre v. Schuller* [1972] RPC 229 (continued right to use information even after licence agreement terminated).

⁴⁷ *C v. C* [1946] 1 All ER 562 (doctor did not breach confidence when patient asked him to reveal information about her venereal disease to third party).

courts have suggested that special considerations apply in relation to consent given in relation to medical information.

3.2 PUBLIC INTEREST DEFENCE

The most important defence available to a defendant is the public interest defence. This provides defendants with the opportunity to escape liability for breach if they can establish that the disclosure is justified in the public interest. As Lord Phillips said ‘the right of confidentiality, whether or not founded in contract is not absolute. That right must give way where it is in the public interest that the confidential information shall be made public’.⁴⁸ The origin of the defence lies in the dicta of Wood V-C in the 1856 decision of *Gartside v. Outram*.⁴⁹ In that case the claimant, who carried on business as woolbrokers, brought an action to restrain the defendant, an ex-employee, from communicating information about their business dealings. The defendant asserted that the claimant had been defrauding its customers using falsified business records. Wood V-C held that if the defendant made out the case pleaded by him, he would have ‘a very good case for resisting this injunction’.⁵⁰ He said that:

there is no confidence as to the disclosure of iniquity. You cannot make me the confidant of a crime or a fraud, and be entitled to close up my lips upon any secret which you have the audacity to disclose to me relating to any fraudulent intention on your part: such a confidence cannot exist.⁵¹

Although Wood V-C’s comments suggest that the public interest is not so much a defence as a reason why the court will not recognize an obligation of confidence in the first place, case law since the 1960s has treated public interest as a defence in its own right. For example, in *Initial Services v. Putterill*⁵² the defendant had been employed as a sales manager by the claimant company, a firm of launderers. The defendant resigned and revealed documents to the *Daily Mail* exposing the claimant’s price-fixing. After the *Daily Mail* published articles about the price-fixing, the claimant brought an action for breach of confidence. In response, the ex-employee argued that the disclosure was in the public interest because it revealed that the claimants were parties to a price-fixing agreement contrary to the 1956 Restrictive Trade Practices Act. The claimant’s action failed. Salmon and Winn LJ applied the iniquity rule, but widened it to include improper trade practices. This was on the ground that ‘what was iniquity in 1856 differed from what was iniquity in 1967’.⁵³ Lord Denning suggested a different test altogether. This was that the defence was not limited to crime or fraud. Instead, it covered any misconduct of such a nature that it is in the public interest to disclose.⁵⁴ Lord Denning reasserted this view in *Fraser v. Evans*,⁵⁵ when he said that iniquity is merely an example of a ‘just cause or excuse’ for breaking a breach of confidence. More recently, the courts have incorporated the generalized public interest defence into a balancing process. For example, in *Spycatcher*, Lord Goff explained that:

⁴⁸ *Campbell v. Frisbee* [2002] EMLR 31, para. 23.

⁴⁹ (1856) 26 LJ Ch 113; 5 WR 35; 3 Jur (NS) 39, 28 LT (OS) 120. The judgment was delivered *ex tempore* and the reports vary.

⁵⁰ 26 LJ (NS) Ch 113, 116.

⁵¹ 26 LJ (NS) Ch 113, 114.

⁵² [1968] 1 QB 396.

⁵³ [1968] 1 QB 396, 410.

⁵⁴ [1968] 1 QB 396, 405.

⁵⁵ [1969] 1 QB 349.

[A]lthough the basis of the law's protection of confidence is a public interest that confidences should be preserved and protected by law, nevertheless that public interest may be outweighed by some other countervailing public interest which favours disclosure.⁵⁶

Because many of the limitations to the action for breach of confidence have been modified in relation to personal information, the courts have been willing to widen the exceptions.⁵⁷ Certainly, some of the limitations of the standard public interest test seem to have been modified, particularly those relating to disclosure to a responsible authority. For example, in *A v. B*, Lord Woolf MR spoke of the public having an understandable and legitimate interest in being told information, an interest which should be taken into account even though it could not really be called a 'public interest'.⁵⁸

The tendency of British courts to treat matters of public interest as a general defence was criticized by Gummow J in the Federal Court of Australia on the basis that it was 'picturesque but somewhat imprecise'.⁵⁹ He argued that *Gartside v. Outram* did not establish a defence. Instead, Gummow J said that it was better explained either as a case where the contractual obligation implied by the court did not extend to the information concerned, or where the court withheld equitable relief on the grounds of 'unclean hands'. In *Smith Kline & French v. Department of Community Health*,⁶⁰ Gummow J continued to criticize the English public interest defence on the basis that it had been constructed out of inadequate historical and doctrinal materials. Moreover, it was 'not so much a rule of law as an invitation to judicial idiosyncrasy'. In contrast, Gummow J asserted that equitable principles are best developed by reference to what conscientious behaviour demands of the defendant. Whatever validity Gummow J's criticisms may have, it is clear that where a defendant discloses information in the public interest that British law provides them with a possible defence to escape liability. Having said that, the Court of Appeal cited Gummow J's comments about the defence being a call to 'judicial idiosyncrasy' as a reason for confining the public interest defence within strict limits.⁶¹

3.2.1 What is the public interest?

While it is impossible to delimit the types of circumstances in which a particular disclosure will be in the public interest, a number of different factors are taken into account when deciding whether the disclosure is in the public interest.⁶²

(i) *The nature of the information.* A key factor to be considered will be the nature of the information. If a disclosure relates to misdeeds of a serious nature and importance to the country, then it is likely to be justified as being 'in the public interest'.⁶³ Disclosure relating

⁵⁶ *Attorney General v. Guardian Newspapers* [1990] AC 109, 282. See also Lord Griffiths at 269.

⁵⁷ *Theakston v. MGN* [2002] EMLR 398, 420, paras. 66–7.

⁵⁸ [2002] EMLR 371, [2002] 3 WLR 542, (guideline xii). In so doing, he seems to have been edging towards the broader defences available under the US Restatement.

⁵⁹ *Corrs Pavey Whiting & Byrne v. Collector of Customs (Vic)* (1987) 14 FCR 434, 451–8 (FCA).

⁶⁰ [1990] FSR 617, 663.

⁶¹ *R v. Department of Health, ex p. Source Informatics* [2000] 1 All ER 786, 800 (CA).

⁶² These factors are reflected in the provisions of the Public Interest Disclosure Act 1998, which protects employees from action by employers as regards 'protected disclosures'. A different definition is provided by the *Press Complaints Code of Practice*: see *A v. B* [2003] QB 195, 208 (guideline xiv).

⁶³ *Beloff v. Pressdram* [1973] 1 All ER 24, 260. This is not to say that iniquity always justifies disclosure: *Bunn v. BBC* [1998] FSR 70.

to a criminal offence, civil actions,⁶⁴ a failure to comply with a legal obligation, a miscarriage of justice, behaviour likely to endanger health or safety, or damage the environment are obvious examples of cases where disclosure might be justified. Although the public interest defence is defined broadly, it does not permit the unauthorized disclosure of information that is merely 'interesting to the public'.⁶⁵ In this context, the law draws a distinction between matters which affect the moral, political, medical, or material welfare of the public (or a section thereof), and the public's entertainment, curiosity, or amusement.

Having said this, the courts have been willing to permit the disclosure of confidential information in the public interest where it serves to correct a false image that a person has created about themselves. As Lord Phillips said, where a public figure makes untrue statements as to their private life, the press will normally be entitled to put the record straight: particularly where they have courted rather than shunned publicity.⁶⁶ This can be seen, for example, in *Woodward v. Hutchins* where the Court of Appeal held that disclosure of the private activities of a group of pop stars (including Tom Jones and Engelbert Humperdink) by their former press agent was justifiable where they had falsely represented to the public that they were clean-living.⁶⁷ According to Lord Denning if the image which a public figure fostered was 'not a true image, it is in the public interest that it should be corrected'. This was because in these cases 'it is a question of balancing the public interest in maintaining the confidence against the public interest in knowing the truth'.⁶⁸ While there have been doubts cast over the ongoing relevance of *Woodward v. Hutchins*, it has been followed in a number of decisions.⁶⁹ This can be seen, for example in *Theakston v. MGN*, an action brought by Theakston, a thirty-one year old presenter for Top of the Pops, to suppress publication of the fact that he had sex with a number of prostitutes in a brothel in London.⁷⁰ In allowing the publication, the Court of Appeal noted that Theakston had courted publicity and willingly placed information in the public domain about his sexual and personal relations. This was done 'so as to create and project an image calculated to enhance his fame, popularity and reputation as a man physically and sexually attractive to many women'. Citing *Woodward v. Hutchins* with approval the court said that this meant that he could not complain if the publicity given to his sexual activities was less favourable in this instance.

(ii) *The consequences of non-disclosure.* A disclosure may be justified as being in the public interest, even though it does not reveal wrongful behaviour or misconduct,⁷¹ for example where the disclosure will protect public health or safety.⁷² In *Lion Laboratories* the court held that it was legitimate for the press to disclose confidential internal papers that

⁶⁴ *Frankson v. Home Office* [2003] 1 WLR 1952 (information obtained during criminal investigations into assaults by prison officers could be disclosed as part of the prisoner's civil action against the prison officers).

⁶⁵ *Lion Laboratories v. Evans* [1985] QB 526, 537.

⁶⁶ *Campbell v. MGN* [2003] QB 633 (CA).

⁶⁷ *Woodward v. Hutchins* [1977] 1 WLR 760, 763.

⁶⁸ *Ibid.*, 764.

⁶⁹ *Campbell v. MGN* [2003] QB 633, 658, paras. 40–41 (publication of information about the internationally famous model Naomi Campbell's attendance at Narcotics Anonymous was justified because she had painted a false picture of herself, had re-branded herself as a reformed and stable individual who did not take drugs).

⁷⁰ *Theakston v. MGN* [2002] EMLR 398.

⁷¹ *Malone v. Metropolitan Police Commissioner* [1979] Ch 344, 362 (Megarry V-C) ('There may be cases where there is no misconduct or misdeed but yet there is a just cause or excuse for breaking confidence').

⁷² *Hubbard v. Vosper* [1972] 2 QB 84.

suggested that an alcohol-measuring machine was faulty. (The machine was used to test whether drivers were guilty of driving under the influence of alcohol.) The disclosure was justified because if the information remained concealed, the life and liberty of an unascertainable number of persons might be affected. Revelation in the press was justified because disclosure to the police might not have been adequate.⁷³

(iii) *The type of obligation.* Another factor that is likely to play a significant role in determining whether a disclosure is permissible is the type of obligation involved. It seems that the courts will treat some obligations as more absolute than others. For example, a disclosure by a priest or doctor could rarely be justified in the public interest.⁷⁴ In a rare case, the Court of Appeal held that a psychiatrist was justified in breaching the obligation of confidence he owed to a patient who had been interned under the Mental Health Act, by alerting the Home Office to the patient's interests in firearms and explosives. This was vital information, directly relevant to public safety.⁷⁵ The courts have also suggested that they will give more weight to obligations that arise through agreement than through other means. For example, in *Campbell v. Frisbee* it was said that 'a duty of confidentiality that has been expressly assumed under a contract [arguably] carries more weight, when balanced against the restriction of the right of freedom of expression, than a duty of confidentiality that is not buttressed by express agreement'.⁷⁶

(iv) *The beliefs of the confidant.* Because the public interest defence covers any situation where there is 'just cause or excuse' for breaking a confidence, the court is not confined to considering whether the information is *in fact* real misconduct. Instead, the court can also take into account whether the confidant believed on reasonable grounds that revelation was required in the public interest.⁷⁷ That is, according to the broader 'just cause' characterization of the defence, a disclosure may be justified where the confidant reasonably believed they were disclosing an iniquity, even if it turns out that they were wrong.⁷⁸ For example, in *Malone v. Metropolitan Police Commissioner*⁷⁹ it was held that if the police owed a duty of confidentiality, nevertheless there was a reasonable suspicion of iniquity such as to justify the disclosure.

(v) *The party to whom the information was disclosed.* Another factor that will influence whether a disclosure is justified is the party to whom the information is disclosed.⁸⁰ It may

⁷³ See also *W v. Egdeell* [1990] 2 WLR 47; *Schering Chemicals v. Falkman* [1982] 1 QB 1 (Shaw LJ would allow disclosure where the subject matter 'is something which is inimical to the public interest or threatens public safety').

⁷⁴ *X Health Authority v. Y* [1988] RPC 379, 395 (confidentiality was vital to secure public as well as private health, so that the interest in non-disclosure outweighed the interest in disclosure).

⁷⁵ *W v. Egdeell* [1990] 2 WLR 47.

⁷⁶ *Campbell v. Frisbee* [2002] EMLR 31, para 22.

⁷⁷ *Fraser v. Evans* [1969] 1 All ER 8.

⁷⁸ Y. Cripps, *Disclosure in the Public Interest* (1994), 25–6.

⁷⁹ [1979] Ch 344, 377. See also *Woolgar v. Chief Constable of Sussex Police* [2000] 1 WLR 25, 36.

⁸⁰ The Employment Rights Act 1986 allows for disclosures to employers, prescribed bodies, and 'in other cases'. In the latter case, the person to whom the information is revealed is a significant factor in assessing whether a disclosure is 'qualifying': ss. 43G(3)(a), 43H(2). *R v. Plymouth City Council* [2002] 1 WLR 2583, 2599, para. 50 (confidential information about why C had been put into guardianship under the Mental Health Act 1983 could be released to psychiatric and social work experts to advise in a challenge to the order); *Jockey Club v. Buffham* [2003] QB 462, 475–79 (disclosure of information by ex-employee that showed corruption within Jockey Club allowed. Judge took account of fact that Jockey Club was a public authority and the good conduct of the party ('BBC Panorama')).

be legitimate to disclose information to one body, but not another. For example, while a disclosure is likely to be justified if it is made to a responsible body,⁸¹ it is less likely to be justified if it is disclosed to the general public via a newspaper. As the Court of Appeal emphasized in *Lion Laboratories*, newspapers must take special care not to confuse the public interest with their own interest in increasing circulation. Thus, if the confidence relates to a crime, for a disclosure to be justified, it should normally be made to the police.⁸² In *Francome v. Mirror Group Newspapers*, an interim injunction was granted preventing disclosure in a newspaper of conversations which were alleged to reveal that Johnny Francome had breached Jockey Club regulations and possibly committed criminal offences. The main basis of the decision appears to have been that disclosure to the Jockey Club would have sufficed: there was no need for full newspaper disclosure.⁸³ While the courts have been wary about using the public interest defence to justify publication in a newspaper, in some cases publication to the press might be justified.⁸⁴

(vi) *Other factors.* A number of other factors may influence the court in determining whether disclosure is in the public interest. For example, in *Francome*, the court took account of the manner in which the information was acquired.⁸⁵ Another relevant factor is whether the person claiming the defence received remuneration for the disclosure.⁸⁶ While receipt of remuneration does not preclude the operation of the defence,⁸⁷ it may indicate that a defendant confused their own interests with that of the public.⁸⁸ Finally, it seems that the extent to which the information is already publicly available may impact on the operation of the public interest defence. If the information is not very confidential, disclosure may be justified even if there is only a low level of public interest.

(vii) *Public and private interests.* Typically, the public interest defence is characterized as the balancing of one public interest against another. The idea that it might involve a balancing of public interest against a private interest was rejected in *W v. Egdell* where the relevant private interest was that of the confider.⁸⁹ It has yet to be seen, however, whether the courts might accept a defence of disclosure in the private interests of the person to whom the disclosure was made. For example, if a doctor who knew that one of their patients had a contagious disease disclosed that information to a person in a sexual

⁸¹ *Imutran v. Uncaged Campaigns* [2002] FSR 21, 28 (no restriction on disclosure of confidential information about treatment of animals in xenotransplantation factory to specialist bodies with relevant responsibility).

⁸² *Initial Services v. Putterill* [1968] 1 QB 39, 405–6.

⁸³ [1984] 1 WLR 892, 899 (Lord Donaldson MR).

⁸⁴ e.g. *Lion Laboratories v. Evans* [1985] QB 526, 553. See also *Cork v. McVicar* (*The Times*, 31 Oct. 1984) (disclosure to the press might be in the public interest where the information disclosed concerned police corruption and therefore disclosure to police might not suffice).

⁸⁵ [1984] 1 WLR 892 (rejecting the defence in a case where the information had been acquired criminally, in breach of the 1949 Wireless Telegraphy Act). In contrast, if all the defendant has done is break a promise that will not weigh materially against a public interest defence: *Cork v. McVicar* (*The Times*, 31 Oct. 1984), Scott J. See also Employment Rights Act 1986, s. 43B(3) (not a qualifying disclosure if person commits an offence by making it).

⁸⁶ *Initial Services v. Putterill* [1968] 1 QB 396, 406 (Lord Denning MR observing that 'It is a great evil when people purvey scandalous information for reward').

⁸⁷ *Hubbard v. Vosper* [1972] 2 QB 84; *Church of Scientology v. Kaufman* [1973] RPC 627, 635. Cf. Employment Rights Act 1986, ss. 43G(c), 43H(1)(c) (not a qualifying disclosure if person makes disclosure for personal gain).

⁸⁸ *Schering Chemicals v. Falkman* [1982] QB 1, 39.

⁸⁹ [1990] 2 WLR 471, 485.

relationship with the patient, the court might be tempted to develop a defence of justified disclosure in the private interest.⁹⁰

A related question is whether disclosure can be justified by reference to the confider's own interests. For example, is a doctor justified in revealing information about treatment of a child to the child's parents? While in *Gillick* the majority of the House of Lords held that doctors did not have a duty to inform parents about the advice they had given to their children (here in relation to contraception), the Lords did not express any view on whether if the doctor did so, they would be in breach.⁹¹ Lord Templeman, dissenting, was clear that 'confidentiality owed to an infant is not breached by disclosure to a parent responsible to that infant if the doctor considers that such disclosure is necessary in the interests of the infant'.⁹²

3.3 FREEDOM OF EXPRESSION

One of the factors that the courts take into account in deciding whether to grant relief for breach of confidence is the right to freedom of expression provided for in Article 10 of the European Convention of Human Rights. This right, which is directly applicable as between the parties to private litigation,⁹³ operates independently of the public interest defence.⁹⁴ As the Court of Appeal said, the interference with the right has to be justified 'even where there was no identifiable special public interest in the material in question being published, since the existence of a free press was desirable in itself'.⁹⁵ While freedom of expression is valuable as a counter force to privacy, the courts have been at pains to point out that it is not an 'ace of trumps'.⁹⁶ That is, freedom of speech is not paramount and must be balanced against other interests.⁹⁷

3.4 MISCELLANEOUS IMMUNITIES

A defendant may also be immune from a breach of confidence action where they have revealed information pursuant to a statutory obligation or a court order.⁹⁸ Another way in which a defendant might be able to escape liability is via the equitable principle that for a claimant to bring an action in equity they must have 'clean hands'.⁹⁹ For the claimant's

⁹⁰ D. Caswell, 'Disclosure by a Physician of AIDS-related Patient Information: An Ethical and Legal Dilemma' (1989) 68 *Can Bar Rev.* 225.

⁹¹ *Gillick v. West Norfolk & Wisbech HA* [1985] 3 *All ER* 402, 410–13.

⁹² [1985] 3 *All ER* 402, 434.

⁹³ *Douglas v. Hello!* [2001] 2 *WLR* 992, 1027, para. 133 (Sedley LJ) (CA).

⁹⁴ *Theakston v. MGN* [2002] *EMLR* 398, para. 70 (the apparent attempt by defendant to blackmail the claimant did not remove her right to freedom of expression nor her right to seek publication).

⁹⁵ See *A v. B* [2003] *QB* 195, 205 (CA); *Douglas v. Hello!* [2001] 2 *WLR* 992, 1027, para. 133 (Sedley LJ) (when deciding whether to grant an injunction the court should have regard to the availability of the material).

⁹⁶ *Douglas v. Hello! (No. 3)* [2003] 3 *All ER* 996, para. 185.

⁹⁷ *Imutran v. Uncaged Campaigns* [2002] *FSR* 21, 28, para. 17.

⁹⁸ Examples include the Criminal Justice Act 1988, s. 98 (where a person discloses to a constable a belief that property is the proceeds of a crime, that disclosure is not to be treated as a breach of any restriction upon disclosure of information imposed by contract).

⁹⁹ See *Hubbard v. Vosper* [1972] 2 *QB* 84, 101 (Megaw LJ) (refusing injunctive relief because of the deplorable means that the claimant used to protect its confidential information); *Church of Scientology v. Kaufman* [1973] *RPC* 635.

conduct to be relevant, 'it must have an immediate and necessary relation to the equity sued for'.¹⁰⁰ In *Lennon v. News Group*,¹⁰¹ John Lennon sought to restrain his former wife, Cynthia, from publishing details of their married life in a newspaper article called 'I saw the man I loved turn into a snake'. The Court of Appeal affirmed the decision of Bristow J not to grant the injunction. The Court was influenced by the fact that newspaper articles written by the Lennons' chauffeur and by John Lennon had already been published which had discussed 'their most intimate affairs'. According to Lord Denning, this put their relationship in the public domain. As such, neither could restrain the other.

4 REMEDIES

In this final section we look at the more important remedies that may be granted where there has been a finding of breach. While we examine intellectual property remedies more generally elsewhere,¹⁰² in this section we wish to highlight the peculiar considerations that arise in relation to breach of confidence.

4.1 INTERIM RELIEF

The primary remedy that a claimant is likely to pursue in a breach of confidence action is an interim injunction to restrain use or disclosure of the information. In other areas of intellectual property law, the test for whether an injunction should be granted is that outlined in *American Cyanamid*. In essence, this provides that once a claimant has established that there is a serious question to be tried, then the court will exercise its discretion to grant or withhold interim relief on the basis of the 'balance of convenience'. (We review its application in greater detail in Chapter 48.) While this test is widely used in other areas of intellectual property, as we will see in some circumstances the courts have decided not to apply this test in breach of confidence actions. This is particularly the case in relation to personal information where the courts have said that the threshold for injunction is higher than *American Cyanamid*.¹⁰³ In *A v. B* the Court of Appeal put forward a set of guidelines for dealing with interim applications in privacy cases.¹⁰⁴ Essentially, the guidelines advocate a balancing of the facts rather than a technical approach to the law.¹⁰⁵

4.1.1 Interim relief restraining publication

Where the defendant proposes to publish the information, the claim for injunctive relief is normally directed at preserving the confidential nature of the information. If the *American Cyanamid* test were applied it would almost always lead to the grant of injunctive relief.¹⁰⁶

¹⁰⁰ *Besant v. Wood* (1879) 12 Ch D 605. Moreover, a claimant will not be disentitled to an equitable remedy if the acts are not of the same kind or degree: *Duchess of Argyll v. Duke of Argyll* [1967] Ch 302 (granting relief in spite of claimant's wrongdoing because the defendant's behaviour was altogether a different order of perfidy).

¹⁰¹ [1978] FSR 573. ¹⁰² See Ch. 47.

¹⁰³ *Douglas v. Hello!* [2001] 2 WLR 992, 1028, para. 136 (Sedley LJ) (CA).

¹⁰⁴ *A v. B* [2003] QB 195, 204–10, para. 11 (CA).

¹⁰⁵ *Ibid.*, 210, para. 12. The court has jurisdiction to grant an injunction against the world: *Venables v. News Group Newspapers* [2001] 2 WLR 1038 (not applied in *Mills v. MGN* [2001] EWHC Ch 412, para. 37).

¹⁰⁶ *AG v. Newspaper Publishing* [1988] Ch 333, 358 per Sir John Donaldson MR; Robertson and Nicol, *Media Law* (1992), 192.

This is because the balance of convenience almost always favours restraint in order to ensure that the information concerned retains its confidential quality until trial. However, such automatic grant of interim relief raises serious questions about freedom of expression. To avoid this, the courts have been wary about using the *American Cyanamid* test in these circumstances, preferring to pay greater attention to the merits of the parties' claims.¹⁰⁷

Section 12(3) of the 1998 Human Rights Act now confirms that where the relief impinges upon freedom of expression a claimant must show that there is more than a serious question to be tried. Section 12(3) provides that where a court is considering whether to grant relief which might affect the exercise of the right to freedom of expression, no relief should be granted which will restrain publication prior to trial 'unless the court is satisfied that the applicant is likely to establish that publication should not be allowed'. Courts are also instructed to take account of the extent to which the material has or is about to become available to the public; and whether it is, or would be, in the public interest for the material to be published.¹⁰⁸ The tribunal is also instructed to take into account 'any relevant privacy code'.

4.1.2 Interim relief restraining use

Where injunctive relief is being sought to prevent *use* of confidential information, different considerations operate. Interim relief restraining use prevents wrongdoers from benefiting from their wrongful acts or from continuing to inflict damage on the claimant. The grant of an injunction restricting use often also operates to restrain manufacture, sale, and competition. The stakes, therefore, can be very high. Where the effect of injunctive relief is likely to be that no trial will ever take place, the courts have taken it upon themselves to consider the strength of the parties' cases before deciding whether to grant interim relief.

In restraint of trade cases, the courts have also been reluctant to apply the *American Cyanamid* test on the basis that it might interfere with a person's right to trade.¹⁰⁹ The rejection of the *American Cyanamid* test is sometimes said to be justified on the ground that in the absence of a speedy trial matters are resolved by interim relief. For example in *Lansing v. Kerr*,¹¹⁰ where trial would not take place before a twelve-month restraint clause had expired, the Court of Appeal declined to apply the *American Cyanamid* test. Instead, the court looked at the parties' chance of success. Since the express restraint, though temporary, was worldwide, the judge considered it would be unlikely that it would be enforceable. The Court of Appeal held that such a consideration was appropriate. In contrast, where a speedy trial was pending and the restraint in question was two years, the Court of Appeal has used the *American Cyanamid* test to grant an interim injunction preventing a former employee from taking up a post at a competitor firm.¹¹¹

¹⁰⁷ *Hubbard v. Vosper* [1972] 2 QB 84, 96, 98; *Cambridge Nutrition v. BBC* [1990] 3 All ER 523; *Times v. Mirror Group* [1993] EMLR 443.

¹⁰⁸ Human Rights Act 1998, s. 12(4). See J. Griffiths, 'The Human Rights Act 1998, s. 12: Press Freedom over Privacy?' [1999] *Ent LR* 36. The injunctions granted in the *Spycatcher* litigation were reviewed by the European Court of Human Rights in *The Observer and The Guardian v. United Kingdom* (1991) 14 EHRR 153.

¹⁰⁹ *Fellowes v. Fisher* [1976] QB 122, 133 (per Lord Denning, arguing that *Cyanamid* does not apply to restraint of trade cases), 138, 142 (per Browne LJ and Sir John Pennycuik, taking *Cyanamid* approach but looking at the strength of the parties' cases when assessing the balance of convenience).

¹¹⁰ [1991] 1 All ER 418.

¹¹¹ *Lawrence David v. Ashton* [1991] 1 All ER 385.

4.1.3 Permanent injunctions (and delivery up)

If a claimant succeeds at trial in establishing a breach of confidence, they are prima facie entitled to injunctive relief.¹¹² Nevertheless, claimants are not entitled as of right to an injunction. As the courts retain discretion as to whether to grant the injunction, if there are special or exceptional factors the court may refuse to grant an injunction. This would be the case, for example, if the effect of a permanent injunction would be oppressive, or out of all proportion to the value of the information used.¹¹³ It is important that any injunction granted be formulated in specific terms.¹¹⁴ As an adjunct to an injunction, a court may award delivery up for destruction of material containing confidential information.¹¹⁵ This remedy is dealt with in Chapter 48.

4.2 DAMAGES

Specific problems have arisen in relation to financial remedies for breach of confidence as a result of the confusion as to the juridical nature of the obligation. Where the obligation of confidentiality is contractual, the promisee will usually be entitled to damages for breach of contract under normal contractual principles. However, doubts have been raised as to whether damages are available for breach of an equitable duty of confidentiality.¹¹⁶ This was because only common law courts, rather than equity, awarded damages. Instead, it is said that if the claimant desires a financial remedy in a Court of Equity it should be in the form of an account of profits. Despite these doubts, the courts have awarded damages even though the obligation was equitable.¹¹⁷ In some cases, the basis for doing so has been attributed to a 'beneficent construction of Lord Cairn's Act' which enables a court to grant damages 'in lieu of' an injunction.¹¹⁸

It has been said that the measure of damages for breach of confidence should be tortious, reflecting loss to the claimant.¹¹⁹ In *Seager v. Copydex (No. 2)*¹²⁰ the Court of

¹¹² *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 410.

¹¹³ *Ibid.*, 410–11. ¹¹⁴ *Potters Ballotini v. Weston Baker* [1977] RPC 202.

¹¹⁵ *Peter Pan v. Corsets Silhouette* [1963] RPC 45 (order for delivery up for destruction of bras which the defendant had manufactured with the use of confidential information); but cf. *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 410 (delivery up refused in relation to all documents needed for the running of its business and defendants' plant, equipment, or products).

¹¹⁶ *Nichrotherm Electrical Co. v. Percy & G. A. Harvey & Co. (London)* [1957] RPC 207, 213–14.

¹¹⁷ *Seager v. Copydex* [1967] RPC 349.

¹¹⁸ Chancery Amendment Act 1858 (21 & 22 Vict. c. 27); *Attorney General v. Guardian Newspapers* [1990] AC 109, 286 (Lord Goff); *Malone v. Metropolitan Police Commissioner* [1979] Ch 344, 360 (only remedy is account where no injunction would issue). But see *Cadbury Schweppes v. FBI Foods* [2000] FSR 491, 516 (Supreme Court of Canada) (damages were not dependent on Lord Cairn's Act and accepting that the action was 'sui generis').

¹¹⁹ *Indata Equipment Supplies v. ACL* [1998] FSR 248, 261, 264. Cf. J. Beatson, 'Damages for breach of confidence' (1991) 107 LQR 209, 211 (remedy should be restitutionary: either profit attributable to breach or saving made by defendant); R. Plibersek, 'Assessment of Damages for Breach of Confidence in England and Australia' [1991] EIPR 283 (arguing that damages for breach of the equitable obligation of confidence should be assessed on a 'restitutionary' basis of giving a claimant sufficient to restore him to the same position he would have been in if the breach of duty had not occurred); P. Birks, 'The Remedies for Abuse of Confidential Information' [1990] *Lloyds Maritime and Commercial Law Quarterly* 460 (compensatory and restitutionary damages should be available, but the choice should not merely be a matter of discretion: rather the restitutionary remedy should only be available where there is a strong need to buttress the practice of good faith in bargaining).

¹²⁰ [1969] 2 All ER 718.

Appeal held that damages were to be assessed by reference to the market value of the information. This has been subsequently said to be one, but not the only way of assessing damages.¹²¹ Other techniques for the assessment of damages are by way of fair remuneration for a licence, loss of profit the claimant would have gained,¹²² or depreciation in value of the right to have the information kept confidential.¹²³ It has been suggested that in calculating damages the courts are able to take account of distress and injury to feelings,¹²⁴ and might also award exemplary damages for breach.¹²⁵

4.3 ACCOUNT OF PROFITS

In general, a claimant relying on an equitable duty of confidence is entitled to an account of profits for the wrongful use or disclosure of confidential information. This restitutionary remedy also appears to be available in cases where the obligation of confidence is contractual.¹²⁶ In either case, similar problems of computation arise as with other intellectual property claims.¹²⁷

4.4 CONSTRUCTIVE TRUSTS

One feature that distinguishes the law of breach of confidence from other areas of intellectual property law is that constructive trust is a possible remedy. If a confider succeeds in a claim for breach of confidence, the court might order that property derived from the breach is held by the confidant on trust for the confider. The effect of this may be to enable a claimant to obtain priority over general creditors, to recover profits-from-profits made by the defendant, to obtain compound interest, and to bring an action outside the normal (contractual) limitation periods.¹²⁸

The first signs that the remedy of the constructive trust may be available against an errant confidant appeared in the *Spycatcher* case where various of the Law Lords suggested that Peter Wright held copyright on constructive trust for the Crown.¹²⁹ Although emanating from the House of Lords, these views were *obiter*, were expressed without the benefit of any argument from Wright, and might easily have been interpreted as being confined to

¹²¹ *Talbot v. General Television Corp* [1981] RPC 1, 22; *Aquaculture v. New Zealand Mussel* (1985) 5 IPR 353 (NZ High Court); [1990] 3 NZLR (NZ CA).

¹²² *Dawson & Mason Ltd. v. Potter* [1986] 1 All ER 418; *Cadbury Schweppes v. FBI Foods* [2000] FSR 491, 513–14, 517 (Supreme Court of Canada) (damages for lost opportunity).

¹²³ In *Talbot v. General Television* [1981] RPC 1, 31–3, damages were assessed as the loss of the chance to make the television series which at best could have made the plaintiff a (Aus.) \$160,000 profit: the court awarded him (Aus.) \$15,000.

¹²⁴ *Campbell v. MGN* [2003] QB 633 (CA).

¹²⁵ *Aquaculture v. New Zealand Mussel* [1990] 3 NZLR 299, 301; *Hello! v. Douglas No. 3*, para. 273; See also *Legislating the Criminal Code: Misuse of Trade Secrets*, No. 150 para. 3.34 (no authority supporting award of exemplary damages for breach of confidence). And see generally p. 1105 below.

¹²⁶ *Peter Pan Manufacturing Corporation v. Corsets Silhouette* [1963] 3 All ER 402; *AG v. Blake* [2000] 3 WLR 625, 641 (Lord Nicholls).

¹²⁷ See pp. 1106–8 below.

¹²⁸ Though this latter advantage seems doubtful in the light of *Coulthard v. DMC* [1999] 2 All ER 457, 477–80. See also, Tang Hang Wu, 'Confidence and the Constructive Trust' (2003) 23 *Leg Studs* 135 (doubting whether such ancillary effects are justified in cases of confidentiality).

¹²⁹ [1990] AC 109, 139 (Scott J), 211 (Dillon LJ), 286 (Lord Goff).

the narrow situation where the confidant was also a fiduciary. However, in *LAC Minerals*¹³⁰ the majority in the Supreme Court of Canada held that it was appropriate to impose a constructive trust over land which the defendant had bought after he had been told in confidence that it might be gold-bearing. More recently, in *Ocular Sciences v. Aspect Vision*, Laddie J accepted that a constructive trust might be available where there was a pre-existing fiduciary relationship and that there would usually be such a relationship where there existed a confidential obligation.¹³¹ This reasoning, which has much in common with that of Wilson J in *LAC Minerals*,¹³² paves the way for the availability of constructive trusts in almost all cases of breach of confidence. It should not be mistaken, however, to be suggesting that the remedy should be granted in all cases.

Other cases have cast doubt over whether the constructive trust is a remedy that is available in an action for breach of confidence. For example, in *Attorney General v. Blake*¹³³ Scott V-C said that existing case law would have precluded a finding of constructive trust in the case before him, where there was a breach of confidence but no pre-existing fiduciary relationship. On appeal, Lord Woolf MR appears to have agreed that a constructive trust was an inappropriate remedy for breach of a contractual duty of confidentiality.¹³⁴ Although the House of Lords did not consider this issue explicitly, it seems clear from their approach that they did not consider a constructive trust to be an appropriate remedy for breach of contract.¹³⁵

Whether the constructive trust is only available for breach of a pre-existing fiduciary duty or for all breaches of confidence, it is clear that it will rarely be the appropriate form of relief.¹³⁶ In determining whether a proprietary remedy is appropriate, the court must look at the circumstances of the case and the effects of imposing a constructive trust. A constructive trust should only be awarded if there is reason to grant to the claimant the additional rights that flow from recognition of a right of property.

In *LAC Minerals*, La Forest J imposed a constructive trust on the grounds that but for the actions of the defendant in misusing confidential information and thereby acquiring the Williams property, that property would have been acquired by the claimant. The defendant intercepted the claimant's efforts to obtain a specific and unique property that it would otherwise have acquired. The defendant was enriched by the acquisition of an asset that would have, but for the actions of that party, been acquired by the claimant. In contrast, in *Ocular Sciences*¹³⁷ Laddie J refused the claim for the imposition of a constructive trust over a part of the defendant's business and assets. This was because there was no question of the diversion of assets from the claimant, and because the contamination that was 'small and technically inconsequential', only affected a fraction of the business. In relation to the latter point Laddie J noted that there would likely be difficulties in imposing a constructive trust over part of the business. In *United Pan-Europe Communications NV v. Deutsche Bank AG*,¹³⁸ the Court of Appeal held that a constructive trust might be

¹³⁰ [1990] FSR 441, 445, 452; 497 Sopinka J (dissenting recognized that the remedy would be available in very special circumstances).

¹³⁵ [2000] 3 WLR 625.

¹³⁶ *LAC Minerals v. International Corona Presource* [1990] FSR 441, 474, 497. Cf. P. Birks, 'The Remedies for Abuse of Confidential Information' [1990] *Lloyds Maritime and Commercial Law Quarterly* 460 (criticizing use of constructive trust for breach of confidence).

¹³⁷ [1997] RPC 289, 411–16.

¹³⁸ [2000] 2 BCLC 461 (CA).

available as a remedy for breach of confidence even if the breach was only 'relevant' to the acquisition made.

4.5 CRIMINAL LAW

Taking confidential information is not, in English law, theft.¹³⁹ Section 1 of the 1968 Theft Act defines theft as the 'dishonest appropriation of property belonging to another with the intention of permanently depriving the other of it'. While section 4 says that property includes 'other intangible property', it has been held in a number of cases that for these purposes information is not intangible property. In *Oxford v. Moss*,¹⁴⁰ an undergraduate at Liverpool University obtained the proofs of an examination paper before the exam. After reading the exam, the student returned the paper, but 'retained' the information. Smith J held that this did not amount to theft. This was because information was not property and because there was no intention to deprive the university of the information. While it might be possible in certain situations to treat specific breaches of confidence as carrying criminal liability on other grounds, these all carry limitations.¹⁴¹

A number of calls have been made for the criminalization of the act of misappropriating trade secrets,¹⁴² and the Law Commission have responded by issuing a consultation paper (No. 150).¹⁴³ The paper provisionally concluded that the case for criminal offences of trade secret misuse is a strong one, basing that view primarily on the close analogy between trade secrets and property 'in the strict sense', and on the economic importance of protecting business investment.¹⁴⁴ The paper reviewed the practical problems of legislating: in particular, difficulties associated with reaching a satisfactory definition of the concept of 'trade secrets'. The Law Commission said it wanted to ensure that all misuses of trade secrets which were criminalized would be breaches of confidence at civil law, but made it clear that it did not wish to criminalize all acts which would incur civil liability under the present law. Views were sought, in particular, about the definition of trade secret, whether errant employees should be subject to criminal liability, and the appropriate scope of a public interest defence.¹⁴⁵ The final Report is still awaited.

¹³⁹ See A. Coleman, *The Legal Protection of Trade Secrets* (1992), ch. 7.

¹⁴⁰ (1979) 68 *Cr App R* 183.

¹⁴¹ If two people steal a trade secret, this may constitute conspiracy to defraud: *R v. Lloyd* [1985] *QB* 29; [1985] 3 *WLR* 30. Other criminal charges may be available under the Prevention of Corruption Act 1906 and s. 1 of the Computer Misuse Act 1990, which creates the offence of gaining unauthorized access to data held on a computer.

¹⁴² e.g. A. Coleman, *The Legal Protection of Trade Secrets* (1992), 93 (criminal law needed to stigmatize conduct, and afford adequate deterrent).

¹⁴³ For a review, see J. Hull, 'Stealing Secrets: A Review of the Law Commission's Consultation Paper on the Misuse of Trade Secrets' (1998) 4 *IPQ* 422.

¹⁴⁴ Law Commission, *Legislating the Criminal Code: Misuse of Trade Secrets*, Consultation Paper No. 150 (1997), para. 3.1.

¹⁴⁵ For the Law Commission's provisional proposal, outlining specific purposes for disclosure which are in the public interest, but without prejudice to the generality of the defence, see *ibid.*, para. 6.54.

PART VI

LITIGATION AND
REMEDIES

1 INTRODUCTION

It is sometimes said that intellectual property rights are only as good as the procedures and remedies by which they are enforced. While we would not necessarily subscribe wholly to that view, it is useful insofar as it highlights the importance of the so-called adjectival aspects of intellectual property law: that is, the rules of evidence, procedure, litigation, and remedies. The history of the adjectival aspects of intellectual property law is as old and complex as the history of the substantive law. Indeed, many developments in the substantive law have been influenced and shaped by changes in evidence, procedure, remedies, and litigation. In the following two chapters we wish to provide an introduction to these aspects of intellectual property law.

Until recently, the rules and practices that regulate litigation, procedure, and remedies have developed on a national basis, largely unaffected by international standards.¹ There are, for example, only a few references in the Berne² and Paris Conventions³ to matters of enforcement. As a result of recent changes in European and international intellectual property law, the relative insularity of the adjectival aspects of British intellectual property law has ended.

Largely at the behest of the industrialized nations seeking to ensure that their rights are adequately enforced in developing countries, the extent of international norm setting has started to expand. Probably the most significant change at the international level is that matters relating to enforcement are comprehensively dealt with by Part III of TRIPS.⁴ This requires that members ensure that enforcement procedures are available so that intellectual property right-holders can take effective action against infringers. More specifically, the law of the member state must enable *expeditious* remedies to be obtained so that imminent infringements can be prevented. Members are also required to provide remedies that are severe enough to deter further infringements. Procedures should be fair, equitable, and only as complicated, costly, or lengthy as is necessary.⁵ TRIPS provides further details in relation to civil procedures, remedies, provisional measures, border measures, and criminal liability. As the standards required are expressed in terms of particular purposes or goals (such as that the procedures must not be unduly costly) it may be difficult to evaluate whether national procedures and remedies satisfy the international standards. Indeed, the vague manner in which the effects are enunciated means that they are unlikely to be enforced at the WTO.⁶

Following the lead of TRIPS, the WIPO Copyright Treaty and the WIPO Performers and Phonograms Treaty also require contracting parties to have enforcement procedures in place which provide effective action against acts of infringement covered by the Treaties. This includes expeditious remedies to prevent infringement and remedies that deter

further infringement.⁷ In addition, contracting states are required to provide 'effective legal remedies' for violation of Berne, TRIPS, and components of the WIPO Treaties dealing with the digital agenda.⁸

While these changes mark an important shift in direction for international intellectual property law, for the most part they have had little impact upon British law. This has not been the case, however, with the changes that have taken place at the European level. In considering the impact of European initiatives on procedural and remedial matters, we need to distinguish between intellectual property rights at the Community level and Community rules relating to the enforcement of national rights. We deal with these in turn.

The development of Community intellectual property rights—currently Community trade marks and plant varieties, registered and unregistered design rights, but soon possibly to include Community patents,—has brought with it a degree of Community regulation of the procedures by which rights are enforced. The most obvious impact is that member states must designate particular domestic courts as 'Community courts'. These are the places where actions to enforce Community rights, as well as rules over jurisdiction and enforcement (usually supplementing and replacing some of the rules under the Brussels Convention) are brought.⁹ While matters of procedure and remedies are left to the law of a relevant member state,¹⁰ the right to injunctions in relation to Community rights is governed by Community law: injunctive relief will be granted unless there are special reasons to the contrary.¹¹ Moreover, Community courts have general jurisdiction to grant provisional (including protective) measures that operate in all contracting states.¹² Perhaps the most novel and important innovation will occur if the Community patent comes into force, since it will introduce a Community Patent Appeal Court.

The procedures and enforcement of *national* intellectual property rights has also been the focus of attention at the European level. Two matters are worth mentioning at this stage. First, all European Union has adopted a Regulation governing jurisdiction and recognition of judgments (based on the Brussels Convention).¹³ These provisions are examined in more detail in Chapter 47. The European Union has also adopted measures that regulate the external borders of the Community.¹⁴ More specifically, the Council set in place mechanisms that ensure that goods that infringe intellectual property rights can be retained by customs authorities when they are introduced into or are exported from the Community.¹⁵ These are discussed in Chapter 48.

¹⁵ Council Regulation No. 1383/2003 which came into force in July 2004 (hereafter IGR) (replacing Council Regulation 3295/95 of 22 Dec. 1994 (as amended by Council Regulation 241/99 of 25 Jan. 1999).

Further reform in Europe is imminent. In 2003, the Commission issued a Proposal for a Directive on measures and procedures to ensure the enforcement of intellectual property rights.¹⁶ Although the text has been considerably watered down, it seems that the Directive will be adopted in April or May 2004. This is described in Chapter 48.

47

LITIGATION

1 INTRODUCTION

While many improvements have taken place since Charles Dickens lampooned the archaic patent system of the mid-nineteenth century, nonetheless intellectual property litigation remains an expensive and time-consuming process.¹ In part this can be explained by the technical nature of intellectual property (especially in patent cases); by the role that experts play; and by the fact that infringement actions are frequently countered by claims for the invalidity of the intellectual property right. This chapter provides an overview of some of the more important aspects of intellectual property litigation.

2 WHO CAN BRING PROCEEDINGS?

Most intellectual property proceedings are concerned with the infringement of rights. In some cases, however, would-be defendants might want reassurance that their proposed activities will not infringe. In these circumstances, a person may be able to apply to the court for a declaration that their activities are non-infringing.

2.1 ACTION FOR INFRINGEMENT

Usually it is the rights-holder as defined in the relevant legislation who is able to bring an action for infringement. In certain situations, however, other parties are able to litigate to protect their interests. For example, in some cases equitable owners are able to bring an action where their intellectual property rights have been breached or infringed. To do so, they must join the legal owner before final judgment can be given.² A co-owner can also

¹ See J. Phillips, *Charles Dickens and the Poor Man's Tale of a Patent* (1984); M. Lubbock, 'Access to Justice: The Woolf Report' [1997] *EIPR* 385 (a patent action which would cost £600,000 in England might cost as little as £40,000 in Germany). Fewer patents are being litigated in England and Wales than previously, with the number of cases reaching trial being per year being in single figures. It is unclear whether this represents a reaction of litigants to the cost of litigation in the UK, or a preference for the substantive findings of other courts (the English judges perhaps being seen as more likely to strike down patents), or is testament to the success of recent attempts to induce parties to settle out of court. Some attempt to reduce the cost of litigation has been made through the Civil Procedure Rules (Part 44(3)), which enable courts to deviate from the assumption that costs follow the result, so that decision on costs can now be made on an issue-by-issue basis: see *AEI Rediffusion Music v. Phonographic Performance* [1999] 1 WLR 1507; 1522; *McGhan Medical UK v. Nagor* [2002] FSR (9) 162; *Stena Rederi AB v Irish Ferries (No. 2)* [2003] RPC (37) 681.

² *Columbia Pictures Industries v. Robinson* [1988] FSR 531, 547; *Batjac Productions v. Simitar Entertainment* [1996] FSR 139, 149–52.

bring an action for infringement.³ While exclusive licensees are usually able to bring an action for infringement,⁴ the question of whether a licensee of a sign is able to bring a passing off action depends on the circumstances.⁵ In some cases, the courts have allowed representative actions to be brought, notably by trade associations such as the British Phonographic Industry.⁶ Representative actions are allowed where there is a common interest and a common grievance so that the remedy sought will be of benefit to all those who are represented. In cases of criminal infringement, the police and other relevant public authorities, such as the local Weights and Measures Authority, may be empowered to take action.⁷

2.2 DECLARATION OF NON-INFRINGEMENT

Given the cost and uncertainty of intellectual property litigation, it may be important for someone who plans to invest a lot of money in a particular activity for them to know whether the proposed conduct is non-infringing.⁸ One option is to seek legal advice.⁹ In some cases, would-be-defendants are able to apply to the court for a declaration that their activities are non-infringing. A declaration of non-infringement can be made either under the court's general powers or (in relation to potential patent infringements) under the powers provided by the 1977 Patents Act. We will look each in turn.

For a court to grant a declaration of non-infringement under their general powers, it must be satisfied that the possibility that the activity is infringing is real and not theoretical. The court must also be satisfied that the applicant has a real interest in seeking the declaration and that there is a proper 'contradictor', that is a defendant who has a true interest in opposing the claim.¹⁰ This means that declarations of non-infringement will only be granted where legal rights have been contested or, more specifically where the

³ PA s. 66(2); TMA s. 23(5) (but must join all other co-owners to proceedings, other than for interim relief); CDPA s. 173(2), *Cescinsky v. Routledge* [1916] 2 KB 325; CDPA s. 259 (references to designer to be treated as references to all designers). In the case of patents and trade marks, acts done or authorized by another co-owner may not amount to an infringement: PA s. 36; TMA s. 23(3).

⁴ PA s. 67. See *Bondax Carpets v. Advanced Carpet Tiles* [1993] FSR 162, 163; CDPA s. 101, s. 191L; TMA s. 31 (if the exclusive licence specifically grants the right to bring proceedings); Council Regulation (EC) 6/2002 on Community Design Art. 32 (3) (exclusive licensee can bring action if proprietor, having been given notice to do so, does not himself bring proceedings within an appropriate period); Council Regulation 40/94 (20 Dec. 1993) on the Community Trade Mark, Art 22(3). Cf. Registered Designs: *Oren & Tiny Love v. Red Box Toy Factory* [1999] FSR 785 (exclusive licensee has no right of action against an infringer). The position of a bare licensee is more varied: normally a bare licensee cannot bring an action. But cf. TMA s. 30(3) (if proprietor refuses to bring proceedings 'in respect of any matter which affects his interests' the licensee may do so). As a result of changes introduced by the Copyright and Related Rights Regulations 2003 (SI 2498/2003), a non-exclusive licensee can bring an action for infringement of copyright if the infringing act was 'directly connected' to a prior licensed act of a licensee and the licence expressly grants a right of action and is in writing signed by the copyright owner: CDPA s. 101A.

⁵ *Scandecor Developments v. Scandecor Marketing* [1998] FSR 500 (CA).

⁶ *CBS Songs v. Amstrad* [1988] RPC 567.

⁷ The Trade Descriptions Act 1968 also creates certain offences, discussed in Ch. 48, which the Trading Standards Departments enforce.

⁸ See P. Young, *Declaratory Orders* (1984) chs. 2 and 7; A. Hudson, 'Declaratory Judgements: Theoretical Cases and the Reality of the Dispute' (1977) 3 *Dalhousie LJ* 706.

⁹ In the context of registered rights would-be-defendants are also able to apply to have the right revoked or declared invalid. We have dealt with this in the relevant chapters.

¹⁰ *Russian Commercial and Industrial Bank v. British Bank of Foreign Trade* [1921] 2 AC 438, 448.

right-holder has already made a claim against the applicant for the declaration.¹¹ As a result, declarations of non-infringement will only rarely be available.¹²

In addition to the general power the courts have to make declarations of non-infringement, the 1977 Patents Act contains specific statutory provisions that empower the courts to make declarations of non-infringement in relation to potential infringements of patents.¹³ The provisions recognize the burdensome nature of patent litigation. In order to provide certainty to potential competitors and to facilitate investment, section 71 of the 1977 Patents Act enables applicants to apply to the court or the Comptroller for a declaration that certain acts do not constitute an infringement of the patent. This is the case even though no claim has been made against the applicant.¹⁴ Declarations will only be made where it can be shown that the person has applied in writing to the proprietor for a written acknowledgement that they are not infringing and the proprietor has refused or failed to provide an acknowledgement.¹⁵ The onus of proof lies on the party seeking the declaration.¹⁶ When a declaration is issued, patentees are estopped from later claiming that the matters in the declaration constitute an infringement of the patent.¹⁷

3 WHO CAN BE SUED?

There are a number of parties who may be sued for infringement or breach of intellectual property rights. In deciding who should be sued, claimants will be guided by a range of factors. These include pragmatic concerns such as the convenience of suing a central party rather than a range of disparate infringers (a manufacturer rather than a retailer, or an Internet Service Supplier rather than a person who posts or receives information). In other cases the relative financial stability of the parties may determine who is sued.

¹¹ On the relationship between declarations of non-infringement and the appropriate scope of an injunction, see *Coflexip v. Stolt Comex Seaway* [1999] FSR 473, 484.

¹² Where the applicant has already begun to take the relevant action (such as manufacture, import, or sale) and an intellectual property right-holder has objected to that action, the court will more readily consider the grant of a declaration. Even then, the remedy is discretionary and so will only be granted in 'appropriate circumstances to settle appropriate questions': *Biogen v. Medeva* [1993] RPC 475, 489.

¹³ PA s. 71. The section does not prevent a person applying under the inherent jurisdiction, but it appears that it is not possible to put the validity of the patent in issue when seeking a declaration under the inherent jurisdiction, because of PA s. 74. On the limits see *Organon Teknika v. F. Hoffmann-La Roche AG* [1996] FSR 383.

¹⁴ *Plastus Kreativ v. Minesota Mining and Manufacturing Co.* [1995] RPC 438, 442.

¹⁵ On the need for specificity in the applicant's description of the activities about which they want a declaration see *MMD Design & Consultancy* [1989] RPC 131, 135; *Wollard's Patent* [1989] RPC 141. There is 'an interesting point of law' as to whether a court should ever entertain an application which is 'hypothetical': *Apotex Europe v. Beecham Group plc* [2003] EWHC 1395 (6 Jun. 2003) (para. 12) (Laddie J).

¹⁶ *Rohm & Haas & Co. v. Collag* [2001] FSR 426. The court has a discretion, and so will take into account whether the application is timely, and whether it imposes unfair burdens on the patentee: *Apotex Europe v. Beecham Group plc* [2003] EWHC 1395 (6 Jun. 2003) (Laddie J).

¹⁷ In some European countries, the declaration of non-infringement has been used as a 'torpedo' by defendants to pre-empt a claimant's selection of a different jurisdiction. For example, a defendant who anticipates being sued in Germany might bring an action for a declaration of non-infringement in a more sympathetic country: see, e.g. *Franzosi* [2000] EIPR N142. On jurisdictional issues, see pp. 1076–82 below.

3.1 PRIMARY INFRINGERS

The most obvious person to sue is the primary infringer, that is the person directly responsible for the infringement or breach. We have dealt with the circumstances in which such persons will be liable in each of the infringement chapters.¹⁸

3.2 SECONDARY AND INDIRECT INFRINGERS

Most intellectual property regimes extend the scope of liability from immediate infringers such as manufacturers, importers, or vendors of infringing goods to also include parties who facilitate, authorize, or induce infringement. Often these are referred to as secondary infringers. In most instances for the secondary or indirect infringer to be liable they must have known, or it must have been obvious to a reasonable person, that they were facilitating, authorizing, or inducing the infringement. As with primary infringers, the special provisions relating to secondary infringers have been considered in the earlier chapters on infringement.

3.3 EMPLOYERS

The general tortious rule that the employer will be vicariously liable when an employee commits an infringing act in the course of their employment applies as much to intellectual property rights as to other torts. Where the wrong is equitable the position is not so clear. It is difficult to see, however, why an employer should not be equally liable for a breach of an equitable duty of confidentiality by an employee as they are for a breach of any other obligation.¹⁹

3.4 JOINT TORTFEASORS

It is also possible to bring an action against a party where they are acting as a joint tortfeasor. A person will be liable as a joint tortfeasor where they are connected with or somehow associated with the infringement. It is important to note that not every connection is sufficient to render an associated person a joint tortfeasor.²⁰ In particular, mere assistance (knowing or otherwise) in the commission of a tort will not suffice to make an aider or abettor civilly liable as a joint tortfeasor. Rather the test for a joint tortfeasor is that 'each person has made the infringing acts his own'.²¹ The situations where a party will be liable as a joint tortfeasor fall into two (overlapping) categories.²² The first category

¹⁸ See Chs. 6, 8, 13, 22, 28, 30, 40.

¹⁹ *AGIP (Africa) v. Jackson* [1992] 4 All ER 385, 408.

²⁰ See *Credit Lyonnaise v. Export Credit Guarantee Department* [1998] 1 Lloyd's LR 19, 44 (appealed on a different issue to the House of Lords [1999] 2 WLR 540); *Lancashire Fires v. SA Lyons* [1996] FSR 629, 675 (CA) (same principles apply to determine liability for breach of confidence). Cf. *Evans v. Spritebrand* [1985] FSR 267 (differentiating between strict liability torts and those dependent on mens rea); *MCA Records Inc. v. Charly Records* [2002] FSR (26) 401 (para. 51) (hinting that there might be principles of joint tortfeasance specific to intellectual property). For discussion of joint tortfeasance in the context of passing off, see H. Carty, 'Passing Off and Instruments of Deception: The Need for Clarity' [2003] EIPR 188.

²¹ *SABAF SpA v. MFI Furniture* [2003] RPC (14) 264 (para. 58).

²² *Unilever v. Gillette (UK)* [1989] RPC 583, 608 (where Mustill LJ left it open as to whether these were just two aspects of a single way of infringing, but noted that procurement might lead to a common design and hence fall under both heads). Cp. *MCA Records Inc v. Charly Records* [2002] FSR (26) 401, 424 (paras. 51, 52) using the language 'intends and procures and shares a common design that infringement takes place'.

concerns the situation where one party intends and procures, or *induces*, the commission of the tort. The second category concerns the situation where two or more persons joined in a *common design* pursuant to which the tort was committed.²³ We deal with each in turn.

3.4.1 Inducement

A person will be liable where they induce the infringement. An extreme example of this is where a person controls the operations of another (such as a company), which is merely the tool or ‘cat’s paw’ of the individual, and the other (the company) infringes: in such a case the moving spirit of the company may be found to have induced its acts.²⁴ Similarly, a person who sells an article in kit form with instructions which when constructed infringes the claimant’s copyright will be a joint tortfeasor with the person who puts the kit together, because they have *induced* that infringement.²⁵ In contrast, while a person who sells an article knowing that it is going to be used to infringe may assist infringement, they will not be treated as having induced the infringement. For example, in *CBS Songs v. Amstrad*²⁶ the House of Lords was asked to consider whether, in selling a high-speed tape-to-tape recorder which the manufacturer and vendor knew was likely to be used to infringe copyright in sound recordings, the supplier was a joint tortfeasor. The House of Lords held that because the supplier did not have control over how purchasers used the tape recorders, nor had they asked purchasers to use the tape recorder in a particular way, the supplier was not a joint tortfeasor with purchasers who made illegal recordings.

3.4.2 Common design

Where a group of people share a ‘common design’ (a plan or a purpose), and one of the group commits a tort while carrying out the common design, the other members will be liable as joint tortfeasors.²⁷ Although one member of the group commits the tort, it is treated as if it was committed on behalf of and in concert with the other members of the group. For parties to operate in a common design it is not necessary for the secondary party to have mapped out a plan with the primary offender;²⁸ tacit agreement will suffice.²⁹ The common design need not be to infringe if the agreed action leads to an

²³ *Unilever v. Gillette (UK)* [1989] *RPC* 583, 608.

²⁴ Normally, directors are not liable for tortious acts done by servants of a company unless they are privy to the act, that is, they ordered or procured it: *PRS v. Cyril Theatrical Syndicate* [1924] 1 *KB* 1, 14–15. If a director is acting constitutionally, only rarely can he be said to have procured the acts of the company (since, in principle, he has acted for it): *MCA Records Inc v. Charly Records* [2002] *FSR* (26) 401, 423–4 (para. 49). There is authority that, for a director to be liable as a joint tortfeasor, they must have directed that an act be carried out knowing that it would be tortious: *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1996] *FSR* 874, 894 (Hong Kong Court of Appeal); *White Horse Distillers v. Gregson Associates* [1984] *RPC* 61, 91.

²⁵ *Rotocrop International v. Genbourne* [1982] *FSR* 241, 259. ²⁶ [1988] *RPC* 567, 606.

²⁷ *Morton-Norwich Products v. Intercen* [1978] *RPC* 501, 512, 515 (where Dutch company supplied English firm with drug which infringed the claimant’s patent, the Dutch company was a joint tortfeasor even though it had committed no act in the UK).

²⁸ A joint marketing agreement by which the supplier of infringing goods also provides demonstration machines, literature, and advertising material and training might be indicative of sufficient cooperation between the parties to constitute a common design: *Puschner v. Tom Palmer (Scotland)* [1989] *RPC* 430. But mere supply does not amount to a common design: *SABAF SpA v. MFI Furniture* [2003] *RPC* (14) 264 (para. 59).

²⁹ *Unilever v. Gillette (UK)* [1989] *RPC* 583, 609. See also *Lubrizol v. Esso Petroleum (No. 1)* [1992] *RPC* 281.

infringement.³⁰ It also does not matter whether or not the parties knew they were infringing.³¹ The fact that a parent company has financial control of a subsidiary is not enough of a connection to constitute a common design. The parent company must be shown to have ‘taken part’ in the primary act.³² Equally a director will only be liable under this head for the acts of the company where the and the company ‘joined together in concerted action to secure that [the infringing] acts were done’.³³

4 OBTAINING AND PRESERVING EVIDENCE

Often intellectual property-right-holders find out about infringement by chance. For example, an employee or representative may stumble across an infringing article while on holiday, or a dissatisfied customer may complain to the right-holder that the goods made by the infringer are faulty. Intellectual property rights-owners also have other more systematic ways of discovering infringements. In particular, collecting societies and trade associations such as the British Phonograph Industry’s Anti-Piracy Unit, the Federation against Copyright Theft (which polices video piracy),³⁴ and the Federation against Software Theft (which monitors software infringement) play an important role in identifying and policing infringement.

Once a right-holder discovers that their rights are being infringed, a number of options are available. For example, they can sue for infringement or attempt to settle out of court. Whichever route is chosen it is usually prudent and often necessary for them to gather the relevant evidence. The evidence that is needed will vary according to the facts in hand, and may include evidence that an infringement has taken place, the details of the parties involved, and the extent of infringement. In some cases, evidence of infringement is obtained by ambushing or entrapping the defendant. For example, a legal practitioner may pose as a bona fide customer of a person selling infringing products or service. Such actions, which are called ‘trap orders’, often involve a degree of deception by the person collecting the evidence. Despite this, the courts have not objected to evidence obtained in this way, nor have claimants relying on such evidence been treated as lacking ‘clean hands’.³⁵ Instead, the courts have left the probity of such techniques to be regulated by the appropriate professional bodies.

Copyright owners and anyone whom they authorize are given the power to seize and detain infringing copies without first obtaining a court order.³⁶ To protect the expectations

³⁰ *Unilever v. Gillette (UK)* [1989] *RPC* 583, 609; *Ravenscroft v. Herbert* [1980] *RPC* 193, 210 (contract between author and publisher whereby publisher was bound to publish constituted common design so author was also liable for act of publishing work).

³¹ e.g. that they believed the goods had been put on the market with the consent of the holder of the intellectual property right: *Morton-Norwich Products v. Intercen* [1978] *RPC* 501, 515.

³² *Unilever v. Chefaro Proprietaries* [1994] *FSR* 135, 138; *Napp Pharmaceutical Group v. Asta Medica* [1999] *FSR* 370; *Coin Controls v. Suzo* [1997] *FSR* 660, 666; *The Mead Corporation v. Riverwood Multiple Packaging* [1997] *FSR* 484.

³³ *MCA Records Inc v. Charly Records* [2002] *FSR* (26) 401, 424 (para. 53).

³⁴ See *R v. Alpha Holbrough* (7 Nov. 2002) (para. 4) (CA).

³⁵ *Marie Claire Album v. Hartstone Hosiery* [1993] *FSR* 692.

³⁶ CDPA s. 100, s. 196. The copies must be exposed or otherwise immediately available for sale or hire; a local police station must be duly notified beforehand of the action to be taken; and the seizure must be in a

of property owners and the public more generally, the availability of such self-help mechanisms is limited.

Another important source of evidence derives from the fact that intellectual property right-holders are able to obtain a court order requiring a person to reveal information relevant to the action.³⁷ This may include the names and addresses of relevant parties, the dates and quantities of importation, and the source of goods or materials.³⁸ Orders for discovery are particularly useful in that they enable right-holders to trace the channels through which infringing goods are distributed.³⁹ The traditional, so-called *Norwich Pharmacal* order continues to be available,⁴⁰ and will be particularly useful in situations where the person seeking the information has no intention of bringing court proceedings, but, for example, merely wishes to identify moles within its organisation and dismiss them.⁴¹

To enable intellectual property right-owners to preserve evidence prior to trial, the British courts developed the so-called Anton Piller order.⁴² As a result of recent changes, the Anton Piller order is now called a *search order*.⁴³ In essence a search order permits a claimant (and their solicitor) to inspect the defendant's premises and to seize or copy any information that is relevant to the alleged infringement. Applications for search orders are made either to a patents judge in the High Court or the Patents County Court, or to a Chancery judge.⁴⁴ As the order aims to ensure that evidence is not destroyed, the application is made without giving notice to the other party. Given the potentially draconian

public place or on public premises from a person who does not have a permanent or regular place of business there. Notice of what has been seized has to be given in prescribed form. No force may be used; though, if police officers are present, they may be able to use the discretionary power of arrest. See Police and Criminal Evidence Act 1984, ss. 24–5.

³⁷ CPR r. 31.

³⁸ It seems likely that the case law on *Norwich Pharmacal* orders will be applicable to CPR r. 31 Orders. It is therefore unlikely that an order will include the names of customers of a competing business: *Jade Engineering (Coventry) v. Antiference Window Systems* [1996] FSR 461, 465–7.

³⁹ It seems likely that the case law on *Norwich Pharmacal* orders will be applicable to CPR r. 31 Orders. It is therefore unlikely that an order will include the names of customers of a competing business: *Jade Engineering (Coventry) v. Antiference*, an application for such an order can be resisted e.g. journalists may be protected from having to reveal their sources under the Contempt of Court Act 1981, s. 10, or reliance may be placed on ECHR Art 10: see *Goodwin v. UK* (1996) 22 EHRR 123. But there are limits: *Ashworth Security Hospital v. MGM Ltd* [2002] 1 WLR 2033 (paras. 61–66, 71–73).

⁴⁰ *Norwich Pharmacal v. CCE* [1974] AC 133; *Ashworth Security Hospital v. MGM Ltd* [2002] 1 WLR 2033. This order, made under the court's inherent jurisdiction, is available against a person who has committed no wrong, but they must have been 'involved' in the wrongdoing. For example, the Commissioners of Customs and Excise have been required to reveal the names of importers of a patented drug: *Norwich Pharmacal v. CCE* [1974] AC 133; and British Telecom the names of mobile phone users alleged to be involved in passing off: *The Coca-Cola Co. v. British Telecommunications* [1999] FSR 518, 523.

⁴¹ *Ashworth Security Hospital v. MGM Ltd* [2002] 1 WLR 2033 (para. 60) (where the claimant was entitled to an order against a newspaper requiring that it reveal the source of confidential patient records leaked from the claimant's high security hospital). According to Lord Woolf, the claimant must clearly identify the wrongdoing on which he relies and specify the purposes for which disclosure will be used. The court order may impose restriction as to how the information may be used.

⁴² *Anton Piller v. Manufacturing Processes* [1976] Ch 55. See M. Dockray, *Anton Piller Orders* (1992); S. Gee, *Mareva Injunctions and Anton Piller Relief* (4th edn. 1998); M. Hoyle, *The Mareva Injunction and Related Orders* (1997), ch. 8. For a Marxist interpretation of the development of the order see F. Carrigan, 'The Political Economy of Anton Piller Orders' (1995) 11 *Australian Journal of Law & Society* 33.

⁴³ CPA 1997 s. 7; CPR r. 25; Rule 25 Practice Direction.

⁴⁴ CPR Rule 25A Practice Direction, para. 8.5.

nature of the search order,⁴⁵ they will only be made if the matter is urgent or otherwise desirable in the interests of justice.⁴⁶ Before an order will be granted, the courts require claimants to show that they have an extremely strong prima facie case of infringement and that the potential damage to them is very serious. The claimant must also provide clear evidence that the defendant has incriminating material in their possession and that there is a real possibility that the evidence will be destroyed.⁴⁷ The search order is subject to procedural safeguards,⁴⁸ such as the need for a supervising solicitor (unconnected with the applicant) who is experienced in the operation of search orders.⁴⁹ The order may only be served on a weekday between 9.30 and 5.30 (unless the court orders otherwise), and supervising solicitors must explain the terms of the order to the respondents in everyday language and advise them of their rights.⁵⁰ Failure to comply with an order is a contempt of court, resulting in imprisonment or a fine.⁵¹

The application for a search order may be combined with an interim injunction against infringement and a *freezing order* (formerly known as a *Mareva injunction*) ordering the retention of property pending the outcome of the litigation.⁵² In addition, the search order may require that the defendant provide information about the source of the infringing copies or their intended destination.⁵³

5 PRESUMPTIONS

Normally in civil actions, the obligation falls upon the claimant to prove their case on the balance of probabilities. However, in a number of situations intellectual property legislation creates presumptions that alter the normal burden of proof. The most important is that it is presumed that registered rights have been validly granted. Thus, the obligation falls on the alleged infringer of a patent, a registered trade mark, or a registered design to prove that the right is invalid (or obtain revocation). Presumptions also operate in the field of unregistered design rights, copyright, and the database right. These relate to the identity

⁴⁵ *Universal Thermosensors v. Hibben* [1992] FSR 361; *Taylor Made Golf Company v. Rata and Rata* [1996] FSR 528, 535. In *Bank Mellat v. Nikpour* [1985] FSR 87, 92 Donaldson LJ described the order as one of two 'nuclear weapons' of English law.

⁴⁶ CPR r. 25.2(2)(b).

⁴⁷ The applicant should disclose all material facts. Rule 25A Practice Direction, para. 3.3. See *Naf Naf SA v. Dickens* [1993] FSR 424.

⁴⁸ CPR Rule 25A Practice Direction. See M. Hoyle, *The Mareva Injunction and Related Orders* (1997), 110 (use of such orders has declined since adoption of safeguards in *Universal Thermosensors v. Hibben* [1992] FSR 361 and the Practice Direction (Mareva Injunctions and Anton Piller Orders) 1994 [1994] RPC 617).

⁴⁹ CPR Rule 25A Practice Direction, paras. 7.2 and 8.1 (supervising solicitor must not be an employee or member of the applicant's firm of solicitors). Other safeguards were imposed as a result of *Universal Thermosensors v. Hibben* [1992] FSR 36.

⁵⁰ CPR Rule 25A Practice Direction, para. 7.4. Where the supervising solicitor is a man and the respondent is likely to be an unaccompanied woman, at least one other person named in the order must be a woman and must accompany the supervising solicitor: para. 7.4(5).

⁵¹ *Taylor Made Golf Company v. Rata and Rata* [1996] FSR 52 (fine of £75,000). See the Notice to the Respondent in the sample order annexed to CPR Rule 25A Practice Direction.

⁵² CPR r. 25(f). (Sometimes called 'asset preservation orders').

⁵³ There is a statutory exception to the privilege against self-incrimination: Supreme Court Act 1981 s. 72.

of the author,⁵⁴ or (in the case of database right) the maker,⁵⁵ and the date on which a work (etc.) was published.⁵⁶ In copyright law, where an author is dead it is presumed that the work was original and that it was first published where and when the claimant alleges.⁵⁷

6 UNJUSTIFIED THREATS TO SUE

The cost and burden of intellectual property litigation means that the mere threat of litigation has the potential to act as a potent commercial weapon.⁵⁸ To ensure that the threat to sue is not misused, special provisions provide remedies against unjustified threats to litigate.⁵⁹ These exist in the case of patents, trade marks, registered designs, and the unregistered design right. There are no statutory provisions that protect against unjustified threats to sue in relation to copyright, passing off, or breach of confidence. In these cases, persons unjustifiably threatened with litigation have to resort to other means.

6.1 THREATS TO SUE: PATENTS, TRADE MARKS, DESIGNS

Special statutory provisions exist in the case of patents,⁶⁰ trade marks,⁶¹ registered designs,⁶² and the unregistered design right⁶³ to protect parties against unjustified threats to sue. These statutory provisions ‘ensure that threats of infringement proceedings are not made casually or recklessly, because of the potential damage and concern they can cause’.⁶⁴ As a result, if owners threaten to sue, they must ensure that the threat can be justified.

In order to qualify for relief against a groundless threat, a claimant must establish that an actionable threat has been made and that as a result they have been aggrieved. If the defendant fails to justify the threat, the court will grant relief. We will deal with these factors in turn.

⁵⁴ CDPA ss. 104(2)–(4); *Waterlow Publishers v. Rose* [1995] FSR 207, 218. These presumptions do not operate for the purposes of the publication right: Related Rights Reg. 17(2)(b). As regards films, additional presumptions operate concerning statements as to who was the director or producer of the film, as well as who was the principal director, author of the screenplay, author of dialogue, or composer of music.

⁵⁵ See Database Reg. r. 22(1).

⁵⁶ As regards copyright in sound recordings and computer programs, it is presumed that statements naming the copyright owner or giving the date or place of first publication, are true: CDPA s. 105. See *Microsoft Corporation v. Electrowide* [1997] FSR 580, 594. Where copies of the database as published bear a label or a mark stating that the database was first published in a specified year, the label or mark shall be admissible as evidence of the facts stated and shall be presumed to be correct until the contrary is proved: Database Reg. 22(3).

⁵⁷ CDPA s. 104(5).

⁵⁸ Another technique that is used to avoid unnecessary litigation is the issuing of certificates of contested validity. As well as acting as a victory trophy, the certificate may deter subsequent litigation. RDA s. 25; PA s. 65; TMA s. 73.

⁵⁹ See L. Gee, ‘The “Threats” Section in the UK Trade Marks Act 1994: Can A Person Still Wound Without Striking?’ [1995] *EIPR* 138. The earliest statutory action was in Patents, Designs and Trade Marks Act 1883 (46 & 47 Vict. ch. 57) s. 32.

⁶⁰ PA s. 70. ⁶¹ TMA s. 21.

⁶² RDA s. 26: e.g. *Jaybeam v. Abru Aluminium* [1975] FSR 334.

⁶³ CDPA s. 253.

⁶⁴ *Prince v. Prince Sports Group* [1998] FSR 21, 33.

6.1.1 Actionable threats

In order for a claimant to be entitled to the relief provided, they must show that an actionable threat has been made. It should be noted that in the case of patents,⁶⁵ registered designs,⁶⁶ and trade marks⁶⁷ special provisions limit the circumstances in which groundless threats are actionable. In essence these exclude threats made in relation to primary acts of infringement: rival manufacturers may threaten each other.⁶⁸ While the legislative philosophy underlying these exclusions is ‘difficult to detect’,⁶⁹ it is clear that they greatly weaken the scope of the threats provisions.

Threats can take many different forms. Although actionable threats will usually be explicit, they may also be implicit,⁷⁰ and may arise from a single letter or a circular.⁷¹ When considering whether a threat had been made, the document in question is looked at through the eyes of a reasonable and normal recipient.⁷² In so doing, the court will take into account matters such as the circumstances of the business or the background information available to a reasonable recipient.⁷³ The courts will pay particular attention to the initial impression that the communication has on a reasonable addressee. Mere notification of the existence of a patent, trade mark, or other right will not constitute a threat of proceedings. It has been suggested, however, that notification of a patent (and presumably other statutory intellectual property rights) may constitute an actionable threat if it is ‘given in such a context that a threat is seen to be intended’.⁷⁴ It is necessary to show that a threat has been made against someone in particular: it is not enough for a claimant to show that a general threat has been made.⁷⁵

⁶⁵ PA s. 70(4) provides that s. 70 does not apply where the threat is to bring infringement proceedings for the ‘making or importing a product for disposal or of using a process’.

⁶⁶ RDA s. 26(2A) and CDPA s. 253(3) state that proceedings may not be brought under the respective threat provisions ‘in respect of a threat to bring proceedings for an infringement alleged to consist of the making or importing of anything’.

⁶⁷ TMA s. 21(1) excludes threats involving ‘the application of the mark to goods or their packaging; the importation of goods to which, or to the packaging of which, the mark has been applied; or the supply of services under the mark’.

⁶⁸ *Cavity Trays v. RMC Panel Products* [1996] RPC 361.

⁶⁹ *Brain v. Ingledew Brown Bennison & Garrett (No. 3)* [1997] FSR 511, 525; *Unilever plc v. The Procter & Gamble Co.* [2000] FSR 344, where Simon Brown LJ calls the position today ‘most curious and unsatisfactory’.

⁷⁰ *Bowden Controls v. Acco Cable Controls* [1990] RPC 427, 431; *Scandecor Development v. Scandecor Marketing* [1999] FSR 26, 47.

⁷¹ When read in conjunction with other letters or circulars, the communication as a whole may be construed as giving rise to a threat of litigation: *Brain v. Ingledew Brown Bennison & Garrett (No. 3)* [1997] FSR 511, 521–4. Later letters cannot nullify an earlier threat: *Prince v. Prince Sports Group Inc.* [1998] FSR 21, 33.

⁷² *Brian v. Ingledew Brown Bennison & Garrett (No. 3)* [1997] FSR 511, 521; *Bowden Controls v. Acco Cable Controls* [1990] RPC 427, 431; *Lunar Advertising Company v. Burnham & Co.* (1928) 45 RPC 258, 260.

⁷³ *Brain v. Ingledew Brown Bennison & Garrett* [1996] FSR 341, 349. But ‘without prejudice’ discussions cannot be used as a basis for a threats claim: *Unilever plc v. The Procter & Gamble Co.* [2000] FSR 344, 358 (CA); *Kooltrade v. XTS* [2001] FSR 158 (noting that ‘without prejudice’ is not a label that can be used to immunize an act from its normal consequences); *ALM Manufacturing v. Black & Decker* (21 May 2003) (refusing to strike out threats action and stating that the *Unilever* case left unclear the position in relation to threats made in the course of without prejudice negotiations where the person aggrieved was not party to the negotiations).

⁷⁴ *CIPA Guide*, 595. *Brain v. Ingledew Brown Bennison & Garrett* [1996] FSR 341, 349. *Jaybeam v. Abru Aluminium* [1975] FSR 334, 340 (describing the letter as an over-ingenious attempt by solicitors to avoid producing an actionable threat); *L’Oreal v. Johnson & Johnson* [2000] ETMR 691, 703.

⁷⁵ *Speedycranes v. Thompson* [1978] RPC 221.

6.1.2 Aggrieved

A person is able to bring an application for relief even though the threats have not been made against them. This means that a right-owner is able to bring an action where a shopkeeper who sells their products is threatened with litigation by a competitor. The availability of the action is limited by the requirement that a claimant must show that they were 'aggrieved' by the threats. This excludes frivolous applications or applications by busybodies who have no real interest in the threats.⁷⁶ While a person can be aggrieved without having to prove actual damage at trial, they must show that something more than a mere fanciful or minimal commercial interest has been interfered with. The courts are more likely to infer an adverse effect where the threats are made directly against a party.⁷⁷ Where threats are made indirectly, claimants will need to demonstrate that they suffered actual or potential loss (that is not minimal).⁷⁸ This will be easier to prove where the threat was intended to scare off the claimant's customers.⁷⁹

6.1.3 Groundless threats

Once a claimant has established that a threat has been made and that as a result they were aggrieved, the statutory provisions shift the onus onto the defendant to prove that the threats were justified.⁸⁰ To do this, the defendant will need to show that the right in question is valid⁸¹ and that the acts in respect of which proceedings were threatened would constitute an infringement of the right. This means, for example, that where a threat was made after a patent application had been made but before the patent had been granted, it will not be possible to justify the threat if the patent is not granted before trial.⁸²

6.1.4 Relief

If a claimant can show that they have been aggrieved as a result of an actionable threat and the defendant cannot establish that the threat was justified, the claimant is entitled to the relief provided in the relevant statutory provisions.⁸³ This includes a declaration that the threats are unjustifiable,⁸⁴ an injunction against the continuance of the threats,⁸⁵ and damages for any losses which were sustained as a result of the threats.⁸⁶

⁷⁶ *Brain v. Ingledew Brown Bennison & Garrett* [1997] FSR 511, 519 (hurt feelings are not enough).

⁷⁷ *John Summers v. Cold Metal Press Co.* (1948) 65 RPC 75; *Prince v. Prince Sports Group* [1998] FSR 21, 33–4.

⁷⁸ *Brain v. Ingledew Brown Bennison & Garrett* [1997] FSR 511, 520; *Summers & Sons v. The Cold Metal Process Co.* (1948) 65 RPC 75.

⁷⁹ *Dimplex v. De'Longhi* [1996] FSR 622.

⁸⁰ RDA s. 26(2); PA s. 70(2); CDPA s. 253(2); TMA s. 21(2). ⁸¹ TMA s. 21(3).

⁸² *Brain v. Ingledew Brown Bennison & Garrett (No. 2)* [1997] FSR 271, 275.

⁸³ RDA s. 26(2); PA s. 70(3); CDPA s. 253(1); TMA s. 21(2).

⁸⁴ For a discussion of the relationship between this and the inherent jurisdiction to grant declarations that a claimant does not infringe, see *L'Oreal v. Johnson & Johnson* [2000] ETMR 691.

⁸⁵ Injunctions should usually follow a successful threats action: *Prince v. Prince Sports Group* [1998] FSR 21, 36.

⁸⁶ Damage must be shown to have been caused by the threat: *Carflow Products v. Linwood Securities* [1998] FSR 691 (decision to withdraw product was a consequence of commencement of proceedings rather than a threat).

6.2 THREATS TO SUE: COPYRIGHT, PASSING OFF, AND BREACH OF CONFIDENCE

There are no statutory provisions that protect against unjustified threats to sue in relation to copyright, passing off, or breach of confidence.⁸⁷ In these circumstances, a person who suffers damage as a result of an unjustified threat will have to seek relief through alternative avenues.⁸⁸ In some cases, an aggrieved party may be able to bring an action for the tort of abuse of process.⁸⁹ A more important option is provided by the action for injurious falsehood. To succeed in an action for injurious falsehood, a claimant must prove that the statements were untrue and malicious. They must also show that they suffered special damage as a result of the statements. The notion of malice has proved difficult to define. It seems to require that the threat must be issued with a view to injuring the claimant rather than defending the defendant's rights. Moreover, it has been said that an honest belief in an unfounded claim is not malicious.⁹⁰

7 COURTS AND TRIBUNALS

One of the methods that have been adopted to deal with the technical nature of intellectual property litigation has been to develop special courts and tribunals. In this section we provide a brief overview of some of the courts and tribunals that operate in the UK.

7.1 THE VARIOUS TRIBUNALS

7.1.1 High Court

Disputes to do with all forms of intellectual property can be brought before the Chancery Division of the High Court. Proceedings under the Patents Act are dealt with by the Patents Court, which is a specialist court within the Chancery Division.⁹¹ Proceedings before the Patents Court are heard before a specialist judge, sitting without a jury. The parties must be represented either by counsel instructed by a solicitor, or by a solicitor. The Patents Court has a reputation for the quality of its decisions.⁹² Despite this, it has been said that litigation before the Patents Court is time-consuming, laborious, drawn out, and as a consequence expensive.⁹³

⁸⁷ During the passage of the 1988 CDPA, it was explained in Parliament that no such action was required in relation to copyright because the position as regards ownership of copyright is usually clear. See Lord Young, 501 Hansard (HL), 2 Nov. 1988, col. 338.

⁸⁸ See *Laddie et al.*, 953. A person may also seek a declaration of non-infringement. Once a letter or circular has been issued it seems that the legal contest is sufficiently joined to justify a court making such a declaration. See *Leco Instruments v. Land Pyrometers* [1982] RPC 133, 136.

⁸⁹ *Grainger v. Hill* (1838) 4 Bing NC 212. On the limits of the action see *Pitman Training v. Nominet* [1997] FSR 797; *Essex Electric v. IPC Computer* [1991] FSR 690. On the distinction between the tort of abuse of process and malicious prosecution see *Speed Seal Products v. Paddington* [1986] 1 All ER 91 (Fox LJ).

⁹⁰ *Greers v. Pearman and Corder* [1922] 39 RPC 406, 417; *Polydor v. Harlequin* [1980] FSR 26, 31.

⁹¹ Practice Direction, pt. 49E Clause 1.3 defines patent to include supplementary protection certificates and patent court business to include proceedings under the RDA.

⁹² *Chaplain Patents Holding Co. v. Group Lotus (CA)* (The Times, 12 Jan. 1994).

⁹³ R. Nott, 'Patent Litigation in England' [1994] EIPR 3.

7.1.2 Patents County Court

The Patents County Court, which was established in 1990,⁹⁴ aims to provide a quicker, cheaper, and more accessible way of dealing with patent and design litigation.⁹⁵ The Patents County Court has jurisdiction to hear and determine any action or matter relating to patents or designs over which the High Court has jurisdiction. It is also able to hear claims or matters ancillary to or arising from such proceedings. This has been held to include ancillary copyright matters.⁹⁶

While patent agents have the right of appearance before the Patents County Court,⁹⁷ discovery is not available 'as of right' and it is unusual for experiments to be conducted to prove a particular point. Procedures in the Patents County Court are otherwise similar to those in the Patents Court: there is cross-examination of witnesses,⁹⁸ and the court is equipped with a full range of remedies (such as interim and final injunctions and search orders).⁹⁹

The question of whether proceedings should be transferred from the Patents Court to the Patents County Court is left to the Patents County Court.¹⁰⁰ When deciding whether to transfer a matter, the County Court takes account of: the financial position of the parties;¹⁰¹ whether it would be more convenient or fair for the hearing to be held in another court; the availability of a judge specializing in the type of claim in question; the relative complexity of the legal issues, the remedies, and the procedures involved;¹⁰² the importance of the outcome to the public; and the facilities available at the court where the claim is being dealt with.¹⁰³

Despite empirical evidence suggesting otherwise,¹⁰⁴ doubts have been raised over the success of the Patents County Court.¹⁰⁵ As Hoffmann J noted, it has resulted 'not so much to a saving in costs but to a shifting in the time at which those costs are incurred'.¹⁰⁶ More specifically, the requirement that the claimant set their case out at the preliminary stage leads to greater costs at an earlier stage, which may be unnecessary if the action is settled quickly.¹⁰⁷

⁹⁴ CDPA pt. VI; Patents County Court (Designation and Jurisdiction) Order 1990 (SI 1990/1496). The court was established by CDPA s. 287. Patents County Court (Designation and Jurisdiction) Order 1994 (SI 1994/1609). So far only one court has been designated, namely the Central London County Court.

⁹⁵ *Chaplain Patents Holding Co. v. Group Lotus (CA)* (The Times, 12 Jan. 1994) (Sir Thomas Bingham MR); *Memminger-Iro v. Trip-Lite* [1992] RPC 210, 216 (Aldous J). Cf. P. Ford, 'Patent Litigation: A Better Deal for Litigants?' [1990] EIPR 435, 436.

⁹⁶ *PSM v. Specialised Fastener Products* [1993] FSR 113, 116–17; *McDonald v. Graham* [1994] RPC 407, 434–5, 441.

⁹⁷ CDPA s. 292 (1). *Memminger-Iro v. Trip-Lite* [1992] RPC 210, 221. ⁹⁸ *Ibid.*, 220.

⁹⁹ CPA s. 7; CPR r. 25; CPR, *Practice Direction* para. 8.5. See *McDonald v. Graham* [1994] RPC 407, 435.

¹⁰⁰ CDPA s. 289. *Memminger-Iro v. Trip-Lite* [1992] RPC 210, 224. *Wesley Jessen Corp v. Coopers & Lybrand* (2 July 2001).

¹⁰¹ CDPA s. 289(2). ¹⁰² *Chaplain Patents Holding v. Group Lotus (CA)* (The Times, 12 Jan. 1994).

¹⁰³ CPR r. 30.3.

¹⁰⁴ J. Adams, 'Choice of Forum in Patent Disputes' [1995] EIPR 497, 501–2. In *McDonald v. Graham* [1994] RPC 407, 441 Evans LJ was more supportive.

¹⁰⁵ R. Nott, 'Patent Litigation in England' [1994] EIPR 3 (also pointing to the unfortunate record of the court for being reversed on appeal); M. Lubbock, 'Access to Justice: The Woolf Report' [1997] EIPR 385, 389.

¹⁰⁶ *Composite Gutters v. Pre-Formed Components* [1993] FSR 305, 308; *Chaplain Patents Holding Co. v. Group Lotus (CA)* (The Times, 12 Jan. 1994).

¹⁰⁷ R. Nott, 'Patent Litigation in England' [1994] EIPR 3, 4.

7.1.3 County Court

County courts have jurisdiction to hear cases on copyright,¹⁰⁸ unregistered designs, passing off, and performances,¹⁰⁹ but not patents, registered designs, or (possibly) trade marks.¹¹⁰ The jurisdiction of the county court is local: a defendant should be sued in the county court in the district where they reside. Patent and trade mark agents have no right of audience. While certain forms of relief, such as search orders and delivery up,¹¹¹ are not available,¹¹² the county court can award interim injunctions, damages, and account of profits.

7.1.4 Comptroller of Patents

The Comptroller of Patents and the Patent Office more generally have important powers to determine matters relating to the validity and revocation of patents.¹¹³ With the authority of the parties, the Comptroller has the ability to hear infringement actions and counterclaims for revocation.¹¹⁴ The Comptroller also has jurisdiction over certain issues concerning unregistered design rights.¹¹⁵ The Comptroller provides litigants with a cheaper, quicker, and more specialized and informal forum than is offered by the Patents Court.¹¹⁶ One advantage of using the Comptroller is that the parties can be represented by patent agents rather than by counsel.¹¹⁷ However, the jurisdiction has rarely been used. This may be because the Comptroller has no jurisdiction to grant injunctive relief and because failed proceedings do not give rise to any issue estoppel. Moreover, the courts have been extremely reluctant to stay court proceedings pending determination of the issues by the Comptroller.¹¹⁸ Hoffmann J said that these factors mean that the Comptroller and the Patent Office can only be made to work as an alternative tribunal in infringement cases by the giving of undertakings by the parties which will enable it to decide finally on those issues which are before it and, even then, resort may still be had to the High Court in order to obtain injunctions.¹¹⁹

7.2 WHICH TRIBUNALS CAN BE USED FOR WHICH RIGHTS?

Not all actions can be brought before all of the courts. In the following section we attempt to explain in which tribunals proceedings can be brought for infringement of the different intellectual property rights.

¹⁰⁸ *PSM v. Specialised Fastener Prods* [1993] FSR 113, 116; *McDonald v. Graham* [1994] RPC 407.

¹⁰⁹ Arnold, 142. ¹¹⁰ PA s. 130(1), RDA s. 27(1), TMA s. 75.

¹¹¹ County Courts Act 1994 s. 15 gives the court power to hear 'any action'.

¹¹² CPR Rule 25A Practice Direction, para. 8.5.

¹¹³ The most important is the power to revoke the patent as invalid: PA s. 72, s. 73. The Comptroller may also grant compulsory licences, settle the terms of licence of right, and award compensation to employees. See Reid, chs. 7 and 8.

¹¹⁴ PA s. 61(3). ¹¹⁵ CDPA s. 246.

¹¹⁶ Cf. *Ferro Corporation v. Escol Products* [1990] RPC 651. ¹¹⁷ PA s. 102(1).

¹¹⁸ Such a stay was ordered in *Hawker Siddley Dynamics Engineering v. Real Time Developments* [1983] RPC 395. *Hawker* was subsequently described as 'exceptional' (*Gen Set v. Mosarc* [1985] FSR 302) and as a 'very unusual case' (*Ferro Corporation v. Escol Products* [1990] RPC 651).

¹¹⁹ *Ferro Corporation v. Esso Products* [1990] RPC 651, 652. For reform, see above p. 335.

7.2.1 Copyright

Copyright (including publication right and database right), moral rights, and performers' rights cases¹²⁰ can be brought before the county court,¹²¹ or the High Court (Chancery Division). Where a copyright issue is ancillary to a designs question it may also be considered in the Patents County Court or High Court (Patents Court).¹²²

7.2.2 Patents

UK patent infringement cases can be brought before the Comptroller (if the parties consent);¹²³ the Patents County Court (there is no value ceiling), or the High Court (Patents Court).¹²⁴ Such cases cannot be brought before the ordinary county courts. Since issues of validity may be heard before the Comptroller, or opposition proceedings may be taking place at the European Patent Office,¹²⁵ a possibility exists that proceedings will be duplicated. With domestic proceedings, some attempt is made to avoid such duplication by a provision that prohibits issues of validity from being raised before the Comptroller pending the outcome of a decision in the Patents Court. As between UK infringement (or invalidity) proceedings and Oppositions at the EPO, the court has a discretion to order a stay which it will exercise according to the facts of the case: often the problem is how to balance the competing issues of costs of duplicating proceedings (perhaps unnecessarily) against the delays involved in staying local proceedings and awaiting outcome of the opposition at the EPO.¹²⁶

7.2.3 Supplementary protection certificates

Supplementary protection certificate cases can be brought before the High Court (Patents Court).¹²⁷

7.2.4 Plant variety rights

Plant variety cases, including Community plant variety infringement cases, can be brought before the county court or the High Court (Chancery Division). There is also a special procedure whereby the Plant Varieties and Seeds Office can operate as an arbiter.¹²⁸ Since issues of validity of a Community plant variety may only be determined by the Community Office, the national court is directed to assume that the right is valid, or if

¹²⁶ *General Hospital Corporation's European Patent (UK)* [2000] FSR 633 (granting the stay and setting out relevant factors); *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] FSR 235, 250–1; *Unilever v. Frisa* [2000] FSR 708 (stay granted); *Minnesota Mining and Minerals v. Rennicks* [2000] FSR 727 (refusing stay); *Pall v. Commercial Hydraulics* [1988] FSR 274 (refusing stay); *Beloit Technologies Inc. v. Valmet Paper Machinery Inc.* [1996] FSR 715; [1997] RPC 489. The Irish practice is to order a stay unless there are convincing reasons why it should be refused: *GD Searle & Co & Monsanto's Patent* [2002] FSR (24) 381. See, W. Cook, 'Staying alive!' [2001] EIPR 304.

¹²⁷ CPR Practice Direction, pt. 49E, para. 1.3 defines patents to include supplementary protection certificates.

¹²⁸ PVA s. 43.

proceedings are pending at the Community Office to stay the national proceedings pending the determination of the validity of the right.¹²⁹

7.2.5 Registered designs

UK Registered Design cases can be brought before the Patents County Court (there is no value ceiling) or the High Court (Patents Court).¹³⁰ Such cases cannot be brought before the ordinary county courts.¹³¹ Since issues of validity may be heard by the Comptroller¹³² and the Patents Court,¹³³ provision must be made for one set of proceedings to be stayed pending the determination in the other tribunal.

7.2.6 Community design right

The Community Designs Regulation requires member states to designate Community design courts which are given jurisdiction to decide issues relating to infringement of Community registered and unregistered design rights.¹³⁴ Pending designation jurisdiction lies with the court which would have jurisdiction *ratione loci* and *ratione materiae* (by reason of place and subject matter) in the case of proceedings relating to a national design right of that state. Issues of validity can be determined by the OHIM.¹³⁵

7.2.7 Unregistered design right

UK unregistered design right cases can be brought before any of four tribunals. Questions of subsistence, term, and first ownership can also be heard by the Comptroller.¹³⁶ The Comptroller cannot decide infringement questions, which are determined by the county court; the Patents County Court (there is no value ceiling) or the High Court.

7.2.8 Passing off

Passing off cases can be brought before the county court or the High Court (Chancery Division).¹³⁷ Where a passing off claim is ancillary to a designs question it may also be considered in the Patents County Court.¹³⁸

7.2.9 Trade marks

Community trade mark infringement cases can only be brought before the High Court (Chancery Division).¹³⁹ It is unclear whether an action for infringement of a domestic trade mark can be heard in the county court as well as the High Court.¹⁴⁰ Issues of validity may be heard before the Comptroller, or in the case of Community Marks by the Office of

Harmonization in the Internal Market, as well as in counterclaims in infringement actions.¹⁴¹

7.2.10 Breach of confidence

Breach of confidence cases can be brought before the county court or the High Court (Chancery Division).

8 EXPERTS

Given the technical and novel nature of the subject matter of intellectual property law, it is not surprising that the courts frequently rely on experts for a range of different matters.¹⁴² Courts can hear expert evidence in relation to matters of which the court is ignorant and needs to be informed. These include questions such the meaning of a word in a patent claim, whether a substantial part of a copyright work has been reproduced,¹⁴³ or the likelihood of confusion in a passing off or trade mark action.¹⁴⁴ It should be noted that while courts can hear expert evidence on a range of matters, ultimately it is for the court to decide the factual issue in hand.

The permission of the court is required to call an expert or to put an expert's report in evidence.¹⁴⁵ As the use of expert evidence increases the cost of intellectual property litigation,¹⁴⁶ matters requiring expert evidence should where possible be dealt with by a single expert. In patent matters directions can be made for the production of joint reports.¹⁴⁷ An expert's report should be addressed to the court and not to the party from whom the expert has received their instructions. The courts have emphasized that experts should be impartial, that is they should not assume the role of an advocate.¹⁴⁸

¹⁴¹ CTMR Arts. 50–1.

¹⁴² On the practice of courts in relation to expert evidence and technical terms see *American Cyanamid v. Ethicon* [1979] RPC 215, 252–3.

¹⁴³ *Newspaper Licensing Agency v. Marks & Spencer plc* [2003] AC 551.

¹⁴⁴ Cf. *Guccio Gucci SpA v. Paolo Gucci* [1991] FSR 89, 91 where Browne-Wilkinson V-C admitted expert evidence in a passing off case as to whether consumers were likely to be deceived even though this was the very question that the court itself had to determine and therefore one on which evidence is not normally admitted.

¹⁴⁵ The rules on experts are codified in the CPR Rule 35 Practice Direction. These are intended to limit the use of oral expert evidence to that which is 'reasonably required'. These seem to codify the duties and responsibilities of experts identified in *The Ikarian Reefer* [1993] FSR 563.

¹⁴⁶ The need for experts is reduced by specialist courts such as the Patents Court and Patents County Court and by the use of scientific advisers. In order to avoid delays, patent judges require that the parties supply a scientific primer prior to trial. Moreover, CPR Part 49E Practice Direction specifies that where certain claims are to be made, that the parties set out the relevant matters in detail.

¹⁴⁷ CPR Part 49E Practice Direction.

¹⁴⁸ *Cantor Fitzgerald International v. Tradition* [2000] RPC 95.

9 JURISDICTIONAL ISSUES AND CONFLICTS OF LAW

Given the nature of intellectual property it should come as no surprise that many intellectual property actions have a transnational dimension.¹⁴⁹ For example, the claimant may be domiciled in country A and the defendant in country B. In these circumstances, it is necessary to decide whether the action should be brought in country A or B. More complex questions arise where the infringement occurs in a number of countries. This would be the case, for example, where the defendant manufactures infringing goods in country C and an importer sells them in country D. In these cases a claimant may wish to sue both infringers in a single action. Even more complicated scenarios arise, for example, where copyright infringement takes place on the Internet.¹⁵⁰ Where disputes cross national boundaries, a number of questions arise. Here we focus on whether a court has jurisdiction to hear a matter, the type of law that should be applied, and the situations where foreign judgments will be recognized and enforced. A number of considerations arise in answering these questions: the convenience and efficiency of litigation; the impact on national sovereignty; the desirability of allowing litigants to choose the jurisdiction most favourable to their claim (forum-shopping);¹⁵¹ and national interests in attracting legal business.¹⁵²

9.1 JURISDICTION

The question of whether a court has jurisdiction to hear a matter where the infringement or breach of an intellectual property right crosses national boundaries depends on the situation in hand.¹⁵³

9.1.1 Under the Brussels Regulation

The question of whether a British court has jurisdiction over a matter is largely governed by the so-called 'Brussels Regulation'.¹⁵⁴ The basic rule of the Regulation is that a person domiciled in a Member state should be sued in the courts of that state (*actor sequitur forum rei*).¹⁵⁵ Consequently, an English copyright owner must normally bring an action

¹⁴⁹ See Fawcett and Torremans; Wadlow (1998); I. Karet, 'Intellectual Property Litigation: Jurisdiction in Europe' (1998) 3 *IPQ* 317.

¹⁵⁰ Fawcett and Torremans, 236–7.

¹⁵¹ *Ibid.*, 198–201.

¹⁵² The most controversial example of foreign courts offering extensive relief has been the Dutch 'kort geding' procedure in which following a speedy hearing of both parties, the judge determines appropriate relief on the basis of forecasting the outcome in full court procedure. See J. Brinkhof, 'Summary Proceedings and Other Provisional Measures in Connection with Patent Infringements' (1993) 24 *IIC* 762.

¹⁵³ There has been discussion of a draft international convention on jurisdiction, the Hague Conference on Private International Law. Following that initiative, specific work has been undertaken towards resolving the specific intellectual property related issues. For an overview, Symposium, Constructing International Intellectual Property Law: The Role Of National Courts (2002) 77 *Chicago-Kent LR* 991, setting out the Hague draft at 1015; see especially J. Ginsburg and R. Dreyfuss, 'Draft Convention On Jurisdiction And Recognition Of Judgments In Intellectual Property Matters', at 1065 ff.

¹⁵⁴ EC Regulation 44/2001. This replaces the 1968 Brussels Convention, which in turn came into force in England on 1 Jan. 1987. Jurisdiction can be challenged according to CPR r. 11.

¹⁵⁵ Regulation 44/2001, Art. 2 (formerly Brussels Convention Art. 2). Domicile is determined under national law: Brussels Convention Art. 52. On the problems of knowing where a person is 'domiciled' see Wadlow (1998), 283.

against a French infringer in French courts: the domicile of the claimant and the familiarity of the court with the relevant law being largely irrelevant.¹⁵⁶ As Jacob J put it, in footballing terms the claimant must play away.¹⁵⁷ There are five qualifications to this basic rule which need to be noted.¹⁵⁸

- (1) Where the matter involves a tort (therefore including infringement of intellectual property rights with the possible exception of equitable actions for breach of confidence)¹⁵⁹ a claimant *may* bring an action in the place where the harmful event occurred.¹⁶⁰ Article 5(3).
- (2) Where there are a number of defendants, an action may be brought in the country where any one of the defendants is domiciled: Article 6(1).¹⁶¹
- (3) An action can be brought in a country other than that of the defendant's domicile if both parties agree: Article 23.¹⁶²
- (4) In proceedings concerned with the registration or validity of patents, trade mark, designs, or other similar rights required to be deposited or registered, the courts of that state have exclusive jurisdiction: Article 22(4).¹⁶³
- (5) Different rules apply in relation to preliminary measures: Article 31.

¹⁵⁶ This has worried some of the UK judiciary. In *Coin Control v. Suzo* [1997] FSR 660 Laddie J was concerned that English courts might as a result have to decide 'questions of foreign law as well as factual issues relating to the pronunciation and meaning of similar words spoken in other languages.' See also *Pearce v. Ove Arup* [1977] FSR 641.

¹⁵⁷ *Mecklermedia v. DC Congress* [1997] FSR 627, 633.

¹⁵⁸ Which are to be narrowly construed: see *Kalfelis v. Schroder*, Case 189/87 [1988] ECR 5565. See Wadlow, 67–9.

¹⁵⁹ On what is a 'tort' see *Kalfelis v. Schroeder*, Case 189/87 [1988] ECR 5565 (all actions which seek to establish the liability of a defendant and which are not related to contract within the meaning of Art. 5(1)). The breadth of this statement is hard to reconcile with other parts of *Kalfelis* that seemed to exclude a claim for unjust enrichment from Art. 5(3). In matters of contract, jurisdiction is given to the courts of the place of performance of the obligation. It has been suggested that breach of confidence is not within Art. 5(3): *Kitechnology v. Unicolor Plastmaschinen* [1995] FSR 765, 778. See Wadlow (1998), 173–4.

¹⁶⁰ Regulation, Art. 5(3) (formerly Brussels Convention Art. 5(3)). On the place where the 'harmful event occurred', see *Bier v. Mines de Potasse d'Alsace*, Case 21/76 [1976] ECR 1735; *Shevill/Press Alliance SA*, Case 68/93 [1995] ECR I-415. See Fawcett and Torremans, 154 ff.; Wadlow (1998), 90–6. One problem concerns whether, in the case of use on a web site, the event takes place in every country from which the site can be accessed. If so, the opportunities for forum-shopping are dramatic. See, *Bonnier Media v Smith* [2002] ETMR (86) 1050 (OH, CS) (where the defendant owned the domain name business.am.com and the claimant, owner the UK trade mark for business.am, brought an action for infringement in Scotland (where the claimant sold a newspaper under the name 'business.a.m.') but there was doubt about the domicile of the defendant (the choices being Mauritius, England, or Greece), the Scottish Court found it had jurisdiction based on where the harmful event occurred. Lord Drummond Young held that a web site was to be regarded as having its delictual effect in all countries where its impact was 'significant' (para. 19). On the facts, a harmful event occurred in Scotland because the defendant's acts were aimed at the claimant's business centred in Scotland and were intended to have their main effect in Scotland.

¹⁶¹ See *Athanasios Kalfelis v. Bankhaus Schroder*, Case 189/87 [1988] ECR 5565; *Pearce v. Ove Arup* [1997] FSR 641; *Coin Controls v. Suzo International* [1997] FSR 660; cf. *Fort Dodge Animal Health v. Akzo Nobel NV* [1998] FSR 222; *Expandable Grafts Partnership v. Boston Scientific BV* [1999] FSR 352 (Court of Appeal of the Hague). See Fawcett and Torremans, 172–4 ff.; Wadlow (1998), 81–2.

¹⁶² Formerly Brussels Convention, Art. 17. See, e.g. *Kitechnology v. Unicolor Plastmaschinen* [1995] FSR 765, 774.

¹⁶³ Formerly Brussels Convention, Art. 16(4). See Wadlow (1998) 104 ff.; 112 ff.

The first two exceptions are self-explanatory, and nothing more will be said about their substance here. As they provide *alternative* jurisdictions, they enable claimants to choose the forum. The possibility of alternative jurisdictions creates the problem that simultaneous proceedings may produce inconsistent judgments. Consequently, the Brussels Regulation contains provisions which deal with pending actions (*lis pendens*). These provide that where a court of a contracting state is presented with a claim (e.g. on the basis of domicile) which has already been commenced elsewhere (e.g. on the basis of harm), the later action should be stayed. More specifically, Article 27 states that where a later court is presented with *the same cause of action* between the *same parties* that court *must* decline jurisdiction.¹⁶⁴ In addition, a further provision gives the court a discretion to stay proceedings if it is presented with an action which is ‘related’ to one that is already being heard in the courts of another contracting state. This discretion only arises where the actions are ‘related’, that is where they are so closely connected that it is expedient that the actions be tried together to avoid the risk of irreconcilable judgments.¹⁶⁵ In exercising the discretion, the court will take into account the domicile of the defendant, the applicable law, and whether the UK action will need to be decided in any case.¹⁶⁶

Where the parties have selected a forum under Article 23, or the action concerns the registration or validity of patents, trade mark, designs or other similar rights, required to be deposited or registered (Article 22(4)), the jurisdiction is *exclusive*: there is no question of alternative jurisdictions. If a court of a contracting state is presented with a *claim* which is ‘principally concerned’ with a matter over which the courts of another contracting state have exclusive jurisdiction, it should decline jurisdiction.¹⁶⁷ While it should be relatively easy to determine whether the parties have a formal agreement governing the choice of jurisdiction (Article 23), it is more difficult to determine when Article 22(4) applies.¹⁶⁸

Article 22 (4) applies to the registration or validity of patents, trade mark, designs, or other similar rights required to be deposited or registered. The phrase ‘other similar rights’ refers to other registrable rights such as plant varieties, supplementary protection certificates, and utility models. As such, it does not apply where the intellectual property right is unregistered, as with copyright, unregistered design right, or passing off.¹⁶⁹ Article 22(4)

¹⁶⁴ Brussels Regulation, Article 27 (formerly Brussels Convention, Art. 21). See, e.g. *Molins v. G. D. SpA* [2000] 1 WLR 1741 (deciding where proceedings were first started). An action for infringement of a trade mark is not the ‘same action’ as an action for passing off: *Mecklermedia v. DC Congress* [1997] FSR 627, 637. While a wholly owned subsidiary might be regarded as the ‘same party’, a mere licensee will not: *ibid.* If a French tribunal is considering opposition to registration of A’s mark X on the basis of B’s mark Y, and B commences an action in the UK against A for infringement of B’s mark Y (registered in the UK) by use of X, and there is no issue as to the validity of B’s mark Y, must the UK tribunal stay proceedings? See *Prudential Assurance Co v. Prudential Insurance Co of America* [2003] ETMR (69) 858, 867 (para. 47).

¹⁶⁵ On the approach to this, see *Sarrio v. Kuwait Investment Authority* [1999] AC 32. In *Mecklermedia v. DC Congress* [1997] FSR 627, an action brought by a defendant for infringement of a German registered trade mark (‘Internet World’) against the claimant’s licensee was held not to be ‘related’ to an action for passing off by the claimant in relation to its goodwill in the same words in England. But an action brought in England by the claimant to English copyright in a film against a person also claiming to be the owner was related to an action by a third party in France relating to ownership of copyright in the same film everywhere except England: *Abkco Music Records v. Jodorowski* [2003] ECDR (3) 13.

¹⁶⁶ *Abkco Music Records v. Jodorowski* [2003] ECDR (3) 13.

¹⁶⁷ For discussion of the meaning of ‘claim’ and an argument that it is distinguishable from the ‘issues’ in that it should concern the claimant’s action, not the defendant’s response, see Wadlow (1998), 183–4.

¹⁶⁸ See, e.g. *Coin Controls v. Suzo International* [1997] FSR 660.

¹⁶⁹ *Pearce v. Ove Arup* [1997] FSR 641.

only applies to proceedings concerning the 'validity' of such rights. Although in certain circumstances it is clear that an issue relating to a registered right does not concern validity (e.g. where the dispute is over ownership),¹⁷⁰ in many situations the matter is less clear. For example, in an action for infringement of a patent or design registration,¹⁷¹ one of the most common 'defences' is that the registration is invalid. The problem here is that while questions of validity and infringement are technically distinct, in British intellectual property law they are inextricably linked.¹⁷²

The question of whether an action is 'concerned with the registration or validity of patents, trade marks designs, or other similar rights' is a crucial one.¹⁷³ In *Fort Dodge v. Akzo Nobel*,¹⁷⁴ the Court of Appeal observed that while the Brussels Convention (then applicable) presupposed that there was a distinction between actions of infringement and those concerning validity, the split cannot always be made. More specifically, Lord Woolf MR said that 'when there is a bona fide challenge to the validity of a United Kingdom patent, any proceedings for infringement must in English eyes be "concerned with" the validity of the patent'.¹⁷⁵ However, because these conclusions were not *acte clair*, the court referred the issue to the European Court of Justice.¹⁷⁶ Unfortunately, the litigation was settled, so a final resolution of this issue will have to await a further reference to the court: just such a reference is pending in *GAT v. Luk Lamellen*.¹⁷⁷

There are a number of problems with the *Fort Dodge* ruling. From a practical viewpoint, it is difficult for a court to predict when validity is going to be a real issue in a patent infringement action or, in the Court of Appeal's terms, when a challenge is bona fide.¹⁷⁸ Consequently, the ruling introduces unjustified uncertainty.¹⁷⁹ From a policy point of view, the *Fort Dodge* ruling means that the same issues of patent validity may have to be simultaneously litigated in a number of countries with consequent costs and inconvenience.¹⁸⁰

The fifth possible exception to the golden rule of the Brussels Regulation that a

¹⁷⁰ *Ferdinand Duijnste v. Lodewijk Goderbauer*, Case 288/82 [1995] 1 CMLR 220.

¹⁷¹ There will be less of a problem with trade marks, where invalidity is less frequently a defence, and issues of validity have less impact on the scope of rights: see Kerly, para. 18–42, 668. But cf. *Prudential Assurance Co v. Prudential Insurance Co of America* [2003] ETMR (69) 858, 867 (para. 21).

¹⁷² Nowhere is this more apparent than in the so-called 'Gillette' defence. See pp. 548–9.

¹⁷³ On the policy of Art. 16(4) see *Ferdinand Duijnste v. Lodewijk Goderbauer*, Case 288/82 [1995] 1 CMLR 220, 227 (Rozes AG), 235 (ECJ).

¹⁷⁴ [1998] FSR 222.

¹⁷⁵ [1998] FSR 222, 244. Given that the case involved just such issues, the court concluded it fell within the exclusive jurisdiction of the UK courts.

¹⁷⁶ [1998] FSR 222, 247. The Court of Appeal also declined to grant the injunction prohibiting further Dutch proceedings, though the Court of Appeal said it anticipated that the Dutch court would take due notice of the conclusions.

¹⁷⁷ Case C-4/03 (pending). For possible solutions see Wadlow (1998), 194–210.

¹⁷⁸ The Dutch courts have indicated that jurisdiction with respect to infringement does not cease as soon as nullity actions are instituted: *Expandable Grafts Partnership v. Boston Scientific* [1999] FSR 352, 361 (Court of Appeal of the Hague). See Fawcett and Torremans, 203–4; P. Haas, 'Extraterritorial Jurisdiction in Patent Infringement Issues' [2001] IPQ 187.

¹⁷⁹ Wadlow (1998), 180–1.

¹⁸⁰ For those who think it is inappropriate that foreign patent infringement actions are brought before UK courts, *Fort Dodge* is likely to be seen as not going far enough: *Plastus Kreativ AB v. Minnesota Mining and Manufacturing Co.* [1995] RPC 438, 447 (patent infringement cases should be heard by a court situated in the country where the public will have to pay the higher prices if infringement is found to exist).

defendant should be sued in their state of domicile relates to 'provisional measures'. More specifically Article 31 states that an application may be made to the courts of a contracting state for provisional measures (including protective measures that are available under the law of that state), even if under the Brussels Regulation the courts of another contracting state have jurisdiction over the substance of the matter. On one interpretation, this means that claimants can choose the forum which they prefer to get an interim injunction, even if that court could not grant final relief. If this is correct, it means that forum shopping is possible at the interim stage.¹⁸¹

9.1.2 Where the Brussels Regulation is not applicable

The Brussels Regulation applies where a person is domiciled in a contracting state. This is the case even if the claimant is domiciled outside the EC,¹⁸² the right is granted by a state outside the EC, or the infringing acts took place outside of EC/EFTA territories. If the defendant is domiciled in the United Kingdom and a claim relates to infringement of American copyright by acts done in the USA, the Regulation will apply and the UK court must accept jurisdiction. The Regulation will not necessarily apply where the defendant is not domiciled in a contracting state. Thus, if a US citizen A was resident but not domiciled in the United Kingdom, and claimant B argued that the court should take jurisdiction over A for infringement of B's American copyright by acts in the USA, it seems that the traditional UK rules would apply.¹⁸³

The traditional British rules on jurisdiction were long understood to preclude an action based on infringement of foreign intellectual property rights.¹⁸⁴ However, in light of the Court of Appeal decision of *Pearce v. Ove Arup Partnership* it seems that English courts might now accept jurisdiction in these situations. In this case, the Court of Appeal said that existing case law provided no assistance 'on the question whether an action for alleged infringement of a foreign copyright by acts done outside the United Kingdom, in a case where the existence and validity of the right is not in issue, is justiciable in an English court'.¹⁸⁵ However, the court might decline jurisdiction on the ground that a UK hearing is not 'convenient' under the principle of '*forum conveniens*'.¹⁸⁶

¹⁸¹ The decision in *Fort Dodge* [1998] FSR 222, 246, that Art. 24 of the Convention (now Art. 31 of the Regulation) did not justify provisional proceedings being heard in the Netherlands for infringement of a UK patent because no final relief could be given in Dutch courts, is inconsistent with holdings of the ECJ in *Van Uden Maritime BV v. Kommanditgesellschaft in Firma Deco-Line*, Case C-391/95 [1998] ECR I-7091 (where preliminary measures were available in a Dutch court despite the existence of an arbitration clause depriving such a court of jurisdiction on the substantive issue).

¹⁸² *Societe Group Josi Reinsurance Company SA v. Compagnie d'Assurances Universal General Insurance Company*, Case C-412/98 (13 Jul. 2000) (an insurance case).

¹⁸³ Similarly, if a British claimant wanted to bring an action against a US company alleging infringement of copyright in the UK, the UK court might consider serving a claim form outside the jurisdiction. In contrast with the situation where jurisdiction exists under the Brussels Regulation, leave of the court is required to serve a claim from outside the jurisdiction. The claim must fall within one of the 'gateways' under the CPR r. 6.20. On the circumstances in which the service of proceedings out of the jurisdiction will be permitted see *Beecham Group v. Norton Healthcare* [1997] FSR 81; Fawcett and Torremans, 25–6.

¹⁸⁴ See Fawcett and Torremans, 279–90.

¹⁸⁵ [1999] FSR 525, 557.

¹⁸⁶ *Spiliada Maritime Corp. v. Cansulex* [1987] AC 460. See Fawcett and Torremans, 267.

9.1.3 Community rights

Special rules exist on the allocation of jurisdiction in relation to ownership of European patents¹⁸⁷ and more generally for community rights (such as the Community Trade Mark, Design and Plant Variety Right). For example, Article 90 of the Community Trade Mark Regulation incorporates the Brussels Regulation in modified form.¹⁸⁸ The basic rule of the Brussels Regulation, *viz.* that a person should sue in the jurisdiction where the defendant is domiciled, is maintained. This is extended to those who are not domiciled but who have an 'establishment' in the jurisdiction. The Community Trade Mark Regulation also modifies the application of the Brussels Regulation by excluding Article 4, thereby conferring jurisdiction on the Community Trade Mark Courts over defendants domiciled outside of contracting states (rather than applying national rules). If the defendant is not domiciled in the Community, the action should be brought where the claimant is domiciled. Where neither party is domiciled nor established in the Community, the action should be brought in the place where the Community Trade Mark Office is situated (i.e. Alicante). These rules are mandatory and applied in strict sequence. As a result, there is a reduced possibility of there being competing alternative jurisdictions and hence less scope for forum shopping. However, despite the strict scheme, Article 93(5) of the Community Trade Mark Regulation also allocates jurisdiction based on the place of infringement. If a claimant uses this forum, relief is territorially limited. Consequently, this route is less attractive than an action brought in the state of the defendant's domicile.¹⁸⁹ Moreover, Article 6 of the Brussels Convention is maintained, so that an action can also be brought against a co-defendant in a court other than the court where they are domiciled.

Because the Community systems for registered trade marks and designs co-exist beside harmonized national laws, provision is also made for dealing with simultaneous proceedings, and successive actions.¹⁹⁰ These require the latter court to stay proceedings pending the determination of the earlier one, or, if judgment has been given, to follow suit. Nevertheless, the detail of these rules is more complex. In *Prudential Assurance Co. v. Prudential Insurance Co. of America*, the Court of Appeal held that the claimant was not prevented from bringing an infringement action in England based on infringement of its Community Trade Marks PRU OR PRUDENTIAL by the defendant's use of PRUMERICA, merely because the claimant had been unsuccessful when opposing a national registration of PRUMERICA in opposition proceedings before the French Trade Marks Registry, even though those proceedings had been unsuccessfully appealed.¹⁹¹ While Article 105(2) of the CTMR requires the court to reject an action for infringement 'if a final judgment on the merits has been given on the same cause of action and between the same parties of the basis of an identical national trade mark valid for identical goods or services', the Court of Appeal found that the English action did not concern an 'identical trade mark': the French

¹⁸⁷ Protocol on Jurisdiction and the Recognition of Decisions in respect to the Right to the Grant of a European Patent. Art. 4 allocates jurisdiction to the courts of the contracting state whose law determines the right. In EPC Art. 60, this is the law of the state in which the employee is mainly employed.

¹⁸⁸ CTMR Art. 93; Council Regulation (EC) 6/2002 on Community Design Art. 82 applies very similar rules. Rather oddly, the CPVR bases its rules on the Lugano Convention. For problems, see Wadlow (1998), 276; Fawcett and Torremans, 357 ff.

¹⁸⁹ Wadlow (1998), 287–8.

¹⁹⁰ CTMR Art. 105, CDR Art. 95.

¹⁹¹ [2003] *ETMR* (69) 858.

action related to the validity of PRUMERICA whereas the English one dealt with infringement of PRUDENTIAL.¹⁹² This seems a rather formalistic way of applying Article 90.

9.2 APPLICABLE LAW

Once the court accepts it has jurisdiction, the next issue to determine is the law that applies. With the abolition of the so-called ‘double actionability’ rule in determining whether a tort is actionable,¹⁹³ the law to apply is usually that of the country where the infringement took place (*lex loci delicti*).¹⁹⁴ For example, if a claimant brings an action in an English court against a defendant domiciled in the United Kingdom, alleging infringement of their Dutch copyright by acts done in the Netherlands, the applicable law would be Dutch copyright law.¹⁹⁵

While the law to apply is normally that of the country where the tort occurred, in certain cases, the law to be applied is determined by special rules. For example, disputes about the ownership of European patents for employee inventions are determined by the law of the state in which the employee is mainly employed.¹⁹⁶ Where the right infringed is a Community right, such as a Community trade mark, the relevant law is that of the Regulation concerned. However, where the Regulations do not apply, the relevant law is the law of the forum (except in the case of remedies, when it is the law of the place where the infringement occurred).¹⁹⁷

9.3 RECOGNITION OF JUDGMENTS

Where intellectual property matters cross jurisdictional boundaries, questions often arise about the recognition and enforcement of foreign judgments. This is largely governed by the Brussels Regulation. The general policy of the Regulation is that there should be free movement of judgments. This means that once a court has assumed jurisdiction over a matter, any determinations it makes should be recognized and, if necessary, enforced in other member states. So, for example, if a Dutch court held that a British domiciled co-defendant infringed the Dutch claimant’s copyright, then the order of that court should be enforced by English courts. The procedure for recognition is straightforward. The judgment must first be registered and then notice is served on the person subject to the judgment.¹⁹⁸

The requirement that a court of a contracting state automatically recognizes judgments from other contracting states is qualified in a number of ways.¹⁹⁹ The most important is

¹⁹² [2003] *ETMR* (69) 858, para. 39 (Chadwick LJ).

¹⁹³ Private International Law (Miscellaneous Provisions) Act 1995, s. 10.

¹⁹⁴ Breach of confidence is probably not a ‘tort’ for these purposes, and defamation (and hence injurious falsehood) are not subject to the reform: Private International Law (Miscellaneous Provisions) Act 1995, s. 13. See Wadlow (1998), 342 ff.

¹⁹⁵ *Pearce v. Ove Arup* [1999] *FSR* 524, 542. It has been argued that Berne Convention, Art. 5(2) contains international harmonization of the rule on the applicable law, namely that it be the law of the country ‘where protection is claimed’. However, there is dispute as to whether this wording implies the *lex fori* or *lex loci delicti*. For a discussion in the context of broadcasting, see Makeen, *Copyright in the Global Information Society*, 185–92.

that where the originating court assumed jurisdiction in breach of Article 22, then recognition must be refused. Thus, if a Dutch court ordered the revocation of a British patent, UK courts would not have to recognize the judgment since it was made in respect of a claim principally concerned with validity. However, as the scope of Article 22(4) is unclear it will be difficult to predict whether a British court would be able to refuse to recognize the Dutch judgment that a UK patent had been infringed. This is especially the case if the Dutch court formed a conclusion as to the validity of the patent.²⁰⁰ A court can also refuse to enforce a judgment which is irreconcilable with a judgment given in a dispute between the same parties in the state in which recognition is sought.²⁰¹ In *Italian Leather SpA v. WECO Polstermobel GmbH*, an Italian court ordered an interim injunction preventing the use of the claimant's mark *LONGLIFE* by a German defendant, whereas the German court had refused interim relief. When the German court was asked to enforce the Italian judgment in Germany, the court sought the advice of the ECJ as to whether the judgments were irreconcilable, and if so the consequences. The ECJ was clear that the judgments were irreconcilable, and that the German court was obliged to enforce its own rather than the Italian decision.²⁰²

10 ALTERNATIVE DISPUTE RESOLUTION

In many areas of law, the cost and hassle of litigation has encouraged the growth of mechanisms such as arbitration and mediation for resolving disputes outside of the court framework. While alternative dispute resolution is used in many areas of law, it has not been widely used to resolve disputes concerning intellectual property.²⁰³ It seems, however, that this may change.²⁰⁴ One reason for this is that the Woolf Reforms offer increased incentives for parties to avoid using the court system.²⁰⁵ The Civil Procedure Rules, for example, promote the use of alternative dispute resolution by providing that proceedings may be stayed pending alternative dispute resolution²⁰⁶ and by allowing courts to make early neutral evaluations of the merits of the case (thus prompting settlement).²⁰⁷ Another reason is that alternative dispute resolution is becoming more widely used by international bodies. A notable example is the recent extension of the WIPO Arbitration and Mediation Centre (established in 1994), to include compulsory arbitration under the Internet Corporation for Assigned Names and Numbers' (ICANN) Uniform Domain Name Dispute

²⁰⁷ Prior to the *American Cyanamid v. Ethicon* [1975] AC 396 decision, litigants used to treat the grant of interlocutory relief, as equivalent to such an early neutral evaluation. See p. 1010.

Resolution Policy.²⁰⁸ ICANN's policy and procedures are incorporated into a subscriber's Internet registration agreement, so that if a person makes a complaint to ICANN,²⁰⁹ the registrant is required to submit to a mandatory administrative proceeding.²¹⁰ Proceedings only begin where a complainant asserts that (i) the domain name is identical or confusingly similar to a trade mark or service mark in which the complainant has rights (including 'common law' marks);²¹¹ (ii) the registrant has no rights or legitimate interests in respect of the domain name;²¹² and (iii) the domain name has been registered and is being used in bad faith.²¹³ In the proceedings, the complainant must prove each of these three elements. The cost of the proceedings is borne by the complainant. The remedies available are the cancellation of the domain name or the transfer of the domain name registration to the complainant.

By November 2003, well over 8,000 cases had been referred for resolution under the UDRP (the vast majority resulting in transfer of ownership of the domain name to the applicant),²¹⁴ and a further 15,000 cases had been heard under other specific policies. Despite this obvious popularity, the ICANN system has been criticized, simultaneously as being slanted in favour of trade mark holders,²¹⁵ for unduly stretching the protective reach of the rules, and for being inconsistent in its construction of 'confusing similarity' (especially with respect to sites which are established as outlets for criticism of corporate

²⁰⁸ Approved by ICANN, 24 Oct. 1999. See www.icann.org. For introductory overviews to the rules and case law, see L. Helfer and G. CIVIL AND CRIMINAL REMEDIES

In this chapter we look at the criminal and civil remedies that a claimant may obtain for violation of intellectual property rights. We begin by looking at the civil relief available pre-trial: interim injunctions and prevention of importation. We then go on to look at the civil remedies available at full trial: final injunction, delivery up or destruction, damages, and account of profits. Next we look at the various criminal remedies that may be available for a claimant. Finally, we look at some of the proposed reforms that may impact on intellectual property remedies.

1 INTERIM INJUNCTIONS

Although on most occasions a tribunal will make an order for a speedy trial, in many situations there may be a significant delay between the time when a rights-holder discovers that their rights are being infringed and the time when the matter is heard at trial. In order to ensure that a rights-holder's interests are not undermined during this period, provision exists for interim orders, sometimes referred to as 'interlocutory' relief. The most important of these is the interim injunction.¹ This is a court order to stay events pending a final determination. An interim injunction will only be granted if the matter is urgent or is otherwise desirable in the interests of justice.² Given the urgency, applications for interim injunctions are disposed of quickly. They are usually considered on the basis of sworn written evidence which has not been subjected to cross-examination. Consequently, there is a danger that the tribunal's interim decision will differ from the result after matters are fully aired at trial.³ It is therefore important that when a court grants interim relief that it does so in a way which minimizes the irreparable consequences to the parties that may arise from a hasty view of the merits of the case. In these circumstances, the courts must reconcile the conflicting demands of speed and correctness in decision-making. On the one hand, there is a desire to examine the issues as fully as possible to ensure that the interim decision is accurate. At the same time, since the evidence is necessarily inadequate, there is a desire to ignore the legal issues and focus instead on minimizing the injustices that will ensue from incorrect preliminary intervention.⁴

Applications for interim injunctions in the UK are usually assessed according to the

¹ CPR r. 25.1(a).

² CPR r. 25.2(2)(b).

approach set out by the House of Lords in *American Cyanamid v. Ethicon*.⁵ It is important to note that recent cases have been reluctant to follow these guidelines strictly. It should also be noted that the 1998 Human Rights Act has modified the approach that must be taken in cases which concern freedom of expression.

In *American Cyanamid* the claimant sought interim relief to restrain the defendant from infringing the claimant's patent for surgical sutures. The defendant company planned to argue at trial either that it had not infringed or that the claimant's patent was invalid. When considering whether to grant interim relief, the High Court and the Court of Appeal said that the key question was whether the claimant had established a strong prima facie case.⁶ Overturning this approach, the House of Lords rejected previous suggestions to the effect that a prima facie case must be established before a court could grant interim relief. Instead, the Lords laid down a reduced threshold requirement. More specifically, the House of Lords said that for a court to be vested with the discretion to grant an interim injunction, it was necessary for a claimant to establish that there was 'a serious question to be tried'.⁷ Once a claimant has established that this threshold had been met, the House of Lords said that when considering whether to grant an interim injunction, the court should then go on to consider a series of other matters. First, the court should compare the possible effects of granting and not granting the injunction on the defendant and the claimant. Lord Diplock explained that this involved deciding whether the claimant's or defendant's interests were capable of being satisfied solely by financial means. If these considerations do not produce a clear indication of the best course of action, the court should consider the 'balance of convenience'. In turn, if there is no clear result from considering the balance of convenience, the court should look at the merits of the case.

The goal of *American Cyanamid* was to reduce the number of mini-trials that occurred at the interim stage and thereby speed up the process of granting interim relief. In turn, it was thought that this would avoid duplication and produce a more efficient judicial process. Nevertheless, the approach set out in *American Cyanamid* has been criticized on a number of grounds.⁸ First, it has been said that Lord Diplock failed to deal adequately with, or refer to, a number of existing House of Lords authorities which are difficult to reconcile with *American Cyanamid*.⁹ Second, while the approach set out in *American Cyanamid* is supposed to be of general application, it is inflexible especially where a claimant's case is strong.¹⁰ Many commentators have noted that it gives rise to the perverse situation whereby the availability of interim injunctive relief to a claimant with an open-and-shut case turns on questions of convenience. Third, it is also said that it is unrealistic

⁵ *American Cyanamid v. Ethicon* [1975] AC 396.

⁶ In the High Court, Graham J found that the claimant had established a strong prima facie case and that the balance of convenience favoured the grant of interim relief. In the Court of Appeal, where argument had lasted for two weeks, Russell LJ held that no prima facie case of infringement had been proved, and so did not go on to consider the balance of convenience: [1974] FSR 312.

⁷ *American Cyanamid v. Ethicon* [1975] AC 396, 407–9.

⁸ See P. Prescott, 'American Cyanamid v. Ethicon' (1975) 91 LQR 168.

⁹ e.g. *Stratford & Son v. Lindley* [1965] AC 269 (a requirement of a 'sufficient prima facie case') and *Hoffmann-La Roche v. Secretary of State for Trade and Industry* [1975] AC 295 (requiring a strong prima facie case).

¹⁰ *Rubycliff v. Plastic Engineers* [1986] RPC 573, 583 (*American Cyanamid* recognized to be not 'a very popular decision, being rather formal and rigid'). A. Gore, 'Interlocutory Injunctions: A Final Judgment?' (1975) 38 MLR 672, 678. See also J. Leubsdorf, 'The Standard for Preliminary Injunctions' (1978) 91 *Harvard LR* 525, 540.

to expect judges not to take into account obvious conclusions as to the merits of the case.¹¹ Fourth, ignoring the merits and basing the availability of relief on matters such as the adequacy (including the ability to pay) damages sometimes unduly favours established businesses at the expense of newer, financially weaker, competitors.¹² Fifth, the refusal to consider the merits overlooks the value to litigants of the kind of ‘mini-trials’ which took place prior to *American Cyanamid*. More specifically, it has been argued that because interim relief required the merits of the parties’ cases to be considered, the interim decision was often treated as indicating the final outcome of the case. In effect, interim relief was used as a cheap method of litigation and as a way of avoiding long-drawn-out final trials.¹³

For some time it was unclear whether the principles in *American Cyanamid* applied to all proceedings for interim injunctions for infringement of intellectual property rights.¹⁴ In particular it was suggested that *American Cyanamid* did not apply in passing off cases.¹⁵ This view was later rejected, and in *County Sound v. Ocean Sound* the Court of Appeal argued that the principles were well suited to a passing off action.¹⁶ In addition, after some doubts,¹⁷ the *American Cyanamid* approach has also been applied to cases of breach of confidence and restraint of trade cases.¹⁸

While the general applicability of *American Cyanamid* to intellectual property cases has been accepted, a number of exceptions have been introduced to the *American Cyanamid* approach.¹⁹ The most important of these was the recognition of the principle that where the interim decision would be determinative of the action, the approach in *American Cyanamid* is not appropriate. This is because the problem which *American Cyanamid* seeks to redress, namely to minimize the harm when a preliminary decision turns out to have been incorrectly decided, does not arise where the preliminary decision is going to be the only decision. In these cases the court should simply do its best to resolve the legal issues.²⁰

In general, however, when considering the grant of interim relief the court should operate in two stages. First, the court should decide whether there is a serious question to be tried (or in freedom of expression cases, whether the claimant is likely to succeed). Second, if the court decides that this threshold has been reached, it should then go on to consider whether to exercise its discretion to grant an injunction. That is, it will consider whether it would be fair to grant interim relief.²¹ We now examine these two stages in more detail.

²⁰ The general principle was established in *NWL v. Woods* [1979] 3 *All ER* 614. It has frequently been applied in intellectual property disputes: *Athletes Foot v. Cobra Sports* [1980] RPC 343 (where little dispute on facts and law not difficult); *Mirage Studios v. Counter-feat Clothing* [1991] FSR 145, 154; *Barnsley Brewery Company v. RBNB* [1997] FSR 462.

²¹ *United Biscuits v. Burton Biscuits* [1992] FSR 14, 15.

1.1 SERIOUS QUESTION TO BE TRIED

The first task confronting a claimant seeking an interim injunction is that they must satisfy the threshold requirement that there is a serious question to be tried. In other words if the evidence reveals that the claimant does not have any real prospect of succeeding in their claim for a permanent injunction at trial, the court will not even consider the balance of convenience.²² According to Lord Diplock, when determining whether there is a serious question to be tried the court should only investigate whether a known cause of action is revealed. In so doing it should take account of points of law that necessarily arise on the facts that are revealed at the interlocutory stage. The courts should not, however, embark upon mini-trials of disputed questions of fact or difficult questions of law.

A claimant might fail to demonstrate that there is a serious question to be tried for a number of reasons. In some cases, a claimant may fail to show a realistic cause of action. For example, if a straightforward reading of existing case law suggests that the cause of action does not exist, the application will be refused.²³ Moreover, if the claimant's case is dependent on overseas authorities,²⁴ or the extension of an existing action to new circumstances, the court might take the view that this falls below the threshold.²⁵ In contrast, where the existing authorities are merely unclear, the court will usually decline to resolve the dispute and treat the situation as raising a serious question to be tried.

More commonly, a court will find that there is no arguable case because the affidavit evidence is so insubstantial that it is clear that the case will fail. In many cases, particularly in passing off and trade mark cases, the court will be able to make a fairly confident judgment on factual matters such as whether a name or get-up is not distinctive,²⁶ and whether there is a misrepresentation²⁷ or a likelihood of confusion.²⁸ The fact that a reasonable person could bring the action in good faith will not matter if it is so hopeless a case that no interim relief should be available.²⁹ Having said that, a case may be 'thin' but arguable.³⁰ Another reason why the court may hold that there is no serious question to be tried is because the defendant has a very strong prospect of a successful defence.³¹ It should be noted that the question is not whether there is an arguable defence: if the defence is only arguable, there is a serious question to be tried.³²

²² Although Lord Diplock equated this test with a claimant showing that the claim is not 'frivolous or vexatious', subsequent courts have preferred to ignore that rephrasing which carries with it the jurisprudential baggage of the striking out action: see *Mothercare v. Robson Books* [1979] FSR 466, 472–4; *Consorzio del Prosciutto Di Parma v. Marks & Spencer* [1991] RPC 351, 372 per Nourse LJ; cf. Leggatt LJ, 383.

²³ *Mail Newspapers v. Insert Media* [1987] RPC 521, 529–30; *Schulke & Mayr v. Alkapharm* [1999] FSR 161, 166.

²⁴ *Lyngstrad v. Anabas Products* [1977] FSR 62, 68 (Oliver LJ).

²⁵ *Times Newspapers v. MGN* [1993] EMLR 443; *Marcus Publishing v. Hutton Wild Communications* [1990] RPC 576, 584.

²⁶ *Marcus Publishing v. Hutton Wild Communications* [1990] RPC 576, 583; *County Sound v. Ocean Sound* [1991] FSR 367, 372.

²⁷ *Consorzio del Prosciutto Di Parma v. Marks & Spencer* [1991] RPC 351, 372 (describing this as a question of 'law depending on evidence already before the court which is of its nature complete and incontrovertible').

²⁸ *Morning Star Co-operative Society v. Express Newspapers* [1979] FSR 113 (no serious question to be tried that *Daily Star* would be confused with *Morning Star*).

²⁹ *Mothercare v. Robson Books* [1979] FSR 466, 472–3.

³⁰ *Metric Resources Corporation v. Leasemetrix* [1979] FSR 571, 580.

³¹ *News Group Newspapers v. Rocket Record* [1981] FSR 89, 102.

³² Cf. *Warner v. Channel Four* [1994] EMLR 1.

An important qualification to the threshold for injunctive relief set out in *American Cyanamid* was introduced by section 12(3) of the 1998 Human Rights Act. This provides that where a court is considering whether to grant relief which might affect the exercise of the Convention's right to freedom of expression, no relief should be granted that restrains publication prior to trial 'unless the court is satisfied that the applicant is likely to establish that publication should not be allowed'. The court is further instructed to take account of the extent to which the material has or is about to become available to the public. The courts also take account of whether it would be in the public interest for the material to be published.³³ Quite what the impact of section 12(3) is likely to be remains somewhat unresolved: in *Douglas v. Hello*, the Court of Appeal indicated that it requires the courts to look at the merits of the case and not merely apply the *American Cyanamid* test.³⁴ However, in *Imutran v. Uncaged Campaigns*,³⁵ Sir Andrew Morritt V-C denied that the two tests would produce different results.

1.2 IS IT FAIR THAT THE INJUNCTION BE GRANTED?

Where the claimant passes the threshold and establishes that there is a serious question to be tried, the court will then consider whether to exercise its discretion to grant an injunction. That is, it will consider whether it would be fair to grant interim relief. The aim is to reduce the chances of the provisional decision providing an unjust result.³⁶ In so doing, the court will focus on three factors: whether damages would be an adequate remedy, the balance of convenience, and the relative strength of the parties' cases.³⁷

1.2.1 Adequacy of damages

The first matter to be considered is the adequacy of damages. Here, the court asks if an injunction was refused would damages awarded at full trial be a satisfactory remedy for the claimant? If damages are an adequate remedy for a claimant and the defendant is able to pay them, no relief should be granted.³⁸

In considering whether damages would be an adequate remedy, the courts will consider whether the damage suffered by the claimant is repairable at all. That is, they ask whether

³³ Human Rights Act 1998, s. 12(4). The tribunal is also instructed to take into account 'any relevant privacy code'. See J. Griffiths and T. Lewis, 'The Human Rights Act 1998, s. 12: Press Freedom over Privacy?' [1999] *Ent LR* 361; Rogers and Tomlinson [2003] *EHRLR* 36.

³⁴ *Douglas v. Hello!* [2001] *EMLR* 199, 246–8, paras. 145–53 (Keene LJ); at 242–4, paras. 134–6 (Sedley LJ). See also *Theakston v. MGN* [2002] *EMLR* 398, 407 (discernibly more rigorous requirement); *Mills v. News Group Newspapers* [2001] *EMLR* 957, 966 (para. 18); *Cream Holdings* [2003] *Ch* 650; Kerly, paras. 22–31, p. 764. This does not appear to be inconsistent with TRIPS Art. 50 which requires that judicial authorities have the authority to order 'prompt and effective provisional measures' because Art. 50(3) allows for consideration of the evidence as to whether the applicant's rights are being infringed.

³⁵ [2001] *EMLR* 21 (para. 17).

³⁶ *Barnsley Brewery Company v. RBNB* [1997] *FSR* 462, 472.

³⁷ In its initial formulation, Lord Diplock's speech appears to set out a series of matters to be considered sequentially, rather than a catalogue of factors—a matter criticized by A. Gore, 'Interlocutory Injunctions: A Final Judgement?' (1975) 38 *MLR* 672, 678. However, in a number of cases the latter approach has been preferred: see, e.g. *Fleming Fabrications v. Albion Cylinders* [1989] *RPC* 47, 56. Note that the 'adequacy of damages' issue is sometimes treated as part of the assessment of the balance of convenience. Indeed, Lord Diplock used the term 'balance of convenience' inconsistently in this respect. Nothing, however, appears to turn on the categorization.

³⁸ *Roussel-Uclaf v. Searle & Co.* [1977] *FSR* 125; *Baywatch Productions v. The Home Video Channel* [1997] *FSR* 22; *Weight Watchers (UK) v. Tesco Stores* (16 Apr. 2003).

the claimant's interest can be compensated by a financial remedy that may be granted at trial. If the damage is to a non-financial interest, such as privacy or personal reputation, it is highly unlikely that the claimant will be able to be compensated for the loss in question. As a result, interim injunctions are less likely to be awarded in patent cases, compared with confidentiality or copyright cases where non-financial interests are often present.³⁹ In addition, if the claimant has been in the habit of licensing rights for royalties, it is likely that damages will be seen to be an adequate remedy.⁴⁰

The courts also consider whether the defendant is likely to be able to pay such damages.⁴¹ In general, the impact of this is that the smaller a defendant's business, the more likely interim relief will be granted.⁴² In some cases, in order to avoid unduly favouring rich claimants over poorer defendants, the courts have devised orders that allow a defendant to continue their allegedly infringing operations even where they cannot provide an undertaking. In these orders, the courts protect the claimant's rights by requiring the defendant to make payments into an account on a royalty-type basis.⁴³

Where damages are not an adequate remedy, the courts will consider whether it is possible to formulate a cross-undertaking that compensates the defendant for any harm caused during the period when their activities were curtailed. If the cross-undertaking would be satisfactory, then an injunction should be granted. Usually the question is merely one of the adequacy of damages, not of the claimant's ability to pay. The reason for this is that if there is any doubt as to reliability of the cross-undertaking, the court may require the claimant to provide security. If the claimant acted promptly, the chances are that the cross-undertaking will be satisfactory and that the interim relief will be granted. (This is because money spent in preparations for trade are usually quantifiable.)⁴⁴ Moreover, pending trial the defendant can continue to trade in non-infringing ways (for example, by selling non-infringing items or selling goods under a different trade mark). This, however, will not be the case where timing is crucial to the defendant, for example, where the defendant is satisfying a short-term fashion or seasonal demand,⁴⁵ where a third-party competitor of the defendant is about to launch,⁴⁶ or where the defendant's whole business is in allegedly infringing goods.⁴⁷ If the defendant is already selling the allegedly infringing goods on the market, the cross-undertaking is liable to be inadequate. This is because it will be very difficult to quantify losses incurred from withdrawing from a (usually expanding) market.⁴⁸

1.2.2 Balance of convenience

In deciding whether to grant an interim injunction, the court will consider the balance of convenience.⁴⁹ The facts that are taken into account will vary depending on the circumstances of the case. It has sometimes been suggested that the public interest may be taken into account in assessing the balance of convenience. For example, if granting injunctive relief might prevent the public having access to a life-saving drug, then such relief might be refused.⁵⁰ The court will also compare the likely impact that their decision will have on both parties. For example, in a case of alleged copying of a dress design, the Court of Appeal held that the risks which the claimant was exposed to were 'more dreadful' and their 'consequences more lasting and more irreparable'. As such, they granted interim injunction.⁵¹ In contrast, where there is only a remote risk of damage to the claimant, but the defendant would certainly suffer substantial unquantifiable damage, the balance of convenience will be against the grant of interim injunctive relief.⁵² If the order would prevent the defendant from earning a living, it is more likely that the court will be reluctant to grant interim relief.⁵³

Another factor often considered in the determination of the balance of convenience is whether the claimant brought the action promptly. If the claimant has delayed bringing the action, the court will usually refuse interim relief.⁵⁴ This is especially the case where over the period where the claimant failed to act, the defendant spent a considerable amount of money, or put themselves at risk.⁵⁵ However, if the claimant can explain the delay or show that they acted diligently, the court is unlikely to treat this as a basis for refusing interim relief.⁵⁶ Another factor often considered in the determination of the balance of convenience is whether the defendant deliberately took a risk. If the defendant deliberately risked infringing, this may tip the balance of convenience in favour of an injunction.⁵⁷

Where the factors are evenly balanced, Lord Diplock suggested that the best course is to preserve the status quo.⁵⁸ Subsequent cases have said that the status quo refers to the period preceding the issue of the 'statement of case' claiming a permanent injunction.⁵⁹ Thus if a defendant is doing something they have not done before, all the injunction does is to postpone their activities;⁶⁰ if the injunction would stop them from continuing to do something they were already doing this would cause greater inconvenience. The courts

⁴⁹ It has been said that the phrase is rather inept, and alternative phrases such as the 'balance of injustice' or 'prejudice' have sometimes been deployed.

⁵⁰ *Roussel-Uclaf v. Searle* [1977] FSR 125, 131–2.

⁵² *John Walker v. Rothmans International* [1978] FSR 357, 363; *British Association of Aesthetic Plastic Surgeons v. Cambright* [1987] RPC 549; *John Wyeth v. Pharmachem* [1988] FSR 26, 33.

⁵³ *Raindrop Data Systems v. Systemics* [1988] FSR 354, 361.

⁵⁴ *Silicon Graphics v. Indigo Graphic Systems* [1994] FSR 403.

⁵⁵ *Financial Times v. Evening Standard* [1991] FSR 7, 12–13 (delay of 11 days taken into account).

⁵⁶ *Mirage Studios v. Counter-feat Clothing* [1991] FSR 145, 153 (3-month delay explained by fact that claimant was attempting to enforce claim through trading standards authorities).

⁵⁷ *News Group Newspapers v. Rocket Record* [1981] FSR 89, 107; *Elanco Products v. Mandops (Agrochemical Specialists)* [1979] FSR 46; *Smithkline Beecham plc v. Apotex Europe* (14 Feb. 2003) [2003] EWCA Civ 137 (para. 40).

⁵⁸ This has been referred to as a 'judicial last resort': *Barnsley Brewery Company v. RBNB* [1997] FSR 462.

⁵⁹ *Garden Cottage Foods v. Milk Marketing Board* [1983] 2 All ER 770, 774. But not always: *Alfred Dunhill v. Sunoptic* [1979] FSR 337, 376 (date may well vary in different cases).

⁶⁰ *Elanco Products v. Mandops (Agrochemical Specialists)* [1979] FSR 46.

have been careful to prevent the desire to preserve the status quo from being used tactically. In particular, they have been careful to ensure that a defendant cannot alter the status quo, for example by embarking on a high-risk strategy.⁶¹

1.2.3 The merits of the case

The third factor that the court will consider in deciding whether an interim injunction should be granted is the relative strength or merits of the parties' cases. According to the traditional reading of *American Cyanamid*, the court should only consider the merits of each party's case in the last resort. Applying the approach strictly, the courts have often refused to indicate which of the parties' cases they consider to be stronger, for fear that it might prejudice the ultimate outcome.⁶²

While *American Cyanamid* suggests that the strength of the parties' cases should not be considered until this final stage, nonetheless in a number of cases the courts have been influenced by the merits of the claimant's case when considering factors such as the adequacy of damages and the balance of convenience.⁶³ This generated a growing feeling of unease that judges were not following *American Cyanamid*.⁶⁴ In *Series 5 Software* Laddie J criticized this trend saying that he did 'not believe it is satisfactory to exercise the court's discretion to grant an interlocutory injunction by paying lip-service to the guidance given in *American Cyanamid* while in practice applying different criteria'. Laddie J took the opportunity in *Series 5 Software* 'to look again at *American Cyanamid* to see what it decided'.⁶⁵ Laddie J's primary concern was to consider the extent to which Lord Diplock's judgment precluded a court from considering the legal and factual merits of the case. Laddie J argued that Lord Diplock could not have been imposing the sea change attributed to him, given the fact that in a subsequent decision Lord Diplock himself said that to 'justify the grant of such a remedy the claimant must satisfy the court first that there is a strong prima-facie case'.⁶⁶ Laddie J argued that when Lord Diplock said that the court should not consider the strength of the claimant's case, he was merely referring to the 'mandatory initial hurdle'. Indeed, a close analysis of the factors which Lord Diplock thought were relevant suggested that even he would consider the strength of the case.⁶⁷ Laddie J therefore argued that the prospects of success was still a relevant factor when considering the balance of convenience. However, he did accept that Lord Diplock had intended that this should be conducted in a way so as to avoid a mini-trial.

Laddie J's reformulation has met with a mixed reception. In *Barnsley Brewery Company v. RBNB*,⁶⁸ Robert Walker J signalled his approval, stating that while *Series 5* 'is sometimes regarded as surprising or even heretical', it provided a valuable reminder of the

⁶¹ *Jian Tools for Sales Inc v. Roderick Manhattan Group Ltd* [1995] FSR 924, 943.

⁶² *Sodastream v. Thorn Cascade* [1982] RPC 459, 467. For discussion of the prejudice argument, see J. Leubsdorf, 'The Standard for Preliminary Injunctions' (1978) 91 *Harvard LR* 525, 546–7.

⁶³ *Alfred Dunhill v. Sunoptic SA* [1979] FSR 337, 374; *County Sound v. Ocean Sound* [1991] FSR 367, 372.

⁶⁴ K. Gray, 'Interlocutory Injunctions Since *American Cyanamid*' (1981) 40 *Cambridge LJ* 307, 338–9 refers to differences of appearance rather than substance.

⁶⁵ *Series 5 Software v. Clarke* [1996] 1 *All ER* 853; [1996] FSR 273 (the analysis appears to have been *obiter*).

⁶⁶ *Hoffmann-La Roche v. Secretary of State for Trade and Industry* [1975] AC 295, 360.

⁶⁷ For example, Lord Diplock stated that if damages would satisfy a claimant no injunction should be granted 'however strong the plaintiff's claim'—implying that if damages were not adequate the strength of the claim was a relevant consideration.

⁶⁸ [1997] FSR 462, 472 (refusing injunction largely because claimant's case in passing off though not unarguable was weak).

background to and basic message contained in *American Cyanamid*. However, other judges have ignored *Series 5*, preferring to stick to *American Cyanamid* and the acknowledged exceptions to it.⁶⁹ Most recently, in *Guardian Media Groups v. Associated Newspapers*⁷⁰ the Court of Appeal said that the *American Cyanamid* principles had a degree of flexibility and:

do not prevent the court from giving proper weight to any clear view which the court can form at the time of the application for interim relief (and without the need for a mini-trial on copious affidavit evidence) as to the likely outcome at trial. That is particularly so when the grant or withholding of interim relief may influence the ultimate commercial outcome.

The better view appears to be that the strength of each case is a relevant factor for the court to take into account when it exercises its discretion. However, strength should only be considered where there is no credible dispute as to the evidence and it is clear that one party's case is likely to succeed.⁷¹

2 STOPPING IMPORTATION

In many situations, the infringing products originate from other jurisdictions. In these circumstances, the claimant may try to prevent the infringement at its source. Alternatively, a claimant may try to intercept the infringing articles or materials at the point of importation.⁷² There are two legal mechanisms for stopping articles that infringe intellectual property rights at their point of importation into the United Kingdom.⁷³ The most important of these are the European procedures specified in the Infringing Goods Regulation, as adopted by the Council in July 2003.⁷⁴ In 2002, using the European procedure then in place over 85 million articles were confiscated, the bulk coming from Asia. The sorts of articles seized included not just counterfeit clothes and perfume, and pirated CDs and DVDs, but mundance consumer goods such as tea, spinning tops, and mobile phones.⁷⁵ The other set of procedures, which are now of limited scope, derives from domestic legislation.⁷⁶

2.1 EUROPEAN PROCEDURE

The European Regulations attempt to establish mechanisms which ensure that goods which infringe intellectual property rights, other than travellers' personal luggage,⁷⁷ can be retained by customs authorities when they are introduced into or exported from the

⁷³ TRIPS, Arts. 51 and 52 requires such measures.

⁷⁴ Council Regulation no. 1383/2003 which came into force in July 2004 (hereafter IGR) (replacing Council Regulation 3295/95 of 22 Dec. 1994 (as amended by Council Regulation 241/99 of 25 Jan. 1999).

⁷⁵ Commission Press Release IP/03/1589 (24 Nov. 2003).

⁷⁶ TMA s. 89; Trade Marks (Customs) Regulations 1994 (SI 1994/2625); CDPA s. 111.

⁷⁷ IGR Art 3(3); Recital 11.

Community.⁷⁸ The Regulations define goods infringing intellectual property rights to cover 'counterfeit' goods infringing trade marks, 'pirated' goods infringing copyright and design rights, and goods which infringe patents, supplementary protection certificates, plant varieties, PDOs, and PGIs.⁷⁹ The Regulations do not apply to parallel imports or overruns.⁸⁰

Provisions are made in the Infringing Goods Regulation for a pro-active intellectual property rights-holder who gets wind of the fact that goods are going to be imported, to make an 'application for customs action'. That is, the right-holder can apply to the relevant customs authorities designated by each member state (in the United Kingdom, the Criminal Justice, Fraud and Enforcement Team of HM Customs and Excise—but the request can apply to authorities in other member states, too) to detain the goods, should they come into its hands.⁸¹ As one would expect, the right-holder is required to describe the goods so that they can be 'readily recognised by the customs authorities' and to provide proof that they are the rights-owner.⁸² The applicants must accept liability towards the persons involved in the event that action is discontinued or goods are found to be non-infringing.⁸³ The customs authorities must process the application by deciding whether the information is sufficient, determine the relevant 'action period' and forward details to the relevant offices. If the customs office comes across goods which it suspects are infringing (within the decision) 'it shall suspend release of the goods or detain them'.⁸⁴ The Office then informs the right-holder and 'declarant or holder of the goods'. The right-holder is given information necessary to assist them in establishing whether an intellectual property right has been infringed, including the opportunity to inspect the goods and to remove samples for analysis.⁸⁵

Even if advance warning has not been given, but the relevant authority has sufficient grounds for suspecting that goods are infringing, the Regulation empowers the authority

⁷⁸ In *The Polo/Lauren Co. LP v. PT Dwidua Langgeng Pratama International Freight Forwarders*, Case C-383/98 the ECJ interpreted Council Regulation 3295/94 as requiring EC customs authorities to seize counterfeit goods even though they were in transit between non-EEC countries (in this case T-shirts suspected of being counterfeits were being transported between Indonesia and Poland, via Austria), and the Court took the view that such legislation was justified under Art. 113 (now Art. 133 EC) because transit could affect the Internal Market 'as there is a risk that counterfeit goods placed under the external transit procedure may be fraudulently brought on to the Community market.'

⁷⁹ Infringing Goods Reg., Art. 2. This further defines 'counterfeit goods', as goods which infringe registered trade marks where the trade mark used without consent is identical to or cannot be distinguished in its essential aspects from the registered mark; and which is used on the same type of goods; and 'pirated goods' as goods which are or embody copies made without the consent of the holder of the copyright or neighbouring rights or design right whether registered under national law or not.

⁸⁰ Infringing Goods Reg., Art. 4 (goods which have been manufactured with the right-holder's consent but are placed in circulation without it, or which are manufactured or bear a trade mark 'under conditions other than those agreed with the holder of the right in question').

⁸¹ IGR Art. 5. Apparently, in 2002 there were 1,600 such applications—a surprisingly small number.

⁸² IGR Art. 5(5). See *Commissioners of Customs and Excise v. Top High Development* [1998] FSR 464 (no reasonable grounds for seizure by customs authority where declarant had only applied for a trade mark and was not yet registered).

⁸³ IGR Art. 6. But fees and indemnities have been abandoned, to promote the use of these measures by SMEs. See, for early abolition of the fees in the UK, as of October 2003: Goods Infringing Intellectual Property Rights (Customs) Regulations 2003 (SI 2003/2316).

⁸⁴ IGR Art. 9(1). If it fails to detect them, the authority is not liable to the right-holder: Art. 19.

⁸⁵ IGR Art. 9(3).

to prevent their transit temporarily.⁸⁶ The authority will attempt to contact the relevant intellectual property right-holder, who must complete the standard 'application for customs action' within three days.

The customs office will not detain the goods indefinitely. Under the newly formulated Regulations, it seems that there are three possible scenarios which might ensue. First, the intellectual property right-holder may take no further action. If so, the customs office should release the goods after ten days. Second, the intellectual property right-holder may commence an action in the relevant national tribunal for infringement. If this occurs, and the right-holder informs the authority, detention of the goods can be continued pending the outcome of proceedings. However, since that may not be for some time, the owner of the goods has an option of seeking the release of the goods on condition that they provide an appropriate security. This option, it should be noted, is not available where the allegation is infringement of copyright, trade marks, PDO, or PGI. If the goods are found to be infringing at the substantive hearing, the competent authorities are empowered to destroy the goods and to take any measures which deprive the persons concerned of the economic benefits of the transaction.⁸⁷ Removing trade marks affixed to counterfeit goods is not normally regarded as sufficient.⁸⁸

The third scenario is that the parties will agree to destruction of the goods without the need for proceedings. This new 'simplified procedure' for abandonment is optional for member states, and is only to be used by the customs authorities if four conditions are met. First, the right-holder must inform the authority within ten working days that the goods infringe intellectual property rights. Second, the authorities must have the written agreement of the 'declarant, the holder or the owner of the goods'. (If any object, the goods should not be destroyed.) Third, the right-holder must agree. Fourth, before the goods are destroyed, samples must be kept as evidence, in case of further legal proceedings.

2.2 DOMESTIC PROCEDURE

A residual domestic procedure continues to coexist with the European Regulation,⁸⁹ but does not apply to goods already in free circulation within the EEA. According to this procedure, copyright and trade mark owners may notify the Commissioners of Customs and Excise that infringing goods, materials, or articles are about to be imported and request that they be prohibited.⁹⁰ As regards copyright, the right only applies to printed copies of literary, dramatic, or musical works or of sound recordings or film. As such, it does not cover things such as computer programs on disc or artistic works. Given that the copyright works covered by the domestic procedures fall within the scope of the EC Regulation (which pre-empts domestic procedures), its impact in this sphere is likely to be restricted to parallel imports and overruns. As regards trade marks, the domestic procedure applies to all infringing goods, materials, or articles and so is broader in scope than the EC procedure. As with the EC procedure, the applicant must give certain information

⁸⁶ IGR Art. 4. ⁸⁷ Art. 17. ⁸⁸ Art. 17.

⁸⁹ See *Morcom et al.*, ch. 18; Wordsall and Clark, 214–17; Copinger, 1118–20.

⁹⁰ CDPA s. 111; Copyright (Customs) Regulations 1989 (SI 1989/1178), amended by Copyright (EC Measures Relating to Pirated Goods and Abolition of Restrictions on the Import of Goods) Regulations 1995 (SI 1995/1445); TMA s. 89, s. 112; Trade Marks (Customs) Regulations 1994 (SI 1994/2625).

so that the Commissioners can establish that the applicant is the copyright or trade mark owner and that the goods (etc.) are infringing. The Commissioners may require an indemnity and security against any liability and expense which may accrue.⁹¹ Once a notice is in force the importation of the goods is prohibited. If the customs find such goods (other than for the private and domestic use of the person importing them), they will be seized and the owner informed.⁹² The owner has one month to make a claim that the goods were not liable to seizure. If such notice is given the Commissioners are obliged to bring proceedings for 'condemnation' of the goods (either in the magistrates' court or the High Court).⁹³ If successful, the goods will usually be destroyed.⁹⁴

3 FINAL INJUNCTION

A final or perpetual injunction is usually granted to an intellectual property right-owner who proves at trial that their rights have been infringed by the defendant.⁹⁵ A final injunction will order the defendant not to carry on with certain activities. As such, it is directed at future conduct, whereas the financial remedies operate in relation to past acts. The injunction, being equitable in origin, is a discretionary remedy. This means that while final injunctions are normally awarded, they are not granted automatically. Although the law of injunctions is a topic with implications that extend well beyond intellectual property rights, here we consider four specific issues.

3.1 GENERAL APPROACH

The question of whether an injunction should be granted usually depends on the facts of the case.⁹⁶ Nevertheless, the courts have indicated a few of the circumstances where an injunction might be refused.⁹⁷ These include situations where the infringement is trivial, its value can be estimated in financial terms and adequately compensated and an injunction would be oppressive on the defendant;⁹⁸ where a claimant is only interested in money; where the claimant's action is vexatious; or where the infringing act is old and there is no future threat.⁹⁹ Moreover, in circumstances where licences of right are available to a defendant, injunctive relief will not normally be granted.¹⁰⁰ An injunction will not be refused simply because there is a public interest in widespread exploitation or

⁹¹ CDPA s. 112. ⁹² Customs and Excise Management Act 1979, Sched. 3, para. 1(2).

⁹³ *Ibid.*, para. 8. ⁹⁴ CDPA s. 111(4); TMA s. 89(2).

⁹⁵ *Chiron v. Organon (No. 10)* [1995] FSR 325 (as a general rule a defendant who interferes with a proprietary right will be enjoined).

⁹⁶ *Proctor v. Bayley* (1889) 6 RPC 538, 541. In *Ludlow v. Williams* [2002] FSR 868, 896 an injunction was granted to prevent the making of future pressings of Williams' album, but not to sale of existing stocks.

⁹⁷ The leading authority is *Shelfer v. City of London* [1895] 1 Ch 287. Cf. CTMR Art. 98, which requires a Community trade mark court to grant an injunction 'unless there are special reasons for not doing so'. Discussed by Prescott QC in *Glaxo v. Dowelhurst* (31 Jul. 2003); CDR Art. 89.

⁹⁸ *Sterwin v. Brocades* [1979] RPC 481.

⁹⁹ *Raleigh v. Miller* (1949) 66 RPC 23; *Frayling Furniture v. Premier Uphostery* (5 Nov. 1999) (no injunction where infringement had taken place five years earlier apparently inadvertently and had not been repeated).

¹⁰⁰ RDA 1949, s. 11B(1)(a); PA s. 46(3)(c); CDPA s. 98(1)(a), s. 191K.

dissemination of a particular product (such as a cure for HIV);¹⁰¹ or the infringing material comprises only a small portion of the defendant's products.¹⁰²

3.2 FORM OF INJUNCTION

It is normal practice to grant an injunction that corresponds to the rights that were infringed. For example an injunction will usually be granted that restrains the defendant from infringing the patent in suit or restrains the defendant from passing off their goods as those of the claimant.¹⁰³ Such broadly worded relief is appropriate because 'claimants cannot be adequately protected by orders which are cabined or confined'.¹⁰⁴ Despite criticism that such vaguely worded relief is unfair to a defendant,¹⁰⁵ it has been stated by the Court of Appeal that the 'traditional form' of injunction sets out with as much clarity as the context admits what may not be done. This is because, while the wording of the order may look vague, the Patents Act and the claims form a context from which the specific meaning of the terms of the order can be understood.¹⁰⁶ Nevertheless, Aldous LJ has said that an order that simply restrained 'breach of confidence' would not be precise enough. Moreover, Aldous LJ reiterated that 'each case must be determined on its own facts and the discretion exercised accordingly'. Consequently, although the traditional form of injunction will often be appropriate, in some cases more narrowly couched orders will be required, depending on the right involved, the honesty of the defendant, and all other circumstances.¹⁰⁷

3.3 SPRINGBOARD INJUNCTIONS

In the last few years, the courts have been asked to develop new forms of injunction on the grounds that it is 'just and convenient' to do so.¹⁰⁸ One such claim has been for injunctions which continue after the expiry of an intellectual property right (aka 'springboard relief'). Although the idea of a post-expiry injunction may seem strange given the policy of fixing the duration of many intellectual property rights, such orders have been thought to be desirable in cases where infringing acts that have already taken place (during the term of

¹⁰¹ *Chiron v. Organon (No. 10)* [1995] FSR 325. Cf. *Roussel Uclaf v. Searle* [1977] FSR 125, 131.

¹⁰² *MacMillan v. Reed* [1993] FSR 455; *Mawman v. Tegg* (1826) 2 Russ 385.

¹⁰³ Wadlow, para. 8.51 ff.

¹⁰⁴ *Spectravest v. Aperknit* [1988] FSR 161, 174; *Aktiebolaget Volvo v. Heritage* [2000] FSR 265–6.

¹⁰⁵ *Coflexip v. Stolt Comex Seaway* [1999] FSR 473, 476. Laddie J stated that while the purpose of an injunction is to protect the claimant from further infringement, it is important that the order was also fair to the defendant. The standard approach did not always meet this objective. On the basis that most defendants are not untrustworthy but are respectable and honest traders, Laddie J said that a narrow injunction provided sufficient protection to the claimant. (Laddie J did acknowledge, however, that in the case of counterfeiting, usually involving infringement of copyright, trade marks, or passing off, an injunction formulated in broader terms might be the only reasonable way of giving claimants the protection they need.) See also *Microsoft v. Plato Technology* [1999] FSR 834; [1999] *Masons CLR* 370 (where the Court of Appeal declined to interfere with the narrow form of injunction granted); *Beautimatic v. Mitchel Pharmaceuticals* [2000] FSR 267, 284.

¹⁰⁶ *Coflexip v. Stolt Comex Seaway* [2001] RPC 182.

¹⁰⁷ In *Department of Culture, Arts & Leisure v. Automobile Association* (29 Jan. 2001) Laddie J granted an injunction in the traditional form, but made comments to the effect that it would be an abuse of process if the claimant brought contempt proceedings based on alleged infringements which had not been established at trial.

¹⁰⁸ Supreme Court Act 1981, s. 37.

the intellectual property right) have given a defendant a headstart in the process of marketing legitimate goods in the post-expiry period. In *Dyson Appliances v. Hoover* (No. 2), Judge Fysh QC in the Patents Court granted such an injunction against Hoover for a period of twelve months following expiry of Dyson's patent.¹⁰⁹ The case concerned the patent for Dyson's well-known 'bag-less' vacuum cleaner. During the patent's life, Hoover had developed a cyclone-based vacuum cleaner and had been granted clearances by certifying authorities. In October 2000 the vacuum cleaner was held to be an infringing. Dyson argued that it would be unfair if Hoover could relaunch the model when Dyson's patent expired in June 2001. The Court agreed. Having noted that the remedies prescribed in section 61 of the Patents Act were 'without prejudice to any other jurisdiction of the court', the judge held such an order was 'just' and 'convenient' because it sought to place the claimant in the position it would have been in if its rights had been respected (and incidentally it saved the tribunal from having to calculate damages relating to such acts). The judge did, however, indicate that the scope of the injunction should be circumscribed to the model developed during the patent term, and to a period corresponding to the time which it had taken Hoover to develop the model and get the relevant clearances.

3.4 LONG-ARM INJUNCTIONS

The courts have proved less amenable to the idea of injunctions covering foreign territories (so-called 'long arm relief'). In *Kirin-Amgen Inc v. Transkaryotic Therapies Inc* (No. 2),¹¹⁰ the claimant owned a patent relating to the production of erythropoietin (EPO) (using genetic engineering) which the defendant had been held to infringe. Although appeals were pending, the claimant sought to amend the relief it was seeking to include an order restraining the defendant from using outside the UK 'UK-derived cells' which could produce EPO. Refusing leave to amend in this way, Neuberger J held that the court could not 'at least in the absence of very exceptional circumstances, grant an injunction in a patent infringement case, restraining a person's activities abroad, even if those activities were only possible as a result of an infringement in this jurisdiction'. This view was informed by the terms of the statutory tort defined in section 60 of the Patents Act 1977, as well as a clear sense that acts occurring abroad were matters for foreign law. In another case, the Court of Session refused to grant an injunction relating to infringement of unregistered design right that extended beyond Scotland to cover England and Wales.¹¹¹

One of the most important attributes of Community rights (Trade Marks, Designs, etc.) is that they result in a single action in a designated Community court which is given jurisdiction in respect of all of the member states.¹¹²

¹⁰⁹ [2001] *RPC* (27) 544. The case is remarkable, not least for its inclination to develop English law in line with Dutch practice, and the account taken of the ECJ's decision that the Dutch post-expiry remedy was legitimate in *Generics BV v. Smith Kline & French Laboratories* [1997] *ECR* I-3929. The ground for this jurisdiction had been laid by Jacob J in *Union Carbide v. BP Chemicals* [1998] *FSR* 1, 6. Such relief is also considered in *Kirin-Amgen Inc v. Transkaryotic Therapies Inc* (No. 2) [2002] *RPC* (3) 203, 222-3.

¹¹⁰ [2002] *RPC* (3) 203, 216.

¹¹² CDR Art. 1(3),83; CTMR Art. 94.

3.5 INTERNET PROVIDERS

Although the courts might well have been willing to extend their jurisdiction to cover Internet service providers, following implementation of the EC Information Society Directive, statutory provision is now made for the grant of injunctions against service providers, 'where that service provider has actual knowledge of another person using their service to infringe' copyright or a performer's property rights.¹¹³

4 DELIVERY UP

As an adjunct to a final injunction,¹¹⁴ a court may order the delivery up or destruction of infringing articles.¹¹⁵ While the defendant usually chooses which option to take,¹¹⁶ if they have shown themselves to be unreliable the court may demand delivery up.¹¹⁷ The long-standing inherent equitable jurisdiction to make an order for delivery up is not based on the idea that the claimant owns the infringing material.¹¹⁸ Rather, it aims to ensure that a defendant is not tempted to put the infringing copies into circulation in breach of the injunction.¹¹⁹ If the infringement relates to a separable part of an article, the order will be for delivery up of that part.¹²⁰ In the case of trade marks and passing off, if a sign can be removed the court will order that this be done rather than order delivery up of the goods.¹²¹ No order can be made once the right has expired.¹²² Moreover, the order does not extend to third parties who have come into possession of infringing articles.¹²³

In the case of patents and trade marks, there is an express statutory power to order delivery up and/or obliteration.¹²⁴ The statutory provisions, like the inherent jurisdiction, provides that in cases where it appears 'likely that such an order would not be complied with' the court can order delivery up to the claimant (or some other person) for erasure or destruction.

A more significant statutory extension has been made available in respect of the

¹¹³ CDPA s. 97A, s. 191JA (as inserted by Copyright and Related Rights Regs 2003 (SI 2003/2498)).

¹¹⁴ An order for delivery up is a type of mandatory injunction and can be awarded in interim proceedings: see *Films Rover International v. Cannon Film Cells* [1986] 3 All ER 772.

¹¹⁵ A. Burrows, *Remedies for Tort and Breach of Contract* (1994), 458–61; P. Meagher, W. Gummow, and J. Lehane, *Equity: Doctrines and Remedies* (1992), ch. 27. Note CDR Art 89(1)(b)–(c) (on finding of infringement of Community design right, court should order seizure of infringing products and materials used to manufacture infringing goods).

¹¹⁶ *Lady Anne Tennant v. Associated Newspapers* [1979] FSR 298, 305.

¹¹⁷ *Industrial Furnaces v. Reaves* [1970] RPC 605. The claimant is entitled to be present to ensure destruction is carried out: *Slazenger v. Feltham* (1889) 6 RPC 531.

¹¹⁸ The position may also be different in relation to confidential information, where infringing material has been likened to 'trust property': *Industrial Furnaces v. Reaves* [1970] RPC 605.

¹¹⁹ *Mergethaler Lionotype v. Intertype* (1926) 43 RPC 381. In *Chappell v. Columbia Gramophone Co.* [1914] 2 Ch 745 the Court of Appeal utilized the remedy to prevent the defendant benefiting from its infringement by making it deliver up sound recordings derived from infringing acts, even though these were not infringing articles. For discussion of the case, see *Union Carbide Co. v BP Chemicals* [1998] FSR 1.

¹²⁰ *Mergethaler Lionotype v. Intertype* (1926) 43 RPC 381. Cf. *Industrial Furnaces v. Reaves* [1970] RPC 605.

¹²¹ *Warwick Tyre v. New Motor and General Rubber* (1910) 27 RPC 161, 171.

¹²² *Leggatt v. Hoods Darts Accessories* (1950) 67 RPC 134, 143.

¹²³ *Knowles v. John Bennett* (1895) 12 RPC 137, 148 (shipper).

¹²⁴ PA s. 61(1)(b); TMA s. 15. Under the Engravings Act 1735 (8 Geo. 2, ch. 13) provision was made for forfeiture of plates and sheets for destruction and damasking.

infringements of trade marks, performers' rights, unregistered design right, and copyright.¹²⁵ More specifically, a statutory procedure exists for the delivery up of infringing goods, illicit recordings, infringing articles, and infringing copies for the purposes of 'destruction' or 'forfeiture'. In most cases the power is only available where a person has infringing goods (etc.) in their possession, custody, or control 'in the course of business'. The power also applies where a person has in their possession anything specifically designed or adapted for making infringing goods (etc.), knowing or having reason to believe that it has been or is to be used to make infringing goods (etc.). The court may order delivery up to the right owner (or some other person), pending a further order either for destruction or forfeiture as the court thinks fit. The ability to order forfeiture goes well beyond the inherent power which is confined to delivery for destruction.¹²⁶

In considering whether the discretionary order for destruction or forfeiture is appropriate, the court is directed to take into account 'whether other remedies available in an action for infringement would be adequate to compensate the right-owner and protect their interests'. This has been described as 'a strange provision, the purpose of which is not entirely clear'.¹²⁷ As yet, there is little indication as to when a forfeiture order will be made.¹²⁸ However, one obvious case where the other remedies might be inadequate is where the defendant is bankrupt or unable to pay damages.¹²⁹ As the order may affect the rights of third parties having interests in the goods, third parties may appear in proceedings.¹³⁰

5 DAMAGES

The most common remedy for infringement of intellectual property rights is an award of damages.¹³¹ The damages recoverable are the same as with other torts: the aim is to restore the victim to the position they would have been in if no wrong had been committed: it does not aim to punish the defendant.¹³²

In some cases, damages will not be available where the defendant's infringement was innocent. More specifically, damages will not be awarded in an action for infringement of a registered design or a patent where the defendant proves that at the date of infringement they were not aware and had no reasonable grounds for supposing that the design was

¹²⁵ TMA s. 16; CDPA ss. 195, 199 (criminal proceedings); CDPA ss. 204, 230, 231; CDPA ss. 99, 108 (criminal proceedings).

¹²⁶ Cf. TMA s. 97(6) (where forfeiture of 'infringing goods, materials or articles' acquired in the course of investigating or prosecuting 'an offence' requires destruction).

¹²⁷ Arnold, para. 6.52.

¹²⁸ In *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 407 Laddie J refused delivery up on the ground that it would cause much greater harm to the defendant than was necessary to safeguard the legitimate interests of the claimants.

¹²⁹ Laddie *et al.*, para. 24.36.

¹³⁰ TMA s. 19(3). For the sorts of interests that may be involved where destruction was sought of counterfeit beer held in a Belfast port, see *Miller Brewing Co. v. The Mersey Docks & Harbour Co* [2004] FSR (5) 81 (where various innocent third parties were held entitled to recovery of their reasonable costs).

¹³¹ PA 1977, s. 61(1)(c); CDPA 1988, ss. 96(2), 191(3), 229(2); TMA 1994, s. 14(2); PVA 1997, s. 13(2); CPVR Art. 94.

¹³² *General Tire & Rubber v. Firestone Tyre & Rubber* [1976] RPC 197, 214. On the extent to which damages are restitutionary, see J. Edelman, *Gain-Based Damages* (2002).

registered or the patent existed.¹³³ In either case, a person will not be deemed to have been aware or have had reasonable grounds for supposing that the design was registered or patent existed merely because the article is marked 'registered' or 'patented'. This does not apply, however, where the marking is accompanied by the registration or patent number.¹³⁴ In the case of copyright, rights in performances, and unregistered design right, the legislation provides that damages will not be awarded in an action for infringement where it is shown that at the time of the infringement the defendant did not know, and had no reason to believe, that copyright (etc.) subsisted in the work to which the action relates.¹³⁵ In certain cases of infringement of performers' rights by a person who 'innocently acquired' an illicit recording, the only remedy available is damages 'not exceeding a reasonable royalty in respect of the act complained of'.¹³⁶ In contrast, in the case of trade mark infringement and passing off,¹³⁷ it seems that damages will be awarded even against an innocent defendant. It is difficult to conceive of any rational basis for such inconsistent approaches.

The normal measure of damages is 'the depreciation caused by the infringement of the value of the intellectual property right as a chose in action'.¹³⁸ As we will see the courts have also allowed claims relating to indirect or consequential losses. It is for the claimant to prove the loss, though this is not a matter of scientific precision.¹³⁹ Given the varied circumstances in which infringement can occur, the courts have been reluctant to lay down more detailed rules as to how damages should be computed.¹⁴⁰ In the following sections, we look at some of the factors that are taken into account when assessing the damages that are payable.¹⁴¹

5.1 LOST PROFITS

One way in which damages may be calculated is by reference to the profits which the claimant lost as a result of the competing sales of infringing goods (or services) made by the defendant. For example, if prior to an infringement a patentee of a widget was selling

¹³³ RDA 1949, s. 9; PA 1977, s. 62(1); CDPA ss. 191J, 233.

¹³⁴ See *Lancer Boss v. Henley Forklift Co.* [1974] FSR 14 (relevant factors in determining innocence include whether the goods were marked 'patented' with a number; how widely distributed the goods were; whether the defendant copied the goods; whether any investigations had been made); *Texas Iron Works Inc's Patent* [2000] RPC 207.

¹³⁵ CDPA ss. 97(1), 191J, 233(1). Note also CDPA s. 233(2) as regards innocent acquirers. *Nottinghamshire Healthcare v. News Group* [2002] RPC (49) 962 (para. 52) (A very limited defence). See pp. 149–51 above.

¹³⁶ CDPA s. 184(2).

¹³⁷ *Gillette UK v. Edenwest* [1994] RPC 279, 291–4; cf. *Marengo v. Daily Sketch* (1948) RPC 242 (leaving undecided whether there could be damages for innocent passing off); C. Best, 'Damages against the Innocent Infringer in Passing Off and Trade Mark Infringement' (1985) 1 *IPJ* 205.

¹³⁸ *Sutherland Publishing v. Caxton Publishing* [1936] Ch 323, 336. Cf. *Ludlow v. Williams* [2002] FSR (57) 868, 882 (describing this as not a particularly helpful formulation)

¹³⁹ *Watson Laidlaw v. Potts, Cassels & Williamson* [1914] 31 RPC 104, 109; *Khawam v. Chellaram* [1964] RPC 337, 343.

¹⁴⁰ *Meters v. Metropolitan Gas Meters* (1910) 28 RPC 157, 163. For general comments, see *Kuwait Airways Corp. v. Iraqi Airways Co* [2002] 2 AC 833 per Lord Nicholls (paras. 69–73).

¹⁴¹ Many of the intellectual property statutes provide that where licences of right are made available an award of damages is not to exceed double the amount which would have been payable as a licensee if such a licence on those terms had been granted before the earliest infringement: RDA 1949, s. 11B(1)(a); PA s. 46(3)(c); CDPA ss. 98(1)(a), 191K, 239(1)(c).

200 widgets per year, but only sold 150 widgets after the infringement (the defendant selling fifty widgets), the damages are likely to be calculated as the profits the patentee would have made on the fifty widgets.¹⁴² Clearly, this method of calculation will only be used where the intellectual property right-owner exploits the right by manufacturing goods. Although the courts have indicated that proof of lost profits need not be minutely accurate, a claimant will often encounter difficulties.¹⁴³ In particular, problems may arise in relation to causation.¹⁴⁴ For example, where an infringer sells an infringing product at a cost which is less than that of the claimant's product, it will often be difficult to be certain that sales which went to the defendant would, absent infringement, have gone to the claimant.¹⁴⁵ Other difficulties may arise: discovering how many infringing items the defendant sold; establishing that the claimant's expected sales figures were justified; proving that the claimant would have had sufficient stock to cover the defendant's sales; and that the defendant's sales would not have gone to a competitor of the claimant (rather than the claimant).¹⁴⁶ In certain circumstances, the courts have got over these difficulties by presuming that the claimant would have made the sales.¹⁴⁷

5.2 ROYALTY

If a claimant is unable to claim damages on the basis of lost profits, the court may make an award on a royalty basis. That is, the court can award the claimant a notional fee for each infringing act.¹⁴⁸ Here the damages compensate for the misappropriation and represent the fee that the defendant would have paid for a licence for the use of the rights they infringed. Such a royalty will be easy to determine where a claimant has been in the practice of granting licences: it will be the 'going rate'. In these cases, the claimant will need to show that the circumstances in which the going rate was being paid by others are the same or comparable with those in which the intellectual property right-holder and infringer are assumed to strike their bargain.¹⁴⁹ The defendant's own financial position is not regarded as a relevant circumstance and so it is not open to the defendant to argue that they could not have afforded to pay a reasonable rate.¹⁵⁰

¹⁴² The approach has been described as 'inescapably hypothetical, even speculative': *Douglas v. Hello!* (No. 8) [2004] EMLR (2) 13 (para. 17).

¹⁴³ *Watson Laidlaw v. Potts, Cassels & Williamson* [1914] 31 RPC 104, 113.

¹⁴⁴ See *Coflexip SA v. Stolt Offshore MS* [2003] FSR (41) 728 (considering problems of causation in relation to defendant's acquisition of contracts, in execution of which it used claimant's patented process).

¹⁴⁵ *Columbia Pictures Industries v. Robinson* [1988] FSR 531, 535. See also *Prior v. Lansdowne Press* [1977] RPC 511.

¹⁴⁶ *Cow v. Cannon Rubber Manufacturers* [1961] RPC 236, 240.

¹⁴⁷ *Catnic Components v. Hill & Smith* [1983] FSR 512, 524. Cf. *Blayne (t/a Aardvark Jewellery) v. Clogau St. Davids Gold Mines* [2003] FSR (19) 360 (CA).

¹⁴⁸ Where the claimant has granted licences at a royalty rate, it is 'almost a rule of law' to assess damages as the amount the defendant infringer would have had to pay for the number of infringing articles at the royalty rate had they had a licence: *Meters v. Metropolitan Gas Meters* (1911) 28 RPC 157, 164; *Catnic Components v. Hill & Smith* [1983] FSR 512, 518. But the lost profits approach is preferred in cases of trade marks and passing off: *Games Workshop v. Transworld Publishers* [1993] FSR 704, 713–14; *Domeuil Freres v. Feraglow* [1990] RPC 449.

¹⁴⁹ *General Tire & Rubber v. Firestone Tyre & Rubber* [1976] RPC 197, 213.

¹⁵⁰ *Irvine v TalkSport Ltd* [2003] FSR (35) 619 (para. 106) (CA) (Jonathan Parker LJ).

Where the claimant has not been in the practice of granting licences, the claimant will have to find some other basis from which the court can estimate an appropriate royalty. This ‘may consist of the practice, as regards royalty, in the relevant trade or in analogous trades; perhaps of expert opinion expressed in publications . . . possibly of the profitability of the invention; and any other factor on which the judge can decide the measure of loss’.¹⁵¹ The aim of the evidence is to establish what royalty a willing licensee would have been prepared to pay and a willing licensor to accept.¹⁵² That is, the goal is to establish what terms would have been reached between the actual licensor and the actual licensee, bearing in mind their strengths and weaknesses and the market as it exists, on the assumption that each was willing to negotiate with the other.¹⁵³ The process of calculation is ‘intended to represent a robust and inexpensive cutting of a Gordian knot’.¹⁵⁴

Where neither avenue suggests itself as the most appropriate, the choice between the ‘lost profits’ and ‘royalty’ approaches to the calculation of damages is left to the claimant (even in ‘licence of right cases’).¹⁵⁵ In some circumstances it may be appropriate to choose both. For example, if a defendant sold twenty-five infringing works and the claimant would only have made fifteen sales, then the claimant may claim for lost profits on those fifteen sales plus a royalty in relation to the other ten sales.¹⁵⁶

5.3 SECONDARY LOSSES

Although the sum awarded is usually calculated on the basis of the loss to the value of the intellectual property right as a chose in action,¹⁵⁷ other secondary losses may also be recovered.¹⁵⁸ These are sometimes referred to as consequential or parasitic damages. The ability to claim such losses may be particularly important where goods incorporating intellectual property are marketed at low-profit margins and the profits are largely made from the sale of associated goods or services. Such losses can be claimed if they are foreseeable, caused by the wrong,¹⁵⁹ and not excluded from recovery by public policy.¹⁶⁰ A

¹⁵¹ *General Tire & Rubber*, 214.

¹⁵² *Ibid.*, 225; *Ludlow Music Inc v. Williams* [2002] FSR (57) 868, 889–90 (court should err on side of generosity). Cf. *SPE International v. Professional Preparation Contractors* (10 May 2002) Rimer J (court should err on side of under-compensation).

¹⁵³ *Ibid.*, 221. ¹⁵⁴ *Douglas v. Hello! (No. 8)* [2004] EMLR (2) 13 (para. 61).

¹⁵⁵ *Gerber Garment Technology v. Lectra Systems* [1997] RPC 443, 486. In *Douglas v. Hello! (No. 8)* [2004] EMLR (2) 13 (para. 13), a case on damages for breach of confidence, Lindsay J did not require the claimant to elect between damages based on lost sales and damages calculated on a royalty basis, taking the view that the court should award the higher of the two—in the case based on lost profits (though might penalize the claimant for running mutually exclusive claims through a costs award).

¹⁵⁶ *Watson Laidlaw v. Potts, Cassels & Williamson* (1914) 31 RPC 104; *Catnic Components v. Hill & Smith* [1983] FSR 512, 522; *Gerber Garment Technology v. Lectra Systems* [1997] RPC 443, 486 (CA); *Blayney (t/a Aardvark Jewellery) v. Clogau St. Davids Gold Mines* [2003] FSR (19) 360 (CA).

¹⁵⁷ *Sutherland Publishing Company v. Caxton Publishing* [1936] 1 All ER 177, 180.

¹⁵⁸ Cf. *Catnic Components v. Hill & Smith* [1983] FSR 512, 534 (loss of profits due to sale of non-patented lintels not recoverable).

¹⁵⁹ *Work Model Enterprises v. Ecosystem & Clix Interiors* [1996] FSR 356, 362 (a matter of common sense).

¹⁶⁰ *Gerber Garment Technology v. Lectra Systems* [1997] RPC 443, 452. In *Kuwait Airways Corp. v. Iraqi Airways Co.* [2002] 2 AC 833 (paras. 69–73) Lord Nicholls treated causation as encompassing two stages: a ‘but for’ test, and an enquiry into whether the loss was one for which the defendant ‘ought fairly or reasonably or justly to be held liable’. The latter includes aspects of foreseeability and public policy, though normally evokes ‘an immediate intuitive response’.

conceivable but remote result could not be deemed to be reasonably foreseeable. Applying these principles the courts have held, for example, that a copyright infringer would not be liable for cash-flow consequences for the copyright owner;¹⁶¹ nor would an infringer be liable for losses on sales of the claimant's goods as a result of the defendant's distribution of an infringing catalogue.¹⁶²

5.4 EXEMPLARY DAMAGES

According to the House of Lords in *Rookes v. Barnard*,¹⁶³ a court may award exemplary damages where, in cynical disregard of a claimant's rights, a defendant infringed those rights calculating that they would make a profit which would exceed the compensation payable to the claimant. The award is proper 'whenever it is necessary to teach a wrongdoer that a tort does not pay'.¹⁶⁴ The House of Lords recently made it clear in *Kuddus v. Chief Constable of Leicestershire Constabulary* that the availability of exemplary damages is not confined (as had been previously thought) to causes of action where the remedy had been recognized prior to *Rookes v. Barnard*.¹⁶⁵ Nevertheless, such damages will rarely be awarded.¹⁶⁶

5.5 ADDITIONAL STATUTORY DAMAGES

In relation to copyright and rights in performances¹⁶⁷ as well as unregistered design rights,¹⁶⁸ a court may consider all the circumstances, particularly the flagrancy of the infringement and any benefit accruing to the defendant,¹⁶⁹ and award such additional damages as the justice of the case requires.¹⁷⁰ The nature of additional damages is unclear. In particular, it is unclear whether they are compensatory, exemplary, or restitutionary.¹⁷¹

¹⁶¹ *Claydon Architectural Metalwork v. Higgins & Sons* [1997] FSR 475.

¹⁶² *Work Model Enterprises v. Ecosystem & Clix Interiors* [1996] FSR 356; *Paterson Zochonis v. Merfarken Packaging* [1983] FSR 273, 295 (Robert Goff LJ) (where it was said to be undesirable as a matter of policy to extend the scope of recoverable damages in this way to cover a different proprietary interest). See also *Dyson Appliances v. Hoover (No. 2)* [2001] RPC (27) 544, 572, where Judge Fysh QC would not have granted a claimant damages for sales of non-infringing vacuum cleaners that used the mark VORTEX where the mark VORTEX had earlier been used to refer to vacuum cleaners that did infringe the patent.

¹⁶³ [1964] AC 1129, 1226–7.

¹⁶⁹ *Fulton v. Totes Isotoner* [2003] RPC (27) 499 (para. 116) (flagrancy implies something approaching premeditated commercial amorality rather than just business risk or sharp practice); *Ravenscroft v. Herbert* [1980] RPC 193, 208 (benefit implies that the defendant has reaped a pecuniary advantage in excess of damages they would otherwise have to pay).

¹⁷⁰ CDPA s. 97. This amended and replaced CA 1956, s. 17(3) which had confined such damages to circumstances where 'effective relief would not otherwise be available'.

¹⁷¹ *Redrow Homes v. Bett Bros.* [1998] 1 All ER 385, 391 per Lord Jauncey (no need to decide whether punitive or compensatory); 393 per Lord Clyde (probably aggravated); *Ludlow Music v. Williams* [2002] FSR (57) 868, 891–2 (restitutionary); *Nottinghamshire Healthcare v. News Group* [2002] RPC (49) 962 (paras. 48–51) (can include a restitutionary element but not a punitive one). C. Michalos, 'Copyright and Punishment: The Nature of Additional Damages' [2000] EIPR 470.

However, it has been held that their award is the exception rather than the rule, and a claimant needs to show special circumstances which would justify the imposition of an additional financial penalty.¹⁷² Ideally this should be done by full pleading, and the determination as to whether such damages should be awarded may be dealt with by the trial judge or the inquiry.¹⁷³ However, if there are issues on which evidence has not been given during the trial which might be relevant, the court will probably leave the assessment of additional damages to the inquiry stage.¹⁷⁴ Factors which may be relevant in deciding to award additional damages include: (i) whether the defendant acted deliberately or ‘couldn’t care less’;¹⁷⁵ (ii) whether the defendant was acting on legal advice;¹⁷⁶ (iii) whether the defendant was merely out to make money or had other motives;¹⁷⁷ (iv) whether the claimant and defendant were involved in negotiating a licence;¹⁷⁸ (v) the impact of the defendant’s action on the claimant (e.g. disruption or upset);¹⁷⁹ (vi) whether there are any other mitigating circumstances;¹⁸⁰ and (vii) possibly the means of the defendant.¹⁸¹ Additional damages are not available in addition to an account of profits.¹⁸²

6 ACCOUNT OF PROFITS

In relation to most intellectual property rights,¹⁸³ a claimant may elect for an ‘account of profits’, instead of claiming damages.¹⁸⁴ An accounting of profits is an equitable remedy which deprives the defendant of any profits made as a result of their infringement. Because account of profits has its origins in the Court of Chancery, it is an alternative financial remedy to damages.¹⁸⁵ It cannot be claimed in addition to damages, even where the loss to the claimant and profit to the defendant are unrelated so that when combined the two remedies would not result in double liability.¹⁸⁶ Usually, election is solely a matter for the

Betts Bros.* [1998] 1 *All ER* 385, 393 (*HL*) (explaining requirement on basis that the two remedies are inconsistent); PA s. 61(2). *Cf.* *Watson Laidlaw v. Potts, Cassels & Williamson* (1914) 31 *RPC* 104, 119 (explaining the requirement of an election as a mechanism to prevent overlapping). See, more generally, S. Waterson, ‘Alternative and Cumulative Remedies: What is the Difference?’ [2003] 11 *Restitution L.R.* 7.

claimant, but as the remedy for account of profits is equitable (and therefore discretionary), the court may refuse it.¹⁸⁷ Where there is more than one claimant (e.g. a proprietor and exclusive licensee) or more than one defendant, it has been held that a single election must be made: as regards a single course of action, a claimant may not have an account against one defendant, and damages against another.¹⁸⁸

Traditionally the remedy of account was said to have been conditional on the availability of injunctive relief. However, at least where the remedies for infringement of intellectual property rights are specified by statute, this precondition seems to have been abandoned.¹⁸⁹ In the case of patents, passing off, and trade marks,¹⁹⁰ no order of an account will be made where a defendant acted innocently. That is, no order will be made if at the date of infringement the defendant was not aware and had no reasonable grounds for supposing that the intangible property right existed. For some time it was thought that the decision to elect for an account of profits had to be made at the time of judgment. However, since a claimant would not necessarily have sufficient information on which to base the election, greater flexibility has been introduced so that the election should optimally take place only when the claimant can make an informed decision.¹⁹¹

The main difficulty raised by the remedy of an account concerns the way the profits are calculated. In part this is because it will be very rare for the infringement of the intellectual property right to be the single cause of any profit. It is more likely that only part of the product sold by the defendant will have been infringing. In such cases the court must try to determine what profits have been caused, in a legal sense, by those acts.¹⁹² Under what is called the 'incremental approach', it has been suggested that to determine the profits payable, the courts should compare the profit the defendant made with that which they would have made had they not used the infringing material or process: the 'increment' being the profits attributable to the infringement.¹⁹³ However, this approach has been rejected on a number of occasions in favour of a less refined approach, where the courts simply apportion the total net profits.¹⁹⁴

With the 'apportionment approach', the court first ascertains the total net profits made

¹⁹³ An approach that seemed to have been taken in *Siddell v. Vickers* (1888) 5 RPC 416 and *My Kinda Town v. Soll* [1983] RPC 15.

¹⁹⁴ *Potton v. Yorkclose* [1990] FSR 11 (incremental approach is only suitable where the infringement was in the process of producing the work); *Cala Homes (South) v. Alfred McAlpine Homes East (No. 2)* [1996] FSR 36, 44; *Celanese International v. BP Chemicals* [1999] RPC 203. See T. Moody-Stuart, 'Quantum in Accounts of Profits: The Acid Test' [1999] EIPR 147.

by the defendant from the activity in question.¹⁹⁵ In calculating net profits the court will deduct relevant expenses such as costs, overheads, and taxes¹⁹⁶ from the revenue received in relation to the infringing project. The court then attempts to locate a principled means for dividing up the profits, so as to define the portion attributable to the infringement. This is not a mathematical exercise but one of reasonable approximation.¹⁹⁷ So if the infringing process is one of five steps in the production of a particular product, in the absence of evidence suggesting otherwise, one-fifth of the profits from the sale of the product would be attributed to the infringement. The courts have recently favoured the view that the proportion of profits attributable to the infringing activity might best be determined by looking at the corresponding costs of the process of production.¹⁹⁸ In some, though probably rare, circumstances the court will ask itself what is the importance of the infringing activity or part to the ultimate profits.¹⁹⁹

As with damages, where licences of right are made available the amount to be rendered in an account of profits is not to exceed double the amount which would have been payable by the defendant as a licensee if such a licence on those terms had been granted before the earliest infringement.²⁰⁰

7 TIME LIMITATIONS

Delay in bringing proceedings may lead to an action for infringement being barred, either under statutory provisions or equitable principles. An action for infringement of copyright, patent, or trade mark must be commenced within six years of the wrongful act.²⁰¹ If proceedings are commenced within the requisite period, it will only be struck out for want of prosecution if there is real prejudice to the defendant, as well as inordinate delay.²⁰²

Where a claimant expressly or impliedly represents that the defendant's conduct is non-infringing, they will thereafter be estopped from asserting their right. Where the claimant knows of their right against the defendant and that the defendant mistakenly believes that they are entitled to do what they are doing, yet the claimant stands by without asserting their right, they will be taken to have acquiesced in the wrong.²⁰³

8 CRIMINAL REMEDIES

For the most part, there has been little demand for criminal sanctions to protect intellectual property rights. In part this has been because the rights-holders have preferred the lower standard of proof associated with the civil action.²⁰⁴ Recently, there has been increased interest in the scope of criminal liabilities and sanctions, especially in the case of piracy and counterfeiting.²⁰⁵ Criminal prosecution is attractive because of the publicity that a criminal trial can attract and the deterrent effect of the sanction.²⁰⁶ There are four categories of crime that concern us here. These are: crimes relating copyright and trade mark infringements under the relevant statutes; the common law crime of conspiracy to defraud; the crimes created by the Trade Descriptions Act 1968; and finally special crimes created by the intellectual property statute which are intended to protect the integrity of intellectual property registers.

If a right-owner chooses to pursue a criminal prosecution, they can do so by three routes. First, the right-owner or a representative²⁰⁷ may commence criminal proceedings by 'laying an information' (or complaint) at a magistrates' court,²⁰⁸ on the basis of which the court will issue a summons.²⁰⁹ Alternatively, the claimant may seek the assistance of the police, which may be advantageous because the police may obtain a search warrant and police action carries a significant social stigma. However, if a charge is made by the police, the prosecution must be conducted either by the Department of Public Prosecutions or the Crown Prosecution: it cannot then be handed back to the claimant.²¹⁰ This may be a dangerous tactic, because the Crown Prosecution Service may decide not to prosecute.²¹¹ The right-holder may also enlist the help of administrative authorities, in particular Trading Standards Departments or Local Weights and Measures Authorities. These authorities are obliged to enforce the Trade Descriptions Act and the criminal provisions of the Trade Marks Act. They may soon also be placed under a duty to enforce criminal copyright provisions relating to copyright and performances.²¹² A provision to this effect has been enacted, but it has yet to be brought into force.

²⁰⁴ See Worsdall and Clark, chs. 5 and 6.

²⁰⁵ E.g. Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002.

²⁰⁶ In addition, criminal prosecutions are likely to be quicker than civil actions, and a losing prosecutor may avoid paying costs: Prosecution of Offenders Act 1985, ss. 16–18. TRIPS, Art. 61 requires members to provide for criminal procedures and penalties at least in cases of wilful trade mark counterfeiting and copyright piracy 'on a commercial scale'.

²⁰⁷ E.g. a representative organization such as the Federation Against Copyright Theft (FACT), the Federation Against Software Theft, or a collecting society. See *Thames & Hudson v. DACS* [1995] FSR 153.

²⁰⁸ There should be a separate 'information' for each individual copyright work: *R v. Ward* [1988] *Crim LR* 57.

²⁰⁹ Any citizen may bring a private prosecution: Prosecution of Offences Act 1985, s. 6(1). See G. Harbottle, 'Criminal Remedies for Copyright and Performers' Rights Infringement under the Copyright, Designs and Patents Act 1988' [1994] *Ent LR* 12.

²¹⁰ See *R v. Ealing Justices, ex p. Dixon* [1989] 2 *All ER* 1050 (proceedings begun by police could not be prosecuted by FACT); cf. *R v. Croydon Justices, ex p. Holmberg* (1992) 157 *JP* 277.

²¹¹ The Director of Public Prosecutions is under a duty to prosecute certain offences and may in its discretion prosecute others: Prosecution of Offenders Act 1985, ss. 3, 6(2).

²¹² CDPA s. 107A (introduced by the Criminal Justice and Public Order Act 1994, s. 165). In Northern Ireland, enforcement is the responsibility of the Dept. of Economic Development: CDPA s. 107A(3). A similar enforcement provision exists with respect to performances. No such duty or authority applies in relation to proceedings in Scotland.

8.1 STATUTORY OFFENCES

In order to buttress the civil remedies and to help combat piracy, bootlegging, and counterfeiting, a number of statutory criminal offences have been introduced in relation to copyright, performers' rights, and trade mark law. There is no criminal sanction for the infringement of patents or designs (whether registered or unregistered).

In relation to copyright, criminal liability is not confined to those normally considered to be pirates.²¹³ Rather, criminal infringement covers most acts of primary and secondary infringement,²¹⁴ though in all cases criminal relief requires proof of knowledge or reason to know that copyright was being or would be infringed.²¹⁵ It should be clear, therefore, that a successful criminal prosecution can result either in a fine or imprisonment, and the maximum penalty is ten years' imprisonment.²¹⁶ In sentencing, the courts have indicated that they consider copyright infringement to be an offence of 'real dishonesty' equivalent to cheating or stealing.²¹⁷ Conscious of the prevalence of such offences and the difficulties of detection,²¹⁸ the courts have emphasized that criminal copyright infringement is to be regarded as a very serious matter. Even small-scale infringement, such as the copying of forty-eight videos, has led to custodial sentences.²¹⁹ The greater the numbers of copies made²²⁰ and the greater the value of each copy,²²¹ the more severe the sentence.

Criminal offences also exist to protect performers.²²² These largely correspond to civil infringements and deal with the making, importation, and commercial dealing with illicit

²¹³ *Thames & Hudson v. Designs & Artists Copyright Society* [1995] FSR 153. On pirates see, D. Halbert, 'Intellectual Property Piracy: The narrative construction of deviance' (1997) 10 *International Journal for the Semiotics of Law* 55.

²¹⁴ CDPA ss. 107–10. Note also: CDPA s. 297 (fraudulently receiving programmes), s. 297A (making, etc. unauthorized decoders), s. 296ZB (circumventing technological measures), s. 198 (illicit recordings of performances); Related Rights Reg. 17(1), 17(3) (applying offences to publication right but with modified penalties). There are no criminal offences in relation to the database right.

²¹⁵ CDPA ss. 107–10. The presumptions of authorship, etc. do not apply, and problems of proving copyright ownership may arise: *Musa v. Le Maitre* [1987] FSR 272.

²¹⁶ CDPA s. 107(4), as amended by the Copyright and Trade Marks (Offences and Enforcement) Act 2002. Note that the maximum period for communicating the work to the public is two years: s. 107(2A), (4A) (following SI 2003/2498 r. 26). A maximum of 6 months applies to showing a film, or playing a sound recording in public: CDPA s. 107(3), (5).

²¹⁷ *R v. Carter* [1983] FSR 303; *R v. Ian Dukett* [1998] 2 *Cr App R (S)* 59; *R v. Roy John Gibbons* (1995) 16 *Cr App Rep (S)* 398.

²¹⁸ *R v. Paul Godfrey Kemp* (1995) 16 *Cr App R (S)* 941; *R v. Roy John Gibbons* (1995) 16 *Cr App R (S)* 398.

²¹⁹ *R v. Kemp* (1995) 16 *Cr App Rep (S)* 941 (6 months). See also *R v. Lloyd* [1997] 2 *Cr App R (S)* 151 (6 months); *R v. Gross* [1996] 2 *Cr App R* 189 (9 months); *R v. Gibbons* (1995) 16 *Cr App R (S)* 398 (7 months).

²²⁰ *R v. Lewis* [1997] 1 *Cr App R (S)* 208 (sentence of 12 months for a person who ran a computer bulletin board for 'swapping' computer games. The system contained over 1,000 games, and thus was a significant enterprise); *R v. Alphon Holborough* (7 Nov. 2002) (CA) (3 years imprisonment for conspiracy to defraud based on sale of about 20,000 devices for over £400,000); *R v. Harold Christopher Carey* [1999] 1 *Cr App R (S)* 322 (4 years for sale of 650,000 smart cards); *R v. Maxwell King* [2001] *Cr App R (S)* 28 (150 hours of community service for inciting the supply of 20 devices to enable unauthorised access to cable TV contrary to the Computer Misuse Act 1990, s. 3).

²²¹ *R v. Dukett* [1998] 2 *Cr App R (S)* 59 (27 months' imprisonment for 4 copyright offences of distributing CD-ROMs was justified because, while the numbers sold were relatively small, each CD contained material worth several thousand pounds).

²²² CDPA s. 198. See Arnold, ch. 7.

recordings, without sufficient consent. Sufficient consent is defined in relation to performers' rights as the consent of the performers or owner of the performers' property rights; and in relation to recording rights the consent of the performer or the owner of the recording rights. Criminal liability is also imposed for infringement by making available a work, for example on the Internet, where the act took place in the course of business or 'to such an extent as to affect prejudicially the owner of the making available right'.²²³ Liability depends on proof of knowledge or reason to believe that the recordings are 'illicit'.²²⁴ The penalties are equivalent to those for infringement of copyright: so that a person convicted on indictment may receive a prison sentence of up to ten years.²²⁵

Special criminal provisions also exist to deal with trade mark infringement.²²⁶ In particular, section 92 of the 1994 Trade Marks Act states that a person commits an offence if they apply to goods or their packaging a sign 'identical to, or likely to be mistaken for, a registered trade mark' without the consent of the proprietor and 'with a view to gain for himself or another, or with intent to cause loss to another'.²²⁷ It is now clear that this requires a showing of trade mark use.²²⁸ The section goes on to create further offences that capture parties who deal commercially in goods bearing such a sign or are otherwise involved in ancillary or preliminary acts that enable such exploitation.²²⁹ The requirement that the sign be 'identical to, or likely to be mistaken for, a registered trade mark' uses language that differs from that used in civil infringement.²³⁰ Moreover, it is only an offence to apply the sign (etc.) to goods for which it is registered, or 'if the trade mark has a reputation in the UK, and the use of the sign takes . . . unfair advantage of; or is . . . detrimental to, the distinctive character or repute of the mark'. There is near absolute liability which does not depend on proof of the trader's knowledge of the existence of a registered mark.²³¹

It is a defence to a criminal prosecution to show that the accused 'believed on reasonable grounds that the use of the sign in the manner in which it was used . . . was not an infringement of the registered trade mark'.²³² As Lord Nicholls has explained, '[t]hose who act honestly and reasonably are not to be visited with criminal sanctions'. Thus the defence applies equally to situations where a defendant did not believe the mark was registered, and where a defendant believed a mark was registered but that the act was non-infringing.²³³ It is for the defendant to establish on the balance of probabilities an affirmative case of reasonable belief.²³⁴

²²³ s.198(1A), (5A) (with a possible sentence of 2 years).

²²⁴ On what is acceptable proof, see *Radford v. Kent County Council* (unreported, 18 Feb. 1998) (Queen's Bench Division).

²²⁵ CDPA s. 198(5)—for making, importing, and distributing illicit recordings (as amended by the Copyright, etc, and Trade Marks (Enforcement and Offences) Act 2002); other offences carry a maximum of six months' imprisonment.

²²⁶ *S v. London Borough of Havering* (20 Nov. 2002) (para. 10) (explaining rationale for criminal protection).

²²⁷ On the meaning of 'with a view to' in TMA s 92(1)(c), see *R v. Zaman* [2003] FSR (13) 230.

²²⁸ *R v. Johnstone* [2003] FSR (42) 748.

²²⁹ But not importation: which may be a failure to implement Council Regulation 3295/94 Art. 11. See *Worsdall and Clark*, para. 7.41.

²³⁰ TMA s. 10(2). Note also Infringing Goods Reg. Art. 1(2) referring to an identical sign or one 'which cannot be distinguished in its essential aspects from such trade mark' in the definition of counterfeit goods.

²³¹ *Torbay Council v. Singh* [1999] 2 Cr App R 451, 455.

²³³ *R v. Johnstone* [2003] FSR (42) 748, 763.

²³⁴ *R v. Johnstone* [2003] FSR (42) 748, 764 (para. 46). This is a legal or persuasive burden, but was deemed

The criminal penalties for infringement of trade marks are similar to those for criminal copyright infringement. A summary conviction can result in a custodial sentence of six months or a fine of up to £5,000; a conviction on indictment can result in a fine or imprisonment for up to ten years. The courts have not been swayed by pleas that counterfeiting has not misled anyone,²³⁵ and have repeatedly emphasized that trade mark infringement is ‘properly a criminal offence’ akin to stealing goodwill.²³⁶ Consequently, it has been said that it is important that sentences be serious enough to operate as a deterrent.²³⁷ The punishment will depend largely on the gravity and the scale of the infringement and the persistence of the defendant.²³⁸ As to gravity, the courts have treated the counterfeiting of pharmaceuticals as particularly heinous, because of the potential effects on public safety.²³⁹ As to scale, the Court of Appeal has held three years was an appropriate sentence for applying false trade marks to perfume such as Chanel No. 5, on a scale of 5,000–10,000 bottles per week.²⁴⁰ With regard to persistence, an isolated lapse by a generally honest businessman will merely warrant a fine,²⁴¹ though small-scale dealing in counterfeit watches has been held to warrant a prison sentence of three months.²⁴²

On convicting a defendant either for criminal copyright infringement or trade mark infringement, the courts also have the power to order delivery up of infringing copies or goods and to make certain compensation and confiscation orders.²⁴³ Moreover, criminal proceedings concerning copyright are not subject to any statute of limitations.

8.2 CONSPIRACY TO DEFRAUD

In some cases, the general common law crime of conspiracy to defraud may be used to protect intellectual property rights. This crime will be committed where someone dishonestly tries to obtain an economic advantage without the need to show that anyone was deceived.²⁴⁴ It will only be useful in cases of organized piracy where there is some agreement between the parties. One advantage of bringing a charge of common law conspiracy to defraud is that the courts’ discretion to imprison or fine an adult offender is

by the House of Lords to be a justified derogation from the presumption of innocence contained in ECHR Art. 6(2). Lord Nicholls, at 766, (paras. 52–3) found there to be ‘compelling reasons’ why the defence should place the persuasive burden on the accused.

²³⁵ *R v. Priestly* [1996] 2 Cr App R (S) 144.

²³⁶ *R v. Bhad* [1999] 2 Cr App R (S) 139.

²³⁷ *R v. Adam* [1998] 2 Cr App R (S) 403.

²³⁸ *R v. Kelly* [1996] 1 Cr App R (S) 61 (defendant’ persistence in dishonest conduct justified imprisonment).

²³⁹ *R v. Yanko* [1996] 1 Cr App R (S) 217 (4–5 years for counterfeiting of medicinal products (steroids) under signs SYNTEX and ANAPOLON was not excessive).

²⁴⁰ *R v. Priestly* [1996] 2 Cr App R (S) 144. See also *R v. Ansari, Horner, Ling & Ansari* [2000] Cr App R (S) 94 (3 years).

²⁴¹ *R v. Bhad* [1999] Cr App R (S) 139.

²⁴² *R v. Kelly* [1996] 1 Cr App R (S) 61 (possession of 30 watches).

²⁴³ Powers of Criminal Courts Act 1973, ss. 35, 43 (property deprivation order); Magistrates’ Courts Act 1980, s. 40 (power to award compensation up to £5,000); Criminal Justice Act 1988, as amended by the Proceeds of Crime Act 1995 and Criminal Justice Act 1988 (Confiscation Orders) Order 1995 (SI 1995/3145) (court may make confiscation order under Powers of Criminal Courts Act 1973, s. 43 in relation to offences under TMA s. 92 and CDPA s. 107).

²⁴⁴ *Scott v. Metropolitan Police Commissioner* [1975] AC 819; *R v. Bridgeman & Butt* [1996] FSR 538. In *Scott*, the defendant bribed cinema employees to hand over films so that they could be surreptitiously copied. The House of Lords held that this amounted to a conspiracy to defraud the owners of the copyright.

unlimited.²⁴⁵ With the recent increase in penalties for criminal copyright infringement, the use of conspiracy charges is likely to diminish.

8.3 TRADE DESCRIPTIONS ACT 1968

Another source of criminal sanctions for intellectual property infringement is the 1968 Trade Descriptions Act. Under this Act, a person commits an offence if, in the course of trade or business,²⁴⁶ they apply a false trade description to goods, or supply or offer to supply any goods bearing such a false description.²⁴⁷ Although typical trade descriptions cases cover misdescriptions as to quality, 'trade description' is defined broadly to include, *inter alia*, indications of 'approval by any person or conformity with a type approved by any person' and as to the 'person by whom manufactured, produced, processed or reconditioned'.²⁴⁸ As a result, the application of a trade mark to goods may be a false trade description.²⁴⁹ In some cases, it has been held that a disclaimer to the effect that the goods are 'replicas' or 'counterfeits' is sufficient to negate the initial misdescription.²⁵⁰ There are also certain defences, which can protect innocent distributors of counterfeit goods.²⁵¹

The Trade Descriptions Act is enforced by trading standards officers employed by local authorities (which are under a statutory duty to enforce the Act). The officers are empowered to make test purchases, enter premises, and inspect and seize goods. They do not have power to arrest offenders.²⁵² The authorities also bring proceedings but if prosecution is not thought to be appropriate they have power to issue 'formal cautions'. Offences under the 1968 Act carry a maximum of two years' imprisonment.²⁵³

8.4 PROTECTING REGISTRATION

A number of criminal sanctions exist which aim to maintain the veracity of the registration regimes. In particular, it is an offence to make false entries on the register²⁵⁴ and to make unauthorized claims to rights.²⁵⁵ An interesting variation is contained in section 201

²⁴⁵ See Criminal Law Act 1977, s. 5.

²⁴⁶ Although the courts will infer the existence of a business from numbers of articles in a person's possession (see, e.g. *Elder v. Crowe* [1996] SCCR 38) it is thought the requirement might make it difficult to secure counterfeiters who operate through 'car boot sales'.

²⁴⁷ TDA s. 1. ²⁴⁸ TDA s. 2.

²⁴⁹ TDA s. 34; *Horner v. Kingsley Clothing* [1989] *Crim LR* 911 (sweatshirts bearing Marc O Polo mark did bear false trade description that goods were produced by Marc O Polo). Cf. *R v. Veys* [1993] *FSR* 366 (Manchester United FC merchandise did not signify approval or that manufactured by the club).

²⁵⁰ *Kent County Council v. Price* (unreported, 1993) (89 T-shirts bearing marks were being sold on a market stall, and were accompanied by cards stating they were 'Brand Copies'. In addition the stall-holder told customers orally that the goods were copies. It was held that the Crown Court was justified in reaching the conclusion that there was no false trade description). But cf. *Lewis v. Fuell* [1990] *Crim LR* 658 (oral disclaimer did not nullify trade description of use of ROLEX on watches). See Worsdall and Clark, para. 5–20.

²⁵¹ TDA s. 24; s. 28(3) (that defendant did not know and could not with reasonable diligence have ascertained that the goods did not conform to the description applied to the goods). See Worsdall and Clark, paras. 5.21–22.

²⁵² TDA ss. 27–8.

²⁵³ *R v. Ahmadi* (1993) 15 *Cr App R (S)* 254 (6 months for supplying recycled toner cartridges); *R v. Shekhar Kumar* (1992) 13 *Cr App R (S)* 498 (hirer of 26 counterfeit videos fined £5,000).

²⁵⁴ PA s. 109, TMA s. 59, RDA s. 34.

²⁵⁵ e.g. see PA s. 110, TMA s. 60; Trade Marks (International Registration) Order 1996 (SI 1996/714) r. 18; Community Trade Mark Regulations 1996 (SI 1996/1908) r. 8; RDA s. 35.

of the 1988 Copyright Designs and Patents Act which makes it an offence for a person 'falsely to represent that he is authorised by another to give consent . . . in relation to a performance unless he believes on reasonable grounds that he is so authorised'.

9 REFORM

There are plans for reform of litigation and remedies at the European level. In a follow-up to the 1998 Green Paper on counterfeiting and piracy,²⁵⁶ the Commission launched an 'action plan' to combat piracy in the Community.²⁵⁷ This resulted in a Proposal for a Directive of the European Parliament and of the Council on measures and procedures to ensure the enforcement of intellectual property rights.²⁵⁸ The Proposal notes that different member states have different rules on enforcement and argues that as a consequence some countries are seen as softer than others. The effects of these disparities impact on the Internal Market, and while this is the Commission's chief motivation, it also wants to strengthen remedies to counter piracy. It opted for a Directive as the best means of harmonization. The initial proposal for a Directive cherry picked legal remedies and procedures from a host of different states, and directed member states to make the full panoply available to its judicial authorities.

There is not space here to provide a full review, but it is worth highlighting a few of the provisions in the initial proposal. Much of the proposed Directive will harmonize remedies which are familiar to a British lawyer. For example, Article 8 would require member states to empower the judicial authorities to grant orders akin to *Anton Piller* orders; Article 9 would require member states to confer powers to rightholders to apply for disclosure orders (akin to our *Norwich Pharmacal* orders); Article 10 would require member states to make available interim relief; and Article 11 orders akin to *Mareva* injunctions. Article 13 would require the possible order of disposal of infringing goods 'outside the channels of commerce, without any compensation being due'. Article 14 would require recognition of orders for destruction of goods, and Article 15 injunctive relief (subject to a very strange qualification via Article 16, where pecuniary damages would suffice an injunction can be refused only with the claimant's agreement!). Article 17 dealt with damages and Article 20 criminal provisions. Surprisingly, this was where the proposal was least prescriptive, requiring that criminal liability attach to serious infringements (that is ones which are intentional and for commercial purposes), and result in fines or imprisonment.

However, what was more startling about the initial proposal is the raft of less familiar (but no less far-reaching) remedies that the United Kingdom would be required to adopt.²⁵⁹ Article 12 would require the possibility of a remedy of an order to 'recall, at the infringer's expense' infringing goods. Article 17, on damages, would require member states to offer penal damages at 'double the royalties or fees which would have been due if the infringer had requested authorisation to use the intellectual property right in

²⁵⁷ *Communication from the Commission to the Council, the European Parliament and the Economic and Social Committee* (Brussels, 17 Nov. 2000) COM (2000) 789.

²⁵⁸ COM (2003) 46 final.

²⁵⁹ Article 5 would entitle 'rights management and professional defence bodies' to seek the benefit of the measures and proceedings established by the Directive.

question'. Moreover, a claimant is to be able to claim damages corresponding to actual prejudice plus restitution of profits made by the defendant. Finally, in criminal cases, a raft of new remedies is to be available: closure of the establishment; personal bans on engaging in commercial activities; judicial winding up; a ban on access to public assistance or subsidies; and publication of judicial decisions.

The proposals have been met with divergent reactions. Some rights-holder groups have argued that the proposed Directive does not go far enough.²⁶⁰ However, others have criticized the proposals.²⁶¹ First, it has been questioned whether the proposals are really justified by reference to the need to complete the Internal Market. What evidence is there that pirates and counterfeiters are moving their operations to places where the remedial laws are weaker? Second, it has been questioned whether proposals of the sort presented, which largely involve conferring powers on judicial authorities, can in any way produce harmonization (which surely requires the application of like remedies to like cases). Third, opponents criticize the substance of the proposed Directive, in which matters of human rights (privacy, right to a fair hearing) find little place.²⁶² Without harmonization of these basic rights, procedures, and protections, statements in this Proposed Directive such as that the procedures should be 'fair and equitable' are worryingly vague.

Desiring to have the Directive adopted before the enlargement of the Community in 2004, the European Commission, Parliament and Council approved an amended version of the Directive. The provisions extending who can bring proceedings have been emasculated by the qualification 'as far as is permitted by the applicable law'. The provisions on criminal sanctions have been deleted because of doubts over the Legislature's competence to deal with them in such a Directive. Even the harmonized rules on damages have been made more palatable by the deletion of the proposed penal elements. It seems the amended Directive will be adopted in April or May 2004. Its implementation will require some amendments to British intellectual property law, but nothing as drastic as would have been required had the initial proposal been adopted without amendment.

²⁶⁰ S. Coombes, 'Piracy Report Reveals Startling Figures' [2004] *Ent LR* 28, 29.

²⁶¹ W. Cornish, J. Drexler, R. Hilty, A. Kur, 'Procedure and Remedies for Enforcing IPRS; the EC's proposed Directive' [2003] *EIPR*; J. Drexler, R. Hilty, A. Kur, 'Proposal for a Directive on Measures and Procedures to Ensure the Enforcement of IPRS—A First Statement' (2003) 34 *IIC* 530.

²⁶² The Charter of Fundamental Rights is not, as yet, a legally significant document for the EU (whatever Recital 30 may imply), and while the ECHR might be regarded as part of the general background of legal principles shared by all EU countries its systematic application is only just taking place in the UK after the Human Rights Act.
