## PREFACE

The task of writing the third edition of this book on intellectual property law brought with it a number of challenges. In writing this new edition, we have taken account of a number of important changes. These include the introduction in December 2007 of the European Patent Convention 2000 (EPC 2000), which replaced the 1973 European Patent Convention. Similar changes were also made to British patent law. While the EPC 2000 did not bring about many substantive changes in the law, it did renumber and alter many of the articles. The rules that accompany the EPC 2000 and the 1977 Patents Act were also overhauled. We have taken account, as well, of jurisprudential developments in the other areas where there has been less legislative change. These include the House of Lords' decisions in *Campbell v. MGN*, *Douglas v. Hello*, *Synthon v. Synthlabo*, *Kirin Amgen*, and *Yeda Research and Development* as well as the important Court of Appeal decisions in *Aerotel*, *Nova v. Mazooma*, and the *Da Vinci Code* case. We have also accommodated the growing body of case law at the EPO on morality exclusion to patentability. Additionally, we have taken account of the growing body of case law on trade marks and designs emanating from the Community trade mark and design offices, as well as the jurisprudence of the European Court of Human Rights in *von Hannover* and *Anheuser-Busch*. We have also tried to accommodate the expanding body of critical literature that has developed in the last couple of years (which has served to enrich and enliven many aspects of intellectual property law).

Perhaps the most important challenge relates to the decision as to the material that is included and excluded in an intellectual property law textbook. While there is a large amount of material that most people would expect to see in such a book, there are some areas where there is less agreement. This might be the case, for example, with geographical indications of origin, which we have dealt with in some depth. In part this is a reflection of the economic and cultural importance of this topic. Another reason for including this material is that geographical indications of origin may extend beyond food and agriculture to deal with other subject matter (such as indigenous creations). A related problem concerns the extent to which we should include material from 'outside' intellectual property law: a decision that depends on how we define intellectual property law in the first place.

In writing the third edition we have accumulated a number of debts. In particular we would like to thank Eamon Carew and Julian Moore for their valuable research assistance. We are also indebted to Michael Handler, Stephen Hubicki, Kim Weatherall, and Leanne Wiseman for reading and commenting on chapters. Their comments were invaluable. We would like to thank the staff at OUP (particularly Ruth Ballantyne) for their help and forbearance. We would like to express gratitude to Susi Paz for her valiant efforts at picture research, as well as Shirin Guild, Simon Malynicz, Gaenor Moore, Peter O'Byrne, Hamish Porter, John Swarbrick, Roger Wyand QC and Dirk Visser for either granting permission or helping us locate or obtain permission to use various images. Finally, and most importantly, we should pay tribute to Clair Milligan and Leanne Wiseman for their patience, tolerance, and on-going support.

### 1 INTRODUCTION

Intellectual property law regulates the creation, use, and exploitation of mental or creative labour.<sup>1</sup> The term ‘intellectual property’ has been used for almost one hundred and fifty years to refer to the general area of law that encompasses copyright, patents, designs, and trade marks, as well as a host of related rights.<sup>2</sup> Intellectual property law creates property rights in a wide and diverse range of things from novels, computer programs, paintings, films, television broadcasts, and performances, through to dress designs, pharmaceuticals, genetically modified animals and plants. Intellectual property law also creates rights in the various insignia that are applied to goods and services from FUJITSU for computers to ‘I CAN’T BELIEVE IT’S NOT BUTTER’ for margarine. We are surrounded by and constantly interact with the subject matter of intellectual property law. For example, you are reading a copyright work bearing Oxford University Press’s trade mark. You are probably sitting on a chair protected by design rights and marking the book with a pen the mechanism for which has, at some stage, been patented. Alternatively you may be typing notes into a computer, which no doubt has parts (such as the mouse) which are protected by patents and design rights (in the shape of the product as well as the semiconductor chip topographies inside).

While there are a number of important differences between the various forms of intellectual property, one factor that they share in common is that they establish property protection

<sup>1</sup> According to Art. 2, para. viii, WIPO Convention (1967) ‘Intellectual property’ includes ‘the rights relating to—literary, artistic and scientific works—performances and performing artists, photographs and broadcasts—inventions in all fields of human endeavour—scientific discoveries—industrial designs—trade marks, service marks, and commercial names and designations—protection against unfair competition and all other rights resulting from intellectual activity in the industrial, scientific, literary or artistic fields’.

<sup>2</sup> See Sherman and Bently, 95–100.

over intangible things such as ideas, inventions, signs, and information. While there is a close relationship between intangible property and the tangible objects in which they are embodied, intellectual property rights are distinct and separate from property rights in tangible goods. For example, when a person posts a letter to someone, the personal property in the ink and parchment is transferred to the recipient. If the recipient is pleased with the letter, they can frame it and hang it on the wall; if they are unhappy with the letter they can burn it; or, if it is a love letter, they might store it away in which case it will pass under the recipient's will when they die. Despite the recipient having personal property rights in the letter as a physical object, the sender (as author) retains intellectual property rights in the letter.<sup>3</sup> The author will be the first owner of copyright in the letter, which will enable them to stop the recipient (or anyone else) from copying the letter or from posting it on the internet.

For many, the fact that intellectual property rights are separate from the physical objects in which they are embodied may be counter-intuitive. For example, if someone owns a recipe book, why should they not be able to photocopy a couple of recipes to send to a relative? Similarly, if someone owns an animal or plant, should they not be able to buy and sell seeds from the plant, or offspring of the animals? Or if someone purchases bottles of perfume in Singapore, should they not be able to sell them in the United Kingdom? One of the consequences of intellectual property rights being separate from property rights is that the legal answer to these questions might well be 'no'.<sup>4</sup> As rights over intangibles, intellectual property rights limit what the owners of personal property are able to do with the things which they own.

While the law has long granted property rights in intangibles, the law did not accept 'intellectual property' as a distinct and (relatively) non-controversial form of property until late in the eighteenth century.<sup>5</sup> In granting property status to intangibles the question arose as to how and where the boundary lines of the intangible property were to be determined. That is, once it was accepted that the law should grant property rights over intangibles, the question arose: how was the object of the property to be identified and its limits defined? While in real and personal property law, questions of this nature are answered by reference to the boundary posts and physical markers of the objects in question,<sup>6</sup> one of the defining features of intangible property is that these reference points do not exist. As a result, each area of intellectual property law has been forced to develop its own techniques to define the parameters of the intangible property. These include schemes of deposit and registration techniques of representation (such as the patent specification and claims), statutory rules and legal concepts such as the requirement of sufficiency of disclosure (in patent law),<sup>7</sup> and the originality requirement (in copyright law).<sup>8</sup>

One fact that will become apparent as we look at the various forms of intellectual property law is that they share a similar image of what means to 'create' (or produce), for example, a book,

<sup>3</sup> Commercial practices frequently operate in apparent ignorance of the distinction: see R. Deazley, 'Collecting Photographs, Copyrights and Cash' [2001] *EIPR* 551 (describing, and doubting, the legitimacy of certain claims to copyright ownership of photographs used by the press).

<sup>4</sup> J. Litman, 'Consumers and the Global Copyright Bargain' [1998] *IPQ* 139, 145. ('The copyright statute is a law that most people, at least in the United States, don't believe in, that is, they don't believe copyright law says what it says.')

<sup>5</sup> It was not called intellectual property until midway through the nineteenth century.

<sup>6</sup> And Latin maxims such as *cujus est solum, ejus usque ad coelum et ad inferos* (the owner of soil is presumed to own the airspace above and the matter below as far as the centre of the earth).

<sup>7</sup> Which effectively means that the property claimed must correspond to the invented subject matter: see Ch. 20.

<sup>8</sup> See Sherman and Bently, 25, 153–5, 185–93.

a design for a car, or a new type of pharmaceutical. More specifically, it is commonly assumed that it is an individual, rather than a god, a machine, a force of nature, or a muse that creates ideas, information, and technical principles. It is also assumed that the act of creation occurs when an individual exercises their mental labour to manipulate the underlying raw material.

Another fact that will become clear as we progress through the book is that intellectual property law is highly politicized. On the one hand there are groups who represent existing (or putative) right holders which have tended to argue that the existing laws provide inadequate protection: that, for example, the threshold for patent protection for genetically modified biological material is set too high, that copyright and patent protection need to be explicitly extended to cover multimedia works and software, that trade mark owners are not sufficiently protected against cyber squatters who acquire related domain names, and so on. At the other extreme, there are a range of groups who oppose stronger intellectual property protection: whether they be representatives of the developing world, consumers and users of intellectual property (such as home tapers, digital samplers, appropriation artists, 'netizens', and librarians), defenders of free speech, classical liberal economic theorists, competition lawyers, post-modern theorists, ecologists, or religious groups. While there is a tendency to caricature such debates about intellectual property as battles between good and evil, there are many shades of opinion between these extremes that deploy a diversity of more nuanced arguments.<sup>9</sup>

While anyone reading recent commentaries on music on the internet or the legal status of genetically modified plants and animals might be led to think otherwise, intellectual property law has a long and rich history. Despite this, intellectual property has only recently become part of the typical law school syllabus (although textbooks or treatises have existed since the middle of the nineteenth century). In part, the growing interest in intellectual property may be attributed to the fact that, in the last two decades or so, intellectual property law has come to be widely viewed as an area of primary economic and social importance.

The remainder of this chapter provides an introduction to some topics that impinge upon all areas of intellectual property law. After looking at some of the justifications that have been given for the grant of intellectual property rights, we explain the key international and regional structures that are central to an understanding of British intellectual property law.

## 2 JUSTIFICATIONS FOR INTELLECTUAL PROPERTY

Legal and political philosophers have often debated the status and legitimacy of intellectual property.<sup>10</sup> In so doing, philosophers have typically asked 'why should we grant intellectual property rights?' For philosophers, it is important that this question is answered, since we have a choice as to whether we should grant such rights. It is also important because the decision to grant property rights in intangibles impinges on traders, the press and media, and the public.<sup>11</sup>

<sup>9</sup> See, e.g. A. Thierer and C. Crews, *Copy Fights: The Future of Intellectual Property in the Information Age* (Washington DC: Cato Institute, 2002).

<sup>10</sup> For a useful collection, see A. Moore (ed.), *Intellectual Property: Moral, Legal and International Dilemmas* (1997).

<sup>11</sup> In *A v. B* [2003] QB 195, 205 para. 11 Lord Woolf CJ observed that 'any interference with the press has to be justified'. For emphasis on free speech, see P. Drahos, 'Decentring Communication: The Dark Side of Intellectual Property', in T. Campbell and W. Sidurski (eds.), *Freedom of Communication* (1994); J. Waldron, 'From Authors to Copiers: Individual Rights and Social Values in Intellectual Property' (1993) 68 *Chicago-Kent Law Review* 841. For emphasis on the relationship between intellectual properties, identity and alterity, see R. Coombe, *The Cultural Life of Intellectual Properties: Authorship, Appropriation and the Law* (1998).

Moreover, because the conventional arguments which justify the grant of private property rights in land and tangible resources are often premised on the scarcity or limited availability of such resources, and the impossibility of sharing, it seems especially important to justify the grant of exclusive rights over resources—ideas and information—that are not scarce and can be replicated without any direct detriment to the original possessor of the intangible (who continues to be able to use the idea or information). As we will see, philosophers have not always found intellectual property rights to be justified,<sup>12</sup> and there are now many commentators who doubt that all intellectual property rights are justified in the form they currently take.

The justifications that have been given for intellectual property tend to fall into one of two general categories. First, commentators often call upon ethical and moral arguments to justify intellectual property rights. For example, it is often said that copyright is justified because the law recognizes authors' natural or human rights over the products of their labour.<sup>13</sup> Similarly, trade mark protection is justified insofar as it prevents third parties from becoming unjustly enriched by 'reaping where they have not sown'.

Alternatively, commentators often rely upon instrumental justifications that focus on the fact that intellectual property induces or encourages desirable activities.<sup>14</sup> For example, the patent system is sometimes justified on the basis that it provides inventors with an incentive to invest in research and development of new products,<sup>15</sup> or an incentive to disclose valuable technical information to the public, which would otherwise have remained secret. Similarly, the trade mark system is justified because it encourages traders to manufacture and sell high-quality products. It also encourages them to provide information to the public about those attributes.<sup>16</sup> Instrumental arguments are typically premised on the position that without intellectual property protection there would be under-production of intellectual products. This

<sup>12</sup> A. Plant, 'The Economics of Copyright' (1934) *Economica* 167; S. Breyer, 'The Uneasy Case for Copyright: A Study of Copyright in Books, Photocopies and Computer Programs', 84 *Harvard Law Review* 281; R. Brown, 'Advertising and the Public Interest: The Legal Protection of Trade Symbols' (1948) 57 *Yale Law Journal* 1165 (on trade marks); N. Kinsella, 'Against Intellectual Property' (2002) 15 *Journal of Libertarian Studies* 1. Different theories may work better for different intellectual property rights: L. Paine, 'Trade Secrets and the Justifications of Intellectual Property: A Comment on Hettinger' (1990) 19 *Philosophy & Public Affairs* 247; *Sirena*, Case C-40/70 [1971] ECR 69 (the ECJ admitted that the interests protected by patents merited a higher degree of protection than trade marks.)

<sup>13</sup> Universal Declaration of Human Rights Art. 27(2); Article II-17 (3) of the draft European Constitution (18 Jul. 2003) CONV 850/03; Charter of Fundamental Rights of the European Union, (7 Dec. 2000), Art. 17. For a critical assessment of such claims, see P. Drahos, 'Intellectual Property and Human Rights' [1999] *IPQ* 349. On the theoretical basis of these claims, see J. Hughes, 'The Philosophy of Intellectual Property' (1988) 77 *Georgetown Law Review* 287 (exploring application of Locke and Hegel); A. Moore, *Intellectual Property and Information Control: Philosophical Foundations and Contemporary Issues* (2001) (rejecting utilitarian argument and favouring a version of Lockean theory); W. Gordon, 'Property Right in Self Expression' (1993) 102 *Yale Law Journal* 1533. On desert, see L. Becker, 'Deserving to Own Intellectual Property' (1993) 68 *Chicago-Kent Law Review* 609. The ethical justifications provide an important basis for the claims of indigenous peoples over their traditional knowledge: see, e.g. M. Spence, 'Which Intellectual Property Rights are Trade-Related?', in Francioni, F. and Scovazzi, M. (eds.), *Environment, Human Rights and International Trade* (2001), 279–80 (describing the claims to inclusion of such rights in the TRIPS framework as based on commutative justice).

<sup>14</sup> For an overview, see E. Hettinger, 'Justifying Intellectual Property Rights' (1989) 18 *Philosophy & Public Affairs* 31; F. Machlup and E. Penrose, 'The Patent Controversy in the Nineteenth Century' (1950) *Journal of Economic History* 1, 10 ff; T. Palmer, 'Are Patents and Copyrights Morally Justified?' (1990) 13 *Harvard Journal of Law and Public Policy* and reprinted in Thierer and Crews, *Copy Fights: The Future of Intellectual Property in the Information Age* (Washington DC: Cato Institute, 2002).

<sup>15</sup> For an example, see W. Landes and R. Posner, 'An Economic Analysis of Copyright Law' (1989) 18 *Journal of Legal Studies* 325.

<sup>16</sup> See, e.g. W. Landes and R. Posner, 'The Economics of Trademark Law' (1988) 78 *TM Rep* 267.

is because, while such products might be costly to create, once made available to the public they can often be readily copied. This means that (in the absence of rights giving exclusivity) a creator is likely to be undercut by competitors who have not incurred the costs of creation. The inability of the market to guarantee that an investor in research could recoup its investment is sometimes called 'market failure'.

A set of related, but distinct, economic theory argues that by transforming potentially valuable intangible artefacts into property rights, those artefacts are more likely to be exploited to their optimal extent. Such a theory (in contrast with theories of intellectual property rights as incentives to create or disclose), are not concerned with how the intangibles came into existence, and tend towards the protection of a broader range of subject matter, potentially in perpetuity. This 'neo-classical' economic theory would draw the limit of intellectual property protection at the point where it begins to inhibit efficient uses (that is, where the costs of transacting with a property holder start to prevent uses to which parties would agree were there no such costs).<sup>17</sup>

These justifications are examined in more detail in the introductory sections dealing with copyright, patents, and trade marks.<sup>18</sup>

### 3 INTERNATIONAL INFLUENCES

One of the defining characteristics of intellectual property rights is that they are national or territorial in nature. That is, ordinarily they do not operate outside the national territory where they are granted.<sup>19</sup> The territorial nature of intellectual property rights has long been a problem to rights holders whose works, inventions, and brands are the subject of transnational trade. Throughout the nineteenth century, a number of countries that saw themselves as net exporters of intellectual property began to explore ways of protecting their authors, designers, inventors, and trade mark owners in other jurisdictions. Initially, this was done by way of bilateral treaties, whereby two nations agreed to allow nationals of the other country to claim the protection of their respective laws. Towards the end of the nineteenth century a number of (largely European) countries entered into two multilateral arrangements: the Paris Convention for the Protection of Industrial Property of 1883 and the Berne Convention for the Protection of Literary and Artistic Works of 1886. While the detail of these treaties is left for later chapters, it is worth observing here that both treaties adopted as their central criterion for protection the principle of 'national treatment'. The principle of national treatment is fundamentally a rule of non-discrimination. This provides that a member state of the Paris and Berne Union (country A) must offer the same protection to the nationals of other member states (say country B) as country A gives to its own nationals. The beauty of the principle of national treatment is that it allows countries the autonomy to develop and enforce their own laws,<sup>20</sup> while meeting the demands for international protection. Effectively, national treatment is a mechanism of international protection without harmonization.

<sup>17</sup> Classic texts include: Landes & Posner, *The Economic Structure of Intellectual Property* (2003); E. Kitch, 'The Nature and Function of the Patent System', *Journal of Law & Economics* 265; W. Gordon, 'Fair Use as Market Failure: A Structural and Economic Analysis of the Betamax Case and Its Predecessors' (1982) 82 *Columbia Law Review* 1600. For a general discussion see W. Gordon and R. Watt (eds), *The Economics of Copyright: Developments in Research and Analysis* (2003).

<sup>18</sup> See below Chapters 2, 14 and Part IV.

<sup>19</sup> On the ability of UK courts to decide issues of infringement of foreign intellectual property rights, see Ch. 47.

<sup>20</sup> Although this is usual, it is not a necessary consequence of national treatment: see Ch. 47.

While the principle of national treatment provides rights owners with some protection in other jurisdictions, it only offers a partial solution. One problem that national treatment fails to address is that where country A requires registration as a prerequisite for protection, the right holder in country B must endure the time and cost of registration to protect their creations in country A. Since the end of the nineteenth century one of the goals of international intellectual property law has been to reduce the inconvenience caused by registration. In the copyright field, this was achieved by requiring members of the Berne Union to grant copyright protection without the need for formalities (such as registration). In the field of trade marks, a mechanism was developed under which a national trade mark owner could make an 'international registration' which would take effect almost automatically in designated countries.<sup>21</sup> A similar procedure for international application for patents was not developed until 1970.<sup>22</sup>

The expansion of international arrangements for the protection of intellectual property continued through the twentieth century and into the present one. Over this time, the Paris and Berne Conventions have been revised on a number of occasions, their membership has expanded (particularly as former colonies achieved independence), and a number of new treaties have been formulated. Most of these treaties have been developed and are supervised by the World Intellectual Property Organization (WIPO), which has its headquarters in Geneva.<sup>23</sup> It continues to be the main forum for the development of new intellectual property initiatives at an international level.

Early intellectual property treaties were largely established between countries with a shared interest in recognizing such rights (even if arrangements often implicated colonies which had quite different interests). For a long time, countries such as the USA, the USSR, and the People's Republic of China remained outside the treaty arrangements, often believing that as 'net consumers' of intellectual property, recognition of the rights of foreigners would work against their national economic interests. The persistent refusal of the USA to protect British copyright owners in the nineteenth century was a cause of great annoyance. While more acceptable arrangements were made in the twentieth century, the USA did not join the Berne Convention until 1988.

By the 1980s, the USA had realized that it was a net producer of intellectual property-based goods and, along with the EC and Japan, began to advocate for higher levels of intellectual property protection on a global basis. Frustrated by the difficulties encountered under the traditional treaty arrangements,<sup>24</sup> the developed countries began to employ tactics that were

<sup>21</sup> The Madrid Agreement concerning the International Registration of Marks 1891. (However, given that trade mark procedures remained a matter for national law, this system proved unattractive to some countries, including the UK.)

<sup>22</sup> The Patent Co-operation Treaty. Discussed at pp. 352–3, 373–4 below.

<sup>23</sup> WIPO, a specialized agency of the UN, was established by a treaty signed in Stockholm on 14 July 1967 (replacing 'BIRPI', the body which supervised the Berne and Paris Conventions). See K. Pfanner, 'World Intellectual Property Organization' (1979) 10 *IIC* 1. The most important treaty falling outside WIPO supervision is the Universal Copyright Convention of 1952, which operates under the auspices of UNESCO. K. Idris, 'WIPO and the Rule of Law in a Changing World' (1999) 61 *The Review* 11.

<sup>24</sup> The frustrations of the developed world can be traced back to 1967 with the Stockholm Protocol to the Berne Convention: H. Sacks, 'Crisis in International Copyright: The Protocol Regarding Developing Countries' (1969) *Journal of Business Law* 26. This was compounded by the failure to revise the Paris Convention between 1980 and 1984: K. Beier, 'One Hundred Years of International Cooperation: The Role of the Paris Convention in the Past, Present and Future' (1994) 15 *IIC* 1; Opinion 1/94 (1994) ECR I–5267, 5294. Yet more disappointment followed WIPO's failure to combat copyright piracy: see M. Blakeney, 'Intellectual Property in World Trade' (1995) 3 *International Trade Law Review* 76 (which provides a concise overview of the origins of TRIPS). See also K. Beier and G. Schriker (eds.), *GATT or WIPO?* (1996).

much more aggressive than had hitherto operated at WIPO.<sup>25</sup> More specifically, in the 1980s the US Government started to take advantage of its trading power to threaten trade sanctions against countries that did not offer sufficient protection to American intellectual property rights owners.<sup>26</sup> Frustrated by the experience of WIPO-controlled treaty negotiations, the USA also sought to bring intellectual property protection within the General Agreement on Tariffs and Trade system (GATT).

The GATT was formed after the Second World War with a view to stabilizing and liberalizing trade conditions on a worldwide basis. In 1986, a new round of negotiations begun which included 'Trade-Related Aspects of Intellectual Property Rights' (or TRIPS) on the agenda.<sup>27</sup> When compared with WIPO negotiations, the TRIPS negotiations had a number of advantages. First, they brought intellectual property rights within a broader framework, thus making clear to the parties that, although it may not have been in their interest to accept stronger intellectual property standards, these would be offset by other advantages elsewhere.<sup>28</sup> Second, as non-Governmental Organizations (NGOs) and other organizations are largely excluded from the treaty process, the GATT negotiations are conducted between countries in a more streamlined manner. The negotiations that began in 1986 were concluded in 1993,<sup>29</sup> and became part of the World Trade Organization agreement signed in Marrakesh in April 1994. There are 146 parties to the Agreement.<sup>30</sup>

The TRIPS Agreement covers all the main areas of intellectual property.<sup>31</sup> For the most part, it requires members of the WTO to recognize the existing standards of protection within the Berne and Paris Conventions.<sup>32</sup> It also demands substantive protection for 'neighbouring rights'

<sup>25</sup> See E. Uphoff, *Intellectual Property and US Relations with Indonesia, Malaysia, Singapore and Thailand* (1991). In addition, the US Semiconductor Chip Protection Act 1984 heralded a return of reciprocity, rather than national treatment, as a technique for recognition of foreign entitlements: non-US nationals could not obtain the benefit of the 1984 Act unless similar laws were in place in the claimant's country. Japan and the EC responded by enacting equivalent laws.

<sup>26</sup> Most notoriously, under 'Special 301' of the Omnibus Trade and Competitiveness Act of 1988, *Pub L*, No. 100-418, 102 *Stat* 1176-9 the US Trade Representative conducts an annual audit, placing countries which fail to give adequate and effective protection on a 'watch list', followed (currently in the case of the Ukraine) by sanctions (the withdrawal of trade privileges). For annual reports and current watch lists see <http://www.ustr.gov>. The European Community also applied retaliatory measures against countries with inadequate intellectual property protection, under Council Regulation (EEC) No. 2641/84 of 17 Sept. 1984 on the strengthening of the common commercial policy with regard in particular to protection against illicit commercial practices OJ L 252/1 and Council Regulation (EEC) No. 4257/88 of 19 Dec. 1988 applying generalized tariff preferences for 1989 in respect of certain industrial products originating in developing countries OJ L 375/1.

Spence, 'Which Intellectual Property Rights are Trade-Related?' in Francioni, F. and Scovazzi, M. (eds), *Environment, Human Rights and International Trade* (2001), 279-80 (attempting to locate a principled basis to justify the scope and content of TRIPS and permit its coherent development, and arguing that TRIPS Art. 7 fails to provide such a basis).

<sup>32</sup> TRIPS Art. 2(1), Art. 9.

to copyright,<sup>33</sup> trade marks,<sup>34</sup> geographical indications,<sup>35</sup> designs,<sup>36</sup> patents,<sup>37</sup> topographies of integrated circuits,<sup>38</sup> and undisclosed information.<sup>39</sup> Perhaps the most significant difference between TRIPS and the existing treaties is in the detailed provisions on enforcement of intellectual property rights in Part III. Prior to TRIPS matters of procedure, remedies, and criminal sanctions had largely been left to national law.

TRIPS has had an important impact on the general development of intellectual property law since it came into force on 1 January 1995.<sup>40</sup> As the procedures of enforcement through the International Court of Justice are cumbersome, little could be done where a country ratified but did not comply with an intellectual property treaty. However, as a result of TRIPS being part of the WTO Agreement, if a country fails to bring its laws into line with TRIPS, another member may complain to the WTO and set in motion a so-called 'dispute resolution procedure'.<sup>41</sup> This involves initial consultations between the parties, followed by the establishment of a panel of three experts that produces a report that the parties either accept or appeal. Where a successful complaint has been made against a nation, it is usually required that the relevant laws are amended so as to comply with the TRIPS Agreement,<sup>42</sup> though the possibility exists for the parties to the dispute to reach an alternative arrangement.<sup>43</sup> The consultation procedures have been invoked over twenty times, and—perhaps surprisingly—most of the disputes have arisen between developed countries,<sup>44</sup> rather than between developed and

<sup>33</sup> TRIPS Art. 14.

<sup>34</sup> TRIPS Arts 15–21. For a conclusion that the TRIPS agreement covers trade names, see *EC v. US*, WT/DS 176/AR.

<sup>35</sup> TRIPS Arts 22–4.      <sup>36</sup> TRIPS Arts 25–6.      <sup>37</sup> TRIPS Arts 27–34.

<sup>38</sup> TRIPS Arts 35–8.      <sup>39</sup> TRIPS Art. 39.

<sup>40</sup> Developed countries were granted a transitional period of one year, developing countries five years. The WTO has been called a 'global regulatory ratchet in place for intellectual property, which for the time being is being worked by a technocratic elite': P. Drahos, 'Intellectual Property and Human Rights' [1999] *IPQ* 349, 370. Although TRIPS has had little direct impact on UK law, in general because the standards embodied in the Agreement reflect pre-existing European standards, it has been frequently referred to in cases interpreting UK (and European) legislation: see, e.g. T-1173/97 *IBM/Computer program product* [1999] *OJEP* 609 (referring to TRIPS Art. 27); *S. v. Havering Borough Council* (20 Nov. 2002), para. 11; *Libertel Groep BV v. Benelux MerkenBureau*, Case C-104/01 [2004] *FSR* (4) 65 (EC); *Nova Productions v. Mazooma Games* [2007] *EWCA Civ* 219 (CA).

<sup>41</sup> TRIPS Arts 63–64; Understanding on Rules and Procedures Governing the Settlement of Disputes.

<sup>42</sup> Procedures exist for determining a time-scale, if necessary by way of arbitration.

<sup>43</sup> As occurred in *EC v. US*, WT/DS 160 (where, following Panel Report that US violated TRIPS Art. 13, the EC accepted compensation in lieu of change in US law). It has been observed that agreements of this sort enable those who are rich enough to buy themselves out of compliance with TRIPS standards, and that this, in turn, undermines the moral force of the TRIPS Agreement.

<sup>44</sup> See, e.g. *US v. Japan*, WT/DS 28 (retrospective rights for sound recordings); *US v. Portugal*, WT/DS 37 (patent term); *EC v. Japan*, WT/DS 42 (retrospective rights for sound recordings); *US v. Ireland*, WT/DS 82 (copyright enforcement); *US v. EC/Denmark*, WT/DS 83/1 (enforcement, provisional measures); *US v. Sweden*, WT/DS 86/1 (enforcement, provisional measures); *EC v. Canada*, WT/DS 114 ('regulatory review' and 'stockpiling' exceptions to pharmaceutical patents); *US v. EC/Greece*, WT/DS 124/1 (enforcement of film copyright); *US v. EC/Greece*; WT/DS 125/1 (enforcement of copyright in relation to Greek TV stations); *Canada v. EC*, WT/DS 153 (EC supplementary protection certificates breach TRIPS Art. 27 on non-discrimination between technologies); *EC v. US*, WT/DS 160 (public playing of music); *US v. EC*, WT/DS 174 (geographical indications, beer); *EC v. US*, WT/DS 176 (US legislation on Cuban confiscations); *US v. Canada*, WT/DS 179 (patent term); *Australia v. EC*, WT/DS 290 (geographical indications).

less-developed countries.<sup>45</sup> To date there have been a limited but growing number of disputes,<sup>46</sup> with even fewer appeals.<sup>47</sup> Although there are aspects of the process that might be thought to need improvement,<sup>48</sup> so far the enforcement machinery has been effective without any need to resort to trade sanctions.

Although TRIPS is the single most important development in international intellectual property law of the last thirty years, it does not appear to have permanently eclipsed the role of WIPO. Indeed, not long after the Marrakesh Agreement was signed, two new intellectual property treaties were formulated and agreed through WIPO: the 1996 WIPO Copyright Treaty and the 1996 WIPO Performances and Phonograms Treaty. These reincorporated the Berne-plus elements of TRIPS into an exclusively intellectual property environment, as well as adding new TRIPS-plus elements. Other WIPO initiatives, particularly in relation to traditional knowledge and standardization of patent law, will continue to play a significant role in international intellectual property law (albeit now in tandem with the WTO).

Although the intellectual property instruments that have been developed at the international level have occasionally recognized the peculiar needs of the developing and least-developed countries (most notably in terms of transitional periods),<sup>49</sup> the globalization of intellectual property standards has largely been a process whereby the wish-lists of various developed-world lobby groups are inscribed into public international law.<sup>50</sup> One notable exception to this is found in the 1992 Convention on Biological Diversity (CBD), which recognizes the rights of the (indigenous) peoples who preserve biological resources to share in the

<sup>45</sup> *US v. Pakistan*, WT/DS 36, *US v. India*, WT/DS 50, *EC v. India*, WT/DS 79 (all on protection of pharmaceutical patent rights pending full recognition); *US v. Argentina*, WT/DS 171 (pharmaceutical patents); *US v. Argentina*, WT/DS 196 (on patents/confidential test data); *US v. Brazil*, WT/DS 199 (local working of patents, compulsory licences); *Brazil v. US*, WT/DS 224 (discrimination in patents).

<sup>46</sup> For example see: *Brazil v. US*, WT/DS 224 (re US Patents Code); *Australia v. EC*, WT/DS 290 (Geographical Indications); *US v. EC* WT/DS 174 (Geographical Indications); *US v. India*, WT/DS 50 (holding that India failed to provide a suitable set of procedures regarding filing of patent applications relating to pharmaceuticals, and granting exclusive marketing rights, largely affirmed on appeal); *EC v. India*, WT/DS 79/1 (largely following WT/DS50), *EC v. Canada*, WT/DS 114 (holding that Canadian exception to patent protection allowing 'stock-piling' prior to expiry of patent term breached TRIPS, but finding 'regulatory review' exception compatible with TRIPS Art. 30); *US v. Canada*, WT/DS 170 (Canada's patent term of 17 years from grant violated TRIPS Art. 33, affirmed on appeal); *EC v. US*, WT/DS 160 (holding that 'business' exemption, but not 'home-style' exemption, to liability for public playing of music from broadcasts, violated TRIPS Art. 13); *EC v. US*, WT/DS 176 (US law on Cuban confiscations mostly related to ownership of trade marks, an issue not covered by TRIPS; largely affirmed on appeal).

<sup>47</sup> *US v. India*, WT/DS 50 (overturning Panel's finding on extent of requirements of TRIPS Art. 70.8, but finding India in violation nevertheless); *US v. Canada*, WT/DS 170 (affirming Panel's finding that Canada's patent term based on grant violated TRIPS Art. 33), *EC v. US*, WT/DS 176 (overturning a number of Panel findings, as regards scope of TRIPS, national treatment, and most favoured nation standard, but largely affirming that US law on Cuban confiscations concerned 'ownership' of trade marks, a matter for Member States).

<sup>48</sup> One problem is the possibility of successive actions by different complainants over identical issues, as occurred in *US v. India*, WT/DS50 and *EC v. India*, WT/DS 79. For general discussion of reform see D. Georgiev and K. van der Borgh, *Reform and Development of the WTO Dispute Settlement System* (2006); Y. Taniguchi, A. Yanovich, J. Bohanes (eds), *The WTO in the Twenty-first Century: Dispute Settlement, Negotiations* (2007).

Halbert, 'Intellectual Property Piracy: The Narrative Construction of Deviance' (1997) 10 *International Journal for the Semiotics of Law* 55. R. Sherwood, 'Why a Uniform Intellectual Property System Makes Sense for the World' in M. Wallerstein, M. Moge, R. Schoen (eds.), *Global Dimensions of Intellectual Property Rights in Science and Technology* (1993).

benefits arising from the commercial exploitation thereof.<sup>51</sup> This has prompted further calls for greater protection for traditional intellectual resources of the developing world; notably plant culture, medicinal products, and indigenous folklore.<sup>52</sup> Recent years have also witnessed growing resistance to the wholesale imposition of IP standards on the developing world.<sup>53</sup> Most importantly, the Ministerial declaration at the Doha review of TRIPS in December 2001 acknowledged the primacy of the right to life and health over the protection of intellectual property rights.<sup>54</sup> Moreover, the UK government established a Commission on Intellectual Property Rights which investigated the relationship between intellectual property rights and development, health, and food security, and proposed that such considerations be integrated in national and international policy making.<sup>55</sup> While the acknowledgement of the different positions and interests of developing countries is a welcome development, a number of commentators have observed a parallel trend for further ‘ratcheting up’ of standards through bilateral trade negotiations (particularly between the USA and developing-world countries).<sup>56</sup> The progressive geographical extension of higher standards for intellectual property rights through such trade arrangements raises the spectre of further norm-setting in the multilateral arena. Indeed, ministers at the meeting in Doha agreed to negotiate the establishment of an international registration system for geographical indications of wines and spirits, and to provide higher levels of protection for names of agricultural products.<sup>57</sup> As with many recent proposals to reform multilateral treaties, these proposals have stalled.

One of the notable developments in recent years is the gradual shift away from multilateral treaties as the sole domain in which the aims of the standardization and harmonization of intellectual property are pursued. In addition to the well documented shift (or return) to bilateral treaties (which we discuss below), there have also been moves towards more subtle forms

<sup>55</sup> See Commission on Intellectual Property Rights, *Integrating Intellectual Property Rights and Development Policy* (2002). The Commission was established by the Secretary of State for International Development in 2001 to consider how intellectual property rights regimes could be designed to benefit developing countries, to reduce poverty and hunger, improve health and education, and ensure environmental sustainability. See also, Royal Society, *Keeping Science Open: The Effects of Intellectual Property Policy on the Conduct of Science* (2003) (recommending that developing countries should not be required to implement tranches of legislation until their level of development is such that the benefits of implementation outweigh the disadvantages, though without giving an indication as to how this could be calculated). For a defensive response to these reports, see S. Crespi, ‘Intellectual Property Rights Under Siege’ [2003] *EIPR* 242. See also C. May, ‘Why IPRs are a Global Political Issue’ [2003] *EIPR* 1.

<sup>56</sup> See, e.g. Commission on Intellectual Property Rights, *Integrating Intellectual Property Rights and Development Policy* (2002), 162–4. For a recent example, see Ch. 17 of the US–Chile Trade Agreement, requiring implementation in Chile of standards well above those in TRIPS. An EU–Chile Agreement, while less ambitious, also contains TRIPS-plus obligations: see Council Decision of 18 Nov. 2002 on the signature and provisional application of certain provisions of an Agreement establishing an association between the European Community and its member states, of the one part and the Republic of Chile, of the other part [2002] *OJ L* 352/1, esp. Art. 170. See more generally Peter Yu, ‘Currents and Cross Current in the International Intellectual Property Regime’ (2004) *Loyola LA Law Review* 323, Peter Drahos, ‘BITs and BIPs—Bilateralism in Intellectual Property’ (2001) *Journal of World IP* 791.

<sup>57</sup> See below at Ch. 43.

of harmonization, particularly in the standards applied in the different intellectual property offices throughout the world. As well as the standardization of examination practice (such as is being developed between the American, European, and Japanese patent offices), the fact that the US Patent Office has outsourced some of its patent examination work to patent offices in Australia and South Korea is likely to have a subtle but nonetheless important impact on patent standards.

## 4 REGIONAL INFLUENCES

If an understanding of some of the basic aspects of international intellectual property is important for students of UK intellectual property law, familiarity with European Union law is essential. This is because the majority of developments in UK intellectual property law over the last thirty years have had their origin in the European Community and, since the Maastricht Treaty came into force in 1993, the European Union. Moreover, any future legal developments are likely to stem from, or at least be directed through, the Community/Union.

The European (then ‘Economic’) Community was established by the Treaty of Rome 1957 (hereafter ‘The Treaty’). In its initial conception, the Community focused on the goals of achieving a customs union, a single market, and avoiding the distortion of competition within that market.<sup>58</sup> The original Treaty has been amended and extended by the Treaty on European Union of Maastricht (hereafter ‘TEU’),<sup>59</sup> the Treaty of Amsterdam, and most recently the Treaty of Nice.<sup>60</sup> The Amsterdam Treaty introduced a consolidated version of the Treaty establishing the European Community (hereafter ‘EC’), operative from 1999.<sup>61</sup> Under the Treaty on European Union, the possibility exists for further forms of action at Community level, for example in the field of criminal law.<sup>62</sup> The Charter of Fundamental Rights of the European Union, proclaimed on 7 December 2000, is another possible influence on intellectual property

<sup>58</sup> Art. 2 EC (formerly Art. 2 of the Treaty) sets out the tasks of the Community as being to establish ‘a common market and economic and monetary union’ and ‘by implementing common policies and activities... to promote throughout the Community a harmonious, balanced and sustainable development in economic activities’. Subsequent provisions explain that the Community must prohibit restrictions on the import or export of goods, remove obstacles to the free movement of goods, persons, services, and capital; introduce a system ensuring that competition in the internal market is not distorted. Art. 3 EC (formerly Art. 3 of the Treaty).

<sup>59</sup> The TEU is important for intellectual property rights partly through its provisions recognizing fundamental rights as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms (Art. 6, TEU, formerly Art. F) and on police and judicial cooperation in criminal matters (Arts. 29–30 TEU, formerly Art. K.1).

<sup>60</sup> In force from 2003. Article II–17(3) of the draft European Constitution provides that ‘intellectual property shall be protected’. (18 Jul. 2003) CONV 850/03.

<sup>61</sup> In the latter document, many of the important provisions were renumbered. In this textbook, following the lead of the European Court of Justice, we will refer to Articles of the Treaty of Amsterdam as Art. X EC, and refer to corresponding provisions in parentheses (formerly Art. X of the Treaty). In some cases even this format will be confusing, because some provisions of the initial Treaty of Rome were ‘renumbered’ by amendments in 1992. The most important of these for our purposes is Art. 12 (formerly Art. 6 of the Treaty (as amended), and prior to that Art. 7 of the Treaty) (non-discrimination).

<sup>62</sup> The ‘third’ pillar of the Treaty on European Union (Maastricht) covers ‘justice and home affairs’. But see *Commission v. Council*, Case C–176/03 [2006] *All ER (EC)* 1, [2005] *ECR I–7879* (ECJ) (striking down ‘framework decision’ under TEU because its object was environmental protection, a matter under the EC Treaty). This decision suggests that the EC can adopt criminal provisions under Art 95 EC. See Proposal for a European Parliament and Council Directive on criminal measures aimed at ensuring the enforcement of intellectual property rights [SEC(2005)848]/\* COM/2005/0276 final—COD 2005/0127 \*/ (referring to Art. 95).

within Europe.<sup>63</sup> Despite the rejection by a number of member states of a new ‘Constitutional Treaty’ in 2005, many of the proposals in that treaty have made themselves into a new ‘Reform Treaty’ agreed at Lisbon in 2007.<sup>64</sup> This is currently awaiting ratification by member states. As far as intellectual property law is concerned, the Reform treaty contains a new special head of legislative power relating to Community Intellectual Property Rights.<sup>65</sup>

In its early years, European intervention in British intellectual property law largely came through two avenues. First, the judicial interpretation of the Treaty of Rome produced various doctrines that limited the operation of national intellectual property laws in the Community. In addition, the Commission also played a role in policing various competition law aspects of the Treaty that had an impact on intellectual property law. However, for the last twenty years or so, most of the important interventions have been legislative in nature. In particular, there have been moves to centralize the administration of intellectual property rights and to harmonize national laws. As a result, it is not possible to describe British intellectual property law in any sensible way without constant reference to various European Council and Parliament Directives and Regulations, to the decisions of the Court of Justice and the Court of First Instance (interpreting both the EC Treaty and various directives and regulations),<sup>66</sup> the regulations and decisions of the Commission, as well as various intellectual property-granting offices (such as the Office of Harmonization in the Internal Market and the Community Plant Variety Office). Indeed, a high-profile judicial figure has asked whether national intellectual property rights have become ‘a moribund anachronism’.<sup>67</sup>

#### 4.1 FREE MOVEMENT OF GOODS AND THE INTERNAL MARKET

In the 1970s and 1980s, much of the influence of European Community law on British intellectual property law was a consequence of the interpretation of Articles 28 and 30 EC (formerly Articles 30 and 36 of the Treaty). These two provisions reflect the desire to establish an ‘internal market’, that is a single European market with no internal frontiers or national barriers to trade. To this end, Article 28 EC (formerly Article 30 of the Treaty) prohibits ‘quantitative

<sup>63</sup> See Craig and de Búrca, pp. 379–427. Note the influence of the European Union’s Charter of Fundamental Rights on the Advocate General’s opinion in *Netherlands v. European Parliament and Council*, Case C-377/98 [2001] ECR I-7079 (para. 197). On the legal status of the charter, see A. Menéndez, ‘Chartering Europe: Legal status and Policy Implications of the Charter of Fundamental Rights of the European Union’ (2002) 40 *Journal of Common Market Studies* 471. Presumably, the Charter may obtain legal status when directly referred to by legislation: see, e.g. Council Regulation (EC) No. 1/2003 of 16 Dec. 2002 on the implementation of the rules on competition laid down in Art. 81 and 82 of the Treaty [2003] OJ L 1/1), Recital 37.

<sup>64</sup> Signed 13 December 2007, OJ C 306.

<sup>65</sup> Lisbon Reform Treaty, inserting new Art. 97a mandating action establishing uniform intellectual property rights under the ‘ordinary procedure.’

<sup>66</sup> The Court of Justice has jurisdiction to give preliminary rulings concerning the interpretation of the Treaty. Where any question arises before a court of tribunal of a member state then it may refer the question to the Court under Art. 234 EC (formerly Art. 177(2) of the Treaty). If the court or tribunal is one against whose decision there is no judicial remedy under national law, that court or tribunal must refer the matter to the Court of Justice.

<sup>67</sup> H. Laddie, ‘National IPRS: A Moribund Anachronism in a Federal Europe?’ [2001] *EIPR* 402, 407 (arguing that national intellectual property rights are an anachronism but regretting that they are not yet moribund, and advocating the adoption of Community-wide rights and Community courts, in particular to prevent forum shopping). See also W. Kingston, ‘What Role Now for National Patent Offices?’ [2003] *EIPR* 289.

restrictions' on trade and provisions 'having equivalent effect'.<sup>68</sup> While the use of intellectual property rights to prevent the importing of goods from one Community country into another would be a 'quantitative restriction', Article 30 permits such restrictions where they are necessary to protect industrial and commercial property. This is conditional on the fact that such restrictions do not 'constitute a means of arbitrary discrimination or a disguised restriction on trade between member states'.<sup>69</sup>

While Articles 28 and 30 EC appear to be contradictory, the two provisions were reconciled by permitting the maintenance and use of different national intellectual property laws, while simultaneously limiting the negative effects of the territorial nature of such rights through the so-called 'doctrine of exhaustion'.<sup>70</sup> Initially this was dressed up to appear as if it only invalidated the exercise of intellectual property rights, while preserving their existence (so as not to contravene Article 30).<sup>71</sup> Later, the concept of the existence of the right was refined in terms of its 'specific subject matter'<sup>72</sup> and the 'essential function' of the right. However clothed, the doctrine of exhaustion is best seen as a judicial and political compromise that allows the free movement of goods within the Community. This is despite the fact that national intellectual property rights enable intellectual property rights owners to interfere with the free movement of goods.

In a nutshell, the doctrine of exhaustion prohibits an intellectual property right owner from utilizing their rights to control the resale, import, or export of any goods that have been placed on the market in the Community by or with their consent. For example if A, who has acquired a patent in France and the United Kingdom over a particular machine, sells a machine in France, they cannot use their UK patent rights to prevent importing of the machine into the United Kingdom. This is based on the idea that the 'first sale' gives the intellectual property owner the reward that constitutes the 'specific subject matter'<sup>73</sup> of the right. It is irrelevant that the patentee expressly prohibited the purchaser from reselling the machine or exporting it. This is because it is the consent to first sale that is important.<sup>74</sup> As the doctrine of exhaustion

<sup>68</sup> Art. 49 EC (formerly Art. 59 of the Treaty) makes similar prohibition on restrictions on freedom to provide services.

<sup>69</sup> Note also Art. 295 EC (formerly Art. 222 of the Treaty).

<sup>70</sup> In this context, the national and territorial nature of the rights refers to the essential separateness and distinctiveness of each right—for example, the idea that a copyright owner in France and the UK has two separate French and UK copyrights. It was thought to follow from this that consent to distribution in France could in no way affect the exercise of the separate UK copyright. The doctrine of exhaustion does not change the distinctness of the two national rights (so, for example, each might be assigned separately to different persons). Rather, it limits the scope of each national law where the rights are in common control.

<sup>71</sup> H. Cohen Jehoram, 'The *Ideal Standard* Judgment: An Unheeded Warning' [1999] *IPQ* 114. The distinction between existence and exercise was developed in the context of Art. 81 EC (formerly Art. 85 of the Treaty) in *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-6/65 [1966] *ECR* 299; *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55 and C-7/80 [1981] *ECR* 147.

<sup>72</sup> In *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] *ECR* 1147 (Art. 30 derogations are limited to the purpose 'of safeguarding rights which constitute the specific subject matter of this property').

<sup>73</sup> *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] *ECR* 1147 (defining the specific subject matter of patents and trade marks). Note also the discussion of the concept by Advocate General Gulmann in *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] *ECR* 808 (the 'Magill' Case).

<sup>74</sup> *Dansk Supermarked A/S v. Imerco A/S*, Case C-58/80 [1981] *ECR* 181.

facilitates the ‘parallel importation’ of goods within the Community, it operates to minimize price differentials for identical goods between countries in the Community.<sup>75</sup>

The doctrine of exhaustion of rights only applies to the right to control distribution (resale, export, or import). It does not apply to the right to rent, perform, or show a (copyright) work in public where the ‘specific subject matter’ of the right allows the owner to control each and every use (for it is through charging for each use that the essential function of the right is achieved).<sup>76</sup> The case law of the ECJ has elaborated this general principle in a range of subsequent cases. Rather than rehearse the detailed reasoning, the resulting principles can be summarized as follows:

- (i) The principle of exhaustion applies to all types of intellectual property.<sup>77</sup>
- (ii) Consent by the intellectual property right owner includes the consent of person or persons legally or economically dependent on the proprietor (e.g. a licensee or subsidiary).<sup>78</sup>
- (iii) Consent by the intellectual property right owner does *not* include the consent of a person who is an independent assignee of the right (or who happens to be the holder of a right that once had a ‘common origin’). For example, the owner of copyright in countries A and B may assign the copyright in a particular work in country B. If the new owner of the right places works on the market in country B, the owner of copyright in country A (being independent) has not exhausted their rights in country A.<sup>79</sup> Although assignments of this nature will often be void as illegitimate agreements to divide up the market (and contrary to Article 81 EC),<sup>80</sup> where the assignments are valid the exception to the principle of exhaustion leaves open the possibility that intellectual property rights might restrict the free movement of goods. This can only be rectified by harmonized regimes (such as the Community trade mark) that forbid separate assignments of national rights.<sup>81</sup>
- (iv) National intellectual property rights may be used to prevent the further circulation of pirated, counterfeit, and other illicitly manufactured goods which by definition have not been placed on the market in the Community with the right holder’s consent.

<sup>75</sup> *Deutsche Grammophon GmbH v. Metro GmbH*, Case C-78/70 [1971] ECR 487.

<sup>76</sup> *Warner Bros. v. Christiansen*, Case C-158/86 [1988] ECR 2605 (rental); *Coditel SA v. Cine Vog Films SA* (No. 1), Case C-62/79 [1980] ECR 881 (public performance). For more nuanced interpretations of *Coditel*, see IViR, *Recasting Copyright for the Knowledge Economy* (2006), pp. 21–30, and T. Dreier, ‘The Role of the ECJ for the Development of Copyright in the European Communities’ (2007) 54 *Journal of Copyright Society USA* 183, 198–200.

<sup>77</sup> See, e.g. *Deutsche Grammophon GmbH v. Metro GmbH*, Case C-78/70 [1971] ECR 487; *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55 and Case C-57/80 [1981] ECR 147; *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79.

<sup>78</sup> *Deutsche Grammophon GmbH v. Metro GmbH*, Case C-78/70 [1971] ECR 487 (subsidiary); *Keurkoop BV v. Nancy Kean Gifts BV*, Case C-144/81 [1982] ECR 2853.

<sup>79</sup> *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] 1 ECR I-2789. This reversed *Sirena*, Case C-40/70 [1971] ECR 3711 and *Hag I*, Case C-192/73 [1974] ECR 731.

<sup>80</sup> Whether the agreement is treated as market sharing will depend on the context, the commitments, the intention of the parties, and the consideration provided. See *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-58/64 [1966] ECR 299 (assignment void). cf. *IHT International Heiztechnik v. Ideal-Standard*, Case C-9/93 [1994] 1 ECR I-2789 (assignment had been prompted by the assignor’s financial difficulties); *GSK Services Unlimited v. Commission*, Case T-168/01 [2006] ECR II-2969.

<sup>81</sup> H. Cohen Jehoram, ‘The *Ideal Standard* Judgment: An Unheeded Warning’ [1999] *IPQ* 114.

- (v) Where intellectual property rights subsist in country A but not in country B (where A and B are both in the Community), and goods are legitimately placed on the market by parties unconnected with the right holder in country B, the right owner has not consented to the marketing of those goods and as such will not have exhausted their rights. The right holder can therefore prevent import into and distribution of the goods in country A.<sup>82</sup>
- (vi) Where intellectual property rights subsist in country A but not in country B (where A and B are both in the Community), and goods are legitimately placed on the market by the right holder (or parties connected with the right holder) in country B, the right owner will have been taken to have consented to the marketing of those goods and so have exhausted their rights.<sup>83</sup>
- (vii) Where intellectual property rights subsist in country A but are subject to a compulsory licence (i.e. any person may exploit the intellectual property right on payment of a fee), the rights are *not* exhausted when goods are manufactured under such a licence. Here, the intellectual property right owner will be able to use national laws to prevent imports into country B.<sup>84</sup>
- (viii) Where goods have been marketed in the EC by the intellectual property right holder (or with their consent), the right of the owner of the goods to resell might permit behaviour (such as advertising) that overrides other aspects of the proprietor's intellectual property rights.<sup>85</sup>
- (viii) Where goods have been marketed in the EC by the intellectual property right holder (or with their consent), but the goods have subsequently been altered, a series of specific rules have been developed that define when a resale is legitimate. These are considered later, in the context of trade marks.<sup>86</sup>
- (ix) Where goods have been marketed *outside* the EC by the intellectual property right holder (or with their consent), the principle of exhaustion has no application. In the absence of harmonization, it is for member states (and where there has been harmonization, the ECJ) to determine the effects of such marketing.<sup>87</sup>

Although the doctrine of exhaustion of rights has reduced some of the disruption that national intellectual property laws pose to the internal market, it has not provided a complete solution.

<sup>82</sup> *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79. For the limits of this see *Commission v. French Republic*, Case C-23/99 [2000] ECR I-7653.

<sup>83</sup> *Merck & Co. v. Stephar BV & Exler*, Case C-187/80 [1981] ECR 2063 (marketing of drug in Italy when patent protection was not available); *Merck & Co. v. Primecrown*, Joined Cases C-267/95 and C-268/95 [1996] ECR I-6285 (affirming *Merck v. Stephar*).

<sup>84</sup> *Pharmon v. Hoechst*, Case C-19/84 [1985] ECR 2281 (import into the Netherlands of drugs manufactured under compulsory licence in the UK); *Music Vertrieb Membran GmbH and K-tel International v. GEMA*, Joined Cases C-55/80 and C-57/80 [1981] ECR 147. One problem with this effect is that it may undermine compulsory licences which are intended to induce voluntary licensing arrangements, since the latter (but not the former) will be treated as exhausting the intellectual property owner's rights.

<sup>85</sup> *Parfums Christian Dior SA v. Evora BV*, Case C-337/95 [1997] ECR I-6013; *Norwegian Government v. Astra Norge SA*, E1-98 [1999] 1 CMLR 860.

<sup>86</sup> See below at pp. 945–52.

<sup>87</sup> *EMI Records v. CBS United Kingdom*, Case C-51/75 [1976] ECR 811 (stopping import of copyright works from the US); *Polydor and RSO Records v. Harlequin Record Shops and Simons Records*, Case C-70/80 [1982] ECR 329 (stopping import of copyright works from EFTA countries); *Sebago and Ancienne Maison Dubois et fils SA v. GB-Unic SA*, Case C-173/98 [1999] CMLR 1317. See below at pp. 953–6.

This is because the national intellectual property laws of the member states can vary significantly. Since the principle of exhaustion comes into effect when the right owner consents to goods being placed on the market, that consent will not exist where a third party makes and distributes goods in a country where the right does not exist or has lapsed.<sup>88</sup> It is largely for this reason that the Commission set about to harmonize intellectual property laws in Europe.

#### 4.2 COMPETITION RULES

The second way in which European initiatives have exerted an influence over British intellectual property law is through the rules on competition contained in Articles 81 and 82 EC (formerly Articles 85 and 86 of the Treaty). These provisions are designed to prevent anti-competitive agreements and practices, as well as abusive conduct by monopolies. These provisions impact on intellectual property law in a number of ways. Articles 81 and 82 EC are both couched as prohibitions and thus automatically render void arrangements between ‘undertakings’ which meet the specified criteria (or in the case of Article 81 are not exempted by Article 81(3)).<sup>89</sup> In certain cases, they also provide the basis for an action for damages,<sup>90</sup> a ground for applying to the Commission for a compulsory licence to exploit an intellectual property right,<sup>91</sup> and a defence (a so-called ‘Euro-defence’) to an action for infringement of intellectual property rights.<sup>92</sup> Articles 81 and 82 EC are both enforced by the European Commission, and from May 2004, by national competition authorities (in the United Kingdom, the Office of Fair Trading, and on appeal from a finding of infringement or rejecting a complaint, the Competition Appeal Tribunal).<sup>93</sup> If an undertaking is found to have been acting anti-competitively, the European Commission has the ability to impose serious fines, whether the behaviour was intentional or negligent.<sup>94</sup>

<sup>88</sup> *Bassett v. SACEM*, Case C-402/85 [1987] ECR 1747; *EMI Electrola GmbH v. Patricia Im-und Export*, Case C-341/87 [1989] ECR 79.

<sup>89</sup> Art. 81(2). This might be a significant penalty where a patentee has carefully calculated the terms of the licence, only for it later to be held to be void.

<sup>90</sup> In the UK, either before a Court, or the Competition Appeal Tribunal: Competition Act 1998, s. 47A (introduced by the Enterprise Act 2002, s. 18).

<sup>91</sup> *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808.

<sup>92</sup> Whether and, if so, when abuse can be used as a defence is a controversial issue. See *Chiron Corp. v. Organon Technika* [1993] FSR 324; [1994] FSR 202; *Intel v. Via Technologies* [2003] FSR 574 (para. 115); *Sportswear Spa v. Stonestyle* [2007] (2) 33. Two other penalties are available in serious cases: criminal penalties as regards dishonest ‘horizontal agreements’ (Enterprise Act 2002, Part 6) and disqualification of directors (Enterprise Act 2002, s. 204).

<sup>93</sup> Council Regulation (EC) No. 1/2003 of 16 Dec. 2002 on the implementation of the rules on competition laid down in Art. 81 and 82 of the Treaty [2003] OJ L 1/1, Art. 5. This Regulation sees a ‘modernization’ and decentralization of the enforcement of European competition law, with the European Commission operating as part of a ‘European Competition Network’ of national authorities. In general, the European Commission will enforce cases involving practices or agreements that affect at least three member states.

<sup>94</sup> Council Regulation No. 17/62 of 6 Feb. 1962: First Regulation Implementing Arts. 85 and 86 of the Treaty OJ Sp Ed 1962 No. 204/62 p. 87, reg. 15(2) fines of up to 1 million Euro or 10% of turnover in the preceding business year. Council Regulation No. 1/2003, Art. 7 (empowering the Commission to impose behavioural or structural remedies which are ‘proportionate’ and necessary to bring the infringement to an end); Art. 23(2) (fines of up to 10% of turnover in the preceding business year); Art. 24 (periodic penalties of up to 5% of average daily turnover per day). Competition Act 1998 (giving OFT power to impose penalties of up to 10% turnover for up to 3 years).

Article 81 prohibits ‘all agreements between undertakings...and concerted practices which may affect trade between member states and which have as their object or effect the prevention, restriction or distortion of competition’. As the term ‘undertakings’ has been interpreted liberally, Article 81 potentially applies to agreements concerning the licensing and assignment of intellectual property rights,<sup>95</sup> whether between competitors or parties at different levels of distribution (for example, exclusive distribution agreements). Article 81 goes on to outline certain practices, such as price fixing and market sharing, which will normally be prohibited. In other cases, a conclusion that the agreement has an anti-competitive effect depends on the actual conditions in which the agreement would function, including the economic contexts, the products covered by the agreement, and the structure of the market.<sup>96</sup>

Even though the Treaty is not meant to prejudice the rules in member states governing the system of property ownership,<sup>97</sup> the European Commission and the European Court of Justice have had little hesitation in applying Article 81(1) to agreements involving intellectual property rights. According to the Court, interference with intellectual property rights is justified on the basis that it ‘does not affect the grant of those rights but only limits their exercise to the extent necessary to give effect to the prohibition under [Art. 81]’.<sup>98</sup> Article 81 also applies to institutions and arrangements for the collective administration of rights: a common feature of copyright exploitation.<sup>99</sup>

Given the potential breadth of Article 81, it is important to note that Article 81(3) allows for Article 81(1) to be ‘declared inapplicable’ in a number of circumstances.<sup>100</sup> Such exemptions must ‘contribute to improving the production or distribution of goods or to promoting technical or economic progress, while allowing consumers a fair share of the resulting benefit’. The European Commission has issued a number of such ‘block exemptions’ in the form of Commission Regulations: the most important relate to ‘technology transfer agreements’, ‘R&D agreements’, and ‘vertical agreements’.<sup>101</sup> These block exemptions enable operators to be confident that their agreements are exempt (though the benefit of a block exemption may be withdrawn as regards an individual agreement), and may also be treated as ‘guidelines’ even for agreements that fall outside the scope of the block exemption. In other situations, operators will have to form their own judgements as to whether agreements are exempt. (The

<sup>95</sup> For example, *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-583/64 [1966] ECR 299. (German manufacturer G appointed French company C as exclusive distributor in France. C had registration of GINT mark in France. The ECJ agreed with the Commission’s view that the agreement (including the provision allowing C to register the mark in France) was contrary to Art. 85.) Minor agreements are excluded: Commission Notice on agreements of minor importance which do not fall within the meaning of Art. 81(1) EC [2001] OJ C 368/13 (agreements between firms who are not competitors as falling outside of Art. 81(1) if the market share held by each of the parties does not exceed 15% on any of the relevant markets affected by the agreement). See, generally, Stothers, Ch. 3.

<sup>96</sup> *European Night Services v. Commission*, T-374/94 [1998] ECR II-3141.

<sup>97</sup> Art. 295 EC (formerly Art. 222 of the Treaty).

<sup>98</sup> *Etablissements Consten SARL and Grundig-Verkaufs-GmbH v. EEC Commission*, Case C-58/64 [1966] ECR 299. Cf. *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229.

<sup>99</sup> See below at pp. 274–7, 296–302.

<sup>100</sup> Regulation No. 19/65/EEC.

<sup>101</sup> Commission Regulation (EC) No 772/2004 on the application of Article 81(3) of the Treaty to categories of technology transfer agreements [2004] OJ L 123/11 (27 April 2004) (Technology Transfer Block Exemption: TTBER); VRR; see below at pp. 576–7, 968–9.

possibility for obtaining individual exemption through a notification system, which became an unacceptable administrative burden, has been abolished from May 2004.)<sup>102</sup>

Article 82 EC prohibits an undertaking from abusing a dominant position. This prohibition has primarily affected intellectual property law in two ways. First, it provides a basis for regulating collective organizations that administer intellectual property rights on behalf of owners and which occupy a dominant position in the market. To prevent abuse, organizations in a dominant position are only able to impose obligations and restrictions that are necessary to achieve their legitimate aims.<sup>103</sup> Second, Article 82 provides a remedy for misuse or abuse of intellectual property rights. On one reading of Article 82, it is possible to argue that, as intellectual property rights confer monopoly rights, they necessarily place owners in a dominant position for the market covered by the intellectual property right. On this basis, all activities carried on by intellectual property right holders would need to be scrutinized to ensure that they were not abusive. However, the European Court of Justice has declined to use Article 82 in this way. Instead, the Court has made it clear that ownership of an intellectual property right does not of itself confer dominance in a market. As a consequence, a refusal to license an intellectual property right only constitutes an abuse of a dominant position in exceptional circumstances.<sup>104</sup>

### 4.3 CENTRALIZATION AND HARMONIZATION

While the doctrine of exhaustion has reduced the impact of national intellectual property rights on the completion of the internal market, it has been unable to guarantee that barriers to trade would not arise where national laws differed in terms of substance or duration. Consequently, it soon became apparent that to achieve the holy grail of an internal market, some level of harmonization would be necessary. There are three relevant ways in which the Community is able to harmonize national laws.<sup>105</sup>

<sup>102</sup> Formerly, where there had been no notification to the Commission and an agreement fell outside the scope of a block exemption, the national court could not authorize an agreement: Regulation 17/62 of 6 Feb. 1962: First Regulation Implementing Arts. 85 and 86 of the Treaty *OJ Sp Ed* 1962, No. 204/62, 8, Art. 9. If faced with such a situation the court was forced to seek information from the Commission or refer the case to the ECJ. See Notice on Cooperation between National Courts and the Commission in Applying Arts. 85 and 86 EEC [1993] *OJ C* 39/6. However, the system of prior notification became unworkable, and has now been abolished. From 1 May 2004, Art. 81(3) is directly applicable by the courts of member states: Council Regulation No. 1/2003, Art. 1(2), Art. 6, Recital 4. The Commission may still produce block exemptions, may make decisions withdrawing the benefit of such exemptions in individual cases (Art. 29), or finding that Arts. 81 or 82 are inapplicable to individual cases (Art. 10).

<sup>103</sup> These are discussed below at pp. 298–9. *Re GEMA (No. 1)* [1971] CMLR D35; *Belgische Radio en Televisie (BRT) v. SABAM*, Case C-127/73 [1974] ECR 313.

<sup>104</sup> Thus, it was not an abuse for a designer and manufacturer of automobiles to refuse to license its intellectual property rights to persons wishing to manufacture replacement parts for vehicles. *AB Volvo v. Erik Veng (UK)*, Case 238/87 [1988] ECR 6211; *CICRA v. Regie Nationale des Usines Renault*, Case C-53/87 [1988] ECR 6039. However, an abuse of dominant position was found where a broadcasting organization which generated programme schedules in which copyright was held to subsist, refused to license a newspaper to publish those schedules on a weekly rather than daily basis: *RTE and ITP v. EC Commission*, Joined Cases C-241/91 and C-242/91 [1995] ECR 808 (the ‘Magill’ Case). Subsequent decisions have sought to identify the basis to the Magill Case, but as yet have proved inconclusive: *Oscar Bronner v. Media Print*, Case C-7/97 [1998] ECR I-7791; *Tierce Ladbroke v. Commission*, Case T-504/93 [1997] ECR II-923; *IMS Health Inc v. Commission*, Case T-184/01R [2002] 4 CMLR 58; *NDC Health Corporation and NDC Health GmbH*, Case C-481/01P(R); *Microsoft v. Commission*, Case T-201/04 [2007] 5 CMLR (11) 846.

<sup>105</sup> See generally, Craig and de Búrca, Chs. 3 and 4.

The Council can issue directives for the approximation of the laws of member states ‘as directly affect the establishing and function of the common market’.<sup>106</sup> Under this process a Commission issues a proposal and then consults with the European Parliament and Economic and Social Committee. To be passed, a proposal must be approved unanimously by the Council. The Council is also able to adopt measures (not just directives) ‘for the approximation of the provisions laid down by law, regulation or administrative action in Member States which have as their object the establishment and functioning of the internal market’.<sup>107</sup> Typically, this process begins with a Commission proposal,<sup>108</sup> which must be approved by the Council and the European Parliament. As only a qualified majority of the Council must support the proposal it is not necessary to have the unanimous approval of all the member states. Third, if action by the Community is ‘necessary to attain, in the course of the operation of the common market, one of the objectives of the Community, and this Treaty has not provided the necessary powers, the Council shall, acting unanimously on a proposal from the Commission after consulting the European Parliament, take the appropriate measures’.<sup>109</sup> This provision may only be used where no other provision of the Treaty gives the Community institutions the necessary power to act.<sup>110</sup> It has usually been the basis for the establishment of Community offices.<sup>111</sup>

Community involvement with intellectual property can be divided into four stages. In the 1970s, the focus of attention was on the establishment of a Community patent system, that is a system in which a single patent would be granted for the whole of the Community, enforceable in Community patent courts. To this end, in 1975 the Community Patent Convention was agreed to at an intergovernmental level between the (then nine) member states. However, the political will to introduce the scheme never materialized.<sup>112</sup> In part this was because in 1973 a separate instrument for the granting of patents, the European Patent Convention (EPC), had been agreed to between states (a number of which were then outside the EC). As such, there was little urgency to implement the distinct (though linked) Community patent. Despite attempts to revive the Treaty through a 1989 Protocol in Luxembourg,<sup>113</sup> it is only in the last couple of years that a real will for a single Community patent regime has emerged. This has taken shape in the form of a Commission proposal to introduce a Community patent by way of a Community Regulation.<sup>114</sup> In the meantime, the existence of the European Patent Convention has limited the ability of the Community to harmonize national patent laws.<sup>115</sup> The reason for this is that

<sup>106</sup> Art. 94 EC.

<sup>107</sup> Art. 95 EC (formerly Art. 100A of the Treaty). See *Netherlands v. European Parliament and Council*, Case C-377/98 [2002] OJEO 231; [2002] FSR 575 (EC) paras. 13–29 (Biotech Directive was properly based on Art. 100A).

<sup>108</sup> The Protocol on the Application of the Principles of Subsidiarity and Proportionality states that the Community should legislate only to the extent necessary and that, in general, directives should be preferred to Regulations, and framework directives preferred to detailed measures (para. 6). It also requires the Commission to consult widely before proposing legislation (para. 9). Such consultation is usually by way of issuing Green Papers and holding meetings of ‘interested parties’.

<sup>109</sup> Art. 308 (formerly Art. 235 of the Treaty).

<sup>110</sup> *Commission v. Council*, Case C-45/86 [1987] ECR 1493, para. 13.

<sup>111</sup> e.g. CTMR, Recital 4. In these cases the legislature is not harmonizing, but creating new rights: see Opinion 1/94 [1994] ECR I-5267 (para 59); Case C-377/98 (para 35).

<sup>112</sup> [1976] OJL 17/43.

<sup>113</sup> Luxembourg Agreement of 15 Dec. 1989 relating to Community Patents (1989) OJL 401/1.

<sup>114</sup> See below at p. 351. After the proposal stalled in 2004, it has, once again, been revived.

<sup>115</sup> Paradoxically, the Community’s exclusive competence in the field of civil jurisdiction stands in the way of an inter-governmental agreement to simplify patent litigation: see A Arnall & R Jacob, ‘European Patent Litigation: Out of the Impasse?’ (2007) *EIPR* 209 (noting that member states cannot enter the proposed European

all member states are parties to and therefore bound by the EPC. At the same time, they cannot amend the Convention without the assent of the non-EC participants. In the two fields where Community action has taken place, the proposals have been made to appear as if they leave the EPC untouched. The two Regulations on Supplementary Protection Certificates are worded so as to avoid appearing to be extensions of the patent term.<sup>116</sup> Similarly, the Directive of the European Parliament and Council on the Legal Protection of Biotechnological Inventions, which attempts to harmonize patent law for biological inventions, is presented as a Directive to harmonize the ‘interpretation’ of existing provisions of the EPC, rather than amending or modifying those provisions.

In the 1980s, attention turned to the harmonization of trade mark law. The first part of a two-pronged strategy was to approximate national trade mark laws. This was eventually completed by way of a directive.<sup>117</sup> The second prong saw the establishment of a single office that granted Community trade marks enforceable in the courts of member states designated as Community Trade Mark Courts. The Community trade mark was introduced by way of a Council Regulation, and in 1996 the Office of Harmonization in the Internal Market was established in Alicante, Spain.<sup>118</sup> As the substantive rules of the Regulation are virtually identical to those of the Directive, appeals of decisions of the Office of Harmonization to the OHIM’s Boards of Appeal, the Court of First Instance, and the ECJ offer valuable guidance to national authorities.

At the end of the 1980s, the third wave of harmonization began when the Commission set out to harmonize a number of aspects of copyright law.<sup>119</sup> The need for action arose because the different levels of copyright protection in different member states was seen to constitute a potential barrier to trade.<sup>120</sup> In contrast with the approach taken to trade marks, the Community passed a series of seven Directives each harmonizing particular aspects of copyright law (especially relating to areas of technological change). In so doing, the Commission also aimed to set the standard of protection to be given to creators at a ‘high level’.<sup>121</sup>

The 1990s also witnessed Community intervention in relation to a number of the so-called *sui generis* intellectual property rights. A Community Plant Variety Regulation established a Community Office in Angers, France. In contrast to the strategy in relation to trade marks, no harmonization directive was passed regulating national law.<sup>122</sup> A directive was also passed relating to the harmonization of the law relating to designs which was followed by a Regulation introducing a Community Registered Design (to be issued by the Office of Harmonization in the Internal Market), and a Community Unregistered Design Right.<sup>123</sup> The latter, available since April 2002, is the first Europe-wide, unitary right to be granted automatically, rather than after application to an office.<sup>124</sup>

Patent Litigation Agreement, but suggesting possible revision limiting it to institutional questions to avoid overlap with Directive 2004/48 and Reg 44/2001).

<sup>116</sup> SPC (MP) Reg.; SPC (PPP) Reg. <sup>117</sup> Trade Marks Directive.

<sup>118</sup> See below at pp. 781–2 and Chapter 35, Section 3.

<sup>119</sup> See below at Chapter 2, Section 7.

<sup>120</sup> It was also motivated by the prompting of the ECJ, e.g. in *EMI Electrola GmbH v. Patricia Im-und Export*, Case C–341/87 [1989] ECR 79.

<sup>121</sup> For example, Duration Dir. Recital 10.

<sup>122</sup> CPVR. See below at p. 593.

<sup>123</sup> See below at Section 4 of the Introduction to Part III.

<sup>124</sup> The Commission also put forward a proposal to harmonize the law on utility models which would have required member states to supplement patent protection with a system for issuing a second tier of rights for inventions. This proposal has been abandoned. See Bently and Sherman, 2nd edn., pp. 338–40.

Given the breadth of European intervention in intellectual property law, it is not surprising that a number of challenges have been made to particular European initiatives. In most cases, such challenges must be brought by national governments before the Court of Justice.<sup>125</sup> National courts do not have the power to declare acts of the Community institutions to be invalid.<sup>126</sup> If past experiences are much to go on, it seems that attempts to set aside Community legislation are unlikely to be successful.<sup>127</sup>

#### 4.3.1 Implementation

In the UK, directives have been implemented through the introduction of new statutes (as with the Trade Marks Act 1994), or more commonly by amending existing statutes by way of statutory instrument.<sup>128</sup> When implementing directives, the UK government has tended to rewrite the (often abstract) provisions used in the directives into the language that is more commonly found in British statutes. Unfortunately, such rewriting can make interpretation doubly difficult, and a number of UK judges have made adverse comments about this practice.<sup>129</sup> Unlike the case with directives, regulations do not need to be implemented into national law to be effective.<sup>130</sup> However, where national procedures need to be established (as with the Regulations on Supplementary Protection Certificates), some action must necessarily follow.

If a government fails to implement a directive or implements it partially or tardily, the Commission may commence an action against that member state before the ECJ.<sup>131</sup> Moreover, pending implementation, a number of consequences may follow automatically.<sup>132</sup> First, in accordance with general principles of European law, the provision has a direct effect 'vertically' on state bodies, including rights-granting bodies such as the Patent Office or Trade Marks Registry. This direct effect only applies where the provision is clear and unconditional.<sup>133</sup> Second, the national courts must interpret existing national law in line with

<sup>125</sup> The *locus standi* rules mean that the applicant must normally be a member state or community institution rather than an individual. But in certain circumstances an individual may challenge EC legislation: see *Codorniu SA v. Council*, Case C-309/89 [1994] ECR 1853 (Spanish producers of sparkling wine, also owners of graphic trade mark 'Gran Cremant de Codorniu', successfully objected to regulation restricting legitimate use of 'cremant' to wine made in France or Luxembourg).

<sup>126</sup> *Foto-Frost*, Case C-314/85 [1987] ECR 4199.

<sup>127</sup> *Spain v. The Council of the European Union*, Case C-350/92 [1995] ECR I-1985; *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] ECR I-1953; *Netherlands v. European Parliament and Council*, Case C-377/98 [2002] OJEP 231; [2002] FSR 575 (ECJ).

<sup>128</sup> European Communities Act 1972, s. 1(2).

<sup>129</sup> *Philips Electronics BV v. Remington Consumer Products* [1998] RPC 283; *British Horseracing Board v. William Hill* [2001] 2 CMLR 212, 225; *Apple Computer Inc.'s Design Application* [2002] FSR (38) 602, 603.

<sup>130</sup> Art. 249 EC (formerly Art. 189 of the Treaty).

<sup>131</sup> See, e.g. *Commission v. United Kingdom*, Case C-30/90 [1992] ECR I-829 (UK compulsory licence provisions incompatible with Treaty); and *Commission v. Ireland*, Case C-212/98 [1999] ECR I-8571 (failure of Republic of Ireland to implement the Satellite Directive); *Commission v. Ireland*, Case C-213/98 [2000] ECDR 201 (failure of Republic of Ireland to implement the Rental Directive); *Commission v. Ireland*, Case C-13/00 [2002] ECR I-2943; [2002] 2 CMLR 10 (failure of Ireland to implement the Paris Act of Berne and thus failure to fulfil its obligations under Art. 300(7) EC and Art. 5 of Protocol 28 of the European Economic Area of 2 May 1992).

<sup>132</sup> See Craig and de Búrca, 268-303.

<sup>133</sup> *NV Algemene Transport en Expeditie Onderneming van Gend en Loos v. Nederlandse Administratie der Belastingen*, Case 26/62 [1963] ECR I. These conditions have been whittled away, so the question may well now be whether the provision is capable of being applied by a court to a specific case: *H.J. Banks & Co. v. British Coal Corporation*, Case C-128/92 [1994] ECR I-1209, 1237 (Advocate General Gervens). For an example, see *Mister Long Trade Mark* [1998] RPC 401 (TM Dir. Art. 13).

the unimplemented provisions of a directive: a consequence sometimes referred to as ‘indirect effect’.<sup>134</sup> Where this is not possible, individuals are not able to rely on the unimplemented provisions to bring an action against other private bodies: there is no ‘horizontal’ direct effect. While in these circumstances private individuals may not get the remedy they would have been entitled to if the directive had been implemented, they are not left without a course of action. This is because, if a private individual has suffered damage as a result of a government’s failure to implement a directive, the member state may be required to compensate the individual. For this to occur, the claimant must show that the object of the directive was to create rights, that the scope of rights is identifiable, and that failure to introduce such rights caused the damage.<sup>135</sup>

#### 4.3.2 Interpretation

When interpreting provisions that are intended to give effect to a European directive, not surprisingly the directive will be a critical aid to interpretation. For the uninitiated common lawyer, European directives may seem strange since they are often formulated in relatively vague language. In such cases, the provisions should be interpreted purposively.<sup>136</sup> While the text of the directive remains critical, particular attention should be given to the Recitals at the front of the directive, since these often provide specific examples explaining what a clause is intended to cover.

The material available to assist in the interpretation of a directive will be different from the material that is used to interpret British statutes. Whereas it is possible to look to Hansard when interpreting (purely) UK law, when considering the implementation of a European directive, what is said in the British Parliament will be of little assistance (except possibly as regards the implementation of optional aspects of European legislation).<sup>137</sup> Instead, attention must be paid to the European ‘travaux préparatoires’, such as Commission proposals.<sup>138</sup> In exceptional cases, it may be helpful to refer to the so-called ‘Agreed Statements’, that is to the minutes of what was agreed between the Commission and the Council.<sup>139</sup> Legislation is also to

<sup>134</sup> *Marleasing v. La Comercial Internacional de Alimentacion*, Case C-106/89 [1990] ECR I-4135; *Silhouette International Schmied GmbH & Co. KG v. Hartlauer Handgesellschaft mbH*, Case C-355/96 [1998] ECR I-4799; [1998] CMLR 953, 979; *Webb v. EMO Air Cargo* [1992] 2 All ER 43; [1995] 4 All ER 577.

<sup>135</sup> *Franovich v. Italian Republic*, Joined Cases C-6, and 9/90 [1991] ECR I-5357 (paras. 31–45); *R v. Secretary of State for Transport, ex p. Factortame* [1999] 3 CMLR 597.

<sup>136</sup> *Re Adidas AG*, Case C-223/98 [1999] 3 CMLR 895 (under Community law legislation is to be interpreted by reference to the wording taking into account the context and object of the legislation); *SA Société LTJ Diffusion v. SA Sadas* Case C-291/00 [2003] ECR I-02799 (AG, para. 18); *Ansul v. Ajax*, Case C-40/01 [2003] ECR I-2439, para. 26.

<sup>137</sup> *British Sugar v. Robertson* [1996] RPC 281, 292 (no room for the application of *Pepper v. Hart* or the *White Paper*). Cf. R. Burrell, H. Smith, and A. Coleman, ‘Three-dimensional Trade Marks: Should the Directive be Reshaped?’, in N. Dawson and A. Firth (eds.), *Trade Marks Retrospective: Perspectives in Intellectual Property*, vol. 7 (2000) 137, 160 n. 5.

<sup>138</sup> S. Schönberg and K. Frick, ‘Finishing, Refining, polishing: on the use of *travaux préparatoires* as an aid to the interpretation of Community legislation’ (2003) 28 *ELR* 149, 156–7 (observing that such documents have frequently been used in the interpretation of the regulations creating ‘supplementary protection certificates’ and on the registration of ‘geographical indications.’)

<sup>139</sup> Schönberg and Frick, 164–7. In relation to the TM Dir., see *Libertel Groep BV v. Benelux MerkenBureau*, Case C-104/01 [2004] FSR (4) 65 (para. 25) (ECJ) (noting that the Minutes specifically acknowledge that they should not be used in interpretation); *Heidelberger Bauchemie*, Case C-49/02 [2004] ECR I-6129, paras. 16–17; *Anheuser-Busch*, Case C-245/02 [2004] ECR I-10989 (ECJ, Grand Chamber) (paras. 78–80). For the general proposition that ‘declarations recorded in minutes... cannot be used for the purposes of interpreting a provision of Community law where no reference is made to the content of the declaration in the wording of the

be interpreted in the light of any international agreements to which the Community is a party, including, importantly, the TRIPs Agreement.<sup>140</sup>

When interpreting British law implementing a directive, it may be important to take account of decisions of other European courts.<sup>141</sup> Occasionally decisions given by the courts of member states before the adoption of the directive may provide some indication of what the directive was intended to achieve. Where a directive is meant to correspond to pre-harmonized law in one jurisdiction, the decisions of that jurisdiction may carry special weight.<sup>142</sup> While the judgments of the courts of member states as to the meaning of a directive may be helpful, there is no obligation to follow the interpretation of the first court that happened to do so. Decisions of the courts of all member states are meant to be equally authoritative.

Ultimately, the question of the way a directive (or regulation) is to be interpreted is decided by the ECJ.<sup>143</sup> The Court is assisted by one of the eight Advocates General, who make reasoned submissions in order to assist the Court. The Advocate General's opinion may be a useful interpretative tool to resolve doubts over a decision of the ECJ. In some situations, particularly in relation to appeals from the Boards of Appeal of the OHIM, hearings are initially to the Court of First Instance (from whence appeals can be heard by the ECJ). Given the enormous workload of the ECJ, it seems likely (and desirable) that a specialist chamber of the Court of First Instance (with a limited possibility for further appeals to the ECJ) will be established sometime in the future. Until that time, the final word on the meaning of Community provisions is left to a tribunal that is clearly less than comfortable with intellectual property law.

#### 4.4 EXTERNAL RELATIONS

Another way in which the European Community is involved in intellectual property law is through the role it plays in negotiating and signing treaties. The Community's treaty powers are set out in Article 133 EC (formerly Article 113 of the Treaty), as amended by the Treaty of Nice in 2003.<sup>144</sup> This gives the Community the exclusive power to enter into treaties with respect to common commercial policy, a notion which is expressly extended to the negotiation and

provision in question', see *VAG Sverige AB*, Case C-329/95 [1997] ECR I-2675 (para. 23) and *Antonissen*, Case C-292/89 [1991] ECR I-745, [1991] 2 CMLR 373 (para. 18). For British objections to use of such minutes where they are not public documents, see *Wagamama v. City Centre Restaurants* [1995] FSR 713, 725.

<sup>140</sup> *Heidelberger Bauchemie*, Case C-49/02 [2004] ECR I-6129, paras. 19-21.

<sup>141</sup> For example in *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809, 820-1 reference was made to the Swedish decision in *Ide Line Aktiebolag AG v. Philips Electronics NV* [1997] ETMR 377; and in *Premier Brands UK v. Typhoon Europe* [2000] FSR 767 reference was made to a number of German decisions.

<sup>142</sup> But for them to do so there must be solid evidence of the relevant legislative intention: *Wagamama v. City Centre Restaurants* [1995] FSR 713, 725. In *British Horseracing Board v. William Hill* [2002] ECDR 41 the Court of Appeal acknowledged that a different understanding of the Database Directive from that of Laddie J at first instance prevailed in Scandinavian countries, and noted that the latter's understanding may be significant given the fact that the Directive was said to be influenced by the so-called 'Nordic catalogue rule'. The Court of Appeal therefore referred the case to the ECJ.

<sup>143</sup> One controversial issue concerns when 'interpretation' permitted under Art. 234 EC ends, and determination of facts—a matter for the national courts—begins. See, generally, Craig and de Búrca, 493-4, and in the context of intellectual property, *Arsenal v. Reed*, Case C-206/01 [2002] ECR I-10273; *Arsenal FC plc v. Reed (No. 2)* [2003] 1 CMLR 13; [2003] 1 All ER 137 (CA). On the UK courts' relationship with the ECJ, see B. Trimmer, 'An Increasingly Uneasy Relationship—the English Courts and the European Court of Justice in Trade Mark Disputes', [2008] EIPR 87.

<sup>144</sup> In a case concerning the powers of the Community to enter TRIPs, the European Court of Justice held that Art. 113 (as it then was) did not cover treaties relating to intellectual property rights, except insofar as they related to border measures, Opinion 1/94 [1994] ECR I-5267, 5316. The TRIPs Agreement was entered into by

conclusion of agreements relating to ‘the commercial aspects of intellectual property’. Article 133(7) of the amended text continues to allow the Council, after consulting the Parliament, to enter into treaties relating to intellectual property.<sup>145</sup> To date the Community has entered into a number of intellectual property-related treaties. For example, the Community is now a party to TRIPS, the Madrid Protocol on international registration of trade marks, the WIPO Copyright Treaty and WIPO Performances and Phonograms Treaty,<sup>146</sup> as well as bilateral agreements with Morocco, Tunisia, and Australia for the protection of denominations of wine.<sup>147</sup> In October 2007, the European Commission announced that it would seek the authority of member states to begin negotiations of anti-counterfeiting trade agreements (with, inter alia, the US, Japan, Korea, Mexico, and New Zealand).

Although the United Kingdom has historically adopted a ‘dualist’ approach to international law (meaning that international treaties cannot be relied upon as a source of rights unless they have been implemented into national law), the Community’s participation in international norms presents the possibility of such norms being relied upon directly in certain circumstances. While the European Court of Justice has been willing to interpret European Community legislation in the light of its treaty obligation,<sup>148</sup> the Court has yet to hold that any provisions in international treaties have direct effect.<sup>149</sup>

#### 4.5 EUROPEAN ECONOMIC AREA

To understand intellectual property law in the United Kingdom, it is important to be familiar with the European Economic Area (EEA). This is an initiative entered into between the EC and certain satellite countries who are members of the European Free Trade Area (EFTA). In 1994, the majority of the countries then in EFTA decided to enter into a joint EC–EFTA initiative

the Community (under implied powers) and member states: Opinion 1/94 [1994] *ECR* I-5267. See generally Craig and de Búrca, 169–182.

<sup>145</sup> A. Dashwood, ‘External Relations Provisions of the Amsterdam Treaty’ (1998) 35 *CMLR* 119; P. Pescatore, ‘Opinion 1/94 on Conclusion of the WTO Agreement: Is There an Escape from a Programmed Disaster?’ (1999) 36 *CML Rev* 387.

<sup>146</sup> Council Decision 2000/278 of 16 Apr. 2000, [2000] *OJ L* 89/6; Council Decision of 27 Oct 2003 approving accession of the European Community to the Protocol relating to the Madrid Agreement Concerning the International Registration of Marks [2003] *OJ L* 296/1; Council Decision of 18 Dec 2006 Approving accession to the Geneva Act of the Hague Agreement Concerning the International Registration of Industrial Designs *OJ L* 386/28 (29 Dec 2006).

<sup>147</sup> Under Art. 133. Council Regulation (EEC) No. 482/77 of 8 Mar. 1977 [1977] *OJ L* 65/1; Council Regulation (EEC) No. 3618/87 of 30 Nov. 1987 [1987] *OJ L* 3618/87; Council Decision 89/146/EEC of 12 Dec. 1988 [1989] *OJ L* 56/1.

<sup>148</sup> *Sociedad General de Autores y Editores de Espana (SGAE) v. Rafael Hoteles SL*, Case C–306/05 [2006] *ECR* I-11519, para. 35 (ECJ) (interpreting the Information Society Directive in the light of the Berne Convention). More radically, in *Hermes*, Case C–53/96 [1998] *ECR* I-3603, the ECJ held that it should interpret TRIPS Art. 50(6) to assist the national court to determine its own obligations and ‘to forestall future differences of interpretation’.

<sup>149</sup> *Dior*, Cases C–300/98 and C–392/98 [2000] *ECRI*–11307 (refusing to treat TRIPS Art. 50 as having ‘direct effect’); *Develey Holding v. OHIM*, Case C–238/06P (ECJ 8th ch) (25 Oct 2007) (refusing to treat Art. 6quinquies of Paris as of direct applicability because the Community is not a party to the Convention; and holding that it was not indirectly applicable via TRIPS Art. 2, because TRIPS is not itself to be regarded as directly applicable). *Merck Genericos v. Merck & Co*, Case C–431/05 (11 Sept 2007) (holding that patent term, a subject dealt with in TRIPS, Art. 33, was primarily a matter of national competence, because of the limited harmonization in the patent field to date). Note Council Decision 94/800/EC of 22 Dec. 1994, Recital 11 (‘whereas, by its nature, the Agreement Establishing the WTO, including the Annexes thereto, is not susceptible to being directly invoked in Community or Member State courts.’)

and form the European Economic Area.<sup>150</sup> The countries that joined the EEA from EFTA undertook to join various international conventions,<sup>151</sup> to implement domestic provisions on the free movement of goods (similar to those in Articles 28 and 30 EC), on competition (equivalent to Articles 81 and 82), and a raft of EC directives (including those on trade marks and copyright).<sup>152</sup> These provisions are enforced by the 'EFTA Surveillance Authority' and the 'EFTA Court'.<sup>153</sup> In return, the EC agreed to extend its provisions to the EEA countries. As a result where the term 'Community' or 'common market' are used in provisions falling within the EEA, they refer to the territories of the contracting parties.<sup>154</sup> Moreover, the doctrine of exhaustion and the jurisprudence of the ECJ on Article 28 EC explicitly apply to goods placed on the market in the EEA.<sup>155</sup>

#### 4.5.1 'Europe agreements'

Increasingly, 'European' intellectual property law is having an ever-expanding significance outside the EU. In part, this was promoted by the Treaty of Nice, which paved the way for a number of countries to join the Community on 1 May 2004.<sup>156</sup> In addition, the EC has entered into 'Europe Agreements' with so-called 'candidate countries'.<sup>157</sup> The agreements, which aim to establish a free-trade area, contain a number of provisions in relation to intellectual property.

The EC also operates a number of initiatives and has agreements with many satellite countries.<sup>158</sup> The EC has also entered into 'Euro-Med Association Agreements' with countries of the South and East Mediterranean,<sup>159</sup> 'Partnership and Co-operation Agreements' with countries in Eastern Europe and Central Asia,<sup>160</sup> and 'Stabilisation and Association Agreements' with Balkan states (such as Albania).<sup>161</sup>

Typically these agreements include prohibitions on 'quantitative restriction on imports and measures having equivalent effect', as well as competition provisions similar to Articles 81 and 82 EC. The agreements usually also require the contracting party to apply to become parties to

<sup>150</sup> Although the EFTA countries at one time included Austria, Finland, and Sweden, these have since acceded to the EC. The EFTA countries that are parties to the EEA are: Iceland, Norway, and Liechtenstein. The only remaining EFTA country, Switzerland, refused to join the EEA.

<sup>151</sup> Indeed member states agreed to adhere to these Conventions, and the Court ruled that Ireland had failed to do so in *Commission v. Ireland*, Case C-13/00 (19 Mar 2002) (ECJ).

<sup>152</sup> Agreement on the European Economic Area OJ L 001, 3 Jan. 1994, 3. See esp. Arts 11, 13, 53, 54. Subsequent instruments have updated the content of the obligations.

<sup>153</sup> See <http://www.efta.int>. There have been few decisions of the EFTA court of interest in intellectual property: *Mag Instrument v. California Trading Co.*, E2-97 [1998] 1 CMLR 331 discussed at p. 954 n. 151; *Paranova v. Merck*, E-3/02 [2003] EFTA Court Reports 101. See also E-10/02, *L'Oreal Norge SA v. Smart Club Norge SA* (pending) (requesting an interpretation of Art. 7 of the Trade Marks Directive).

<sup>154</sup> Para. 8 of Protocol 1 on Horizontal Adaptation to the EEA Agreement.

<sup>155</sup> Protocol 28 on Intellectual Property, Art. 2.

<sup>156</sup> Cyprus, The Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, the Slovak Republic, Slovenia. Bulgaria and Romania joined on 1 Jan. 2008.

<sup>157</sup> Turkey, Croatia, and Former Yugoslav Republic of Macedonia. Note the Council Decision of 19 May 2003 on the principles, priorities, and immediate objectives and conditions contained in the Accession Partnership with Turkey, OJ L 145/40.

<sup>158</sup> As part of the so-called 'neighbourhood policy'. See e.g. Communication from the Commission to the European Council and Parliament on Strengthening the Neighbourhood Policy, COM (2006) 726 final.

<sup>159</sup> e.g. Tunisia, Morocco, Israel, Jordan, Egypt, and Syria. The Agreement with Egypt came into force on 1 June 2004. Article 37 and annex VI relate to IPRs, obliging the parties mostly in relation to the international treaties. There are plans for a Euro-Med free trade area by 2010.

<sup>160</sup> These include Armenia, Georgia, Russia, Moldova, and the Ukraine.

<sup>161</sup> EC-Albania Stabilization and Association Agreement, 22 May 2006, esp Arts 70, 73 and Annex V.

(or if already parties, to affirm their commitment to) various intellectual property treaties such as the European Patent Convention, the Union for the Protection of Plant Varieties, the Rome Convention, the Madrid Protocol, the Berne and Paris Conventions, the Madrid Agreement, and the Patent Cooperation Treaty. They also require states to implement the Community 'acquis' so as to approximate their laws on intellectual property with those of the EC. The implementation of these standards is monitored, and the Commission reports have frequently emphasized the importance of implementation both in law and in practice, in particular insisting on training law enforcement bodies and the judiciary on intellectual property matters.

#### 4.6 NON-EUROPEAN UNION REGIONAL INITIATIVES

Finally, it is important to note that there are a number of European initiatives that are independent of the European Community/Union which relate to intellectual property law. One of the most important is the 1973 European Patent Convention (EPC). The EPC established a single central office for the granting of bundles of national patents in Munich. The EPC is a treaty independent of the European Union, and includes all the member states of the EU, the EEA, as well as a number of non-EEA countries such as Switzerland and Turkey.<sup>162</sup>

The Council of Europe, a political organization founded in 1949 comprising 45 European countries, has also had an impact on intellectual property. While the Council of Europe is largely concerned with the promotion of democracy and human rights, it has undertaken a number of initiatives in the field of intellectual property. The Council supervises certain treaties, including treaties on patents (relating to formalities required for patents, international classification of patents, and the Strasbourg Treaty on the Unification of certain points of substantive law on patents for inventions) and copyright (in particular requiring recognition of the rights of broadcasting organizations), and the protection of authors where their works are broadcast across frontiers.<sup>163</sup> The Council also makes certain recommendations to governments (for example on copyright law and reprography),<sup>164</sup> as well as being a forum for discussion.

The European Convention on Human Rights, a treaty signed in 1950 under the aegis of the Council of Europe, requires contracting parties to recognize certain rights such as fair trial (Article 6), privacy (Article 8), freedom of expression (Article 10), and property (Article 1 of the first Protocol). Alleged failures to comply with the Convention are justiciable before the European Court of Human Rights (Article 19). Until recently the impact of the Convention on British intellectual property law was limited to cases of breach of confidence and remedies. However, with the coming into force of the Human Rights Act 1998 in October 2000, arguments based on the Convention have become more frequent and the jurisprudence of the

<sup>162</sup> See p. 341 n. 29.

<sup>163</sup> For example the Convention on the Unification of Certain Points of Substantive Law on Patents for Inventions (1963) ETS No. 47 (the UK ratified the Convention which came into force in 1980); European Agreement on the Protection of Television Broadcasts (1960) ETS No. 34 and Protocol (1965) ETS No. 54, Additional Protocol (1974) ETS No. 81, and Additional Protocol (1985) ETS No. 113 (the UK ratified this Treaty in 1965); European Convention on Transfrontier Broadcasting (1989) ETS No. 132 (which the UK ratified in 1993) (defining, e.g. the act of broadcasting). With the stalling of the proposed WIPO Broadcasting Treaty, attention has turned in 2008 to the possibility of formulating a treaty within this forum.

<sup>164</sup> Recommendation no. R(90)11 of the Committee of Ministers to Member States on Principles Relating to Copyright Law Questions in the Field of Reprography (adopted by the Committee of Ministers on 25 Apr. 1990 at the 438th meeting of the Ministers' Deputies).

Court more relevant.<sup>165</sup> The Convention has, however, had some impact on the law of countries with more expansive intellectual property rights than those of the UK, particularly countries with broad laws against ‘unfair’ competition.<sup>166</sup>

One recent development is likely to prove particularly significant: in *Anheuser-Busch Inc. v Portugal*,<sup>167</sup> the Grand Chamber of the European Court of Human Rights held that a trade mark application was a ‘possession’ for the purposes of Article 1 of the first Protocol. The question was whether the Convention had been breached when the Portuguese Supreme Court held that Anheuser-Busch’s trade mark application for BUDWEISER, made in 1981, was invalid on the basis of a Bilateral Treaty entered between Portugal and the Czech Republic in 1986, that is, five years *after* the trade mark application had been made. Having held that the application was a ‘possession’,<sup>168</sup> the majority found there was no undue deprivation, because the Supreme Court had been applying domestic law between parties in circumstances where the precise intent of the domestic law was in issue. This was not something that the Court felt was its place to judge. A much clearer and persuasive dissent (from Judges Caflisch and Cabral Barreto) carries the majority holding that a trade mark application is a possession to its logical conclusion: the 1986 Bilateral treaty, found to be retrospective, deprived Anheuser-Busch of its property and was not undertaken in the public interest or with compensation.<sup>169</sup> As the status of intellectual property rights as protected property is confirmed, policy makers will at the very least need to acquaint themselves with ECHR jurisprudence on when a ‘deprivation’ occurs, and in what circumstances such a taking is legitimate.<sup>170</sup>

<sup>165</sup> For arguments based on ECHR, Art. 6(2) (presumption of innocence), see the discussion of criminal liability for trade mark infringement in *R v. Johnstone* [2003] FSR (42) 748; for arguments based on ECHR, Art. 8 (privacy) see chs. 44–6; for arguments based on ECHR, Art. 10 (free expression), see, e.g. *Levi’s v. Tesco* [2002] 3 CMLR 11; [2002] ETMR (95) 1153 (rejecting an argument for international exhaustion), *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368 (public interest defence to copyright); [2002] RPC 235; *Confetti Records v. Warner Music UK* [2003] EMLR (35) 790 (para. 161) (rejecting argument that ECHR Art. 10 requires a narrow reading of moral rights); *FCUK Trade Mark* [2007] RPC 1 (Arnold QC) (relevance of Art. 10 in assessment of the ‘morality’ objection to trade mark registration).

<sup>166</sup> *Hertel v. Switzerland*, Case 25181/94 (1999) 28 EHRR 534 (ECtHR) (application of Swiss unfair competition law to publication of research on health impact of microwaves breached ECHR, Art. 10); *Krone Verlag GmbH & Co Kg v. Austria*, Case 39069/97 (2006) 42 EHRR (28) 578 (application of Austrian unfair competition law against comparative advertiser breached ECHR, Art. 10).

<sup>167</sup> Application No 73049/01 (11 Jan 2007), [2007] EHRR (36) 830, [2007] ETMR (24) 343.

<sup>168</sup> [2007] EHRR (36) 830 (para 78), [2007] ETMR (24) 343, 364–5.

<sup>169</sup> [2007] ETMR (24) 343, 369–71.

<sup>170</sup> In general, a ‘deprivation’ must be lawful, in the public interest and strike a fair balance between the needs of the state and the rights of an individual. The latter balance, in all but exceptional cases, is only achieved by the payment of compensation.

### 1 INTRODUCTION

In British legal parlance, 'copyright' is the term used to describe the area of intellectual property law that regulates the creation and use that is made of a range of cultural goods such as books, songs, films, and computer programs.<sup>1</sup> The intangible property protected by copyright law is distinctive in that it arises automatically and usually for the benefit of the author.<sup>2</sup> Various rights are conferred on the owner of copyright, including the right to copy the work and the right to perform the work in public.<sup>3</sup> ('Work' is the term used in British law to describe the various objects that are protected by copyright.) The rights vested in the owner are limited, notably in that they are not infringed when a person copies or performs a work that they have created themselves. The rights given to a copyright owner last for a considerable time: in many cases for 70 years after the death of the author of the work.<sup>4</sup> The basic framework of British copyright law is largely to be found in the Copyright, Designs and Patents Act 1988,<sup>5</sup> as amended, most significantly to implement European Community directives.

This chapter provides an outline of certain background matters that will make the following chapters easier to follow. We begin by looking at some of the concepts that we will encounter in the following chapters. We then turn to look at the history and functions of copyright law, as well as international and European influences on British copyright law.

<sup>1</sup> For an analysis of various other perspectives on copyright, see P. Goldstein, 'Copyright' (1990–1) 38 *Journal of the Copyright Society of the USA* 109.

<sup>2</sup> See Ch. 5.      <sup>3</sup> See Ch. 6.      <sup>4</sup> See Ch. 7.

<sup>5</sup> Certain related rights, such as the 'publication right' and the 'database right', are found in statutory instruments.

## 2 'COPYRIGHT' AND 'DROIT D'AUTEUR'

Many factors shape the way we view British copyright law. To some, it may appear as an unnecessary restriction on their ability to express themselves. For others copyright law provides the means to protect investment and labour. More generally, the image we have of British copyright law is shaped by the way we think it relates to other legal regimes. On the one hand, British copyright law is often seen as a gift that was bequeathed to colonial countries. At the same time British copyright law (and its 'unruly colonial children') is seen to be distinct from the 'copyright law' that exists in other countries. Most famously, common law copyright is said to be distinct from and in many ways in opposition to the civil law *droit d'auteur* system (of France). While there is now a growing body of literature that questions the accuracy of these portrayals,<sup>6</sup> nonetheless these caricatures have had and undoubtedly will continue to have an impact on the way the law develops.

The common law copyright model is said to be primarily concerned with encouraging the production of new works.<sup>7</sup> This is reflected in copyright law's emphasis on economic right, such as the right to produce copies. Another factor that is held to typify the copyright model is its relative indifference to authors. This is said to be reflected in the fact that British law presumes that an employer is the first owner of works made by an employee, the paucity of legal restrictions on alienability, and the limited and half-hearted recognition of moral rights.<sup>8</sup> In contrast, the civil law *droit d'auteur* model is said to be more concerned with the natural rights of authors in their creations. This is reflected in the fact that the civil law model not only aims to secure the author's economic interests, but also aims to protect works against uses which are prejudicial to an author's spiritual interests (in particular through moral rights).

## 3 AUTHOR'S RIGHTS AND NEIGHBOURING RIGHTS

While British copyright law abandoned the formal distinction between different categories of work with the passage of the 1988 Act, nonetheless an informal distinction is still drawn between two general categories of subject matter. More especially, a distinction is drawn between what are known as 'authorial works' and 'entrepreneurial works' (or 'neighbouring rights'). This reflects the distinction drawn in many legal systems between 'author's rights' and 'neighbouring rights'. Author's rights refer to works created by 'authors' such as books, plays, music, art, and films. In contrast, neighbouring rights (which are sometimes called 'related rights' or '*droits voisins*') refer to 'works' created by 'entrepreneurs', such as sound recordings, broadcasts, cable programmes, and the typographical format of published editions. The rationale for differentiating between these two categories of subject matter lies in the facts that neighbouring (or entrepreneurial) rights are typically derivative, in the sense that they use or develop existing authorial works; that they are a product of technical and organizational skill rather than authorial skill; and that the rights are initially given, not to the human creator, but

to the body or person that was financially and organizationally responsible for the production of the material.<sup>9</sup>

## 4 HISTORY

The history of copyright is a complex, subtle, and rich subject. Depending on one's interest it is possible to highlight many different themes and trends. For example, a history of copyright could look at the gradual expansion of the subject matter and the rights granted to owners, the role that copyright law plays in shaping the notion of authorship, or the impact that copyright has on particular cultural practices. Most histories of British copyright law tend to focus on the origins of copyright, which are usually traced back to the 1710 Statute of Anne, or occasionally to the practices developed in the sixteenth century to regulate the book trade.<sup>10</sup> In this section we limit ourselves to a brief chronological account of some of the more important political and legal events that frame and shape the current law.

While aspects of copyright law have a long history, copyright law did not take on its modern meaning as a discrete area of law that grants rights in works of literature and art until at least the mid-nineteenth century.<sup>11</sup> Moreover, it was not until the passage of the 1911 Copyright Act that copyright law was rationalized and codified into the type of modern, abstract, and forward-looking statute that concerns us here. The 1911 Act was also important insofar as it abolished common law copyright in unpublished works and also repealed the plethora of subject-specific statutes that existed at the time. In their place the 1911 Act established a single code which conferred copyright protection on a number of works (whether published or not, and including many previously unprotectable works such as works of architecture, sound recordings, and films).<sup>12</sup> In most cases, protection lasted for 50 years after the death of the author of the work.<sup>13</sup> At the same time, the 1911 Act abandoned all requirements concerning formalities (in particular the need for registration with the Stationers' Company). Infringement was also expanded to include translations and adaptation as well as reproductions 'in a material form'.<sup>14</sup>

<sup>9</sup> For a general discussion see W. Grosheide, 'Paradigms in Copyright Law' in Sherman and Strowel, 223 (identifying two extremes thus: 'one is the view that traditional copyright law must be purified and updated; the other is the notion that copyright is an integral part of intellectual property law, and that a more liberal and unorthodox approach to copyright law should be adopted').

<sup>11</sup> See Sherman and Bently, 111–28; B. Sherman, 'Remembering and Forgetting: The Birth of Modern Copyright Law' (1995) 10 *IPJ* 1.

<sup>12</sup> Films were protected as 'photographs', without prejudice to copyright in the dramatic works embodied in films. Sound recordings were deemed to be musical works: Copyright Act (CA) 1911 s. 19.

<sup>13</sup> Literary, dramatic, musical, and artistic works other than photographs, which received a term of 50 years from making.

<sup>14</sup> CA 1911 s. 1(2).

Following a review by the Gregory Committee in 1952, the 1911 Copyright Act was replaced by the 1956 Copyright Act.<sup>15</sup> This extended the scope of copyright to encompass sound and television broadcasts, as well as typographical formats of published editions. Along with sound recordings and films (which were now recognized as having copyright in their own right), these new rights were placed in a special category in Part II of the 1956 Act.<sup>16</sup> The 1956 Act was amended on a number of occasions, primarily to take account of new technologies such as cable television and computer software.<sup>17</sup> A further periodic review by the Whitford Committee in 1977 proposed a general revision of the 1956 Act.<sup>18</sup> After further negotiations and refinement, these proposals led to the passage of the Copyright, Designs and Patents Act 1988.<sup>19</sup>

The 1988 Act substantially reorganized the statutory regime. In particular, it removed the distinction between 'Part I works' and 'Part II subject matter'. This was achieved by treating films, sound recordings, and broadcasts (along with the authorial works) within a single general category of 'copyright works'. In many cases, these changes were not intended to alter the substantive law.<sup>20</sup> However, the rights given to copyright owners were expanded significantly (notably by the introduction of a distribution right and a rental right). At the same time, the Copyright Tribunal was established to ensure that copyright owners did not exercise their rights in an anti-competitive manner.<sup>21</sup> The 1988 Act also introduced a new category of non-assignable 'moral rights' for authors.<sup>22</sup> Performers' rights, which were formerly dealt with under special Acts, were also included within the 1988 Act (where they are protected separately under Part II).<sup>23</sup> The 1988 Act also created a new automatic form of short-term protection for designs, known as the unregistered design right.<sup>24</sup>

Although the 1988 Act forms the basis of contemporary copyright law, it has been amended on a number of occasions since it came into force in August 1989. In most cases, these amendments were made to give effect to obligations imposed by European Community directives. As we will see, while the Community has stopped short of a wholesale approximation of copyright law, a series of specific interventions has altered the contents of the 1988 Act to such an extent that a recodification of national law would be desirable. In particular, two new rights related to copyright, which are currently found in statutory instruments (namely the database right and the publication right) could usefully be incorporated into the statutory regime, as could the meaning of 'information society service provider' (for which one has to consult an EC Directive and its annex).

## 5 JUSTIFICATIONS

The existence of copyright in a particular work restricts the uses that can be made of the work. For example, a person who purchases a book in which copyright subsists cannot legally photocopy the book. Similarly a person who buys a protected CD cannot legally rip the recordings

<sup>24</sup> See Ch. 30.

from that CD for a friend to use on her mp3 player. As well as being inconvenient and/or expensive, copyright has the potential to inhibit the public's ability to communicate, to develop ideas, and produce new works. For example, in order for a person to parody a song it will normally be necessary for them to reproduce a substantial proportion of the lyrics and the music from the song. In the United Kingdom, this would usually require the permission of the copyright owner, who may be reluctant to grant permission in the circumstances.

Because copyright law has the potential to inhibit the way people interact with and use cultural objects, it is important that we constantly reassess its legitimacy. More specifically, we need to ask whether (and why) copyright is desirable. In this context it is important to note that not everyone thinks that copyright is a good thing.<sup>25</sup> In fact, with the advent of the internet, there are many who think that copyright unjustifiably stifles our ability to make the most of the new environment,<sup>26</sup> or that it impinges upon the public domain.<sup>27</sup> Others consider that, while some aspects of copyright are justifiable, others are not. Typically the argument is that copyright law has gone too far.<sup>28</sup> In response to these copyright sceptics or critics, five basic arguments are used to support the recognition (and further extension) of copyright: natural rights arguments, reward arguments, incentive arguments, neo-classical economics, and arguments from democracy.<sup>29</sup>

## 5.1 NATURAL RIGHTS

According to natural rights theorists, the reason why copyright protection is granted is not because we think that the public will benefit from copyright. Rather, copyright protection is granted because it is right and proper to do so. More specifically, it is right to recognize a property right in intellectual productions *because* such productions emanate from the mind of an individual author. For example, a poem is seen as the product of a poet's mind, their intellectual effort and inspiration. As such it should be seen as their property, and copying as equivalent to theft. Copyright is the positive law's realization of this self-evident, ethical precept. However, at this point, natural rights theorists divide as to exactly what it is about origination that entitles an author to protection. Some, particularly those associated with the European traditions, explain that works should be protected because (and insofar

<sup>25</sup> For an early example see the minority report of Sir Louis Mallet, *Report of the Royal Commission on Copyright*, C 2036 (1878) 24 PP. More recent attacks have been associated with the Austrian school of free-market liberal economics, e.g. A. Plant, 'The Economics of Copyright' (1934) *Economica* 167.

<sup>26</sup> In fact, it is commonly argued that widespread illegal copying on the internet can be explained by reference to the fact that the public is not persuaded by the rationales offered for copyright: J. Garon, 'Normative Copyright: A Conceptual Framework for Copyright Philosophy and Ethics' (2003) 88 *Cornell Law Review* 1278, 1283–5. However, other accounts of these practices are emerging: see L. Strahilevitz, 'Charismatic Code, Social Norms & the Emergence of Co-operation on the File-Swapping Networks' (2003) 89 *Virginia Law Rev* 505 (examining social psychology of peer-to-peer). For a review of consumer awareness in the EC, see Instituut voor Informatierecht (Institute for Information Law, University of Amsterdam—IViR), *Recasting Copyright for the Knowledge Economy* (2006), Ch 6.

<sup>27</sup> For a general discussion of the public domain see (2003) 66 *Law and Contemporary Problems* (Special Edition on the Public Domain); F.W. Grosheide and J.J. Brinkhof (eds), *Intellectual Property Law 2004: Articles on Crossing Borders between Traditional and Actual* (2005); B. Hugenholtz and L. Guibault (eds), *The Future of the Public Domain: Identifying the Commons in Information Law* (2006); C. Waelde and H. MacQueen (eds), *Intellectual Property: The Many Faces of the Public Domain* (2007).

<sup>28</sup> S. Trosow, 'The Illusive Search for Justificatory Theories: Copyright, Commodification and Capital', (2003) 16 *Canadian Journal of Law and Jurisprudence* 217.

<sup>29</sup> For an overview, see M. Spence, 'Justifying Copyright' in D. McLean and K. Schubert, *Dear Images: Art, Culture and Copyright*, 388 (2002).

as) they are the expressions of each particular author's personality.<sup>30</sup> On the assumption that a work created by an individual reflects the unique nature of them as an individual, the natural rights arguments require that we allow the creator to protect the work (from misattribution, modification, or unauthorized exploitation) because it is an extension of the persona of its creator. In the words of an ancient aphorism, 'to every cow its calf'. A second version of natural right theory, strongly represented in the US literature, has tended to found itself on labour. Drawing on Locke's idea that a person has a natural right over the products of their labour, it is argued that an author has a natural right over the productions of their intellectual labour.<sup>31</sup>

Critics of natural rights theories of copyright take a number of different positions. Some simply reject the idea of 'natural rights'. Others criticize the assumptions within the theory, for example that a natural right in labour justifies a natural right in the product of mixing labour and unowned resources. Some criticize the extension of natural rights theories to copyright, challenging the idea of individual creation of ideas, emphasizing the social (or 'intertextual') nature of writing and painting.<sup>32</sup> If works are seen less as the products of individual labour or personality, and more as reworkings of previous ideas and texts, the claim to ownership seems weak. Another critique questions why it is that a natural right in the products of one's labour should justify recognition of anything more than a right over the manuscript or immediate creation. A final argument criticizes natural rights theory on the ground that it provides no normative guidance as to the specific form of copyright law.<sup>33</sup>

## 5.2 REWARD

According to reward arguments, copyright protection is granted because we think it is fair to reward an author for the effort expended in creating a work and giving it to the public. Copyright is a legal expression of gratitude to an author for doing more than society expects or feels that they are obliged to do. In a sense, the grant of copyright is similar to the repayment of a debt. (Although the language of reward often appears when discussing the 'incentive' theory of copyright, it differs from incentive theory: in reward theory proper the reward is an end in itself, in incentive theory the reward is a means to an end.)

Critiques of reward theory tend to pose two questions. First, they ask, do the circumstances in which copyright protection is granted correspond to the circumstances in which people deserve rewards? One answer is that a reward is only deserved where someone has done something they felt was unpleasant and that they would not otherwise have done. If this is the case, copyright does seem to give far too many rewards. As we will see, copyright's threshold is set at a very low level and thus catches works which are created for their own sake such as letters, holiday photographs, and amateur paintings. Another account sees the reward as being

<sup>30</sup> For personality theory based on Hegel see J. Hughes, 'The Philosophy of Intellectual Property' (1988) 77 *Georgetown Law Journal* 287.

<sup>31</sup> On Locke and labour, see Hughes, *ibid*; A. Yen, 'Restoring the Natural Law: Copyright as Labour and Possession' (1990) 51 *Ohio State Law Journal* 517; W. Gordon, 'A Property Right in Self-Expression: Equality and Individualism in the Natural Law of Intellectual Property' (1993) 102 *Yale Law Journal* 1533.

<sup>32</sup> S. Shiffrin, 'Lockean Arguments for Private Intellectual Property', in S. Munzer (ed.), *New Essays in the Legal and Political Theory of Property* (2001) (disputing the idea that intellectual works are more susceptible to Lockean arguments than tangible objects); P. Drahos, *The Philosophy of Intellectual Property* (1996), ch. 3; Lior Zemer, *The Idea of Authorship in Copyright* (2006).

<sup>33</sup> J. Garon, 'Normative Copyright: A Conceptual Framework for Copyright Philosophy and Ethics' (2003) 88 *Cornell LR* 1278, 1299–1306.

deserved where the person invested labour (irrespective of their ulterior motives or the pleasure or pain of labouring).<sup>34</sup>

The second criticism questions the nature of the reward: why should a person be granted an exclusive right? There are other systems of reward (such as the MAN Booker Prize) that have fewer social and economic costs. The usual answer is that copyright allows the general public to determine who should be rewarded and the size of that reward: the more copies of a book that are purchased, or the more a record is played on the radio, the greater the financial reward that accrues to the copyright owner.<sup>35</sup> Consequently, a property right is often the best way to ensure that the reward is proportional to the public's appreciation of the work.

### 5.3 INCENTIVE-BASED THEORIES

In contrast to the natural rights and reward theories, the third argument for copyright is not based on ideas of what is right or fair to an author or creator. Rather, it is based on an idea of what is good for society or the public in general. The incentive argument presupposes that the production and public dissemination of cultural objects such as books, music, art, and films is an important and valuable activity. It also presupposes that, without copyright protection, the production and dissemination of cultural objects would not take place at an optimal level. The reason for this is that, while works are often very costly to produce, once published they can readily be copied. For example, while this textbook took a considerable amount of time and energy to write, once published, it can easily and cheaply be reproduced. Consequently, in the absence of copyright protection, a competitor could reproduce Bently and Sherman's *Intellectual Property Law* without having to recoup the expense of its initial production. In so doing they could undercut Oxford University Press. According to the incentive argument, if Bently, Sherman, and Oxford University Press were not given any legal protection, *Intellectual Property Law* would never have been written or published—and the world would have been a commensurably poorer place. The legal protection given by copyright is intended to rectify this 'market failure' by providing incentives that encourage the production and dissemination of works. In short, copyright provides a legal means by which those who invest time and labour in producing cultural and informational goods can be confident that they will be able not only to recoup that investment, but also to reap a profit proportional to the popularity of their work.<sup>36</sup>

Utilitarian arguments for copyright are commonly met with three criticisms. Some question whether an incentive is really necessary for much production, and certainly there are plenty of examples of practices of creation and dissemination of works that do not depend

<sup>34</sup> British copyright law has often employed a variant of reward theory. For example see *Designers Guild v. Williams* [2001] FSR 11, para. 2 (HL): Lord Bingham said that the 'law of copyright rests on a very clear principle: that anyone who by his or her own skill and labour creates an original work of whatever character shall, for a limited period, enjoy an exclusive right to copy that work. No one else may for a season reap what the copyright owner has sown.' See also *Walter v. Lane* [1900] AC 539, 545 *per* Earl of Halsbury LC (it would be a 'grievous injustice' if 'the law permitted one man to make profit and to appropriate to himself the labour, skill, and capital of another'), 551 (Lord Davey).

<sup>35</sup> Thus Bentham argued that 'an exclusive privilege is of all rewards the best proportioned, the most natural, and the least bothersome': *A Manual of Political Economy*, in J. Bowring (ed.), *The Works of Jeremy Bentham*, iii (1843) 31, 71.

<sup>36</sup> W. Landes and R. Posner, 'An Economic Analysis of Copyright Law' (1989) 18 *Journal of Legal Studies* 325; W. Gordon, 'An Inquiry into the Merits of Copyright: The Challenges of Consistency, Consent and Encouragement Theory' (1989) 41 *Stanford Law Review* 1343.

on the existence of copyright.<sup>37</sup> Others, admitting the need for an artificial incentive to rectify the market failure, question whether the grant of an exclusive property is the appropriate incentive.<sup>38</sup> After all, exclusive properties impose costs on people who wish to use the work, costs of policing rights and enforcement on owners, and transaction costs on those who seek permissions.<sup>39</sup> In some cases, in fact, exclusive rights are replaced by payments from general taxation (as with the Public Lending Right discussed in Chapter 13), thus ensuring that authors are provided with an incentive but that the costs associated with exclusive rights are minimized. Even if we accept that exclusive rights are the optimal form of incentive, the third problem with the utilitarian approach is deciding exactly what incentive is optimal. What should a copyright owner be able to prevent another person from doing and for how long?

#### 5.4 NEO-CLASSICAL ECONOMICS

If economic theory that sees copyright as an incentive to create or publish implies a rather narrow right, an alternative economic theory, associated with neo-classical economics, would justify protection of virtually all 'value'.<sup>40</sup> According to this school of thought, private ownership of resources is the juridical arrangement most conducive to optimal exploitation. In contrast, common ownership or non-ownership is likely to lead to over-exploitation (the so-called 'tragedy of the commons'). For example, it has been argued that failure to protect sound recordings by copyright would lead to their over-use, so that the public interest in the recording would tire, and their value diminish.<sup>41</sup> Accordingly, copyright protection should only be limited where the transaction costs involved in locating and negotiating licence agreements would prevent the conclusion of optimal agreements. These theoretical positions have not only featured in the arguments of scholars and treatise writers, and in the lobbying process, but have even been adopted by some US courts.<sup>42</sup> However, the idea that copyright should be unlimited in coverage, scope, and duration because this will promote optimal use of intellectual resources seems to neglect a fundamental characteristic of intellectual products, namely, their 'non-rival nature'.<sup>43</sup> Fears about over-exploitation of physical resources, which (might) make private ownership the most satisfactory allocative model, simply do not apply to cultural resources: the more people who can get access to the works of Shakespeare, Mozart, and even Jeremy Bentham, the better.

<sup>37</sup> S. Breyer, 'The Uneasy Case for Copyright: A Study of Copyright in Books, Photocopies and Computer Programs' (1970) 84 *Harvard Law Review* 281 (emphasizing, in particular, the incentives provided by lead time, and possible use of contractual methods such as subscription).

<sup>38</sup> R. Hurt and R. Schuchman, 'The Economic Rationale for Copyright' (1966) 56 *American Economic Review* 421 (suggesting private patronage and government support).

<sup>39</sup> See *Eldred v. Ashcroft* (2003) 123 S Ct 769, 804 ff (Breyer J in the US Supreme Court explaining the costs imposed on the public from extension of the term of copyright). For an argument that copyright diminishes diversity, see G. Pessach, 'Copyright Law as a Silencing Restriction on Non-Infringing Materials: Unveiling the Scope of Copyright's Diversity Externalities' (2003) 76 *Southern California Law Review* 1067.

<sup>40</sup> For a concise, if unsympathetic, explanation, see N.W. Netanel, 'Copyright and a Democratic Civil Society' (1996) 106 *Yale Law Journal* 283, 290, 306–7, 308–36.

<sup>41</sup> W. Landes and R. Posner, 'Indefinitely Renewable Copyright' (2003) 70 *University of Chicago Law Review* 471.

<sup>42</sup> For example the US Supreme Court in *Harper & Row Publishers Inc v. Nation Enterprises* 471 US 539 (1985), where fair use was grounded in implied consent.

<sup>43</sup> For a compelling critique, see M. Lemley, 'Ex Ante versus Ex Post Justifications for Intellectual Property', (2004) 71 *University of Chicago Law Review* 129.

## 5.5 DEMOCRATIC ARGUMENTS

In an important intervention in 1996, Neil Netanel has tried to justify copyright by reference to the ‘democratic paradigm’.<sup>44</sup> Netanel sees copyright as ‘fortifying our democratic institutions by promoting public education, self-reliant authorship, and robust debate. More precisely, this democratic paradigm views copyright law as a state measure designed to enhance the independent and pluralist character of civil society.’ Copyright encourages greater production, but also, ‘is designed to secure the qualitative condition for creative autonomy and expressive diversity’.

## 5.6 THE PLACE OF JUSTIFICATIONS

There is a large body of literature criticizing, developing, and refining these five justifications. There is not room here to recount and assess this literature further. Nevertheless, it is worth noting a number of points about the ways these theories are marshalled in support of legal arguments relating to copyright. It is often said that a natural rights-based justification for copyright inevitably produces a different conception of copyright from that which results from an incentive argument. More specifically, it is argued that a natural rights conception of copyright leads to longer and stronger protection for authors (and copyright owners) than an incentive-based conception. This is because a natural rights argument for copyright is assumed to result in a form of property that is perpetual and unqualified.<sup>45</sup> In contrast, an incentive-based argument only justifies the grant of the minimum level of protection necessary to induce the right holder to create and release the work. While there is an element of truth in these arguments, they should not be overstated. The reason for this is that the copyright law that operates in the United Kingdom today is a product of a range of different factors, only a few of which could be said to have been influenced by the justificatory theories.<sup>46</sup>

Although the various theories have relatively distinct philosophical pedigrees, when they have been employed in support of various claims little if any attention is given to such niceties. Instead, the five arguments are typically deployed side by side. In fact, in most cases where a claim is made for the legal protection of works not previously protected (such as television formats), or the expansion of the rights conferred by the law in respect of such works, one can reasonably anticipate that all five types of justification will be used. While it is understandable that lobby groups use (or abuse) the various justifications to further their ends, more problems arise when people begin to believe the rhetoric and assume that copyright law is determined and shaped by these philosophical ideals.<sup>47</sup>

<sup>44</sup> Neil Weinstock Netanel, ‘Copyright and a Democratic Civil Society’ (1996) 106 *Yale LJ* 283, 291.

<sup>45</sup> See *Millar v. Taylor* (1769) 4 Burr 2303, 98 ER 201, 218–22 (Aston J), 252 (Mansfield CJ).

<sup>46</sup> Most important is the prevailing understanding of the processes of ‘authorship’: where ‘authorship’ is understood in its ‘romantic’ sense as the outpouring of the soul, so that the resulting work is the unique product of its author, no doubt a natural right justification does lead to a maximalist conception of copyright. In contrast, where the processes of authorship are perceived as processes of a combination of existing texts, of *bricolage*, and collocation, a natural rights approach might only justify a short-term and highly qualified ‘property’ in the resulting work.

<sup>47</sup> J. Litman, *Digital Copyright* (2001) 77 (‘in the ongoing negotiations among industry representatives, normative arguments about the nature of copyright show up as rhetorical flourishes, but, typically, change nobody’s mind’); G. Austin, ‘Copyright’s Modest Ontology—Theory and Pragmatism in *Eldred v. Ashcroft*’ (2003) 16 *Canadian Journal of Law & Jurisprudence* 163 (‘the realities of intellectual property lawmaking are such that there are few instances where theory dictates the formulation and development of positive law’).

## 6 INTERNATIONAL INFLUENCES

One of the constant themes in the history of British copyright law is that it has been influenced by foreign and international trends and developments. While the sources may have changed, contemporary law is no different.<sup>48</sup> There are a number of international treaties that impact upon British copyright law.<sup>49</sup> Here, we will limit ourselves to the five most significant treaties. These are the Berne Convention, the Rome Convention, TRIPS, the WIPO Copyright Treaty, and the WIPO Performances and Phonograms Treaty.

### 6.1 BERNE CONVENTION (1886–1971)

The most important international influence on the development of UK copyright has been the Berne Convention on the Protection of Literary and Artistic Works. The Berne Convention was drawn up in 1886 as a small treaty allowing for mutual recognition of rights amongst a few largely European countries. Since then, the treaty has been revised on a number of occasions,<sup>50</sup> and the membership expanded to 151 states.<sup>51</sup>

In its earliest form, there were two key provisions of the Berne Convention. The first was the adoption of the principle of national treatment. This meant that with certain exceptions a country of the Union should not discriminate between its own nationals and those of other countries of the Union.<sup>52</sup> For example, under the principle of national treatment, French law was obliged to confer the same rights on a British author as it conferred on French authors. In addition to the principle of national treatment, the Berne Convention has long required that the ‘enjoyment and exercise’ of copyright in the works of the Convention should not be ‘subject to any formality’. This means that registration or notices cannot be made prerequisites for protection.<sup>53</sup> Because international protection is to be automatic, there is no need for international bureaucratic regimes to simplify registration processes.

Over time the Berne Convention has come to demand that members of the Union provide certain minimum standards of protection to copyright owners and authors. These include the right to reproduce the work,<sup>54</sup> to perform the work publicly,<sup>55</sup> to translate the

<sup>48</sup> Under the powers conferred by the International Copyright Act 1844 (7 & 8 Vict. c. 12) Britain had begun to build bilateral arrangements with other countries for mutual recognition of copyrights.

<sup>49</sup> Also important are the Universal Copyright Conventions (last revised at Paris in 1971); the Geneva Convention on Phonograms of 1971; and the Convention Relating to the Distribution of Programme-Carrying Signals Transmitted by Satellite, Brussels, 21 May 1974.

<sup>50</sup> The last revision was at Paris on 24 Jul. 1971, and amended on 28 Sept. 1979.

<sup>51</sup> As of 15 Oct. 2003. The Convention applies to all works in which copyright has not expired at the time of accession to the Convention: Berne Art. 18.

<sup>52</sup> Berne Art. 5(1). These are to be enjoyed by authors who are nationals of one of the countries of the Union, for their works, whether published or not; and authors who are not nationals of one of the countries of the Union, for their works first published in one of those countries: Berne Art. 3. The exceptions to national treatment relate to (i) copyright terms which exceed the Berne minimum, Art. 7(8); (ii) copyright in applied art; and (iii) *droit de suite*, Art. 14 *ter*(2).

<sup>53</sup> Berne Art. 5(2). For consideration as to whether the requirement for assertion of the right to attribution complies with this, see below at p. 246.

<sup>54</sup> Berne Art. 9 (countries to recognize the exclusive right to authorize the reproduction of works ‘in any manner or form’); Art. 9(3) specifically states that a sound or visual recording is to be considered a reproduction.

<sup>55</sup> Berne Art. 11 (for dramatic, dramatico-musical, and musical works); Art. 11 *ter* (public recitation and communication of literary works).

work,<sup>56</sup> to adapt the work,<sup>57</sup> and to broadcast the work.<sup>58</sup> Members of the Union are also to give authors (rather than copyright owners) the moral rights of attribution and integrity.<sup>59</sup> In recognition of the need for the public to be able to utilize works without payment, there is limited scope for members of the Union to create exceptions.<sup>60</sup> In relation to the reproduction right, these exceptions must satisfy the so-called three-step test. This requires that all exceptions must be limited to certain special cases, not conflict with a normal exploitation of the work, and not unreasonably prejudice the legitimate interests of the author.<sup>61</sup> Moreover, protection is to last at least for the life of the author, plus 50 years thereafter.<sup>62</sup>

## 6.2 ROME CONVENTION (1961)

The coverage of the Berne Convention is limited to literary and artistic works, which include cinematographic works.<sup>63</sup> It does not include provisions for the protection of performers, producers of sound recordings, broadcasters, publishers, and many others. Despite several attempts to expand the coverage of the Berne Convention to include performers and sound recordings, these were resisted.<sup>64</sup> The various authors' societies opposed the inclusion of such works within the Berne Convention on the grounds that they are non-creative and derivative in character,<sup>65</sup> and that recognition of performers' rights might reduce the royalties available for authors.<sup>66</sup> Similar arguments were also used to oppose the introduction of sound recordings into Berne (though additional arguments were made that sound recordings are properly seen as industrial, not literary or artistic,<sup>67</sup> and that there are difficulties in identifying an author of a sound recording).<sup>68</sup>

Eventually, it became clear that international recognition of the rights of phonogram producers, performers, and broadcasters would need to be sought under a separate instrument. In 1961 an international agreement on these 'neighbouring rights' was reached at the

<sup>56</sup> Berne Arts. 8 and 11(2) (translation); Art. 12 (adaptations, arrangements, and other alterations); Art. 11 *ter* (2) (communication of translations).

<sup>57</sup> Berne Art. 12 (authorizing adaptations, arrangements, and other alterations of their works); Art. 14 (cinematographic adaptation).

<sup>58</sup> Berne Art. 11 *bis*. <sup>59</sup> Berne Art. 6 *bis*. See Ch. 10.

<sup>60</sup> Minor exceptions are permitted in accordance with the understandings expressed at various conferences but these must be *de minimis*: see WTO Panel Report, WT/DS/16OR June 2000. Compulsory licences are permitted under Art. 11 *bis* (2) and Art. 13 (mechanical copying).

<sup>61</sup> Berne Art. 9(2). Note also Art. 10(2) (use by way of illustration in publications for teaching); Art. 10 *bis* (use for reporting current events).

<sup>62</sup> Berne Art. 7. Certain exceptions are possible relating to cinematographic works, pseudonymous and anonymous works (where a 50-year minimum operates), and photographic works and works of applied art insofar as they are protected as artistic works (where a minimum of 25 years operates).

<sup>63</sup> Berne Art. 14 *bis*.

<sup>64</sup> For example, at the Rome Revision in 1928. Opponents included France and Hungary: see Ricketson, paras. 15.40–54.

<sup>65</sup> So are translations, adaptations, and films, though these are protected under Berne.

<sup>66</sup> On the so-called 'cake theory' see Ricketson, paras. 15.52–3.

<sup>67</sup> Ricketson, para. 6.76 (arguing that explanation for inclusion of photographs and films but exclusion of sound recordings and broadcasts from Berne is best explained by the historical fact that, when claims to include the former were made, the idea of separate neighbouring rights regimes had not developed).

<sup>68</sup> The making of a recording is typically a collective exercise and protection is sought by corporate authors. However, so is the making of a film. For a comparative account, see G. Boytha, 'The Intellectual Property Status of Sound Recording' (1993) 24 *IIC* 295. Note, in particular, that the USA did not give protection at a Federal level until 1971, with the Sound Recording Amendment Act of 15 Oct. 1971.

Rome Convention<sup>69</sup> (which now has 76 signatories).<sup>70</sup> Like the Berne Convention, the central principle of the Rome Convention is national treatment: national treatment must be provided to performances that take place in a contracting state, or which are embodied on protected sound recordings, or carried by a protected broadcast; to sound recordings produced by nationals of a contracting state, fixed in a contracting state, or first published in a contracting state; and to broadcasts where the broadcasting organization is situated in a contracting state or the broadcast is transmitted from a contracting state.<sup>71</sup>

The Rome Convention also requires that phonogram producers, performers, and broadcasters be granted certain substantive rights. For performers these are relatively limited, being largely restricted to matters relating to 'bootlegging' (that is, the fixation of their unfixed performances without their consent), the broadcasting of their unfixed performances without their consent, and the duplication of any such recordings which have been made illicitly.<sup>72</sup> Notably, contracting states are not required to give performers rights to control the reproduction, distribution, or public communication of legitimately made recordings of their performances. (As a result there is no requirement, for example, that performers be paid when films are shown at a cinema.) The protection that is given is to last for 20 years from the first fixation of the performance or, if it has not been fixed, 20 years from the date when the performance took place.

Producers of phonograms and broadcasting organizations received better treatment. Producers of phonograms are to be granted the right to prevent the reproduction of those recordings for 20 years.<sup>73</sup> Broadcasting organizations are to be given exclusive rights, for a minimum of 20 years from when a broadcast took place, to authorize or prohibit the rebroadcasting of their broadcasts, the fixation of their broadcasts, and the reproduction of fixations of their broadcasts. Broadcasters were also given the right to control the showing of television broadcasts in places accessible to the public (against payment of an entrance fee).<sup>74</sup>

The three divergent interests that coexist in the Rome Convention gave rise to one further and important compromise. This was that contracting states are to confer a right to a *single* equitable remuneration when phonograms are broadcast or played in public.<sup>75</sup> This right to remuneration must be provided either to the performers whose performances are embodied on phonograms, or to the producers of phonograms, or both. This means that broadcasters, nightclubs, restaurants, etc. must pay a single fee to play sound recordings. It is left to the contracting states whether the beneficiary of the right is to be the performer, the phonogram producer, or both.

Contracting states are permitted to make these rights subject to defences as regards private use, news reporting, ephemeral recordings, and teaching and scientific research,<sup>76</sup> as well as the same kind of limitations as are provided for literary and artistic works under the Berne Convention.<sup>77</sup>

<sup>69</sup> International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations.

<sup>70</sup> As of 15 Oct. 2003. Though significantly not the USA, as a result of its refusal to give broadcasting organizations copyright.

<sup>71</sup> Rome Art. 4 (performers); Art. 5 (phonograms); Art. 6 (broadcasts). National treatment is defined in Rome Art. 2.

<sup>72</sup> Rome Art. 7. Note also Art. 19.

<sup>73</sup> Rome Art. 10. If formalities are required, they are complied with by using the 'P' symbol: Rome Art. 11.

<sup>74</sup> Rome Art. 13; Art. 14, see Ricketson, paras. 15.41 ff.

<sup>75</sup> Rome Art. 12. This can be excluded under Art. 16.

<sup>76</sup> Rome Art. 15(1).

<sup>77</sup> Rome Art. 15(2).

### 6.3 TRIPS

The third important international development that impacts upon British copyright law is TRIPS.<sup>78</sup> There are a number of provisions in TRIPS that relate to copyright. The most important of these is that members must implement Articles 1–21 of the Berne Convention (but not Article 6 bis dealing with moral rights).<sup>79</sup> One of the consequences of this is that disputes over compliance with Berne can now be considered by the WTO.<sup>80</sup> While the TRIPS Agreement does not require member states to adhere to the Rome Convention, Article 14 of TRIPS contains substantively similar provisions to Rome (though the term of protection in such cases is substantially longer under TRIPS).<sup>81</sup>

In addition, the TRIPS Agreement contains certain ‘Berne-plus’ features, as regards various aspects of copyright. Some of these are responses to new technologies that have given rise to new sorts of work and new modes of distribution. For example, under TRIPS, protection must be given to computer programs as literary works within the Berne Convention;<sup>82</sup> and to compilations of data or other material which, by reason of the selection or arrangement of their contents, ‘constitute intellectual creations’.<sup>83</sup> Reflecting the impact of new modes of distribution, members must (in most cases) give copyright owners the right to authorize rental of computer programs, cinematographic works, and phonograms.<sup>84</sup> Other provisions flow from more general concerns as to the nature of copyright protection. In particular, copyright is defined generally as covering ‘expressions’ and *not* ideas or methods.<sup>85</sup> Moreover, TRIPS requires that *all* limitations and exceptions (rather than the right to reproduction as in Berne) must satisfy the three-step test.<sup>86</sup>

### 6.4 WIPO COPYRIGHT TREATY (1996)

In December 1996, two treaties were agreed at Geneva: the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty.<sup>87</sup> In part, these grew out of the frustration at the inability to produce a revised version of the Berne Convention and subsequent attempts to produce a ‘Protocol’ to the Berne Convention (possibly incorporating the rights of record producers and performers within a single treaty). Both treaties are intended to supplement the existing Conventions to reflect, in particular, technological changes and changes in practice.<sup>88</sup>

<sup>78</sup> See above at pp. 6–11. <sup>79</sup> TRIPS Art. 9(1).

<sup>80</sup> As has occurred in the WTO Dispute Panel Report on US limitations on the public performance right. WT/DS160/R (15 Jun. 2000). According to TRIPS Art. 14(6) the provisions on neighbouring rights in performances and phonograms apply to existing works: the WTO Dispute Resolution procedure was used to induce Japan to comply with this requirement: WT/DS22 and WT/DS 48.

<sup>81</sup> TRIPS Art. 14. The term of protection for performers and producers of phonograms is extended to 50 years from fixation of the performance or the date of the performance: Art. 14(5). As regard broadcasts, Art. 14(3) requires that broadcasting organizations are to have various rights (to prohibit the fixation, reproduction of fixations and re-broadcasting of broadcasts, and communication to the public of the same), but a derogation provides that ‘where Members do not grant such rights to broadcasting organizations, they shall provide owners of copyright in the subject matter of broadcasts with the possibility of preventing the above acts, subject to the provisions of the Berne Convention (1971)’.

<sup>82</sup> TRIPS Art. 10(1); see also, WCT Art. 4. <sup>83</sup> TRIPS Art. 10(2).

<sup>84</sup> TRIPS Art. 11, Art. 14(4). <sup>85</sup> TRIPS Art. 9(2).

<sup>86</sup> TRIPS Art. 13. For consideration of the relationship between Art. 13 and EC law, particularly Art. 82 EC, see *Microsoft v. Commission*, Case T–201/04, [2007] 5 CMLR (11) 846 (paras 794–803).

<sup>87</sup> Reinbothe and von Lewinski (2002); M. Ficsor, *Copyright and The Internet* (2002); D. Saunders and B. Sherman (eds.), *From Berne to Geneva* (1997).

<sup>88</sup> WCT Art. 1 defines the Treaty as a ‘special agreement’ within Art. 20 Berne.

For the most part, the WIPO Copyright Treaty (WCT), which came into force in 2002,<sup>89</sup> repeats many of the extensions effected in the TRIPS Agreement,<sup>90</sup> though importantly the WCT places them back under the supervision of the WIPO. Some of these are extended. For example, contracting parties must provide copyright owners with the exclusive right to distribute fixed copies that can be put into circulation as tangible objects.<sup>91</sup> In addition, contracting parties must provide copyright owners whose works are embodied in phonograms (not just those in computer programs or cinematographic works) with the exclusive right to authorize the commercial rentals of those fixed copies.<sup>92</sup>

The WCT also embodies three provisions that reflect the so-called ‘digital agenda’. (In essence these are responses to concerns raised by copyright owners about new digital communication technologies.)<sup>93</sup> First, as part of the ‘communication right’, contracting parties must provide copyright owners with the exclusive rights to make their works available to the public in such a way that members may access the work from a place and at a time individually chosen by them.<sup>94</sup> (This is intended to cover, for example, the placing of a work on a web site that can be accessed by the public.) Second, contracting parties must provide adequate legal protection against the circumvention of ‘effective technological measures’ used by authors to protect their rights.<sup>95</sup> Third, contracting parties must provide adequate remedies to those who tamper with ‘rights management information’, that is information used to facilitate the identification or exploitation of those works.<sup>96</sup>

## 6.5 WIPO PERFORMANCES AND PHONOGRAMS TREATY (1996)

Although the WIPO Performances and Phonograms Treaty (‘WPPT’) was intended to supplement the Rome Convention, it only contains provisions relating to rights of performers and phonogram producers, and *not* broadcasters.<sup>97</sup> The WPPT upgrades the position of performers whose performances are embodied on phonograms. However, largely as a result of the resistance of the American film industry, it does little for actors. Under the WPPT, contracting parties must confer on all performers rights against bootlegging equivalent to those in the Rome Convention. This is upgraded from ‘the possibility of preventing’ to an exclusive right.<sup>98</sup> Performers in the music industry (whose performances have been ‘fixed in phonograms’) are to be given three extra rights. First, they are to be given rights to control various acts in relation to fixations of their performances, that is the reproduction, distribution, rental, and making

<sup>89</sup> There were 51 signatories and as of 28 May 2008 there were 65 ratifications.

<sup>90</sup> Art. 2 WCT is on a par with TRIPS Art. 9(2); Art. 4 WCT is on a par with TRIPS Art. 10(1); Art. 5 WCT is on a par with TRIPS Art. 10(2); Art. 10 WCT is on a par with TRIPS Art. 13; Art. 14 WCT is on a par with TRIPS Art. 41.

<sup>91</sup> WCT Art. 6; ‘Agreed Statement’ concerning Arts. 6 and 7.

<sup>92</sup> WCT Art. 7. Note the qualifications in Art. 7(2)–(3).

<sup>93</sup> The Preamble recognizes ‘the profound impact of the development and convergence of information and communication technologies on the creation and use of literary and artistic works’. Note the Agreed Statement concerning WCT Art. 1(4) which defines reproduction to include the storage of a work in digital form in an electronic medium.

<sup>94</sup> WCT Art. 8. Note also the ‘Agreed Statement’ annexed to the treaty stating that the mere provision of physical facilities for enabling or making a communication does not in itself amount to a communication.

<sup>95</sup> WCT Art. 11. <sup>96</sup> WCT Art. 12.

<sup>97</sup> The WPPT entered into force on 20 May 2002 (pursuant to Art. 29: 3 months after deposit by 30 states of their instruments of accession of ratification). There were 50 signatories and as of 28 May 2008 there were 70 ratifications to the WPPT.

<sup>98</sup> WPPT Art. 6.

available of copies of such fixations.<sup>99</sup> Second, where there is public performance or broadcasting of such fixations, contracting states are to ensure that performers receive a share in the remuneration that is paid.<sup>100</sup> Third, contracting states are to confer moral rights of attribution and integrity on the performers of ‘live aural performances or performances fixed in phonograms’.<sup>101</sup> The upshot of this is that, while recording artists and musicians will get rights which are equivalent to those given to authors, actors (and other individuals whose performances are embodied in films/audiovisual works) will be confined to the right to prevent first fixation (etc.) without their consent.

The WPPT also extends the rights given to producers of phonograms. Contracting states are not only to confer on the producers of phonograms the right to control reproduction, but also the exclusive right to control the distribution, rental, and making available of copies of phonograms.<sup>102</sup> The WPPT also requires certain action for the benefit of *both* performers and phonogram producers. In particular, the WPPT replicates the three provisions of the WCT on the digital agenda, that is, the ‘making available’ right, the requirements relating to technological measures of protection, and the provisions on rights management information. The Treaty also provides that contracting states may only create exceptions and limitations to the rights of performers or phonogram producers if those limitations pass the three-step test.<sup>103</sup>

## 7 EUROPEAN INFLUENCES

In the last twenty years or so, European initiatives have had an important and growing impact on British copyright law.<sup>104</sup> This is because various European directives now prescribe in some detail when and in what manner member states must (and often may) recognize intellectual property rights in this field. As we saw in Chapter 1, the need for harmonizing legislation arose because, despite the efforts of the European Court of Justice (notably through the doctrine of exhaustion),<sup>105</sup> differences in national laws relating to copyright and related rights operate to produce barriers to trade within the internal market. Perhaps the clearest example of this was in the decision in *EMI Electrola GmbH v. Patricia Im-und Export*.<sup>106</sup> This grew out of the fact that because of differences in the terms of copyright in sound recordings in Germany and Denmark,<sup>107</sup> the sound recording rights in songs by Cliff Richard had expired in Denmark but not in Germany. Patricia attempted to import the records from Denmark (where the records were lawfully available) back into Germany. The European Court of Justice held that even though the copies were lawfully marketed in Denmark (because the copyright had expired there), the German right holder was entitled to prevent the importing of the recordings into Germany where copyright continued to subsist. This was because, as the

<sup>101</sup> WPPT Art. 5. This was implemented in the UK by Performances (Moral Rights, etc.) Regulations 2006 SI 2006/18. See pp. 308–9 below.

<sup>102</sup> WPPT Arts 11–14.      <sup>103</sup> WPPT Art. 16.

<sup>104</sup> For an outline of earlier Community activities, see J. Pardo, ‘Highlights of the Origins of European Union Law on Copyright’ [2001] *EIPR* 238.

<sup>105</sup> *Deutsche Grammophon v. Metro*, Case C–78/70 [1971] *ECR* 487.

<sup>106</sup> Case C341/87 [1989] *ECR* 79. See also *Warner Bros v. Christiansen*, Case C–158/86 [1988] *ECR* 2605 (rental right).

<sup>107</sup> Both countries granted terms of 25 years but from different starting dates, Denmark favouring fixation and Germany publication.

copyright owner had not consented to the marketing of those copies in Germany, they had not exhausted their rights. The Court observed that ‘in the present state of the Community, characterized by an absence of harmonization, it is for national legislatures to specify the conditions and rules for such protection’. Such restrictions are justified by Article 30 EC (formerly Article 36 of the Treaty) if the period of protection is inseparably linked to the existence of the exclusive rights.

By the time of the *Patricia* decision, the Commission had already decided that, if the plan for an internal market free from barriers was to be made good, then certain aspects of copyright had to be harmonized. The first step in the harmonization programme was the publication of the Green Paper, *Copyright and the Challenge of Technology*.<sup>108</sup> This set out a basic plan to harmonize specific areas of copyright, particularly those relating to new technologies. Given that it was widely believed that national copyright traditions were very different, it was decided that the wholesale approximation of copyright law was impossible. In the light of comments on the Green Paper,<sup>109</sup> the Commission expanded its proposals in 1990.<sup>110</sup> The subsequent decade has seen the formulation and passage of a series of directives on software, cable and satellite broadcasting, rental and lending, and ‘neighbouring rights’, the duration of copyright, databases, the resale royalty right, and copyright in the ‘information society’. While each of these directives concerned itself primarily with a specific aspect of copyright (that is, a specific type of subject matter or a specific right), the Directive on copyright in the Information Society concerned a series of rights and exceptions applicable to virtually all copyright works. Consequently, this directive is widely regarded as heralding a shift from ‘vertical’ harmonization to ‘horizontal’ harmonization. While we look at these directives at appropriate points in the following chapters, it may be useful to outline their key features here. Before doing so, it may be helpful to highlight some of the themes that are beginning to develop in the European legislation, some of which have been interpreted as representing a step towards a coherent European copyright policy.<sup>111</sup>

One notable trend is that the directives consistently distinguish between two categories of work: ‘copyright’ which means authorial works falling under the Berne Convention; and ‘related rights’ (specifically not ‘neighbouring rights’) which means various rights of performers, phonogram producers, the producers of the first fixations of films, and broadcasting organizations. The related rights given to producers of the first fixations of ‘films’ by various Directives are important in that they are not confined to audiovisual or cinematographic works, but also extend to other moving images (such as films of sporting events).

Another notable aspect of the directives concerns the way they manage the (supposed) differences between the different legal regimes (copyright and *droit d’auteur*). Given that the directives are largely the result of lobbying and horse-trading between interest groups and member states, it is not surprising that the end-results are a hybrid mix of concepts taken from both the *droit d’auteur* and copyright law.<sup>112</sup> For example, there is recognition of an unwaivable

<sup>108</sup> Interestingly, it had been the subject of discussion as early as 1980: S. von Lewinski, ‘EC Proposal for Council Directive Harmonizing the Term of Protection of Copyright and Certain Related Rights’ (1992) 23 *IIC* 785, n. 1.

<sup>109</sup> The Green Paper received a lukewarm reception. See A. Francon, ‘Thoughts on the Green Paper’ (1989) 139 *RIDA* 128; M. Moller, ‘On the Subject of the Green Paper’ (1989) 141 *RIDA* 22 (1989); G. Shricke, ‘Harmonization of Copyright in the EEC’ (1989) 20(4) *IIC* 466, 475.

<sup>110</sup> *Follow Up to the Green Paper*, 17 Jan. 1991 COM (90) 584 Final.

<sup>111</sup> H. Comte, ‘The Rental Rights Directive: A Step towards a Copyright Europe’ (1993) 158 *RIDA* 2.

<sup>112</sup> See, e.g. E. Derclaye, ‘Software Copyright Protection: Can Europe Learn from American Case Law?’ (2000) *EIPR* 7, 9–10; D. Vaver, ‘The Copyright Mixture in a Mixed Legal System: Fit For Human Consumption?’ (2002) *Juridical Review* 101 (largely defending the harmonization process against some of its critics).

right to 'equitable remuneration' for the authors of works which are the subject of rental and lending. This corresponds to similar (though more general) provisions in French and German law guaranteeing authors proportionate remuneration.<sup>113</sup> On the other hand (much to the disappointment of some French commentators), computer programs are recognized as literary works.<sup>114</sup> In addition, where a computer program is made by an employee in the course of employment, the economic rights are given to the employer, rather than to the employee.<sup>115</sup> In some ways, the form that the directives have adopted is a return, at least from the British perspective, to the openly hybrid nature of intellectual property statutes in the nineteenth century.

Another trend that is apparent is that, while the need for harmonization arose because variations in the law of member states posed a potential barrier to trade, the Commission has tended to harmonize 'upwards'. That is, the EC has tended to strengthen the protection given to copyright owners. The most obvious example of this was the decision to increase the term of copyright to the term of life plus 70 years which existed in Germany, rather than ask that the German term be reduced to life plus 50 years (which was the term then used by many member states). While the strengthening of protection has sometimes been explained in terms of legislative convenience, it also suggests that it is at least an implicit agenda that aims to maximize copyright protection. This can be detected in Recital 10 to the Duration Directive which says that 'these rights are fundamental to intellectual creation... their protection ensures the maintenance and development of creativity in the interests of authors, cultural industries, consumers and society as a whole'.<sup>116</sup> Another example of the strengthening of the position of right holders has been the progressive restriction of the defences or exceptions that member states are able to use in their laws.<sup>117</sup> This is particularly noticeable in the Database Directive where the option of a 'private use' defence is excluded when the database is in an electronic form, and when use in scientific research is confined to uses for 'non-commercial purposes'.

Another notable, and possibly growing, trend is that the directives adopted in the name of harmonization have only a very limited harmonizing effect. In fact, there are many situations where the directives tolerate a level of difference between the laws of member states. For example, in relation to subject matter, member states are expressly permitted to protect non-original photographs, and critical and scientific publications of works which have fallen into the public domain.<sup>118</sup> Although there is some degree of prescription, member states have flexibility as regards specifying who are the co-authors of cinematographic works.<sup>119</sup> Member states are sometimes permitted to confer greater rights on right holders than those specified in the directives,<sup>120</sup> and occasionally (as with the lending right) to derogate from the standards set by the directives.<sup>121</sup> There are also permissive clauses in relation to defences,<sup>122</sup> presumed transfer of rights,<sup>123</sup> and the kinds of collective licensing regime required.<sup>124</sup> The details of

<sup>113</sup> Rental Dir., Art. 5.      <sup>114</sup> Software Dir., Art. 1.      <sup>115</sup> Ibid, Art. 2(3).

<sup>116</sup> Duration Dir., Recital 10.      <sup>117</sup> Rental Dir., Art. 10(1).      <sup>118</sup> Duration Dir., Arts 5 and 6.

<sup>119</sup> Rental Dir., Art. 2(2); Duration Dir., Art. 2(1). As well as designating 'legal persons' as rights holders: Software Dir., Art. 2(1); Database Dir., Art. 4(1).

<sup>120</sup> Satellite Dir., Art. 6 (expressly permitting member states to provide more far-reaching broadcasting and communication rights than those mandated by Rental Dir., Art. 8).

<sup>121</sup> Rental Dir., Art. 5.

<sup>122</sup> Rental Dir., Art. 10; and the more restricted Database Dir., Art. 6(2); Info. Soc. Dir., Art. 5(2), (3).

<sup>123</sup> Rental Dir., Arts 2(6), (7).

<sup>124</sup> Rental Dir., Art. 8(2) (conditions as to sharing remuneration for broadcasting and public performance between performers and the producers of phonograms), Art. 13(9) (level of remuneration for rental); Satellite Dir., Art. 3(2), Art. 9(3), Art. 13.

'transitional provisions' are also left largely to member states.<sup>125</sup> Moreover, as the case law on transitional provisions in the Term Directive, and that on the concept of 'equitable remuneration' make clear, the harmonizing directives often offer loose, open-textured concepts around which member states must formulate specific rules, within certain limited parameters.

Another notable trend that is apparent from the directives is that the Commission is developing a series of conceptual solutions that may ultimately form the basis for a harmonized law. The most obvious example of this is in relation to the notion of originality, which we discuss in Chapter 4. By harmonizing the originality requirement in an identical manner for computer programs, photographs, and databases, the Commission has set up a single European standard, namely that works should only be protected where they are their author's 'own intellectual creations'.<sup>126</sup>

With these general points in mind, we now outline the main features of the seven Directives.

### 7.1 COMPUTER PROGRAMS DIRECTIVE (1991)

The first European initiative in the copyright field was the Computer Programs Directive, which had to be implemented by 1 January 1993.<sup>127</sup> The Computer Programs Directive addressed the question whether computer programs should be protected by copyright, patents, or a *sui generis* right. Fearing that the member states might have responded differently, the Commission sought a swift and unified response. After consulting with interested parties, it was decided that computer programs should be protected by copyright. This is reflected in the fact that the Directive requires member states to protect computer programs as literary works under the Berne Convention. To ensure that this operates as a matter of substance as well as form, the Directive also harmonized the criteria for protection. Prior to the Directive, there were wide divergences as to what member states required of computer programs before they could be regarded as original, with German law setting the definition of originality at a particularly high level. Ultimately, the Directive requires member states to protect computer programs as long as they are original in the sense that they are their author's own intellectual creation.

The Computer Programs Directive also goes some way to harmonizing the protection member states must give to computer programs. More specifically, the Directive requires member states to confer certain rights on the owners of copyright in computer programs, including the right to control temporary reproduction, the running and storage of the program, the translation or adaptation, distribution or rental of programs;<sup>128</sup> as well as certain liabilities for 'secondary infringers'.<sup>129</sup> The Directive also requires member states to recognize certain exceptions to the exclusive rights. Negotiations over these exceptions caused intense and acrimonious lobbying in Brussels. Ultimately, the Directive requires member states to enact four exceptions. The first concerns acts done by a lawful acquirer of a program which are necessitated by use of the program for its intended purpose; the second allows the making of back-up copies;

<sup>125</sup> Rental Dir., Art. 13(3)–(8); Satellite Dir., Art. 7; and Duration Dir., Art. 10(3), which was considered by the ECJ in *Butterfly Music SRL v. Carosello Edizioni Musicali e Discografiche SRL*, Case C–60/98 [1999] ECDR 1.

<sup>126</sup> Software Dir., Art. 1(3); Duration Dir., Art. 6, Recital 17; Database Dir., Art. 3(1). But note IviR, *Recasting Copyright*, pp. 36–7, suggesting that the test differs for photographs.

<sup>127</sup> Commission, *Report on the Implementation and Effects of the Directive in 2000*: COM (2000) 199 final.

<sup>128</sup> *Ibid.*, Art. 4. See Ch. 6. <sup>129</sup> *Ibid.*, Art. 7. See Ch. 8.

the third permits the studying and testing of the program; the fourth, and most controversial, permits—in very limited circumstances—the decompilation of programs.<sup>130</sup>

One final provision of interest in the Computer Programs Directive concerns the way it allocates the ownership of copyright. In the case of programs that are made by employees in the course of their employment, the Directive requires member states to allocate the copyright in such programs to the employer.<sup>131</sup>

## 7.2 RENTAL DIRECTIVE (1992) (codified in 2006)

The Rental Directive is in two parts, the first dealing with the specific issues of rental and lending, the other dealing with related rights.<sup>132</sup> The second part comes as close to the codification of copyright as any of the European Directives. Most of the provisions in the Directive had to be implemented by 1 July 1994.<sup>133</sup>

Chapter 1 of the Directive was drafted in response to the increasing economic importance of home rental as a source of revenue for copyright owners. Some member states had decided to confer a rental right, and some had adopted provisions relating to the public lending of works. The Directive attempts to avoid the development of divergent approaches by harmonizing the law relating to rental and lending.<sup>134</sup> It requires member states to confer on authors (of works within the Berne Convention), performers, phonogram producers, and film producers the exclusive right to control the rental and lending of copies (or in the case of performers, fixations) of their works.<sup>135</sup> However, member states are given a number of options, sometimes in derogation from the exclusive rights. The most important of these is the option not to recognize an exclusive right to authorize ‘public lending’ if authors receive remuneration of some sort for such lending.<sup>136</sup> Member states may also exempt certain establishments from the payment of remuneration for lending.<sup>137</sup>

Chapter 1 of the Directive also includes some interesting provisions on the ownership of the rental right. The Directive recognized the need for creators to obtain an ‘adequate income as a basis for further creative and artistic work’.<sup>138</sup> As a result, a fiercely debated provision requires member states to confer on authors and performers an ‘unwaivable right to equitable remuneration’ when copies of films or phonograms are rented.<sup>139</sup> In turn, it was decided that this required further definition of who is the author of a cinematographic or audiovisual work (a matter on which there are wide divergences under the laws of different countries).<sup>140</sup>

<sup>130</sup> Ibid, Arts. 5 and 6. See further Ch. 9.      <sup>131</sup> Ibid, Art. 2(3). See Ch. 5.

<sup>132</sup> The Rental Directive emerged in part in response to the European Court of Justice’s decision in *Warner Bros. v. Christiansen*, Case C-158/86 [1988] ECR 2605. For background see Reinbothe and von Lewinski (1993).

<sup>133</sup> Rental Directive 92/100/EEC, Art. 13. On implementation, see Commission, *Report from the Commission to the Council etc on the Public Lending Right* COM (2002) 502 final (12 Sept. 2002).

<sup>134</sup> In *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] ECR I-1953, 1978–80 (paras. 21–2), the ECJ held that the Directive was legitimate despite its impact on the freedom to pursue trade because it effected an objective of general interest pursued by the Community and did not constitute a disproportionate and intolerable interference impairing the very substance of freedom to pursue a trade.

<sup>135</sup> Rental Dir., Art. 1(1). Rental and lending are defined in Art. 2. See Ch. 6.

<sup>136</sup> Rental Dir., Art. 6(1). See below at pp. 221–2, 225, 328–9.

<sup>137</sup> Ibid, Art. 6(3). See below at p. 225.      <sup>138</sup> Ibid, Recital 5.

<sup>139</sup> Ibid, Art. 5. See below at p. 285.

<sup>140</sup> In the original proposal this was left as a matter for member states. The provision originated in an amendment to the proposed Directive by the European Parliament Committee on Culture.

The Directive requires that member states recognize that the ‘principal director’ is one of the authors of such a work.<sup>141</sup>

Chapter 2 of the Rental Directive requires member states to confer various rights on performers, producers of phonograms, broadcasters, and cable distributors (in addition to the rental and lending rights conferred by Article 2). *Performers* are to be given the exclusive right to authorize or prohibit the fixation,<sup>142</sup> broadcasting, or communication to the public of their unfixed performances.<sup>143</sup> They are also to be given the right to control the distribution of fixations of their performances.<sup>144</sup> Performers are also granted the right to share in the remuneration paid for the right to broadcast or play in public phonograms embodying their performances.<sup>145</sup> In turn, *phonogram producers* are to be given the exclusive right to authorize or prohibit the distribution of their phonograms.<sup>146</sup> They are also given a right to share in remuneration paid for the right to broadcast or play in public phonograms embodying their performances.<sup>147</sup> *Broadcasting organizations* are to be given the exclusive right to authorize or prohibit the fixation<sup>148</sup> of their unfixed broadcasts,<sup>149</sup> the distribution of fixations of their broadcasts; or the rebroadcasting or communication to the public of their broadcasts.<sup>150</sup>

Part 2 also requires member states to confer similar rights on the producers of first fixations of films. In the European schema, ‘first fixations of films’ is a category of related rights over and above the category of ‘cinematographic and audiovisual works’, which covers all fixations of moving images. A film of a football match, for example, would be a first fixation of a film, even though it might not be a cinematographic work. The producers of these fixations are to be granted the exclusive right to authorize or prohibit the distribution of their films.<sup>151</sup>

### 7.3 CABLE AND SATELLITE DIRECTIVE (1993)

The third European initiative, the Cable and Satellite Directive, was a response to technological developments. The Directive required member states (by 1 January 1995) to recognize that copyright and related rights include the right to authorize communication to the public by satellite.<sup>152</sup> The Directive does not harmonize these rights. Instead it requires member states ‘to ensure that when programmes from other member states are retransmitted by cable in their territory the applicable copyright and related rights are observed’. The Directive indicates that the rights recognized must be full property rights and that statutory licensing schemes must be abolished by 31 December 1997. The Directive limits the ways in which the rights may be administered. The Directive requires that the right to grant or refuse authorization to a cable operator who wishes to retransmit a broadcast shall only be exercised through a collecting

<sup>141</sup> Rental Dir., Art. 2(2). Reiterated in Duration Dir., Art. 2(1). See below at pp. 123–5.

<sup>142</sup> Rental Dir., Art. 7(1). See below at pp. 306–8. The reproduction right was repealed and replaced by Info. Soc. Dir., Art. 2.

<sup>143</sup> Ibid., Art. 9(1).

<sup>144</sup> Ibid., Art. 9. See below at p. 307.

<sup>145</sup> Ibid., Art. 8(2). The ECJ has declined to give guidance on what amounts to equitable remuneration, leaving it to member states to determine, though seemingly reserving the right to say when member states get it wrong: *Stichting ter Exploitatie van Naburige Rechten (SENA) v. Nederlandse Omroep Stichting (NOS)*, Case C-245/00 [2003] *EMLR* 364. See below at pp. 307–8.

<sup>146</sup> Ibid., Art. 9. <sup>147</sup> Ibid., Art. 8(2). See Ch. 6. <sup>148</sup> Ibid., Art. 7(1).

<sup>149</sup> Ibid., Art. 8(1). <sup>150</sup> Ibid., Art. 9(1)(d); Art. 8(3). See Ch. 6.

<sup>151</sup> Ibid., Art. 9(1)(d). For the problems UK law has with films, see below at Ch. 3, Sections 3 and 6.

<sup>152</sup> Satellite Directive, Arts 2 and 4. (It also permits member states to require ‘collective administration’ of some such rights, but only in the case of simulcasts of terrestrial broadcasts.)

society.<sup>153</sup> This does not apply, however, where the rights are owned by broadcasting organizations. The right of the broadcaster to prohibit retransmission of its own transmissions can be exercised independently.<sup>154</sup>

The most notable feature of the Directive concerns the definition of the place where the communication takes place. Prior to the Directive, different jurisdictions responded differently to the question of whether a satellite broadcast takes place in the country where the broadcast originated, the country from which the signals are sent, the satellite itself, or the countries where the signal can be received (this is known as the ‘footprint’). Opting for the simplest solution, the Directive requires member states to treat a satellite broadcast as taking place where the signals are introduced (or ‘injected’). This is the simplest solution because permissions to broadcast the various works to be included in a satellite broadcast are only required from the copyright owners in the country of introduction.<sup>155</sup>

#### 7.4 DURATION DIRECTIVE (1993) (codified 2006)

The Duration Directive was adopted in response to the *Patricia* decision, which made it clear that varying terms of protection posed a hurdle to the completion of the internal market.<sup>156</sup> Prior to its adoption, most member states granted copyright protection for a period of 50 years after the author’s death. However, some countries granted a 60-year *post mortem* term and Germany a 70-year term. Preferring to harmonize upwards, the Duration Directive required member states, by 1 July 1995, to grant a term of protection for copyright works (including original photographs) lasting for the life of the author plus 70 years.<sup>157</sup> In the case of cinematographic works, the duration is 70 years from the death of the principal director, author of the screenplay, author of the dialogue, and composer of music.<sup>158</sup> Terms of protection for related rights (including broadcasting organizations and film producers) are to be based on a fixed 50-year term.<sup>159</sup> However, where the country of origin of the work is a third country, and the author is not a Community national, these terms of protection are to be restricted so that the terms expire in the EEA no later than their date of expiry in their country of origin.<sup>160</sup> The Directive also requires member states to grant a new right, called the ‘publication right’, where previously unpublished works in which copyright has expired are published for the first time.<sup>161</sup>

#### 7.5 DATABASE DIRECTIVE (1996)

The Database Directive, which member states were obliged to implement by 1 January 1998, attempts to harmonize the laws of copyright in the field of databases.<sup>162</sup> It also requires member states to introduce a new *sui generis* right in non-original databases. This was seen to

<sup>153</sup> Satellite Dir., Art. 9(2), Art. 10. For British implementation see CDPA s. 144A. Note the criticism of the German implementation which requires cable operators to pay right holders an equitable remuneration, thereby precluding the possibility of cable operators dealing with only broadcasting organizations, and broadcasting organizations dealing with the collecting society: COM (2002) 430 final (July 26, 2002) p. 5.

<sup>154</sup> Satellite Dir., Art. 10. <sup>155</sup> Satellite Dir., Art. 1. See below at p. 150.

<sup>156</sup> See above at pp. 45–6, 161.

<sup>157</sup> Duration Dir., Art. 1. Original photographs are defined as those which are their author’s own intellectual creation. Recital 16 of the codified version of the Directive suggests that this means the photograph must reflect the personality of the author. Member states may protect non-original photographs. See below at pp. 109–11.

<sup>158</sup> Ibid, Art. 2(2). <sup>159</sup> Ibid, Art. 3. See below at p. 166.

<sup>160</sup> Prompting a rapid response from the United States.

<sup>161</sup> Duration Dir., Art. 4. See below at pp. 167–8. <sup>162</sup> See Davison, Chs. 3 and 4.

be necessary to sustain investment in the production and exploitation of electronic databases equally throughout the Community. While digital technologies had enhanced the potential of databases, differences in national laws (particularly as to originality) meant that databases were probably only protected by copyright in a few member states. This presented the possibility of distortions within the internal market. The Directive attempts to remedy this problem by requiring member states to ensure that their copyright laws protect *some* databases. It also requires that member states introduce new *sui generis* rights to protect other databases (no matter how mundane the arrangement of the material). In a sense, the two-tiered system recognizes that copyright only protects the selection or arrangement of materials, whereas the database right protects the collection and verification of the materials themselves.

The Directive requires member states to grant copyright to 'original databases'. A 'database' is defined rather vaguely as a collection of independent works, data, or other materials arranged in a systematic or methodical way and individually accessible by electronic or other means.<sup>163</sup> A database is only original where 'by reason of the selection or arrangement of their contents' the database constitutes the author's own intellectual creation.<sup>164</sup>

Member states are to give the owner of copyright in a database the exclusive right to reproduce the database, to translate it, to adapt, arrange, or alter it, distribute it, and communicate it to the public.<sup>165</sup> Member states must provide a defence to the lawful user of a database who commits acts that are necessary to access the contents of the database and to use those contents normally.<sup>166</sup> A limited list of optional defences is also prescribed.<sup>167</sup>

The Directive also requires member states to introduce a new *sui generis* right (which is reviewed in Chapter 13). For the moment it is worth observing that the database right arises where the maker of a database has made a substantial investment in either the activities of obtaining, verifying, or presenting the contents of the database. The maker of such a database is to be granted a right to prevent extraction or reutilization of the whole or substantial parts of the database. In certain circumstances, they also prevent the systematic extraction and/or reutilization of insubstantial parts.<sup>168</sup> Member states may subject the database right to certain limited defences and exceptions as regards private use of non-electronic databases, use for illustration of teaching and in non-commercial scientific research, public security, and administrative or judicial procedures.<sup>169</sup> This right is to last for 15 years from completion of the database or its publication, and a new right can arise where there is a substantial new investment in an existing database.<sup>170</sup>

## 7.6 ELECTRONIC COMMERCE DIRECTIVE (2000)

The EC Directive on Certain Legal Aspects of Electronic Commerce in the Internal Market aims to promote electronic commerce within the European Union, that is the provision of goods and services online. As such, it encompasses matters such as electronic contracts, unsolicited communications, and codes of conduct which are outside the scope of this text. However, a number of Articles impact upon intellectual property more directly, probably the most important of which concern the liability of service providers. As we will see, important questions arise as to whether people who provide the infrastructure and facilities for electronic communications become liable for the actions of those to whom their services are

<sup>163</sup> Database Dir., Art. 1. See pp. 66–7. <sup>164</sup> Ibid, Art. 3. See pp. 107–9.

<sup>165</sup> Ibid, Art. 5. See Ch. 6. <sup>166</sup> Ibid, Art. 6(1). See p. 232. <sup>167</sup> Ibid, Art. 6(2). See p. 207.

<sup>168</sup> Ibid, Art. 7. <sup>169</sup> Database Dir., Art. 9. <sup>170</sup> Ibid, Art. 10(3).

provided.<sup>171</sup> Articles 12–15 of the Directive differentiate between situations where services are mere conduits and where they are involved in caching and hosting. The E-Commerce Directive requires member states to provide that a mere conduit is not liable, except under a ‘prohibitory injunction’, for information transmitted on the network. Moreover, a provider shall not be liable for ‘caching’, that is the automatic, intermediate, and temporary storage of information, as long as it complies with a series of conditions. Finally, the Directive states that a provider shall not be liable for ‘hosting’, that is storage of information at the request of a recipient, so long as the provider does not have actual knowledge that the activity is illegal and, as regards claims for damages, is not aware of facts or circumstances from which illegal activity is apparent; or upon obtaining such knowledge or awareness, acts expeditiously to remove or disable access to the information.

### 7.7 INFORMATION SOCIETY DIRECTIVE (2001)

By far the most significant of the Community initiatives dealing with copyright is the Information Society Directive: often referred to as the Copyright Directive.<sup>172</sup> This Directive has its origin in the Green Paper, *Copyright in the Information Society*<sup>173</sup> and the 1996 *Follow Up*.<sup>174</sup> According to one commentator, it was ‘one of the most intensively debated proposals in recent EU history’.<sup>175</sup> The Directive is intended to implement the two WIPO Treaties agreed in Geneva in 1996. However, the Directive goes much further in responding to the perceived changes brought about by digital technology to the environment in which copyright law operates. As Recital 5 says:

technological development has multiplied and diversified the vectors for creation, production and exploitation. While no new concepts for the protection of intellectual property are needed, the current law on copyright and related rights should be adapted and supplemented to respond adequately to economic realities such as new forms of exploitation.

As well as introducing a ‘making available right’ and controls over technological measures of protection and rights management information,<sup>176</sup> the Directive harmonizes the reproduction and distribution rights, and attempts to limit the number and scope of the exceptions

<sup>171</sup> See below at Ch. 6 Section 9.

(or defences) that a national regime can operate.<sup>177</sup> The Directive was adopted on 22 May 2001 and had to be implemented by 22 December 2002. The UK complied with that obligation on 31 October 2003.<sup>178</sup>

## 7.8 RESALE RIGHTS DIRECTIVE (2001)

A number of European countries currently offer artists the right to participate in the resale value or profits from the resale of their works. This is known as the *droit de suite* or artist's resale royalty. In the 1990s, the Commission took the view that variations in national laws could affect the operation of the art market. To ensure that this did not happen, the Resale Rights Directive was introduced in 2001.<sup>179</sup> The UK, which has a substantial art market but no resale right, strongly resisted adoption of the Directive. While the UK was unable to prevent the Directive being adopted, it did succeed in diluting some of the provisions. The Directive had to be implemented by 2006. The Directive and its implementation is discussed further in Chapter 13.

# 8 THE FUTURE

Although the British copyright legislation has been amended on a number of occasions over the last 15 years, further reforms are already being discussed. In 2006, the Gowers Committee recommended certain amendments of British law with respect to exceptions and enforcement,<sup>180</sup> but concluded that no case had been made out to extend the term of copyright in sound recordings. In addition, it is to be hoped, though not expected, that Parliamentary time will be made available for the passage of a Copyright Act which incorporates previous amendments (thereby removing doubts that have been raised about their validity), places the publication right and database right within the statutory schema, and codifies the law so that it is more comprehensible. In an era where members of the public are more directly involved with works protected by copyright, copyright owners are increasingly dependent on the public's knowledge of, and compliance with, the law. Given this, it is even more pressing that the problems with the existing law be remedied.

## 8.1 INTERNATIONAL CHANGES

At the international level, WIPO has embarked on a number of initiatives that involve or relate to copyright law. The first area of activity is in relation to audiovisual performances: a topic that was largely excluded from the 1996 Copyright Treaties because of opposition from US-based interests.<sup>181</sup> A diplomatic conference was held in Geneva in December 2000 with a view to adopting either a treaty or a protocol to the WPPT. While the parties were in agreement about 19 of the 20 proposed paragraphs, they were unable to reach final

<sup>177</sup> Art. 5(2).

<sup>178</sup> The Copyright and Related Rights Regulations 2003, SI 2003/2498. France was the last Member State to introduce implementing legislation in August 2006. For a review of implementation see IViR, *Study on the Implementation and Effect in Member States' Laws of Directive 2001/29/EC on the Harmonisation of Certain aspects of Copyright and Related Rights in the Information Society* (Amsterdam, February 2007).

<sup>179</sup> See below at pp. 329–32.

<sup>180</sup> HM Treasury, *Gowers Review of Intellectual Property* (2006).

<sup>181</sup> Diplomatic Conference on the Protection of Audiovisual Performances, Fourth Session (Geneva, 8–20 Dec. 2000).

agreement.<sup>182</sup> In particular, they were unable to reach agreement as to whether the rights acquired by producers should arise by operation of law or by agreement. This issue was discussed at an ad hoc Informal Meeting on the Protection of Audiovisual Performances in Geneva in November 2003. To date there have no formal proposals for a diplomatic conference. As such, it seems that it may be some time before we see any movement in this area.

The second area where WIPO is active is in relation to indigenous culture.<sup>183</sup> In reflection of the fact that many indigenous cultures do not draw a rigid line between art and science in the way that Western cultures often do, WIPO's activities extend beyond copyright to include patents, trade marks, and other related rights. While many of the copyright-related problems have been resolved, there are still a number of issues that need resolution. These include community moral rights, fixation, duration, and ways of protecting against the usurpation of indigenous style.

Another area where WIPO is active is in relation to databases. When WIPO began work on copyright reform in the 1990s, there were plans for three treaties (dealing, respectively, with changes to copyright, performances and phonograms, and databases). However, only two of the three treaties were passed: the third proposed treaty on databases was left on the table.<sup>184</sup> Given the criticisms of the EU Database Directive and that the United States, despite concerted attempts, has been unable to produce legislation in this field,<sup>185</sup> it is unlikely that anything comparable to the original draft would be acceptable. The most likely outcome is a treaty that requires contracting parties to protect databases from misappropriation, but leaves the means of protection to member states.

The fourth area of possible international reform is in relation to copyright protection for broadcasting organizations.<sup>186</sup> This has been under consideration for a decade and various versions of a possible treaty text are in circulation. As with the other WIPO treaties, the initiative was prompted by a desire to update international copyright standards to bring them into line with the 'information age'. Even though much of the content of the proposed treaty echoes that which was adopted for copyright, sound recordings, and performers in the two 1996 Treaties, in the subsequent years opposition to copyright has grown. Coupled with real doubts over the best way to deal with internet services which are similar to broadcasting, it is by no means clear that the proposal will produce a treaty.<sup>187</sup>

## 8.2 EUROPEAN INITIATIVES

The European Commission has announced that it will introduce in 2008 a proposal for a Directive extending the copyright term in sound recordings.<sup>188</sup> The Commission is also

<sup>182</sup> S. von Lewinski, 'The WIPO Diplomatic Conference on Audiovisual Performances: A First Resume' [2001] *EIPR* 333; O. Morgan, 'The problem of the international protection of audiovisual performances' [2002] *IIC* 810–827; Ficsor 70–74, 668–700; Reinbothe and von Lewinski (2002), 469–86.

<sup>183</sup> See Ficsor, 76–8, 704–8.

<sup>184</sup> See Ficsor, 69–70, 701–2; Reinbothe and von Lewinski (2002), 486–94; Davison, 226–34.

<sup>185</sup> The Database Investment and Intellectual Property Antipiracy Bill of 1996, The Collections of Information Antipiracy Bill 1997, The Collections of Information Antipiracy Bill 1999, The Consumer and Investor Access to Information Bill of 1999, Database and Collections of Information Misappropriation Act 2003 (H.R. 3261). See Davison, ch. 5.

<sup>186</sup> See Ficsor, 74–6, 702–4.

<sup>187</sup> The Draft Non-Paper on the WIPO Treaty on the Protection of Broadcasting Organizations of March 8, 2007 is a very modest proposal indeed, proposing protection of broadcasting organizations' broadcasts for 20 years. There would be no obligation to grant 'rights' and the Treaty would expressly not cover web transmissions.

<sup>188</sup> IP/08/240 (Brussels, 14 Feb. 2008).

reviewing the issue of levies on copying equipment, and is alive to potential internal market aspects of this problem.<sup>189</sup> Some legislative initiative may prove necessary, though the issues are complex. The Commission is also reviewing issues of Europe-wide licensing, though any action in this field is likely to be through soft law.<sup>190</sup>

In the medium term, there are still some possible candidates for future harmonization: these include the moral rights, copyright contracts, and collective administration.<sup>191</sup> While many of the copyright reforms initiated by the Commission have proved to be difficult, it is likely that these remaining topics will be particularly problematic.<sup>192</sup> In part, this is because these are areas where the differences between different member states are most marked. They are also areas of copyright law which are closely intertwined with other areas of national law such as contract law and labour law. As such, reform will invariably be caught up in broader debates. Early studies on moral rights and copyright contracts indicate that there is little support for harmonization of these matters on the Continent, because of fears that the laws would be made less author-protective.<sup>193</sup> There are a number of other piecemeal issues that may be addressed in the future. For example, while certain works have to be recognized under the existing Directives, the Commission has not yet looked at the way works are defined more generally (including issues such as TV formats or protection of perfumes), nor at fixation. In addition, there has been only partial harmonization of 'originality' and 'qualification' (in the context of the resale royalty right).

There are always murmurings amongst the more ambitious or federally inclined about the possible codification of European copyright law. In its study for the European Commission, entitled *Recasting Copyright for the Knowledge Economy*, the Institute for Information Law at the University of Amsterdam has made a tentative proposal that long-term consideration be given to creation of a European Copyright Code, conferring a single, Europe-wide, indivisible copyright (and pre-empting any corresponding national rights). The proposed right would be created by Community Regulation and draw on the existing Directives and the jurisprudence of the ECJ. It would also fill in many of the gaps, but would not cover aspects of copyright

<sup>189</sup> E.C., *Fair Compensation for Acts of Private Copying* (Brussels, 14 Feb 2008).

See also E.C., *Monitoring of the 2005 Music Online Recommendation*, (Brussels, 7 Feb 2008).

<sup>191</sup> Info. Soc. Dir., Recital 17 ('it is necessary, especially in the light of the requirements arising out of the digital environment, to ensure that collecting societies achieve a higher level of rationalisation and transparency with regard to compliance with competition rules'); Resale Rights Directive, Recital 28 ('Member States should ensure that collecting societies operate in a transparent and efficient manner').

<sup>192</sup> See, e.g. M. Walter, 'Updating and Consolidation of the *Acquis*: The Future of European Copyright', Report of the Commission meeting Santiago de Compostela, June 2002 (proposing harmonization of moral rights, as well as general application of the unwaivable right to equitable remuneration). But cf. IViR, *Recasting Copyright*, Ch. 7 advising against further harmonizing directives, and proposing immediate action through 'soft law' to clarify inconsistencies, and a longer-term project for a core Copyright Code through a regulation.

<sup>193</sup> A. Strowel, M. Salokannel, and E. Derclaye, *Moral Rights in the Context of the Exploitation of Works Through Digital Technology* (2000); B. Hugenholtz and L. Guibault, *Study in the Conditions Applicable to ContrACts Relating to Intellectual Property in the EU* (2002) (suggesting harmonization would be 'premature'). See also *Communication from the Commission to the Council, the European Parliament and the European Economic and Social Committee: The Management of Copyright and Related Rights in the Internal Market* COM(2004) 261 final (Brussels 16 Apr 2004), 13 (para 2.3) (given common ground there is no need for the time being to harmonize rules on copyright contracts).

that did not affect the operation of the internal market, or which reflected national cultural policy. The study thus suggests that moral rights, authorship, ownership, and supervision of collective administration would remain aspects of national law. In addition, lest such a Code introduce undue inflexibility, the study suggests that national legislatures be provided with some flexibility to introduce new exceptions or limitations. The potential advantages of such a change are self-evident. A code would be simpler, insofar as it consists of a single law, rather than a series of national laws. If drafted correctly, it would remove inconsistencies between the existing Directives. Such a code would also be more user-friendly insofar as it enabled rights to be enforced in a single action across Europe. Despite these attractions, it is unlikely that it will be introduced, at least in the near future. The Commission seems rather intent on adapting existing copyright law to market conditions through recommendations and less interventionist mechanisms. In the longer term, however, these ideas deserve fuller exploration.

## SUBJECT MATTER

### CHAPTER CONTENTS

1	Introduction	58	6	Films	84
2	Literary Works	61	7	Sound Recordings	85
3	Dramatic Works	67	8	Broadcasts	86
4	Musical Works	70	9	Published Editions	89
5	Artistic Works	71			

### 1 INTRODUCTION

This chapter examines the subject matter protected by copyright law. In contrast with some other jurisdictions, where the subject matter protected by copyright is defined by statute in broad and open-ended terms,<sup>1</sup> the Copyright, Designs and Patents Act 1988 provides a detailed and exhaustive list of the types of creation protected by copyright law. In order for a creation to be protected by copyright it must fall within one of the following eight categories of work: (1) literary works, (2) dramatic works, (3) musical works, (4) artistic works, (5) films, (6) sound recordings, (7) broadcasts, (8) published editions (or typographical works).

Before looking at the categories of subject matter in more detail, it is necessary to make some preliminary points. The first is that, as the 1988 Act provides an exhaustive list of the protected subject matter, there is little opportunity for the courts to recognize new forms of subject matter, other than through the creative interpretation of the existing categories. The closed nature of the categories, especially when combined with the fact that the UK has no law of unfair competition, has meant that at times copyright has been 'stretched to give protection to creative talents and activities the protection of which was never in the contemplation... of those who from time to time have been responsible for the framing of the successive statutes'.<sup>2</sup> On other occasions, the fact that the list is exhaustive has led to the exclusion from UK copyright

<sup>1</sup> For example, French law protects '*toutes les oeuvres de l'esprit*': French Intellectual Property Code, 1992, Art. L-112-1. See also Berne, Art. 6. For a proposal to abandon classification of works, see A. Christie, 'Re-conceptualising Copyright in the Digital Era' [1995] *EIPR* 522, 525; 'A Proposal for Simplifying United Kingdom Copyright Law' [2001] *EIPR* 26.

<sup>2</sup> *CBS v. Ames Records* [1981] *RPC* 407, 417.

law of 'works' which would be protected in countries operating a non-exhaustive system.<sup>3</sup> This was graphically illustrated in the case of *Creation Records*. Here, as preparation in the production of the cover for Oasis's album *Be Here Now*, (see Fig. 3.1) Noel Gallagher arranged for a series of objects (a Rolls Royce, a motor bike, a clock) to be placed around a swimming pool. This collection of 'artistically' distributed objects was then photographed by the claimant, and the photograph used as the album cover. However, a photographer from the defendant newspaper was present, and also took a photograph of the scene. When the newspaper published this photograph, and offered to sell posters of the scene, the record company sought an interim injunction alleging infringement of its copyright. The claim based on copyright failed because the scene did not fall within the meaning of any of the (then) nine (now eight) categories of protected work: in particular, it was not an artistic work, nor a dramatic work.<sup>4</sup>

A notable feature of the 1988 Act is that all types of subject matter that are protected by copyright are called 'works'. This is in contrast to the 1956 Copyright Act where a distinction was drawn between Part I 'works' (literary, dramatic, musical, or artistic works) and Part II

<sup>3</sup> Some European countries have even protected perfumes by copyright: *Lancôme Parfums v. Kecofa* [2006] ECDR (26) 363 (Dutch Supreme Court); cf. *Bsiri-Barbir v. Haarmann & Reimer* [2006] ECDR (28) 380 (French Cour de Cassation). This clearly would not be possible under UK law. See C. Seville, 'Copyright in Perfume: Smelling a Rat' (2007) 66 *CLJ* 49; H. Cohen Jehoram [2006] *EIPR* 629.

<sup>4</sup> *Creation Records v. News Group* [1997] *EMLR* 444 (interim relief, however, was granted on the basis of breach of confidence. See below Chs. 44–6).

'subject matter' (sound recordings, films, broadcasts, and typographical arrangements). It is also in marked contrast to the position in civil law systems, such as in France, which distinguish between 'author's rights' (or *droits d'auteur*) and 'neighbouring rights' or entrepreneurial works (*droits voisins*). Author's rights typically cover literary, dramatic, musical, and artistic work, whereas neighbouring rights are afforded to sound recordings, broadcasts, and performers.<sup>5</sup> This distinction is also reflected in the International Conventions: with the 1886 Berne Convention protecting 'author's rights' and the 1961 Rome Convention protecting 'neighbouring rights'. Under EC law, 'neighbouring rights' are usually classed as 'related rights'. While the 1988 Act may have jettisoned the distinction between works and subject matter other than works, it should not be assumed that all works are treated the same. Indeed, as will become apparent in the following chapters, the conditions under which rights are granted differ, sometimes considerably, between different classes of work, as do the scope, nature, and duration of those rights. It is also important to note that, although British law may have abandoned the formal distinction between authorial works (literary, dramatic, musical, and artistic works) and entrepreneurial works (sound recordings, films, broadcasts, and typographical works),<sup>6</sup> nonetheless copyright law treats these two broad categories differently. While there are problems with this distinction, notably now that films occupy a space somewhere in between the two categories, it provides a useful way of describing the subject matter of copyright.

It should also be noted that the legal categories do not necessarily correspond to the objects commonly associated with copyright law. Instead, individual tangible objects may embody a number of different copyright works. For example, a book or newspaper might contain a literary work, an artistic work, and a typographical arrangement;<sup>7</sup> a song may consist of literary and musical works (the lyrics being a literary work); and a CD might contain a sound recording, a musical work, and a literary work. While the legal categories do not necessarily correspond to the objects protected by copyright, in most cases there have been few problems in matching a particular creative act to one of the protected categories. In some cases, however, the question has arisen as to whether it is possible for a particular creation to fall within two categories simultaneously. This question arose in *Electronic Technique v. Critchley*, where Laddie J was called upon to consider whether a circuit diagram could simultaneously be a literary work and an artistic work.<sup>8</sup> Laddie J said that, although it might be possible in theory to say that a single piece of creative effort may 'give rise to two or more copyrights in respect of the same creative effort', nonetheless 'there are compelling arguments that the author must be confined to one or the other of the possible categories'. However, other judges have taken a different view.<sup>9</sup> While it is still unclear whether the same creative effort can simultaneously give rise to both a literary work and an artistic work, in *Norowzian v. Arks (No. 2)* the Court of

<sup>5</sup> The division of subject matter into 'authorial' and 'entrepreneurial' works is based upon a belief that copyright for authors is the pure form and should not be conflated or equated with rights given in return for investment. See above, pp. 32–3.

<sup>6</sup> For example, as to the requirement for originality (see Ch. 4) or the concept of reproduction (see Ch. 6 Section 2 and p. 304).

<sup>7</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 557; [2001] 3 WLR 390 (para. 4).

<sup>8</sup> [1997] FSR 401.

<sup>9</sup> *Anacon Corporation v. Environmental Research Technology* [1994] FSR 659 (Jacob J suggesting that a circuit diagram is both a literary and artistic work). Surely a poem in a particular shape could be an artistic work as well as a literary work: *Sandman v. Panasonic UK Ltd* [1998] FSR 651. See generally Copinger, para 3–04 pp. 51–3.

Appeal accepted that the maker of a film may simultaneously produce two copyright works: a film copyright in the fixation and a dramatic work in the ‘cinematographic work’.<sup>10</sup>

With these general points in mind, we now turn to look at the eight types of work recognized by copyright law.

## 2 LITERARY WORKS

Literary works have been protected from unauthorized reproduction since at least 1710.<sup>11</sup> Literary works are defined in section 3(1) of the 1988 Act to mean ‘any work, other than a dramatic or musical work, which is written, spoken or sung, and accordingly includes (a) a table or compilation (other than a database), (b) a computer program, (c) preparatory design material for a computer program, and (d) a database’.

It is important to note that literary works are not limited to works of literature, but include all works expressed in print or writing (other than dramatic or musical works).<sup>12</sup> It is also important to note that protection is not limited to words, but also includes things such as symbols and numerals. The scope of the subject matter protected as a literary work is enhanced by the fact that a work will be protected irrespective of the quality or style of the creation in question: copyright law does not pass judgment on the standard of the work. As a result, the types of thing that will be protected as a literary work include novels by Salman Rushdie, poems by Ted Hughes, lyrics by Courtney Love, as well as advertising slogans, railway timetables, and examination papers.<sup>13</sup> The fact that literary works include works that are spoken means that spontaneous conversations, interviews, and the like may also be protected (although, as we shall see, copyright does not subsist in a spoken work unless it is recorded).

For the most part, there have been few problems in deciding what is meant by a literary work. Where problems have arisen, the courts have tended to rely on the test set out in *Hollinrake v. Truswell* where it was said that, to qualify as a ‘book’ under the Literary Copyright Act 1842, the creation must afford ‘either information and instruction, or pleasure, in the form of literary enjoyment’.<sup>14</sup> While this was not intended to provide a comprehensive or exhaustive definition,<sup>15</sup> it provides useful guidance as to where the boundaries of the category are to be drawn.

Most of the cases where the meaning of literary work has arisen have been concerned with works that afford information or instruction. These cases have made it clear that for a work to provide information or instruction, it must be capable of conveying an intelligible meaning.<sup>16</sup> In line with the principle that protection should not be dependent upon the quality of the work, the courts have been willing to accept a very low threshold when considering whether a work ‘conveys an intelligible meaning’. For example, in one case it was accepted that sequences of letters set out

<sup>10</sup> [2000] EMLR 67.

<sup>11</sup> The Statute of Anne 1710 and the Literary Copyright Act 1842 used the term ‘book’. However, since 1911 the statutes have referred to literary works.

<sup>12</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601. <sup>13</sup> *Ibid.*

<sup>14</sup> (1894) 3 Ch 420. The Court of Appeal held that a cardboard sleeve chart (i.e. a representation of a sleeve designed for a lady’s arm with certain scales or measurements on it, intended for practical use in dressmaking) was not a ‘book’ within the 1842 Act. Under the CDPA such a work would almost certainly be treated as an artistic work.

<sup>15</sup> *Apple Computer v. Computer Edge* [1984] FSR 481, 495 (Fed. Ct. Australia); *Laddie et al.*, para. 3.31.

<sup>16</sup> *Ibid.*, 521 (Fed. Ct. Australia).

## HERE'S HOW TO WIN THE PRIZE OF A LIFETIME

**O W M Q U**

- THIS is your bonus chance to win £1 million. Just match your personal cash code on your card against the single line grid, from left to right IN ORDER. IF you have the perfect match you are in with a chance for that magical million.

**Fig. 3.2** The grids in *Express Newspapers v. Liverpool Daily Post*

Source: Courtesy of Express Newspapers.

in grids published in a newspaper provided information as to whether a reader had won or lost a bingo game and, as such, were literary works<sup>17</sup> (see Fig. 3.2). In order for a work to ‘convey an intelligible meaning’ it is not necessary that the work be understood by the general public; it is sufficient that the work is understood by a limited group with special knowledge. Thus a telegraphic code has been held to be a literary work, even though the words of the code were meaningless in themselves.<sup>18</sup> It has also been held that ciphers, mathematical tables, systems of shorthand, and Braille catalogues convey meaning and as such qualify as literary works.<sup>19</sup> One of the few situations where works have been held not to provide information or instruction is where the work is meaningless or gibberish.<sup>20</sup> Another situation where a work fails to provide information is where it is an invented name. For example, it was held that the word *EXXON*, which had been created to act as a company name, conveyed no information and hence was not protected as a literary work. (Although, as we will see, there may have been other grounds for this decision.)<sup>21</sup>

In contrast to informational works, there has been little discussion of what is meant by works that ‘provide pleasure in the form of literary enjoyment’. The need for a work to provide literary enjoyment and pleasure seems to suggest a qualitative test. If so, it would run counter

<sup>17</sup> *Express Newspapers v. Liverpool Daily Post* [1985] 3 All ER 680.

<sup>18</sup> *D. P. Anderson v. Lieber Code Company* [1917] 2 KB 469.

<sup>19</sup> *Apple Computer v. Computer Edge* [1984] FSR 481, 521 (Fed. Ct. Australia).

<sup>20</sup> *Ibid.*, 495 (‘meaningless rubbish would plainly be excluded’).

<sup>21</sup> *Exxon Corporation v. Exxon Insurance* [1982] RPC 69, 90.

to the widely accepted principle that the quality of the literary work is not to be taken into account when deciding whether a work should be protected.

With these general points in mind, we now turn to look in more detail at the types of thing that are protected as literary works. After looking at names and titles (which are not protected), we turn to look at tables and compilations, computer programs, preparatory material for computer programs, and databases.

## 2.1 NAMES, TRADE MARKS, AND TITLES

Despite the fact that names and titles are expressions in writing or print (and are often traded for substantial amounts of money), the UK (like most countries) refuses to protect them as literary works.<sup>22</sup> Thus, invented words such as EXXON (which had been invented by Esso Petroleum as a trade name),<sup>23</sup> titles of game shows such as *Opportunity Knocks*,<sup>24</sup> or song titles such as ‘The Man Who Broke the Bank at Monte Carlo’<sup>25</sup> have been held not to be protected by copyright as literary works.

Two different reasons are used to account for the exclusion of names or titles from copyright. Sometimes, it is said, though not without some criticism,<sup>26</sup> that these matters are not ‘literary works’ at all. This is because although names and titles are in writing, they do not afford ‘information, instruction or pleasure of a literary kind’. It was on this basis that the Court of Appeal held that EXXON was not a literary work.<sup>27</sup> In other cases, the tribunals focus on the fact that names and titles are not ‘original’. That is, the courts refuse protection because the title is not the result of a substantial amount of labour, skill, and judgment, or is itself not ‘substantial enough’. It was on this basis that *The Lawyer’s Diary* and ‘The Man Who Broke the Bank at Monte Carlo’ were held to be unprotected.<sup>28</sup> This latter approach leaves room for the possibility that some creative titles might still qualify for copyright protection, particularly lengthy titles which are a product of substantial labour, skill, and judgment.<sup>29</sup>

There are a number of policy reasons why names and titles may be excluded from protection as literary works by copyright law. Perhaps the main reason for not protecting names and titles

<sup>22</sup> See R. Stone, ‘Copyright Protection for Titles, Character Names and Catch-phrases in the Film and Television Industry’ [1996] *Ent LR* 178. For related regimes see R. Stone, ‘Titles, Character Names and Catch-phrases in the Film and Television Industry: Protection under the Trade Marks Act 1994 and Alternative Registration Systems’ [1997] *Ent LR* 34.

<sup>23</sup> *Exxon Corp. v. Exxon Insurance* [1982] *RPC* 69.

<sup>24</sup> *Green v. Broadcasting Corporation of New Zealand* [1989] *RPC* 469, 472, 475, 490 (CA of New Zealand).

<sup>25</sup> *Francis Day and Hunter v. 20th Century Fox* [1940] *AC* 112 (copyright in the song ‘The Man Who Broke the Bank at Monte Carlo’ was not infringed by the performance of a motion picture of the same title). See also *Dick v. Yates* [1881] *Ch* 6 (no copyright in ‘Splendid Misery’).

<sup>26</sup> For criticisms of this rationale see Dworkin and Taylor, 21–2; J. Cullabine, ‘Copyright in Short Phrases and Single Words’ [1992] *EIPR* 205, 208.

<sup>27</sup> *Exxon Corp. v. Exxon Insurance* [1982] *RPC* 69.

<sup>28</sup> *Rose v. Information Services* [1987] *FSR* 254 Hoffmann J (there was too slight a degree of skill and labour); *Francis Day and Hunter v. 20th Century Fox* [1940] *AC* 112 (not substantial enough). In *Sinanide v. La Maison Kosmeo* (1924) *LTR* 365 protection was refused to the advertising slogan ‘youthful appearances are social necessities, not luxuries’ by reference to the principle *de minimis non curat lex*. Cf. *Weldon v. Dicks* [1878] *Ch* 247 (‘Trial and Triumph’ protected—but almost certainly no longer good law: see, Copinger, para. 21–20, 985 n. 98).

<sup>29</sup> In *Francis Day and Hunter v. 20th Century Fox* [1940] *AC* 112, the Privy Council indicated that, if a title was extensive and important enough, it might be possible to protect it. For cases of protection see *Lamb v. Evans* [1893] 1 *Ch* 218 (headings in trade directory protected) and *Shetland Times v. Dr Jonathan Wills* [1997] *FSR* 604 (arguable that newspaper headline of eight or so words (‘Bid to save centre after council funding cock-up’) was protected because it was designedly put together for the purpose of imparting information).

relates to the general inconvenience that would arise if someone was able to control the way certain words and phrases were used. It would be inconvenient—indeed absurd—if business commentators and political activists could not refer (e.g. in broadcasts, newspapers, or campaign literature) to the oil conglomerate by using the term EXXON without gaining permission in advance. Another reason for refusing protection to names and titles as literary works under copyright law is that it is unnecessary to do so, given that they are adequately protected by passing off, trade mark law,<sup>30</sup> and artistic copyright.<sup>31</sup>

## 2.2 TABLES AND COMPILATIONS (OTHER THAN DATABASES)

Section 3(1)(a) of the 1988 Act specifically states that literary work includes ‘tables or compilations (other than a database)’.<sup>32</sup> As a part of the reforms made to accommodate the Database Directive, section 3 was amended as of 1 January 1998 to add the rider that ‘tables and compilations’ no longer includes databases. At the same time, the definition of literary work was amended so as specifically to recognize databases as a separate type of literary work.<sup>33</sup> The reason why databases were placed in a separate category was to enable the 1988 Act to impose a different requirement of originality on databases from that applied to tables and compilations.

Prior to these amendments, a wide range of subject matter had been protected as compilations. This included football pools coupons,<sup>34</sup> a leaflet conferring information about herbicides,<sup>35</sup> TV schedules,<sup>36</sup> directories listing the names and addresses of solicitors,<sup>37</sup> a compilation of computer programs,<sup>38</sup> a timetable index,<sup>39</sup> trade catalogues,<sup>40</sup> and street directories.<sup>41</sup> As we will see, a database is defined in very wide terms. As a result, it is possible that most if not all of the subject matter previously protected as compilations would now be

<sup>30</sup> The corollary of this is that, while a person is usually free (as far as copyright is concerned) to appropriate names and short titles, care must be taken to ensure that the use of such a title cannot be seen as passing-off or a trade mark infringement. The claimant in *Exxon* succeeded in its passing-off claim: [1982] *RPC* 69, 75 (Graham J), but nevertheless appealed on the copyright issue.

<sup>31</sup> ‘*Karo Step*’ *Trade Mark* [1977] *RPC* 255 (a pictorial mark may be an artistic work); *Auvi Trade Mark* [1995] *FSR* 288 (High Court, Singapore); *Hutchinson Personal Communications Ltd v. Hook Advertising Ltd* [1996] *FSR* 549 (logo consisting of inverted ‘R’ with a dot assumed to be protected by copyright); *News Group v. Mirror Group* [1989] *FSR* 126 (masthead from *The Sun* newspaper).

<sup>32</sup> Berne, Art. 2(5) (collections of literary or artistic works); TRIPS, Art. 10(2); WCT, Art. 5 (compilations of data or material).

<sup>33</sup> CDPA s. 3(1)(d).

<sup>34</sup> *Ladbroke v. William Hill* [1964] 1 *All ER* 465, 471. Lord Evershed said that the coupon is ‘a compilation in the sense that it is made up by putting together in writing (that is, in print) a number of individual items or components’. See also *Football League v. Littlewoods* [1959] *Ch* 637 (fixture lists); *Greyhound Services v. Wilf Gilbert (Staffs) Ltd* [1994] *FSR* 723 (advance programme of greyhound races).

<sup>35</sup> *Elanco v. Mandops* [1980] *RPC* 213.

<sup>36</sup> *Independent Television Publications v. Time Out* [1984] *FSR* 64.

<sup>37</sup> *Waterlow Directories v. Reed Information* [1992] *FSR* 409; *Waterlow Publishers v. Rose* [1995] *FSR* 207 (suggesting such a work might be protected even though it has no identifiable author). See also *Kelly v. Morris* (1866) *LR* 1 *Eq* 697.

<sup>38</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] *FSR* 275 (comprising 335 program files, 171 record layout files, and 46 screen layout files was held to be a compilation).

<sup>39</sup> *Blacklock v. Pearson* [1915] 2 *Ch* 376.

<sup>40</sup> *Purefoy v. Sykes Boxall* (1955) 72 *RPC* 89.

<sup>41</sup> *Kelly v. Morris* (1866) *LR* 1 *Eq* 697.

protected as databases.<sup>42</sup> If this is the case, it will leave little or no room for ‘tables and compilations’ in the future.<sup>43</sup>

## 2.3 COMPUTER PROGRAMS

After considerable debate at both national and international level over whether computer programs should be regulated by copyright law, patent law, or by a *sui generis* regime, it was decided in the 1980s that computer programs ought to be protected as literary works.<sup>44</sup> This position is now well entrenched in European and international intellectual property law.<sup>45</sup> In line with these trends, the 1988 Act protects computer programs as literary works.<sup>46</sup> While the 1988 Act does not define what is meant by a computer program,<sup>47</sup> it is clear that it includes source code,<sup>48</sup> assembly code, and object code. It is also clear that ‘computer program’ is not synonymous with software. On this basis it has been held that the definition of computer program includes instructions permanently wired into an integrated circuit (that is, firmware).<sup>49</sup>

## 2.4 PREPARATORY DESIGN MATERIAL FOR COMPUTER PROGRAMS

To bring British law into conformity with the EC Software Directive, preparatory design material for computer programs is now included within the general definition of literary works.<sup>50</sup> It has been suggested that this is an inappropriate way of implementing the Directive and that preparatory design material should be treated as part of a computer program.<sup>51</sup>

<sup>42</sup> For a systematic analysis, see E. Derclaye, ‘Do sections 3 and 3A of the CDPA violate the Database Directive? A Closer Look at the Definition of a Database in the UK and its Compatibility with European Law’ [2002] *EIPR* 466 (suggesting that a shopping list is a collection which is not a database because it is not arranged systematically or methodically and that a table of contents in a book is a collection where the individual elements are not ‘independent’. Derclaye also argues that, by affording protection to such ‘near-databases’, UK law is incompatible with the Directive.)

<sup>43</sup> Note, however, *IPC Media Ltd v. Highbury Leisure Ltd* [2005] *FSR* (20) 434, 441 where the claimant alleged that the series of monthly magazines taken together constituted a database.

<sup>44</sup> The judiciary were willing to accept that software was protected under the CA 1956: *Gates v. Swift* [1982] *RPC* 339–40; *Sega Enterprises v. Richards* [1983] *FSR* 73 (‘assembly code’ was a literary work); *Thrustcode v. WW Computing* [1983] *FSR* 502 (literary copyright is capable of subsisting in a computer program).

<sup>45</sup> Software Dir.; TRIPS, Art. 10(1); WCT, Art. 4.

<sup>46</sup> CDPA s. 3(1)(b). The Copyright (Computer Software) Act 1985 had declared only that computer programs were to be *considered* as literary works.

<sup>47</sup> WIPO model provisions on Protection of Computer Software (1978) defined computer program as a set of instructions expressed in words, codes, schemes, or in any other form, which is capable, when incorporated in a machine-readable medium, of causing a computer—an electronic or similar device having information-processing capacities—to perform or achieve a particular task or result. See also Green Paper, *Copyright and the Challenge of Technology* COM (88) 172 final, 170. A similarly vague definition has been adopted in the USA: see Copyright Act 1976, 17 USC s. 101. (A ‘computer program’ is a ‘set of statements or instructions to be used directly or indirectly in a computer in order to bring about a certain result’.)

<sup>48</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] *FSR* 275.

<sup>49</sup> Software Dir., Recital 7.

<sup>50</sup> For background see *ibid.* For implementation, see Copyright (Computer Programs) Regulations 1992 (SI 1992/3233), operative from 1 Jan. 1993.

<sup>51</sup> Software Reg., reg. 3. For commentary, see S. Chalton, ‘Implementation of the Software Directive in the UK’ [1993] *EIPR* 138, 140; A. Meijboom, in A. Meijboom and H. Jongen (eds.), *Software Protection in the EC* (1993), 8.

## 2.5 DATABASES

As we mentioned earlier, in order to comply with the Database Directive the definition of literary works was amended from 1 January 1998 to introduce ‘databases’ as a distinct class of literary works.<sup>52</sup> A database is defined very broadly as ‘a collection of independent works, data or other materials which (a) are arranged in a systematic or methodical way, and (b) are individually accessible by electronic or other means’. It seems that the definition is broad enough to cover most if not all of the material previously protected as tables and compilations (though preparatory documents suggest that the definition may exclude collections of three-dimensional objects).<sup>53</sup>

Some aspects of the definition of a database were explained by the European Court of Justice in *Fixtures Marketing Ltd v Organismos Prognostikon Agonon Podosfairou AE (OPAP)*.<sup>54</sup> The case concerned a claim by Fixtures Marketing to be the proprietor of database right in English football fixtures. The defendant organization, which used the fixtures in its betting games, asserted that the fixture lists were not ‘databases’ and the Athenian Court referred a number of questions to the ECJ. The Court considered that the notion of database was intended to have ‘a wide scope, unencumbered by considerations of a formal, technical or material nature’. Consequently, there was no reason why a collection of sporting information should not be a database. As regards the prerequisite of ‘independence’, the Court said this required the constituent material to be ‘separable from one another without their informative... or other value being affected’,<sup>55</sup> and the Court intimated that this was true of individual fixtures, each of which had ‘autonomous informative value’ by providing ‘interested third parties with relevant information’.<sup>56</sup> The Court also commented on the requirement that the materials be arranged in a ‘systematic or methodical’ manner so as to be individually accessible, and stated that this required either that there be technical means for searching or other means, such as an index, table of contents, plan, or classification, to allow retrieval.<sup>57</sup> The fixture lists, being organized chronologically, and within the chronology alphabetically, constituted just such an arrangement. Applying these definitions, the poems in a book of poems by the same poet would most likely be regarded as ‘independent’ and ‘individually accessible’ and thus constitute a database. It is more difficult to say whether the data on a map would be considered to be ‘independent’ or ‘individually accessible’.

A database does not include a computer program used in the making or operation of databases accessible by electronic means,<sup>58</sup> or presumably a compilation of programs. It should be noted that a computer program might itself be or include a compilation of information and hence be a database as well. Insofar as a computer program incorporates parts that fall within the definition of a database, it seems that these components may be independently protected as databases (whether under copyright or the *sui generis* database right). For example, if program

<sup>52</sup> CDPA s. 3(1)(d).

<sup>53</sup> Explanatory Memorandum, Com (93) 464 final\_SYN 393, 41. In *Football Association Premier League Ltd v Panini UK Ltd* [2004] FSR (1) 1 (paras. 25, 29) Chadwick and Mummery LJ suggested that an album for stickers of football players (the stickers being artistic works) was a compilation, but it is probably a database.

<sup>54</sup> Case C-444/02 [2005] 1 CMLR (16) 367.

<sup>55</sup> *Ibid.*, para. 29. See also Derclaye [2002] *EIPR* 466, 469 (“‘independent’ means that an element makes sense by itself; its meaning does not depend on another element, another piece of information”); Davison, 72, suggesting that the element must have ‘a stand-alone function to play in terms of informing or entertaining people’.

<sup>56</sup> *Ibid.*, para 33. <sup>57</sup> *Ibid.*, para. 30.

<sup>58</sup> Database Dir., Art. 1(3). See also J. Reichman and P. Samuelson, ‘Intellectual Property Rights in Data?’ (1977) 50 *Vanderbilt Law Review* 51, 132.

interfaces can be characterized as databases, they may be protected by either copyright or the *sui generis* database right. The fact that a computer program may be protected both as a literary work and by the database right may have a number of important consequences. As the defences available in relation to the database right are less extensive than those offered by copyright, the overlap might undermine the defences to copyright infringement specially tailored for computer programs. In particular, it is possible that the copyright defence that allows decompilation of programs for the purpose of ascertaining interface information might be rendered redundant.

One question that has arisen in this context is the extent to which a multimedia work as a whole (as distinct from the sound, pictures, text, and moving images of which it is made up) can be protected as a database. While individual elements may be protected by copyright, the question has arisen as to whether all the elements combined together can be protected by copyright as a database.<sup>59</sup> While there are doubts about whether multimedia works could be protected as compilations (this was because it is unclear whether the protection afforded to compilations is confined to compilations of *information* or to compilations of *literary works*),<sup>60</sup> this problem does not arise in relation to databases. This is because databases are defined, seemingly without restriction to the type of material, as a collection of ‘works data or other materials’. While it may seem odd that a compilation of artistic works or sound recordings is protected as a literary work,<sup>61</sup> this conclusion now seems unavoidable.<sup>62</sup>

### 3 DRAMATIC WORKS

The next general category of works that are protected by copyright is that of dramatic works. The 1988 Act does not define what a dramatic work is, except to state that it includes a work of dance or mime.<sup>63</sup> However, it is relatively clear that dramatic work includes the scenario or script for films, plays (written for the theatre, cinema, television, or radio),<sup>64</sup> and choreographic works.<sup>65</sup>

<sup>59</sup> See Stamatoudi, ch. 5.; T Aplin, *Copyright Law in the Digital Society* (Hart: 2005) ch. 3; S. Beutler, ‘The Protection of Multimedia Products through the European Community’s Directive on the Legal Protection of Databases’ [1997] *Ent LR* 317 (treating the Directive as the main way of protecting multimedia works, and pointing out that the effectiveness of the Directive to protect multimedia works will be dependent upon its interpretation).

<sup>60</sup> See Stamatoudi, 75–8 (arguing that failure to do so would have meant non-compliance with Berne).

<sup>61</sup> See *Football Association Premier League Ltd v. Panini UK Ltd* [2004] *FSR* (1) 1 (para. 32) Mummery LJ (giving examples of compilations made up of artistic works); *Kalamazoo v. Compact Business Systems* (1985) 5 *IPR* 213. One effect could be that a compilation of sound recordings would achieve much longer protection under copyright as a database than a single sound recording.

<sup>62</sup> Stamatoudi’s argument (at 98–102) that individual elements of a multimedia work cannot be regarded as ‘individually accessible’ unless items can be lifted out of the multimedia work (rather than merely be made to appear on the screen) is not sustainable in the light of the ECJ interpretation of that concept in *Fixtures Marketing v. OPAP* Case C-444/02 [2005] 1 *CMLR* (16) 367.

<sup>63</sup> CDPA s. 3(1). <sup>64</sup> *Green v. BC New Zealand* [1989] *RPC* 469, 493.

<sup>65</sup> The fixation of such a work can be in writing ‘or otherwise’ and may accordingly be, for instance, on film. Where a dramatic work is recorded on a film, the film must contain the whole of the dramatic work in an unmodified state: *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67 (dance recorded on film held unprotected because the film had been drastically edited, and so was no longer a recording of the dance).

For a creation to qualify as a ‘dramatic work’, it must be a ‘work of action’ that is ‘capable of being performed’.<sup>66</sup> While the courts have not yet fully explored what is meant by a ‘work of action’, it is clear that it does not include static objects, sets, scenery, or costumes<sup>67</sup> (though these might be protected as artistic works).<sup>68</sup> It has been said that a film will usually be a dramatic work where there is ‘cinematographic work’ on the film.<sup>69</sup> In some limited circumstances a work of action might include sports such as gymnastics or synchronized swimming.<sup>70</sup>

The requirement that to be a dramatic work the subject matter must be ‘capable of being performed’ initially operated in a restrictive manner. In the *Hughie Green* case,<sup>71</sup> Green was the originator and producer of a talent show called *Opportunity Knocks*, a programme which followed a particular format: certain catchphrases were used, sponsors introduced contestants, and a ‘clapometer’ was used to measure audience reaction. Beyond this, the content of the show varied from show to show. The Broadcasting Corporation of New Zealand broadcast a television talent quest that was similar to *Opportunity Knocks* in that the title and catchphrases were the same. It also used a clapometer, as well as the idea of using sponsors to introduce contestants.<sup>72</sup> Green’s action for copyright infringement against the Broadcasting Corporation of New Zealand failed, primarily because he was unable to show that the programme was a dramatic work. In part, this was because, when looked at as a whole, the show lacked the specificity or detail for it to be performed. In particular, the Privy Council said that the scripts only provided a general idea or concept of a talent quest, which was not capable of being protected. The Privy Council also held that the features of the programme that were repeated in each show (namely the format or style of the show) were not dramatic works. The reason for this was that a dramatic work must have sufficient unity for it to be capable of being performed.<sup>73</sup> On the facts it was held that the particular features which were repeated from show to show (the format) were unrelated to each other except as accessories to be used in the

<sup>66</sup> *Norowzian v. Arks (No. 2)* [2000] EMLR 67, 73 (CA).

<sup>67</sup> *Creation Records* [1997] EMLR 444 (finding no arguable case that a photo shoot is dramatic work, since scene was inherently static, having no movement, story, or action).

<sup>68</sup> See *Shelley Films v. Rex Features* [1994] EMLR 134 (seriously arguable that film set prepared for film *Mary Shelley’s Frankenstein* was a work of artistic craftsmanship). Cf. *Creation Records*, *ibid* (no arguable case of action that arranging objects for photo shoot for record sleeve was a work of artistic craftsmanship or collage, because the composition was intrinsically ephemeral and its continued existence was to be in the form of a photographic image).

<sup>69</sup> *Norowzian v. Arks (No. 2)* [2000] EMLR 67. (In the view of Buxton LJ such a construction went some way towards ensuring compliance with Art. 14 *bis* of the Berne Convention which specifies that a cinematographic work must be protected ‘as an original work’ and that the owner of copyright therein ‘shall enjoy the same rights as the author of an original work’. Nourse LJ said he reached his conclusion without reference to the Convention.) One problem with defining the scope of ‘dramatic work’ by reference to ‘cinematographic works’ is that the latter seems to refer merely to a technique of production: see Stamatoudi, 133.

<sup>70</sup> Although a film of a sporting event may be a work of action, it is probably not an ‘original’ dramatic work, being a mere recording of actions. Kamina argues that in order to be a dramatic work, an audiovisual work must convey a story and therefore concludes that documentaries could be protected but doubts whether newsreels or television productions of sports matches would be: Kamina, 72–4.

<sup>71</sup> *Green v. BC New Zealand* [1989] RPC 469, 477 (scripts could not constitute dramatic works because they could not be acted or performed, which is the essence of drama) (CA of New Zealand); [1989] 2 All ER 1056 (Privy Council).

<sup>72</sup> *Green v. BC New Zealand* [1989] RPC 469, 478, 480, 493.

<sup>73</sup> Cf. *Ladbroke v. William Hill* [1964] 1 All ER 465 where copyright was held to exist in pools coupons even though the matches changed each week.

presentation of some other dramatic performance.<sup>74</sup> The requirement of ‘unity’ means that interactive video games are not ‘dramatic works’ since the sequence of images will not be the same from one play to another. Thus, in *Nova Productions Ltd v Mazooma Games*,<sup>75</sup> Kitchin J held that a computer game simulating billiards involved artistic works, and literary works, but not a dramatic work.

The failure of the Privy Council to protect television formats in the *Hughie Green* case prompted a number of (unsuccessful) attempts to have formats recognized by British law.<sup>76</sup> The proponents of format rights appealed to the usual moral and economic arguments to support their case. In particular it was argued that formats require creative input similar to that involved in existing copyright works. It was also argued that failure to protect formats is not only unjust, but also fails to provide sufficient incentives to television producers. Those opposed to format rights noted the problems of defining what a format is, the anti-competitive effects, and the costs of such rights, as well as the potential for nuisance litigation.<sup>77</sup> The opponents of format rights favour leaving the developers of formats to the remedies offered by passing off<sup>78</sup> and breach of confidence.<sup>79</sup>

While formats are not protected to the extent that some would like, the need for *sui generis* format protection is less pressing as a result of the Court of Appeal decision of *Norowzian v. Arks*.<sup>80</sup> This is because in this case the Court of Appeal liberally interpreted the requirement that a dramatic work must be ‘capable of being performed’ to include performances by artificial means, such as the playing of a film.<sup>81</sup> Consequently a cartoon may be a dramatic work. In this decision, the Court of Appeal was called upon to decide whether a Guinness advertisement (which featured an actor dancing while a pint of Guinness was being poured) had infringed copyright in an earlier film *Joy* (which the advertisement copied). To answer this question it was necessary to determine whether *Joy* was a dramatic work.<sup>82</sup> One of the notable features of *Joy* was that it utilized a particular editing technique known as jump-cutting (this is done by cutting segments out of the film to produce a series of artificial effects). One of the consequences of this was that the finished film contained a series of movements that could not be performed by an actor.<sup>83</sup> At first instance it was held that as the (artificial) dance shown on

<sup>74</sup> *Green v. Broadcasting Corporation of New Zealand* [1989] RPC 469, 477; [1988] 2 NZLR 490, 497 (New Zealand Court of Appeal); cf. *Television New Zealand v. Newsmonitor Services* [1994] 2 NZLR 91 (High Court of Auckland) (TV news programme made up of unscripted and unchoreographed interviews and discussions was not a dramatic work).

<sup>75</sup> [2006] RPC (14) 379 (paras 116–119).

<sup>76</sup> See ‘Programme Formats: A Further Consultative Document’ [1996] Ent LR 216; R. McD. Bridge and S. Lane, ‘Programme Formats: The Write-In Vote’ [1996] Ent LR 212. After the consultation exercise in 1996 a decision was made to neither support nor introduce legislation to give specific copyright protection to television and radio programme formats. There seem to be no plans to reconsider the matter. For an overview of case law and developments, see U. Klement, ‘Protecting Television Show Formats under Copyright Law—New Developments in Common Law and Civil Law Countries’ [2007] EIPR 52.

<sup>77</sup> Mr Mellor, Standing Committee F, IV Hansard, 8 Mar. 1990, cols. 1293–4.

<sup>78</sup> The New Zealand Court of Appeal unanimously rejected the claim as to passing-off because of lack of sufficient goodwill in New Zealand. *Green v. Broadcasting Corporation of New Zealand* [1989] RPC 469, 474, 480–1, 488–9. The British show had never been broadcast in New Zealand, and the goodwill relied on was that of former British residents living in New Zealand.

<sup>79</sup> Lord Sanderson of Bowden, Hansard (HL), 26 July 1990, cols. 1718–19.

<sup>80</sup> *Norowzian v. Arks (No. 2)* [2000] EMLR 67, 73. <sup>81</sup> *Ibid.*

<sup>82</sup> Note that the argument on appeal was not that there was copyright in the dance as a dramatic work (recorded on film), but that the film was not merely a ‘record’ of a dramatic work but was itself a dramatic work: *ibid.*

<sup>83</sup> That is, the finished film owed as much to the editing technique as to the dance that was filmed.

the edited film could not be performed, the film did not embody a dramatic work. (If the film had shown all the movements of the actor it would have been protected.) However, on appeal it was held that the film itself was a dramatic work. The Court said that, as it was possible for the film to be played, it was therefore 'capable of being performed'.

## 4 MUSICAL WORKS

The next category of works protected under the 1988 Act is that of 'musical works'. A musical work is defined to mean 'a work consisting of music exclusive of any words or action intended to be sung, spoken or performed with the music'.<sup>84</sup> Thus, the words and the music of songs and similar works are treated as the subject matter of distinct copyrights. A song therefore consists of both a musical work and a literary work: the tune and lyrics respectively.

There has been very little discussion in the UK as to what is meant by 'music', though it is normally understood to include melody, harmony, and rhythm.<sup>85</sup> A recent exception to this is to be found in the case of *Sawkins v Hyperion Records*.<sup>86</sup> This case concerned the efforts of Sawkins in producing what are termed 'performing editions' of four of the works of the seventeenth-century composer Michel-Richard de Lalande. Sawkins' efforts included 'figuring of the bass', adding 'ornamentation', and performance directions. Hyperion, which made recordings of performances of the works of Lalande by musicians using Sawkins' scores, denied that by so doing it infringed copyright, arguing that Sawkins' contribution had not created an original *musical* work. One question was whether Sawkins' contributions could count as contributions to the music in circumstances where they did not involve alteration of the notes or melody. The Court of Appeal held that they could. Mummery LJ explained that the:

essence of music is combining sounds for listening to. Music is not the same as mere noise. The sound of music is intended to produce effects of some kind on the listener's emotions and intellect. The sounds may be produced by an organised performance on instruments played from a musical score, though that is not essential for the existence of the music or of copyright in it.

The defendant's argument mistakenly assumed that the *actual notes* were the only matter covered by musical copyright: according to the Court of Appeal, other elements that contributed *to the sound* as performed, such as tempo and performance practice indicators, were equally music.

Although the Court of Appeal explicitly excluded 'noise' from the scope of 'music', it said nothing about the controversial question of whether 'silence' can be music.<sup>87</sup> According to

<sup>84</sup> CDPA s. 3(1). Sheet music was held to be covered by the term 'book' in the Statute of Anne: see *Bach v. Longman* (1777) 2 Cowp 623, but that merely conferred a right to print and reprint the music. See R. Rabin and S. Zohn, 'Arne, Handel, Walsh, and Music as Intellectual Property: Two Eighteenth-Century Lawsuits' (Apr. 1995) 120 *Journal of the Royal Musical Association* 112.

<sup>85</sup> Some countries have defined music. For example, Canadian law formerly defined music as any combination of melody and harmony or either of them, printed or reduced to writing or otherwise graphically reproduced. This definition was described as 'unnecessarily limiting' in that it excluded elements such as rhythm and timbre from protection. In particular, such limited definitions may have negative effects for the protection of traditional music. See J. Collins, 'The Problem of Oral Copyright: The Case of Ghana' in S. Frith (ed.), *Music and Copyright* (1993), 149 (arguing that rhythm is an equal component with lyrics and melody in African music).

<sup>86</sup> *Sawkins v. Hyperion Records* [2005] 1 *WLR* 3281; [2005] *RPC* (32) 808.

<sup>87</sup> Saw, 'Protecting the Sound of Silence in 4' 33"' [2005] *EIPR* 467; Copinger, para 3–46, p. 82 ('it is doubtful that a passage of silence by itself is capable of being a musical work, even if claimed by the author or critics to be such.').

newspaper reports, a dispute over just such a work of ‘silence’ resulted in a settlement (and a six-figure payment for the rights to use the work!) The work in question was by the avant garde composer John Cage, who in the 1950s wrote a piece entitled *4’ 33”*, a work of silence. Apparently, the basis for the claim was that the classical–pop fusion group, the Planets, included 60 seconds of silence on its recording. A member of the group claimed that this was an improvement on Cage’s effort—because they had achieved in 60 seconds what he accomplished in 273! The payment to Cage’s publisher suggests, however, that the legal advisers to the Planets (and the group’s record company) feared that a court would treat Cage’s work as protected.<sup>88</sup>

## 5 ARTISTIC WORKS

The fourth category of works protected by copyright is artistic works.<sup>89</sup> The first artistic works protected by statute were ‘engravings’ (1735). These were followed by calico designs (1787), sculptures (1798 and 1814), drawings, paintings, and photographs (1862), and works of artistic craftsmanship (1911).<sup>90</sup> The various artistic works are now collected together in section 4(1) of the 1988 Act which contains a detailed list of the types of subject matter that are protectable as artistic works. These are divided into the following three categories:<sup>91</sup>

- (i) irrespective of artistic quality, a graphic work (including painting, drawing, diagram, map, chart or plan, engraving, etching, lithograph, woodcut, or similar work), a photograph (excluding a film), a sculpture, or a collage;
- (ii) a work of architecture, being a building or fixed structure or a model therefor; or
- (iii) a work of artistic craftsmanship.

### 5.1 GRAPHIC WORKS, PHOTOGRAPHS, SCULPTURES, AND COLLAGES

The first subcategory of artistic works, which is set out in section 4(1)(a), includes graphic works, photographs, sculptures, and collages. It is important to note that the material contained in section 4(1)(a) is protected irrespective of artistic quality. This ensures that once a creation falls within a particular category of works, copyright protection is not contingent on the work reaching a certain aesthetic standard. As a result, the task of having to decide what is good or bad art and all the associated problems are thus avoided.<sup>92</sup> More controversially, the decision that copyright law should not concern itself with the artistic quality of these types of

<sup>88</sup> *The Independent*, 22 June 2002.

<sup>89</sup> See S. Stokes, *Art and Copyright* (2001); A. Barron, ‘Copyright, Art and Objecthood’, 277 in D. McClean and K. Schubert (eds.), *Dear Images: Art, Copyright and Culture*, 331–51 (2002) (describing affinities between judicial approaches to defining art in technical materialist terms and those of modernist commentators, observing that this leads to a law which includes items which have no creativity and excludes ones which do, so that ‘copyright law’s conception of the artistic work now faces a crisis of credibility’).

<sup>90</sup> The Engravings Act 1735 was amended by Acts in 1766 (7 Geo. 3 c. 38) and 1776 (17 Geo. 3 c. 57). The Sculpture Copyright Act 1798 was amended and expanded in 1814 (54 Geo. 3 c. 56); Fine Art Copyright Act 1862 (25 & 26 Vict. c. 68). On the latter, see L. Bently, ‘Art and the Making of Modern Copyright Law’, in McClean and Schubert, note 89 above, 331–51.

<sup>91</sup> CDPA s. 4(1).

<sup>92</sup> In *Burge v. Swarbrick* [2007] HCA 17; (2007) 234 ALR 204; 81 ALJR 950 (26 April 2007), para 63, the Australian High Court referred to ‘the supposed terrors for judicial assessment of matters involving aesthetics’.

work has been used to expand the *types* of subject matter (as distinct from the *quality* of subject matter) protected as artistic works. While few would have problems with Marcel Duchamp's Readymades (for example, his famous urinal) being protected as an artistic work, more problems arise when objects exclusively used for industrial purposes to achieve commercial ends are protected as artistic works. For a period of time, a fear of making aesthetic judgements (when combined with a degree of formalism) led the courts to provide such protection. In recent years, however, the courts have been more willing to use a general sense of what is meant by art to limit the scope of protectable works.

### 5.1.1 Paintings

Graphic works are specifically defined in section 4(1)(a) to include 'paintings'. For the most part, there have been few problems in determining whether something is a 'painting' and thus whether it qualifies as an artistic work. One of the few situations where this was not the case was in *Merchandising v. Harpbond*,<sup>93</sup> where it was argued that the facial make-up of the pop star Adam Ant was a painting and thus protected by copyright. The Court of Appeal rejected this submission, Lawton LJ remarking that it was fantastic to suggest that make-up on anyone's face could possibly be a painting. He held that a painting required a surface and that Adam Ant's face did not qualify as such, noting that '[a] painting is not an *idea*: it is an object; and paint without a surface is not a painting' (see Fig. 3.3).<sup>94</sup>

The reasoning of Lawton LJ seems odd,<sup>95</sup> for it is difficult to see why Adam Ant's face is less of a surface than a piece of canvas. The decision could however be justified on the ground that a painting must be intended to be permanent. If so a tattoo would be protected, but dramatic or cosmetic make-up would not.<sup>96</sup> Equally, since the make-up in question consisted of two broad red lines round a light-blue line running from nose to jaw, it is arguable that the work did not satisfy the criteria of originality.<sup>97</sup> Alternatively, the decision could be seen as a case of merger of idea and expression (where no protection is granted).<sup>98</sup> At the end of the day, however, it seems that the reason why Adam Ant failed was because the traditional image of a painting as a framed canvas to be hung on a wall prevailed.

### 5.1.2 Drawings

The next type of subject protected as an artistic work under section 4(1)(a) is drawings. In addition to sketches of people and landscapes that we expect to be classified as drawings, protection has been granted to the drawing of a hand on a 'how to vote' card,<sup>99</sup> typeface design,<sup>100</sup> architects' plans (as distinct from actual buildings), and sketches for dress designs.<sup>101</sup> Because protection is granted 'irrespective of artistic quality', copyright in drawings has been widely used to protect industrial designs.<sup>102</sup> Thus drawings of exhaust pipes, boxes for storing kiwi fruit,

<sup>93</sup> [1983] FSR 32.      <sup>94</sup> *Ibid.*, 46.      <sup>95</sup> Copinger, para 3–55, p. 85 n40.

<sup>96</sup> *J. & S. Davis (Holdings) v. Wright Health Group* [1988] RPC 403 may lend support to such a view. Cf. *Metix v. Maughan* [1997] FSR 718, 721.

<sup>97</sup> Laddie *et al.*, paras. 4.20 and 4.37, favours the rationalization based on originality.

<sup>98</sup> Cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

<sup>99</sup> *Kenrick v. Lawrence* (1890) 25 QBD 99.

<sup>100</sup> *Stephenson Blake & Co. v. Grant, Legros & Co.* (1916) 33 RPC 406.

<sup>101</sup> *Bernstein v. Murray* [1981] RPC 303.

<sup>102</sup> D. Booton, 'Framing Pictures: Defining Art in UK Copyright Law' [2003] *IPQ* 38 (criticizing the 'technical' approach of the courts to defining drawings, which focuses on how the artefact was made, and arguing that a distinguishing characteristic of literary works is that they are capable of being notated in a form which defines all the constitutive properties of such works, so that circuit diagrams, architects' plans, and engineering drawings are not artistic but literary).

Fig. 3.3 The defendant's poster in *Merchandising Corp v. Harpbond* (created by Mr. Langford)

and the like have been protected.<sup>103</sup> Importantly, such protection has frequently prevented the copying of the (three-dimensional) designed artefact itself. As we will see later, section 51 of the 1988 Act has reduced the significance of copyright in drawings for three-dimensional designs, other than in designs for artistic works.<sup>104</sup>

### 5.1.3 Engravings

Engravings were first protected by copyright in 1735. For the most part, the way the law has developed since then has provided few surprises: protection being granted to etchings, aquatints, woodcuts, lithographs, and the like. In the last twenty or so years, however, a range of somewhat surprising objects have been protected as engravings.<sup>105</sup> For example, in *Wham-O v. Lincoln Industries* the New Zealand Court of Appeal held that both the mould from which a frisbee was pressed and the frisbee itself were protected, because the mould was made by cutting onto a surface and so was an engraving, and the frisbee itself was a print from the engraving.<sup>106</sup> (see Fig. 3.4)

Despite subsequent doubts being expressed by the Australian Federal Court<sup>107</sup> about the reasoning in *Wham-O*, it was recently followed in *Hi-Tech Autoparts v. Towergate Two*

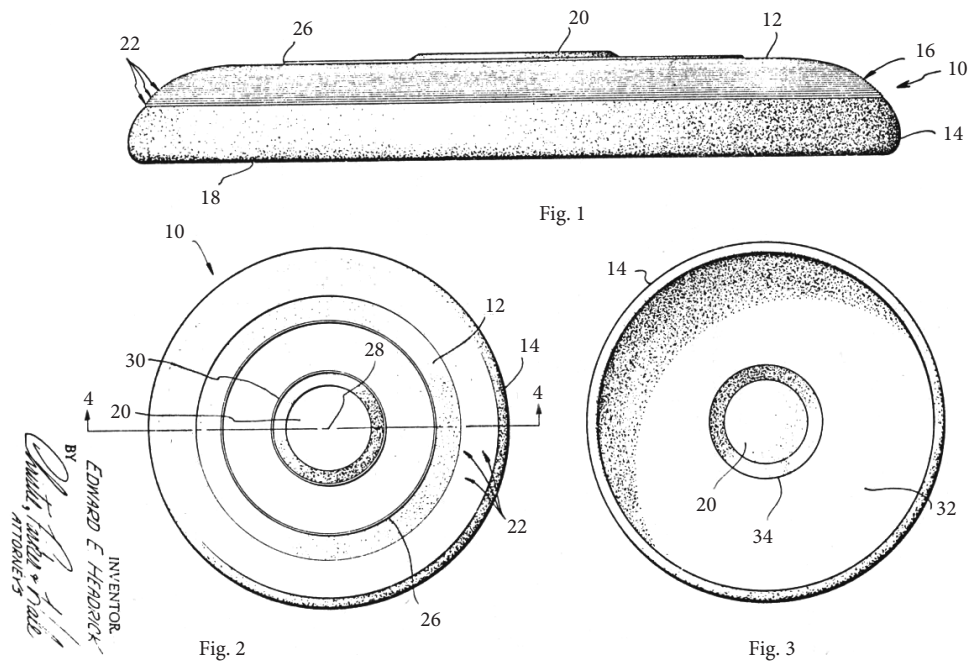

<sup>103</sup> *British Leyland v. Armstrong* [1986] RPC 279; *Plix Products v. Frank Winstone* [1986] FSR 92 (NZ).

<sup>104</sup> See below at Ch. 29 Section 3.

<sup>105</sup> In *James Arnold v. Miafern* [1980] RPC 397, it was held that the term engraving not only covered the articles made from a block but also the block itself. See also *Martin v. Polyplas* [1969] NZLR 1046 (coin is an engraving).

<sup>106</sup> [1985] RPC 127.

<sup>107</sup> *Greenfield Products v. Rover-Scott Bonnar* (1990) 17 IPR 417; (1991) 95 ALR 275 (Fed. Ct. Australia). Pincus J declined to hold that the drive mechanism of a lawnmower was an engraving. As Pincus J stated that 'engraving' does not cover shaping a piece of metal or wood on a lathe, but has to do with marking, cutting, or working the surface—typically the flat surface—of an object. In *Talk of the Town v. Hagstrom* (1991) 19 IPR 649, 655, Pincus J qualified the suggestion that an engraving must be on a two-dimensional surface.

**Fig. 3.4** Headrick's flying saucer

Source: Wham-O Manufacturing [1982] RPC 281, 296.

*Ltd.*<sup>108</sup> In that case Judge Christopher Floyd QC held that copies of the claimant's rubber floor mats for cars could not be sold by the defendant on the grounds that the moulds used in the production of the mats, and the mats themselves, were engravings. The moulds had been made by cutting a series of concentric circles, to a depth of 1/16th inch and a bevel angle of 45°, into flat plates. In so holding, the Judge placed particular emphasis on the fact that the statute requires engravings to be protected 'irrespective of their artistic quality'. Floyd J also rejected the defendant's argument that the plates were models for the purposes of sculpture rather than engravings, stating that he did not think it was possible to limit the skill and labour of the engraver to that only concerned with the flat surface, excluding work on the interior.

#### 5.1.4 Photographs

Although photographs were protected by copyright shortly after photography was invented in the 1840s,<sup>109</sup> copyright law has never been completely comfortable with photographs,<sup>110</sup>

<sup>108</sup> *Hi-Tech Autoparts Ltd v. Towergate Two Ltd* [2002] FSR 254 (treating plates for the production of rubber mats as engravings); *Hi-Tech Autoparts Ltd v. Towergate Two Ltd (No. 2)* [2002] FSR 270 (treating rubber mats stamped from plates as engravings).

<sup>109</sup> 1862 Fine Art Copyright Act. See Ricketson, paras. 6.33–43 (protected under Berne since 1886, enumerated since 1948). In contrast, Edelman has described how French law was caught out by the emergence of photography in the mid-nineteenth century: B. Edelman, *Ownership of the Image* (1979); J. Gaines, *Contested Culture: The Image, the Voice and the Law* (1992), ch. 2.

<sup>110</sup> The question what was an 'original photograph' was treated as problematic in *Graves' Case* (1869) LR 4 QB 715 and the idea of the 'author' of a photograph was grappled with in *Nottage v. Jackson* (1883) 11 QB 627, 630 per

primarily because they seem to be ill-suited to the paradigm of the ‘original’ and the ‘copy’.<sup>111</sup> Photographs are defined in the 1988 Act as ‘a recording of light or other radiation on any medium on which an image is produced or from which an image may by any means be produced, and which is not part of a film’.<sup>112</sup> The definition is broad enough to include digital photographs (where there is no film). Individual frames from a film are not treated as photographs.<sup>113</sup>

### 5.1.5 Other Graphic Works

Other non-itemized works, such as computer screen icons and graphic user interfaces, are protected as artistic works. This is because these items fall within the inclusive definition of the subcategory ‘graphic work’.<sup>114</sup> However, the dynamic effect created by a series of drawings is not protected as an artistic work.<sup>115</sup>

### 5.1.6 Sculpture

Sculptures were one of the earliest kinds of artistic work to be protected from reproduction. The recognition of copyright in sculptures in 1798 is notable because it took ‘copyright’ (insofar as such a concept existed at that time) out of the realm of printing (books, engravings, or calico printing) to cover reproduction more generally.

When most people think about sculptures, they might envisage a work by Henry Moore displayed in the Tate Gallery, or a statue of Queen Victoria in a town square. While it will come as no surprise to learn that these would qualify as sculptures, it might come as a surprise to learn that, for the purpose of copyright law, in *Wham-O Manufacturing v. Lincoln* the New Zealand Court of Appeal held that the wooden model which was used as a mould to make the frisbees was ‘a sculpture’. However, the Court declined to hold that the frisbee itself was a sculpture, since it was created by injecting plastic into a mould and was thus not the expression of a sculptor’s ideas.<sup>116</sup>

In recent years, the courts have construed the term sculpture more restrictively.<sup>117</sup> For example, in *Metix v. Maughan*<sup>118</sup> Laddie J said that ‘sculpture’ should be construed narrowly.<sup>119</sup>

Brett MR (holding that the author of the photograph was the person who was the effective cause of the picture, that is, the person who superintended the arrangement).

<sup>111</sup> K. Bowrey, ‘Copyright, Photography and Computer Works—The Fiction of an Original Expression’ (1995) 18 *University of New South Wales Law Journal* 278.

<sup>112</sup> CDPA s. 4(2). Whether something is a photograph may also be important because of CDPA s. 30(2) and CDPA s. 62.

<sup>113</sup> *Spelling Goldberg Productions v. BPC Publishing* [1981] *RPC* 283, 288, 297, 298, 300 (single frames from *Starsky and Hutch* were not photographs but part of a film under CA 1956). See Kamina, 92–4.

<sup>114</sup> *Navitaire Inc v. EasyJet Airline Co & Bulletproof Technologies Inc* [2006] *RPC* 111, 153 (para 98); *Nova Productions Ltd v. Mazooma Games* [2006] *RPC* (14) 379 (para 100).

<sup>115</sup> *Nova Productions Ltd v. Mazooma Games* [2007] *EWCA Civ* 219 (para 16) where Jacob LJ described the various subject categories listed in section 4 of the CDPA to be ‘static, non-moving’ and thus held that the effect produced from a series of drawings falls outside the scope of protection.

<sup>116</sup> *Wham-O v. Lincoln Industries* [1985] *RPC* 127, 157.

<sup>117</sup> In *J & S Davis (Holdings) v. Wright Health Group* [1988] *RPC* 403, it was held that a cast for dental impression trays was not a ‘model or cast intended for the purposes of sculpture’ since the cast was made in plasticine and was thus not intended to be permanent. *Metix v. Maughan* [1997] *FSR* 718, 721.

<sup>118</sup> [1997] *FSR* 718, 722.

<sup>119</sup> A similar interpretation of the term was adopted by Falconer J in *Breville Europe v. Thorn EMI* [1995] *FSR* 77, 94 when he said that the term ‘sculpture’ was to be given its ordinary dictionary meaning. Despite this, Falconer J concluded, rather surprisingly, that copyright would protect as sculptures scallop-shaped moulds that were used in toasted-sandwich makers.

He added that ordinary usage of the term refers to a three-dimensional work made by an artist's hand. Consequently, Laddie J held that the argument that moulds for making functional cartridges in the shape of double-barrelled syringes should be protected as sculptures had no prospect of success. Laddie J noted that none of the evidence indicated that the creator regarded himself, or was regarded by anyone else, as an artist.<sup>120</sup> While this aspect of Laddie J's reasoning has rightly been criticized because it contradicts the statutory requirement that sculpture be protected 'irrespective of artistic quality',<sup>121</sup> the judge's conclusion that the moulds were unprotected seems justified on the basis that the ordinary notion of sculpture requires that the maker be concerned with shape and appearance rather than just with achieving a precise functional effect.

While the legal understanding of 'sculpture' is by no means confined to the works of those who exhibit in art galleries, not all three-dimensional works exhibited in art galleries and attributed to artists will necessarily qualify as sculptures. In *Creation Records* (the Oasis record cover case—see Fig 3.1), Lloyd J held that the collection of a series of objects around a swimming pool was not itself a sculpture.<sup>122</sup> He explained that he could not see how 'the process of assembling these disparate objects together with the members of the group can be regarded as having anything in common with sculpture... No element in the composition has been carved, modelled or made in any of the other ways in which sculpture is made...'. This conclusion leaves unclear the position in relation to so-called *objets trouvés*, and other situations where artists 'create' artistic works from found material: famous examples being Duchamp's urinal, Carl André's bricks, Damien Hirst's shark, or Tracy Emin's bed.<sup>123</sup> It is by no means obvious that these fall within Laddie J's definition of sculpture as a three-dimensional work made by an artist's hand.

## 5.2 WORKS OF ARCHITECTURE

The second subcategory of artistic works listed in the Act is 'works of architecture': section 4(1)(b). A work of architecture is defined in the 1988 Act as a building or a model for a building.<sup>124</sup> In turn, a building is defined as including 'any fixed structure, and a part of a building or fixed structure'. It should be noted that copyright also exists in the architect's plans as drawings.

One question that has arisen is whether buildings include things such as greenhouses, Portakabins, and swimming pools that are built off-site.<sup>125</sup> The main obstacle to protection is that a building is defined as a *fixed* structure.<sup>126</sup> While this was apparently intended to

<sup>120</sup> Booton, 63 (noting, with approval, a convergence between Laddie J's approach and an 'institutional approach' to the definition of art).

<sup>121</sup> *Hi-Tech Autoparts v. Towergate Two Ltd* [2002] FSR 254 (para. 48) (Judge Floyd QC); Copinger, para 3–58, p. 90.

<sup>122</sup> *Creation Records v. News Group* [1997] EMLR 444.

<sup>123</sup> In *Creation Records*, Lloyd J referred to the issue of whether copyright subsisted in Carl André's bricks, by saying he would distinguish Mr Gallagher's composition as being 'ephemeral', that is, put together solely to be the subject matter of a number of photographs and disassembled as soon as those were taken. Perhaps Lloyd J was suggesting that a work of sculpture is a three-dimensional artefact *either* made by an artist's hand *or* intended to have a permanent existence as an object of art.

<sup>124</sup> CDPA s. 4(1)(b). Copyright protection for works of architecture was first introduced under the 1911 Act; most probably to give effect to the Berlin Revision of the Berne Convention. Ricketson, paras. 6.31–2.

<sup>125</sup> See also *Half Court Tennis* (1980) 53 *Federal Law Report* 240 (half-size tennis court made of concrete slab with posts was a work).

<sup>126</sup> CDPA s. 4(2) (but note the provision says 'building' *includes* 'any fixed structure').

prevent ships from being protected as works of architecture, the status of articles which are not fixed when they are created, but which are intended to be subsequently fixed or permanently placed, is unclear. In an Australian case, the Supreme Court of the Northern Territory held that a plug and mould used for manufacture of pre-cast fibreglass swimming pools were protected by copyright.<sup>127</sup> Explaining that there was no single test for what is a building, Mildren J said that a number of factors needed to be considered. These included the size of the structure, its proposed use, whether it is fixed or portable, and its degree of permanence. As a result he concluded that while neither the plug nor the mould were buildings, the pools were. This was despite the fact that the pools were manufactured off-site and were capable of being removed.

In contrast to other types of artistic work, there is no requirement that architectural works (and works of artistic craftsmanship) should be protected ‘irrespective of artistic quality’. This seems to suggest that, when deciding whether subject matter qualifies as an architectural work (or as a work of artistic craftsmanship), we should consider whether the work is a work of architecture (or artistic craftsmanship); and if so, whether it is sufficiently artistic. While the courts have accepted that a work of artistic craftsmanship must by its very nature be sufficiently artistic to attract copyright, the position in relation to architectural works is less clear. If buildings are only protected if they are artistic, it is unlikely that designs for things such as swimming pools would be protected.<sup>128</sup> One factor that suggests that for a work to qualify as a work of architecture it must also be ‘artistic’ is that, in contrast to section 4(1)(a), there is no explicit statement that such works are to be protected ‘irrespective of artistic quality’. However, this interpretation is difficult to reconcile with the legislative history. While under the 1911 Act a work of architecture had to satisfy a qualitative threshold in order to be protected, this criterion was removed under the 1956 Copyright Act. This would suggest that, under the 1988 Act, the legislature intended that there was no need for a work of architecture to be ‘artistic’ for it to be protected. Unfortunately, the Act is ambiguous.

### 5.3 WORKS OF ARTISTIC CRAFTSMANSHIP

The final category of artistic works listed in the Act is ‘works of artistic craftsmanship’: section 4(1)(c). The legislative origins of this category of work, which first appeared in the 1911 Copyright Act, are obscure.<sup>129</sup> Works of artistic craftsmanship cover creations such as handcrafted jewellery, tiles, pots, stained-glass windows, wrought-iron gates, hand-knitted jumpers, and crocheted doilies. In order for a work to fall within this category, it is necessary to show that the work is ‘artistic’ and that it is a work of ‘craftsmanship’. We will deal with each in turn.

<sup>127</sup> *Darwin Fibreglass v. Kruhse Enterprises* (1998) 41 IPR 649.

<sup>128</sup> In *Darwin*, Mildren J assumed there is no requirement for artistry: *ibid.*

<sup>129</sup> In *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64 Lord Simon said that ‘when Parliament, in 1911, gave copyright protection to “works of artistic craftsmanship” it was extending to works of applied art the protection formerly restricted to works of the fine arts, and was doing so under the influence of the Arts and Crafts movement’. That movement, which dated from the 1860s and was led by William Morris, emphasized the importance of handicraft techniques in the applied or decorative arts, restoring the hand-craftsman to his creative role in society. However, Lord Simon argued that, given the context, the choice of the word ‘craftsmanship’ rather than ‘handicraft’ was a deliberate indication that the provision was not to be limited to handicraft or exclude products of machine production.

### 5.3.1 The requirement of 'artistic quality'

A work will only qualify as a work of artistic craftsmanship if it is 'artistic': that is, if it has an element of real artistic or aesthetic quality.<sup>130</sup> This approach is unusual in copyright law because it requires the courts to consider whether the work satisfies the qualitative threshold of being artistic. The question of what is meant by a work of *artistic* craftsmanship was discussed by the House of Lords in *Hensher v. Restawile Upholstery*.<sup>131</sup> As the defendants conceded that the claimant's prototype of a mass-market upholstered chair was a work of craftsmanship, the only question to be determined was whether the chair was a work of *artistic* craftsmanship. While all their Lordships agreed that the chair was not artistic, they all differed in their explanations as to why.

Lord Reid said that an object could be said to be artistic if a person gets 'pleasure or satisfaction . . . from contemplating it'. As a result, Lord Reid said that the test to decide whether a work was artistic was whether 'any substantial section of the public genuinely admires and values a thing for its appearance and gets pleasure or satisfaction, whether emotional or intellectual, from looking at it'. Lord Reid noted that 'looking nice appears to me to fall short of having artistic appeal'. While the author's intention that the resulting product is artistic might be important, Lord Reid indicated it was neither 'necessary [n]or conclusive'. Since there was no evidence that anyone regarded the furniture in issue as artistic, Lord Reid concluded that the prototype was not protected by copyright.

Lord Morris said that, in this context, the word 'artistic' required no interpretation. However, he acknowledged that as the question whether a particular artefact was artistic was a matter of personal judgment, courts might be faced with differences of opinion. Because of this, Lord Morris said that a court should look to see if there was a general consensus of opinion 'among those whose views command respect'. The views of the artist and the person acquiring the object might act as pointers as to whether something is artistic. However, the question was ultimately one for the court, guided by evidence (particularly of specialists). Since the most favourable thing that had been said about the prototype chair was that it was distinctive, Lord Morris was content to conclude that it was not artistic.

Lord Kilbrandon said the question whether something was a work of art depended on whether it had come into existence as the product of an author who was consciously concerned to produce a work of art. For Lord Kilbrandon, this must be judged from the work itself and the circumstances of its creation. A work did not become a work of art as a result of the opinions of critics, or the public at large. As a consequence, expert evidence was irrelevant. Instead, it was for the judge to determine whether the author had the 'desire to produce a thing of beauty which would have an artistic justification for its own existence'. Since in the case in hand the objective was to produce a commercially successful chair, it was not a work of artistic craftsmanship.

In deciding whether a craftwork was artistic, Viscount Dilhorne explained that this was really a question of fact for the court to answer. As such, he declined to elaborate much further on the meaning of artistic. He did say, however, that a work would not be artistic merely because there was originality of design, but that it could be artistic even if it was functional. While Viscount Dilhorne said that expert evidence and public opinion would be relevant, in the end it seems that he preferred to act on his own intuition as to what was a 'work of art'.

<sup>130</sup> *Cuisenaire v. Reed* [1963] VR 719, 730; *Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77, 78, 81, 85, 86, 96; *Merlet v. Mothercare plc* [1986] RPC 115 and *Bonz Group v. Cooke* [1994] 3 NZLR 216, 222.

<sup>131</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64.

However, since no witness had described the chair as a work of art, he said that this was not even a borderline case: the prototype was not protected by copyright.

Lord Simon took a rather different approach from his colleagues, insofar as he emphasized that it was the craftsmanship rather than the work that must be artistic. Lord Simon also said that the fact that the work ‘appeals to the eye of the beholder, giving him visual pleasure’ was irrelevant. Examples of ‘artistic craftsmen’ included hand-painters of tiles, makers of stained-glass windows and wrought-iron gates, but not ‘plumbers’. Lord Simon said that many craftsmen fell into an intermediate category: some of their products being the result of artistic craftsmanship, while others were the product of craftsmanship. In making the decision as to whether a particular object was created by a person who was an ‘artist craftsman’, Lord Simon took the view that ‘the most cogent evidence is likely to be either from those who are themselves acknowledged artistic-craftsmen or from those who are concerned with the training of artist-craftsmen—in other words, expert evidence’. Lord Simon added, however, that the crucial question was ‘the intent of the creator and its result’. Like the other Law Lords, he found the application of his test to the facts relatively easy: none of the experts had regarded the settee as exhibiting anything more than originality of design and appeal to the eye. The settee was an ordinary piece of furniture, and not an example of artistic craftsmanship.

Given the ‘different and apparently irreconcilable’ tests employed in *Hensher*, it is not surprising to find that there has been little consistency in subsequent case law as to the approach to be taken when assessing ‘artistry’.

In *Merlet v. Mothercare*,<sup>132</sup> where Walton J had to decide whether a baby’s cape made by Madame Merlet was a work of artistic craftsmanship, Walton J said that the majority in *Hensher* had held that the relevant question in determining whether a work was artistic was whether the object in question was a work of art.<sup>133</sup> However, given the warning not to exercise a value judgment, he concluded that in the first instance the question is whether the artist-craftsman intended to create a work of art. If the intention was present and the creator had not ‘manifestly failed’ in this regard, then the work was a work of art. As Madame Merlet had not set out to create a work of art, but instead had utilitarian considerations in mind (she hoped the cape would shield her son from the rigours of the climate when visiting her mother in the Scottish Highlands), Walton J concluded that the baby cape was not a work of artistic craftsmanship. In contrast, in *Vermaat v. Boncrest*, Evans-Lombe J seems to have declined to follow *Merlet* and instead adopted a new test which required that for a work to be artistic there had to be evidence of creativity.<sup>134</sup> The case concerned the design of a patchwork bedspread and whether this was a work of artistic craftsmanship. Evans-Lombe J referred approvingly to the view of the New Zealand High Court that the question whether a work was of artistic craftsmanship could not depend purely on the intention of the creator: the finished work must have some artistic quality in the sense of being produced by someone with creative ability and having aesthetic appeal.<sup>135</sup> Applying that test of artistry to the facts, the judge held that though the designs were ‘pleasing to the eye’ they did not exhibit the necessary requirement of creativity.

<sup>132</sup> *Merlet v. Mothercare* [1986] RPC 115. The Court of Appeal (at 129 ff) only considered issues relating to infringement of copyright in Mme Merlet’s drawings.

<sup>133</sup> *Ibid.*, 125–6 citing Viscount Dilhorne, Lord Simon, and Lord Kilbrandon.

<sup>134</sup> *Vermaat v. Boncrest* [2001] (5) FSR 49. <sup>135</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216.

If the judgment in *Vermaat* undermined Walton J's attempt in *Merlet* to resolve the question of when a work of craftsmanship is 'artistic', yet more confusion has been created by the rather incoherent judgment of Rimer J in *Guild v. Eskandar*.<sup>136</sup> Here the question was whether the claimant's wide, square-shaped designs for a cardigan and sweater were works of artistic craftsmanship. (For an example of Shirin Guild's work from this period see Fig. 3.5).<sup>137</sup>

Initially, Rimer J purported to follow *Merlet*, and found that there was no evidence that the claimant regarded herself as an artist or intended to create a work of art: she chose the design because it appealed to her, and she therefore believed it would appeal to others. If he had been rigorously following *Merlet*, that should have been an end of the investigation. However, Rimer J went on to consider whether the garment 'can fairly be regarded as satisfying the aesthetic emotions of a substantial section of the public'.<sup>138</sup> (He may have done so purely out of deference to Lord Reid in *Hensher*, or just in case a different criterion was applied on appeal, but the case is unsatisfactory for failing to explain the reasons for this examination.) The judge took account of the conflicting expert evidence, but ultimately concluded the garments were not works of art. This was in spite of the fact they had been displayed in the Victoria & Albert Museum, Rimer J explaining that they were exhibited as examples of developments in fashion (rather than because anyone regards them as works of art).

Clearly, the decisions in *Vermaat* and *Guild* have done little to clarify when a work of craftsmanship is to be treated as artistic. Further guidance from a higher court would be welcome indeed.

### 5.3.2 The requirement of 'craftsmanship'

As well as showing that the work is artistic, it is also necessary to show that it is a work of 'craftsmanship'. In *Hensher v. Restawile* Lord Simon defined a work of craftsmanship as presupposing 'special training, skill and knowledge' for its production. He also said that it implied 'a manifestation of pride in sound workmanship'. A rather different definition was provided by Lord Reid, who referred to a work of craftsmanship as 'a durable, useful handmade object'. Lord Reid seemed to suggest that if the defendant had not conceded that the prototype was a work of craftsmanship, he would not have been inclined to that view. This was because the prototype, which was a flimsy, temporary, knock-up which had subsequently been destroyed, was better described as a 'step in a commercial operation' with no value of its own rather than as a work of craftsmanship.<sup>139</sup> While wooden rods (used to teach addition and subtraction to children) have been held not to be products of craftsmanship,<sup>140</sup> knitting and tapestry-making have been held to be a craft,<sup>141</sup> and the baby's cape in *Merlet v. Mothercare* was said to be 'very much on the borderline'.<sup>142</sup>

<sup>136</sup> *Guild v. Eskandar* [2001] (38) FSR 645.

<sup>137</sup> This image shows items that were typical of Guild's style in 1996, but these were *not* exhibits in the case. See <http://www.shiringuild.com> for further details on this fashion designer.

<sup>138</sup> *Guild v. Eskandar* [2001] FSR (38) 645, 700.

<sup>139</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77.

<sup>140</sup> *Cuisenaire v. Reed* [1963] VR 719 (Supreme Court of Victoria); *Komesaroff v. Mickle* [1988] RPC 204, 210 (Supreme Court of Victoria) (while assembling picture windows and dispensing into them chosen amounts of selected sands, liquid, and a bubble-producing substance might be artistic, there was no craftsmanship in performing those acts).

<sup>141</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216 (NZ High Court) (a case approved by the English High Court in *Vermaat*, note 134 above).

<sup>142</sup> [1986] RPC 115, 122.

One problem with the courts' failure to provide a helpful definition of craftsmanship is that it is unclear whether the work needs to be handmade to be protected. In *Hensher v. Restawile*, Lord Reid and Viscount Dilhorne suggested that 'craftsmanship' implied that the work was handmade.<sup>143</sup> In contrast, Lord Simon said that 'craftsmanship' could not be limited to hand-crafts, nor was the word 'artistic' incompatible with machine production.<sup>144</sup> The approach of Lord Simon was followed by the Federal Court of Australia in *Coogi Australia v. Hysport International*.<sup>145</sup> There, Drummond J held that the stitch structure of a fabric made up of different yarns (used to make jumpers), which was constructed in such a way as to produce a mixture of textured surfaces—some flat, some rolled, some protruding—was a work of artistic craftsmanship. Drummond J said that the way the designer had used the stitch structures and colour to produce an unusual textured and multi-coloured fabric meant that the design was artistic. This was so even though the design was mass-produced and had been formulated on a computer, rather than using traditional craft techniques.<sup>146</sup> As regards the issue of mass-production, Drummond J reviewed the authorities and found that he preferred Lord Simon's approach in *Hensher v. Restawile*. To hold otherwise, he said, would be to import a Luddite philosophy into copyright legislation which was enacted against a background of modern

<sup>143</sup> *George Hensher v. Restawile Upholstery (Lancs)* [1976] AC 64, 77 (Lord Reid), 84 (Viscount Dilhorne: made by hand and not mass-produced).

<sup>144</sup> *Ibid*, 90.

<sup>145</sup> (1999) 157 ALR 247 (Fed. Ct. of Australia). See also *Burge v. Swarbrick* [2007] HCA 17; (2007) 234 ALR 204; 81 AJLR 950 (26 April 2007), para. 60 (noting that something such as a 'plug' for a mass-produced boat could be a work of artistic craftsmanship).

<sup>146</sup> 'There is no necessary difference between a skilled person who makes an article with hand-held tools and a skilled person who uses those skills to set up and operate a machine which produces an article. Such an article can still be a work of craftsmanship even though the creator has used a highly sophisticated computer-controlled machine to produce it, if nevertheless it is a manifestation of the creator's skill with computer-controlled machinery, knowledge of materials and pride in workmanship.' For similar reasoning in relation to computer-related literary works, see Whitford J in *Express Newspapers v. Liverpool Daily Post* [1985] FSR 306.

industrial organization and was intended to regulate rights of value to persons in the area of activity. As Drummond J's approach presents a realistic and workable approach to this issue, hopefully it will be followed in the United Kingdom.<sup>147</sup>

Another aspect of the notion of artistic craftsmanship that has proved to be problematic is whether the requirements of artistic quality and craftsmanship must emanate from the same person. In *Burke v. Spicer's Dress Designs*<sup>148</sup> Clauson J suggested as much when he said that a woman's dress was not a work of artistic craftsmanship because the artistic element (the sketch of the dress) did not originate from the person who made the dress (the dressmaker).<sup>149</sup> However in *Bonz Group v. Cooke*<sup>150</sup> the New Zealand High Court held that hand-knitted woollen sweaters depicting dancing lambs and golfing kiwis was a work of artistic craftsmanship: the handknitters being craftspersons and the designer an artist. Tipping J observed that:

there are some passages in the authorities that suggest that it is essential that the same person both conceive and execute the work. For myself I do not regard that as being necessary. If two or more people combine to design and make the ultimate product I cannot see why that ultimate product should not be regarded as a work of artistic craftsmanship.<sup>151</sup>

While the rejection of the requirement that artistry and craftsmanship come from the same person is welcome, *Bonz Group v. Cooke* raises problems in determining who is the author of a work of artistic craftsmanship. Where a work is created by collaboration between artist and craftsperson, a court is likely to treat them as co-authors. However, in *Bonz* itself the court treated the company as the copyright owner, even though the craftspersons were unidentified outworkers (and thus possibly not even employees). Perhaps that was a case where the craftspeople were merely executing the detailed designs of the artist: if this is true, it seems strange that the existence of craftsmanship is a prerequisite for protection, but does not even confer a claim to co-authorship. Another possibility is that, in the absence of collaboration such as to give rise to co-authorship, the craftsperson is to be regarded as the author, since they give expression to the artistic ideas.

### 5.3.3 The Australian escape route

It is clear that the English courts have struggled with the interpretation of the notion of artistic craftsmanship. An indication as to how the problems can be avoided has recently been provided by the unanimous decision of Australia's highest court, the High Court, in *Burge v. Swarbrick*.<sup>152</sup> The question there was whether Swarbrick's design for a yacht, the JS 9000 (see Fig. 3.6), (in particular the hull and deck) mouldings, were works of artistic craftsmanship.

<sup>147</sup> The fact that a design is created without using traditional 'craftsmanship techniques', or is intended to be mass-produced, may be a factor. See e.g. *Guild v. Eskander* [2001] FSR (38) 645, 700 (finding sample garments, made both by machine and as prototypes for mass production, not to be works of craftsmanship) (not considered on appeal at [2003] FSR (3) 23).

<sup>148</sup> [1936] 1 Ch 400, 408.

<sup>149</sup> This approach is consistent with the views of Lord Simon in *George Hensher Ltd v. Restawile Upholstery (Lancs)* [1976] AC 64, to the effect that a work of artistic craftsmanship is the work of a person who is an 'artist-craftsman'.

<sup>150</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216 (High Court of New Zealand). See also *Spyrou v. Radley* [1975] FSR 455; *Bernstein v. Sydney Murray* [1981] RPC 303; *Merlet v. Mothercare* [1986] RPC 115, 123–4.

<sup>151</sup> *Bonz Group v. Cooke* [1994] 3 NZLR 216, 224 (High Court of New Zealand). This passage was approved and applied by Evans-Lombe J in *Vermaat v. Boncrest* [2001] FSR 49 (though he held that there was no sufficient 'creativity' to render the work one of artistic craftsmanship).

<sup>152</sup> [2007] HCA 17; (2007) 234 ALR 204; 81 ALJR 950 (26 April 2007).

**Fig. 3.6** JS9000 yacht

*Source:* Courtesy of Mr John Swarbrick.

The High Court conducted a careful review of the history of the concept of ‘artistic craftsmanship’ noting its origins in the Copyright Act 1911 (which had been applied to Australia) and the interpretation thereof by Lord Simon in *Hensher v. Restawile*. By emphasizing the fact that it was only Lord Simon who had considered the meaning of the composite phrase,<sup>153</sup> the High Court avoided the difficulty of ‘distilling a ratio decidendi’ from the five judgments.<sup>154</sup> While refusing to provide ‘any exhaustive and fully predictive identification of what can and cannot amount to a “work of artistic craftsmanship”’, the Court concluded that the key factor that separates protected works of artistic craftsmanship from mere industrial designs is the significance of functional constraints.<sup>155</sup> With works of artistic craftsmanship there is considerable ‘freedom of design choice’ and thus scope for ‘real or substantial artistic effort’. The intention of the designer could cast some light on this, and in his evidence Swarbrick had acknowledged that he sought to produce a ‘well mannered, easily balanced boat that was fast’. However, in most cases the crucial evidence would be the views of experts, and here this confirmed that speed was the overriding consideration in the design of ‘sports boats’.<sup>156</sup> Designing the JS 9000 therefore involved the application of principles of mathematics, physics, and engineering, rather than making something visually or aesthetically appealing. Thus, the plug and mouldings were not works of artistic craftsmanship.

Although the decision in *Burge v. Swarbrick* is based on legislation that now differs substantially from that operating in the UK, there is much to be said for the clarity it brings to the notion of a work of artistic craftsmanship. Had the ‘design freedom’ test been applied in *Guild v. Eskander* or *Vermaat v. Boncrest*, one could imagine that a different result might well have been reached: both look like cases where the creator possessed and utilized the freedom available in creating the design of clothes and bedspreads. Of course, other cases, such as *Hensher* itself or *Merlet v. Mothercare*, would require the court to face up to the difficult question as to

<sup>153</sup> According to the Court, ‘craftsmanship’ and ‘aesthetic quality’ are not distinct questions (para. 66).

<sup>154</sup> *Ibid*, paras 55–56. <sup>155</sup> *Ibid*, paras. 82–84.

<sup>156</sup> See paras 63–65, noting the problems with such evidence, in particular that ‘few alleged authors of works of artistic craftsmanship [will] be heard readily to admit the absence of any aesthetic element in their endeavours’.

how much design freedom would suffice to render a work one of artistic craftsmanship. The High Court was only willing to say that this was a question of ‘fact and degree’.

## 6 FILMS

Moving pictures were first produced towards the end of the nineteenth century. Initially, films were only indirectly protected in the UK as series of photographs<sup>157</sup> or as dramatic works.<sup>158</sup> At an international level, films were gradually recognized as the subject matter of authors’ rights protection.<sup>159</sup> UK law recognized cinematic ‘films’ as an independent category of subject matter in the 1956 Act,<sup>160</sup> conferring first ownership on ‘the maker’ thereof.<sup>161</sup> Under the 1988 Act, films are defined to mean a recording on any medium from which a moving image may be produced by any means.<sup>162</sup> This broad definition encompasses celluloid films and video recordings or disks, as long as they produce ‘moving images’.<sup>163</sup> Multimedia products may sometimes be protected as films,<sup>164</sup> though it is has been doubted whether recordings which generate text, such as teletext, would be covered.<sup>165</sup>

The EC Duration and Rental Directives, which required directors to be recognized as authors, distinguishes between cinematographic works and related rights in mere fixations, so-called ‘films’, or ‘videograms’.<sup>166</sup> This approach has not been followed in the UK where

<sup>157</sup> Films were registered as series of photographs at the Stationers’ Company, as required under the Fine Art Copyright Act 1862, but from 1911 this became unnecessary.

<sup>158</sup> CA 1911, s. 35(1). For a systematic account, see Kamina, ch. 2. For theoretical reflections, see A. Barron, ‘The Legal Properties of Film’ (2004) 67 *MLR* 177.

<sup>159</sup> Article 14 of the Berlin Revision of Berne in 1908 required that cinematographic productions be protected as literary or artistic works if ‘by the arrangement of the acting form or the combination of the incidents represented, the author has given the work a personal and original character’. Such works are now listed in Art. 2(1) of the Paris text, and assimilation is further provided in Art. 14 *bis*.

<sup>160</sup> CA 1956, s. 13. See more generally, M. Salokannel, ‘Film Authorship in the Changing Audio-visual Environment’, in Sherman and Strowel, ch. 3 (it was only with the rise of the notion of the ‘director as author’ (or *auteur*) that copyright law came to embrace films as copyright subject matter on a par with literary and artistic works).

<sup>161</sup> CA 1956, s. 13(4), (10) (defining maker in terms similar to the definition of producer in CDPA, s. 178). Prior to the amendments in 1996, copyright in films was treated in a similar manner to that in sound recordings and broadcasts, with the producer being designated as the sole ‘author’. Films now have a hybrid status under CDPA s. 9(2)(ab) which gives the principal director joint authorship with the producer of films made on or after 1 July 1994.

<sup>162</sup> CDPA 5B(1). Cf. CA 1956, s. 13(10) and *Spelling Goldberg v. BPC Publishing* [1981] *RPC* 283 (stating that film has three characteristics: a sequence of images, recorded on material, capable of being shown as a moving picture).

<sup>163</sup> See Kamina, 88–91 (in particular, considering whether a computer program which produces images on a screen which can appear to move is a film, and arguing that there must be something in the nature of a pictorial work).

<sup>164</sup> M. Turner, ‘Do the Old Legal Categories Fit the New Multimedia Products? A Multimedia CD-ROM as a Film’ [1995] *EIPR* 107; Aplin, note 109 above, Ch. 3; T. Aplin, ‘Not in Our Galaxy: Why Film Won’t Rescue Multimedia’ [1999] *EIPR* 633; Stamatoudi, ch. 6, esp. 126–51 (arguing that few multimedia products would be audiovisual works, since moving images rarely form the main element, and objecting in any case to the artificiality of interpreting a multimedia work as a recording which produces moving images); Kamina, 92 (suggesting that the definition of film as ‘a recording’ might afford protection to multimedia works in which moving images form only a limited part). Despite these criticisms, the biggest problem with relying on film copyright to protect multimedia works derives from the narrow scope of protection given by film copyright. In some cases, a multimedia work might be a dramatic work, and thus benefit from ‘thick’ protection: Kamina, 79.

<sup>165</sup> Stamatoudi, 111.

<sup>166</sup> See above p. 50; below at pp. 123–5.

the 1988 Act only acknowledges one copyright work, a film. Provisions are made for circumstances where there is no principal director, nor any author of screenplay, dialogue, or music.<sup>167</sup> Moreover, there is no requirement under UK copyright law that films be original, as is the case with literary, dramatic, musical, and artistic works. However, it has now been accepted that films which would be ‘cinematographic works’ under the Berne Convention are also ‘dramatic works’ under UK copyright law.<sup>168</sup>

The soundtrack accompanying a film is treated as part of the film. As we will see, there is no reason why such a soundtrack would not also qualify as a sound recording. This leads to a potential problem of overlap. Section 5B(3) clarifies the position by stating that (i) references to the showing of a film include playing the film soundtrack to accompany the film and (ii) references to playing a sound recording do not include playing the film soundtrack to accompany the film. Consequently if a cinema wished to show a film which included a soundtrack, the cinema would only need to obtain rights clearances from the owner of copyright in the film.<sup>169</sup> In contrast, where the soundtrack is played without the moving images, for example on a jukebox in a pub, it is only necessary to obtain the consent of the right holder in the sound recording of the soundtrack.<sup>170</sup>

## 7 SOUND RECORDINGS

Sound recordings were first given protection under the 1911 Copyright Act where they were protected as musical works.<sup>171</sup> It soon became apparent that sound recordings were fundamentally different from musical works. The change of attitude was summed up in *Gramophone Company v. Stephen Cawardine*<sup>172</sup> where Maugham J considered the creative contribution to the gramophone record ‘Overture to the Black Domino’. He said:

[I]t is not in dispute that skill, both of a technical and of a musical kind is needed for the making of such a record as the one in question. The arrangement of the recording instruments in the building where the record is to be made, the building itself, the timing to fit the record, the production of the artistic effects... combine together to make an artistic record, which is very far from the mere production of a piece of music.<sup>173</sup>

These sentiments are now reflected in the 1988 Act, where sound recordings are defined to mean ‘(a) a recording of sounds, from which the sounds may be reproduced’, or ‘(b) a recording of the whole or any part of a literary, dramatic or musical work, from which sounds reproducing the work or part may be produced, regardless of the medium on which the recording is made or the method by which the sounds are reproduced or produced’.<sup>174</sup> It thus covers vinyl records, tapes, compact discs, digital audiotapes, and MP3s which embody recordings. The

<sup>167</sup> CDPA s. 13B(9). For an argument that this fails to implement the Directives see P. Kamina, ‘British Film Copyright and the Incorrect Implementation of the EC Copyright Directives’ [1998] *Ent LR* 109.

<sup>168</sup> *Norowzian v. Arks (No. 2)* [2000] *EMLR* 67. For criticism, see T. Rivers, ‘*Norowzian Revisited*’ [2000] *EIPR* 389 (arguing that the case creates problems identifying the author).

<sup>169</sup> See also P. Kamina, ‘The Protection of Film Soundtracks under British Copyright after the Copyright Regulations 1995 and 1996’ [1998] *Ent LR* 153.

<sup>170</sup> CDPA s. 5B(2)–(3).

<sup>171</sup> *Panayiotou v. Sony Music Entertainment* [1994] *EMLR* 229, 348 (brief history of recorded music). Gaines, note 109 above, has argued that the print-based concept of copyright had difficulties accommodating sounds. This was clearly not the case in the UK.

<sup>172</sup> [1934] 1 Ch 450.

<sup>173</sup> *Ibid*, 455.

<sup>174</sup> CDPA s. 5B(1).

definition also seems to encompass digital instructions embodied in electronic form which produce sounds. In a different legal context (that of licensing places of entertainment), it has been held that ‘recorded sounds’ can include CD-ROM embodiments of Musical Interface Digital Interface (MIDI) instructions (rather than data in wave form) which cause a sound module or synthesizer to generate sounds.<sup>175</sup>

As the definition of sound recording requires that there be ‘sounds’, it appears to exclude a single sound from protection (even though a considerable amount of production work may go into its recording).<sup>176</sup> Interesting questions have also arisen as to how the limits of a sound recording are to be determined. We review these issues when we look at copyright infringement.<sup>177</sup> Because sound recordings exist irrespective of the medium on which the sounds are recorded, a soundtrack of a film is a sound recording. However, the soundtrack of a film will also be treated as part of the film insofar as the soundtrack ‘accompanies’ the film.<sup>178</sup> The effect of this is that the public showing of a film and its soundtrack only requires the consent of the owner of copyright in the film.<sup>179</sup> In contrast, where the soundtrack is played without the moving images<sup>180</sup> this would only require the consent of the holder of rights in the sound recording.<sup>181</sup>

## 8 BROADCASTS

Broadcasts, whether of sounds or images, were first included as copyright works in the 1956 Copyright Act. Subsequently, they were deemed to be suitable subject matter for protection by neighbouring rights at the 1961 Rome Convention.<sup>182</sup> The decision to extend copyright protection to broadcasts marked an important change in copyright law. In contrast with art, literature, films, and recordings, a broadcast is essentially the provision of a service which involves a communication: it is not the creation of a thing, but an action. This is because broadcasts are not fixed or embodied (though they can be), they are ephemeral acts of communication. This means that a broadcast does not protect any fixed entity *per se*. Instead, what is protected are the signals which are transmitted. In a sense copyright law recognizes the value in the act of communication itself, as distinct from the content of what is being communicated.<sup>183</sup>

<sup>175</sup> *Sean Toye v. London Borough of Southwark* (2002) 166 JP 389.

<sup>176</sup> P. Theberge, ‘Technology, Economy and Copyright reform in Canada’, in S. Frith (ed.) *Music and Copyright* (1993), 53; S. Jones, ‘Music and Copyright in the USA’, in S. Frith (ed.) *Music and Copyright* (1993), 67.

<sup>177</sup> See Ch. 8, especially pp. 176–7, discussing *Hyperion Records v. Warner Bros* (1991, unreported).

<sup>178</sup> This gives effect to Duration Dir. Art. 3, which required that the term ‘film’ be defined as ‘a cinematographic or audiovisual work or moving images, whether or not accompanied by sound’.

<sup>179</sup> CDPA s. 5B (3)(a). <sup>180</sup> CDPA s. 5B(3)(b).

<sup>181</sup> Contrast the current position with the position under the 1988 Act as initially enacted where ‘sound recordings’ and ‘films’ were mutually exclusive. This meant that the showing of a film in public required the consent of both the copyright holder in the moving images and the copyright owner of the soundtrack.

<sup>182</sup> Rome, Art. 3(f), Art. 6, Art. 13, Art. 14, Art. 16(1)(b). TRIPS, Art. 14(3). The UK is also party to the European Agreement of 1960 on the Protection of Television Broadcasts. Broadcasts were not the subject of the recent WIPO Treaties.

<sup>183</sup> On the question of what amounts to a ‘work’ in this context, see the Australian High Court decision in *TCN Channel Nine v. Network Ten* [2004] HCA 14 (11 Mar. 2004), where the majority held that in the case of a broadcast the work is the individual programme transmitted.

Provision was made for protection of cable programmes from 1 January 1985.<sup>184</sup> This differentiated treatment was carried through into the 1988 Act, as enacted, which recognized two categories of subject matter: a ‘broadcast’, which referred to a wireless transmission, and cable programmes. This differentiation has been abandoned, as of 31 October 2003, with cable programmes being assimilated within a broadly defined concept of ‘broadcast’. Doubts will almost certainly be expressed as to the validity of these amendments to the primary Act by way of delegated legislation: the following paragraphs, however, assume the changes are allowed to stand.<sup>185</sup>

In its amended form, a broadcast is defined as an ‘electronic transmission of visual images, sounds, or other information which—(a) is transmitted for simultaneous reception by members of the public and is capable of being lawfully received by them, or (b) is transmitted at a time determined solely by the person making the transmission for presentation to members of the public’.<sup>186</sup> This definition merely requires that the transmission be ‘electronic’,<sup>187</sup> being indifferent otherwise as to the means of transmission, the route taken, or the form of the signals.<sup>188</sup> The definition therefore covers transmissions both by wire (‘Cable TV’) and wireless (e.g. ‘free-to-air’ broadcasts), terrestrial and satellite transmission, and analogue and digital broadcasts. By referring to the transmission of ‘visual images, sound, or other information’, the definition is also broad enough to cover systems which transmit different forms of content, such as radio, television, and other broadcasts (such as teletext). It also takes into account the forms of broadcasting which may be directly received by individuals or may be received by subscribers who obtain a decoder.<sup>189</sup>

While the definition of broadcast is deliberately broad, it was readily appreciated that this breadth was likely to confer protection on some subject matter for which it was neither needed nor desired.<sup>190</sup> Two alternative criteria limit the definition further: to constitute a broadcast

<sup>184</sup> Cable and Broadcasting Act 1984, s. 22, adding CA 1956, s. 14A. Although diffusion services existed in 1956, they merely relayed BBC and ITA broadcasts to subscribers in areas where the signals were weak.

<sup>185</sup> But see *Oakley Inc v. Animal Inc* [2006] Ch 337 (liberal interpretation of European Communities Act 1972, s. 2(2)). The Copyright Directorate viewed the changes as necessary to implement Info. Soc. Dir. Art. 3 (communication to the public right). However, while that justified altering CDPA s.20 on ‘rights’, it is not obvious how it justifies altering CDPA s. 6 which deals with works.

<sup>186</sup> CDPA s. 6(1) (as amended by Copyright and Related Rights Regulations 2003 SI 2003/2498, Reg. 4). Perhaps the amendments were influenced by the definition of broadcast contained in Directive 89/552/EEC OJL 298/23 (17 Oct. 1989) Art. 1 (“television broadcast” means the initial transmission by wire or over the air, including that by satellite, in unencoded or encoded form, of television programmes intended for reception by the public. It includes the communication of programmes between undertakings with a view to their being relayed to the public. It does not include communication services providing items of information or other messages on individual demand such as telecopying, electronic data banks and other similar services’).

<sup>187</sup> Defined in CDPA s. 178 as ‘actuated by electric, magnetic, electro-magnetic, electro-chemical or electro-mechanical energy’.

<sup>188</sup> The Copyright Directorate refers to this as a ‘technologically neutral definition’: *Consultation on UK Implementation of Directive 2001/29/EC on Copyright and Related Rights in the Information Society: An Analysis of Responses and Government Conclusions*, para. 3.6. The definition of wireless telegraphy in CDPA s. 178 had excluded transmission by microwave energy between terrestrial fixed points: the new definition of broadcast has no such exclusion.

<sup>189</sup> That is, any encrypted broadcast, whether terrestrial or by satellite relay, is ‘lawfully’ received if decoding equipment has been made available through the person transmitting it in encrypted form. CDPA s. 6(2).

<sup>190</sup> Copyright Directorate, *Consultation on UK Implementation of Directive 2001/29/EC: An Analysis of Responses and Government Conclusion*, para. 3.6 (explaining its attempt to exclude on-demand services from the definition of broadcast on the basis that the subject matter transmitted is usually protected under other headings).

the transmission must be 'for simultaneous reception by members of the public' (and capable of being lawfully received) or be made 'at a time determined solely by the person making the transmission for presentation to members of the public'. Moreover, a new section 6(1A) excludes from broadcasts 'any Internet transmission', though with three (not insubstantial) exceptions.

The limitation of broadcasts to transmissions *for* simultaneous reception 'by members of the public' excludes from protection transmissions between individuals, such as telephone calls, faxes, or e-mails, as well as transmissions on private networks (such as company 'intra-nets'): these are not for reception by members of the public. The requirement that the transmission be 'capable of lawful reception' reinforces the exclusion of private communications from the definition of broadcast, because the interception of such a transmission would be illegal under the Interception of Communications Act 1985.<sup>191</sup> The requirement for 'simultaneous reception', too, excludes transmissions where the individual recipient decides the time of the transmission, as with on-demand services,<sup>192</sup> or interactive database services (such as *Lexis* or *Westlaw*). The alternative criterion, that the transmission be at a time determined solely by the person making the transmission 'for presentation to members of the public', is designed to cover transmission for playing or showing, as where a football game is beamed back to the away team's stadium.<sup>193</sup> It also covers what is frequently referred to as 'narrow-casting': such as transmission to shops for presentation to the public.

The scope of the definition of broadcast is confined further by excluding 'any Internet transmission', but this exclusion is subject to three exceptions of its own. No definition is provided for an 'Internet transmission' but the better view is that the internet is not confined to the 'worldwide web'. E-mails to news groups and web sites therefore, are generally excluded from protection as 'broadcasts' (though they might be protected as literary or artistic works).<sup>194</sup> A non-interactive on-line database service (formerly thought to be a cable programme service, and its contents therefore protected as cable programmes)<sup>195</sup> would also be excluded. In contrast, an information service through telecommunications networks to subscribers to certain mobile phone services is probably a broadcast.

Having said that, the amendments have sought to keep broadcast protection for 'Internet transmissions of a conventional broadcast character' through three exceptions to the exclusion of 'Internet transmissions' from the definition of broadcasts. First, section 6(1A)(a) clarifies

<sup>191</sup> Rather surprisingly this might mean that foreign encrypted broadcasts, such as satellite broadcasts, where there is no authorized distribution of decoders in the UK, are unprotected because they are not capable of lawful reception in the UK. This would be a breach of Art. 6(1)(b) of the Rome Convention, and is best avoided by treating the definition as covering broadcasts which are capable of lawful reception in the country at which the signals are primarily targeted.

<sup>192</sup> Many web sites are probably not for 'simultaneous reception' in that the transmitter intends that the site can be accessed at any time the user desires. Is a web site which is updated on a daily basis, the new version being transmitted at 8 A.M. each morning, for 'simultaneous reception'? Probably it does not matter, as it is excluded under CDPA, s. 6(1A) as an internet transmission.

<sup>193</sup> Copyright Directorate, *Consultation on UK Implementation of Directive 2001/29/EC: An Analysis of Responses and Government Conclusion*, para. 3.9 (explaining requirement that timing be determined by the person making the transmission as designed to exclude on-demand services from the definition of broadcast).

<sup>194</sup> *Ibid* (explaining the exclusion as a response to user groups who were concerned that web sites would be protected and that exceptions, such as research and private study, would therefore be unavailable). In these respects, the decision in *Shetland Times v. Dr Jonathan Wills* [1997] FSR 604 that a web site is protected (then, as items included in a cable programme service) is no longer good law.

<sup>195</sup> *Dun & Bradstreet v. Typesetting Facilities* [1992] FSR 320.

that the exclusion of 'Internet transmissions' does not encompass 'a transmission taking place simultaneously on the Internet and by other means'. This means that web sites which transmit sounds and images simultaneously with broadcasts—all the BBC radio stations, for example, are accessible from the BBC's web site—remain protected broadcasts.

A second provision allows for broadcasts to include an internet transmission which is a 'concurrent transmission of a live event'. The term 'concurrent' implies that the internet transmission must occur at the same time as the 'live event', so would seem to cover internet transmission of a cricket match or sounds of a pop concert. The provision refers to transmission of a live event and so would not treat as a broadcast a transmission of *commentary* on a live event. News-group e-mails of progress at the latest international copyright convention would not be a broadcast, therefore; nor would the commentary on a football match (unless the commentary itself were treated as an event). Whether the courts will interpret 'live event' to cover transmissions of the *Big Brother* house (even where these were not being broadcast on TV), remains to be seen: an approach which refuses to discriminate will end up treating all live web-cam feeds into web sites as broadcasts.

A third saving indicates that an internet transmission is not excluded from the definition of broadcast if it is 'a transmission of recorded moving images or sounds forming part of a programme service offered by the person responsible for making the transmission, being a service in which programmes are transmitted at scheduled times determined by that person'. This means that a person who wishes to set up a conventional style of broadcast service, solely utilizing the internet to distribute the programme service, does gain protection for the broadcasts.

## 9 PUBLISHED EDITIONS

The final category of works that are protected by copyright is 'typographical arrangements of published editions'. This category of works was first introduced in the UK in 1956, and remains largely a peculiarity of the British, and British-influenced, copyright systems (having no corresponding international regime).<sup>196</sup> A 'published edition' means 'a published edition of the whole or any part of one or more literary, dramatic or musical works'.<sup>197</sup> In *Newspaper Licensing Agency v Marks & Spencer*, Lord Hoffmann held that 'the "edition" is the product, generally between covers, which the publisher offers to the public'.<sup>198</sup> In this context, the copyright in the published edition protects the typographical arrangement, that is, the overall appearance of the page or pages. This protects the publisher's skill and investment in typesetting, as well as the processes of design and selection that are reflected in the appearance of the text.<sup>199</sup> There is no requirement that the published edition must be a previously unpublished

<sup>196</sup> CA 1956 s. 15. See *Report of the Copyright Committee* (Cmd. 8662), paras. 306–10.

<sup>197</sup> CDP A s. 8(1). Cf. Art. 5 Duration Dir. which permits member states to create a publishers' right in critical and scientific works which have fallen into the public domain.

<sup>198</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 558; [2001] 3 WLR 390 (Lord Hoffmann) (holding that whole newspaper was the 'edition').

<sup>199</sup> *Ibid* (para. 23) ('It is not the choice of a particular typeface, the precise number or width of the columns, the breadth of margins and the relationship of headlines and strap-lines to the other text, the number of articles on a page and the distribution of photographs and advertisements but the combination of all of these into pages which give the newspaper as a whole its distinctive appearance... The particular fonts, columns, margins and so forth are only, so to speak, the typographical vocabulary in which the arrangement is expressed.')

work. It therefore covers modern editions of works in the public domain (such as the complete works of Shakespeare), and prohibits the reproduction of the layout (but not the work itself). It should be noted that the concept of reproduction of a typographical arrangement is extremely narrow, being restricted to facsimile reprography. Consequently, the reproduction of the material contained in a published work will not infringe this limited copyright where a different layout is employed. It has been suggested that typographical arrangements may also be protected as 'photographs'.<sup>200</sup>

<sup>200</sup> Laddie *et al.*, paras 9.4–5 (but observing that such a photograph may lack originality). See also J.A.L. Sterling and M.C.L. Carpenter, *Copyright Law in the United Kingdom and the Rights of Performers, Authors and Composers in Europe* (1986), para. 244 (publishers have copyright in photographic plates used in printing process).

## CRITERIA FOR PROTECTION

### CHAPTER CONTENTS

1	Introduction	91	4	Entrepreneurial Works: 'Not copied'	111
2	Recorded in Material Form	92	5	Is the work 'Qualified'?	113
3	Originality: Literary, Dramatic, Musical, and Artistic Works	93	6	Excluded Subject Matter	117

### 1 INTRODUCTION

In order for a work to be protected by copyright, it is necessary to show that, as well as falling within one of the eight categories of work listed in the Act, the work also satisfies the particular requirements that are imposed on it. As we will see, the requirements that need to be complied with vary, sometimes considerably, between different categories of work.

(i) The *first* general requirement for copyright to subsist is that the work must be recorded in a material form. As we will see, this only applies to literary, dramatic, and musical works.

(ii) The *second* requirement that must be satisfied for protection to arise is that the work must be 'original'. It should be noted that this only applies to literary, dramatic, musical, and artistic works. In contrast, there is no need for entrepreneurial works (sound recordings, films, broadcasts, and typographical arrangements) to be 'original' for them to qualify for protection. Instead the 1988 Act declares that copyright only subsists to the extent that such works are not copied from previous works of the same sort.<sup>1</sup>

(iii) The *third* requirement that must be satisfied for a work to be protected, which applies to all works, is that it is necessary to show that the work is sufficiently connected to the UK to qualify for protection under UK law.

(iv) The *fourth* requirement is that the work is not excluded from protection on public policy grounds. Occasionally the courts have said that works which are immoral, blasphemous, or libellous, or which infringe copyright, will not be protected.

We will deal with each of these requirements in turn.

<sup>1</sup> CDPA ss. 5(2), 6(6), 7(6), 8(2).

## 2 RECORDED IN MATERIAL FORM

There is no requirement that a work be registered for copyright protection to arise. Instead, the right arises automatically. However, the 1988 Act provides that copyright does not subsist in literary, dramatic, or musical works ‘unless and until’ the works are ‘recorded in writing or otherwise’.<sup>2</sup> This is usually referred to as the requirement that the work be recorded in a material form. The fixation or recording of creative ideas carries with it many benefits. Perhaps the most obvious legal benefits are evidential. While evidence that has not been recorded in some way is admissible, the law has always preferred evidence that is fixed (written, taped, or filmed) to oral evidence. The reduction of ideas to a material form also increases the probability that a work may continue to be accessible beyond the death of its author.

In many cases, there is no need for any special rules to be made to ensure that a work is recorded. The reason for this is that, in the case of artistic works,<sup>3</sup> works of artistic craftsmanship,<sup>4</sup> sound recordings, films, and published editions, expression ordinarily takes place in a recorded physical form. That is, it is impossible for someone to create, say, a sound recording or a film in a way in which it is not fixed. This is not the case, however, in relation to literary, dramatic, and musical works which can be expressed in ways in which they are not fixed or recorded: literary works can be spoken, musical works sung, and dramatic works performed. To remedy this, section 3(2) of the 1988 Act states that copyright does not subsist in literary, dramatic, or musical works unless and until they are recorded, in writing or otherwise (for example, on film).<sup>5</sup> Writing is defined to include any form of notation or code ‘regardless of the method by which, or medium in or on which, it is recorded’.<sup>6</sup>

There is no requirement that broadcasts be fixed or embodied in any particular form. Thus, broadcasts are protected whether or not the Broadcasting Authority makes a permanent version of them. Arguably, the ephemeral nature of broadcasts makes them one of the most intangible of all forms of intellectual property.

The requirement that literary, dramatic, and musical works be recorded is rarely a serious impediment to copyright protection. The reason for this is that the fixation requirement will be satisfied even if the recording is carried out by someone other than the creator (with or without their permission),<sup>7</sup> whether the recorded form is in the claimant’s hands, or has subsequently been destroyed.<sup>8</sup> Given that when someone infringes copyright they will normally have reproduced the work, and that parties unconnected with the creator can carry out the requisite recording, this means that in most cases the work will in fact have been recorded.

<sup>2</sup> CDPA s. 3. This is deemed to be the time when the work is ‘made’: CDPA s. 3(2).

<sup>3</sup> There is an area of uncertainty in the case of artistic works that are not fixed, such as a display of coloured lights. It could be argued that, since fixation is not specifically required by the CDPA for artistic works, such a display could be protected (though, *quaere* under what sub-category of CDPA s.4). If so, live televising of the display would infringe. The point remains to be decided by the courts. It has been stated that an ice sculpture, though not permanent, is protected: *Metix v. Maughan* [1997] FSR 718, 721.

<sup>4</sup> But cf. *Komesaroff v. Mickle* [1988] RPC 204 (a device consisting of a mixture of sand, liquid, and bubble-producing substance did not qualify as a work of artistic craftsmanship).

<sup>5</sup> CDPA s. 3(2). This clarifies any doubts which may have existed under the 1956 Act that recording on tape was not sufficient.

<sup>6</sup> CDPA s. 178. <sup>7</sup> CDPA s. 3(3).

<sup>8</sup> *Lucas v. Williams & Sons* [1892] 2 QB 113, 116; *Wham-O Manufacturing Co. v. Lincoln Industries* [1985] RPC 127, 142–5 (CANZ); *J & S Davis (Holdings) v. Wright Health Group* [1988] RPC 403, 409.

One question that has arisen in relation to the fixation requirement concerns works that change form (such as databases or works of kinetic art).<sup>9</sup> While works that continually change form may give rise to problems in other respects, it seems that as long as a work is recorded it will be protected, even though it may subsequently change form.

### 3 ORIGINALITY: LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

Perhaps the most well-known requirement that must be satisfied for copyright protection to arise is that the work be ‘original’. It should be noted that this only applies to literary, dramatic, musical, and artistic works.<sup>10</sup> In contrast, there is no need for entrepreneurial works (sound recordings, films, broadcasts, and typographical arrangements) to be original for them to qualify for protection. Instead the 1988 Act declares that copyright only subsists to the extent that such works are not copied from previous works. (We look at this in the following section.)

While the originality requirement has been a general statutory requirement since 1911,<sup>11</sup> it is very difficult if not impossible to state with any precision what copyright law means when it demands that works be original. This uncertainty has been exacerbated by the fact that, as part of the harmonization of copyright law in Europe, a new concept—that of the *author’s own intellectual creation*—is now used in the United Kingdom to determine the originality of databases, and arguably also computer programs and photographs. In what follows, therefore, we need to distinguish carefully between the traditional British conception of originality, and the European one.

While we will explore the differences between the British and European conceptions of originality below, both conceptions share a number of characteristics. In both British and European conceptions, ‘originality’ is concerned with the relationship between an author or creator and the work. That is, originality is not concerned with whether the work is inventive, novel, or unique.<sup>12</sup> While the novelty requirement in patent law focuses on the relationship between the invention and the state of the art, the originality examination is primarily concerned with the relationship between the creator and the work. When copyright says that a work must be original, this means that the author must have exercised the requisite intellectual qualities (in the British version *labour, skill, or effort*, in the European ‘*intellectual creation*’) in producing the work.<sup>13</sup> More specifically, in determining whether a work is original, copyright

<sup>9</sup> In *Komesaroff*, note 4 above, King J held that a device consisting of a mixture of sand, liquid, and bubble-producing substance did not qualify as a work of artistic craftsmanship. The device, when moved, produced pretty patterns. King J held that: ‘it must be possible to define the work of artistic craftsmanship on which she bases her action, and this can be done only by a reference to a static aspect of what has been referred to by counsel as a “work of kinetic art”’.

<sup>10</sup> CDPA s. 1(1).

<sup>11</sup> Though the requirement was introduced for paintings, drawings, and photographs by the Fine Art Copyright Act 1862.

<sup>12</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601; *Sawkins v. Hyperion* [2005] 1 WLR 3281, 3288 *per* Mummery LJ (para. 31) (originality does not require ‘novelty, usefulness, inventiveness, aesthetic merit, quality or value. A work may be complete rubbish and utterly worthless, but copyright protection may be available for it...’)

<sup>13</sup> Lord Reid in *Ladbroke v. William Hill* [1964] 1 All ER 465, 469.

law focuses on the input that the author contributed to the resulting work.<sup>14</sup> Consequently, a person who writes a film script based on an original story recounted by Homer in *The Odyssey* produces an 'original' work even though the story and characters have been widely known for thousands of years.<sup>15</sup>

The originality requirement sets a threshold that determines when material falling within the definition of literary, dramatic, musical, or artistic work is protected by copyright law.<sup>16</sup> Nevertheless, the policy basis for the threshold requirement has never been made clear. It certainly excludes from protection trivial works, the creation of which involves little labour, skill, or effort. As we will see, the European conception of originality may well set the threshold higher,<sup>17</sup> excluding works which are merely the product of labour alone.<sup>18</sup> The originality requirement also functions to limit the duration of protection by preventing existing works from being the subject of further copyright protection in the absence of some additional contribution. Since this function could be achieved by requiring that the work must not already exist (as is the case with entrepreneurial works), it seems that the originality requirement is intended to do something more. What this is, however, is unclear.

In addition to operating as a threshold, originality may be important in establishing whether a person has infringed copyright. This is because a person will not infringe copyright if they merely copy elements which are not original in the claimant's work. That is, deciding what is original in a claimant's work plays an important role in ascertaining whether a substantial part of a work has been taken by the defendant. (However, it should be noted that the fact that a person creates an original work does not mean that they are not infringing copyright in work they have drawn on.<sup>19</sup> This is because, as we see in Chapter 8, infringement depends on what a person has taken from a copyright work; the effort that such a person adds is irrelevant.)

### 3.1 THE BRITISH CONCEPTION OF ORIGINALITY

It would be foolish to claim that the case law developed since 1912 (or carried over from earlier jurisprudence) has defined clearly the circumstances in which a literary, dramatic, musical, or artistic work will be treated as original. Much of the case law seems inconsistent, and according

<sup>14</sup> To use Benjamin Kaplan's terminology in *An Unhurried View of Copyright* (1965), the test in copyright is psychological, whereas in patents it is historical.

<sup>15</sup> *Christoffer v. Poseidon Film Distributors* [2001] ECDR 481.

<sup>16</sup> Originality has also played an important role in deciding whether new classes of work (photography in the nineteenth century and more recently Aboriginal art) ought to be protected by copyright law. There is also a possibility that the growing judicial suspicion about the over-extension of copyright may mean that originality comes to be used as a way of restricting the scope of the subject matter protected by copyright law.

<sup>17</sup> Given that many such countries have an 'open' list of works protected by copyright, the 'originality' requirement does the job of delimiting the sphere of copyright in those countries (a role performed in the UK by the list of eight types of work in CDPA s. 1).

<sup>18</sup> See J. Ginsburg, 'Creation and Commercial Value: Copyright Protection of Works of Information' (1990) 90 *Columbia Law Review* 1865 (in the context of US law, doubting whether copyright should be confined to works exhibiting traces of personality, given the social value of works which are a product of 'sweat of the brow'.) But as regards databases in Europe, an attempt is made to meet this objection through the *sui generis* right: see Ch. 13.

<sup>19</sup> See *Wood v. Boosey* (1868) LR 3 QB 223, 229; *Redwood Music v. Chappell* [1982] RPC 109, 120; *ZYX Music GmbH v. King* [1995] 3 All ER 1, 9–11; cf. *Ashmore v. Douglas Home* [1987] FSR 553 (Judge Mervyn Davies denied copyright protection to part of a play which was derived from an existing copyright play on the grounds that the former was 'infringing material').

to one commentator ‘the dividing line between original... works, and unoriginal... works, remains an uncertain and shifting one’.<sup>20</sup> In part these difficulties arise because originality ‘must depend largely on the facts of the case and must in each case be very much a question of degree’.<sup>21</sup>

As we explained above, when British copyright says that a work must be original, this means that the author must have exercised the requisite *labour, skill, or judgment* in producing the work.<sup>22</sup> However, while the phrase ‘labour, skill, or judgment’ may be a useful label by which to describe the traditional British test of originality, it should be noted that it is a form of words that is not used with great precision (and thus should not be viewed as if it were a statutory phrase). Sometimes the courts use the phrase disjunctively, referring to labour, skill, *or* judgment,<sup>23</sup> sometimes cumulatively as labour, skill, *and* judgment.<sup>24</sup> On other occasions the words work, capital, effort, industry, time, knowledge, taste, ingenuity, experience, or investment are used.<sup>25</sup> This looseness may be criticized on the basis that it leaves the law uncertain, particularly as regards whether works which are only a product of labour (so called ‘sweat-of-the-brow’ works) are original. But the truth is that this is a question whose economic and legal importance has only become paramount with the advent of electronic databases. In the past, the distinction between labour and skill was less momentous (and, indeed, the line drawn between labour and skill was less obvious).

Before looking at the notion of originality in more detail, it will be helpful to make a few preliminary points.

### 3.1.1 Preliminary points

(i) The first point to note is that in most cases the requisite labour, skill, and effort that is needed for a work to be original will be exercised in the way the work is *expressed*: in the way the paint is applied, the words are chosen and ordered, ideas executed, or the clay moulded. That is, in assessing originality, British law is concerned with the originality of expression rather than ideas.<sup>26</sup>

(ii) However, while the originality with which we are concerned is originality of expression, the courts have accepted that the originality of a work may arise in the steps preceding the production of the work (in the *pre-expressive* stage).<sup>27</sup> That is, the labour that confers originality on a particular work may arise in the selection of the subject matter or the arrangement of the image that comes to be embodied in the painting. In other cases, such as with respect to literary compilations, the courts will consider the footwork involved in discovering the

<sup>20</sup> S. Ricketson, ‘The Concept of Originality in Anglo-Australian Copyright Law’ (1991) 9(2) *Copyright Reporter* 1.

<sup>21</sup> *Macmillan v. Cooper* (1923) 93 *LJPC* 113 (Lord Atkinson).

<sup>22</sup> *Ladbroke v. William Hill* [1964] 1 *All ER* 465, 469 (Lord Reid). <sup>23</sup> *Ibid* 469 *per* Lord Reid.

<sup>24</sup> *Ibid* 473 *f per* Lord Evershed; *Interlego v. Tyco* [1988] *RPC* 343, 371.

<sup>25</sup> *Ladbroke v. William Hill* [1964] 1 *All ER* 465, 475 *per* Lord Hodson (‘work, labour and skill’); 478 *per* Lord Devlin (‘skill, industry, or experience’); 480 *per* Lord Pearce (‘labour or skill or ingenuity or expense’); *Macmillan v. Cooper*, note 21 above (Lord Atkinson) (‘labour, skill and capital’); *Sawkins v. Hyperion* [2005] 1 *WLR* 3280, 3285 *per* Mummery LJ (para. 15) (‘effort, skill and time’).

<sup>26</sup> *University of London Press*, note 12 above.

<sup>27</sup> On another reading, three different factors have been taken into account: the relative importance of each depending on the subject matter in question. In certain situations, the courts have considered the *quality* of the labour. In other situations the courts have focused upon the *quantity* of labour that has been invested in the creation of the work. Where the labour is expended on an existing work, the courts have paid attention to the *effect* that the labour has on the underlying work.

information,<sup>28</sup> or the selection or choice of the materials that are later embodied in the work. This was made clear in *Ladbroke v. William Hill* where the question arose as to whether football pools coupons (which listed matches to be played and offered a variety of bets arranged in 16 categories) were original compilations.<sup>29</sup> On the basis that the expressive form of the coupons inevitably followed from the preceding commercial decisions as to the bets which should be offered, the appellants argued that the coupons were not original. The House of Lords rejected these claims.<sup>30</sup> According to Lord Reid, it was artificial to divide the inquiry up, on the one hand into the commercial decisions about which bets to offer and, on the other, the form and arrangement of the table. The selection of wagers and their presentation was so interconnected as to be inseparable. Consequently, when considering originality, it is inappropriate to dissect the labour, skill, and judgment into pre-expressive and expressive stages: both elements should be taken into account to determine whether the threshold had been reached.<sup>31</sup>

(iii) It is important to appreciate that the question of whether a work is original often depends on the particular cultural, social, and political context in which the judgment is made. In part this is because originality turns on the way the labour and the resulting work are perceived by the courts. One of the consequences of this is that what is seen as original may change over time. A good example of this is provided by photography. When invented in the 1840s, photography was seen as a non-creative (and non-original) mechanical process whereby images were produced by exposing chemically sensitive materials to light. In the late nineteenth century, however, photography came to be seen as an artistic activity. As a result, photographs came to be seen as creative and thus potentially original works.<sup>32</sup> Similar changes recently occurred in relation to the artistic works of Australian Aborigines.<sup>33</sup>

The historical specificity of the originality examination means that we must be careful as to the conclusions we draw from earlier decisions. This can be seen for example, if we look at the 1900 decision of *Walter v. Lane*.<sup>34</sup> In this case it was held that a newspaper report of an oral speech was protected by copyright because the reporter exercised considerable labour,

<sup>28</sup> For example in *Kelly v. Morris* (1866) 1 *Equity Cases* 697 the author 'needed to make time-consuming enquiries and to write down the results with painstaking accuracy'. Cf. *Sawkins v. Hyperion* [2005] 1 *WLR* 3280, 3291 (para 43) (time and effort spent discovering and retrieving original scores treated as irrelevant when deciding whether claimant had created original musical work).

<sup>29</sup> [1964] 1 *All ER* 465, 469 (Lord Reid); 477 (Lord Hodson); 479 (Lord Devlin); 481 (Lord Pearce). See also *Football League v. Littlewoods* [1959] *Ch* 637, 656; *Bookmakers' Afternoon v. Gilbert* [1994] *FSR* 723.

<sup>30</sup> Note, however, *Ladbroke v. William Hill* [1964] 1 *All ER* 465, per Lord Evershed, at 472, who considered the task of expressing the wagers a distinct one involving 'considerable skill, labour and judgment'.

<sup>31</sup> Two points are worth adding. The first is that there must be limits to the relevance of pre-expressive work. One such limit may be where pre-expressive work is provided by someone else, but is not sufficient to render that person a co-author. In these circumstances, such pre-expressive work cannot count towards the originality assessment. Another is where the pre-expressive labour is unconnected to the production of the work, as where a person selects products they are going to sell and then produces a catalogue. In such cases, it seems, pre-expressive work cannot contribute to the originality of the catalogue: *Purefoy Engineering v. Sykes Boxall & Co* (1955) 72 *RPC* 89. See also *Ladbroke v. William Hill*, [1964] 1 *All ER* 465, 477 per Lord Hodson; 479 per Lord Devlin (one of objects of pre-expressive labour should be production of work); 481 (Lord Pearce) ('if the work was done with no ultimate intention of a compilation'). The second point is that, to the extent that pre-expressive labour confers originality, so its appropriation may be infringement: see below, pp. 177–85.

<sup>32</sup> B. Edelman, *Ownership of the Image: Elements for a Marxist Theory of Law* (1979); J. Gaines, *Contested Culture: The Image, The Voice and the Law* (1992).

<sup>33</sup> See B. Sherman, 'From the Non-original to the Aboriginal', in Sherman and Strowel.

<sup>34</sup> *Walter v. Lane* [1900] *AC* 539. This was decided under the 1842 Act and there was no specific requirement of originality; it has been treated as being 'undeniably good law'. See *Express Newspapers v. News UK* [1990]

skill, and judgment in producing a verbatim transcript of the speech. (See Fig. 4.1.) More specifically, the court said that the reduction to writing of the words of a person who spoke quickly was an art requiring considerable training. It is possible that changes since 1900, notably the spread of simple tape-recorder technology, may mean that the transcription of a speech will no longer be treated as labour that gives rise to an original work.<sup>35</sup>

(iv) The next point to note is that the originality threshold has been set at a very low level. It may come as a surprise for some to learn that the courts have accepted as original such things as railway timetables and exam papers (which were drawn from the stock of knowledge common to mathematicians, produced quickly, and included questions similar to ones which had previously been asked by other examiners).<sup>36</sup> One of the consequences of the originality standard being set at a low level is that there have been relatively few instances where subject matter has been excluded on the basis that it was non-original. Most of the problems that have arisen have been in relation to tables and compilations, derivative works (that is, works which incorporate material copied from another source), and industrial designs.

### 3.1.2 Determining whether a work is original

As we explained above, when copyright says that a work must be original, this means that the author must have exercised the requisite *labour, skill, or effort* in producing the work. However, not all 'labour, skill, and judgment' will give rise to an original work. The problem facing us is to try and explain coherently when a work is original, and when it is not. In part these difficulties arise because the effort, skill, or judgment which is needed to confer originality on a work cannot be defined in precise terms. This is because originality 'must depend largely on the facts of the case and must in each case be very much a question of degree'.<sup>37</sup> As a result, it is very difficult to explain originality in terms of any overarching principles or rules. While a number of equally plausible accounts could be given of the British concept of originality,<sup>38</sup> perhaps the best approach is to look at originality in terms of the types of work in question. To this end we will look at the way the courts approach originality in relation to the following types of work:

- (i) new works,
- (ii) derivative works,
- (iii) tables and compilations, and
- (iv) computer-generated works.

FSR 359 (Browne-Wilkinson V-C); *Sawkins v. Hyperion* [2005] 1 WLR 3280, 3288 per Mummery LJ (para. 33); and Jacob LJ (para. 79).

<sup>35</sup> For a comparable argument that the labour, skill, and effort that was required to create a photographic reproduction of an art work was much greater in the 1860s than today, so that such a work should not necessarily be regarded as original today, see R. Deazley, 'Photographing Paintings in the Public Domain: A Response to Garnett' [2001] *EIPR* 179, 181.

<sup>36</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 209. Although widely referred to, Peterson J's comment that the work 'should originate from the author' offers limited assistance when distinguishing between original and non-original works in the difficult cases of derivative works, compilations, and computer-generated works.

<sup>37</sup> *Macmillan v. Cooper* (1923) 93 *LJPC* 113 (Lord Atkinson).

<sup>38</sup> It may well be that there is no single British concept of originality, but that different tests apply to different categories of work, for example, that the originality requirement operates differently in relation to artistic work from the way it operates in relation to literary work. Indeed, in *Interlego v. Tyco Industries* [1989] *AC* 217 Lord Oliver said it would be 'palpably erroneous' to apply the test of originality developed in relation to literary compilations in *Ladbroke v. William Hill* [1964] 1 *All ER* 465, namely that originality was dependent upon the degree of skill, labour, and judgment involved in preparing the compilation, to art works.

### 3.1.3 New works

The first situation we wish to consider is where a ‘new’ work is created.<sup>39</sup> In particular we wish to consider the situation, for example, where inspired by a particular event a person sits down at their desk and writes a poem or a song. As in these circumstances the work clearly emanates from the author, there are unlikely to be any problems in showing originality. In the words of Peterson J in *University of London Press*, such works are original because they originate with the author and are not copied.<sup>40</sup>

The one exception to this principle is where the labour is trivial or insignificant and the result is trivial or insignificant. A possible example is the case of *Merchandising Corporation v. Harpbond*,<sup>41</sup> where face-paint was held unprotected by copyright. While (as we saw in the previous chapter) protection was refused on the rather unsatisfactory basis that the work was not a painting, the decision was justifiable on the basis that the work was a trivial outcome of an insignificant amount of labour.<sup>42</sup> Another example of a work held insufficiently original on the basis of insignificant labour involved the routine application of a formula to produce forecast dividends on greyhound races.<sup>43</sup> Yet other examples can be found in the case law on titles and advertising slogans, also discussed in Chapter 3. Titles, such as ‘The Lawyer’s Diary’, involve too trivial an amount of labour to be regarded as original.<sup>44</sup>

However, in many cases the courts have been prepared to accept that even very simple works can be original. This was in effect the position in *British Northrop* where it was argued that drawings of things such as rivets, screws, studs, a bolt, and a length of wire lacked originality because they were too simple. In rejecting the argument, Megarry J said that he would be ‘slow to exclude drawings from copyright on the mere score of simplicity’ or on the basis that they were of elementary or commonplace objects.<sup>45</sup> This reluctance to exclude simple abstract works probably reflects a desire to ensure that works of abstract artists, such as Mark Rothko, which may be extremely simple, are regarded as original. Equally, even short poems such as haiku would be regarded as original.<sup>46</sup>

### 3.1.4 Derivative or copied works

The next type of creation that we wish to consider concerns the so-called derivative works, that is, works which were derived from or based upon existing works (whether or not they are protected by copyright). Obvious examples of such works are translations, abridgements, and new editions. Copyright law has long recognized that it is important that authors should be

<sup>39</sup> The distinction would doubtless be unsatisfactory to someone who views all works as derivatives, as ‘inter-texts’ which draw on and refer to existing works. While we accept that works are never created *de novo*, we have used the terms ‘new works’ and ‘derivative works’ as convenient labels with which to describe distinct judicial approaches taken to works which do not draw directly on the expressive form of existing works (new works) and those which do (derivative works).

<sup>40</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 209.

<sup>41</sup> *Merchandising Corp. of America v. Harpbond* [1983] FSR 32.

<sup>42</sup> This may be what Lawton LJ meant when he said a ‘painting is not an idea’.

<sup>43</sup> *Greyhound Services v. Wilf Gilbert (Staffs)* [1994] FSR 723.

<sup>44</sup> *Rose v. Information Services* [1987] FSR 254; *Sinanide v. La Maison Kosmeo* (1924) LTR 365. Perhaps the *Exxon Corp. v. Exxon Insurance* decision is explicable as a case where, even though the labour was extensive, the result was too trivial to be regarded as original.

<sup>45</sup> *British Northrop v. Texteam Blackburn* [1974] RPC 57, 68. See also *Karo Step Trade Mark* [1977] RPC 255, 273. An example of a non-original artistic work would be a straight line drawn with a ruler.

<sup>46</sup> In some cases, where the resulting work is regarded as sufficiently creative, the work may be very small: *Kipling v. Genatosan* (1917–23) MacG CC 203 (extract of four lines from poem ‘If’).

rewarded not just for creating new works, but also for building upon existing works. However, for a derivative work to be treated as original, copyright law seems to have imposed three hurdles. First, the labour expended must be of the right kind. Second, the effort must bring about a material change in the work. Third, that change must be of the right kind.

Before examining these, it is worth reiterating that copyright may subsist in a derivative work even though it might infringe copyright in the existing work.<sup>47</sup> That is, a derivative work may be both original and infringing. In such a situation, any copyright that is acquired in a derivative work will be distinct from and subordinate to the copyright in any prior original work which is incorporated into it. Provided that the original work is still apparent in the new version, both the maker of the new version and any third-party copier will need the licence of the owner of copyright in the original.

*The labour must be of the right kind.* As Lord Oliver said in *Interlego* ‘only certain kinds of skill, labour and judgment confer originality’.<sup>48</sup> Consequently, a person may exercise a considerable amount of labour yet the resulting work will not be original if the labour is of the wrong kind. This would be the case, for example, where there is a direct or slavish copy of another work or where a work is photocopied.<sup>49</sup> While the tracing or copying of drawings, especially technical drawings, requires patience, skill, and labour, as Lord Oliver said in *Interlego*, ‘copying *per se*, however much skill or labour may be devoted to the process, cannot make a work original’.<sup>50</sup> More specifically, he said a ‘well-executed tracing is the result of much labour and skill but remains what it is, a tracing’.<sup>51</sup> It is clear that the reason why tracing and photocopying do not produce original works is not that there is no labour. Rather, it is that it is not the right type of labour.<sup>52</sup>

In some cases, the courts have suggested that for labour, skill, and judgment to be relevant it must not be mechanical or automatic, but must exhibit some ‘individuality’. In *Macmillan v. Cooper* the Privy Council held that a reduction of Plutarch’s *Life of Alexander* from 40,000 to 20,000 words so that it was suitable for use in schools was not original. An important factor in the finding that the selection was *not* original and thus not protected by copyright was that the process of selection was motivated by a desire to cut down the work so that it was merely shorter and more readily mastered and to exclude material which was of an indecent or indelicate character and unfit for schoolchildren.<sup>53</sup> To this end passages from the original were merely omitted at various points. Such a process did not require ‘great knowledge, sound judgment, literary skill or taste to be brought to bear upon the translation’.<sup>54</sup> There had been effort expended in making the reduction, no doubt, but the Privy Council contrasted it with a (hypothetical) original abridgement, by explaining that the (hypothetical) process of

<sup>47</sup> *Redwood Music v. Chappell* [1982] RPC 109, 120; *ZYX Music GmbH v. King* [1995] 3 All ER 1, 9–11.

<sup>48</sup> *Interlego AG v. Tyco Industries* [1989] AC 217, 268 (Lord Oliver).

<sup>49</sup> *British Northrop v. Texteam (Blackburn)* [1974] RPC 57, 68 (a drawing which is simply traced from another drawing is not an original artistic work); *Rexnold v. Ancon* [1983] FSR 662, 664 (improbable that copyright would be given to a mere tracing); *Davis (Holdings) v. Wright Health Group* [1988] RPC 403, 409 (casts made from models are not original) and 412 (tracing not original).

<sup>50</sup> *Interlego AG v. Tyco Industries* [1989] AC 217, 263.

<sup>51</sup> *Ibid*, 262 (‘it takes great skill, judgment and labour to produce a good copy by painting or to produce an enlarged photograph from a positive print, but no one would reasonably contend that the copy painting or enlargement was an “original” artistic work in which the copier is entitled to claim copyright’).

<sup>52</sup> *The Reject Shop v. Robert Manners* [1995] FSR 870, 876.

<sup>53</sup> However, the appellant had added marginal notes, an introduction, and a chronological table. The Privy Council held that these were well chosen, neatly condensed, sufficiently copious and accurate, and must have required literary skill, taste, labour, and judgment.

<sup>54</sup> *Macmillan v. Cooper* (1924) 40 TLR 186.

abridgement would have required some form of ‘learning, judgment, literary taste and skill’.<sup>55</sup> That is, it lacked what the courts saw as the necessary skills to qualify for protection. Quoting from an early edition of Copinger’s *Treatise on Copyright*, the Privy Council said that ‘the act of abridgement is an exertion of the individuality employed in moulding and transfusing a large work into a small compass... Independent labour must be apparent, and the reduction of the size and work by copying some of its parts and omitting others’ does not do this.<sup>56</sup> In contrast, the Privy Council said that the reduction of the *Life of Alexander* from 40,000 to 20,000 words was non-original because it lacked the ‘exertion of the individuality employed in moulding and transforming a large work into a small compass’.

*Macmillan v. Cooper* seems to set a surprisingly demanding standard for the types of labour, skill, and judgment that are relevant. It can be contrasted with *Walter v. Lane* (though the Privy Council saw no inconsistency with that decision).<sup>57</sup> In that case it was held that a newspaper report of an oral speech given by Lord Rosebery, transcribed by a reporter from the talk, was protected by copyright (see Fig. 4.1).

This was because the reporter exercised considerable labour, skill, and judgment in producing a verbatim transcript of the speech. More specifically, the House of Lords said that the reduction to writing of the words of a person who spoke quickly was an art requiring considerable training.<sup>58</sup> Lord James of Hereford explained that ‘from a general point of view a reporter’s art represents more than mere transcribing or writing from dictation. To follow so as to take down the words of an ordinary speaker, and certainly of a rapid speaker, is an art requiring considerable training, and does not come within the knowledge of ordinary persons’.

One question that remains unanswered in this context is whether the digitization of a work (with no other changes) is sufficient to confer originality on the resulting work. For example, would the digital scanning of a novel or the creation of a digital database from non-digital sources give rise to an original work? Some commentators have suggested that the translation of a work into a digital format (in the case of a literary work, from a ‘typographical character to numerical token’)<sup>59</sup> may give rise to an original work. While there can be no doubt that the process of digitization does generate a product which is different, in the light of *Macmillan* it is doubtful whether the labour is of the sort which can render the outcome original.

*The effort must bring about a material change in the work.* Second, labour, skill, and judgment must have been applied to existing materials so as to bring about a *material change* to the raw material. More specifically, the labour, skill, and capital must have imparted to the product ‘some quality or character which the raw material did not possess, and which differentiates the product from the raw material’.<sup>60</sup> In so doing the law ensures that any copyright that is acquired in a derivative work is distinct from the original work that is incorporated into it.

<sup>55</sup> Ibid, 187.

<sup>56</sup> Ibid.

<sup>57</sup> *Walter v. Lane* [1900] AC 539. This was decided under the 1842 Act and there was no specific requirement of originality; it has been treated as being ‘undeniably good law’. See *Express Newspapers v. News UK* [1990] FSR 359 (Browne-Wilkinson V-C); *Sawkins v. Hyperion* [2005] 1 WLR 3280, 3288 per Mummery LJ (para. 33); and Jacob LJ (para. 79).

<sup>58</sup> The court also noted that considerable skill had to be invested in learning shorthand and that judgment was exercised in deciding how to convert spoken words and performance to written sentences, with suitable grammar. On the skills of the journalist see *Walter v. Lane* [1900] AC 539, 551–2 (Lord Davey); 554 (Lord James of Hereford).

<sup>59</sup> Laddie *et al.*, para. 20.67 suggest that it was akin to the copyright protection given to the speechwriter in *Walter v. Lane*.

<sup>60</sup> *Macmillan v. Cooper* (1924) 40 TLR 186, 188; note 21 above (a passage described in *Interlego* as ‘perhaps the most useful exegesis’ on the issue of originality).

THE TIMES, FRIDAY, JUNE 26, 1896.

LORD ROSEBERY ON FREE LIBRARIES.

Yesterday afternoon the Earl of Rosebery opened a new free public library, named after its munificent donor, the Passmore Edwards Library, and erected as a memorial of Leigh Hunt and Charles Keene, at Uxbridge-road, near Shepherd's-bush-green, W. The special feature of this building is the complete supervision throughout all the departments from the librarian's counter, and to insure this advantage the several public rooms are divided by glazed screens. Ample light is provided everywhere, and the interior is bright and cheerful. The exterior has been designed in accordance with the English Renaissance style with bold cornices and handsome mullioned windows. The central gable is sculptured with a life-size group representing the "Shepherd in the Bush," suggested by the name of the district in which the library has been built. The librarian's house is on the first floor of the front buildings, and above are large storage rooms in connexion with the library. The architect was Mr. Maurice B. Adams, F.R.I.B.A., of Bedford-park, Chiswick. The cost of the building, exclusive of the site, has been rather more than £6,000. Lord Rosebery and Mr. Passmore Edwards were received on their arrival by the Library Commissioners, and conducted to the central room, where the chair was taken by Prebendary Snowden, chairman of the commissioners.

The CHAIRMAN, in opening the proceedings, explained that the site, which was peculiarly well adapted for the purpose of a public library, and which was very valuable, having an excellent building frontage, was a benefaction from the copyholders and the Ecclesiastical Commissioners, and when, after the refusal of the ratepayers to increase the library rate, those in favour of the library were almost in despair as to raising the necessary funds, Mr. Passmore Edwards came forward to their relief. (Cheers.) With noble, but not unaccustomed, generosity, he had erected that beautiful building, which was complete in all its arrangements as far as experience and skill could make it so. The chairman also made a reference to Lord Rosebery's literary achievements, and expressed the hope that he would present the library with a volume of his life of Pitt, inscribed with the author's autograph.

LORD ROSEBERY, who was received with loud cheers on rising to speak, said:—Mr. Chairman, Ladies, and Gentlemen,—I have much pleasure in declaring this library open. (Cheers.) I do that at the beginning and not at the end of what I have to say because I have observed almost invariably that public speakers whenever they have a formal duty to discharge and attempt to discharge it at the end of their speech forget to do so. (Laughter.) Now, Mr. Chairman, you have been very kind in the remarks that you have made. I shall cherish your reference to my little book which I had great pleasure in seeing on your shelves, but I will not accept your invitation to present the book to your library. In the first place, you already have a copy of it, which I do not think was at all worn out. (Laughter.) And in the second place, as it is sold I believe—although I have never bought a copy myself—at the ridiculously inadequate sum of 1s. 10d. (laughter), it is not at all a suitable offering for me to make to this library. I trust to find a more valuable book that I may leave as a memento of my visit here to-day. (Cheers.)

MR. PASSMORE EDWARDS.

But I have another duty to perform besides declaring this library open, it is that of proposing a vote of thanks to the generous donor of the building. (Cheers.) You have expressed a wish that I may have a long time before me to devote to literary pursuits. (Hear, hear.) I thought my neighbour on my right expressed a particularly fervent and enthusiastic assent to that sentiment. (Laughter.) I for my part have nothing to say in contravention of it. "Sweet are the uses of adversity," or what is called adversity, and it is difficult for those who are intrusted with the government of the country to come and open public libraries or perform functions of that kind; and therefore you have reason to thank her Majesty's Opposition for their existence when it comes to any question of a function of this kind. But I am bound to say that even when I was in office, and when I was subject to the responsibilities and censures of office, I found time in the very first beginning of that period to go and open another library, founded of course, and given of course, by Mr. Passmore Edwards. (Cheers.) Now there is something about the permanence of pursuits in individuals which gives one a sense of the nothingness of time. We must all have known in our younger days some venerable ancestress or female relative who was occupied in some interminable piece of worsted work. (Laughter.) We went to school, we went on our travels, and we returned again and found that piece of worsted was still progressing (laughter), and I had something of the same feeling when I came here to-day and found Mr. Passmore Edwards still giving public libraries. (Cheers.) I do not know whether you remember the old story of the gambler who lost an enormous sum at Crockford's in the old days, and came out of that haunt with a generally vicious feeling against himself and the whole human race which he did not know how to vent. Looking opposite at White's Club-house he saw a gentleman kneeling against the stairs and tying his shoe lace. The gambler saw in him an object on which to vent his feeling, and, rushing up to the gentleman, he kicked him, and cried, "Bless you"—he did not say "Bless you," but in the presence of the chairman I will not quote the exact word he did use (laughter)—but he said, "Bless you, you are always tying up your shoe lace." (Laughter.) Well, I feel inclined to approach Mr. Passmore Edwards, not to kick him, but to say, "Bless you, you are always doing good." (Cheers.) Another word about Mr. Passmore Edwards. I am given to understand by those who are accustomed to commendation that it is not pleasant to be praised, in public at any rate, and therefore I think I shall best suit his feelings if I say nothing more on a subject which I could not adorn by eloquence, and which certainly does not need eloquence to recommend it.

OUTDOOR SPORTS IN ENGLAND.

But I think those who watch the growth of the free libraries system in this country, in spite of the almost persistent opposition of the ratepayers, have some cause to inquire, What object is it that these free libraries answer in our modern commonwealth? I confess I have formed a very clear conviction on that head. I think no one can watch the progress of our nation without seeing the enormous predominance that is given everywhere to-day to outdoor sports. I welcome that tendency. I think it is a healthy and rational tendency, but of course it may be carried too far. What we do see in the tendency to outdoor sport at this time is that it weans the race from occupations that might be objectionable, and it is rearing a noble and muscular set of human beings; and it subserves other objects which are not so immediately apparent. For instance, I take it the connexion between Australia and the mother country has been rendered closer than it would have been otherwise by the cricket contests which take place between the two countries; and I am given to understand, though I

Fig. 4.1 One of the newspaper reports considered protected by copyright in *Walter v. Lane*  
Source: *The Times*, Friday 26 June 1896, page 12.

In some situations, originality has been denied where the labours of a creator fail to bring about a material change in the resulting product. That is, while the efforts of the author might have led to a change in the resulting product, the change (and thus the labour) is not regarded as sufficient to confer originality on the resulting work. Conversely, where the change is material, the work will be original. This approach has been used to confer originality on new editions,<sup>61</sup> compilations, anthologies, translations,<sup>62</sup> adaptations of existing materials,<sup>63</sup> as well as arrangements of music,<sup>64</sup> and engravings. In all these cases, the labour of the author not only produced a change, it also produced what was taken to be a 'material change' in the raw material. The difficult question is deciding when such a transformation has occurred.

In *Interlego v. Tyco*, the Privy Council was called upon to decide whether there was copyright in drawings for the children's building blocks known as LEGOBRICKS.<sup>65</sup> After Lego's patents and designs in the bricks expired in 1975, Lego sought to retain its monopoly over the bricks by claiming that copyright existed in drawings produced in 1973. As these drawings were based upon earlier drawings, the question arose as to whether the alterations made in 1973 were sufficient to produce an original artistic work. The major differences between the drawings concerned the sharpening of the outer edges of the tubes in the brick, changes in tolerances, and increase in the radii on the outer edges of the knobs on the brick from 0.2 to 0.3 mm.

While the Privy Council recognized that these changes were technically significant and the result of considerable labour and expertise, they denied that there was copyright in the later drawings.<sup>66</sup> The mere fact that the drawing took skill and labour to produce did not necessarily mean that it was therefore an original drawing. As Lord Oliver explained, '[t]here must in addition be some element of material alteration or embellishment which suffices to make the totality of the work an original work'.<sup>67</sup>

This decision can be usefully contrasted with *Macmillan Publishers v. Thomas Reed Publications*.<sup>68</sup> The case turned on whether the preparation of a number of small, local charts

<sup>61</sup> *Black v. Murray* (1870) 9 *Macph* 341, 355. Lord Kinloch held that to create copyright in a new edition, alterations must be extensive and substantial; additional notes must be not superficial or colourable, but impart to the book a true and real value over and above that belonging to the text. Although as has been explained in the discussion of *Walter v. Lane*, there was no requirement of originality under the Literary Copyright Act 1842, decisions thereunder have often been cited in the context of works created after 1911.

<sup>62</sup> *Byrne v. Statist Co.* [1914] 1 *KB* 622; *Cummins v. Bond* [1927] 1 *Ch* 167.

<sup>63</sup> *Warwick Films v. Eisinger* [1969] 1 *Ch* 508 (book comprising large extracts from court transcripts was original because of editorial work, addition, and omission of material, etc.).

<sup>64</sup> *ZYX Music GmbH v. King* [1995] 3 *All ER* 1 (appeal dismissed: on other grounds [1997] *All ER* 129) (transformation) of ballad into disco or dance track was original arrangement). See R. Arnold, *Performers' Rights*, 240–53. But note *Hadley & Others v. Kemp* [1999] *EMLR* 589 (contributions of performers not relevant when assessing originality).

<sup>65</sup> *Interlego v. Tyco Industries* [1989] *AC* 217.

<sup>66</sup> Lord Oliver was happy to find that these drawings were not original. Otherwise, Lego would have been able to maintain a perpetual monopoly by continually revising the picture. This type of behaviour, he noted, had been disapproved of by the House of Lords in *Coca-Cola Co. Trade Mark Application* [1986] 1 *WLR* 695. It seems that Lord Oliver overlooked the fact that the pre-1973 works were not protected by copyright and therefore that a competitor was free to copy pre-1973 drawings (or models based on upon pre-1973 drawings).

<sup>67</sup> *Interlego v. Tyco Industries* [1989] *AC* 217. This leads to the rather bizarre conclusion that good reproductions are denied copyright but poor ones have sufficient visually significant variation. This was explicitly stated by Lord Oliver, *ibid.* For further discussion, see Laddie *et al.*, para. 4.42.

<sup>68</sup> [1993] *FSR* 455. Mummery J explained, 'on originality I find that this is a case where sufficient work and skill have been done; both in the creation of the simplified form of a work, showing the outline of the coast and geographical features, and in the compilation of selected information, such as depth soundings, geographical features, buoys and so on'.

that contained an outline of the coastline as well as relevant information (such as depth soundings, buoys, and geographical features) was original. More specifically, the question arose as to whether the charts were original, given that they were drawn from and based upon Admiralty charts. The High Court held that the labour used in producing the simplified charts involved the appropriate level of work and skill and transformed the charts sufficiently for the resulting work to be original.

It should also be noted that the requirement that the labour needs to produce a materially different work for it to be original is unnecessary where the same author produces a series of drawings or drafts.<sup>69</sup> As Nourse LJ explained:

What the Copyright Act requires is that the work should be the original work of its author. If, in the course of producing a finished drawing, the author produces one or more preliminary versions, the finished product does not cease to be his original work simply because he adopts it without much variation, or even if he simply copies it from an earlier version. Each drawing, having been made by him, each is his original work.<sup>70</sup>

In effect, the Court of Appeal indicated that no material change is required in situations where there are a series of drafts *by the same author*. It should be noted, however, that this exception to the rule that a derivative work must involve a material change if it is to be original has no application where there are different authors at each stage.<sup>71</sup>

*The change must be of the right kind.* Another situation where an author may exercise a considerable amount of labour and the work not be original is where the type of labour used does not correspond to the type of work for which protection is sought. This can be seen in *Interlego*.<sup>72</sup> As noted, the major differences between the 1973 drawings and the earlier ones from which they were derived concerned the sharpening of the outer edges of the tubes in the brick, changes in tolerances, and increase in the radii on the outer edges of the knobs on the brick. Of the changes made, only the first was shown pictorially, the others by letters and figures. While the Privy Council recognized that these changes were technically significant they were not sufficient to render the work original because in the case of artistic works the change must be *visually significant*. That is, to confer copyright the skill and labour must produce a change which is relevant to the category of work in question. On the facts it was held that as the changes made to the drawings were primarily to the written specifications, this was not an alteration of visual significance.<sup>73</sup> As such, the drawings were not original. If this principle is applied in other contexts, it may have important ramifications for forms of appropriation art; that is where artists focus on the meaning rather than the visual appearance of the work.<sup>74</sup>

<sup>69</sup> Moreover, it has been held that, where a drawing was made from a three-dimensional functional design, such a drawing would be original if there was a continuous design process between the creation of the three-dimensional functional object and the subsequent creation of the two-dimensional drawing copying the three-dimensional object. *Murray Engineering v. Nicholas Cesare* (1997, unreported).

<sup>70</sup> *LA Gear v. Hi-Tech Sports* [1992] FSR 121, 136 (Nourse LJ).

<sup>71</sup> *Biotrading and Financing Oy v. Biohit* [1996] FSR 393, 395 (not sufficient merely to be owner of copyright in earlier drawings if later ones which are relied upon are not significantly different). Cf. *Rexnold v. Ancon* [1983] FSR 662 (summary judgment refused in similar circumstances).

<sup>72</sup> *Interlego v. Tyco Industries* [1989] AC 217.

<sup>73</sup> *Ibid*, 268 (Lord Oliver). Cf. *Interlego AG v. Croner Trading* 25 IPR 65 (Fed. Ct. Australia). Visually significant variations have been held to include changes of shape but not mere changes of scale: *Drayton Controls v. Honeywell Control Systems* [1992] FSR 245, 260.

<sup>74</sup> See B. Sherman, 'Appropriating the Postmodern: Copyright and the Challenge of the New' (1995) 4 *Social & Legal Studies* 31 and D. McClean and K. Schubert (eds.), *Dear Images: Art, Copyright and Culture*, (2002) 405;

The question whether the labour, skill and judgment was ‘of the right kind’ was considered by the Court of Appeal in *Sawkins v Hyperion*.<sup>75</sup> As will be recalled from chapter 3, the key question in this case was whether performing editions of musical works first composed in the seventeenth and eighteenth centuries were original musical works. It was argued by Hyperion that the reconstructed and edited scores were not original musical works, because Lionel Sawkins had added no new music over and above that in the original. While he had laboured to reconstruct the manuscripts and make them more user-friendly to today’s performers, that did not involve labour, skill, or judgment of a musical sort. Mummery LJ agreed that some aspects of Sawkins’ efforts ‘such as time and labour spent on discovery or retrieval of the original scores and in their layout on the page’ were irrelevant. However, labour, skill, and judgment in adding information that could potentially affect the totality of sounds produced by musicians were pertinent. On the facts, the work had sufficient aural and musical significance to attract copyright protection.

### 3.1.5 Tables and compilations (other than databases)

In this section, we consider the way in which the originality of tables and compilations has been approached. As we explained earlier, as a result of the Database Directive a new European standard of originality now applies for databases. The consequence of this is that the following analysis is now only applicable to a very narrow category of works, namely, tables and compilations (other than databases). However, the following analysis is helpful in two other respects. First, an understanding of the way the originality of tables and compilations has been dealt with in the past in the UK is helpful in understanding the nature of the changes effected by the Directive.<sup>76</sup> Second, and more importantly, the case law on originality of compilations indicates the confused approaches taken by the British courts.

Over time the courts have used two different and largely inconsistent approaches when determining whether tables and compilations are original. While the approaches are similar insofar as they focus upon the labour exercised in the creation of the work, they differ in terms of the *type* of labour that is needed for the work to be original. In some cases, originality arises through the application of the appropriate skill, labour, and effort in the creation of the work (the *quality* of the labour used in creation of the work). More controversially, originality can also arise through the application of a sufficient amount of routine labour (the *quantity* of the labour used in creation of the work). We will deal with each in turn.

*Quality of the labour.* The originality of tables and compilations may arise through the application of the appropriate skill, labour, and effort in the creation of the work (the *quality* of the labour used in creation of the work). It seems that the requisite labour may be employed either in the way the information to be included is *selected*, or in the way that it is *arranged*. For example, if we take the case of an edited collection, originality might arise as a result of the way the authors to be included in the volume are selected, or through the way the chapters are organized.

Given that tables and compilations are similar to derivative works (after all, a list is made up from existing materials), the comments made above about the originality of derivative works

P. Anderson, ‘On the Legal Limits of Art’ (1994) *Arts & Entertainment Law Review* 70.

<sup>75</sup> *Sawkins v. Hyperion* [2005] 1 WLR 3280.

<sup>76</sup> In addition, tables and compilations which are databases and which existed prior to 27 Mar. 1996 retain copyright if they passed the British test of originality then operative, even though they would now fail the European test: Database Regs, SI 1997/3032, reg. 29.

apply here. Looking at the question negatively, it seems that a table or compilation would not be original where the selection and arrangement is directly or slavishly copied from another work. Another situation where a compilation would lack originality is where the resulting work is a consequence of a mechanical, automatic, or formulaic process. The position would be the same where the material to be included in a compilation was selected automatically. In *Cramp v. Smythson*, Viscount Simon suggested that the making of a chronological list which is ‘automatic and only requires painstaking accuracy’ would not, of itself, be original.<sup>77</sup> The reason for this is that the making of a chronological list requires no element of ‘taste or selection, judgment or ingenuity’.<sup>78</sup> On this basis it seems that where a list is organized alphabetically, it would not give rise to an original work (although originality might arise through the quantity of labour used in creating the compilation).

*Quantity of the labour.* In certain situations the courts have accepted that the mere exercise of a substantial amount of routine labour may give rise to an original work.<sup>79</sup> For example, where a compiler spends a considerable amount of time and effort creating a chronological list of television programmes or an alphabetically ordered list of lawyers,<sup>80</sup> the resulting work will be original. That is, even though in creating the table or compilation the author might not have exercised the appropriate quality of labour, nonetheless the work may still be original if the process of compilation involves a sufficient amount of (mundane) labour.

Where there is insufficient labour (and originality does not arise through the exercise of requisite qualitative skill, labour, and effort), the resulting work will not be original. For example, where the process of compilation involves little effort or judgment and the effect is commonplace, the work will not be treated as original. Thus the selection of seven tables at the front of a diary, consisting of things such as days and dates of the year, tables of weights and measures, and postal information,<sup>81</sup> was held by the House of Lords to be non-original. Similarly, in another case involving a local timetable showing a selection of trains to and from a particular town that was prepared from official railway timetables, the compilation was held to be non-original.<sup>82</sup> In these circumstances the difficult question is knowing how much labour needs to be exercised for the resulting work to be original.<sup>83</sup>

The willingness to accept that a substantial amount of routine labour may give rise to an original work is usually explained in terms of the fact that defendants ought not to be able to

<sup>77</sup> In relation to indisputable facts (such as when the sun rises or sets), it was said that there is ‘no room for taste or judgment. There remains the element of choice as to what information should be given’: all that a table can do is state the facts accurately: *Cramp v. Smythson* [1944] AC 329, 336 (Viscount Simon).

<sup>78</sup> *Football League v. Littlewoods* [1959] Ch 637, 654. Though in this case, Upjohn J *obiter* at 656 would have accepted that the expenditure of labour requiring painstaking hard work and accuracy would suffice.

<sup>79</sup> *Ladbroke v. William Hill* [1964] 1 All ER 465, 478 (Lord Devlin).

<sup>80</sup> *BBC v. Wireless League Gazette Publishing Co.* [1926] Ch 433; *Independent Television Publications v. Time Out* [1984] FSR 64; *Waterlow Directories v. Reed Information Services* [1992] FSR 409; *Dun & Bradstreet v. Typesetting Facilities* [1992] FSR 320. *Blacklock v. Pearson* [1915] 2 Ch 376 (list of railway stations in UK).

<sup>81</sup> *Cramp v. Smythson* [1944] AC 329 (Viscount Simon LC) (‘commonplace information which is ordinarily useful and is...commonly found prefixed to diaries’). See also *Waylite Diary CC v. First National Bank* [1993] EIPRD-242 (no copyright in diary pages which lacked quality of individuality sufficient to distinguish the work from the merely commonplace).

<sup>82</sup> *Leslie v. Young* [1894] AC 335.

<sup>83</sup> See *Cramp v. Smythson* [1944] AC 329 *Greyhound Racing Association v. Shallis* [1923-8] MacG CC 370; *Total Information Processing Systems v. Daman* [1992] FSR 171 (linking of three computer programs was not a compilation). Cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 290.

avail themselves of the labour and expense which a claimant invested in the production of a work.<sup>84</sup> Instead of asking whether the work is original and thus protectable, where the courts have focused on the quantity of the labour involved in the creation of the work they have tended to start from the premise that any labour or effort that a claimant exerted in the production of work ought to be protected (so long as it reaches the requisite quantitative threshold). This is reflected in the maxim: ‘what is worth copying is prima facie worth protecting’.<sup>85</sup> One issue that has yet to be answered in this context, to which we will return shortly, relates to the impact upon these decisions of the new standard of originality which is now to be applied to databases (namely, an author’s own intellectual creation).

The position in the United Kingdom, where the exercise of non-creative labour can give rise to an original work, can be contrasted with the position in other jurisdictions such as Germany (where case law suggests that some minimal degree of creativity is required) and France (where originality is said to require ‘the imprint of the author’s personality’ on the work, or an intellectual contribution). The UK position is also at odds with the position in the USA where, as the Supreme Court pointed out in the *Feist* decision, a work must have at least a minimal degree of creativity to be protected.<sup>86</sup> In relation to the question of the originality of a white-page telephone directory, the Supreme Court held that since facts were not created, the names and numbers were not themselves ‘copyrightable’. Moreover, while the collection might have been original had the selection or arrangement involved some minimal creativity, as the directory in question had been selected by area and arranged alphabetically, it did not meet that minimum threshold.<sup>87</sup>

It should be noted that, in the UK, routine labour has only been used to confer originality on the resulting work in a limited number of situations. In particular, it has only been applied to a limited category of works: largely to tables and compilations of things such as maps, guidebooks, street directories, dictionaries, authors’ works, and selections of poems.<sup>88</sup> More specifically, the cases which have accepted that originality can arise through the exercise of a sufficient degree of labour have tended to focus on the amount of labour exercised in the *selection* of materials to be included in tables and compilations: that is, they take place in the pre-expressive rather than the expressive stage.<sup>89</sup>

<sup>84</sup> *Weatherby and Sons v. International Horse Agency and Exchange* (1910) 2 Ch 297, 303–5; *Waterlow Directories v. Reed Information Systems* [1992] FSR 409.

<sup>85</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601 (Peterson J). This can be justified on the basis that, if a person copies an existing work, that person has demonstrated that the work incorporated skill or labour since otherwise it would not be worth copying. If the aphorism were taken at face value, it would prevent defendants from asserting that they were entitled to copy the claimant’s work on the basis that it was not original.

<sup>86</sup> *Feist Publications v. Rural Telephone Service Co.*, 499 US 340 (1991).

<sup>87</sup> The *Feist* approach has been explicitly rejected in Australia, in *Desktop Marketing Systems Pty Ltd v. Telstra Corporation Ltd* (2002) 119 FCR 491, with the Federal Court of Australia affirming that laborious collection of data was sufficient to render the telephone directory an ‘original literary work’. *Feist* has also been rejected in Canada, with the Supreme Court decision in *CCH Canadian Ltd v. Law Society of Upper Canada* [2004] SCC 13 (4 Mar. 2004) (holding that copyright subsisted in headnotes of judicial decisions) stating that imagination or creative spark was not a necessary element of originality but that skill and judgment was (para. 16). At the same time, however, the Supreme Court of Canada stated that labour alone would not usually suffice to demonstrate originality and that the skill and judgment required to produce the work must not be so trivial that it could be characterized as a purely mechanical exercise. The Supreme Court was opposed to granting copyright purely on the basis of labour so as to safeguard the ‘public domain’ and prevent authors from being overcompensated for their work.

<sup>88</sup> *Macmillan v. Cooper* (1924) 40 TLR 186, 189.

<sup>89</sup> *Cramp v. Smythson* [1994] AC 329, 330.

### 3.1.6 Computer-generated works

Prior to the passage of the 1988 Act, there was some uncertainty as to the status of computer-generated works; that is, of works created by translation programs, search engines, and the like. In part, the 1988 Act resolved this uncertainty by providing that a literary, dramatic, musical, or artistic work attracts copyright protection even where it has been generated by computer in circumstances where there was no human author.<sup>90</sup> While these changes were useful insofar as they clarified that creations generated by a computer could be classified as works, they said nothing about how the originality of such works was to be determined. The particular problem that arises with computer-generated works is that it is difficult to see how the existing criterion of originality, which focuses on the relationship between the author and the work, can be applied to computer-generated works which, by definition, have no readily identifiable author.<sup>91</sup>

Given that computer-generated works are protected where there is no human author, the question arises: what test for originality should be applied to such works? One possible test would be to ask whether the work was produced as a result of the independent acts of the computer. That is, is the work original in the sense that it was 'not copied'? Alternatively, a court might say that originality exists where the computer has produced a work which is different from previous works (i.e. it is novel). It has also been suggested that the courts ought to ask the hypothetical question: if the same work had been generated by a human author would it have required the exercise of a substantial amount of skill, labour, and effort? If yes, then the computer-generated work would be original.<sup>92</sup>

## 3.2 EUROPEAN ORIGINALITY: DATABASES, PHOTOGRAPHS, AND COMPUTER PROGRAMS

As we noted in Chapter 2, a process of partial harmonization of copyright law is taking place within Europe. The Software and Database Directives require that a computer program or database can only be protected by copyright where it is the 'author's own intellectual creation'.<sup>93</sup> A similar test was also introduced for photographs in the Duration Directive.<sup>94</sup>

### 3.2.1 Databases

In implementing the Database Directive, the UK Database Regulations explicitly amended the originality requirement of the Copyright, Designs and Patents Act 1988 in relation to databases to include the new criterion of the 'author's own intellectual creation'.<sup>95</sup> In particular, section 3A(2) says that 'a literary work consisting of a database is original if, and only if, by

<sup>90</sup> CDPA s. 9(3), 178. Cf. *Payen Components South Africa v. Bovis Gaskets* (1996) 33 IPR 406, 411 (Supreme Ct. of South Africa) (distinguishing between 'computer-generated' and 'computer-assisted' works).

<sup>91</sup> As regards computer-generated computer programs and databases, the EC standard should apply so that presumably no copyright protection is available.

<sup>92</sup> Laddie *et al.*, para. 20.63.

<sup>93</sup> Software Dir., Art. 1(3) ('a computer program shall be protected if it is original in the sense that it is the author's own intellectual creation. No other criteria shall be applied to determine its eligibility for protection': Database Dir., Art. 3(1)).

<sup>94</sup> It is arguable that this European standard is also required of photographs by Art. 6 of the Duration Dir., which states that photographs which are original in the sense that they are the author's own intellectual creation shall be protected in accordance with Art. 1. No other criteria shall be applied to determine their eligibility for protection.

<sup>95</sup> CDPA s. 3A(2), introduced by Database Regs. 1997, r. 6.

reason of the selection or arrangement of the contents of the database the database constitutes the author's own intellectual creation'.

The position in the United Kingdom under the revised law is similar to the old law in that the originality of the database may arise either through 'the selection' or through the 'arrangement' of the contents of the database. It should be noted, however, that the new criterion does not appear to permit a court to take account of the *creation* of information included in the database. Thus an organization which spends time carefully thinking about what television programmes to broadcast and at what times they should be broadcast will not obtain copyright protection for listings produced using a database. This is because the 'intellectual creation' lies not in the selection or arrangement of the contents, so much as in their creation. (In other words, the European standard seems to require a court to distinguish more rigorously than British courts have hitherto been accustomed, between pre-expressive and expressive aspects in the creation of a database.)

The extent to which the new law will differ also depends on the way 'an author's own intellectual creation' is interpreted by the courts. At present it is difficult to predict how this phrase will be interpreted. It has been widely assumed that the new EU standard is higher than the previous British standard of originality.<sup>96</sup> There is some suggestion that a quantitative criterion as well as this qualitative criterion of originality should apply.<sup>97</sup> However, someone familiar with the common law might find it difficult to see how the phrase differs from the words used by Peterson J in *University of London Press v. University Tutorial Press*.<sup>98</sup> There is some indication of the intended standard in Recital 17 of the Duration Directive. This explains that a photograph will be original 'if it is the author's own intellectual creation reflecting his personality'. Whether this will be used in relation to databases has yet to be seen.

While the courts may use the new standard as a way of rethinking the law in relation to originality, for the most part the new standard probably will not lead to different results. In particular, where the originality derives from the quality of the labour used in either the selection or the arrangement of the database, it is still likely to be regarded as an author's intellectual creation. The one area where the new definition may lead to a change is where originality arises through the mere exercise of routine labour; that is, where the *quantity* as distinct from the quality of the labour is used in the creation of the database. Where all an author has done is to exert a considerable amount of effort in the creation of a database, it is difficult to see how this, on its own, could be seen as an 'intellectual creation', especially one which reflects the author's personality. As a result it is possible that the previous decisions which accepted that the exertion of a sufficient amount of routine labour could confer originality on tables and compilations may no longer be good law for databases (though it might be for tables and compilations other than a database).<sup>99</sup> In a recent case in which the issue whether customer lists were protected by copyright arose (albeit as something of a side issue), Deputy Judge Fenwick

<sup>96</sup> Davison, 15–16.

<sup>97</sup> *British Horseracing Board v. William Hill* [2001] ECDR 257, 269 (Laddie J) (an inference from Database Dir., Recital 19 which states that the compilation of several recordings of musical performances on a CD does not meet the conditions for copyright protection).

<sup>98</sup> [1916] 2 Ch 601, 608. C. Millard, in H. Jongen and A. Meijboom (eds.), *Copyright Software Protection in the EC* (1993), 239. Because the phrase can be interpreted as requiring no change for any particular EC country, Karnell calls it a 'chimera': G. Karnell, 'European Originality: A Copyright Chimera', in *Intellectual Property and Information Law* (Kabel *et al.* ed., 1998), 201–9. While this may be true in the short term, the ECJ will eventually decide on the standard that prevails.

<sup>99</sup> As explained below, pp. 104–6, if this criterion is not met, the material data may be protected by a *sui generis* right.

said he was ‘far from persuaded that the exercise of assembling a list of contact addresses’ was original work.<sup>100</sup>

### 3.2.2 Computer programs

In implementing the Computer Programs Directive the government did not consider it necessary to amend the 1988 Act in relation to originality.<sup>101</sup> As was the case before the Directives, such works are protected if they are ‘original’. The fact that no changes were made to the standard of originality for computer programs seems to suggest that it was thought that the position in the United Kingdom prior to the implementation of the Directives was already similar to the position required under the Directives. Nevertheless, the language of the 1988 Act should be construed as far as possible to be consistent with international obligations,<sup>102</sup> so the originality of computer programs in the United Kingdom should now be assessed in light of the EU standard of an author’s own intellectual creation.

Accordingly, it seems that elements in a computer program which are dictated by the function the program is to perform or by economic necessity are probably not original.<sup>103</sup> To require computer programs to be demonstrated to be an author’s own intellectual creation may also mean that commonplace routines used by programmers would not be protected.

### 3.2.3 Photographs

The position with respect to photographs is more complicated. This is for two reasons. First, the law on originality of photographs prior to the Directive was unclear. Second, even after the Directive, it is difficult to know whether the traditional British test of originality must be employed, or whether the Act implicitly adopts the European one.

Prior to the adoption of the Duration Directive, little judicial guidance had been given in the United Kingdom as regards the exact circumstances in which photographs would be regarded as original.<sup>104</sup> While there was little doubt that protection would be granted to more ‘artistic’ photographs (where there might be considerable effort in selection of the material to be photographed and the way the photograph is executed in terms of light, angle, exposure),<sup>105</sup> doubts existed over the originality of routine snapshots, as well as the originality of photographs of existing artistic works. Although, in *Graves’ Case*, Blackburn J held that a photograph of an engraving of a painting was an ‘original photograph’ and therefore protected under the Fine Art Copyright Act 1862, doubts had been raised as to the usefulness of this case as an authority

<sup>100</sup> *Penwell Publishing v. Ornstein* [2007] EWHC 1570 (QB) (para. 107).

<sup>101</sup> Cf. Germany, which explicitly repeats the wording of the Directive: G. Schricker, ‘Farewell to the “Level of Creativity” in German Copyright Law?’ (1995) 26 *IIC* 41.

<sup>102</sup> *Von Colson and Kamann*, Case 14/83 [1984] ECR 1891.

<sup>103</sup> See G. Dworkin, ‘Copyright Patents or *Sui Generis*: What Regime Best Suits Computer Programs?’ in H. Hansen (ed.), *International Intellectual Property Law and Policy* (1996) 165, 168; J. Drexler, *What Is Protected in a Computer Program?* (1994), 96–7 (emphasizing that the European standard was a direct reaction to the German *Inkassoprogram* decision, and that the standard adopted is consistent with the copyright approach of treating originality as requiring the independent creation of an author, though not mere ‘sweat of the brow’).

<sup>104</sup> In *Graves’ Case* (1869) LR 4 QB 715 Blackburn J held that a photograph of a painting was an ‘original photograph’ but noted the difficulty involved, explaining, ‘[t]he distinction between an original painting and its copy is well understood, but it is difficult to say what can be meant by an original photograph. All photographs are copies of some object.’ It should be noted that, in contrast with the position in relation to protection of books under the Literary Copyright Act 1842, photographs, drawings, and paintings were only protected under the Fine Art Copyright Act 1862 if they were ‘original’. *Graves’ Case* therefore remains relevant.

<sup>105</sup> K. Bowrey, ‘Copyright, Photography and Computer Works: The Fiction of an Original Expression’ (1995) 18 *University of New South Wales Law Journal* 278.

today, given that the technological apparatus for taking photographs is so much more developed (and thus the act of taking photograph so much easier).<sup>106</sup>

As regards snapshots, no judicial guidance had been provided as to whether pointing a camera and pressing the button was sufficient ‘labour, skill and effort’ to justify protection. It was possible to claim that in such circumstances the photograph ‘originated with the author’ and so should be treated as original (applying the *University of London Press* case). Moreover, it was argued, if someone wished to copy a photograph, is that not sufficient reason to treat it as original? On the other hand, it is clear that copyright does not protect the products of trivial effort. What could be more trivial than a snapshot?

As regards photographs of existing works, doubt was cast on the usefulness of the authority in *Graves’ Case* by *Interlego v. Tyco*. As we have seen, Lord Oliver was dismissive of the idea that labour in the process of copying could confer originality. If an artist gets no copyright by making a faithful copy of a painting, it was asked, how could a photographer be said to create an original work where they expended much less labour or skill in photographing a painting? On this basis, in the US case *The Bridgeman Art Library Ltd v. Corel Corp*, an American judge (Justice Kaplan) found that *under UK law* a photograph of a painting in the public domain is not entitled to copyright because it is not an original work.<sup>107</sup> The US decisions, which are not binding on UK courts, concluded that a photograph which attempted to duplicate another work was the equivalent of a photocopy, and thus is not protected by copyright because there is no visually significant embellishment to render the photograph an original work. However, it has been trenchantly argued that it is wrong to apply the dicta in *Interlego v. Tyco* in this way, and there would certainly be serious economic implications for museums and art galleries if this were ultimately found to be the law.<sup>108</sup> In *Antiquesportfolio.com v. Rodney Fitch & Co Ltd*,<sup>109</sup> it was held that copyright subsists in simple photographs of three-dimensional objects because the taking of such photographs involves judgment—the positioning of the object, the angle from which the picture is taken, the lighting, and the focus. It seems likely therefore that, despite *Interlego*, the British courts, applying the traditional originality test, would treat photographs of existing (albeit two-dimensional) paintings in the same way. The labour and skill of photography produces a material change in the work, by converting it from paint on canvas, to the flat representation of a photograph. In so doing, the photographer employs various skills, which can be described as more than skills in the mere process of copying.

The position after the Duration Directive is even more unclear. This is because the Directive itself allows for two courses of action, and it is unclear which of these courses the United Kingdom has taken. As mentioned, the Directive requires original photographs to be protected by copyright if they meet the European originality criterion (that is, they are their ‘author’s own intellectual creation’). However, the Directive allows member states to give protection to

<sup>106</sup> Deazley, ‘Photographing Paintings in the Public Domain’, 181.

<sup>107</sup> *The Bridgeman Art Library Ltd v. Corel Corp* (1998) 25 *F Supp* 2d 421, 36 *F Supp* 2d 191.

<sup>108</sup> See, e.g. K. Garnett, ‘Copyright in Photographs’ [2000] *EIPR* 229. Cf. Deazley, ‘Photographing Paintings in the Public Domain (arguing that *Graves’ Case* is inapplicable in the light of *Interlego*); S. Stokes, ‘*Graves’ Case* revisited in the USA—*The Bridgeman Art Library v. The Corel Corporation*’ [2000] *Ent LR* 104; S. Stokes, ‘Photographing Paintings in the Public Domain: A Response to Garnett’ [2001] *EIPR* 354 (in fact, a response to Deazley, arguing for copyright in such works to protect the labour and skill of the photographer); R. Deazley, ‘Copyright; Originality; Photographs; Works of Art’ [2001] *EIPR* 601 (responding to Stokes); S. Stokes, ‘*Graves’ Case* and Copyright in Photographs: *Bridgeman v. Corel*’, in McClean and Schubert, 109.

<sup>109</sup> [2001] *FSR* 345; [2001] *ECDR* 51.

non-original photographs (i.e. ones which are non-original in the European sense). Insofar as the traditional (UK) standard of originality is lower than the (European) standard in Article 6(1) (and Recital 17) of the Duration Directive, this allows the United Kingdom to maintain its lower standard: that is, to protect photographs which are 'non-original' (in the European sense). The difficulty with interpreting the British law lies in the fact that the legislature said nothing about this issue when implementing the Directive. That is, after 1 January 1996, UK law only protects 'original' photographs, but it is unclear whether by that it means 'original' in the British sense or 'original' in the European sense.

As things stand, the most obvious way to interpret the originality requirement in the 1988 Act so that it complies with the Duration Directive with respect to photographs is to treat the word 'original' as referring to the European standard. That is, as requiring the photograph to be an author's own intellectual creation reflecting his or her personality. However, it is equally plausible to argue that the lack of any transitional provisions applying to photographs taken prior to January 1996 suggests that the old standard, i.e. the traditional British standard, is intended to apply. That is, that when UK law protects 'original' photographs it protects photographs that are original in the European sense, and takes advantage of the derogation also to protect photographs which are non-original in the European sense, but original in the British sense.

The conclusion matters. Under the Directive, an original photograph is one which is the author's own intellectual creation, 'reflecting his personality'. It seems unlikely that photographs of existing painting or sculptures (at least when done purely to produce a faithful impression of these artefacts) could be said to reflect a photographer's personality. However, as already noted, such photographs may well be original in the traditional British sense.

## 4 ENTREPRENEURIAL WORKS: 'NOT COPIED'

Unlike the case with literary, dramatic, musical, and artistic works, there is no requirement that films, sound recordings, broadcasts, or published editions be original. Instead, the 1988 Act provides that copyright does not subsist in a sound recording, a film, or a published edition to the extent that it is itself copied from a previous work of the same kind.<sup>110</sup> In relation to broadcasts, the Act provides that copyright does not subsist to the extent that it infringes copyright in another broadcast.<sup>111</sup> One of the consequences of this is that entrepreneurial works will be protected irrespective of whether or not the author exerted mental skill, labour, or effort in the creation of the work. This means that if a video recorder or tape recorder is turned on and left on a table, the resulting film or sound recording would be protected.<sup>112</sup>

It has been suggested that the reason why a lower standard is applied to entrepreneurial works than to authorial works relates to the nature of the rights which are granted.<sup>113</sup> In relation to authorial works, the scope of the rights is more expansive than with entrepreneurial works. As a result, it is more important that the law monitors the types of authorial work that are protected. Conversely, in the case of entrepreneurial works where protection is thin, there

<sup>110</sup> CDPA ss. 5A(2), 5B(4), 8(2).      <sup>111</sup> CDPA ss. 6(6).

<sup>112</sup> *Kamina*, 96–9 (the only films that benefit from the absence of an originality requirement are security camera recordings and fortuitous films).

<sup>113</sup> *Laddie et al.*, para. 6.13.

is less need to monitor the subject matter protected. This does not mean, however, that it is not necessary to regulate the types of subject matter protected as entrepreneurial works. In particular, to have allowed such works to be protected with no threshold requirement would have created the undesirable position that rights in entrepreneurial works could have continued in perpetuity. The reason for this is that, in the absence of some limitation, every time someone copied an entrepreneurial work they would have obtained a fresh copyright in the 'new' work. This problem is avoided in the 1988 Act by ensuring that entrepreneurial works are only protected to the extent that they are not copied.

For the most part these provisions are relatively straightforward. However, three issues remain unsettled. The first is whether a compilation of parts of sound recordings (such as a 'megamix') would be protected as a separate sound recording.<sup>114</sup> On one view, if the megamix is compiled from existing recordings, then nothing is protectable. The reason for this is that each existing element is excluded on the basis that it is copied from another sound recording. However, if such an approach were to be followed it would lead to the bizarre result that the absence of a notion of originality in respect of entrepreneurial works means the threshold of protection is higher than with respect to authorial works (where collections of materials are protected as databases, tables, and compilations).<sup>115</sup> Perhaps the better view is that a compilation of sound recordings ought to be protected as a sound recording, on the basis that the compilation is more than the sum of its parts.

The second question is whether, in the process of digitally remastering an old work, the resulting work would be protected. Where no change is made to the contents of the work, it is difficult to see how the digital version of the work could be protected by copyright, since the recording is copied from existing recording of sounds. Would the position be any different if, in the process of remastering an old recording, it was cleaned of unnecessary noise and interfering sound? It seems that the way this question will be answered depends on the way the phrase 'to the extent that' is construed.<sup>116</sup>

Another question that has arisen is whether the recent introduction of a provision to the effect that the producer and principal director are the creators of a film means that films are now to be treated as authorial rather than entrepreneurial works (or indeed as some sort of hybrid). In turn this might suggest that to be protected a film must be original.<sup>117</sup> Weighing against this, however, is the fact that the provisions dealing with duration provide that a film may lack a director yet still attract copyright.<sup>118</sup> Given this (and the express language used in the Act), it seems that films will not be subject to the originality requirement.

<sup>114</sup> P. Theberge, 'Technology, Economy and Copyright Reform in Canada', in S. Frith (ed.), *Music and Copyright* (1993), 53.

<sup>115</sup> It might be the case that a 'megamix' would indirectly create an original musical work or that the process of digitization creates an original literary work.

<sup>116</sup> Laddie *et al.*, para. 6.13 (sound recording); para. 7.30 (films); Kamina, 98–9 (noting that the film producers' copyright required under the Rental and Duration Directives refers to the *first* fixation).

<sup>117</sup> The existing understandings of the originality requirement developed from judicial interpretation of the notion of 'authorship' in a period when there was no express requirement of originality. See, e.g. *Walter v. Lane* [1900] AC 539.

<sup>118</sup> The Act specifically makes provision for circumstances where there is no principal director, author of screenplay, dialogue, or music, by limiting the copyright term to 50 years from the year in which the film was made. See CDPA s. 13B(9).

## 5 IS THE WORK ‘QUALIFIED’?

In order for a work to be protected in the United Kingdom, it is necessary to show that the work is suitably ‘qualified’.<sup>119</sup> That is, it is necessary to show that the work is sufficiently connected to the UK to qualify for protection under UK law. UK law withholds protection from works that fail to establish a sufficient connection to the United Kingdom. In essence, the requirement that the work be qualified helps to balance the protection offered to British authors in other jurisdictions against the protection given to foreign authors in the United Kingdom. Once a work qualifies, British law applies the principle of national treatment. That is, UK copyright law generally treats foreign works as it does those of British authors.<sup>120</sup>

### 5.1 CONNECTING FACTORS

The benefits of British copyright law have been extended to cover a vast array of works created by foreign authors or published in foreign countries.<sup>121</sup> Nevertheless, the task of determining whether a particular work is protected under British copyright law is remarkably complex. While in some situations this task may be avoided through the use of statutory presumptions,<sup>122</sup> in most situations it needs to be undertaken. Given that British law effectively provides universal protection, some regard the complexity of the task as unnecessary.<sup>123</sup>

There are three connecting factors which enable works to qualify for copyright protection (sections 154–6). These are by reference to (i) authorship, (ii) country of first publication, and (iii) place of transmission. A work qualifies if it satisfies *any* of these three factors.<sup>124</sup> Once a work qualifies for copyright protection, British copyright law does not usually discriminate between it and a work created by or first published in the United Kingdom.<sup>125</sup>

#### 5.1.1 Qualification via authorship

Section 154(1) provides that a work qualifies for copyright protection if at the ‘material time’ the author of the work was a ‘qualifying person’.<sup>126</sup>

In order for a work to qualify for protection, it is necessary that the author be connected to a relevant country at the ‘material time’.<sup>127</sup> For unpublished literary, dramatic, musical, and

<sup>119</sup> For further details, see Copinger, paras 3–152 to 3–259, pp 135–181.

<sup>120</sup> But see pp. 162–3 for an exception to this concerning duration (applying shorter term in country of origin).

<sup>121</sup> In international parlance, these are referred to as the connecting factors, the *points d’attachement* or the *Anknüpfungspunkt*.

<sup>122</sup> See *Microsoft Corp. v. Electro-wide* [1997] FSR 580, 594.

<sup>123</sup> Laddie *et al.*, paras. 5.10, 5.146–50.

<sup>124</sup> Where created before 1 Jun. 1957, a published work could be protected only on the basis of first publication and not by virtue of personal status: CA 1956, Sched. 7, para. 1.

<sup>125</sup> In the light of the requirements of the Duration Directive, the application of *the rule of the shorter term* to works which have as their country of origin a non-EEA state. CDPA ss. 12–14. This may have a more startling impact than has sometimes been assumed: see pp. 162–3.

<sup>126</sup> This may make determination of authorship important. In *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 the court had to determine whether the author of a film made under restrictive conditions in China was a Hong Kong company that initiated and organized the making of the film, in which case the film qualified for protection under s. 154, or whether the author was the Chinese national carrying out the detailed making of the film, in which case the film did not qualify for copyright protection.

<sup>127</sup> CDPA s. 154(4).

artistic works, the ‘material time’ is the date when the work was made. Where the work has been published, it is the author’s status at the date of first publication that is decisive; or, if the author died before publication, their status at the date of death.<sup>128</sup> By contrast, the material time for other types of copyright works does not change; qualification depends on the personal status of the ‘author’ of a sound recording or film at the time of its making or, for the organization broadcasting a transmission, at the date of transmission; and, for typographical format, it is the publisher at publication that is relevant.<sup>129</sup> Since a work may take a considerable time to make, section 154(4)(a) provides that, in the case of an unpublished literary, dramatic, musical or artistic work, the ‘material time’ is ‘a substantial part of that period’. Rather oddly, no such provision exists for films.

To qualify under section 154, it is necessary to show that the author was a ‘qualifying person’. There are three ways in which this can be achieved. First, a person will be a ‘qualifying person’ if they can show that they are a British citizen, national, or subject; a person within certain categories of the British Nationality Act 1981; or a person domiciled or resident in, or a body incorporated in, part of the United Kingdom.<sup>130</sup> The concepts of ‘domicile’ and ‘residence’ are not defined in the Act. It seems, however, that ‘domicile’ refers to the country where a person makes their permanent home. In contrast, the concept of ‘residence’ is more flexible, simply demanding some degree of continuous association with the country in question. A person can be a resident of more than one country, though a person will not be a resident if he or she is a casual visitor.<sup>131</sup>

Second, a person will qualify if they can show that they are an individual domiciled or resident in, or a body incorporated under the law of, a country to which the law has been ‘extended’.<sup>132</sup> In this context it should be noted that ‘extension’ refers to the fact that Her Majesty by Order in Council is given the power to extend the 1988 Act to other territories, including the Isle of Man, the Channel Islands, and any colony.<sup>133</sup> Along with the power of ‘application’ (discussed below), ‘extension’ is a technique that is used to protect works that originate from outside the United Kingdom. While few such orders have been made under the 1988 Act (in relation to Guernsey and Bermuda),<sup>134</sup> orders made under the equivalent section of the 1956 Copyright Act continue to operate,<sup>135</sup> for example in the Falkland Islands.<sup>136</sup> The effect of such orders is not simply to provide protection in the UK for categories of work with a relevant connection to those countries: protection is also afforded in those countries to works protected in the United Kingdom.<sup>137</sup> As the power to extend the 1988 Act permits the extension to be ‘subject to such exceptions and modifications as may be specified’, each order needs to be considered individually.

<sup>128</sup> *Ibid.*      <sup>129</sup> CDPA s. 154(5).      <sup>130</sup> CDPA s. 154(1)(a).      <sup>131</sup> Laddie *et al.*, paras 5.60–1.

<sup>132</sup> CDPA s. 154(1)(b); British Nationality Act 1981, s. 51.      <sup>133</sup> CDPA s. 157.

<sup>134</sup> *Bermuda*, SI 2003/1517; *Guernsey*: SI 1989/1997. Orders extending the Act to *Gibraltar* (SI 2005/853) and the *Isle of Man* (SI 1990/1505, SI 1990/2293) were revoked and both are now countries to which the Act applies: Copyright and Performances (Application to Other Countries) Order, SI 2008/677, Sched.

<sup>135</sup> They continue to operate because of CDPA, Sched. 1, para. 36.

<sup>136</sup> *British Indian Ocean Territory*: SI 1984/541; SI 1987/2200; *British Virgin Islands*: SI 1962/2185; 1985/1988; *Cayman Islands*: SI 1965/2010; *Falkland Islands and Dependencies*: SI 1963/1037; 1987/2200; *Gibraltar*: SI 1960/847; 1985/1986; 1987/2200; *Montserrat*: SI 1965/1858; 1985/1987; 1987/2200 *St. Helena and Dependencies*: 1963/1038. Many Orders made in respect of other colonies which have become fully independent territories have been revoked. The Copyright (Status of Former Dependent Territories) Order, SI 1990/1512 lists territories to which the 1956 Act is deemed to have extended immediately before 1 Aug. 1989: Antigua, Dominica, Gambia, Guyana, Jamaica, Kiribati, Lesotho, St Christopher, Nevis, St Lucia, Swaziland, and Tuvalu. Pending revocation, these countries continue to be treated as qualifying, under previous extension orders.

<sup>137</sup> Laddie *et al.*, para. 5.82.

Third, a person will qualify if they can show that they are a citizen or subject of, and an individual domiciled or resident in, or a body incorporated under a law of, a country to which the Act has been 'applied'.<sup>138</sup> Section 159 empowers Her Majesty by Order in Council to 'apply' the copyright sections of the 1988 Act to other countries. This may be done so as to let either authors connected to such countries, works first published in such countries, or broadcasts sent from such countries qualify for protection in the United Kingdom. Moreover, such 'applications' may be subjected to such exceptions and modifications as are specified or confined to certain classes of cases specified in the Order. The power to make such Orders is restricted to 'Convention countries', other member states of the EEC, or to countries which give adequate protection to the owners of copyright in respect of the class of works to which the Order relates.<sup>139</sup> The latest version of the Order is the Copyright and Performances (Application to Other Countries) Order 2008.<sup>140</sup>

Where a work has been jointly authored, the work qualifies for copyright protection if any of the joint authors is qualified. However, the non-qualifying author is ignored when considering issues of first ownership<sup>141</sup> and duration.<sup>142</sup> Consequently, if one joint author qualifies and another does not, the qualifying owner alone will be first owner.<sup>143</sup> Similarly, copyright in a co-written literary work expires 70 years after the death of the last qualifying co-author.<sup>144</sup>

### 5.1.2 Qualification by first publication

A work may also qualify for protection if it is first published in the United Kingdom or in another country to which the Act has been 'extended' or 'applied'. (These concepts were discussed above.)<sup>145</sup> A work is published when copies of the work are issued to the public<sup>146</sup> or, in the case of literary, dramatic, musical, and artistic works, when the work is made available to the public through an electronic retrieval system.<sup>147</sup> It does not include: performing a literary, dramatic, or musical work; exhibiting an artistic work; issuing specified types of copies of such works;<sup>148</sup> playing or publicly showing a sound recording or film; or communicating to the public any work.<sup>149</sup>

<sup>138</sup> CDPA s. 154(1)(c).

<sup>139</sup> CDPA s. 159–60. Under CDPA s. 160, the Order may limit protection by virtue of first publication in respect of works from a country which does not adequately protect British works. The main example of such restrictions relate to sound recordings. According to the Copyright and Performances (Application to Other Countries) Order 2008, SI 2008/677, Sched. Column 3, the protection given to sound recordings varies between three categories of country: those merely parties to the WTO; those which are 'asterisked,' comprising Rome Convention countries and EC member states, to which a required connection results in *full* protection that includes the right to control public playing and communication to the public; and those marked by a 'hash' sign, being WPPT countries which are not also parties to the Rome Convention (most significantly, the USA), but to which a required connection results in *basic* protection, coupled with the right to control communication to the public other than broadcasting.

<sup>140</sup> SI 2008/677. <sup>141</sup> Under CDPA s. 11. <sup>142</sup> Under CDPA s. 12.

<sup>143</sup> But the non-qualifying author, it seems, can claim moral rights, and therefore should be named on the work, and the work should not be subjected to any derogatory treatment without their consent.

<sup>144</sup> CDPA s. 154(3). <sup>145</sup> CDPA s. 155(1). <sup>146</sup> CDPA s. 175.

<sup>147</sup> CDPA s. 175(1). There is also a definition of 'commercial publication': CDPA s. 175(2). Note also the differences in the concept of publication employed in relation to the 'publication right': see Related Rights Regulations, SI 1996/2967, r. 16.

<sup>148</sup> CDPA s. 175(4)(a)–(b). Publication of an artistic work does not include issuing copies of a film depicting such a work, nor copies of graphic works or photographs representing a sculpture, a work of artistic craftsmanship, or a work of architecture. However, the construction of a building is the equivalent of publishing the architectural work that it embodies: CDPA s. 175(3).

<sup>149</sup> CDPA s. 175(4). But an electronic retrieval system may still serve to publish literary, dramatic, musical, or artistic works even if it operates by way of broadcasting: CDPA s. 175(4)(a)(ii), (b)(iv).

If a work is to qualify for protection by publication, the publication must be authorized by the author.<sup>150</sup> The 1988 Act provides that publication does not include merely colourable publications which are not intended to satisfy the reasonable requirements of the public.<sup>151</sup> The threshold for protection is very low. At a minimum, if a work attracts no interest, the mere fact that a few copies have been made available for sale will suffice.<sup>152</sup> Publication takes place wherever the publisher invites the public to acquire copies<sup>153</sup> and may take the form of gift, hire, or sale.<sup>154</sup> Since publication consists in offering reproductions to the public, it seems that anything that amounts to a reproduction will suffice.<sup>155</sup>

To qualify for protection, the work must be published *first* in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’. The fact that publication first occurs in a non-qualifying country will not matter, so long as that work is published within 30 days in the United Kingdom or in another country to which the Act has been ‘extended’ or ‘applied’.<sup>156</sup> It should also be noted that films that have been released commercially under conditions of restricted distribution may well not have been published, since copies will not have been made available to the public.<sup>157</sup>

### 5.1.3 Qualification by place of transmission: broadcasts

A broadcast qualifies for protection if it is made or sent from a place in the United Kingdom, or a country to which the Act ‘extends’ or ‘applies’.<sup>158</sup> In the case of satellite broadcasts, the broadcast is made where the signals are introduced.<sup>159</sup>

<sup>150</sup> CDPA s. 175(6) (no account shall be taken of any unauthorized act); s. 178 (defining unauthorized act where no copyright subsists). Joint authors are not specifically dealt with, but probably all must consent before a publication is authorized.

<sup>151</sup> CDPA s. 175(5).

<sup>152</sup> *Francis Day & Hunter v. Feldman* [1914] 2 Ch 728 (placing six copies of music in retail showroom was publication, so that the work attracted UK copyright protection). In contrast, in *Bodley Head v. Flegon* [1972] 1 WLR 680, Brightman J said he thought it unlikely that underground publication was enough since it intentionally disregarded the requirements of the public. That case concerned whether Solzhenitzyn’s work *August 1914* had been published first in France or Russia. It was claimed (by the defendant) that publication had occurred in Russia illegally by way of *samizdat*. However, the court found no evidence to support the claim.

<sup>153</sup> In *British Northrop v. Texteam* [1974] RPC 57 Megarry J held that a work was issued to the public when reproductions of the work were put on offer to the public. That offer could be sale or gift. The place of first publication is where the offer is made, not where copies are received.

<sup>154</sup> *Ibid.*

<sup>155</sup> *Merchant Adventurers v. Grew* [1973] RPC 1; *British Northrop v. Texteam* [1974] RPC 57. Doubted in *Laddie et al.*, paras. 5.30–2.

<sup>156</sup> CDPA s. 155(3). A publication in the UK or any other country is not to be treated as other than first publication by reason only of earlier publication elsewhere if the latter occurred within a stated period of the former. For works published after the 1956 Act took effect, this period is 30 days; for those published before, it is 14 days (CDPA s. 155(3), Sched. 1, para. 35).

<sup>157</sup> Cf. *Bodley Head v. Flegon* [1972] 1 WLR 680.

<sup>158</sup> The Copyright and Performances (Application to Other Countries) Order 2008, SI 2008/677, specifies the countries to which the Act applies with respect to broadcasts in columns 4 & 5. Column 4, which relates to wireless broadcasts, distinguishes between, on the one hand, those made by persons or entities appropriately connected to Rome or EC countries, which receive ‘full protection’ and, on the other, those by parties thus connected to WTO countries, which benefit from a more modest regime of rights. Column 5 relates to non-wireless broadcasts and extends protection only to those made by persons or entities appropriately connected to other EC or EFTA countries.

<sup>159</sup> CDPA s. 156(1).

## 6 EXCLUDED SUBJECT MATTER

Although a work may be recorded in material form, be original, and be sufficiently connected to the United Kingdom, in some circumstances the courts may nonetheless refuse to recognize copyright for policy reasons. It appears that copyright protection will not be granted for obscene, blasphemous, or immoral works. This can be seen from *Glyn v. Weston Film Feature*<sup>160</sup> where Younger J refused to grant an injunction for infringement of copyright in the claimant's dramatic work, *Three Weeks*, which he described as a 'sensual adulterous intrigue' and condemned on the ground that it advocated 'free love'. Younger J said, 'it is clear that copyright cannot subsist in a work of a tendency so grossly immoral as this'.

For some time it had been thought that *Glyn* and the other cases where copyright had been denied to obscene, blasphemous, libellous, irreligious, or misleading works<sup>161</sup> were the products of less enlightened times and, as such, would no longer be followed.<sup>162</sup> However, in *A-G v. Guardian (No. 2)*<sup>163</sup> the House of Lords cited *Glyn* with approval. In that case Peter Wright, a former security services agent, had written a book (called *Spycatcher*) about the various operations of the service. Importantly, in writing the book Wright breached the duty of confidence he owed to the Crown. The House of Lords held that Wright would not be able to bring a copyright infringement action because of the 'disgraceful circumstances' in which the book was written.<sup>164</sup> As well as citing *Glyn* with approval, the Lords extended the scope of the immorality exclusion beyond the content of the work to include the circumstances in which the work was created.

While the House of Lords affirmed the continued existence of the public policy exclusion, there is still some doubt as to the exact effect of immorality. It is unclear whether it means that there is no copyright in the work at all,<sup>165</sup> or that equity will not enforce the copyright.<sup>166</sup> The way this question is answered might be important given that, if there is no copyright, presumably all contracts that purported to deal with the copyright would be void.

<sup>160</sup> [1916] 1 Ch 261.

<sup>161</sup> One difficulty with the *Glyn* decision is that it is by no means clear when a work is immoral. Generally the criminal law restricts circulation of obscene works—works which are likely to deprave and corrupt. Immorality appears to be a wider test. It is certainly difficult to believe that a work which advocated free love would today be denied copyright. In *Stephens v. Avery* [1988] Ch 449, in the context of breach of confidence, Browne-Wilkinson V-C stated that he thought the *Glyn* exception should not apply in the absence of public consensus that the work in question was immoral. In *Fraserside Holdings v. Venus* [2005] FMCA 997, the Federal Magistrates' Court of Australia was prepared to enforce copyright in 'adult films', explaining that the court should look at the attitudes taken towards the work both in Australia and overseas.

<sup>162</sup> In *Chaplin v. Frewin* (1966) 1 Ch 71 the Court of Appeal said that it thought the book in question was worthless from a literary point of view as well as being blasphemous but nowhere suggested that the work should for that reason be deprived of copyright. It thus appeared that the doctrine in *Glyn* could no longer be viewed as sound law.

<sup>163</sup> [1990] 1 AC 109.

<sup>164</sup> At the same time they appeared to take the view that the Crown had copyright in Wright's book or that Wright held copyright in the book on trust for the Crown. This is a little difficult to square with the proposition that there was no copyright in the work.

<sup>165</sup> In *Glyn*, Younger J said there was no copyright in the work.

<sup>166</sup> In *Spycatcher* the House of Lords simply stated that Wright would not be allowed to enforce his copyright. The assertions that Wright held copyright on trust or that copyright rested in the Crown suggests that the House of Lords may have interpreted *Glyn* as a case where the remedy of an injunction was withheld rather than copyright denied. See Copinger, para. 3–260, p. 181 (copyright subsists but will not be enforced) and, generally, A. Sims, 'The Denial of Copyright on Public Policy Grounds' [2008] *EIPR* 189.

The scope of the exclusion is also unclear. Although hitherto it has been concerned with matters such as sexual morality, the exclusion may also be a basis for declining to protect so-called 'malware', that is, software designed to appropriate sensitive information from a user's infected personal computer.

The effect of the public policy exclusions is somewhat paradoxical. As the denial of copyright to obscene works effectively places them in the public domain, this might increase the speed and breadth of circulation. If dissemination is deemed to be undesirable, the denial of copyright seems to be counter-productive.<sup>167</sup> (It may also stimulate public interest in the work.) Presumably, other reasons have motivated the courts. The approach taken by the courts is consistent with the view that the primary concern of copyright is to encourage creation rather than to control dissemination. Denying copyright will (supposedly) remove the incentive to produce obscene works.

As we have seen, a derivative work that infringes copyright in the work on which it is based can be original. In such circumstances the question arises as to whether an original but infringing work should be denied protection on grounds of public policy. With one or two exceptions,<sup>168</sup> the courts have generally been willing to enforce copyright in derivative works even though they infringe.<sup>169</sup> This has been explained on the basis that if protection were denied to such works it would lead to a substantial injustice. As Goff J said:

It is understandable that the owner of copyright should be entitled to restrain publication of an infringing work; but the idea that he should be entitled to reap the benefit of another's original work, by exploiting it, however extensive such work might be, however innocently it might have been made, offends against justice and common sense.<sup>170</sup>

<sup>167</sup> See *Fraser v. Venus* [2005] FMCA 997, paras 39–42.

<sup>168</sup> e.g. *Ashmore v. Douglas Home* [1987] FSR 553. (Judge Mervyn Davies denied copyright protection to part of a play which was derived from an existing copyright play on the grounds that the former was 'infringing material'.)

<sup>169</sup> See *Wood v. Boosey* (1868) LR 3 QB 223, 229; *Chappell v. Redwood Music* [1982] RPC 109, 120; *ZYX Music, GmbH v. King* [1995] 3 All ER 1, 9–11; *Ludlow Music Inc. v. Williams* [2002] FSR (57) 868, 886 (paras. 39–40).

## AUTHORSHIP AND FIRST OWNERSHIP

### CHAPTER CONTENTS

1	Introduction	119	3	First Ownership	127
2	Authorship	119	4	Harmonization	133

### 1 INTRODUCTION

A considerable amount has been written about authorship and the role it plays in copyright law. It has become clear from these discussions that the concept of authorship which operates in copyright law is not the same as is used in many other fields.<sup>1</sup> One explanation for this relates to the particular role that the author plays in copyright law. More specifically it is because, in copyright law, the author acts as a focal point around which many of the rules and concepts are organized. For example, as we have just seen, the status of the author helps to determine whether a work qualifies for protection. Where relevant, the labour that an author expends in creating a work will also influence whether the resulting work is original. In other situations, the duration of many types of work is determined by reference to the lifespan of the author. Similarly, the moral rights that are recognized in the United Kingdom attach to the author of the work in question.

In this chapter we explore two closely related themes. First, we look at the concept of authorship, as it is understood in copyright law. In turn, we look at one of the most important consequences that flow from being named as author of a work: namely, first ownership of copyright and the various exceptions to this general rule.

### 2 AUTHORSHIP

The author of a work is defined in the 1988 Act as the person who creates the work.<sup>2</sup> Special provisions deal with the situation where more than one person is involved in the creation

<sup>1</sup> Frequently it is more expansive, including those whose effort might not reach the creative levels of literary authorship. See, e.g. *Walter v. Lane* [1900] AC 539.

<sup>2</sup> CDPA s. 9(1). For comparative analysis, see J. Ginsburg, 'The Many Faces of Authorship: Legal and Interdisciplinary Perspectives' (2003) 52 *De Paul LR* 1063.

of a work.<sup>3</sup> While to describe the creator of a painting or a sculpture as an ‘author’ may jar, few problems arise in ascertaining who is the author of most literary, dramatic, musical, and artistic works.<sup>4</sup> This is because in relation to the traditional categories of literary, dramatic, musical, and artistic work there is a general consensus as to which of the various people involved in the production of a work is to be treated as the creator or author of it.

More problems arise, however, in relation to entrepreneurial works and computer-generated works. In part, this is because the concept of authorship does not sit comfortably with the way we tend to think about such works. That is, we do not normally think of a sound recording, a typographical arrangement, or a broadcast as having an author, even in the broad sense in which it is used in copyright law. In these circumstances, it is important to appreciate that the ‘author’ is an artificial construct, a legal fiction, which is used to allocate rights. This can be seen in the fact that, in relation to sound recordings, broadcasts, and typographical arrangements, the ‘author’ is (effectively) defined as the person who made the work possible (as distinct from the creator). In the case of a literary, dramatic, musical, or artistic work that is computer-generated (which by definition has no author) the ‘author’ is ‘the person by whom the arrangements necessary for the creation of the work are undertaken.’<sup>5</sup>

In its dealings with entrepreneurial works, British copyright law has tended to concentrate on the person who made the arrangements necessary for the making of the work (the entrepreneur). In contrast, civil law systems have tended to focus on the persons who made creative contributions to the work. This difference has long been seen as an important point of contrast between the two systems.<sup>6</sup> As a result of attempts to harmonize copyright law in Europe, this difference is slowly being undermined. In part, this is because one of the consequences of the process of harmonization is that civil law conceptions of authorship have been introduced into British law.<sup>7</sup> A prelude to this occurred with moral rights, where the director was recognized as having a status equivalent to the author of a literary, dramatic, musical, or artistic work. More recently, the notion of the principal director as joint author of a film has also been introduced into UK law.<sup>8</sup> One of the consequences of these changes is that films now occupy a hybrid position in between authorial and entrepreneurial works.

One of the key differences between copyright and most other forms of intellectual property is that copyright protection arises automatically, without the need for formality or registration. While this may be advantageous to authors, it generates some unexpected problems. In particular, while with patents, registered designs, and trade marks the identity of the creator of the intellectual property and, in turn, the nature of the property are clarified by the process of registration, with copyright this has to be achieved by other means.<sup>9</sup>

The task of determining who is the author of a work is made easier because the 1988 Act sets out a series of statutory presumptions as to who is the author of a work. Section 104 provides that the name that appears on a literary, dramatic, musical, and artistic work as published, or

<sup>3</sup> See below at pp. 125–7.

<sup>4</sup> For consideration of the question whether an amanuensis is an author, see *Donoghue v. Allied Newspapers* [1938] 1 Ch 106. But note that a medium who transcribed messages from the spiritual world was author of the work: *Cummins v. Bond* [1927] 1 Ch 167 (Eve J held that the medium ‘had exercised sufficient skill, labour and effort to justify being treated as author’).

<sup>5</sup> CDPA s. 9(4), 178.

<sup>6</sup> A. Strowel, *Copyright et Droit d’Auteur: Convergences et Divergences* (1993) 320–89.

<sup>7</sup> Note, however, that under the 1911 Copyright Act, UK law conferred copyright in cinematographic works as ‘dramatic works’ to their authors, and after *Norowzian v. Arks (No. 2)* [2000] EMLR 67 this may again be the case. Civil law systems have, occasionally, treated the ‘producer’ as the author of a film: see Kamina, 132–3.

<sup>8</sup> CDPA s. 9. <sup>9</sup> See Sherman and Bently, 182–5.

on the work when it is made, shall be presumed to be the author. Section 105 establishes similar presumptions with respect to sound recordings, films, and computer programs.<sup>10</sup> The upshot of these presumptions, which only operate in civil matters, is that the burden of proof is placed on the person claiming that someone other than the 'named' author is the true creator of the work in question.

## 2.1 AUTHORSHIP OF LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

The author of literary, dramatic, musical, or artistic work is the person who creates it.<sup>11</sup> No further guidance is given in the 1988 Act as to what this means. The only exception to this is to be found in section 3(2) which indicates that the author need not necessarily be the person who fixes or records the work (although this will usually be the case).<sup>12</sup> The lack of statutory guidance as to the way the author is to be construed in this context does not matter that much given that there are few problems in identifying who is the author of a literary, dramatic, musical, or artistic work.

Having said that, problems have occasionally arisen in determining whether a person involved in the production of a literary, dramatic, musical, or artistic work is to be regarded as an author (or creator). The way this question is answered is similar to the way the originality of a work is determined. Basically, in order for someone to be classified as an author, it is necessary for them to be able to show that the labour, skill, and judgment that they contributed to the work are of the *type* that is protected by copyright: that is, that they would be sufficient to confer originality on the relevant work.<sup>13</sup> The upshot of this is that it is unlikely that a stenographer, an amanuensis, or a person who merely photocopies or traces a work would ever be considered as an author.<sup>14</sup> This is because the labour expended in relation to the work fails to bring about a (material) change in the resulting work. However, if the person exercised a degree of creative labour in producing the work, even if only a very small amount, it is more likely that they will be treated as an author. This can be seen, for example, in *Cummins v. Bond*<sup>15</sup> where it was held that a spiritualist who produced 'automatic writing' dictated to her from beyond the grave at a seance was the author of the resulting work. As the spiritualist exercised great speed in writing down the messages, and used great skill in translating the spiritual communication given in an 'unknown tongue' into 'archaic English', it was held that she had exercised sufficient skill, labour, and effort to justify her being treated as author. Similarly, in *Walter v. Lane*, the House of Lords held that a reporter who took a shorthand report of a speech had exercised sufficient skill to be treated as author of the resulting report.<sup>16</sup>

Where the contribution made by someone is at an abstract level, such as the idea for a play, or a book, or a structure of a computer program, they are unlikely to be treated as an author of the resulting work. Thus, for example, the telling of a person's experiences to form the basis of a 'ghost-written' book is (without more) unlikely to render the narrator of the tales an author of the resulting book: rather, the ghost writer who determines the way the stories are expressed

<sup>10</sup> CDPA s. 105.      <sup>11</sup> CDPA s. 9(1).      <sup>12</sup> CDPA s. 3(2).

<sup>13</sup> As the type of labour that confers originality is the same as that which enables someone to be classified as an author, in copyright law terms, reference should be made to the earlier discussions on this topic.

<sup>14</sup> *Donoghue v. Allied Newspapers* [1938] 1 Ch 106.

<sup>15</sup> [1927] 1 Ch 167. See also *Leah v. Two Worlds Publishing* [1951] 1 Ch 393.      <sup>16</sup> [1900] AC 539.

will be regarded in law as the author.<sup>17</sup> The more specific the contribution, however, the more likely it is that the person in question will be treated as an author. Thus, at the opposite extreme to that of the ghost writer, in the case of a person who dictates text and punctuation to another who merely follows the instructions, UK law would regard the dictator rather than the amanuensis as the author.<sup>18</sup> In between the two extremes lies a host of possibilities. In one case it was held that a person who developed an idea for a house design that he had explained in detail (both verbally and through sketches) to a technical draftsman was joint author of the plans that the draftsman subsequently produced.<sup>19</sup> Similarly, a political figure who dictated his memoirs to a friend, read every word, and altered parts of the manuscript was held to be joint author of the resulting book.<sup>20</sup>

As we saw in relation to the originality requirement, the mere fact that a person expended labour in the creation of a work will not necessarily mean that the resulting work is original (or that the person is an author) if it is the wrong type of labour. This means that, although a person may play an important role in the production process, they still might not be treated as an author. In the case of a book, for example, while the copy editor, the jacket designer, and the typesetter all play an important role in giving shape to the final product, they will not be treated as authors of the resulting literary work.<sup>21</sup> (Although it is possible to imagine situations where the efforts of a copy editor might be such that they might be treated as a joint author.) Similarly, while copyright law has few problems in categorizing the person who wrote a play as the author of the play, in one case it was held that a person who had suggested the title, the leading characters, a few catchwords, and the scenic effects for the play had not contributed sufficiently to the play to justify them being treated as a joint author.<sup>22</sup> In a more recent case, *Brighton v. Jones*,<sup>23</sup> Park J held that the suggestions made by a director to a playwright, prompted by problems with the script encountered during rehearsals, were not of the right kind to justify the director's claim to co-authorship. He said the director had failed to establish 'that the contributions which she made were contributions to the creation of the dramatic work rather than contributions to the interpretation and theatrical presentation of the dramatic work'.<sup>24</sup>

### 2.1.1 Computer-generated works

In the case of literary, dramatic, musical, or artistic works that have been computer-generated,<sup>25</sup> the creator is 'the person by whom the arrangements necessary for the creation of the work are undertaken.' While the meaning of this provision has yet to be tested, it seems that it might include the person who operates the computer, as well perhaps as the person who provides or has programmed the computer.<sup>26</sup>

<sup>17</sup> *Donoghue v. Allied Newspapers* [1938] 1 Ch 106 (reporter was author of stories about jockey Steve Donoghue's life).

<sup>18</sup> *Ibid.* <sup>19</sup> *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818.

<sup>20</sup> *Heptulla v. Orient Longman* [1989] FSR 598 (Indian High Court).

<sup>21</sup> A technician expending skill and labour in testing software, detecting bugs, and providing information towards de-bugging was likened to a proof-reader and therefore was not a joint author since he did not contribute to the authorship of the software as such: *Fylde Microsystems v. Key Radio Systems* [1998] FSR 449.

<sup>22</sup> *Tate v. Thomas* [1921] 1 Ch 503. <sup>23</sup> [2005] FSR (16) 288. <sup>24</sup> *Ibid.*, para. 56.

<sup>25</sup> The term is defined in CDPA s. 178 as referring to the situation where a work is created by a computer in circumstances such that there is no human author of the work. Where a work is created merely with the assistance of a computer, it is therefore clearly not a 'computer-generated work'.

<sup>26</sup> In *Express Newspapers v. Liverpool Daily Post* [1985] FSR 306 Whitford J held that the author of computer-generated bingo sheets was the programmer of the computer. It is not clear whether this would be the position under the 1988 Act. See above p. 62, Fig. 3.2.

### 2.1.2 Unknown authorship

In certain situations, it may not be possible to ascertain who is the author of a literary, dramatic, musical, or artistic work. This may be because the name of the author is not attached to the work and it is not possible to ascertain authorship by other means. In other cases, an author may wish that their works be published anonymously, under a false name or a pseudonym. As the author acts as the focal point around which many of the rules of copyright are organized, this creates a number of potential problems. To remedy this, the 1988 Act includes the notion of 'unknown authorship.' A work is a work of unknown authorship if the identity of the author is unknown and it is not possible for a person to ascertain his or her identity by reasonable inquiry.<sup>27</sup> While in this situation the author remains the first copyright owner, since it is impossible to know when the author of such a work died, the duration of copyright is limited to 70 years from the date when the work was first made available to the public (or 70 years from when the work is made, if it is not made available before the expiry of that period).<sup>28</sup>

## 2.2 ENTREPRENEURIAL WORKS: STATUTORY AUTHORS

As we mentioned earlier, authorship does not sit comfortably with the way we tend to think about entrepreneurial works. Any potential difficulties in having to identify who is the author of, say, a broadcast or a sound recording are resolved by section 9(2) which defines who is the author of each of the different entrepreneurial works.

### 2.2.1 Sound recordings: the producer

Section 9(2)(aa) provides that the author of a sound recording is the 'producer.'<sup>29</sup> In turn, the 'producer' is defined as the 'person by whom the arrangements necessary for the making of the sound recording are undertaken.'<sup>30</sup> In most cases, the 'producer' of a sound recording will be the record company. This may change, however, where a sound recording is produced cooperatively, or where non-traditional modes of distribution (such as the internet) are used. The question of what is meant by 'the producer' is discussed in more detail in the next section.

### 2.2.2 Films: the producer and the principal director

When the 1988 Act was enacted,<sup>31</sup> for the purposes of determining authorship, films were treated in a similar fashion to sound recordings: the author was defined as 'the person by

<sup>27</sup> CDPA s. 9(4), (5). <sup>28</sup> CDPA s. 12(3).

<sup>29</sup> CDPA s. 9(2)(aa). This section, which took effect from 1 Dec. 1996, was introduced by the Copyright and Related Rights Regulations 1996 (SI 1996/2967). This replaced s. 9(2)(a) which stated that 'in the case of a sound recording or film, the person by whom the arrangements necessary for the making of the recording or film are undertaken.'

<sup>30</sup> For works made between 1 Jun. 1957 and 1 Aug. 1989, 'the person who owns the first record (disc, tape or roll) embodying the recording at the time the recording is made' (the maker) is the owner: CA 1956 s. 12(8). In relation to pre-1957 works, 'the owner of the original plate upon which the sound recording were recorded is deemed to be the author,' CA 1911 ss. 5(1), 19(1). Cf. Rome Convention, Art. 3(c); Geneva Convention, Art. 1(b) (both defining the producer of a phonogram as the person or the legal entity which first fixes the sounds of a performance or other sounds). WPPT Art 2(d) refers to 'the person or legal entity who or which takes the initiative and has the responsibility for the first fixation.'

<sup>31</sup> CDPA s. 9(2)(ab); the status of the authorship of a film will differ depending on the date when the film was made. Prior to the 1956 Act, films were not recognized as a distinct category of work, but the elements of the film (photographs, sound recording, and dramatic works) were protected instead (in much the same way as

whom the arrangements necessary for the making of the film are undertaken.' As had been the case under the 1956 Copyright Act, films were treated as entrepreneurial works. In order to bring UK law into line with the EU Duration Directive, the 1988 Act was amended. The upshot of this is that the authors of a film made on or after 1 July 1994 are the producer and the principal director of the film. The principal director and producer are treated as joint authors, except where they are the same person.<sup>32</sup> The recognition of the principal director as author of the film marks an important change in the way films are regarded by British copyright law, from being treated as a type of entrepreneurial work, to being treated as a hybrid of entrepreneurial and authorial works.

The 'principal director' is not defined in the 1988 Act. Some guidance as to what is meant by this term is provided by section 105(5), which states that, where a film bears a statement that a particular person was the director (or principal director) of the film, this shall be presumed to be correct until the contrary is proved.<sup>33</sup> Section 105(6) adds that, where a person is named as the director of a film, this shall be presumed to mean that he or she is the principal director.

The 'producer' of a film is defined as 'the person by whom the arrangements necessary for the making of the film are undertaken.'<sup>34</sup> This is the same definition as is used to describe the producer of a sound recording. The question whether a person is a 'producer' of a film or a sound recording is a question of fact.<sup>35</sup> For the most part, there will be few problems in determining who is the producer of a film or a sound recording. Most questions regarding the allocation of ownership of copyright will be dealt with contractually. Problems may arise, however, because the production of sound recordings and films frequently involves the input of a range of different people, many of whom may lay claim to having helped to organize and facilitate the making of the sound recording or the film. Although the term 'producer' is used to define who is the creator, it should be noted that the courts have emphasized that there is a distinction between someone who 'makes' a recording and someone who 'makes the arrangements for the production of a recording': it is the latter who is the author rather than the person who actually records or makes the sound recording or film (the person who operates the recording system).<sup>36</sup>

The notion of the 'producer' presupposes that at the core of the production process there is a person (or more often a company) that coordinates, controls, and organizes the production of the work.<sup>37</sup> It seems that to be a 'producer' a person must exercise some degree of direct

multimedia works are now). This position under the 1956 Act and under the 1988 Act, prior to the amendments in 1994, were the same. That is, the author of the film is 'the person by whom the arrangements necessary for the making of the film are undertaken.' However, films begun before 1 Jul. 1994, but completed thereafter are treated as made when completed: Related Rights Regs., r. 25(2). Furthermore, it is not an infringement of any right which the principal director has by virtue of these Regulations to do anything after commencement in pursuance of arrangements for the exploitation of a film made before 19 Nov. 1992: Related Rights Regs., r. 36(2).

<sup>32</sup> CDPA ss. 9(2)(ab) and 10(1A). <sup>33</sup> CDPA s. 105(5).

<sup>34</sup> CDPA s. 178. However, it is unclear whether the term 'principal director' will be treated as narrower than the term 'director' when used in relation to moral rights.

<sup>35</sup> *Beggars Banquet Records v. Carlton TV* [1993] EMLR 349, 361; *A & M Records v. Video Collection* [1995] EMLR 25, 29.

<sup>36</sup> *Adventure Films v. Tully* [1993] EMLR 376; *A & M Records* [1995] EMLR 25; *Bamgboye v. Reed* [2004] EMLR (5) 61, 84 (para. 77). Kamina says that the definition of producer 'certainly excludes purely creative contributors, including the film director': Kamina, 139.

<sup>37</sup> See also *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 (film made under restrictive conditions in China was produced by organizer outside China). For examples of situations where it is difficult to say who, if anyone, is the 'producer' (home movies, wedding videos) see Kamina, 140.

(organizational) control over the process of production.<sup>38</sup> If a person operates at the periphery of the process, such as the person who merely commissions the making of the recording, or merely provides the finance for a film or a sound recording, he or she will not be regarded as a producer. If this were not the case, banks and other lending institutions would qualify as authors. However, provision of finance may be one of the organizational matters that, in combination with others, amount to a 'necessary arrangement'.<sup>39</sup>

### 2.2.3 Broadcasts

In the case of sound and television broadcasts, the author is the person who makes the broadcast.<sup>40</sup> Where a person receives and immediately retransmits a broadcast, the author is the maker of the original broadcast rather than the person who relays it.

### 2.2.4 Typographical arrangements

The author of a typographical arrangement of a published edition of a work is the publisher.<sup>41</sup>

## 2.3 JOINT AUTHORSHIP

Collaborative research and creation is often a fruitful and productive way for authors to work.<sup>42</sup> Copyright recognizes this mode of creation through the notion of joint authorship. A number of important consequences, such as the way the work can be exploited, flow from a work being jointly authored.<sup>43</sup> While joint authorship is normally associated with literary, dramatic, musical, and artistic works, it is possible for any work to be jointly authored. As we saw earlier, the 1988 Act specifically provides that films are treated as works of joint authorship between the principal director and the producer, unless those are the same person.<sup>44</sup> The 1988 Act also extends the concept of joint authorship to a broadcast 'where more than one person is taken as making the broadcast,' namely, those 'providing,' or taking 'responsibility' for the contents of the programme, and those making the 'arrangements necessary for its transmission'.<sup>45</sup> No special definition of joint authorship is applied to sound recordings, or published editions.

In cases other than those special circumstances where joint authorship is deemed, a general principle applies: a work is a work of joint authorship if it is 'a work produced by the collaboration of two or more authors in which the contribution of each author is not distinct from that of the other author or authors.' A work is one of joint authorship if it satisfies three conditions:

(i) First, it is necessary to show that each of the authors *contributed to the making of the work*. In order to render a person a joint author, the contribution must be 'significant' and

<sup>38</sup> *Adventure Films v. Tully* [1993] EMLR 376.

<sup>39</sup> *Ibid.* *Beggars Banquet Records v. Carlton TV* [1993] EMLR 349 (arguable claim that person who provided finance and arranged access to venue where event was filmed was a person who made arrangements); *Century Communications v. Mayfair Entertainment* [1993] EMLR 335 (person had undertaken the arrangements necessary for the production of the film when it initiated the making of the film, organized the activity necessary for making it, and paid for it).

<sup>40</sup> CDPA s. 9(2)(b). <sup>41</sup> CDPA s. 9(2)(d).

<sup>42</sup> For a discussion of collaboration in the context of universities and the role of copyright, see A. Monotti (with S. Ricketson), *Universities and Intellectual Property: Ownership and Exploitation* (2003).

<sup>43</sup> A joint owner (or other co-owner of copyright) can sue an infringer independently and can also bring an action against another co-owner.

<sup>44</sup> CDPA ss. 9(2)(ab) and 10(1A). Note, however, that the general scheme applies to determine authorship, or co-authorship, of the 'dramatic work': on which, see Kamina, 141–53.

<sup>45</sup> CDPA s. 10(2), cross-referenced to s. 6(3).

'original'.<sup>46</sup> The requirement of originality is easily satisfied: this merely requires that the claimant came up with the contribution as a result of his own skill and effort.<sup>47</sup> The requirement that the contribution be 'significant' has proved more problematic.<sup>48</sup> The better view is that 'significant' here means 'substantial', or 'considerable', or 'non-trivial', rather than 'aesthetically important'.<sup>49</sup> While to be a joint author it is necessary for an author to have made a significant and original contribution to the work, joint authorship does not require that the respective contributions be in equal proportions.<sup>50</sup> However, it does require the contribution to be of the right kind: a contribution to the words of a song will normally give rise to joint authorship of the literary work, but not of the music; and a contribution to the 'performance' of a piece of music will not render the performer a co-author of the musical work.<sup>51</sup> Equally, a contribution to 'interpretation and theatrical presentation' is not to be regarded as a contribution to the creation of a dramatic work.<sup>52</sup>

(ii) The second requirement that must be satisfied for a work to be one of joint authorship is that the work must have been produced through a process of *collaboration* between the authors. This means that, when setting out to create a work, there must have been some common design, cooperation, or plan that united the authors (even if only in a very loose sense).<sup>53</sup> So long as the authors have a shared plan of some sort, there is no need for them to be in close proximity for them to collaborate. Indeed, it is possible for the collaboration to take place over long distances (a practice made much easier because of e-mail).<sup>54</sup> There is no additional requirement that the parties must have intended to create a work of joint authorship.<sup>55</sup> The upshot of this second requirement is that, although two people may work on the same project, unless there is a shared goal they will not be classified as joint authors. This means, for example, that where one person writes a poem and another person translates it into another language, the author of the original poem would not be a joint author of the

<sup>46</sup> *Godfrey v. Lees* [1995] EMLR 307, 325–8; *Hadley v. Kemp* [1999] EMLR 589; *Brighton v. Jones* [2005] FSR (16) 288, para.34. See also *Fylde Microsystems v. Key Radio Systems* [1998] FSR 449 (suggestions not sufficient); *Robin Ray v. Classic FM* [1998] FSR 622.

<sup>47</sup> *Locksley Brown v. Mcasso Music Production Ltd* [2005] FSR (40) 846 para. 42.

<sup>48</sup> One can contrast the decision of *Godfrey v. Lees* [1995] EMLR 307 (classically trained musician who acted as orchestral arranger for a rock band was held to be joint author of a number of arrangements which included orchestral passages linking the verses and choruses) with *Hadley v. Kemp* [1999] EMLR 589 (contribution of saxophonist, singer, and drummer insufficient to render them co-authors because contributions were just what one would have expected). See A. Barron 'Introduction: harmony or dissonance? Copyright concepts and musical practice,' (2006) 15 *Social and Legal Studies*, 25; L. Bently, 'Authorship of Popular Music in UK Copyright Law' (2008) *Information, Communication and Society*

<sup>49</sup> *Fisher v. Brooker and Onward Music Ltd* [2007] FSR (12) 255 (para. 46), where Blackburne J preferred to ask whether the claimant's contribution was 'non-trivial'.

<sup>50</sup> Joint authorship will usually be presumed to lead to equal shares, but this may be varied either by the court, where it feels comfortable evaluating the contributions (as in *Bamgboye v. Reed* [2004] EMLR (5) 61, 86 (para. 85) and *Fisher v. Brooker and Onward Music Ltd* [2007] FSR (12) 255 (Fisher, author of the organ solo for 'A Whiter Shade of Pale', was awarded a 40 per cent share)). or according to the agreement of the parties: *Beckingham v. Hodgens* [2003] FSR 238, 249 (equal shares); *Peter Hayes v. Phonogram Ltd et al.* [2003] ECDR (11) 110, 123 ff (agreement as to size of share).

<sup>51</sup> *Peter Hayes v. Phonogram Ltd et al* [2003] ECDR (11) 110, 128; *Hadley v. Kemp* [1999] EMLR 589, 643. See R. Arnold, 'Are Performers Authors?' [1999] *EIPR* 464. Expert evidence may need to be employed to assist the court in distinguishing between what is the work and what is performance: *Barrett v. Universal Island Records* [2006] EWHC 1009 (para 356).

<sup>52</sup> *Brighton v. Jones* [2005] FSR (16) 288, para. 56.

<sup>53</sup> *Levy v. Rutley* (1871) LR 6 CP 583; *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818, 835.

<sup>54</sup> *Cala Homes (South) v. Alfred McAlpine Homes East* [1995] FSR 818, 835.

<sup>55</sup> *Beckingham v. Hodgens* [2003] FSR 238, 249.

translation. Similarly, where a musician arranges an existing musical work, the author of the original musical piece would not be able to claim joint authorship over the subsequent work: instead, there would be separate copyrights in the two pieces.<sup>56</sup>

(iii) Third, for a work to be jointly authored the respective contributions must not be *distinct* or *separate* from each other. In more positive terms, this means that the contributions must merge to form an integrated whole (rather than a series of distinct works).<sup>57</sup> For example, if the contributions of two authors merged in such a way that no one author is able to point to a substantial part of the work and say ‘that is mine,’ the authors would be joint authors. If, however, one author wrote the first four chapters of a book and the other author wrote the remaining six chapters, instead of the resulting book being a joint work, the respective authors would have copyright in the particular chapters they wrote.<sup>58</sup> In relation to a more difficult set of facts, it has been held that, where one person added an introduction to the music of a song, this introduction was not ‘distinct’ because it was ‘heavily dependent’ on the rest of the tune and because, by itself, it would ‘sound odd and lose meaning.’<sup>59</sup>

### 3 FIRST OWNERSHIP

Authorship and ownership have long been closely intertwined in copyright law. Indeed, one of the notable features of the 1710 Statute of Anne was that it recognized authors as first owners of the literary property they created. This basic formula is repeated in the 1988 Act which declares that the author of a work is the first owner of copyright.<sup>60</sup> The rule that copyright initially vests in the author is, however, subject to a number of exceptions. The first and most important concerns works made by employees.<sup>61</sup> Exceptions also exist in relation to Crown copyright, Parliamentary copyright, and to works created by officers of international organizations.<sup>62</sup> Judicially originated exceptions also exist where a work is created in breach of a fiduciary duty or in breach of confidence.

Before looking at these in more detail, it is important to note that, although the author is usually the first owner, it is possible for an author to assign his or her copyright to third parties. This means that the question of who is the copyright owner at any particular point of time will depend upon what has happened to the copyright since it was first created. Since valid agreements can be made in relation to the transfer of future copyright, it may be that, when copyright arises, the first owner of copyright under the statutory scheme is immediately divested of their rights in favour of an assignee. It is also important to note that, while the law

<sup>56</sup> *Chappell v. Redwood Music* [1981] RPC 337. Cf. *Godfrey v. Lees* [1995] EMLR 307, where the claimant who provided orchestral arrangements of Barclay James Harvest’s existing songs was treated as a co-author; and *Beckingham v. Hodgens* [2003] FSR 238, where the session musician who added an introduction to the song ‘Young at Heart’ was held to own 50 per cent of the copyright in the new arrangement. It seems that, where the author of a song collaborates in a new arrangement thereof, they acquire co-ownership of the arrangement even where they contribute nothing new.

<sup>57</sup> In this respect, the British notion of co-authorship differs from that of the United States, Belgium, and France where separable but interdependent elements can form joint works, such as songs, operas, and motion pictures. In France, for example, the author of a novel which is used as the basis of an audiovisual work is treated as an author of the audiovisual work.

<sup>58</sup> CDPA s. 10(1).

<sup>59</sup> *Beckingham v. Hodgens* [2003] FSR 238, 248. In any case, the introductory fiddle music was repeated a number of times elsewhere in the arrangement. Cf. *Hadley v. Kemp* [1999] EMLR 589, where Park J suggested that a saxophone solo in the middle of Spandau Ballet’s ‘Gold’ might be a distinct work.

<sup>60</sup> CDPA s. 11(1).

<sup>61</sup> CDPA s. 11(2).

<sup>62</sup> CDPA s. 11(3).

recognizes that a person other than the author may be first owner, the question of who is the author remains a distinct one (and an important one). A work made by an employee author, for example, has a duration dependent on the life of the author (i.e. the employee) even if first ownership vests in the employer. Equally, issues of qualification and moral rights are determined by reference to authorship (not first ownership).

### 3.1 WORKS CREATED BY EMPLOYEES

Section 11(2) of the 1988 Act provides that, in the absence of an agreement to the contrary, where a literary, dramatic, musical, or artistic work, or a film is made in the course of employment, the employer is the first owner of any copyright in the work.<sup>63</sup> While employees retain moral rights in the works they create, these are subject to a number of limitations.<sup>64</sup>

Critics have suggested that, by granting first ownership of works made by employees to employers, British law fails to provide creators with sufficient additional incentives to create. It is also said that British law also fails to acknowledge the natural rights which employee-authors have in their creations. In so doing, it is said that British law fails to follow the underlying rationales for copyright. In response to arguments of this sort, it is suggested that, while employers might not create works, they provide the facilities and materials that enable the act of creation to take place. In so doing, they make an important contribution to the production of new works. It is argued that granting first ownership to employers encourages employers to invest in the infrastructure that supports creators. As employers are often in a better position than employees to exploit the copyright in a work, it is also suggested that it makes more sense to give copyright to employers than to employees. Another argument in favour of giving ownership to employers is that, in the absence of a provision that formally granted first ownership to employers, employers would require employees to assign their copyright to them. As section 11(2) achieves what would otherwise happen in practice, it thus serves to reduce transaction costs. In response to the argument that, in granting first ownership to employers, employees are not properly rewarded for their creative efforts, it is suggested that employees are rewarded through other means, such as pay, continued employment, and promotion.<sup>65</sup>

However problematic may be the arguments in favour of granting first ownership of employee works to employers, they have dominated policy changes that have been made in this area. In particular, while under the Copyright Act 1956 employee journalists presumptively shared copyright with the newspapers, this 'anomaly' was removed in the 1988 Act.<sup>66</sup> As a result, under the current law copyright in all works made in the course of employment belongs to the employer (unless there is an agreement to the contrary).

For an employer to be first owner of copyright it is necessary to show that (i) the literary, dramatic, musical, artistic work, or film was made by an employee; (ii) the work was made in

<sup>63</sup> In the USA, related, but distinct principles operate in relation to so-called 'works made for hire.' On the history, see C. Fisk, 'Authors at Work: The Origins of the Work for Hire Doctrine' (2003) 15 *Yale Journal of Law & Humanities* 1.

<sup>64</sup> CDPA s. 79(3) and s. 82.

<sup>65</sup> The Whitford Committee considered whether a scheme should be implemented, such as that which exists under the Patents Act, providing for extra reward for particularly successful works.

<sup>66</sup> More specifically, under the previous law, copyright in a work made by an author in the course of employment by the daily or periodical press presumptively vested in the employer for purposes of its publication in the newspaper or periodical. CA 1956 s. 4(2).

the course of employment; and (iii) there is no agreement to the contrary.<sup>67</sup> We will deal with each of these in turn.

### 3.1.1 Who is an employee?

An employee is defined in the 1988 Act as a person who is employed under a contract of service or apprenticeship.<sup>68</sup> A contract of service is frequently distinguished from a contract for services. In general, it is easy to determine whether someone is an employee or not. However, there are many different sorts of work relationship, some of which are less easy to designate as employment relations. In such situations the courts tend to focus on whether there is the so-called 'irreducible minimum' necessary to give rise to an employment relation: namely 'mutuality of obligation' and 'control'. If these two factors are present the relationship might be one of employment: if they are not present, it is not. However, these factors are not of themselves conclusive. The court will examine all other relevant aspects and provisions to establish whether they are consistent with a contract of service.

(i) *Mutuality of obligation* In an employment relation the employer undertakes and is bound to provide work and pay, the employee to provide their labour. In other sorts of relationship there is not necessarily such mutuality. Consequently, if no such mutuality exists, there is no employment.<sup>69</sup> So, for example, an arrangement whereby an artist carries out work for an advertising agency will not amount to an employment relationship if the agency is free to offer any work to others, and the artist is free to refuse the work requested by the agency (for example where the artist is working on a job for another agency).

(ii) *Control*. The second aspect of the irreducible minimum is that one party (the employer) must be capable of exercising control over the other (the employee).<sup>70</sup> The more control one party is able to wield, the more likely it is that the parties are in an employment relationship. The control test is regarded as relevant even though there are many professions ('from surgeons to research scientists') where a person has a considerable amount of freedom, but nonetheless is ordinarily regarded as an employee. In these circumstances the courts have stressed that the question whether someone is an employee depends on whether there is 'sufficient framework of control'. Thus, even where a person is not under a great degree of supervision, they still may be an employee.<sup>71</sup>

If the irreducible minimum is present, the tribunal will then consider all other factors. One important, but not determinative consideration is the descriptions used (such as 'independent contractor'). Other factors which suggest that someone is not an employee include the fact that they have a great deal of responsibility, provide their own equipment, hire their own helpers, take financial risks, have other commitments, and have the opportunity of profiting from the tasks they perform.<sup>72</sup> The courts will also look at the way financial arrangements between the parties are organized as a way of determining whether someone is an employee. Factors which indicate that someone is an employee include the fact that they are paid wages; that income

<sup>67</sup> While the 1988 Act introduced changes on point, effective from 1 Aug. 1989, the initial ownership of copyright continues generally to be determined by the law in effect when the materials in question were made. CDPA, Sched. 1, para. 11.

<sup>68</sup> CDPA s. 178. <sup>69</sup> *Carmichael v. National Power plc* [1999] 4 All ER 897 (HL).

<sup>70</sup> *Ready Mixed Concrete (South East) Ltd v. Minister of Pensions and National Insurance* [1968] 2 QB 497; *Montgomery v. Johnson Underwood* [2001] ICR 819.

<sup>71</sup> See *Stevenson Jordan v. McDonnell & Evans* (1952) 69 RPC 10, 22 (Denning LJ).

<sup>72</sup> *Robin Ray v. Classic FM* [1998] FSR 622.

tax deductions are made on the 'Pay-As-You-Earn' basis; and that both parties contribute to pension schemes and make National Insurance payments.<sup>73</sup>

### 3.1.2 Was the work made in the course of employment?

In order for an employer to be first owner of copyright, it is also necessary to show that the work was made in 'the course of the employment.' Even though an author is an employee, if the work was not created in the course of employment, the author retains ownership of copyright. The question whether a work has been made in the course of employment will depend on the particular circumstances of the case in hand.

An important factor which has influenced the courts when determining if a work has been made in the course of employment is whether the making of the work falls within the types of activity that an employer could reasonably expect or demand from an employer. In turn, this depends on the scope of the employee's duties. This can be seen, for example, in *Stevenson Jordan v. MacDonnell*,<sup>74</sup> where the question arose as to whether an accountant or his employer (a firm of management consultants) owned copyright in a series of public lectures the accountant had given about the budgetary control of businesses. Morris LJ noted that the employer had paid the expenses of the lecturers, that the employee-accountant could have prepared the lectures in the company's time, used its library, had the lectures typed up by company secretaries, and that the lectures were a useful accessory to his contracted work.<sup>75</sup> Nonetheless, Morris LJ found that, since it was not shown that the accountant could have been *ordered* to write and deliver the lectures, they were not created in the course of his employment. As such, the copyright belonged to the employee rather than to the employer.

Similar reasoning was also applied in *Noah v. Shuba*.<sup>76</sup> This was a copyright infringement action in relation to a book called *A Guide to Hygienic Skin Piercing*, written by the claimant, Dr Noah. During the proceedings it was argued that when Dr Noah wrote the guide he was employed as a consultant epidemiologist at the Public Health Laboratory Service. As such, the copyright vested in his employer.<sup>77</sup> While there was no doubt that Dr Noah was an employee of the Public Health Laboratory, it was less clear as to whether the guide had been written in the course of his employment. Dr Noah discussed his work with colleagues, made use of the services of the Public Health Laboratory Service library, and had the manuscript typed up by his secretary. In addition, the guide was published by the Public Health Laboratory Service at its own expense. Nonetheless, Mummery J held that the guide had not been written in the course of Noah's employment. An important factor that influenced this decision was that Dr Noah had written the draft at home in the evenings and at weekends.

It should be pointed out that the mere fact that a work is made at home, or that the employee makes use of their personal resources, does not necessarily mean that it will fall outside the scope of the employee's duties. Ultimately, the question whether a work is made within the scope

<sup>73</sup> In *Lee Ting Sang v. Chung Chi Keung* [1990] 2 AC 374, the Privy Council approved of the 'indicia' approach in *Market Investigations v. Minister for Social Security* [1969] 2 QB 173, without referring to the 'irreducible minimum.' See also *Todd v. Adams and Chope* [2002] 2 Lloyd's Rep 293 (CA, refusing to find an employment relationship where there was sharing of profits and losses of fishing trips).

<sup>74</sup> *Stevenson Jordan v. McDonald & Evans* (1952) 69 RPC 10. However, a journalist who wrote a confidential memorandum to colleagues about a possible article was acting in the course of her employment: *Beloff v. Pressdram* [1973] 1 All ER 241.

<sup>75</sup> In *Byrne v. Statist* [1914] 1 KB 622, a journalist made a translation to be used in the newspaper in his own time: this was not in the course of his employment.

<sup>76</sup> [1991] FSR 14. <sup>77</sup> *Noah v. Shuba* [1991] FSR 14.

of employment depends upon the contract of employment. This can be seen in *Missing Link Software v. Magee*,<sup>78</sup> where the question arose as to whether software written by an employee outside work time and on his own equipment was created in the course of his employment and thus copyright in it owned by his employer. The claimant company argued that, since they had employed the defendant to write programs of the kind in dispute, similar programs, even if written in his spare time, were created in the course of his employment. The court held that, although the employee had written the software in his own time and on his own equipment, nonetheless it was not unarguable that, as it fell within the scope of the tasks he was employed to carry out, the computer programs were created within the course of his employment.

### 3.1.3 Agreements to the contrary

Finally, it should be noted that the copyright in works made in the course of employment will not be treated as belonging to the employer where there is an agreement to the contrary. Such an agreement may be written or oral, express, or implied.<sup>79</sup>

In some cases, such agreements have been implied from custom. For example, in *Noah v. Shuba* Mummery J said that if the skin-piercing guide had been written in the course of Dr Noah's employment, he would nonetheless have implied a term into Dr Noah's contract that the copyright remained with the employee.<sup>80</sup> The reason for this was the Public Health Laboratory Service's long-standing practice of allowing its employees to act as if they owned copyright in their works: they allowed employees to assign copyright to publishers, claim royalties, and with respect to the case itself, did not assert that they owned copyright. This decision has important ramifications where employers allow employees to act as if they own copyright (whereas in fact they may not).

## 3.2 CROWN COPYRIGHT

Another exception to the general rule that the author is the first owner relates to works governed by Crown copyright. Where a work is made by an officer or servant of the Crown in the course of their duties,<sup>81</sup> copyright in the work belongs to the Crown and not to the author of the work.<sup>82</sup>

## 3.3 PARLIAMENTARY COPYRIGHT

Where a work is made under the direction or control of the House of Commons or the House of Lords, the respective House owns copyright therein.<sup>83</sup> Such Parliamentary copyright lasts for 50 years from the year in which the work was made. All Bills introduced into

<sup>78</sup> [1989] FSR 361.

<sup>79</sup> As we will see there is a general requirement that assignments of copyright be in writing. However, such formality is unnecessary with respect to the agreement reversing the presumption of initial ownership, which can be oral or implied. But to refer to a relationship as not being one of employment was not an implied agreement that copyright was to vest in the employee: *Robin Ray v. Classic FM* [1998] FSR 622.

<sup>80</sup> *Noah v. Shuba* [1991] FSR 14. <sup>81</sup> CDPA ss. 163, 164.

<sup>82</sup> CDPA s. 163. It lasts for 125 years from when the work is made or 50 years from its commercial publication. Crown copyright also exists in all Acts of Parliament and Measures of the General Synod of the Church of England.

<sup>83</sup> CDPA s. 164. The Government of Wales Act 1998, Sched. 12, has added to this list: 'any sound recording, film, or live broadcast of the National Assembly for Wales which is made by or under the direction or control of the Assembly.'

Parliament attract Parliamentary copyright, but this ceases on Royal Assent, withdrawal, or rejection of the Bill.<sup>84</sup>

### 3.4 INTERNATIONAL ORGANIZATIONS

Where a literary, dramatic, musical, or artistic work is made by an officer or employee of an 'international organization',<sup>85</sup> the organization is the first owner of the resulting copyright.<sup>86</sup>

### 3.5 COMMISSIONED WORKS AND EQUITABLE ASSIGNMENT

Another exception to the general rule that the author is first owner arises, in limited circumstances, where a person commissions someone to make a work. Under the Copyright, Designs and Patents Act 1988, copyright in a commissioned work belongs to the author of the commissioned work.<sup>87</sup> However, in certain circumstances the courts may infer that an independent contractor is subject to an implied obligation to assign the copyright to the commissioner. This may give rise to a trust with respect to the copyright in the commissioned work, and render the commissioner the equitable owner. A good example is provided by *Griggs v. Raben Footwear*, where Griggs, distributors of DR. MARTEN'S AIRWAIR, in 1988 commissioned the advertising agency, Jordan, to produce a logo for it.<sup>88</sup> Evans, who did freelance work for Jordan, produced the logo and was paid at his standard rate of £15 an hour. Nothing was said about copyright in the logo. In 2002, Evans purported to assign copyright in the artistic work to Raben Footwear, an Australian competitor of Griggs. In response, Griggs brought an action seeking a declaration that it was beneficial owner of copyright, and an assignment of legal title. Peter Prescott QC, sitting as Deputy High Court judge, granted the relief sought. He held that, while Evans was the author, and first owner of the legal title, an agreement that copyright was to belong to Griggs was to be implied. Such an agreement was necessary to give business efficacy to the arrangement, under which it was clearly contemplated that Griggs would be able to use the logo and stop others from using it.<sup>89</sup> This could only be achieved if the implied agreement was to assign the copyright or give a perpetual exclusive licence (and the latter solution would be less convenient for Evans). The Court of Appeal affirmed.

<sup>84</sup> CDPA ss. 165–7.

<sup>85</sup> This means an organization the members of which include one or more states: CDPA s. 178.

<sup>86</sup> CDPA s. 168.

<sup>87</sup> Under the 1956 Act, a party commissioning a photograph, portrait, or engraving for value presumptively acquired copyright in that work: CA 1956 s. 4(3), Sched. 8, para. 1(a). When this position was changed in the 1988 Act, commissioners of photographers and films for private and domestic purposes were 'compensated' with the so-called 'moral' right of 'privacy': CDPA s. 85. The right covers issuing of copies of the work to the public, its exhibition in public, and its communication to the public.

<sup>88</sup> *R. Griggs Group v. Raben Footwear* [2004] FSR (31) 673; [2005] FSR (31) 706 (CA). This decision is remarkable in two respects. First, because the implied assignment is in favour of a third party, Griggs, rather than the design company, Jordan. The more orthodox (if artificial) view would be that there are two implied agreements: one between Jordan and Evans, and another between Griggs and Jordan. The distinction would have been important if, for example, Jordan had decided the logo supplied by Evans was unsuitable. Second, the agreement to assign is implied in this case even though Evans did not know of the use intended by Griggs, Evans thinking the use was for point-of-sale only. The judge seems to have ignored this on the ground that Evans was 'indifferent' to the use, and had he known he would have accepted the more extensive use without charging a different fee.

<sup>89</sup> Para. 57.

Implied agreements to assign have also been found where a choreographer undertook to arrange certain dances for the Russian ballet;<sup>90</sup> a design of a trade mark was produced;<sup>91</sup> a person upgraded a previous version of a computer program;<sup>92</sup> and a person arranged for the making of a sound recording.<sup>93</sup> These decisions amount to judicial variations of a clear legislative scheme. Clearly, the judges are looking at transactions after the event, and are motivated by gut feelings of justice to prevent opportunistic behaviour by creators. However, the impact of the decisions is to undermine a clear scheme which is designed both to achieve certainty in transactions and to protect authors. It does so by requiring parties to allocate ownership through written assignments and in so doing requires those acquiring rights to specify what they want, thus giving authors an opportunity to reflect upon whether they wish to transfer all those rights. Under that scheme, the penalty for those commissioners who fail to organize their legal rights properly, is that they risk having to bargain for them later. The courts, by repeatedly responding to their sense that rights should follow money, remove this ‘penalty’ and, with it, undermine the goals that the statutory scheme aims to achieve. The better view is that these cases should be confined to their specific facts.<sup>94</sup>

### 3.6 BREACH OF CONFIDENCE

It also seems that copyright in works that are created in breach of a fiduciary duty or in breach of confidence will be held on constructive trust for the person to whom the duty was owed.<sup>95</sup> The same may be true of works made ‘in circumstances involving the invasion of legal or equitable rights of the [claimant] or breach of the obligation of the maker to the [claimant].’<sup>96</sup>

## 4 HARMONIZATION

Questions of authorship, and the position of employed authors, are matters on which there has been little harmonization. As we have already noted, the issue was tackled, but only partially, in relation to films, by stating that the director is to be regarded as one of the authors of a cinematographic work. The only other harmonization has been in respect of the position of

<sup>90</sup> *Massine v. De Basil* [1936–45] *MacG CC* 223. See also *Brighton v. Jones* [2005] *FSR* (16) 288 (paras 57–8) (contributions of director to play were made on behalf of theatre, and so director was unable to claim copyright therein).

<sup>91</sup> *Auvi Trade Mark* [1995] *FSR* 288; *R. Griggs Group v. Raben Footwear* (2 Dec. 2003) [2003] *EWHC* 2914.

<sup>92</sup> *Flanders v. Richardson* [1993] *FSR* 497, 516–19, Ferris J held that where a computer program was improved, in circumstances where there was an acceptance or understanding that the plaintiff owned all the rights in the program, the court would hold the plaintiff to be the copyright owner. (Ferris J relied on *Massine v. De Basil* [1936–45] *MacG CC* 223.)

<sup>93</sup> *A & M Records v. Video Collection* [1995] *EMLR* 25.

<sup>94</sup> For example, *Saphena Computing v. Allied Collection Agencies* [1995] *FSR* 616, distinguishing *Warner v. Gestetner* [1988] *EIPR D*–89.

<sup>95</sup> *A-G v. Guardian (No. 2)* [1990] *AC* 109, 263, 276. Insofar as the constructive trust analysis is adopted there is no obvious reason why the analysis should be restricted to cases of breach of duties owed to the Crown. See *Ultraframe UK v. Clayton (No. 2)* [2003] *EWCA Civ* 1805 (director held unregistered design rights on trust for company). See below at pp. 1064–5.

<sup>96</sup> *Australian Broadcasting Corp v. Lenah Game Meats Pty. Ltd* (2001) 208 *CLR* 199 *per* Gummow and Hayne JJ at paras. 101–2 and *per* Callinan J at para. 309.

authors who create computer programs while employed: the Computer Programs Directive requires that the employer exclusively shall be entitled to exercise all economic rights in programs so created. Although differences in the rules operated by member states may lead to different conclusions as to who is an author or owner of a particular copyright work, it seems unlikely that the Commission will attempt harmonization in the near future. This is because these rules raise thorny political issues which go well beyond the field of copyright, in particular touching on national traditions as regards labour relations.

5	The Right to Perform, Show, or Play the Work in Public	146			

### 1 INTRODUCTION

This chapter is concerned with the rights that the law confers on the copyright owner. The scope of these rights is important insofar as it determines the types of activity which, unless done with the copyright owner's consent, amount to an infringement of the owner's copyright.

One of the most consistent themes in the history of copyright law is that the types of activity that have fallen within the copyright owner's control have steadily expanded. For example, the 1710 Statute of Anne conferred on authors and proprietors of books the limited right to 'print and reprint' those books. In the early nineteenth century, the copyright owner's monopoly as regards musical and dramatic works was extended to cover not only the reprinting of the work, but also the public representation of the work. In 1911, the reproduction right was expanded from the right to print and reprint to the right to 'copy,' which included copying in different dimensions. The same reforms conferred the right to 'adapt' a work, that is, a right to prevent translation and conversion into dramatic forms of literary works and arrangements of musical works. With the advent of broadcasting, the copyright owner's right was interpreted as covering broadcasting, and in 1956 a specific broadcasting right was added to the copyright owner's rights. Since then, further rights to distribute, rent, and lend copies have also been added, and the 'broadcasting right' has been transformed into a right to communicate a work to the

public.<sup>1</sup> While the copyright owner is able to control the use that can be made of the work in many circumstances, there are still some that do not fall within the owner's control. If we take the case of the rights in a book, for example, the copyright owner is not able, at least yet, to control reading, browsing, or resale of the book.

For the most part, the rights have developed in a piecemeal way in response to external pressures: notably to technological change. As well as producing a complicated and illogical system of rights, the cumulative and reactionary way in which the rights have developed has also led to a degree of overlap between them.<sup>2</sup> While the expansion of the rights granted to the copyright owner has continued with the implementation of the Information Society Directive,<sup>3</sup> there have been growing signs that members of the judiciary are becoming suspicious about the over-expansion of copyright and the dangers that this poses for users and consumers of copyright.<sup>4</sup> What effect this will have upon copyright infringement has yet to be seen, though it might mean that the tendency to interpret the rights in favour of copyright owners may decline.<sup>5</sup>

The primary rights that are currently granted to copyright owners are set out in sections 16–21 of the 1988 Act. Anyone who carries out any of these activities, or authorizes someone else to carry out these activities, is liable for primary infringement. This will not be the case, however, if the defendant has the permission of the copyright owner or can show that the activity falls within one of the defences available to them. While the nature of the rights which are granted varies according to the type of work in question, these include the exclusive right to:

- (i) copy the work (reproduction right);
- (ii) issue copies of the work to the public (distribution right);
- (iii) rent or lend the work to the public (rental or lending right);
- (iv) perform, show, or play the work in public (public performance right);
- (v) communicate the work to the public;
- (vi) make an adaptation of the work, or do any of the above acts in relation to an adaptation (right of adaptation); or
- (vii) authorize others to carry out any of these activities.

It should be noted that the particular rights that are granted to copyright owners vary depending on the type of work which is protected.<sup>6</sup> In particular, while the right of reproduction and the right to issue copies of the work to the public exist in relation to all types of work, the other rights only apply to certain of them. For example, the performing right

<sup>1</sup> As from Oct. 31, 2003 as a result of Copyright and Related Rights Regulations 2003 SI 2003/2498 implementation of Info. Soc. Dir., Art. 3.

<sup>2</sup> For example, between the right of reproduction and the right of adaptation.

<sup>3</sup> Copyright and Related Rights Regulations 2003 SI 2003/2498.

<sup>4</sup> H. Laddie, 'Copyright: Over-Strength, Over-Regulated, Over-Rated?' [1996] 5 *EIPR* 253; A. Mason, 'Developments in the Law of Copyright and Public Access to Information' [1997] *EIPR* 636.

<sup>5</sup> On previous tendencies to interpret rights broadly in favour of authors see, e.g. *Gambart v. Ball* (1863) 14 *CB (NS)* 306; *Harms v. Martans* [1927] 1 *Ch* 526, 534; *Message v. BBC* [1927] 2 *KB* 543, 548–9.

<sup>6</sup> The rights, as we will see, are ultimately divisible according to convenience. Thus terms such as 'mechanical rights' and 'synchronization rights' have no place in CDPA s. 16. The mechanical copyright refers to a musical copyright owner's right to make a sound recording and is simply an example of the reproduction right. The synchronization right refers to the right to incorporate a record into a film soundtrack.

Table 6.1 Rights

Works	To copy the work (s. 17)	To issue copies of the work to the public (s. 18)	To rent or lend the work (s. 18A)	To perform or show the work in public (s. 19)	To communicate the work to the public (s. 20)	To make an adaptation (s. 21)
Literary, dramatic, and musical	✓	✓	✓	✓	✓	✓
Artistic	✓	✓	✓ (but not building/ applied art)	NO	✓	NO
Film	✓	✓	✓	✓	✓	NO
Sound recordings	✓	✓	✓	✓	✓	NO
Broadcasts	✓	✓	NO	✓	✓	NO
Typographical	✓	✓	NO	NO	NO	NO

applies to all works except artistic works and typographical arrangements; the right to communicate the work to the public applies to all works except typographical arrangements; and the right to make an adaptation of a work only applies to literary, dramatic, or musical works. Care must be taken to check which rights a copyright owner is given by the 1988 Act.

One of the key features of the restricted activities found in sections 16–21 is that they are based on a notion of strict liability. This means that the state of mind of the defendant is not relevant when determining whether an infringement has taken place. As such, it does not matter if a defendant knew that the work was protected by copyright or that the claimant owned the work. Nor does it matter that the defendant incorrectly believed that they had permission to copy the work. All that matters, at least in relation to primary infringement, is that the defendant copied the claimant's work. It should be noted that while the defendant's innocence is not a relevant factor in determining whether they have infringed copyright, it may be relevant when damages are being determined.<sup>7</sup>

In addition to the primary rights set out in sections 16–21, the 1988 Act also provides copyright owners with the ability to protect against secondary infringements (sections 22–6). A defendant may be liable for secondary infringement if, in the commercial exploitation of copies or articles specifically adapted to make copies, the defendant knew or had reason to believe that the copies were or would be infringements when made.<sup>8</sup> We deal with secondary infringement in Chapter 8.<sup>9</sup>

<sup>7</sup> CDPA s. 97(1). See below at p. 1117.

<sup>8</sup> CDPA ss. 22–4, 27. See Laddie *et al.*, ch. 10.

<sup>9</sup> See below at Ch. 8, Section 6.

## 2 THE RIGHT TO COPY THE WORK: THE RIGHT OF REPRODUCTION

The first and best-known right given to copyright owners is the right to copy the work (section 17).<sup>10</sup> The right to copy the work is the oldest of the rights granted to owners of copyright. While the right applies to all works, the scope of the right varies depending on the type of work in question. Having said that, one factor that is common to all works is that infringement takes place whether the copy is permanent, transient, temporary, or incidental to some other use of the work.<sup>11</sup> This means a person will infringe (absent a defence) when they reproduce a copyright work on a computer screen, or store it in computer memory, as much as when they copy the work from disk to disk. Activities associated with the internet, such as ‘framing’ (taking material from one site and placing it on another, though reframed with the latter’s get-up) will be straightforward cases of copying. So will unauthorized acts of up-loading on to sites, or down-loading from peer-to-peer systems like Napster. The problems posed by the internet for copyright holders are, in essence, ones of detection and enforcement rather than absence of liability.

### 2.1 LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

When the 1710 Statute of Anne first granted copyright to books, the right was limited to the right to print and reprint copies of those books. Within a relatively short period of time, it became clear that if the rights of the copyright owner were limited to situations where the work was copied identically, it would undermine the value of the property. It would fail, for example, to protect an owner against someone making minor changes to the work (thus rendering the ‘copied’ work non-identical). In order to protect against such uses, the scope of copyright protection was expanded to include non-identical or ‘colourable’ copying. Even so, the emergence of new practices of replication, use, and distribution of works (which were often but not always linked to new technologies) has repeatedly given rise to doubts about what amounts to a reproduction. Some of these doubts were resolved in a straightforward manner. For example, photographic reproduction was readily treated as equivalent to reprinting.<sup>12</sup> On other occasions, however, it has been more difficult to accommodate the new uses within the existing conceptions of reproduction. For example, at the turn of the twentieth century it was held that a phonographic record was not a copy of sheet music for the purposes of the Literary Copyright Act 1842.<sup>13</sup> Similarly, the courts have held that the making of *tableaux vivants* (which is the practice of performers dressing up as characters from paintings so as to produce a ‘live version’ of the painting), did not amount to an infringement of the copyright in the painting.<sup>14</sup>

<sup>10</sup> It is called the ‘Crown right’ in Reinbothe and von Lewinski (2002) 312. For an argument that it should be jettisoned, in favour of a general right to control commercial exploitation, see J. Litman, *Digital Copyright* (2001), 180 ff.

<sup>11</sup> CDPA s. 17(6). *R v. Higgs* [2008] EWCA Civ 1324 (para. 9) (RAM copies of computer games generated when game is played are infringing). See Information Society Directive, Arts. 2 and 5 (certain temporary acts are to be deemed to be non-infringing).

<sup>12</sup> For example, *Gambart v. Ball* (1863) 14 CB (NS) 306; *Boosey v. Whight* [1900] 1 Ch 122, 123.

<sup>13</sup> *Newmark v. The National Phonograph Company Ltd* (1907) 23 TLR 439.

<sup>14</sup> *Hanfstaengl v. Empire Palace* [1894] 2 Ch 1; but after 1911 see *Bradbury Agnew v. Day* (1916) 32 TLR 349.

The 1988 Act attempts to minimize these kind of difficulties by using a technologically neutral concept of reproduction. This is reflected in the fact that, in relation to literary, dramatic, musical, and artistic works, copying means ‘reproducing the work in any material form.’<sup>15</sup> This means that, as well as protecting owners against identical copying of the work (such as where a book is reprinted), a defendant may still infringe where they make a non-identical copy of a literary, dramatic, musical, or artistic work. In these instances the question arises: how different from the ‘original’ work can a copy be and still infringe?

The 1988 Act provides some guidance in this matter. It states, for example, that reproduction includes storing the work in any medium by electronic means. This means that the storing of a work on a computer amounts to a reproduction in material form. In relation to artistic works, the 1988 Act indicates that a person will reproduce a work if there is a change of dimensions. This means that photographing a sculpture, and making a car exhaust pipe from a design drawing, will be reproductions.<sup>16</sup>

Beyond the specific examples listed in the 1988 Act, the question of how different a copied work can be from the ‘original’ work and still infringe is a question decided by the courts on the particular facts of the case. It is clear that a photocopy of a book,<sup>17</sup> an engraving of a painting, a painting of a photograph, and a sound recording of a song are (potentially) reproductions.<sup>18</sup> Beyond this, it is impossible to predict in advance the exact point at which the translation of a work from one format into another will be treated as a ‘reproduction.’ It seems highly likely that the conversion of a work into digital form—from symbols perceptible and understandable to the senses into series of ones and noughts—will be treated as a reproduction.<sup>19</sup>

While copyright owners are protected against change of form in a wide variety of situations, nonetheless there are limits to the scope of the protection. In particular, the courts have stated that, in order to infringe, the derived form must be ‘objectively similar’ to the copyright work.<sup>20</sup> The requirement of objective similarity means that, to infringe, the relevant part of the defendant’s work must be a copy or representation of the whole or part of the original work.<sup>21</sup> The question of whether the defendant’s work is objectively similar to the copyright work has arisen in two situations: both concerned with infringement of literary copyrights.

The first is where the copyright work consists of *instructions* how to make or do something. While literary copyright in the instructions will be infringed if the instructions are photocopied or are repeated in different words,<sup>22</sup> the copyright will not be infringed where someone follows the instructions. Thus a person will not infringe the literary copyright in a recipe if they follow the instructions and bake a cake to the recipe.<sup>23</sup> This is because what is protected is the literary effort in creating the recipe as a work of information and not the cake *per se*.

<sup>15</sup> CDPA s. 17(2).      <sup>16</sup> CDPA s. 17(3).

<sup>17</sup> *Norowzian v. Arks* [1998] FSR 394, 398 (‘copying of a book is not restricted to simply photocopying the pages from the book but extends to writing the work, retyping it any form whatsoever, dictating it into a tape machine or any other means of reproducing the work in a material form’).

<sup>18</sup> *Bauman v. Fussell* [1978] RPC 485. However, it has been held that where someone follows the instructions on a knitting pattern so as to make up a jumper this is not a reproduction. This was because the pattern and jumper were not objectively similar.

<sup>19</sup> *Autospin (Oil Seals) v. Beehive Spinning (A Firm)* [1995] RPC 683, 698. (If a literary work precisely defines the shape of an article, copyright may be infringed by making the article or copying it.)

<sup>20</sup> *Francis Day Hunter v. Bron* [1963] Ch 587, 623.

<sup>21</sup> *Brigid Foley v. Ellot* [1982] RPC 433 (Megarry VC).

<sup>22</sup> *Elanco v. Mandops* [1980] RPC 213. See also *M.S. Associates v. Power* [1988] FSR 242 (interlocutory proceeding for alleged infringement of computer program).

<sup>23</sup> *Davis (J. & S.) Holdings v. Wright Health Group* [1988] RPC 403, 414. *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 698.

Similarly, a person who knits clothes according to a knitting guide does not infringe copyright in the guide.<sup>24</sup>

The need for objective similarity is also important where the copyright work *describes* something. As with instructional works, the key issue here is: when is a description replicated? While copyright in the literary work will be infringed if the work is photocopied, the position is less clear where someone makes or uses the object that has been described in a two-dimensional format. The problem has become acute with developments in computer-aided design (CAD) which mean that it is now 'possible to define any shape in words and letters. Therefore a design in a drawing can be defined equally accurately in non-graphic notation. In fact many three-dimensional articles are now designed on computers. A literary work consisting of computer code therefore represents the three-dimensional article.'<sup>25</sup>

The question of the protection available to a descriptive literary work was considered by Pumfrey J in *Sandman v. Panasonic*.<sup>26</sup> This was a copyright infringement action brought in respect of two circuit diagrams that were included in an article published in the journal *Wireless World*. The claimant argued that the copyright that existed in the two-dimensional literary work was infringed when the design was made into a three-dimensional circuit and incorporated into amplifiers, CD players, radio tuners, and cassette decks.

Pumfrey J began by noting that the chief problem confronting the claimant was Lord Oliver's comment in *Interlego* that protection for change of form from 2D to 3D was limited to artistic works. On the strength of this Pumfrey J said that there may appear to be 'no way out of this difficulty, if one accepts that a literary-work is two-dimensional.' Pumfrey J went on to say, however, that 'I suspect that the proper answer is that the circuit itself is a reproduction because it still contains all the literary content of the literary work, albeit in a form which would require analysis for it to be extracted.'<sup>27</sup> That is, Pumfrey J accepted that in certain circumstances a two-dimensional literary work that described something could be reproduced in a three-dimensional form.

Two points are pertinent here. The first is that it is necessary to distinguish between factual and non-factual descriptions. The reason for this is that it is much more likely that a (factual) description written by an engineer would be protected than a description written by a novelist or a poet. It is unlikely that the copyright in a novel that describes a particular scene will ever be infringed when someone draws it.<sup>28</sup> The second is that it seems that a literary work that describes something will only provide protection against a 'reproduction' of the work where the description is very detailed. Thus, someone may infringe where they make a three-dimensional article from a data file in a computer (a literary work) which *precisely defines* the shape of the article.<sup>29</sup> By limiting protection to situations where the object is precisely defined, this means that the problem of inhibiting creation in the same area is avoided.

## 2.2 SOUND RECORDINGS AND FILMS

The definition of 'reproduction' used in relation to films and sound recordings is narrower than in relation to literary, dramatic, musical, and artistic works. As we saw earlier,

<sup>24</sup> *Brigid Foley v. Elloit* [1982] RPC 433 ('there is no reproduction of the words and numerals in the knitting guides in the knitted garments produced by following the instructions'). *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 701. (No infringement of the claimant's charts for calculating the dimension of oil seals when using them to make such oil seals.)

<sup>25</sup> *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 698. <sup>26</sup> [1998] FSR 651. <sup>27</sup> *Ibid.*

<sup>28</sup> *Laddie et al.*, para. 7–38. <sup>29</sup> *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 701.

entrepreneurial works (which are seen as the products more of investment than of creativity) are given a ‘thinner’ protection than is given to authorial works.<sup>30</sup> This is reflected in the fact that the scope of the reproduction right is inextricably linked to the way the particular work is defined.<sup>31</sup> Sound recordings are defined as the ‘recording of sounds from which the sounds may be reproduced’.<sup>32</sup> Consequently, what is protected in relation to sound recordings is not the content *per se*—the song, storyline, plot, or language—or the music or lyrics (which are protected, if at all, as authorial works). Instead, copyright protects the recording of these sounds.<sup>33</sup> Similarly, because a film is defined as a recording on a medium from which a moving image may be produced, the courts have held that film copyright protects the recording of the image (rather than the image itself).<sup>34</sup>

One of the consequences of reproduction being defined very narrowly is that copyright in a sound recording of a speech is not infringed where a person transcribes the speech. Similarly, copyright in a film is not infringed when somebody writes a description of the film, or stages a play replicating events in the film. Moreover, there is no reproduction where a person records contents of a similar nature or style to those embodied on the claimant’s (film or sound) recording.<sup>35</sup> Likewise, the reshooting of a film sequence (in which not a single frame of the copyright film had been included) was held not to be a copy for the purpose of the 1988 Act.<sup>36</sup> This is the case even if the second film closely resembles and imitates the claimant’s copyright film, or reproduces the essential features of that film.<sup>37</sup> Similarly, copyright in a sound recording is not infringed where a person remakes (or ‘covers’) the same song or records the same song performed in a similar style (a.k.a. ‘sound-alikes’).<sup>38</sup> However, it should be noted that, while an entrepreneurial copyright will not be infringed where a new recording of identical or similar sounds or images is made, this might infringe copyright in an underlying work such as the music, lyrics, or screenplay,<sup>39</sup> or violate some other intellectual property right.<sup>40</sup>

Having observed that the reproduction right in relation to films and sound recording is confined to the reproduction of the recording, it should be noted that the recording will be treated as having being reproduced even though the recording medium has changed (as long as the particular sounds or images embodied on the claimant’s recording are replicated). For example, a reproduction occurs where a person makes a tape recording of a CD, records a film on a digital camcorder, or up-loads or down-loads a sound recording from the internet. Even though the Act does not specify that copying of a film or sound recording includes storing it by electronic means, the better view is that it does.<sup>41</sup>

<sup>30</sup> It is important to remember that the narrow protection given to entrepreneurial works is balanced by the fact that protection arises irrespective of whether or not the work is original.

<sup>31</sup> This is not the case with photographs, where the copyright extends to the content or arrangement, not just the ‘recording’: *Creation Records v. News Group Newspapers* [1997] *EMLR* 444, 450.

<sup>32</sup> CDPA s. 5A(1)(a).

<sup>33</sup> In the case of broadcasts the definitions refer to the transmission or sending of visual images, sounds, or other information; CDPA s. 6(1).

<sup>34</sup> CDPA s. 5B(1). <sup>35</sup> *Norowzian v. Arks (No. 1)* [1998] *FSR* 394. <sup>36</sup> *Ibid*, 400.

<sup>37</sup> *Ibid*, 398. <sup>38</sup> *Ibid*, 394; *CBS Records v. Telemark* (1988) 79 *ALR* 604; (1987) 9 *IPR* 440.

<sup>39</sup> *Norowzian v. Arks (No. 1)* [1998] *FSR* 394.

<sup>40</sup> For example, by passing the recording off as the recording of the claimant. Cf. *Sim v. Heinz* [1959] 1 *WLR* 313; [1959] *RPC* 75 (CA).

<sup>41</sup> Copinger, paras. 7–70, p. 422.

### 2.3 BROADCASTS

The 1988 Act provides little guidance as to what it means to copy a broadcast. However, it is clear that the making of an audiotape of a radio broadcast or a videotape of any image forming part of a television broadcast would amount to a reproduction of the broadcast (as well as the contents of the broadcast, be they sound recordings, films, or other works). In contrast with some jurisdictions, UK law does not differentiate between the first fixation and other reproductions of broadcasts.<sup>42</sup> Following the logic of entrepreneurial copyright it seems that the reproduction of a broadcast only protects the information, sound, and images sent through particular signals. Thus, a person would not infringe if they summarized a broadcast, or described its contents. Similarly, the right to copy the broadcast would not be infringed if someone broadcast exactly the same sound recordings in the same order as was used by another broadcaster.

### 2.4 TYPOGRAPHICAL ARRANGEMENTS

The scope of the reproduction right in relation to typographical arrangements is very narrow. This is because copying of a typographical arrangement means making a facsimile copy of the arrangement.<sup>43</sup> Although 'facsimile' is defined to include enlargements and reductions,<sup>44</sup> it seems to be confined to reproduction by way of reprography, photocopies, digital scanning, faxing, and little more. Retyping a work in a different font is a sure way of avoiding infringement of copyright in the typographical arrangement.

## 3 ISSUING COPIES OF THE WORK TO THE PUBLIC: THE DISTRIBUTION RIGHT

The owner of copyright in all categories of work is given the right to issue copies of the work to the public (section 18). This is commonly known as the 'distribution right'.<sup>45</sup> Section 18 explains that issuing copies of a work to the public means:<sup>46</sup>

- (a) the act of putting into circulation in the EEA copies not previously put into circulation in the EEA by or with the consent of the copyright owner; or
- (b) the act of putting into circulation outside the EEA copies not previously put into circulation in the EEA or elsewhere.

The distribution right is given in respect of the issuing of each and every copy (including the original).<sup>47</sup> As such it needs to be distinguished from a right to make the works available to the public for the first time (that is a 'publication' or 'divulcation' right of the kind previously recognized in UK law). Essentially, the distribution right is a right to put each tangible copy (which

<sup>42</sup> Cf. Rental Rights Dir., Art. 6 (fixation), Art. 7 (reproduction of fixations).

<sup>43</sup> CDPA s. 17(5). <sup>44</sup> CDPA s. 178.

<sup>45</sup> The 1988 Act has been amended twice in this regard to implement the Software Dir., Art. 4(c) and the Rental Rights Dir., Art. 9. No amendments were thought necessary to implement Database Dir., Art. 5(c) or Info. Soc. Dir., Art. 4 (which, in turn, implements WIPO Copyright Treaty, Art. 6).

<sup>46</sup> CDPA s. 18(1). <sup>47</sup> CDPA s. 18(4).

has not previously been circulated) into commercial circulation.<sup>48</sup> Once particular copies are in circulation (at least where the first circulation was consensual), the right no longer operates in relation to those objects. As the right of distribution does not include ‘any subsequent distribution,’<sup>49</sup> copyright owners cannot control resale.<sup>50</sup>

But what acts count as ‘issuing’ to the public? Sub-section 18(3) indicates that once a copy is in circulation subsequent acts of ‘distribution, sale, hiring or loan of copies’ or ‘importation’ do not infringe. On one reading, at least, this implies that putting into circulation includes not only sale and other transfers of articles but also import,<sup>51</sup> hire, and even loan. In *Peek & Cloppenburg*, it was suggested by a German court, in a reference to the ECJ, that distribution ‘by sale or otherwise’ (the words of article 4(1) of the Information Society Directive) could be interpreted to encompass display in a shop of an article for use by customers as well as display in a shop window.<sup>52</sup> However, such a broad interpretation of distribution (under UK or European law) presents the possibility that the distribution right duplicates the rental and lending rights, but is not subject to their exception and limitations.<sup>53</sup> The German interpretation was rejected by the ECJ which took the view that distribution required the transfer of ownership of the object embodying the work. Consequently, distribution includes the import, sale,<sup>54</sup> and gratuitous transfer of any tangible article embodying the work. Advocate-General Sharpston’s Opinion uses different reasoning to reach a similar conclusion.<sup>55</sup>

<sup>48</sup> Info. Soc. Dir., Art. 4(1) refers to distribution ‘by sale or otherwise,’ whereas CDPA s. 18 refers to ‘putting into circulation.’ Info. Soc. Dir., Recital 28 indicates that distribution relates to distribution in the form of a ‘tangible article’.

<sup>49</sup> CDPA s. 18(3)(a). The Rental Rights Dir., Art. 9(2) and the Software Dir., Art. 4(c) refer to exhaustion on ‘first sale,’ whereas Info. Soc. Dir., Art. 4(2) allows for exhaustion in cases of ‘first sale or other transfer of ownership in the Community’.

<sup>50</sup> This corresponds with the idea of exhaustion of rights. Note, however, proposals for a resale royalty right: see Ch. 13.

<sup>51</sup> *Independiente Ltd v. Music Trading On-Line (HK) Ltd* [2007] EWHC 533 (Ch), [2007] FSR 525 (supplier of CDs was held to have put them into circulation even though the items were posted outside UK, the customer paid a price which included a postage and packaging component, and that according to the terms of the agreement, property passed when the credit card payment had been made and the individual item had been allocated to the customer. The claimants argued that delivery through the UK postal system was the defendant’s act of putting the CDs into circulation, relying on s. 32(4) of the Sale of Goods Act 1979 which regulates the notion of delivery to consumers. Evans-Lombe J agreed with the claimant, distinguishing the House of Lords decision in *Sabaf SpA v. MFI Furniture* [2005] RPC 10, a patent case, where the consigner of goods (which were said to infringe the claimant’s patent) from Italy to the UK was held not to be importers as having concerned sale between businesses in which the property passed when the goods were dispatched. But cf Copinger, para 7–80, p. 427 (‘it is difficult to see how the mere act of importation could amount to putting copies into circulation’). However, it seems to us that the clear intention of the legislation is that copyright owners be entitled to prevent the import into the EEA of copies not previously put into circulation there, so that member states must interpret the distribution right as including importation.

<sup>52</sup> *Peek & Cloppenburg KG v. Cassina SpA*, Case C–456/06 (17 April 2008) (concerning copies of Le Corbusier-designed furniture that was not protected by copyright in Italy but was in Germany). It should be noted that if the same facts fell to be analysed under British, as opposed to German, law the articles would have been infringing copies and the display thereof secondary infringements under CDPA, s.24.

<sup>53</sup> For example, those in Rental Dir., Art 3(2) (non-application to buildings and works of applied art), Recital 10 (certain acts not treated as lending), and derogations permitted to member states under Art. 6.

<sup>54</sup> Possibly also an ‘offer of sale’: *KK Sony Computer Entertainment v. Pacific Game Technology Ltd* [2006] EWHC 2509 (Ch) (holding that the defendant, a Hong Kong-based company, had breached s. 18 (as well as infringed various trade mark rights and rights in registered designs) when it advertised on its web site the sale of PlayStation Consoles (which had been placed on the market by the claimant in Japan) and then dispatched a console to the claimant’s agents in England).

<sup>55</sup> *Peek & Cloppenburg KG v. Cassina SpA*, Case C–456/06 (17 April 2008) para. 41.

Even if it is uncontroversial that issuing covers 'sale,' the point in the chain of distribution when a copy is issued 'to the public' is unclear.<sup>56</sup> On one view, a copy will be issued to the public (and thus require the copyright owner's authority) when it is first sold from a manufacturer to a wholesaler. Thereafter, further sales will not require authorization. On another view, a copy will be issued to the public when a copy reaches the hands of a member of the public. Under this approach, the relevant act would occur when the retailer sold a copy of the work to a consumer.<sup>57</sup> The wording of section 18 is ambiguous and can support either interpretation, though EC legislation (which section 18 is supposed to implement) suggests that distribution takes place on first sale or other transfer of ownership.

It is important to note that the distribution right incorporates certain geographical distinctions. In particular, the distribution right was drafted to recognize the principle of Community-wide exhaustion. That is, once tangible copies have been placed on the market in the EEA, a copyright owner cannot utilize national rights to prevent further circulation within the EEA.<sup>58</sup> Section 18 achieves Community exhaustion by deeming the act of issuing not to include 'any subsequent distribution, sale, hiring or loan of copies previously put into circulation . . . or any subsequent importation of such copies into the UK or another EEA State.'<sup>59</sup> Consequently, if a copy is put on the market in the Netherlands and then imported into and sold in the United Kingdom, the import to and sale in the United Kingdom do not infringe the issuing right. The corollary of Community-wide exhaustion was that there was no 'international exhaustion.'<sup>60</sup> This means that the distribution right can be used to prevent importing of copies of the work to the EEA. Consequently, the issuing right may be invoked to prevent the parallel import to the United Kingdom of copies marketed outside the EEA even though that marketing was by or with the consent of the relevant copyright owner.<sup>61</sup> So, for example, UK copyright owners were entitled to prevent a Hong Kong company from supplying CDs to UK-based consumers: the copyright-owners' rights were not exhausted through marketing in Hong Kong, and sending the CDs to UK consumers counted as placing copies in circulation in the UK.<sup>62</sup>

## 4 RENTAL AND LENDING RIGHTS

While subsequent distribution of copies of the work is not generally within the copyright-owner's control, the owner of copyright does have the right to control the rental and lending of

<sup>56</sup> J. Phillips and L. Bently, 'Copyright Issues: The Mysteries of Section 18' [1999] *EIPR* 132.

<sup>57</sup> Some member states recognise a *droit de destination*, the right to control the destination of the work.

<sup>58</sup> Info. Soc. Dir., Art. 4(2). <sup>59</sup> CDPA s. 18(3).

<sup>60</sup> Info. Soc. Dir., Recital 28. This was confirmed (as a matter of EC law) by the ECJ in *Laserdisken ApS v. Kulturministeriet*, Case C-479/04 [2006] *ECR I*-8089, [2007] *CMLR* (6) 187.

<sup>61</sup> Issuing implicitly includes such 'importation' as a result of the proviso to s. 18(3)(b), which having excluded import into the UK or another EEA state from the concept of issuing, provides that the exclusion does not apply so far as the issuing concerned is issuing in the EEA of copies not previously put into circulation in the EEA by or with the consent of the copyright owner. Such liability for parallel import, in contrast with import as an act of secondary infringement, is not dependent on knowledge. This would apply, *a fortiori*, if the copies being imported from outside the EEA were infringing.

<sup>62</sup> *Independiente Ltd v. Music Trading On-Line* [2007] *EWHC* 533 (CA), [2007] *FSR* 525. See also *KK Sony Computer Entertainment v. Pacific Game Technology Ltd* [2006] *EWHC* 2509 (Ch) (the judgment concentrates on the ECJ's trade mark jurisprudence on exhaustion and concludes that Sony had not exhausted its right, before holding that the web site included an offer to sell which was targeted at the UK, and thus, fell to be treated as an offer for sale in the UK. The judge did not expressly address the trickier issue as to where sale (or issuing) took place, but the clear implication is that the goods were issued to the public in the UK.)

the work. When the 1988 Act was first enacted, it provided a limited right to control the rental of copies of sound recordings, films, and computer programs.<sup>63</sup> No such right was given in relation to literary, dramatic, musical, or artistic works. However, as a result of amendments implementing the Rental Rights Directive,<sup>64</sup> an owner of copyright in literary, dramatic, or musical works, and even artistic works (other than works of architecture or applied art),<sup>65</sup> is granted an exclusive right to rent and lend copies of such works to the public (section 18A). The rental right is not exhausted by the first sale of copies of the work.<sup>66</sup>

Rental and lending both involve the making of the original or a copy of a work available for use on terms that it will or may be returned.<sup>67</sup> The distinction between rental and lending is that the act of rental involves a commercial advantage, whereas lending does not. More specifically, rental is defined as making the work available 'for direct or indirect economic or commercial advantage.' In contrast, lending occurs where there is no such advantage.<sup>68</sup> It has been suggested that rental not only includes rentals of the sort familiarly operated by video-rental stores, but also where videos were lent to hotel guests. It has also been suggested that an organization will indirectly derive a 'commercial advantage' through sponsorship (for example with a commercially sponsored library such as that of the Wellcome Institute) and hence be involved in rental, not lending.<sup>69</sup>

Lending means 'making a copy of the work available for use, on terms that it will or may be returned, otherwise than for direct or indirect economic or commercial advantage, through an establishment which is accessible to the public.'<sup>70</sup> The right does not cover loans between private individuals. This is because lending is only prohibited when it is made 'through an establishment which is accessible to the public.' Lending does not become a rental, at least as regards loans between establishments accessible to the public, where payment does not go beyond what is necessary to cover the operating costs of the establishment.<sup>71</sup>

The Rental Rights Directive and the 1988 Act both contain a number of limitations to the rental and lending rights.<sup>72</sup> Neither covers the making available of a copy for public performance, playing or showing in public, or broadcast. As Recital 13 explains, where a cinema owner rents a film from a film distributor that is to be shown to the public, this falls outside the scope of the rental right.<sup>73</sup> The exclusion also seems to cover a variety of other commercial practices, such as the rental of jukeboxes and possibly also the rental of sheet music.

In a similar vein, neither rental nor lending covers situations where a work is made available for the purposes of exhibition in public. As a result, the owner of a painting does not need to

<sup>63</sup> Prior to that there was no rental right: see *CBS v. Ames* [1981] *RPC* 407, 428.

<sup>64</sup> See Reinbothe and von Lewinski (1993).

<sup>65</sup> Rental Dir., Art. 2(3). Apparently these were excluded because it was thought that the rental right would then cover rental of housing, cars, etc.

<sup>66</sup> *Metronome Music v. Music Point Hokamp GmbH*, Case C-200/96 [1998] *ECR* I-1953; *Foreningen Af Danske Videogramdistributører v. Laserdisken*, Case C-61/97 [1999] *1 CMLR* 1297.

<sup>67</sup> CDPA ss. 18A(2), 18A(6), 182C(2) (performers). Contrast the terms of Rental Dir., Art. 1 'making available for use, for a limited period of time.' Note that it only applies to material copies.

<sup>68</sup> Recital 16 of the Software Dir. defined 'rental' as the making available of a computer program for use, for a limited time, and for 'profit-making purposes'. During formulation of the Rental Rights Dir. this formula, along with others defining rental as making available 'against payment' were rejected.

<sup>69</sup> See Reinbothe and von Lewinski (1993), 40; cf. J. Griffiths, 'Copyright and Public Lending in the United Kingdom' [1997] *EIPR* 499.

<sup>70</sup> CDPA s. 18A(2)(b). <sup>71</sup> CDPA s. 18A(5). Reflecting the Rental Rights Dir., Recital 14.

<sup>72</sup> *Ibid.*, Recital 13.

<sup>73</sup> But this act was long ago held to amount to authorization of infringement: *Falcon v. Famous Players Film Co.* [1926] *2 KB* 474.

seek permission from the copyright owner before lending the work to an art gallery for public display. Moreover, the rental and lending rights do not cover situations where a work is made available for on-the-spot reference. It has been suggested that this will exempt situations where magazines are made available in waiting rooms.<sup>74</sup> Finally, lending does not cover the making available of a work between establishments that are accessible to the public. This means that 'inter-library loans' are permissible.<sup>75</sup> Special exemptions apply to the lending of works by educational establishments,<sup>76</sup> and for the lending of *books* by public libraries (if the book is eligible to fall within the Public Lending Right Scheme).<sup>77</sup> In addition, copyright in *any work* is not infringed by the lending of copies of the work by a 'prescribed' library or archive that is not conducted for profit.<sup>78</sup>

## 5 THE RIGHT TO PERFORM, SHOW, OR PLAY THE WORK IN PUBLIC

The fourth right conferred on a copyright owner is the right to perform the work in public (section 19). This right, which is usually known as the 'performing right,' was first introduced by statute in 1833 to protect owners of copyright in dramatic works.<sup>79</sup> This was because, as the primary way dramatic works are exploited is by way of performance, if the protection given to dramatic works was limited to the reproduction right, this would have been inadequate. In order to be consistent, the performing right was also extended to musical works and literary works in general. Today, section 19(1) of the 1988 Act provides that performance of a work in public is an act restricted by the copyright in a literary, dramatic, or musical work; and section 19(3) states that the playing or showing of the work in public is an act restricted by the copyright in a sound recording, film, or broadcast. There is no performing right for artistic works (and hence no right to authorize the public exhibition of the work),<sup>80</sup> or for typographical arrangements.

'Performance' is defined to include the delivery of lectures, addresses, speeches, and sermons; as well as 'any mode of visual or acoustic presentation of a work, such as by means of a sound recording, film, or broadcast'.<sup>81</sup> It has been held that a performance of a musical work or sound recording takes place where it can be heard.<sup>82</sup> Presumably, a performance of a film takes place where it can be seen. Where the performance is live, it should be fairly obvious who is responsible for the performance. Where more artificial means of delivery are employed (for example where copyright-protected music embodied in a sound recording is played by way of a radio in a restaurant), the person who infringes is not the broadcaster,<sup>83</sup> or the person who supplied the radio apparatus. Rather it is the person who operates the radio.<sup>84</sup> It seems that it is

<sup>74</sup> See Griffiths [1997] *EIPR* 499, 500.    <sup>75</sup> CDPA s. 18A(4).    <sup>76</sup> CDPA s. 36A.

<sup>77</sup> CDPA s. 40A; Rental Rights Dir., Art. 5. This was the most hotly contested issue during the passage of the Directive. See Ch. 13.

<sup>78</sup> CDPA s. 40A(2).    <sup>79</sup> See *Russell v. Smith* (1848) 12 QB 217, 236.

<sup>80</sup> But see moral right of attribution. In *Hanfstaegl v. Empire Palace* [1894] 2 Ch 1 it was held that copyright was not infringed by performing an artistic work in the form of a *tableau vivant*. This may, however, be a reproduction: *Bradbury Agnew v. Day* (1916) 32 TLR 349.

<sup>81</sup> CDPA s. 19.

<sup>82</sup> *PRS v. Camelo* [1936] 3 All ER 557 (the playing of a radio in the defendant's lounge infringed the performing right in the songs played on the radio because the radio could be heard in the neighbouring restaurant).

<sup>83</sup> CDPA s. 19(4). Cf. *PRS v. Hammond's Bradford Brewery Co.* [1934] 1 Ch 121, 139.

<sup>84</sup> *PRS v. Hammond's Bradford Brewery Co.* [1934] 1 Ch 21 (a person performs a musical composition when they cause it to be heard); *Messenger v. BBC* [1927] 2 KB 543, 548.

a publican, rather than a customer, who operates a jukebox and is liable if the public performance is not authorized.

In order to infringe, the performance must be carried on 'in public.' There are many situations where it is clear that a performance is in public: a performance at the Brixton Academy, the Royal Albert Hall, a West End theatre or cinema, or in a public house would normally all be to the public. Beyond these examples, however, what is meant by 'in public' is less clear.<sup>85</sup> Over time, three different conceptions of the 'public' have been used in the case law.

In some cases the concept of the public is understood according to the character of the audience.<sup>86</sup> In this context a distinction is drawn between a section of the general public (which have no other unifying theme other than the desire to see the performance), and a group of people who share a private or domestic link. For example, the residents of a hospital or a nursing home are bound together by a link that distinguishes them from the general public, namely, that they reside at a particular location. Consequently, in *Duck v. Bates*,<sup>87</sup> the Court of Appeal held that copyright in the play *Our Boys* was not infringed when an amateur dramatic club performed it at Guy's Hospital for the entertainment of the nurses. This was because it was held to be a domestic performance, not a performance to which the public or any portion of the public was invited. Using a test of this sort, a performance in a shop,<sup>88</sup> before members of a club,<sup>89</sup> or in a hotel lounge<sup>90</sup> would be a performance to a 'section of the general public' (so long as anyone could enter the shop, join the club, or enter the hotel lounge). However, using the same test, it is unlikely that a performance at a dinner party,<sup>91</sup> or to students at a boarding school,<sup>92</sup> would be treated as a performance to a 'section of the general public.' In these cases, the audience is linked by personal connection, residence, or employment.

Another test that has occasionally been employed to determine whether a performance is in public effectively ignores the public or private nature of the performance and focuses, instead, on whether the performance is motivated by financial considerations.<sup>93</sup> If the performance is run for profit, it is likely to be 'in public.' The rationale for this is that otherwise the performer or organizer of the performance could be unjustly enriched by the performance (at the expense of the person who owned copyright in the works that were performed).<sup>94</sup> Thus, in *Harms v. Martans* the Court of Appeal held that performance of the musical work 'That Certain Feeling' at the Embassy Club to an audience of 150 members and 50 guests was a performance in public. Lord Hanworth MR suggested that the critical considerations were whether the defendants' activities were for profit,<sup>95</sup> who was admitted; and where the performance took place. Since the members paid a substantial subscription and an entrance fee, were the sorts of people who would pay to go to a public theatre to hear a performance, and the club paid the orchestra to perform, the performance was 'in public.'

<sup>85</sup> *Jennings v. Stephens* [1936] 1 Ch 469, 476, 481 (the words are probably incapable of precise definition); *Harms v. Martans* [1927] 1 Ch 526, 530. M. F. Makeen, *Copyright in a Global Information Society: The Scope of Copyright Protection under International, US, UK, and French Law* (Kluwer, 2000), 148 ('no problem in contemporary copyright law appears to have been debated more extensively or intensely').

<sup>86</sup> *Jennings v. Stephens* [1936] 1 Ch 469, 476, 479; *PRS v. Harlequin* [1979] 2 All ER 828, 833.

<sup>87</sup> (1884) 13 QBD 843. <sup>88</sup> *PRS v. Harlequin* [1979] 2 All ER 828.

<sup>89</sup> *Harms v. Martans* [1927] 1 Ch 526, 537 (emphasizing that there was an invitation to the general public to become members of the club).

<sup>90</sup> *PRS v. Hawthorns Hotel (Bournemouth)* [1933] Ch 855. <sup>91</sup> *Jennings v. Stephens* [1936] 1 Ch 469, 481.

<sup>92</sup> *Ibid*, 483. <sup>93</sup> *Harms v. Martans* [1927] 1 Ch 526, 532–3.

<sup>94</sup> Some statutory support for this approach can be found in the defence provided by CDPA s. 67 (as amended) and 72 as regards the free public showing of a broadcast.

<sup>95</sup> A factor treated as of minimal significance in *Ernest Turner Electrical Instruments v. PRS* [1943] 1 Ch 167, 173.

A third test has focused upon the copyright-owner's monopoly. Under this approach, a performance is 'in public' if it is made to or before 'the copyright owner's public.' This test, which first emerged in the 1930s in the judgments of Lord Greene MR, later came to be quite widely adopted. In *Jennings v. Stephens*<sup>96</sup> the performance of a play *The Rest Cure* by the members of a Woman's Institute without charge and without guests was held to be a performance in public. Greene LJ said:

[T]he expression 'in public' must be considered in relation to the owner of the copyright. If the audience considered in relation to the owner of the copyright may properly be described as the owner's 'public' or part of his 'public,' then in performing the work before that audience he would in my opinion be exercising the statutory right conferred upon him.<sup>97</sup>

This test has been used to hold that the playing of the BBC's music broadcasts to 600 workers in a factory infringed the performing right. The factory owner claimed that the audience was not a 'section of the public'—a reasonable view given that the common bond was work, not a desire to listen to music. However, Lord Greene MR held the performances were 'in public,' because to hold otherwise would have meant that the value of the monopoly given by the statute would have been substantially 'whittled down.'<sup>98</sup> This test seems difficult to justify, since it is surely the case that most copyright owners would want to extend their monopoly as widely as possible and would therefore claim that all performances were before their 'public.'<sup>99</sup>

While uncertainties exist over the relationship between the three tests,<sup>100</sup> it should be clear that, historically, the notion of public is defined expansively, so as to favour the copyright owner. For the moment, copyright owners and their collective representatives seem content with the limits set by the courts. These make it clear that performances in places which are open to the public (from hairdressers' salons to hotel lounges) are performances in public. The cases also make it clear that performances before substantial numbers of people not connected by family or domestic ties, will be in public. The consequences of the different approaches to defining the public now remain to be felt only in marginal cases (such as the case of playing music in the office of a small family firm, or at a wedding reception).

With regard to the infringement of the performing right, it is important to bear in mind that there are a number of related acts of secondary infringement. These are considered in Chapter 8.

## 6 THE RIGHT TO COMMUNICATE THE WORK TO THE PUBLIC

The exclusive right to communicate a work to the public arises with respect to literary, dramatic, musical, and artistic works, sound recordings,<sup>101</sup> films, and broadcasts.<sup>102</sup> The right, which was introduced to implement the EC Information Society Directive,<sup>103</sup> is distinguished

<sup>96</sup> [1936] 1 Ch 469.      <sup>97</sup> Ibid, 485.

<sup>98</sup> *Ernest Turner Electrical Instruments v. PRS* [1943] 1 Ch 167 (Lord Greene MR). For a contemporary equivalent, see *PRS v. Kwik-Fit Ltd* [2008] ECDR (2) 13 (para. 3) (OH CS).

<sup>99</sup> See *PRS v. Harlequin Record Shops* [1979] 2 All ER 828, 834.

<sup>100</sup> Indeed, the courts have rarely acknowledged that the tests applied vary or are incompatible.

<sup>101</sup> In the case of sound recordings, when exercised by a collecting society, the right consists only of an entitlement to equitable remuneration: ss. 135A–H.

<sup>102</sup> CDPA s. 20.

<sup>103</sup> Copyright and Related Rights Regulations 2003, SI 2003/2498 implementing Info. Soc. Dir., Art. 3, itself implementing WCT, Art. 8, WPPT Art. 14.

from public performance, or playing or showing in public (section 19), by the fact that the public is not present at the place where the communication originates.<sup>104</sup> So, converting sounds into electronic signals and broadcasting them so that they can be received and heard on a radio is a communication to the public (rather than a public performance). In contrast, operating the radio so the sounds can be heard in a public place would be public performance (but not communication to the public).<sup>105</sup>

In its British implementation, the communication right is confined to ‘electronic communication,’ and is said to include ‘broadcasting’ and ‘making available.’ While a broadcasting right has been expressly conferred on copyright owners in the United Kingdom since 1956, the ‘making available’ right has its roots in the WIPO Copyright Treaty of 1996. We consider each separately.

### 6.1 BROADCASTING

As we saw in Chapter 3, a ‘broadcast’ is defined as an electronic transmission of visual images, sounds, or other information for simultaneous reception by the public, or which is made for presentation to the public, but excludes ‘internet transmissions.’<sup>106</sup> As we have already observed, this covers digital, analogue, terrestrial, and satellite transmissions, but not the placing of a work on a web site. The definition of broadcast covers the forms of satellite broadcasting which may be directly received by individuals or may be received by subscribers who obtain a decoder.<sup>107</sup> The relaying of a broadcast by reception and immediate retransmission constitutes a separate act of broadcasting.<sup>108</sup> Thus where a hotel relays television programmes to individual guest rooms, this of itself is a communication to the public.<sup>109</sup>

The person who makes a broadcast is either the person transmitting an item, such as a programme, where that person has responsibility for its contents, or the person providing the item for transmission who ‘makes with the person transmitting it the arrangements necessary for its transmission.’<sup>110</sup>

<sup>104</sup> Info. Soc. Dir., Recital 23.

<sup>105</sup> The distinction between broadcasting and public performance has not always been maintained. Soon after the emergence of radio broadcasting in the 1920s, it was successfully argued that the BBC had infringed the ‘performing right’ when it broadcast a private performance that was capable of being received on wireless receivers: *Messenger v. BBC* [1927] 2 KB 543, 548–9. Later, a specific ‘broadcasting right’ was conferred on copyright owners by the 1956 Act. This was retained in s. 20 of the CDPA, as enacted, and has been included, in amended form, in the new s. 20. Broadcasters are given immunity from liability for public performances that result from the broadcasts by CDPA s. 19(4). The relationship between ‘communication in public’ and ‘communication to the public’ is explored in comparative, historical context by Makeen, *Copyright in a Global Information Society: The Scope of Copyright Protection under International US, UK, and French Law* (2000).

<sup>106</sup> CDPA s. 6(1). The definition of broadcast is the same for infringement as that used to define broadcasts as works capable of being protected by copyright.

<sup>107</sup> That is, any encrypted broadcast, whether terrestrial or by satellite relay, is ‘lawfully’ received if decoding equipment has been made available through the person transmitting it in encrypted form: CDPA s. 6(2).

<sup>108</sup> CDPA s. 6(5)(a). However, special rules apply to retransmissions of broadcasts from another EEA member state: CDPA s. 144A. These provide that, aside from rights of broadcasting organizations with regard to their own transmissions, only collecting societies may exercise rights to authorize cable retransmissions of broadcast works. Where such arrangements have not been made, the licensing body is treated as mandated to exercise the right.

<sup>109</sup> *Sociedad General de Autores y Editores de Espana (SGAE) v. Rafael Hotels SL*, Case C-306/05 [2006] ECR I-11519.

<sup>110</sup> CDPA s. 6(3).

Because of the potential transnational nature of broadcasting, it has long been acknowledged that it is important to ascertain where a particular broadcast takes place.<sup>111</sup> A person wishing to make a broadcast needs to obtain consents from copyright holders of works included in the broadcast, but only as regards those copyrights that are operative in the territory in which the broadcast occurs. However, when a signal is sent or up-linked to a satellite (from place A) and is then beamed back to Earth over a large reception area or 'footprint' (places A, B, and C), there are at least two possible territories where the act of broadcasting might be thought to take place. On the one hand, it could be said that the broadcast occurs from the place from which the signal was sent (the emission or introduction theory). Alternatively, it might be thought that the broadcast occurs in the places where it is received (the reception or communication theory). In the face of conflicting national decisions on this issue, it became clear in the late 1980s that it was necessary to harmonize the law in this area. Two contrary concerns dominated the decision as to the choice of the place of broadcast. On the one hand, the simplest answer and the one that facilitated satellite broadcasting was that the country of broadcast was the country of up-link. However, it was feared that this would lead to satellite up-link facilities migrating to countries where copyright protection was weak, and that copyright owners would thus be best protected if consent was required in all countries where the signal could be received. In the end a compromise was reached. The country of introduction is treated as the relevant place only where the standard of copyright protection is satisfactory. Accordingly, section 6 of the 1988 Act defines the place of wireless broadcasting as the place where the broadcaster introduces programme-carrying signals into an uninterrupted chain of communication, including any satellite relay.<sup>112</sup>

## 6.2 THE RIGHT TO MAKE THE WORK AVAILABLE

The second element of the communication right is the exclusive right to make the work 'available to the public... by electronic transmission in such a way that members of the public may access it from a place and at a time individually chosen by them.' In contrast to the broadcasting right, which is premised on the idea of simultaneous reception, 'making available' encompasses individual communications to persons who are members of 'the public.' A recital to the Information Society Directive explains that the right will cover interactive on-demand transmissions,<sup>113</sup> such as 'video-on-demand' services and so-called 'celestial jukeboxes.' But the new right should also be assumed to cover most internet transmissions (other than broadcasts) where a person places a work on a web site because members of the public can access the work 'from a place' (their terminal, whether it be in their office, home, or on their mobile telephone) and 'at a time' chosen by them.<sup>114</sup>

Although the infringing act is the making available and infringement only occurs as regards acts done in the UK, neither the Directive nor the British implementation explains *where* the

<sup>111</sup> See Makeen, *Copyright in a Global Information Society* (2000) ch. 4.

<sup>112</sup> CDPA s. 6(4). These provisions reflect amendments in the Rental Regs., to give effect to the Cable and Satellite Directive, chs. I and II. CDPA s. 6 is subject to the safeguard rules in CDPA s. 6A, which operates in cases of transmissions from places outside the EEA. The addition of the word 'wireless' was added by the 2003 Info. Soc. Regs., SI 2003/2498 reg. 4(c).

<sup>113</sup> Info. Soc. Dir., Recital 25.

<sup>114</sup> On which see Reinbothe and von Lewinski (2002) pp. 108–11. See also Irish Copyright and Related Rights Act 2000, s. 40(1)(a) (defining making available explicitly to include the making available of copies of works 'through the internet').

act takes place. In the simple case of a British person who subscribes to a British service provider utilizing peer-to-peer software, it seems clear that deploying the software so that others can access files will amount to making available in the UK (even if those who access the files are in many cases outside the UK).<sup>115</sup> A more difficult case is that of a person in the United States creating a video using copyright-protected material, uploading that material on to YOUTUBE, so that it can be accessed in the United Kingdom. Whether there is an infringement of UK copyright law may well depend on which acts are regarded as making the work available and where those acts are understood to occur. One candidate is the place where the individual uploads the work on to a web site, so that in this example there would be no infringement in the UK (though there might be in the USA). A second possibility is that the act of making available occurs wherever the server which permits access is located: in the case of YOUTUBE, probably the United States. A third possibility is that the act occurs in the place or places from which it can be accessed. This would mean that YOUTUBE would be making available all over the world. The fourth possibility is that the work is made available in the territory where the public at which the work is targeted is located. This difficult issue will need to be resolved.

A further issue that will need to be confronted before long is which ancillary acts constitute distinct infringing communications: for example, is hyper-linking to a work itself a 'making available,' and if so, do search engines make works available? Although it might be arguable that hyper-linking makes a work available to a new public (as, for example, where a link is made from an intranet onto the worldwide web), and thus might be seen as an act which the copyright owner should be empowered to control,<sup>116</sup> the better view is that the 'making available right' is not an appropriate mechanism by which to protect a content-holder's interest in controlling access to different audiences (or its different publics). Most hyper-linking simply makes it easier to locate (and, if desired, access) works which are already available to the public, and it would be unduly constraining to require all links to be authorized.<sup>117</sup> In those relatively rare situations where a link enables broader access to a site than was originally authorized by a content owner, the rules dealing with circumvention of access controls should provide ample protection. Where a person operated a web site with hyper-link to files which contained copyright-infringing material, the Federal Court of Australia has held that the hyper-link was not a 'making available' but was rather an 'authorization' to reproduce the material.<sup>118</sup>

### 6.3 'TO THE PUBLIC'

In *Sociedad General de Autores y Editores de Espana (SGAE) v Rafael Hotels SL*,<sup>119</sup> the ECJ elaborated on the concept of the public in the context of Article 3 of the Information Society

<sup>115</sup> *Polydor Ltd v. Brown* [2005] EWHC 3191 (finding 'making available' in the act of connecting computer to internet, where the computer is running peer-to-peer software and music files containing copies of the claimant's copyright works are placed in a shared directory).

<sup>116</sup> In *Shetland Times v. Wills* [1997] FSR 604 it was found to be arguable that a newspaper web site which was linked to another web site, had thereby included items (the headline of the article) in a cable-programme service. The basis for the decision has been swept away by the 2003 amendments.

<sup>117</sup> Litman, *Digital Copyright* p. 183 ('the public has always had, and should have, a right to cite'); A. Strowel and N. Ide, 'Liability with Regard to Hyperlinks' (2001) 24 *Columbia Journal of Law & the Arts* 403, 425; B. Allgrove & P. Ganley, 'Search engines, Data Aggregators and UK Copyright Law: A proposal' (2007) *EIPR* 227 (arguing for clarification through a specific defence).

<sup>118</sup> *Universal Music Australia v. Cooper* [2005] FCA (14 July 2005) (only the authorization matter was dealt with on appeal).

<sup>119</sup> Case C-306/05 (ECJ, 7 December 2006).

Directive. The case concerned the relaying of television signals to individual hotel rooms. The Court rejected the contention that the definition of 'public' was a matter for each member state, and, took the view that the right was to be interpreted broadly.<sup>120</sup> The Court did not provide a definition of 'the public,' but referred to the statement in an earlier decision in *Lagardere* (interpreting the Satellite and Cable Directive) that the term refers 'to an indeterminate number of potential viewers'. While guests might occupy individual rooms and so watch broadcasts in private, 'the private or public nature of the place where the communication takes place is immaterial'.<sup>121</sup> The hotel guests 'quickly succeed each other' so that 'they may be considered to be a public'. The 'cumulative effects' of making works available to this group 'could become very significant'. Moreover, the Court observed that the provision of access to broadcast was 'an additional service' provided by the hotel and 'profit-making'. Consequently, the Court concluded that the distribution of signals by cable to customers staying in its rooms was a 'communication to the public'. Probably it is safe to follow the Advocate General's approach when determining whether a communication is to the public, which considers the key factors to be the extent of the circle of potential recipients and its economic significance to the author, as well as the existence of economic benefit to the person making the communication (in the case in question, the hotelier). Economic benefit is clearly a relevant factor, but probably not a necessary condition, for a communication to be regarded as one 'to the public'.

## 7 THE RIGHT TO MAKE AN ADAPTATION OF THE WORK

The owner of copyright in literary, dramatic, or musical work is given the exclusive right to make an adaptation of the work.<sup>122</sup> The owner of copyright in artistic works, sound recordings, and films is not given an adaptation right. The adaptation right is restrictively defined and is not to be confused with a general right to control all derivative works, such as that recognized by copyright law in the USA.<sup>123</sup> The adaptation right includes the right to do any of the other restricted acts in relation to an adaptation, including the right to make an 'adaptation of an adaptation'.<sup>124</sup> Consequently it is not only a restricted act to make an adaptation, but also to reproduce an adaptation in any material form, issue copies of it to the public, perform it in public, or broadcast it. As it is not possible to draw a clear line between an adaptation and a reproduction, in many cases the same act might be both a reproduction and an adaptation.<sup>125</sup>

### 7.1 MEANING OF ADAPTATION

Adaptation is defined differently for literary works, dramatic works, computer programs, databases, and musical works. We must deal with each in turn. In relation to *literary or dramatic* works, adaptation means a translation (such as a translation into French), or a dramatization

<sup>120</sup> Para. 36 (relying on recital 23). While in much of what it said the Court seems to have followed the opinion of Advocate General Sharpston, the judgment lacks the same clarity as the opinion.

<sup>121</sup> Para. 50.

<sup>122</sup> Implementing, for the most part, Berne, Arts. 8 and 11(2) (translation); Art. 12 (adaptations, arrangements, and other alterations); Art. 11ter(2) (communication of translation).

<sup>123</sup> And in this respect seems narrower than Berne, Art. 12. <sup>124</sup> CDPA s. 21(2).

<sup>125</sup> CDPA s. 21(6).

of a non-dramatic work (such as where a novel is turned into a screenplay or ballet or, after *Norowzian v. Arks*,<sup>126</sup> a film). The adaptation right in a literary or dramatic work will also be infringed where the story or action is conveyed wholly or mainly by means of pictures (such as a comic strip). As regards dramatic works, adaptation means a version of a dramatic work that is converted into a non-dramatic work (such as the conversion of a film into a novel). In relation to musical works, an adaptation is defined as an arrangement or transcription of the work.<sup>127</sup>

Although an adaptation is only made when it is recorded in writing or otherwise, the public performance or broadcasting of an adaptation will infringe even if at that stage the adaptation has not been recorded in writing or otherwise. Consequently, an amateur dramatic group whose public performance is based on a novel, will almost certainly infringe the adaptation right. This is because in so doing the group will have adapted the novel by converting it into a dramatic work. Equally, the broadcast of someone translating a text from a foreign language into English will infringe, even though the translator has not made a written version of the translation.

The adaptation right also applies to computer programs and databases. In relation to computer programs, an adaptation means an arrangement, or altered version of the program, or a translation of it.<sup>128</sup> In these circumstances, translation includes the conversion into or out of a computer language, or from a computer language into a different computer language or code.<sup>129</sup> In relation to databases, adaptation means an arrangement or altered version of the database or a translation of it.<sup>130</sup>

## 8 AUTHORIZATION

As well as being given the right to carry out the restricted activities, the copyright owner is also given the right to authorize others to do any of the restricted acts.<sup>131</sup> When this right was introduced in the Copyright Act 1911, it was said to be superfluous and tautologous: the exclusive right to do an act implicitly carried with it the right of authorization.<sup>132</sup> However, it soon became clear that the term ‘authorize’ extended the copyright-owner’s rights to cover the acts of persons in some way associated or affiliated with an infringement. It was said that ‘authorize’ meant to sanction, countenance, or approve,<sup>133</sup> or alternatively, to grant or purport to grant to a third person the right to do an act.<sup>134</sup> The latter formulation has now received the approval of the House of Lords. In order to amount to authorization, the person to whom ‘authority’ has illegitimately been granted must in fact commit an infringing act.<sup>135</sup> However,

<sup>126</sup> [2000] FSR 363.

<sup>127</sup> *Francis Day & Hunter v. Bron* [1963] 1 Ch 587, 611 (adaptation and translation must be deliberate).

<sup>128</sup> CDPA s. 21(3)(ab). <sup>129</sup> CDPA s. 21(4); Software Directive, Art. 4(b).

<sup>130</sup> CDPA s. 21(3)(ac); Database Dir., Art. 5(b).

<sup>131</sup> CDPA s. 16(2). Y. Gendreau, ‘Authorization Revisited’ (2001) 48 *Journal of the Copyright Society of the USA* 341. The ‘authorization’ right needs to be compared with the general principles of joint tortfeasance described in Ch. 47. Acts which are ‘authorizations’ will often also be acts which amount to joint tortfeasance, but there is such a degree of uncertainty surrounding the case law (particularly after the narrow interpretation given to authorization in *CBS v. Amstrad* [1988] 2 All ER 484) that it remains impossible to estimate how far the tort of authorization extends beyond joint tortfeasance.

<sup>132</sup> *Falcon v. Famous Players* [1926] 2 KB 474, 495–6; *PRS v. Cyril Theatrical Syndicate* [1924] 1 KB 1, 12.

<sup>133</sup> *Falcon v. Famous Players* [1926] 2 KB 474, 491. <sup>134</sup> *Ibid.*

<sup>135</sup> *Nelson v. Rye and Cocteau Records* [1996] FSR 313, 337.

the person giving the authorization (in contrast with the person to whom authority is given) need not be located in the UK.<sup>136</sup>

The concept of authorization has been applied in two distinct ways. First, it has been used to expand the network of potential liability beyond vicarious liability. This has typically occurred in relation to the performance of copyright works.<sup>137</sup> Given that performers often do not have a lot of money, copyright owners have attempted to sue the parties who hired the performers. While the principle of vicarious liability made this relatively straightforward where the performer was an employee,<sup>138</sup> copyright owners argued, for example, that where a person hired a band (which infringed copyright), the hirer was liable for ‘authorizing’ the infringing performance. These attempts proved to be relatively successful where the hirer was aware of the songs which the band would perform, or did nothing to control the repertoire performed. In both cases the hirer was deemed to have authorized the infringements.<sup>139</sup> However, where a warning was given to the performers and the infringements were by way of spontaneous encores of which the hirer had no prior knowledge, the mere hiring of the band was held not to be an authorization.<sup>140</sup> In one case, an attempt to make a managing director liable for authorizing the infringing performance of a band was unsuccessful where the director had taken no interest in the content of the performance and was out of the country when it took place.<sup>141</sup>

The concept of authorization has also been applied where a person manufactures or supplies equipment or other means that enable or facilitate infringement. In these circumstances copyright owners have argued that, where a person makes facilities available in the knowledge that they will probably be used to infringe, this is equivalent to ‘authorizing’ infringement. Thus it has been asserted that a person who supplies films to a cinema, who sells blank tapes to the public when renting out records,<sup>142</sup> makes photocopying equipment available in a library,<sup>143</sup> or manufactures tape-to-tape machines, should be treated as having authorized the resulting infringements. Today the same kind of arguments are being used in relation to the activities of those who make available file-sharing software, such as Grokster or KaZaa, as well as others who provide hyper-links to infringing material, or provide the internet locations of infringing material, for example, on aggregation sites or through search engines.<sup>144</sup>

The leading authority in the UK is *CBS Songs v. Amstrad*,<sup>145</sup> where the House of Lords defined the term ‘authorize’ restrictively. Amstrad manufactured and marketed a double-speed

<sup>136</sup> CDPA s. 16(2), in contrast with s. 16(1) is not explicitly confined to ‘acts’ of authorization within the UK: *ABKCO Music & Records Inc. v. Music Collection International* [1995] RPC 657.

<sup>137</sup> But note also, e.g. *Pensher Security Door Co. v. Sunderland CC* [2000] RPC 249, 278–9 (door designs).

<sup>138</sup> *PRS v. Mitchell & Booker (Palais de Danse)* [1924] 1 KB 762 (applying a ‘control’ test). For consideration of the issue where the act is playing a radio, see *PRS v. Kwik-Fit Group Ltd* [2008] ECDR (2) 13 (OH CS).

<sup>139</sup> *PRS v. Bradford Corporation* (1921) [1917–23] MacG CC 309, 312–13, 314. If the hirer specified particular songs were to be performed, and those performances infringed copyright, the case would be even stronger: see *Standen Engineering v. Spalding & Sons* [1984] FSR 554; *Pensher v. Sunderland CC* [2000] RPC 249, 278–9 (commissioner specifying infringing design).

<sup>140</sup> *PRS v. Bradford Corporation* [1917–23] MacG CC 309, 314.

<sup>141</sup> *PRS v. Cyril Theatrical Syndicate* [1924] 1 KB 1.

<sup>142</sup> *CBS Inc v. Ames Records and Tapes* [1981] 2 All ER 812 (a record library which lent out records and sold cheap blank tapes did not infringe).

<sup>143</sup> *Moorhouse v. UNSW* [1976] RPC 151, 159 (High Court of Australia) (university authorized infringement of copyright by providing a self-service photocopying machine without adequate warning about copyright). Cf. *CCH Canadian Ltd. v. Law Society of Upper Canada* [2004] SCC 13.

<sup>144</sup> *Perfect 10 Inc v. Google Inc* 416 F.Supp.2d 828 (CD Cal 2006). <sup>145</sup> [1988] 2 All ER 484.

twin-tape recorder, which was sold by Dixons. The advertisement which Lord Templeman described as ‘hypocritical and disingenuous’ boasted that the model ‘now features hi-speed dubbing enabling you to make duplicate recordings from one cassette to another, record direct from any source and then make a copy and you can even make a copy of your favourite cassette.’ An asterisk drew attention to a footnote warning that the recording and playback of certain material was only possible with permission. It also referred the user to the relevant legislation. The British Phonogram Industry (BPI), which represents various owners of copyright in musical and literary works and in sound recordings, claimed that Amstrad had authorized infringement of copyright in BPI’s sound recordings.<sup>146</sup>

The House of Lords held that neither the sale of the equipment nor the advertisement thereof amounted to an authorization. Lord Templeman said that an authorization means a grant or purported grant, express or implied, of the right to do the act complained of.<sup>147</sup> The House of Lords held that, while the machinery enabled a person to copy lawfully or unlawfully, this did not constitute an authorization.<sup>148</sup> Lord Templeman said that it was crucial that the footnote had warned that certain types of copying required permission and that Amstrad did not have the authority to grant that permission. In short, the Lords held that there was no authorization because it was up to the operator whether to infringe or not: Amstrad in no way purported to possess the authority to give permission to copy records.

Two Australian cases have applied the concept of ‘authorization’ to the internet.<sup>149</sup> In *Universal Music Australia v Cooper*,<sup>150</sup> the Full Federal Court held that a web site, ‘mp3s4free.net’, which provided links to other locations from which sound recordings could be copied, was liable for authorizing infringement (by users in copying the recordings, and third parties in communicating them to such users). The site was structured so that third parties could add links and the creator of the web site, Cooper, was unable to prevent the addition of or edit these links. Nevertheless, the Court—adopting the broad interpretation of ‘authorize’ as ‘countenance, sanction or approve’—found that Cooper had authorized infringement. The Court emphasized that it was Cooper’s deliberate choice to establish the web site in this way, and therefore he could not claim thereafter to lack power to control the infringements he had enabled others to carry out.<sup>151</sup> The Court also noted that Cooper benefited financially from advertising a sponsorship of the site and took no steps to prevent infringement. A disclaimer regarding copyright law was dismissed as merely cosmetic. Overall, the Court concluded that by establishing the web site Cooper invited users and third parties to do acts that infringed copyright, and thereby authorized those infringements. What is more, the Court affirmed the judge’s finding that the service provider which hosted Cooper’s web site was also liable for authorization, since it knew of Cooper’s site and did nothing to curtail its operation.

In *Universal Music et al v Sharman License Holdings Ltd*,<sup>152</sup> the Federal Court of Australia held that the marketing of KaZaa software which was used to infringe the

<sup>146</sup> Their Lordships also considered and rejected a number of related claims as to joint tortfeasance. See below at pp. 1075–6.

<sup>147</sup> [1988] 2 All ER 484, 493.      <sup>148</sup> Ibid, 492.

<sup>149</sup> Under s. 101(1A) of the Copyright Act 1968 (as amended by the Copyright Amendment (Digital Agenda) Act 2000—so as to specify certain relevant factors in the assessment of whether authorization occurs).

<sup>150</sup> [2006] FCAFC 187 (18 December 2006).

<sup>151</sup> See Kenny J at 148–9. According to Branson J, ‘a person’s power to prevent the doing of an act comprised in a copyright includes the person’s power not to facilitate the doing of that act by, for example, making available to the public a technical capacity calculated to lead to the doing of that act’.

<sup>152</sup> [2005] FCA 1242 (5 September 2005). Apparently, the case is being appealed. For commentaries, see R. Giblin & M. Davison, ‘KaZaa goes the way of Grokster: Authorization of Copyright Infringement

applicants' copyright amounted to authorization so to do.<sup>153</sup> Wilcox J reiterated that under Australian law, 'authorisation' meant to 'sanction, approve or countenance' an infringement, and that inactivity and indifference may be such as to lead a court to infer authorization.<sup>154</sup> Despite using notices telling users that Sharman did not condone copyright infringements, the judge held that there was evidence of positive acts encouraging infringement, coupled with a failure to use filtering software. He went on to say that Sharman was in fact in a position to control users' activities.<sup>155</sup>

Although these two cases both depended upon interpretation and application of the concept of authorization, they are of dubious direct relevance as indications of British law. This is for two reasons. The first is because a divergence had already emerged between the UK and Australian courts' interpretations of authorization: the House of Lords in *Amstrad* preferring a narrow test ('to grant or purport to grant authority to do an act') whereas the Australian High Court in *Moorhouse* preferred the broader notion of 'sanction, countenance or approve'.<sup>156</sup> In *Universal v. Cooper*, Kenny J specifically rejected Cooper's argument that authorization should be understood restrictively (*à la Amstrad*) as inconsistent with Australian authority.<sup>157</sup> Second, the Australian legislature seemed to give its explicit approval to the broad interpretation of authorization when in 2000 it amended the Australian copyright law to 'codify' the test by introducing a series of statutory factors which a court is to consider when deciding that there has been an authorization.<sup>158</sup>

What would the results in these cases be under UK law? The result of the *Cooper* decision might well have been the same: after all, the provision of links to infringing material seems as inevitably to produce infringement as the supply of films to a cinema, which was held to amount to authorization in *Falcon v. Famous Players*. It is more difficult to predict the result in the UK of a case with the same facts as *Sharman*. The restrictive interpretation of 'authorization' adopted in *Amstrad*, with its emphasis on control, might well lead to a conclusion that Sharman was not 'authorizing'.<sup>159</sup> As a result, a court might be inclined to resort to a general theory of tortious liability, following the approach of the US Supreme Court in *Grokster*.<sup>160</sup> In this case, the Supreme Court held providers of peer-to-peer software liable for 'inducing' infringements. The inducement lay not in the supply of software itself, since this had some non-infringing uses,<sup>161</sup> but rather in the manner in which the device had been distributed

via Peer-to-Peer Networks in Australia' (2006) *Australian Intellectual Property Journal*, 53; J. Ginsburg & S. Ricketson, 'Inducers and Authorisers: A Comparison of the US Supreme Court's *Grokster* Decision and the Australian Federal Court's *KaZaa* Ruling' (2006) 11 *Media and Arts Law Review*; G. Austin, 'Importing *KaZaa*—Exporting *Grokster*' (2006) 22 *Santa Clara Computer and High Tech Law Journal* 577.

<sup>153</sup> [2005] FCA 1242, para 420. <sup>154</sup> *Ibid*, para 402. <sup>155</sup> *Ibid*, para 414.

<sup>156</sup> See also *Australasian Performing Right Association Limited v. Jain* (1990) 26 FCR 53, 57–60. Gendreau has offered an explanation of this divergence in terms of the different approaches to secondary infringement in the respective legislation: Gendreau, 'Authorization Revisited', 350–1.

<sup>157</sup> [2006] FCAFC 187, para 140.

<sup>158</sup> The matters that must be taken into account include the following: '(a) the extent (if any) of the person's power to prevent the doing of the act concerned; (b) the nature of any relationship existing between the person and the person who did the act concerned; (c) whether the person took any other reasonable steps to prevent or avoid the doing of the act, including whether the person complied with any relevant industry codes of practice.'

<sup>159</sup> Though some would argue that filtering technology is now at a sufficient level of sophistication that 'control' exists, a positive requirement to filter might impose considerable costs and administrative burdens on amateur operations and emergent businesses.

<sup>160</sup> *Metro-Goldwyn-Mayer Studios Inc v. Grokster* 125 S Ct 2764 (2005).

<sup>161</sup> Ginsburg and Kennedy JJ and Rehnquist CJ doubted whether the non-infringing uses were substantial enough to bring the software within the 'staple article of commerce' concept.

‘with the object of promoting its use to infringe copyright, as shown by clear expression or other affirmative steps taken to foster infringement’. English law has a similar principle of joint tortfeasance through inducement or procurement of a tort which might equally apply to such a situation.

## 9 LIABILITY OF INTERNET SERVICE PROVIDERS

One issue that has caused particular concern is the position of those who provide services and facilities that facilitate infringement on the internet.<sup>162</sup> These people, who effectively provide the hardware and infrastructure for the new information society, include multinational enterprises who provide the cables for communication, as well as others who provide access to the web through local ‘servers,’ who run bulletin boards and web sites where others can post information, and who provide temporary access to the net at internet cafés. At one stage, it became fashionable to suggest that the difficulties with rights holders policing their own rights were so great that some of these service providers should incur liability where infringing material was found on sites which they controlled. The argument ran that these persons were in the best position to supervise and inspect their cyber premises, and like the owner of a place of entertainment, should be liable for infringements which occurred on their ‘premises’.<sup>163</sup>

The European Commission decided to pre-empt the development of diverse national responses to these issues through a harmonizing Directive, but took the view that, since service providers could incur liability on a number of bases (defamation, copyright, obscenity, etc.), the issue fell outside the remit of the Information Society Directive. Instead, harmonization was provided for in Articles 12–15 of the EC Directive on Electronic Commerce, which required member states, by 17 January 2002, to confer an immunity on such providers except in certain limited situations.<sup>164</sup> These parallel, in large part, the so-called ‘safe harbours’ introduced into US law by the US Digital Millennium Copyright Act.<sup>165</sup>

British implementation took place in the Electronic Commerce (EC Directive) Regulations 2002.<sup>166</sup> For internet and related service providers, law adjacent to copyright law introduces three general immunities from liability, whether it be for the infringement of copyright or the

<sup>162</sup> WCT, Art. 8. Note also the ‘Agreed Statement’ annexed to the Treaty stating that the mere provision of physical facilities for enabling or making a communication does not in itself amount to a communication.

<sup>163</sup> Info. Soc. Dir., Recital 59. Indeed, as ‘filtering technology’ becomes more widely available, some people predict that the immunities granted to ISPs in the formative years of the internet will increasingly be pared back.

<sup>164</sup> Electronic Commerce Dir. The European Council Directive on Certain Legal Aspects of Electronic Commerce in the Internal Market is aimed generally at promoting electronic commerce within the European Union, that is the provision of goods and services on-line, and so encompasses many matters such as electronic contracts, unsolicited communications, codes of conduct, etc., outside the scope of this book.

<sup>165</sup> Online Copyright Infringement Liability Limitation Act, Title II of the Digital Millennium Copyright Act, Pub. L. No. 105–304, amending Ch. 5 of Title 17 USC. In contrast with the DMCA no provision is made for the benefit of information location tools. For commentaries, see A. Yen, ‘Internet Service Provider Liability for Subscriber Copyright Infringement, Enterprise Liability and the First Amendment’ (2000) 88 *Georgetown Law Journal* 1883. For comparisons, see V. McEvedy, ‘The DMCA and the E-Commerce Directive’ [2002] *EIPR* 65.

<sup>166</sup> Electronic Commerce (EC Directive) Regulations 2002, SI 2002/2013 in force on 21 Aug. 2002.

violation of any other right.<sup>167</sup> The immunities in all cases excuse liability for damages, for any other monetary remedy, and for any criminal sanction, but they do not prohibit injunctive relief.<sup>168</sup>

The beneficiaries of these immunities are so-called information-society service providers, that is, any service which is normally provided for remuneration, and which operates at a distance by electronic means, and at the individual request of a recipient of the services. It would cover, therefore, most commercial Internet Service Providers, but would not cover internet cafés, whose services are not provided at a distance. The immunities apply to 'mere conduits,' 'caching,' and 'hosting,' as follows.

### 9.1 MERE CONDUIT<sup>169</sup>

Where the service provided is the transmission in a communication network of information provided by a recipient of the service, or is the provision of access to a communication network, the service provider is exempted from liability where it did not initiate the transmission, select the receiver of the transmission, and did not select or modify the information contained in the transmission.<sup>170</sup>

### 9.2 CACHING

Where the service provided is the transmission in a communication network of information provided by a recipient of the service, the service provider shall not be liable if the information is the subject of 'automatic, immediate and temporary storage' and if the following conditions are satisfied:

- (i) the service provider provides storage for the sole purpose of making more efficient onward transmission of the information to other recipients of the service upon their request;
- (ii) the service provider does not modify the information;
- (iii) it complies with the conditions on access to the information;
- (iv) it complies with rules regarding the updating of the information;
- (v) it does not interfere with the lawful use of technology, widely recognized and used by the industry, to obtain data on the use of the information; and
- (vi) it acts expeditiously to remove or disable access to the information, so stored, upon obtaining actual knowledge of the fact that the information at the initial source of the transmission has been removed from the network, or access to it has been disabled, or a court has ordered such removal or disablement.<sup>171</sup>

<sup>167</sup> Ibid.      <sup>168</sup> Electronic Commerce Reg. 20(1)(b).

<sup>169</sup> Cp. s. 512(a) of the US Copyright Act 1976 providing the 'conduit' safe harbour in US law. It defines a 'service provider' as 'an entity offering the transmission, routing or providing of connections for digital online communications, between or among points specified by a user, of material of the user's choosing, without modification to the content of the material sent or received'.

<sup>170</sup> Electronic Commerce Reg. 17.

<sup>171</sup> Electronic Commerce Reg. 18. Cf. s. 512(b) of the US Copyright Act 1976 (as introduced by the DMCA).

### 9.3 HOSTING

Where the service provided consists of storage of information provided by a recipient of the service, the service provider shall not be liable for storage where it has no actual knowledge of unlawful activity or information, and is not aware of facts or circumstances from which it would have been apparent to the service provider that the activity or information was unlawful; or, upon obtaining such knowledge or awareness, it acts expeditiously to remove or disable access to the information.<sup>172</sup>

### 9.4 INJUNCTIVE RELIEF

Section 97A of the 1988 Act (which implements Article 8 of the Information Society Directive) imposes an important counterweight to those immunities. This confers a power on the High Court to issue an injunction against a service provider where that person has actual knowledge of another person using their service to infringe copyright. In assessing whether the service provider has the appropriate knowledge, the Court is directed to take account of any notice received by the service provider under regulation 6(1)(c) of the Electronic Commerce Regulations 2002. Right holders are in a position to apply for an injunction against intermediaries whose services are used by a third party to infringe a copyright or related right. While the immunities given by the Electronic Commerce Directive prevent financial liability, if the service provider is informed of the illegal acts, thereafter it seems they must take action to stop them continuing or face injunctive relief.

<sup>172</sup> Electronic Commerce Reg. 19. Cf. s. 512(c) of the US Copyright Act 1976 (as introduced by the DMCA). Note the 'notice and take-down' and 'put-back' procedures.

### 1 INTRODUCTION

The question of the appropriate period of protection that ought to be granted to copyright works has long captured the attention of policy makers, legislatures, judges, and commentators. For example, the central question of the literary property debate of the eighteenth century was whether common law literary property protection should be perpetual.<sup>1</sup> Similar debates have arisen at many other times during the history of copyright law. While these debates have always been shaped by the particular circumstances under discussion, they are similar in that they have attempted to mediate between the private interests of owners and the interests of the public in ensuring access to creative works.<sup>2</sup> That is, they have attempted to coordinate and balance the various interests that coexist in copyright law. Another common feature of these debates is that, whenever the question of duration has arisen, the length of protection has

<sup>1</sup> That is, the debates preceding and surrounding *Millar v. Taylor* (1769) 98 ER 201; 4 Burr 2303 and *Donaldson v. Beckett* (1774) 2 *Brown's Prerogative Cases*; Cobbett's *Parliamentary History* xvii, 954. See, e.g. A. Birrell, *Seven Lectures on Copyright* (1898); B. Kaplan, *An Unhurried View of Copyright*, 1–25 (1967); L.-R. Patterson, *Copyright in Historical Perspective* (1968); M. Rose, *Authors and Owners* (1993); D. Saunders, *Authorship and Copyright* (1992); Sherman and Bently, ch. 1.

<sup>2</sup> For an overview of policy considerations, see S. Ricketson, 'The Copyright Term' (1992) 23 *IIC* 753. The arguments were extensively ventilated in the US literature surrounding *Eldred et al. v. Ashcroft* [2003] 123 *S Ct* 769 in which the US Supreme Court (Stevens J and Breyer J dissenting) held constitutional Congress's extension of copyright for extant works to life plus 70 years. Of the more startling contributions, see W. Landes and R. Posner, 'Indefinitely Renewable Copyright' (2003) 70 *University of Chicago LR* 471 (proposing a system of indefinitely renewable copyright, the requirement of renewal ensuring most works fall into the public domain, the possibility of indefinite renewal ensuring sufficient incentive to exploit the work). For a compelling critique of the 'neo-liberal economics' espoused by Landes and Posner, see M. Lemley, 'Ex Ante versus Ex Post Justifications for Intellectual Property' (2004) 71 *University of Chicago LR* 129.

typically increased rather than decreased. For example, literary works were initially protected for 14 years under the 1710 Statute of Anne. After great debate, the 1842 Literary Copyright Act extended the term of copyright in books to 42 years, or the author's life plus 7 years.<sup>3</sup> In 1911, this was extended to life plus a 50-year term. As a result of the EU Duration Directive, the term of protection was recently increased to the life of the author plus 70 years.<sup>4</sup>

Before looking at duration in more detail, it is important to note a number of things. The first is that the period of protection changes depending on the type of work in question. This is a reflection of the fact that different interests and policy issues arise with different categories of work. The way in which the term of protection is calculated also differs depending on the type of work in question. In relation to most literary, dramatic, musical, and artistic works, copyright subsists throughout the life of the author, and for a fixed term (currently 70 years) that is calculated from when the author dies (*post mortem*). In the case of entrepreneurial works and certain types of authorial work (such as those of unknown authorship), the protection is a fixed term which is calculated from when the work is either *made* or *published*. The term is calculated from the end of the year in which a particular event occurs.<sup>5</sup>

Harmonization of copyright laws in Europe has had an important impact upon the duration of copyright in the United Kingdom. When the 1988 Act was first enacted, the length of protection for literary, dramatic, musical, and artistic works was for the life of the author plus 50 years. In relation to sound recordings, films, and broadcasts, the period of protection lasted for 50 years from the making of the work. The duration for typographical arrangements was limited to 25 years from the year in which the edition was first published.

As a result of the EU Duration Directive the length of protection for literary, dramatic, musical, and artistic works in the United Kingdom was increased as of 1 January 1996 to the life of the author plus 70 years.<sup>6</sup> The term of protection offered to films also changed as a result of the Directive. Under the 1988 Act (as enacted), where films were treated as entrepreneurial works, films were given a fixed term of protection. As a result of the move towards harmonization of copyright in Europe, films are now treated more as authorial works.<sup>7</sup> This is reflected in the fact that the period of protection offered to films now depends on the life of the principal director, author of the screenplay, author of the dialogue, and the composer of music specifically created for use in the work. No changes needed to be made to the term for broadcasts,<sup>8</sup> or for typographical arrangements. Some minor changes have taken place in relation to sound recordings.<sup>9</sup>

<sup>4</sup> Duration Directive. See W. Cherniak and P. Parrinder (eds.), *Textual Monopolies* (1997); N. Dawson, 'Copyright in the European Union: Plundering the Public Domain' (1994) *Northern Ireland Legal Quarterly* 193; S. Lewinski, 'EC Proposal for Council Directive Harmonizing the Term of Protection of Copyright' (1992) 23 *IIC* 785; A. Silvestro, 'Towards EC Harmonization of the Term of Protection of Copyright and so-called Related Rights' [1993] *Ent LR* 73.

<sup>5</sup> CDPA s. 12(2). The Duration Directive expresses this as calculating matters 'from the first day of January of the year following the event which gives rise to them'. Duration Dir., Art. 8.

<sup>6</sup> Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297). The length of protection is greater than that which is required in the WIPO Copyright Treaty, Art. 1(4) and the TRIPS Agreement: Art. 9 TRIPS.

<sup>7</sup> In fact the position is more complicated. Art. 3(3) of the Directive also provides that the rights of the producer of first fixation of a film are to last 50 years after fixation or after the fixation was lawfully published. These are distinct from the rights of the owner of copyright in a cinematographic or audiovisual work.

<sup>8</sup> Duration Dir., Art. 3(4).

<sup>9</sup> The Copyright and Related Rights Regulations 2003 (SI 2003/2498) reg. 29 amends CDPA s. 13A(2) to implement the Information Society's amendment to the Duration Dir., Art 3(2). Transitional provisions are made by regs 30–39.

In implementing the Duration Directive, member states were required to apply the new terms to all works and subject matter that were protected in at least one member state on 1 July 1995. As it turned out, this meant that not only was the copyright in many works extended, but also that the copyright in some works which had previously expired had to be revived.<sup>10</sup> For example, the United Kingdom copyright in a work by a British author who died in 1935 and which had first been published in the United Kingdom, would have lapsed on 1 January 1986; but would have been revived from 1 January 1996, since the work would have been protected in Germany on 1 July 1995.<sup>11</sup> The Directive also obliged member states when implementing the reforms 'to adopt the necessary provisions to protect in particular acquired rights of third parties'.<sup>12</sup> Acts done pursuant to arrangements made before 1 July 1995 at a time when copyright did not subsist in the work are treated as not infringing any revived copyright in a work.<sup>13</sup> In all cases, the revived copyright is treated as 'licensed by the copyright owner, subject only to the payment of such reasonable royalty or other remuneration as may be agreed or determined in default of agreement by the Copyright Tribunal'.<sup>14</sup>

As well as extending the period of protection given to many works, as of 1 January 1996 the Duration Directive also changed the way duration is calculated for works originating from outside the EEA. Prior to the introduction of the Directive, British law provided the same level of protection to works published in the United Kingdom as those published elsewhere. This principle changed, however, under the Duration Directive which only requires that the extended period of protection be offered to works originating from within the EEA. The period of protection given to works of non-EEA origin, that is to works not originating in the EEA or without an EEA author, is the same as that which the work would receive in the country of origin.<sup>15</sup> That is, the Duration Directive is based on a notion of 'comparison of terms' rather than national treatment.<sup>16</sup> This means that, where a work is first published in Australia<sup>17</sup> and the author is not a national of an EEA state, the work is only protected in Europe for 50 years after the death of the author (because that is the duration of Australian copyright law).<sup>18</sup>

However, it has been observed that the implementation of the 'comparison of terms' rule in the United Kingdom may be more far-reaching than the Directive was generally thought to have intended.<sup>19</sup> This is because section 12(6) (like sections 13A(4), 13B(7), 14(3)) refers to the

<sup>10</sup> Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297), especially r. 17.

<sup>11</sup> *Land Hessen v. G. Ricordi & Co*, Case C-360/00 [2002] ECR I-5089 (ECJ).

<sup>12</sup> Duration Directive, Art. 10. See also Recitals 26 and 27. For discussion by the ECJ of the Italian transitional provisions see *Butterfly Music Srl v. Carosello Edizioni Musicali e Discografiche Srl* Case C-60/98 [1999] ECR I-3939, [2000] 1 CMLR 587 (holding that the Italian legislation satisfied the criterion of legality imposed by the Directive, and did not defeat the intention of the Directive. The ECJ approved the fact that those who had reproduced and marketed phonograms during the period when copyright had expired were permitted by the Italian provisions to continue distribution for three months after the copyright revived, the Court saying 'a provision of that kind, which must necessarily be transitional in order not to prevent the application of the new term of protection of copyright and related rights on the date laid down by the Directive, that being the Directive's principal objective': para. 28. <sup>14</sup> *Ibid.*, r. 23, r. 24.

<sup>15</sup> On what is a country of origin see CDPA s. 15A. In relation to sound recordings, and broadcasts, the Act refers to the author of a work being 'a national of an EEA state': CDPA s. 13A(4), s. 14(3).

<sup>16</sup> Duration Dir., Recital 22, Art. 7. <sup>17</sup> CDPA s. 15A(2). <sup>18</sup> CDPA s. 12 (6).

<sup>19</sup> As observed by Mustafa Safiyuddin, of Little & Co, Mumbai.

duration of copyright as being ‘that to which the work is entitled’ in the country of origin. A literal interpretation requires reference therefore not only to duration in the country of origin, but also to whether copyright subsists at all in that country: after all, if there is no copyright in the work in its country of origin, it is difficult to say the work is ‘entitled’ to copyright for any length of time. The impact would be to deny copyright to works which were unprotected in the country of origin, for example, because they fell outside any list of subject matter, or failed to reach that country’s originality threshold. UK implementation, thus interpreted, would take the comparison of terms rule and transform it into something akin to a rule of reciprocity (and thus incompatible with the Berne Convention). The Directive, in contrast, states that copyright ‘shall expire on the date of expiry of the protection granted in the country of origin.’ The use of the term ‘expiry’ suggests that the rule is not directed at conditions of subsistence. The preferable view is that section 12(6) should be read as only dealing with expiry of term: in cases where works are not protected in the country of origin, but would meet British requirements for subsistence, the section should be understood as requiring British law to give such works protection until such time as protection of a work *of that sort* would expire in the country of origin.

## 2 LITERARY, DRAMATIC, MUSICAL, AND ARTISTIC WORKS

Subject to the exceptions listed below, copyright in a literary, dramatic, musical, or artistic work expires 70 years from the year in which the author of the work dies.<sup>20</sup> Thus, where an author of a book died in 1990, the copyright in the book would expire in 2060. If a literary, dramatic, musical, or artistic work is jointly authored, the 70-year *post-mortem* term of copyright is calculated from the year in which the longest surviving author dies.<sup>21</sup>

In discussions about copyright duration, the question is often asked: why not have fixed terms for all works? A number of justifications have been given as to why the ‘life-plus’ term should be used to calculate the duration of authorial works. It has been suggested, admittedly without any real evidence, that since authors will be providing for their next of kin, the life-plus protection provides authors with incentives to create up until their death. Another explanation given as to why the life-plus formula is used is that it overcomes the problems that often arise in determining when a work was made or published. While the date of an author’s death is easily ascertained from public records, it is often difficult to determine when something was created. A final reason for using the life-plus formula is that it avoids the complications that would otherwise arise in calculating duration when authors make revisions to a work during their lifetime. Under the life-plus test, all works fall into the public domain on the same date.

### 2.1 EXCEPTIONS TO THE TERM OF LIFE PLUS 70 YEARS

The general rule that the duration of literary, dramatic, musical, and artistic works is life plus 70 years is subject to the following exceptions: computer-generated works; Crown copyright;

<sup>20</sup> CDPA s. 12(2).

<sup>21</sup> CDPA ss. 3(1), 12(4). However, because copyright subject matter remains unharmonized, different European countries have different concepts of joint authorship in relation to ‘songs’. In Britain, a song comprises two works, and the duration of copyright in lyrics and music must be calculated separately. For an overview of the European situation, see IviR, *Recasting Copyright for the Knowledge Economy* (2006), Ch. 4.

Parliamentary copyright and international organizations; artistic works used in designs; works of unknown authorship; unpublished works not in the public domain.<sup>22</sup>

### 2.1.1 Computer-generated works

Where a literary, dramatic, musical, or artistic work is computer-generated, the duration of protection lasts for 50 years from the end of the year when the work was made.<sup>23</sup>

### 2.1.2 Crown copyright

Crown copyright in a literary, dramatic, musical, or artistic work lasts for 125 years from the year in which the work was made. If the work is published commercially within 75 years from the year it was made, then copyright lasts for 50 years from the date it was commercially published.<sup>24</sup>

### 2.1.3 Parliamentary copyright and international organizations

Parliamentary copyright lasts for 50 years from the year in which the work was made.<sup>25</sup> Where an international organization is the first owner, copyright also lasts for 50 years from when the work was made.

### 2.1.4 Artistic works used in designs

Copyright in artistic works which have been used in designs of industrially produced articles lasts for 25 years from the year in which such articles are first legitimately marketed.

### 2.1.5 Works of unknown authorship

As we saw earlier, in certain situations it may not be possible to identify the author of a particular work. Given that, with works of unknown authorship, there is no identifiable author whose death can help set the duration of protection, copyright law is forced to use other trigger points to calculate duration. In these circumstances, the 1988 Act provides that copyright in a literary, dramatic, musical, or artistic work of unknown authorship lasts for 70 years calculated either from the year of creation or, if during that period the work is made available to the public, from the year it was made available.<sup>26</sup> If the author's name is disclosed before the 70-year term lapses and before the author's death, this disclosure will have the effect of extending the term of copyright to the author's life plus 70 years.<sup>27</sup>

### 2.1.6 Unpublished works not in the public domain

Section 17 of the 1911 Copyright Act conferred protection on unpublished literary, dramatic, and musical works, and engravings, for 50 years from the date of publication. This meant that

<sup>22</sup> Prior, perpetual copyrights under past law end in 2040. Contrast, however, the curious exception for J. M. Barrie's *Peter Pan*: CDPA, Sched. 1, para. 13, and Sched. 6, respectively.

<sup>23</sup> CDPA s. 12(7).

<sup>24</sup> CDPA ss. 163(3), 164, 165(3), 166(5). International organizations initially acquiring copyright in a work may enjoy it for 50 years from making or longer if specified by order: CDPA s. 168(3).

<sup>25</sup> CDPA s. 165(3).

<sup>26</sup> CDPA s. 12(3). The requisite 'making available to the public' includes the following acts if authorized: publishing, performing in public, and communicating the work to the public, in the case of literary, dramatic, and musical works; and exhibition in public, and inclusion in a film shown in public, or a communication to the public, in the case of artistic works: CDPA s. 12(5).

<sup>27</sup> CDPA s. 12(4). Before 1996, absent identification of an author, an anonymous or pseudonymous work obtained a term of 50 years from the year of first publication.

so long as the works remained unpublished the copyright term was unlimited. The 1988 Act removed this possibility by specifying that copyright in works which were unpublished at the author's death and remained so until 1 August 1989, was to last for a fixed period of 50 years from 1 January 1990, that is, until 31 December 2039.<sup>28</sup>

### 3 FILMS

Under the 1956 and 1988 Acts (as enacted), where films were treated as types of entrepreneurial work, protection was limited to 50 years, normally calculated from the year of release.<sup>29</sup> The Duration Directive required recognition of copyright in both the first fixation of a film for 50 years, and the 'cinematographic or audiovisual work' for which the term was to be 70 years from the year of the latest death among four categories of person: the principal director, the author of the screenplay, the author of the dialogue, or the composer of music specially created for and used in the film.<sup>30</sup> Subsequent British attempts at implementation rather unwisely ignored the distinction, preferring to extend the copyright in 'film'—the section 5B copyright—to 70 years from the death of these four persons.<sup>31</sup> Where the identity of these four people is unknown, the term of protection is 70 years from the year in which the film was made.<sup>32</sup> Alternatively, if during that period the film is made available to the public, copyright expires 70 years from the end of the year in which the film was first made available.<sup>33</sup> Foreseeing potential problems in identifying when such copyright expires, the Duration Regulations also introduced a new exception to allow a film to be copied at a time when it is reasonable to assume that copyright has expired.<sup>34</sup>

Not long after this attempted implementation, the Court of Appeal recognized that cinematographic works benefit from copyright not merely as films but also as dramatic works.<sup>35</sup> While this decision moved British law some way towards compliance with international and regional obligations, it also exposed further the oddness of the British attempt to give effect to the Duration Directive. This is because the term of copyright in the cinematographic work as a dramatic work is left to be determined by reference to the life of the 'author.' In British law, this might well include the director and authors of scripts for the film (as long as they do not exist before the film-making process) and possibly the editors or director of cinematography, but it is highly unlikely to include the composer of music. If normal principles were to be applied, the term of protection would be unlikely to be that required by Article 2(2). If the legislation

<sup>28</sup> CDPA, Sched. 1, para. 12(4). A work published after the author's death, but before 1 Aug. 1989, obtained a term of 50 years from publication: CDPA, Sched. 1, para. 12(2). Under the 1956 Act, a work unpublished at the author's death continued in copyright until 50 years after first publication: CA 1956, ss. 2(3), 3(4). In some cases, certain acts, such as performance in public, had the same effect as publication. For some works unpublished on 1 Aug. 1989, the relevant copyright will have been extended by the recent increase in the term of copyright. For example, if an author died in 1988 leaving unpublished manuscripts (which remained unpublished in 1990), the effect of the changes made in 1988 was that copyright lasted until 31 Dec. 2039. However, as a result of the increase in the duration of copyright to life plus 70 years copyright will be extended to 31 Dec. 2058.

<sup>29</sup> CDPA s. 13 (as enacted). <sup>30</sup> Duration Dir., Art. 2(2).

<sup>31</sup> CDPA s. 13B(2). Each category may include more than one member, but unidentified members do not count: CDPA s. 13B(3), (10).

<sup>32</sup> CDPA s. 13B(4)(a), (10).

<sup>33</sup> CDPA s. 13B(4)(b), (10). The requisite 'making available to the public' includes the following acts if authorized: showing in public or communicating to the public: CDPA s. 13B(6).

<sup>34</sup> CDPA s. 66A. <sup>35</sup> *Norowzian v. Arks* (No. 2) [2000] FSR 363.

is not amended, it is not unlikely that a court will be faced with the choice of applying these normal principles, and acknowledging failed implementation, or reading the term 'author' in this context as being open-textured enough to take its meaning from the Directive. Moreover, once a *post-mortem* term is acknowledged to exist in relation to the cinematographic work as a dramatic work, the wrong-headedness of extending the term of the section 5B film copyright is apparent. If the section 5B copyright is to reflect the Directive's demands in relation to related rights in the first fixation of a film, the period should be confined to 50 years from the making of the fixation.<sup>36</sup>

## 4 ENTREPRENEURIAL WORKS

As entrepreneurial works have no readily identifiable author, the period of protection is calculated using different trigger points.<sup>37</sup>

### 4.1 SOUND RECORDINGS

For sound recordings, copyright expires 50 years from the end of the year in which it is made. If during that period the sound recording was published, copyright expires 50 years from the year of such publication. If during the 50 years from making the work is not published but is made available to the public by being played in public or communicated to the public, copyright expires 50 years from the year of communication or playing in public.<sup>38</sup> The maximum duration of copyright in a sound recording thus appears to be 100 years (which should be available where a work is published or communicated to the public 50 years after its making).

### 4.2 BROADCASTS

The duration of broadcasts is 50 years from when the broadcast was first made.<sup>39</sup> Where the author of a broadcast is not a national of an EEA state, the duration of copyright is that to which the broadcast is entitled in the country of which the author is a national (provided that the period of protection does not exceed 50 years).<sup>40</sup>

### 4.3 TYPOGRAPHICAL ARRANGEMENTS

For typographical arrangements of published editions, copyright expires 25 years from the year of first publication.<sup>41</sup> This right should be distinguished from the publication right conferred on the publisher of a previously unpublished work in which copyright has expired, which also lasts for 25 years from publication.<sup>42</sup>

<sup>36</sup> Duration Dir., Art. 3(3). See Kamina, 123.

<sup>37</sup> For transitional provisions see CDPA, Sched. 1, paras. 12(2)(d)–(e), (5), (6).

<sup>38</sup> CDPA s. 13A(2) (as amended by SI 2003/2498, with transitional provisions in regs. 30–32, 36–9) implementing Duration Dir., Art. 3(2) (as amended by Info. Soc. Dir.). Note that an original collection of recordings would constitute a database and therefore be protected as a literary work.

<sup>39</sup> CDPA s. 14(2). <sup>40</sup> CDPA s. 14(3). <sup>41</sup> CDPA s. 15.

<sup>42</sup> Related Rights Reg. 16(6). See below at pp. 167–8.

## 5 MORAL RIGHTS

In the United Kingdom, moral rights of integrity and attribution subsist as long as copyright subsists.<sup>43</sup> The right to object to false attribution is less extensive, only lasting for 20 years after the author's death. In some other countries moral rights are capable of operating in perpetuity. The Duration Directive made no attempt to harmonize the duration of moral rights and was expressed to be without prejudice to them.<sup>44</sup>

## 6 PUBLICATION RIGHT IN WORKS IN WHICH COPYRIGHT HAS LAPSED

In order to give effect to Article 4 of the Duration Directive, a new property right equivalent to copyright, called a 'publication right', was introduced in the United Kingdom.<sup>45</sup> The right is granted without formality to any person who, after the expiry of copyright protection, publishes for the first time a previously unpublished literary, dramatic, musical, or artistic work or film. This new right lasts for 25 years from the end of the year in which the work was first published.

In order to have the right, a publisher must publish a public-domain literary, dramatic, musical, or artistic work or a film for the first time.<sup>46</sup> The right is only acquired where the work is previously unpublished. It should be noted that publication in this context has a special meaning.<sup>47</sup> When determining whether the work is previously unpublished, no account is to be taken of any unauthorized act done at a time when there is no copyright in the work. An unauthorized act means an act done without the consent of the owner of the physical medium in which the work is embodied or on which it is recorded.

The publication right that vests in the publisher is only available 'after the expiry' of copyright protection.<sup>48</sup> This means that the publication right is unlikely to be of great significance in the United Kingdom for some time. This is because of the dual effect of the changes made as regards unpublished works in the 1988 Act and the other changes made to the copyright term introduced to give effect to the Duration Directive. The effect of these transitional provisions is that the publication right is currently restricted to unpublished artistic works other than engravings.<sup>49</sup>

Another consequence of limiting the availability of the publication right to cases where copyright has expired is that it may exclude works in which copyright has never subsisted. Since the majority of existing unpublished works received statutory copyright protection in 1911, it will normally be possible to resolve the question of whether a work ever enjoyed

<sup>43</sup> See Ch. 10.      <sup>44</sup> Duration Dir., Art. 9.      <sup>45</sup> Related Rights Reg. 16.

<sup>46</sup> The publication right does not arise from the publication of a work in which Crown copyright or Parliamentary copyright subsisted: Related Rights Reg. 16(5).

<sup>47</sup> It includes any making available to the public and, in particular, includes the issue of copies to the public; making the work available by means of an electronic retrieval system; the rental or lending of copies of the work to the public; the performance, exhibition, or showing of the work in public; or communicating the work to the public: Related Rights Reg. 16 (as amended).

<sup>48</sup> Ibid.

<sup>49</sup> For an elaboration of the reasoning that leads to this conclusion, see Copinger, paras. 17–29 to 32.

copyright protection without too much difficulty (although problems exist in relation to artistic works). It seems that no statutory copyright existed in unpublished paintings, drawings, and photographs created before 1862 by an artist who died before 1855, nor in unpublished sculptures created prior to 1 July 1862.<sup>50</sup>

While the publication right may supplement existing rights given to publishers in their typographical arrangement of published editions, it differs from these rights in three regards. First, the publication right is only available for the first publication of a previously unpublished work. Second, while the new publication right may apply where the publication relates to an artistic work, the typographical arrangement right is not relevant in such circumstances. This is because the right in typographical arrangement is confined to 'a published edition of the whole or any part of one or more literary, dramatic or musical works'.<sup>51</sup> Third, the publication right is much more extensive than the right to prevent facsimile copying of a typographical arrangement.

A work qualifies for a publication right<sup>52</sup> only if the first publication occurs in the European Economic Area and the publisher of the work at the time of first publication is a national of an EEA state.<sup>53</sup> Publication has a more extended meaning than that discussed in relation to copyright. Where two or more people jointly publish a work, it is sufficient if any of them is a national of an EEA state. No provision is made for the extension of the publication right so as to recognize equivalent rights for foreign publishers, where the country of publication provides reciprocal rights to publishers in the EEA.<sup>54</sup>

## 7 REFORM PROPOSALS

The record industry and allied interests, particularly performers, have recently been campaigning for an extension of the term of copyright in sound recordings. The background to the campaign is the imminent lapse of sound recording copyright in material from the late 1950s and early 1960s, the heyday of rock 'n' roll and the early years of pop, when artists such as Elvis and the Beatles were performing. An argument is made that extension of copyright in the UK, and of necessity therefore in Europe, is needed because copyright protection of such recordings still exists under the law of the United States. Absent some sort of harmonization with the United States, there is a fear that artists will record with the more lucrative US market in mind, thus producing a sort of 'cultural distortion.' A second argument that is put is that it is unfair to treat sound recording producers and performers differently to creators of literary and artistic works, including cinematographic works. It is said to be particularly unfair that performers, such as Sir Cliff Richard, will find their income from their recording dries up during their lifetime.<sup>55</sup> Consequently, all copyright terms should be aligned at 'life plus 70' (or some equivalent, such as 95 years from publication or 120 years from creation). Thirdly, it is claimed by the record industry that investment in record production in any given year is linked to the previous year's income, so that once its income declines (as recordings go out of copyright) so will its investment. Finally, the record industry argues that increasing the term of copyright in sound recordings may induce greater investment in the production of sound recordings.

<sup>50</sup> For background, see Sterling and Carpenter, para. 2A.01. <sup>51</sup> CDPA s. 8(1).

<sup>52</sup> For general analysis of concepts relevant to protecting foreign claims, see above at Ch. 4, Section 5.

<sup>53</sup> Related Rights Reg. 16(4). <sup>54</sup> Ibid.

<sup>55</sup> The record industry has not campaigned, however, for longer performers' rights.

The record industry's arguments—particularly the economic ones—have been scrutinized and found to be unpersuasive by a number of independent bodies: the Centre of Intellectual Property and Information Law,<sup>56</sup> the Gowers Committee,<sup>57</sup> and the Institute for Information Law at the University of Amsterdam.<sup>58</sup> These reviews see increasing copyright term as imposing costs on consumers (and welfare generally by increasing so-called 'deadweight loss'),<sup>59</sup> without being likely to increase investment in the production of sound recordings in any significant way. The critical explanation as to why increasing term does not have a substantial effect on present incentives lies in the fact that the current value of money that might be raised in 50 years' time is a tiny fraction of the latter sum.

Not surprisingly, given the revenues that it would gain if it were to be successful in the pursuit of a longer term, the record industry is continuing to lobby national legislatures and the European Commission. The battle over copyright term remains, inevitably, one that will be fought in the political arena where economic rationality is only one weapon that will be deployed. At the time of writing, the record industry's efforts appear to have borne some fruit. On St Valentine's Day, 2008, the Internal Market Commissioner announced that he would be introducing legislation to increase the term of sound recordings to 95 years. The Commissioner claims he is doing so on the basis of the 'moral right' of performers 'to control the use of their work and earn a living from their performances'. Having said he can see no justification for performers being treated differently from authors (who get life plus 70 years), he nowhere explains why he proposes that the EC adopt the 95-year term (that the US confers on copyright owners in sound recordings, insofar as they are perceived as works for hire).<sup>60</sup> If the Commissioner really wanted to protect performers, the proposal would give them a life-long, inalienable right to remuneration from use of their performances, rather than giving the owners of copyright in sound recordings (the record industry) a fixed term.

<sup>59</sup> The deadweight loss is the loss caused to those who would have bought a record at the price it would sell for in a competitive market (without copyright) but who are not willing to pay the price established by the copyright owner and thus do not make the relevant purchase.

3	Restricted Activities	171			
4	A ‘Causal Connection’	171			

### 1 INTRODUCTION

The aim of this chapter is to explore copyright infringement. We begin by discussing ‘primary’ infringement, that is, the activities of those involved in infringing the copyright owner’s exclusive rights (which we described in Chapter 6). We then discuss the statutory provisions which render accessories—whether before or after the act of primary infringement—liable for assisting in the making or distribution of infringing copies or the giving of infringing performances. These liabilities are referred to as ‘secondary infringements’.

Before examining ‘primary’ infringement in detail, it is worth observing that, while there has been a great deal of norm setting in relation to the rights of the copyright owner, the question of what amounts to copyright infringement has not generally been the subject of much international or regional harmonization. The relevant tests for infringement have largely been developed locally, and for the most part by the judiciary.<sup>1</sup> Having acknowledged that British law on infringement has taken its own course, it is worth noting two recent developments. First, the rule that copyright does not protect ideas has found its way into both

<sup>1</sup> While infringement analysis in the UK may use concepts, such as ‘substantiality’ and ‘idea-expression’, similar to those used elsewhere, British applications of these concepts are distinct. Consequently, although case law from the United States has sometimes been referred to, the British courts have doubted its relevance. Contrast *John Richardson v. Flanders* [1993] FSR 497, 527 (Ferris J, finding useful US case law on infringement in relation to computer programs, especially the abstraction–filtration–comparison approach adopted in *Computer Associates v. Altai* (1993) 23 IPR 385); with *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 289 (Jacob J, finding US case law unhelpful, and pointing out the different statutory basis for US decisions).

regional and international arrangements, and has been interpreted as a copyright ‘maximum’.<sup>2</sup> Second, regional harmonization initiatives seem to require that copyright infringement be found to occur where ‘any part’—as opposed to any ‘substantial part’—of a work is reproduced.<sup>3</sup> Quite what impact, if any, these two developments will have on British case law is difficult to predict.<sup>4</sup>

## 2 PRIMARY INFRINGEMENT

In an action for primary infringement, the onus falls upon the claimant to show on the balance of probabilities that:

- (i) the defendant carried out one of the activities which falls within the copyright owner’s control;
- (ii) the defendant’s work was *derived* from the copyright work (‘causal connection’); and
- (iii) the restricted act was carried out in relation to the *work* or a *substantial part* thereof.<sup>5</sup>

## 3 RESTRICTED ACTIVITIES

The first question that needs to be asked in considering whether copyright in a work has been infringed is whether the defendant carried out one of the activities that falls within the copyright owner’s rights. This topic was discussed in Chapter 6.

## 4 A ‘CAUSAL CONNECTION’

The second matter that needs to be proved in order to establish infringement is that the defendant’s work was *derived* from the claimant’s work.<sup>6</sup> That is, it is necessary to show that there is a causal link between the work used by the defendant (i.e. reproduced, issued, rented, performed, communicated, or adapted) and the copyright work. This means that, unlike the

<sup>2</sup> TRIPS, Art. 9(2) (copyright protection shall extend to expressions and not to ideas, procedures, methods of operation, or mathematical conceptions as such); WCT, Art. 2. In *Nova Productions v. Mazooma* [2007] EWCA Civ 219, [2007] RPC 589, 602 (para. 38) Jacob LJ stated that TRIPS, though a minimum standards treaty, ‘lays down a positive rule as to the point beyond which copyright protection may not go’. The Software Dir., Art 1(1) states that ‘ideas and principles which underlie any element of a computer program . . . are not protected by copyright’. This, too, is an obligatory requirement, but has not been expressly implemented in the UK.

<sup>3</sup> Database Dir., Art. 5; Software Dir., Art. 4(a); Info. Soc. Dir., Art. 2(1). No alteration of the British statute was seen to be necessary.

<sup>4</sup> In *Nova Productions v. Mazooma* [2007] EWCA Civ 219, [2007] RPC 589, 602 Jacob LJ stated that the idea that there might be infringement by copying *insubstantial* parts was ‘so absurd as to be assuredly wrong’. The question of substantiality will be reviewed by the ECJ in *Infopaq International AS v. Danske Dagblades Forening*, Case C-5/08 (pending) (whether 11 words from newspaper article is substantial part).

<sup>5</sup> CDPA s. 16(3).

<sup>6</sup> See e.g. *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683 (failure to show a causal chain); *Sawkins v. Hyperion* [2005] 1 WLR 3281, 3288 (para. 30). As we saw at p. 137 above the knowledge of the defendant is not important in determining whether an act of primary infringement has taken place, but see also Ch. 6 Section 9 above.

case with patents, copyright law does not protect a copyright owner against independent creation. It is important to note that it is not necessary for the defendant's work to be derived directly from the original of the work;<sup>7</sup> it is possible for a defendant to infringe where they base their work on a copy of the work. It is also important to note that it does not matter if the intermediate reproduction is itself a legitimate or a pirated copy.<sup>8</sup> This means, for example, that where a person copies a three-dimensional object (such as an exhaust pipe), they may infringe the copyright in the drawings on which the three-dimensional object was based, even though they have never seen those drawings.<sup>9</sup>

Whether a defendant's material was derived from a claimant's copyright work is a matter of fact, and it is for the claimant to persuade the tribunal that this has occurred. In order to do so, the claimant may use different forms of evidence. First, and most convincing, is direct evidence that the defendant utilized the claimant's work in producing their own. For example, an ex-employee may be able to give evidence that they were asked to produce something similar to the claimant's work; or a third party may have witnessed the appropriation. Indeed, a defendant may in some circumstances admit that they drew upon the claimant's work.

However, such direct evidence is often unavailable. In these circumstances, the courts have sometimes been willing to infer derivation.<sup>10</sup> In order to persuade a court to infer copying, a claimant will typically rely on similarities between the works, coupled with evidence that the defendant had access and opportunity to copy the copyright work. a court is likely to accept that there is a causal connection between the two works if the similarities are very numerous, or so individual,<sup>11</sup> that the possibility of their having been independently conceived by the defendant is implausible.<sup>12</sup> Even if the shared elements are less individual or numerous, an inference of derivation may be drawn where a claimant can positively demonstrate the defendant's familiarity with the copyright work.<sup>13</sup> Where such an inference of copying has been established by a claimant, the onus then shifts onto the defendant to prove that they created the work independently.<sup>14</sup> In order to do so, a defendant may claim that the similarities between the two works can be explained by factors other than copying. For example, a defendant may attempt to show that the similarities are attributable to the fact that the two works were inspired by the same source,<sup>15</sup> that both works were constrained by the functions

<sup>7</sup> CDPA s. 16(3)(b).      <sup>8</sup> CDPA s. 16(3).

<sup>9</sup> *British Leyland v. Armstrong* [1986] AC 577 (production of replacement exhaust pipes for claimant's cars indirectly copied the claimant's original drawings).

<sup>10</sup> *IPC Media Ltd v. Highbury Leisure Ltd* [2005] FSR (20) 434, 443.

<sup>11</sup> *Billhöfer Maschinenfabrik GmbH v. Dixon & Co.* [1990] FSR 105, 123 (Hoffmann J, observing the paradox that it is 'the resemblances of inessentials, the small, redundant, even mistaken elements of the copyright work which carry the greatest weight' in proving derivation). See also *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 159 (Lord Hailsham); *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 298 (proving derivation via the inclusion in the defendant's program of spelling mistakes and redundant code from the claimant's program).

<sup>12</sup> *Designers Guild v. Russell Williams* [2000] 1 WLR 2416, 2425 per Lord Millett.

<sup>13</sup> At this stage, key factors include the relative age of the claimant's work, and how widely distributed it had been: *Francis Day & Hunter v. Bron* [1963] Ch 587 (where, on facts, derivation not established).

<sup>14</sup> *Designers Guild v. Russell Williams* [2000] 1 WLR 2416, 2425 per Lord Millett; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 297; *Stoddard International v. William Lomas Carpets* [2001] FSR 848, 857–8.

<sup>15</sup> *Harman Pictures v. Osborne* [1967] 1 WLR 723, 728 (plays about the Charge of the Light Brigade may have been created independently but in the absence of an express explanation by the defendant, Goff J granted an interim injunction).

they perform,<sup>16</sup> or, less plausibly, to chance.<sup>17</sup> Such claims are likely to be undermined by evidence that the defendant has been engaged in similar acts of copying on previous occasions.

This process of inference can be well illustrated by the House of Lords' decision in *Designers Guild v. Williams*.<sup>18</sup> The claimant had produced its fabric design, named *Ixia*, in 1994. The design was impressionistic in style, made up of roughly drawn pink and yellow stripes with flowers scattered haphazardly across them (see Fig. 8.1).

The fabric was made available in shops from September 1995. A year later the claimant discovered that the defendant was selling fabric with a design called *Marguerite*, also based on vertical stripes in alternating colours and with flowers and associated stalks and leaves scattered across the stripes (see Fig. 8.2).

There were, however, several differences between the two designs, and the defendant denied that *Marguerite* had been copied from *Ixia*, asserting that its designer had developed it from her own *Cherry Blossom* design. Nevertheless, Judge Lawrence Collins QC inferred from the evidence that *Marguerite* in fact had been derived from *Ixia*,<sup>19</sup> a finding which the

**Fig. 8.1** The claimant's *Ixia* design, created by Helen Burke

<sup>16</sup> *Catnic Components v. Hill and Smith* [1982] RPC 183, 222 (CA, affirming Whitford J); *Kleeneze Ltd. v. D.R.G. (UK) Ltd* [1984] FSR 399, 401 (both designs relied on same concept, but beyond that similarities were attributable to functional considerations or were commonplace).

<sup>17</sup> *Francis Day v. Bron* [1963] Ch 587, 615–6 (per Willmer LJ, accepting similarities in two musical pieces were a result of coincidence).

<sup>18</sup> *Designers Guild v. Russell Williams* [2000] 1 WLR 2416.

<sup>19</sup> *Designers Guild v. Russell Williams* [1998] FSR 803.

Fig. 8.2 The defendant's *Marguerite* design, created by Jane Ibbotson

House of Lords approved. First, the judge found that there were seven similarities between the two designs.<sup>20</sup> Both designs were based on stripes with scattered flowers; both were in an impressionistic style, showing brushwork; in both the stripes had rough edges; in both the petals were executed in a similar way; in both the stripes showed through some of the petals; in each, the flower heads comprised a 'strong blob'; and in each the leaves were in two shades of green. The judge concluded that these similarities went 'far beyond the similarities which would be expected simply from both being based on an impressionistic style or from both being based on a combination of stripes and scattered flowers and leaves'. Second, the judge found that the designer of *Marguerite* had had an opportunity to copy *Ixia*, since she was at a trade fair in 1995 where the *Ixia* design was exhibited. Third, the judge rejected the defendant's own account of how she came to produce the *Marguerite* design, finding her story unconvincing. Consequently, he found that the defendant's design was derived from the claimant's.

One factor that has been useful in proving derivation is the fact that the infringing work contains the same mistakes that occur in the original work. In these circumstances it is assumed that the reason why the same mistakes appear in the two works is that they are copies of each other. Where works involve low levels of innate individuality, in order to assist in the task of proving derivation, copyright owners sometimes place incorrect or false information in their works. For example, the creators of a telephone directory might include a number of false names and addresses in the directory. Similarly, computer programs might contain lines of meaningless code. Where this incorrect or meaningless information appears in a defendant's

<sup>20</sup> [1998] *FSR* 803, 815.

work, it is very difficult for them to argue that they created the work independently of the copyright work.<sup>21</sup>

In most cases, the process of copying will be a conscious act. In some cases, however, the courts have been willing to accept that the process of derivation may occur at a subconscious level.<sup>22</sup> While a defendant may honestly not recall having seen or heard the copyright work, the courts seem open to the argument that the defendant subconsciously copied from the copyright work. This is particularly the case in relation to songs, where catchy, even annoying, tunes embed themselves in the subconscious. The acceptance of subconscious copying provides the courts with a way of reconciling the implausibility of independent creation with the conflicting evidence of a defendant who claims that they cannot remember having any contact with the work.<sup>23</sup>

## 5 THE WORK OR A SUBSTANTIAL PART THEREOF?

The third and final question that needs to be asked in an infringement action is whether the restricted act has been carried out in relation to the *work* or a *substantial part* thereof. The basic approach was set out by Lord Millett in *Designers Guild*:<sup>24</sup>

Once the judge has found that the defendants' design incorporates features taken from the copyright work, the question is whether what has been taken constitutes all or a substantial part of the copyright work. This is a matter of impression, for whether the part taken is substantial must be determined by its quality rather than its quantity. It depends upon its importance to the copyright work. It does not depend upon its importance to the defendants' work, as I have already pointed out. The pirated part is considered on its own . . . and its importance to the copyright work assessed. There is no need to look at the infringing work for this purpose.

This question of substantiality is the most difficult aspect of copyright infringement. In principle, in order to answer this question it is necessary to ask two subsidiary questions:

- (1) what is the work for the purposes of infringement; and
- (2) has the defendant's utilized the whole of the claimant's work or a substantial part thereof?

<sup>21</sup> *Waterlow Directories v. Reed Information* [1992] FSR 409; *Waterlow Publishers v. Rose* [1995] FSR 207.

<sup>22</sup> *Francis Day v. Bron* [1963] Ch 587. According to Willmer LJ, at 614, to establish subconscious copying it must be shown that the composer of the offending work was familiar with the work alleged to have been copied. Cf. Upjohn LJ, at 621–2 (leaving undecided the issue of whether a different test applied for subconscious copying). In this case there was not sufficient material from which such an inference could be drawn. See also *E. Gomme Ltd v. Relaxateze* [1976] RPC 377 (requiring high degree of familiarity for subconscious copying); *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 432.

<sup>23</sup> *Francis Day v. Bron* [1963] Ch 587, 619 (per Upjohn LJ). The decision of Wilberforce J at first instance is called 'a wise judgment' by Mummery LJ in *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579 para. 122. See also *Jones v. Tower Hamlets* [2001] RPC (23) 407, 432; *Elanco Products v. Mandops* [1980] RPC 213, 227 (CA) (where similarities were so remarkable there must have been deliberate and conscious copying).

<sup>24</sup> *Designers Guild v. Williams* [2000] 1 WLR 2426, 2426.

## 5.1 WHAT IS THE WORK FOR THE PURPOSES OF INFRINGEMENT?

Logically, the first task that arises when determining whether the defendant has utilized the whole or a substantial part of the copyright work is to ascertain the limits of the copyright work. To determine what the work is, it is necessary first to determine the parameters of the work, and then to distinguish the protected from non-protected elements of the work. We will deal with each of these in turn.<sup>25</sup>

### 5.1.1 What are the parameters of the work?

In many situations the parameters of the work will not be in dispute. This would be the case, for example, where a person photocopies all of a book, or they copy all of a computer program. Where a work is divisible into smaller elements the question may arise as to whether the 'parts' should be treated as separate and distinct works. If we take the case of a book, for example, while it is clear that the book as a whole is a copyright work, what of the chapters, pages, paragraphs, sentences, or words that are included in the book? The decision as to the size of the copyright work may have an important bearing on the outcome of an infringement action. The reason for this is that the question whether something is 'the whole or a substantial part' of something else depends on what it is being judged against. In this case, that something else is the copyright work.<sup>26</sup>

The question of how the parameters of the work are to be determined was considered by Judge Laddie QC in *Hyperion Records v. Warner Music*.<sup>27</sup> This was an application for summary judgment brought by Hyperion Records who owned copyright in a sound recording of the medieval chant, 'O Euchari'. The chant, which was 5 minutes 18 seconds long, appeared on the album *A Feather on the Breath of God*. Hyperion Records alleged that their copyright had been infringed when the electronic-pop band, The Beloved, copied (or sampled) eight notes from 'O Euchari' and incorporated them into their record 'Happiness'.

While it was clear that the song 'O Euchari' was a work, Hyperion Records argued that the eight notes sampled by The Beloved also formed a distinct copyright work in their own right.<sup>28</sup> If this was accepted, it would clearly have been an infringement, as 100 per cent of the 'work' would have been taken. Judge Laddie QC rejected the argument saying that 'I do not accept that all copyright works can be considered as a package of copyright works, consisting of the copyright in the whole and an infinite number of subdivisions of it'. He added that 'if the copyright owner is entitled to redefine his copyright work so as to match the size of the alleged

<sup>25</sup> The task of identifying the work is made easier because the claimants will specify in their statement of case the parameters of the work as well as the parts of the work that they believe have been infringed. While not definitive, this provides a useful starting point for demarcating the scope of the work.

<sup>26</sup> In the past, statutory definitions have helped give guidance as to the parameters of the work. For example, under the Literary Copyright Act 1842, 'book' was defined as 'every volume, part or division of a volume... separately published'. However, the abstract categories in CDPA s. 1(1) provide no such guidance. See also Sherman and Bently, 192–3 (explaining that for many intellectual property rights 'representative registration' helps define the parameters of the work, and noting this is not the case with copyright).

<sup>27</sup> *Hyperion Records v. Warner Music* (1991, unreported). See also, *Spelling Goldberg Productions v. BPC Publishing* [1981] RPC 283 (Buckley LJ); *Merchandising Corporation v. Harpbond* [1983] FSR 32, 39 (Walton J); it was not open to a claimant to select certain parts of a sketch and say each part had a separate copyright therein); *Coffey v. Warner/Chappell* [2005] FSR (34) 747.

<sup>28</sup> They also argued that the whole track was the work and that the defendant had reproduced a substantial part thereof.

infringement, there would never be a requirement for substantiality'. More specifically, Judge Laddie did not accept that it was legitimate 'to arbitrarily cut out of a large work that portion which has been allegedly copied and then to call that the copyright work'.<sup>29</sup> While Judge Laddie held that the eight notes sampled by *The Beloved* could not be treated as a separate work, this did not mean that in other circumstances a recording of eight notes could not be a copyright sound recording; it is possible that it could. The reason for this was that a particular aspect of a larger work might be treated as a separate work if it has a discrete, natural, or non-artificial shape. Thus, a day's footage on a film that is 'a discrete product of the film-maker's art' may be treated as a distinct work. Presumably the results of a recording session, as distinct from the final product, would also attract separate copyright protection.<sup>30</sup>

Judge Laddie's judgment provides us with some useful assistance in undertaking the (much neglected) task of defining the parameters of the work. In addition to focusing on whether a particular item can be seen as 'natural' or 'non-artificial', it seems that other relevant considerations would include: the intention of the creator; the level of interdependence or independence of the units concerned; and the commercial form in which the work is to be published or made available.<sup>31</sup> Given that one consequence of recognizing small units as discrete copyright works is potentially to increase the level of protection,<sup>32</sup> a useful starting point should be that, where a work has been published, the form in which the work is first issued is presumed to determine the parameters of the work.

### 5.1.2 The depth of protection

As we explained in Chapter 6, the protection given to entrepreneurial works is limited to the form in which the work is fixed (e.g. in the case of a film, the specific images; or in the cases of a sound recording, the specific sounds recorded). One of the consequences of this is that the only question that arises in relation to entrepreneurial works is whether a substantial part of a work has been taken. In relation to authorial works, however, the protection extends beyond the specific form in which the work is recorded to include other aspects of the work. For example, the protection afforded to a literary work, such as a novel, may extend beyond reproduction

<sup>29</sup> It is not always in the copyright-owner's interests to define the work in this way. Where a defendant has taken small helpings from a number of separate publications there may be benefits from asserting that the separate publications were in fact one. See, e.g. *PCR v. Dow Jones Telerate* [1998] FSR 170, 183 (Lloyd J rejecting claimant's argument that its two articles should be taken together for the purpose of determining whether a substantial part).

<sup>30</sup> Note the correspondence in the definition of sound recording with the notion of a musical work, in CDPA s. 5(1)(b). This may suggest that the parameters of a sound recording are defined by the parameters of a musical work: *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551, 557–8 (para. 11) *per* Lord Hoffmann (a sound recording of one musical work is by definition different from the recording of another, even if they are issued on the same CD).

<sup>31</sup> This will be the primary factor in relation to copyright in the typographical arrangement of a published edition: *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] AC 551 (HL). Here the issue was whether the copyright in the typographical arrangements in a number of the newspapers had been infringed by copying and distributing individual articles. As a result the House of Lords was called upon to consider whether the NLA had typographical copyright in each of the individual articles in the newspapers or only in each newspaper as a whole. The House of Lords held that 'the frame of reference for the term "published edition" is the language of the publishing trade' and therefore that 'the edition is the product, generally between covers, which the publisher offers to the public'. Thus, each edition of the newspaper rather than each article benefited from the typographical copyright.

<sup>32</sup> For an example of an exceptional case where it was in the interests of the claimant to define the parameters of the work expansively, so that the defendant's individually *de minimis* takings might be regarded as substantial, see *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401.

of the printed words on the page to include copying of the story line, plot, and characters that form part of the novel.

In some cases, the non-literal elements of the work may take the form of more abstract or general ways of describing the literal aspects of a work. As Mr Justice Learned Hand said in the well-known American decision in *Nichols v. Universal Pictures Corporation*, '[u]pon any work, and especially a play, a great number of patterns of increasing generality will fit equally well, as more and more of the incident is left out'.<sup>33</sup> Thus, at its most specific, a play may consist of the words of the script. At a more abstract level, it may consist of the plot or story line. The play may also be described very generally as a tragedy or a comedy. (It should be noted that the very general aspects of the work may not be protected on the basis that they are 'ideas'.) While thinking about a copyright work as if it consisted of a series of levels of abstraction may be useful in certain instances, in other situations the non-literal elements of a work cannot be described in these terms. In these cases the non-literal elements are better seen as aspects of a work that are not visible on looking at the surface of the work: this is particularly the case in relation to computer programs.<sup>34</sup> Given this, perhaps the best way to understand the scope of protection potentially available beyond the surface of the work is to provide some examples.

In relation to *literary and dramatic works*, as well as the words on the page (the literal aspect of the work), the non-literal elements of a novel or play (which may be protected by the copyright therein) may include the plot,<sup>35</sup> the story line,<sup>36</sup> as well as the incidents and themes.<sup>37</sup> While the issue has not really been addressed in the United Kingdom, it is less likely that the characters of a novel or play will be protected.<sup>38</sup> As we explain below, the non-literal elements of a literary work do not include the general ideas that may have informed or underpinned a work. In relation to *computer programs* copyright protection potentially extends beyond the object and source code of the program to include non-literal elements such as the structure or architecture of the program,<sup>39</sup> as well as the sequence of operations, functions, and interfaces that are used in the program.

There have been fewer decisions defining what is protected in relation to *musical works*. However, it seems that protection might include the melody, phrasing, or rhythm; the time; or the suggested orchestration, but not aspects such as timbre or pitch contour that can be said to be purely aspects of performance style.

The question of the scope of protection available for artistic works was considered in *Krisarts SA v. Briarfine*.<sup>40</sup> The defendants commissioned a Mrs Gardner to paint scenes and views such

<sup>33</sup> *Nichols v. Universal Pictures Corporation* (1930) 45 F (2d) 119, 121.

<sup>34</sup> Most literary copyright works involve both literal matter (the exact words of a novel or computer program) and varying levels of abstraction (more or less detailed plot of a novel, general structures of a computer program). *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 302.

<sup>35</sup> *Harman Pictures v. Osborne* [1967] 1 WLR 723, 728; *Rees v. Melville* [1914] MacG CC 168; *Brighton v. Jones* [2005] FSR (16) 288 (paras. 63–6). In relation to literary works, the taking of a plot of a novel or play can certainly infringe—if the plot is a substantial part of the copyright work: *Designers Guild v. Williams* [2001] 1 WLR 2416; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 291.

<sup>36</sup> *Corelli v. Gray* (1913) 29 TLR 570; *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 697; *Kelly v. Cinema Houses* [1914] MacG CC 168.

<sup>37</sup> *Corelli* (1913) 29 TLR 570; *Rees v. Melville* [1914] MacG CC 168. Cf. *Norowzian v. Arks (No. 2)* [2000] FSR 67, 74, 76 (rhythm and pace, theme, and editing style were not subjects of copyright).

<sup>38</sup> *Kelly v. Cinema House* [1928–35] MacG CC 362, 368. For a review, see J. McCutcheon, 'Property in Literary Characters—Protection under Australian Copyright Law' [2007] EIPR 140.

<sup>39</sup> 'Architecture' may also be used to describe what Jacob J in *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 292, 302 called program structure. *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 133–4. See generally, M. Shaw and D. Garlan, *Software Architecture: Perspectives on an Emerging Discipline* (1996).

<sup>40</sup> [1977] FSR 557.

as the Houses of Parliament with Westminster Bridge in the foreground, the Tower of London, Windsor Castle, and so on. In so doing they showed Mrs Gardner picture postcards of the scenes they wanted her to paint. The defendants also gave Mrs Gardner prints taken from M. Legendre's paintings. While there was no accusation of slavish copying, many of the paintings were made from the same view and the same angle as M. Legendre's paintings. As such, the question arose as to whether there was any copyright in the view or angle that a painter adopts. While Whitford J stressed that other painters should not be prevented from painting the same scenes, he did accept that there could be certain elements of the scenes that were 'distinctive' enough to warrant being protected.<sup>41</sup> As he said:

When one is considering a view of a very well-known subject like the Houses of Parliament with Westminster Bridge and part of the Embankment in the foreground, the features in which copyright is going to subsist are very often the choice of viewpoint, the exact balance of foreground features or features in the middle ground and features in the far ground, the figures which are introduced, possibly in the case of a river scene the craft on the river and so forth. It is in choices of this character that the person producing the artistic work makes his original contribution.<sup>42</sup>

In the light of this, Whitford J held that it was arguable that Mrs Gardner's use of M. Legendre's work was sufficiently substantial to amount to infringement of copyright. While it is highly unlikely that the style used by an artist could be protected (style being the equivalent of an idea), it has been suggested that if the 'feeling and artistic character' of the claimant's work has been taken infringement might have occurred.<sup>43</sup>

### 5.1.3 Distinguishing the protected parts from the non-protected parts

Although the scope of the work may extend well beyond its literal appearance, in most cases there will be certain parts of a work that are not protected. In order to ascertain whether infringement has occurred, therefore, it is necessary to distinguish the protected parts of the work from those parts that are not protected (which form part of what is sometimes called the 'public domain'). The reason for this is that, when deciding if a copyright work has been infringed, copyright law is only concerned with the protected parts of the work.<sup>44</sup> The problem is knowing how the line is to be drawn between the protected and non-protected parts of the work. Given the diverse nature of the subject matter protected by copyright, it is not surprising that the aspects of the work that are potentially protected vary considerably between the different categories of work.

Three principles are used to divide a work into the part that is protected by copyright law and the unprotected parts that are free to be used by all. The first flows from the fact that protection is only granted over the parts of a work that are relevant to the type of work in question. The second is that copyright law only provides protection over those parts of the work that ensure that the work is original. The third is that copyright does not protect the 'ideas' that lie behind or inform a work.

<sup>41</sup> While Whitford J was not willing to reach a final decision on copyright infringement, he was sympathetic to such a finding.

<sup>42</sup> [1977] FSR 557, 562.

<sup>43</sup> Copinger, para. 7–60 citing *Bauman v. Fussell* [1978] RPC 485; *Brooks v. Religious Tract Society* (1897) 45 WR 476.

<sup>44</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 (Lord Pearce); *Warwick Film v. Eisenger* [1969] 1 Ch 508.

*Irrelevant elements.* The only elements of a work that are protected are those which are relevant to the type of work in question.<sup>45</sup> This means that the way a work is classified may influence the aspects of a creation that are protected. For example, because there are two copyrights in a song, one relating to the lyrics and one to the music, a claim to infringement must be made out distinctly in relation to one or other. That is, evidence of copying of the music will not make an insubstantial taking of the lyrics any more substantial: it is simply not relevant to the claim.

For the most part, there are few problems in ascertaining which aspects of a particular creation are relevant to the type of work in question, though as we observed in Chapter 3, certain difficulties have arisen in distinguishing between literary and artistic aspects of functional works, such as circuit diagrams. Another situation where a strict distinction may prove unsatisfactory is in relation to maps: while strictly speaking maps are ‘artistic works’, the courts have, rightly, considered them not just visually but as compilations of information.<sup>46</sup>

*Non-original elements.* Another factor that separates the public and the private elements of a copyright work is the requirement of originality (discussed in Chapter 4). This is because a person will only infringe if they appropriate a part of the work upon which an author’s original skill and labour had been expended.<sup>47</sup> This means that the copying of an unoriginal part of the work is not an infringement.<sup>48</sup> This can be seen if we consider the situation where a person compiled a list of the names of Arsenal supporters living in Australia. If the originality of the compilation lay in the way the information was arranged, third parties would not be able to make use of the way the names were organized. They would, however, be able to make use of the information (if, for example, they scrambled the list). Alternatively, if the originality of the compilation stemmed from the selection of the material (but not its arrangement), third parties would not be able to make use of the information (although they would not be prevented from independently compiling the list themselves).

The correspondence between originality and what needs to be taken if a person is to be regarded as infringing can be seen in *Kenrick v. Lawrence*.<sup>49</sup> This case concerned the copyright protection available for a rudimentary drawing of a hand pointing to a square on a ballot paper to be used by illiterate voters. In considering this issue, the court said that ‘the degree and kind of protection given must vary greatly with the character of the drawing, and that with such a drawing as we are dealing with the copyright must be confined to that which is special to the individual drawing over and above the idea—in other words, the copyright [in the case at hand] is ... [of] extremely limited character’.<sup>50</sup> As such, while the court held that the drawing was protected by copyright, it also said that, as the level of skill, labour, and effort that was used in creating the work was minimal (it was a simple, functional work), nothing short of an exact

<sup>45</sup> *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131.

<sup>46</sup> *Geographia Ltd v. Penguin Books Ltd* [1985] FSR 208.

<sup>47</sup> *Designers Guild v. Williams* [2000] 1 WLR 2416, 2431 (Lord Scott, approving as useful a test suggested by *Laddie et al.* asking whether the infringer incorporated a substantial part of the independent skill, labour, etc. contributed by the original author in creating the copyright work); *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131 (copyright law protects the relevant skill and labour expended by the author on the creation of the work); *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, 697; *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

<sup>48</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 293 (Lord Pearce); *Bowater Windows Ltd v. Aspen Windows Ltd* [1999] FSR 759, 781–2 (holding redrafted version of an 8-page sales ad not to infringe copyright in the document on which it was based because any literal similarity existed only in respect of aspects of the document which embodied a negligible amount of skill and labour and because no claim could be made to originality in the basis of the document); *Laddie et al.*, paras. 4.1, 8.35.

<sup>49</sup> (1890) 25 QBD 99.      <sup>50</sup> *Ibid.*, 104.

literal reproduction of the drawing would constitute an infringement. The upshot of this is that, where the originality is thin, the scope of protection will be correspondingly thin. The principle that copyright protection is ‘thinner’ where the originality is ‘thinner’ may go some way to explain statements of courts that a copyist may legitimately take greater amounts of technical or historical material than would be permitted in the case of a work of fiction.<sup>51</sup>

It is important to recognize that a great deal of care needs to be taken when distinguishing between original and non-original aspects of a work. Although in some situations, the work as a whole can be dissected and non-original aspects ignored for the purposes of the infringement analysis, such ‘dissection’ carries with it a potential danger. This danger arises from the fact that originality can be provided not merely from labour and skill in the creation of new, original, material, but also from the collation or collection of existing, non-original, material. A process of dissection can cause a tribunal to overlook the creativity involved in such collation or arrangement. In other words, dissection may cause a tribunal incorrectly to treat the whole as merely the sum of its parts. However, if a defendant takes a number of elements from the claimant’s work, each of which might individually be non-original, there may well nevertheless be a taking of a substantial part of the labour and skill involved in collating the material.<sup>52</sup> This can be seen from the different positions of the Court of Appeal and the House of Lords in *Designers’ Guild v. Williams*. The Court of Appeal found that various elements of the claimant’s design were unoriginal, and this led it to hold that the defendant had merely reproduced the idea of stripes and flowers, which was not a substantial part. As the House of Lords pointed out, in overturning this finding and reinstating the finding of the High Court, the error involved in this analysis was that the originality of the claimant’s design lay in the composition of the design as a whole. As Lord Hoffmann stated, ‘the exercise in dissection ... dealt with the copied features piece-meal instead of considering, as the judge had done, their cumulative effect’. Likewise, Lord Scott described the approach whereby the constituent features of the rival designs were isolated from the whole and compared with one another as ‘wrong in principle’, because the claim related to altered copying of the claimant’s design as a whole.<sup>53</sup>

*Non-protection of ideas.* Another factor which enables the public and the private elements of a work to be distinguished derives from the long-established principle that copyright protection is not granted to the ideas which are embodied in or which may have inspired the work.<sup>54</sup> In more positive terms this means that third parties are able to make whatever use they wish of the ideas that are contained in a copyright work. Thus it is not an infringement for someone to take the ideas or concepts ‘behind’ a painting, a book, or a computer program and incorporate them into their own work. In this context it is important to note that ‘idea’ is a shorthand

<sup>51</sup> *Ravenscroft v. Herbert* [1980] RPC 193, 205–6 (while the court based its view on a notion of implied licence, we prefer the view that copyright is ‘thinner’ in such cases).

<sup>52</sup> On the relationship between unoriginal works and the context in which they are taken see *Biotrading & Financing v. Biohit* [1998] FSR 109, 122.

<sup>53</sup> [2000] 1 WLR 2416, 2421 (Lord Hoffmann), 2434 (Lord Scott). See also *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579, per Mummery LJ paras 127–129.

<sup>54</sup> The dangers of copyright protection of ideas were recognized in the eighteenth-century discussions of common law property, in particular *Millar v. Taylor* (1769) 98 ER 201; (1774) 2 Bro PC 129 and *Donaldson v. Beckett* (1774) Cobbett’s *Parliamentary History* xvii, 954. The principle that there can be no copyright in an idea has been described at the highest level as ‘trite law’: *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 160 (Lord Hailsham), 165 (Lord Salmon). The non-protection of ideas has been recognized in international treaties: see TRIPS Art. 9(2); WCT Art. 2; Software Dir., Art. 1(2).

expression that covers an array of different things such as the ideas which prompted the work (for example, to explore the impact of copyright law on artists); the subject matter of the work (for example, a book on intellectual property law);<sup>55</sup> or the general style in which the work is created (such as a cubist painting).<sup>56</sup>

Sometimes, the principle that copyright law does not protect ideas is referred to as the idea-expression dichotomy. This is usually taken to mean that what is protected is not an idea but its expression. Insofar as the dichotomy implies that copyright predominantly protects the mode of expression used by the author, rather than the ideas, the dichotomy is not inaccurate. It is unhelpful, however, in that it wrongly suggests that copyright protection is limited to the form or expression used by the author and that copyright does not protect against change of form nor against non-literal copying.<sup>57</sup> For, as we noted earlier, copyright law will protect many of the ideas expressed in a work. As Lord Hoffmann explained in the *Newspaper Licensing Agency* case, copyright infringement 'is sufficiently flexible to include the copying of ideas abstracted from a literary, dramatic, musical or artistic work, provided that their expression in the original work has involved sufficient of the relevant original skill and labour to attract copyright protection'.

In *Designers Guild v. Williams*, Lord Hoffmann reviewed the case law on idea and expression, and concluded that it supported two quite distinct propositions. The first is that a copyright work may express certain ideas which are not protected 'because they have no connection with the literary, dramatic, musical or artistic nature of the work'.<sup>58</sup> Lord Hoffmann said this would be the case with a literary work which described a system or invention. Although the work would be protected, copyright would not entitle the author to claim protection for their system or invention as such. He gave, as a specific example, the case of *Kleeneze Ltd v. DRG (UK)*, in which Whitford J found there had been no infringement of copyright in the claimant's drawing of a letterbox draught-excluder, where the defendant had merely taken the concept of the draught-excluder.<sup>59</sup> The other proposition is that certain ideas expressed by a copyright work may not be protected because, although they are ideas of a literary, dramatic, or artistic nature, they are not original, or so commonplace as not to form a substantial part of the work. Lord Hoffmann gave the example of *Kenrick v. Lawrence*, which we have already discussed. In that case copyright subsisted in the drawing of a hand, but such copyright would not enable the copyright owner to object to other people drawing hands, if in so doing all that was reproduced was the idea. As Lord Hoffmann explained, '[a]t that level of abstraction, the idea, though expressed in the design, would not have represented sufficient of the author's skill and labour as to attract copyright protection'.

<sup>55</sup> *Kenrick v. Lawrence* (1890) 25 QBD 99, 102 ('mere choice of subject matter can rarely if ever confer upon the author of a drawing an exclusive right to represent the subject').

<sup>56</sup> *Norowzian v. Arks* [2000] FSR 67, 74, 76 (no copyright in film-editing style).

<sup>57</sup> For a warning about the use of this aphorism see *Designers Guild v. Williams* [2000] 1 WLR 2416, 2422 (Lord Hoffmann); *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275 (Jacob J).

<sup>58</sup> *Designers Guild v. Williams* [2000] 1 WLR 2416, 2423. Discussed by Jacob LJ in *Nova Productions v. Mazooma* [2007] EWCA Civ 219, [2007] RPC 589, 601 (esp para 35).

<sup>59</sup> [1984] FSR 399. The example is problematic for a number of reasons. First, because Whitford J's judgment is couched mainly in terms of whether there had been 'copying'. Second, because the claimant's work had two components: Berry's idea and Snow's drawing which embodied the idea, and the decision merely found indirect copying of Berry's idea, not direct copying of Snow's labour. The case would stand better for the proposition that there cannot be copyright in ideas for new functional products (because there are public policy reasons for promoting competition in that domain, as well as a specific intellectual property regime, patents).

Lord Hoffmann's articulation of the rule that ideas are unprotected is helpful in that it recognizes that the vagueness of the concept of 'idea' is likely to lead to misinterpretation of the nature and scope of the exclusion. In fact, the exclusion is a relatively narrow one, and does not encompass everything that might be referred to, in common speech, as an idea. However, his attempt to pin down the rule that copyright is not infringed by the use of some ideas is open to the criticisms that it lacks clarity,<sup>60</sup> is incomplete,<sup>61</sup> and (by collapsing the rule on the non-protection of ideas into a rule on originality, rather than acknowledging its basis in public policy) might produce an unduly limited account of the exception. Failing to acknowledge that the rule is based in public policy suggests that if general ideas embody substantial labour and skill they will benefit from protection (unless they are 'unconnected' with the work). This would be a novel, and undesirable, outcome. The exclusion of 'ideas' from the scope of protection is an important judicial technique that is used to reconcile the divergent interests of copyright owners with those of users, creators, and the public more generally.<sup>62</sup> These interests include, but are by no means confined to: the public interest in ensuring that new works can be made dealing with the same topic, or subject matter;<sup>63</sup> the public interest in ensuring that copyright protection does not undermine the free use of functional ideas (other than those protected by designs);<sup>64</sup> the desirability of allowing multiple works using the same techniques of production (again subject to the limitation of patent law); the public interest in free expression; and particularly the free dissemination of political and economic ideas and historical facts.<sup>65</sup> The rule on non-protection of ideas is thus primarily directed at leaving free from

<sup>60</sup> In particular, his speech leaves unclear what kind of connections make ideas part of the protected elements.

<sup>61</sup> Lord Hoffmann's account seems to be incomplete, in that it omits techniques, methods, or style, matters which are usually considered unprotected: *Harman v. Osborne* [1967] 1 WLR 723, 728 ('there is no copyright in ideas or schemes or systems or methods: it is confined to their expression'); *Norowzian v. Arks* [2000] FSR 67, 74, 76 (no copyright in film-editing style); *Sawkins v. Hyperion* [2005] 1 WLR 3280, 3288 (para. 29) (copyright 'does not prevent use of the information, thoughts or emotions expressed in the copyright work'); *IPC Media v. Highbury Leisure Ltd* [2005] FSR (20) 434, 444 ('the law of copyright has never gone as far as to protect general themes, styles or ideas'); *Baigent v. Random House* [2007] EWCA Civ 247 (para 146) (no infringement to 'replicate or use items of information, facts, ideas, theories, arguments, themes and so on derived from the original copyright work').

<sup>62</sup> There is an abundance of US literature: W. Landes and R. Posner, 'An Economic Analysis of Copyright' (1989), 12 *J Legal Studies* 325 (explaining idea-expression dichotomy in terms of law and economics); A. Yen, 'Restoring the Natural Law: Copyright as Labour and Possession' (1990) 51 *Ohio State LJ* 517, 552 (arguing that the idea-expression dichotomy is informed by natural law doctrines of possession, which recognize certain things as being inherently incapable of possession and suggesting that copyright statutes should be interpreted correspondingly, so that copyright protects only 'the most concrete and obvious facets of a work'); A. Yen, 'A First Amendment Perspective on the Idea/Expression Dichotomy and Copyright in a Work's "Total Concept And Feel"' (1989) 38 *Emory LJ* 393 (emphasizing role and limitations of dichotomy in protecting freedom of speech); J. Litman, 'The Public Domain' (1990) 39 *Emory LJ* 965 (explaining the law's reluctance to protect ideas, information, short phrases, simple plots, themes, stock scenes, and utilitarian solutions to concrete problems on the ground that they are difficult to trace); S. Vaidhyanathan, *Copyright and Copywrongs: The Rise of Intellectual Property and How it Threatens Creativity* (2001) (arguing that the distinction has been steadily collapsing and that it is crucial that we rediscover, reinvent, and strengthen the idea-expression dichotomy).

<sup>63</sup> *Jones v. London Borough of Tower Hamlets* [2001] RPC (23) 407, 418–9. ('If the idea were protected at law that would prevent any subsequent person using that idea producing a variant. That would give the originator of the idea a very wide monopoly and not one contemplated by law.')

<sup>64</sup> *Kleeneze v. DRG (UK) Ltd* [1984] FSR 399 (permitting defendant to take idea of letterbox draught-excluder, and recognizing desirability of competition in production of articles which perform the same function).

<sup>65</sup> *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368, 1379; [2002] RPC 235 (Lord Phillips MR, discussing relation between copyright and freedom of expression, and noting that there will rarely be a conflict between them because 'only the form of the literary work is protected' so copyright does not normally prevent the

monopolization the building blocks of culture, communication, innovation, creativity, and expression.<sup>66</sup> It can be no surprise, then, that given the potential variety of influences, the application of the rule has been somewhat unpredictable. Moreover, in an era in which there is increased international norm setting in the definition of the rights of the copyright owner, the non-protection of ideas represents one of the few avenues by which the courts can take account of the individual circumstances and merits of particular decisions.

While *Designers Guild* might have heralded a narrow interpretation of copyright law's refusal to protect 'ideas', subsequent cases indicate that the lower courts prefer to take advantage of the flexibility that the 'idea-expression' dichotomy provides to dismiss speculative claims. In *Navitaire v EasyJet*,<sup>67</sup> the owner of copyright in source code brought an action against a former licensee who, having never seen the source code, tried to emulate the functional behaviour of the program. Pumfrey J found no infringement, stressing that the functional behaviour of a program was different from the plot of a novel (which might gain protection) and that policy weighed against protecting the 'business logic' of a program through copyright.<sup>68</sup> In *Nova Productions Ltd v Bell Fruit Games*,<sup>69</sup> Kitchin J held that similarities between video games were attributable to general ideas which had 'little to do with skill and effort' expended by the programmer. This was affirmed on appeal, Jacob LJ concluding that 'what was found to have inspired some aspects of the defendants' game is just too general to amount to a substantial part of the claimant's game'.<sup>70</sup> In *Baigent v Random House* (the da Vinci Code case),<sup>71</sup> Peter Smith J held that Dan Brown's book did not infringe copyright in Baigent and Leigh's *The Holy Blood and the Holy Grail*. In essence, Peter Smith J held that Brown had used HBHG (along with other books) but what was taken was facts and ideas at such a level of abstraction that there was no infringement.<sup>72</sup> In so holding, the judge observed that the line between idea and expression 'is to enable a fair balance to be struck between protecting the rights of the author and allowing literary development'.<sup>73</sup> The decision was affirmed on appeal, the Court unanimously agreeing that there was no reproduction of a substantial part of HBHG because that which was in *The da Vinci Code* was ideas rather than 'the form or manner in which ideas were expressed'.<sup>74</sup> Mummery LJ, in particular, emphasized that literary copyright does not give rights that enable persons 'to monopolise historical research or knowledge'.<sup>75</sup> A final example of a situation where the defendant was 'inspired' by the claimant's copyright work but was held not to have taken a substantial part is provided by the World Cup Willie case.<sup>76</sup> The claimant's work was the World Cup logo from 1966 comprising a lion in an England strip kicking a football. The defendant created a modernized version of a lion playing football for England. Although the defendant had copied the idea of a lion kicking a ball with its right foot, the postures were different (one leant back, the other forward), the angle of the faces differed (the plaintiff's drawing depicted the lion's face from the side, whereas the defendant's showed

publication of the information conveyed by the literary work. Understood in this way, the rule cannot be limited to the general or abstract ideas or facts).

<sup>66</sup> *Jones v. London Borough of Tower Hamlets* [2001] RPC (14) 379, 418–9 (referring to common stock of architectural ideas which everyone is free to use).

the whole face). While the stylization was similar, the High Court concluded that all that had been reproduced was ideas rather than ‘a substantial part of the original’.

## 5.2 HAS THE DEFENDANT TAKEN THE WHOLE OR A SUBSTANTIAL PART OF THE COPYRIGHT WORK?

Once the protected elements of the work have been identified, it is then possible to consider what the defendant has taken from the copyright work and ask whether the defendant has used the whole or a substantial part of the claimant’s work.<sup>77</sup> Identical copying (that is, copying the totality of the claimant’s work in an identical form—sometimes referred to as ‘piracy’) raises no analytical problems, and thus in the absence of an exception (on which see Chapter 9) a finding of infringement follows inevitably. Consequently, we say nothing further about such copying. Copyright law, however, has long recognized that protection ought not to be limited to situations where the defendant makes an exact copy of the work.<sup>78</sup> The reason for this is that, if copyright protection is limited to situations where identical copies of the work were used, plagiarists would be able to escape infringement simply by making minor variations to the copied work.<sup>79</sup> Copyright law therefore provides protection not just where the whole work has been copied but also where a defendant has used a substantial part of the protected aspects of the work. In extending protection from identical copying to copying of ‘any substantial part’ of a work, the law enables a copyright owner to control situations where a defendant takes *part of a work* (e.g. where half of a book is photocopied or a sample of a sound recording is copied); and where the defendant *changes the form of the work* (e.g. where a play is translated from English into Spanish, or is converted into a film).<sup>80</sup> This move from protecting only against identical copying to protecting partial copies or copies of the substance of a work, inevitably has required the courts to make difficult value judgements.

While it seems eminently defensible to protect a copyright work against ‘colourable variations’, the term ‘substantial’—introduced for the first time in the 1911 Act—has allowed the courts to expand the scope of protection much further than the mere coverage of substantially competing works.<sup>81</sup> The term is one with a ‘wide range of meanings’ and the courts have preferred those at the lower end of the range.<sup>82</sup> This is not the place for an historical review of the case law, but it can be said that there has been a discernible shift towards allowing a copyright owner to control ever-smaller uses and re-uses of their works. In the not-too-distant past,

<sup>77</sup> As Lord Millett emphasized in *Designers Guild v. Williams* [2000] 1 WLR 2416, 2425, copyright infringement does not involve a work-for-work comparison. Rather, it is important to focus on what the defendant derived from the claimant’s work.

<sup>78</sup> Thus, in the case of a book, as well as protecting the surface of the text (the printed words), copyright law also protects the intangible property that lies behind or, more accurately, is represented in the text.

<sup>79</sup> As should be clear, the circumstances in which someone infringes copyright are different from the circumstances in which someone might be regarded as a ‘plagiarist’. For discussions of the distinction, see S. Green, ‘Plagiarism, Norms, and the Limits of Theft Law: Some Observations on the Use of Criminal Sanctions in Enforcing Intellectual Property Rights’ (2002) 54 *Hastings LJ* 167, 200–202; L. Stearns, ‘Copywrong: Plagiarism, Process, Property and the Law’ (1992) 80 *California LR* 513, 525 ff.

<sup>80</sup> These two situations are sometimes referred to as cases of ‘fragmented literal similarity’ and ‘comprehensive non-literal similarity’, or as ‘literal copying’ and ‘altered copying’. See, e.g. *Designers Guild v. Williams* [2000] 1 WLR 2416, 2431 *per* Lord Scott, following *Laddie et al.*

<sup>81</sup> CDPA s. 16(3). The term ‘substantial part’ was first introduced in CA 1911 s. 1(2). The term had however been used in case law prior to 1911 (where taking was contrasted with ‘fair use’ of a work).

<sup>82</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 268 *per* Peter Gibson LJ (citing Lord Mustill in *R v. Monopolies and Mergers Commission, ex p South Yorkshire Transport Ltd* [1993] 1 WLR 23, 29); at 286–7, *per* Mance LJ.

the courts often took the view that a person would only infringe where the part taken was an essential, vital, or important part of the work.<sup>83</sup> In recent years, however, tribunals have been willing to find infringement as long as the defendant's use is not of an 'insignificant' part or *de minimis*.<sup>84</sup> Indeed, in an important speech by Lord Bingham (with whom all the other Lords agreed) in *Designers Guild*,<sup>85</sup> the concept of substantiality has been treated implicitly as leaving beyond the scope of the copyright-owner's monopoly only trivial, valueless, and insignificant elements of the work. More specifically, his Lordship explained section 16(3)'s reference to a substantial part as the law 'realistically recognising that no real injury is done to the copyright owner if no more than an insignificant part of the copyright work is copied'. In our view this tendency, to treat the test whether the defendant has used a substantial part as merely a test whether a taking is more than *de minimis*, involves an unjustified and undesirable extension of the copyright-holder's rights. We therefore proceed on the orthodox basis, that is that for a defendant to be held to have infringed it is necessary to show that they have used a substantial part of the claimant's copyright work, that is, an important part of that work.

### 5.2.1 When is a part important?

The question whether a restricted act carried out in relation to part of a work amounts to an infringement always depends on the facts of the case. In particular, the question whether a copyright work has been infringed depends primarily on the nature of the claimant's work, and on what has been taken by the defendant. While the evidential nature of the infringement inquiry means that each case will depend on its facts, it is possible to make some general comments about the way that importance is likely to be judged. In essence, the fate of a defendant depends on the relative *importance* of the part that is taken.<sup>86</sup>

*Types of evidence.* While the question whether a part is substantial is decided by the courts,<sup>87</sup> in cases involving technical or esoteric subject matter they may rely on expert evidence from computer programmers, musicologists, choreographers, and other specialists as to the relative importance of the part.<sup>88</sup> At the end of the day, however, it is for the court to decide whether the part taken is important. Although the focus of the tribunal should be on whether the part taken was important to the copyright work, in reaching a determination a court will inevitably be influenced by the surrounding circumstances (including: the way the claimant's work was created; the nature of the work, for example, whether it is a work of information or fiction; the relationship between the parties, in particular, whether they are in competition; the conduct of the parties, in particular whether the defendant has copied merely to save itself expending

<sup>83</sup> *Hawkes & Sons v. Paramount Film Service* [1934] 1 Ch D 593, 606 (Slesser LJ) (where the defendant's broadcast of part of the claimant's song, while not prolonged, was held to be 'a substantial, vital and essential part').

<sup>84</sup> *Designers Guild v. Williams* [2000] 1 WLR 2416, 2418 (Lord Bingham). See also *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 268 per Peter Gibson LJ (substantiality describes something 'more than *de minimis*, something considerable in amount; that is, of an amount to make it worthy of consideration'); at 287, per Mance LJ (specifically rejecting argument that substantial part meant the 'essential part', saying it set the test too high).

<sup>85</sup> [2000] 1 WLR 2416, 2418.

<sup>86</sup> *Sillitoe v. McGraw-Hill Book Co. (UK)* [1983] FSR 545, 549–50; *Hawkes & Sons v. Paramount Film Service* [1934] 1 Ch D 593, 605–6 (CA).

<sup>87</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, note 1 above, 302.

<sup>88</sup> *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95. The evidence assists the court to form a view about the nature of the skill and labour involved in a particular work: *The Newspaper Licensing Agency v. Marks and Spencer plc* [2003] AC 551 (para. 21).

effort; the reason why the part was taken, for example, whether it has been used for the purposes of parody; and whether the use is degrading).<sup>89</sup> In addition, the tribunal is likely to be influenced by its understanding of the functions (and legitimacy) of copyright law,<sup>90</sup> and its general perceptions of the work and the part used.<sup>91</sup>

*Importance to claimant's work.* The next point to note is that the relative importance of the part taken is judged in terms of its importance to the copyright work and not the defendant's work.<sup>92</sup> The reason for this is that the test imposed by the statute is whether the part used by the defendant is a substantial part of the *claimant's* copyright work, not whether it is a substantial part of the *defendant's* work.<sup>93</sup> This has two consequences. First, it means that it does not matter that the part taken forms an unimportant part of the defendant's work, nor that the defendant has expended considerable labour, skill, and effort themselves. The contributions of the defendant in transforming a copyright work have been regarded as largely irrelevant, the court preferring merely to attend to what the defendant has taken.<sup>94</sup> Translations and abridgements, however valuable, have for more than a century been regarded as infringements.<sup>95</sup> Equally, in the case of copying elements of an artistic work (as with that of *Ixia* by *Marguerite* in *Designer's Guild*: Figs. 8.1 and 8.2), it is a matter of no relevance to a finding of substantial taking that the defendant's work gives off an overall different impression than the claimant's. For the same reason (most) parodic uses of copyright works are regarded as infringements, irrespective of the parodist's skill or the social value accorded to parody.<sup>96</sup> The second consequence of focusing on whether the part is important to the claimant's work is that, if it is not, then in principle it does not matter whether the part is used repeatedly in the defendant's work (as often happens with the digital sampling of musical works).

<sup>89</sup> Laddie *et al.*, para. 4.55. But note the emphatic statements of Lloyd LJ in *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579, 620 that the intention of the copier is 'irrelevant as a matter of law' (para. 95) and 'a red herring in modern English copyright law that... should not be invoked in the future' (para. 97).

<sup>90</sup> See R. Deazley, 'Copyright in the House of Lords' [2004] *IPQ* 121 (highlighting the Lockean underpinnings of the House of Lords judgment in *Designers Guild v. Williams*).

<sup>91</sup> This can be seen in the way data division of a program (which defines the nature and structure of the files used by the program) was construed. In *Total Information Processing* [1992] FSR 171, Judge Baker likened the data division to a table of contents of a book, which he said would be unlikely to be protected as part of a book. Cf. *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 303.

<sup>92</sup> *Designers Guild v. Williams* [2000] 1 WLR 2416, 2420, 2426.

<sup>93</sup> *Warwick Films v. Eisinger* [1969] 1 Ch 508; *Hyperion Records v. Warner Music* (1991, unreported). (The 'importance of the copied part to the defendant's recording is a poor guide as to whether or not it is a substantial part of the work from which it was taken', particularly where the recordings were in different styles.)

<sup>94</sup> It was not always so: courts previously took into account any effort the defendant had made in transforming the work into another work: if a transformation was substantial, as with a translation or abridgement, there would be no finding of infringement, e.g. *Gyles v. Wilcox* (1741) 2 Atk 141.

<sup>95</sup> D. Vaver, 'Abridgments and Abstracts: Copyright Implications' [1995] *EIPR* 225. R. Burrell, 'Reining in Copyright Law: Is Fair Use the Answer?' [2001] *IPQ* 361, 365ff. (pointing out that even cases such as *Gyles v. Wilcox* can be seen as pro-copyright owner, given the statutory starting point).

<sup>96</sup> *Williamson Music v. Pearson* [1987] FSR 97, 107; *Schweppes v. Wellington* [1984] FSR 210 (suggesting that what the defendant added is irrelevant, so issue is whether defendant has taken a substantial part, which will usually be the case with parodies—though it was not so on the facts in *Williamson Music*). Cf. *Glyn v. Weston Feature Film* [1916] 1 Ch 261; *Joy Music v. Sunday Pictorial Newspapers* [1960] 2 QB 60 (both suggesting that the defendant's effort is relevant, and if sufficient, parodies are non-infringing). The killing-off of this 'nascent exception for parodies' is characterized by Burrell as 'cavalier': Burrell, *ibid.*, 376. See also Laddie *et al.*, para. 3.142 and 4.62 (arguing that there is still room for the courts to indulge the parodist, and suggesting a test based on injury to the economic interests of the copyright owner); M. Spence, 'Intellectual Property and the Problem of Parody' (1998) 114 *LQR* 594; E. Gredley and S. Maniatis, 'Parody: A Fatal Attraction?' [1997] *EIPR* 339.

*Substantiality a qualitative criterion.* While the use of the term ‘substantial’ suggests that importance should be judged in terms of the amount taken, the inquiry is as much concerned with the *quality* as the *quantity* of the part taken.<sup>97</sup> Indeed, in two recent decisions Lord Hoffmann went further, saying that the question of substantiality is a matter of quality *rather than* quantity.<sup>98</sup> So long as a part is qualitatively an important part of the work as a whole, even a very small part of a work may be a substantial part.

*Assessing quality.* To say that the issue is one of quality leaves open how quality is to be determined. In *The Newspaper Licensing Agency Ltd. v. Marks and Spencer plc*, Lord Hoffmann provided some guidance, when he stated that the qualitatively important parts of a work were to be identified ‘by reference to the reason why the work is given copyright protection.’<sup>99</sup> He explained that in the case of literary copyright, copyright is conferred (irrespective of literary merit) upon an original literary work, and it followed that the quality relevant for the purposes of substantiality is the ‘literary originality’ of that which has been copied.<sup>100</sup> In the case of an artistic work, Lord Hoffmann said, it is the ‘artistic originality’ of that which has been copied—which primarily relates to the visual significance of what has been copied.<sup>101</sup> In relation to typographical arrangements, it is the labour and skill invested in choosing the presentation and layout (as opposed to the particular words and images published in the edition) that are protected.<sup>102</sup> However, it is not always easy to determine exactly which labour and skill are ‘relevant’. This is because each category of works accommodates a whole variety of different genres—‘literary works’ include novels and poems; tables and compilations, computer programs; ‘artistic works’ include realist and abstract paintings and drawings, as well as engineering drawings and maps, and so on—and in turn there are potentially a wide variety of types of relevant skill and labour.<sup>103</sup>

<sup>97</sup> *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 276 (Lord Reid), 283 (Lord Evershed, not just physical amount but substantial significance).

<sup>98</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 559 (para. 19); *Designers Guild v. Williams* [2000] 1 WLR 2416, 2422; see also *per* Lord Millett, 2426; *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273, 288 *per* Lord Hodson; *L.B. (Plastics) v. Swish Products* [1979] FSR 145, 152 (Lord Wilberforce), 159 (Lord Hailsham).

<sup>99</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 551, 559. Later he reiterated that ‘the purpose of the copyright is something which can be taken into account in deciding the kind of skill and labour which will attract protection’. Ascertaining Parliamentary intention was relatively easy in relation to ‘typographical arrangements’, but may be less easy in relation to other works.

<sup>100</sup> At times the courts come dangerously close to analysing quality in aesthetic terms, and thus breaching the ‘principle of non-discrimination’ which they attempt to apply in the context of determining subsistence. In *Chappell v. D.C. Thompson* [1928–35] MacG CC 467, where 4 lines were taken from a 20-line poem (‘Her Name is Mary’), the importance of the part was judged in terms of its literary merit. The lines—‘Her name is Mary/The sweetest name I know/And she’s the one that I will love/For ever and a day’—were held not to be a substantial part of the poem. This can be contrasted with *Kipling v. Genatosan* [1917–23] MacG CC 203 where it was suggested that 4 lines which formed the crescendo of Kipling’s 32-line poem ‘If’ were a substantial part of the poem.

<sup>101</sup> In *Billhöfer Maschinenfabrik v. T.H. Dixon & Co.* [1990] FSR 105, Hoffmann J (as he then was) said that the question of whether part of an artistic work is substantial depends upon the importance of the particular dimensions and spatial arrangements depicted.

<sup>102</sup> *The Newspaper Licensing Agency Ltd v. Marks and Spencer plc* [2003] 1 AC 55. However, it is not always easy to determine exactly which labour and skill is ‘relevant’ because each category of works accommodates a whole variety of different genres—‘literary works’ include novels and poems; tables and compilations, computer programs; ‘artistic works’ include realist and abstract paintings and drawings, as well as engineering drawings and maps; and so on. In turn there are potentially a wide variety of types of relevant skill and labour.

<sup>103</sup> *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579 (para 145 *per* Mummery LJ).

*Quality of entrepreneurial works.* It seems that the same approach is taken in assessing what amounts to a substantial part of an entrepreneurial work as in the case of any other work. A number of commentators had suggested that it was not possible to speak in a meaningful way about the ‘important’ part of an entrepreneurial work, contending that the quality of the entrepreneurial work will not change throughout the work.<sup>104</sup> For example, it was argued that, while a three-second sample that contains the ‘hook’ of a song may be an important part of a musical work, it does not necessarily follow from this that the way the three seconds were recorded will be any different from the way the rest of the song was recorded.<sup>105</sup> Indeed it is more likely that the quality of the sound recording will be the same throughout the recording than change from part to part. Following the decision of the House of Lords in *Newspaper Licensing Agency*, it is evident that the same general approach is taken *at least* in relation to typographical arrangements as in relation to literary, dramatic, musical, and artistic works. However, while the decision applied only to typographical arrangements, leaving the position in relation to sound recordings, films, and broadcasts undecided, the better view is that the House of Lords decision applies to all such works.

*Photographs of films.* In assessing substantiality in relation to films, account needs to be taken of a special statutory provision. Section 17(4) of the 1988 Act states that copying in relation to a film or television broadcast includes making a photograph of the whole or any substantial part of *any image* forming part of the film or broadcast. This means that where someone takes a photograph of a single image from a film and reproduces it on a T-shirt, a poster, or a web site they could infringe (were that regarded as a substantial part).<sup>106</sup>

*Importance to audience.* It is sometimes said that the importance of the part is judged from the point of view of the person to whom the work is addressed.<sup>107</sup> For example, in dealing with an infringement action brought in 1934 in relation to the copying of 28 bars from the well-known military march ‘Colonel Bogey’, the Court of Appeal concluded that the part was substantial because anyone hearing the part taken would recognize it.<sup>108</sup> It was also the part by which the march was chiefly known and the cause of its popularity. In *ITP v. Time Out*, the court held that, in copying part of the claimant’s compilation of television and radio programmes, *Time Out* (a weekly listings magazine) reproduced a substantial part of the copyright work.<sup>109</sup> The court stressed that a key factor in finding that the part taken was important and thus substantial was that *Time Out* had concentrated on the peak viewing times and on the programmes which occurred at irregular times. In essence, *Time Out* took the parts of the TV listings that were of most value to users. A similar approach was adopted in *Express*

<sup>104</sup> *Laddie et al.*, paras. 7.59 (films), 9.20, 8.37 (broadcasts) (typographical arrangements). It had been suggested that in this context a ‘substantial part’ simply means any part of the work so long as it is not so small as to be trifling or insignificant: *Laddie et al.*, para. 7.59.

<sup>105</sup> Moreover, a substantial part of a newspaper protected by copyright as a ‘literary work’ may well not be a substantial part of the ‘typographical arrangement’: *Nationwide News v. Copyright Agency Ltd* (1996) 34 IPR 53, 71.

<sup>106</sup> See *R v. Higgs* [2008] EWCA Crim 1324, para. 9. Although the existence of this provision indicates that the legislature is happy, on occasions, that copyright protection extends to very small parts of work, it should be recognized, first, that this was done in response to the existence of a market for film stills for use in posters; and second, that the express provision only covers infringement by copying. The sub-section should not be read as a green light to those seeking to transform the meaning of ‘substantial part’ into ‘non-*de minimis* part’.

<sup>107</sup> *Billhöfer Maschinenfabrik v. T. H. Dixon & Co.* [1990] FSR 105; *Francis Day & Hunter v. Bron* [1963] Ch 587, 623.

<sup>108</sup> *Hawkes & Sons v. Paramount Film Service* (1934) 1 Ch D 593, 609 (CA); *King Features v. Kleenman* [1941] AC 417.

<sup>109</sup> [1984] FSR 64, 74.

*Newspapers*. In considering whether the copying of the small sequences (two sequences of five letters and a twenty-five letter grid) from an original work of somewhere between 700 and 750 different sets of grids and five-letter sequences (which was used in a newspaper game), the court said that the part was substantial because it was ‘the only part of the work that on that day will be any matter of consequence to anybody’.<sup>110</sup> (See Fig. 3.2.)

While this approach to the determination of the importance of a part is not necessarily wrong, it should be noted that it may be misleading. It is unobjectionable in those cases where the audience’s view is founded on an appreciation of the relevant labour, skill, judgment, or craftsmanship that has gone into the work. For example, in the ‘Colonel Bogey’ case, the decision could as easily have been articulated in terms of the fact that the part taken was that which was most musically original. Similarly, although in the *Time Out* decision Whitford J emphasized that the parts were important because they related to the peak viewing times, his decision might have been justified by treating the taking of the ‘irregular scheduling’ as a substantial part because more skill and labour was required in scheduling the irregular programs than the regular ones: Whitford J had earlier treated the labour, skill, and judgment in choosing the programme times as well as compiling the list as ‘relevant’ to the literary originality of the schedules.

Focusing on audience evaluation or commercial importance is potentially misleading, however, because the audience to whom the work is addressed might be interested in parts of the works which involve little *relevant* labour, skill, or investment. The key inquiry is that stated by Lord Hoffmann: the importance of a part of a work is to be judged in terms of criteria that are relevant to the type of work in question. In contrast, the mere fact that part of a work becomes commercially significant or that there is a market for it should not matter when deciding whether the part is substantial. For example, if a closed-circuit camera in a fixed position records incidents in a car park, while the incidents or personalities recorded may hugely affect the commercial value of parts of the tape, they in no way affect the qualitative importance of any part for copyright purposes.<sup>111</sup> If we consider exactly what was the relevant labour, skill, and judgment invested by the creators in the *Express Newspapers* case, we might wonder whether the conclusion that there was infringement was properly justified on the ground that the particular day’s grid was the most important part of the claimants’ respective work.<sup>112</sup> It seems that the court, no doubt motivated by a desire to prevent ‘unfair competition’, stretched copyright too far.

*Importance of ideas.* One of the chief difficulties caused by Lord Hoffmann’s holding that the qualitatively important parts of a literary work were to be identified by reference to the ‘literary originality’ and the important parts of an artistic work by reference to ‘artistic originality’, is that the case law on ‘originality’ (described in Chapter 4) hardly comprises an uncontroversial

<sup>110</sup> *Express Newspapers v. Liverpool Daily Post & Echo* [1985] FSR 306, 311. See also *PCR v. Dow Jones Telerate* [1998] FSR 170.

<sup>111</sup> In the case of a sound recording, it seems on this basis it would be wrong to treat the part of which embodies the most distinctive, unusual, or catchy sounds as automatically representing the important part of the sound recording. This is because those parts may reflect, for example, the musical work, performance, and so on, rather than labour, skill, and judgment in creating the recording itself.

<sup>112</sup> Whitford J was of the view that a good deal of labour had gone into ensuring the grids produced enough winners to be attractive, but not so many as to render the game hopelessly uneconomic. In fact, the claimant had developed a computer program, and then checked that the grids were acceptable. Perhaps the case can be said to be one where there was a substantial taking from a quantitative point of view.

or settled body of law.<sup>113</sup> One key difficulty it raises is knowing to what extent labour, skill, and judgment in producing ideas, information, or making commercial decisions which precede the creation of the work itself can be treated as part of the ‘literary or artistic originality’. In the context of determining originality, we saw that the House of Lords in *Ladbroke v. William Hill* had said that the court should not dissect labour, skill, and judgment in deciding what bets to offer from the labour, skill, and judgment in creating the coupon thereafter.<sup>114</sup> If this general proposition also carries weight when determining literary or artistic originality for the purpose of deciding whether a part is important and thus whether there is infringement, we are a short step away from concluding that the important parts of a copyright work may be those that incorporate the ideas or carry the information that have taken the most labour or skill to produce (rather than express).<sup>115</sup> And yet, in *Catnic v. Hill & Smith*, (in a passage which received the approval of the Privy Council in *Interlego v. Tyco*), Buckley LJ has said that importance may be judged by how far a part contributes to conveying information, but not to the importance of the information which it helps to convey. What is protected is the skill and labour devoted to making the work not the skill and labour devoted to developing some idea or invention communicated or depicted in the work.<sup>116</sup> In due course, the courts will be forced to confront this apparent conflict. If current trends persist, it is likely that they will reject the *Catnic* approach, which requires too subtle an analysis, and favour the stronger protection that application of *Ladbroke* would produce.

*Functional importance.* A similar difficulty has arisen in relation to determining the importance of parts of functional works. Here, the courts have held that, while a part may be important to the functioning of the work, if it is not also significant in terms of the originality of the work it will not be substantial. In the case of an artistic work this means that, while a part may be important to the functioning of a work, if it is not visually important then it will not be a substantial part. This can be seen, for example, in *Johnstone Safety v. Peter Cook* where the Court of Appeal had to consider whether a relatively small but functionally important feature of a sectional design of a plastic traffic cone which enabled the cones to be conveniently stacked was a substantial part of the drawing. Ralph Gibson LJ said that the fact that the feature was functionally important did not make it ‘more potent’ for demonstrating that a substantial part had been reproduced. As the feature had ‘no substantial significance in the visual image of the artistic work’ it was not a substantial part of the work.<sup>117</sup> Nevertheless, while ‘functional importance’ of a part is not the test, it does not follow that a part taken from an artistic work is only substantial if it is of visual significance to a layman. In the case of design drawings for a car exhaust system, the salient features were not to be assessed by the visitor observing the exhaust pipe mounted on a plinth at the Tate Gallery. Instead, they were to be judged by an engineer wanting to make an exhaust pipe to fit under a car.<sup>118</sup> Presumably, this person is in

<sup>113</sup> A further question is whether the European harmonization of originality in relation to computer programs, databases, and photographs (described at pp. 107–11) affects the substantiality inquiry.

<sup>114</sup> [1964] 1 WLR 273.

<sup>115</sup> *L.B. (Plastics) v. Swish* [1979] FSR 145, 163 (Lord Hailsham) (all information embodied in the design drawings could be considered when deciding if there was infringement).

<sup>116</sup> *Catnic Components v. Hill and Smith* [1982] RPC 183; *Interlego v. Tyco* [1989] AC 217, 265.

<sup>117</sup> *Johnstone Safety v. Peter Cook* [1990] FSR 161, 178. See also *Rose Plastics GmbH v. William Beckett & Co* [1989] FSR 113, 123 (substantial importance from point of view of operation was not same as substantial part of artistic work, which depended on visual significance).

<sup>118</sup> *Billhöfer Maschinenfabrik v. Dixon* [1990] FSR 105, 120.

the best position to assess the labour, skill, and judgment that the author has invested in the drawings in question.

The relation between functional importance and ‘substantiality’ has also arisen where a small part of a computer program is copied. In these circumstances it is sometimes pointed out that the program will not function or will not function properly without the part.<sup>119</sup> Given that ‘every part of a computer program is essential to its performance’ it has been suggested by some commentators that every part, however small, should be treated as a ‘substantial part’ of the program.<sup>120</sup> This approach has been rejected in the United Kingdom.<sup>121</sup> The reason for this is that it applies the wrong criterion to test whether the part is important.<sup>122</sup> While it may be clear that the functional importance of part of a computer program is not a relevant consideration when deciding whether the work has been infringed, it is not yet clear which aspects of a computer program will be relevant.

*The part must itself be capable of being protected.* In some cases the courts have suggested that a part will not be substantial if the amount that is taken would not itself attract copyright.<sup>123</sup> This can be seen in *Francis Day & Hunter* where the owners of copyright in the song ‘The Man Who Broke the Bank at Monte Carlo’ brought an infringement action against a person who made a film of the same name. In response Lord Wright said that the ‘copying which is complained of is the use of the title, and that is too unsubstantial on the facts of this case to constitute infringement’.<sup>124</sup> In other words, Lord Wright thought there was no copyright in the title by itself. a similar approach was adopted in the parody case of *Williamson Music v. Pearson* where the only parts left in the defendant’s parody of the claimant’s song ‘There is Nothin’ Like a Dame’ were the words ‘we got’, which were repeated several times. Judge Baker QC held that the words were not a substantial part of the copyright work, noting that ‘in themselves the words would not be copyright as a literary work’.<sup>125</sup> While the rule that a part will not be substantial if it would not itself attract copyright may be uncontroversial, it would be dangerous to infer from these cases a different proposition, namely, that if the amount taken could itself have constituted a protected work, then it necessarily follows that the amount taken is substantial.<sup>126</sup> Such a proposition would fail to take account of the importance of the part taken to the claimant’s work as a whole: indeed, it would involve ignoring the rest of the claimant’s work.

*Repeated takings.* In certain situations the question has arisen as to whether the taking of an insubstantial part of the copyright work over a period of time amounts to the taking of a

Highbury Leisure* [2005] FSR (20) 431, 443–4 (paras. 12–13.)

<sup>124</sup> *Francis Day & Hunter v. 20th Century Fox* [1940] AC 112, 123–4.

<sup>125</sup> [1987] FSR 97, 107. After some early cases suggesting a different test for infringement by way of parody, this case confirmed that no special rules apply.

<sup>126</sup> Cf. *Laddie et al.*, para. 4.45 (arguing that if the part taken could have stood on its own as an original work, the defendant’s work ‘is a plagiarism’).

substantial part of the work. This question arises in two situations. The first is where a defendant regularly takes insubstantial amounts from a *single copyright work*. For example, while students might not infringe the copyright in a 300-page textbook if they copied 5 pages, what of the situation where, over the course of an afternoon, the same student went to a photocopy machine 20 times and photocopied a different 5-page section each time? While the copying of 5 pages may not amount to an infringement, what of the copying of 100 pages? The second scenario is where copyright works are created regularly and the defendant consistently takes insubstantial amounts from different works. For example, would it be an infringement for an evening newspaper to reproduce regularly an insubstantial amount taken from daily financial reports of foreign markets that appeared in a morning paper?

As regards the first situation, that is where a defendant regularly takes insubstantial amounts from a *single copyright work*, the court in principle must decide whether there are a number of takings or only one: a person will infringe if the acts can reasonably be seen as a single act, and the cumulative taking is 'substantial'.<sup>127</sup> Relevant factors would presumably include whether the taking were used for the same purpose, and the time frame in which the activities took place. Beyond those limited situations where a series of acts could be interpreted as a single act, it seems the courts recognize a broader doctrine of 'repeated systematic copying from the same work'. Although Laddie J had observed that 'the concept of infringement by taking small and regular amounts was problematical',<sup>128</sup> the Court of Appeal in *Newspaper Licensing Agency v. Marks & Spencer plc* stated that such systematic copying could be infringement.<sup>129</sup> (The issue was not discussed in the House of Lords.) The Court of Appeal found support for its view from a case where a defendant was held to infringe copyright in the fixture lists for the football season, because it had copied a part of the list every two weeks.<sup>130</sup> Nevertheless, the comments in *NLA* were obiter, and the Court gave no indication as to when (or why) copying would be treated as 'systematic'.<sup>131</sup>

In contrast, where there is repeated copying of insubstantial parts from a series of the claimant's works there can be no finding of infringement (despite certain nineteenth-century cases to the contrary).<sup>132</sup> Dismissing those authorities on the basis of the different statutory terms, Peter Gibson LJ said, 'I do not understand how in logic what is an insubstantial part of a work can when aggregated to another insubstantial part of another work become a substantial part of the combined work'.<sup>133</sup> Here the only issue is whether in each case the claimant can show some use of a substantial part of the individual works.<sup>134</sup>

### 5.2.2 Judicial and practical responses to the complicated inquiry

Having set out a structured approach suited to a rigorous analysis of copyright infringement, we should conclude our discussion of primary infringement with three points.

<sup>127</sup> *Electronic Techniques Anglia v. Critchley Components* [1997] FSR 401, 410. <sup>128</sup> *Ibid.*

<sup>129</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2001] Ch 257, 269 (para. 33) *per* Peter Gibson LJ. See also 288–9 (para. 108) (Mance LJ).

<sup>130</sup> *Football League Ltd v. Littlewoods Pools Ltd* [1959] Ch 637 (whether such fixture lists would now be protected by copyright depends upon whether, as a result of the selection or arrangement, they could be said to be their author's own intellectual creation). Perhaps this would be the most satisfactory explanation for *Express Newspapers v. Liverpool Daily Post & Echo* [1985] FSR 306 (which, as we saw earlier, is otherwise problematical).

<sup>131</sup> Indeed, the fixture list case could have been an example of a single act, given that there was a preconceived course of action.

<sup>132</sup> *Cate v. Devon Constitutional Newspaper* (1889) 40 Ch D 500; *Trade Auxiliary v. Middlesborough* (1889) 40 Ch D 425. There is a possibility of infringing *sui generis* database right: see Ch. 13.

<sup>133</sup> *Newspaper Licensing Agency Components* [1997] FSR 401, 269, 288.

<sup>134</sup> *PCR v. Dow Jones Telerate* [1998] FSR 170, 183 (Lloyd J rejecting claimant's argument that its two articles and the defendant's three articles should be taken together for the purpose of determining whether a substantial part).

First, it should be noted that courts have not always been as rigorous or structured in their analyses as we suggest is necessary in the preceding account. In most cases, in fact, the court does not examine the nature of the claimant's work, rather taking for granted the boundaries of the work and that the work as a whole is protected. In these cases, the court will merely go straight to the second issue, the substantiality of the taking.<sup>135</sup> In yet other cases, the court will not even examine the second, substantiality, issue with any rigour. In some such cases, the court will utilize the 'rough practical test', that 'what is worth copying is worth protecting'.<sup>136</sup> This might be justified where there is an indication that the defendant has deliberately copied, from which the court can at least draw an inference that the defendant regarded the material it had appropriated as 'worth taking' and, therefore, embodying original skill and labour.<sup>137</sup> In other circumstances, in particular where the issue of derivation has been determined through a process of inference from multiple similarities between the defendant's material and the claimant's work, the court may simply regard further inquiry as superfluous. This was the view of the majority of the House of Lords in *Designers Guild*. For example, Lord Bingham there observed that 'while the finding of copying did not in theory conclude the issue of substantiality, on the facts here it was almost bound to do so'. Lord Millett, too, agreed that while the issues of copying and substantiality are treated as separate questions, in some circumstances, 'the answer to the first question will almost inevitably answer both, for if the similarities are sufficiently numerous or extensive to justify an inference of copying they are likely to be sufficiently substantial to satisfy this requirement also'.<sup>138</sup>

Second, as should be clear, the factual nature of the infringement inquiry means that it is often difficult to state in advance when a particular work may be infringed. This uncertainty is particularly problematic for bodies such as libraries who deal with copyright works on a day-to-day basis and who need to provide advice as to the types of use which are permissible. Faced with this uncertainty, it is not surprising that standards and protocols have been formulated in many industries that set out in a clear and readily quantifiable manner the type of copying that is permissible. Perhaps the best-known example is the rule of thumb that 10 per cent or one chapter of a book may be copied. Similar standards have also been formulated to deal with the digital sampling of musical works and are currently being

<sup>135</sup> *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275.

<sup>136</sup> *University of London Press v. University Tutorial Press* [1916] 2 Ch 601, 610. In *Ladbroke (Football) v. William Hill (Football)* [1964] 1 WLR 273 the House of Lords misread Peterson J's dictum (which was directed at the issue of the originality of mathematics exams) and treated it as if it was concerned with substantial taking.

<sup>137</sup> As Laddie J said in *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683, a belief that taking was blatant led courts, sometimes with almost evangelical fervour, to apply the commandment 'thou shalt not steal'. The test has been criticized by the lower courts on the ground that, where the test is used, the tribunal relinquishes the task of asking whether the work has been infringed according to the rules of copyright law and focuses instead on the mere fact that the work has been copied. In so doing, all that a claimant has to show to establish infringement is that their work has been copied. For criticisms, see *Ibcos Computers v. Barclays Mercantile Highland Finance* [1994] FSR 275, 289 (Jacob J, test 'proves too much'); *Hyperion Records v. Warner Music* (1991, unreported) (Judge Laddie QC, saying test 'goes too far'); *Cantor Fitzgerald International v. Tradition (UK)* [2000] RPC 95, 131 (Pumfrey J, test 'proves too much').

<sup>138</sup> [2000] 1 WLR 2416, 2418 (Lord Bingham), 2426 (Lord Millett), 2435 (Lord Scott). Lord Scott put the proposition more forcefully still, stating that in cases of 'altered copying', '[i]f the similarities between the two works were sufficient to justify the inference that one had been copied from the other, there was, in my judgment, no further part for the concept of substantiality to play'. But cf. *Baigent v. Random House* [2007] EWCA Civ 247, [2007] FSR 579, in which an inference of copying was drawn, but this was held not to be substantial; and *Nova Productions v. Mazooma* [2007] EWCA Civ 219, [2007] RPC 589, 599 para 26 where Jacob LJ explained Lord Scott's dictum and denied that it established a general principle.

formulated in the multimedia industries. While these standards do not take account of the qualitative nature of infringement, they do provide an important and workable way of dealing with a difficult issue.

Third, and finally, as should be clear from the foregoing, the courts have recently interpreted the rules on primary infringement in a way that leaves little scope for unauthorized utilization of copyright-protected material. Those parts of a work which are not protected (as unoriginal, or as ideas) are defined increasingly narrowly. At the same time, the courts are willing to treat virtually any appropriation as substantial (and pay no attention to the way the material comes to be used). These trends reflect a widely-held judicial understanding of copyright law as intended to protect all contributions of labour, skill, and judgment. Copyright works are protected by the courts with a zeal that seems to reflect a belief that the work is the absolute, despotic dominion of the copyright owner. Yet, if we reflect on the dominant justification for copyright, namely that copyright is intended to provide the minimum incentive necessary to the production of new works, such an approach seems problematic.

## 6 SECONDARY INFRINGEMENT

In an attempt to inhibit the negative impact that illegal acts have upon copyright owners, copyright law recognizes that it is not enough merely to provide remedies against those who copy or perform the copyright work. Instead, copyright law recognizes that it is also necessary to provide owners with protection against those who aid and abet the primary infringer. Such accessory infringement is known as *secondary infringement*.

There are two important differences between primary and secondary infringement. The first relates to the scope of protection. Primary infringement is concerned with people who are directly involved in the reproduction, performance, etc. of the copyright work. In contrast, secondary infringement is concerned with people in a commercial context who either deal with infringing copies, facilitate such copying, or facilitate public performance. The second difference between the two forms of infringement relates to the mental element that the defendant must exhibit in order to infringe. As we explain below, the state of mind of the defendant is not formally taken into account when deciding whether an act of primary infringement has occurred. In the case of secondary infringement, however, liability is dependent on the defendant knowing or having reason to believe that the activities in question are wrongful.<sup>139</sup>

### 6.1 TYPES OF SECONDARY INFRINGEMENT

Secondary infringement can be divided into two general categories. First, those who distribute or deal with infringing copies once they have been made; and second, those who facilitate copying by providing the equipment or means that enable the copying to take place.

#### 6.1.1 The distribution of infringing copies

The first general category of secondary infringement is concerned with people who deal with infringing copies of the work in a commercial context. To this end, sections 22 and 23 of the

<sup>139</sup> CDPA ss. 22–4, 27. See Laddie *et al.*, ch. 19.

1988 Act provide that the copyright in a work is infringed by a person who without the licence of the copyright owner:

- (i) *imports* an infringing copy into the UK otherwise than for their private and domestic use,<sup>140</sup>
- (ii) *possesses* an infringing copy in the course of business,<sup>141</sup>
- (iii) *sells* or *lets for hire*, or offers or exposes for sale or hire an infringing copy,
- (iv) in the course of business *exhibits* in public or distributes an infringing copy,<sup>142</sup> or
- (v) *distributes* an infringing copy, otherwise than in the course of a business, to such an extent as to affect prejudicially the copyright owner.

Section 27(2) provides that an article is an ‘infringing copy’ if its making constituted an infringement of the copyright in the work in question.<sup>143</sup> In the case of imported copies, infringing copy also includes ‘notional infringements’, that is copies which if they had been made in the United Kingdom would have infringed copyright at the time of making, or would have constituted a breach of an exclusive licence agreement relating to the work.<sup>144</sup> This provision has proved to be problematic.<sup>145</sup> Its significance has been reduced, however, by the extension of liability for primary infringement to include the issuing of copies, including the importing of copies from outside the EEA. Liability for secondary infringement by import remains important in cases of import from one EEA state to another: however, this right is subject to the Treaty of Rome and the principle of exhaustion.<sup>146</sup>

### 6.1.2 Providing the means for making infringing copies or performances

The second general category of secondary infringement is concerned with people who facilitate copying. This occurs, for example, where someone provides the equipment or the means that enables the copying to take place. There are a number of different situations where the provision of the means for making infringing copies or performances will amount to a secondary infringement.

Section 24(1) provides that a person is liable for infringement where they supply an article that is specifically designed or adapted for making copies of the copyright work. More specifically, section 24(1) provides that copyright in a work is infringed by a person who

<sup>140</sup> CDPA s. 22.

<sup>141</sup> Business is defined in CDPA s. 178 as including a ‘trade or profession’. In *Pensher Security Doors v. Sunderland City Council* [2000] *RPC* 249, 280–2, Aldous LJ held that (i) the letting of flats by a local authority was a ‘business activity’, and (ii) the council possessed infringing copies (in the case, security doors which infringed the claimant’s copyright in its design drawings) ‘in the course of’ that business even though there was no intention to distribute the infringing copies. This was because possession of the doors was an integral part of the business of letting the flats and thus not ‘incidental’ to the business.

<sup>142</sup> An art gallery carries on business even though certain paintings are not for sale: *Pensher*, *ibid*, 282.

<sup>143</sup> However, note the many situations in which the making of a copy is not infringing because of the existence of a defence, but the statute requires the copy be treated as an infringing copy when subsequently dealt with in specified ways: CDPA s. 27(6) referring to s. 32(5), s. 35(3), s. 36(5), s. 37(3), s. 56(2), s. 63(2), s. 68(4), and s. 141.

<sup>144</sup> CDPA s. 27(3), Sched. 1, para. 14(3).

<sup>145</sup> Described by Laddie *et al.*, para. 19.16 as ‘far from straightforward’. One question that has been debated is who does the hypothetical making—the maker abroad, the importer, or someone else. See W. Rothnie, *Parallel Imports* (1993), 199–241. Laddie *et al.* argue that the identity of the maker is not in issue; what is in issue is the purpose which the import is intended to fill.

<sup>146</sup> CDPA s. 27(5). See above at pp. 12–16, 142–4.

without the licence of the copyright owner (a) makes, (b) imports into the United Kingdom, (c) possesses in the course of business, or (d) sells, or lets for hire, or offers or exposes for sale or hire *an article specifically designed or adapted for making copies of that work*.

It should be noted that section 24(1) states that the article must be *specifically* designed or adapted for the purpose of copying. This means that it is not enough that an article, such as a photocopier or a tape-to-tape recorder, has the potential to copy. Rather, for the section to operate the article must be specifically designed for the copying of a particular work. This would be the case, for example, where someone makes a template or a mould of a copyright work that is used to create infringing copies.

Special provisions are also made for people who *transmit the work* without the appropriate permission. Section 24(2) states that copyright in a work is infringed by a person who without licence transmits the work by means of a telecommunications system (such as a fax). It does not apply, however, to communications to the public. As with all forms of secondary infringement, infringement is dependent upon the defendant 'knowing or having reason to believe that infringing copies of the work will be made by means of the reception of the transmission in the UK or elsewhere'.

Where the copyright in a literary, dramatic, or musical work is infringed by a performance at a 'public place of entertainment',<sup>147</sup> any person who gave permission for that place to be used for the infringing performance is also liable for infringement. This does not apply, however, where the defendant gave permission on reasonable grounds that the performance would not be infringed.<sup>148</sup>

Special provisions also apply to those who facilitate an infringing performance. Section 26 deals with the situation where copyright is infringed by a public performance or by the playing or showing of the work in public by means of apparatus for (a) playing sound recordings, (b) showing films, or (c) receiving visual images or sounds conveyed by electronic means. In these situations, the following people will infringe:

- (i) The person who *supplies the apparatus* which enables the act of primary infringement to take place is liable for infringement. This covers someone who supplies equipment to play records or show films. Infringement here is conditional on the fact that, where an apparatus is normally used in public, the defendant did not reasonably believe on reasonable grounds that it would be used to infringe copyright.<sup>149</sup>
- (ii) An occupier of premises who gave permission for an apparatus to be brought on to the premises will be liable if they knew or had reason to believe that the apparatus was likely to be used to infringe copyright.<sup>150</sup>
- (iii) a person who *supplies a copy* of a sound recording or a film will be liable if they knew or had reason to believe that the copy was likely to be used to infringe copyright.<sup>151</sup>

Finally, it should be noted that special rules, analogous to provisions on secondary infringement, apply where persons do various acts that facilitate access to or duplication of works that have been protected by technological measures. We deal with these in detail in Chapter 13. For the moment we merely need to note that these rights cover (i) acts which

<sup>147</sup> Defined in CDPA s. 25(2) to include premises occasionally used for public entertainment.

<sup>148</sup> CDPA s. 25(1). <sup>149</sup> CDPA s. 26(2).

<sup>150</sup> CDPA s. 26(3). For a possible example, see *PRS v. Kwik-Fit Group Ltd* [2008] ECDR (2) 13 (OH CS).

<sup>151</sup> CDPA s. 26(4).

circumvent technological measures;<sup>152</sup> (ii) the manufacture and distribution of devices either ‘primarily designed, produced, adapted ... for the purpose of enabling and facilitating’ circumvention, or ‘promoted, advertised or marketed’ for that purpose, and having ‘only a limited commercially significant purpose or use other than to circumvent’;<sup>153</sup> and (iii) the provision of services for the purpose of enabling or facilitating circumvention. Distinct, and narrower provisions apply where the measures protect computer programs.<sup>154</sup>

## 6.2 ACTUAL OR CONSTRUCTIVE KNOWLEDGE

One of the notable features of secondary infringement is that liability is dependent on the defendant ‘knowing or having reason to believe’ that the activities in question are wrongful. That is, liability is dependent on the defendant having either actual or constructive knowledge. The question of whether a defendant has the requisite knowledge is decided objectively.<sup>155</sup> As such, it does not matter that the defendant may not have believed that the act in question was wrongful. All that matters are the conclusions a reasonable person would have reached in the circumstances.

The question that needs to be asked is whether the defendant knew or had reason to believe that they were dealing with or helping to facilitate the creation of an ‘infringing copy’ of the copyright work. In answering this question, the courts have stressed that the defendant must be in a position where they are able to evaluate the information that is given to them.<sup>156</sup> This means that they must be given a reasonable period of time to consider the information.<sup>157</sup> It also means that the information that they are given must be sufficiently detailed as to the nature of the work in question: general allegations about infringement will not suffice.<sup>158</sup> The courts have also said that it is *not* enough for the facts to lead a reasonable person to suspect the relevant conclusion.<sup>159</sup> Although it will enhance the claimant’s case where the defendant is supplied with a copy of, or given reasonable access to, the copyright work, the circumstances of the case may be such that the reasonable defendant could have ‘known’ about the wrongful nature of their activities without ever having seen the copyright work.<sup>160</sup>

<sup>152</sup> CDPA s. 296ZA.      <sup>153</sup> CDPA s. 296ZD.      <sup>154</sup> CDPA, s. 296(1).

<sup>155</sup> Cf. *Laddie et al.*, paras. 19.4 ff. (arguing that a subjective element is appropriate, at least in cases where the defendant is in possession of contradictory information).

<sup>156</sup> *LA Gear v. Hi-Tec Sports* [1992] FSR 121, 129 (action for infringement of copyright in the drawings of its shoes by import of infringing copies. Since the claimant had sent the defendants a letter and copies of the drawings, they had reason to believe these were infringing copies).

<sup>157</sup> The normal period is often 14 days. Cf. *Monsoon v. Indian Imports* [1993] FSR 486.

<sup>158</sup> *Hutchinson Personal Communications v. Hook Advertising* [1995] FSR 365; *Metix UK v. Maughan* [1997] FSR 718.

<sup>159</sup> *ZYX Music GmbH v. King* [1997] 2 All ER 129.

<sup>160</sup> *Pensher Security Doors v. Sunderland City Council* [2000] RPC 249.

### 1 INTRODUCTION

In this chapter we look at the exceptions that a defendant may rely upon when sued for infringement of copyright.<sup>1</sup> Most of these exceptions are found in Chapter III of Part 1 the 1988 Act (where they are referred to as permitted acts). As Laddie J said, Chapter III 'consists of a collection of provisions which define with extraordinary precision and rigidity the ambit of various exceptions to copyright protection'.<sup>2</sup> In addition to the exceptions in the 1988 Act the courts have also developed a number of common law defences that a defendant may rely upon when sued for infringement of copyright.

<sup>1</sup> See generally, R. Burrell & A. Coleman, *Copyright Exceptions: The Digital Impact* (2005).

<sup>2</sup> *Pro Sieben Media v. Carlton UK Television* [1997] EMLR 509.

The exceptions examined here provide that certain acts that might otherwise constitute an infringement of copyright do not incur liability. The exceptions only come into play once a claimant has established that copyright has been infringed. Where this occurs, the onus of proof falls on the defendant to prove that one of the exceptions applies.<sup>3</sup>

Given that the exceptions span a wide variety of activities, it is not surprising that they perform a number of different roles. In some cases, the exceptions promote and encourage the creation of works. This is particularly the case where the permitted use transforms the original work in some way. In other cases, the exceptions overcome the market failure that arises where an economically optimal use would not occur for one reason or other. This occurs, for example, where the dealing is so small that the transaction costs of formulating an agreement outweigh the value of any licence that might be negotiated between the parties.<sup>4</sup> In other cases the defences are intended to protect other non-copyright interests, such as the protection of privacy and free speech.<sup>5</sup> In yet other cases the exceptions prevent monopolies from being abused<sup>6</sup> and help to preserve material that is culturally and historically valuable.<sup>7</sup> Some of the defences encourage the parties to enter into collective licences.<sup>8</sup>

As the 1988 Act reminds us, the mere fact that an activity falls within one of the permitted acts does not mean that it does not contravene some other legal right,<sup>9</sup> an obvious example being breach of contract. In recent years questions have arisen as to whether the law should limit a person's ability to contract out of the exceptions.<sup>10</sup> So far, British copyright law has taken a piecemeal approach to these issues, and the various provisions which prevent contracting-out are examined in their particular contexts.<sup>11</sup> A related problem is that raised by the interface between the exceptions to copyright and technological measures of protection. If a person cannot take advantage of a defence because of the application of access or copy control mechanisms, can that person legally circumvent the measure in order to do so? So far, the UK legislature has answered this question with a clear 'no', leaving users deprived of the ability to utilize some of the exceptions with the possibility of applying to the Secretary of State. These provisions are reviewed in Chapter 13.<sup>12</sup>

For the most part, the exceptions to copyright protection available in the UK have largely been unaffected by international influences. Under the Berne Convention,<sup>13</sup> members of

<sup>3</sup> Rather surprisingly, given that the defences derogate from property rights, there does not appear to be any consistent process of interpreting copyright exemptions strictly against the defendant.

Heide, 'Copyright, Contract and the Legal Protection of Technological Measures: Not "The Old Fashioned Way": Providing a Rationale to the "Copyright Exceptions Interface"' (2003), 50 *Journal of the Copyright Society of the USA* 1001.

<sup>11</sup> CDPA s. 36(4), s. 50A, s. 50B, s. 296A(1)(a), s. 296A(1)(b), s. 296A(1)(c), s. 296B. Broadcasting Act 1996, s. 137. The more general issue about the relationship between contract and copyright is reviewed in Ch. 12.

<sup>12</sup> CDPA s. 297ZA, 297ZE; Info. Soc. Dir., Art. 6. See below pp. 321–3.

<sup>13</sup> As regards phonograms and broadcasts, see Rome, Art. 15(1).

the Union are permitted to create exceptions to the exclusive rights, in limited circumstances.<sup>14</sup> In particular, exceptions to the reproduction right must satisfy the so-called ‘three-step test’.<sup>15</sup> According to this test, all exceptions must (i) be limited to certain special cases, (ii) not conflict with a normal exploitation of the work, and (iii) not unreasonably prejudice the legitimate interests of the author. As TRIPS requires that *all* limitations comply with the three-step test, the test has become more important.<sup>16</sup> Indeed, in a notable decision it was held by the Dispute Panel that a provision of US law which allowed certain establishments to play or show publicly works which were received from broadcasts violated the ‘three-step test’.<sup>17</sup> Although the United States has not been able, as yet, to amend its law to comply with the Report, it has agreed to compensate European copyright holders for the losses they have incurred.<sup>18</sup> With the entry into force of the WIPO Treaties, the same test is to be applied to the additional rights required to be recognized, such as the distribution right and the right to make the work available to the public.<sup>19</sup> The WPPT extends the application of the ‘three-step’ test to the exceptions from rights in phonograms.<sup>20</sup>

The three-step test sets general parameters to the freedom of national legislatures to create exceptions: in contrast, European Community developments have had a more pronounced impact upon the copyright exceptions available in the UK. The Software, Databases, Rental and Information Society Directives require member states to operate certain exceptions,<sup>21</sup> and limit the circumstances in which other exceptions may be granted.<sup>22</sup> The Information Society Directive, in particular, contains one mandatory exception as regards transient or incidental acts of reproduction<sup>23</sup> and a huge list of optional defences, many covering the analogue environment.<sup>24</sup> The list is exhaustive: member states may not maintain any other exceptions.<sup>25</sup> The defences listed in the Directive are subject to the three-step test.<sup>26</sup>

<sup>14</sup> Minor exceptions are permitted in accordance with the understandings expressed at various conferences but these must be *de minimis*: see WTO Panel Report, *United States: Sec. 110(5) of the US Copyright Act* (15 June 2000) WT/DS160/R.

<sup>15</sup> Berne, Art. 9(2).

<sup>16</sup> TRIPS, Art. 13.

<sup>17</sup> The WTO Dispute Panel has assessed whether various provisions of US law passed the test and thus complied with Art. 13 TRIPS. WTO Panel Report, *US: Sec. 110(5)*, note 14 above. For commentary, see L. Helfer ‘World Music on Stage: A Berne/TRIPS and Economic Analysis of the Fairness in Music Licensing Act’ (2000) 80 *Boston University LR* 93; J. Ginsburg, ‘Toward Supranational Copyright Law? The WTO Panel Decision’ (2001) 187 *RIDA* 3; Bettina C. Goldmann, ‘Victory for songwriters in WTO music royalties dispute between U.S. and EU—background of the conflict over the extension of copyright homestyle exemption’ [2001] *IIC* 412–429.

<sup>18</sup> Richard Owens, ‘TRIPS and the Fairness in Music Arbitration: the Repercussions’ [2003] *EIPR* 49.

<sup>19</sup> WCT, Art. 10.

<sup>20</sup> WPPT, Art. 16. TRIPS, Art. 13 is not specific about exactly which rights to which it applies: in that it is part of ‘section A’, it might be thought also to be applicable to phonograms. However, because it comes before Art. 14(2), which requires members to give reproduction rights to phonogram producers, and this is qualified by Art. 14(6), the more obvious interpretation is that Art. 13 only affects Berne rights, and the Rental Right in Art. 11. See also Rome, Art. 15(2) (permitting certain exceptions).

<sup>21</sup> Software Dir, Arts 5 and 6; Database Dir, Art. 6.

<sup>22</sup> Rental Dir., Art. 10, especially At 10(3) (three-step test, added by Info. Soc. Dir., Art. 11); Software Dir., Arts. 5 and 6; Database Dir., Art. 6.

<sup>23</sup> See Sections 16 and 17 below.

<sup>24</sup> Info. Soc. Dir., Art. 5. Early proposals contained a very limited catalogue of exceptions, reflecting the limited concerns of the Directive with the ‘information society’.

<sup>25</sup> See Info. Soc. Dir., Recital 32. The Directive divides the exceptions into two categories: five that relate to the reproduction right, and fifteen that relate to both the reproduction right and the communication right. Member states are also able to extend the exceptions to cover distribution of copies ‘to the extent justified by the purpose of the authorized act of reproduction’. Defences relating to public performance, e.g. in CDP s. 34, are unaffected.

<sup>26</sup> *Ibid.*, Art. 5(5).

Finally, the European Convention on Human Rights, and the jurisprudence of the Strasbourg Court, appears to offer an important backdrop for the interpretation of a number of the defences (especially after the Human Rights Act 1998 came into force in October 2000).<sup>27</sup> As mentioned in Chapter 2, Article 10 of that Convention confers a freedom of expression, limitations to which must be ‘necessary in a democratic society’. In *Ashdown v. Telegraph*, the Court of Appeal acknowledged that Article 10 considerations were to be taken into account, first, in the process of interpreting the existing exceptions; second, in the formulation of remedies; and third, if necessary, in the formulation of a judicial ‘public interest’ exception to copyright.<sup>28</sup>

## 2 FAIR DEALING

Of the various permitted acts in Chapter III, perhaps the most significant (in terms of their scope) are the fair-dealing defences that are found in sections 29 and 30.<sup>29</sup> These provide that a person will not be liable if they can show:

- (i) fair dealing for the purposes of research or private study—section 29(1) and (1C);
- (ii) fair dealing for the purposes of criticism or review—section 30(1); or
- (iii) fair dealing for the purpose of reporting current events—section 30(2).

Before looking at the three defences, we wish to make some general comments about fair dealing.

### 2.1 ‘DEALING’

It is important to note that all that is meant by dealing is that the defendant has made use of the work. Dealing does not imply that there has to be some sort of transaction between the parties.

### 2.2 PURPOSE

One of the notable features of UK copyright law is that fair dealing is only permitted for the purposes specifically listed in the 1988 Act. This means that the dealing must be fair for the purpose of research or private study, criticism or review, or the reporting of current events. As such, it is irrelevant that the use might be fair for a purpose not specified in the Act, or that it is fair in general. Thus, the fact that it might be impracticable for a commercial organization to circulate and distribute articles cut from a newspaper does not make the photocopying of the articles fair. Instead, it makes it a reason to seek an appropriate licence.<sup>30</sup> The restricted approach adopted in the UK should be contrasted with American copyright law which has a

<sup>27</sup> R. Burrell, ‘Defending the Public Interest’ [2000] *EIPR* 394. See more generally J. Griffiths & U. Suthersanen (eds.), *Copyright and Free Speech: Comparative and International Analyses* (2005).

<sup>28</sup> *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 167 [2001] 3 *WLR* 1368; [2002] *RPC* 235 (para. 46).

<sup>29</sup> These defences were first introduced in the CA 1911 s. 2(1)(a).

<sup>30</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] *EMLR* 369 (para. 18).

general defence of *fair use* such that if the court is satisfied that the use is fair, then there will be no infringement.<sup>31</sup>

In thinking about whether an alleged infringer falls within one of the purposes listed in the 1988 Act, it is important to note two things. The *first* is that the courts have construed the specific purposes liberally.<sup>32</sup> As such, the first hurdle (namely that the dealing falls within one of the purposes in the 1988 Act) has been relatively easy to satisfy. The *second* point relates to the standpoint of interpretation that will be adopted when deciding the purpose for which the work was used. At first glance the language of the statute seems to suggest that the test for determining the purpose of the dealing should be decided according to the subjective intentions of the alleged infringer. However, as Aldous LJ pointed out in *Hyde Park*, when deciding the purpose of the dealing, it is not necessary ‘for the court to put itself in the shoes of the infringer of the copyright’.<sup>33</sup> Instead, a more objective approach ought to be adopted. This ensures that the court does ‘not give any encouragement to the notion that all that is required is for the user to have sincere belief, however misguided, that he or she is criticizing a work or reporting current affairs’.<sup>34</sup>

## 2.3 THE DEALING MUST BE FAIR

Once a defendant has shown that their dealing falls within one of the purposes listed in the 1988 Act, they must then show that the dealing was fair. The determination whether a dealing is fair is a question of degree and impression.<sup>35</sup> While it is not possible to provide precise guidelines as to when a dealing will be fair, it is possible to identify a number of factors that might influence the way this question is answered. It should be noted that the relative importance of each of these factors will vary according to the case in hand and the type of dealing in question. Moreover, now the Human Rights Act 1998 is in force, as Lord Phillips MR stated, ‘[i]t is... essential not to apply inflexibly tests based on precedent, but to bear in mind that considerations of public interest are paramount’.<sup>36</sup> Where ‘freedom of expression’ is affected, this may require the courts to place less weight than had previously been the case on factors such as whether the work was unpublished, or the commercial purpose of the dealing, and more weight on factors, not previously to the fore, such as the political importance of the contents of the copyright work, whether the subject matter is at the margins of copyright, and perhaps even how old the work is.<sup>37</sup>

### 2.3.1 Is the work unpublished?

Where the dealing takes place in relation to a work that has not been published or made widely available to the public, this will weigh against the dealing being fair. In fact, in the case

<sup>31</sup> Copyright Act 1976 (US) s. 107. For a careful argument that the restrictive approach of British law would not necessarily change were a fair-use defence adopted, see R. Burrell, ‘Reining in Copyright Law: Is Fair Use the Answer?’ [2001] *IPQ* 368.

<sup>32</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 *All ER* 239, 257 (Chadwick LJ) (CA). See also *Pro Sieben Media v. Carlton Television* [1999] *FSR* 610, 620; *Ashdown v. Telegraph Group Ltd* [2002] *Ch* 149, 172 (para. 64).

<sup>33</sup> *Hyde Park Residence v. Yelland* [2000] *EMLR* 363 (para. 21). <sup>34</sup> *Pro Sieben*, note 32 above, 620.

<sup>35</sup> *Hubbard v. Vosper* [1972] 2 *QB* 84. <sup>36</sup> *Ashdown*, note 32 above, 173 (para. 71).

<sup>37</sup> J. Griffiths, ‘Copyright Law After *Ashdown*—Time to Deal Fairly with the Public’ [2002] *IPQ* 240 (critical of Court of Appeal’s recourse to existing case law establishing ‘factors’ on this basis); M. Birnhack, ‘Acknowledging the Conflict Between Copyright Law and Freedom of Expression under the Human Rights Act’ [2003] *Ent LR* 24, 33 (to similar effect). On the relation between the age of copyright and ‘fair use’ under US law, see J. Liu, ‘Copyright and Time: A Proposal’ (2002) 101 *Michigan Law Review* 409; J. Hughes, ‘Fair Use Across Time’ (2003) 50 *UCLA Law Review* 775.

of fair dealing for criticism or review, the defence is specified to be unavailable if the work has not been previously 'made available' to the public.<sup>38</sup> In other cases, particularly that of reporting current event, the fact that a work has not been published will certainly stand against a defendant.<sup>39</sup> In this respect, it is likely that the weight a court gives to the fact that a work is unpublished will vary according to the nature of the work in question: giving more weight in relation to private letters than it would for official reports that revealed matters of public importance.

### 2.3.2 How the work was obtained

The method by which the copyright material has been obtained has also been a factor in determining whether the dealing is fair.<sup>40</sup> It is less likely for a dealing to be fair if the dealing relates to a work that is leaked or stolen, or obtained by unauthorized access to a database, than a work that is obtained legitimately.<sup>41</sup>

### 2.3.3 The amount taken

The quantity and quality of what is taken will be a crucial factor in deciding whether a dealing is fair. As Lord Denning MR said in *Hubbard v. Vosper*, you 'must consider the number and extent of the extracts' and ask are 'they altogether too many and too long to be fair?'<sup>42</sup> This is because lengthy and numerous extracts, or extracts of the most important parts of a work, will reduce the expected returns to the copyright owner. By focusing on the quantity and quality of what is taken, the courts have recognized that fair dealing should not undermine the role copyright plays in encouraging creativity. In general, therefore, the defence will only apply where part of a work was taken. Nevertheless, the courts have acknowledged that, in some cases, such as where the work itself is short, it may be fair to reproduce the whole work.<sup>43</sup>

### 2.3.4 Use made of the work

Another factor that may influence the decisions as to whether a dealing is fair is the use that is made of the work in question. In some instances, it may be possible to reproduce someone else's work without comment or analysis and it be a fair use. However, a use is more likely to be fair if the defendant can show that they have added to or recontextualized the part taken. That is, a defendant will have a stronger case if they can show that the dealing was transformative.<sup>44</sup> This is particularly the case with fair dealing for criticism or review.

<sup>38</sup> CDPA s. 30(1), (1A) (as amended to give effect to Info. Soc Dir. Art. 5(3)(d)). Cf. Lord Denning, *Hubbard v. Vosper*, note 35 above, a result which would now have to be justified on the basis of the public interest.

<sup>39</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, 378 (para. 34) per Aldous LJ (it is 'difficult to imagine that it could be fair dealing to use a work that had not been published nor circulated to persons for the purpose of... newspaper reporting'); *HRH the Prince of Wales v. Associated Newspapers* [2007] 3 WLR 222, 264 (para. 174 per Blackburne J), 288 (paras. 78–9 per Lord Phillips MR). But cf. *CCH Canadian v. Law Society of Upper Canada* [2004] SCC 13 (para. 58).

<sup>40</sup> *Beloff v. Pressdram* [1973] 1 All ER 241.

<sup>41</sup> *Ibid*; *The Controller of Her Majesty's Stationery Office, Ordnance Survey v. Green Amps Ltd* [2007] EWHC 2755 (Ch) (para. 54); *Queensland v. TCN Channel Nine* [1993] IPR 58 (Sup. Ct. of Qld.); *British Oxygen v. Liquid Air* [1925] 1 Ch 383. Cf. *Time Warner v. Channel 4* [1994] EMLR 1.

<sup>42</sup> *Hubbard v. Vosper* [1972] 2 QB 84.

<sup>43</sup> *Ibid*, 94–5, 98 (Megaw LJ) (example of a parishioner quoting an epitaph on a tombstone in the churchyard); *Sillitoe v. McGraw Hill* [1983] FSR 545; *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515, 520; cf. *Zamacois v. Douville* [1943] 2 DLR 257 where the Canadian Exchequer Court suggested that the copying of an entire work cannot qualify as fair dealing.

<sup>44</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [1999] EMLR 369, 380 (Lightman J).

It seems that the fact that a defendant derives a *commercial benefit* from the dealing will weigh against them when attempting to show that the dealing was fair. (Indeed, in the case of fair dealing for purposes of research, the defence only applies to research for a non-commercial purpose.)<sup>45</sup> As Chadwick LJ said in the Court of Appeal decision of *Newspaper Licensing Agency v. Marks & Spencer plc*, ‘a dealing by a person with a copyright work for his own commercial advantage—and to the actual or potential commercial disadvantage of the copyright owner—is not to be regarded as a “fair dealing” unless there is some overriding element of public advantage which justifies the subordination of the rights of the copyright owner’.<sup>46</sup>

### 2.3.5 Motives for the dealing

Another factor that may influence the decision as to whether a use is fair relates to the motives of the alleged infringer.<sup>47</sup> The court must ‘judge the fairness by the objective standard of whether a fair minded and honest person would have dealt with the copyright work in the manner’ in question.<sup>48</sup> Thus, where a person acts dishonestly or for a motive that the court finds questionable (such as being primarily motivated by financial gain), it is likely to weigh against them. In contrast, if an alleged infringer can show that they were acting benevolently or were motivated by some altruistic or noble cause, this will increase the chances of their establishing that the dealing was fair.

### 2.3.6 Consequences of the dealing

Another factor that will influence the decision as to whether a dealing is fair relates to the impact that the dealing will have upon the market for the work. This is particularly important where the parties are in competition and the defendant’s use of the work acts as a substitute for the purchase of the original work.<sup>49</sup> This would be the case, for example, if in criticizing it a defendant showed all of a film.

### 2.3.7 Could the purpose have been achieved by different means?

In some cases, the courts have asked whether the purpose could have been achieved in a manner that is less intrusive on the copyright holder’s rights.<sup>50</sup> While there can be few objections to this test being used to determine whether a dealing is fair, problems may arise in the way it is applied by the courts. This can be seen in *Hyde Park Residence v. Yelland*. This case concerned an application for summary judgment against the *Sun* newspaper for publishing stills of Dodi Fayed and Diana, Princess of Wales, taken from security film, the copyright in which was owned by the claimant. The defendant argued that the stills revealed the times when Fayed and Diana were present at Villa Windsor and therefore exposed the falsehood of statements

<sup>45</sup> CDPA s. 29(1)(as amended, to give effect to Info. Soc. Dir., Art. 5(3)(a); Database Dir., Art. 6(2)(b)).

<sup>46</sup> Ibid. *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 257 (Chadwick LJ) (CA).

<sup>47</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, para. 36 (CA); *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 614 (Walker LJ); *Beloff v. Pressdram* [1973] 1 All ER 241, 263.

<sup>48</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, 379. Followed in *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 250 (Gibson LJ) (CA).

<sup>49</sup> *Hubbard v. Vosper* [1972] 2 QB 84.

<sup>50</sup> *Newspaper Licensing Agency* [1999] EMLR 369, 382–3. Note also Info. Soc. Dir., Art. 5(3)(a), (c), (d) (limiting scope of exceptions for research, reproduction by the press, and criticism or review respectively, to ‘the extent justified’ by the non-commercial purpose, the ‘informatory purpose’, and the ‘specific purpose’). Such an approach seems difficult to reconcile with ECHR-informed jurisprudence, which gives journalists leeway to determine what is necessary for a particular purpose: *Fressoz & Roire v. France* [2001] 31 EHRR 28, 60 (para. 54); *A v. B & C* [2002] 3 WLR 542 (para. 11).

made by Mohammed Al Fayed. At first instance it was argued that it was not necessary for the *Sun* to have published the images taken from the video. Instead, it was suggested that the same result could have been achieved via written word. In particular it was argued that the *Sun* could have interviewed the security guard and said that they had seen the photographs without actually publishing them. The Court of Appeal agreed. As Aldous LJ said, ‘the information as to the timing of arrival and departure of Dodi and Princess Diana could have been given in the articles by the reporter in the *Sun* stating that he had seen the photographs which proved the Princess and Mr Dodi only stayed at the Villa for 28 minutes’.<sup>51</sup> In so doing, the Court of Appeal implied that the pictures were no more effective evidence than the written word.<sup>52</sup>

## 2.4 SUFFICIENT ACKNOWLEDGEMENT

In certain situations, for the fair dealing defence to apply the dealing must be accompanied by a ‘sufficient acknowledgement’. In essence this means that the author and the work must be identified. It should be noted that sufficient acknowledgement is not required in all cases.

- (i) In relation to fair dealing for research for a non-commercial purpose or private study, sufficient acknowledgement is *only* required where the dealing relates to research, and acknowledgement is not impossible ‘for reasons of practicality or otherwise’.<sup>53</sup>
- (ii) In relation to fair dealing for criticism and review, sufficient acknowledgement is required for *all* works.<sup>54</sup>
- (iii) In relation to the reporting of current events, sufficient acknowledgement is required for all works.<sup>55</sup> However, no acknowledgement is required in connection with the reporting of current events *by means of* a sound recording, film, or broadcast where this would be not impossible ‘for reasons of practicality or otherwise’.<sup>56</sup>

Where required, the defendant must show that they have identified both the work *and* the author of the work.<sup>57</sup> A work can be identified by its title or by some other description.<sup>58</sup> The author can be identified by name, pseudonym, or by other means such as a photograph or a logo.<sup>59</sup> Whatever method is chosen, it must convey ‘to a reasonably alert member of the relevant audience that the identified person is the author’.<sup>60</sup> It is important to note that it is the author and not the owner of the copyright work who must be identified.<sup>61</sup> There is no need for the author to be identified where a work is published anonymously or, in the case of an unpublished work, where it is not possible for a person to ascertain the identity of the author by reasonable inquiry. It seems that even in these cases the work still needs to be identified.

<sup>51</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, 379.

<sup>52</sup> Mance LJ also said the interest ‘in resolving general falsity did not require the misappropriation of the stills or their supply to the *Sun*, presumably for money or their publication by the *Sun*’. *Hyde Park Residence v. Yelland* [2000] EMLR 363, 392.

<sup>53</sup> CDPA s. 29(1), (1B) (as amended to give effect to Info. Soc. Dir. Art. 5(3)(c)).

<sup>54</sup> CDPA s. 30(1). <sup>55</sup> CDPA s. 30(2). The exception does not apply to photographs.

<sup>56</sup> CDPA s. 30(3) (as amended to give effect to Info. Soc. Dir., Art. 5(3)(c)).

<sup>57</sup> CDPA s. 178. <sup>58</sup> *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 616.

<sup>59</sup> *Ibid.*, 625. The logo of Pro Sieben, a stylized figure 7 (Sieben means seven in German) in the top right-hand corner of the broadcast images, was sufficient acknowledgement. Newspaper publishers need to be identified by the name of the newspaper that they publish: *Newspaper Licensing Agency* [1999] EMLR 369, 384.

<sup>60</sup> *Pro Sieben Media v. Carlton UK Television* [1997] EMLR 509, 597.

<sup>61</sup> *Express Newspapers v. Liverpool Daily Post* [1985] 3 All ER 680.

With these general points in mind, we now turn to consider each of the specific fair dealing defences.

### 3 FAIR DEALING FOR THE PURPOSES OF RESEARCH OR PRIVATE STUDY

Section 29(1) provides that fair dealing with a work for the purpose of non-commercial research or private study does not infringe copyright in the work. The defence applies where the dealing takes place with literary, dramatic, musical, and artistic works, as well as with the typographical formats of published works.<sup>62</sup> The exception does not apply where the dealing is with a broadcast, sound recording, or film.<sup>63</sup> The limited scope of the defence has been criticized because it ‘fails to reflect the increasing importance of non-textual media for both study and research’.<sup>64</sup> The defence is also of limited application to computer programs.<sup>65</sup>

The rationale for this defence lies in the belief that research and study is necessary to generate new works. It also recognizes that non-commercial research and study does not normally interfere with the incentives and rewards that copyright provides to creators and owners. In effect, the defence helps to achieve copyright’s goal of maximizing the production of works. The defence also takes account of the fact that dealings of this kind would often be difficult to detect.

In order for a defendant to rely upon the research or private study defence they must show (i) that the use made of the copyright work was for the purpose of non-commercial research or private study and (ii) that the dealing was ‘fair’. In the case of research, the work and the author must be sufficiently acknowledged (with certain exceptions).

#### 3.1 IS THE DEALING FOR THE ‘PURPOSE OF RESEARCH OR PRIVATE STUDY’?

To fall within section 29(1), the defendant must show that the dealing was for the purpose of either research for a non-commercial purpose or private study. Private study is defined, in section 178, as not including any study which is directly or indirectly for a commercial purpose.<sup>66</sup> The provisions therefore cover most research or private study for academic purposes but will also potentially include situations where a person copies material to investigate their

<sup>62</sup> CDPA s 29(2) (in relation to the typographical copyright, the defence is available for all research, not just non-commercial research). The defence of fair dealing for private study is available in relation to databases, whether electronic or not, despite Database Dir., Art. 6(1).

<sup>63</sup> CDPA s. 29: *Pro Sieben Media v. Carlton UK Television* [1997] 1 EMLR 509.

<sup>64</sup> Copinger, para. 9–23, p. 484; Burrell & Coleman, *Copyright Exceptions: The Digital Impact* (2005), p. 116. It has been proposed in the *Gowers Review* that these limitations be removed and detailed aspects are considered in IPO, *Taking Forward the Gowers Review of Intellectual Property* (2008) 21–27.

<sup>65</sup> CDPA s. 29(4)–(4A) (excluding from the fair-dealing exceptions acts which are permitted in relation to computer programs under CDPA ss. 50B and 50BA).

<sup>66</sup> To give effect to the limitation in Info. Soc. Dir., Art. 5(b). The reference to ‘indirect’ seems particularly problematic: much study, even in schools, is intended to equip the student with skills or knowledge that improve their own commercial potential. Surely, it cannot have been intended that this would be regarded as ‘indirectly’ for a commercial purpose.

family history. In contrast, where a work (such as a database) is used in the market-testing of new drugs, or for a commercial training course, the defence would not apply. Much research, however, will occupy a difficult middle ground. In a recent case the High Court appears to have approved the test of whether it is contemplated that the research will ultimately be used for a purpose which has some commercial value.<sup>67</sup> Here, useful reference might also be made to Recital 42 of the Information Society Directive which indicates that the determination is to be by reference to the activity as such, rather than ‘the organisational structure and the means of funding the establishment’. Research carried out in an independent school or a private university may be non-commercial, and, depending on its orientation, research in a publicly-funded university may be commercial.<sup>68</sup>

Prior to 2003, little turned on whether an activity was defined as research or private study. It seemed that the only difference between the two concepts was that research was seen as a process that is intended to lead towards a particular result (be it a conclusion, a decision, an answer to a problem, an article, or a book), whereas study might be ‘for its own sake’. However, the distinction may now prove more important, as the defence will usually only apply to dealings for research where there is ‘sufficient acknowledgement’. The terms must also be interpreted in the light of the Information Society Directive. In this context, it seems that the key difference between private study and research is that research may not be private. Private study can cover any private use, such as note-taking or photocopying from a book, whether it be for its own sake or with a goal in mind,<sup>69</sup> whereas ‘research’ seems to relate to the use of copyright material in papers, documents, talks, and other output which make arguments, observations, or draw conclusions. The research exception is intended to be available to justify the public communication or distribution of copyright material, as well as its reproduction. Indeed, the permitted exception in the Directive relates to ‘use for the sole purpose of illustration for . . . scientific research’. It seems therefore that the use of quotations in a book or journal article can be dealings for research. However, not all public output is research. The book, paper, or article must have been researched: that is, it must be a product of systematic inquiry (as opposed, for example, to fiction).<sup>70</sup>

### 3.2 THE DEALING MUST BE ‘FAIR’

The mere fact that a defendant can show that the work was used for private study or non-commercial research does not necessarily mean that the dealing will be exempt from liability. It is also necessary to show that the dealing was fair. As we explained earlier, a number of different factors will influence the decision as to whether a particular dealing is fair. In this context the most important are likely to be the amount taken,<sup>71</sup> whether the work is readily available, and the effect that the dealing has on the market for the original work.

<sup>67</sup> *The Controller of Her Majesty's Stationery Office, Ordnance Survey v. Green Amps Ltd* [2007] EWHC 2755 (Ch) (para. 23) (citing Copinger, para 9–28).

<sup>68</sup> Davison, pp. 79–80.

<sup>69</sup> Thus, private study would include situations where a student is preparing for a seminar, or photocopies material to assist in the writing of an essay, or where a person photocopies pages from various newspapers to study the form of a particular horse, or to help them decide what type of stove to buy.

<sup>70</sup> The Federal Court of Australia has said that research means ‘a diligent and systematic inquiry or investigation into a subject’: *De Garis v. Neville Jeffress Pidler* (1990) 18 IPR 292 (FCA).

<sup>71</sup> *Universities U.K. v. Copyright Licensing Agency Ltd.* [2002] RPC 693, 702 (para. 34) (student who photocopies an article or short passage from a book is likely to be involved in a ‘fair’ dealing, while a student who photocopies the whole of a textbook would not be).

### 3.3 SPECIAL CASES

#### 3.3.1 Copying by third parties

In many cases, the person who does the copying will also be the person who carries out the research or study. Indeed, as a general rule, in order to come within the defence the dealing must be for defendant's *own* research or study. For example, a publisher cannot rely on the exception to justify reproducing parts of copyright-protected works in study guides.<sup>72</sup> However, in some circumstances, the defence is available even though the primary actor may not be the person engaged in the research. This might be the case, for example, where a research assistant or a librarian makes photocopies for academics or students. The 1988 Act recognizes that, for the defence to apply, it is not necessary for the activity that leads to the alleged infringement to be undertaken by the researcher or student. That is, it is possible for an agent to do the copying on behalf of the researcher or student. However, an important limitation to this possibility is imposed by section 29(3)(b).<sup>73</sup> This provides that copying by a person other than a researcher or student is not a fair dealing if the person doing the copying knows it will result in 'copies of substantially the same material being provided to more than one person at substantially the same time and for substantially the same purpose'.<sup>74</sup> This means that lecturers are unable to use the research or private study defence where they make multiple copies of a work for their students.

#### 3.3.2 Limited application in relation to computer programs

As a result of changes introduced to implement the Software Directive, the research and private study defence is limited in relation to computer programs. Section 29(4) provides that it is not fair dealing (a) to convert a computer program expressed in a low-level language into a version expressed in a higher-level language or (b) incidentally in the course of so converting the program to copy it. Section 29(4) ensures that the decompilation of computer programs is taken outside the remit of the research and private study defence. Instead, defendants will have to resort to the more limited defence under section 50B (which is discussed below). Section 29(4A) similarly excludes from the scope of the defence the acts of observing, studying, and testing the functioning of a computer program in order to determine the ideas and principles which underlie it. Since the Software Directive requires such acts to be permitted irrespective of whether the acts are done for commercial purposes, it was decided to provide a special exemption in section 50BA, which we will return to later. It should be noted that the fair-dealing defence is available for other uses of computer programs.

### 3.4 SUFFICIENT ACKNOWLEDGEMENT

Where a dealing is for purposes of non-commercial research, it can only benefit from the exception if there is 'sufficient acknowledgement'.<sup>75</sup> However, this can be dispensed with where

<sup>72</sup> *Sillitoe v. McGraw Hill* [1983] FSR 545; *Longman Group v. Carrington Technical Institute* [1991] 2 NZLR 574 (CANZ).

<sup>73</sup> This should be read in conjunction with the education copying defences discussed below (especially CDPA s. 38) and the relevant collective licensing schemes (see section 9 below).

<sup>74</sup> CDPA s. 29(3). Cf. *Longman v. Carrington*, note 72 above.

<sup>75</sup> Reflecting, and in such implementation eliding, Database Dir. Art. 6(2)(b) ('as long as the source is indicated') and Info. Soc. Dir., Art. 5(3)(a) ('as long as the source, including the author's name, is indicated, unless this turns out to be impossible').

the acknowledgement is impossible for reasons of practicality or otherwise. As mentioned above, no such requirement is required as regards 'private study'. Although the exact distinction between research and private study will now require judicial articulation, the requirement for sufficient acknowledgement seems to take account of the fact that research output, whether papers or articles, is often circulated.

## 4 FAIR DEALING FOR CRITICISM OR REVIEW

Section 30(1) provides that fair dealing with any work for the purpose of criticism or review does not infringe the copyright in the work. This defence recognizes the value of criticism or review. It also recognizes that, for a person to critique someone's work, they will normally need to cite the author—something that authors might be reluctant to allow. The defence prevents copyright owners from using copyright to control who should review their works, when they may do so, and what parts of the work may be used.<sup>76</sup>

In order to rely upon the defence, a defendant must show that (i) the dealing was for the purpose of criticism or review, (ii) the work had previously been made available to the public, (iii) the dealing was 'fair', and (iv) the dealing was accompanied by sufficient acknowledgement.

### 4.1 WAS THE DEALING FOR THE PURPOSE OF 'CRITICISM OR REVIEW'?

For a defendant to rely upon section 30(1), they must show that the dealing was for the purpose of criticism or review of the work, or of another work,<sup>77</sup> or the performance of a work. As we explained above, the courts take an objective approach when deciding the purpose for which the work was used. The courts have also said that criticism and review should be construed liberally.<sup>78</sup> Consequently, the criticism or review may be of the work as a whole or a single aspect of a work, the thought or philosophy underpinning a work,<sup>79</sup> or its social and moral implications.<sup>80</sup> Some decisions have seemed to suggest that the criticism or review need not be of a work at all. For example, where a television programme used extracts from Kubrick's film *A Clockwork Orange* to criticize the decision to withdraw the film from distribution, Henry LJ explained that this fell within the defence, which applied 'equally where the criticism is of the decision to withdraw from circulation a film in the public domain, and not just the film itself'.<sup>81</sup> In *Pro Sieben*, the Court of Appeal treated as justified the use of extracts from the claimant's television broadcast (which featured interviews with a woman who was pregnant with octuplets) even though the defendant's programme criticized the practices of 'cheque-book journalism' of which the claimant's programme was said to be an example, rather than the claimant's broadcast itself.<sup>82</sup> In

<sup>76</sup> *Time Warner v. Channel 4* [1993] EMLR 1, 14; *Banier v. News Group Newspapers* [1997] FSR 812.

<sup>77</sup> *Beloff v. Pressdram* [1973] 1 All ER 241; *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515.

<sup>78</sup> *Newspaper Licensing Agency v. Marks & Spencers plc* [2000] 4 All ER 239, 257 (Chadwick LJ) (CA); *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 620.

<sup>79</sup> *Hubbard v. Vosper* [1972] 2 QB 84, 94 ff.; *Time Warner v. Channel 4* [1994] EMLR 1, 15.

<sup>80</sup> *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 621.

<sup>81</sup> *Time Warner v. Channel 4* [1994] EMLR 1, 15.

<sup>82</sup> *Pro Sieben Media AG v. Carlton UK Television Ltd. & Anor* [1999] EMLR 109. See *Fraser-Woodward v. BBC* [2005] FSR 762 (excusing the use of photographs in a broadcast which criticized relations between celebrities and newspapers).

some cases, however, the courts have been more fastidious in relation to the requirement that the criticism be of ‘that or another work or of a performance of a work’.<sup>83</sup> In *Ashdown v. Telegraph*, for example, the exception was held not to justify the reproduction in the *Sunday Telegraph* of sections of Ashdown’s memorandum of a meeting with Tony Blair where the gist of the article lay in criticizing the political event and actors described in the memorandum, rather than the existence, style, or other aspects of the memorandum.<sup>84</sup> If this narrow (though, on the basis of the statutory wording, hardly unjustified) reading of the exception takes root, defendants will be forced to rely on the other exceptions: an academic paper criticizing the Blair–Ashdown meeting might be able to claim fair dealing for research, and a newspaper account (being for commercial purposes) might be permitted as reporting current events or exceptionally disclosing matters in the public interest.

#### 4.2 THE WORK MUST HAVE BEEN MADE AVAILABLE

The defence is only available where the work has been made available to the public. Making available is broadly defined to include the issuing of copies, making the work available by an electronic retrieval system, rental, or lending of copies to the public, the performance, exhibition playing, or showing of the work, and the communication to the public.<sup>85</sup> In *HRH the Prince of Wales v. Associated Newspapers* it was held that Prince Charles’s ‘Hong Kong journals’ had not been made available to the public, even though they had been distributed to as many as 75 people, because the recipients understood that the work was being disclosed in confidence.<sup>86</sup>

#### 4.3 WAS THE DEALING FAIR?

Once a defendant has shown that the dealing was for the purpose of criticism or review, they must then show that the dealing was fair. As we explained earlier, a number of different factors will influence the decision as to whether a particular dealing is fair. In this context the most important of these are likely to be the amount taken,<sup>87</sup> the effect on the market,<sup>88</sup> and the nature of the dealing.<sup>89</sup> When deciding whether a dealing for the purpose of criticism

<sup>83</sup> This limitation is not required by the Info. Soc. Dir., Art. 5(3)(d), where it is the ‘quotations’ that must relate to a work rather than the criticism or review, and it is hoped that when the legislature comes to recodify the 1988 Act, it seriously considers leaving the object of criticism or review at large.

<sup>84</sup> *Ashdown*, note 32 above, 171; [2002] RPC 235, 251.

<sup>85</sup> CDPA s. 30(1A) (added by SI 2003/2498 to give effect to Info. Soc. Dir., Art. 5(3)(d)). Since this requirement was included by delegated legislation under the European Communities Act 1972, it is difficult to see a justification for applying it to databases and computer programs (which were unaffected by the Info. Soc. Dir. (see Info. Soc. Dir., Art. 1)), or typographical arrangements. However, in the light of *Hyde Park v. Yelland* [2000] EMLR 363, 378 (para. 34) and *British Oxygen Liquid Air* [1925] 1 Ch 383, the addition of the requirement is unlikely to be of material significance.

<sup>86</sup> [2007] 3 WLR 222, 265 (para. 176 per Blackburne J).

<sup>87</sup> Rather oddly, the Info. Soc. Directive seems to require that the defence be confined to ‘quotations’, implying that paraphrasing or summarizing is outside its scope. Given that Art. 5(3)(d) is built around an idea of proportionality, it would seem sensible to interpret ‘quotations’ as covering ‘quotations and other infringing uses’.

<sup>88</sup> *IPC Media Ltd. v. News Group Newspapers Ltd.* [2005] FSR 752 (copying for own competing commercial purpose unfair). Cf. *Pro Sieben Media AG v. Carlton UK Television Ltd & Anor* [1999] EMLR 109 (Court of Appeal) (‘the degree to which the challenged use competes with exploitation of copyright by the copyright owner is a very important consideration, but not the only consideration’).

<sup>89</sup> *Fraser-Woodward v. BBC* [2005] FSR 762 (inclusion of copyright photographs in broadcast was fair, taking into account the brief time for which the images were shown).

or review is fair, the courts have not tended to consider whether the criticism itself is fair.<sup>90</sup> Rather, they take account of whether the extent of the copying is fair to illustrate or support the criticism. As such, the criticism may be malicious, unbalanced, or motivated by insecurity without forfeiting the defence.<sup>91</sup> While this is likely to continue to be the general nature of the assessment, UK courts may now pay attention to the limitation in the Information Society Directive that the use be ‘in accordance with fair practice, and to the extent required by the specific purpose’.

#### 4.4 SUFFICIENT ACKNOWLEDGEMENT

The third and final factor that a defendant must show to fall within the criticism or review defence is that the dealing was accompanied by ‘sufficient acknowledgement’. This is required for *all* works.<sup>92</sup> The issue of sufficient acknowledgement was discussed above.

#### 4.5 PARODY

Where parodies breach the rule against substantial taking, it is necessary to consider whether such uses avoid liability through the ‘fair dealing’ exceptions, particularly those relating to criticism or review. The possibility was mooted in *Williamson Music v Pearson*,<sup>93</sup> but cases in other jurisdictions suggest that this role for the exception might be quite limited. Two particular problems have arisen.

First, restrictive interpretation of the concept of ‘criticism’ has made it difficult to predict whether it covers parody.<sup>94</sup> In the 1996 Canadian Federal Court case *Michelin v National Automobile, Aerospace, Transportation and General Workers Union of Canada* a trade union distributed literature deploying Michelin’s famous Bibendum logo with his foot raised as if about to crush underfoot an unsuspecting Michelin worker.<sup>95</sup> The company sued, claiming violation of various trade marks and infringement of copyright. It failed on the trade mark issues, but succeeded on copyright. Teitelbaum J, having found that the image on the leaflet reproduced a substantial part of the original artistic work, held that the defence of ‘fair dealing for criticism or review’ was inapplicable. The judge said that the choice of the terms ‘criticism and review’ indicated a desire that parody not be treated as excepted and, in his view, exceptions to property rights were to be construed narrowly. While it is possible to take issue with each of these grounds, what seems most peculiar about Teitelbaum J’s reasoning is the claim

<sup>90</sup> There is no need for the critical work to be representative of the original. *Time Warner v. Channel 4* [1994] EMLR 1, 12.

<sup>91</sup> *Pro Sieben Media v. Carlton Television* [1999] FSR 610, 619. In these circumstances an author’s remedy for malicious and unjustified criticism lies in the law of defamation, not copyright.

<sup>92</sup> CDPA s. 30(1).

<sup>93</sup> *Williamson Music v. Pearson* [1987] FSR 97, 103. Paul Baker QC stated that the point ‘does not arise in the present case, because that was not the purpose of the compilers of the advertisement.’ Subsequent case law indicates that ‘subjective’ intention of the user is not determinative, and that ‘for the purposes’ of is equivalent to ‘in the context of’, a matter to be decided objectively.

<sup>94</sup> The Supreme Court of Israel, however, held that parody could be ‘criticism’ in *Geva v. Walt Disney Co*, PLA 2687/92, 48 PD (1) 251, para 38. See Wilkof, ISR–37, in Nimmer & Geller, *International Copyright Law and Practice* (2007). Unfortunately, the ground-breaking decision was not translated into English and, as a consequence, has failed to influence subsequent judicial interpretation of the concept of ‘criticism and review’.

<sup>95</sup> *Cie Générale des Etablissements Michelin v. CAW Canada* (1996) 71 CPR (3d) 348 (Fed Ct of Canada, on Canadian Copyright Act, s. 27).

that criticism and parody are mutually exclusive notions, and thus that parody has never (and could never) 'figure as criticism'. While one can readily accept the judge's statement that 'criticism' is not synonymous with 'parody', as there can clearly be criticism that is not parodic, it by no means follows that no parody can be critical.<sup>96</sup>

Second, the requirement that the dealing give 'sufficient acknowledgement' to the author of the parodied or caricatured work can present a practical hurdle to the application of the exception to such uses. Although in the world of art and particularly that of the cartoonist, it has been common to designate works 'after x', in many other types of parody an explicit reference of this sort might seem inappropriate, even an admission of failure.<sup>97</sup> While it is arguable that, were the sufficient acknowledgement requirement given a broad construction it could be said that *implicit* recognition would be sufficient,<sup>98</sup> the possibility of 'implicit' acknowledgement was denied in the *Michelin* case. Teitelbaum J rejected outright the trade union arguments that, in cases of parody, there is no need for express mention of the source, because it is obvious. The judge observed that such a rule would lead to distinctions between cases where the parody was poorly executed and so the source not recognized and good parodies (where the source would be recognized and so there would be no infringement), as well as between cases of parodies of obscure works (where the parodied work could not be implicitly recognized) and parodies of famous works (where acknowledgement could be implicit). In his view, 'the law cannot permit such distinctions'. Moreover, the judge stated that the 'requirement to actively mention the source and author is there for a reason and not to be lightly skipped over'. Passive or implicit acknowledgement is insufficient.

The Gowers Review has recommended that UK law be amended to incorporate a defence in relation to parody, caricature, and pastiche (following the EC Directive on Copyright in the Information Society). Follow-up consultations,<sup>99</sup> on-going at the time of writing, are considering the appropriate breadth of such an exception. Should it apply to all works? Should it be limited to 'fair dealing' for parodic purposes? Should parodic uses in advertising be exempted? Should sufficient acknowledgement be required?

## 5 REPORTING OF CURRENT EVENTS

Section 30(2) provides that fair dealing with any work (other than a photograph)<sup>100</sup> for the purpose of reporting current events does not infringe the copyright in the work provided it is

<sup>96</sup> An Australian Federal court decision suggests that, whatever the position in relation to parody, the 'criticism or review' defence is available for satire: *TCN Channel Nine v. Network Ten* [2001] FCA 108, (2001) 108 FCR 235, (20 February 2001), Conti J (Federal Court of Australia); (2002) 118 FCR 417, [2002] FCA 146. The decisions of Conti J and the Full Federal Court are savagely criticized by Michael Handler in 'A Real Pea Souper: The Panel Case and the Development of the Fair Dealing Defences to Copyright Infringement in Australia' [2003] *Melbourne University LR* 15.

<sup>97</sup> Burrell and Coleman, at 61; Copinger (15th ed) para 9–41; Laddie *et al*, para 4.62 (explicit reference may be 'ponderous, heavy-handed and likely to undermine the deft touch of the satirist, as where one has to explain the point of a joke').

<sup>98</sup> Spence (2007), 'Rogers v Koons: Copyright and the Problem of Artistic Appropriation', in D. McClean (ed.), *The Trials of Art* (2007) 213–234, 228.

<sup>99</sup> IPO, *Taking Forward the Gowers Review*, 31–36.

<sup>100</sup> This means that a newspaper is not able to take photographs from another paper and claim this defence. Hence the need to rely on the criticism or review defence in *Banier v. News Group Newspapers* [1997] FSR 812.

accompanied by a sufficient acknowledgement.<sup>101</sup> No acknowledgement is required, however, in connection with the reporting of current events by means of a sound recording, film, or broadcast where this would be impossible by reason of practicality or otherwise.<sup>102</sup>

As Gibson LJ explained, the reporting of current events defence aims to strike a 'balance between protection of rights of creative authors and the wider public interest (of which free speech is a very important ingredient)'.<sup>103</sup> In order to rely upon the defence, a defendant must show (i) that the dealing was for the purpose of reporting current events, (ii) that the dealing was 'fair', and (iii) that there was sufficient acknowledgement.<sup>104</sup> Before looking at these, it should be noted that contractual restrictions on what would otherwise fall within the defence of fair dealing for the purpose of reporting current events are void insofar as the restriction relates to the inclusion of visual images taken from a broadcast in another communication to the public.<sup>105</sup>

### 5.1 WAS THE DEALING FOR THE PURPOSE OF REPORTING A CURRENT EVENT?

As we explained above, the courts take an objective approach when deciding the purpose for which the work was used. The courts have also said that the reporting of current events should be construed liberally.<sup>106</sup>

To fall within the defence, the dealing must take place in relation to an event that is *current*. An event will be current if it deals with a contemporary issue. The older the issue, the less likely it is that it will be treated as having any currency. An event that took place some time ago may however be current if it is still under discussion. For example, in *Hyde Park* it was accepted, both at first instance and by the Court of Appeal (albeit grudgingly), that although the stills in the *Sun* were published more than a year after the visit by Fayed and Princess Diana to Villa Windsor, the events still had some currency. As Jacob J said, 'at the time of publication the events were still very much under discussion that it would be pedantic to regard them as anything other than current'.<sup>107</sup>

For the defence to apply, a defendant must also show that the dealing took place in relation to an *event*.<sup>108</sup> It seems that certain matters by their very nature will be treated as events. Thus, matters of national or political importance (planned minimum wage proposals, a campaign about child labour, a case about alleged race bias at a rival establishment, or announcements

<sup>101</sup> Cf. CA 1911, s. 2(1)(a) which referred to fair dealing with any work for the purposes of newspaper summary. This became 'reporting current events' in CA 1956, s. 6(3).

<sup>102</sup> CDPA s. 30(3).

<sup>103</sup> *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 249 (Gibson LJ) (CA).

<sup>104</sup> CDPA s. 30(2). <sup>105</sup> Broadcasting Act 1996, s. 137 (as amended).

<sup>106</sup> The value placed on freedom of information and freedom of speech requires that gateway to be wide: *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 382; *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 172.

<sup>107</sup> *Hyde Park Residence v. Yelland* [1999] RPC 655, 661. See also *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 172 (meeting between Ashdown and PM in October 1997 was an event that was 'a matter of current interest to the public' in Nov. 1999).

<sup>108</sup> The concept of 'current events' is narrower than 'news': *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 382; cf. [2000] 4 All ER 239, 249 (Gibson LJ) (CA).

about the Euro<sup>109</sup>), as well as major sporting contests (the World Cup,<sup>110</sup> Wimbledon, or the Olympics) are likely to be events.<sup>111</sup>

In contrast, matters that are trivial, ephemeral, or immaterial will not be treated as events. For example, it has been said that comparisons of products such as wines, chicken Kiev, and taramasalata,<sup>112</sup> lifestyle articles on choice of underwear, and the times of television programmes were not current events.<sup>113</sup> The fact that a matter is currently of interest or in the press does not mean that it is a current event.<sup>114</sup> However interesting an article may be, the fact that it is reported in a newspaper does not necessarily make it a current event. Thus, it was suggested in the *NLA* decision that the mere fact that a fashion editor of a journal featured a Marks & Spencer garment did not make it a current event.<sup>115</sup>

While trivial or immaterial matters will not ordinarily be treated as events, it is possible for such matters to be transformed into an event through media coverage. This can be seen in *Pro Sieben*, where a matter that was otherwise of limited and ephemeral interest (here it was the sale to German television by a member of the public of an interview about a woman pregnant with octuplets)<sup>116</sup> was nonetheless treated as an ‘event’. This was because the volume and intensity of the media coverage was sufficient to bring that coverage within the ambit of current events.

The material dealt with by the defendant must relate to or be relevant to the current event in question. This means that the defence will not cover any dealing that takes place separately from the current event in question. Thus, it was held that the *Daily Mail* newspaper was unable to rely on the death of the Duchess of Windsor to justify the republication of correspondence between the Duchess and her husband.<sup>117</sup> Similarly, in *Hyde Park*, the Court of Appeal held that the publication of the driveway stills that showed the arrival and departure times of Fayed and Princess Diana did not fall within the current events defence. This was because the material in question (the driveway stills) did not correlate with the event in question (the purpose being to expose the lies of Mohammed Al Fayed).<sup>118</sup>

The upshot of this is that while the publication of historical material is not ordinarily a current event,<sup>119</sup> old information may become relevant in response to some fresh event. As Walton J said:

[T]he publication of historical material, material that is strictly historical, may nonetheless be of urgent necessity in reporting current events. One has only to think, for example, of correspondence dealing with nuclear reactors that have just blown up or have had a core melt-down: that might date from a very considerable period previous to the event happening, but would be of a topical nature in order to enable a report of what actually happened to be properly prepared.<sup>120</sup>

<sup>109</sup> *Ibid*, 267 (Mance LJ) (CA). According to Lightman J, the event ‘may be a matter of entirely local interest or of interest to few people’: *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 382 (para. 18).

<sup>110</sup> *British Broadcasting Corporation v. British Satellite Broadcasting* [1992] Ch 141.

<sup>111</sup> Chadwick LJ took a more subjective approach when he said the publication of an article which features comments that relate to or impact upon the appellant’s products was an event: *Newspaper Licensing Agency v. Marks & Spencer plc* [2000] 4 All ER 239, 257 (CA).

<sup>112</sup> *Newspaper Licensing Agency* [1999] EMLR 369, 383.

<sup>113</sup> *Independent Television Publications v. Time Out* [1984] FSR 64.

<sup>114</sup> *Newspaper Licensing Agency* [1999] EMLR 369, 382.

<sup>115</sup> *Newspaper Licensing Agency* [2000] 4 All ER 239, 250 (Gibson LJ); 267 (Mance LJ) (CA).

<sup>116</sup> *Pro Sieben Media v. Carlton UK Television* [1999] FSR 610.

<sup>117</sup> *Associated Newspapers v. News Group Newspapers* [1986] RPC 515.

<sup>118</sup> The Court of Appeal looked to the relevant parts of the *Sun* to ascertain the perceived purpose of the use of the work. *Hyde Park v. Yelland* [2000] EMLR 363, 374, 379–80.

<sup>119</sup> *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 166–7 (para. 44).

<sup>120</sup> *Associated Newspapers v. News Group Newspapers* [1986] RPC 515.

## 5.2 WAS THE DEALING FAIR?

Once a defendant has shown that their dealing was for the purpose of reporting current events, they must then show that the dealing was fair. According to the Court of Appeal, the defence should be available ‘where the public interest in learning of the very words written by the owner of the copyright is such that publication should not be inhibited by the chilling factor of having to pay damages or account of profits’.<sup>121</sup> Although a number of different factors will influence the decision as to whether a particular dealing is fair, including whether the work is published or unpublished,<sup>122</sup> the amount taken, and the motive for the dealing,<sup>123</sup> the most important is likely to be whether it is reasonably necessary to refer to the work in order to deal with the events in question.<sup>124</sup> It also seems that the courts will be influenced by what is taken to be normal behaviour in the circumstances. Thus, in the *World Cup* case, it was fair for the defendant to reshoot the goals and match highlights, typically 30 seconds of a 90-minute match, even though these were clearly the most important extracts. This was because the sequences were the normal and obvious means of illustrating the news report.<sup>125</sup>

It has also been suggested that the commercial nature of a dealing will weigh against a defendant trying to establish that the dealing was fair. A more extreme view was taken by Mance LJ in the *NLA* decision. While he was not willing to express a final opinion on the matter,<sup>126</sup> Mance LJ had doubts about whether it was possible to extend the fair-dealing exception, which represents a public-interest exception to copyright, to the reporting of current events for private commercial purposes.<sup>127</sup> Such an approach is problematic in that it will greatly restrict the ability of commercial media to rely upon fair dealing. A more realistic approach was adopted by Jacob J in the first instance decision of *Hyde Park Residence v. Yelland*, where he held that the fact that the security guard and the *Sun* had both expected to make money from the publication of the pictures did not derogate from the fair-dealing justification.<sup>128</sup> As Jacob J said, the ‘press often have to pay for information of public importance. And when they publish they will always expect to make money. They are not philanthropists.’<sup>129</sup>

<sup>121</sup> *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 173 (para. 69).

<sup>122</sup> *HRH the Prince of Wales v. Associated Newspapers* [2007] 3 WLR 222, 264, 287 (newspaper copying of Prince’s travel journals not fair because obtained in breach of confidence and more than necessary for purpose of reporting current events).

<sup>123</sup> *Newspaper Licensing Agency v. Marks & Spencer* [2000] 4 All ER 239, 258 (Chadwick LJ) (CA).

<sup>124</sup> *Associated Newspapers Group v. News Group Newspapers* [1986] RPC 515, 519; *Hyde Park v. Yelland* [2000] EMLR 363, 393 (para. 78).

<sup>125</sup> Although the BBC and the BSB were in competition, Scott J did not think it to be important because ‘highlights’ of this nature do not really compete with a full-length live broadcast lasting 90 minutes.

<sup>126</sup> *Newspaper Licensing Agency v. Marks & Spencer* [2000] 4 All ER 239, 267 (Mance LJ) (CA).

<sup>127</sup> ‘The rationalization that in a capitalist society all economic activity serves the public good does not avoid the distinctions’. *Ibid.*

<sup>128</sup> Cf. *Initial Services v. Putterill* [1968] 1 QB 396.

<sup>129</sup> *Hyde Park Residence v. Yelland* [1999] RPC 655, 663. The Court of Appeal overturned Jacob J’s decision. While the Court of Appeal did not address the issue directly, the fact that the security guard and the *Sun* benefited financially from the dealing seems to have influenced the finding that the use was not fair. When combined with other factors, the Court of Appeal concluded that to ‘describe what the *Sun* did as fair dealing is to give honour to dishonour’: *Hyde Park Residence v. Yelland* [2000] EMLR 363, 379 (para. 40).

### 5.3 SUFFICIENT ACKNOWLEDGEMENT

The third and final factor that a defendant must show to fall within the defence is that the dealing was accompanied by ‘sufficient acknowledgement’ (which was discussed earlier).<sup>130</sup> This is required for all works to which the defence applies.<sup>131</sup> However, no acknowledgement is required in connection with the reporting of current events *by means* of a sound recording, film, or broadcast, where this would be ‘impossible for reasons of practicality or otherwise’.<sup>132</sup>

## 6 INCIDENTAL USES

The urban landscape is full of works that are protected by copyright. Most city centres contain an array of murals, buildings, sculptures, and advertisements.<sup>133</sup> This creates a potential problem for photographers, film makers, broadcasters, painters, and the like who wish to represent that landscape. If a movie is filmed in a public place, it is highly likely that the final product will include a number of different copyright works. This gives rise to a potential problem in that the recording of these works is *prima facie* an infringement of copyright.<sup>134</sup>

To ensure that problems of this nature do not arise, section 31(1) provides that copyright in a work is not infringed by its ‘incidental inclusion’ in an artistic work, sound recording, film, or broadcast.<sup>135</sup> This means that a defence is available where a copyright work, such as a painting, is incidentally included in the background of another work, such as a film. Section 31(2) extends the defence to include the exploitation of works that incidentally include other works. This ensures that the showing, as distinct to the making, of a film does not infringe.

The question of when a work is ‘incidentally included’ in another work was considered in *Football Association Premier League Ltd v. Panini UK*.<sup>136</sup> There, the Premier League, its members, and Topps brought an action alleging that Panini had infringed copyright in their club emblems and the Premiership heraldic lion emblem by distributing stickers depicting well-known footballers, for purchase and collection in a book. Topps had obtained an exclusive licence from the claimant to use the emblems in this way, and Panini had lost out in the tendering process for the licence but nevertheless gone ahead and produced an ‘unofficial’ product. In Panini’s product, most players were in club strip, with their club emblems and the Premiership heraldic lion emblem often visible. The defendant argued that the emblems were artistic works which were incidentally included in other artistic works (photographs). Peter Smith J rejected the defence, and this was affirmed by the Court of Appeal. There, the Court

<sup>130</sup> See above at p. 206.      <sup>131</sup> CDPA s. 30(2).      <sup>132</sup> CDPA s. 30(3).

<sup>133</sup> See also CDPA s. 62 (re public display of artistic works).

<sup>134</sup> For similar issues raised in the context of Canada’s right to use one’s own image, see *Aubry v. Éditions Vice Versa Inc* 157 DLR (4th) 577 (paras. 58–9).

<sup>135</sup> CDPA s. 31(1). For a discussion of the relationship between this section and its predecessors (CA 1956, s. 9(4) (works of architecture), s. 9(5)), see *Football Association Premier League Ltd v. Panini UK Ltd* [2004] FSR 1 per Chadwick LJ (paras. 19–20) (doubting whether linguistic differences would have any effect on the result in a particular case); but cf. Mummery LJ (para. 39). There is no defence of incidental inclusion in a web site, because internet transmissions fall outside the scope of the meaning of ‘broadcast’ in CDPA s. 8. However, the inclusion in a web site of a work which incidentally includes another work, and thus benefits from the exception in CDPA s. 31(1), will not infringe: CDPA s. 31(2).

<sup>136</sup> [2004] FSR 1. For commentary, see K. Garnett, ‘Incidental Inclusion under s.31’ [2003] EIPR 579.

of Appeal declined to define the term ‘incidental’,<sup>137</sup> Mummery LJ stating that the ‘range of circumstances in which the word “incidental” is commonly used to describe a state of affairs is sufficiently clear to enable the courts to apply it to the ascertainable objective context of the particular infringing act in question’. The question whether the uses were incidental did not have to be determined at the time the photograph was taken, but rather when the sticker was created.<sup>138</sup> The question was why one work was included in another, and the court could take account of commercial as well as artistic or aesthetic reasons.<sup>139</sup> Given that the answer in the case was the self-evident one of producing ‘something which would be attractive to a collector’, in this case a player in their authentic club strip, the Court concluded that the inclusion of the emblem was ‘essential to the object for which the image... was created’ rather than incidental. In an earlier case the High Court held that by featuring the claimant’s magazine, *Woman*, in a TV advertising campaign run for the defendant’s own magazine, the defendant had infringed the claimant’s artistic copyright in the masthead, the layout, and the photographs on the magazine cover. The defendant’s argument that the use was incidental was rejected ‘since the impact of the advertisement would be lost entirely if the front cover of *Woman* was not used. The inclusion of the copy of *Woman* was an essential and important feature of the advertisement. The impact could not be more obvious.’<sup>140</sup>

The defence will apply irrespective of whether a work is accidentally or deliberately included.<sup>141</sup> This is not the case, however, with musical works or lyrics (as well as a sound recording, or broadcast of a musical work or lyrics). The reason for this is that section 31(3) says that musical works or lyrics shall not be regarded as being incidentally included if they are deliberately included. This means that the defence is not available where a song is chosen for the background of a film, or a song from a radio is deliberately played in the background to a broadcast. Thus, if the makers of the police drama *The Bill* decide to have a scene where a character is listening to a radio playing a Rolling Stones’ song, this is not an incidental inclusion. However, if a musical work is accidentally included in a live broadcast, this is within the defence. Thus, a broadcast of a football match that accidentally includes a sound recording played over the public address system falls squarely within the defence.<sup>142</sup>

<sup>137</sup> In contrast with Richard McCombe QC, sitting as Deputy High Court judge in *IPC Magazines v. MGN* [1998] FSR 431, 441 (a use was incidental if its inclusion was ‘casual, inessential, subordinate, or merely background’).

<sup>138</sup> This rather technical approach, requiring an assessment whether the inclusion is ‘incidental’ to be made for every act of infringement, undermines the value of CDPA s. 31(2). This implies that, if copyright in the emblems is not infringed by taking the photograph, it is not infringed by issuing copies of the photograph. However, the Court of Appeal decision suggests that this inference is incorrect: whether the inclusion is incidental must also be assessed when the commercial form of the copy (here the sticker) is determined.

<sup>139</sup> Cf. *IPC Magazines v. MGN* [1998] FSR 431, 441 where the judge suggested that the question whether a work was incidentally included does not depend on the user’s intention, nor on the views of those who witness the use.

<sup>140</sup> *Ibid.* This was, evidently, a case of comparative advertising: the argument that it should therefore be permitted under the Comparative Advertising Directive was rejected at *ibid.*, 447. But cf. *O2 Holdings v. Hutchison 3G Ltd* [2007] RPC (16) 407 (para. 45–47, para.55) (indicating that this question will have to be answered one day by the ECJ). See pp. 937–42 below.

<sup>141</sup> *Football Association Premier League Ltd v. Panini UK Ltd* [2004] FSR 1 (para. 24) (“‘incidental’ was not intended to mean “unintentional””). However, the courts may well resort to the ‘logic’ that, if something was deliberately included, then it must be of more than ‘incidental’ significance.

<sup>142</sup> *Laddie et al.*, para. 2.161.

## 7 DISCLOSURE IN THE PUBLIC INTEREST

Despite the lack of any statutory provision on point,<sup>143</sup> a defendant may resist an action for copyright infringement—probably, though, only in very rare instances—on the grounds that the use in question is necessary ‘in the public interest’. Although such a defence was recognized by the High Court in the 1970s and the Court of Appeal in the 1980s, the reasoning in those cases and thus the existence and scope of this defence has been heavily debated, both by courts and commentators, over the last few years.<sup>144</sup> In order to gain an appreciation of the uncertainty surrounding the existence and scope of the defence, it is necessary to pay close attention to three Court of Appeal decisions: *Lion Laboratories v. Evans*, *Hyde Park Residence v. Yelland*, and *Ashdown v. Telegraph*.

In *Lion Laboratories v. Evans*,<sup>145</sup> the manufacturers of a breathalyser (the Lion Intoximeter) sought to prevent the defendant newspaper, the *Daily Express*, from publishing extracts of a confidential internal memorandum which cast doubt on the accuracy of the device. The defendant claimed that the public had an interest in knowing that the breathalyser might be faulty. They also said that the public interest should override the rights of the copyright owner. All three members of the Court of Appeal accepted that the public interest defence was available in an action for infringement of copyright. According to the Court of Appeal, if the alleged fault with the breathalyser was not investigated, a significant number of motorists could have been wrongly convicted of driving with excess alcohol. On the basis that there was a seriously arguable case that the disclosure was justified in the public interest, the Court refused to grant interim relief.

It will be recalled that *Hyde Park Residence v. Yelland* concerned an application for summary judgment against the *Sun* newspaper for publishing stills of Dodi Fayed and Diana, Princess of Wales, taken from security film, the copyright in which was owned by the claimant.<sup>146</sup> The defendant argued that the stills revealed the times when Fayed and the Princess were present at Villa Windsor and therefore exposed the falsehood of statements made by Mohammed Al Fayed. As such, the publication was in the public interest. The Court of Appeal found that there was no arguable defence. The Court did not consider that it was in the public interest to publish the stills to prove that Al Fayed’s statements were false: the information could easily have been made available by the *Sun* without infringing the claimant’s copyright. While the Court could have argued that the public interest defence did not succeed on the facts, the majority (Aldous LJ, with whom Stuart-Smith LJ agreed) said that there is no general public interest defence to an action for infringement of copyright in the UK (though this was not how *Ashdown*, a later case, interpreted Aldous LJ). He gave three reasons. First, on the basis that the statutory regime was exhaustive, Aldous LJ observed that no such defence is

<sup>143</sup> The validity of the common law defence recognized in case law under the 1956 Act seemed to have been accepted by CDPA s. 171(3) which says that nothing in the Act ‘affects any rule of law preventing or restricting the enforcement of copyright, on grounds of public interest or otherwise’. This is confirmed by *Hansard*, which shows that Parliament intended to preserve a common law public interest defence. Lord Beaverbrook, 491 *Hansard*, HL, 8 Dec. 1987, col. 77. See Copinger (14th ed.), para. 22.48; Dworkin and Taylor, 81–2.

<sup>144</sup> See *Lion Laboratories v. Evans* [1985] QB 526 (esp. at 536 *per* Stephenson LJ and 550 *per* Griffiths LJ). *Beloff*, note 40 above is usually regarded as the first case to recognize the public interest defence for an infringement of copyright. There, drawing inspiration from the public interest defence in breach of confidence, Ungood-Thomas J said that the ‘public interest is a defence outside and independent of statutes, is not limited to copyright cases and is based on a general principle of common law’.

<sup>145</sup> [1985] QB 526.

<sup>146</sup> *Hyde Park Residence v. Yelland* [2000] EMLR 363, note 33 above. For criticism, see R. Burrell, ‘Defending the Public Interest’ [2000] EIPR 394.

recognized in the code. Second, he said the defence of disclosure of information in the public interest was inappropriate, because copyright restricts reproduction of the form of a work, not the information it contains. Third, Aldous LJ argued that the defence was incompatible with the Berne Convention.<sup>147</sup> In addition, Aldous LJ held that the reasoning in *Lion Laboratories* lacked any substantial basis in precedent.<sup>148</sup> In contrast, Mance LJ accepted that Parliament had intended, via section 171(3), that the courts should retain some discretion to refuse to enforce copyright on public interest grounds.

In *Ashdown v Telegraph*,<sup>149</sup> a differently constituted Court of Appeal rejected the approach of the majority in *Hyde Park*, preferring that of Mance LJ and referring with approval to *Lion Laboratories*. As we have seen, the *Ashdown* case concerned the publication in the *Sunday Telegraph* of sections of a secret memorandum written by the leader of the Liberal party, Paddy Ashdown, about a meeting that had taken place with Tony Blair concerning a possible pact between the Liberal Party and the Labour Party. Ashdown sought summary judgment, and the newspaper sought to justify its infringement on the basis of the public interest defence (the criticism defence having failed because there was no criticism of a work, and the current-events reporting defence because the use was not fair). Although the Court of Appeal rejected the *Sunday Telegraph*'s arguments on the facts,<sup>150</sup> it reviewed the law relating to the 'public interest defence' in the light of the Human Rights Act 1998. While the Court explained that copyright was not normally in conflict with freedom of expression, because copyright does not prevent the publication of information,<sup>151</sup> there could be such a conflict where expression required reproduction of specific text or images.<sup>152</sup> In such cases, if fair dealing and refusal of discretionary relief would not protect the public interest, a defendant could invoke the public interest defence, as developed by the common law and acknowledged by section 171(3) of the 1988 Act.<sup>153</sup>

In the absence of a decision of the House of Lords on this issue, the view favoured by the majority on the Court of Appeal over the three cases thus seems to be that a 'public interest' defence might justify an act otherwise infringing copyright. But in what circumstances? The Court of Appeal in *Lion Laboratories* failed to draw any distinction between the application of the public interest defence to a case of breach of confidence, and one based upon copyright. The Court was clear that the defence was not confined to cases of iniquity, but covered situations where there was 'just cause or excuse' for breaking confidence.<sup>154</sup> In *Hyde Park*, Mance LJ had declined to define the exact circumstances in which the defence would be available, but said that this discretion is much more limited than the defence recognized in breach of confidence

<sup>147</sup> Cf. Berne, Art. 17. See Ricketson, para. 9.72; Ricketson & Ginsburg, para. 13.88, pp. 842ff.

<sup>148</sup> Although Aldous LJ denied the existence of a public interest defence, he recognized that the courts do retain a power under their 'inherent jurisdiction' to refuse to enforce copyright where it offends against the 'policy of the law'. In effect, Aldous LJ sought to conflate the case law on 'public interest' with the general power of the courts to refuse to enforce copyright in scandalous, libelous, seditious, or blasphemous works employed in cases such as *Glyn v. Weston Feature Film Co.* [1916] 1 Ch 261 (immoral) and discussed at Ch. 4 Section 6 above. Thus, for Aldous LJ, the courts would refuse to enforce copyright on the basis that it would be against the 'policy of the law' where the work is scandalous, immoral, or contrary to family life; the work itself is injurious to public life, public health, and safety, or the administration of justice; or where a work incites or encourages others to act in a way which is injurious to public life, public health, and safety, or the administration of justice: *Hyde Park Residence v. Yelland* [2000] EMLR 363, 389.

<sup>149</sup> *Ashdown v. Telegraph Group Ltd* [2001] 3 WLR 1368; [2002] RPC 235 (Lord Phillips MR, Keene LJ, and Robert Walker LJ). For commentary, see R. Burrell, 'Reining in Copyright Law: Is Fair Use the Answer?' (2001) IPQ 368.

<sup>150</sup> Ibid, at para. 02.      <sup>151</sup> Ibid. [2002] Ch 149, 163 (para. 31).      <sup>152</sup> [2002] Ch 149, 166 (para. 39).

<sup>153</sup> Ibid. [2002] Ch 149, 164 (para. 34), 170–1 (paras. 58–9).

<sup>154</sup> See *Lion Laboratories v. Evans* [1985] QB 526, 538 (Stephenson LJ), 548 (O'Connor LJ); 550 (Giffiths LJ).

cases. According to Mance LJ, the countervailing public interest was of more limited scope in the case of copyright, given that it is a property right and regulated by statute.<sup>155</sup> The Court of Appeal in *Ashdown* said it agreed with Mance LJ that the circumstances in which the public interest may override copyright are not capable of precise categorization or definition, but indicated that the defence would only succeed in ‘very rare’ circumstances.<sup>156</sup> The more recent decisions therefore offer little assistance as to when the ‘public interest defence’ would apply, except to indicate that the circumstances are more limited than in cases of breach of confidence.

## 8 LIBRARY USES

The 1988 Act provides librarians with a number of defences.<sup>157</sup> Most of these apply only to prescribed, non-profit libraries, that is libraries prescribed by the Secretary of State, and the defences cover inter alia school, university, and local authority libraries.<sup>158</sup>

### 8.1 COPIES FOR RESEARCH OR PRIVATE STUDY

Librarians (from a prescribed, non-profit library) are permitted, in specified circumstances, to copy works in order to supply them to individuals at cost *and* for purposes of non-commercial research or private study.<sup>159</sup> In the case of articles, they may copy up to one article in an issue of a periodical.<sup>160</sup> In the case of published literary, dramatic, or musical works, they may copy no more than a reasonable proportion of the work.<sup>161</sup> In the case of unpublished works, librarians may make and supply single copies of a literary, dramatic, or musical work as long as the copyright owner had not prohibited copying thereof.<sup>162</sup> The requirement that the recipient satisfy the librarian or archivist that they require the copies for the purposes of research for a non-commercial purpose or private study, is likely to place librarians in a difficult position. For example, if a person requires copies because they are researching a topic for publication in a book (and they will receive royalties from the publisher), in the absence of guidance the librarian will have to determine whether this is for a ‘commercial purpose’. The legislation fortunately provides that librarians may rely on signed declarations by any person requesting a copy.

<sup>155</sup> *Hyde Park v. Yelland* [2000] *EMLR* 363, 392. See R. Burrell, ‘Defending the Public Interest’ [2000] *EIPR* 394.

<sup>156</sup> *Hyde Park v. Yelland* [2000] *EMLR* 363 (Mance LJ); *Ashdown v. Telegraph Group Ltd* [2002] Ch 149, 170 (para. 59).

<sup>157</sup> CDPA ss. 37–44; Copyright (Librarians and Archivists) (Copying of Copyright Material) Regulations 1989 (SI 1989/1212). Different classes of library are prescribed by the Regulations in relation to different exemptions. Such exemptions are permitted by Info. Soc. Dir. Art. 5(2)(c) at least as they relate to ‘specific acts of reproduction made by publicly accessible libraries, educational establishments or museums, or by archives, which are not for direct or indirect economic or commercial advantage’. For an extensive review of library exemptions under US law, see *The Section 108 Study Group Report* (March 2008) at <<http://www.section108.gov>>.

<sup>158</sup> CDPA s. 37(1)(a). See J. Griffiths, ‘Copyright and Public Lending in the United Kingdom’ [1997] *EIPR* 499, 501.

<sup>159</sup> The immunity conferred relates not just to copyright in the article, or literary, dramatic, or musical work, but also in any illustrations accompanying the work, and in the typographical arrangement.

<sup>160</sup> CDPS s. 38.

<sup>161</sup> CDPA s. 39. ‘Prescribed library’ means those specified in Part A, Sched. 1 to the Regulations. CDPA s. 40 qualifies s. 38 and s. 39 so that it cannot be used as a mechanism to facilitate multiple copying.

<sup>162</sup> The provisions in CDPA ss. 38–9 and s. 43 require the person requiring the copy to pay the cost price of its production.

## 8.2 LENDING OF WORKS

Special defences also exist where libraries lend copyright works. Section 40A provides that copyright in a work of any description is not infringed by the lending of a *book* by a *public library* if the book is eligible to be within the Public Lending Right Scheme.<sup>163</sup> The second defence that relates to the lending of works is found in section 40A(2). This states that no copyright in *any work* is infringed by the lending of copies of the work by a prescribed library or archive (other than a public library) that is not conducted for profit.

## 8.3 LIBRARY COPYING

Prescribed libraries are allowed to make copies of periodical articles, or the whole or part of a published edition of a literary, dramatic, or musical work, in order to supply another prescribed library.<sup>164</sup> Libraries are also able to copy from any item in order to preserve or replace material in a library's permanent collection without infringing copyright in any literary, dramatic, or musical work.<sup>165</sup>

# 9 EDUCATIONAL USES

The copying that takes place in educational institutions is governed by a complex web of provisions. In addition to the fair-dealing defences and the defences for library copying we have already looked at, the 1988 Act contains a number of defences that relate to the copying carried out by schools and other educational establishments (which includes universities and colleges of further education).<sup>166</sup>

## 9.1 COPYING FOR INSTRUCTION AND EXAMINATION

The 1988 Act contains a number of defences that relate to copying carried out for pedagogical purposes. Section 32(1) provides that copyright in a literary, dramatic, musical, or artistic work is not infringed if it is copied in the course of, or preparation for, instruction. This is subject to four provisos: that the copying is done by the person either giving or receiving the instruction (i.e. the teacher or student), that the instruction is for a non-commercial purpose,

<sup>163</sup> Rental Dir., Art. 5. On the uncertain scope of the provision see Griffiths, 'Copyright and Public Lending', 502.

<sup>164</sup> CDPA s. 41. This does not apply if at the time the copy is made the librarian knows or could reasonably ascertain the name and address of a person entitled to authorize the making of the copy: CDPA s. 41(2).

<sup>165</sup> CDPA s. 42. This applies to prescribed libraries and archives where the item is in the permanent collection and it is not reasonably practicable to purchase a copy for that purpose. It has been proposed in the *Gowers Review* that these exceptions be expanded beyond literary, dramatic, and musical works to cover e.g. films and sound recordings, to allow 'format shifting', and the making and retention of more than one copy. Detailed aspects are considered in IPO, *Taking Forward the Gowers Review*, 28–30.

<sup>166</sup> As specified by the Secretary of State under his powers under CDPA s. 174(1)(b); s. 174(3). 'School' is defined by reference to the Education Act 1996, the Education (Scotland Act) 1962 and the Education and Libraries (Northern Ireland) Order 1986 (SI 1986/59: NI 3). Universities, theological colleges, and various institutions providing further education are 'educational establishment(s)': Copyright (Educational Establishments) Order 2005 (SI 2005/223). These provisions have been extended to apply to teachers employed by a local authority to give instruction to pupils unable to attend an educational establishment: the Copyright (Application of Provisions relating to Educational Establishments to Teachers) (No. 2) Order 1989 (SI 1989/1067).

that the copying is *not* done by means of a reprographic process, and that the copying is accompanied by sufficient acknowledgement.<sup>167</sup> The defence applies whether the work in question is published or not, and there appears to be no limit on the quantity of copying. For example, this exception enables a student or a teacher to write out a whole poem, or extensive passages from a book, in longhand without fear of infringing copyright in the work. A second exception applies as regards copying of literary, dramatic, musical, or artistic works in slightly different circumstances. Section 32A provides that copyright in a literary, dramatic, musical, or artistic work is not infringed if it is copied in the course of, or preparation for, instruction but is subject to five provisos: that the work has been made available to the public,<sup>168</sup> that the copying is a fair dealing with the work, that the copying is done by the person either giving or receiving the instruction (i.e. the teacher or student), that the copying is not done by means of a reprographic process, and that the copying is accompanied by sufficient acknowledgement (but it is not a requirement that the instruction be for a non-commercial purpose). Both provisions appear to be of limited value since neither allows for 'reprographic' copying. This term is defined so broadly that it would almost certainly apply to digital copying carried out for the purpose of instruction.<sup>169</sup> Bizarrely, making (computer or projector) slides will likely involve copyright infringements (even though, because of an absence of relevant blanket licences, there will often be no simple way for educational institutions to obtain permission).

A related defence exists for copying done for film-making courses. Section 32(2) states that the 'copyright in a sound recording, film, or broadcast is not infringed by its being copied by making a film or film sound-track' in the course of, or in preparation for, instruction in the making of films or film soundtracks. This is subject to three conditions: that the person giving or receiving the instruction does the copying, that the copying is accompanied by sufficient acknowledgement, and that the instruction is for a non-commercial purpose.

A special defence applies to copying done for the purpose of preparing or giving examinations. Copyright is not infringed by anything done for the purposes of setting exam questions, communicating the questions to the candidates, or answering the questions, provided that the questions are accompanied by sufficient acknowledgement. The classic form of exam question, familiar to all law students, which comprises a quote followed by the instructions 'discuss critically', must therefore be attributed appropriately. This defence does not apply, however, to the making of a reprographic copy of a musical work to be used in an exam.<sup>170</sup>

## 9.2 COPYING SHORT PASSAGES IN ANTHOLOGIES AND COLLECTIONS

Section 33 provides that copyright is not infringed where a 'short passage' from a published literary or dramatic work is included in a collection that is intended for use in an educational establishment.<sup>171</sup> This is subject to the proviso that (i) the collection consists mainly of material in which no copyright subsists, (ii) the inclusion is acknowledged, and (iii) the inclusion does not involve more than two excerpts from copyright works of the same author in collections published by the same publisher over any period of five years. These restrictions greatly restrict

<sup>167</sup> CDPA s. 32(1) (as amended by SI 2003/2498, introducing the sufficient acknowledgement requirement (reflecting Art. 5(3)(a)) and the non-commercial purpose limitation reflecting Info. Soc. Dir. Art. 5(2)(c)). This does not apply to subsequent dealings (sale, hire, or offering for sale or hire or communicating to the public).

<sup>168</sup> As defined in CDPA s 30(1A). <sup>169</sup> Reprographic copying is defined in CDPA s. 178.

<sup>170</sup> CDPA s. 32(3) (as amended by SI 2003/2498). On subsequent dealings with copies see CDPA s. 32(5).

<sup>171</sup> CDPA s. 33; CA 1956 s. 6(6); CA 1911 s. 2(1)(iv).

the utility of the defence.<sup>172</sup> The defence would be used, for example, to compile a collection of cases, many of which were out of copyright.

### 9.3 PERFORMING, PLAYING, OR SHOWING WORKS

A special defence exists to protect the performing, playing, or showing of literary, dramatic, or musical works before an audience consisting of teachers and pupils at an educational establishment.<sup>173</sup> Section 34(1) operates by deeming certain performances not to be public performances and hence not to be infringements of the performing right. To fall within the defence, the performance must be before an audience consisting of teachers and pupils at an educational establishment. The performance must be carried out either by a teacher, a pupil, or by any other person for the purposes of instruction. This will exempt performances, whether by students or outsiders, before students in a drama class. It does not cover pupil performances to audiences of parents.<sup>174</sup>

A similar defence exists with regard to the showing of films and broadcasts and the playing of sound recordings before an audience of teachers and pupils for the purposes of instruction.<sup>175</sup> While this would cover the showing of a documentary about the first Moon landing to a primary-school class, it presumably would not cover school film societies since they are for pleasure and not instruction. Both provisions appear to permit the use of material in (computer or projector) slide shows (though the making of the slides (involving reproduction), as well as the distribution of copies, or the making-available on-line would not fall within the exception).

### 9.4 RECORDING OF BROADCASTS

Section 35 provides that, in the absence of a 'certified licensing scheme',<sup>176</sup> educational establishments may make a recording of a broadcast, or a copy of such a recording, for the educational purposes of that establishment, provided that there is sufficient acknowledgement of the broadcast and the educational purposes are non-commercial.<sup>177</sup> As educational establishments have entered into a number of relevant certified licensing schemes, section 35 has little practical importance.<sup>178</sup> Nevertheless, the Gowers Review has proposed that the exception be expanded to allow the communication of broadcasts to distance learners (through secure 'virtual learning environments' and beyond 'broadcasts'. The detailed issues arising from these proposals are currently being reviewed.<sup>179</sup>

<sup>172</sup> The work from which the passage is taken must itself not be intended for use in an educational establishment, and no more than two excerpts from copyright works by the same author may be published in collections by the same publisher over any period of five years. Moreover, the collection in question must be described as being for use in educational establishments, must consist mainly of material in which no copyright subsists, and there must be a sufficient acknowledgement.

<sup>173</sup> CDPA s. 34(1). <sup>174</sup> CDPA s. 34(3).

<sup>175</sup> CDPA s. 34(2). These are deemed not to be public performances.

<sup>176</sup> CDPA s. 143. <sup>177</sup> CDPA s. 35(1).

<sup>178</sup> For example, Copyright (Certification of Licensing Scheme for Educational Recording of Broadcasts and Cable Programmes) (Educational Recording Agency Ltd.) Order 2005 (SI 2005/222); Copyright (Certification of Licensing Scheme for Educational Recording of Broadcasts) (Open University) Order 2003 (SI 2003/187).

<sup>179</sup> IPO, *Taking Forward the Gowers Review*, 9–11.

## 9.5 REPROGRAPHIC COPYING

Section 36 provides that, to the extent that licences are unavailable, educational establishments may reprographically copy 1 per cent of literary, dramatic, and musical works per quarter of a year for the purposes of instruction without infringing copyright.<sup>180</sup> The exception only operates where the copies are accompanied by sufficient acknowledgement (except where this would be impossible), and the instruction is for a non-commercial purpose. Again, the operation of the section 36 defence is limited as a result of the fact that educational establishments have entered into a number of relevant certified licensing schemes. The Gowers Review has proposed that the exception be expanded to take account of developments in instructional techniques in the 'digital age', including 'interactive whiteboards' and 'virtual learning environments'. The Review also suggested that the exception be extended to other media. The issues arising from the proposal are being reviewed by the IPO.<sup>181</sup>

## 9.6 LENDING OF COPIES

Copyright in a work is not infringed by the lending of copies of the work by an educational establishment.<sup>182</sup>

# 10 USES OF WORKS FOR THE HANDICAPPED

Two sets of provisions are designed to facilitate the making available of works to persons whose aural or visual senses are impaired.

## 10.1 MODIFICATION OF BROADCASTS FOR THOSE WITH POOR HEARING

Section 74 allows a designated body to make copies of broadcasts to provide subtitled or modified copies of broadcasts to people who are deaf, hard of hearing, or physically or mentally handicapped.<sup>183</sup> The making, supply, or lending of such copies does not infringe any copyright in the broadcasts or in any work included in them.<sup>184</sup> This defence does not apply, however, if there is a relevant certified licensing scheme in existence.<sup>185</sup>

## 10.2 MODIFICATIONS FOR BENEFIT OF THE VISUALLY-IMPAIRED

The Act permits the making of copies of commercially published literary, dramatic, musical, and artistic works, as well as of published editions, for the personal use of visually impaired persons.<sup>186</sup>

<sup>180</sup> CDPA s. 36. <sup>181</sup> IPO, *Taking Forward the Gowers Review*, 11–14.

<sup>182</sup> CDPA s. 36A was introduced into the 1988 Act by the Related Rights Reg. 11. See Rental Dir., Art. 5(3).

<sup>183</sup> CDPA s. 74; Copyright (Subtitling of Broadcasts and Cable Programmes) (Designated Body) Order 1989 (SI 1989/1013) (designating The National Subtitling Library for Deaf People). See Info. Soc. Dir., Art. 5(3)(b).

<sup>184</sup> CDPA s. 74(1). <sup>185</sup> CDPA s. 74(4) and s. 143.

<sup>186</sup> CDPA s. 31A (added by the Copyright (Visually Impaired Persons) Act 2002). The exception does not apply to copyright databases. It is subject to the following conditions: (i) the visually impaired person has lawful possession or use of a copy; (ii) the copy is not accessible to them because of their impairment; (iii) copies

In addition, in the absence of a licensing scheme notified to the Secretary of State,<sup>187</sup> an educational establishment, or a body not conducted for profit, is permitted to make and supply, other than for profit, accessible copies of commercially published literary, dramatic, musical, or artistic works, or of published editions, for the personal use of visually impaired persons.<sup>188</sup> Most obviously, this would include transliterations into braille, or the making and issue of recordings of spoken versions of those literary works.<sup>189</sup> The exemption does not apply if copies making the works accessible to visually impaired persons are already commercially available.<sup>190</sup>

## 11 PUBLIC ADMINISTRATION

The 1988 Act contains a number of defences that facilitate involvement in, and the dissemination of information about, public administration.<sup>191</sup> To this end the Act provides that copyright is not infringed by anything done for the purposes of Parliamentary or judicial proceedings,<sup>192</sup> or for proceedings of a Royal Commission or statutory inquiry.<sup>193</sup> This means that copyright is not infringed if a barrister digitally scans a case report, or a police officer photocopies a statement for use in a trial. The 1988 Act also provides that copyright is not infringed by anything done for the purposes of *reporting* such proceedings.<sup>194</sup> This means that law reports do not infringe copyright in the barristers' statements, a defendant's evidence, or a speech of a judge. It should be noted that these defences do not extend to the copying of the published reports of such proceedings.<sup>195</sup> As such, the defence does not apply, for example, to the photocopying of law reports.

Special defences also enable the copying of material that is open to public inspection pursuant to a statutory requirement (this would apply to material on the patents, designs, and trade

that would be accessible to them are not commercially available; (iv) the copy states it was made under s. 31A; (v) there is acknowledgement of author and title. A 'visually impaired person' is defined in CDPA s. 31F(9) as a person: (a) who is blind; (b) who has an impairment of visual function which cannot be improved, by the use of corrective lenses, to a level that would normally be acceptable for reading without a special level or kind of light; (c) who is unable through physical disability, to hold or manipulate a book; or (d) who is unable, through physical disability, to focus or move their eyes to the extent that would normally be acceptable for reading. For background, see Copyright Directorate, *Summary of Responses to the Consultative Exercise on a Possible Copyright Exception for the Benefit of Visually Impaired People that took place from February to May 2001* (2001). For commentary, see K. Garnett, 'The Copyright (Visually Impaired Persons) Act 2002' [2003] *EIPR* 522.

<sup>187</sup> CDPA s. 31D(1). The scheme must not be 'unreasonably restrictive'.

<sup>188</sup> CDPA s. 31B (added by the Copyright (Visually Impaired Persons) Act 2002). For background, see Copyright Directorate, *Summary of Responses to the Consultative Exercise*.

<sup>189</sup> CDPA s. 31B(2) states that the exemption does not apply 'if the master copy is of a musical work, or part of a musical work, and the making of an accessible copy would involve recording a performance of the work or part of it'. The exemption also does not apply if the work concerned is a database.

<sup>190</sup> CDPA s. 31B(3), (4). <sup>191</sup> Info. Soc. Dir., Art. 5(3)(e).

<sup>192</sup> CDPA s. 45(1); CA 1956 ss. 6(4), 9(7), 13(6), 14(9), 14A(10). <sup>193</sup> CDPA s. 46(2).

<sup>194</sup> CDPA ss. 45(2); 46(2). The latter, which relates to Royal Commissions and statutory inquiries, is limited to the reporting of any such proceedings held in *public*.

<sup>195</sup> This would include arbitration proceedings, *London & Leeds Estates v. Paribas (No. 2)* [1995] 1 *EGLR* 102, 106. Note also *A v. B* [2000] *EMLR* 1007 (refusing summary judgment in a case where defendant had copied pages from claimant's diary with a view to using them in divorce proceedings, even though those proceedings had not yet begun); *Vitof Ltd. v. Altoft* [2006] *EWHC* 1678; *Television New Zealand v. Newsmonitor Services* [1994] 2 *NZLR* 91, 100 (High Court of Auckland) (extends to situation where a work is required to be reproduced so that legal advisers can properly advise client whether or not it is appropriate to commence legal proceedings or to defend proceedings which are threatened).

mark registries);<sup>196</sup> to material that is communicated to the Crown in the course of public proceedings;<sup>197</sup> and, in certain circumstances, to material on public records.<sup>198</sup>

## 12 CULTURAL PRESERVATION

A number of defences aid in the preservation of cultural objects.<sup>199</sup> A designated non-profit organization may record a song and make copies available for non-commercial research or private study even though there is copyright in the words or music. This is subject to the proviso that the words are unpublished and are of unknown authorship.<sup>200</sup> In addition, where an article of culture or historical importance cannot lawfully be exported from the UK unless a copy of it is made and deposited in an appropriate library or archive, it is not an infringement to make that copy.<sup>201</sup> Finally, a recording of a broadcast of a designated class,<sup>202</sup> or a copy of such a recording, may be made for the purpose of being placed in an archive maintained by a designated body without thereby infringing any copyright in the broadcast or in any work included in it.<sup>203</sup>

## 13 EXCEPTIONS FOR ARTISTIC WORKS

A number of defences exist in relation to artworks. Given that artistic works protect a broad array of subject matter from paintings and sculpture through to typefaces and industrial designs, it is not surprising that these defences are similarly eclectic. In addition to the defences listed below, it should be noted that a number of defences exist in relation to industrial designs. These are discussed in Chapter 29.<sup>204</sup>

### 13.1 REPRESENTATION OF WORKS ON PUBLIC DISPLAY

A special defence exists in relation to the representation of artistic works on public display.<sup>205</sup> Section 62 provides that copyright in (a) buildings and (b) sculptures, models for buildings, and works of artistic craftsmanship if permanently situated in a public place or in premises open to the public, may be represented in a graphic work, photographed, filmed, or broadcast with-

<sup>196</sup> CDPA s. 47.      <sup>197</sup> CDPA s. 48.

<sup>198</sup> CDPA ss. 47 and 49. CDPA s. 50 provides a defence for acts specifically authorized by an Act of Parliament.

<sup>199</sup> See above at Section 8 (ability of libraries to make copies for purposes of preservation).

<sup>200</sup> CDPA s. 61. The making of the recording must not infringe any other copyright and must not have been prohibited by any of the performers. For designated bodies, see Copyright (Recording of Folksongs for Archives (Designated Bodies) Order 1989 (SI 1989/1012)).

<sup>201</sup> CDPA s. 44.

<sup>202</sup> All broadcasts other than encrypted transmissions and all cable programmes have been designated for this purpose.

<sup>203</sup> CDPA s. 75. The Copyright (Recording for Archives of Designated Class of Broadcasting and Cable Programmes) (Designated Bodies) Order 1993 (SI 1993/74).

<sup>204</sup> CDPA ss. 51–3. See below Ch. 29 Section 3.

<sup>205</sup> See also incidental use defence in CDPA s. 31 discussed at Section 6 above (but with CDPA s. 62 there is no need for the use to be incidental). Info. Soc. Dir. Art. 5(3)(h) permits member states to have an exception relating to 'use of works, such as works of architecture or sculpture, made to be located permanently in public places'.

out a licence. The defence also applies to subsequent dealings with the representation. Thus, a postcard of a sculpture in Trafalgar Square can be reproduced and distributed without infringing copyright in the sculpture. Similarly, a film of a new building could be made or broadcast without the consent of the owner of copyright in the building.<sup>206</sup> It seems that the defence applies to both private and public buildings. If so, this means that a company that was taking photographs of private homes to be stored on a database for use by real estate agents could rely upon the defence to avoid a claim for infringement of any copyright in the building.

One potential problem with the defence is that section 62 says that copyright in *such a work* is not infringed. As such the defence seemingly would not apply to any preliminary drawings or plans that were used to create the public work. If so, it greatly reduces the scope of the defence.<sup>207</sup>

### 13.2 ADVERTISEMENTS FOR SALE OF AN ARTISTIC WORK

Section 63 declares that it is not an infringement of copyright in an artistic work to copy it or to issue copies to the public in order to advertise the sale of the work. This means that it is permissible when selling a painting to take a photograph of the painting and to publish it in a catalogue. Section 63 serves to reconcile the conflict that may arise where the artistic work and the copyright in that work are owned by different parties. It does this by preventing the copyright owner from exercising their copyright so as to hinder the owner of the artistic work from selling it. It should be noted that subsequent uses of the copy, such as selling it, are not covered by the defence.<sup>208</sup> This means that the sale of a catalogue formerly used to advertise the sale of the work is *prima facie* an infringement of copyright.<sup>209</sup>

### 13.3 SUBSEQUENT WORKS BY THE SAME ARTIST

It is common practice for artists to build upon and develop earlier works they have created. A potential problem that arises for artists who sell the copyright in their works is that copyright owners may object to the artist continuing to work in the same style. Under general copyright principles, artists are able to develop the same ideas as long as they do not copy a substantial part of the expressive form of the earlier work. To ensure that owners of copyright in an earlier work are unable to stifle an artist's ability to work in the same style, section 64 adds that an artist is able to copy their earlier works, provided they do not repeat or imitate a work's main design.

### 13.4 RECONSTRUCTION OF BUILDINGS

Section 65 allows for the reconstruction of a building without infringement of any copyright in the building or in the original drawings or plans for it.<sup>210</sup> This ensures that an owner of a building is able to carry out repairs without having to seek the approval of the copyright owner.

<sup>206</sup> Though (as a consequence of amendments made by SI 2003/2498) while a film of a building could be placed on a web site without infringing (CDPA s. 62(3) referring to communications to the public of anything whose making was not an infringement), a direct live feed of images of the building would appear to fall outside the scope of the exception (CDPA s. 62(2) referring to broadcasts).

<sup>207</sup> Copinger, para. 9–169; Burrell & Coleman, note 1 above, 233. <sup>208</sup> CDPA s. 63.

<sup>209</sup> Info. Soc. Dir., Art. 5(3)(j) permits member states to have an exception for such advertising 'to the extent necessary to promote the event, excluding any other commercial use'.

<sup>210</sup> CDPA s. 65; Info. Soc. Dir., Art. 5(3)(m).

### 13.5 USE OF TYPEFACES IN THE ORDINARY COURSE OF PRINTING

A special defence exists where typefaces (which are protected as artistic works) are used in the ordinary course of printing. Section 54 provides that it is not an infringement of copyright in an artistic work consisting of the design of a typeface to use the typeface in the ordinary course of printing activities. The section also provides that it is not an infringement to possess or do anything in relation to the material produced by such a use.<sup>211</sup>

## 14 EXCEPTIONS FOR COMPUTER PROGRAMS

Special provisions in the 1988 Act, which follow from the Software Directive, govern how far it is permissible to copy and otherwise use computer programs without infringing. These defences ensure that a lawful user is able to make a back-up copy, to decompile a program for certain purposes, to study the program, and to adapt or copy the program where necessary for the lawful use of the program. The first three of these exceptions cannot be excluded or restricted by contract, and provisions attempting so to do are to be treated as null and void.<sup>212</sup> A report by the European Commission in 2000 on the implementation of the Software Directive concluded that overall the aims of the Directive had been achieved. The Commission did however make some comments about the way that the Directive had been implemented in the United Kingdom, which might require adjustment in the future.<sup>213</sup>

One issue that may impact upon the scope of the defences relates to the question of whether computer programs are seen as databases (and thus protected under the database right). As we alluded to in our discussion of the database right, if 'database' is defined broadly enough it may include computer programs. If so, this will impact upon the relevance of the copyright defences. This is because there are fewer defences available to a defendant in relation to infringement of the database right than are available for infringement of copyright.

### 14.1 MAKING BACK-UP COPIES

Section 50A(1) provides that it is not an infringement of copyright for a 'lawful user'<sup>214</sup> of a copy of a computer program to make any back-up copy of it, which is necessary for them to have for the purpose of their lawful use.<sup>215</sup> By enabling users to make back-up copies, it provides a form of insurance in case a computer program fails or is corrupted. Importantly

<sup>211</sup> CDPA s. 54. The typeface itself may be reproduced 25 years after the year of authorized marketing. CDPA s. 55. See J. Watts and F. Blakemore, 'Protection of Software Fonts in UK Law' [1995] 3 *EIPR* 133.

<sup>212</sup> CDPA s. 50A(3), s. 50BA(2), s. 50B(4), s. 296A(1), reflecting Software Dir., Art. 9(1), Recital 26.

<sup>213</sup> *Report from the Commission on the implementation and effects of Directive 91/250/EEC on the legal protection of computer programs*, COM (2000) 199 final (Brussels, 10 Apr. 2000), 12–14. The UK has since added CDPA s. 50BA which meets one of the Commission's criticisms.

<sup>214</sup> Defined as a person who has a right to use the program: CDPA s. 50A(2). In its Report on the Software Directive, the Commission said that 'lawful acquirer' (which was the term used in the Directive), meant a 'purchaser, licensee, renter or a person authorized to use the program on behalf of the above'. *Report on the implementation and effects of Directive 91/250/EEC*, 12.

<sup>215</sup> The Commission said that the notion of 'back-up' meant 'for security reasons' and that the result of the wording of Art. 5(2) was that only one copy is permitted. *Report on the implementation and effects of Directive 91/250/EEC*, 18.

section 50A(3) provides that any term or condition in an agreement that purports to prohibit or restrict an act that is permitted under section 50A is void.<sup>216</sup>

The scope of the defence will depend on when it is 'necessary' for a lawful user to make a back-up copy. It is likely that this will depend on factors such as the relative stability of the program (the more vulnerable the program the more the need for back-up), the environment in which the program operates, and the consequences of a program failing (it is more likely that a court will consider it necessary to make a back-up copy where the program is used for air traffic control or to assist in heart surgery than where it is a computer game). Indeed, in *Sony Computer Entertainment Inc. v. Owen* it was held that, when a person buys a computer game on a CD, it is not 'necessary' for that person to make a back-up copy of the disk.<sup>217</sup>

#### 14.2 DECOMPILATION

One of the problems facing creators of computer programs is that they have to ensure that their creations can be used in conjunction with existing products and processes. In the same way in which a manufacturer of spare parts for cars needs to ensure that their products are the appropriate size and shape, so too producers of computer programs and devices used in conjunction with existing programs need to ensure that their products comply with the existing standards. While some of this information will be generic and widely available, some of it may be hidden in the program. For a producer to ensure that their creations are compatible (or inter-operable) with existing systems, they need to have access to the information that is hidden in the program. Some developers (most famously IBM) publish such information to encourage others to construct further application programs or add-on devices, whereas others license the information. In some circumstances, the only way in which the relevant information can be obtained is by decompiling or reverse engineering the program. The process of decompilation reduces the object code in the program to a form that approximates with the source code. The potential problem with this is that as decompilation involves intermediate copying of a program, it is prima facie an infringement of copyright.<sup>218</sup>

After considerable debate it was decided to include a defence for decompilation in the Software Directive.<sup>219</sup> This found its way into British law via section 50B. Before looking at the defence it should be noted that the parties cannot contract out of the decompilation defence.<sup>220</sup> It should also be noted that the importance of section 50B is reinforced by the fact that fair dealing for the purpose of research and study does not apply to the decompilation of computer programs.<sup>221</sup>

Section 50B provides that it is not an infringement of copyright for a lawful user of a copy of a computer program expressed in a low-level language to convert it into a higher-level language (that is, to 'decompile' it) or incidentally in the course of converting the program, to copy it. This is subject to the proviso that:

- (a) it is necessary to decompile the program to obtain the information necessary to create an independent program which can be operated with the program decompiled, or with another program (the 'permitted' objective); and

<sup>216</sup> CDP A s. 50A(3), s. 296A. <sup>217</sup> [2002] *EMLR* 742.

<sup>218</sup> See Copinger, para. 9–134, pp.540–1. S. Chalton, 'Implementation of the Software Directive in the UK' [1993] *EIPR* 138,

<sup>219</sup> Software Dir., Art. 6. <sup>220</sup> CDP A ss. 50A(3), 50B(4), 50D(2). <sup>221</sup> CDP A s. 29(4).

- (b) the information obtained is not used for any purpose other than the permitted objective.

These conditions will be not be met, for example, where (i) the relevant information is readily available to the lawful user, (ii) the decompilation is not confined to acts necessary to achieve the permitted objective, (iii) the lawful user supplies the information to any person to whom it is not necessary to do so in order to achieve the permitted objective, or (iv) the lawful user uses the information to create a program which is substantially similar in its expression to the program decompiled, or to do any act restricted by copyright.<sup>222</sup>

In its *Report on the Implementation of the Software Directive*, the Commission was critical of the way Article 6 had been implemented in the United Kingdom. (Article 6 sets out the decompilation exception.) In particular, the Commission said there are four reasons why section 50B may be non-conforming. First, section 50B's use of 'lawful user' appears not to include a 'person authorized on behalf of the licensee or person having a right to use a copy of the program'. Second, while Article 6 mentions 'reproduction of the code and translation of its form', this has been implemented in section 50B as 'expressed in a low-level language to convert it into a higher-level language'. Third, there is no restriction in the UK to 'parts' of the decompiled program: instead section 50B is restricted to 'such acts as are necessary to achieve the permitted objective'. The final criticism is that the section 50B defence is not expressly subject to the three-step test (as is required under Article 6(3)).<sup>223</sup> It is possible that British courts could construe section 50B in such a way as to comply with many of the criticisms (if this was considered desirable).

### 14.3 OBSERVING, STUDYING, AND TESTING PROGRAMS

Section 50BA, introduced in October 2003,<sup>224</sup> implements Article 5(3) of the Software Directive, by providing that a lawful user of a copy of a program is not liable for infringement if, when carrying out an act they are entitled to do (such as to load, display, run, transmit, or store the program), that person observes, studies, or tests the functioning of the program in order to determine the ideas or principles which underlie any element of the program.

### 14.4 COPYING AND ADAPTING FOR LAWFUL USE

In the absence of contractual terms to the contrary, section 50C(1) allows a lawful user of a computer program to copy or adapt it if 'it is necessary for his lawful use'.<sup>225</sup> An example of a situation where it will be necessary to copy for a lawful use is given by section 50C(2). This says that it is not an infringement for a lawful user of a copy of a computer program to copy or adapt it for the purpose of correcting errors. Another obvious example is copying that occurs in the RAM of a computer that enables the program to run. In contrast, it has been held that a

<sup>222</sup> CDPA s. 50B(3). <sup>223</sup> *Report on the implementation and effects of Directive 91/250/EEC*, 14.

<sup>224</sup> As noted earlier, these acts no longer fall to be treated as fair dealing under CDPA s. 29. The specific implementation of Software Dir., Art. 5(3) seems to have been required now that the notion of fair dealing for research and private study has been limited to non-commercial ends. See *Navitaire Inc. v. Easy Jet Airline Co. & BulletProof Technologies Inc.* [2006] *RPC* (3) 111 (para. 77).

<sup>225</sup> Note the contradictory provisions of Software Dir., Art. 5(1) and Recital 18 (stating that the acts of loading and running necessary for use of the program, and the act of correction of its errors, may not be prohibited by contract. This defence does not apply to the making of back-up copies (s. 50A), to the decompilation of programs (s. 50B), or to acts carried out to study or test the program (s. 50BA).

licence to use a computer game in Japan did not justify adaptation to circumvent copy protection so as to enable its use in the UK.<sup>226</sup> Given the limits of the licence to Japan, there was no lawful use in the UK.

## 15 EXCEPTIONS FOR DATABASES

Section 50D provides that it is not an infringement of copyright in a database for a person who has a right to use the database or any part of the database (whether under a licence to do any of the acts restricted by the copyright in the database or otherwise) to do, in the exercise of that right, anything which is necessary for the purposes of *access to* and *use of* the contents of the database or of that part of the database. This means that if, in the course of searching a database, the database is downloaded into the memory of a computer, this will not be an infringement. Although in situations where the copyright owner and the user are in a contractual relation (as a subscriber to *Lexis* would be) the user would have, at the very least, an implied licence covering these acts, this exception seems to operate in favour of others with a right to use the database, such as transferees of material copies of databases (e.g. the purchaser of a second-hand CD-ROM of the *Oxford English Dictionary*). It is important to bear in mind that fair dealing for the purposes of research and study is not available for databases. This increases the relative importance of the section 50D defence. As with the defences for the making of back-up copies and decompilation, it is not possible to contract out of the section 50D defence.<sup>227</sup>

## 16 EXCEPTIONS FOR WORKS IN ELECTRONIC FORM

Under section 56, if the purchaser of a work in electronic form (such as a computer program or an e-book) is entitled to make further copies or adaptations of the work, then unless there is an express stipulation to the contrary, so too is anyone to whom the ownership of the copy has been transferred. That is, the defence applies when a back-up copy is transferred if the original copy is no longer usable. Any copies remaining with the original purchaser after transfer are infringing.<sup>228</sup>

## 17 TEMPORARY TECHNOLOGY-DICTATED COPIES

In order to implement Article 5(1) of the Information Society Directive, a new defence was introduced in October 2003 relating to the temporary copying of copyright works other than programs or databases. This applies only if four conditions are met: (i) the copy must be transient or incidental; (ii) the making of the copy must be ‘an integral and essential part of a

<sup>226</sup> *Sony Computer Entertainment Inc v. Owen* [2002] *EMLR* 742, 747. See B. Esler, ‘Judas or Messiah? The Implications of the Mod Chip Cases for Copyright in an Electronic Age’ (2003) *Hertfordshire Law Journal* 1.

<sup>227</sup> CDPA s. 50D(2). For speculation as to the scope of this exception and criticism, see Davison, 77–8.

<sup>228</sup> CDPA s. 56(2)–(3). See C. Millard in H. Jongen and A. Meijboom (eds.), *Copyright Software Protection in the EC* (1993), 224.

technological process'; (iii) the copying must take place to enable either transmission of the work in a network between third parties and an intermediary, or a lawful use of the work; and (iv) the temporary copy must have 'no independent economic significance'. Lawful use is defined to include uses 'authorised by the rightholder or not restricted by law'.<sup>229</sup> The provision appears to have been designed to allow 'caching',<sup>230</sup> that is the temporary storage of information in the user's computer or server which allows for speedier access to web sites.<sup>231</sup> Such activities are positively desirable, since they enable the 'web' to function speedily and efficiently, and seem to have no obvious impact on the economic interests of content holders. Nevertheless, while the provision may have been designed to exempt such acts (which otherwise might technically infringe the reproduction right in the content being stored),<sup>232</sup> the conditions imposed make it difficult to predict when (if at all) such acts will in fact be legitimate. First, the requirement that the reproduction be an 'integral and essential' part of a technological process raises a difficult hurdle. This is because, while digital transmission is more efficient if caching occurs, such transmission can occur without caching. Can it then be said that caching is 'integral and essential' rather than desirable?<sup>233</sup> Second, the requirement that the acts be of no 'independent economic significance' raises the question exactly how a defendant might prove that (as well as how a court is to determine whether) activities have any 'independent economic significance'.

## 18 DEFENCES FOR FILMS AND SOUND RECORDINGS

### 18.1 EXPIRY OF FILM COPYRIGHT

As we saw earlier, one of the changes brought about as a result of the Duration Directive is that copyright in films expires 70 years from the end of the calendar year in which occurs the death of the last of the following: the principal director, the author of the screenplay, the author of the dialogue, or the composer of any music specifically created.<sup>234</sup> One of the consequences of this is that it may be difficult to determine when copyright in a film actually expires. To ensure that this uncertainty does not unduly hinder subsequent uses of the film, section 66A provides that copyright in a film is not infringed if (i) it is not possible by reasonable inquiry to ascertain the identity of any of the relevant persons and (ii) that it is reasonable to assume that the copyright has expired *or* that the last relevant person has been dead for over 70 years.

<sup>229</sup> Info. Soc. Dir., Recital 33.

<sup>230</sup> Info. Soc. Dir., Recital 33. This seems to impose further conditions paralleling those set out in the E-commerce Directive. These are: first, that the intermediary does not modify the information; and second, that he does not interfere with the lawful use of technology, widely recognized and employed by industry, to obtain data on the use of information. The scope of Art 5(1) will be reviewed in *Infopaq International AS v. Danske Dagblades Forening*, Case C-5/08 (pending).

<sup>231</sup> See P.B. Hugenholtz, 'Caching and Copyright: The Right of Temporary Copying' [2000] *EIPR* 482, 483 (in particular focusing on 'proxy (web) caching' and 'client caching').

<sup>232</sup> But note P. B. Hugenholtz, 'Why the Copyright Directive is Unimportant and Possibly Invalid' [2000] *EIPR* 499, 501 ('a common sense interpretation of the reproduction right would have done the job [of exempting caching and browsing] as well, if not much better').

<sup>233</sup> See Hugenholtz, 'Caching and Copyright', 488-9.

<sup>234</sup> CDPA s. 13B(2). See Ch. 7 Section 3 above.

## 18.2 CHARITABLE USES OF SOUND RECORDINGS

Another exception operates in favour of non-profit, charitable organizations and permits those organizations to play sound recordings as part of the activities of, or for the benefit of, the organization without infringing copyright in the sound recording.<sup>235</sup> As a practical consequence, charitable organizations do not need to obtain licences from PPL (the collective body that deals with the public playing of sound recordings), but only from PRS (since the exception does not apply to copyright in the literary and musical works). Not surprisingly, this exception has long been a source of resentment to the record industry and performers' groups who see no reason why the revenues to which they would otherwise be entitled (and which other authors do get) should be compulsorily given to charity. Because of a belief that the exception in the form originally enacted in the 1988 Act fell foul of the 'three-step test', it has been made subject to a host of conditions.<sup>236</sup>

Firstly, the exception only applies if the organization is not established or conducted for profit, and its main objects are charitable or are otherwise concerned with the advancement of religion, education, or social welfare.<sup>237</sup> Secondly, the exception only applies if the sound recording is played by a person who is acting primarily and directly for the benefit of the organization and who is not acting with a view to gain. This means the exemption does not apply if the organization hires a disc jockey to choose and play the recordings. Thirdly, the exception only applies if the proceeds of any charge for admission to the place where the recording is to be heard are applied solely for the purposes of the organization. Finally, for the exemption to operate it is required that the proceeds from any goods sold by or on behalf of the organization (in the place where the sound recording is heard and when the recording is played) are applied solely for the purposes of the organization.<sup>238</sup> The effect of this last condition depends particularly on what is meant by 'good or services sold by, or on behalf of, the organisation'. If a charitable organization has a fund-raising event at which recorded music is played, but obtains the services of the local publican to serve drinks (and the publican keeps the profits from such sales), are the bar services provided 'on behalf of the organisation' so that the defence does not apply? Or are the services provided by and on behalf of the publican, with the paradoxical consequence that the exception applies? If the aim of the limitations is to restrict the operation of this defence to events where everybody involved gives their services and profits to the charity, it is likely that the publican who has been invited to sell drinks at the event (primarily for their own benefit), would be treated as acting 'on behalf of' the charity.

<sup>235</sup> CDPA s. 67(1) does not apply to musical works.

<sup>236</sup> The Info. Soc. Dir., Art. 11 amended the Rental Dir., Art. 10, by adding that limitations to the fixation, broadcasting, communication, and distribution rights are only applied in accordance with the three-step test. See also WPPT, Art. 16(2). It is not obvious why the three-step test led to the imposition of the new conditions. For example, why would the mere fact that the organization paid a professional disc jockey render the activities prejudicial to the legitimate interests of the 'rights holders', or mean that the use conflicts with 'normal exploitation'? The view seems to be that if anyone is paid or makes a private profit, then so should the record companies and performers. It should be noted, however, that the European Commission had issued a warning letter to the UK Government complaining that section 67 does not comply with Art 8(2) and 10 of the Rental Rights Dir: 'Internal Market: Infringement Proceedings Against France, Ireland, Luxembourg, Spain and the United Kingdom', IP/07/92 (27 June 2007).

<sup>237</sup> A local government authority was held to be neither an 'organization' similar to a club or society, nor an organization whose main object was the advancement of 'social welfare': *Phonographic Performance Ltd v. South Tyneside Metropolitan Borough Council* [2001] RPC 594 (exemption held not to cover playing sound recordings at fitness classes run by the local authority).

<sup>238</sup> CDPA s. 67(2).

## 19 BROADCASTS

Various acts are permitted in relation to the making, retransmission, and reception of broadcasts. In addition to the provisions we have already looked at in relation to archives,<sup>239</sup> education, and sub-titling for the hard of hearing,<sup>240</sup> the following defences may apply.

### 19.1 INCIDENTAL RECORDING FOR THE PURPOSE OF BROADCASTING

A person authorized to broadcast a work may make a recording of it for purposes of the broadcast.<sup>241</sup> This is subject to the requirement that the recording should not be used for any other purpose and should be destroyed within 28 days of first being used.<sup>242</sup> This ensures that any temporary copies that are made in the course of broadcasting will not infringe.

### 19.2 RECORDING FOR PURPOSES OF SUPERVISION

As part of the regulatory framework that governs the broadcasting industry, a number of organizations are given the task of supervising broadcast programmes. To ensure that these bodies are able to perform these tasks, the 1988 Act provides that supervisory bodies (in particular, after the Communications Act 2003, the unitary body, Ofcom) may make recordings of broadcasts for the purpose of controlling broadcasting.<sup>243</sup>

### 19.3 TIME SHIFTING

Section 70 provides for the much-debated time-shifting defence that allows for the private recording of broadcasts so that they may be watched at a later time. The making of a recording of a broadcast, in domestic premises for private and domestic use, solely in order to view it or listen to it at a more convenient time, does not infringe any copyright in the transmission, or of works included in the transmission.<sup>244</sup> This enables a person to video a programme to watch at a more convenient time or tape radio programmes so that they can be listened to later. Since broadcasts do not include most 'internet transmissions' this defence cannot be employed to justify private copying from web sites. Moreover, the limitation of the defence to recordings made 'in domestic premises' means it cannot justify acts of recording broadcasts in commercial establishments, such as the recording of simultaneous internet broadcasts in internet cafés.<sup>245</sup> Rather strangely, however, it means that, if a person tapes a radio programme on a

<sup>239</sup> CDPA s. 75.      <sup>240</sup> CDPA ss. 32(2), 34(2), 35.

<sup>241</sup> CDPA s. 68; Info. Soc. Dir., Art. 5(2)(d); Rental Dir., Art. 10(1)(c); Berne, Art. 11bis(3).

<sup>242</sup> See *Phonographic Performance v. AEI Rediffusion Music* [1998] Ch 187; [1997] RPC 729 (holding that the making of permanent recordings for the purpose of broadcast could not be treated as authorized under compulsory licence).

<sup>243</sup> CDPA s. 69; Info. Soc. Dir., Art. 5(3)(e). Communications Act 2003, Sched. 17, para. 91(3).

<sup>244</sup> CDPA s. 71. Presumably this is thought to be within Info. Soc. Dir., Art. 5(2)(b), and that under Recital 35 no compensation need be paid. The requirement that the recording be on domestic premises may have been intended to ensure compliance with the requirement that the reproduction not be for ends which are directly or indirectly commercial.

<sup>245</sup> Even prior to the addition of this requirement by SI 2003/2498 it had been held that the exception did not justify the copying of such material by a commercial organization at the request of individuals, because the

cassette recorder situated in their office they will infringe, whereas they would not do so were they at home. In an era where it is increasingly important for the rules relating to copyright liability to make sense to the public, this different treatment seems regrettable.

#### 19.4 FREE PUBLIC SHOWING OR PLAYING

Although running a radio or television in public normally infringes the public performance right in the broadcast, and any works therein, a special defence limits the scope of such liability where a broadcast is shown or played to a non-paying audience.<sup>246</sup> An audience will be paying if they have paid admission, *or* if goods or services are supplied at that place at prices which are substantially attributable to the facilities afforded for seeing or hearing the broadcast or programme, or at prices exceeding those usually charged there and which are partly attributable to those facilities.<sup>247</sup> So a wine bar wishing to offer a television for the benefit of customers, but which does not alter its prices, would fall within the exception, whereas a bar which charges an entry fee when broadcasts are being shown would not. The free-showing defence also covers the showing or playing of broadcasts to residents of hotels, inmates in prisons, patients in hospitals, and members of clubs; and covers free demonstrations of broadcast-receiving equipment, for example in shop windows.

The free-playing defence only applies to claims relating to infringement of copyright in the broadcast or any film included in it and, in certain specified situations, to the copyright in sound recordings. Permissions as regards other works included in the broadcast, for example music and lyrics of songs, will be required (so a PRS licence will be required).<sup>248</sup> In the case of sound recordings, the section distinguishes between two categories of recording. If they either are not recordings of music or songs (for example, recorded interviews with politicians), or are musical recordings of which the author is also the author of the broadcast (such as sound recordings created as theme music for the channel or to accompany a programme), it is not an infringement of the copyright in the recording to show in public a broadcast which includes the recording.<sup>249</sup> The exception however does not excuse any infringement of the copyright in other sound recordings i.e. those which are recordings of music and songs where the author of the recording is not the author of the music (termed 'excepted sound recordings'). These excepted sound recordings encompass most commercially-distributed popular and classical music, so that the general free-playing defence would not apply to sound recordings featured on the radio or *Top of the Pops*. For these 'excepted sound recordings', a much more limited exception exists as regards the free playing or showing of a broadcast which 'forms part of the activities of an organisation that is not established or conducted for profit'.<sup>250</sup>

copying was not for the 'private and domestic use' of the organization: *Sony Music Entertainment (UK) Ltd v. EasyInternetcafe Ltd*. [2003] FSR (48) 882 (paras. 40–1). For commentary, see K. Garnett, 'The Easy Internet Café Decision' [2003] EIPR 426.

<sup>246</sup> CDPA s. 72.

<sup>247</sup> CDPA s. 72(2)(b). Residents or inmates and the members of a club or society are not normally regarded as having paid for admission.

<sup>248</sup> Hence many electrical retailers allow the demonstration of television equipment with the sound off.

<sup>249</sup> CDPA s. 72(1A), introduced by SI 2003/2498 to implement Rental Dir., Art. 10(3). The EC Commission announced on 26 July 2001 that it had referred the question of whether the UK had failed to implement the Rental Directive to the European Court of Justice: the action may now be dropped.

<sup>250</sup> CDPA s. 72(1B)(a). A further exception applies where the broadcast is played for the purposes of repairing equipment for the reception of broadcasts, demonstrating that such repair has been carried out, or

So, while a wine bar or hotel will benefit from the broad free-playing defence as regards broadcasts and films included therein, a PPL licence will need to be obtained to cover the 'excepted sound recordings' included in the broadcast.<sup>251</sup> In contrast, the defence will extend to broadcasts which include excepted sound recordings where the broadcast is played to an NHS Hospital or government-owned prison, since these activities fall within both the broad free-playing defence and the narrower version of the defence which applies to excepted sound recordings.<sup>252</sup>

## 19.5 PHOTOGRAPHS OF TELEVISION BROADCASTS

The taking of a photograph of an image from a broadcast, in domestic premises for private and domestic use, is not an infringement of copyright in the broadcast or any film included in it.<sup>253</sup> The exception does not extend to photographs of artistic works included in TV broadcasts.<sup>254</sup>

## 19.6 RECEPTION AND RETRANSMISSION OF WIRELESS BROADCAST BY CABLE

A special defence in section 73 deals with the retransmission of wireless broadcasts by cable operators. The defence helps to ensure that people in areas where reception of the broadcast is very poor or restricted are able to get access to programmes.<sup>255</sup> The defence also takes account of the fact that certain cable operators are under a 'must carry' obligation.<sup>256</sup>

Section 73 applies where a wireless broadcast made from a place in the United Kingdom is received and immediately retransmitted by cable. Such retransmissions, in the absence of any exceptions, would infringe copyright in the broadcast and any works included therein.<sup>257</sup> However, retransmissions are often made merely to enable potential customers of a broadcast to obtain reception in areas where the signal is weak. In these cases, where there is no alteration of the transmission at all, it is difficult to see in what way the copyright owners in the works included in the broadcast are prejudiced by the act of retransmission (after all, they have been paid by the initial broadcaster). Consequently, the Act provides that copyright in any work included in the broadcast is not infringed when the broadcast is retransmitted by cable if and to the extent that the broadcast is made for reception in the area in which it is retransmitted by cable.<sup>258</sup> The broadcaster's permission is required, however, unless the

demonstrating such equipment. This is acceptable under Info. Soc. Dir., Art. 5(3)(l), and implicitly therefore under Rental Dir., Art. 10(2).

<sup>251</sup> CDPA ss. 128A–B requires that such licensing arrangements should be notified to the Secretary of State by a licensing body, before they come into effect, and the Secretary of State may refer the licence or scheme to the Copyright Tribunal.

<sup>252</sup> The government has indicated that it will consider modifications of this provision, and doubts have been raised as to the compatibility of the provision with the EC Rental Directive.

<sup>253</sup> CDPA s. 71. Justifiable, possibly under Info. Soc. Dir., Art. 5(2)(b) or Art. 5(3)(i).

<sup>254</sup> In these circumstances, it would be necessary to rely upon other defences (e.g. CDPA s. 31).

<sup>255</sup> Copinger, para. 9–207, pp. 574–5.

<sup>256</sup> Such obligations are imposed under the Communications Act 2003, s. 64. For the background see Copinger, para. 9–206, pp. 573–4.

<sup>257</sup> CDPA s. 20(1), s. 6(5A) (defining broadcast to include relaying by reception and immediate retransmission).

<sup>258</sup> CDPA s. 73(2). This seems to be the legal basis on which certain Internet retransmissions are being made by *zattoo.com*. However, where the making of a *broadcast* was an infringement of copyright in the work, the fact that the broadcast was retransmitted is to be taken into account in assessing damages for that infringement. Note also CDPA s. 73(9), empowering the Secretary of State to limit the operation of s. 73(3).

broadcast is part of a qualifying service (such as the BBC, or Channels 3, 4, or 5), and was made for reception in the area in which the retransmission is provided.<sup>259</sup>

Some other acts of transmission are obligatory under the Communications Act 2003. As it would be grossly unfair to make a person who is obliged to transmit a broadcast liable to the copyright owner, either in the broadcast, or the works contained therein, the Act exempts such a person from infringement. As regards copyright in the broadcast itself, retransmission is permitted if the retransmission takes place in pursuance of a 'relevant requirement' (whether the transmission extends beyond the intended broadcast area or not).<sup>260</sup> As regards copyright in the underlying works, retransmission in the same area as the broadcast is exempted by section 73(3). Where a cable retransmission goes beyond the area of reception of the broadcast, and the retransmission has been required under a 'relevant requirement', the Act provides that the retransmission of any work included in the broadcast is to be treated as licensed by the owner of copyright, subject to the payment of a reasonable royalty by the person making the broadcast.

## 20 MISCELLANEOUS DEFENCES

### 20.1 NOTES OR RECORDINGS OF SPOKEN WORDS

As a result of changes introduced by the 1988 Act, it is now possible for a person who makes a speech to have copyright in the speech. This innovation gave rise to a concern that speakers would be able to use the new copyright to restrict people who record speeches (such as journalists) from making use of their recordings. To avoid this, section 58 provides that the copyright that vests in a person who makes a speech cannot be used to restrict the use of recordings made of their speech for the purpose of reporting current events, or recordings made for communicating to the public the whole or part of the work.<sup>261</sup> For the defence to operate the recording must be a direct record of the spoken words, and the speaker must not have prohibited the recording of their speech.<sup>262</sup>

### 20.2 PUBLIC RECITATION

Section 59(1) provides that the reading or recitation in public by one person of a reasonable extract from a publicized literary or dramatic work does not infringe any copyright in the work so long as it is accompanied by a 'sufficient acknowledgement'.<sup>263</sup> Section 59(2) provides that copyright in a work is not infringed where a recording or recitation covered by section 59(1) is included in a sound recording, or communicated to the public.<sup>264</sup>

<sup>259</sup> CDPA s. 73(2)(b). Qualifying service means a regional or national Channel 3 service, Channel 4, 5, and S4C (both analogue and digital); the teletext service; and the television and teletext services of the BBC. CDPA s. 73(6).

<sup>260</sup> CDPA s. 73(2)(a).

<sup>261</sup> CDPA s. 58; cf. Info. Soc. Dir., Art. 5(3)(f) (which requires that the source, including the author's name, is indicated).

<sup>262</sup> CDPA s. 58. <sup>263</sup> Defined in CDPA s. 178.

<sup>264</sup> As long as the recording or communication consists mainly of material in relation to which it is not necessary to rely on CDPA s. 59. CDPA s. 59(2) may be justified by reference to Info. Soc. Dir., Art. 5(3)(o) on the basis that recitation is an 'analogue use'.

### 20.3 ABSTRACTS

Where an article on a scientific or technical subject is published in a periodical accompanied by an abstract indicating the contents of the article, it is not an infringement of copyright in the abstract or in the article to copy the abstract or issue copies of it to the public.<sup>265</sup> This provision does not apply, however, if or to the extent that there is a relevant licensing scheme certified under section 143 of the Act.<sup>266</sup> As no licensing scheme has been established in this area, the defence plays an important role in ensuring the circulation of scientific information.

### 20.4 DIFFICULTIES WITH IDENTIFYING AUTHORS

Where works are of unknown authorship, a fixed term of copyright replaces the normal *post-mortem* term.<sup>267</sup> Similarly, in the case of films, where it is not possible to identify any of the persons by whom the calculation of the term of protection is normally made, a fixed term operates. In both situations the possibility arises that, while a user may rely on the fixed term, the author might later become known. If so, the longer conventional term would apply.<sup>268</sup> In order to ensure that this does not create problems, there is a defence to infringement where reasonable inquiry cannot ascertain the identity of any author of a work and it is reasonable to suppose that copyright has expired in the work.<sup>269</sup>

### 20.5 TIT-FOR-TAT COPYING

The courts have refused to enforce copyright because the claimant was involved in activities similar to the defendant. In *Express Newspapers v. News (UK)*, Browne-Wilkinson V-C refused to enforce the copyright owned by one newspaper against a competitor who copied a story. This was because the claimant newspaper had itself indulged in a similar act of appropriation.<sup>270</sup> The judge explained that the claimant should not be allowed to 'approbate and reprobate'. This is sometimes referred to as the tit-for-tat defence. It is probably better seen, however, as an exercise of the court's judgment as to the balance of convenience in proceedings for an interim injunction, or as an exercise of the equitable discretion to refuse injunctive relief where the claimant has unclean hands. It is not a defence to an action for damages.

### 20.6 RIGHT OF REPAIR

As part of the general jurisdiction to refuse to enforce copyright where it would contravene public policy, the courts have sometimes treated a person as having a right to repair their property even though to do so would be a direct or indirect reproduction of a copyright work.<sup>271</sup> This was taken furthest by the House of Lords in *British Leyland v. Armstrong*,<sup>272</sup> where it was

<sup>265</sup> CDPA s. 60(1). The retention of this defence might be justified on Info. Soc. Dir., Art. 5(3)(a) or (o) (for analogue uses).

<sup>266</sup> CDPA s. 60(2). <sup>267</sup> CDPA s. 12(3).

<sup>268</sup> CDPA ss. 12(4); 13(4). Cf. CDPA 13(9) where there is no person.

<sup>269</sup> CDPA ss. 57, 66A. The retention of this defence might be justified under Info. Soc. Dir., Art. 5(3)(o) (though this is confined to analogue uses).

<sup>270</sup> [1990] FSR 359.

<sup>271</sup> See Info. Soc. Dir., Art. 5(3)(l) (allowing exceptions relating to use in relation to repair of equipment).

<sup>272</sup> [1986] RPC 279.

held that manufacturers were entitled to make spare parts for motor vehicles (even though to do so would be to indirectly reproduce the claimant's design drawings) so as to facilitate the repair of such vehicles. However, the defence enunciated in *British Leyland* has subsequently been qualified to such an extent that it is hard to imagine any situations where it might apply. In *Canon Kabushiki Kaisha*,<sup>273</sup> Lord Hoffmann said that for the defence to apply it must be plain and obvious that the circumstances are unfair to customers and that the monopoly is anti-competitive. Soon after that decision, the scope of the repair defence was further restricted in *Mars v. Teknowledge*.<sup>274</sup> There Jacob J held that the *British Leyland* defence could not be applied to claims for infringement of copyright in computer software or to rights in databases because those rights stemmed from exhaustive European statutory regimes.<sup>275</sup> The upshot of this is that the right of repair has effectively been abolished.<sup>276</sup>

## 21 REFORM PROPOSALS

The narrow scope of the exceptions to copyright law in the UK has attracted considerable criticism.<sup>277</sup> The *Gowers Review of Intellectual Property* has proposed that copyright exceptions be reformed to introduce more flexibility into UK law.<sup>278</sup> More specifically, it proposes that legislation be introduced to extend the exception for research and private study to all media; to amplify the library exception applicable to the archiving of material; and to expand the scope of the educational exceptions to encompass virtual learning environments. The *Review* also recommended the introduction of two new exceptions. One would exempt private copying through a narrow exception for format shifting, 'to allow consumers to make a copy of a work they legally own, so that they can make the work accessible in another format for playback on a device in their lawful possession'. Clearly, the primary aim of such an exception is to render it lawful for people to copy their own records and CDs and put the digital versions on their MP3 players. However, the exact formulation of the exception is likely to be heavily contested. The second 'new' exception (mentioned earlier) would permit caricature, parody, and pastiche. The government has begun further consultation on these matters, in order to flesh them out and determine their implications.<sup>279</sup> Any amendments to the Act are likely to be drafted specifically. Unfortunately, there is no plan to conduct any thorough-going rationalization of Chapter III of the Act. A broader suggestion in *Gowers*, to exempt all 'transformative uses' falling within the so-called three-step test, will be pursued (if at all) at the EU level.

At the regional level, the European Commission continues to review the matters of private copying and levies.<sup>280</sup> These issues are easily ignored by UK copyright scholars, because the UK has no private copying exception as such, and thus no levies.<sup>281</sup> Nevertheless, most member states have such provisions and the variations between them may ultimately draw the Commission to consider harmonization.

<sup>273</sup> [1997] FSR 817.      <sup>274</sup> [2000] FSR 138.

<sup>275</sup> *Ibid* (the defence was unlikely to succeed unless the court can be reasonably certain that no right-thinking member of society would quarrel with the result).

<sup>276</sup> See G. Llewellyn, 'Does Copyright Recognize a Right to Repair?' [1999] *EIPR* 596, 599.

<sup>277</sup> Burrell & Coleman, note 1 above.      <sup>278</sup> (HM Treasury, 2006) ch.4.

<sup>279</sup> IPO, *Taking Forward the Gowers Review*, 9–11.

<sup>280</sup> EC, *Fair Compensation for Acts of Private Copying* (Brussels, 14 Feb 2008).

<sup>281</sup> Although the UK Office does not at present intend to accompany the proposed 'format-shifting' exception with a levy, it may ultimately come to be questioned whether this complies with the Information Society Directive.

## MORAL RIGHTS

### CHAPTER CONTENTS

1	Introduction	241	3	The Right to Object to False Attribution	249
2	The Right of Attribution (or Paternity)	244	4	Right of Integrity	252

### 1 INTRODUCTION

Once a work qualifies for copyright protection two distinct categories of right may arise. In addition to the economic rights that are granted to the first owner of copyright, the 1988 Act also confers moral rights on the authors of certain works.<sup>1</sup>

Moral rights<sup>2</sup> protect an author's non-pecuniary or non-economic interests.<sup>3</sup> The 1988 Act provides authors and directors with the right to be named when a work is copied or communicated (the right of attribution), the right *not* to be named as the author of a work which one did not create (the right to object against false attribution), and the right to control the form of the work (the right of integrity). The moral rights recognized in the United Kingdom are more limited than the rights granted in some other jurisdictions where, for example, authors are provided with the right to publish or divulge a work, to correct the work, to object to the alteration or destruction of the original of a work, to object to excessive criticism of the work, and to withdraw a work from circulation on the ground that the author is no longer happy with it (because, for example, it no longer reflects the author's world view, or because the person to whom the economic rights in the work have been assigned has failed to exploit it).

<sup>1</sup> See E. Adeney, *The Moral Rights of Authors and Performers: An International and Comparative Analysis* (2006); W. Cornish, 'Moral Rights under the 1988 Act' [1989] *EIPR* 449; R. Durie, 'Moral Rights and the English Business Community' [1991] *Ent LR* 40; J. Ginsburg, 'Moral Rights in a Common Law System' [1990] 1 *Ent LR* 121; Copinger, ch. 11; Laddie *et al.*, ch. 27; P. Anderson and D. Saunders (eds.), *Moral Rights Protection in a Copyright System* (1992).

<sup>2</sup> The term 'moral rights' is derived from the French *droit moral*.

<sup>3</sup> Ginsburg, note 1 above, 121. This does not mean that they cannot be used to secure economic benefits. The estate of French painter Maurice Utrillo has benefited considerably from the grant of the right to use Utrillo's name in relation to certain paintings. See J. Merryman, 'The Moral Right of Maurice Utrillo' (1993) 43 *American Journal of Comparative Law* 445; A. Dietz, 'The Artist's Right of Integrity under Copyright Law: A Comparative Approach' (1994) 25 *IIC* 177.

Infringement of a moral right in the United Kingdom is actionable as a breach of a statutory duty<sup>4</sup> and will result in an award of damages. The moral rights of integrity and attribution recognized under the 1988 Act last for the same time as the copyright in the relevant work. The right to object to false attribution is less extensive, only lasting for 20 years after the author's death.<sup>5</sup> After the author's death, moral rights usually are exercised by their heirs,<sup>6</sup> but in some countries may be enforced by executive bodies such as the Ministry for Culture.

The moral rights in the 1988 Act were introduced to give effect to Article 6*bis* of the Berne Convention,<sup>7</sup> which requires that members of the Union confer on authors the right of attribution and integrity.<sup>8</sup> More specifically, it states that:

Independently of the author's economic rights, and even after the transfer of the said rights, the author shall have the right to claim authorship of the work, and to object to any distortion, mutilation or other modification of, or other derogatory action in relation to, the said work, which would be prejudicial to his honour or reputation.

Instead of replicating Article 6*bis* verbatim, the British legislature chose to introduce a series of detailed statutory provisions, each of which contains a number of conditions, limitations, and exceptions.<sup>9</sup> This has led commentators to suggest that the manner in which Article 6 has been implemented in the United Kingdom is 'cynical, or at least half-hearted'.<sup>10</sup> Given that failure to give effect to Article 6*bis* does not represent a ground of objection to the World Trade Organization,<sup>11</sup> it is unlikely that much will come of these complaints.

While moral rights have received a considerable amount of support,<sup>12</sup> particularly from creators, they have also been subject to a degree of criticism.<sup>13</sup> At a general level, moral rights

<sup>4</sup> CDPA s. 103.

<sup>5</sup> UK law also describes a further right, that of privacy in photographs, as a 'moral right': CDPA s. 85. We consider this briefly in Ch. 6. Breach of confidence may provide something akin to a divulgence right: see, e.g. *Prince Albert v. Strange* (1848) 2 *De G & Smith* 652 (1849) 1 *MacG CC* 25 (preventing unauthorized disclosure of previously unpublished artwork on grounds of common law copyright and breach of confidence).

<sup>6</sup> The rights pass on death to the person nominated by testamentary disposition, or else to the person to whom copyright is being passed; otherwise they are to be exercised by personal representatives, CDPA s. 95(1). As an exception, the right against false attribution passes to the author's personal representatives: CDPA s. 95(5).

<sup>7</sup> While various moral rights existed in the UK prior to 1989, it was widely believed that the protection was not sufficient to meet the criteria in the Berne Convention. The Gregory Committee (1952), Cmnd. 8662, paras. 219–26 had been reluctant to introduce such rights in 1956, anticipating difficulties in their drafting. The Whitford Committee, Cmnd. 6732, paras. 51–7, impressed by the form of their implementation in Dutch law, recommended their adoption in 1977. See G. Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 11; Adeney, ch.13.

<sup>8</sup> These were introduced at the Rome Conference in 1928. See Ricketson, paras. 8.92–8.116; Ricketson & Ginsburg, para. 3.28, p. 108, para. 10.07, pp. 590–94; Adeney, ch.6. Art. 6*bis* was in many ways a compromise. Durie tells us that the terms 'honour and reputation' were introduced in place of 'moral interests of the author' to satisfy objections of the common law jurisdictions. Most importantly, Art. 6(3) leaves Union countries free to determine the conditions under which the rights are exercised. Durie, 'Moral Rights and the English Business Community' [1990] *Ent LR* 40; Ricketson, para. 8.98; Ricketson & Ginsburg, para. 10.36, p. 614.

<sup>9</sup> CDPA ch. IV. The criticisms are that the provisions do not implement Berne; do not improve the position of authors; are, in practical terms, ineffective; and neglect the essential characteristics of moral rights.

<sup>10</sup> Ginsburg, 'Moral Rights in a Common Law System' [1990] *Ent LR* 121, 129.

<sup>11</sup> Cornish has suggested that the express recognition of moral rights might lay the foundation for less meagre treatment in future—particularly by penetrating judicial attitudes. Cornish, 'Moral Rights under the 1988 Act' [1989] *EIPR* 449.

<sup>12</sup> Although TRIPS requires member states to comply with Arts. 1 to 21 of Berne, it is notable that the agreement says that 'members shall not have rights or obligations under this Agreement in respect of the rights conferred under Art. 6*bis* of that Convention'.

<sup>13</sup> Dworkin, 'Moral Rights and the Common Law Countries' [1994] *AIPJ* 5, 34 (opposition to moral rights has at times bordered on the hysterical).

have been criticized for the fact that they are founded upon a romantic image of the author as an isolated creative genius who in creating a work imparts their personality upon the resulting work. Under this model, moral rights enable the author to maintain the 'indestructible creational bond' that exists between his or her personality and the work.<sup>14</sup> The notion of the romantic author, which became unfashionable in the second half of the twentieth century, has been criticized because it presents an unrealistic image of the process of authorship. In particular, it has been criticized for the fact that it fails to acknowledge the collaborative and inter-textual nature of the creative process.<sup>15</sup>

Another criticism made about moral rights focuses on what is perceived as their foreign or alien nature.<sup>16</sup> More specially, it has been suggested that moral rights, which have their origin in continental copyright systems,<sup>17</sup> cannot readily be absorbed or transplanted into a common law system.<sup>18</sup> Any attempt to do so will not only fail, it will also upset the existing copyright regimes.

Moral rights have also been criticized on the basis that they represent an unjustified legal intervention in the working of the free market. Such arguments highlight the fact that moral rights typically secure authors' interests at the expense of entrepreneurs, disseminators, and exploiters of copyright.<sup>19</sup> Given this, it is not surprising that, while authors' groups argue for further entrenchment of the rights (so that they are inalienable), the entrepreneurial interests lobby for further restrictions on the rights and their subjugation to voluntary market transactions.<sup>20</sup> Another criticism made of moral rights is that they prioritize private interests over the public interest. More specifically, it has been suggested that moral rights may inhibit the creation and dissemination of derivative creations, such as multimedia works and parodies.<sup>21</sup> For example, if an author was to use their moral right of integrity to prevent the publication

<sup>14</sup> Dietz, 'The Artist's Right of Integrity under Copyright Law' (1994) 25 *IIC* 177, 182.

<sup>15</sup> P. Jaszi, 'On the Author Effect: Contemporary Copyright and Collective Creativity' (1992) 10 *Cardozo Arts and Entertainment LJ* 293.

<sup>16</sup> For a discussion of tension along such 'comparative' lines, see I. Stamatoudi, 'Moral Rights of Authors in England: The Missing Emphasis on the Role of Creators' (1997) 4 *IPQ* 478. For similar concerns see the Gregory Report. For a less caricatured approach, see Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5, 6.

<sup>17</sup> The earliest French cases based moral rights on contract. However, by the end of the nineteenth century the courts recognized an artist's moral rights in their own right. For the French and German histories, see D. Saunders, *Authorship and Copyright* (1992), chs. 3 and 4. For a recent statement of the position in France, P. Dulian, 'Moral Rights in France through Recent Case Law' (1990) 145 *RIDA* 126. For an exhaustive (if dated) account, S. Stromholm, *Le Droit Moral de L'Auteur en droit Allemand, Française et Scandinave* (1966).

<sup>18</sup> While historically, there have been those who have wished to confine copyright to the protection of an author's pecuniary interests, they have not in general succeeded. The Engravings Act of 1735, for example, was directed, in part, to protecting an engraver against 'base and mean' imitations. See *Gambart v. Ball* (1863) 14 *CB (NS)* 306; 143 *ER* 463 (submission that Engravings Act could not be relied on to prevent photography on grounds that the Act's sole purpose was protection of reputation and quality, which was not diminished in a photograph, was rejected).

<sup>19</sup> Moral rights have been characterized as limits on the 'right of the owner of the copyright to do what he likes with his own'. *Preston v. Raphael Tuck* [1926] *Ch* 667, 674.

<sup>20</sup> Dworkin, 'Moral Rights and the Common Law Countries' (1994) 5 *AIPJ* 5 36 argues for 'a fair balance between the genuine moral interests of the author and the genuine economic interests of those using and exploiting copyright works', but his employment of the language of balance does not take the analysis very far.

<sup>21</sup> G. Pessach, 'The Author's Moral Right of Integrity in Cyberspace—A Preliminary Normative Framework' (2003) 34 *IIC* 250 (proposing a 'liberal' approach to use of components of existing works in new digitized works by reference to whether the later work 'is identified as a work of the first author'); J. Gaster, 'Copyright and Neighbouring Rights in the European Information Society', in *Copyright in Multimedia: Papers from the Aslib Conference held on 19 July 1995* (1995).

of a parody of their work, this would conflict with the right to free expression, and thus with broader public interests.<sup>22</sup>

With these initial points in mind, we now turn to look at the moral rights which are recognized in the United Kingdom.

## 2 THE RIGHT OF ATTRIBUTION (OR PATERNITY)

The right of attribution or (as the statute prefers) the right of paternity is perhaps the best-known of all the moral rights recognized in the United Kingdom. In essence the right of attribution provides the creators of certain types of works with the right to be identified as the author of those works.<sup>23</sup> While the right of attribution cannot be assigned, as we will see, it can be waived. The moral right of attribution lasts for the same period of time as the copyright in the relevant work.

The right to be named as author of a work carries with it a number of symbolic, economic, and cultural consequences. The reason for this is that the name of the author performs a number of different roles: it facilitates the management of intellectual works (through indexes, catalogues, and bibliographies),<sup>24</sup> the channelling of royalties (for example from the Public Lending Right), the interpretation of the work (insofar as it provides a psychological or biographical history of the author), the celebration, reward, and sustenance of authorial talent or genius,<sup>25</sup> and the construction of the individual as the creator of an intellectual *oeuvre*. In many cases, the right to be named as author of a work will be unnecessary because it is in the interests of all the parties concerned in the exploitation of the work to attribute it. Where this is not the case, however, the right of attribution is potentially a very important right.

Before looking at the right of attribution in more detail, it should be noted that an author may be able to rely on a number of mechanisms other than the right of attribution to ensure that they are named as author. Publishing contracts, for example, will often contain terms dealing with attribution which may be enforced against a publisher<sup>26</sup> and possibly also against third parties who knowingly induce such breaches. In some circumstances, such a term might be implied into a contract.<sup>27</sup> The right to be named as author of a work may also be ensured by other means such as union power and industry standards.<sup>28</sup> The law of reverse passing-off might also be used to prevent another person from falsely claiming that they are the author of a work.

<sup>22</sup> See *Confetti Records v. Warner Music UK Ltd* [2003] EMLR (35) 790 (para. 161) (declining to 'read down' the integrity right to give effect to ECHR, Art. 10).

<sup>23</sup> Cf. the information protected by rules on 'rights-management information' discussed in Ch. 13. For a detailed exploration of the inter-relation between moral rights and protection of rights-management information, see J. Ginsburg, 'Have Moral Rights Come of (Digital) Age in the United States?' (2001) 19 *Cardozo Arts and Entertainment LJ* 9; S. Dusollier, 'Some Reflections on Copyright Management Information and Moral Rights' (2003) 25 *Columbia Journal of Law & the Arts* 377.

<sup>24</sup> See R. Chartier, 'Figures of the Author', in Sherman and Strowel.

<sup>25</sup> A link is frequently drawn between the right to be named and the ability to gain a reputation and make an income as an author or artist. See *Tolnay v. Criterion Film Productions* [1936] 2 *All ER* 1625.

<sup>26</sup> *Ibid* (breach of contractual stipulation to give author of a screenplay credit was held to give rise to claims for damages for loss of advertising and publicity which would enhance the author's reputation in the future).

<sup>27</sup> *Miller v. Cecil Film Ltd* [1937] 2 *All ER* 464 (implying term that credit should not be given to person other than the plaintiff author, but not implying a term that the plaintiff should be mentioned).

<sup>28</sup> See D. Read and D. Sandelson, 'Credit Where Credit's Due' [1990] *Ent LR* 42.

## 2.1 SUBSISTENCE OF THE RIGHT OF ATTRIBUTION

In order for the right of attribution to arise it is necessary to show two things. First, it is necessary to show that the work in question is the type of work to which the right applies. Second, it is also necessary for the right of attribution to have been asserted.<sup>29</sup> We will deal with each of these requirements in turn.

### 2.1.1 Relevant works

The right of attribution is only granted to the creators of a limited number of works. More specifically, the right is only recognized in relation to original literary, dramatic, musical, and artistic works, and in films. In the case of literary, dramatic, musical, and artistic works the right is granted to the author of the work. In the case of films, the right of attribution is granted to the director.<sup>30</sup>

Within these general categories, a number of specific types of work do not give rise to a right of attribution. The right of attribution does not arise in relation to works made for the purpose of reporting current events. Nor does it apply to contributions to a newspaper, magazine, or periodical, or an encyclopedia or similar work.<sup>31</sup> These exceptions, which are difficult to reconcile with the Berne Convention, reflect government concessions to the lobbying power of the newspaper and other publishing industries. The objections were informed by fears that the need to name the author of a work would interfere with the prompt delivery of news.<sup>32</sup> It was also feared that enabling an author of a news story to be named would undermine the image of the news as being objective and neutral.

The 1988 Act also states that the right of attribution does not apply to computer programs,<sup>33</sup> computer-generated works,<sup>34</sup> typefaces,<sup>35</sup> or works protected by Crown or similar copyright.<sup>36</sup> No satisfactory policy-based justification has been given for denying authors of computer programs or typefaces a right of attribution.

### 2.1.2 The requirement of assertion

The right of attribution does not arise until it has been asserted.<sup>37</sup> Even if it has been asserted, in an action for infringement of the attribution right the courts take into account any delay in asserting the right when considering remedies.<sup>38</sup> The imposition of the requirement of

<sup>29</sup> The requirement of assertion and the rules governing who is bound by an assertion have the effect that the attribution right occupies a grey area between property rights and rights *in personam*. In many cases, third parties will be bound by the attribution right whereas an author who was forced to rely on contract law might not succeed.

<sup>30</sup> For such works created prior to 1 Aug. 1989, see CDPA, Sched. 1, para. 23(2)–(3) (the right applies: except in the case of a film made before that date; and other works where the author died before that date; or where the author had assigned the copyright before that date).

<sup>31</sup> CDPA s. 79(6). <sup>32</sup> Laddie *et al.*, para. 27.14; Copinger, para. 11–32, p. 642.

<sup>33</sup> TRIPS Art. 10 states that computer programs shall be protected as literary works under the Berne Convention. Thus while TRIPS Art. 9 does not require that members apply Art. 6*bis*, it seems (somewhat counter-intuitively) that Art. 10 requires that Art. 6*bis* be applied as regards computer programs.

<sup>34</sup> Perhaps on the ground that such works do not fall within Berne, that is, a Union for the protection of the rights of authors: Berne Art. 1.

<sup>35</sup> CDPA s. 79(2). Typefaces are probably within the scope of Art. 2(7), which requires members only to protect such works by copyright if they do not offer protection as designs and models. Typefaces also fall under the remit of the Vienna Convention.

<sup>36</sup> CDPA s. 79(7). Perhaps justified because of Berne Art. 2(4).

<sup>37</sup> CDPA s. 78(1). <sup>38</sup> CDPA s. 78(5).

assertion is said to be justified because Article 6*bis* merely requires members of the Union to confer on authors the right 'to claim' authorship.<sup>39</sup> However, it has been suggested that such an interpretation is unsustainable given that Article 5(2) of the Berne Convention requires that an author's 'enjoyment and exercise of these rights shall not be subject to any formality'.<sup>40</sup> As the TRIPS Agreement does not require that Article 6*bis* of Berne be implemented, the merits of these arguments are unlikely to be tested before the WTO.<sup>41</sup>

In general, the right can be asserted in one of two ways. First, when copyright in a work is assigned, the author or director includes a statement that asserts their right to be identified.<sup>42</sup> Second, the right may be asserted by an instrument in writing signed by the author or director. The form of assertion has an important impact on the extent to which third parties are bound to comply with the right.<sup>43</sup> If the first mode of assertion is chosen, it binds the assignee and anyone claiming through them, whether or not they have notice of the assertion. If the second mechanism is employed, however, the assertion only binds those who have notice of the assertion. The former is consequently the more effective mode of assertion. There seems to be no reason why an author or director should not use both methods or make a number of assertions.

Two additional modes of assertion exist in relation to artistic works.<sup>44</sup> First, the right will have been asserted if the artist is identified on the original, copy, frame, mount, or other attachment when the artist or the first owner of copyright parts with possession of the original.<sup>45</sup> Such an assertion binds anyone into whose hands the original or copy comes (including borrowers and purchasers), whether or not the identification is still present or visible.<sup>46</sup> If the work is exhibited in public thereafter, the artist should be named.<sup>47</sup> Second, the right may be asserted by the inclusion of a specific statement to that effect in a licence that permits copies of the work to be made.<sup>48</sup> This kind of assertion binds the licensee and anyone into whose hands a copy made in pursuance of the licence comes, whether or not they have notice of the assertion.<sup>49</sup>

## 2.2 INFRINGEMENT

The attribution right provides that, when the work is dealt with in certain ways, authors and directors have the right to be identified as author of the work. In order for the right of attribution to be infringed, it is necessary to show that:

- (i) the author has not been properly identified;
- (ii) the work has been dealt with in circumstances where attribution is required; and
- (iii) none of the defences or exceptions applies.

<sup>39</sup> The requirement of assertion also helps to overcome some of the problems that may arise in tracing authors, Laddie *et al.*, para. 27.10.

<sup>40</sup> See Ginsburg, 'Moral Rights in a Common Law System' [1996] *Ent LR* 121, 128.

<sup>41</sup> It has been argued that 'the assertion requirement will have to go when the legislation is amended and that such an amendment is already overdue'. Stamatoudi, note 16 above, 504.

<sup>42</sup> This may be difficult because the author need not be a party to such an assignment, for example, where they are not first owner. But, in such circumstances, if there is an assertion, it does not seem to matter that the author was not party to the assignment.

<sup>43</sup> CDPA s. 78. <sup>44</sup> See 491 *Hansard* (HL) cols. 346–56. <sup>45</sup> CDPA s. 78(3)(a).

<sup>46</sup> CDPA s. 78(4)(c). <sup>47</sup> Described as 'ill-drafted' by Copinger, para. 11–23, 637.

<sup>48</sup> CDPA s. 78(2)–(3). <sup>49</sup> CDPA s. 78(4)(d).

### 2.2.1 Nature of the identification

For the attribution right to be infringed, it is necessary to show that the author has not been properly identified as an author. Merely thanking a person for ‘preparing materials’ was held not to have identified his authorship.<sup>50</sup> In order to be properly identified, the name of the author must appear in or on each copy of the work in a clear and reasonably prominent manner.<sup>51</sup> Where it is not appropriate for the name of the author to appear on each copy of the work, the name must appear in a manner which is likely to bring their identity to the notice of a person acquiring a copy of the work.<sup>52</sup> So long as the name becomes apparent during its use, there does not seem to be any need for the author to be named in a way which can be ascertained prior to acquisition of the copy.<sup>53</sup> Thus, an author of a book might be named on the inside of the work. Where a performance, exhibition, showing, broadcast, or cable transmission is involved, the author has the right to be identified in a manner likely to bring their identity to the attention of a person seeing or hearing the communication. Where the relevant work is a building, the identification should be visible to persons entering or approaching the building.<sup>54</sup>

If, in asserting the right of attribution, the author specifies that a pseudonym, initials, or some other form of identification such as a symbol be used (as the Artist-formerly-known-as-Prince has required), then that form of identification should be adopted.<sup>55</sup> Otherwise any reasonable form of identification may be used. It is not clear whether the attribution right gives rise to a right of anonymity, which may be valuable in raising public curiosity about the work and in protecting the author from vilification or criticism. However, it seems unlikely from the wording of the provisions that if an author made it clear that they wanted the work to be published anonymously, that this would be treated as the particular form of identification that had to be used.

### 2.2.2 Circumstances where attribution is required

The right to be identified as author or director of a work only arises when the work is dealt with in certain ways. While the particular circumstances in which the right arises vary depending upon the type of work in question, in all cases the right applies whether the act is carried out in relation to the whole work or a substantial part thereof.

An author of *literary or dramatic work* has the right to be identified whenever copies of the work are published commercially, or the work is performed in public or broadcast.<sup>56</sup> This means, for example, that the author of a play has the right to be named when copies of the play are sold in bookshops or the play is performed in public. Similarly, the writer of a film script has the right to be named when videos are sold to the public, or the film is broadcast on television, (but not, it seems, on rental copies).<sup>57</sup> The right applies equally to adaptations of the work: so the author of a French novel has the right to be named on copies of an English translation.

Songwriters are treated slightly differently. The author of the music or lyrics of a song has the right to be named on commercial publication of copies of the song—such as the issue of songbooks, sound recordings, or films containing a recording of the song. However, the right of attribution given to the author of a song does not extend to circumstances where the song

<sup>50</sup> *Sawkins v. Hyperion Records* [2005] 1 WLR 3281.      <sup>51</sup> CDPA s. 77(7).      <sup>52</sup> CDPA s. 77(7)(a).

<sup>53</sup> Cf. Copinger, para. 11–17, p 634 (arguing that identification needs to be outwardly apparent).

<sup>54</sup> CDPA s. 77(7)(b).      <sup>55</sup> CDPA s. 77(8).      <sup>56</sup> CDPA s. 77(7)(a).

<sup>57</sup> Although the practice of renting copies of films in plain packaging is common, this does not depend upon the absence of a right of attribution in relation to rental: for in such cases, the director of a film, or the author of other works included therein, will usually be identified in the film credits.

is performed in public or broadcast.<sup>58</sup> This limitation, often dubbed the disc-jockey exception, was introduced so that disc jockeys and broadcasters would not have to name the songwriters when songs are played at discotheques or broadcast. It thus allows them to continue the current practice whereby only the name of the recording artist is mentioned.<sup>59</sup>

Where a right of attribution relates to an *artistic work*, the artist has the right to be identified where the work is published commercially, is exhibited in public, or where a visual image of it is broadcast or included in a cable transmission. If an artwork is filmed, the artist should be identified when copies of the film are issued to the public or if the film is shown in public. The 1988 Act also specifies that the creator of a building, sculpture, or work of artistic craftsmanship should be named where 'copies of a graphic work representing it, or of a photograph of it' are issued to the public.<sup>60</sup> The author of a work of architecture has the right to be identified on the building as constructed. If a series of buildings are made, however, the architect only needs to be identified on the first building to be constructed.

The director of a *film* has the right to be identified whenever the film is publicly shown, broadcast or included in a cable service. The director also has the right to be named on copies of the film, but not (it seems) where the films are rented.

### 2.2.3 Exceptions

A number of exceptions and qualifications are placed upon the scope of the right of attribution by the 1988 Act. The right of attribution is constrained by section 79(3) which provides that if the employer or copyright owner authorized reproduction, etc. of the work, then the right does not apply.<sup>61</sup> It has been suggested that this exception can be explained on the basis that, as an employer has paid for the creation of the work, they should have complete freedom to exploit it. It is also said that they should not be required to keep detailed records of who contributes to a collaborative work.<sup>62</sup> Insofar as the right of attribution plays a role in the establishment of an author's or artist's reputation, the link between authorship and livelihood is less important when the creator is employed.

The 1988 Act also provides that the right of attribution will not be infringed where the act in question amounts to fair dealing for the purpose of reporting current events by means of a sound recording, film, broadcast, or cable programme.<sup>63</sup> The 1988 Act also provides that the attribution right is not infringed where the work is incidentally included in an artistic work, sound recording, film, broadcast, or cable programme.<sup>64</sup> Exceptions also exist where the work is used for the purposes of examinations, Parliamentary or judicial proceedings, and government inquiries.<sup>65</sup>

<sup>58</sup> CDPA s. 77(2), (3).

<sup>59</sup> This was so even though there was no specific obligation to do so. However, WPPT, Art. 5 now confers moral rights on the performers of 'live aural performances or performances fixed in phonograms'.

<sup>60</sup> CDPA s. 77(4). <sup>61</sup> CDPA s. 79(3). <sup>62</sup> Laddie *et al.*, para. 27.12.

<sup>63</sup> CDPA s. 79(4)(a). This corresponds with CDPA s. 30(2)–(3), which require 'sufficient acknowledgement' in cases of fair dealing for reporting current events by other means, such as in newspapers. The effect is that the fair-dealing defences parallel the moral rights provisions: fair dealings where acknowledgement is required but not provided are likely to be infringements of both the copyright and the author's moral right.

<sup>64</sup> CDPA s. 79(4)(b).

<sup>65</sup> The right of attribution applies to cases which would not infringe copyright because they amount to cases of fair dealing for purposes of criticism or review. However, because a finding of fair dealing requires 'sufficient acknowledgement' of the author, most cases of fair dealing will not infringe the moral right of attribution. See also Adeney, para. 14.44, p. 401. These provisions relate to Berne Art. 10, which is intended to protect the author's attribution right: see Gregory Committee, para. 42.

Further exceptions to the right of attribution exist in relation to works that lie at the interface between design law and copyright law. The defences to infringement of copyright granted by sections 51 and 52 of the 1988 Act also apply to infringement of the attribution right. Consequently, if a person makes an article to a design document, there is no need to obtain the permission of the copyright owner, or to name the author of the design. This is also the case where 25 years has elapsed since an artistic work has been industrially applied. Such a time limitation fits awkwardly with the broader conception of moral rights as the personal rights of the artist.

#### 2.2.4 Waiver

Finally, it should be noted that an author can waive his or her right of attribution.<sup>66</sup> Waiver of the right of attribution, which is relevant for activities such as 'ghost writing', is discussed in more detail below in the context of the integrity right.

### 3 THE RIGHT TO OBJECT TO FALSE ATTRIBUTION

The right to object to false attribution is the oldest of the United Kingdom's statutory moral rights.<sup>67</sup> Re-enacted in section 84 of the 1988 Act, this right is effectively the flip side of the attribution right: the right of attribution provides authors with the right to be named on works which they have created, whereas the right to object to false attribution provides individuals with the right *not* to be named on works which they have not created.<sup>68</sup> Unlike the right of attribution, the right to object to false attribution applies whether or not the claimant is an author. The right to object to false attribution applies to persons<sup>69</sup> wrongly named as the authors of literary, dramatic, musical, or artistic works, or as the directors of films.<sup>70</sup> The right of false attribution only lasts for 20 years after the death of the person who is falsely said to be the author.

The right is infringed by a person who issues copies of a work to the public, or exhibits in public an artistic work, on which there is a false attribution (rather than by the person who makes the false attribution). The right can also be infringed by a person who performs, broadcasts, or shows the work and who knows that the attribution is false. Section 84(5) also provides for infringement where certain commercial acts are done with the knowledge that the attribution is false.<sup>71</sup>

<sup>66</sup> CDPA s. 87(2).

<sup>67</sup> CDPA s. 84(6) re-enacts CA 1956, s. 43 which, in turn, was an expansion to literary, dramatic, and musical works of the Fine Art Copyright Act 1862, s. 7(4). Gregory Committee, para. 225. CDPA, Sched. 1, para. 22. The general transitional provision of the 1988 Act states that no act done before 1 Aug. 1989 is actionable as a violation of these moral rights, but preserves causes of action previously arising under s. 43 of the 1956 Act for violating the right against false attribution of authorship.

<sup>68</sup> For discussion of whether the Berne Convention implicitly requires recognition of such a right see Ricketson, para. 8.105; Ricketson & Ginsburg, para 10.19, p. 601 (suggesting Berne does not cover the case where an author is seeking to deny rather than establish their authorship).

<sup>69</sup> *Clark v. Associated Newspapers* [1998] 1 *All ER* 959, 964. According to Lightman J, the section confers a personal or civic right (at 965).

<sup>70</sup> The provision does not contain the usual exceptions for computer programs or computer-generated works, so that while the author of a program has no right to be named, a person who is not the author of a program has the right not to be named as its author.

<sup>71</sup> CDPA s. 84(5), (6) (possessing or dealing with a falsely attributed copy of the work in the course of business or, in the case of an artistic work, dealing with it in business as the unaltered work of the artist when in fact it was altered after leaving their possession, knowing or having reason to believe that there is false attribution).

Whether a work has been attributed to the wrong person depends on ‘the single meaning which the . . . work conveys to the notional reasonable reader’.<sup>72</sup> There is no need for the complainant to prove that the attribution actually caused them any damage.<sup>73</sup> Examples of situations where the right has been violated include the attribution to a member of the public of a newspaper article written by a journalist but based on conversations between the two,<sup>74</sup> and a newspaper parody of a politician’s diaries (see Fig. 10.1).<sup>75</sup>

In another decision, an author’s work was held to be falsely attributed when it was attributed to the author after having been substantially added to by another person without their consent.<sup>76</sup> On this basis, it seems that a replica of a painting that included the signature of the original artist could be said to be falsely attributed, since the replica painting would not be solely made by the original artist.<sup>77</sup> In the case of artistic works, the right to object to false attribution is extended by a special provision to circumstances where the work has been altered, even if that alteration only amounts to deletion of part of the work. This would be the case, for example, where a detail is cut from a broader canvas and sold as an unaltered original.<sup>78</sup> The right would also be infringed where a black-and-white drawing was colorized.<sup>79</sup>

The right to object to false attribution of authorship is supplemented by various non-statutory causes of action, such as the action for passing off or defamation.<sup>80</sup> Under the former, a person can complain where a work is misrepresented as being by the claimant, when it is in fact the work of the defendant.<sup>81</sup> In *Ridge v. English Illustrated Magazine* the defendant published a story that they attributed to the plaintiff, a well-known author, which in fact had been written by a grocer’s assistant from Bournemouth.<sup>82</sup> The court instructed the jury to find the publication to be defamatory if ‘anyone reading the story would think that plaintiff was a mere commonplace scribbler’.<sup>83</sup>

<sup>72</sup> *Clark*, note 69 above, 968; also [1998] RPC 261. <sup>73</sup> *Ibid*, 965.

<sup>74</sup> *Moore v. News of the World* [1972] 1 QB 441 (finding false attribution in a newspaper article entitled ‘How my love for the Saint turned sour by Dorothy Squires’, written in the first person by journalist on basis of conversations with Squires). It is not altogether clear whether the work was falsely attributed because Squires had not written the words, or because she had not spoken them. In the light of the changes in the 1988 Act, which confer copyright on spoken words, it seems that a verbatim account of a speech by a journalist should not be treated as having been falsely attributed to the speaker.

<sup>75</sup> *Clark v. Associated Newspapers* [1998] 1 All ER 959; [1998] RPC 261.

<sup>76</sup> *Noah v. Shuba* [1991] FSR 14 (finding no false attribution of 17 words added to passage extracted from the plaintiff’s work, since these words did not constitute a work, but that there was false attribution of the extract as a whole as attributed solely to the plaintiff). In effect the plaintiff succeeded in protecting his right to endorse the defendant’s services, and thus indicates a potential usefulness in the context of ‘personality merchandising’.

<sup>77</sup> *Preston v. Raphael Tuck* [1926] Ch 667 (replica with no signature would not be falsely attributed).

<sup>78</sup> CDPA s. 84(6) (introduced in response to a complaint of this sort by the English painter Landseer). For discussion of the extent of such alterations see *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (alteration must be material in the sense that it might affect the credit and reputation of the artist).

<sup>79</sup> *Ibid* (in a case where colour was taken to be a very important element).

<sup>80</sup> Indeed, Fine Art Copyright Act 1862, s. 7(4) was described as ‘a kind of statutory prohibition against what is commonly known as a passing off of the goods of one person as the goods of another’: *Carlton Illustrators*, note 78 above, 779.

<sup>81</sup> Passing off requires a claimant to demonstrate not merely a misrepresentation, but also the existence of goodwill and likelihood of damage. It is broader than s. 84 in that s. 84 relies on a single meaning, whereas a misrepresentation can be established in passing off in circumstances where a substantial or large number of consumers are likely to be misled. See *Clark v. Associated Newspaper* [1998] 1 All ER 959.

<sup>82</sup> *Ridge v. English Illustrated Magazine* [1911–16] MacG CC 91.

<sup>83</sup> See also *Marengo v. Daily Sketch* (1948) 65 RPC 242 (a cartoonist called KIM succeeded in a passing-off action against another cartoonist using the name KEM); *Samuelson v. Producers Distributing* [1932] 1 Ch 201 (passing off by giving film similar title to play).

On the historic day Tony Blair made his Commons debut as Prime Minister, Alan Clark found himself in the ignominious position of sitting on the Opposition benches. PETER BRADSHAW imagines how the great diarist would record the event

## It's wonderful to be back in the old place

Tuesday 6th May

*Albany*  
Well, the Tory political landscape is a smoking ruin.

But as the dawn comes up, and Blair's Messerschmitts drone away over the horizon, I am delighted to report that the smart shops and elegant terraces of Kensington and Chelsea are unscathed. The only vote I seem to have lost is that of Michael Winner, the film director, who cut up rather rough over my comments about his house in this Diary.

We are in a mess, though, and every revolting little BBC functionary and Guardian scribbler with a colleague or homosexual "partner" on the New Labour benches is gloating.

Little Major has mumbled something about the show being over and it being time to leave the stage. This apparently was a phrase he learned at his father's knee as the old boy, wearing smeared make-up and floppy-toed clown shoes, hid in his dressing room with the lights off while the angry audience demanded their money back.

We have now started a spastic "leadership contest", which has about as much political significance as the election of a refreshments secretary in a suburban golf club. Hesseilne is *hors de combat*, and while he was delirious with pain-killers on his hospital bed, his lady wife Anne typed out his withdrawal statement, then gripped his writing hand and wrote out his signature underneath. I'm not sure how he took the news of his standing down.

Clarke is standing for the collaboration with Kohl faction, Michael Howard is running on his iron-fist-in-the-iron-glove ticket, apparently with fresh-faced, apple-cheeked young Hague as his supporter, an arrangement toasted over champagne earlier this evening.

No one seems to be begging me to stand.

Wednesday 7th May

*Albany*  
*Morning*  
Hague has dumped.

His clique of admirers encouraged him to think of himself as the Young Pretender, and he is believing this publicity whole-heartedly. So the engagement is broken off.

Now Dorrell is courting the bare vote and Redwood's candidacy is gravely damaged by the support of The Times.

A complete shower. I am going to the Commons.

House of Commons  
Evening

Extraordinary. In the Commons I saw what appeared to be a crocodile of schoolchildren in the Central Lobby, moving unimpeded into the Chamber. When I complained, someone explained that this was the New Labour intake, all polytechnic lecturers, media folk and trades union press officers, with their electronic pagers dutifully turned off, and the person at their head barking instructions was little Mandelson — although what he knows about Parliament could be written on the back of a stamp.

It is *marvellous* to be back in the House; I simply can't believe it has been five years, although it was *very* strange to see the sides reversed. I couldn't get used to the through-the-looking-glass effect — I felt dizzy and disorientated and had a slight nose bleed.

We were in opposition when I first arrived in '74, when Ted Heath was Leader and it was a disagreeable shock to see that he is *still here*, Sir Edward Heath, Father of the House, still pompous and slow-witted — visibly bridle when Gwyneth Dunwoody, in her speech proposing dear Betty Boothroyd as Speaker, called him "Mr" Heath.

Later I was strolling towards the Strangers Bar, whistling a lively air, when I came across a *very* pretty girl in tears. "What's the matter?" I asked. The dear little thing gulped and pouted and said: "It's my first day, I'm lost ... " I twinkled like Alec d'Urberville. "Never mind," I said, proffering a hanky. "It's easy for a secretary to get lost on her first day." She turned on me, her beautiful eyes flashing angrily. "I am the New Labour Member for Watford!" she shouted, and ran off down the corridor.

But she still has my handkerchief — an excuse to get back in touch!

How have I existed out of this place?

## 4 RIGHT OF INTEGRITY

The right of integrity is one of the most important of the innovations in the 1988 Act. The moral right of integrity lasts for the same time as the copyright in the relevant work. The right of integrity is the right to object to derogatory treatment of a work, or any part of it. The basis for this authorial prerogative is that the artist, through the act of creation, has embodied some element of their personality in the work, which ought to be protected from distortion or mutilation.<sup>84</sup> In some cases, this carries with it the corollary that the artist feels some degree of responsibility for the work.<sup>85</sup> The desire to protect the reputation of authors was also a factor used to support the right.

### 4.1 SUBSISTENCE OF THE RIGHT

As with the other moral rights recognized under the 1988 Act, the right of integrity is given to the author of a literary, dramatic, musical, or artistic work, and the director of a film.<sup>86</sup> It is not given to computer programs, nor to computer-generated works.<sup>87</sup> With respect to computer programs, the exclusion is justified on the basis that it might be necessary to alter, debug, improve, or modify a program to render it suitable to achieve its purpose.<sup>88</sup> The integrity right does not apply to a work made for the purpose of reporting current events,<sup>89</sup> to publications in newspapers, or collective works of reference such as encyclopedias.<sup>90</sup> In the latter case, the relevant publishers were keen to retain their power to edit or otherwise alter any submissions without having to consult contributing authors.<sup>91</sup>

### 4.2 INFRINGEMENT OF THE RIGHT

In order for the right of integrity to be infringed, an author or director must be able to show that:

- (i) there has been a 'derogatory treatment' of the work;
- (ii) the work has been dealt with in circumstances where the author is protected from derogatory treatment;

<sup>84</sup> A. Dietz, 'The Artist's Right of Integrity under Copyright Law' (1994) 25 *IIC* 177, 181. See also B. Ong, 'Why Moral Rights Matter: Recognising the Intrinsic Value of Integrity Rights' (2003) 26 *Columbia JL & the Arts* 297.

<sup>85</sup> This is the case, for example, with Stanley Kubrick's reaction to copy-cat violence (and the resulting media coverage) that followed the release of the film he directed, *A Clockwork Orange* (1971).

<sup>86</sup> CDPA s. 80(1). For such works created prior to 1 Aug. 1989, see Sched. 1, para. 23(2)–(3) (the right applies: except in the case of a film made before that date; and other works where the author died before that date; or where the author had assigned the copyright before that date). Colourization of pre-1989 black-and-white films would not infringe the moral right of integrity. See Laddie *et al.*, para. 27.21. However, insofar as the film consists of photographs of which the director is the author, colourization might incur liability on the basis of 'false attribution' under CDPA s. 84(6). Cf. *Carlton Illustrators v. Coleman* [1911] 1 *KB* 77 (on Fine Art Copyright Act 1862, s. 7). This last caveat would not apply to films made after 1956.

<sup>87</sup> CDPA s. 81(2). See the discussion in relation to these exclusions from the right of attribution above as to whether this is compatible with Berne.

<sup>88</sup> Cf. Copinger, para. 11–50 p.649 (observing that inept alterations to a computer program which are still likely to be regarded as the work of the original author might be highly damaging to his reputation). The right of integrity for the author of a computer program is limited even in France: Dietz, 'The Artist's Right of Integrity under Copyright Law' (1994) 25 *IIC* 177, 184.

<sup>89</sup> CDPA s. 81(3).

<sup>90</sup> CDPA s. 81(4).

<sup>91</sup> See Copinger, para. 27–111ff. pp. 1423–4.

- (iii) none of the exceptions apply; and
- (iv) the right has not been waived or the action consented to by the author.

#### 4.2.1 Derogatory treatment

In order for an author or director to show that the right of integrity has been breached, it is necessary to show that there has been a ‘derogatory treatment’ of their work. Before looking at the meaning of ‘derogatory’, it is necessary to explore what the Act means when it refers to a ‘treatment’ of the work.

*Treatment.* ‘Treatment’ of a work means any ‘addition to, deletion from, alteration to or adaptation of the work’. The concept of the work that is employed here is that of an autonomous artefact, which is born out of, tied to, or related to neither other works, nor its environment. Moreover, the work has its own internal integrity or logic (a beginning, middle, and end; a foreground, middleground, and background; line, shade, colour).<sup>92</sup> For a treatment of the work to take place, it seems that the defendant must interfere with the internal structure of the work.<sup>93</sup> This idea of treatment, it seems, would cover a situation such as in *Noah v. Shuba*<sup>94</sup> where 17 words were added to the claimant author’s medical guide. It would also cover situations where a portion of a painting was cut from its original canvas and exhibited; a song was chopped up and inserted into a megamix;<sup>95</sup> a drawing was reproduced in reduced size or recoloured;<sup>96</sup> or a black-and-white film ‘colourized’.<sup>97</sup> In these cases the internal composition or structure of the work is changed.

The definition of treatment that is used in the United Kingdom is narrower than is employed in Article 6bis of the Berne Convention, which requires that the author be able to object to ‘any... derogatory action’ in relation to a work. The broader definition used in Berne seems to acknowledge that a treatment of a work can take place even though the composition or structure of the work is not altered. Importantly it suggests that a treatment of a work can take place where the meaning and significance of the work is affected. It has been suggested, for example, that the mere act of placing a work in a new context, such as the hanging of a religiously inspired artistic work alongside a piece of erotic art, probably would not amount to a treatment of a work under UK law. It would, however, amount to a treatment of the work under the Berne Convention.<sup>98</sup>

<sup>92</sup> *Pasterfield v. Denham* [1999] FSR 168, 180. This structural approach is evident in the interpretation of the concept of ‘alteration’ under the Fine Art Copyright Act 1862, s. 7(4) in *Carlton Illustrators v. Coleman* [1911] 1 KB 771 and *Preston v. Raphael Tuck* [1926] Ch 667.

<sup>93</sup> No indication is given as to the degree of significance to be attached to changing the ‘meaning’ rather than the structure, sequence, and organization of the work. Laddie *et al.*, para. 27.17 (actual physical treatment not as important as message).

<sup>94</sup> See note 76 above. <sup>95</sup> *Morrison v. Lightbond* [1993] EMLR 144.

<sup>96</sup> In *Tidy v. Trustees of the Natural History Museum* (1998) 39 IPR 501, 503 neither party disputed that a reduction was an alteration. Cases of alteration under Fine Art Copyright Act, s. 7(4) will be clear cases of ‘treatment’: *Carlton Illustrators v. Coleman* [1911] 1 KB 771 (colouring of drawing) and *Preston v. Raphael Tuck* [1926] Ch 667.

<sup>97</sup> *Huston v. Turner Entertainment* (1991) 23 IIC 702 (French Cour de Cassation) (injunction granted to prevent television broadcast of colourized version of *The Asphalt Jungle*). See B. Edelman, ‘Applicable Legislation Regarding the Exploitation of Colourized Films’ (1992) 23 IIC 629; J. Ginsburg, ‘Colors in Conflicts’ (1988) 36 *Journal of the Copyright Society USA* 810.

<sup>98</sup> Dworkin and Taylor (p. 97) argue that to put an artistic work in a pornographic exhibition would not be a treatment. See also Copinger, para 11–43, p. 647; Cornish and Llewelyn, para 12–75, p. 492; Adeney, para 14.63, p. 406 (referring to the ‘treatment’ concept as ‘unexpectedly narrow’ in that it does not cover ‘non-transformational uses of the work, such as its use in a particular context’).

In the absence of much case law, we can only speculate as to which of the following scenarios would be considered to be a ‘treatment’ under UK law: placing two written works side by side in a bound volume? Changing the title of a work? Placing a book in an offensive or vulgar dust jacket?<sup>99</sup> Placing a caption on the frame of a painting? Placing a caption beside a painting?<sup>100</sup> Placing a ribbon around the neck of a sculpture of a goose? Placing a sculpture designed for a particular location in a different location? Performing a song’s lyrics to a different tune or adding different words to a song’s music?<sup>101</sup> Performing a tragedy in a manner whereby it seems like a farce?<sup>102</sup> Adding recordings of the claimant’s music to a film of which they did not approve?<sup>103</sup> Interrupting a film for advertising breaks?<sup>104</sup>

The type of activities that will be considered to be a ‘treatment’ is further restricted by the fact that treatment is defined to exclude translations of literary and dramatic works, and arrangements or transcriptions of musical works involving no more than a change of key or register.<sup>105</sup> It is unclear why moral rights are deemed to be inappropriate here. One rather implausible explanation is that such acts never affect the internal structural or composition of a work.<sup>106</sup> Another possible explanation is that these activities would amount to adaptations of the work and as such require the consent of the copyright owner.<sup>107</sup> However, it is clear that an inaccurate translation may have a negative impact upon an author of a literary work.<sup>108</sup> It may be that, in order to minimize the incompatibility between UK law and Article 6*bis*, the courts might treat an inaccurate or poor-quality translation as if it were not a ‘translation’ at all, thus falling outside the scope of the exclusion.<sup>109</sup>

‘Derogatory’. Once it has been shown that there has been a treatment of the work, it is then necessary to show that the treatment was ‘derogatory’. Section 80(2)(b) of the 1988 Act states that a treatment is derogatory if it amounts to a ‘distortion’ or ‘mutilation’ of the work; or if it is otherwise prejudicial to the honour or reputation of the author.<sup>110</sup>

As yet there is little indication of what the 1988 Act means when it talks about the ‘distortion’ or ‘mutilation’ of a work.<sup>111</sup> There appears, however, to be a growing consensus that, in

<sup>99</sup> *Mosely v. Staley Paul & Co.* [1917–23] *MacG CC* 341 (where such action was held to be defamatory).

<sup>100</sup> *Pasterfield v. Denham* [1999] *FSR* 168, 180.

<sup>101</sup> In *Confetti Records v. Warner Music UK Ltd* [2003] *EMLR* (35) 790, the defendants had ‘rapped’ over the claimant’s ‘track’ (which comprised an insistent instrumental beat accompanied by the vocal repetition of the word ‘burning’). The defendant accepted that this was a treatment, but the judgment of Lewison J. leaves unstated what was ‘treated’—the musical work by the addition of the rap, or the literary work comprising the repetition of a single word. A more thorough analysis would have been helpful.

<sup>102</sup> Ricketson, para. 8.107; Ricketson & Ginsburg, para. 10.22, p. 603.

<sup>103</sup> *Shostakovich v. Twentieth-Century Fox Film Corp* (1948) 80 *NYS (2d)* 575 (failed). Apparently the claim was successful in France: *Société le Chant de Monde v. 20th Century Fox* 1953 *DA* 1954 16 80 cited in Durie, ‘Moral Rights and the English Business Community’ [1991] *Ent LR* 40, 42.

<sup>105</sup> CDPA s. 80(2)(a).

<sup>106</sup> See Dworkin, ‘Moral Rights and the Common Law Countries’ (1994) 5 *AIPJ* 22, 22.

<sup>107</sup> See P. Goldstein, ‘Adaptation Rights and Moral Rights in the UK, the US and the Federal Republic of Germany’ (1983) 14 *IIC* 43.

<sup>108</sup> See, e.g. the French case of *Leonide Zorine v. Le Lucernaire* [1987] *ECC* 54.

<sup>109</sup> There is authority that suggests that a ‘translation’ must be accurate: *Wood v. Chart* (1870) *LR* 10 *Eq* 193, 205; *Lauri v. Renad* [1892] 3 *Ch* 402.

<sup>110</sup> CDPA s. 80(1), (2).

<sup>111</sup> In *Tidy v. Natural History Museum* (1998) 39 *IPR* 501, 503 it was accepted that a reproduction in reduced size is not a mutilation.

order for a work to be distorted or mutilated, the action must be prejudicial to the honour or reputation of the author.<sup>112</sup>

The question what the phrase ‘prejudicial to honour and reputation’ means was considered in the Canadian case *Snow v. The Eaton Centre*.<sup>113</sup> Michael Snow, a sculptor of international repute, created a work entitled ‘Flight-Stop’ which he sold to a shopping complex in Toronto called the Eaton Centre. The work comprised 60 geese flying in formation. The Eaton Centre tied ribbons around the necks of the geese as a Christmas decoration. Snow argued that this was prejudicial to his honour and reputation (the Canadian Copyright Act being in similar terms to the British 1988 Act).<sup>114</sup> Snow was adamant that his naturalistic composition was made to look ridiculous by the addition of the red ribbons, which he likened to the addition of earrings to the Venus de Milo. Snow’s views were shared by a number of well-respected artists and experts. Although the Eaton Centre produced another artist to deny the claim, the Ontario High Court ruled for Snow and ordered that the ribbons be removed. In so doing the court indicated that, so long as it was not irrational, the author’s word on the matter would be sufficient. More specifically, O’Brien J said that the words ‘prejudicial to honour and reputation’ involved a certain subjective element or judgment on the part of the author, so long as it was reasonably arrived at.

In ascertaining what is meant by the phrase ‘prejudicial to the honour or reputation of the author’, as used in the 1988 Act, British courts have shown little inclination to follow the emphasis in the *Snow* case. In *Tidy v. Trustees of the Natural History Museum*,<sup>115</sup> the cartoonist Bill Tidy gave the gallery of the Natural History Museum the right to exhibit a series of black-and-white cartoons of dinosaurs that he had drawn. Tidy claimed that his right to integrity in the drawings had been violated when, in putting the cartoons in a book, the gallery reduced the size of the cartoons from 420 mm × 297 mm to 67 mm × 42 mm and added coloured backgrounds to the black-and-white originals. Tidy complained that the reduced cartoons had less visual impact, that the captions were unreadable, and that the process led to the inference that he had not bothered to redraw the cartoons so as to ensure that they were suitable for publication in a book. In the High Court, Rattee J refused Tidy’s application for summary judgment for breach of his right of integrity, explaining that he was far from satisfied that the reductions amounted to a distortion of the drawings. The judge also suggested that, in order to find the gallery’s treatment of the cartoons was prejudicial to Tidy’s honour, it was necessary to have evidence as to how the public perceived the defendant’s acts. Referring to *Snow*, Rattee J said

<sup>112</sup> *Confetti Records v. Warner Music UK Ltd* [2003] EMLR (35) 790 (para. 149–50); *Pasterfield v. Denham* [1999] FSR 168, 182; Adeney, pp.408–9; Laddie *et al.* (3rd edn.), para. 13.18; Copinger, para. 11–38, p. 644; Ricketson, para. 8.107 (otherwise concepts of distortion and mutilation could lead to problems because they appear to be ‘highly subjective’). *Snow v. The Eaton Centre* (1982) 70 CPR (2d) 105 (Canada) (‘I am satisfied that the ribbons do distort or modify the plaintiff’s work and the plaintiff’s concern that this will be prejudicial to his honour or reputation is reasonable under the circumstances’). If this is right, then it is possible that highly distorting treatments, such as parodies, which might not be prejudicial to the author’s reputation, do not infringe the integrity right. An alternative view is that distortions and mutilations are to be treated as prejudicial *per se*, and that prejudice need only be proved for lesser cases of ‘treatment’. In *Tidy v. Natural History Museum*, note 96 above, 504 the submission that the treatment was a ‘distortion’ was treated as an alternative to the submission that it was ‘otherwise prejudicial’. The two views largely depend on differing interpretations of the words ‘or otherwise’, but also reflect disagreement as to interpretation of the Berne Convention itself: see Ricketson, para. 8.112, Ricketson & Ginsburg, para. 10.32, pp. 609–10, but note Adeney’s categorical view that the qualification that the act must have a prejudicial effect on the honour or reputation of the author applies to distortions and mutilations: Adeney, para 6.52, 14.72.

<sup>113</sup> *Snow v. The Eaton Centre* (1982) 70 CPR (2d) 105 (Canada).

<sup>114</sup> Section 12(7) RSC 1970 c. C–30.

<sup>115</sup> *Tidy v. Trustees of the Natural History Museum* [1996] EIPR D–86; (1998) 39 IPR 501 (reductions of cartoons). See also Laddie *et al.*, para. 27.18 (court unlikely to treat author’s own reaction as determinative).

that he would have to be satisfied that the view of the artist was one which is reasonably held, which ‘inevitably involves the application of an objective test of reasonableness’.<sup>116</sup> Without further evidence, Rattee J said he could not see how he could draw such a conclusion.

A county court judge has recently gone further and argued that, for a treatment to be derogatory, ‘what the plaintiff must establish is that the treatment accorded to his work is either a distortion or a mutilation that prejudices his honour or reputation as an artist. It is not sufficient that the author is himself aggrieved by what has occurred.’<sup>117</sup> Applying that test the judge took the view that certain colour variations between the original and the artwork in question (the design of a brochure), the omission of trivial matter, and the reduction in size were not derogatory. The judge added that, while the changes to peripheral matters were of the kind that ‘could well be the subject of a Spot the Difference competition in a child’s comic’, it would be wrong to elevate such differences to a ‘derogatory treatment’.

In a third UK case, *Confetti Records v. Warner Music UK Ltd*,<sup>118</sup> Lewison J held that the claimant, Andrew Alcee (a member of the ‘Ant’ill Mob’), had not made out a sufficient case for a finding of derogatory treatment where his garage track ‘Burnin’, which comprised an insistent instrumental beat accompanied by the vocal repetition of the word ‘burning’, had been superimposed with a rap by another garage act, ‘The Heartless Crew’ (the words of which were difficult to make out). The defendant accepted that this was a treatment, so the crucial issue was whether it was derogatory. The claimant had argued that it was, first, because the rap contained references to violence and drugs, by using phrases such as ‘mish mish man’, ‘shizzle (or sizzle) my nizzle’; and ‘string dem up one by one’, which was, according to the claimant, an ‘invitation to lynching’. Alternatively, it was argued that the rap affected the ‘coherence of the original work’. Lewison J rejected the claimant’s argument. First, he stated that the fact that the words were difficult to decipher militated against them being derogatory. Second, he noted that the meaning of the words, which he described as being ‘in a foreign language’, could only be determined by way of expert evidence, and no such evidence had been offered. Third, Lewison J took the view that ‘string dem up’ was not necessarily an ‘invitation to lynching’, and could be heard as merely advocating the return of capital punishment. Most importantly, however, he rejected the claimant’s argument because he had failed to provide evidence of his honour or reputation. In the absence of such evidence, even by the complainant himself, the judge was not prepared to infer prejudice. Lewison J was confirmed in this view by the fact that the Ant’ill Mob itself utilized the imagery of gangsters. As regards the claim based upon the effect of the rap on the coherence of the song, Lewison J seems to have been strongly influenced by indications that the song was written as a background for rapping, and that the Ant’ill Mob’s own mixes added rapping over the whole track.

Despite these decisions, it is still unclear how derogatory treatment will be construed in the UK. In particular, there is still some uncertainty as to whether the question whether a treatment is prejudicial to the honour or reputation of an author is to be judged from an objective or subjective standpoint. Under UK law one would expect that the notion of reputation used in this context would be similar to that which is employed in defamation law.<sup>119</sup> If this were the case, one would expect that the question whether or not conduct was prejudicial to an author’s

<sup>116</sup> *Tidy v. Trustees of the Natural History Museum* [1996] EIPR D-86; (1998) 39 IPR 501.

<sup>117</sup> *Pasterfield v. Denham* [1999] FSR 168, 182.

<sup>118</sup> [2003] EMLR (35) 790.

<sup>119</sup> Ricketson, para. 8.110; Ricketson & Ginsburg, para. 10.27, p. 606, para. 10.09, pp. 592–3, para. 10.11, pp. 594–6 (explaining that these terms were preferred to the wider concept of ‘moral or spiritual interest of the author’).

reputation should be judged from the viewpoint of right-thinking members of society (that is, objectively).

While ‘reputation’ is a familiar concept in British law, the same cannot be said for ‘honour’. If ‘honour’ is taken to refer to what a person thinks of themselves (and is thus similar to the Roman law concept of *dignitas*), it would seem that prejudice to honour might well involve a strong subjective element.<sup>120</sup> This distinction might be important where a defendant parodies the claimant’s work in such a way that a member of the public would not believe the parody to be the claimant’s work, so would be unlikely to find that the claimant’s reputation was harmed.<sup>121</sup> Nonetheless, the claimant might feel offended.

#### 4.2.2 Circumstances where the author is protected from derogatory treatment

The right of an author or a director to object to, or prevent, the derogatory treatment of their work only arises when the work or copies thereof are dealt with in certain ways (section 80). While these acts vary according to the category of work involved, basically they arise where someone communicates, disseminates, or otherwise renders the derogatory treatment available to the public. As a result of this requirement, the right to integrity is not a right to prevent destruction or spoliation of the work itself.<sup>122</sup>

In relation to *literary, dramatic, and musical works* the right to object to derogatory treatment may be invoked when a derogatory treatment of the work is published commercially, performed in public, or communicated to the public. It is also triggered when copies of a film or sound recording embodying the derogatory treatment are issued to the public.<sup>123</sup> In turn, with an *artistic work*, the right may be invoked against a person who publishes commercially or exhibits in public a derogatory treatment of the work. The right is also triggered where someone communicates to or shows in public a film including a visual image of a derogatory treatment of the work.<sup>124</sup> Further acts are specified in relation to works of architecture, sculpture, and works of artistic craftsmanship.<sup>125</sup> In relation to *films*, the right of integrity is infringed whenever a derogatory treatment of the film is shown in or communicated to the public, or when copies of a derogatory treatment of the film are issued to the public.<sup>126</sup>

In addition, it should be observed that certain acts may amount to a secondary infringement of the right of integrity.<sup>127</sup> This will occur where, in the course of business, a person possesses, sells or lets for hire, offers or exposes for sale or hire, exhibits in public, or distributes an article which they know or have reason to know, is an infringing article. In this context an infringing article means a work or a copy of a work which has been subjected to a derogatory treatment and has been, or is likely to be, the subject of any of the infringing acts in section 80. Secondary infringement only takes place if the dealing prejudicially affects the honour or reputation of the author. If the treatment itself is derogatory, it seems likely that the dissemination of the treatment will prejudice the honour or reputation of the author.

<sup>120</sup> Laddie *et al.*, para. 27.18 (honour refers to integrity as a human being). This is consistent with the Report of Michael Plaisant at the Brussels Conference revising Berne: see Ricketson, para. 8.110; Ricketson & Ginsburg, para. 10.27, p. 606.

<sup>121</sup> Copinger, para. 11–41, p. 646.

<sup>122</sup> Such a right has been accepted in the US Visual Artists Rights Act 1990. At the Brussels Revision of Berne, one of the *vœux* adopted said that countries introduce such a prohibition. See Ricketson, para. 8.109; Ricketson & Ginsburg, para. 10.26, pp. 605.

<sup>123</sup> CDPA s. 80(3)(a), (b). These are identical to the occasions on which an author has a right to be identified under CDPA s. 77(2): no differentiation is made for songs as in CDPA s. 77(3).

<sup>124</sup> CDPA s. 80(4)(a).

<sup>125</sup> CDPA s. 80(4)(c).

<sup>126</sup> CDPA s. 80(6).

<sup>127</sup> CDPA s. 83.

### 4.2.3 Exceptions and defences

A number of exceptions are placed upon the right of integrity by the 1988 Act. It is notable that there are no defences for fair dealing, nor for the design–copyright interface. Some commentators have therefore suggested that the defences are ‘unduly narrow’.<sup>128</sup>

In the case of works created by employees,<sup>129</sup> the right of integrity does not apply to anything done by or with the authority of the copyright owner except in two particular situations.<sup>130</sup> The general rule, then, is that an employer can deal publicly with derogatory treatments of an employee’s work. In these circumstances, the authorial prerogative gives way to the demands of the employer for control.<sup>131</sup> This means, for example, that artists who work for a design firm will not be able to use their right of integrity where their artworks are modified either by their employer or by other employees. Similarly, an employee who drafts a report will not be able to restrain publication of a version that is rewritten on behalf of the employer.

The exceptions to this general position relate to circumstances where the author/employee has been, or is to be, identified. Although the law privileges the needs of the employer and the copyright holder, those needs do not extend as far as continuing to name the employee where the work has been modified. Consequently, ‘the right does not apply to anything done in relation to such a work by or with the authority of the copyright owner unless the author or director (a) is identified at the time of the relevant act, or (b) has previously been identified in or on published copies of the work’.<sup>132</sup> However, even in these cases, the right of integrity is not infringed if there is ‘sufficient disclaimer’. That is, if there is a clear and reasonably prominent indication that the work has been subjected to treatment to which the author or director has not consented.<sup>133</sup>

There are also special defences to infringement of the moral right of integrity. In particular, the right is not infringed by anything done for the purpose of avoiding the commission of an offence (such as under the Obscene Publications Act 1959 or the Public Order Act 1986), complying with a duty imposed by or under an enactment, or in the case of the British Broadcasting Corporation ‘avoiding the inclusion in a programme broadcast by them of anything which offends against good taste or decency or which is likely to encourage or incite crime or to lead to disorder or to be offensive to public feeling’.<sup>134</sup> In the case of a work of architecture, the right is limited. Where an architect is identified on a building which is subject to derogatory treatment, the architect is given the right to have their identification as architect removed from the building.<sup>135</sup>

### 4.2.4 Waiver

Although the moral right of integrity, like the other moral rights, cannot be assigned, section 87 of the 1988 Act ensures that they can be waived by way of agreement in writing. Such a waiver can be specific or general, and relate to existing or future works. It has been said that most ‘objective observers would acknowledge that such wide waiver provisions, both in theory

<sup>128</sup> Laddie *et al.*, para. 27.27.

<sup>129</sup> CDPA s. 82. The same rules apply to works in which Crown or Parliamentary copyright subsist and works in which copyright originally vested in an international organization under CDPA s. 168.

<sup>130</sup> The provision refers to the circumstance where works vested in the director’s employer by virtue of CDPA s. 9(2)(a). The Copyright and Related Rights Regulations 1996 (SI 1996/2967) amended the provisions on film authorship and ownership without altering the reference in CDPA s. 82(1)(a).

<sup>131</sup> Dworkin, note 7 above, 27, ‘the exceptions and qualifications to moral rights... were attempts by the UK Government to modify... moral rights in the light of business reality’.

<sup>132</sup> CDPA s. 82(2).

<sup>133</sup> CDPA s. 178.

<sup>134</sup> CDPA s. 81(6).

<sup>135</sup> CDPA s. 80(5).

and in practice, erode significantly, indeed drive a coach and horses through the moral rights provisions'.<sup>136</sup> This is because the industries that exploit copyright works tend to oblige authors and artists to enter standard-form contracts which require them to waive the integrity rights. Even the requirement that waiver be in writing, which provides authors with some residual protection, is compromised by section 87(3) which states that the general law of contract and estoppel applies to informal waiver.

### 4.3 ALTERNATIVE AND RELATED FORMS OF RELIEF

If an argument based upon the moral right of integrity fails (or is dubious), an author may fall back on protection under common law or contract.<sup>137</sup> If a work is presented as being that of the author but has been substantially altered, that representation could be defamatory. Thus, in *Humphries v. Thompson*,<sup>138</sup> a newspaper which serialized a story, but changed the names of the characters and omitted and added other text, was found by the jury to have defamed the author by damaging her literary reputation. Similarly, in *Archbold v. Sweet*,<sup>139</sup> an author successfully claimed that his reputation had been injured by the publication of a further edition of his work that contained a number of errors. The new edition would have been understood by the public to have been prepared by the author.<sup>140</sup>

Similarly, there are many situations in which an author may be able to rely on contract rather than moral rights to object to derogatory treatment of their work. In *Frisby v. BBC*,<sup>141</sup> the claimant had written a play for the BBC, and the BBC deleted the line 'my friend Sylv' told me it was safe standing up...' on the ground that it was indecent.<sup>142</sup> The complex contractual arrangement prohibited the BBC from making 'structural' as opposed to 'minor' alterations to the script. The court decided the contract was a licence and considered whether the alteration was structural or minor. The claimant alleged that it was essential to and even the climax of the play. In contrast, the BBC claimed it was a minor deletion. Goff J granted the injunction, saying that the author 'prima facie would appear to be the best judge' of the significance of the line.

### 4.4 THE FUTURE: HARMONIZATION

In April 2000, the Commission published a report on moral rights which had been prepared for it by Alain Strowel, Marjut Salokannel, and Estelle Derclaye. The existing Directives have steered carefully clear of the hornets' nest that moral rights stirs up, particularly in the UK. Nonetheless, one would have thought that however politically difficult it may seem, there would be clear justification (in terms of the Internal Market) for activity in this sphere.<sup>143</sup> The

<sup>136</sup> Dworkin, note 7 above, 28. Durie, note 1 above, 40, 48, calls this 'the greatest compromise in the Act'.

<sup>137</sup> For a general review of the common law analogues to moral rights, see G. Dworkin, 'Moral Rights: The Shape of Things to Come' [1986] *EIPR* 329.

<sup>138</sup> [1905–1910] *MacG CC* 148. Interestingly, the jury rejected the defendant's arguments that any moral obloquy would attach to them, as publishers, rather than the author.

<sup>139</sup> [1832] 172 ER 947. See also *Springfield v. Thame* (1903) 89 *LT* 242.

<sup>140</sup> See also *Ridge v. English Illustrated Magazine* [1911–16] *MacG CC* 91 (where the defendant published a story attributed to the plaintiff, a well-known author, but in fact written by a grocer's assistant from Bournemouth, the judge instructed the jury to find defamation if 'any one reading the story would think that plaintiff was a mere commonplace scribbler').

<sup>141</sup> *Frisby v. BBC* [1967] *Ch* 932.

<sup>142</sup> The defence under CDPA s. 81(6)(c) means that claimant in *Frisby v. BBC* would still have to rely on contract.

<sup>143</sup> See L. Bently, *Between a Rock and A Hard Place* (2002).

Report, entitled *Moral rights in the context of the exploitation of works through digital technology*, reveals substantial differences in the detail of the laws of member states on moral rights, but little dissatisfaction with the lack of harmonization. In part, this reflects the similar (high) levels of moral right protection in most European countries. The Report also revealed that one of the reasons for the failure to press the Commission to undertake harmonization was fear that the effect of the legislative process would be to allow the influence of exploiters and the 'copyright countries' to lower the level of protection. Not all commentators share the view espoused by the study.<sup>144</sup>

<sup>144</sup> For example, M. Walter, 'Updating and Consolidation of the *Acquis*: The Future of European Copyright', Report of the Commission meeting at Santiago de Compostela, Jun. 2002 (proposing harmonization of moral rights). Cf. IViR, *Recasting Copyright for the Knowledge Economy* (2006), para. 7.3, p. 220.

### 1 INTRODUCTION

As we saw in Chapter 6, copyright law confers on the first owner of copyright certain exclusive rights over the exploitation of the work. These rights are capable of being exploited in a number of ways. Most obviously, the rights enable copyright owners to control the sale of both the original work and copies of the work. By selling copies of the work at an appropriate price, copyright owners can ensure they reap a reward sufficient to cover the costs of producing the work. This form of exploitation is most important where the market for the work is limited and the owner can easily be linked to a purchaser: as with sales of limited editions of engravings or prints by artists.

If copyright law only gave the author the right to exploit the work, its economic usefulness would be limited. Few authors have the financial ability, economic acumen, or the willingness to print and sell their own works. Consequently, the law treats copyright as a form of personal property that can be exploited in a number of ways, most importantly by being assigned or licensed.<sup>1</sup> This enables copyright to be transferred to those who can exploit it most profitably. Where this occurs the terms of the transfer agreement will determine how the profits are to be distributed. As we will see, such transfers are often arranged in advance of the creation of a work, for example, where an author enters into a publishing contract prior to writing a book. Moreover, since some works can be exploited in a variety of ways, there may be many assignments, licences, and sublicences. With new forms of exploitation, the web of transactions is becoming ever more complex.

<sup>1</sup> CDPA ss. 1 and 90(1).

One of the characteristics of the intangible property protected by copyright is that it has the potential to be used by a range of different people at the same time. For example, a sound recording can be played in numerous public places (such as pubs, shops, and discos) simultaneously. As works are increasingly exploited in this manner, the role of licensing in exploitation becomes ever more important. In some situations the copyright owner will be able to license the use of the work by the customer directly (for example where sale of software on a floppy disc includes a licence to make the immaterial copies necessary to run the program). In other cases, owner–user relations are mediated by an agency or collective management systems.

In this chapter, we look at the ways copyright can be exploited or transferred. After exploring the most important forms of exploitation, *viz.* assignment and licensing, we consider the transfer of copyright in the case of mortgages, bankruptcy, or death. In turn, we examine situations where the rights are exploited by way of compulsory licence. We also consider briefly techniques for exploiting works that rely on the use of technological protection measures, techniques which are becoming increasingly important in the digital environment. (These are examined in detail in Chapter 13.) Finally, we look to the important role that collecting societies play in copyright exploitation.

Before doing so, it is important to note that assignment, licence, or other transaction in relation to copyright is only effective if the purported assignor was able to enter the transaction. Consequently, it is important to ensure that the person entering the transaction is the owner, or is appropriately authorized by the owner.<sup>2</sup> In this respect it should be noted that, where there are joint proprietors, all of them must consent to any transaction (if it is to affect more than their own share).<sup>3</sup> Particular difficulties may arise in relation to transactions made by minors. These are only inviolable if made for the benefit of the minor. If not so made, on reaching majority, the minor can have such a transaction set aside.<sup>4</sup>

## 2 ASSIGNMENT

An assignment is a transfer of ownership of the copyright. As a result of an assignment, the assignee stands in the shoes of the assignor and is entitled to deal with the copyright as he or she pleases. Although an assignment may be for payment of a royalty (as well as for a fixed sum), the nature of the assignment means that, if the assignee transfers the copyright to a third party, the transferee takes free of the personal agreement to pay royalties.<sup>5</sup>

It is not necessary that all of the copyright be assigned.<sup>6</sup> In contrast with other types of property, where the tendency is to simplify transfers by limiting the ways in which the rights can be divided up, copyright law takes a liberal view of what may be assigned. In particular, copyright allows partial assignments by reference to ‘times, territories and classes of conduct’.<sup>7</sup> For example, an agreement to write a book might include an exclusive grant of all rights. In turn, the publisher might parcel out the exploitation of the work by way of hardback, paperback, newspaper serialization, audiotape, reprography, electronic distribution, dramatization,

<sup>2</sup> *Beloff v. Pressdram* [1973] RPC 765.

<sup>3</sup> *Powell v. Head* (1879) 12 Ch D 686.

<sup>4</sup> *Chaplin v. Frewin (Publishers)* [1966] Ch 71.

<sup>5</sup> *Barker v. Stickney* [1919] 1 KB 121 (royalty clause not enforceable against subsequent assignees but only on the basis of contract against the initial assignee). See J. Adams, ‘*Barker v. Stickney* Revisited’ [1998] *IPQ* 113 (arguing that the case was wrongly decided; in particular, that the agreement constituted a charge); Copinger, para. 5–69 (discussing role of the doctrine of mutual benefit and burden).

<sup>6</sup> CDPA s. 90(2).

<sup>7</sup> *Kervan Trading v. Aktas* (1987) 8 *IPR* 583, 587.

translation, as well as by being filmed.<sup>8</sup> Restrictions that are geographical in nature are subject to EC rules, so that agreements that are intended to divide up the Common Market will be prohibited.<sup>9</sup>

In order for an assignment to be valid, it must be in writing and signed by or on behalf of the assignor. It has been held that sufficient writing might be provided by an invoice or receipt.<sup>10</sup> The assignment should identify the work concerned with sufficient clarity that it can be ascertained, though the courts have admitted oral ('parol') evidence to assist in the process of identification.<sup>11</sup> No special form of words is required, so a transfer of 'all the partnership assets' will include a transfer of any copyright owned by the partnership.<sup>12</sup> Assignment of copyright is a distinct legal transaction and is not effected by mere sale or transfer of the work itself.<sup>13</sup> Thus, if a person sells an original painting or manuscript, this (of itself) only transfers the personal property right in the chattel: the copyright remains with its owner.<sup>14</sup> If a vendor wishes to transfer the copyright as well as the personal property in the chattel, this should be done explicitly.

Where an assignment is made orally, this will be ineffective *at law*. However, the general equitable rule that treats a failed attempt at a legal assignment as an oral contract to assign the interest will usually apply to attempted assignments of copyright. So long as there is valuable consideration, an oral contract of this nature will be specifically enforceable.<sup>15</sup> Where this occurs a prospective assignee will be treated as the immediate equitable owner.<sup>16</sup> While such an equitable owner may commence an action against an infringer and secure interlocutory relief, the legal owner needs to be joined as a party before final relief can be secured.<sup>17</sup>

A prospective copyright owner (usually an author) can also make assignments of future copyright. That is, they can assign the copyright in works not in existence at the time of the agreement.<sup>18</sup> This will be useful, for example, where a painting is commissioned, or where a music publishing agreement is entered into before a songwriter creates the songs. However, it seems that the assignment of future copyright only operates where the agreement is for valuable consideration, since it is only in these circumstances that the assignee would be 'entitled as against the whole world'.<sup>19</sup>

An assignment does not need to be registered to be valid. Priority is determined by reference to rules as to first-in-time and bona fide purchase. In the case of legal assignments, the first transfer in time has priority over claims deriving from subsequent purported transfers of the same rights. Assignments effective in equity will only be defeated at the hands of a later bona fide purchaser for value without notice of the earlier assignment.

<sup>19</sup> *Laddie et al.*, para. 13.6.

### 2.1 PRESUMED TRANSFERS

Although transfer of ownership of copyright (or its component rights) is usually governed by contract, an important exception exists in relation to film production agreements. Where a contract concerning film production is concluded between an author and a film producer, the author is presumed to have transferred their *rental* right to the film producer.<sup>20</sup> The presumption only operates in relation to authors of literary, dramatic, musical, and artistic works, and therefore does not apply to the director of a film. Moreover, the presumption does not apply to the author of a screenplay, dialogue, or music specifically created for and used in a film.<sup>21</sup> The presumption is important in relation to the incorporation of existing works in films, for example where the author of a novel agrees to their work being made into a film, or a musical composer agrees to their work being used in a soundtrack. The presumption can be rebutted by an agreement to the contrary, which it seems can be express or implied.

## 3 VOLUNTARY LICENCES

The powers conferred on the copyright owner are most commonly employed by the copyright owner giving licences to particular individuals permitting them to carry out specified activities. At a basic level a licence is merely a permission to do an act that would otherwise be prohibited without the consent of the proprietor of the copyright.<sup>22</sup> A licence enables the licensee to use the work without infringing. So long as the use falls within the terms of the licence,<sup>23</sup> it gives the licensee an immunity from action by the copyright owner.

In contrast with an assignment (where the assignor relinquishes all interest in the copyright), the licensor retains an interest in the copyright. Indeed, no proprietary interest is passed under a licence,<sup>24</sup> though in most circumstances a licence is binding on successors in title of the original grantor of the licence.<sup>25</sup> While the essential nature of a licence is that it is a mere permission, copyright law has developed a sophisticated repertoire of ways whereby a work might be licensed.

Licences may take many forms: from a one-off permission through to an exclusive licence. Licences may be limited geographically, temporally, and in relation to specific modes of exploitation of the copyright work. A licence, even if non-exclusive, may (if the parties so choose) grant the licensee a right of action against infringers.<sup>26</sup> For the most part, the terms of a voluntary licence are up to the parties to choose. As such, terms will vary with the needs, capacities, and wishes of the parties.

<sup>20</sup> CDPA s. 93A. Implementing Rental Dir., Art. 2(6). See Copinger, para. 5.96.      <sup>21</sup> CDPA s. 93A(3).

<sup>22</sup> *British Actors Film Co. v. Glover* [1918] 1 KB 299; *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1997] AC 728, 735.

<sup>23</sup> Where a licensee breaches the agreement the question arises whether there is an action merely for breach of contract or for infringement of copyright: if the act is outside the scope of the licence, it is an infringement; if the breach relates to a condition precedent for the licence, the action will also infringe (*Miller v. Cecil* [1937] 2 All ER 464); moreover, if the breach is sufficiently serious to amount to a repudiation of the contract, this may be accepted by the copyright owner and an action will lie for infringement of copyright as regards subsequent acts.

<sup>24</sup> *CBS v. Charmdale* [1980] FSR 289, 295.

<sup>25</sup> CDPA s. 90(4).

<sup>26</sup> CDPA s. 101A (added by SI 2003/2498).

### 3.1 EXCLUSIVE LICENCES

Of the different forms of licence, perhaps the most significant is the 'exclusive licence'. An exclusive licence is an agreement according to which a copyright owner permits the licensee to use the copyright work. At the same time, the copyright owner also promises that they will not grant any other licences and will not exploit the work themselves. The legal consequence of this is that the licence confers a right in respect of the copyright *work to the exclusion of all others including the licensor*.<sup>27</sup> In some ways it is the intangible property's equivalent of a 'lease'.<sup>28</sup>

While a bare licensee acquires the right not to be sued in relation to the acts set out in the licence, an exclusive licence confers on the licensee a 'statutory procedural status' that is equivalent to that of the proprietor.<sup>29</sup> One significant aspect of this status is that exclusive licensees can sue infringers without having to persuade the proprietor to take action on their behalf.<sup>30</sup> Section 101(1) of the Act declares that an exclusive licensee has the same rights and remedies in respect of matters occurring after the grant of the licence as they would have if the licence had been an assignment.<sup>31</sup> An exclusive licensee is given the same rights as a copyright owner and therefore has the right to bring proceedings in respect of any infringement of the copyright after the date of the licence agreement. Indeed, an action can be brought by both the copyright owner and an exclusive licensee: special provisions dealing with this situation are set out in section 102. Exclusive licences of legal interests in copyright have to be in writing and signed by or on behalf of the assignor<sup>32</sup> if the licensee wishes to take advantage of their statutory entitlement to sue for infringement.<sup>33</sup> This is in contrast to a non-exclusive licence, which may be made orally, or in writing; and might be contractual or gratuitous, express or implied.<sup>34</sup>

In practice, the grant of an exclusive licence can often be seen as equivalent to an assignment.<sup>35</sup> Consequently, publishers are often happy to be granted exclusive licences, rather than full assignments, by authors.<sup>36</sup> However, there are legal differences between an assignment and an exclusive licence. The first difference arises from the fact that an assignee becomes the copyright owner, whereas an exclusive licensee does not. One of the consequences of this is that the remedies available to the exclusive licensee are limited to those that arise in an action for breach of contract against the copyright owner.<sup>37</sup> The second difference is that the rights given to licensees are less certain and can be defeated at the hands of a purchaser in good faith for valuable consideration and without notice (actual or constructive) of the licence.<sup>38</sup> Third, an exclusive licensee may not always be able to grant a sublicense or transfer the benefit of their

<sup>27</sup> Cf. *Sega Enterprises v. Galaxy Electronics* (1998) 39 IPR 577.

<sup>28</sup> D. Vaver, 'The Exclusive Licence in Copyright' (1995) 9 *IPJ* 163, 165 (which also reviews the history of such licences).

<sup>29</sup> Copinger, para. 5.201.

<sup>30</sup> The copyright owner is made party to the proceedings, if necessary by joining it as a defendant. But note that a mere licensee may be able to bring an action under CDPA s. 101A if the infringing act was directly connected to a previous licensed act of the licensee, the licence is in writing signed by the copyright owners, and it expressly grants the right of action.

<sup>31</sup> Except that the exclusive licensee cannot sue the copyright owner for breach of copyright (though if the terms are breached, the copyright owner will be liable for breach of contract).

<sup>32</sup> CDPA s. 90(3). <sup>33</sup> CDPA s. 101. <sup>34</sup> *Godfrey v. Lees* [1995] *EMLR* 307.

<sup>35</sup> *R. Grigg v. Raben Footwear* [2003] *EWHC* 2914 para. 58; *Chaplin v. Frewin* [1966] *Ch* 71, 93.

<sup>36</sup> The Publishers' Association Code of Practice (revised and reissued 1997) recommends that in a publishing contract the author should normally retain copyright.

<sup>37</sup> *CBS v. Charmdale* [1980] *FSR* 289, 297. <sup>38</sup> CDPA s. 90(4).

licence to a third party.<sup>39</sup> Fourth, the rights of an exclusive licensee may be limited by implied terms.<sup>40</sup> Finally, a copyright owner who wishes to permit another to exploit a work can retain better protection by giving an exclusive licence.<sup>41</sup>

In some situations it may be difficult to determine whether a copyright owner has assigned their copyright or merely granted an exclusive licence.<sup>42</sup> Whether a person is an exclusive licensee or an assignee is a matter of construction of the agreement. The question to be answered is whether there is evidence from which an intention to assign can be inferred. The way in which the parties describe the arrangement will be influential, but not conclusive. Use of terms such as 'grant', 'sole', and 'exclusive rights', and provisions on 'retransfer' if the copyright is not exploited, might indicate an assignment.<sup>43</sup> However, these descriptions may be ignored if the tenor of the agreement suggests that in substance there is an exclusive licence.<sup>44</sup> Occasionally, the courts have treated provisions concerning 'royalties' as suggesting that the arrangement is an exclusive licence rather than an assignment.<sup>45</sup> But in all cases the court should beware of linguistic formalism and infer the intention from all the circumstances of the case.<sup>46</sup>

### 3.2 CREATIVE COMMONS, FREE SOFTWARE, AND VIRAL LICENCES

While it has been extremely common hitherto for an author to grant an exclusive licence to an exploiter, such as a publishing company, the last decade has seen the rise in popularity of 'open access' modes of distributing works, that is, the use of standardized licences allowing for particular re-uses of works by any member of the public.<sup>47</sup>

The first popular version of such a licence was the so called 'General Public License' developed for use in relation to computer programs.<sup>48</sup> Given the manner in which computer programs build on existing programs it was immediately evident to a few of those involved that the need to obtain copyright permissions could become a significant impediment to software development. Richard Stallman of the Free Software Foundation conceived that one way to avoid this would be to grant permission in advance permitting anyone to use and modify material, but making it a condition of use that subsequent developers make their software available on the same terms.<sup>49</sup> The GPL therefore has been said to be 'viral' in nature, in that

<sup>39</sup> Copinger, para. 5.196. Publishing contracts are generally non-assignable: see Laddie *et al.*, para. 14.23.

<sup>40</sup> For example, in *Frisby v. BBC* [1967] Ch 932 (in the case of a licence the courts will more readily imply a term limiting the right of the licensee to alter the work).

<sup>41</sup> *Barker v. Stickney* [1919] 1 KB 121.

<sup>42</sup> *Western Front v. Vestron* [1987] FSR 66, 75. Nevertheless the Supreme Court of Canada has called the distinction between an assignment and an exclusive licence 'important and meaningful': *Euro-Excellence Inc v. Kraft Canada Inc* (2007) SCC 37, para 85.

those who take advantage of the licences must subject their own work to the same conditions.<sup>50</sup> Developers are able to obtain remuneration by selling individual pieces of software, rather than extracting licence fees based on copyright. The GPL has proved to be an amazing success,<sup>51</sup> though doubts exist over the enforceability of ‘viral’ clauses.<sup>52</sup>

Following in the wake of the GPL, the ‘Creative Commons’ movement has attempted to develop similar standard open licences for other types of work.<sup>53</sup> In so doing, the Creative Commons movement has been forced to take account of different national legal systems, and currently it operates in 42 jurisdictions.

In contrast with the GPL, Creative Commons offers copyright owners a menu of licences: some allow re-use of a work only in unmodified form, some allow re-use only with attribution, some allow re-use only for non-commercial purposes; and some attempt to impose a ‘share-alike’ condition on users. As a result, a copyright owner has considerable flexibility, and the take-up of such licences has been very widespread. Nevertheless, it should be observed that the most commonly adopted licence is the ‘attribution-non-commercial no derivative works’ licence, which confers only the freedom to duplicate, distribute, play, or perform the work in an unmodified state, for non-commercial purposes and with attribution of authorship.<sup>54</sup>

While the use of both the GPL and the Creative Commons licences has become very widespread, these projects have not gone uncriticized, even by those who share similar ideological goals or desire similar practical results. Niva Elkin-Koren, for example, has emphasized the dangerous effect of ‘open access’ as constituting informational goods as property, and creators as owners.<sup>55</sup> In fact, recognizing the dependence of the Creative Commons licences on the existence of property right, one of the leaders of Creative Commons, Jamie Boyle, has

<sup>50</sup> The characterization of such contracts as viral is attributed to M.J. Radin, “Humans, Computers, and Binding Commitment” (2000) 75 *Ind. LJ* 1125. The term ‘copyleft’ is also frequently used to describe this feature of the GPL and other licences.

<sup>51</sup> 50,013 projects, 67% of projects listed in the SourceForge open source repository, are released under the GPL.

<sup>52</sup> A. Guadamuz Gonzalez, ‘Viral Contracts or Unenforceable Document: Contractual Validity of Copyleft Licences’ (2004) *EIPR* 331; cf. Westkamp [2008] *IPQ* 14.

<sup>53</sup> See <<http://www.creativecommons.org>>. See S. Dusollier, ‘The Master’s Tools v. the Master’s House: Creative Commons v. Copyright’ (2005) 29 *Col. J. L. A.* 271; M. Fox, T. Ciro and N. Duncan, ‘Creative Commons: An Alternative, Web-Based, Copyright System’ (2005) *Ent LR* 111.

<sup>54</sup> A. Chander and M. Sunder, ‘The Romance of the Public Domain’ (2004) 92 *Cal. LR* 1331, 1361–2.

<sup>55</sup> N. Elkin-Koren, ‘What Contracts Cannot Do: The Limits of Private Ordering in Facilitating a Creative Commons’ (2005) 74 *Fordham LR* 375, 398. The dependence of open access licensing on copyright was earlier emphasised by Dusollier: S. Dusollier, ‘Open Source and Copyleft: Authorship Reconsidered’ (2003) 26 *Col. J. L. A.* 281, 286–7, but she also argues that creative commons may bring about a shift in the notion of the author from the romantic author-as-owner who controls the meaning of a text, to the post-modern author as the ‘founder of a discursivity’: Dusollier, ‘The Master’s Tools’ (2005), at 285–6.

advocated the extension of legal protection to non-original databases, so that such products can effectively come within the terms of creative commons share-alike licensing schemes. More practically, Severine Dusollier has called attention to a number of potential limitations to the effectiveness of viral contracts,<sup>56</sup> in order to remind those in the open access movement and beyond of the remaining importance of public law.

Others, more sympathetic to traditional avenues of copyright exploitation, have emphasized the dangers of ill-considered adoption of these licences by aspiring authors. While it may seem attractive for a young or naïve author to adopt an easy-to-use CC licence at a time when many others seem to be so doing, it is by no means obvious that such a move is in their best interests. Rather, only those with a clear idea as to how they will be able to turn a profit if their works become popular should throw away the mechanism that has traditionally secured rewards to successful writers or composers. From this perspective, creative commons licences are primarily useful tools for those who do not need remuneration *from copyright* (or at all).

### 3.3 IMPLIED LICENCES

In certain circumstances the court may see fit to imply a licence to use a copyright work. However, for the most part the courts have been reluctant to imply licences from the circumstances.<sup>57</sup> They have indicated that they will normally imply terms into a contract only in two situations. First, terms may be implied 'by law' where they are 'inherent in the nature of the contract'. Second, terms may be implied to fill gaps left in an agreement where it is necessary to provide 'business efficacy'.

In relation to terms implied by law, the court is primarily concerned with whether the contract falls into a particular class. However, that is not to say that the express terms are not important. This is because they may indicate that the parties did not intend the normal incidents of a particular class of contract to apply. The classes subject to such implied terms are not closed, and change with the necessities of the times. An Australian case has indicated that one such class of contracts concerns 'persons who prepared written material with the intention it should be used in a particular manner'.<sup>58</sup> The specific terms to be implied in this class then depend upon the 'particular purpose'. For example, where an architect provides a client with plans, the court might determine the purpose (and the extent of any licence) from the fee when viewed in the light of the standard professional fee scales operating.<sup>59</sup>

Where courts are implying terms for particular cases, they look at the existing express terms and the surrounding context. It has been said that for a term to be implied it must be reasonable and equitable, necessary to give business efficacy to the contract, obvious that it 'goes without saying', capable of clear expression, and must not contradict any express term of the contract.<sup>60</sup> In *Ray v. Classic FM*, Lightman J found that an expert in music who had been

<sup>56</sup> Dusollier emphasizes three limits: the definition as to when the viral effect occurs, the validity of the licence itself, and the compatibility of different licences. On the potential problems posed by revocation, see L.P. Loren, 'Building a Reliable Semicommons of Creative Works: Enforcement of Creative Commons Licenses and Limited Abandonment of Copyright' (2007) 14 *Geo. Mason LR* 271.

<sup>57</sup> *Philips Electronique v. BSB* [1995] *EMLR* 472, 481; *Cescinsky v. Routledge* [1916] 2 *KB* 325, 319.

<sup>58</sup> *Acohs v. RA Bashford Consulting* (1997) 37 *IPR* 542 (FCA).

<sup>59</sup> *Blair v. Osborne & Tompkins* [1971] 2 *QB* 78; *Stovin-Bradford v. Volpoint Properties* [1971] 1 *Ch* 1007. Note that *Ray v. Classic FM* [1998] *FSR* 622 treats these cases as ones where the terms are implied to give business efficacy to the agreement.

<sup>60</sup> *BP Refinery (Westernport) v. Hastings Shire Council* (1977) 16 *ALR* 363, 376 (Lord Simon of Glaisdale) approved in *Ray v. Classic FM*.

engaged by a radio station to catalogue its musical recordings had copyright in the catalogues produced. While the terms of his consultancy were silent as to copyright, the court held that the expert had granted an implied licence to the radio station to do certain things with the catalogues. The scope of the licence was limited to use of the material for the purpose of broadcasting in the United Kingdom. This meant that claimant's copyright was infringed where copies were made for the purpose of exploiting the database abroad.

In less formal circumstances (particularly those involving consumers) the courts have tended to react flexibly in deciding the nature and extent of any licence. For example, it seems that sale of an article to a consumer usually carries with it a licence to repair that article,<sup>61</sup> and sale of a knitting pattern might carry with it an implied licence to the effect that a person can make the pattern for domestic, but not commercial, purposes.<sup>62</sup> Where the licence is claimed by a competitor who could have entered formal contractual arrangements but neglected to do so, the courts have been reluctant to imply a licence.<sup>63</sup>

## 4 MORTGAGES

Like other forms of property, copyrights may be mortgaged, that is assigned as security for a debt.<sup>64</sup> This can be a useful technique that enables copyright owners to raise funds. It has proved to be particularly common where a work is extremely expensive to create, as in the film industry.<sup>65</sup> In this context, a mortgage is achieved by way of an assignment of the copyright by the copyright owner to the mortgagee (lender). This is subject to a condition that the copyright will be reassigned to the mortgagor when the debt is repaid (or, as the law describes this, on 'redemption'). In addition, it is important that the assignment reserves for the mortgagor a right to continue selling copies of the work. This is probably best achieved by reservation of an exclusive licence.<sup>66</sup> Alternatively, copyright can be used as security by way of a charge. While in these circumstance there is no assignment, the chargee gains certain rights over the copyright as security.<sup>67</sup> In the case of both forms of security, the transaction must be in writing and signed by the parties in order to be valid. A mortgage or charge by a company of its copyright must also be registered within 21 days of its creation with the Registrar of Companies, if it is not to be void against the liquidator or a creditor of the company.<sup>68</sup> It has been assumed that a mortgagee has the powers of proprietor and is therefore able to sue infringers,<sup>69</sup> even though, as a matter of practice, the borrower is in a better position to police infringements.

'Securitization' is the name given to a further way of raising money from copyright. Typically, securitization involves selling tranches of (that is, defined periods of entitlement

<sup>61</sup> *Solar Thomson v. Barton* [1977] *RPC* 537, 560–1; *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1997] *AC* 728, 735. Cf. *Sony Entertainment Inc v. Owen* [2002] *EMLR* (34) 742, 747 (Jacob J holding that because a licence is territorial, a licensee must prove that a Japanese licence to use a computer game extended to the UK).

<sup>62</sup> *Patricia Roberts v. Candiwear* [1980] *FSR* 352.

<sup>63</sup> *Banier v. News Group* [1997] *FSR* 812; cf. *Express Newspapers v. News (UK)* [1990] *FSR* 359 (tit-for-tat defence).

<sup>64</sup> Copinger, para. 5–190.

<sup>65</sup> M. Henry, 'Mortgages and Charges over Films in the UK' [1992] *Ent LR* 115.

<sup>66</sup> On the importance and delicacy of the terms of the licence, see M. Antingham, 'Safe as Houses? Using Copyright Works as Security for Debt Finance' (Mar. 1998) 78 *Copyright World* 31, 32.

<sup>67</sup> Copinger, para. 5–193 seems to suggest that such a charge is equitable. While there is no definitional provision equivalent to PA s. 130, there seems no reason why it should not be legal.

<sup>68</sup> Companies Act 1985, ss. 395 and 396. <sup>69</sup> Copinger, para. 5–191.

over) the rights to royalties accruing from bundles of copyrights: a well-known example being in relation to David Bowie's recordings. The reasons for creating these financial arrangements stem from the desire to exchange future possible income for immediate capital, which will facilitate reinvestment of that capital in new projects.<sup>70</sup>

## 5 TESTAMENTARY DISPOSITIONS

Because copyright is personal property, it is capable of passing on the death of the proprietor either by will or according to the rules applicable in cases of intestacy. In the case of the death of one co-proprietor, because they hold copyright as tenants in common (rather than as joint tenants), the share of the deceased co-owner passes along with the rest of their estate.<sup>71</sup> A presumption exists that, where a work is unpublished and a bequest is made of a document or other material thing containing the work, the bequest is to be construed as including the copyright in the work, insofar as the testator was the owner of the copyright immediately before their death.<sup>72</sup>

## 6 BANKRUPTCY

On bankruptcy, copyright passes to the trustee in bankruptcy by operation of law.<sup>73</sup> Where a court appoints a receiver to sell assets, both the appointment and subsequent sales by the receiver will involve transfers 'by operation of law' and therefore need not comply with the formal requirements.<sup>74</sup> Where copyright has been assigned in return for a royalty and the assignor subsequently becomes insolvent, that right also vests in the bankrupt's trustee in bankruptcy.<sup>75</sup>

## 7 COMPULSORY LICENCES

In general, if copyright owners choose not to allow others to exploit their rights then that is their prerogative.<sup>76</sup> However, in certain exceptional circumstances, the law will intervene to force the copyright owner to license the work and require the 'licensee' to pay a fee. The basis for such action varies, as do the conditions on which the law permits the copyright owner's wishes to be overridden. Provisions of this nature are called 'compulsory licences'. In jurisprudential terms, the grant of a compulsory licence converts a property rule into a liability rule.<sup>77</sup> Compulsory licences can arise either as a result of various provisions in the 1988 Act or through the general powers of the European Commission. We discuss these in turn.

## 7.1 COMPULSORY LICENCES IN THE UNITED KINGDOM

Compulsory licences are only made available under British law in a small number of specifically defined circumstances. One reason why so few non-voluntary licences exist in the United Kingdom is because the international standards that the United Kingdom has committed itself to are generally incompatible with compulsory licensing. Although two provisions of the Berne Convention explicitly permit the national legislature to grant such licences,<sup>78</sup> the United Kingdom no longer takes advantages of these provisions. As regards rights in phonograms, the Rome Convention intimates that compulsory licences may only be imposed as regards the broadcasting or communication to the public of phonograms.<sup>79</sup>

Another reason for the limited circumstances in which compulsory licences are available is that they are generally seen as unsatisfactory when compared with full property rights. This is because, in contrast to exclusive property rights, the existence and terms of compulsory licences require some administrative procedure, which is costly and time-consuming when compared to free-market negotiations. Critics of the compulsory licence also complain that the value of a licence can only ever be determined accurately by negotiations in the marketplace. It is also argued that compulsory licences unfairly deprive the copyright holder of the most significant element of their rights, namely the right to bargain.

There are no common characteristics that explain the circumstances in which compulsory licences are granted.<sup>80</sup> In some cases they are granted in response to past practices of 'abuse', usually where that abuse either prevented the production of a product for which there was a clear demand, or where the evidence showed that the copyright holder had imposed unjustifiable restrictive conditions. This is true of the compulsory licence relating to the publication of television schedules,<sup>81</sup> which was introduced to end the practice by television companies of only licensing the publication of daily listings, so that they could reserve for their own subsidiaries the market for weekly guides.<sup>82</sup> After a Monopoly and Mergers Commission Report,<sup>83</sup> the Broadcasting Act 1990 introduced provisions entitling publishers, once certain conditions are satisfied, to reproduce that information.<sup>84</sup> On other occasions, compulsory licences are granted where changes in market conditions unduly strengthen the copyright owner's interest. This sort of consideration explains the introduction of compulsory licences where copyright had lapsed but has been revived by the Duration Regulations.<sup>85</sup>

<sup>78</sup> Berne Art. 11bis(2); Berne Art. 13 (aka the 'mechanical licence'). Berne Art. 17 is not intended to permit any general system of compulsory licences but to cover such things as the maintenance of public order and morality. See Ricketson, para. 9.72.

<sup>79</sup> Rome Art. 12. Note also Art. 15(2).

<sup>80</sup> For a full review, see Copinger, ch. 29.

<sup>81</sup> Broadcasting Act 1990, ss. 175, 176 and Sched. 17.

<sup>82</sup> *ITP v. Time Out* [1984] FSR 64.

<sup>83</sup> MMC, *The British Broadcasting Commission and Independent Television Publications: A Report on the Policies and Practices of the BBC and ITP of limiting the publication of advance programme information* (1995) (Cmnd. 9614).

<sup>84</sup> *News Group Newspapers v. ITP* [1993] RPC 173. From 1946 to 1990, the owners of copyright in sound recordings (through PPL) insisted that broadcasters should limit the amount of time that they spent playing their recordings (so called 'needle-time'). This was done to induce such broadcasters to employ their own musicians. A Monopoly and Mergers Commission Report concluded that these restrictions were an anti-competitive practice that adversely affected radio licensees and that it should be abandoned: MMC, *Collective Licensing: A report on certain practices in the collective licensing of public performances and broadcasting rights in sound recordings* (1988) (Cm. 530). In response, the Broadcasting Act 1990 introduced provisions making a compulsory licence available against a licensing body which imposes restrictions on either the total or the proportion of air-time in which such recordings can be played: CDPA ss. 135A to 135G. The terms of one such licence were settled in *The Association of Independent Radio Companies v. Phonographic Performance* [1994] RPC 143.

<sup>85</sup> Duration of Copyright and Rights in Performances Regulations 1995 (SI 1995/3297), r. 24(1).

## 7.2 COMPULSORY LICENCES ORDERED BY THE EC

Compulsory licences may also be made available by the European Commission if a copyright owner is found to have violated Article 82 EC (formerly Article 86 of the Treaty) which prohibits the ‘abuse’ of a ‘dominant position.’<sup>86</sup> *RTE and Independent Television Publications v. Commission* (known as the ‘Magill’ case),<sup>87</sup> involved a battle between an Irish broadcaster (RTE) who produced copyright-protected television listings, but only licensed them on a daily basis (in order to reserve to themselves the market for weekly guides to their own programmes), and a person wishing to publish a comprehensive weekly guide. The Commission held this refusal to license the copyright to be an abuse of the dominant position of the broadcaster, and ordered the broadcasters to license the listings.<sup>88</sup> The Court of Justice affirmed the legality of the action by the Commission. The substantive basis of this power to intervene—which it should be noted is limited to exceptional circumstances—is discussed in Chapter 12.<sup>89</sup> As Microsoft has recently discovered, failure to comply with a Commission decision that it should grant a licence can result in a very substantial fine.<sup>90</sup>

## 8 TECHNOLOGICAL PROTECTION MEASURES

As already mentioned, copyright works have traditionally been exploited by the manufacture and sale of duplicated copies (where the processes of manufacturing and distribution have been controlled by the copyright owner). In light of the emergence of digital communication technologies, and digital reproduction, many copyright owners are concerned that continued use of such a traditional model of exploitation will expose them to undue levels of infringement. More specifically, there is a concern that if digital versions of works are made available, it will result in widespread unauthorized copying, particularly by individual users in private. Since these digital copies will be perfect, this is seen as a much greater threat than that previously posed by photocopiers, for example. Relying on copyright against widespread copying by individuals is not a realistic option. So copyright holders have sought techniques outside copyright to protect their interests: in particular through the use of so-called ‘technological measures of protection’. That is, they have sought to make available works only when they have additional protection systems through technologies which prohibit access, encrypt, or control copying. A familiar example of such a technology is the encryption of satellite broadcast signals and the provision to authorized service subscribers of cards that enable the use of decoding technology. A second is the ‘content scrambling system’ used to protect DVDs and ensure they can only be used on authorized players with CSS descrambling software. A third example is that of the ‘Series Copyright Management System’ introduced in the 1980s by record companies which allowed for the making of first-generation but not second-generation copies of sounds embodied on Digital Audio Tape (DAT)—that is, copies of copies. The system worked by triggering a device fitted in electrical goods.

Technological measures are regarded as critically important for the so-called ‘information society’, because the feared duplication of works is thought likely to take place in private, and

<sup>86</sup> I. Goraere, *The Use and Abuse of Intellectual Property Rights* (1996), 135–50.

<sup>87</sup> [1995] 4 CMLR 18. <sup>88</sup> *Magill TV Guide/ITP, BBC and RTE* (1989) OJ L 78/43.

<sup>89</sup> Note also *IMS Health v. Commission*, T-184/01 R [2002] 4 CMLR 58, where the Commission had also ordered a compulsory licence, but the CFI overturned the interim measure.

<sup>90</sup> €899 million: EC, Press Release IP/08/318 (Brussels, 27 Feb 2008).

thus be impossible to police. Technological measures provide an opportunity to police private uses, by forcing users to enter contractual arrangements before they can use or copy works. If users do not contact the copyright owner, they do not get a set of keys to open the technological locks. However, the potential for technological measures is much more than just operating to solve the problem of the digital shift in replication from public to private arenas. It poses the possibility of radical transformation in the way works are delivered. For example, in a technological fantasy world a person would not have to buy a whole book: they could just buy a copy of Chapter 1 and, if they liked it, then buy the rest (such a user need only spend £1 rather than £8 on all the books they buy and end up not liking). Similarly, technological measures might mean a person could buy a digital newspaper for a single read with the advantage that the proprietor would not need to set the price on the basis that other readers will look at the newspaper (and so will not buy their own copy). The potential of technological measures is to enable us all to get works delivered in the form we want, with costs to the user tailored more closely to the use of the work. Everybody should be better off.

The use of technological measures to support copyright, however, is not a complete answer to the problems of digital distribution and replication. This is because for every lock, there is some enthusiast willing to pick it. So those wishing to rely on technological measures have sought government support for the use of such measures through the passage of laws prohibiting circumvention of the measures. Governments—particularly the US Government and the European Commission—have been supportive.<sup>91</sup> They argue that, by providing protection now, copyright owners will be given appropriate incentives to develop such systems. If such legal protection were not provided, that investment is vulnerable to being undermined by the rapid spread of circumventing technology. So there has been felt to be a need to act immediately. The problem with formulating legal principles to prevent circumvention, however, is that it is the locking systems currently being used that are crude. Strong protection of crude systems carries two problems: it may give users of technological protection too much control (or control of public domain dimensions of content), and it provides developers with little reason to make the systems more sophisticated.<sup>92</sup>

The 1988 Act, as amended, contains a formidable array of civil and criminal provisions dealing with situations where a person facilitates access to works which the person concerned is not entitled to use or receive. Some of these relate to the circumvention of effective technological measures applied to copyright works other than computer programs, and are designed to implement Article 6 of the Information Society Directive.<sup>93</sup> Others, somewhat less prescriptive in scope, apply only to computer programs (and implement Article 7(1)(c) of the Software Directive). The third category, in sections 297–9, relate to reception of transmissions (and

<sup>91</sup> S. Dusollier, 'Technological Measures and Exceptions in the European Directive of 2001: An Empty Promise' (2003) 34 *IIC* 62. For an examination of the US provisions under the Digital Millennium Copyright Act 1998, see D. Nimmer, 'A Riff on Fair Use in the Digital Millennium Copyright Act' (2000) 148 *University of Pennsylvania Law Review* 673.

<sup>92</sup> Not surprisingly, therefore, the formulation of legislative provision in the Information Society Directive 'caused more controversy than any other in the Copyright Directive': M. Hart, 'The Copyright in the Information Society Directive: An Overview' [2002] *EIPR* 58, 61.

<sup>93</sup> CDPA s. 297ZA(1), (6); s. 296 ZD(1), (8) (copyright works (other than computer programs), performances, database right, publication right); Info. Soc. Dir., Recital 50 (without prejudice to Software Directive). In turn, Art. 6 implements Art. 11 of the WCT and Art. 18 of the WPPT. However, they go beyond the requirements of those treaties in breadth (since they apply also to broadcasting organizations, publication right, and *sui generis* database right), and—more importantly—depth. The Directive goes beyond acts of circumvention to cover devices and services which enable circumvention.

implement an EC Directive giving legal protection to services based on 'conditional access').<sup>94</sup> We consider these provisions in Chapter 13. Whether these provisions will give copyright owners the confidence to exploit works, particularly in electronic form, by utilizing technological protection, remains to be seen.

## 9 COLLECTING SOCIETIES

One of the central problems facing copyright owners who wish to exploit their works is how to monitor or police infringements. Where the main form of copyright was the book and the main mode of exploitation the sale of printed copies, this policing (typically undertaken by a publisher) was ad hoc and depended on monitoring activities in the marketplace. However, as copyright expanded to encompass a wider array of subject matter and (particularly ephemeral) uses, the problems of policing copyright have changed. One of the main mechanisms developed by copyright owners to monitor infringement has been collective systems of management and enforcement of rights, in particular, the 'collecting society'.<sup>95</sup>

Collective administration is a system whereby certain rights are administered for the benefit of authors and/or copyright owners. The organizations that administer the rights are empowered to authorize various specified uses of their members' works, normally by way of a licence.<sup>96</sup> The essential characteristic of these arrangements is that they are able to negotiate and act without individual consultation. In most cases the copyright owner assigns their rights to the society. Where this occurs the rights are pooled so as to create a repertoire of works at the disposal of potential users.

The main UK collecting societies are:

- (i) The Performing Right Society (PRS), formed in 1914, which administers as assignee the performing and broadcasting rights in music and song lyrics. PRS annual income from all sources is in the region of £200 million.<sup>97</sup>
- (ii) The Mechanical-Copyright Protection Society (MCPS), formed in 1924, which administers as agent the 'mechanical rights' in music and song lyrics, that is, the right to make a sound recording (part of the reproduction right).
- (iii) Phonographic Performance Limited (PPL), formed in 1934, which administers as assignee the performing and broadcasting rights in sound recordings, and from 2007 (when it merged with PAMRA and AURA) has also represented performers.
- (iv) Video Performance Limited (VPL), which administers, as agent, the performing, and broadcasting rights in videos.
- (v) Authors' Licensing and Collecting Society (ALCS), formed in 1977, which, inter alia, collects fees for writers from the retransmission by cable of all terrestrial channels.

<sup>94</sup> Directive 98/84 EC of the European Parliament and of the Council of 20 Nov. 1998 on the Legal Protection of Services based on, or consisting of, Conditional Access.

<sup>95</sup> For commentary, see Copinger, ch. 28; Laddie *et al.*, paras. 15.14–15.38.

<sup>96</sup> M. Freegard, 'Collective Administration' (1985), *Copyright* 443. A similar definition can be found in Satellite Dir., Art. 1(4). Note also the definition of 'licensing body' in CDPA s. 116(2).

<sup>97</sup> On the history of the PRS, see T. Ehrlich, *Harmonious Alliance: A History of the Performing Right Society* (1989). For details of the PRS see <<http://www.prs.co.uk>>.

- (vi) Copyright Licensing Agency (CLA), formed in 1982, represents authors' and publishers' licensing societies (including ALCS) with regard to reprographic reproduction. It enters blanket licences with educational authorities and universities.
- (vii) The Design and Artists' Copyright Society (DACS), formed in 1983, administers, as agents, the reproduction rights for painters, printmakers, sculptors, and photographers, as well as the new resale royalty right.
- (viii) Educational Recording Agency (ERA) and Open University Educational Enterprises, which license educational establishments to record off-air under schemes which have been certified.<sup>98</sup>
- (ix) Artists Collecting Society CIC, formed in 2006 to administer the resale royalty right (in competition with DACS).

## 9.1 ORGANIZATION

As collecting societies are private organizations that have emerged in response to particular commercial environments, there is no great uniformity to their organizational structures. Nevertheless, it is worth considering the different dimensions of some of the existing societies.

### 9.1.1 Membership terms

In terms of copyright owner–society relations, the relevant relationship will be determined in the membership agreement and the rules of the society. To ensure that each collecting society is capable of licensing the relevant right on behalf of the copyright owner, the owner has to assign the right to the society or appoint the society as its agent. The scope of any such assignment or agency will depend on the proposed function of the society. For example, a copyright owner joining the PRS is required to assign the 'small rights' relating to non-dramatic performances. The 'grand rights' relating to dramatic performances, which are not included, are administered by individual agreements. The rules of a society might also make provision for a member to assign rights in relation to works not in existence at the time of joining. A society may have different categories of membership (for example, author members and publisher members). As a member, a copyright owner will have power to vote at meetings and thus to influence the way the society operates. A collecting society will distribute any licensing revenues it collects in accordance with the rules of the society. Often this will involve some kind of sampling mechanism that enables the society to estimate the amount that each member is proportionally entitled to. Usually a society will first deduct its administration expenses. In some jurisdictions a portion of the revenue is used for 'cultural purposes' (for example to fund indigenous music culture in the country making the deduction) and for pension and welfare payments.<sup>99</sup> Provisions exist within the rules of a society specifying the circumstances in which a person may leave the society, which will usually require a substantial period of notice.

<sup>98</sup> CDPA s. 35; Copyright (Certification of Licensing Scheme for Educational Recording of Broadcasts) (Educational Recording Agency) Order 1990 (SI 1990/879, as amended by SI 1996/191), and Copyright (Certification of Licensing Scheme for Educational Recording of Broadcasts) (Open University) Order 2003 (SI 2003/187).

<sup>99</sup> See A. Harcourt, 'The Unlawful Deduction Levied upon UK Composers' Performing Rights Income' (Oct. 1996) 64 *Copyright World* 15 (criticizing the practice of European performing rights societies in deducting up to 10% of income in this way).

### 9.1.2 Licensing arrangements

The collecting societies enter into negotiations with copyright users, either as associations of users or on an individual basis. Negotiations with associations of users will often result in the establishment of tariffs.<sup>100</sup> Sometimes a society–user agreement will cover more than just a licence fee. Some associations of users will involve themselves in ensuring that licence fees are paid by their members, or help in other ways with the administration in return for a reduced tariff. Although the terms of licences will vary, it is common for collecting societies to grant a ‘blanket’ licence entitling users to use any work in the repertoire of the licensing body without restriction.<sup>101</sup>

## 9.2 ASSESSMENT

At a practical level, collecting societies are a convenient way of resolving some of the difficulties faced by copyright owners and users in reaching appropriate arrangements.<sup>102</sup> Collecting societies are useful insofar as they provide users with a focal point to locate and transact with copyright owners. Collecting societies reduce the ‘transaction costs’ that would otherwise exist in ascertaining and negotiating individual licences with individual copyright owners. This is particularly important where a user wishes to utilize a large number of copyright works, so that transacting on an individual basis would be time-consuming and costly.<sup>103</sup> Moreover, where the society grants a user a blanket licence, this offers users a degree of flexibility. For example, where a blanket licence is granted to a disco or a radio station, it means that they do not need to determine in advance the works they are going to play.

For the copyright owner, collective administration relieves an otherwise impossible burden of policing and enforcing rights. It also provides copyright owners with a bargaining power that they would not possess as individuals. Moreover, the possibility of collective administration has enabled owners to argue for the extension of rights in relation to subject matter that might not otherwise have been protected on the basis that it was unenforceable.

Probably the most interesting thing about collecting societies is the way in which their emergence represents a significant shift in the character of copyright. As Thomas Streeter has observed, with collective administration copyright loses much of its character as a property right exploited through distribution of copies bought and sold in the marketplace. Instead, copyright becomes more like the legal underpinning of an institutional bureaucracy that attempts to simulate a market through statistical mechanisms. Each copyright loses its individuality and the ‘property form’ is replaced by a liability form. In effect, collecting societies turn an author’s property right into a right to receive welfare payments and a user’s licence fee into a tax upon their activities.<sup>104</sup>

<sup>100</sup> For example, at sports grounds where music is played incidentally the PRS receives a rate of £1.56 per 1,000 persons admitted; whereas for pop concerts the PRS charges 3% of box-office receipts. See *BSB v. PRS* [1998] *RPC* 467 (para. 4.29).

<sup>101</sup> While the MCPS operates a blanket licence for re-recordings, first recording requires individual licensing: *BPI v. MCPS* [1993] *EMLR* 86, 139.

<sup>103</sup> J. Fujitani, ‘Controlling the Market Power of Performing Rights Societies: An Administrative Substitute for Antitrust Regulation’ (1984) 72 *California LR* 103, 106 (breaking down the transaction costs in identifying and locating the copyright owner, obtaining the information necessary to negotiate a price, and transaction time costs).

<sup>104</sup> T. Streeter, ‘Broadcast Copyright and the Bureaucratization of Property’ (1992) 10 *Cardozo Art & Entertainment LJ* 567, 570, 576.

### 9.3 INTERNATIONAL DIMENSIONS

Although collecting societies tend to operate at the national level, they form part of a global network of collecting agencies. For example, while performing rights are administered in the UK by the PRS, there are equivalent societies in the USA (BMI, ASCAP), Australia (APRA), Germany (GEMA), France (SACEM), Belgium (SABAM), and so on. Typically, there will be 'reciprocal representation contracts' between national copyright management societies. Under these arrangements, one national society (A) undertakes, on a reciprocal basis, to manage the rights attached to the repertoire of a foreign society (B) within its sphere of operation, normally its national territory. The society (A) collects royalties on behalf of the foreign society (B), pursues infringers, takes any necessary proceedings in respect of infringement, and transfers sums collected to (B). Effectively, these agreements can mean that a particular national society controls within the territory the entire world repertoire of works.

### 9.4 EUROPEAN DEVELOPMENTS

These national arrangements—under pressure from the Community authorities, as well as business pressures—are giving way to more flexible options. As markets for particular uses have become more and more transnational, attempts have been made to develop Community-wide licences (so that users do not have to get permission on a territory-by-territory basis). For such Community-wide licensing to be possible, the collecting Societies must agree that they can grant licences permitting uses outside their territories—so, for example, that GEMA can authorize web-casting in the UK or the PRS–MCPS can do the same for Germany. This sets the collecting societies up in competition with one another, which from one perspective could make them operate more efficiently. However, if collecting societies compete amongst themselves for users by reducing authors' (and copyright owners') remuneration, one might wonder whether the overall effect is in the public interest. One attempt to avoid this kind of competition was proposed by the music performing rights societies in an agreement that would have permitted all collecting societies to authorize Europe-wide licensing of public performance right, but would have required users to seek permission from their local society. The Commission doubted whether this was compatible with competition law, and has encouraged collecting societies to compete with one another.<sup>105</sup> A recent report claims there has been significant movement towards Europe-wide licensing.<sup>106</sup>

## LIMITS ON EXPLOITATION

### CHAPTER CONTENTS

1	Introduction	278	4	Regulation of Contracts for the Protection of Users	294
2	Limits on Agreements between Authors and Entrepreneurs	279	5	Orphan Works	295
3	Competition Law and the Exploitation of Copyright	286	6	Controlling Collecting Societies	296

### 1 INTRODUCTION

The terms and conditions under which a copyright work is transferred or exploited are usually determined contractually by the parties. In this chapter we look at the exceptional situations where the law controls the way those rights are exploited. We begin by looking at the various mechanisms that are used to regulate contracts between authors and entrepreneurs. We then go on to look at the impact that British and European competition law has on copyright owners' ability to exploit their copyright. In turn we look at the ways in which copyright contracts are regulated in respect to users of copyright. Finally, we look at the various controls that are imposed on collecting societies.

Before looking at these, it is important to note that there are many other restrictions placed on the owners' ability to exploit and use the copyright work that we will not look at here.<sup>1</sup> Although copyright is described as a 'property right' and therefore might be expected to give absolute dominion, copyright law operates as an exclusionary right: it prevents all parties (other than the copyright holder) from exploiting the work. Copyright, however, does not confer on the proprietor of the copyright any positive rights to make and sell copies of the work. Consequently, the copyright owner will be subject to the regulatory regimes in the field in question (relating for example to the showing of films or broadcasts), and criminal laws (such as obscenity or public order legislation). Another factor that may affect the ability of a copyright owner to exploit a work is the rights that exist in any underlying works. For example, where the owner of the copyright in an English translation of a French novel

<sup>1</sup> The moral rights of attribution and integrity operate as techniques of control over the manner in which a work is exploited, and thus are frequently akin to statutory implied contract terms. See Ch. 10.

wishes to exploit the copyright in the translation, it will be necessary for them to obtain the permission of the owner of copyright, if any, in the French novel that has been translated. With some copyright works, such as films or multimedia works, a whole host of prior right owners will have to be identified, approached, and persuaded to consent to the exploitation.<sup>2</sup> It should be noted that one joint owner may not exploit the work without the licence of the other owners.<sup>3</sup>

## 2 LIMITS ON AGREEMENTS BETWEEN AUTHORS AND ENTREPRENEURS

This section considers the extent to which UK law will interfere to regulate the terms of transactions between authors and entrepreneurs, either to protect the psychological link between the author and their work, or to protect an author's financial interests. A number of other jurisdictions, notably France and Germany, include within their copyright legislation provisions relating to the interpretation of copyright contracts. They also impose overriding terms that protect the financial interests of authors.<sup>4</sup> In the United Kingdom, there are very few provisions specifically directed at authors. The legal validity of such arrangements is generally dependent upon the law of contract, not the law of copyright. In the United Kingdom, the basic principle is that a contract freely entered into by an adult is binding. The court will not reopen the contract merely because the court thinks that the terms are unreasonable or unfair. The main way in which authors' interests are protected derives less from legal regulation than from collective processes such as union activity or the promotion of standard contracts like those formulated by the Society of Authors and the Writers' Guild.<sup>5</sup> Individual authors and artists are also better able to secure reasonable terms by the engagement of literary agents.<sup>6</sup>

Having said this, a contract entered into between an author and entrepreneurs may be regulated in a number of ways. On occasions the general contractual doctrines of undue influence and restraint of trade have been used to protect particularly vulnerable authors from the more egregious of practices. In other cases the courts may interfere with the sanctity of author-entrepreneur contracts where they are anti-competitive (either under domestic or European law). After looking at these, we will examine the specific terms that are implied by statute into certain contracts.

<sup>2</sup> Sometimes it will be impossible to trace the relevant copyright holders, in which case the exploiter might take out insurance, pay notional royalties into a fund, or simply take a risk. Cf. CDPA s. 190 (performers).

<sup>3</sup> CDPA s. 173(2); *Lauri v. Renad* [1892] 3 Ch 402; *Powell v. Head* (1879) 12 Ch D 686; *Cescinsky v. Routledge* [1916] 2 KB 325, 330.

<sup>4</sup> See L. Bently, *Between a Rock and a Hard Place* (2002); W. Cornish, 'The Author as Risk-Sharer' (2002) 26 *Columbia Journal of Law & the Arts* 1; G. D'Agostino, 'Copyright Treatment of Freelance Works in the Digital Era' (2002) 19 *Santa Clara Computer & High Technology Law Journal* 37; W. Nordemann, 'A Revolution of Copyright in Germany' 49 (2002) *Journal of the Copyright Society of the USA* 1041.

<sup>5</sup> Even here, however, competition law may limit collective self-help. In *Re: Royal Institute of British Architects*, Case ref GP/908 (March 2003), the OFT held that 'fee guidance' to its members infringed the Chapter 1 prohibition, though a collation of historical price trends did not.

<sup>6</sup> See D. De Freitas, 'Copyright Contracts: A Study of the Terms of Contracts for the Use of Works Protected by Copyright under the Legal System in Common Law Countries' [1991] *Copyright* 222. For an example, see B. Nyman, 'The Author-Publisher Agreement' [1995] *Ent LR* 127.

## 2.1 UNDUE INFLUENCE

If a disadvantageous bargain is the result of the exercise of undue influence the court may set the bargain aside. An extreme example would be where an author assigned copyright to a publisher because of threats made by the publisher. However, the court's power to interfere extends beyond those extreme scenarios to all situations where a 'person in a position of domination has used that position to obtain unfair advantage for himself, and so caused injury to the person relying on his authority or aid'.<sup>7</sup> For the courts to interfere in the sanctity of the contract, two elements need to be satisfied. *First*, it must be shown that the parties are in a relationship in which one person has influence over another. *Second*, it must be shown that the influence was used to bring about a 'manifestly disadvantageous transaction'.<sup>8</sup> If undue influence exists, the contract is then voidable, and copyright assigned thereunder may be revested in the author. It seems that since the contract is voidable (as opposed to void), contractual dealings with bona fide purchasers which take place before the contract is avoided will remain binding.

In order to have a contract set aside on the basis of undue influence, it must first be shown that the parties are in a relationship in which one person has influence over another. That is, it is necessary to demonstrate a 'dominating influence'. The most common situation where this occurs is where the parties are in a fiduciary relationship; that is, one of trust. Where the relationship between the parties is deemed by the court to be 'fiduciary', the existence of a dominating influence is presumed. In most cases of copyright assignments, for example a publishing agreement, such a fiduciary relationship is unlikely to exist because there will rarely be any pre-existing relationship. An example of an exception to this is provided by *Elton John v. James*.<sup>9</sup> There Elton John sought to avoid an agreement tying him and fellow songwriter Bernie Taupin to a publishing arrangement with James for six years. Nicholls J held that there was a 'dominating influence' even though the acquaintance of John, Taupin, and James was short before the publishing agreement was signed, because James 'really took charge', while the writers were young and eager and received no independent advice, reposing trust 'in a man of stature in the industry that he would treat them fairly'.

A similar position was reached in *O'Sullivan v. Management Agency*.<sup>10</sup> This decision arose as a result of the fact that a young and then unknown composer named Gilbert O'Sullivan entered into an exclusive management agreement with the defendant. The defendant operated through a number of companies with whom O'Sullivan entered into publishing and other agreements. O'Sullivan later sought a declaration that these contracts were void and unenforceable on the ground, inter alia, that they had been obtained by undue influence. Mars-Jones J held that the defendant was in a fiduciary position and thus the agreements were presumed to have been obtained by undue influence. The associated companies were equally subject to fiduciary obligations.<sup>11</sup> Although there was no pressure on O'Sullivan to execute the agreements that did not matter. As Fox LJ said, on appeal, '[t]he fiduciary relationship existed. The onus was then upon those asserting the validity of the agreements to show that they were the consequence of the free exercise of Mr O'Sullivan's will in the light of full information regarding the transaction. That has not been done. He had no independent advice about these matters at all'.<sup>12</sup>

<sup>7</sup> *National Westminster v. Morgan* [1985] 2 WLR 588, 599 (quoting Lord Shaw).

<sup>8</sup> The relationship need not be one of domination: *Goldworthy v. Brickell* [1987] Ch 378, 404–6.

<sup>9</sup> *Elton John v. James* (1985) [1991] FSR 397. <sup>10</sup> [1985] QB 428. <sup>11</sup> *Ibid*, 448 (Dunn LJ).

<sup>12</sup> On appeal, the central issue was to determine the appropriate remedy. Dunn, Fox, and Waller LJ held that the court should try to achieve 'practical justice' and found that the assignments of the copyright should be set aside, the copyrights be returned to the author, and the manager be required to account for profits made from

In order to have a contract set aside on the basis of undue influence, it must also be shown that the dominating influence was used to bring about a transaction that was ‘manifestly disadvantageous’. The problem that confronts authors and artists here is that in many cases their grievances are collective, rather than individual, in nature. Consequently, the possibility exists for an assignee or exclusive licensee to deny that there is disadvantage by referring to agreements with other authors and the practices of other entrepreneurs. It should be noted that this tactic does not always work. For example, in *Elton John v. James* some of the publishing agreements were found to be unfair even though James acted in a bona fide manner, imposing terms standard in the trade. In that case (as with the *O’Sullivan* decision), the court was influenced by the fact that the royalty under the contract was less than that paid to other ‘unknown’ artists.<sup>13</sup>

## 2.2 RESTRAINT OF TRADE

The second way in which vulnerable authors are protected is via the doctrine of ‘restraint of trade’. As it suggests, this doctrine reflects a general policy of contract law that a person should be able to practise their trade.<sup>14</sup> Contracts that restrict this right will be scrutinized by the courts to ensure that they are justified.<sup>15</sup> In these circumstances the courts have said that the terms must be no more than is reasonably required to protect the legitimate interests of the promisee and the public interest.<sup>16</sup> This doctrine has been important in relation to long-term contracts that are common in the music industry.

The impact of the doctrine of restraint of trade can be seen in *Schroeder Music Publishing Co. v. Macaulay*,<sup>17</sup> where the House of Lords held that an agreement between a songwriter and a publisher was invalid because it was in restraint of trade. The agreement was in a standard form and required the songwriter to assign copyright in his works to the publisher. The most important factor was that the duration of the agreement was to be five years and, if the royalties for those years exceeded £5,000, a further five-year period. In effect, the songwriter was bound to the publisher for ten years. However, the publisher was under no obligation to exploit the songs. Lord Reid suggested that even if there was a term requiring the publisher to use its best endeavours to promote the composer’s work, this would be of little use to the composer. He said, ‘if no satisfactory positive undertaking by the publisher can be devised, it appears to me to be an unreasonable restraint to tie the composer for this period of years so that his work will be sterilized and he can earn nothing from his abilities as a composer if the publisher chooses not to publish’.<sup>18</sup> Only a clause permitting the composer to terminate the agreement could save it. Lord Diplock said that the doctrine of restraint of trade was part of a general jurisdiction to protect parties from unconscionable contracts. In these circumstances, the relevant question was whether the bargain was fair, that is, ‘whether the restrictions are both reasonably necessary for the protection of the legitimate interests of the promisee and commensurate

them, but subject to deduction of a service fee for his contribution to the composer’s success: *ibid*, 458–9, 466–9, 471–3. See, generally, J. Tatt, ‘Music Publishing and Recording Contracts in Perspective’ [1987] *EIPR* 132.

<sup>13</sup> *Elton John, v. James* (1985) [1991] *FSR* 397, 453.

<sup>14</sup> *Schroeder Music Publishing Co. v. Macaulay* [1974] 3 *All ER* 616, 621 (Lord Reid). See also below at pp. 1035–6.

<sup>15</sup> Certain categories may be excluded from the doctrine: *Eso Petroleum Co. v. Harper’s Garage* [1968] *AC* 269; *Panayiotou v. Sony Music Entertainment* [1994] *EMLR* 229, 320.

<sup>16</sup> This is referred to as the ‘Nordenfelt test’ after *Nordenfelt v. Maxim Nordenfelt* [1894] *AC* 535.

<sup>17</sup> *Schroeder Music Publishing Co. v. Macaulay* [1974] 3 *All ER* 616. <sup>18</sup> *Ibid*, 622.

with the benefits secured to the promisor under the contract'.<sup>19</sup> Lord Diplock's reliance on the broad notion of inequality of bargaining power, after receiving a positive reception,<sup>20</sup> has been largely ignored in subsequent cases which have preferred to rely on the more concrete doctrines of restraint of trade, rather than develop general principles of this sort.<sup>21</sup>

Another situation where restraint of trade has been used to protect an author is in *Zang Tumb Tuum v. Holly Johnson*,<sup>22</sup> which dealt with a publishing agreement and a recording agreement that the group Frankie Goes to Hollywood signed with Perfect and ZTT respectively. The publishing agreement was for five years and the recording agreement possibly for nine years. Soon after the group became successful, Holly Johnson left the group. ZTT tried to enforce a 'leaving member' clause in the recording contract and sought an injunction to restrain him from working for another record company. ZTT's action failed. Applying the doctrine of restraint of trade, the Court of Appeal set aside the recording contract and the publishing agreement. The Court was particularly influenced by the duration of the agreement: Dillon LJ said that 'stringent provisions such as many of those in the recording agreement may be justifiable in an agreement of short duration. But the onus must, in my judgment, be on the recording company to justify the length and the one-sidedness of the provisions as to its duration in this recording agreement'.<sup>23</sup> The Court held that ZTT had failed to justify the terms.

If, in the light of these cases, the doctrine of restraint of trade seems to offer substantial protection to authors and artists, it is important to observe the doctrine's limitations, which were highlighted in *Panayiotou v. Sony Music Entertainment*.<sup>24</sup> Panayiotou, a songwriter and singer who worked under the name George Michael, sought to have the recording agreement which he had entered into with Sony in 1988 set aside. The background to the agreement was relatively complicated. In 1982 as a member of the group Wham!, Michael signed an agreement with a record company called Innervision. After some initial success, the validity of the agreement was called into question. Subsequent legal proceedings were settled and in 1984 a new agreement was entered into between Wham! and Sony (who had been licensees of Innervision). This agreement placed Wham! under a potential obligation to record eight albums. When the group disbanded in 1986, Sony exercised its 'leaving member clause' which was to the effect that the 1984 agreement was to continue to bind Michael as an individual recording artist. After the success of Michael's first solo album (*Faith*), the 1984 agreement was renegotiated and replaced by a new agreement with Sony (the 1988 agreement). This also bound Michael, if the defendant so wished, to deliver a further eight albums and was to endure for fifteen years. As part of the renegotiation, Michael was given much improved financial terms. As a result of changes in the corporate structure of the defendant company, Michael became disenchanted and in 1992 sought to release himself from his obligations to Sony.

Parker J rejected Michael's claim that the 1988 agreement should be set aside. The main ground for rejecting George Michael's claim was that it was contrary to public policy to seek to reopen a previously compromised action, and that the 1984 agreement was such a compromise:<sup>25</sup> the 1988 agreement being based on the 1984 predecessor, was covered by the

<sup>19</sup> *Ibid*, 623.      <sup>20</sup> For example *Clifford Davis v. WEA Records* [1975] 1 *All ER* 237.

<sup>21</sup> *NatWest v. Morgan*, note 7 above (rejecting inequality of bargaining power and unconscionability) and *Union Eagle v. Golden Achievement* [1997] 2 *All ER* 215 (describing as 'beguiling heresy').

<sup>22</sup> *Zang Tumb Tuum v. Johnson* [1993] *EMLR* 61.      <sup>23</sup> *Ibid*, 73.

<sup>24</sup> *Panayiotou*, note 15 above. For criticism, see A. Coulthard, 'George Michael v. Sony Music: A Challenge to Artistic Freedom?' (1995) 58 *MLR* 731.

<sup>25</sup> For criticism of this aspect of the case, see Coulthard, *ibid*, 736 (pointing out that the action compromised by the 1984 agreement did not involve the defendant, and moreover that the 1984 agreement contained no express promise not to reopen the 1982 agreement).

same policy. However, aware that the case was likely to be appealed,<sup>26</sup> Parker J went on to consider whether, had there been no compromise, the 1988 agreement was an unreasonable restraint of trade. He found that the agreement was restrictive of trade,<sup>27</sup> but that the restraint was reasonable. Although not explicit, Parker J appears to have accepted that the restraint was necessary to protect the defendant's interests, not merely in recouping investment they had placed in Michael, but also the investment they generally made in young artists who turned out to be unsuccessful.<sup>28</sup> Moreover, the restraint was reasonable as regards Michael's interests given the generous remuneration which was to be promised to the artist: the length of the agreement was simply a product of Michael's success. Parker J added that, when Michael's obligations under the 1984 agreement were taken into consideration, the 1988 agreement hardly restrained Michael at all.<sup>29</sup>

The *Panayiotou* case makes it clear that there are limits to the operation of the doctrine of restraint of trade. However, it has not provided any clear markers as to how to determine where those limits are. More specifically, it is unclear what the legitimate interests of a recording or publishing company are, and how the decision is to be made that the obligation (for example, to produce eight albums, rather than three albums, or a five-year deal), is reasonable. Moreover, the case introduced a new limitation on the doctrine through Parker J's final reason for dismissing Michael's claim: Parker J found that Michael, by requesting an 'advance' from Sony in 1992 had affirmed the existence of the contract and could not thereafter argue that it should be set aside.<sup>30</sup> If this approach is followed,<sup>31</sup> authors, artists, and performers who seek to have lengthy or one-sided agreements set aside, will have to take great care to ensure they do not accept the benefit of the agreement after being informed of its potential unenforceability.

### 2.3 ANTI-COMPETITIVE CONTRACTS

A further ground on which a court might reopen an agreement between an artist and an entrepreneur is on the basis that it is anti-competitive. More specifically, a contract may be declared to be void by virtue of Article 81 EC (formerly Article 85 of the Treaty). As noted in Chapter 1, this renders void all agreements which affect trade between member states and which have the object or effect of distorting competition within the Common Market. The case of *RAI/Unitel*<sup>32</sup> indicated that an exclusive contract with four opera singers for one operatic work was an agreement between 'undertakings' which might have an 'appreciable effect' on trade between member states and thus might be subject to Article 81. Although the Commission took the view that the agreement concerning the broadcast of the performance of *Don Carlos* at La Scala in Milan was subject to Article 81, the case was settled. As such, it remains unclear when such an agreement would be unlawful.

It seems possible that a contract between an author and an entrepreneur would fall outside the scope of Article 81 because the effect on competition might not be 'appreciable'. Alternatively, as with exclusive distribution agreements, the contract might be justifiable under

<sup>26</sup> In fact, no such appeal was heard.

<sup>27</sup> *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229, 342.      <sup>28</sup> *Ibid*, 361.

<sup>29</sup> Cf. *Watson v. Prager* [1993] EMLR 275. In fact, the 1988 agreement effectively required Michael to produce eight albums, not the six that would have been needed to meet his remaining obligations under the 1984 agreement.

<sup>30</sup> *Panayiotou v. Sony Music Entertainment* [1994] EMLR 229, 385–6.

<sup>31</sup> It has been in *Nicholl v. Ryder* [2000] EMLR 632. For arguments against the affirmation doctrine, see Coulthard, 'George Michael v. Sony Music', 741–3.

<sup>32</sup> [1978] OJ L 157/39; [1978] 3 CMLR 306; 12th Report on Competition Policy 1982, para. 90.

Article 81(3).<sup>33</sup> An argument based on Article 81 was also raised but rejected in *Panayiotou v. Sony Music Entertainment*.<sup>34</sup> Parker J held that the 1988 agreement between Michael and Sony had no effect on trade between member states of the EU because the agreement operated ‘worldwide’,<sup>35</sup> that because the 1988 agreement replaced the 1984 agreement it in fact had no effect on trade at all,<sup>36</sup> and did not have the object or effect of restricting competition.<sup>37</sup> Moreover, because the agreement involved an assignment of copyright in the sound recordings to Sony, Parker J held that it fell within Article 295 (formerly Article 222 of the Treaty) which protects property. Whether any or all of these conclusions are satisfactory has been doubted. However, had the contrary conclusion been reached, that the agreement fell within Article 81(1), it is likely that the Commission would have been required to consider a deluge of individual applications for exemptions.

Three developments which have taken place since the *Panayiotou* case are worth noting. The first is the Commission Regulation on Vertical Restraints (discussed in Chapter 42), which makes available a block exemption from Article 81 for ‘vertical agreements’ including exclusive supply agreements.<sup>38</sup> This means that, even if an agreement falls within Article 81 EC, it is exempt as long as the market share of the purchaser is under 30 per cent.<sup>39</sup> However, while a publishing, recording, or songwriting contract would fall within the general definition of a ‘vertical restraint’ in the Regulation,<sup>40</sup> the Block Exemption does not apply where the *primary object* of the agreement concerns intellectual property.<sup>41</sup> We await a decision on whether the primary object of such an arrangement concerns intellectual property. This seems more likely with publishing than recording agreements. However, even if the Block Exemption does not apply, a restrictive agreement may be found exempt individually under Article 81(3).

The second significant development since the *Panayiotou* case is that section 2 of the Competition Act 1998 introduced a national provision (the so-called ‘Chapter I prohibition’) equivalent to Article 81.<sup>42</sup> It seems that an author or artist will be better served by the domestic provision, since it does not require that the applicant show that the contract had an adverse effect on trade between member states. This is because the Competition Act only requires that the agreement ‘may affect trade within the United Kingdom’. There is no express requirement that this effect must be ‘appreciable’ or ‘substantial’ (though there is an immunity from fines for ‘small agreements’ and ‘conduct of minor significance’).<sup>43</sup> However, as with the European provision, most vertical agreements are exempt from section 2 unless the agreement has as its primary object terms relating to the assignment or use of intellectual property.<sup>44</sup>

<sup>33</sup> Article 81(3) is directly applicable from May 2004, and the old system which required ‘prior notification’ has been abandoned.

<sup>34</sup> [1994] *EMLR* 229. For a review of this see A. Coulthard, ‘*Panayiotou v. Sony Music Entertainment*’ [1995] *Journal of Business Law* 414.

<sup>35</sup> [1994] *EMLR* 229, 416.      <sup>36</sup> *Ibid.*, 420.      <sup>37</sup> *Ibid.*, 425.

<sup>38</sup> If the market share of each is less than 15% such agreements will be minor agreements as falling outside of Art. 81(1): Notice on Agreements of Minor Importance [2001] *OJ C* 368/13. Below the threshold, the Commission considers that the competition authorities of member states should provide primary supervision.

<sup>39</sup> VRR, Art. 3. Assuming it has no ‘hard core’ terms.      <sup>40</sup> *Ibid.*, Art. 2(1).      <sup>41</sup> *Ibid.*, Art. 2(3).

<sup>42</sup> Competition Act 1998, s. 2. See J. Turner, ‘The UK Competition Act 1998 and Private Rights’ [1999] *EIPR* 181.

<sup>43</sup> Competition Act 1998, ss. 39 and 40; Competition Act 1998 (Small Agreements and Conduct of Minor Significance) Regulations 2000 (SI 2000/262). But the OFT takes the view that an agreement will have no appreciable effect on competition if the parties’ combined share of the market does not exceed 25%.

<sup>44</sup> The Competition Act (Land and Vertical Restraints Exclusion) Order 2000 (SI 2000/310).

Third, and finally, it should be noted that, as from 1 May 2004, the effect of Regulation 1/2003 is to render Article 81(3) directly applicable by competition authorities and courts of member states. (Previously, such decisions could only be made by the European Commission.) This means that a finding that an exclusive recording agreement breaches Article 81 will not now produce the bureaucratic consequences (in terms of notifications) that it formerly would have entailed. This may make a court willing to abandon the reasoning employed in the *Panayiotou* case, treat exclusive recording arrangements as anti-competitive, but rely on its own assessment of Article 81(3) in deciding whether such arrangements improve the production of goods, while allowing consumers a fair share of the resulting benefit.

## 2.4 THE STATUTORY RIGHT TO EQUITABLE REMUNERATION

Although UK copyright law treats the terms of a contract as essentially a matter for voluntary negotiation, a significant exception has recently been introduced in relation to transfers of rental rights. This so-called ‘unwaivable right to equitable remuneration’ marks a first step in the transplanting of provisions protecting authors in countries such as France and Germany, via the process of European harmonization,<sup>45</sup> into UK copyright law. Section 93B of the 1988 Act specifies that where a person transfers the rental right ‘concerning’ a film or sound recording to the producer of the sound recording or film, ‘he retains the right to equitable remuneration for rental’. The potential beneficiaries of the retained right are the authors of literary, dramatic, musical or artistic works, and the principal director of a film.<sup>46</sup>

The right applies whether the transfer is presumed under section 93A (or with performers, section 191F), or is voluntarily transferred. The right to remuneration cannot be excluded by agreement.<sup>47</sup> The remuneration is to be claimed from the person ‘for the time being entitled to the rental right’, and the relevant time is presumably the time of rental rather than of claim. The right can only be assigned to a collecting society, by testamentary transmission, or by operation of law (e.g. on bankruptcy). The amount deemed equitable is to be determined by agreement or, failing this, by the Copyright Tribunal. In determining what is equitable, the Tribunal is directed to take into account the importance of the contribution of the author or performer to the film or sound recording. Remuneration is not to be considered inequitable merely because it was paid by way of a single payment or at the time the rental right was transferred.<sup>48</sup>

## 2.5 HARMONIZATION?

As can be seen, with one or two exceptions, English law leaves authors free to make arrangements for the exploitation of their rights, and rarely interferes to protect authors against

<sup>45</sup> More specifically, the Rental Dir., Art. 4.

<sup>46</sup> CDPA s. 191G has the same effect as regards performers. It seems that CDPA s. 93B applies not just to circumstances where the work is incorporated in a film or sound recording (for example, the music used on a film) but also where the work is to be rented with the sound recording or film, such as might occur with artwork on a record sleeve. This conclusion is consistent with the expansive definition of author in CDPA s. 93B(1)(a) as covering authors of artistic works and the use in s. 93B(1) of ‘concerning’. However, s. 93C(3) refers to the importance of the ‘contribution...to’ the sound recording or film.

<sup>47</sup> CDPA s. 93B(5).

<sup>48</sup> The right applies even where transfers were made pursuant to agreements made prior to 1 Jan. 1994, but only if the author asserted a claim to that effect between 1 Dec. 1996 and 1 Jan. 1997. See Related Rights Reg. 33(b).

decisions that are not in their long-term interests. In contrast, most member states have provisions regulating the terms and conditions of contracts between creators and exploiters. So far, the only harmonization in this area was the ‘unwaivable equitable right of remuneration’ conferred on authors and performers after the transfer of their rental rights. In 1992, this looked like this was going to be the first stage of a European copyright law that would protect authors from unfair contractual exploitation. But since then little has happened. In May 2002, a study by Hugenholtz and Guibault was published under the title *Study in the Conditions Applicable to Contracts Relating to Intellectual Property in the EU*.<sup>49</sup> The Report does not recommend harmonization. While it acknowledges that ‘the demand expressed within some member states for a more adequate protection for creators against abusive contractual practices may indeed be quite justified’, it offers little prospect of action at a European legislative level. The Report concludes instead that harmonization of the rules on copyright contracts would be premature. This, it says, is because: there has yet to be harmonization of other substantive copyright rules, such as rules on ownership and moral rights; there is no evidence of any impact of differences in national laws on the Internal Market; and European intervention must honour the principle of subsidiarity. The Report argues that ‘the issues of copyright contract law are best addressed at the national level, since the national legislator is in the best position to reconcile the principles of copyright law, with those of contract law, labour law, and social law, while taking account of the relevant cultural considerations’. The Commission has held that differences between contractual rules are not significant enough to require harmonization—for the moment.<sup>50</sup>

### 3 COMPETITION LAW AND THE EXPLOITATION OF COPYRIGHT

In this section we look at the impact that UK and European competition law have on the copyright owner’s ability to exploit copyright.

#### 3.1 REFUSALS TO LICENCE

In general, copyright is regarded as a property right which its owner may use or not use as they wish: an author cannot normally be compelled to publish their private letters or manuscripts, nor are publishers required to keep their books ‘in print’. Nevertheless, just as in exceptional circumstances competition law will require a property owner to make available an ‘essential facility’ to an economic operator,<sup>51</sup> so—exceptionally—competition law might require a copyright owner to license its rights to other traders.<sup>52</sup> The legal basis for this requirement is Article 82 EC (formerly Article 86 of the Treaty), which prohibits the ‘abuse’ of a ‘dominant position’.<sup>53</sup> An operator holds a ‘dominant position’ when it holds a position

<sup>49</sup> ETD/2000/BS-3001/E/69.

<sup>50</sup> EC, *Communication from the Commission to the Council, the European Parliament and the European Economic and Social Committee: The Management of Copyright and Related Rights in the Internal Market* COM(2004) 261 final (Brussels 16 Apr 2004).

<sup>51</sup> *Commercial Solvents v. Commission*, Case 6 & 7/73 [1974] ECR 223.

<sup>52</sup> In so doing, competition law does not violate TRIPS because special provision is made in TRIPS, art 40(2): *Microsoft v. Commission*, Case T-201/04, [2007] 5 CMLR (11) 846, 1077 (para 1192).

<sup>53</sup> I. Goraere, *The Use and Abuse of Intellectual Property Rights* (1996), 135–50.

of economic strength which enables it to behave to an appreciable extent independently of its competitors, customers, and consumers.<sup>54</sup> Operators in a dominant position are regarded as having a 'special responsibility' not to allow their conduct to impair competition. If an operator in such a position fails to license its copyright, such refusal may be regarded as an abuse and can result not merely in the order of a compulsory licence, but also very substantial fines.<sup>55</sup>

The first case in which the ECJ affirmed the application of Article 82 to copyright was *RTE and Independent Television Publications v. Commission* (known as the 'Magill' case).<sup>56</sup> The decision in *Magill* arose from the practice whereby the Irish broadcasting organization (RTE), who owned copyright in its television schedules, refused to license newspapers to publish TV listings in a weekly format. The effect of this was that the only weekly guides available were those issued separately by RTE and the other broadcasting organizations (BBC and ITV). As such, if a viewer wanted to plan their television viewing for the week ahead, they would have to purchase all three magazines. Magill, who proposed to publish a comprehensive guide, claimed that the refusal to license contravened Article 82. The Commission agreed and ordered the defendant to license the listings.<sup>57</sup>

The Court of Justice held that the broadcasting organization held a dominant position in the market for weekly television magazines.<sup>58</sup> The Court of Justice also agreed that the refusal to license was an abuse. The Court observed that the refusal to license an intellectual property right 'cannot of itself constitute abuse of a dominant position' but that 'the exercise of an exclusive right by the proprietor may, in exceptional circumstances, involve abusive conduct'.<sup>59</sup> The Court agreed with the Court of First Instance that this was a case of abuse, because there was a specific, constant, and regular potential demand on the part of consumers for comprehensive weekly listings, which was going unmet because the appellants would offer only their own partial weekly guides. There was no 'justification' for this behaviour related either to broadcasting or to the publishing of television magazines. The consequence of the refusal to license was that the broadcasters reserved to themselves the secondary market in weekly television guides by excluding all competition from that market.

Parties in subsequent cases have sought to explore the scope of the *Magill* holding,<sup>60</sup> but so far the courts have managed to make determinations within its parameters. In *IMS*, for example, the ECJ indicated that it is 'sufficient' to constitute an abuse if these elements are present (leaving open the question whether all elements of *Magill* must be present).<sup>61</sup>

<sup>54</sup> *Compagnie Maritime Belge Transports and Others v. Commission*, Cases C-395 & 396/96 P [2000] ECR I-365 (para. 34).

<sup>55</sup> In the case of *Microsoft*, the Commission's 2004 Order imposed a fine of Euro 497 million: Decision 2007/53 relating to a proceeding pursuant to Art 82 EC and Art 54 of the EEA Agreement against Microsoft Corp (COMP/C-3.37.792-Microsoft ([2007] OJL 32/23). The level of the fine was challenged by Microsoft before the CFI, but the Court affirmed: Case T-201/04, [2007] 5 CMLR (11) 846 (paras 1326-1367).

<sup>56</sup> [1995] 4 CMLR 18. <sup>57</sup> *Magill TV Guide/ITP, BBC and RTE* (1989) OJL 78/43.

<sup>58</sup> [1995] 4 CMLR 18, 718 (para. 50). The ECJ's reasoning on this point has also been treated as less than fully satisfactory: T. Vinje, 'The Final Word on *Magill*' [1995] EIPR 297, 299. Subsequent commentaries have suggested that one distinguishing feature of *Magill* was that the dominance of RTE, ITV, and the BBC was in the provision of broadcasting services.

<sup>59</sup> [1995] 4 CMLR 18, 718 (para. 50).

<sup>60</sup> The differences between the Commission and the CFI in the *IMS* case related to the very broad interpretation the Commission was taking on when an abuse would be found under Article 82. *IMS Health* [2002] OJL 59/18; *IMS Health Inc v. Commission*, T-184/01 R [2002] 4 CMLR 58. Moreover, in the *Microsoft* case the Commission argued that the application of *Magill* did not require the presence of all the elements identified in *Magill*. Nevertheless, it argued, and the CFI found, that all those elements were present (para. 712).

<sup>61</sup> *IMS Health GmbH & Co OHG v. NDC Health GmbH & Co KG*, Case C-418/01 [2004] 4 CMLR (28) 1543 (para 38).

### 3.1.1 Indispensability

The first requirement is that the asset must be ‘indispensable’ for operation of another’s business.<sup>62</sup> This means it must be impossible or at least unreasonably difficult for an undertaking to operate in the relevant market without a licence.<sup>63</sup> In *IMS Health*, IMS provided information to pharmaceutical firms about sales by wholesalers to pharmacies (which gave the firms an indication of doctors’ prescribing habits and thus enabled the pharmaceutical companies to assess and respond to the effectiveness of their marketing to doctors). For privacy purposes, the data had to be collated from data relating to at least three pharmacies. With the assistance of pharmaceutical firms, over a number of years IMS had developed a geographical model for analysing the German pharmaceutical market—a so-called ‘brick structure’, comprising 1,860 segments, which it used from January 2000. IMS believed NDC was using the same brick structure and brought an action for copyright infringement. The Landgericht Frankfurt granted an interim injunction, but referred various questions concerning the application of Article 82 EC to the ECJ.<sup>64</sup> One issue was whether use of the brick structure was ‘indispensable’ to NDC’s operations.<sup>65</sup> It was clear that the brick structure had been developed with the assistance of the pharmaceutical companies, and that there would likely be resistance (and costs) were they to adapt to a different basis for assessing data. In these circumstances, even were NDC to develop an alternative structure, it might ‘be obliged to offer terms which are such as to rule out any economic viability of business on a scale comparable to that’ of IDC. The ECJ advised that these factors were relevant to the national court’s assessment of the ‘indispensability’ of using the brick structure for the provision of data services. In contrast, in *Tierce Ladbroke v. Commission*,<sup>66</sup> the proprietor of a chain of betting shops in Belgium complained that a refusal by the owner of rights in certain televised pictures of French horse races to allow retransmission in the applicant’s betting shop amounted to a breach of Article 82 EC. The CFI held that, while the refusal to license the complainant was an exercise of power from a primary market (transmission of horse races) into a secondary market (betting shops), the refusal to license in no sense prevented the defendant from operating in the secondary market. The provision of pictures was not essential for the applicant’s activity.

### 3.1.2 New Product

The second requirement, that of a new product, was also at issue in *IMS Health*.<sup>67</sup> A key question before the ECJ was whether it was necessary for NDC to establish that it was offering

<sup>62</sup> In *Microsoft v. Commission*, Case T-201/04 [2007] 5 CMLR (11) 846, much time was spent contesting exactly what interoperability information was required, Microsoft claiming that the Commission’s orders in effect required disclosure that would enable its competitors to clone its products, and arguing that all that it should need to disclose was sufficient information to allow its competitors’ products to connect with its system (‘one-way’ functionality). The Court of First Instance declined to overturn the Commission’s ruling, agreeing that, for the competitors to remain viable, the information must be sufficient to enable ‘two-way’ functionality, and observing that the requirements imposed fell well short of requiring the revelation of source code or enabling cloning.

<sup>63</sup> *Ibid.*, para. 28.

<sup>64</sup> In the light of the injunction, NDC sought a licence to use the 1,860-brick structure, offering an annual licence fee of about €5,000. When that was refused, NDC lodged a complaint with the Commission alleging an infringement of Article 82. The Commission adopted a decision ordering interim measures, on the basis that IMS was abusing its dominant position: [2002] OJ L59/18. The President of the CFI suspended the Commission’s decision, because it had taken a very broad interpretation of *Magill: IMS Health Inc v. Commission*, T-184/01 R [2002] 4 CMLR 58.

<sup>65</sup> *IMS Health GmbH & Co OHG v. NDC Health GmbH & Co KG*, Case C-418/01 [2004] 4 CMLR (28) 1543.

<sup>66</sup> Case T-504/93 [1997] ECR II-923.

<sup>67</sup> *IMS Health GmbH & Co OHG v. NDC Health GmbH & Co KG*, Case C-418/01 [2004] 4 CMLR (28) 1543.

a ‘new product’ since, on the face of things, it appeared that NDC wanted to use the brick structure to compete with IMS in providing an identical service (pharmaceutical data services). The Advocate General had noted that, in *Volvo v. Veng*,<sup>68</sup> the ECJ had declined to hold that a refusal to license the manufacture of car spare parts was an abuse, owing to the fact that it was simply proposed to produce duplicates.<sup>69</sup> The ECJ held that the refusal would only be an abuse where a licensee did ‘not intend to limit itself essentially to duplicating the goods or services already offered on the secondary market by the owner of the copyright, but intends to produce new goods or services not offered by the owner of the right and for which there is potential consumer demand’. The Court elaborated a little upon the requirement that there be an upstream and downstream market. While acknowledging that this leveraging from one market into another was an essential component in the *Magill* analysis, the ECJ admitted a certain artificiality was possible in constructing the upstream market—it did not have to be a market that was actually offered. Thus, in the *IMS* case, the Court contemplated that the market for the 1,860-brick structure itself might be the primary market.

The ‘new product’ requirement was also discussed by the CFI in *Microsoft v Commission*.<sup>70</sup> Here, the Court of First Instance was asked to review a Commission decision from 2004 fining Microsoft and ordering it to make available so-called ‘interoperability information’ about its work-group server systems to interested parties. ‘Work-group server systems’ are systems which connect PCs to each other, to common servers, and to printers so that they can share files, share printers, and operate as efficient and secure networks.<sup>71</sup> Microsoft had a 60 per cent share of the work-group server market, so was in a dominant position.<sup>72</sup> While the Commission found that some information was available, it took the view that this was not sufficient to enable competitors to remain viably on the market. The 13-member Grand Chamber of the CFI therefore found that the refusal would prevent the appearance of a ‘new product’ because the refusal to permit full interoperability would limit technical development.<sup>73</sup> Evidence indicated that consumers preferred various facets (reliability, security) of the work-group server operating systems of Microsoft’s competitors, and that the chief quality associated with Microsoft’s systems was their ability to interoperate.<sup>74</sup> In effect, people were buying Microsoft’s items primarily because they were locked in, when they would have preferred the technical features offered by Microsoft’s competitors. The refusal of Microsoft to make available relevant information was thus impeding ‘innovation’.

### 3.1.3 Elimination of Competition

The third *Magill* requirement is that the refusal must be *likely to exclude all competition in the secondary market*. In the *Microsoft* case, Microsoft argued that the continued existence of competitors in the work-group server system market, namely Unix, Linux, and Novell, indicated that the refusal to license the information had not eliminated competition in the market. The Commission rejected that view and the CFI affirmed. The CFI stated that it was not ‘necessary to demonstrate that all competition on the market would be eliminated. What matters, ... is that the refusal at issue is liable to or is likely to, eliminate all effective

<sup>68</sup> *AB Volvo v. Erik Veng (UK)*, Case 238/87 [1988] ECR 6211.

<sup>69</sup> Case C-418/01 [2004] 4 CMLR (28) 1543, AG 65. <sup>70</sup> Case T-201/04 [2007] 5 CMLR (11) 846.

<sup>71</sup> The CFI was asked by Microsoft to consider whether the Commission had formulated the relevant market too narrowly, but the CFI found that it had not done so: *ibid.*, (para. 531).

<sup>72</sup> Of course, in this litigation even this was contested. The CFI findings are at *ibid.*, paras. 555–8.

<sup>73</sup> Para 647. <sup>74</sup> Paras 652, 407–12.

competition on the market.<sup>75</sup> The existence of competitors with a marginal presence in niche markets was not evidence of effective competition.<sup>76</sup>

### 3.1.4 Objective Justification

The final *Magill* requirement is that the refusal must *not be justified* by objective considerations. In the *Microsoft* case, the CFI said that the burden of proving objective justification lies on the operator holding the dominant position.<sup>77</sup> It is evident that the existence of intellectual property rights (IPRs) is not itself a sufficient basis (otherwise Article 82 could never apply to IPRs).<sup>78</sup> In *Microsoft*, the Court of First Instance affirmed the Commission's view that the existence of secrets was not of itself a good reason to refuse to licence,<sup>79</sup> but would, it seems, have accepted as an objective justification a substantiated argument that the requirement to license would seriously have affected Microsoft's incentives to innovate.<sup>80</sup>

## 3.2 EXCESSIVE PRICING

The Competition provisions may also be applicable where a copyright (or database right) owner is willing to licence, but only at a price that is unacceptable to the user. Some such issues arose in *Attheraces Limited, Attheraces (UK) Limited v. The British Horseracing Board Limited, BHB Enterprises plc*, where the Court of Appeal considered whether the British Horseracing Board was guilty of 'excessive pricing', and thereby abusing its admittedly dominant position, in relation to its charges for supplying pre-race data to horse-racing broadcaster, Attheraces.<sup>81</sup> The Court of Appeal allowed an appeal from the judgment of Etherton J., who had held there was abuse. The Court recognized the difficulties with deciding the 'economic value of data', which was a preliminary to deciding whether BHB's pricing was excessive. The Court rejected Etherton J.'s approach of asking what the cost of creating the information was and allowing a reasonable profit on that cost. Instead the Court accepted that the value to the user might also be a relevant component of the 'economic value' of the data.<sup>82</sup>

## 3.3 TYING

If traders in a dominant position need to think carefully before refusing to license their copyright, they should also think carefully before giving away their copyright-protected software with their other products. In *Microsoft*,<sup>83</sup> the Commission held Microsoft had breached Article 82 EC by its bundling-in Windows Media Player with its operating system package.<sup>84</sup> The Commission had found that Microsoft was dominant in the operating system market, with a 90 per cent market share. During the early 1990s, it had offered (but not imposed) its competitor's media players (in particular that of RealNetworks) but from the end of the 1990s it had included its own audio-streaming software and stopped supporting the software of its competitors.<sup>85</sup> The CFI agreed with the Commission's analysis that there was abuse where (a) the tying (Windows OS) and tied (Media Player) products are two separate products; (b) the undertaking concerned is dominant in the market for the tying product; (c) customers are not

<sup>75</sup> Para. 563.      <sup>76</sup> Para. 563.      <sup>77</sup> Paras. 688, 697.

<sup>78</sup> Para. 690.      <sup>79</sup> Para. 693.      <sup>80</sup> Para. 701.

<sup>81</sup> [2007] *EWCA Civ* 38. (The case concerned supply of data, but was not based on database right.)

<sup>82</sup> *Ibid*, para 218.      <sup>83</sup> Case T-201/04 [2007] 5 *CMLR* (11) 846.      <sup>84</sup> Art 82(d).

<sup>85</sup> The history is neatly summarised at Case T-201/04 [2007] 5 *CMLR* (11) 846 (para. 837).

offered the choice of buying the tying product alone; (d) the practice forecloses competition (in the market for the tied product).<sup>86</sup>

The CFI held that the OS and the media player were, at the relevant time, two products. The fact that Microsoft bundled them together and was dominant in the operating system market—so that they appeared to be two parts of a single product—had to be ignored when making the assessment. Rather, the Court was persuaded that these were two products as a result of evidence that Microsoft sometimes offered Windows without Media Player, marketed Media Player separately, and that there was demand (from employers) for Windows without Media Player.<sup>87</sup> The second factor, Microsoft's dominance in the OS market, was not contested. As to the third factor, consumer choice, Microsoft argued that consumers got the Media Player for free and were able to install and use alternative media players.<sup>88</sup> Referring to Article 82(d), Microsoft argued that the circumstances were different from the classic case of abuse by tying, which involved imposing an additional obligation or expense (for example, an obligation to buy expensive nails to go with a nail gun). The Court rejected the arguments: just because there was no separate charge for Windows Media Player did not imply it was included gratis. Moreover, it found that it was not technically possible to remove Windows Media Player, and that the bundling provided consumers with an incentive to use the Windows Media Player 'at the expense of competing media players, notwithstanding that the latter are of better quality'.<sup>89</sup> Turning to the fourth element, the CFI affirmed the Commission's view that the sheer ubiquity of the Windows Media Player, which could not be removed from the operating systems with which it was installed, was likely to foreclose competition.<sup>90</sup> Given that most operating systems were pre-installed on PCs and laptops by 'original equipment manufacturers' (OEMs) (who were given no choice but to instal Windows Media Player), meant that OEMs and consumers were unlikely to choose to instal a second, non-Microsoft, media player. In fact, had Microsoft not adopted the bundling tactic, the Court suggested that there would have been real competition with the market leader from the 1990s, Real Player. Finally, the Court considered whether there was an objective justification for the behaviour, through efficiency gains that outweighed the harm from the anti-competitive action. The Court found the claimed technical efficiencies unsubstantiated. Microsoft therefore had rightly been fined by the Commission and ordered to offer its Windows operating system without the Media Player (though it was also permitted to continue to sell the package).

### 3.3 ANTI-COMPETITIVE CONTRACTUAL TERMS

The key provision of European competition law affecting copyright agreements is Article 81 EC (formerly Article 85 of the Treaty). This renders void all agreements which affect trade between member states and which have the object or effect of distorting competition within the Common Market. Nevertheless, certain agreements that provide benefits may be exempt. In contrast with the fields of technology licensing and vertical restraints, the Commission has been slow to develop block exemptions in the copyright field. The Technology Transfer Block exemption exempts certain agreements which deal with copyright,<sup>91</sup> but only where such agreement is 'ancillary' to a pure patent licensing or know-how licensing agreement, or to mixed patent and know-how licensing agreements. The Regulation on Vertical Restraints is

<sup>86</sup> Recital 794 of the Commission decision, set out at *ibid* (para. 842) and expressly adopted by the CFI (at para 859).

<sup>87</sup> Paras. 912–44.    <sup>88</sup> Paras. 951–2.    <sup>89</sup> Para. 971.    <sup>90</sup> Paras. 1036–7.    <sup>91</sup> TTR.

be of more general applicability: exempting many agreements relating to the distribution of copyright works (for example, the distribution of books or sound recordings).<sup>92</sup> However, as we noted earlier, the exemption does not apply where the primary object of the agreement is the assignment or use of IPRs. Therefore it will rarely be applicable to copyright licences, such as software licences. However, the exemptions made may provide an important guide to the thinking of the Commission on terms in such agreements.

As a result of the Competition Act 1998, UK regulation of copyright agreements parallels European competition law. Section 2 introduces the 'Chapter 1 prohibition', which is equivalent to Article 81 EC.<sup>93</sup> An agreement will be deemed to be exempt from the national prohibition if it is exempt from Article 81 EC under the Community's Technology Transfer Regulation or Vertical Agreements Regulation.<sup>94</sup>

With these general points in mind, we now look at the cumulative effect of the Chapter 1 prohibition and Article 81 EC on various terms that are used in copyright contracts.

### 3.3.1 Agreements Conferring Exclusive Territorial Rights

A copyright assignment or licence commonly includes terms guaranteeing the licensee the exclusive right to sell the work in a particular territory. For example, the licence may grant someone the exclusive right to sell paperback versions of a book in the United Kingdom, or to show a film in public in Belgium. It may also include an undertaking by the licensor not to put the work on the market in that territory and an undertaking by the licensee not to sell the work in the territories of other licensees. The inclusion of such a guarantee of exclusivity may be important to a licensee, who has to invest in the advertising or marketing of the work, and who needs to ensure that they have a reasonable degree of control in the relevant market.

In related situations, the Commission has recognized *both* the value of such terms *and* the threat posed by exclusive licensing to the achievement of the internal market. Consequently, the Commission treats exclusive agreements as legitimate, but simultaneously prohibits certain terms which it considers will have an unduly restrictive effect on the practices of parallel importers. Consequently, while the Commission allows terms which prohibit the active marketing of the work in the territory of another licensee, the agreement may not prohibit 'passive' sales.<sup>95</sup>

Where an exclusive territorial agreement covers the representation (or exhibition), as opposed to the distribution of copies of the work, it may also fall within Article 81 EC. In *Coditel (No. 2)*,<sup>96</sup> a French company granted a Belgian company the exclusive right to exhibit the film, *Le Boucher*, in Belgium for seven years. The French company later licensed a German broadcasting company to broadcast the film on German television. When it did so, Coditel, a Belgian cable operator, included the film in its Belgian service. The question referred to the

<sup>94</sup> Competition Act 1998, s. 10 (parallel exemptions).

<sup>95</sup> TTR, Art. 1(2), Recital 15; VRR, Art. 4(b); See *Re BBC* [1976] CMLR D-89. An OFT investigation into the CD market found evidence of past anti-competitive agreements requiring retailers of CDs not to import cheaper CDs from mainland Europe, or offering favourable terms to those who did not do so: see OFT, Annual Report (2002-3), 61.

<sup>96</sup> *Coditel SA v. Cine Vog Films SA (No. 2)*, Case 262/81 [1982] ECR 3381.

European Court of Justice was whether the exclusive exhibition agreement was prohibited by Article 81 (then Article 85 of the Treaty). The Court held that in general exclusive licences of this nature did not automatically fall within Article 81. However, the Court added that it might do so if the royalties exceeded a fair remuneration; if the agreement was excessively long; or if the exercise of the right was likely to distort competition within the Common Market.<sup>97</sup>

With the strong emphasis now placed on Europe-wide licensing and a European audiovisual area, it may well be that the authorities would want to revisit the *Coditel* holding that exclusive licences on a territorial basis do not automatically fall foul of Article 81 EC. The market has transformed massively since the 1980s, when national—often monopolistic or publicly-funded—television was the norm. The EC Cable and Satellite Broadcasting Directive attempted to limit the impact of territorially limited national rights by redefining the place of broadcast as the place of ‘injection’ of the programming material. It is quite foreseeable that attempts to maintain national exclusivity—for example by requiring those who supply decryption cards to do so solely on a territorial basis—might be regarded as illegitimately restricting competition. The matter has been raised before the English courts,<sup>98</sup> in a action between the FA and importers of equipment and cards that enabled people in the UK to watch Greek broadcasts. The defence’s argument that the FA had breached Article 81 by requiring its Greek licensees to prevent the use of the cards outside Greece has survived a strike-out application. Ultimately, the matter will need to be decided by the ECJ.

### 3.3.2 Restrictive Field of Distribution Agreements

Where a work has a number of potential markets, a copyright owner may wish to limit the field in which the licensee exploits the work. For example, a copyright owner may wish to license a work for sale by a book club, separately from sale by retail outlets. Such agreements are akin to ‘fields of use’ limitations. Under the Vertical Restraints Regulation these would be restrictions of the customers to whom the buyer may sell the contract goods or services. These would not be exempt unless the restriction is confined to active sales to an exclusive customer group allocated by the supplier to another buyer. If a copyright owner has given general retail rights exclusively to one person and book club rights to another, a restriction preventing the book club owner from actively selling outside the club would be exempt from Article 81. The OFT seems to have taken a similar stance as regards the application of the Part I prohibition.<sup>99</sup>

### 3.3.3 Price Limitations

A copyright owner may wish to restrict the price at which the licensee sells a particular product. They might also require the licensee to specify to subsequent purchasers that they may not resell the product at anything other than a specified price. Although such agreements have traditionally been treated as being unlawful, rather surprisingly from 1956 until recently the UK law went out of its way to tolerate one such price-fixing arrangement in the form of the ‘Net Book Agreement’. This was an agreement between members of the Publishers’ Association to impose certain conditions on booksellers as regards the price at which certain books (‘net books’) could be sold.<sup>100</sup> However, in 1995 the majority of publishers decided to

<sup>97</sup> *Ibid*, 3401–2 (paras. 15, 17, 19).

<sup>98</sup> *The Football Association Premier League Ltd v. QC Leisure & Ors* [2008] EWHC 44 (Ch) (Barling J.).

<sup>99</sup> See OFT, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline*, OFT 418 (Nov. 2001) (para. 2.21). Competition Act 1998, s. 10.

<sup>100</sup> *Re Net Book Agreement 1957* [1962] 1 WLR 1347.

abandon the net book system. As a result, the exemption previously afforded to the Agreement was removed.<sup>101</sup>

Under the Vertical Restraints Regulation attempts at resale price maintenance constitute 'hardcore' restrictions that prevent the block exemption from operating.<sup>102</sup> An individual assessment would therefore be necessary.<sup>103</sup> The domestic position is similar: a provision relating to minimum price maintenance which is, on its face, anti-competitive would need to be justified on the ground that it (a) improves the production or distribution of goods or promotes technical or economic progress and also (b) allows consumers 'a fair share of the resulting benefit.'<sup>104</sup>

### 3.3.4 Site licences

One of the characteristics of most digitized works is that users of the work will ordinarily infringe copyright (insofar as they make a temporary reproduction on their computer). As a result, licences are frequently needed to permit such use. In the cases of software, databases, and journals in electronic form, it has become common to limit permitted use to a particular location. The question arises whether such a restriction is anti-competitive. It has been argued that, inasmuch as site licences operate as caps on output, they are anti-competitive and fall within Article 81 EC. For example, if the effect of licensing software to one particular terminal restricts the productive use of that software, such a licence may fall within Article 81 EC. However, if a site licence is 'open' in the sense that it allows for expansion of output or has a clause allowing for further licences on commercial terms, then this objection does not operate.<sup>105</sup> Under the Technology Transfer Regulation,<sup>106</sup> restrictions on quantities of output will place agreement outside the block exemption.

## 4 REGULATION OF CONTRACTS FOR THE PROTECTION OF USERS

In this section, we consider the ways in which the law interferes with copyright contracts for the benefit of 'users'. By 'users' we primarily mean individual consumers who wish to utilize copyright-protected material. The idea of protecting users from unfair contracts imposed by copyright owners is a relatively new one. In part this has arisen because certain acts carried out by users have come to require the consent of copyright owners. In the past, a person who bought a book could do almost whatever they wished with the book without the need for further consent: the book could be read, lent to a friend, or sold to a charity shop without raising any potential liability. Today, as a result of technological developments, many similar acts (such as photocopying the book or reading an electronic version on screen) might now require permission. The second reason why contracts between copyright holders and users

<sup>101</sup> *Re Net Book Agreement 1957 (No. 4)* [1998] ICR 753. <sup>102</sup> VRR, Art. 4(a).

<sup>103</sup> The European Court of Justice held the UK Net Book Agreement to fall within the then Art. 85 prohibition but said it might be justifiable under Art. 85(3), overturning the views of the Commission and Court of First Instance: *Re Net Book Agreements: Publishers' Association v. EC Commission*, Case C-360/92P [1996] FSR 33; [1996] ICR 121; [1995] EMLR 185 (ECJ); *Publishers' Association v. EC Commission* [1992] 4 All ER 70; [1992] ICR 842 (CFI).

<sup>104</sup> Competition Act 1998, ss. 4 (individual exemptions from Director General of Office of Fair Trading, 9 (criteria for exemption), 10 (parallel exemption)).

<sup>105</sup> M. Dolmans and M. Odriozola, 'Site Licence, Right Licence? Site Licences under EC Competition Law' [1998] ECLR 493; cf. J. Townsend, 'The Case for Site Licences' [1999] ECLR 169.

<sup>106</sup> TTR Art. 3(5).

are becoming increasingly common is that new techniques of distribution, particularly digital dissemination, are removing intermediaries from the distribution process. A consumer who formerly would have bought a hard copy of a phonogram from a retailer can now be supplied with an equivalent digital version over the internet directly from the copyright holder. This direct contact allows the copyright owner to reinforce any rights they may have under copyright with obligations imposed as part of the contract they have with the owner.

The main concern in these circumstances is that click-through contracts will extend copyright owners' rights beyond their existing scope. Consequently, such licences might impose conditions for use of works in which copyright has lapsed, or in the case of software might prohibit the making of back-up copies or decompilation, or in other cases might prohibit criticism or review. As the use of electronic resources increases and such contracts become the norm, the 'delicate balance' between owners and users encapsulated in statutory copyright may be sacrificed.

Although the E-Commerce Directive specifies that 'electronic contracts' should be recognized as valid,<sup>107</sup> specific Directives nevertheless indicate that certain exemptions may not be overridden by contract law.<sup>108</sup> For example, the Software Directive allows certain acts, including the decompilation of computer programs. It also renders void contracts that attempt to restrict those rights.<sup>109</sup> A similar clause has been introduced to prevent contractual circumvention of defences to infringement of copyright in databases.<sup>110</sup> Moreover, the Information Society Directive explicitly takes on board concerns about oppressive use of technological measures to prevent access to material falling within copyright's carefully defined exceptions. Article 6(4) of the Information Society Directive provided for a strange, barely comprehensible, compromise.<sup>111</sup> This, and its UK implementation in section 297ZE of the 1988 Act, is reviewed in Chapter 13.

## 5 ORPHAN WORKS

One problem with exploiting copyright-protected material that has attracted increasing attention is that of so-called 'orphan works'.<sup>112</sup> An orphan work is one whose copyright owners (parents) either do not exist or cannot be located. Orphan works exist in part because there is no formal structure for registering copyrights and keeping track of ownership. In some cases the authors of works may not even appreciate that they have created something protected by copyright. In other cases, the ownership of copyright is impossible to trace, perhaps because a firm went bankrupt, or simply because the relatives of a deceased author cannot be identified. The fact that many works are protected by copyright but that owners are not easy to identify means that the market in copyright transactions is inefficient. It is inefficient because some transactions that would voluntarily occur—agreements to use copyright-protected material—are not occurring simply because the costs of locating the owner are greater than the value of

<sup>107</sup> Electronic Commerce Dir., Art. 9(1). <sup>108</sup> Broadcasting Act 1996, s. 137.

<sup>109</sup> CDP A ss. 50A, 50B, 296A(1)(a), 296A(1)(b), 296A(1)(c).

<sup>110</sup> CDP A s. 296B. See also Database Reg. 19(2).

<sup>111</sup> Brian Esler has called this 'arguably the most obtuse and incoherent provision yet enacted by the EU in the touchy area of intellectual property harmonization'. See B. Esler, 'Technological Self-Help: Its Status under European Law and Implications for UK Law' at <<http://www.bileta.ac.uk>> (follow link from 2002 section of 'Conference Papers' page).

<sup>112</sup> For the deliberations of the U.S. Copyright Office, see Register of Copyrights, *Report on Orphan Works* (2006) at <<http://www.copyright.gov/orphan/>>. For more general discussion, see D.W.K. Khong, 'Orphan works, abandonware and the missing market for copyrighted goods' (2007) 15 *International Journal of Law & Information Technology* 54.

the transaction to the potential licensee. In other cases, users simply take a risk or utilize litigation insurance in case the copyright holder does appear.

The issue of orphan works has come on to the legislative agenda for two reasons. The first is that the potential problem is growing as copyright term is extended. The British Library has estimated that 40 per cent of all print works are orphan works.<sup>113</sup> The second is that digital technologies have given rise to new potential uses of such largely forgotten or valueless works, for example in digital archives, but also because they can now be made available profitably to niche markets. If such projects are not to be impeded by heavy costs investigating copyright owners, it is necessary to offer users some way of immunizing themselves from later liability. This could be done by providing some sort of limited defence or immunity from financial liability.

The US Copyright Office has proposed such a scheme, and the matter is being looked at in the UK and the EU. The *Gowers Review* recommended that such a provision be proposed to the European Commission,<sup>114</sup> giving some limited immunity from financial liability for those who have conducted a 'reasonable search' to locate the copyright owner, as well as (rather oddly) proposing a voluntary registration system for copyright. The IViR Study for the Internal Market division of the European Commission, entitled *Recasting Copyright for the Knowledge Economy*, for its part, recommended action initially at a national level, proposing that national authorities (in the UK, e.g. the IPO or Copyright Tribunal) have the capacity to grant licences to potential users of orphan works. It also suggested a bolder plan to establish some central European database of information relating to 'rights management', which would help alleviate the problem.<sup>115</sup> A 2006 Commission Recommendation on the digitization and on-line accessibility of cultural material and digital preservation also calls on member states to develop mechanisms for dealing with orphan works.<sup>116</sup> The Information Society and Media Directorate in the Commission is actively involved in trying to develop non-legislative measures for dealing with the issue, and with the help of a High Level Expert Group on Digital Libraries, has issued a model licensing agreement. While there is widespread recognition of the importance of this subject, it seems no-one is precisely sure whether action should be taken at national or European level, and if the latter, which arm of the Commission should have control.<sup>117</sup>

## 6 CONTROLLING COLLECTING SOCIETIES

In Chapter 11 we looked at the ways in which copyright owners exploit their rights by way of collective administration. While collective licensing can clearly be beneficial to both copyright owners and users, the existence of single bodies solely responsible for administering

('Licensing mechanisms in areas such as orphan works—that is to say, copyrighted works whose owners are difficult or even impossible to locate—and works that are out of print or distribution (audiovisual) can facilitate rights clearance and consequently digitisation efforts and subsequent online accessibility. Such mechanisms should therefore be encouraged in close cooperation with rightholders.')

<sup>117</sup> EC (DG Information Society and Media), *Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions on Creative Content Online in the Single Market* (SEC(2007) 1710 (3 Jan 2008) COM(2007) 836 final para 2.1 ('the Commission will closely monitor the implementation of the [2006] Recommendation and the need for further action at European level').

rights may also cause a number of problems. The problems posed are of two sorts: problems with members and problems with users. Problems with members typically occur because a copyright owner has little alternative to joining the society, which can thus impose restrictive terms. The second set of problems arises from the relations with users, who similarly have little alternative but to take a licence from the collecting society on whatever terms it chooses. Because of these problems collecting societies have been described (in terms similar to the atom bomb) as ‘at once the most ingenious and the worst invention of mankind’.<sup>118</sup>

This section looks at how these problems have been recognized and regulated at a national and European level.<sup>119</sup> As we will see, although the Treaty imposes certain restrictions on the operation of collecting societies that will be investigated at a Community level, collective licensing is largely controlled at the national level. A number of the existing Directives highlight the need for collecting societies to meet certain standards of rationalization and transparency,<sup>120</sup> but none of the Directives propose anything of substance. In 2004, the Commission seemed to be very close to proposing legislation regulating all aspects of the establishment and operation of collecting societies.<sup>121</sup> The Communication concluded that ‘abstaining from legislative action does not seem to be an option any more’.<sup>122</sup> Nevertheless, a year later the Commission decided that the best way to achieve community-wide licensing for music was through a recommendation under Article 211 EC,<sup>123</sup> and such an instrument was indeed issued.<sup>124</sup> Whether the Commission has completely abandoned its aims to harmonize the framework regulating other societies, or as regards other activities, remains to be seen. For the moment, the Internal Market arm of the Commission seems relatively content with the impact of the Recommendation.<sup>125</sup>

## 5.1 REGULATION OF MEMBER–SOCIETY RELATIONS

The terms of membership and control over the collecting society are a matter, first and foremost, for the rules of the society. If a large enough number of members object to these rules, they can be changed by consent. Equally, if a majority of the members are unhappy with the management of the society, control can be changed.<sup>126</sup>

<sup>126</sup> Copinger, para. 28–27.

### 5.1.1 UK Competition Control

A powerful form of external control of society–member relations is provided by the UK competition authorities. As mentioned previously, the Competition Act contains prohibitions on agreements and concerted practices which restrict competition (the Part I prohibition) and ‘abuse of a dominant position’ (the so-called Part II prohibition). Since collecting societies occupy a dominant position in the market (the supply of services of administering particular rights) relations are apt to be scrutinized to ensure there is no abuse. In addition, under Part IV of the Enterprise Act 2002, the Office of Fair Trading is able (after conducting a preliminary informal investigation) to make a ‘market investigation reference’ to the Competition Commission where OFT has grounds for suspecting the features of a market prevent, restrict, or distort competition.<sup>127</sup> The Competition Commission must investigate, assess whether there is an adverse affect on competition, and report. As a result of such a finding, the Competition Commission may require that action be taken to remedy the adverse affect, and make orders or require undertakings to bring about appropriate changes.<sup>128</sup> In a previous investigation, under powers similar to those now granted by the Enterprise Act, the Monopoly and Mergers Commission (the predecessor of the Competition Commission) held that certain practices of the Performing Right Society were unsatisfactory and the Society agreed to amend its rules.<sup>129</sup> The *Gowers Review* invited the OFT to conduct another study of UK collecting societies ‘to ensure the needs of all stakeholders are being met.’<sup>130</sup>

### 5.1.2 EC Competition Law

Another form of control over the rules of the society is to be found in Article 82 EC (formerly Article 86 of the Treaty). This prohibits the abuse by an undertaking of a dominant position. Most rights organizations constitute ‘undertakings’ and have a dominant position in the supply of relevant services to composers, authors, and publishers.<sup>131</sup> The critical issue is in what circumstances the terms constitute an abuse.

The balancing exercise required by Article 82 EC has been felt in four important aspects of society–member relations. *First*, it is clear that under European law societies may not discriminate on grounds of nationality, for example, by conferring associate status on foreign authors. All collecting societies must permit other nationals from the EU to join the society.<sup>132</sup> *Second*, the Commission has stated that the rules of collecting societies should ensure that no group of members obtains preferential treatment from revenue collected from the membership as a whole.<sup>133</sup> *Third*, in *Belgische Radio v. SABAM*,<sup>134</sup> the European Court of Justice held that abuse would occur if a society imposed obligations on members which were not absolutely necessary for the attainment of the society’s objectives and which could encroach unfairly on members’ freedoms.<sup>135</sup> A restriction imposed upon a member must be ‘indispensable’ to the operation of the society, and must restrict the member’s freedom to dispose of their works no more than is absolutely necessary (the ‘equity’ test).<sup>136</sup> *Fourth*, societies are not permitted to impose unduly

<sup>127</sup> Enterprise Act 2002, s. 131. <sup>128</sup> Enterprise Act 2002 s. 134(4)

<sup>130</sup> *Gowers Review*, paras 5.63–7.

<sup>131</sup> For the opinion that such organizations are ‘undertakings’, see *Belgische Radio en Televisie v. SV SABAM*, Case 127/73 [1974] ECR 313, 322–3 (AG Mayras).

<sup>132</sup> *Re GEMA (No. 1)* [1971] CMLR D–35.

<sup>133</sup> *Re GEMA’s Statutes (No. 2)* [1972] CMLR D–115.

<sup>134</sup> *Belgische Radio*, note 131 above.

<sup>135</sup> *Ibid*, 317 (para. 15).

<sup>136</sup> See *Re GEMA (No. 1)* [1971] CMLR D–35 (where the Commission held that it was an abuse for the German society to require the assignment of all categories of right). Similarly, in the context of complaints against the

lengthy notice periods. In *Belgische Radio v. SABAM*, the European Court of Justice observed that rules operated by SABAM, the Belgian society of authors and composers, allowing the society to retain rights for five years after a member withdrew, ‘may appear an unfair condition’, but left the specific determination of whether this was so to the national authority.<sup>137</sup>

### 5.1.3 The EC Recommendation on On-Line Music

The 2005 Commission Recommendation on On-line Licensing of Music reiterates many of these requirements in an official text directed at member states and economic operators.<sup>138</sup> With the aim of encouraging Community-wide licensing of music on-line, the Recommendation states that rights holders should have the right to appoint any body to manage their rights on a multiterritorial basis, implicitly requiring collective rights managers to accept members irrespective of the territory of the rights holder’s residence.<sup>139</sup> The Recommendation calls for collective managers to administer the rights with ‘the utmost diligence’, and to permit rights holders to determine what rights to transfer, the territorial basis of any licensing, and to withdraw rights from the society.<sup>140</sup> It requires the managers to distribute income equitably, specifying any deductions that are for purposes other than management (e.g. for the support of cultural activities generally) and that there be no discrimination (for example against non-nationals).<sup>141</sup> The Recommendation calls on collective managers to account appropriately, and invites member states to establish governance and dispute mechanisms.<sup>142</sup>

## 5.2 REGULATION OF SOCIETY–USER RELATIONS

Another way in which collecting societies are regulated is in terms of their relationship with users of copyright. Here the problem is that most people wishing to use copyright works have no alternative but to seek a licence from a collecting society. This places the society in a strong bargaining position, which may enable it to dictate terms of use to the licensee. In the absence of regulatory control, the society might charge exorbitant fees, discriminate unfairly between different kinds of user, or require parties to acquire licenses over many more works than they want. In order to ensure that this monopoly power is not abused, there are both domestic and European regulatory controls.<sup>143</sup>

### 5.2.1 The Copyright Tribunal

The Copyright Tribunal (which replaced the Performing Right Tribunal in 1989) has wide-ranging powers to review licences and licensing schemes operated by collecting societies.<sup>144</sup>

PRS, the MMC recommended that further exceptions could be allowed to the exclusive assignments that PRS demanded of its members, in particular permitting them to collect their own live performance revenues. The MMC also found that the PRS did not have in place adequate systems for ensuring that the distribution of royalties was carried out equitably. It recommended that the PRS rectify these failings by publishing detailed accounts, as well as taking advice about its mechanisms of sampling and how changes in those mechanisms and distribution policies impact on members. *Report on the Supply in the UK of the Services of Administering Performing Rights and Film Synchronization Rights* (1996) (Cm. 3147) (paras. 2.119–2.121).

<sup>137</sup> *Belgische Radio*, note 131 above, 317 (para. 12), 325–6 (AG). See also *GEMA (No. 2)*, note 133 above (Commission allowed three years’ minimum membership).

<sup>138</sup> Commission Recommendation on collective cross-border management for on-line music services, note 124 above.

<sup>139</sup> *Ibid.*, para. 3.   <sup>140</sup> *Ibid.*, paras. 4–5.   <sup>141</sup> *Ibid.*, paras. 10–12.   <sup>142</sup> *Ibid.*, paras. 14–15.

<sup>143</sup> A ‘market investigation’ reference could also be made under the Enterprise Act 2002.

<sup>144</sup> Though, as is explained below, not every aspect of copyright is regulated by the Tribunal. See Related Rights Reg. 17(4); CDPA s. 205B; Database Regs., Sched. 2.

The Tribunal normally sits in panels of three, selected from a group of up to eight. While it has been said that the Tribunal carries out a ‘useful and indeed necessary function’, its procedures have been criticized as being costly and lengthy.<sup>145</sup> Reforms are under consideration.<sup>146</sup>

The Copyright Tribunal is primarily concerned with the operation of ‘licensing bodies’. A licensing body is defined as a society or other organization that has as one of its main objects the negotiation or granting of copyright licences. A body is still a licensing body if it is an agent, as well as when it becomes the owner of copyright. This means, for example, that the MCPS (which operates as an agent) is within the jurisdiction of the Copyright Tribunal. However, a body is only a licensing body if its object is the granting of licences covering works of more than one author.<sup>147</sup>

The 1988 Act distinguishes between two kinds of activity involving a licensing body, namely ‘licensing schemes’ and one-off ‘licences’. A licensing scheme is defined as any regime that specifies the circumstances and terms on which a licensing body is willing to grant licences.<sup>148</sup> The Tribunal can consider complaints by representative organizations concerning the terms of a proposed scheme;<sup>149</sup> or complaints by organizations or individuals with respect to a scheme in operation.<sup>150</sup> The Tribunal has wide powers: it may approve or vary schemes, hold that particular applicants should be granted licences under such schemes, or approve or vary the terms of particular licences.<sup>151</sup> The Tribunal will also hear disputes over which applicants for licences fall within the scheme,<sup>152</sup> as well as refusals to grant licences. The Tribunal may make an order declaring that the complainant is entitled to a licence. After the Tribunal makes an order, a scheme may be referred again by its operator, a claimant for a licence, or a representative organization.<sup>153</sup>

The criterion by which the Tribunal judges matters is one of ‘reasonableness’. As such, its role is more than one of ‘arbitration’.<sup>154</sup> Indeed, where there are several reasonable solutions, the Tribunal’s job is to select whatever is the ‘most reasonable’.<sup>155</sup> In considering whether to make an order the Tribunal is instructed to have regard to a number of factors, of which the most important is to ensure there is no ‘unreasonable discrimination’ between the scheme or licence in issue and comparable schemes or licences.<sup>156</sup> Apart from that, specific factors are to be considered in relation to different schemes.<sup>157</sup> For example, if the scheme concerns reprographic copying, the Tribunal is to have regard to the availability of published editions, the proportion of the work copied, and the nature of the use to which the copies will be put. In add-

The Tribunal can make orders concerning matter excluded from a licensing scheme: *Universities UK*, note 145 above, 707 (para. 59) (interim decision that the Tribunal had jurisdiction to review handling of ‘study pack’ material which had been excluded from the scope of the licensing scheme).

<sup>153</sup> CDPA s. 120.

<sup>154</sup> *British Airways v. The PRS* [1998] *RPC* 581. <sup>155</sup> *BPI v. MCPS* [1993] *EMLR* 86, 139; 22 *IPR* 325, 333.

<sup>156</sup> CDPA s. 129. Any discrimination should be ‘logical’: *BSB v. PRS* [1998] *RPC* 467, para. 5.4. Cf. Freegard, ‘Forty Years On’, 57 (comparisons rarely used as guides).

<sup>157</sup> CDPA ss. 130–5.

ition to the factors specifically listed in the 1988 Act, the Tribunal will also take account of factors indicated as relevant in EC Directives.<sup>158</sup>

In determining the reasonableness of licence fees, the Copyright Tribunal has often described its task as determining what a ‘willing licensor and willing licensee’ would have agreed.<sup>159</sup> The usual starting point for ascertaining what this might be is with previous agreements, which are evaluated by the Tribunal in the light of changed circumstances.<sup>160</sup> Because the Tribunal is directed to ensure that there is no unreasonable discrimination, it will often be presented with evidence of allegedly equivalent arrangements.<sup>161</sup> These may include arrangements by the same licensing body with other categories of user,<sup>162</sup> or arrangements by similarly positioned licensing bodies with the same licensees.<sup>163</sup> While evidence of schemes in other jurisdictions is frequently put forward, it has rarely been influential.<sup>164</sup> Other factors which are often treated as relevant include the extent of use, the size of the audience, and the user’s revenue. Ultimately, calculating fees is not a process of mathematics, but one of ‘judicial estimation’.<sup>165</sup>

### 5.2.2 Other avenues

A user who is dissatisfied with the terms of a licensing scheme or an individual licence from a collecting society might also be able to bring an action based upon either Article 81 or 82 EC (formerly Articles 85 and 86 of the Treaty),<sup>166</sup> or the two prohibitions contained in the domestic Competition Act 1998.<sup>167</sup>

Applying Articles 81 and 82 EC, the ECJ has provided national courts with general guidance on legitimate collecting society behaviour. In particular, in *Ministère Public v. Tournier*<sup>168</sup> it was argued that the arrangements between the French copyright management society SACEM and discotheques were prohibited under Articles 81 and 82 EC. In that case SACEM granted a blanket licence for its whole repertoire and charged discotheques according to a percentage of gross receipts. Some discotheque owners complained that the charges were excessive and that SACEM refused to grant licences for part of its repertoire, namely in relation to popular dance of Anglo-American origin. The public prosecutor brought criminal proceedings against Tournier, who was director of SACEM, for ‘unfair trading’. As part of the action, certain questions were referred to the ECJ.

In relation to SACEM’s refusal to license use of music from abroad separately, the Court noted that the parallel behaviour might amount to strong evidence of a concerted practice (contrary to Article 81). The Court added that it might be possible to account for the parallel behaviour on the grounds that direct licensing would require each society to establish its own management and monitoring system in other countries.<sup>169</sup> With regard to SACEM’s decision to grant only blanket licences, the Court suggested that the test was one of ‘necessity’, that is

<sup>158</sup> *BSB v. PRS*, note 156 above (Satellite Dir., Recital 17).

<sup>159</sup> For example, *Working Men’s Club v. PRS* [1992] *RPC* 227, 232.

<sup>160</sup> *BACTA v. PPL* [1992] *RPC* 149; *BPI v. MCPS* [1993] *EMLR* 86, 139.

<sup>161</sup> See *BPI Ltd et al v. MCPS et al* (19 July 2007). <sup>162</sup> *BACTA v. PPL* [1992] *RPC* 149.

<sup>163</sup> *Ibid*; *AIRC v. PPL* [1994] *RPC* 143. <sup>164</sup> *BA v. The PRS* [1998] *RPC* 581.

<sup>165</sup> *Universities UK v. Copyright Licensing Agency* [2002] *RPC* 693, 726 (para. 177).

<sup>166</sup> These prohibitions would also apply to society–society arrangements, such as reciprocal agreements. See Commission Decision of 8 Oct. 2002 relating to a proceeding under Art. 81 of the EC Treaty and Art. 53 of the EEA Agreement (Case no. COMP/C2/38.014—*IFPI ‘Simulcasting’* (2003/300/EC) *OJ L* 107/58 (30 Apr. 2003) (granting exemption to reciprocal agreement permitting multiterritorial simulcasting).

<sup>167</sup> Competition Act 1998, s. 2 (Ch. 1 prohibition), s. 18 (Ch. 2 prohibition).

<sup>168</sup> *Ministère Public v. Tournier and Verney*, Case 395/87 [1989] *ECR* 2521.

<sup>169</sup> *Ibid*; also [1991] 4 *CMLR* 248.

whether the terms or practices were ‘necessary’ to safeguard the interests of authors, etc. This was a matter for national courts to determine.

With respect to the charges, the ECJ found that, if there exists an appreciable difference between the fees charged in one member state and those charged in other member states for the same services, such a discrepancy ‘must be regarded as indicative of an abuse of dominant position’.<sup>170</sup> In such circumstances, the ECJ indicated that the burden of proof was effectively reversed. Where this occurs it would be for the relevant collecting society ‘to justify the difference by reference to objective dissimilarities between the situation in the member state concerned and the situation prevailing in all the other member states’.<sup>171</sup>

With so-called ‘modernization’ of competition law and establishment of the European Competition Network, complaints about society–user relations are likely to be directed to national authorities. In the United Kingdom this would be to the courts or the OFT if Articles 81 and 82 are implicated, otherwise to the Copyright Tribunal.

### 5.2.3 The EC Recommendation on On-Line Music

The Recommendation also contains provisions bearing upon society–user relations.<sup>172</sup> The Recommendation calls on collective managers to inform users promptly of changes in the repertoire the manager represents, and calls on commercial users to inform collective managers of exactly which permissions they want.<sup>173</sup> Collective managers are required to grant licences to users on an objective basis and without discrimination.<sup>174</sup> The Recommendation calls on member states to establish mechanisms to regulate licensing conditions.<sup>175</sup>

<sup>170</sup> Ibid, 2577 (para. 38). In *Bassett v. SACEM*, Case 402/85 [1987] ECR 1747, 1769 (para. 19) the Court did observe that ‘it is not impossible, however, that the amount of royalty... charged by the copyright management society may be such that [Art. 82] applies’.

<sup>171</sup> Case 395/87 [1989] ECR 2521, 2577 (para. 38).

<sup>172</sup> Commission Recommendation on collective cross-border management for on-line music services, note 124 above.

<sup>173</sup> Ibid, paras. 7–8.

<sup>174</sup> Ibid, para. 9.

<sup>175</sup> Ibid, para. 15.

2	Performers' Rights	303	6	Public Lending Right	328
3	Database Right	310	7	<i>Droit de suite</i>	329
4	Technological Protection Measures	318			

### 1 INTRODUCTION

If there is one characteristic that typifies the development of intellectual property law since the Second World War, it is the proliferation of new forms of intellectual property. In this chapter we outline a number of regimes which are related to but which fall outside of the remit of copyright law: performers' rights; database right; rights relating to technological protection measures and rights management information; public lending right; and the so-called *droit de suite*, or artist's resale royalty right.

### 2 PERFORMERS' RIGHTS

While the creative or cultural contributions made by people who play instruments, read poetry, and act in plays have long been valued, nonetheless performers have been poorly served by intellectual property law. Indeed, it was not until technological changes at the beginning of the

twentieth century (notably the emergence of sound-recording technologies and radio broadcasting) threatened the livelihood of performers that the law intervened to protect performers. This occurred in 1925 when criminal sanctions were introduced to discourage people from abusing a performer's right to control the fixation and subsequent use of their performances.<sup>1</sup> The courts provided additional relief by allowing performers to bring civil suits for injunctions and damages for threatened breaches of the criminal law.<sup>2</sup> While it might have been expected that copyright law would have been expanded to accommodate performers, this was not the case. In part this was because the transitory nature of performances meant that they could not satisfy the requirement of material form that was widely considered to be a prerequisite for the subsistence of copyright. Another reason why performers were not protected by copyright was that they were considered to be subservient to the interests of the 'proper' rights holders: namely, authors, composers, and dramatists. While authors and composers create primary works, performers were seen to merely translate or interpret these works. In short, it was believed (at least by some) that performers were involved in acts that were less 'creative' than authors, graphic artists, and film directors. The second-rate status of performers was reflected in the decision that performers did not belong within the Berne Convention (along with the producers of phonograms and broadcasting organizations). Indeed it was not until the Rome Convention of 1961 that performers were recognized at the international level.<sup>3</sup> The rights given to performers have been expanded further in the WIPO Performances and Phonograms Treaty 1996.

Eventually, the lobbying efforts of performers paid off when the 1988 Act provided performers with the right to control the recording of live performances (and other related rights).<sup>4</sup> As the rights were not assignable, they are described as 'non-property' rights. The 1988 Act also provided producers with certain rights when they entered into exclusive contracts to record performers.<sup>5</sup> The scope of the protection given to performers was further expanded as a result of European harmonization. To bring UK law into line with the Rental Rights Directive, the 1988 Act was amended from 1 December 1996 to provide performers with fully assignable 'property rights' and certain 'rights to remuneration'. In a third significant development, Article 5 of the WIPO Performances and Phonograms Treaty required contracting parties to grant moral rights of attribution and integrity to performers,<sup>6</sup> and these have now been implemented in the UK. In all but two respects, namely duration and depth of protection,<sup>7</sup> these bring performers' protection to a level virtually equivalent to that of authors.

## 2.1 SUBSISTENCE

Protection is confined to dramatic performances (which include dance or mime), musical performances, readings and recitations of literary works, and also to 'a variety act or any similar presentation'.<sup>8</sup> This definition clearly encompasses much of what we would expect.

<sup>1</sup> Dramatic and Musical Performers' Protection Act 1925, consolidated and amended in the Performers' Protection Acts 1958 and 1972. See R. Arnold, *Performers' Rights* (3rd edn., 2004).

<sup>2</sup> *Rickless v. United Artists* [1987] FSR 362. <sup>3</sup> See above at p. 42.

<sup>4</sup> The Act has been held to confer rights on performers, such as Jimi Hendrix, who were long dead: *Experience Hendrix LLC v. Purple Haze Records Ltd* [2007] EWCA Civ 501.

<sup>5</sup> CDPA ss. 180–4. <sup>6</sup> See above at pp. 44–5. <sup>7</sup> Performers are not protected against imitation.

<sup>8</sup> CDPA s. 180(2). The WPPT, Art. 2(a), defines performers as 'actors, singers, musicians, dancers and other persons who act, sing, deliver, declaim, play in, interpret, or otherwise perform literary or artistic works or expressions of folklore'.

Protection therefore arises for dramatic performances, such as the acting of a play in front of a live audience, or film script before a camera, or the performing of a ballet. It also arises where the performance is ‘musical’ as with the playing of a classical piece, such as Beethoven’s Fifth Symphony by an orchestra, or the rendition of a pop song by a band.<sup>9</sup>

However, the definition is not without its ambiguities and apparent restrictions. First, there are ambiguities raised by the definition as to whether the work performed must exist before the performance takes place. The wording of section 180 of the CDPA suggests this need not be so for musical or dramatic works, since sub-section (2) refers to musical or dramatic performances. Thus unscripted and improvised musical and dramatic performances are almost certainly covered.<sup>10</sup> However, in the case of readings or recitations, the definition suggests that the literary work must be in existence prior to the performance. Consequently, a person who gives a spontaneous speech or an interview will not obtain protection as a performer. Presumably, a singer who sings a song gives a ‘musical’ performance, even though in copyright terminology there might only be a performance of a literary work. Another ambiguity relates to what constitutes a ‘musical performance’. It is unclear whether the term covers the playing of the work from a recording, so that a disc jockey could be a performer. Finally, the definition of performance seems unduly restrictive. It seems that a performance of an ‘artistic work’—by way of *tableaux vivant*, for example—is not included, unless such a performance can be classed as a ‘variety act’ or ‘similar presentation’. (A broad interpretation may be desirable in order to ensure compliance with the UK’s international obligations.) Owen Morgan has proposed a ‘principled definition’ of a performance as ‘the transitory activity of a human individual that can be perceived without the aid of technology and that is intended as a form of communication to others for the purpose of entertainment, education or ritual’.<sup>11</sup>

Before moving on, it should be noted that international and regional treaties frequently distinguish between audiovisual performances and performances embodied on phonograms: indeed, international standards are directed primarily at the latter. While the reasons for the distinction are easy to understand (some parts of the film industry fearing that giving performers rights will potentially jeopardize a film company’s ability to exploit a film), the distinction is not entirely satisfactory. This is because there is now a significant overlap and interchangeability between media, so, for example, that some performances start life as audiovisual before being recorded onto purely aural media, and some aural performances are later fixed on audiovisual media. The boundary lines are, not surprisingly, highly contested.

## 2.2 PERFORMERS, AND RELATED BENEFICIARIES

The beneficiary of the rights given in a performance is *prima facie* the performer (or performers).<sup>12</sup> Although performers are typically freelance workers rather than employees, a

<sup>9</sup> One may wonder whether performance of Cage’s ‘4’ 33’’ constitutes a musical performance. See the earlier discussion at pp. 70–1 as to whether the piece is a ‘musical work’ for copyright purposes.

<sup>10</sup> Kamina, p. 350. Given that a ‘dramatic work’ is a ‘work of action which is capable of being performed’ it seems that a performance of a dramatic work requires action: performances lacking movement not being covered (unless they can be categorized as akin to ‘variety acts’).

<sup>11</sup> See O. Morgan, *International Protection of Performers’ Rights* (2002), 27.

<sup>12</sup> The Act provides no indication as to the test for co-performance. For example, one might ask whether, if a band perform a song, there is: (a) one performance and multiple performers (as one might assume); or (b) multiple performances each given by the individual performer (guitarist, singer, drummer, which is not implausible given that each will be ‘miked-up’ individually, so that the contributions are technically separable); or (c) two performances (one a musical performance by the musicians, one a dramatic performance by the singer). Is

performer is entitled to performance rights *even if* they are employed.<sup>13</sup> Two issues are worth further consideration. The first concerns exactly who counts as a performer. The second concerns special provisions relating to the rights of those who are a party to exclusive recording agreements.

### 2.2.1 Main performers, ancillary performers, and other contributors

In contrast with some other jurisdictions, no attempt is made under UK law to exclude ancillary performers from the scope of protection.<sup>14</sup> This means that in practice care must be taken to deal contractually with all participants, session musicians as well as named artists, extras as well as star performers. A person present in the audience at a performance would not normally be regarded as ‘giving’ a performance, though in situations where a show depends upon active participation of members of the audience it is possible that a member of the audience might become a performer.<sup>15</sup> Although a director, or choreographer, or make-up artist may contribute significantly to the preparation of a performance, it cannot be said that they ‘give’ the performance. Consequently, they are left to their rights, if any, under copyright or contract law. The same is true for the organizer of a performance, such as a theatre or venue operator.

### 2.2.2 Exclusive recording contracts

Special provisions exist in the 1988 Act that relate to exclusive recording contracts. Section 185 defines an exclusive recording contract as ‘a contract between a performer and another person under which that person is entitled to the exclusion of all other persons (including the performer) to make recordings of one or more of his performances with a view to their commercial exploitation’. If the person having such rights is a qualifying person, then they are granted rights similar to a performer’s non-property rights. More specifically, their consent is required by anyone else wishing to make a recording. A party who is the beneficiary of an exclusive recording contract may commence an action for breach of statutory duty against a person who makes such a recording,<sup>16</sup> or who shows a wrongful recording in public or broadcasts it,<sup>17</sup> as well as against those dealing commercially in such illicit recordings.<sup>18</sup> While performers’ non-property rights are not transferable, the person with an exclusive recording contract may assign rights under that contract.<sup>19</sup>

## 2.3 RIGHTS

There are four types of right available to protect performers: non-property rights, property rights, remuneration rights, and moral rights.

the issue one of separability of contribution, intention to integrate, or perception of integration? The answer might be important when determining whose consent is required to exploit elements or parts of the collective performance. The courts have consistently favoured the view that each performer gains rights in his or her own performance: *Bamgboye v. Reed* [2004] EMLR (5) 61; *Experience Hendrix v. Purple Haze Records Ltd.* [2005] EMLR (18) 417 (para. 21); *Bourne v. Davis* [2006] EWHC 1567 (para. 7).

<sup>13</sup> Arnold, *Performers’ Rights*, ch. 3. Note that such performers are presumed employees under French law: see Kamina, p. 357.

<sup>14</sup> Cf. Art. L. 212 of the French Intellectual Property Code.

<sup>15</sup> Cf. Copyright Act 1968, s. 248A(2)(d) (Australia) (excluding ‘a participation in a performance as a member of an audience’).

<sup>16</sup> CDPA s. 186.

<sup>17</sup> CDPA s. 187.

<sup>18</sup> CDPA s. 188.

<sup>19</sup> CDPA s. 185(2), (3).

### 2.3.1 Non-property rights

A performer has the right to authorize the recording of a live performance. They also have the right to prevent the making of a recording of a live performance from a broadcast in which it has been included.<sup>20</sup> (These are the acts of ‘bootlegging’.) Performers also have the right to prevent their live performances being broadcast. Prior to the mass distribution of fixed recordings, this right would have been very important. Where a recording has been made without the consent of a performer, their rights are infringed when the wrongfully recorded performance is shown or played in public, or communicated to the public. This right is only infringed where the defendant knew or had reason to believe the recording was made without the performer’s consent.<sup>21</sup> This would cover the playing of obviously bootlegged recordings at discotheques or over the radio. Performers are also given the right to control the distribution of illicit recordings. These are recordings made, otherwise than for private purposes, without the consent of the performer or the person, if any, having recording rights.<sup>22</sup> Import and sale of illicit recordings is prohibited where the person knows or has reason to believe that the recording is illicit.<sup>23</sup>

All of these non-property rights are non-transmissible, except on death.<sup>24</sup> Infringement is actionable as a breach of statutory duty. A person may also be subject to criminal liability if they knowingly commit certain commercial acts in relation to illicit recordings.<sup>25</sup>

### 2.3.2 Property rights

Performers are also given property rights in their performances. These rights were introduced in order to implement the Rental Rights Directive.<sup>26</sup> The performer’s property rights include the right to make copies of a recording of a qualifying performance, the right to issue copies of a recording to the public, the right to rent or lend copies, and the right to include the performance in an on-demand service.<sup>27</sup> The definitions of these three rights correspond to those of a copyright owner.<sup>28</sup> In contrast with the other rights given to performers, these property rights are transmissible. Any assignments made must be in writing and signed by the assignor.<sup>29</sup> In relation to film-production agreements, a performer is presumed, in the absence of an agreement to the contrary, to have transferred the rental right to the producer.<sup>30</sup>

### 2.3.3 Right of remuneration

Performers are also given two ‘remuneration rights’. These were introduced in the process of implementing the Rental Rights Directive. The most important of these, at least financially, is the right to claim equitable remuneration from the owner of copyright in a *sound recording* (note, not an audiovisual work) of a qualifying performance, where the sound recording is played in public, or communicated to the public (other than by way of ‘making available’).<sup>31</sup> This

<sup>20</sup> CDPA s. 182. The limitation to the effect that these rights are not infringed if the recording is made for private and domestic purposes has been removed to implement the Info. Soc. Dir.: SI 2003/2498 Sched. 2.

<sup>21</sup> CDPA s. 183. <sup>22</sup> CDPA s. 197. <sup>23</sup> CDPA s. 184. <sup>24</sup> CDPA s. 192A.

<sup>25</sup> CDPA s. 198. Illicit recording is defined in CDPA s. 197.

<sup>26</sup> See Ch. 2. The new regime applies to performances given before commencement: Related Rights Reg. 26(1).

<sup>27</sup> CDPA s. 191A and s. 182A–C, s. 182CA (as added by SI 2003/2498 r. 7). The Copyright Tribunal has an ultimate power to override a performer’s right to consent, if they cannot be identified: CDPA s. 190, as amended. Prior to 1 Dec. 1996, the Tribunal had power to override refusal of consent if it was being unreasonably withheld.

<sup>28</sup> See Ch. 6. <sup>29</sup> CDPA s. 191B. <sup>30</sup> CDPA s. 191F.

<sup>31</sup> CDPA s. 182D (as amended by SI 2003/2498 r. 7). A sound recording is not played in public when a film in which the recording is incorporated is shown in public: CDPA s. 5B(3)(a). Cf. Kamina, pp. 356–7 n. 111.

right formalized the existing practice whereby recording companies made *ex gratia* payments to bodies representing musicians. Under the new regime, performers must claim their revenue that accrues in the United Kingdom from the collecting society that administers the performing and broadcasting rights on behalf of the owners of copyright sound recordings, namely Phonographic Performance Limited.<sup>32</sup> The second remuneration right is less important. This provides that where a performer has transferred their rental right concerning a sound recording or film to the producer, the performer retains the right to equitable remuneration for the rental of sound recordings or films.<sup>33</sup>

Both of the remuneration rights may only be assigned to a collecting society.<sup>34</sup> In the absence of a relevant agreement, the Copyright Tribunal may determine royalty rates.<sup>35</sup> As yet there have been no cases where the Tribunal has been asked to assess what an equitable remuneration should be. Although the concept of 'equitable remuneration' is a 'Community concept' it is one to be applied by national authorities, so each is left with a wide margin of appreciation, particularly as to determining relevant criteria. In the only decision to date, the ECJ has said that it was within this margin to calculate the money to be paid by a broadcaster by reference to the number of hours of phonograms broadcast; the viewing and listening densities; the tariffs used in respect of such uses of musical works; the tariffs used in other member states; and the amounts paid by other (commercial) stations.<sup>36</sup> The 'national court is therefore doing everything to ensure the best possible compliance with the provisions of Article 8(2) ... assuring the equitable remuneration of performing artists and phonogram producers by giving preference to a contractual agreement based on objective criteria'.<sup>37</sup>

### 2.3.4 Moral Rights

Performers are granted the moral rights of attribution and integrity.<sup>38</sup> Like authors' moral rights, these rights are not assignable, but may be waived, and are transmissible on death.<sup>39</sup>

The right of attribution applies in relation to live performances, to live broadcasts of performances of all kinds, and to the distribution and communication to the public of performances fixed on sound recordings.<sup>40</sup> Performers have the rights to be so named that their identities are brought to the notice of the relevant public; however, where a performance is by a group, attribution to the group may be sufficient.<sup>41</sup> As with the moral right of attribution granted to authors, the right is not infringed unless it has first been asserted.<sup>42</sup> The right is subject to various exceptions, the most important being that the right does not apply where it is not 'reasonably practicable' to identify the performer or, as appropriate, the group; also, *inter alia*, it does not apply where the performance is for the purpose of reporting current events or where the performance is for the purpose of advertising any goods or services.<sup>43</sup>

<sup>32</sup> Until 2007, this was done via either PAMRA (the Performing Artists' Media Right Association) or AURA (Association of United Recording Artists), but in Jan 2007 these two organizations were merged into a reformed PPL (which previously had just represented record companies).

<sup>33</sup> CDPA s. 191G. <sup>34</sup> CDPA s. 191G(2). <sup>35</sup> CDPA ss. 182D(4), 191H.

<sup>36</sup> *Stichting ter Exploitatie van Naburige Rechten (SENA) v. Nederlandse Omroep Stichting (NOS)*, Case C-245/00 [2003] EMLR (17) 364.

<sup>37</sup> *Ibid*, para. 44.

<sup>38</sup> Performances (Moral Rights, etc.) Regulations 2006 SI 2006/18. For background, see Copyright Directorate, *Consultation Paper on Regulations Implementing Performers' Moral Rights in the U.K. Resulting from the WIPO Performances and Phonograms Treaty Obligations*.

<sup>39</sup> CDPA s. 205J(2) (waiver), 205L (non-assignability), 205M (transmission on death).

<sup>40</sup> CDPA s. 205C.

<sup>41</sup> CDPA s. 205C(3), (4).

<sup>42</sup> CDPA s 205D. On such assertion, see pp. 245-6.

<sup>43</sup> CDPA s. 205E.

The right of integrity applies in relation to live broadcasts of all qualifying performances, as well as to the playing or communication to the public of sound recordings embodying qualifying performances.<sup>44</sup> The performers have the right to object to any such performance insofar as it is subject to a distortion, mutilation, or other modification that is prejudicial to the reputation of the performer. Modifications ‘consistent with normal editorial or production practice’ are permitted, and other exceptions parallel those to author’s moral rights.<sup>45</sup> The integrity right is also infringed by possession or distribution in the course of business of copies of a sound recording embodying a performance which has been so modified as to prejudice the reputation of the performer, but liability is dependent on a showing of *scienter*.<sup>46</sup>

## 2.4 DURATION, DEFENCES, AND REMEDIES

All performers’ rights last for at least 50 years from the end of the year of the performance. However, if a recording incorporating the performance is released within this period,<sup>47</sup> the rights last for 50 years from the year of release.<sup>48</sup> Rights vested in a performer at the time of their death may only be exercised by a person specifically nominated in the performer’s will or by their personal representative.<sup>49</sup>

Performers’ rights are subject to a host of defences that, rather inconveniently, are contained in Schedule 2 to the 1988 Act. The defences parallel those for copyright and include fair dealing for criticism or review, fair dealing for reporting current events, incidental inclusion, as well as a range of educational and library defences. These are all discussed in Chapter 9, and the comments made there apply equally to performers (*mutatis mutandis*). One defence notable by its absence is the defence of fair dealing for research and private study. However, the defence applicable to recording broadcasts for the purpose of watching or listening to the broadcast at a later time also applies to any performance included in the broadcast.

Like copyright, the property and non-property rights are enforceable in civil and criminal actions. The usual remedies for breaches of statutory duty are available, namely injunctions, damages, or account of profits. The right owner may also prosecute for a range of statutory offences, seek orders which include delivery-up and disposal, and seize infringing articles from traders without premises. These remedies are discussed in Chapter 48.<sup>50</sup>

## 2.5 FOREIGN PERFORMANCES

Performances by foreign performers or performances that take place in foreign countries will be protected in the United Kingdom if the performance is ‘qualifying’. A performance is a ‘qualifying performance’ if it is given by a ‘qualifying individual’ or takes place in a ‘qualifying country’.<sup>51</sup> A ‘qualifying individual’ is a citizen of, or an individual resident in,

<sup>44</sup> CDPA s. 205F.      <sup>45</sup> CDPA s. 205G(3). On parallel exceptions to authors’ moral rights, see Ch. 10.

<sup>46</sup> CDPA s. 205(H).

<sup>47</sup> CDPA s. 191(2). The requisite ‘release’ includes the following acts if authorized: publication, playing or showing in public, or communication to the public: CDPA s. 191(3). For further details on these rights, see Ch. 6.

<sup>48</sup> CDPA s. 191.      <sup>49</sup> CDPA s. 192.      <sup>50</sup> CDPA ss. 194–202.

<sup>51</sup> CDPA s. 181. Despite the use of the present tense in the legislation, once a country becomes a qualifying country or a person becomes a qualifying individual, the rights arise retrospectively in relation to past performances: see *Experience Hendrix LLC v. Purple Haze Records Ltd* [2007] EWCA Civ 501. Unfortunately, the relevant Order in Council did not contain any saving for vested rights or for those who have prepared arrangements on the assumption that no relevant performer’s right operated. See Arnold, *Performers’ Rights*, 68–9. The Orders which have operated since 1 May 2005 have rectified this anomaly.

a 'qualifying country'.<sup>52</sup> A 'qualifying country' is defined as the United Kingdom, another member state of the EEA, or a country 'designated... as enjoying reciprocal protection' under section 208 of the 1988 Act.<sup>53</sup> Section 208 empowers Her Majesty to designate certain countries as qualifying countries by Order in Council: either countries party to a convention relating to performers' rights (namely the Rome Convention or TRIPS), or countries deemed to give 'adequate protection' to performances by British citizens, residents or taking place in the United Kingdom.<sup>54</sup>

Section 185, which confers equivalent rights on a person who is party to an exclusive recording contract, does so only if they or one of their licensees, is a 'qualifying person'. A 'qualifying person', is defined as a 'qualifying individual' or a body corporate sufficiently connected with a 'qualifying country'.<sup>55</sup>

## 2.6 REFORM OF DURATION

As mentioned in Chapter 7, the European Commission has announced that it intends to extend copyright in sound recordings to 95 years, particularly with a view to ensuring performers (in particular, session musicians) continue to receive royalties on recordings created in the 1950s and 1960s. Commissioner McCreevy has even promised that 20 per cent of receipts will be distributed amongst session musicians.

## 3 DATABASE RIGHT

Many different technologies organize and order information: encyclopedias, filing cabinets, and textbooks all play their role in placing information in a usable format. Databases are another obvious example. While databases have existed in one form or another for a very long time, digital technology has transformed and revitalized databases. In particular, the digital database has enabled the production of facilities that enable easy access to vast collections of information. Examples familiar to lawyers include LEXIS and WestLaw, as well as CD-ROMs such as the 'Index to legal periodicals'. The value of these facilities is the comprehensive nature of the information that they contain and the ease of access, rather than the way in which that information is ordered. While databases can cost a considerable amount of money to construct, they are readily copied. This makes them an ideal candidate for intellectual property protection.<sup>56</sup>

Faced with the fact that the level of protection varied, sometimes considerably, between member states,<sup>57</sup> the EC decided to harmonize the law that protected the effort that went into creating

<sup>52</sup> CDPA s. 206. For a general analysis of concepts relevant to protecting foreign claims see above at pp. 5–6 and Ch. 4 Section 5.

<sup>53</sup> There is no distinction drawn between 'extension' and 'application', though CDPA s. 208(5) allows Part II of the Act to be 'applied' to countries that in Part I are subject to 'extension'.

<sup>54</sup> Copyright and Performances (Application to Other Countries) Order 2008 (SI 2008/667).

<sup>55</sup> CDPA ss. 181, 185(3), 206(1).

<sup>56</sup> At least in economic theory: see Davison, 239 ff., with criticisms; E. Derclaye, *The Legal Protection of Databases: A Comparative Analysis* (2008) Ch. 1.

<sup>57</sup> Some, such as the UK and Ireland, would probably have protected most databases by copyright; others would have done so through 'unfair competition'; the Nordic countries had adopted a special form of protection for catalogues and a burning issue remains to what extent the Directive should be read as generalizing the latter position. On this, see Davison, 141.

databases.<sup>58</sup> Eventually these efforts took shape in the form of the Database Directive,<sup>59</sup> which was implemented into the United Kingdom on 1 January 1998, in the Database Regulations.<sup>60</sup> The Database Directive required member states to introduce a two-tier system of protection for databases. The first tier involves retaining copyright protection for databases that are ‘original’.<sup>61</sup> This was discussed in Chapters 3 and 4. The Directive also requires member states to provide a second tier of protection by way of a new *sui generis* right known as the ‘database right’. Database rights arise in relation to databases, including those that fail to reach the copyright’s originality threshold.<sup>62</sup> The database right is separate from and in addition to any copyright protection that may exist in relation to a database. Although, this new database right was described as ‘one of the least balanced and most potentially anti-competitive intellectual property rights ever created’,<sup>63</sup> much of its apparent strength has been curtailed by the European Court of Justice in four decisions: *Fixtures Marketing v. Oy Veikkaus*,<sup>64</sup> *Fixtures Marketing v. Organismoa Prognostikon Agnon Podosfairou*,<sup>65</sup> *Fixtures Marketing v. Svenska*,<sup>66</sup> and *British Horseracing Board v. William Hill*.<sup>67</sup> The first three concerned whether there was database right in Premier League fixture lists, and the ECJ clearly indicated that there is not. *BHB* concerned cumulative lists of runners and riders in British horse races, and, following the ECJ’s advice, this was held by the Court of Appeal not to be protected.<sup>68</sup>

### 3.1 SUBSISTENCE

The database right is a property right that subsists in a database whether made before or after 1 January 1998.<sup>69</sup> A ‘database’ is defined as ‘a collection of independent works, data or other

<sup>58</sup> Complete uniformity has not been achieved because member states are able to retain unfair competition protection, and to diverge in implementing exceptions (Database Dir. Art 9, Art. 13). See Davison, 156–7. Note also Recital 52, which enables countries which have specific rules providing a right comparable to the *sui generis* right (presumably, the Nordic countries) to retain ‘as far as the new right is concerned, the expectations traditionally specified by such rules’.

<sup>59</sup> See above at pp. 51–2. The legislative history of the Directive is explored in Davison, 50–68.

<sup>60</sup> Copyright and Rights in Databases Regulations 1997 (SI 1997/3032). For implementation in Europe, see Davison Ch. 5.

<sup>61</sup> Transitional provisions make it clear that databases which were already protected by copyright on 27 Mar. 1996, but which would not reach the standards required under the Directive, continue to enjoy protection until the end of the copyright term.

<sup>62</sup> Database Reg. 13(2) (reflecting Database Dir. Art. 7(4)) says that it is immaterial whether or not the database or any of its contents are copyright works. In the original proposal, a work which benefited from copyright would not have been able to benefit from database right: Davison, 81.

<sup>63</sup> J. Reichman and P. Samuelson, ‘Intellectual Property Rights in Data?’ 50 *Vanderbilt Law Review* 51, 81. Davison, 285, though less hysterical, is equally critical, saying the Directive has ‘significant flaws in both its detail and overall design’.

<sup>64</sup> Case C–46/02 [2005] *ECDR* (2) 21.

<sup>65</sup> Case C–444/02 [2005] 1 *CMLR* (16) 367.

<sup>66</sup> Case C–338/02 [2005] *ECDR* (4) 43.

<sup>67</sup> Case C–203/02 [2005] 1 *CMLR* (15) 319.

<sup>68</sup> *British Horseracing Board v. William Hill* [2005] *RPC* 883. For commentaries on the cases, see T. Aplin, ‘The ECJ elucidates the database right’ (2005) *IPQ* 204; Derclaye, ‘The Court of Justice interprets to database *sui generis* right for the first time’ (2005) *ELR* 420; M. Davison & B. Hugenholz, ‘Football Fixtures, Horseraces and Spin Offs: the ECJ domesticates the database right’ (2005) *EIPR* 113.

<sup>69</sup> Database Regs. 13(1), 27–8 (implementing Database Dir., Art. 14(3), Art 16). It is immaterial whether or not the database or any of its contents is a copyright work, so that there may be a database right where there is no copyright, or there may be both copyright and a database right. It may also be possible for a database to attract copyright but not the database right if the selection and arrangement renders the collection the author’s own intellectual creation but there is not substantial ‘human’ investment in presenting the contents of the database. Nothing in these Regulations affects any agreement made before commencement; nor does any act done

materials that are arranged in a systematic or methodical way, and are individually accessible by electronic or other means.<sup>70</sup> We reviewed the meaning of ‘database’ in Chapter 3, noting its potentially awesome breadth.

The database right only arises if there has been a substantial investment in obtaining, verifying, or presenting the contents of the database. ‘Investment’ includes any investment, whether of financial, human, or technical resources.<sup>71</sup> Investment may be ‘substantial’ in terms of quality, quantity, or a combination of both. The former refers to ‘quantifiable resources’, the latter ‘to efforts which cannot be quantified, such as intellectual effort or energy’.<sup>72</sup> The ECJ did not comment on the Advocate General’s view that the Directive requires an absolute lower threshold for investments worthy of protection as a sort of *de minimis* rule albeit at a low level: a high threshold level ‘would undermine the intended purpose of the Directive, which was to create incentives for investment’.<sup>73</sup>

The act of ‘obtaining’ information is, it seems, to be distinguished from creating information: investment in creation is not relevant.<sup>74</sup> It is to be ‘understood to refer to the resources used to seek out existing independent materials and collect them in the database, and not to the resources used for the creation as such of independent materials’.<sup>75</sup> So the investment in deciding which horses may run in a race was regarded as investment in the creation of data, and thus to be disregarded when assessing whether a collection of such material was a database that resulted from substantial investment.<sup>76</sup> Equally, the resources deployed to determine the football league fixtures was an investment in creating data rather than the database. Finding and collecting, verifying and presenting that existing data did not require ‘any particular effort’.<sup>77</sup> In the same case, ‘verification’ was described as monitoring the accuracy of the materials when the database is created and during its operation. It does not include verification during the stage of creation of data.<sup>78</sup> In the three *Fixtures Marketing* references, Advocate General Stix-Hackl had observed that ‘presentation’ ‘entails not only the presentation for users of the database, that is to say, the external format, but also the conceptual format, such as the structuring of the contents’.<sup>79</sup> The ECJ did not comment on this.

The basic term of protection is 15 years.<sup>80</sup> More specifically, the database right expires 15 years from the end of the calendar year in which the database was completed.<sup>81</sup> However,

either before or after commencement, in pursuance of an agreement made before commencement, amount to an infringement of the database right in a database.

<sup>70</sup> Database Reg. 12.

<sup>71</sup> Database Reg. 13; Database Dir., Recitals 7, 12, 39, 40 (right protects *any* investment and referring to various types). Note Derclaye, *Legal Protection*, 74 (arguing that databases created by the state are unprotected because the state does not ‘invest’).

<sup>79</sup> For example, *OPAP*, Case C-444/02 [2005] 1 CMLR (16) 367, AG’s Opinion para. 78.

<sup>80</sup> Where the making of a database was completed on or after 1 Jan. 1983, the right begins to subsist in the database for the period of 15 years beginning on 1 Jan. 1998: Database Reg. 30.

<sup>81</sup> Database Reg. 17 (implementing Database Dir. Art. 10).

where a database is made available to the public before the end of the period of 15 years from when it was made, rights in the database expire 15 years from the end of the calendar year in which the database was first made available to the public. It is possible that a database right might subsist for 30 years (and thereafter be extended, as discussed below). Where copies of the database as published bear a label or a mark stating that the database was first published in a specified year, the label or mark shall be presumed to be correct until the contrary is proved.<sup>82</sup>

It is important to note that a new period of protection may be acquired for a database. For this to occur there must be a substantial change *to the contents* of the database.<sup>83</sup> This will include a substantial change resulting from the accumulation of successive additions, deletions, or alterations (so long as the changes constitute a substantial new investment in the database). In these circumstances the ‘new’ database qualifies for its own term of protection, but probably only as regards those contents that reflect the new substantial investment. In many cases, therefore, it will be legitimate to extract contents that are more than 15 years old from the database, even if the accuracy of those contents has been verified.<sup>84</sup> While the idea of giving a new period of protection to an updated database may seem no less justified than the idea of giving the authors of the third edition of a textbook copyright in the new edition, problems exist in relation to databases because many are subject to a process of continual updating. For example, in *British Horseracing Board*, the BHB database was constantly being updated so that 800,000 new records or changes to existing records were being made each year—that is over 2,000 a day. In these cases, which Laddie J has described as relating to ‘dynamic databases’, there are clear difficulties in deciding when a sufficient alteration of the contents will have occurred as to render the database a new, separate database.<sup>85</sup>

### 3.2 MAKERS AND OWNERS

The ‘maker’ of a database is the first owner of the database right.<sup>86</sup> Subject to an exception as regards employees, the maker of the database is the person who takes the initiative in obtaining, verifying, or presenting the contents of a database, and who assumes the risk of investing in that obtaining, verification, or presentation.<sup>87</sup> The implication of this is that the maker must take the initiative *and* the risk of the investment. If one person takes the risk and another person takes the initiative, joint making may occur. Where a database is made by an employee in the course of employment, unless otherwise stipulated, the employer is regarded as the maker of the database.<sup>88</sup>

<sup>82</sup> Database Reg. 22(3). Cf. Database Dir., Recital 53.

<sup>83</sup> Database Reg. 17(3); Database Dir., Art. 10(3); Recitals 54, 55.

<sup>84</sup> Derclaye, *The Legal Protection of Databases*, 141–2 (criticizing a comment in Bently & Sherman, *Intellectual Property Law* (2nd ed.) 300).

<sup>85</sup> *British Horseracing Board v. William Hill* [2001] ECDR 257, 283–285 (Laddie J); [2002] ECDR 41 (Court of Appeal). In the case of such a ‘dynamic database’, Laddie J noted that an ‘attempt to split it into a series of discrete databases, besides being impossible to do, would not reflect reality’. He accordingly reasoned that, in that case, ‘[a]s new data are added, so the database’s term of protection is constantly being renewed’. Nonetheless, he qualified this conclusion by opining that, if a person extracts old data from the database, that person is infringing only if the data were added to the database in the last 15 years.

<sup>86</sup> Database Reg. 15. <sup>87</sup> Database Reg. 14; Database Dir., Recital 41.

<sup>88</sup> Database Reg. 14(2). Where a database is made by Her Majesty or by an officer or servant of the Crown in the course of his duties, Her Majesty shall be regarded as the maker of the database: Database Reg. 14(3). Where a database is made by, or under the direction or control of, the House of Commons or the House of Lords, the rule is varied: Database Reg. 14(4).

A number of presumptions simplify the task of proving ownership.<sup>89</sup> Where a name purporting to be that of the maker appears on copies of the database as published or on the database when it was made, the person whose name appeared is presumed to be the maker of the database and to have made it in an employment relationship. Where copies of the database as published bear a label or a mark naming a person as the maker of the database, the label or mark is presumed to be correct. Both presumptions are rebuttable.

The database right is an assignable property right, and sections 90–93 of the 1988 Act apply to the database right as they would to copyright works. It is also possible to license database rights, and licensing schemes and licensing bodies are subject to supervision in accordance with Schedule 2. The jurisdiction of the Copyright Tribunal has been extended accordingly.

### 3.3 INFRINGEMENT, RIGHTS, AND REMEDIES

The database right is infringed where a person, without the consent of the owner of the right, ‘extracts’ or ‘re-utilizes’ all of, or a substantial part of, the contents of the database.<sup>90</sup> The owner of database right must prove that the alleged infringer has derived the material from the claimant’s database, whether directly or indirectly.<sup>91</sup>

‘Extraction’ means the permanent or temporary transfer of those contents to another medium by any means or in any form. ‘Re-utilization’ means making those contents available to the public by any means. In *BHB* the ECJ indicated that the concepts must be interpreted in the light of the objective pursued by the Directive, namely promoting investment in the creation and maintenance of databases.<sup>92</sup> Consequently, the terms are defined widely, to refer to:

any act of appropriating and making available to the public, without the consent of the maker of the database, the results of his investment, thus depriving him of revenue which should have enabled him to redeem the cost of the investment.<sup>93</sup>

This might include indirect as well as direct extraction or re-utilization.<sup>94</sup> In the case in hand, the ECJ held that William Hill had extracted data (albeit indirectly) and reutilized those data by making them available to the public on its internet betting site.<sup>95</sup> The question whether there can be an extraction where a person consults a database and uses the results, rather than physically transferring them from one database to another, is currently awaiting an answer from the ECJ.<sup>96</sup>

The act must occur in relation to a ‘substantial’ part of the contents of the database. This means substantial in terms of quantity or quality or a combination of both. The ECJ in *BHB* held that this is assessed by reference to the investment in the creation of the database and the prejudice caused to that investment by the act of extracting or re-utilizing that part.<sup>97</sup> The

<sup>89</sup> Database Reg. 22(1).

<sup>90</sup> Davison, at 87, argues that, while these new terms give the impression that this is a new kind of right, the terms in fact ‘refer to rights that already exist and are well known in copyright law’: ‘extraction’ is really reproduction, and ‘re-utilization’ a combination of distribution, rental, and communication to the public.

<sup>91</sup> As was the case in *BHB v. William Hill* [2001] ECDR 257, 271 *per* Laddie J; approved on appeal [2002] ECDR 41.

<sup>92</sup> Case C–203/02 [2005] 1 CMLR (15) 319, para. 46. <sup>93</sup> *Ibid*, para. 51.

<sup>94</sup> *Ibid*, para. 52 (contradicting the opinion of Advocate General Stix-Hackl, at para AG 157).

<sup>95</sup> *Ibid*, para. 65.

<sup>96</sup> *Directmedia Publishing GmbH v. Albert-Ludwigs-Universität Freiburg and Professor Ulrich Knoop*, Case C–304/07 (on the meaning of extraction).

<sup>97</sup> Case C–203/02 [2005] 1 CMLR (15) 319, para. 69.

quantitative assessment compares the volume of data extracted to the volume of the whole contents of the database. However, an extraction/re-utilization of a part will also be substantial if it represents a significant part of the investment viewed qualitatively, that is, in terms of human, technical, or financial investment in obtaining, verification, or presentation of the database. The intrinsic value of the material taken is irrelevant.<sup>98</sup> So too is the investment in the creation of those data.<sup>99</sup>

Regulation 16(2) provides that the repeated and systematic extraction or re-utilization of insubstantial parts of the contents of a database may come to amount to the extraction or re-utilization of a substantial part of those contents. This will only be infringement where it comprises acts 'which conflict with a normal exploitation of that database or which unreasonably prejudice the legitimate interests of the maker of the database' (Database Directive, Article 7(5)). In the context of a database of information relating to horse races, Laddie J had held that the repeated use of information for betting services was the systematic extraction of parts of the claimant's 'dynamic database'.<sup>100</sup> However, the ECJ has taken the opposite view. The Regulation on insubstantial parts is 'to prevent circumvention of the prohibition in Article 7(1)'. The systematic and repeated uses must be such that they would lead to the reconstitution of a substantial part of the database, and thus cumulatively would seriously prejudice the investment made by the maker of the database.<sup>101</sup> In the ECJ's view, William Hill's uses were systematic and repeated but not infringing because there was 'no possibility that, through the cumulative effects of its acts, William Hill might reconstitute and make available the whole or a substantial part of the contents of the BHB database'.

One problem which has already been raised before the courts is the conflict between, on the one hand, these rights over the 'contents' of the database, and, on the other, the assertion made in the recitals to the Directive that these rights 'should not give rise to the creation of a new right in the works, data or other materials themselves': Database Directive, recital 46. What is the difference between a right over the contents of a database and a right over the data themselves? Rejecting an argument to the effect that all that is protected is the 'database-ness' of a collection of information, Laddie J has held that infringement of the right is not avoided by rearranging the contents of the database: according to Laddie J what is prohibited is certain kinds of use of 'parts of the contents' of the database. Taking a collection of data from the database is such an act: *British Horseracing Board v William Hill*.<sup>102</sup> However, it should be noted that, on appeal, the Court of Appeal referred the issue of the exact scope of protection to the ECJ.<sup>103</sup> The Advocate General recommended to the Court of Justice that protection not be limited to 'database-ness', referring to such views as 'fundamentally mistaken'.<sup>104</sup> The ECJ declined to determine this issue.<sup>105</sup>

The database right allows the maker to control the first sale, but not the subsequent distribution, of hard copies on which data is stored. Where a copy of a database has been sold within the EEA by, or with the consent of, the owner of the database right in the database, further sales within the EEA of that copy shall not constitute the extraction or re-utilization of the contents of the database. It is interesting that the right is only exhausted by 'sale' and not by other forms of transfer.<sup>106</sup> Consequently, the sale by a customer of gratuitously distributed copies of

<sup>98</sup> Ibid, paras. 72, 78; cf. Laddie J at first instance. <sup>99</sup> Ibid, para. 79.

<sup>100</sup> *British Horseracing Board v. William Hill* [2001] ECDR 257.

<sup>101</sup> *BHB*, Case C-203/02 [2005] 1 CMLR (15) 319, paras. 86-7.

<sup>102</sup> *BHB v. William Hill* [2001] ECDR 257.

<sup>103</sup> *British Horseracing Board v. William Hill* [2002] ECDR 41 (CA).

<sup>104</sup> *BHB*, Case C-203/02 [2005] 1 CMLR (15) 319, AG para. 70.

<sup>105</sup> Ibid, para. 81. <sup>106</sup> Database Reg. 12(3).

databases, such as British Telecom telephone directories, may infringe. Oddly, where there has been first sale of hard copies on which data are stored, the Regulations only permit resale and not other forms of transfer. The Regulations appear to suggest that the lawful buyer of a copy of a database cannot give it away, nor rent it.<sup>107</sup>

In relation to the remedies available for breach of the database right, the Database Regulations provide that equivalent provisions of the 1988 Act apply in relation to the database right and databases in which that right subsists, as they apply in relation to copyright and copyright works.<sup>108</sup>

### 3.4 EXCEPTIONS AND DEFENCES

#### 3.4.1 Lawful use

A lawful user of a database which has been made available to the public in any manner is entitled to extract or re-utilize insubstantial parts of the contents of the database for any purpose.<sup>109</sup> This limitation may not be excluded by agreement.

#### 3.4.2 Fair dealing

Where a database has been made available to the public in any manner, the database right is not infringed by a fair dealing with a substantial part of its contents if three conditions are satisfied: (i) if that part is extracted from the database by a person who is a lawful user of the database; (ii) if it is extracted for the purpose of illustration for teaching or research and not for any commercial purpose; and (iii) if the source is indicated.<sup>110</sup> In exempting pedagogical uses, this provision gives rise to the possibility that a person may infringe copyright in an original database, but not the database right in the component data.<sup>111</sup>

#### 3.4.3 Public lending

An exception is also made for public lending.<sup>112</sup> For lending to be ‘public’ it must take place through an establishment which is accessible to the public. Such an establishment is permitted to charge borrowers an amount that does not go beyond what is necessary to cover the costs of the establishment.<sup>113</sup> However, permitting remote access is not deemed to constitute a lending.<sup>114</sup> Bizarrely, the exception for public lending does not apply to the making of a copy of a database available for on-the-spot reference use. Even if the lending is gratuitous and in a public establishment, the Regulations suggest that it may be an infringement.<sup>115</sup>

<sup>107</sup> Database Reg. 12(2). <sup>108</sup> See Ch. 48.

<sup>109</sup> Database Reg. 19; Database Dir., Art. 8. The definition of ‘lawful user’ is problematic: see pp. 229, 331; Derclaye, *Legal Protection*, 120–26.

<sup>110</sup> Database Reg. 20(1); Database Dir., Art. 9(b). Criticized by the Royal Society as ‘vague and unhelpful’: Royal Society, *Keeping Science Open: The Effects of Intellectual Property on the Conduct of Science* (2003) para. 5.5.

<sup>111</sup> On fair dealing, see Ch. 9. <sup>112</sup> Database Reg. 12(2); Database Dir., Art. 7(2).

<sup>113</sup> Database Reg. 12(3).

<sup>114</sup> Fourth Standing Committee on Delegated Legislation, 3 Dec. 1997, Minister of State, Dept. of Trade and Industry (Ian McCartney): ‘On the question of libraries holding databases and making them available for remote access, we believe that is likely to count as an extraction or reutilization of the database’s contents, and not as public lending. Public lending means that a copy of the database held by the library is lent out and is to be returned. Public lending is excluded from the scope of the database right, under Reg. 12(2).’

<sup>115</sup> Database Reg. 12(4).

#### 3.4.4 Other defences

Defences also exist in relation to Parliamentary and judicial proceedings, Royal Commissions and statutory inquiries, material open to public inspection or on an Official Register, material communicated to the Crown in the course of public business, public records, and acts done under statutory authority.<sup>116</sup> The Regulations also provide a defence where the extraction or re-utilization occurs at a time when the identity of the maker could not be ascertained by reasonable inquiry, or in pursuance of arrangements made at a time when such identification was not possible. It must also be reasonable to assume that the database right has expired.<sup>117</sup> Competition law will also apply to database right in the same way as to other intellectual property rights.<sup>118</sup> This is considered in Chapter 12.

### 3.5 FOREIGN DATABASES

The database right will only subsist where, at the material time,<sup>119</sup> its maker was either: a national of an EEA state; habitually resident within the EEA; a body incorporated under the law of an EEA state; a body with its principal place of business or its registered office within the EEA; or a partnership or other unincorporated body which was formed under the law of an EEA state which, at that time, satisfied certain conditions.<sup>120</sup> Mark Davison has argued that these rules put the EC in breach of its obligations under Berne and TRIPS to provide national treatment. This is because, in Davison's view, the so called '*sui generis*' right is in substance a type of copyright: the criteria for acquisition of the right (in particular taking account of the quality of investment in the creation and arrangement of the database), the nature of the rights conferred, and the exceptions, all—he argues—have the characteristics of copyright.<sup>121</sup> If Davison is wrong, and the *sui generis* right is deemed to be an unfair competition right, there might equally be a violation of TRIPS and the Paris Convention, which requires countries of the Union to grant national treatment as regards the protection of industrial property, including 'the repression of unfair competition'.<sup>122</sup>

### 3.6 ASSESSMENT

Although the Directive had been described by many as unduly protective, the ECJ cases have seriously curtailed the perceived excesses (by limiting the availability of protection of sole-source databases). In December 2005 the Commission issued an evaluation of the effect of the Directive and was disappointed to find that the number of databases created in 2004 had declined to pre-Directive levels.<sup>123</sup> The Commission then embarked on a stakeholder consultation,

<sup>116</sup> Database Regs., Sched. 1: these correspond to the provisions of CDPA ss. 45–50; Database Dir., Art. 9(c).

<sup>117</sup> Database Reg. 21(1). <sup>118</sup> Database Dir., Recital 47.

<sup>119</sup> Database Reg. 18. The 'material time' means the time when the database was made, or, if the making extended over a period, a substantial part of that period.

<sup>120</sup> Database Reg. 18(2). The conditions are (a) that the body has its central administration or principal place of business within the EEA or (b) that the body has its registered office within the EEA and the body's operations are linked on an ongoing basis with the economy of an EEA state.

<sup>121</sup> Davison, 222–5. One unfortunate consequence of such a characterization is that the database right should last for a minimum term of 50 years *post mortem*.

<sup>122</sup> Paris, Art. 2(1), 1(2); TRIPS, Art. 2(1), Art. 3(1).

<sup>123</sup> DG Internal Market and Services Working Paper, *First Evaluation of Directive 96/9/EC on the legal protection of databases* (Brussels, 12 Dec 2005) (paras. 1.4, 4.23).

asking whether stakeholders favoured maintenance of the status quo, repeal of the whole Directive (including its copyright components), repeal of the *sui generis* database right, or modification of the latter right. Most respondents favoured reform of the right, but they were divided over whether the right should be strengthened or the exceptions broadened. The Commission has given no indication of its plans. In the meantime, three references have been made to the ECJ.<sup>124</sup> It seems we should look to the Court for further clarification of the Directive.

## 4 TECHNOLOGICAL PROTECTION MEASURES

As mentioned in Chapter 11, copyright owners have begun to exploit copyright-protected works using self-help mechanisms in the form of ‘technological measures of protection’. As mentioned, this new mode of exploitation reflects real fears amongst the right holders that digital reproduction and communication technologies present the threat of such widespread private copying that copyright law by itself could not be relied upon to protect the investment involved in creating and publishing the work. Such technological protection measures include encryption and similar access controls, which encode works so that only those with legitimate keys can obtain access, and copy controls, which allow users access to works but operate to prevent the subsequent making of copies.

The use of technological measures to support copyright is reinforced by complex and extensive laws prohibiting circumvention of such measures. The reinforcement is by way of a mesh of overlapping civil and criminal actions. This complex topic deserves treatment separate from secondary infringement of copyright, but as ‘related rights’ for two reasons. First, because the measures are in many cases not limited to those applied to protect copyright works, but also protect performances, and *sui generis* database right. Second, because the civil rights of action are frequently conferred not only on the copyright holder who applies the measure to the work, but also on the person issuing copies to the public in protected form, and any other person with intellectual property rights in the technological measure employed.

The 1988 Act, as amended, contains three categories of provision dealing with situations where a person facilitates access to works which the person concerned is not entitled to use or receive. The first category, in sections 296ZA–ZF, relates to the circumvention of effective technological measures applied to copyright works other than computer programs, and is designed to implement Article 6 of the Information Society Directive.<sup>125</sup> The second category, which is found in section 296, applies only to computer programs (and is intended to implement Article 7(1)(c) of the Software Directive). The third category, in sections 297–9, relates to reception of transmissions (and is intended to implement an EC Directive giving legal protection to services based on ‘conditional access’).<sup>126</sup> Each needs to be considered in turn.

<sup>124</sup> *Verlag Schöne GmbH v. Sächsisches Druck- und Verlagsverlag AG*, Case C-215/07 (on the status of official databases); *Directmedia*, note 96 above (on the meaning of extraction); *Apis Hristovich EOOD v. Lakorda ad*, Case C-545/07 (an array of questions on extraction and substantiality from Bulgaria).

<sup>125</sup> CDPA s. 297ZA(1), (6); s. 296 ZD(1), (8) (copyright works (other than computer programs), performances, database right, publication right); Info. Soc. Dir., Recital 50 (without prejudice to Software Dir.). In turn, Art. 6 implements Art. 11 of the WCT and Art. 18 of the WPPT. However, they go beyond the requirements of those treaties in breadth (since they apply also to broadcasting organizations, publication right, and *sui generis* database right), and—more importantly—depth. The Directive goes beyond acts of circumvention to cover devices and services which enable circumvention.

<sup>126</sup> Directive 98/84 EC of the European Parliament and of the Council of 20 Nov. 1998 on the Legal Protection of Services based on, or consisting of, Conditional Access, *OJ* 1998 L 320.

#### 4.1 MEASURES APPLIED TO COPYRIGHT WORKS (OTHER THAN COMPUTER PROGRAMS)

Sections 296ZA–ZF are intended to implement Article 6 of the Information Society Directive which requires member states to provide ‘adequate legal protection’ against a number of activities in relation to the circumvention of ‘effective technological measures’. Because those provisions are not supposed to affect the provisions in the Software Directive, we are here concerned with cases where effective technological measures have been applied to a copyright work other than a computer program.<sup>127</sup> Section 296ZF defines ‘technological measures’ as ‘any technology, device or component that is designed, in the normal course of its operation, to protect a copyright work other than a computer program’.<sup>128</sup> A technological measure is ‘effective’ where the use of a protected work, etc. ‘is controlled by the copyright owner through either (a) an access control or protection process such as encryption, scrambling or other transformation of the work, or (b) a copy control mechanism, which achieves the protection objective’.<sup>129</sup> This makes clear that the provisions apply both to access controls, such as encryption, and copy controls, such as SCMS. It remains unclear, however, whether they cover devices which monitor usage.<sup>130</sup> Following largely the schema of the Directive, the Act distinguishes between two sorts of objectionable behaviour: on the one hand, protection is given against the act of circumvention itself; on the other, protection is given against those who make or sell devices which enable circumvention, or supply services that achieve that end.

##### 4.1.1 The act of circumvention

Section 296ZA gives specified persons civil rights of action where a person does anything which circumvents technological measures knowing or with reasonable grounds to know that they are pursuing that objective. The persons given the right to bring the action, who are described as having the same rights as a copyright owner has in respect of an infringement of copyright, are: the copyright owner of the work protected (or their exclusive licensee); and the person issuing copies of the work or communicating the work to the public in a form to which technological measures have been applied.<sup>131</sup> The *scienter* requirement means that users do not commit a wrong if they circumvent accidentally: it is only where a person knows or has reasonable grounds to know that they are trying to circumvent technological measures that they infringe. The wrong is only committed where a successful act of circumvention has taken place: mere attempts are not covered. The provision is inapplicable where a person circumvents a measure ‘for the purposes of research into cryptography’ unless by so doing ‘or issuing information derived from that research, he affects prejudicially the rights of the copyright owner’.<sup>132</sup>

<sup>127</sup> CDPA s. 296ZA(1).

<sup>128</sup> CDPA s 296ZF. This largely echoes Info. Soc. Dir., Art. 6(3). However, there the definition is worded so as to relate to devices designed ‘to prevent or restrict acts, in respect of works or other subject matter, which are not authorised’ by the right holder. A device which merely discourages infringement, rather than physically preventing it, is not covered: *R v. Higgs* [2008] EWCA Crim 1324.

<sup>129</sup> CDPA s 298ZF(2), replication Info. Soc. Dir., Art. 6(3).

<sup>130</sup> L. Bygrave, ‘The Technologisation of Copyright: Implications for Privacy and Related Interests’ [2002] *EIPR* 51, 54–5. It is unclear whether the definition in Info. Soc. Dir., Art. 6(3) of ‘effective’ is exhaustive and so only covers access or copy controls, and, if it is, whether a system for monitoring usage is an ‘access control or protection process’.

<sup>131</sup> CDPA s. 296ZA(3). Cf. the wider range of persons mentioned in s. 296ZD(2) and s. 296(2).

<sup>132</sup> CDPA s. 296ZA(2); Info. Soc. Dir., Recital 48. One may wonder whether circumvention ought not to be lawful where it is done in the public interest: e.g. where an employee circumvents a measure protecting

#### 4.1.2 Facilitating circumvention

In addition to prohibiting the act of circumvention itself, civil and criminal measures provide protection against a host of related activities which facilitate such circumvention—including manufacture, import, distribution of devices, products, or components, or the provision of services.<sup>133</sup> The addition of criminal liability reflects the fact that these acts are regarded as the ones which seriously threaten the copyright holder's interests: after all, the general public does not have the time or means to break technological locks or controls. It is only with the assistance of commercially available circumvention devices or services that anti-circumvention is likely to become widespread.

There are two criminal provisions. The first applies to devices, products, or components 'primarily designed, produced or adapted for the purpose of enabling or facilitating the circumvention of effective technological measures'.<sup>134</sup> The limitation to devices 'primarily designed' for circumvention is important, and while it would cover forged smart cards for decrypting copyright-protected broadcasts, devices which serve legitimate purposes (such as general-purpose personal computers) fall outside its scope even if they can be used to avoid technological protection (as was notoriously the case with SCMS). A person commits an offence if they manufacture such a device for sale or hire, or distribute one in the course of business, or to such an extent as to affect prejudicially the copyright owner, unless they prove they did not know, and had no reasonable grounds for believing, that the device enabled or facilitated the circumvention of effective technological measures.<sup>135</sup> One peculiar feature of this offence is that, in a situation where a device is primarily designed for circumvention but can be used for other legitimate purposes, a person commits an offence by making and selling such devices even where they were genuinely making and selling them for legitimate purposes. In such a situation, the defence is of no assistance because, while they have good reason to believe the device will not be used to circumvent, they know it *could* be so used. The second criminal provision relates to a service, the purpose of which is to enable or facilitate the circumvention of effective technological measures. A person commits an offence if, in the course of business or to such an extent as to affect prejudicially the copyright owner, they provide, promote, advertise, or market such a service.<sup>136</sup> As with devices, it is a defence for the accused to show that they did not know, nor had reasonable grounds for believing, that the service enabled or facilitated circumvention. In both cases a further defence applies to acts of the intelligence services and law enforcement agencies.<sup>137</sup>

business records (e.g. bypasses a password control) in order to reveal the wrongful practices of their employer, or where a person wants to investigate the practices of those who design censorship (internet filters) to find out exactly what they are preventing us from accessing. A provision equivalent to CDPA s. 171(3) might provide this flexibility.

<sup>133</sup> Member states may also prohibit private possession of such devices: Info. Soc. Dir., Recital 49.

<sup>134</sup> CDPA s. 296ZB(1). See *R v. Higgs* [2008] *EWCA Crim* 1324. <sup>135</sup> CDPA s. 296ZB(5).

<sup>136</sup> CDPA s. 296ZB(2). The reference to non-business activities which affect the copyright owner prejudicially goes beyond the requirements of the Directive and seems designed to cover making available on the internet of decryption code (as occurred in the US case of *Motion Picture Association of America v. Corley and 2600 Enterprises, Inc* 111 *F. Supp. 2d* 294 (SDNY) *affd* 273 *F.3d* 429 (2d cir, 2001)). See, e.g. N. Hanbridge, 'Protecting Right Holders Interests in the information society: Anti-Circumvention; Threats Post *Napster*; and DRM' [2001] *Ent LR* 223; B. Esler, 'Protecting the Protection: A Trans-Atlantic Analysis of the Emerging Right to Technological Self-Help' (2003) 43 *IDEA* 553. Although not in the Directive, the provision may well be justified because the former CDPA s. 296(2)(b) covered the situation where a person 'publishes information intended to enable or assist persons to circumvent copy-protection'.

<sup>137</sup> CDPA s. 296ZB(3).

The civil actions cover broader ground than the criminal ones (and, in contrast to the criminal provisions, apply *mutatis mutandis* to effective technological measures used in relation to performances, database right, and publication right).<sup>138</sup> As regards manufacture and distribution of devices (etc.), liability exists not just in relation to devices ‘primarily designed, produced, adapted... for the purpose of enabling and facilitating’ circumvention, but also to devices ‘promoted, advertised or marketed’ for that purpose and ones having ‘only a limited commercially significant purpose or use other than to circumvent’.<sup>139</sup> As regards services, civil liability is in some respects more narrowly defined than criminal liability, being confined to the *provision* of services (as opposed to the advertising, promoting, and marketing of a service). Civil liability exists, most obviously, where the service is performed for the purpose of enabling or facilitating circumvention. However, civil liability also exists in two other circumstances: where the service provided is merely advertised or promoted for that purpose (even if the service does not achieve the advertised purpose!), and second, where a service is provided which has only a limited commercially significant purpose other than to circumvent (even, it seems, if it is provided for just such a non-circumventing use). Civil actions to enforce these provisions can be brought by a number of parties: the copyright owner, or their exclusive licensee; the person issuing copies of the work to the public or communicating to the public the work to which technological measures have been applied; and the owner, or exclusive licensee, of ‘any intellectual property right in the effective technological measures’. There is no defence of ignorance, though damages may not be awarded against a defendant who demonstrates that they did not know, nor had reason to believe, that their acts enabled or facilitated an infringement of copyright.<sup>140</sup>

#### 4.1.3 Attempts to avoid digital lock-up

When the proposals to expand the scope of protection of technological measures were being debated representatives of consumers vigorously articulated their fear that such provisions would facilitate digital lock-up of material which the public is currently entitled to access and use (without payment). Those fears related in part to the supply of works in the public domain (for example, the works of Shakespeare) in digital form but subject to technical measures: why, it was asked, should the public not be able to circumvent such measures to access what are, after all, works in the public domain? The fears also related to the use of technical measures to prevent uses that fall within existing copyright exceptions: in a world where works are protected by technical measures, and those measures are protected by law against circumvention, how are users to be able to access and copy works for research and private study, criticism and review, and so forth?

The first concern may seem to have been met through the definition of ‘technological measure’. As already observed, ‘technological measure’ is defined as a technology designed in the normal course of its operation to protect a copyright work other than a computer program. Moreover, the provisions on civil liability for circumvention, or supplying devices or services that facilitate circumvention, only apply where ‘effective technological measures have been applied to a copyright work other than a computer program’. While this may seem at

<sup>138</sup> CDPA s. 296ZD(8). s. 296 ZE(11).

<sup>139</sup> CDPA s. 296ZD. The wrongful acts are more broadly defined too: any manufacture, as opposed to manufacture for sale or hire; import, compared to import ‘otherwise than for his private and domestic use’; any distribution, rather than distribution in the course of business; selling or hiring, or offering or advertising for sale or hire, rather than doing so in the course of business. Moreover, civil liability extends to the situation where a person has a device in their possession for commercial purposes.

<sup>140</sup> CDPA s. 296ZD(7).

first glance to protect the public against ‘digital lock-up’, in practice the result is likely to be quite different: this is because, if the measure protects at least one work, civil liability applies. Consequently, devices cannot be circulated, services provided, or acts of circumvention carried out where versions of public domain (i.e. unprotected) works protected by technological measures include *any* copyright material: liability will exist, for example, where a person circumvents a measure to access the complete works of Shakespeare, because the collection also contains a recently written introductory essay.<sup>141</sup>

In addition, one should note that the criminal provisions apply irrespective of the *particular* application of a technological measure. As long as the measure is ‘designed’ to protect a copyright work other than a computer program, criminal infringements occur in the circumstances which have been set out above. Imagine that an entrepreneur designs a technological measure to protect copyright works, but then decides to apply the measure to works in the public domain. The measure, even though now applied to such works, retains its quality of being designed to protect a copyright work. A person commits a criminal act by selling devices or advertising services to enable or facilitate the circumvention of such measures. The defence in section 296ZB(5) will not assist.

As regards the relationship between technological measures and exceptions to copyright, Article 6(4) of the Information Society Directive provides a strange, barely comprehensible, compromise.<sup>142</sup> The Community was caught in the tricky position of wanting to legislate to protect technological measures from circumvention, but without being in a position to understand fully the implications of such strong protection.<sup>143</sup> As things currently stand, it is impossible to predict how dependent consumers are going to be on digital delivery, or the extent to which consumers who previously relied on the limited scope of the rights conferred on copyright owners are going to be inconvenienced by such measures. Article 6(4) is intended to reassure the user community that the legislature will not stand by and let everything go horribly wrong. If technological measures start to impair user actions seriously, ways will be

<sup>141</sup> One issue worth noting here is whether the typographical arrangement right could apply to works in digital form: if so, it seems a person is not permitted to break into a technologically protected non-copyright literary work where there is a copyright typographical arrangement. For criticism of the equivalent US provisions, see J. Litman, *Digital Copyright* (2001), 183–4 (the public should have an affirmative right to gain access to, extract, use, and re-use ideas, facts, information, and other public domain material embodied in protected works. That affirmative right should include a limited privilege to circumvent any technological access controls for that purpose, and a privilege to reproduce, adapt, transmit, perform, or display so much of the protected expression as is required in order to gain access to the unprotected elements).

<sup>142</sup> Brian Esler has called this ‘arguably the most obtuse and incoherent provision yet enacted by the EU in the touchy area of intellectual property harmonization’. B. Esler, ‘Technological Self-Help: Its status under European Law and Its Implications for UK Law’ (2002) <<http://www.bileta.ac.uk>> (follow link from 2002 section of ‘Conference Papers’ page).

<sup>143</sup> For thoughtful consideration of ways of protecting users see D. Burk and J. Cohen, ‘Fair Use Infrastructure for Rights Management Systems’ (2001) 15 *Harvard J Law & Tech* 41 (suggesting access/copying systems that allow fair use; third party-operated procedures such as key escrow—management of rights management keys by trusted third parties (but issues of whether identity of applicant should be revealed to the copyright holder); or both (condition enforcement on automatic fair use defaults)). The US law permits circumvention of access-control measures for certain narrowly-defined classes of works that are determined by the Librarian of Congress on the basis of hearings and findings of the Register of Copyrights every three years: 17 USC s. 1201(a)(1). There are six classes in the 2006 regulations: one concerns access for educational use in the classroom for film and media studies; another concerns the circumvention of malfunctioning devices used on software; a third concerns the need for archiving services to circumvent protection measures which have become obsolete in order to archive computer programs and video games; another case relates to circumvention of access controls which prevent the use of an e-book’s read-aloud function, so as to enable blind users to take advantage of that facility; a fifth concerns programs in mobile telephones; and the final one concerns technological measures that compromise the security of personal computers.

found to sort out the problems. Pending review at the EU level (under Article 12(1), every three years), national authorities may (or indeed in some cases must) take action to release content from its technological chains. Article 6(4) also operates to indicate to content holders that they should develop technological measures with as much sophistication as is possible so that they can enable users to take advantage of limitations and exceptions traditionally recognized by copyright law. Article 6(4) of the Directive states that:

[n]otwithstanding the legal protection provided for by paragraph 1, in the absence of voluntary measures taken by rightholders, including agreements between rightholders and other parties concerned, Member States shall take appropriate measures to ensure that rightholders make available to the beneficiary of an exception or limitation provided for in national law in accordance with Article 5(2)(a), (2)(c), (2)(d), (2)(e), (3)(a), (3)(b), or 3(e) the means of benefiting from that exception or limitation, to the extent necessary to benefit from that exception or limitation and where that beneficiary has legal access to the protected work or subject-matter concerned.

The UK implemented Article 6(4) in section 297ZE of the 1988 Act.<sup>144</sup> This allows for complaints to be made to the Secretary of State where an effective technological measure prevents a person from carrying out a permitted act. The relevant permitted acts are listed in Schedule 5A.<sup>145</sup> It does not apply to copyright works that are made available on agreed contractual terms in such a way that members of the public may access them from a place and at a time individually chosen by them.<sup>146</sup> Given that this would cover most internet supply of works (where a person accesses a work from their own terminal at a time chosen by them), this exclusion may confine the scope of the complaint procedure to circumstances involving encrypted broadcasts or technologically-protected hard copies.<sup>147</sup> The Secretary of State is given wide powers to issue directions to ascertain whether voluntary measures are in place enabling such acts to be permitted, and if not, to ensure that the owner or exclusive licensee of the copyright work makes available to the complainant the means to carry out the permitted acts.<sup>148</sup> The order might be complied with by placing a copy lacking the technological measures at the disposal of the complainant; or possibly by giving the complainant access to a circumvention device. If the copyright owner fails to comply, the complainant is granted normal remedies for breach of statutory duty.<sup>149</sup>

## 4.2 COMPUTER SOFTWARE

Section 296 confers a civil right of action where a person does either of two specified acts which facilitate the circumvention of any ‘technical device’ which has been applied to a computer

<sup>144</sup> See *Gowers Review*, paras 4.104–4.108 (recommending that it be made easier to complain).

<sup>145</sup> The contents of the list are determined by Art. 6(4), though the logic is hard to fathom. Why is action to be taken only where some exceptions are impeded (photocopying, educational, ephemeral recordings for broadcasts, reproductions of broadcasts, teaching, disability, and public security) but not others, and particularly ones such as reproduction in the press, or criticism or review, that represent important public interests? Why is there an *obligation* to take action where some limitations are concerned but only an option where the private use exception in Art. 5(2)(b) is concerned? See T. Foged, ‘US v. EU Anti-circumvention Legislation: Preserving the Public’s Privileges in the Digital Age’ [2002] *EIPR* 525, 537.

<sup>146</sup> CDPA s. 296ZF(9) implementing Info. Soc. Dir. Recital 53.

<sup>147</sup> M. Hart, ‘The Copyright in the Information Society Directive: An Overview’ [2002] *EIPR* 58, 63 (‘as more and more music, film and other content become available on the Internet, this could be a very important qualification in relation to the ability of users to exercise exceptions’). This assumes that the courts accept that ‘click-on’ or other non-negotiable agreements make the works available on ‘agreed contractual terms’, and this is an assumption that will need to be tested.

<sup>148</sup> CDPA s. 296ZE(3). <sup>149</sup> CDPA s. 296ZE(6).

program.<sup>150</sup> Technical device is defined as ‘any device intended to prevent or restrict acts that are not authorised by the copyright owner of that computer program and are restricted by copyright’.<sup>151</sup> The right is conferred on three sets of persons: the owner of copyright in the computer program, or his exclusive licensee; the person issuing or communicating the program to the public; and the owner (or his exclusive licensee) of ‘any intellectual property right’ in the technical device.<sup>152</sup> The right is infringed by two specified acts: the manufacture, distribution, or possession for commercial purposes of ‘any means the sole intended purpose of which is to facilitate the unauthorised removal or circumvention of the technical device’; or the publication of information intended to enable or assist persons to remove or circumvent the technical device.<sup>153</sup> In either case, liability is predicated on *scienter*, that is, there is only infringement where a person does the act ‘knowing or having reason to believe it will be used to make infringing copies’.<sup>154</sup>

It is useful here to observe how much more limited are the provisions related to software than those applicable to other copyright works. First, there is only civil liability in relation to circumvention of software (subject to what was said above about the possible application of measures ‘designed’ for copyright works (other than computer programs) to other material including computer programs). Second, there is no liability for the act of circumventing devices protecting software. Third, as regards software, liability applies only in relation to any means ‘the sole intended purpose of which’ is to facilitate circumvention, whereas the Information Society provisions cover the much broader array of devices advertised for, or primarily designed for circumvention, or with only a limited commercially significant purpose other than circumvention. Fourth, liability in relation to the supply of devices to circumvent measures protecting software is predicated on a knowledge requirement that the person knows or has reason to believe the computer program will be used to make infringing copies: *scienter* is not relevant to section 296ZD except as part of a defence of innocence to an action for damages. Fifth, in relation to technological measures protecting software, no liability pertains to offering or carrying out circumvention services.<sup>155</sup> Although these differences might be taken to reflect a legislative awareness that too-strong control of technical measures applied to software might seriously limit access to and development of software, almost certainly they reflect a desire not to re-open the legislative compromise effected in the Software Directive of

<sup>150</sup> CDPA, s. 296(1).

<sup>151</sup> CDPA s. 296(6). This is narrower than the previous provision on ‘copy protection’ in that it does not encompass technical devices which are intended merely ‘to impair the quality of copies made’, but is broader in that it covers devices which would prevent *any act* which would infringe copyright, not just devices designed to prevent or restrict *copying* of a work.

<sup>152</sup> CDPA, s. 296(2). Formerly, the right was only given to the person issuing copies.

<sup>153</sup> The wording of the first act follows closely that in Software Dir. Art. 7(1)(c), and is consequently narrower than the previous CDPA s. 296(2)(a), which applied to ‘any device or means specifically designed or adapted to circumvent the form of copy-protection employed’. The difference between ‘specific design’ and ‘sole intended purpose’ will be important if there is a second purpose.

<sup>154</sup> Infringing copies are made for these purposes when a computer is loaded into a console: *Sony Computer Entertainment v. Owen* [2002] EMLR 742; *R v. Higgs* [2008] EWCA Crim 1324. See also *Sony Entertainment v. Ball* [2004] ECDR (33) 323 (holding that: (i) infringing copies are limited to ‘articles’, but an article containing a transient reproduction is an infringing copy (para. 15); (ii) where a person makes mod-chips for export these do not produce copies which infringe UK copyright law; but (iii) a copyright owner might nevertheless sue in the UK in relation to foreign infringements).

<sup>155</sup> While the general effect of this comparison is that technological measures receive much stronger protection outside the field of computer programs, it should be noted too that the safeguard provisions of s. 296ZE (implementing Art. 6(4) of the Info. Soc. Dir.) do not apply to computer programs and, in that minor respect, the provisions of s. 296 are stronger.

1991. Nevertheless, the existence of such stark differences in the scope of protection is likely to prompt those who own copyright in software to argue that the technological measures they employ simultaneously protect copyright software and other protected works, so that they too obtain the benefit of the generous protection granted by Article 6 of the Information Society Directive and section 296ZA–ZF of the 1988 Act.

### 4.3 TRANSMISSIONS

A third set of provisions deals with protection measures used in relation to transmissions. Although the 1988 Act, as enacted, contained some such provisions, they have been amended to implement the ‘Conditional Access’ Directive by the Conditional Access Regulations 2000.<sup>156</sup> These apply to broadcasts and ‘information society services’ which are encrypted and, inter alia, prevent unauthorized dealings in decoders. The definition of information society service is found in Council Directive 98/34/EC of June 22, 1998 laying down a procedure for the provision of information in the field of technical standards, and covers any service which is normally provided for remuneration and which operates at a distance by electronic means and at the individual request of a recipient of the services.<sup>157</sup>

#### 4.3.1 Fraudulent reception

Section 297 imposes criminal liability for dishonestly receiving a programme included in a broadcasting service provided from a place in the United Kingdom. It must be proved that the recipient intended to avoid payment of any charge applicable to the reception of the programme. The provision has been applied to a publican who received signals of Premier League football games from a Greek satellite channel, Nova.<sup>158</sup> The programmes had been made by BSkyB at the football ground and sent to the Premier League in Chiswick, which encrypted and sent the images to Nova by satellite, which in turn uplinked the signals to its satellite (and on to its subscribers). The High Court said that the provision required the court to decide, first what was the ‘programme’, and thereafter from where the broadcasting service was provided. Here the programme was said to be the recording of the game, and its identity was not altered by adding Greek commentary and the Greek logo. The place from which the broadcasting service was provided was ‘the point at which the initial transmission of the programme for ultimate reception to the public took place’ i.e. the United Kingdom. Despite the fact that this was a judgment of the late Pumfrey LJ, a respected intellectual property specialist, one cannot help but observe that it feels like a rather strained construction (following extremely sophisticated submissions). In a criminal case, should not the words be given their more obvious meaning, even if this would mean that Ms Murphy’s clearly dishonest behaviour went unpunished?

#### 4.3.2 Unauthorized decoders<sup>159</sup>

Section 297A imposes criminal liability on those who supply ‘unauthorized decoders’ which decode encrypted transmissions so as to enable access to the transmission without payment

<sup>156</sup> Directive 98/84, note 126 above; Conditional Access Regulations 2000 (SI 2000/1175).

<sup>157</sup> Council Directive 98/34/EC of 22 June 1998 laying down a procedure for the provision of information in the field of technical standards, *OJ* 1998 L 204. The Directive excludes television and radio broadcasts from the definition, as well as providing an ‘indicative list’ of services which are not ‘at a distance’, ‘by electronic means’, nor ‘at the individual request of a recipient’, in Annex V.

<sup>158</sup> *Karen Murphy v. Media Protection Services Ltd* [2007] EWHC 3091 (Pumfrey LJ).

<sup>159</sup> CDP A s. 297A.

of the fee which the person making the transmission charges for access.<sup>160</sup> A transmission is defined as any programme included in a broadcasting service from a place within the UK or any other member state, or 'an information society service'. It therefore covers transmissions of encrypted television services (which as we saw in Chapters 3 and 6 do not include most 'on-demand' transmissions), and encrypted services providing video, music, or access to databases 'on demand', the latter falling squarely within the complex definition of 'information society service'. The wrongful acts include making, importing, distributing, selling, possessing (for commercial purposes), and advertising the sale or hire of unauthorized decoders, as well as installing, maintaining, and replacing for commercial purposes an unauthorized decoder. Obvious examples of such wrongs would include the unauthorized manufacture of 'digi-boxes', as well as re-enabling or extending the range of reception on old smart cards.<sup>161</sup>

#### 4.3.3 Civil liabilities

Section 298 gives civil rights of action, akin to those of a copyright owner, to persons who charge for the reception of programmes included in a broadcasting service, send encrypted transmissions, or provide 'conditional access services'.<sup>162</sup> This would cover many of the existing satellite broadcasters, such as Sky, Film Four, etc. A 'conditional access service' is defined as a service providing conditional access technology, that is, any technical measure or arrangement whereby access to encrypted transmissions in an intelligible form is made conditional on previous individual authorization.<sup>163</sup>

A person covered by section 298 has the same rights as a copyright owner against a person who makes or trades in various ways in apparatus which is 'designed or adapted to enable or assist persons to access the programmes or other transmissions or circumvent conditional access technology related to the programmes or transmissions when they are not entitled to do so'.<sup>164</sup> This would seem to cover the situation where somebody made or sold fraudulent smart cards or decoders to enable reception of Sky channels by persons who were not subscribers, and the import of smart cards authorized for use abroad.<sup>165</sup> The rights also encompass a person who publishes any information calculated to enable or assist access.<sup>166</sup>

<sup>160</sup> CDPA s. 297A(4): a transmission is 'encrypted' when it is 'subjected to scrambling or the operation of cryptographic envelopes, electronic locks, passwords or any other analogous application'. A 'decoder' is defined as an apparatus designed or adapted to enable an encrypted transmission to be decoded. A decoder is unauthorized where it is designed or adapted to enable an encrypted transmission to be accessed in an intelligible form without payment of the fee which the person making the transmission charges for access.

<sup>161</sup> See, e.g. *R. v. Bridgeman & Butt* [1996] FSR 538 (re-enabling or extending the range of reception on old smart cards for Spain, where the transmitter did not supply the cards, violated CDPA s. 297A and thus involved a conspiracy to defraud).

<sup>162</sup> CDPA s. 298 (as amended by the Conditional Access Regulations). The rights only apply to transmissions 'from a place in the UK or any other member State'.

<sup>163</sup> CDPA ss. 298(7), 297A(4).

<sup>164</sup> CDPA ss. 298, 299. See *BBC Enterprises v. HI-Tech Xtravision* [1992] RPC 167 (manufacture in UK of decoders for sale abroad infringing s. 298: 'not entitled' meant 'not authorized').

<sup>165</sup> Though this may raise difficult issues concerning the free movement of goods and services. For a taste, see *The Football Association Premier League Ltd v. QC Leisure & Ors* [2008] EWHC 44 (Ch) (Barling J) (an action between FA and importers of equipment and cards that enabled persons in the UK to watch Greek broadcasts was met with a defence that the FA had breached Art 81 by requiring its Greek licensees to prevent the use of the cards outside Greece; the Court refused to strike out the defence, finding it to be arguable).

<sup>166</sup> CDPA s. 298, as amended by the Conditional Access Regulations, in order to implement Directive 98/84, OJ 1998, L 320.

#### 4.3.4 Relationship with sections 296ZA–ZF

As we saw earlier a copyright owner and person communicating a work to the public have various rights under sections 296ZA and ZD where technological measures are applied to the work. These can operate cumulatively with the special transmission and conditional access provisions. For example, if a person installs a device enabling receipt of an encrypted transmission, they will violate section 296ZA if they knowingly circumvent a technological measure. They will also violate section 298(2)(a)(iii) if they instal, maintain, or replace for commercial purposes ‘an apparatus designed or adapted to enable or assist persons to access the programmes or transmissions or circumvent conditional access technology... when they are not entitled to do so’. If someone distributes an unauthorized decoder, they will both be distributing ‘a device... primarily designed... for the purpose of enabling the circumvention of those measures’—that is measures applied to the copyright-protected broadcast—and so violate section 297ZD(1)(b)(iii); and also be distributing an apparatus ‘designed or adapted to enable or assist persons to access the programmes or transmissions or circumvent conditional access technology... when they are not entitled to do so’. In each situation, a careful analysis needs to be undertaken to decide which section is most suitable.

## 5 RIGHTS MANAGEMENT INFORMATION

Article 7 of the Information Society Directive has required the introduction of provisions protecting ‘electronic rights management information’.<sup>167</sup> By ‘rights management information’ is meant any information provided by the copyright owner which identifies the work, the author, the copyright owner, the holder of any intellectual property rights, information about the terms and conditions of use of the work, or any numbers or codes that represent such information.<sup>168</sup> In effect, what we are concerned with is information equivalent to the copyright page of a book (author, publisher, ISBN, etc.) that is electronically attached to (typically being woven into the fabric of) a work which is distributed digitally. This is sometimes referred to as ‘meta-data’.<sup>169</sup> The information falls within the scope of protection when it (or any of it) is associated with a copy of a work or appears in connection with the communication to the public of a work.<sup>170</sup> The provision also applies to the *sui generis* database right.

Although the phrase ‘rights management information’ may not sound very glamorous, the European Commission sees its protection as the key pre-requisite to an effective ‘information society’.<sup>171</sup> This is essentially for two reasons. The first is that rights management

<sup>167</sup> For a discussion of the equivalent US provisions, see D. Nimmer, ‘Puzzles of the Digital Millennium Copyright Act’ 46 (1999) *Journal of the Copyright Society of the USA* 401.

<sup>168</sup> CDPA s. 296ZG(7). It is clear from this that protection extends to all sorts of information which is electronic rather than being limited to information about ‘electronic rights’.

<sup>169</sup> Dusollier has questioned whether the definition of RMI would cover digital watermarks, because some do not contain ‘identifying information’: S. Dusollier, ‘Some Reflections on Copyright Management Information and Moral Rights’ (2003) 25 *Columbia-VLA Journal of Law & the Arts* 377. For speculation as to whether it covers personal data about users, see Bygrave, ‘The Technologisation of Copyright’, 55–6 (examining whether removal of personal data for the sake of individual privacy would give rise to liability).

<sup>170</sup> Info. Soc. Dir. Art. 7(2). It is unclear whether details that appear on a web site, but are not embedded in an aspect of it which is reproduced, would qualify as being ‘associated with a copy of a work’.

<sup>171</sup> See Commission Staff Working Paper, *Digital Rights: Background, Systems, Assessment* SEC (2002) 197 (Brussels, 14 February 2002).

information is seen as having the potential to enable direct contracting between content holders and consumers, the ‘metering’ of uses of works, and enabling rights clearances more generally (for example, in relation to the production of multimedia works). It is thus seen as the lubricant that will keep the legal cogs of the internet turning. As Thomas Dreier has written, digital rights management ‘clearly goes beyond mere protection against piracy and illegal copying. Rather, ... [digital rights management] aims at implementing a technical structure which enables product and service differentiation together with, and on the basis of, price discrimination.’<sup>172</sup> Second, the Commission recognizes that works in digital form are ‘plastic’. In other words, works in digital form are readily capable of modification and alteration. The protection of rights management information is needed to prevent the removal of various identifying insignia from works and to enable users to keep track of what the information is and where it comes from.

Section 296ZG provides the copyright owner, its exclusive licensee, and any person communicating or issuing work to the public,<sup>173</sup> with the ability to prevent the removal of rights management information and the further circulation of copies from which such information has been removed.<sup>174</sup> Liability is dependent in both cases on *scienter*. As regards removal or alteration, a person is liable where they ‘knowingly and without authority’ remove or alter meta-data in circumstances where that person ‘knows or has reason to believe that by so doing [they are] inducing, enabling, facilitating or concealing an infringement of copyright’. Accidental removal of data is therefore permitted, as is deliberate removal of meta-data where a person has no reason to think there has been, is, or is likely to be an infringement. A researcher who deliberately deletes meta-data when making an electronic copy of material from an electronic source for purposes of their own non-commercial research or private study will not violate the section, therefore. As regards dealings in material that has been tampered with by the removal or alteration of meta-data, a person infringes where they ‘knowingly and without authority’ distribute, import for distribution, or communicate to the public, copies of such material where that person ‘knows or has reason to believe that by so doing [they are] inducing, enabling, facilitating or concealing an infringement of copyright’. The provisions do not expressly prevent the publication of information on how to remove such information or the sale of devices which enable the removal of information, though the English legal system might regard this as joint tortfeasance.<sup>175</sup>

## 6 PUBLIC LENDING RIGHT

Although copyright in books enables authors to control (and seek compensation) where their works are copied, they have no right to prevent a range of people from reading the same book. Typically this occurs when books are repeatedly borrowed from a library. As borrowing reduces sales of a work, when it is carried out on a large scale (public libraries in England lend 600 million times a year), it can substantially reduce an author’s expected income. To remedy these problems, a public lending right was established in the UK in 1979.<sup>176</sup> The Public Lending

<sup>172</sup> Thomas Dreier in the Rights Management Report of the Commission meeting Santiago de Compostela, June 2002.

<sup>173</sup> CDPA s. 296ZG(3)–(5). <sup>174</sup> Info. Soc. Dir., Art. 7; Cf. 17 USC s. 1202.

<sup>175</sup> See below at Ch. 47 Section 3.

<sup>176</sup> B. Brophy, *A Guide to Public Lending Right* (1983); J. Phillips, ‘Public Lending: The Structure of a New Statutory Right’ [1979] *EIPR* 187.

Rights Act 1979 provides a framework for the scheme which is contained in the Public Lending Right Scheme 1982.<sup>177</sup> This Scheme has been amended a number of times and its modern form is set out in a 1990 text.<sup>178</sup>

The public lending right scheme entitles authors to remuneration where their works are loaned by public libraries.<sup>179</sup> This is based on the principle that authors should be compensated for lost revenues since such loans are substitutes for sales. The public lending right does not provide authors with large sums of money. Basically, an author<sup>180</sup> may register their right to receive a share of up to £6,600 per annum from a government fund of £8 million.<sup>181</sup> The right persists for the same period as copyright.<sup>182</sup> To qualify for the scheme, authors must have their principal homes in a listed country (at present, EEA countries). The right only applies with respect to books, which must be 'printed and bound'. Musical scores are excluded.<sup>183</sup> The scheme is administered for the government by a Registrar of Public Lending Right. However, section 3(3) declares that the entitlement is to be 'dependent on, and its extent ascertainable by reference to, the number of occasions on which books are lent out from particular libraries'. Libraries thus have to provide information about the books they have loaned.

## 7 DROIT DE SUITE

The final right 'related' to copyright is the *droit de suite*, or as it is also known, the 'artist's resale royalty'.<sup>184</sup> The '*droit de suite*' (literally translated as the right to follow the work) enables artists to claim a portion of the price for which a work is resold. The idea is that an artist may sell a painting for a low price at a time when they are unknown, and have little bargaining power. In due course, if the artist's reputation develops, that painting can be resold for continually increasing sums. The *droit de suite* enables the artist to claim a proportion of the increased value. The right is seen as justifiable not only because it encourages creation, but also because the artist is conceived (through the authorial link) as responsible for the increase

<sup>177</sup> Public Lending Right Scheme 1982 (Commencement) Order 1982 (SI 1982/719); Public Lending Right Scheme (Increase of Limit) Order 2003 (SI 2003/839).

<sup>178</sup> SI 1990/2360. Since then there have been further alterations in the Public Lending Right Scheme (Commencement of Variation) Order 1992 (SI 1992/3049) (altering Art. 46(a) of scheme); 1991 (SI 1991/2618) (removing Art. 6(2)(b)); SI 2005/1519; SI 2005/3351. For fuller commentary, see Copinger, Ch. 19.

<sup>179</sup> A number of countries also recognize 'public lending rights'. See S. von Lewinski, 'Public Lending Right: General and Comparative Survey of the Existing System in Law and Practice' (1992) 154 *RIDA* 3: Denmark (1946), Norway (1947), Sweden (1955), Finland (1961), Iceland (1963), Netherlands (1971), Germany (1972), New Zealand (1973), Australia (1974), UK (1979), Canada (1986), and Israel (1986). These rights are not within the remit of the Berne Convention and vary considerably from place to place.

<sup>180</sup> Defined in Art. 4. Note that the author's name should appear on the title page or be entitled to a royalty from the publisher: Art. 4(2). NB while the right is assignable and devolves on death, only the author may apply to register a book. It has yet to be seen whether publishers will require its assignment to them or the payment over of any part of the moneys received.

<sup>181</sup> Public Lending Right Scheme (Increase of Limit) Order 2003 (SI 2003/839) and SI 2005/1519.

<sup>182</sup> Public Lending Right Scheme (Commencement) Order 1982 (SI 1982/719) as amended by Art. 20, Public Lending Right Scheme (Commencement of Variations) Order 1997 (SI 1997/1576); SI 1999/420 (excluding books which lack ISBNs).

<sup>183</sup> Eligible books are defined in Art. 6. Book means printed and bound publication but does not include books bearing corporate names, musical scores, and serial publications. The restriction to books of 32 pages has been removed.

<sup>184</sup> S. Stokes, *Artist's Resale Right (Droit de Suite): Law and Practice* (2006).

in value (economic success) of their works.<sup>185</sup> Consequently, although the right is essentially economic in nature, it is sometimes categorized as a ‘moral right’. Because of its specific *sui generis* nature, we have included it in this chapter on related rights.

Until recently, no such artists’ resale right was recognized in British copyright law.<sup>186</sup> However, as many European countries did so, and there was thought to be a potential impact on the internal market from the differences in national laws for modern artworks, the Resale Right Directive was adopted by the European Parliament and Council requiring all member states to introduce such a right.<sup>187</sup> Prior to its adoption, the proposed Directive was widely criticized, particularly from the perspective of the UK art market. One particular fear that was expressed was that the effect of harmonizing ‘upwards’ would be to drive sales of modern artworks out of Europe—to the auction houses of New York, where no such ‘tax’ will be imposed on the seller. (Apparently, when California created a *droit de suite*, Sotheby’s closed its auction house there.) These criticisms and questions, however, did not prove persuasive, though the *droit de suite*, as adopted, is much more limited than that originally proposed and gives considerable leeway to member states as regards implementation. The Directive was implemented in the UK by a statutory instrument, operative from February 2006.<sup>188</sup> The British government, rather surprisingly, did not take advantage of all the flexibilities provided to implement the Directive in a minimal fashion.

The Directive applies to original works of art,<sup>189</sup> that is ‘works of graphic or plastic art’. It does not apply to manuscripts of writers and composers.<sup>190</sup> The Directive includes within that definition works such as paintings, engravings, tapestries, ceramics, and photographs, and this implicitly suggests that the right is not available to designers of ‘works of applied art’. The right will apply not merely to unique works but also to works produced in multiples, provided they are made by the artist or are copies considered to be original works of art which have been made in limited number by the artist or under their authority.<sup>191</sup>

<sup>185</sup> Cf. J. Merryman, ‘The Proposed Generalisation of the Droit de Suite in the European Communities’ [1997] *IPQ* 16, 22–3 (arguing that increases in value can be attributed to a variety of causes, including the work of critics, museums, dealers, collectors, and that the artist shares in their efforts through the increased value in any works they have retained).

<sup>186</sup> See, for previous British views, *Report of the Committee on Copyright and Designs Law*, Chap. 17 (Cmnd. 6732, 1977).

<sup>187</sup> Directive 2001/84/EC of the European Parliament and of the Council of 27 Sep. 2001 on the resale right for the benefit of the author of an original work of art, *OJ* 2002, L 272 (hereafter Resale Right Dir.). For commentaries, see J. Merryman, ‘The Proposed Generalisation of the *Droit de Suite* in the European Communities’ [1997] *IPQ* 16 (arguing that the premise on which the Commission operates, that the *droit de suite* is a ‘good thing’, is not sustainable, so harmonization requires its removal); D. Booton, ‘A Critical Analysis of the European Commission’s Proposal for a directive Harmonising the *Droit de Suite*’ [1998] *IPQ* 165; S. Hughes, in L. Bently and S. Maniatis, *Intellectual Property and Ethics, Perspectives in Intellectual Property Vol. IV* (1998).

<sup>188</sup> Effective February 13, 2006. The Directive had an implementation date of 1 January 2006. See IPI, *A Study Into the Effect on the UK Art Market of the Introduction of the Artists Resale Royalty* (2008) (reporting no evidence of diversion of trade).

<sup>189</sup> The right will be applied to existing works still in copyright on 1 Jan. 2006, but only as regards sales after that date.

<sup>190</sup> Resale Right Dir., Recital 19. Presumably existing national regimes which extended resale royalties further will need to limit the operation of the right. This follows from the reasons for harmonization and more specifically from Recital 21 which states that ‘the categories of work of art subject to the resale right should be harmonised’.

<sup>191</sup> Resale Right Dir., Art. 2; The Artist’s Resale Right Regulations 2006 (SI 2006/346), Reg 4.

The Directive requires member states to confer the resale royalty right on the author of such a work.<sup>192</sup> The right is to last for the full term of copyright protection.<sup>193</sup> After death, the right passes with the author's estate.<sup>194</sup> The right is not assignable.<sup>195</sup> Royalties can only be collected through a 'collecting society', and provision is made for the administration of rights by a collecting society even without the holder's action.<sup>196</sup> The Design and Artistic Copyright Society has undertaken to administer the resale right, and in its first year collected over £1 million. At least one competitor has now emerged: the Artists Collecting Society.<sup>197</sup> Although the right applies to sales of existing works in which copyright subsists,<sup>198</sup> it may be exercised only by a person who is at the contract date a 'qualifying individual' or a charity. As regards 'individuals', they must be a national of an EEA state or of one of the 26 countries currently listed in Schedule 2 of the Regulations.<sup>199</sup>

The right operates only in relation to 'resales' of such works, that is, sales by persons to whom the tangible property in the embodiment of a work has already been transferred,<sup>200</sup> and only when such resale is effected by an art-market professional, such as salesrooms, galleries, and dealers.<sup>201</sup> It therefore seems to exclude transactions between individuals acting in their private capacity. A Recital in the Directive also makes clear that the right is not to apply to resales by persons acting in their private capacity to museums which are not-for-profit and are open to the public.<sup>202</sup> The royalty is payable by the seller, and the seller's agent, or if there is no such agent, either by the agent of the buyer, if there is one, or by the buyer.<sup>203</sup>

As regards calculation of the sum due it should be noted that member states may operate a threshold where the seller acquired the work directly from the author within three years of the resale, and the resale price is less than €10,000.<sup>204</sup> Recital 18 implies that this is confined

<sup>192</sup> See Resale Right Dir., Art. 6(1). The Artist's Resale Right Regulations define the term 'joint authors' in a different manner than for copyright: Reg. 5 (different from CDPA, s. 10). The name appearing on the work is presumed to be the author: Reg. 6.

<sup>193</sup> Resale Right Dir., Art. 8. <sup>194</sup> See Resale Right Dir., Art. 6(1); Artist's Resale Right Reg. 9, 7(4).

<sup>195</sup> Artist's Resale Right Reg. 7. Nor is it chargeable nor waivable: Reg. 7(2), 8.

<sup>196</sup> Artist's Resale Right Regulations 2006, Reg. 14.

<sup>197</sup> See: <<http://www.dacs.org.uk>>; also: <<http://www.artistscollectingsociety.org.uk>>.

<sup>198</sup> Artist's Resale Right Reg. 16(1)(b).

<sup>199</sup> Foreign authors—that is, those from non-EU countries—may enjoy the right as long as authors from member states enjoy reciprocal treatment in the third countries concerned: Art. 7; Artist's Resale Right Reg 10(3). The list comprises countries that offer reciprocal protection: Algeria, Brazil, Bulgaria, Burkina Faso, Chile, Congo, Costa Rica, Croatia, Ecuador, Guinea, Iraq, Ivory Coast, Laos, Madagascar, Mali, Monaco, Morocco, Peru, Philippines, Romania, Russian Federation, Senegal, Serbia and Montenegro, Tunisia, Turkey, and Uruguay. The list does not include the United States.

<sup>200</sup> Artist's Resale Right Reg. 3. 'Transfer of ownership by the author' is further defined as including transfer by testamentary disposition in accordance with the rules on intestacy, disposal by the author's personal representative, or disposal by an official receiver or trustee in bankruptcy: Reg. 3(5).

<sup>201</sup> Resale Right Dir., Art. 1. More specifically, the royalty is only applicable to resales where the buyer or seller, or the agent of the buyer or of the seller where the sale takes place through an agent, 'is acting in the course of a business of dealing in works of art': Artist's Resale Right Reg. 12(3)(a).

<sup>202</sup> Recital 18.

<sup>203</sup> Artist's Resale Right Reg. 13. Resale Right Dir. Art. 1(3). Recital 25 states that the seller 'is the person or undertaking on whole behalf the sale is concluded'. Note Resale Right Dir. Art. 1(4) (member states may provide that a buyer or intermediary shall 'alone be liable or shall share liability with the seller for payment of the royalty').

<sup>204</sup> Resale Right Dir., Art. 3(1). Member states may make the right available below that threshold so as to further the interests of young artists: Art. 3(2), Recital 16. Artist's Resale Right Regulations 2006, Reg. 12(3)(b). A sale price of €1,000 produces a royalty of a mere €40. No royalty is payable on a sale for less than €10,000 where the seller acquired the work directly from the author less than three years before the sale: Reg 12(4).

'to the particular situation of art galleries which acquire works directly from the author'. But the Article is not so restricted. Since the maximum such a seller would have to pay would be €500,<sup>205</sup> the utilization of this exemption would seem particularly mean-minded.

Under the Directive royalties are calculated on sales prices, net of tax.<sup>206</sup> The member states are given free rein in establishing a threshold (as long as it does not exceed €3,000) and setting royalty rates where the minimum threshold is lower than €3,000, as long as the rate is 4 per cent or above.<sup>207</sup> The United Kingdom, rather surprisingly (given its outright opposition to the Directive)—and controversially—elected to set a threshold of €1000 at 4 per cent. After that, the royalty rates are set by the Directive and the percentage decreases as the resale price increases: up to €50,000 the artist is to be entitled to 4 per cent;<sup>208</sup> between €50,000 and €200,000 3 per cent; for sales between €200,000 and €350,000, 1 per cent; for those fetching €350–500,000 a mere 0.5 per cent and for those exceeding €500,000 0.25 per cent. As if these sums were not measly enough—a sale for €1 million giving the artist €10,000 (exactly 1 per cent), there is a cap—so that the royalty may not exceed €12,500.<sup>209</sup> The rates are set so low in order to avoid the right having the effect of causing sales to relocate in order to circumvent the rules.<sup>210</sup> Provision is made for periodic review by the Commission.<sup>211</sup>

<sup>205</sup> In a state operating Art. 4(2).

<sup>206</sup> Resale Right Dir., Recital 20. This is in contrast to some member states, where authors were only entitled where the price of the work increased.

<sup>207</sup> Resale Right Dir., Art. 3, 4(3). The threshold may help to avoid disproportionately high collection and administration costs: Recital 22. However, member states may desire to provide royalties below €3,000 'to promote the interests of new artists'. The Recital notes that variations are unlikely to have a significant effect on the proper functioning of the internal market.

<sup>208</sup> Resale Right Dir., Art. 1(a), 1(2). If a member state elects, this figure can be set at 5 per cent. The UK chose 4 per cent.

<sup>209</sup> Resale Right Dir., Art. 4(2). Artist's Resale Right Regulations, Sched. 1. The rates are cumulative: 4% on the first €50,000; 3% on the next €150,000; 1% on the next €150,000; and 0.5% on the next €150,000. The right holder is entitled to 0.25% on any part of the sale price above €500,000. The maximum royalty would only be achieved on a net sale of €2.3 million.

<sup>210</sup> Resale Right Dir., Recitals 24 and 26.

<sup>211</sup> Resale Right Dir., Recital 26.

PART II  
PATENTS

# 14

## INTRODUCTION TO PATENTS

### CHAPTER CONTENTS

1	Introduction	335	3	Justifications for Patents	339
2	History of the British Patent System up until 1977	336	4	Current Legislative Framework	341

### 1 INTRODUCTION

A patent is a limited monopoly that is granted in return for the disclosure of technical information. Under this Faustian pact, the applicant is required to disclose their invention so that it can be used (or worked) by a ‘person skilled in the art’.<sup>1</sup> In return, the state (in the guise of the Patent Office) issues the applicant with a patent that gives them the exclusive right to control the way that their patented invention is exploited for a 20-year period.

While the protection provided by a patent, which is limited to 20 years, is not as long as the protection provided by copyright law or (possibly) trade mark registration, the rights granted are more extensive. The rights granted to the patent owner cover most commercial uses of the patented invention. In addition, the rights will be infringed irrespective of whether or not the defendant copied from the patented invention. In part, the breadth of the patent monopoly is offset by the fact that patents are only granted if an applicant complies with a relatively onerous registration process. Unlike copyright, which arises automatically on creation of the work, patents are only granted after the applicant satisfies the requirements of registration. Although the granting process may not be as onerous as some would like, it does impose a number of limits and safeguards on the types of invention that are patented, the scope of the monopoly granted, and the nature of the information that is disclosed in the patent. As such, rather than merely being seen as a prerequisite to grant, patent registration should be seen as a process in which policy goals are implemented and enforced.

Two bodies grant the patents that operate in the United Kingdom. The first and oldest granting authority is the UK Intellectual Property Office. (Until 2 April 2007, the Intellectual

<sup>1</sup> This is a notional person who has the requisite skill and knowledge appropriate to the type of invention in question.

Property Office was known as the UK Patent Office.) Patents granted by the UK Office only apply in the UK. A British patent cannot be infringed, for example, in Ireland or Germany. As of 1 June 1978, it is also possible to get a patent to protect inventions in the United Kingdom by applying to the European Patent Office (EPO). It should be noted that the EPO grants a bundle of national patents. That is, rather than granting a single pan-European patent, the EPO grants a series of national patents. While there are some subtle differences, once a patent has been granted by the EPO, it is treated as if it had been issued by the British Intellectual Property Office.

Applications for grant of a patent can be made directly to the British Intellectual Property Office or the European Patent Office. It is also possible to apply to these offices indirectly by way of an international filing under the Patent Cooperation Treaty (PCT). The European Patent Convention (EPC) has superseded the UK Intellectual Property Office as a source for applications for UK patents. As a result, the question has arisen as to whether there is much to be gained from retaining a national patent office.<sup>2</sup> In line with the fact that there are two routes by which a patent for the UK can be granted, there are also two (interrelated) legal regimes that need to be taken into account. These are set out in the European Patent Convention 2000 ('EPC 2000') and the Patents Act 1977 (which is modelled on the EPC). In addition, there are also two different sets of tribunals that adjudicate on patent disputes: the tribunals at the EPO and the traditional British judicial structure (with some amendments for specialist tribunals for patents).

## 2 HISTORY OF THE BRITISH PATENT SYSTEM UP UNTIL 1977

The passage of the Patents Act 1977 marked an important change in British patent law. As well as introducing procedural and substantive changes, it also saw Britain's entry into the European Patent Convention. While there are many important differences in the post-1977 law, in the following chapters we will encounter many concepts that predate the 1977 Act. For example, the image of the invention as the human intervention in nature that brings about a resulting physical change which underpins much contemporary jurisprudence, was well entrenched in British law by the mid-nineteenth century.

Insofar as patents can be seen as monopolies offered by the state as rewards, there are many historical antecedents. A notable example is the practice that came to prominence in sixteenth- and seventeenth-century Britain, where the Crown granted privileges to subjects in return for the subject carrying out some corresponding duty. Initially, these privileges were granted in letters patent, that is as 'an open letter' from the Crown to a subject (from which the term patent is derived). Unlike the present system, there were no formal checks or balances on the privileges granted by the Crown. As such, patents were frequently granted for activities that were already being performed by individuals. A famous example is the grant of a monopoly over the selling of playing cards.<sup>3</sup> Clearly, the grant of such a monopoly would have been detrimental to anyone who was already selling playing cards. As Crown grants of patents

<sup>2</sup> See W. Kingston, 'What role now for European National Patent Offices' [2003] *EIPR* 289; J. Phillips, 'Time to Close the Patent Office Doors?' [1990] *EIPR* 151.

<sup>3</sup> *Darcy v. Allin* (1602) 11 *Co Rep* 84b; 74 *ER* 1131.

increased over the course of the sixteenth and seventeenth centuries, so too did the criticism. Eventually, the Crown's right to grant such privileges was challenged in the courts.<sup>4</sup> It was also subject to Parliamentary intervention with the passage of the 1624 Statute of Monopolies, which imposed a general prohibition on the grant of patents by the Crown. While the Statute of Monopolies imposed a general prohibition on the grant of monopolies, an exception was made in section 6 where the grant related to 'a manner of new manufacture'. As well as limiting the circumstances in which a patent could be granted, the Statute also limited the duration of the patents for new manufacture to a period of 14 years. This period, which corresponded to two terms of apprenticeship, was based upon the idea that in return for the monopoly the patentee would teach the new 'art' to two sets of apprentices.

While patents have existed in one form or another for many centuries, the patent system that exists today is largely a creation of the nineteenth century. Indeed many aspects of the registration process as well as many of the legal concepts that we look at in subsequent chapters crystallized over this period.<sup>5</sup> One of the most important changes that took place over the course of the nineteenth century was that patents changed from primarily being a creature of Crown prerogative to become a creature of bureaucracy. Although some of the trappings of the patent system's early connection with the Crown remain, patents are better seen as the product of an administrative process than a form of Crown prerogative. The shift from Crown to administration was reinforced with the passage of the Patents Act 1977, which saw Britain enter the EPC. Another important yet often overlooked change that took place in the nineteenth century was the crystallization of patent *law*. Indeed, it was only after the publication of the first textbooks on patent law and the first series of judicial decisions to consider the validity and infringement of patents that a distinct and relatively coherent body of law came into existence.

Another important event that took place over the nineteenth century was that the emerging patent system was subject to a considerable amount of vocal and highly critical public scrutiny.<sup>6</sup> This scrutiny not only led to calls for the reform of patent law; but also in some cases to calls for the abolition of the whole patent system itself. Critics of the patent system said that it was unnecessarily complicated, technical, and obscure. They also said that, while applicants were able to benefit from the protection provided by the patent monopoly, the corresponding public interest in the disclosure of technical information was not being met. In part this was because in many cases the information disclosed in the patent was of limited practical value. Given the lack of control exercised over the nature and content of the information disclosed in the patent, key aspects of inventions often were not disclosed. As a result, third parties were often not able to work or practise the invention from the information that was disclosed in the patent. Even where the information disclosed in the patent was potentially valuable, it was often very difficult for third parties to locate the relevant information. This was attributed to a range of factors, from the fact that the titles of many patents did not match the subject matter of the invention, through to the fact that patent specifications were often not filed in a consistent or logical fashion. The criticisms of the patent system were also motivated by ideological concerns that focused on the monopolistic nature of the patents. Motivated by political economists, who

<sup>4</sup> Ibid; 77 ER 1260; *The Clothworkers of Ipswich Case* (1614) *Godb R* 252; 78 ER 14.

<sup>5</sup> See Sherman and Bently, 95–110.

<sup>6</sup> The patent controversy was also important insofar as it led to public discussions about the goals and functions of patent law (and intellectual property law more generally). See F. Machlup and E. Penrose, 'The Patent Controversy' (1950) 10 *Journal of Economic History* 1.

championed *laissez-faire* ideas that the government should only interfere in the operation of the market where it was absolutely necessary, patent monopolies were presented as unjustifiable inhibitions on the market that inhibited free trade. (This is in contrast with critics of the Crown grant of patents in the seventeenth century when monopolies were seen to be undesirable because of their association with the Stuart attempts to govern without Parliament.)

The criticisms made of the patent system had a long-standing impact on its shape and direction. Importantly, the shift away from patents being seen as a form of Crown prerogative opened the system up to the possibility of reform. Many of the objections to the existing patent laws were rectified in the Patents Designs and Trade Marks Act 1883 and by changes to Patent Office rules and guidelines. In turn many of the criticisms made of the registration process were met by a raft of administrative reforms. For example, the patent system was rationalized with the establishment of the Patent Office in 1852. In addition, patents were organized alphabetically and rules were introduced that helped to ensure that the titles of the patent corresponded to the patented invention. The growing practice of including a description of the invention in the patent application (now called the specification) was formalized. There was also more attention given to the form and nature of the information disclosed in the patent.

While many of the criticisms made of the patent system were met by legal and administrative reforms, nonetheless the criticisms made of the patent system continued to have an impact upon the way patents were viewed, long after the debates had ended. In part, this may explain why it was that from '1883 until after the end of the [Second World War], the courts tended to regard patent monopolies with some disfavour as being generally contrary to the public interest'.<sup>7</sup> It is interesting to contrast these attitudes with the approach after 1949, where 'the climate of opinion has changed. It is now generally recognized that it is in the public interest to encourage inventive genius. Accordingly the modern tendency of the courts has been to regard patent claims with considerably more favour than before.'<sup>8</sup> This trend has become even more marked in recent years as both UK courts and the EPO have grown increasingly inventive in their efforts to circumvent legislative obstacles to patent protection.

Another notable trend that developed over the nineteenth century was the growing influence that foreign patents systems had on the development of the British patent regime. As well as borrowing concepts from French and American patent law, aspects of the British registration process were modelled on foreign regimes. The second half of the nineteenth century also saw the growing internationalization of the patent system. These moves reached their peak with the signing of the 1883 Paris Convention<sup>9</sup> (which at the end of 2007 had 172 member countries).<sup>10</sup> One of the notable achievements of the Paris Convention was that it introduced the principle of national treatment. This is the principle that a convention country must treat the nationals of other signatory countries in the same way as it treats its own.<sup>11</sup> Another notable aspect of the Convention was that it provided that an application for a patent in one member state should not prejudice subsequent applications in other member states.<sup>12</sup> This is achieved by requiring the later application to be treated as having the priority date of the

<sup>7</sup> *Ethyl Corporation's Patent* [1972] RPC 169, 193 (Salmon LJ). <sup>8</sup> *Ibid.*

<sup>9</sup> Bilateral arrangements that dealt with patent-related issues were entered into in the early nineteenth century. These were usually in the form of Treaties of Freedom, Commerce, and Navigation.

<sup>10</sup> See S. Ladas, *The International Protection of Industrial Property* (1930); E. Penrose, *The Economics of the International Patent System* (1951); *Asahi Kasei Kogyo* [1991] RPC 485, 532 (HL).

<sup>11</sup> Paris Art. 2. <sup>12</sup> *Ibid.*, Art. 4. The priority period is 12 months.

earlier application. It should be noted that the Paris Convention does not impose minimum standards of protection for patents, as the Berne Convention does for copyright.<sup>13</sup>

### 3 JUSTIFICATIONS FOR PATENTS

Over time, a number of different justifications have been given in support of the patent system. At times, the proponents of patent protection have emphasized the natural rights of inventors to the products of their mental labour.<sup>14</sup> Others have argued that justice demands that an inventor's contribution should be recognized by the grant of a reward.<sup>15</sup> While arguments of this ilk have occasionally been relied upon in discussing aspects of the patent system, they have not been as popular as the public interest rationales. Having said that, the current debates about how indigenous interests should best be accounted for in the patent system have seen a resurgence of interest in arguments about inherent rights and justice.

While commentators have occasionally drawn on natural rights in support of the grant of patents, the most common form of argument has concentrated on the public benefits that flow from the grant of patent monopolies. Although these arguments have changed over time, what they share in common is the basic idea that the public should only ever have to endure the harm caused by the grant of a patent if the public receives some corresponding benefit. These arguments have tended to dominate discussion of the function of the patent system since the nineteenth century.

Initially, the public interest in the patent system was said to flow from the fact that the patentee introduced a form of technology that had not previously been available in the United Kingdom. Often this simply involved the patentee importing information about a trade or a craft from another country. Over time, this rationale was replaced by the argument that the public benefit lay in the disclosure of the invention that occurred on publication of the patent application. That is, the justifications focused on the role that the patent system played in the generation and circulation of technical information. (This is often referred to as the 'information function' of the patent system.) In particular it is said that patents act as incentives to individuals or organizations to disclose information that might otherwise have remained secret.<sup>16</sup> Patents also encourage information to be disclosed in a way that is practically useful. At a more general level, the public interest in allowing patents is said to flow from the fact that the numerous patents that have been granted over time constitute a substantive and valuable database of technical and scientific information. The information function of the patent system was reinforced by the Patents Act 1977 and the EPC, which emphasized the need for the invention to be disclosed in such a way that it could readily be put into practice.<sup>17</sup> The value and effectiveness of the information was also bolstered by the publication of patent specifications on the internet.

While the primary focus of the patent system is on the disclosure of technical information for scientific and industrial reasons, the information that is collected at patent offices throughout the world is occasionally used for other purposes. For example, historians have used the patent

<sup>13</sup> Although Paris Art. 4*ter* requires mention of the inventor, Art. 4*quater* requires that patents are not refused on the ground that sale of the product is restricted in domestic law, Art. 5 restricts the ability to forfeit the patent and the availability of compulsory licences.

<sup>14</sup> Machlup and Penrose, 'The Patent Controversy', 11–17. <sup>15</sup> *Ibid.*, 17–21.

<sup>16</sup> See D. Davies, 'The Early History of the Patent Specification' (1934) 50 *LQR* 86.

<sup>17</sup> See below, Ch. 20 Sections 1 and 2.

system as an indicator of public attitudes towards different technologies.<sup>18</sup> More bizarrely, the fact that patent applications had been lodged for ovens for the burning of human corpses was used in a defamation action as evidence of the existence of gas chambers at Auschwitz.<sup>19</sup>

Patents have also been justified by the fact that they provide an incentive for the production of new inventions.<sup>20</sup> As Lord Oliver said in *Asahi* the ‘underlying purpose of the patent system is the encouragement of improvements and innovation. In return for making known his improvement to the public the inventor receives the benefit of a period of monopoly during which he becomes entitled to prevent others from performing his invention except by his licence.’<sup>21</sup> More specifically, it is said that as patents provide the possibility for inventions to be exploited for a 20-year period, this means that investors will be more willing to fund research and development. In this sense, patents act as a vector that links scientific and technical research with commercial spheres.<sup>22</sup> Arguments of this nature have proved to be particularly important in situations where an invention can be readily ascertained (or reverse-engineered) from the product which is put on the market (and no other form of protection exists).

The fact that a product is patented is often used by retailers trying to gain a competitive advantage to show the innovative nature of their products. There is also a sense in which the fact that a product has been patented suggests that the product (or process) has been publicly sanctioned in some way or other. This has proved to be an important consideration in the ethical debates about whether patents should be granted for genetically modified humans, animals, and plants.

If we reflect upon the way that patent law has been viewed over the last century or so, a number of things stand out. The first notable feature is that the patent system has widely been seen, both by supporters and critics alike, as a system of regulation: that is, as a regime that modifies behaviour. While in some cases this is explicit; in most cases it is implicit in the way commentators talk about and think about patents.<sup>23</sup> Another notable and consistent trend has been that whenever commentators talk about the patent system in a *positive* sense, that is as a system that regulates and controls behaviour in a desirable way, they have almost always seen it as a tool to promote economic ends, such as the encouragement of new industries, research and development, or innovation.<sup>24</sup> In contrast, whenever non-economic factors such as health, human rights, the environment, or ethics are discussed, they have either been treated as

<sup>18</sup> T. O’Dell, *Inventions and Official Secrecy* (1994).

<sup>19</sup> *Irving v. Penguin Books* (11 Apr. 2000), para. 7.65 (QB). G. Reimann, *Patents for Hitler* (1945).

<sup>20</sup> Kitch emphasized the way in which the grant of patents could be analogized to the grant of mineral rights, giving the grantee an incentive to invest in the exploitation of the ‘prospect’. See E. Kitch, ‘An Economic Review of the Patent System’ (1977) 20 *Journal of Law & Economics* 265.

<sup>21</sup> *Asahi*, note 10 above, 523 (Lord Oliver) (HL); Mansfield, ‘Patents and Innovation: An Empirical Study’ (1986) 32 *Managing Science* 173; *Esswein/Automatic programmer*, T579/88 [1991] EPOR 120, 125. See J. Aubrey, ‘A Justification of the Patent System’, in J. Phillips (ed.), *Patents in Perspective* (1985); A. Plant, ‘The Economic Theory Concerning Patents for Inventions’ [1934] *Economica* 30; C. Taylor and A. Silbertson, *The Economic Impact of Patents* (1973), chs. 2 and 14.

<sup>22</sup> The role that the patent system played in inducing the invention and implementation of new industrial practices has been widely but inconclusively debated. See C. MacLeod, *Inventing the Industrial Revolution* (1988); H. Dutton, *The Patent System and Inventive Activity during the Industrial Revolution: 1750–1852* (1986).

<sup>23</sup> Driven by a form of legal positivism that has long disappeared from most other areas of law, it is occasionally suggested that patent law does not regulate behaviour: rather, it merely grants property (or monopoly) rights in inventions. Invariably, however, the pretence of neutrality that underpins arguments of this nature disappears when commentators talk about the importance of patent protection in promoting technical innovation or investment in innovation.

<sup>24</sup> Occasionally, policy debates have also focused on the positive impact that patents have on the collection and distribution of technical information.

external (*negative*) constraints upon the core activities of the patent system, or as undesirable side effects that need to be mitigated.

While there is no denying the important role that patents play in macro-economic policy, there is no reason why the patent system, as a regulatory tool, should only be used in the pursuit of economic ends, nor any reason why ‘external’ factors such as the impact of technology on the environment or health should not fall within the core remit of the patent system. That is, there is no compelling reason why the various practices, rules, and concepts that have been developed and fine-tuned over the last couple of centuries or so should only be used for economic ends. Given that modern patent law already performs a number of sometimes surprising non-economic roles, this is not as alien a proposition as it might first appear. For those who require an older lineage, there are also many examples from pre-modern patent law where the grant of a patent was used by the Crown to achieve political and personal, rather than economic, ends. As we will see below, arguments of this nature are beginning to have an influence on patent law, particularly in relation to the use of biological inventions and the protection of indigenous knowledge.<sup>25</sup>

## 4 CURRENT LEGISLATIVE FRAMEWORK

The law that regulates the creation and use of patents that operate in the UK is a hybrid mixture of national, European, and international elements. In this section, we provide an introduction to the legislation, conventions, and treaties that we will encounter in subsequent chapters. We begin by looking at the most important regimes, namely the European Patent Convention and the Patents Act 1977. We then go on to look at the impact that the European Commission has had on patent law. After looking at the Community Patent Convention, we turn to look at some of the international treaties that have shaped British patent law. In particular, we look at the Patent Cooperation Treaty, TRIPS, and the Convention on Biological Diversity.<sup>26</sup>

### 4.1 THE EUROPEAN PATENT CONVENTION

The European Patent Convention (EPC) was signed in Munich in 1973 and came into operation on 1 June 1978.<sup>27</sup> The original convention, which we will refer to as the ‘EPC 1973’ was replaced by the European Patent Convention 2000 (‘EPC 2000’) on 17 December 2007.<sup>28</sup> The provisions of the EPC 2000 apply unless the transitional provisions provide otherwise for the applicability of the EPC 1973.

The EPC is based upon (and modified) the patent law of the various member states in force at the time. The EPC is an intergovernmental treaty that is distinct from the European Community. As such, membership extends beyond members of the EC. At the beginning of 2008, the EPC had 34 member states.<sup>29</sup>

<sup>25</sup> See below pp. 355–56, 388–90.

<sup>26</sup> There are a number of other regional patent agreements, most notably the Bangui Agreement, the Harare Protocol on Patents, and the Eurasian Patent Convention (Moscow, 1994).

<sup>27</sup> Work began on a European patent system in 1949 in the Council of Europe with the Longchambon plan. For background see K. Haertel, ‘The Munich Diplomatic Conference on European Patent Law’ (1973) 4 *IIC* 271. P. Braendli (1974) 4 *IIC* 402.

<sup>28</sup> See below at pp. 343–4.

<sup>29</sup> As of 1 Jan 2008, the 34 members were: Austria, Belgium, Bulgaria, Cyprus, Croatia, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein,

The EPC is primarily concerned with the granting of European patents.<sup>30</sup> This was facilitated by the establishment of the European Patent Office (EPO) in Munich, which acts as a centralized system for the grant of European patents. When an applicant wishes to protect their invention in a number of European countries, the EPO provides them with the benefit of a single application and search procedure, and a single grant of a bundle of national patents in each of the member states.<sup>31</sup>

Applications are made to the European Patent Office, which is based in Munich. The application is submitted to the Examining Division and appeals are made from there to the Technical or Legal Board of Appeal. In rare cases, the Boards of Appeal (or the President of the EPO) may refer legal matters to the Enlarged Board of Appeal.<sup>32</sup> While applications may be filed in any language,<sup>33</sup> if the application is not in an official language of the EPO (English, German, or French), the applicant is given two months to translate the application into an official language.<sup>34</sup> Upon grant, a European patent becomes a bundle of national patents that have effect in each of the member states for 20 years from the date of filing. The procedure for application to the EPO is similar to that at the UK Intellectual Property Office.<sup>35</sup>

When the EPC was being formulated, it was decided that for there to be an effective single granting process, it was necessary for the member states to harmonize the basic rules of patent law. This was particularly the case in relation to the rules on patentability and validity. As we will see, the tribunals at the EPO have had a substantial impact on this area of law. The EPC only provides a mechanism for the grant of national patents. As such, while the EPC is concerned with the validity of European patents, matters of infringement, enforcement, revocation, renewal, and litigation are exclusively dealt with by national law. One of the consequences of this is that a patent granted at the EPO for two countries might be interpreted differently in each country. In order to reduce the chances of problems of this nature from arising, the EPO examiners, national judges, and examiners meet annually. Further, a Protocol on the Interpretation of Article 69 of the EPC 2000 [Article 69 EPC 1973] provides guidance as to how patents should be interpreted.<sup>36</sup>

Lithuania, Luxembourg, Malta, Monaco, the Netherlands, Norway, Poland, Portugal, Romania, Slovenia, Slovak Republic, Spain, Sweden, Switzerland, Turkey, and the UK. In addition there are four extension states: Albania, Bosnia and Herzegovina, the former Yugoslav Republic of Macedonia, and Serbia.

<sup>30</sup> This has cast doubts over the independence of the Office. Interestingly, the European Parliament suggested that the EPO reconsider the practice whereby it 'obtains payments for the patents that it grants as this practice harms the public nature of the institution'. *Proposal for a Directive of the European Parliament and of the Council on the Patentability of Computer-implemented Inventions* COM (2002) 92 final, Recital 7b (introduced by European Parliament, Amendment 95).

<sup>31</sup> The second planned element of the European patent system, the Community Patent Convention (CPC), provided for the establishment of a Community-wide patent. It has not yet come into force and has been supplanted by the EC's plan for a Europe-wide patent. See below at p. 351.

<sup>32</sup> EPC 2000 Art 112a provides that decisions of the boards of appeal can be contested on limited grounds including fundamental procedural defects.

<sup>33</sup> EPC 2000 Art. 14(2), EPC 2000 r. 40. <sup>34</sup> EPC 2000 r. 6(1), r 58.

<sup>35</sup> One important difference is that the EPC allows for third-party opposition to the grant during the nine months after publication of the details of the grant. Opposition is not possible under the UK system, but it is open to a person who objects to the patent to seek revocation on similar grounds.

<sup>36</sup> PA 125(3). See B. Sherman, 'Patent Claim Interpretation: The Impact of the Protocol on Interpretation' (1991) 54 *MLR* 499.

#### 4.1.1 EPC 2000

Over the course of the 1990's, there were growing calls for the European Patent Convention to be changed to take account of the technological, political, and legal changes that had occurred since it was signed in 1973. To this end, a conference took place in Munich in November 2000 to discuss revision of the EPC.<sup>37</sup> The conference aimed to modernize the European patent system while maintaining the proven principles of substantive patent law and procedure. The conference also aimed to undertake a comprehensive review of the EPC in light of technical and legal developments, and over twenty years of practical experience. The conference also wanted to bring the EPC into line with TRIPS, the future Community patent, and the provisions of the (WIPO) Patent Law Treaty. In light of the leading political and legislative role that the European Union played in relation to the protection of biotechnological inventions, it was decided that it was inadvisable to open up parallel discussions in this area. It was also decided that further diplomatic conferences should be organized to consider the protection for computer programs and biotechnology inventions, as well as the changes required to implement the Community patent.

At the end of the conference, the member states of the EPC agreed to make a number of changes to the EPC.<sup>38</sup> The revised Convention, known as the 'EPC 2000', and new Implementing Regulations, were adopted by the EPO Administrative Council on 28 June 2001. The EPC 2000 and its Implementing Regulations came into force on 13 December 2007. In so doing the EPC 2000 replaced the EPC (1973). The new law applies to all European patent applications and to patents granted on the basis of this application which were filed after the EPC came into force. In certain situations, the EPC 2000 also applies to applications that were pending on 13 December 2007 and to patents that had already been granted by that date. Under the transitional provisions of the EPC 2000 most of the provisions of the new law will apply to applications lodged and patents granted prior to the EPC 2000 coming into force. In this section we provide an overview of some of the key features of the EPC 2000; we leave more detailed discussions (including the transitional arrangements) for the appropriate place in the text.

For the most part, the EPC 2000 did not bring about (or at least was not intended to bring about) many changes in the existing law. For example, Article 52(1) EPC 2000 does not make any substantial changes to the types of invention that were patentable under EPC 1973. Following Article 27(1) of TRIPS, EPC 2000 does however add a new phrase that 'European patents shall be granted for any invention, in all fields of technology'. Contrary to the Base Proposal for the Revision of the European Patent Convention, which proposed to delete '*computer programs as such*' from Article 52(2)(c),<sup>39</sup> the conference decided not to remove computer programs from the list of non-patentable inventions in Article 52(2) of the EPC 2000.<sup>40</sup> As such, the statutory position under the EPC 1973 remains unchanged. The provisions in the EPC 2000 in relation to novelty, inventive step, and the internal requirements for patentability are basically the same as in the EPC. The main change is that Article 54(4) EPC has been deleted. This means that the state of the art will include all previous European applications irrespective of their designation.

<sup>37</sup> The Administrative Council of the EPO launched the revision project in 1998.

<sup>38</sup> Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e (hereafter EPC Revision Act).

<sup>39</sup> CA/1000/00e. Distributed by the German Federal Ministry of Justice on 27 June 2000. Diplomatic Conference 20–9 Nov. 2000.

<sup>40</sup> EPC 2000, Art. 52(2)(c) (which is identical to EPC 1973, Art. 52(2)(c)).

In other cases, existing provisions have been reworded to make them more transparent. For example, Article 52(4) EPC 1973 said that methods of treatment and diagnosis were lacking in industrial applicability and as such as excluded from patentability. In contrast, Article 53(c) EPC 2000 takes a more direct approach insofar as it simply says that such methods are excluded from patentability. In other cases, the text has been changed to ensure that the EPC 2000 reflects current practice. As such, while there may have been a change in the language of the Convention, this was not intended to bring about changes to the existing law. For example, Article 54(5) EPC 2000 expressly allows for claims to second and further medical uses of known substances or compositions without the need for such claims to be expressed as Swiss-type claims, as was previously the case. The EPC 2000 also clarifies and strengthens the extent of protection conferred by European patents by expressly including the doctrine of equivalents in the revised Protocol on Article 69 EPC 2000.<sup>41</sup>

One of the most notable changes brought about by the EPC 2000 is that it provides patent owners with the option of limiting the protection afforded by their patents in a central procedure before the EPO.<sup>42</sup> The existence of a centralized procedure for amendment means that proprietors no longer have to go through the national patent offices. It also means that should a patent as granted turn out to be invalid, it can be amended quickly. It was hoped that this would act as an incentive to amend incorrectly granted patents promptly and at a lower cost. Article 138 EPC 2000 also enables proprietors to amend patents granted by the EPO in national proceedings relating to a patent's validity. As we will see, this has ramifications for the judicial discretion that exists in UK patent law as to whether an amendment should be allowed.

The EPC 2000 also made a number of amendments that simplified the patent grant procedure before the EPO.<sup>43</sup> These changes were intended to provide greater legal certainty for applicants and patent owners. It is now possible, for example, to file patent applications in any language, since a translation into one of the official languages of the EPO will not be required until a later date. The EPC 2000 also aims to streamline the European grant procedure. Notably, it was decided that the search and examination parts of the patent application should be brought together. Previously, search and examination were carried out in a number of different locations. On the basis that, as the EPO's vast collection of search documentation were available through databases at all its duty stations, it has been decided that there is no longer any need to separate the two tasks. It was expected that this will lead to a 'significant increase in the productivity and efficiency of the EPO'. The EPC 2000 also made a number of other notable procedural changes. For example, in contrast to the EPC 1973 which requires applicants to designate the states in which they wish to be protected,<sup>44</sup> Article 79(1) EPC 2000 provides that all EPC states will be deemed to be designated at the date of filing. The EPC 2000 has also created a legal basis for special agreements to be made between the contracting states concerning the translation of European patents. It also provides for the introduction of a central court system for the enforcement of European patents, issues which are of importance for the Community patent proposed by the European Commission.<sup>45</sup> In addition, the EPC 2000 authorizes the Administrative Council to adapt the EPC to international treaties and European Community legislation.<sup>46</sup> Given the activity of the European Community in patent law, this may prove to be an important change.

#### 4.1.2 The London Agreement

One of the long-standing problems confronting the European patent system is the cost of translation. Given the informational role played by patents and the problems that arise where European patents are granted for 34 member states (with over 23 different languages), it is not surprising that translation has been a key issue within the EPO. Many of these problems have been alleviated as a result of the London Agreement, which came into operation in the EU and the UK on 1 May 2008.

One of the reasons why translation proved to be so problematic under the EPC, and why the London Agreement was initiated in the first place, was that Article 65 EPC 2000 (as was the case under EPC 1973) allows member states to require the patent to be translated into the national language as a pre-requisite for validity.<sup>47</sup> Prior to 1 May 2008, for example, for a European patent (UK) not in English to be valid in the UK, the patent had to be translated into English within three months. As the number of member states proliferated, so too did the cost of translation. Given the expense of translation (estimated to be 40 per cent of overall patent costs, with an average cost of €3,800),<sup>48</sup> it is not surprising that it attracted a lot of attention. The concerns about translation cost were heightened by the fact that, as most patent litigation was said to be based on the 'authentic' text (published in English, German, or French) rather than the translated text, it was suggested that the national translations were redundant.<sup>49</sup> Given this, the contracting parties to the EPC decided to modify Article 65.<sup>50</sup> To this end, the London Agreement was adopted on 17 October 2000.<sup>51</sup> The Agreement came into force on 1 May 2008.

In order to reduce translation costs and thus the cost of patenting in Europe, Article 1(1) of the Agreement provides that signatory parties that share an official language with the EPO (namely, Austria, Belgium, France, Germany, Ireland, Luxembourg, Monaco, Switzerland, and the UK) must waive, wholly or partially, the requirement under Article 65 EPC 2000 that a patent be translated into their national language. Article 1(2) provides that member states that do not have English, French, or German as their official language must also dispense with the translation requirement (allowed under Article 65 EPC 2000). Article 1(3) does, however, allow these countries to require that, for a patent to be valid, the claims must be translated into the local language.<sup>52</sup> Under Article 2 of the Agreement, in the case of a patent dispute,

<sup>47</sup> EPC 2000 Art. 65.

<sup>48</sup> See EPO, 'The London Agreement' (14 Nov 2007), 1. In 1995 the cost of translation was estimated to be DM400 million per year.

<sup>49</sup> Interestingly, this does not take account of the informational value of the patents and what impact this might have, for example, in Portugal or Turkey. The EPO's response is to deny the value of the translation in providing information about new technologies, as they occur four or five years after filing. EPO, 'The London Agreement', 2.

<sup>50</sup> Previously the EPO had proposed that full translation be replaced with translation of an enhanced abstract European Patent Office, 'Cost of Patenting' (1995) 26 *IIC* 813; P. Braendli, 'The Future of the European Patent System' (1995) 26 *IIC* 813. This has generated further proposals, including only requiring translation of claims or some part of the description, or allowing further delays as to when the translation must take place. B. Pretnar, 'How to Reduce High Translation Costs to European Patents' [1996] *EIPR* 665; K. Heinonen, 'Translation of European Patents: Package Solution not the Answer' [1997] *EIPR* 220; E. Jeneral, 'Once More How to Reduce High Translation Costs of European Patents' [1997] *EIPR* 490; C. Lees, 'Translation: The Key Solution' [1997] *EIPR* 594. On the role of translation in the proposed Community Patent, see p. 344 above.

<sup>51</sup> The full title is: The Agreement on the application of Article 65 of the Convention on the Grant of European Patents made in London on 17th Oct. 2000.

<sup>52</sup> The Netherlands, Sweden and Denmark require that the claims be translated into their official languages. They will also require the description to be published in English.

the owner of the patent is required to supply a full translation of the patent to both the alleged infringer and the competent court.

The UK implemented Article 1(1) of the London Agreement as of 1 May 2008.<sup>53</sup> As a result, section 77(6) of the Patents Act 1977 no longer has effect in the UK. This means that European patents in French or German no longer have to be translated into English within three months of grant at the EPO for them to be valid in the UK. In line with Article 2 of the London Agreement, the rules of procedure before British courts and the Comptroller may require that the full text of the patent is translated into English.

## 4.2 PATENTS ACT 1977

The law that regulates the creation and use of patents in the United Kingdom is found in the Patents Act 1977, as amended.<sup>54</sup> As the bulk of the 1977 Act was based upon the EPC, the passage of the Act brought with it a number of substantive and procedural changes to British patent law. It also saw the United Kingdom's entry into the EPC.

Insofar as the provisions of the Patents Act 1977 are based on the EPC, the Act says that those provisions should be interpreted so as to give effect to the EPC and decisions made thereunder.<sup>55</sup> The important task of ensuring that the UK law remains consistent with the law at the EPO has been recognized by the English courts in numerous cases.<sup>56</sup> Interestingly, the EPO has occasionally reciprocated by taking notice of the decisions of national offices and courts so as to avoid lack of uniformity in the law of the EPC countries.<sup>57</sup> Although there is no consistent pattern, pre-1977 decisions have not been treated as being wholly irrelevant when deciding questions under the 1977 Act. In some cases the courts have said that the 1977 Act swept away the old law.<sup>58</sup> In other cases, however, they have acknowledged that, as the intent of the EPC was to harmonize existing national rules, pre-1977 decisions are still important.<sup>59</sup> Despite this, as the jurisprudence at the EPO develops, it is clear that pre-1977 cases are becoming less important in the United Kingdom.

### 4.2.1 Reform of the Patents Act 1977

In November 2002, the UK Intellectual Property Office and the Department of Trade and Industry released a consultation paper that outlined a number of possible amendments to the Patents Act 1977.<sup>60</sup> While the aim of these changes was primarily to give effect to the EPC 2000, the consultation paper also suggested a number of other changes designed to improve the 1977 Act. The government's conclusions drawn from the consultation process were published in late 2003.<sup>61</sup> After a brief period of debate, the Patents Act received Royal Assent on 22 July 2004.

<sup>53</sup> Patents (Translations) Rules 2005 (SI 2005/682).

<sup>54</sup> This replaced the PA 1949. <sup>55</sup> PA s. 130(7); PA s. 91(1).

<sup>56</sup> *Wyeth's Application* [1985] RPC 545; *Gale's Application* [1991] RPC 305, 322–3 (Nicholls LJ), 332 (Browne-Wilkinson V-C).

<sup>57</sup> *Wellcome Pigs T116/85* [1989] OJ EPO 13, citing *Stafford Miller's Application* [1984] FSR 258; *ICI/Cleaning Plaque, T290/86* [1991] EPOR 157 following *Oral Health Products (Halsteads) Application* [1977] RPC 612.

<sup>58</sup> *Unilever's Application* [1983] RPC 219; *Merrell Dow v. Norton Healthcare* [1996] RPC 76, 82; *Hallen v. Brabantia* [1990] FSR 134, 139.

<sup>59</sup> *Gale's Application* [1991] RPC 305.

<sup>60</sup> *Consultation Paper on the Proposed Patents Act (Amendments) Bill* (29 Nov. 2002).

<sup>61</sup> *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003). See also Explanatory Notes to the Patents Bill (2004) (HL).

Many of the changes made by the Patents Act 2004 mirror those in the EPC 2000 (discussed above). The 1977 Act was amended to reflect the changes in the EPC 2000 by dealing with methods for treatment and diagnosis as exceptions to patentability under section 4A(1), rather than on the basis that they lacked industrial applicability, as had been the case previously.<sup>62</sup> Following Article 54(5) EPC 2000, the government also simplified and clarified the manner in which patent protection can be obtained for second and further medical uses. In particular, under the Patents Act 2004, claims to second or further medical uses of a known substance or composition are allowed whether or not they are drafted as Swiss-type claims.<sup>63</sup> This allows further medical use claims in the UK, while not precluding the possibility of Swiss-type claims.<sup>64</sup> The 1977 Act was also amended to reflect the fact that all applications for European patents form part of the state of the art under section 2(3).<sup>65</sup> The government's earlier proposal to amend section 1 of the 1977 Act to reflect the Article 52(1) EPC 2000 (particularly that inventions 'should be granted in all fields of technology') was not adopted in the 2004 Patents Act.<sup>66</sup>

A number of changes also relate to the amendment of patents. As well as recognizing the new centralized limitation process available under EPC 2000, the government changed the 1977 Act to remove a number of anomalies that previously existed in terms of when a patent may be amended.<sup>67</sup> The Patents Act 2004 also made a number of minor changes to the scheme developed to compensate employee-inventors.<sup>68</sup> It also clarified that co-owners have the ability to amend and revoke a patent if they act jointly.<sup>69</sup>

Infringement proceedings can only be brought before the comptroller if both parties agree that this should happen. In order to provide patentees (particularly small and medium-sized organizations) with an alternative dispute resolution process, the Consultation Paper suggested that the 1977 Act be changed to allow infringement proceeding to be brought before the comptroller at the request of one party. This proposal was not supported.<sup>70</sup> Instead, the 2004 Act amended the 1977 Act to give the comptroller a general power to undertake both post-grant re-examination of a patent and also to make declarations as to whether a particular patent has been infringed. This is to be a non-binding opinion of the Intellectual Property Office, rather than a legally binding decision. It was hoped that this will provide a fast, fair, and effective way of resolving disputes, as an alternative to formal litigation.<sup>71</sup> The Patent Office rules, which play a central role in many aspects of patent law in the UK, were overhauled and

revised to modernize and simplify the patent process as well as improve patent litigation at the Office. The new rules, which are known as the 'Patent Rules 2007' came into force on 17 December 2007. All references to UK patent rules will be to the 2007 rules unless otherwise stated.<sup>72</sup>

### 4.3 THE COMMUNITY PATENT CONVENTION

As part of the plans for the establishment of a European patent system in the 1960s and the 1970s, it was decided that a dual system of protection should be introduced. The first element, which eventually emerged as the EPC, aimed to establish a centralized granting authority. The second part aimed to establish a single Community patent that was to be obtained by one central procedure and be binding in all member states. This came to be known as the Community Patent Convention (CPC), and was signed in Luxembourg in 1975.<sup>73</sup> One of the key advantages that is said to flow from the Community patent is that it would lead to a rationalization of patent administration and thus to a reduction in costs. Unlike the EPC, the CPC has never come into force. To a large extent, these initial plans have recently been superseded by EU moves to establish a single Community-wide patent.

Under the CPC, a patent application would be made to an office at the EPO. To facilitate this, two new departments would be established: the Administration Division to deal with the administrative matters such as transfers and renewals of patents; and the Revocation Division, to deal with applications to revoke Community patents. It is proposed that the system would offer a degree of flexibility, allowing an applicant to switch between EPC and CPC systems in early stages. A number of major problems emerged with the proposed system as regards languages and litigation. Under the 1975 Convention, it was proposed that an applicant would provide translations of claims in all (then eight) official languages. Under a 1989 revision to the CPC it was proposed that this translation be of the complete text, not just the claims, and be supplied within three months of publication. Where this is not complied with, the patent would be void. This proposal would make a Community patent much more costly and less attractive. There will therefore be little advantage to an applicant in a Community patent rather than a European patent. The advantages of the CPC would be limited to convenience and cheaper renewal fees.

The Community patent would offer the possibility of Europe-wide litigation and enforcement (as well as challenge) through a Community patent court. The jurisdiction of the 1975 Convention was to be divided between national courts and the Community court, the former dealing with scope of protection, and the latter with validity. This was rejected in 1989. Under the revised CPC, the validity of a patent would be challengeable either by application to the Revocation division, or in a counterclaim for revocation before a national community patent court. Appeal from either would lie to a (yet to be established) Community Patent Appeal Court (COPAC). Appeal from a national court on other issues (such as damages) would be to the national appeal court. COPAC would also make the final decisions on appeals from the Administration and Revocation divisions. The plan was for COPAC to be an independent

<sup>72</sup> Patent Rules 2007 (SI 2007/3291). For an outline of the changes in the way that hearings are conducted at the IP Office see *Tribunal Practice Notice* (TPN 6/2007).

Scordamaglia, 'The Common Appeal Court and the Future of the Community Patent' (1991) 22 *IIC* 334; V. Scordamaglia, 'The Common Appeal Court and the Future of the Community Patent following the Luxembourg Conference' (1991) 22 *IIC* 458.

organization attached to neither the EPO nor the ECJ. COPAC would not only be the appeal court but would also give preliminary rulings on the interpretation of the CPT, on request from national courts. With respect to remedies, the national rules of the contracting state where the infringement occurred would have to apply. These Conventions have not been ratified by all the member states and have never entered into force.

#### 4.4 IMPACT OF THE EUROPEAN COMMUNITY

While the European Community has not been involved in the reform of patent law anywhere near as much as it has in relation to trade marks and copyright, the Commission has been active in two areas. These are in relation to the duration of patents (via the Supplementary Protection Certificates scheme) and biotechnological inventions.<sup>74</sup> In this context it is important to recall that the European Patent Convention, whose membership extends beyond the boundaries of the EC, is a separate and distinct treaty which operates outside the remit of the EC. The potential for overlap and conflict between the two regimes has been minimized by the fact that the two bodies have worked in tandem on many issues (which, given the membership overlap, is not that surprising).

The first area of patent law where the EC has intervened is in relation to the duration of patent protection. Faced with growing delays caused by the need for regulatory approval prior to marketing, patent owners argued that the time available for them to exploit their inventions was much shorter than the planned 20-year period.<sup>75</sup> To remedy this problem the EC introduced the so-called Supplementary Protection Certificates, which extend patent protection where it has not been possible for the patent proprietor to take full advantage of their patent rights over the period of the grant.<sup>76</sup> In particular, Supplementary Protection Certificates compensate the owner where they have not been able to market the patented product because of delays in seeking regulatory approval.<sup>77</sup> The effect of the basic patent can be extended for up to five years by this supplementary right. The right is characterized as a right distinct from patents in order to avoid the apparent conflict that would otherwise occur with the maximum term under Article 63 of the European Patent Convention. A challenge made by the Spanish Government to this regime in 1995 was dismissed by the European Court of Justice.<sup>78</sup> A corresponding scheme for Supplementary Protection Certificates has been introduced in the UK.<sup>79</sup>

A second area where the EC has intervened in the patent field is in respect of biotechnological inventions. After a decade of heated debate, the Biotechnology Directive was formally

<sup>74</sup> EU competition law also plays a key role in shaping British patent practice: see below at Ch. 23 Section 3.

<sup>75</sup> On the extent to which competitors may experiment prior to expiry of the patent, see below at pp. 564–5.

<sup>76</sup> Council Regulation (EEC) No. 1768/2 of 18 Jun. 1992 concerning the creation of a supplementary protection certificate for medicinal products; (1992) *OJ L* 182/1. Regulation (EC) No. 1610/96 of the European Parliament and of the Council of 23 Jul. 1996 concerning the creation of a supplementary protection certificate for plant protection products; (1996) *OJ L* 198/30–35.

<sup>77</sup> The relevant regulatory authorities include the Medicines Control Agency, the Veterinary Medicines Directorate, the European Agency for the Evaluation of Medicinal Products, and the Pesticides Safety Directorate.

<sup>78</sup> This was on the grounds that the Community did not have competence to legislate a new patent right, and that intervention could not be justified by reference to the need to harmonize laws for the internal market: *Spain v. Council of the European Union*, Case 350/92 [1995] *ECR I*–1985.

<sup>79</sup> See below at pp. 602–6.

adopted by the Council and the European Parliament on 6 July 1998.<sup>80</sup> The Biotechnology Directive deals with the patentability<sup>81</sup> and scope of protection conferred on biotechnological inventions.<sup>82</sup> As well as introducing special defences,<sup>83</sup> the Directive also establishes a scheme for compulsory licences and cross-licences to deal with the overlap between patent and plant variety protection.<sup>84</sup> In addition it also provides for the deposit of biological material.<sup>85</sup> The Directive has now been implemented in the United Kingdom.<sup>86</sup>

During the passage of the Directive, the question arose as to the nature of the relationship between the Biotechnology Directive and the EPC. What would a British court do, for example, if the EPC and the Directive were in conflict? Problems of this nature were resolved when the Administrative Council of the EPO incorporated the Biotechnology Directive into the Implementing Regulations of the EPC.<sup>87</sup> In so doing, the Administrative Council aligned the EPC with the provisions of the Biotechnology Directive. The Council also provided that the Directive should be used as a supplementary means of interpreting the EPC. As a result, the Recitals to the Directive can be taken into account where relevant.<sup>88</sup>

The controversial nature of the patenting of biotechnological inventions, which delayed the passage of the Directive for so long, has continued since it was passed. In addition to ongoing public criticism of biotechnological patents, in November 1998 the Dutch Government filed a challenge to the Biotechnology Directive in the European Court of Justice. While the ECJ rejected the Dutch challenge to the Directive,<sup>89</sup> there are still many critics of the ongoing expansion of patent law in the life sciences.<sup>90</sup>

#### 4.5 PROPOSED EUROPEAN COMMUNITY CHANGES

There are currently a number of proposals for reform that have been put forward by the European Commission that will have an important impact upon patent law if and when they are finalized.<sup>91</sup> We look at the two proposals that have grown out of the *Green Paper on Innovation*.<sup>92</sup> In particular, we examine the plans for the establishment of a unitary patent valid throughout the EU, and the proposed Directive on patent protection for computer-implemented inventions.<sup>93</sup>

<sup>80</sup> EC Directive on the Legal Protection of Biotechnological Inventions 98/44/EC of 6 Jul. 1998; (1998) *OJ L* 213/13 (hereinafter *Biotech. Dir.*).

<sup>92</sup> COM (95) 382. The Green Paper also considers intervention into other areas of patent law, such as employees' inventions, the use of patent agents, and the recognition of professional qualifications.

<sup>93</sup> See O. Bossung, 'The Return of European Patent Law to the European Union' (1996) 27 *IIC* 287. Following the Commission's *Green Paper on Innovation* Dec. 1995, in Nov. 1996 the Commission issued an *Action Plan*

#### 4.5.1 The Community patent

The goal of establishing a single European patent has been on the political agenda for over thirty years. Undeterred by the failings of the CPC, on 5 July 2000 the European Commission proposed the creation of a Community patent.<sup>94</sup> The possibility of a pan-European patent received a considerable boost on 3 March 2003 when EU Ministers agreed on the text of a Common Political Approach regarding the principles of the Community Patent.<sup>95</sup> The Common Approach sets out the main outlines of the system, including a centralized Community Court that would rule on disputes, the languages to be used, costs, the role of national patent offices, and the distribution of fees. The Common Political Approach was supported by the Council of Europe on 21 March 2003. Following the political agreement, a revised version of the Commission's draft Regulation was published in September 2003. The Commission has said that if the Community patent was introduced it would significantly lessen the burden on business and encourage innovation by making it cheaper to obtain a patent (by reducing translation costs). It is also meant to provide a clearer legal framework.

The planned Community patent offers an alternative for patent protection in Europe alongside the national and EPO systems. The Community patent would provide inventors with the option of obtaining a single patent valid throughout the European Union. However, if a Community patent was successfully challenged, it would fail in all EU member states. While applications are to be filed either in national patent offices or with the EPO in Munich, Community patents would only be issued by the EPO. The role of national patent offices is to be limited to a search at the applicant's request. Applications for a Community patent would have to be in one of three languages—English, French, or German—or in any other language together with a translation. Once granted, the patentee will have to translate all of the claims (but nothing else) into all Community languages. This would then be filed at the EPO. Community patents would coexist with the national and EPC patents giving inventors the option to choose the system that best suited their needs.

The Commission also proposes to create a new centralized Community tribunal called the Community Patent Court. The Community Patent Court is to be established in Luxembourg by 2010 as a panel attached to the ECJ Court of First Instance. Prior to this, member states are to designate a limited number of national courts to have jurisdiction in relation to Community Patent matters. When established, the Community Patent Court will have exclusive jurisdiction in relation to invalidity and infringement of Community patents, and actions relating to declaration of non-infringement, and be able to grant provisional measures. Disputes relating to contractual licensing and ownership of Community patents will be handled by national courts. After a period of four years with no progress, the Commission and Council seemed determined to make some headway with the Community Patent in 2008.

*for Innovation in Europe*, proposing three lines of action for tackling Europe's perceived 'innovation deficit'. Subsequent to this initiative, a *Green Paper on the European Patent* was adopted by the European Commission on 24 Jun. 1997, the main proposal of which concerns the option of converting patent law into a Community instrument. This was followed by *Promoting innovation through patents: the follow up on the Community Patent and the Patent System in Europe* [1999] OJ EPO 197.

#### 4.5.2 Patentability of computer-implemented inventions

Another area where the Community has been active is in relation to computer-implemented inventions. After a period of consultation, which raised a number of questions about the scope, nature, and impact of patents for computer-related inventions,<sup>96</sup> the Commission published a proposal for a *Directive on the Patentability of Computer-Implemented Inventions* in February 2002.<sup>97</sup> The proposed Directive was rejected by the European Parliament in July 2005.<sup>98</sup> While many commentators took this as marking the end of the issue, the question of the patentability of computer-related inventions was reopened in 2007 by the EPO President who called for public discussion to fill the vacuum left by the rejection of the Directive.<sup>99</sup>

### 4.6 INTERNATIONAL TREATIES

As we mentioned earlier, international treaties have long played an important role in shaping aspects of British patent law. In addition to the Paris Convention (discussed above), the other treaties of note are the Patent Cooperation Treaty, TRIPS, and the Convention on Biological Diversity.

#### 4.6.1 Patent Cooperation Treaty

The Patent Cooperation Treaty (PCT) was signed in 1970 and came into operation from 1978. The key feature of the Treaty is that it provides for a system of international application and preliminary examination procedure. The PCT has 138 contracting states.<sup>100</sup> The Patent Cooperation Treaty only provides for an international application and search: the authority to grant the patent remains with the national patent office.<sup>101</sup> The PCT provides a second route through which applications for patents that operate in the United Kingdom and the EPO can be made.

Under the PCT, an applicant can apply to an international office and get an international search and an international preliminary examination. Once this is carried out the application is sent to the designated national offices to decide whether to grant national patents. The centralized procedure is particularly useful for countries where the patent office is not capable of carrying out its own examination. The patent cooperation system is attractive because it reduces the fees payable and because of the lengthy period between the initial application to

<sup>96</sup> The EC launched a process of consultation on 19 Oct. 2000.

<sup>97</sup> *Proposal for a Directive of the European Parliament and of the Council on the Patentability of Computer-implemented Inventions* (hereinafter, Computer-Implemented Inventions Dir.) COM (2002) 92 final. The Council considered the proposal and reached a common position in Nov. 2002. See Committee on Legal Affairs and the Internal Market, *REPORT on the Proposal for a Directive* (18 Jun. 2003) FINAL A5-0238/2003 (McCarthy Report). For a discussion of the proposed Directive see L. Bently and B. Sherman, *Intellectual Property Law* (2nd edn), pp. 342–4.

<sup>98</sup> The Directive was rejected 648 to 14. For a more detailed analysis of the draft Directive see Bently and Sherman (2004), 342–4.

<sup>99</sup> Lucy Sherriff, 'Incoming President reopens software patent debate' (4 July 2007) *The Register* <<http://www.theregister.co.uk/2007/07/04>>.

<sup>100</sup> As of 1 Jan. 2008.

<sup>101</sup> The PCT was signed in Washington 1970; amended in 1979; modified in 1984. See K. Pfanner, 'The Patent Cooperation Treaty: An Introduction' (1979) *EIPR* 98; D. Perrott, 'The PCT in Use' [1982] *EIPR* 67; C. Everitt, 'Patent Cooperation Treaty (PCT)' (1984) 13 *CIPAJ* 383; Anon. 'Patent Cooperation Treaty (PCT) in 1992' (1993) 75 *JPTOS* 354; J. Cartiglia, 'The Patent Cooperation Treaty: A Rational Approach to International Patent Filing' (1994) 76 *JPTOS* 261; J. Anglehart, 'Extending the International Phase of PCT applications' (1995) 77 *JPTOS* 101. See below at pp. 372–4.

the international office and the time when that application is forwarded to the relevant national offices. The extra time, which varies between eight and eighteen months, gives applicants time to decide whether the invention is likely to be successful enough to warrant the translation costs that arise when the application is transferred to the national offices.

#### 4.6.2 TRIPS

While TRIPS had a dramatic impact upon many developing countries, it had little direct impact upon European or British patent law.<sup>102</sup> Perhaps the most significant change brought about by TRIPS relates to the limits imposed on compulsory licences. The impact of TRIPS may increase, however, as the jurisprudence at the World Trade Organization takes shape. In an important decision in relation to the patenting of computer programs, the EPO Board of Appeal noted that as the EPO was not a signatory to TRIPS they were not bound by it. However, on the basis that TRIPS aimed at setting common standards the Board said that it acted as an indicator of modern trends.<sup>103</sup> As we will see shortly, the member states of TRIPS are currently in negotiations over the reform of TRIPS.

The member states of TRIPS are currently in the process of reviewing and updating the 1994 Agreement. Two areas of reform concern us here, namely patents and public health, and the patentability of plants and animal inventions.

One issue that has attracted a lot of attention in recent years is the extent to which patents restrict access to life-saving drugs. This problem came to a head when patentees threatened to challenge legislation in South Africa that would have allowed their patented medicines (for the treatment of HIV/AIDS) to be sold at a price lower than they would have liked. Triggered by the dispute in South Africa, the 4th WTO Ministerial Conference, held at Doha in November 2001, focused on access to patented medicines in developed and less-developed countries. The delegates noted that compulsory licences, which are allowed under TRIPS, offer a possible solution for countries, such as South Africa, that have the domestic capacity to manufacture medicines. However, Article 31(f) of TRIPS, which provides that medicines produced under compulsory licence must predominantly be for the domestic market, creates problems for countries that are unable to manufacture the patented medicines themselves. In particular, it means that it is not possible to manufacture a patented drug under compulsory licence in Country A, with the intention of exporting the drug to Country B. While the delegates at Doha agreed that this problem needed to be resolved, they were unable to decide on how this should be done.<sup>104</sup> After heated public debate, on 30 August 2003 the WTO member states agreed that developed and less-developed countries that do not have the domestic capacity to manufacture drugs should be able to import cheaper generic drugs made under compulsory licences in other countries.<sup>105</sup> That is, the member states agreed to allow countries to manufacture patented pharmaceutical products under compulsory licence for export to developing countries. The decision covers

<sup>102</sup> TRIPS Art. 2 requires members to comply with Arts. 1–12 of the Paris Convention (1967). In addition TRIPS Arts. 27–34 increases the level of standards: Art. 27 as regards patentability; Art. 28 rights; Art. 29 disclosure requirements; Art. 30 exceptions; Art. 31 authorized uses; Art. 33 requires a term of 20 years from filing date.

<sup>105</sup> WTO, *Implementation of para 6 of the Doha Declaration on the TRIPS Agreement and Public Health* (1 Sept. 2003) WT/L/540 (decision of the General Council of 30 Aug. 2003).

patented products and products made using patented processes in the pharmaceutical sector, including active ingredients and diagnostic kits. The WTO member governments agreed that the obligations under Article 31(f) were to be waived, at least until the Article is amended.

The second area of the Agreement currently under review in the TRIPS Council is Article 27.3(b). This provides a limited exception to the general rule that patents should be granted in all areas of technology in relation to plant and animal inventions. In particular, it provides that members may exclude from patentability plants and animals other than micro-organisms, and essentially biological processes for the production of plants or animals.<sup>106</sup> As part of the review process, a number of submissions have been made outlining the existing national patent protection for plants and animals, and also the plant variety protection. A number of countries have also made suggestions as to how Article 27.3(b) should be amended. These include discussions about whether patent applicants should be forced to disclose the origin of genetic materials and/or traditional knowledge used in the creation of their invention: the main debate here is the consequences of non-compliance.<sup>107</sup> At the same time, a group of African countries has argued that there should be a general ban on the patenting of any life forms (including animals, plants, and micro-organisms), and that farmers should have a general right to save seed. Given the divergence of views on the question of patenting life forms, it is not surprising that reform of Article 27.3(b) has progressed slowly. The slow progress can also be attributed to the fact that the review touches on a number of contentious issues, such as patent protection for indigenous knowledge, the relationship between intellectual property and the protection of biodiversity, and the way in which TRIPS and the CBD are to interact.<sup>108</sup> Given this, it is likely that the review of Article 27.3(b) may take some time.

The slow progress of the TRIPS review continued at the 5th WTO Ministerial Conference, which was held in Cancun (10–14 September 2003). While intellectual property issues were not at the forefront of the discussions, the meeting ended in a deadlock with the parties unable to reach agreement as to the next phase of the Doha negotiations. It is currently unclear how future negotiations will proceed. Given that developing countries have little to gain from the TRIPS review (with the possible exception of extending protection for geographical indications of origin), it seems that there is little impetus for them to break this stalemate. As a result we might expect to see a move away from multilateral treaties towards bilateral agreements (as is currently being favoured by the USA) in an attempt to extend the scope of patent protection beyond that permitted by TRIPS.

The only area where it seems that there might be some hope of change relates to compulsory licensing of patented medicines for export to developing countries. In late 2005, the WTO General Council decided that the 2003 Doha declaration should be permanently incorporated into the TRIPS Agreement.<sup>109</sup> To this end, a Protocol amending the TRIPS Agreement was

<sup>106</sup> TRIPS Art. 27.3(b) also requires members to provide for the protection of plant varieties either by patent, an effective *sui generis* system, or both.

<sup>107</sup> The EU has proposed that patent applicants disclose the origin of genetic material, with legal consequences outside the scope of patent law. Switzerland has proposed an amendment to WIPO's Patent Cooperation Treaty (and, by reference, WIPO's Patent Law Treaty) so that domestic laws ask patent applicants to disclose the origins of genetic resources and traditional knowledge. Failure to disclose could hold up a patent being granted, or affect its validity. In turn Brazil, Cuba, Ecuador, India, Peru, Thailand, and Venezuela want the TRIPS Agreement to be amended to make disclosure an obligation.

<sup>108</sup> The Doha Declaration says that in reviewing Art. 27.3(b) the TRIPS Council should look at the relationship between the TRIPS Agreement and the CBD; and the protection of traditional knowledge and folklore.

<sup>109</sup> General Council, 'Amendment of the TRIPS Agreement: Decision of 6 Dec 2005' (8 Dec 2005) Doc No WT/L/641.

produced which proposes that TRIPS be amended to include a new Article 31*bis* and a new Annex. The proposed amendments are very similar to the text of the 2003 Doha declaration. Under the proposed new changes, member countries will be able to grant compulsory licences to allow the manufacture and export of pharmaceuticals for public health reasons. This will be permitted where the importing country is a developing country which lacks the capacity to produce the relevant pharmaceuticals (the proposed new Annex sets out the criteria to be used to determine whether a country lacks capacity). Importing countries have an obligation to take reasonable measures to prevent re-exportation.

The proposed changes will only come into effect when two-thirds of the WTO membership accepts the amendment. As of January 2008, only 14 of the 151 member states have done so. This includes the EU,<sup>110</sup> the United States, Australia, Switzerland, China, and India. After one deadline was missed, the period for acceptance of the Protocol has been extended until 31 December 2009.<sup>111</sup> While it may be some time before the Doha declaration is formally embodied in the TRIPS Agreement, this has not stopped countries from using the provisions. The first and (as of January 2008) only notification of a compulsory licence being granted to allow a company to make a generic version of a patented medicine for export was made by Canada on 4 October 2007. The licence allows the Canadian company to manufacture the AIDS therapy drug TriAvir and export it to Rwanda.

#### 4.6.3 The Convention on Biological Diversity (CBD)

The Convention on Biological Diversity (CBD) was signed in June 1992.<sup>112</sup> While the Convention was not directly concerned with patent standards, it heralds a new approach to the way biological resources are treated. The Convention provided developing countries with an opportunity to voice their unhappiness at the exploitation of indigenous resources by firms from the developed world. Of late, there have been numerous examples of situations where this has occurred: the neem tree traditionally used in India to make medicines and insecticides has been the subject of 37 patents in Europe and the USA;<sup>113</sup> there have been applications relating to the use of turmeric for treating wounds,<sup>114</sup> and inventions based on genetic material obtained from the Hagahai people, a small group in Papua New Guinea, have been patented. The Convention on Biological Diversity offers a potential basis to control the uses made of traditional knowledge. The preamble recognizes the close and traditional dependence of many indigenous and local communities embodying traditional lifestyles on biological resources. It also recognizes the desirability of sharing equitably the benefits arising from the use of traditional knowledge, innovations, and practices relevant to the conservation of biological diversity and the sustainable use of its components.

While the Convention may not have an immediate impact on patent law, it does represent a change of attitude towards the way natural resources are exploited which may impact upon the way patents are viewed. In particular it may help to undermine the pro-patent attitudes

<sup>114</sup> (26 Oct. 1996) *New Scientist*, 14.

that have dominated for the last forty or so years. The impetus provided by the Convention on Biological Diversity to reconsider the aims and functions of the patent system has been reinforced by the growing body of literature that questions the often taken-for-granted assumption that technological development is both desirable and neutral. In so doing, commentators have emphasized the adverse physical and psychological effects of technology on individuals, their relations with society (alienation), and the planet in general (environmental problems). Technology is also seen as having vastly altered the nature of political government and reduced individual autonomy (computer databases, surveillance devices). Some authors have called for the democratic control of technology, in particular arguing that some research and development should be prohibited (note, for example, the debate over the patenting of higher life-forms).

In recent years, the CBD has begun to impact upon patent law in a variety of ways, the most notable being the possibility of making 'prior informed consent' a condition of patentability. Debates about this and related issues have become intertwined with the ongoing review of the TRIPS Agreement being conducted by the TRIPS Council and with WIPO's discussions about the protection of indigenous knowledge.<sup>115</sup> We look at these issues in more detail below.

#### 4.6.4 WIPO Patent Law Treaty

In the last decade or so, the World Intellectual Property Organization (WIPO) has been engaged in an ongoing programme of reform of international patent law. The first concrete outcome from this process was the Patent Law Treaty (PLT) which was completed in June 2000.<sup>116</sup> The PLT, which opened for signature on 2 June 2000, entered into force on 28 April 2005.<sup>117</sup> In essence the PLT is an international treaty that aims to simplify and streamline procedures for obtaining and maintaining a patent. It also aims to harmonize patent procedures relating to national and regional patent applications and the maintenance of patents.<sup>118</sup>

The PLT promises to reduce the cost of patent protection (as a result of changes such as national patent offices sharing the results of search and examination procedures) and to make the process more user-friendly and more widely accessible. The specific changes include: the use of standardized forms and simplified procedures that reduce the risk of error; cost reductions for inventors, applicants, and patent attorneys; elimination of cumbersome and complicated procedures; improved efficiency of patent offices and lower operating costs; possibility of introducing electronic filing of patent applications and related communications; standardization of patent formalities in all countries party to the PLT (including the incorporation of provisions under the Patent Cooperation Treaty); exceptions from mandatory representation; and the possibility of obtaining a filing date, even if the main part of the application (description) is filed in a foreign language.<sup>119</sup> Under the PLT, the requirements and procedures for national and regional patent applications, and those for Patent Cooperation Treaty international applications, will be harmonized. This will eventually lead to standardized formal requirements and streamlined procedures for all patent applications at both national and regional patent offices.<sup>120</sup>

<sup>115</sup> See above at pp. 388–90.

<sup>116</sup> WIPO, Patent Law Treaty (2 Jun. 2000) PT/DC/47.

<sup>117</sup> There were 107 signatories to the Final Act of the Diplomatic Conference (including the UK and the EPO) on 2 June 2000. The Treaty had been ratified by 17 countries as of 1 January 2008. The UK ratified the Treaty on 22 March 2006.

<sup>118</sup> For criticisms see R. Dreyfus and J. Reichman, 'Harmonizing Without Consensus: Critical Reflections on Drafting a Substantive Patent Law Treaty' (2007) 57 *Duke Law Journal* 85.

<sup>119</sup> WIPO Press Release PR/2000/222; WIPO, Patent Law Treaty (2 Jun. 2000) PT/DC/47.

<sup>120</sup> Consultation on proposed reforms to bring UK legislation into line with the WIPO Patent Law Treaty ended on 30 May 2003.

#### 4.6.5 Global harmonization of substantive patent law

The next stage in WIPO reform of global patent law began in November 2000, when WIPO launched discussions on the harmonization of the substantive requirements of patent law.<sup>121</sup> These discussions go beyond the Patent Law Treaty of June 2000, which focused on the task of harmonizing the processes by which patents are granted, to consider substantive issues. It is hoped that by standardizing the rules on patentability this will mean that as applicants will not have to prepare totally different patent documents for different patent offices, the costs of patenting will decrease. It is also hoped that it will increase predictability about patentability of inventions.

Although the Patent Cooperation Treaty (PCT) contains some principles of substantive patent law, these are only taken into account at the international phase when an application is submitted under the PCT. PCT contracting states are free to apply any substantive conditions of patentability during the national phase of an international application. Importantly, it is at this stage that the national authorities make the important decision as to whether a patent should be granted. At present there are six basic legal principles under consideration by the Standing Committee on the Law of Patents. These are definitions of prior art, novelty, inventive step (non-obviousness), industrial applicability (utility), sufficiency of disclosure, and the structure and interpretation of claims. It is planned that a future meeting will consider 'first-to-file' versus 'first-to-invent', post-grant opposition, and time limits upon the publication of applications.<sup>122</sup>

<sup>121</sup> WIPO Standing Committee on the Law of Patents, 'Suggestions for the further development of international patent law' (25 Sept. 2000) SCP/4/2. Negotiators attended a meeting of the Standing Committee on the Law of Patents (SCP), which met 6–10 Nov. 2000. For the background see R. Petersen, 'Harmonization: a Way Forward' (1987) 16 *CIPAJ* 234; R. Petersen, 'Harmonization—or Backward' (1987) 17 *CIPAJ* 66; R. Petersen, 'Harmonization: Postponement' (1989) 18 *CIPAJ* 118, 293; R. Petersen, 'On to Harmonization' (1990) 19 *CIPAJ* 147; R. Petersen, 'Harmonization Again' (1990) 19 *CIPAJ* 356; J. Pagenberg, 'WIPO: Diplomatic Conference in the Hague on Harmonization of Patent Law' (1991) 22 *IIC* 682.

## THE NATURE OF A PATENT

### CHAPTER CONTENTS

1	Introduction	358	3	Drafting of Patents	359
2	Types of Patent	358	4	Contents of a Patent	360

### 1 INTRODUCTION

Patents have changed dramatically since they were first granted in England and Wales over four centuries ago. Initially, patents were crude documents, often only one or two sentences long. Since then, patents have become much more sophisticated, complex, and lengthy. As we will see in the next chapter, the process by which a patent is granted has also changed dramatically. A lot of care and attention has been given to the form and content of the patent. If there is a kind of symmetry or logic to the patent system, the content of the patent is the key to that process. As such, to understand many facets of patent law, it is important to have a good grasp of the nature and content of the patent. This chapter is intended to provide an introduction to the nature of the patent. In so doing we look at the different ways patents are described, the way patents are drafted, and the contents of a patent. To help get a sense of the nature of a patent, a patent for a relatively simple piece of technology is reproduced at the Online Resource Centre, <<http://www.oxfordtextbooks.co.uk/bentlysherman3e>>.

### 2 TYPES OF PATENT

Patents are described in a number of different ways in the United Kingdom. Most commonly, a patent is seen as a legal document that confers a 20-year monopoly on the patentee. Patents are also characterized in terms of the organization that grants them. As we saw earlier, the patents that operate in the United Kingdom are granted by two authorities: the UK Intellectual Property Office and the European Patent Office. The patents that operate in the United Kingdom are known either as British patents or European patents (UK). British patents are issued by the Intellectual Property Office and are subject to British law. European patents are issued by the EPO in Munich; a European patent (UK) is a patent issued by the European Patent Office which applies in the United Kingdom. Prior to the introduction of the EPC 2000,

© L. Bently and B. Sherman 2009

applicants had to designate the member states in which they wanted the patent to operate. In contrast, the EPC 2000 provides that all EPC states will be deemed to be designated as the country where the patent will operate at the date of filing.<sup>1</sup> While there are a number of differences between the two systems, once a European patent (UK) has been granted, it is treated as if it had been granted by the UK Intellectual Property Office.<sup>2</sup>

Another way of classifying patents is in terms of the subject matter that they protect. In some instances, patents are described by reference to the industry or branch of science to which the patented invention relates. So, for example, it is common to speak of chemical patents or biotechnology patents. In other cases, patents are classified according to the nature of the interest that is protected; whether it is a product patent, a process patent, or a product-by-process patent. These are looked at below.

### 3 DRAFTING OF PATENTS

The drafting of patents, which is normally undertaken by patent agents, is an important part of the patent process. It is also a complex and difficult task. In part, these difficulties can be attributed to the nature of the subject matter that is protected by patent law and to the fact that it is sometimes very difficult to explain particular forms of technology in the form demanded by patent law. In certain instances, notably in relation to biological inventions, patent law has been forced to develop specific rules and procedures to enable them to meet the requirements for patentability.

Another reason why patent drafting is often such a difficult process is that patents are at once technical, commercial, and legal documents. As such, they are written with a number of different purposes in mind. As we saw earlier, one of the rationales for the grant of patents is that they encourage the dissemination of technical and scientific information. In the hypothetical patent bargain which sees patents as if they were a contract between inventors and the state, the information contained in the application is treated as the 'consideration' for the grant of the monopoly.<sup>3</sup> As well as encouraging inventors to disclose information that might otherwise remain secret, the patent system also attempts to ensure that the information which is made public is recorded in a format that is usable. To this end, a series of detailed rules and procedures regulate the way the patents are drafted.<sup>4</sup> To take one example, patent law stipulates that the patent specification ought to disclose the invention in a manner which is clear enough and complete enough for the invention to be performed by a person skilled in the art.<sup>5</sup>

While the patent system encourages inventors to disclose their technical creations, it would be incorrect to conclude from this that patentees necessarily draft their patents according to the rules and procedures set down by the law. In some cases inventors may take out a patent, but attempt to manipulate the information in the patent application in a way which suits their

<sup>1</sup> EPC 2000 Art. 79(1) provides that all EPC states will be deemed to be designated as the country where the patent will operate at the date of filing (in contrast to Art. 79 EPC 1973, which required applicants to designate the states in which they wished the patent to operate).

<sup>2</sup> PA ss. 77–78; EPC 2000 Art. 64.

<sup>3</sup> 'This is the price which the inventor pays in return for his twenty-year monopoly'. *Mentor v. Hollister* [1993] *RPC* 7, 9. See also *Grant v. Raymond*, 31 *US* (6 *Pet*) 218, 247 (1832).

<sup>4</sup> For example PA r. 14–15, Parts 1–4 of Schedule 2; EPC 2000 r. 47.

<sup>5</sup> PA s. 14(3), r. 12(4); EPC 2000 Art. 83, r. 42. See below at Ch. 20, Sections 1 and 2.

own purposes. For example, as well as disclosing the invention applicants may draft their patent in such a way as to attract sponsorship, or to advertise the existence of their patent.<sup>6</sup>

Given that the information contained in a patent application may be used by an applicant's competitors, it is understandable that applicants may be tempted to provide only the minimum amount of information that is necessary for them to obtain a patent. While patentees may not be able to obscure their inventions in the way they once were, applicants are only required to disclose such details of the invention as to enable a person skilled in the art to make the invention. As a result, a patent might not reveal important features about the invention such as the cheapest or strongest starting materials.<sup>7</sup> This 'know-how' may provide the patentee with a strategic advantage over competitors that may be important when an invention is made available to the public. Ultimately, the degree to which applicants are able to draft patents for their own purposes depends upon how stringently the patent offices and the courts enforce the disclosure requirements.

Another factor that adds to the complexity of the drafting process relates to what has been called the infringement–validity dichotomy (or, as it is also known, the *Gillette* defence). As the scope of the monopoly is determined by what is claimed in the patent, the applicants may be tempted to claim more than they perhaps ought. At the same time, however, applicants need to be mindful of the fact that, if they draft claims too broadly, this increases the chance of the patent being declared invalid (primarily for lack of novelty). As matters of infringement and validity are heard in the same tribunal, the infringement–validity dichotomy helps to ensure that the scope of the patent monopoly corresponds to what was actually invented.

## 4 CONTENTS OF A PATENT

Patents in Britain and the EPO are made up of four key parts:

- (i) an abstract,<sup>8</sup>
- (ii) a description of the invention,<sup>9</sup>
- (iii) one or more claims,<sup>10</sup> and
- (iv) any drawings referred to in the description or claims.<sup>11</sup>

Before looking at these in more detail, it is important to bear in mind a number of preliminary issues.

The various components of a patent perform a number of different roles. Some of these, such as the abstract, are used both for administrative purposes and as a way of advertising the existence of the patented invention. The description and claims, which form the core of the patent,

<sup>6</sup> In *Cartonneries de Thulin v. CTP White Knight* [2001] RPC 107, 116 Robert Walker LJ said patent attorneys in different industrial countries adopt perceptibly different approaches to drafting patent specifications: German (and other continental) draftsmen tend to a 'central' style which concentrates on the 'centre of gravity' of an invention: British (and still more, American) draftsmen tend to a 'peripheral' style which seeks to delimit the boundaries of an invention.

<sup>7</sup> Although there is no requirement of good faith, note PA ss. 62(3) and 63(2).

<sup>8</sup> PA s. 14(2)(c), PA r. 15; EPC 2000 Art. 78(1)(e), EPC 2000 r. 47.

<sup>9</sup> PA s. 14(2)(b), PA r. 12(4)(a), Parts 1–4 of Schedule 2; EPC 2000 Art. 78(1)(b), EPC 2000 r. 42.

<sup>10</sup> PA s. 14(2)(b) and PA r. 12; EPC 2000 Art. 78(1)(c), EPC 2000 r. 43.

<sup>11</sup> PA s. 14(2)(b), PA r. 12; EPC 2000 Art. 78(1)(d), EPC r. 46. Patent applications must also contain a request for the grant of a patent and designate the inventor.

respectively disclose the invention in a usable form and demarcate the scope of the monopoly. It is also important to note that the contents of a patent application differ somewhat from the patent itself. While the patent and the application for a patent both contain a description and claims, the main difference is that the patent application contains additional information—the request for grant. The request for grant, which is used for administrative purposes, normally includes the title of the invention (which clearly and concisely states the technical designation of the invention), as well as relevant biographical details of the applicants and patent agents (if used). As it is permissible to amend the patent application during and after the grant process, the final form that a patent takes may differ from the initial application. This process of amendment is examined in more detail later.<sup>12</sup>

While UK and European patents are very similar,<sup>13</sup> there are some differences that ought to be borne in mind. One of these relates to the language that is used to describe the components of the patent. More specifically, it relates to the fact that, while the core of a British patent is known as the ‘specification’ (which comprises a description of the invention, the claims, and any drawings referred to in the description or claims), the EPC and the PCT speak of the contents of a ‘patent application’ rather than of the specification.<sup>14</sup> Another difference between UK and European patents relates to the controls that are exercised over the form and content of the patent. While similar, in that both have to meet the statutory requirements for patentability, the rules of the EPC (but not the United Kingdom) provide detailed guidance as to the precise form that a patent should take. This is particularly the case in relation to the description and claims. With these initial points in mind, we can now turn to look at the contents of a patent in more detail.

#### 4.1 THE ABSTRACT

The first element of a UK and EPO patent is the abstract.<sup>15</sup> This is a brief summary (usually around 150 words) of the more important technical features of the invention. Normally, an abstract contains the title of the invention, a concise summary of the matter contained in the specification, and an indication of the technical field to which the invention belongs. The relevant rules also provide that the abstract should outline the technical problem which the invention attempts to resolve, the gist of the solution to that problem, and the principal use or uses of the invention.<sup>16</sup>

Patent abstracts perform two main tasks. First, they are used by the patent offices as a search tool in the examination of other patent applications. To this end, the patent rules stipulate that abstracts ought to be drafted in such a way that they constitute an efficient instrument for searching in the particular technical field.<sup>17</sup> Abstracts, which are normally published around eighteen months after the application was filed, also alert third parties to the existence of the application. To ensure that abstracts are only used for these purposes, the Patents Act 1977

<sup>12</sup> See below at p. 385, Ch. 16 Section 5, Ch. 20 Section 4.

<sup>13</sup> European patents which designate the UK are treated as UK patents. PA s. 77.

<sup>14</sup> PA s. 14. See *Genentech’s Patent* [1989] *RPC* 147, 197–9, 236–7, 261. A. White, ‘The Function and Structure of Patent Claims’ [1993] *EIPR* 243.

<sup>15</sup> PA s. 14(2)(c), PA r. 15; EPC 2000 Art. 78(1)(e), EPC 2000 r. 47.

<sup>16</sup> PA r. 15(3); EPC 2000 r. 47(2) (abstract may be amended by the Comptroller).

<sup>17</sup> EPC 2000 r. 47(5) requires that the abstract be drafted in such a way that it constitutes an efficient instrument for purposes of searching in the particular technical field, in particular by making it possible to assess whether there is a need to consult the specification (or patent application) itself.

and the EPC 2000 stipulate that the abstract can only be relied upon to provide ‘technical information’.<sup>18</sup> One of the consequences of this is that, for patent law purposes, the abstract does not form part of the state of the art.<sup>19</sup> This avoids the potential problem of the abstract anticipating the patent and in so doing rendering it invalid for lack of novelty. The fact that the abstract is only used for ‘technical’ purposes also means that it cannot be used to influence the scope of the monopoly.<sup>20</sup>

## 4.2 THE DESCRIPTION

The next element of a patent is the description.<sup>21</sup> As with the abstract, the description plays an important role in ensuring that the information function of the patent system is performed. In many ways, descriptions are similar to scientific or technical papers: they explain what has been created, the problems that the invention solves, why it is important, and how the invention differs from what has been created before.<sup>22</sup>

In most cases, a description will begin with an account of the background to the invention.<sup>23</sup> In so doing, the description will summarize the prior art, usually referring to existing patents and other published documents. This information is used to understand the nature of the invention, for carrying out the search report, and for the purposes of examination.<sup>24</sup> Typically, a description will then disclose the invention as claimed.<sup>25</sup> This is usually done by outlining the technical problem that the invention attempts to solve and the solutions that it offers (which are often couched in terms of the advantages that the invention offers over the ‘background art’).<sup>26</sup> Following a brief introduction to any drawings that are used,<sup>27</sup> the description will normally provide a detailed account of how the invention is carried out.<sup>28</sup>

To ensure that the invention is disclosed in such a way that it is of practical use to people in the art, patent law imposes a number of constraints upon the way inventions are disclosed. At a general level, the application ought to describe the invention in a manner that is clear and complete enough for it to be performed by a person skilled in the art.<sup>29</sup> The description must

<sup>18</sup> PA s. 14(7); EPC 2000 Art. 85.

<sup>19</sup> This is explicit in EPC 2000 Art. 85 and implicit in PA s. 14(7).

<sup>20</sup> *Bull/Identification system*, T246/86 [1989] OJ EPO 199. (The TBA refused to allow an applicant to use an abstract which suggested that the apparatus was a credit card as a way of expanding the preliminary description and claims, which had not suggested that the apparatus could include a portable object.)

<sup>21</sup> PA s. 14(2)(b), PA r. 12(4)(a), Parts 1–4 of Schedule 2; EPC 2000 Art. 78(1)(b), EPC 2000 r 42, r. 49 Unlike the EPC, which provides detailed guidance as to the contents of the description, the Patents Act 1977 and the rules are silent as to the form that the description in a UK application ought to take.

<sup>22</sup> On the specification see R. Merges and R. Nelson, ‘On the Complex Economics of Patent Scope’ (1990) 90 *Columbia Law Review* 839, 844; G. Myers, ‘From Discovery to Invention: The Writing and Re-writing of Two Patents’ (1995) 25 *Social Studies of Science* 57.

<sup>23</sup> EPC 2000 r. 42(1)(b); *EPO Guidelines C–II*, 4.3–4.4. See *Sony/Television receivers*, T654/92 [2000] EPOR 148 (on the meaning of ‘background art’).

<sup>24</sup> EPC 2000 r. 42(1)(b). <sup>25</sup> EPC 2000 r. 42(1)(c); *EPO Guidelines C–II*, 4.5–4.6.

<sup>26</sup> EPC 2000 r. 42(1)(c). For criticisms of EPC 1973 r. 27 (which is similar to EPC 2000 r 42(1)(c)) on the basis that it is ambiguous and uncertain see H. Ullrich, *Standards of Patentability for European Inventions: Should an Inventive Step Advance the Art?* (1977), 113.

<sup>27</sup> EPC 2000 r. 42(1)(d); *EPO Guidelines C–II*, 4.7.

<sup>28</sup> The patent should include a specific description of at least one detailed embodiment, often referred to as the preferred embodiments. Occasionally, this will be unnecessary: see *Toshiba/Semiconductor device*, T407/87 [1989] EPOR 470. EPC 2000 r.42(1)(f) adds that, where necessary, the applicant should state the way in which the invention is capable of industrial exploitation. *EPO Guidelines C–II*, 41.2.

<sup>29</sup> PA s. 14(3); EPC 2000 Art 83.

also support the claims.<sup>30</sup> If the patent fails to meet these criteria, it may later be declared invalid. These issues are dealt with in more detail later.<sup>31</sup>

#### 4.2.1 Description of biological materials

One of the rationales for the inclusion of the description in a patent application is that it ensures that the public is able to access and make use of the invention that is disclosed in the application. This is based on the presupposition that it is possible to describe the invention, whether using words, figures, or diagrams, in such a way that third parties will be able to understand and make use of it. While this assumption holds true in relation to most technologies, it is not necessarily the case in relation to biological inventions. The reason for this is that, where an invention depends on the use of living materials such as micro-organisms or cultured cells, it may be impossible to describe the invention so that the public is able to make the invention.<sup>32</sup>

The EPC 2000<sup>33</sup> and the Patents Act 1977<sup>34</sup> attempt to address this problem by providing that, if an invention involves biological material which cannot be described in a way that enables the invention to be carried out by a person skilled in the art, the applicant must deposit a sample of this biological material at a 'recognized institution' (or depositary).<sup>35</sup> These issues were also addressed in the Biotechnology Directive.<sup>36</sup> The application must contain such relevant information as is available on the characteristics of the biological material.<sup>37</sup> In depositing a sample, the applicant is treated as consenting to the depositary making the sample available after publication of the application.<sup>38</sup> An applicant may require that, until the application has either been abandoned or patented, the deposit should only be released to experts who are only allowed to use the culture for experimental purposes.<sup>39</sup> Special rules also exist in relation to patent applications relating to nucleotide and amino acid sequences.<sup>40</sup>

### 4.3 THE CLAIMS

The next element of a patent is the claims.<sup>41</sup> While the purpose of the description is to ensure that the invention disclosed in the patent is of some practical use, the primary function of

<sup>30</sup> PA s. 14(5)(c); EPC 2000 Art. 84. <sup>31</sup> See below at Ch. 20 Sections 1 and 2.

<sup>32</sup> In *American Cyanamid (Dann)'s Patent* [1971] *RPC* 425 the House of Lords held that there was no obligation on a patentee under the Patents Act 1949 to supply the micro-organism to the public. See generally, B. Hampar, 'Patenting of Recombinant DNA Technology: The Deposit Requirement' (1985) 67 *JPTOS* 569; V. Meyer, 'Problems and Issues in Depositing Micro-organisms for Patent Purposes' (1983) 65 *JPTOS* 455.

<sup>33</sup> EPC 2000 r. 31.

<sup>34</sup> PA s. 125A (introduced by CDPA, Sched. 5 para. 30).

<sup>35</sup> Recognized depositary institutions include all international depositaries under the 1977 Treaty on the International Recognition of the Deposit of Micro-organisms (the Budapest Treaty) (modified 1980). This established minimum requirements for maintaining an international depositary for micro-organisms (UK joined 29 Dec. 1988). In January 2008, there were 68 member states with 37 International Depositary Authorities.

<sup>36</sup> Biotech. Directive Arts. 13–14; implemented in the UK by Patents (Amendment) Rules 2001, SI 2001/1412 (as of 6 July 2001).

<sup>37</sup> EPC 2000 r. 31(1)(b); PA s. 125A, PA r. 13 (1), Schedule 1 (2007 Patent Act Rules).

<sup>38</sup> EPC 2000 r. 31; PA r. 13 (1), Schedule 1 (2007 Patent Act Rules).

<sup>39</sup> EPC 2000 r. 32; PA r. 13 (1), Schedule 1, para 6–7 (2007 Patent Act Rules).

<sup>40</sup> EPC 2000 r. 30. See also 'Decision of the President of the EPO 2 Oct. 1998 concerning the presentation of nucleotide and amino acid sequences in patent applications and the filing of sequence listings' (1998) 11 *OJ EPO Supp. No. 2* 1. PA r. 13.

<sup>41</sup> PA s. 14(2)(b), PA r. 12; EPC 2000 Art. 78 (1)(c), EPC r. 43. The requirement for a claim was first introduced in the UK by the Patents, Designs and Trade Marks Act 1883 s. 5(5). However, the practice of including claims had been common from at least the 1830s. Claims are central to the operation of the European patent

the claims is to set out the scope of the legal protection conferred by the patent.<sup>42</sup> As such the claims play a key role in patent law.

Typically, a patent will consist of a number of claims that are arranged hierarchically.<sup>43</sup> Such patents will commence with a widely drawn 'principal' or 'generic' claim that defines the invention by setting out its distinctive technical features. General claims of this sort are often followed by a series of narrower dependent or subsidiary claims (which may refer back to earlier claims).<sup>44</sup> For example, the primary claim may be for a product (such as a contact lens) having a particular character (such as being made up of recycled plastic), whereas the dependent claims may limit the principal claim to certain quantitative parameters (such as minimum or maximum length).

One of the reasons why claims are arranged hierarchically is that this provides patentees with the flexibility to respond to any legal challenges which are made to the patent.<sup>45</sup> More specifically, if claims are arranged hierarchically, a challenge to the patent might lead only to the principal or broadest claim being severed, leaving behind the more narrowly drafted claims.<sup>46</sup> Confident in the knowledge that the validity of narrower claims are not dependent on the validity of the more general claims, patentees are able to draft claims more generously than they would otherwise be able to do. The rules under the EPC 2000 require that, where appropriate, claims ought to be in two parts.<sup>47</sup> The first, which is called the 'preamble', sets out the technical features of the invention which are necessary for the definition of the claimed subject matter, but which are already part of the prior art. This is followed by a 'characterizing portion' that sets out the novel technical features that the applicant wishes to protect.<sup>48</sup> The so-called characterizing portion of the claim is neither required nor forbidden in the United Kingdom.<sup>49</sup> In British patents, the final claim will often be an omnibus claim, that is a claim that largely mimics the way the invention is set out in the descriptions or the drawings.<sup>50</sup> While permissible in the United Kingdom, omnibus claims are generally not permitted in EPO applications.<sup>51</sup>

A notable feature of most patent claims is that they are difficult to understand, at least to the non-expert reader. This not surprising, given that patents are not written for the general

system: *Mobil/Friction-reducing additive*, G2/88 [1990] OJ EPO 93, 99; J. Kemp (ed.), *Patent Claim Drafting and Interpretation* (1983). On the history see *British United Shoe Machinery v. Fussell* (1908) 23 RPC 631, 650.

<sup>42</sup> PA s. 14(5); EPC 2000 Art. 84. Given that the claims define the scope of protection, the way the claims are interpreted is very important. See below at Ch. 22 Section 3. For an interesting examination of the typical nature of the claims (and how they might differ from the abstract) see *R (on the application of Knight) v. Comptroller-General of Patents, Trade Marks and Designs* [2007] All ER (D) 125.

<sup>43</sup> The number has to be reasonable having regard to the nature of the invention claimed. EPC 2000 r. 43(5). In *Oxy/Gel forming composition*, T246/91 [1995] EPOR 526, a patent with 157 claims violated EPC 1973 Art. 84 and EPC 1973 r. 29(5): 'patents should not be allowed to erect a legal maze or smokescreen in front of potential users of the inventions to which they lay claim'.

<sup>44</sup> *Hallen v. Brabantia* [1990] FSR 134, 140–1.

<sup>45</sup> Myers, 'From Discovery to Invention', 82.

<sup>46</sup> See *Van der Lely v. Bamfords* [1964] RPC 54, 73, 76 (CA); *Chiron v. Organon (No. 7)* [1994] FSR 458, 460–6.

<sup>47</sup> This provision, apparently put in to appease British interests, enables UK patents to be drafted according to the traditional British approach.

<sup>48</sup> EPC 2000 r. 43(1)(b), *EPO Guidelines C–III: 2*. In the USA there are three parts: the preamble, transition, and body. See R. Merges, *Patent Law and Policy* (1992), 12.

<sup>49</sup> CIPA, para. 14.22.

<sup>50</sup> *Raleigh Cycle v. Miller* (1948) 65 RPC 141; *Surface Silo v. Beal* [1960] RPC 154; *Deere v. Harrison McGregor & Guest* [1965] RPC 461.

<sup>51</sup> See CIPA, para. 14.26. *Bayer/Polyamide moulding composition*, T150/82 [1981] OJ EPO 431. In *Philips Electronics' Patent* [1987] RPC 244, the patentee was permitted to add an omnibus claim to a European patent (UK) on the grounds that it did not extend the scope of protection.

reader, but for the relevant person skilled in the art. As well as being written for specialists, the drafting and reading of claims builds upon well-established and sophisticated techniques and procedures that make them difficult for the uninitiated to understand. Another reason why the claims may be difficult to understand is that they often use expressions not ordinarily employed in everyday speech. For example, while most people commonly talk about ‘mice’, a claim may refer to ‘non-human mammals’. Similarly a door handle may be called a ‘rotatable actuating means’<sup>52</sup> and a train’s sleeping car known as ‘a communal vehicle for the dormitory accommodation of nocturnal viators’.<sup>53</sup> Moreover, while in other contexts the rules of grammar are used to make the language we use easier to understand, this is not so with patents, where claims are often made up of single lengthy, repetitive sentences.<sup>54</sup> Indeed, in one case an attempt to divide claims up into separate (shorter) phrases was considered to be ambiguous in scope.<sup>55</sup> One problem that has arisen is the number of claims incorporated in a patent. As part of their drafting strategy, some applications include a very large number of claims. To prevent this, the EPO has announced that from 1 April 2009, the fees charged will increase to €200 where a patent includes more than 15 claims and €500 where it includes more than 50 claims.<sup>56</sup>

#### 4.3.1 Types of claim

Given that claims operate to demarcate and define the patented invention, they will always vary from case to case. Having said that, claims are usually grouped together on the basis either of the subject matter that is protected or the way the claims are formulated. While there are many different types of claim, such as Swiss claims, Markush claims, and novelty-of-use claims, in this section we wish to focus on some of the more common types.

(i) *Product claims.* Product claims, which were the first type of patent to be recognized by British law, provide protection over physical entities or things (such as products, apparatuses, devices, and substances). Such a patent could be, for example, for a new type of contact lens or, as a patent agent might say, ‘a new type of optical membrane being made up of at least one polymer and at least one solvent’.<sup>57</sup> Product claims or, as they are also known, claims for a product *per se*, confer protection over all uses of that product, no matter how the product was derived.<sup>58</sup> As we will see, this has been the subject of some controversy, particularly in relation to claims for gene patents.

<sup>52</sup> *Southco v. Dzus Fastener Europe* [1992] RPC 299.

<sup>53</sup> *Hookless Fastener v. GE Prentice* (CCA 2d, 1934) 68 F (2d) 940, 941. See also W. Woodward, ‘Definiteness and Particularity in Patent Claims’ (1948) 46 *Michigan LR* 755.

<sup>54</sup> ‘The repetitiveness of the claims and the lack of any indication of the strategic links between them, is part of what makes them so hard for a non-lawyer to read’. Myers, ‘From Discovery to Invention’, 75. The technique of drafting claims in this way can have important implications for their interpretation: see *Glaverbel SA v. British Coal* [1995] RPC 255, 281.

<sup>55</sup> *Leonard’s Application* [1966] RPC 269.

<sup>56</sup> EPO Decision CA/D 15/07. See also CA/D 16/07 (which increases fees, notably renewal fees, from 1 April 2008).

<sup>57</sup> *Advanced Semiconductor Products/Limiting feature*, T384/91 [1995] EPOR 97 [1994] OJ EPO 169.

<sup>58</sup> See *Mobil/Friction reducing additive*, note 41 above; *Telectronics/Pacer*, T82/93 [1996] EPOR 409; [1996] OJ EPO 274, 285. In *Moog/Change of category*, T378/86 [1988] OJ EPO 386 the EPO explained: ‘[The] division of patents into various categories (process or product) is legally important because the extent of protection depends to a crucial extent on the category selected, specific types of use being allocated to each category which in some cases differ substantially from each other. The difference in effect on the right conferred by a patent is the reason why it is at all justifiable to classify patents in categories’.

(ii) *Process claims*. In contrast process claims, which were recognized by patent law in the early part of the nineteenth century, protect activities or actions (such as methods, processes, or uses).<sup>59</sup> Such a patent would claim, for example, the particular method by which a contact lens is made (or, ‘the method of making an optical membrane from a solution comprising at least one polymer and at least one solvent’).<sup>60</sup> Sometimes a claim for a product *per se* will not be available because the product is already known in the field, and a claim for the process or use is therefore all that is possible.

(iii) *Product-by-process claims*. Beyond these two broad categories of claim, there is a range of hybrids.<sup>61</sup> A well-known example is the ‘product-by-process’ claim.<sup>62</sup> To continue with the example used above, a product-by-process patent might claim ‘a contact lens made by a particular method’. Where a product already exists but a new process is devised for producing that product, it might be desirable to claim for both the process and the product produced by the process. It is important to bear in mind the Court of Appeal’s reminder that ‘it is not right to lump all claims which contain a process feature into a category called product-by-process claims... a patentee can define the monopoly claimed so as to disclaim products made by a particular process or only disclaim products which do not have the features of products made by a particular process. The two types of claims can be loosely called product-by-process claims, but to do so is likely to hide the differences between the two’.<sup>63</sup>

For many years product-by-process claims were viewed differently in the United Kingdom and at the EPO. As a result of the House of Lords’ 2005 decision in *Kirin-Amgen*, however, the approach in the UK is now the same as at the EPO.<sup>64</sup> The Technical Board of Appeal at the EPO has consistently said that product-by-process claims are not recognized at the EPO, except where the ‘product cannot be satisfactorily defined by reference to its composition, structure or other testable parameter’.<sup>65</sup> That is, product-by-process claims are only acceptable as ‘a manner of claiming structurally indefinable product claims’ or where a product cannot be satisfactorily defined by its features. In contrast, prior to *Kirin-Amgen*, British courts had expressly rejected the position at the EPO and said that, other than the general criteria for patentability, there were no limits either in the Patents Act 1977 or in the EPC as to how the monopoly is defined.<sup>66</sup> As such, there were no additional limits on when product-by-process claims were allowed in the United Kingdom.<sup>67</sup> Recognizing the need for consistency between

<sup>59</sup> *Crane v. Price* (1842) 134 ER 239. See Sherman and Bently, 108.

<sup>60</sup> *Advanced Semiconductor Products/Limiting Feature*, T-384/91 [1995] EPOR 97; [1994] OJ EPO 169.

<sup>61</sup> ‘There are no rigid lines of demarcation between the various possible forms of claim’. *Mobil/Friction reducing additive*, note 41 above, 98–9. *IBM/Computer-related claims*, T410/96 [1999] EPOR 318.

<sup>62</sup> *Ethylene Polymers/Montedison* T93/83 [1987] EPOR 144; *Eli Lilly/Antibiotic*, T161/86 [1987] EPOR 366.

<sup>63</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 3, para. 27 (Aldous LJ) (CA).

<sup>64</sup> *Kirin-Amgen Inc v. Hoechst Marion Roussel* [2005] RPC 9 (HL), para 101.

<sup>65</sup> *IFF/Claim categories*, T150/82 [1984] OJ EPO 309, para. 10–11. This decision was made in the knowledge of the different approach in the UK (para. 11).

<sup>66</sup> *Kirin-Amgen v. Transkaryotic Therapies*, [2003] RPC 3, paras. 29–31 (Aldous LJ) (CA); upholding the finding of the Patents Court on this point in *Kirin-Amgen v. Roche Diagnostics* [2002] RPC 1, para. 296 (‘as a matter of ordinary language, I find it impossible to construe a product-by-process claim... in an absolute sense as the Board apparently felt able to do in T219/83’).

<sup>67</sup> In essence the difference between the approach adopted at the EPO and the pre-*Kirin Amgen* approach turned on the way the invention was defined: the Board of Appeal placing more emphasis on the interaction of the process and the product as a separate entity. On one level the different approaches can be traced to different legal cultures (British compared to a more German approach). More specifically the difference can be traced to differences in the way the invention is characterized. In essence the crux of the difference is that the EPO sees

the approach adopted in the UK and that at the EPO, the House of Lords rejected previous British law and followed the approach at the EPO. The upshot of this is that, where a product is known, product-by-process claims are no longer accepted in the UK on the basis that they lack novelty.

Product-by-process claims remain useful at the EPO and in the United Kingdom where there is no other information available to define the product by reference to its composition, structure, or other testable parameter.<sup>68</sup> This is particularly the case in relation to certain biotechnological and chemical inventions, where the product-by-process claim offers the only way 'to define certain or macromolecular materials of unidentified or complex composition which have yet to be defined structurally'.<sup>69</sup>

(iv) *Representative claims.* It has long been accepted practice for patents to be granted for extremely large classes of objects. This is particularly the case in relation to chemical and biotechnological inventions where patents may claim hundreds of thousands and sometimes millions of compounds, DNA sequences, and the like.<sup>70</sup> If patentees were required to outline every particular manifestation of their invention, it would make those patents unwieldy, cumbersome, and, in some cases, unworkable. Because of this, where a patent is for a class of compounds, it is not necessary for applicants to spell out each and every product or process covered by the patent,<sup>71</sup> nor to show that they have 'proved their application in every individual instance'.<sup>72</sup> Instead patentees are able to claim a broad range of products on the basis of a limited number of (representative) examples. This can be done, for example, through the use of functional language (particularly where the relevant features cannot be defined more precisely), the use of 'Markush' claims (where a claim refers to a chemical structure by means of symbols indicating substituent groups),<sup>73</sup> or the inclusion of a practical application of a theoretical principle or a formula. In other cases, a patent may include variations, analogues, or deemed equivalents that greatly expand the scope of the claims.<sup>74</sup>

Functional claims define the invention by reference to the function that the invention performs, or its purpose, rather than the structure or elements of the invention. That is, instead

the invention in terms of the relationship between the product and the process, whereas the UK tribunals seem to draw a clear divide between product and process. For example, at the EPO it has been said that 'the effect of a process manifests itself in the result, i.e. in the product in chemical cases together with all its internal characteristics': *Gelation/Exxon*, T119/82 [1984] *OJ EPO* 217. In a similar vein, 'the product is in consequence of the invention, without being the invention itself, which is rather the novel interaction represented by the process in such cases. Any attempt to claim the in itself non-inventive product by means of product-by-process claims is claiming the mere effects instead'. *IFF/Claim categories*, note 65 above, para. 10. As we will see below, this has important consequences when a patent is being examined for novelty. See below at pp. 477–8.

<sup>68</sup> *IFF/Claim categories*, T-150/82 [1984] *OJ EPO* 309.

<sup>69</sup> *EPO Guidelines C-III*, 4.12. The benefits of product-by-process claims are less important under the European Patent Convention since infringement of a process occurs where a person disposes of, uses, or imports any product obtained directly by means of that process. PA s. 60(1)(c); EPC 2000 Art. 64(2).

<sup>70</sup> See K. Luzzatto, 'The Support and Breadth of Claims to New Classes of Chemical Compounds' (1989) *Patent World* 21.

<sup>71</sup> *Biogen v. Medeva* [1997] *RPC* 1, 48 (Lord Hoffmann) (HL).

<sup>72</sup> *Kirin-Amgin v. Transkaryotic Therapies*, [2003] *RPC* 31, 67 (Aldous LJ) (CA).

<sup>73</sup> Named after US patent application 1,506,316 by Eugene Markush. See M. Franzosi, 'Markush Claims in Europe' [2003] *EIPR* 200.

<sup>74</sup> For problems that may arise see *American Home Products v. Novartis Pharmaceuticals* [2001] *RPC* 159 (CA).

of specifying what the invention is, a functional claim outlines what the invention does. For example, instead of claiming a modified form of bacteria in terms of its elements or structure, the invention might be described functionally as a bacterium which eats pollution.<sup>75</sup> Functional claims are permissible so long as they provide instructions that are sufficiently clear for the expert to reduce them to practice without undue burden<sup>76</sup> and ‘if from an objective point of view, such features cannot otherwise be defined more precisely without restricting the scope of the claim’.<sup>77</sup>

In some cases, patentees use functional claims because language and concepts are not available to describe the invention in any other way.<sup>78</sup> This is often the case with biotechnological inventions.<sup>79</sup> In other cases, patentees might use functional language because it offers them a strategic advantage over competitors. For example, in describing how two metal plates are attached, a patentee might use functional language and claim a ‘means for attaching’ instead of claiming a ‘nut and bolt’. This has the advantage of preventing a competitor from getting round the claim by using a screw.

#### 4.3.2 Regulating the form and content of claims

A number of different rules and procedures regulate the form that claims ought to take.<sup>80</sup> At a general level, the contents of the claims must comply with the substantive requirements for patentability: namely, subject matter, novelty, and non-obviousness. The claims must also define the matter for which protection is sought in terms of the technical features of the invention,<sup>81</sup> be clear and concise,<sup>82</sup> be supported by the description,<sup>83</sup> and relate to one invention, or a group of inventions that are so linked as to form a single inventive concept.<sup>84</sup> We look at these criteria in more detail later.<sup>85</sup>

## 4.4 DRAWINGS

The final component of a patent is the drawings. These provide a representation of the invention.<sup>86</sup> Along with the description, the drawings may be used to interpret the claims.<sup>87</sup> The

<sup>75</sup> See *Biogen v. Medeva*, note 71 above, where the claim was to a DNA molecule characterized by the way it was made (recombinant DNA) and what it did (display HBV antigen specificity).

<sup>76</sup> For US analogues, see *In re Donaldson* (1994) 16 F.3d 1189; K. Adamo, ‘The Waiting at the Patent Bar is Over: the Supreme Court decides Hilton Davis’ (1996) 78 *JPTOS* 367; R. Taylor, ‘The Pitfalls of Functional Claims in the US’ (June 1997) *MIP* 13.

<sup>77</sup> *Mycogen/Modifying plant cells*, T694/92 [1998] *EPOR* 114, 119; *EPO Guidelines C-III*, 4.7–4.9; *CIPA*, para. 14.24.

<sup>78</sup> The Technical Board of Appeal at the EPO said that the use of structural description of chemical compounds by means of Markush-style formulae, which was part of the standard toolkit of the skilled-person chemist, is the most concise means of defining a class of chemical compounds in a claim. *Bayer CropScience/Safeners*, T1020/98 [2003] *OJ EPO* 533, 540–1.

<sup>79</sup> *Genentech/Polypeptide expression*, T292/85 [1989] *EPOR* 1; [1989] *OJ EPO* 275.

<sup>80</sup> Beyond the requirements that are set out in the Patents Act 1977, British law provides no guidance as to the particular format that the claims ought to take. This is in marked contrast to the EPC, which provides detailed guidance as to the form and content that claims ought to follow.

<sup>81</sup> PA s. 14(5)(a); EPC 2000 Art. 84, EPC 2000 r. 43(1).

<sup>82</sup> PA s. 14(5)(b); EPC 2000 Art. 84. <sup>83</sup> PA s. 14(5)(c); EPC 2000 Art. 84.

<sup>84</sup> PA s. 14(5)(d), PA r. 16; EPC 2000 Art. 82, EPC 2000 r. 44. <sup>85</sup> See Ch. 20.

<sup>86</sup> PA s. 14(2)(b), PA r. 12(2), 18; EPC 2000 Art. 78(1)(d), EPC r. 46. <sup>87</sup> PA s. 125(1).

patent office rules provide very detailed rules as to the nature and form of the drawings. These range from the quality of the paper,<sup>88</sup> the size of the margin,<sup>89</sup> and the use of shading,<sup>90</sup> through to the height of the letters or numerals used. The standardization of the way inventions are represented plays an important role in ensuring the usefulness of the information provided by the patentee.

## PROCEDURE FOR GRANT OF A PATENT

### CHAPTER CONTENTS

1	Introduction	370	4	Procedure for grant	377
2	Preliminary considerations	370	5	Amendment	385
3	Features of the Patent Application Process	375	6	Reform	388

## 1 INTRODUCTION

Unlike the position under copyright law where rights arise without formality, patents are only granted after a series of formal procedures have been complied with. The process of registration plays a key role in defining many aspects of patent law and practice. In this chapter we explore some of the key features of those processes. We begin by exploring some of the issues that would-be applicants ought to consider when deciding whether to take out a patent to protect their inventions in the United Kingdom. We then follow the trajectory of a patent through the administrative process from its inception as a patent application through to grant. In so doing we discuss the British and European patent systems, the Patent Cooperation Treaty, and how they intersect.

## 2 PRELIMINARY CONSIDERATIONS

### 2.1 DECIDING TO PATENT

A range of factors are taken into account when considering whether to patent an invention. A potential applicant will need to consider the benefits that may flow from patenting. Perhaps the most obvious benefit is that as a patent confers an exclusive right to make, use, and sell the patented invention for a period of up to 20 years it provides the owner with associated monopoly profits. It should be noted that the economic value derived from a patent will vary according to the type of invention in question. For example, where competitors are able to

develop new ways of achieving the same result which fall outside the scope of the monopoly (this is known as inventing around the patent), the economic benefits are reduced. Another benefit associated with patenting flows from the fact that patenting translates inventions from the world of science and technology to the world of commerce. In so doing, patenting enables inventions to be included on the balance sheets of organizations and on the research returns of publicly-funded institutions. This may be particularly important in attracting funds to pay for research.

Other less obvious benefits flow from patenting. These include the esteem or symbolic capital that flow from being recognized as an inventor. Indeed in some cases it is the romantic appeal of becoming an inventor that encourages a person to enter into the patent system in the first place.<sup>1</sup> Another benefit of patenting is that it enables manufacturers to enhance the image of their goods. By advertising that their goods are patented, sellers are able to represent to consumers that they are buying cutting-edge technologies. There is also a sense in which the mere fact that something has been patented carries with it the belief that the product has public approval: this has been particularly important in relation to the patenting of life forms.

The benefits that flow from patenting need to be weighed against the associated costs. The financial costs of patenting include patent agent fees (possibly £150 per page), the administrative charges imposed by national and international institutions as a condition of grant,<sup>2</sup> and where a patent is sought in a non-English-speaking country, the costs of translation. A 2004 study commissioned by the EPO showed that the average cost of obtaining a patent directly at the EPO was €24,100.<sup>3</sup> Non-financial costs such as the time and effort involved in transforming a practical technical idea into the form required by the patent system also need to be taken into account. Another cost associated with patenting relates to the fact that the applicant must make their invention available to the public. While competitors may not be able to copy the patented invention, the disclosure of the invention makes it easier for them to invent around the patent. Another factor to be taken into account is whether the benefits that flow from patenting can be achieved through other means with fewer of the associated costs.<sup>4</sup> An important factor here is that an inventor (or owner) may be able to rely upon other techniques to protect their creations that do not require the invention to be disclosed to the public. These include contractual restrictions on the use or disclosure of the process, the law relating to breach of confidence, or to non-legal techniques such as secrecy. The problem with these techniques is that they carry with them the risk that, if the information is disclosed to the public (even if through a breach of contract or confidentiality), in most cases the invention becomes part of the public domain, free for all to use.<sup>5</sup> Another factor that may influence

<sup>1</sup> G. Myers, 'From Discovery to Invention: The Writing and Re-writing of Two Patents' (1995) 25 *Social Studies of Science* 57, 59.

<sup>2</sup> *Study on the Cost of Patenting in Europe*, prepared on behalf of the EPO by Roland Berger Market Research (2004); European Patent Office, 'Cost of Patenting in Europe' (1995) 26 *IIC* 650; M. Bednarek, 'Planning a Global Patent Strategy: where to get the most "Bang for your buck?"' (1995) 77 *JPTOS* 381; S. Helfgott, 'Why Must Filing In Europe Be So Costly?' (1994) 76 *JPTOS* 787.

<sup>3</sup> This included: pre-filing expenditure excluding R&D (€6,240), internal cost of processing (€3,070), attorney fees (€4,930), translation of application and claims (€3,020), official EPO fees (€3,410), validation (€9,870). The cost of a Euro-PCT patent was €46,700. *Study on the Cost of Patenting in Europe*, *ibid*.

<sup>4</sup> There may be a danger of another person patenting the invention. This has occasionally prompted defensive patenting which, at one time, prompted a third of all applications in the USA: W. Davis (1947) 12 *Law & Contemporary Problems* 796, 799–800; W. Ericson and I. Freedman (1957) 26 *George Washington Law Review* 78.

<sup>5</sup> On the trade secret/patenting decision, see Munson (1996) 78 *JPTOS* 689.

the decision to seek a patent is the ease by which the details of the invention can be ascertained or reverse-engineered when the invention or the products thereof are made available to the public.

Given that the decision to patent is influenced by a range of factors, it is not surprising that patenting practices vary from industry to industry. For example, in the pharmaceutical industry, where research and development costs are high and the products are readily and cheaply copied, the patent process is commonly relied on to protect inventions. In other industries, such as in the aviation field where the expense of copying is very high, greater emphasis is placed on secrecy as a mode of protection.

## 2.2 ROLE OF PATENT AGENTS

It is common for decisions concerning patent applications to be made in consultation with a patent agent. Since emerging as a discrete profession during the nineteenth century,<sup>6</sup> patent agents have come to play a central role in the operation of the patent system. Under the EPC a new breed of expert, the European patent agent, has developed to deal with the intricacies of the European patent system.<sup>7</sup> Patent agents normally have knowledge of the law, the patent administration process, and a particular branch of science. As well as assisting in the drafting and processing of patents, patent agents also offer advice as to whether a patent should be taken out and where and how patents are best exploited. In some cases they are also able to litigate on behalf of patentees. In a sense, patent agents act as go-betweens who unite the technical–scientific domains with the legal and commercial. The patent system encourages the use of patent agents by penalizing the owners of poorly drafted patents. For example, where a patent is found to be partially valid, relief by way of damages, costs or expenses is only available where a claimant can show that the patent was framed in good faith and with reasonable skill and knowledge:<sup>8</sup> a matter which may be difficult for non-specialists to prove.

## 2.3 CHOICE OF ROUTES TO GRANT

Once the decision is made to protect an invention in the United Kingdom by patent, it is then necessary to decide the particular route to take to secure grant of the patent. In particular, it is necessary to decide whether to take out a British patent or a European patent (UK).<sup>9</sup> In turn,

<sup>6</sup> See D. Van Zyl Smit, 'Professional Patent Agents and the Development of the English Patent System' (1985) 13 *International Journal of Society and the Law* 79; H. Dutton, *The Patent System and Inventive Activity during the Industrial Revolution 1750–1852* (1984), ch. 5; F. Kittel, 'Register of Patent Agents: A Historical Review' (1986–7) 16 *CIPAJ* 195.

<sup>7</sup> See EPC 2000 Arts. 133–134a; L. Osterborg, 'The European Patent Attorney: A New Profession' (1994) 25 *IIC* 313.

<sup>8</sup> PA s. 63(2). See *General Tire v. Firestone Tyre* [1975] *RPC* 203, 269; *Hallen v. Brabantia* [1990] *FSR* 134, 143; *Chiron v. Organon Teknika (No. 7)* [1994] *FSR* 458. Good faith primarily depends on whether the patentee knew something detrimental to the patent, or which escaped the eye of the patent examiner. Reasonable skill and knowledge relates to the competence employed in framing the specification. See *Hoechst Celanese v. BP Chemicals* [1997] *FSR* 547. For criticisms of the provision see Jacob LJ in *Beheer BV v Berry Floor NV* [2005] *EWCA Civ* 1292 (CA), para 35 (it makes no sense to restrict the right to damages but not account of profits). Jacob also questioned whether the provisions comply with the Directive on the Enforcement of IP Rights (2004/48/EC).

<sup>9</sup> Applications to the EPO and UK IPO are alternatives, so a patentee cannot have patents via both mechanisms. To prevent this PA s. 73(2) requires the Comptroller to revoke a UK patent where there is a European patent (UK) for the same invention having the same priority date which was applied for by the same applicant.

it is necessary to decide whether to apply directly to the UK Intellectual Property Office or the EPO, or whether it would be better to make use of the application system provided by the Patent Cooperation Treaty.<sup>10</sup> The particular route which is chosen depends on a variety of factors: perhaps the most important are the countries where protection is desired.

When deciding whether to bring an application to the UK or the EPO, commercial and strategic considerations may come into play. From a commercial point of view, the primary variable is the fees charged by the respective patent offices. As the cost of an application to the EPO is greater than to the UK office, if an applicant only wishes to file in the United Kingdom or in a few countries it would be cheaper for them to apply to the respective national offices. There comes a point, however, where the cumulative cost of applying to several national offices will exceed the cost of a European application.<sup>11</sup>

Applicants may also be influenced by strategic considerations when they are considering whether to apply to the EPO or to national offices. An important factor relates to the fact that although the substantive law of the national systems and the EPC are largely the same, there are a number of other important differences.<sup>12</sup> In particular, while the EPC has a full examination system some national offices do not require examination at all,<sup>13</sup> some allow for deferred examination, some require patent agents to provide the examination service, while others will only reject applications on limited grounds (such as novelty).<sup>14</sup> Another factor that may influence the route that is taken is the relative vulnerability of the patent. In particular, while a national patent can only be challenged in national tribunals, the EPC allows for a central challenge to be made against a European patent (this takes the form of an 'opposition' to the grant which can be brought in the nine-month period after grant).<sup>15</sup> If a would-be-patentee believes that the application is likely to be challenged, the applicant might prefer to maximize the survival chances of their patent by registering in a range of national offices rather than risking the possibility of a successful central attack which would deprive the applicant of protection in all the designated states.

Similar factors will influence inventors when they are considering whether to apply directly to the UK Intellectual Property Office or the EPC, or whether they want to make use of the

Before revocation the patentee is given an opportunity to justify holding two patents: PA s. 73(3), amended by CDPA, Sched. 5, para. 19.

<sup>10</sup> There are four routes available to get a patent for the UK: directly to the UK Patent Office, indirectly to the UK Patent Office via the PCT, directly to the EPO, or indirectly to the EPO via the PCT. *AstraZeneca/Priorities from India* G2/02 and G3/02 [2004] OJ EPO 483 (not possible to claim priority for a European patent from first publication in India by way of TRIPS, as India was not a party to PCT).

<sup>11</sup> While translation costs have been a significant consideration in the decision whether to file for a European patent or a national patent, this should be less important after 1 May 2008, when the London Agreement became operational.

<sup>12</sup> Early versions of the EPC proposed a two-stage approach: a provisional grant which was only subject to formal examination and novelty report, followed by the possibility of confirmation as a final European patent within five years at the behest of applicant or a third party. G. Oudemans, *The Draft European Patent Convention* (1963), 53–60, 164–76.

<sup>13</sup> There is no examination in Belgium, the Netherlands, Switzerland, or Ireland. On the latter see *Rajan v. Minister for Industry and Commerce* [1988] 14 FSR 9; A. Parkes, 'The Irish Patent Act 1992' (1991–2) 21 CIPAJ 426.

<sup>14</sup> For example, the French Patent Office will not refuse on grounds of lack of inventive step: Law of 2 Jan. 1968, Art. 16, J. Schmidt-Szalewski, 'Non-obviousness as a requirement of patentability in French Law' (1992) 23 IIC 725. For Germany, see E. Fischer, 'The New German Patent Procedure: From the View of a Corporate Patent Department' (1971) 2 IIC 277.

<sup>15</sup> EPC 2000 Arts. 99–101.

international filing system provided by the Patent Cooperation Treaty (PCT).<sup>16</sup> While the PCT does not issue patents, it does provide an alternative starting point by which both UK and European patents (UK) can be obtained.<sup>17</sup> Under the PCT,<sup>18</sup> an international application can be made to the patent office of one of the contracting states, which is called the receiving office.<sup>19</sup> The application must contain:<sup>20</sup> a request, a description, at least one claim, drawings (where appropriate), and an abstract. Prior to 1 January 2004, applicants also had to designate the states in which protection is sought.<sup>21</sup> This is no longer necessary, however, as the filing of a request automatically applies in all contracting states to the PCT (unless the applicant specifies otherwise).<sup>22</sup> Applicants can apply to designated international offices for an international search<sup>23</sup> and an international preliminary examination to be carried out.<sup>24</sup> At this point, the applicant can shift to the designated national offices who will decide whether to grant national patents.<sup>25</sup> At this stage, the national office treats the application as if it has been filed in that office. Instead of going straight to the national stage, an applicant may ask for an international preliminary examination by an examining authority.<sup>26</sup> The examining authority issues an international preliminary examination report indicating whether the invention appears to meet international standards of novelty, inventive step, or industrial applicability.<sup>27</sup> It should be noted that the examination is merely advisory and not binding on designated countries.<sup>28</sup>

The procedures are useful for countries where the patent office is not capable of carrying out its own examination. Another factor in favour of the PCT is convenience. Rather than having to apply in each individual country, a single application can be submitted to a relevant PCT body. The PCT is also attractive because of the lengthy period between the initial application to the international office and the time when the application is forwarded to the relevant national offices when the expensive process of translation must be completed.

<sup>16</sup> See above at pp. 352–3. D. Perrott, 'The PCT in Use' [1982] *EIPR* 67; B. Bartels, 'Patent Cooperation Treaty: The Advantages for the Applicant in the UK' (1983) 13 *CIPAJ* 3; J. Cartiglia, 'The Patent Cooperation Treaty: A Rational Approach to International Patent Filing' (1994) 76 *JPTOS* 261; J. Anglehart, 'Extending the International Phase of PCT Applications' (1995) 77 *JPTOS* 101.

<sup>17</sup> This was signed in 1970 and came into operation from 1978. As of 1 Jan. 2008 there were 190 Parties (168 Signatures). PA s. 89 gives statutory effect to some of the Treaty's provisions.

<sup>18</sup> PCT Art. 3.

<sup>19</sup> The receiving office retains one copy of the application, transmits another to WIPO, and a third to an international search authority. The receiving office checks to ensure that a filing date should be granted (Art. 14) and that appropriate fees have been paid. The ISA conducts a search and reports its findings to WIPO: Art. 15 PCT. The application can then be amended within two months (PCT Art. 19, Regulations under the Patent Cooperation Treaty (7 Dec. 2006) (hereafter, PCT r.) 46) and it and the search report are then communicated to the patent offices of the designated states: PCT Art. 20. The application must be published after the expiry of 18 months from the priority date: PCT Art. 21 (2).

<sup>20</sup> PCT rr. 4–8.

<sup>21</sup> On the need to correct failure to designate during the international phase, see *Vapocure Technologies Application* [1990] *RPC* 1.

<sup>22</sup> PCT r. 53.7. For a discussion of changes to the filing of international applications as of 1 Jan. 2004, see PCT Newsletter no. 11/2003 (Nov. 2003).

<sup>23</sup> There are nine International Search Authorities.

<sup>24</sup> There are eight International Preliminary Examination Authorities.

<sup>25</sup> At 20 months after the priority date the national stage begins, by formally initiating prosecution in the designated states, filing translations, and paying fees as necessary.

<sup>26</sup> PCT Ch. II; PCT Art. 22 (revised by PCT Assembly on 3 Oct. 2001) (provides for a minimum period of 30 months within which the applicant must provide certain documents and fees). Implemented in the UK by Patent (Amendment) Rules 2002 (SI 2002/529) (1 Apr. 2002). See now PA r. 66.

<sup>27</sup> PCT Art. 35(2). <sup>28</sup> PCT Art. 33.

### 3 FEATURES OF THE PATENT APPLICATION PROCESS

Before looking in detail at the procedures for grant of a patent, it may be helpful to highlight some of the key features of the UK and EPO patent application processes.<sup>29</sup>

#### 3.1 THE REQUIREMENT OF REGISTRATION

Registration has long been a prerequisite for grant of a patent in the United Kingdom. In modern times, this is largely explained by reference to the type of monopoly that a patent confers. The decision to make patent protection dependent upon registration is said to result from the fact that patents confer an absolute monopoly that enables the patentee to prevent all others from practising the invention. This is the case even if the infringer developed the same invention independently from the patented invention. Consequently, as a matter of fairness it is necessary to have a register open to the public. This ensures that third parties are able to ascertain whether they are infringing someone else's rights. The process of filing also helps to establish the priority of the invention and is a prerequisite to systems of pre-grant examination such as those that operate in the UK and EPO.

#### 3.2 FIRST-TO-FILE

Most patent systems, including the United Kingdom's and the EPC, operate on the basis that the first person to file an (acceptable) application for an invention should be granted a patent over the invention. The fact that patents are granted via a system of registration does not necessarily mean that the patent ought to be granted to the first person to file an application. In some other patent systems, notably the USA, a patent is granted to the first person to invent, rather than to the first person to file an application.<sup>30</sup>

While the first-to-file system may be incompatible with a regime of intellectual property predicated on natural rights, it avoids the need to consider difficult questions about who was the first person to have a particular idea or to reduce the idea to a working model (as occurs in first-to-invent systems).<sup>31</sup> Instead, the first-to-file system replaces such investigations with

<sup>29</sup> The Strasbourg Agreement concerning International Patent Classification 1971 (UK joined on 7 Oct. 1975) has led to a degree of uniformity in the presentation of patent documents. See A. Wittmann, R. Schiffels, and M. Hill, *Patent Documentation* (1979), 124–34.

<sup>30</sup> C. Macedo, 'First-to-file' (1990) 18 *AIPLA Quarterly Journal* 193. The USA now accepts provisional applications: see 'The same effect: United States Provisional Patent Applications and Paris Convention Priority Rights' (1996) 78 *JPTOS* 716. In 2007 The Patent Reform Bill of 2007 was introduced into US Congress and Senate in plans to shift the USA away from a first-to-invent to a first-to-file system.

<sup>31</sup> The preference for a first-to-file system, however, does not avoid all legal investigations into who was the 'inventor'. This is because inventors are entitled to be named on the patent, even if they are not the applicant: PA s. 13; EPC 2000 Art. 62, Art. 81. If the inventor is not designated, the application is treated as having been withdrawn: EPC 2000 Art. 90(3), Implementing Regulations to the Convention on the Grant of European Patents (2006) (hereafter, EPC 2000 r.) 57. However, there is no investigation into the correctness of the designation. Where the inventor designated and the applicant are different persons the practice is to inform the inventor of the application, thereby enabling the inventor to raise any objection they may have. Procedures are also available for inventors to be omitted from published versions of the application if they wish: EPC 2000 r. 20(1).

an administrative practice that delivers rough but simple justice.<sup>32</sup> The first-to-file system is also justified on the basis that it provides inventors with an incentive to disclose (or a reward for having disclosed) the invention: the first applicant to disclose the invention obtains the patent.<sup>33</sup> As we will see, the adoption of a first-to-file system has certain consequences that need to be taken into account later in the grant process.<sup>34</sup>

### 3.3 EXAMINATION

Another notable feature of the patent application processes in the UK and the EPO is that applications are subject to a full examination.<sup>35</sup> That is, all applications are examined to ensure that they comply with the formalities of filing, as well as the requirements of subject matter, novelty, non-obviousness, and sufficiency.

For most of its long history, British patents were granted without examination. The question whether examination as a prerequisite for grant should be introduced into the UK was considered and rejected on a number of occasions during the nineteenth century.<sup>36</sup> One of the main arguments against examination was that it would have made the recognition of property rights subject to the discretion of government officials. Examination would also have added to the cost and time of obtaining a patent:<sup>37</sup> changes which would have run counter to the spirit of much nineteenth-century reform which aimed to simplify the system and to reduce the 'taxes' imposed on inventors.

After much deliberation, a limited system of examination was introduced into the United Kingdom in 1905.<sup>38</sup> An important factor which helped to support the case for examination was the finding of the 1901 Fry Committee that 40 per cent of the patents registered at the time were for inventions which had already been described in previous patents.<sup>39</sup> As these patents would not have withstood litigation, they were theoretically harmless. Nevertheless, it was believed that they deterred others from working in the same field. Moreover, the lack of examination brought the system into disrepute and undermined the trust placed in valid patents. For some, the prospect of an examination system sanctioned and controlled by the state was attractive because it would have created a legal (and thus a commercial) presumption that any patents which had been granted were valid. Another factor which supported the case for examination was that fears of arbitrary or self-seeking exercise of discretion on behalf of those in charge of the register had been allayed by a growing trust in bureaucracy: a trend which was cemented by the increased use of experts.<sup>40</sup>

<sup>32</sup> T. Nicolai, 'First-to-File vs. First-to-Invent: A Comparative Study Based on German and United States Patent Law' (1972) 3 *IIC* 103; W. Kingston, 'Is the United States Right about First-to-Invent?', [1992] *EIPR* 223; T. Roberts, 'Paper, Scissors, Stone' [1998] *EIPR* 89.

<sup>33</sup> For arguments for first-to-file see [no named author] 'Prior Art in Patent Law' (1959) 73 *Harvard LR* 369, 380.

<sup>34</sup> See below at Section 5, and Ch. 20 Section 4. <sup>35</sup> G. Smith, 'Why Examine?' (1982) 12 *CIPAJ* 9.

<sup>36</sup> (1864) 29 *PP* 321; (1871) 10 *PP* 603; (1872) 11 *PP* 395.

<sup>37</sup> The most common criticism of examination today is delay. Many patent systems operate with time limits in an attempt to reduce such problems. In the UK, examination should occur not later than 4 years and 6 months from priority.

<sup>38</sup> Patents Act 1902. The Office began to search British patents in 1905. <sup>39</sup> (1901) 23 *PP*.

<sup>40</sup> EPC 2000 Art. 113 gives an applicant whose patent has been refused an opportunity to comment. This is of fundamental importance for ensuring a fair procedure and reflects the generally accepted notion of a right to be heard. The examiner must give the grounds for refusal, that is, the essential reasoning, sufficient for the case to be properly understood. See *NEC/Opportunity to comment*, T951/92 [1996] *EPOR* 371; [1996] *OJ EPO* 53.

The limited examination system established in 1905 was maintained until the passing of the Patents Act 1977, when the current full examination system was introduced.<sup>41</sup> While the examination system currently forms an integral part of the British patent system, there may come a time where the United Kingdom may wish to follow other countries in the EPC who in the face of falling national applications have abandoned full examination as part of national procedure. If this were to happen, it would provide applicants with greater choice: the alternatives being an unexamined national patent or an examined European patent.

### 3.4 AMENDMENT

Another notable feature of the grant system is that applicants are able to alter or amend their initial application both during and after grant of the patent. The decision to give patentees the opportunity to amend their patent recognizes that the first-to-file system may encourage applicants to register without a full understanding of the invention or complete familiarity with the relevant prior art. It is also based on the fact that subsequent examination, either by the applicant or the Patent Office, may reveal the existence of a piece of prior art which requires the application to be reformulated to ensure its validity.<sup>42</sup> Similarly, an applicant may wish to amend the application as filed in light of subsequent experiments carried out on the invention. Where a patent is found to be partially valid,<sup>43</sup> it is desirable that the patent be amended by the deletion of the invalid claims which otherwise might remain as a potential nuisance to industry.<sup>44</sup> At the end of this chapter we look at the situations where applicants and patentees are able to amend and the restrictions that they operate under.

## 4 PROCEDURE FOR GRANT

The basic procedure for application for a patent to the UK Intellectual Property Office is roughly the same as at the European Patent Office. In this section we provide an overview of some of the more important features of those processes (see Fig. 16.1).

### 4.1 WHO IS ENTITLED TO APPLY FOR A PATENT?

There are virtually no restrictions on who may apply for a patent. In contrast with the rules relating to copyright and trade marks, there are no limitations as regards the nationality or residency of the applicant.<sup>45</sup> Where appropriate, an application for a patent may be made by two or more applicants. While anyone may apply for a patent, there are a number of restrictions placed on those who are entitled to be granted a patent. The issue of entitlement to grant is dealt with later.<sup>46</sup>

<sup>41</sup> Prior to the 1977 Act, examination was for patentability and novelty only. Examination for inventive step was introduced by the 1977 Act.

<sup>45</sup> PA s. 7(1); EPC 2000 Art. 58. Cf. Paris Art. 2(1) which requires members to provide the same protection as nationals receive to nationals of any other country in the Union. See also PCT Art. 9.

<sup>46</sup> See Ch. 21 below.

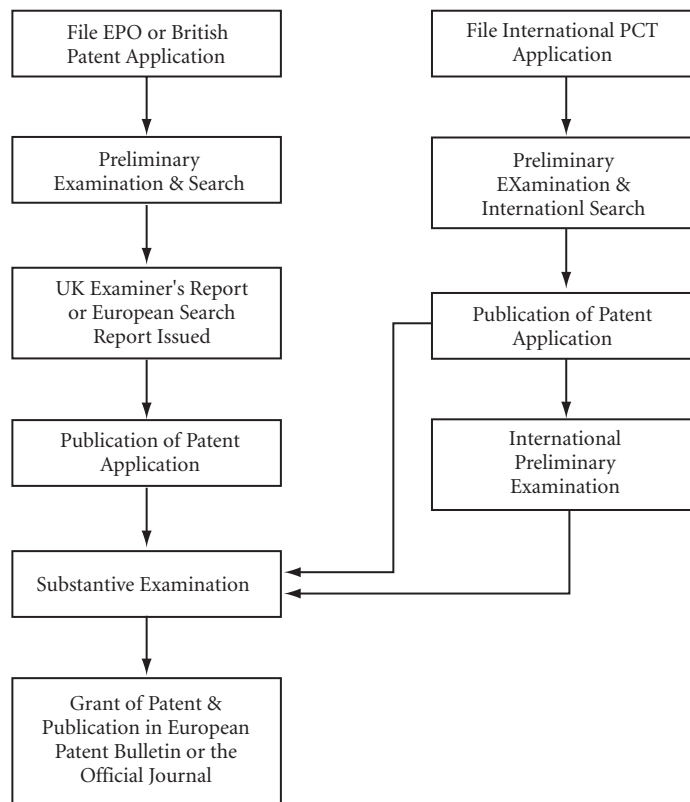

Fig. 16.1 Flowchart of a patent application

During the application process disputes over who is entitled to a patent that may subsequently be granted are dealt with differently, depending on whether it is a British or a European application.<sup>47</sup> For the purposes of proceedings before the EPO, it is assumed that the applicant is entitled to exercise the right to the European patent: issues about entitlement are determined elsewhere.<sup>48</sup> The EPO will only take account of the question of entitlement if a decision is made by an appropriate national court that a person other than the applicant is entitled to the patent.<sup>49</sup>

As with the EPC, an applicant for a British patent is presumed to be entitled to grant of the patent.<sup>50</sup> However, in contrast with the EPC the comptroller is able to consider issues of entitlement which are raised before grant.<sup>51</sup> If a person 'properly entitled' to a patent decides

<sup>47</sup> Under EPC 2000 Art. 60 the right to a European patent belongs to the inventor or his successor in title. The rights of employees depend on the law of the state in which they are mainly employed or, if that cannot be determined, that in which the employer has his place of business. See below at pp. 533–8.

<sup>48</sup> EPC 2000 Art. 60(3). See G. Le Tallec, 'The Protocol on Jurisdiction and the Recognition of Decisions in Respect of the Right to the Grant of a European Patent' (1985) 16 *IIC* 318; *Kirin-Amgen/Erythropoietin*, T412/93 [1995] *EPOR* 629 (questions of entitlement could not be considered in opposition proceedings).

<sup>49</sup> Three courses of action are available: prosecution of the application in place of the applicant; filing of a new application; or a request that the application be refused: EPC 2000 Art. 61(1). See *Latchways/Unlawful applicant*, G3/92 [1995] *EPOR* 141.

<sup>50</sup> PA s. 7(4).

<sup>51</sup> PA s. 8. See T. Gold, 'Entitlement Disputes: A Case Review' [1990] *EIPR* 382.

to submit a new application, they may be able to use the wrongful applicant's priority date.<sup>52</sup> The comptroller of the UK Intellectual Property Office is given similar powers to determine entitlement where a patent has already been granted.<sup>53</sup>

#### 4.2 FILING A PATENT APPLICATION

Applications for British patents are filed in Newport. The contents of all documents included in an application for a British patent must be in English or Welsh.<sup>54</sup> Applications for a European patent may be filed either with the European Patent Office in Munich or in The Hague, or with national patent offices in the contracting states.<sup>55</sup> Unlike the case under the EPC 1973 (where applications had to be in one of three official languages and the text of the patent had to be in that language), the EPC 2000 allows European patent applications to be filed in any language.<sup>56</sup> If the application is not made in an official language of the EPO (English, German, or French), the applicant is given two months to translate the application into an official language.<sup>57</sup>

Applicants at the UK Intellectual Property Office and the EPO are faced with the choice either of making a 'full application' or alternatively of taking advantage of the facility which allows for 'early filing'.<sup>58</sup> A full application for a patent must contain a request for grant of a patent, a description of the invention, one or more claims, any drawings referred to in the description or the claims, and an abstract.<sup>59</sup>

In order to provide applicants with greater flexibility, the patent systems provide that, instead of filing a full application, applicants are able to make an 'early filing'.<sup>60</sup> Early filing occurs where an applicant supplies an indication that a patent is sought, information identifying the applicant, and a description of the invention.<sup>61</sup> Essentially, early filing provides applicants with a twelve-month breathing-space in which they can decide whether they wish to pursue a patent, are able to carry out further experiments on the invention, look for investors, and further consider the countries in which they wish to seek patents. The applicant must file the claims and abstract within twelve months of the early filing (the so-called filing date) if an early application is not to lapse.<sup>62</sup> While early filing offers a breathing space 'for completion of the formalities and the interim preservation of priority', early filing was not intended 'to provide a cover for making improvements in the disclosed invention by bringing in new

<sup>52</sup> PA s. 8(3).

material not covered by the disclosure whilst preserving for it the priority conferred by the original filing date'.<sup>63</sup>

### 4.3 PRIORITY DATE OF THE APPLICATION

The initial application is important in that it sets in play the sequence of steps that may ultimately result in the grant of the patent. Irrespective of whether the filing is an early filing or a full application, filing is also important since it establishes the 'priority date' of the patent. In the absence of a claim to an earlier date, the priority date is the filing date of the application.<sup>64</sup> As we will see, the priority date is the date at which the novelty, inventiveness, and other aspects of the invention are assessed. As such it is often of critical importance for the validity of the patent. The priority date is of practical significance in several other ways. Firstly, because novelty is assessed as of the priority date, once the date is established an applicant is able to exploit their invention without fear of invalidating the patent. Second, applicants are able to use the priority date established by filing in the UK or EPO as the priority date for applications in other countries.

### 4.4 PRELIMINARY EXAMINATION AND SEARCH

The next formal step in the process of grant is the preliminary examination and search.<sup>65</sup> When the claims and abstract have been submitted, the applicant should request a preliminary examination and search.<sup>66</sup>

On preliminary examination the application is examined to see whether it complies with certain formal requirements.<sup>67</sup> These are that the application contains a request for grant, a description of the invention, one or more claims, any drawings referred to in the description or claim, and an abstract. In addition, the preliminary examination also ensures that the inventor(s) have been identified and that the application accords with other formalities (such as payment of fees).<sup>68</sup>

Applicants are alerted to any problems that may have been identified in the preliminary examination in a report which is issued to them.<sup>69</sup> Applicants are then given the opportunity to respond to the report or, if necessary, amend their application to overcome the problems. If an applicant fails to change their application in a manner that satisfies the respective patent offices, the application may be refused.

The examiner or (at the EPO) the Search Division also carry out a limited search of the existing literature for relevant prior art (that is, information similar to the invention in question).<sup>70</sup> The aim of the search is to identify the documents that may be used at the substantive examin-

<sup>66</sup> PA s. 17(1). Under the EPC 2000, the search and examination stages of the application process were combined.

<sup>67</sup> The receiving office retains one copy of the application, transmits another to WIPO, and a third to an international search authority. The receiving office checks to ensure that a filing date should be granted and that appropriate fees have been paid. EPC 2000 Art. 90.

<sup>68</sup> PA r. 31; EPC r. 40, 55; EPO Guidelines A–II.

<sup>69</sup> PA r. 29; EPC 2000 r. 57.

<sup>70</sup> PA s. 17(1); EPC 2000 Art. 92, EPC 2000 r. 61–64.

ation stage when the application is examined for novelty and inventive step.<sup>71</sup> The applicant is informed of the findings of the search by way of an examiner's report or, as it is known at the EPO, the European search report.<sup>72</sup>

As well as identifying the documents that may be relied upon when the application is examined for novelty and inventive step, the application is also examined during the search stage to ensure that it relates to one invention or to a group of inventions which form a single inventive concept.<sup>73</sup> That is, it is examined to ensure it meets the requirement of 'unity of invention'.<sup>74</sup>

Where two or more inventions are claimed in the one application, the application will fail to comply with the requirement of unity of invention unless it can be shown that the inventions form a single inventive concept.<sup>75</sup> To do this it is necessary to show that the inventions share the same 'special technical features'. Special technical features are the features that define the contribution that each of the claimed inventions, considered as a whole, makes to the claimed advance over the prior art.<sup>76</sup> There are at least two reasons for limiting patent applications to a single inventive concept. The first is that patent protection should not be available to two inventions for the price of one. Second, and more importantly, to allow more than one inventive concept to be included in a single patent is likely to undermine the administrative systems for locating, identifying, and searching for patents.

If it is found that the application contains more than one invention, the search is limited to the first invention that is set out in the claims.<sup>77</sup> In the face of a finding that an application contains more than one patent, applicants may simply pursue a patent for one of the inventions. Alternatively, they may divide the initial application into two (or more) fresh applications. So long as additional fees are paid and no new material is added, they may use the priority date for the original application for the new applications.<sup>78</sup>

#### 4.5 PUBLICATION

The next stage in the grant process is the publication of the patent application. The application will be published and made available for public inspection 18 months from the date of filing (or 'as soon as possible thereafter').<sup>79</sup> This process informs third parties that the application has been made. While third parties are not able to oppose the grant of a patent at this stage, they are able to make observations as to whether the patent should be granted.<sup>80</sup>

<sup>71</sup> PA s. 17(4)(5); EPC 2000 Art. 92, EPC 2000 r. 61(1). <sup>72</sup> PA s. 17(5); EPC 2000 r. 65.

<sup>73</sup> PA ss. 14(5)(d), (6), s. 17(6), PA r. 17; EPC 2000 Art. 82, EPC 2000 r. 64.

<sup>74</sup> Lack of unity is not a ground for revocation. PA s. 26, PA r. 16. No EPC equivalent, but see EPC 2000 Art. 82.

<sup>75</sup> PA s. 14(5)(d) and s. 14(6), PA r. 16; EPC 2000 Art. 82, EPC 2000 r. 64.

<sup>76</sup> PA r. 16(2); EPC 2000 r. 44. Technical features 'are the physical features which are essential to the invention'. With respect to a product these are 'the physical parameters of the entity'. In relation to a process, the technical features are 'the physical steps which define such activity'. *Mobil Oil/Friction Reducing additive*, G2/88 [1990] EPOR 73; [1990] OJ EPO 93, 100. See also *May & Baker v. Boots* [1950] 67 RPC 23, 50; *Biogen v. Medeva* [1995] RPC 25, 92–3; *Bayer/Benzyl esters* [1983] OJ EPO 274; *Siemens/Unity*, G1/91 [1992] OJ EPO 253.

<sup>77</sup> *Hollister's Application* [1983] RPC 10; G2/92 [1993] OJ EPO 591.

<sup>78</sup> Failure to meet an objection of lack of unity is frequently remedied by the making of divisional applications. EPC 2000 r. 36; PA s. 18(3), PA r. 100.

<sup>79</sup> PA s. 16, PA r. 26; EPC 2000 Art. 93, EPC 2000 r. 67–70; PCT Arts. 21 and 29, PCT r. 9.1 and 48.

<sup>80</sup> PA s. 21, PA r. 33; EPC 2000 Art. 115, EPC 2000 r. 114.

The documents published in the UK and the EPO include the description, claims, and drawings (if any) that have been filed. In the United Kingdom, the publication must include the original claims, any amendments that have been made to the claims, as well as any new claims. The UK Intellectual Property Office is also given power not to publish parts of the application which are offensive or disparaging,<sup>81</sup> or which might be prejudicial to national security.<sup>82</sup> At the EPO, the abstract and (where available) the search report are also published.<sup>83</sup>

Publication is important for two reasons. First, since the act of publication discloses the invention to the public, an unwanted publication may prevent applicants from relying on other ways of protecting their invention (such as confidentiality). Similarly, once a patent application has been published, the application can no longer be resubmitted (whereas if the application is withdrawn prior to publication it is possible to make a later application).<sup>84</sup> Second, if the patent proceeds to grant, the date of publication is the date from which the patentee is able to sue for infringement of the patent. This is on the condition that the act would have infringed both the patent as granted and the claims in the form in which they were published.<sup>85</sup> In these circumstances, the patentee is only entitled to damages for infringement in the period between publication and grant.

As mentioned, a third party may respond to the publication of the application by submitting 'observations' to the Patent Office (at any time before grant).<sup>86</sup> Such observations should relate to whether the invention is a patentable invention.<sup>87</sup> Observations may be made by 'any person' and must be submitted in writing accompanied by appropriate reasons. The comptroller of the UK Intellectual Property Office is instructed to consider the observations, whereas the European Patent Office is merely required to communicate the observations to the proprietor who, in turn, is permitted to comment on them. If the EPO wishes, it can take account of such observations when examining the application.<sup>88</sup> In both fora, the party submitting the observations does not become party to the proceedings and so will not be asked to any hearing, nor made to pay the costs of any proceedings.

#### 4.6 SUBSTANTIVE EXAMINATION

Once the requirements of preliminary examination and search have been satisfied, the next stage in the application process is the 'substantive examination'.<sup>89</sup> The applicant must request

<sup>81</sup> PA s. 16(2), PA r. 33.

<sup>82</sup> PA s. 22 (no EPC 2000 equivalent). PA s. 23 provides that British residents need prior written approval from the comptroller before they file applications outside the UK. This gives the office the opportunity to examine applications to see if the information is prejudicial to the defence of the realm or the safety of the public. If so, the office may prohibit or restrict publication.

<sup>83</sup> EPC 2000 r. 68(1).

<sup>84</sup> EPC 2000 Art. 128 specifies that the application prior to this point is confidential and may only be viewed by third parties with the consent of the applicant.

<sup>85</sup> PA s. 69(2); EPC 2000 Art. 67; PCT Art. 29. <sup>86</sup> PA s. 21; EPC 2000 Art. 115.

<sup>87</sup> That is, matters covered in PA s. 21(1), s. 1; EPC 2000 Arts. 115, 52. <sup>88</sup> EPC 2000 Art. 114.

<sup>89</sup> PA s. 18(1), PA r. 28–29; EPC 2000 Art. 94, EPC r. 70–71. Under the PCT, the national stage begins 20 months after the priority date by formally initiating prosecution in the designated states, filing translations, and paying fees as necessary. Instead of going straight into the national stage, an applicant may ask for an international preliminary examination by an examining authority (PCT Art. 31). This is dealt with in Chapter II of the Convention. This delays entry into the national systems for a further 10 months, so that entry is within 30 rather than 20 months of the priority date. The IPEA establishes an international preliminary examination report indicating whether the invention appears to meet international standards of novelty, inventive step, or industrial applicability (PCT Art. 35(2)). Such examination is merely advisory and not binding on designated countries: PCT Art. 33.

this within six months from the date of publication of the application, or (at the EPO) the publication of the search report.<sup>90</sup>

The purpose of the substantive examination is to ascertain whether the application complies with the requirements of the Patents Act 1977 or, in the case of the EPO, the European Patent Convention 2000.<sup>91</sup> Unlike the preliminary examination, which is mainly concerned with ensuring the presence of certain documents, during the substantive examination the application is scrutinized to ensure that it is valid in all aspects. In particular, the invention is examined to ensure that it does not consist of subject matter excluded from patentability, and that the invention is novel, involves an inventive step, and is industrially applicable. The substantive examination also ensures that the application has been sufficiently disclosed, and that the claims are concise and are supported by the description.

The substantive examination takes the form of a dialogue between the examiner and the applicant. After the examination has taken place the examiner draws up a report which outlines any objections to the application which have been identified. The report is supplied to the applicant who is given an opportunity to comment on the objections, often in the hope of persuading the examiner that any doubts they have about the application are ill-founded. Alternatively, the applicant may respond to the objections by amending the patent application.<sup>92</sup> If they think it necessary, the examiners may make or require further searches. Ultimately, the dialogue may lead to a hearing before the Senior Examiner in the United Kingdom or the full Examining Division of the EPO, and from there by way of appeal to the UK Patents Court or the Board of Appeal of the EPO.<sup>93</sup>

#### 4.7 GRANT OF THE PATENT

If the respective patent office is not satisfied that the application satisfies the various requirements for grant, the application will be refused.<sup>94</sup> If the respective patent office is satisfied that all the necessary requirements have been satisfied, the patent will be granted.<sup>95</sup> The decision to grant a patent does not take effect until the date on which it is mentioned in the *Official Journal* (for a UK patent) or the *European Patent Bulletin* (for a European patent).<sup>96</sup> The protection afforded by a patent can last up to 20 years from the filing date.<sup>97</sup> Renewal fees must be paid after four years.<sup>98</sup> As we will see, the protection may extend beyond the 20-year period where a supplementary protection certificate is issued. The extent of protection conferred by a patent will be considered later.<sup>99</sup>

The date of the grant of a European patent is also the date of its transition from a European application to a bundle of separate national rights.<sup>100</sup> With the exception of opposition proceedings, questions of validity and infringement are thereafter considered at a national level.<sup>101</sup> Once granted, a European patent (UK) is given the same level of protection as those granted by

<sup>90</sup> PA r. 28(2); EPC 2000 r. 70(1). This distinction is not of great significance, given that in the UK an applicant should receive the search report before the date of 'early' publication.

<sup>91</sup> Substantive examinations of EPO applications are carried out in Munich, The Hague, and Berlin.

<sup>92</sup> PA s. 18(3); EPC 2000 Art. 94(3)(4), EPC 2000 r. 71; PCT Ch. II (preliminary examination).

<sup>93</sup> PA s. 97(1); EPC 2000 Art. 106–112a, EPC 2000 rr. 90–96. EPC 2000 Art 112a provides parties with the ability to petition for review by the Enlarged Board of Appeal in limited circumstances.

<sup>94</sup> PA s. 18(3); EPC 2000 Art. 97(2), *EPO Guidelines* C–VI, 7.6. <sup>95</sup> PA s. 18(4); EPC 2000 Art. 97(1).

<sup>96</sup> PA s. 24(1); EPC 2000 Art. 97(3). <sup>97</sup> PA s. 25; EPC 2000 Art. 63(1).

<sup>98</sup> The fees increase over time to ensure that the Registry does not become cluttered with useless patents.

<sup>99</sup> See Ch. 22 below. <sup>100</sup> EPC 2000 Art. 64(1); PA s. 77. <sup>101</sup> EPC 2000 Art. 64(3).

the national patent office.<sup>102</sup> As discussed above, it is no longer necessary to translate European patents in French or German into English within three months of grant at the EPO for them to be valid in the UK.<sup>103</sup>

#### 4.8 REVOCATION

While the patent examination processes at the UK and European Patent Office are relatively rigorous, they are not conclusive. As such, it is possible for patents to be revoked after grant on a limited number of grounds. The grounds on which a patent may be revoked are set out in section 72 of the 1977 Act and Article 138 of the EPC 2000. These are that:

- (i) the invention is not a patentable invention;<sup>104</sup>
- (ii) the patent was granted to a person who was not entitled to that patent;<sup>105</sup>
- (iii) the specification of the patent does not disclose the invention clearly enough and completely enough for it to be performed by a person skilled in the art;<sup>106</sup> or
- (iv) the material in the patent extends beyond the material in the application as filed (impermissible amendment).<sup>107</sup>

In addition, the UK Intellectual Property Office has limited power to revoke patents on its own initiative.<sup>108</sup>

One of the notable features of section 72 is that it says that ‘any person’ can apply to have a patent revoked. This has been taken to mean that there is no need for a person to have any interest, whether commercial or otherwise, in the outcome of proceedings to bring an action to revoke a patent.<sup>109</sup> Unlike the position under the Patents Act 1949, a person who has no interest in the revocation is nevertheless entitled to apply to have the patent revoked. As Jacob J said, ‘Parliament purposively made patents vulnerable to attack from anyone’.<sup>110</sup>

#### 4.9 OPPOSITION PROCEEDINGS AT THE EPO

While the grant of a European patent generally brings the European stage to an end, a central challenge can be made to the validity of the European patent in the nine-month period following grant of the patent.<sup>111</sup> This process, known as ‘opposition’, has a number of advantages over leaving decisions about the validity of patents exclusively to national offices or

<sup>102</sup> PA s. 77(1)(a).

<sup>103</sup> See above at p. 346. EPC 2000 Art. 97(1), r. 71(3), (7). Under PCT Art. 3 an international application can be made to a Patent Office of one of the contracting states, which is termed the receiving office. Rules 4–8 PCT set out the contents of a filing, i.e. a request, a description, at least one claim, drawings where appropriate, and an abstract. The application must designate the states in which protection is sought.

<sup>104</sup> PA s. 72(1)(a); EPC 2000 Art. 138(1)(a); Arts 52–7.

<sup>105</sup> PA s. 72(1)(b); EPC 2000 Art. 138(1)(e). <sup>106</sup> PA s. 72(1)(c); EPC 2000 Art. 138(1)(b).

<sup>107</sup> PA s. 72(1)(d)–(e); EPC 2000 Art. 138(1)(c)–(d). <sup>108</sup> PA s. 73.

<sup>109</sup> *Cairnstores v. Aktiebolaget Hassle* [2002] FSR 35 (there were circumstances where the commencement of revocation proceedings might amount to an abuse of process). See also *Indupack Genentech/Third party opposition*, G03/97 [2000] EPOR 8.

<sup>110</sup> *Oystertec’s Patent* [2003] RPC 559, 563. Cf. PA 1949 ss. 14 and 32 (an applicant for revocation had to be a ‘person interested’).

<sup>111</sup> EPC 2000 Art. 99. See generally Bossung, ‘The Return of European Patent Law to the European Union’, 296.

courts. The most obvious advantage is cost: it is cheaper to launch or defend a single attack in one place rather than to engage in revocation proceedings in each of the countries where the patent was issued.

Any person may file a notice of opposition. For a period, it was common for the proprietor to file oppositions in order to make post-grant amendments (which otherwise would have to be made at national level).<sup>112</sup> This practice has now been curtailed.<sup>113</sup> Opposition has to be filed within nine months from grant and must be based on one of three grounds.<sup>114</sup> These are that:

- (i) the subject matter of the European patent is not patentable under Articles 52–57 EPC 2000;<sup>115</sup>
- (ii) the European patent does not disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art;<sup>116</sup> or
- (iii) the subject matter of the European patent extends beyond the content of the application as filed.<sup>117</sup>

Any opposition to a European patent is communicated to the patent proprietor who may contest the opposition, make observations and/or make amendments. The opposition proceedings will determine whether the patent should be revoked, maintained, or maintained in an amended form.<sup>118</sup> If the proceedings result in revocation, the patent is deemed, from its outset, not to have had any of the effects specified in the EPC.<sup>119</sup>

## 5 AMENDMENT

As we mentioned earlier, applicants are able to alter or amend their initial application both during and after grant of the patent. *Prior to grant*, applicants are able to amend their application where the examination reveals that the formal and substantive requirements are not complied with.<sup>120</sup> In addition, applicants have a general power to amend their application at any time before a patent is granted.<sup>121</sup> The ability to amend during grant is based on a belief that it would be unreasonable to expect applicants to be fully aware of all prior art at the point when they filed their application. This is especially the case given that the patent system provides for a search and examination at a later stage.

*After a patent has been granted*, the owner of a patent is also able to amend their patent.<sup>122</sup> In addition, the comptroller is able to instigate proceedings that may prompt such amendment.<sup>123</sup> Under the EPC 1973 post-grant amendment only occurred in opposition proceedings.<sup>124</sup>

<sup>112</sup> *Mobil Oil/Opposition by proprietor*, G1/84 [1985] OJ EPO 299; [1986] EPOR 39; *Mobil/Admissibility*, T550/88 [1992] OJ EPO 117; [1990] EPOR 391.

<sup>124</sup> *Advanced Semiconductor Products/Limited Feature* G1/93 [1994] OJ EPO 169. Amendments in opposition proceedings are only considered where they are appropriate and necessary, that is that they can fairly be said

Otherwise, such matters were for national law.<sup>125</sup> Under the EPC 2000, however, patent owners are given a general power to revoke or limit European patents after grant at the EPO.<sup>126</sup> Article 138(3) EPC 2000 also provides proprietors of European patents with the right to amend a patent in national proceedings relating to the patent's validity. As we will see, this has ramifications for the role of the judicial discretion to allow amendment. Under the procedures in the UK and EPO, the application to amend is advertised so that any person may oppose it within two months. If granted, the amendment is deemed to have taken effect from the grant of the patent. Since these provisions make no provision for circumstances where there are infringement proceedings and amendment is desired but validity is not in issue, they leave a lacuna in the legislative scheme.<sup>127</sup> This discrepancy is to be resolved by amending section 75 so as to allow patentees to propose amendments in the course of any proceedings.<sup>128</sup>

### 5.1 RESTRICTIONS ON AMENDMENT

In order to ensure that any amendments that are made comply with the overriding aims of the patent system,<sup>129</sup> a number of restrictions are placed on an owner's ability to amend their application/patent. The amended patent must comply with the requirements that have to be met by all patents. These include the requirements of subject matter, novelty, and inventive step. The amended claims must also be clear and concise, be supported by the description, and relate to one invention or group of inventions that are linked to form a single inventive concept.

There are a number of other provisions that restrict an owner's ability to amend either the application or the patent. Perhaps the most important of these, which we deal with in Chapter 20, strike at the validity of the patent. Under these provisions, if the amendment introduces subject matter that was not in the original application, or the amendment extends the scope of protection beyond the initial application, the amended patent is liable to be revoked.<sup>130</sup> In this section, we wish to focus on the situations where validity is not at stake.

to arise out of the grounds of opposition: *Mobil/Admissibility*, T550/88 [1992] OJ EPO 117; [1990] EPOR 391 397, For a discussion of the situations where amended claims will be allowed at the EPO see *Minnesota Mining and Manufacturing Company*, G/99 [2001] OJ EPO 381 (EBA); *Lubrizol Corporation*, T525/99 [2003] OJ EPO 452, 457–8.

<sup>125</sup> *Mobil/Admissibility*, T550/88 [1992] OJ EPO 117; [1990] EPOR 391, 394.

<sup>126</sup> EPC 2000, Art. 105a–105c. See also Art. 1, items 51, 62 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev 1e. It has been proposed that where a patent not in English is limited at the EPO, the UK will require a translation of the patent as granted, limited, or amended within a specific time before that limited patent can take effect in the UK. *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), para. 32–33.

<sup>127</sup> *Norling v. Eez Away* [1997] RPC 160, 165. 'All this suggests that the sooner the whole procedure of amendment of a patent is rethought and provided for by an amended statute and rules the better. Preferably, so far as European patents are concerned, there should be one, effective and cheap, procedure'. In *Boston Scientific v. Palmaz* (unreported, 20 Mar. 2000), the Court of Appeal held that if the EPO had amended a patent 'after judgment in UK patent litigation, but before an appeal of that judgment is heard, the Court of Appeal must consider the patent as amended' [2000] EIPR N–115.

<sup>128</sup> It is proposed that PA s. 75 be changed to allow for amendment during any proceedings where validity may be put in issue, namely during any proceedings for infringement, groundless threats, declarations of non-infringement, revocation proceedings, or disputes over Crown use. See *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses*, paras. 153–155.

<sup>129</sup> R. Krasser, 'Possibilities of Amendment of Patent Claims during the Examination Procedure' (1992) 23 IIC 467, 471; Gunzel, *Staking Your Claim: Claiming Options and Disclosure Requirements in European Patent Practice* (1990), 29. A. Bubb, 'Implied Added Subject Matter, A Practitioner's View of History' (1991) CIPAJ 444.

<sup>130</sup> PA s. 72(1)(d) and (e), s. 76; EPC 2000 Art. 138(1)(c).

An important factor that limits the owner's ability to amend their application as filed arises from the fact that post-grant amendment is at the discretion of the comptroller and the courts.<sup>131</sup> The onus is on the patentee to establish that the amendment should be allowed.<sup>132</sup> As a result of changes made in 2004, when deciding whether to allow an amendment the courts and the Comptroller are directed to take account of 'any relevant principles applicable' under the EPC 2000.<sup>133</sup>

The courts have tended to use their discretion to deny amendments where the owner has not acted innocently. As Jacob J noted, '[n]o patent office is there for the purpose of enabling people deliberately to impose bogus monopolies on the public'.<sup>134</sup> There are two situations where the discretion has been exercised against the patentee. The first is where a patentee knowingly and deliberately obtained claims that were wider than justified by what was invented.<sup>135</sup> The second situation where discretion has not been exercised is where knowing of the doubtful validity of the patent, a patentee has been slow to take action to amend.<sup>136</sup> In *Raleigh Cycle v. Miller*<sup>137</sup> the House of Lords emphasized that a patentee who suspects a patent is too widely drawn should amend it promptly. If they do not, the discretion to amend will be refused. Lord Normand explained that 'the public interest is injured when invalid claims are persisted in so that inventors are illegitimately warned off an area ostensibly monopolised by the claims'. In this situation, patentees should either litigate or amend. However, if they choose to litigate, they should not be permitted to amend later. It is reasonable for a patentee to delay where they believed on reasonable grounds that the patent was valid.<sup>138</sup>

Another factor that regulates the way patents are amended arises from the fact that the courts may limit the damages that are awarded where an amended patent is infringed. There are two situations where this may occur. If an amended application expands the claims beyond that which was reasonable to expect from the application as it was initially published, the courts may limit the damages that are available to the patentee. The question whether the inference is reasonable is objective. As such, it does not matter what the defendant (subjectively)

<sup>131</sup> PA ss. 27(1); 75(1). EPC 2000 Art 105a. The Court of Appeal confirmed the general discretion of the courts to refuse post-grant amendments in the public interest under PA s. 75 in *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 422, 435. In so doing it overturned Laddie J's decision in the Patents Courts in *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 424. (Cf. *Palmar's European Patent (UK)* [1999] RPC 47, 63–5 which distinguished Laddie J on this point.) For the application of the CA decision see *Oxford Gene Technology v. Affymetrix (No. 2)* [2001] RPC 310 (CA). See generally P. Cliffe, 'A Sorry Case of Making Amends' [2002] EIPR 277.

<sup>132</sup> *SKF v. Evans Medical* [1989] FSR 561, 569; *Chevron Research Company's Patent* [1970] RPC 580.

<sup>133</sup> PA s. 75(5).

<sup>134</sup> *Richardson-Vicks Patent* [1995] RPC 561. See also *Hallen v. Brabantia* (1990) FSR 134, 149; *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 422, 435 (Aldous LJ) (CA).

<sup>135</sup> *ICI (Whyte's) Patent* [1978] RPC 11. In *Richardson-Vicks Patent* [1995] RPC 561, 568, Jacob J observed that there was little EPO jurisprudence as regards post-grant amendment in opposition proceedings. Nonetheless he assumed that if it was shown that an applicant had deliberately sought to patent an unjustifiably wide claim, the EPO would refuse leave to amend. Beyond this, however, Jacob J predicted that the EPO might allow a patent to be amended. Consequently, Jacob J held that, for purposes of consistency, nothing short of really blameworthy conduct by a patentee should act as bar to amendment in the UK. See also *Kimberly-Clark Worldwide v. Procter & Gamble (No. 2)* [2001] FSR 339, 342–3.

<sup>136</sup> *SKF v. Evans* [1989] FSR 561, 577.

<sup>137</sup> (1950) 67 RPC 226.

<sup>138</sup> On some occasions the courts have suggested that delay is more justified where the patentee operates outside the UK. *Bristol Myers Company v. Manon Freres* [1973] RPC 836, 857; *Mabuchi Motor KK's Patent* [1996] RPC 387 (not blameworthy to delay when involved in worldwide litigation in which the UK was not an important country).

thought.<sup>139</sup> It has been suggested that this rule will apply where a defendant reasonably thought that no claim covering what they do would be supported by the description in the specification. Apart from that, it was seen as unlikely to have wide application.<sup>140</sup> Another factor that regulates the way patents are amended arises from the fact that, where a specification is amended, damages are only awarded prior to the date of the amendment if the court is satisfied that the specification as originally published was framed in good faith and with reasonable skill and knowledge.<sup>141</sup> In practice, it is rare for the courts to find that patents were not framed in these terms.

## 5.2 ERRORS AND CLERICAL MISTAKES

Instead of amending a patent, a patentee may seek to have the patent altered to correct errors and clerical mistakes.<sup>142</sup> Such corrections take effect retroactively. The ability to correct mistakes does not conflict with the general policy of protecting third parties which forbids amendments that extend the patent beyond the scope of the application as filed. The reason for this is that 'if the mistake was obvious, it cannot have misled'.<sup>143</sup>

If the request to correct a mistake concerns the description, claims, or drawings, the correction must be obvious. A correction will be obvious where it is immediately evident that nothing else would have been intended other than what is offered as the correction.<sup>144</sup> If there are any doubts, a correction cannot be made. A useful example of the limits imposed on a patentee's ability to correct mistakes can be seen in *PPG Industries Patent*.<sup>145</sup> In this case it was said that, faced with the proposition '2 + 2 = 5' a person might readily presume that this was obviously incorrect and that to correct the mistake the '5' should be changed to a '4'. However, as Dillon and Slade LJ pointed out, since an alternative solution was to change one of the '2's to a '3', in the absence of an indication as to where the mistake lay, the correction was not obvious within the meaning of the Act.

## 6 REFORM

Another change that may take place in patent procedure relates to the information that applicants have to disclose in their patent application. While these changes are some way off, discussions are taking place at the national, community, and international level about the possibility of requiring inventors who draw upon or utilize genetic resources in the development of their inventions to disclose information in their patent application, such as the fact that they have prior informed consent to use the genetic resources. These discussions have been prompted by Article 15 of the CBD (which recognizes equitable benefit sharing for access providers) and

<sup>139</sup> *Unilever v. Chefaro* [1994] RPC 567, 592.

<sup>140</sup> Jacob J's reasoning, which was dependent on the assumption that there could be no revocation for broad unsupported claims, is now doubtful in the light of *Biogen v. Medeva* [1997] RPC 1 (HL).

<sup>141</sup> PA s. 62(3). See *General Tyre & Rubber v. Firestone Tyre & Rubber* [1975] RPC, 270 (CA); *Chiron v. Organon* (No. 7) [1994] FSR 458. PA s. 62(3) does not apply to an account of profits. *Codex Corporation v. Racal Milgo* [1983] RPC 369 (CA).

<sup>142</sup> PA s. 117(1), PA r. 105; EPC 2000 r. 139.

<sup>143</sup> *Holtite v. Jost* [1979] RPC 81, 91 (Lord Diplock). In *Correction Under Rule 88*; G3/89 [1993] EPOR 376, it was held by the Enlarged Board of Appeal that, as a matter of construction of the EPC, the correction must not extend protection contrary to EPC 1973 Art. 123(2) (which is the same as EPC 2000 Art 123(2)).

<sup>144</sup> This was the position under PA 1949 s. 31(1): *Holtite v. Jost* [1979] RPC 81.

<sup>145</sup> [1987] RPC 469, 478, 483.

by Article 8(j) of the CBD (which encourages the equitable sharing of benefits arising from the use of indigenous knowledge).<sup>146</sup> The discussions have also been prompted by the growing concern about biopiracy and the general misuse of genetic resources in the biodiscovery process. The idea that applicants should be required to disclose information about their invention builds upon the idea that patent law has the potential to modify behaviour to promote good corporate and scientific conduct.<sup>147</sup> The fact that an organization might not be able to patent products derived from genetic resources, if they do not have the informed consent of the access provider in advance, will act as a powerful incentive for such organizations to ensure that they have the necessary prior consent. As we mentioned earlier, debates are at present taking place at the international level over whether or not prior informed consent should be incorporated into patent law, and if so, how.<sup>148</sup> Discussions are also taking place within Europe as to the best way in which the goals of the CBD might be achieved.<sup>149</sup> The issue of prior informed consent has already been recognized in Europe in the Biotechnology Directive, albeit only in the non-binding Recitals. In particular, Recital 27 encourages patent applications to include information on the geographical origin of biological material. In turn, Recital 55 requires member states to recognize Article 8(j) of the CBD when developing laws and regulations. To date these have had minimal impact on member states.<sup>150</sup> More recently, the Commission has suggested that there should be a debate over the unilateral development under EC law of 'a self-standing obligation for patent applicants to disclose the origin of genetic resources'.<sup>151</sup> This builds upon existing requirements that encourage disclosure of information, namely enabling disclosure, disclosure of relevant prior art for novelty examination, and the disclosure of the inventors.<sup>152</sup> The proposal by the Commission is fairly modest. Prior informed consent will not be treated as an additional or formal requirement for patentability. Rather, the Commission has suggested that failure to comply with the requirement for prior informed consent would carry consequences outside patent law. For example, it might prompt civil law claims for compensation or administrative sanctions (such as a fee for refusal to submit relevant information). The Commission is also looking at introducing a similar requirement for plant variety rights.<sup>153</sup>

As well as the above, the Commission has opened up discussions as to the position that it should adopt in international multilateral treaty negotiations about prior informed consent.<sup>154</sup> In this context, the Commission has said that it should be prepared to discuss prior informed consent as a formal condition for patentability, and not merely as a self-standing obligation. Here the options include the non-processing of patent applications until all the relevant information has been provided, and the invalidation and revocation of patents if the

<sup>146</sup> See also the *Bonn Guidelines on access and benefit sharing*, adopted at the Sixth Conference of the Parties to the CBD, (The Hague, 2002). These are voluntary provisions that act as a guide to the implementation of CBD Art. 1, 8 (j), 10(c), 15, 16, and 19.

<sup>147</sup> See B. Sherman, 'Regulating access and use of genetic resources: intellectual property law and biodiscovery' (2003) *EIPR* 301.

<sup>148</sup> Particularly at the CBD, the TRIPS Council, and at WIPO. See above at pp. 355–6.

<sup>149</sup> See also 'EC Thematic Report on Access and Benefit-Sharing', submitted to CBD Secretariat in Oct. 2002, available at <<http://biodiversity-chm.eea.eu.int/>>.

<sup>150</sup> A notable exception being Denmark. See G. van Overwalle, 'Belgium goes its own way on Biodiversity and Patents' [2002] *EIPR* 233.

<sup>152</sup> *Ibid.*, 17. The proposal also builds on a Concept Paper submitted by the EC to the TRIPS Council in Oct. 2003 on the relationship between TRIPS and the CBD.

<sup>153</sup> *Ibid.*, 18.

<sup>154</sup> *Ibid.*, 19.

applicant fraudulently disclosed incorrect information. As a way of assisting applicants, the Commission has suggested the use of certificates of origin. As we saw earlier, this issue has been taken up as part of the on-going reform of TRIPS. However, like many other recent proposed changes, it is unlikely that these proposals will ever be implemented.

While there are many questions that remain unanswered, there is a chance that prior informed consent might go some way to providing indigenous groups, as well as mega-biodiverse countries, with an equitable share of the benefits that flow from the use of their resources. Ironically, by encouraging the situation in which access providers will be entitled to a percentage of the patent royalties that flow from products developed from genetic resources, this adds to the problem of 'royalty stacking' that is causing so many problems in the life sciences. Unrealistic expectations about the value of the genetic resources have served to exacerbate this problem.

Another area where reform might be considered is examination. Here there are two issues that are currently attracting interest. The first relates to the rigour with which examinations are conducted. Some argue that, given the fact that the number of patent applications vastly exceeds the number of commercially significant inventions, it is a huge waste of resources to examine every application in detail. The most efficient approach, it is said, is to perform a cursory examination of all applications, and to review seriously the validity of any grant that has commercial significance.<sup>155</sup> As the validity of any commercially valuable patent will be subjected to a thorough review in any litigation, we should not bother to waste resources on pre-grant examination of patents. On the other hand, some argue that examination is important to protect the public, in particular small traders, from threats of patent litigation by well-resourced claimants on the basis of granted patents of dubious validity. Essentially, the argument is that even invalid patents can be used to chill activity of legitimate traders, or extort settlements from risk-averse or poorly financed potential defendants. A related problem is said to be the activity of 'patent trolls', that is commercial organisations that acquire patents specifically with a view to bringing actions in the hope of making money by forcing settlements.<sup>156</sup> Although the causes and effects of patent trolling are controversial, some argue that the impact has been made much worse by the practices of some Patent Offices in granting patents which rigorous examination would have shown related to subjects which lacked novelty or were obvious.

The second issue related to examination arises from increasing backlogs in the processing of applications. Filings at the EPO, for example, have quadrupled in the last 25 years to over 208,000 in 2006, leaving substantial backlogs. One possible solution that has been mooted is to farm out examinations to other countries, such as India or Korea, where they can be processed more cheaply and quickly. Another possible solution would be for the EPO examiners to rely on the decisions of other Offices. So, for example, a patent that passed examination at the US Office might be regarded as automatically registrable in Europe. The problem with such a proposal for 'mutual recognition' is that not all Offices apply the same standards. Substantive patent harmonization may need to be effected first.

## PATENTABLE SUBJECT MATTER

### CHAPTER CONTENTS

1	Introduction	391	6	Is the Invention Excluded by Section 1(2)/Article 52(2)?	405
2	Patentable Subject Matter	391	7	Specific Applications	420
3	Industrial Application	392	8	Biological Subject Matter	441
4	Methods of Medical and Veterinary Treatment	395	9	Immoral Inventions	453
5	Excluded Subject Matter	403			

### 1 INTRODUCTION

In the previous two chapters, we looked at the nature of a patent and the processes by which patents are granted. In this and the following three chapters we look at the factors that an invention must comply with to be patentable. These are that the invention:

- (i) consists of subject matter that is patentable (this chapter),
- (ii) is new (Chapter 18),
- (iii) involves an inventive step (Chapter 19), and
- (iv) complies with the internal requirements of patentability (Chapter 20).

If an application fails to comply with any of these criteria, a patent will not be granted. If a patent has already been granted, non-compliance may mean that the patent is revoked. With these general points in mind, we now turn to look at the subject matter that is capable of being patented.

### 2 PATENTABLE SUBJECT MATTER

The task of having to decide the types of subject matter that ought to be patentable invariably generates conflict and uncertainty. This is because patent law inevitably finds itself dealing with technologies that it may not yet understand. It is also because the task of having to decide

whether to grant property rights in a particular type of invention raises a complex mix of legal, cultural, political, and social questions. Over time a range of different factors has restricted the subject matter protected by patents. Perhaps the most important is the image of the invention as something concrete and physical which results from human intervention in nature.<sup>1</sup> A range of other more explicit policy factors has also limited the type of subject matter that is protected by patents.

The subject matter that is potentially patentable under the Patents Act 1977 and the EPC 2000 is regulated in five ways.

The first limitation is that to be patentable an invention must be capable of ‘industrial application’: section 1(1)(c), section 4/Article 52(1). While this is probably the least important of the five requirements, it has been important in relation to inventions involving naturally occurring substances.

The second restriction on patentable subject matter is found in section 4A(1) and Article 53. These provide that a patent shall not be granted for methods of medical and veterinary treatment.<sup>2</sup>

The third restriction on the subject matter protected by patents is set out in section 1(2) and Article 52(2)(3). In essence these provide a non-exhaustive list of things which are not regarded as inventions. If the subject matter of an application falls within the scope of these provisions, it will not be patentable.

The fourth general restriction on the subject matter excluded from patent protection is in paragraph 3(f) of Schedule A2 to the 1977 Act<sup>3</sup> and Article 53(b). These provide that a patent shall not be granted for ‘any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a microbiological process or the product of such a process’.

The fifth factor which restricts the subject matter protected by patent law is that patents are not granted for immoral inventions or inventions which are contrary to public policy: section 1(3)<sup>4</sup>/Article 53(a). While rarely used in the past, this exclusion has taken on a new significance in light of developments in biotechnology. A number of specific exclusions relating to immoral biological inventions are also contained in paragraph 3(a)–(d) of Schedule A2 to the 1977 Act and Rule 28 EPC 2000 (formerly Rule 23d EPC 1973).

We will look at each of these in turn.

### 3 INDUSTRIAL APPLICATION

In order for an invention to be patentable it must be capable of ‘industrial application’.<sup>5</sup> This reflects the long-held view that patent protection should not be available for purely abstract or intellectual creations. The need to show industrial applicability also reflects the image of the patentable invention as having a concrete and technical character.<sup>6</sup>

<sup>1</sup> Sherman and Bently, 46, 150–7.

<sup>2</sup> Previously, methods of medical and veterinary treatment were excluded on the basis that they were not industrially applicable.

<sup>3</sup> This provision, which replaced PA s. 1(3)(b) (as enacted), was introduced by the Patents Regulations 2000 (SI 2000/2037) (in force 28 Jul. 2000).

<sup>4</sup> This provision, which replaced PA s. 1(3)(a) (as enacted), was introduced by the Patents Regulations 2000.

<sup>5</sup> PA s. 1(1)(c); EPC 2000 Art. 52(1).

<sup>6</sup> EPC 2000, Art. 52(1) provides that European patents ‘shall be granted for any inventions *in all fields of technology*, provided that they are new, involve an inventive step and are susceptible of industrial application’.

An invention is capable of industrial application if it can be used or made in 'any kind of industry'.<sup>7</sup> Industry is construed in its widest sense, including activities whether or not for profit,<sup>8</sup> and expressly extends to include agriculture.<sup>9</sup> As such, the requirement that an invention be made or used in industry presents few problems. In a controversial decision, however, it was held that a private and personal activity (the application of a contraceptive composition to the cervix) was not industrial in character and thus not patentable.<sup>10</sup>

As well as being used or made in any kind of industry, for an invention to be industrially applicable, it is also necessary to show that it has a 'useful purpose'.<sup>11</sup> As the Patents Act 1977 and the EPC 2000 provide that inventions only need to be *susceptible* or *capable* of industrial application, this implies that there is no need to show actual use: it is enough to show that the invention has the *potential* to be used or made in industry. Where a product has been used (or put on the market), the commercial success of the product is not relevant when deciding industrial applicability.<sup>12</sup>

The requirement that inventions need to exhibit a useful purpose is particularly important in relation to biological research. The reason for this is that although researchers have been successful in locating and identifying new gene structures, so far they have been much less successful in ascertaining what many of these genes do.<sup>13</sup> While researchers have been able to identify the genes that make up the human genome, the role that many of these genes play remains unknown. Unless a useful purpose can be found for these genes, they will not be industrially applicable and, as such, not patentable.<sup>14</sup> This position is reinforced by the Biotechnology Directive insofar as it attempts to clarify the industrial applicability requirement in relation to biological inventions.<sup>15</sup> As the Recitals to the Directive explain, a mere

See Art. 1, item 17 of the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 Nov. 2000) MR/3/00 Rev. 1e; Base Proposal for the Revision of the European Patent Convention, CA/100/00 e (2000), 38. PA s. 1 was to be amended to reflect Art. 52(1) EPC 2000. *Consultation on the proposed Patents Act (Amendment) Bill: Summary of responses and the Government's conclusions* (13 Nov. 2003), para. 17. Despite earlier plans, this was not adopted in the Patents Act 2004.

<sup>7</sup> PA s. 4(1); EPC Art. 57. But not when the invention contravenes well-established natural laws: *Duckett v. Patent Office* [2005] EWHC 3140 (application for machine that contravened the principle of conservation of energy was rejected); *Thompson v. Comptroller General of Patents, Designs and Trade Marks* [2005] EWHC 3065 (invention which purported to contravene Newton's third law of motion was rejected); *Ward v. Comptroller-General* (unreported) (19 May 2000) (CA) (application for perpetual motion machine was rejected).

<sup>8</sup> *Chiron v. Murex (No. 12)* [1996] RPC 535, 607 (Morritt LJ). <sup>9</sup> PA s. 4(1); EPC Art. 57.

<sup>10</sup> *British Technology Group/Contraceptive method*, T74/93 [1995] EPOR 279, 284. For criticisms of the decision see J. Pagenberg, 'Comment' (1996) 27 IIC 104.

<sup>11</sup> *Chiron v. Murex (No. 12)* [1996] RPC 535, 607 (Morritt LJ).

<sup>12</sup> *Harvard/Onco-mouse* [2003] OJ EPO 473, 494 (Opposition Division). (The fact that the transgenic mice were commercially unsuccessful was not relevant: all that mattered in this context was that they were on the market.)

<sup>13</sup> This problem has been exacerbated by the success of the human (and other) genome projects which attempt to identify the thousands of genes that comprise the genetic blueprint of biological entities. On which see T. Wilkie, *Perilous Knowledge* (1993); BMA, *Our Genetic Future: the Science and Ethics of Genetic Technology* (1992); P. Gannon, T. Guthrie, and G. Laurie, 'Patents, Morality and DNA: Should there be Intellectual Property Protection of the Human Genome Project' (1995) 1 *Medical Law International* 321; J. Straus, 'Patenting Human Genes in Europe: Past Developments and Prospects for the Future' (1995) 26 IIC 920.

<sup>14</sup> On the proposal for a probationary or interim patent pending discovery of the function of a gene sequence see M. Llewellyn, 'Industrial Applicability/Utility and Genetic Engineering: Current Practices in Europe and the United States' [1994] EIPR 473, 480.

<sup>15</sup> In *Icos Corporation/Seven transmembrane receptor* [2002] OJ EPO 293, 304 (para. 9), the Opposition Division said that the Recitals to the Biotech Dir. were relevant as supplementary rules of interpretation when examining European patent applications.

DNA sequence without any indication of function does not contain any technical information and is therefore not a patentable invention.<sup>16</sup> In relation to gene sequencing, the Biotechnology Directive and the Patents Act (as amended) specify that the industrial application of a sequenced or a partial sequence of a gene must be disclosed in the application.<sup>17</sup> Where a full or partial sequence of a gene is used to produce a protein or part of a protein, the subject matter will only satisfy the requirement of industrial applicability if the application specifies which protein is produced or the function that it performs.<sup>18</sup> For example it would be necessary to show a biological function (which would imply a therapeutic use), or that the sequence could be used as a genetic marker (which would imply a diagnostic use). The Opposition Division at the EPO applied this reasoning in *Icos Corporation* to deny patent protection for a purified and isolated polynucleotide encoding for the amino acid sequence of the V28 protein.<sup>19</sup> The specification in question listed a number of predicted uses for the claimed protein (in relation to ‘immunological and inflammatory events’). The problem for the applicant, however, was that these uses were based on the *predicted* function of the protein as a receptor.<sup>20</sup> Importantly, the applicants were unable to show that the receptor was actually involved in any specific immunological and/or inflammatory events. The Opposition Division said that it was not enough for the application to disclose uses that were merely speculative.<sup>21</sup> Echoing (but not citing) the USPTO Guidelines,<sup>22</sup> the Opposition Division added that ‘DNA sequences with indications of function which are not substantial, specific, and credible shall not be patentable inventions according to Article 52(1) EPC’.<sup>23</sup> On this basis, the Opposition Division said that the application lacked industrial applicability and, as such, was not patentable.

While critics who argue that gene patents are having a chilling impact on research will welcome this decision, others may find that it does not go far enough. In particular, it is now being suggested that the problem with patents over genes is that, while a patentee only has to disclose one specific use to show industrial applicability, once this threshold is satisfied they are given control over *all* uses of the patented gene: even those uses which they had not discovered or even imagined. The problem here is that there is a lack of symmetry between what is disclosed and what is protected. This has led some to argue that protection should be limited to what is

<sup>16</sup> Biotech. Dir., Recital 23.

<sup>17</sup> Ibid, Art. 5(3), Recital 22. PA s. 76A, and Sched. A2, para. 6. See also Administrative Council of the EPO 16 June 1999 amending the Implementing Regulations of the EPC, EPC Rule 23e(3) (1999) 7 *OJ EPO* 437 (which introduced the Biotech. Directive, Art. 5(3) into the EPC).

<sup>18</sup> S. Bostyn, ‘The Patentability of Genetic Information Carriers’ [1999] *IPQ* 1, 7–8; Straus, ‘Patenting Human Genes in Europe’, 934–5; O. Gandy, ‘The EC Biotechnology Patent Directive: A More Ethical European Patent System?’ (1998) 12 *World Intellectual Property Reports* 239. Biotech. Dir., Recital 24. See *Chiron v. Murex (No. 12)* [1996] FSR 153, 177 (claim to polypeptides invalid because the claim covered ‘an almost infinite number of polypeptides which are useless for any known purpose’).

<sup>19</sup> The UK Patent Office said that it will follow *Icos Corporation/Seven transmembrane receptor*, note 15 above. UK Patent Office, *Biotechnology Examination Guidelines* (Sept. 2002), para. 33–35.

<sup>20</sup> This was because the specification did not disclose any antibody substances which specially recognize V28 protein.

<sup>21</sup> This was based on Recital 23 of the Biotech. Dir. (which provides that ‘a mere DNA sequence without indication of a function does not contain any technical information and is therefore not a patentable invention’).

<sup>22</sup> The USPTO issued guidelines on the interpretation of the utility requirement under US patent law on 5 Jan. 2001. These state that for an invention to have requisite utility (which is similar to industrial application), there must be a ‘specific, substantial and credible’ use. The Guidelines are available at <<http://www.uspto.gov/web/menu/utility.pdf>>.

<sup>23</sup> *Icos Corporation/Seven transmembrane receptor* [2002] *OJ EPO* 293, 307 (para. 11(ii)).

actually disclosed in the application.<sup>24</sup> Despite its importance, this issue has not yet been given the attention that it clearly requires.

## 4 METHODS OF MEDICAL AND VETERINARY TREATMENT

The second category of subject matter excluded from patentability is inventions for methods of medical and veterinary treatment.<sup>25</sup> Such inventions are excluded to ensure that people who carry out medical or veterinary treatments are not inhibited by patents.<sup>26</sup> As the Enlarged Board noted, this helps to achieve the socio-ethical and public health goal that '[m]edical and veterinary practitioners should be free to take the actions they consider suited to diagnose illness by means of investigative methods'.<sup>27</sup> Prior to the EPC 2000, methods of medical and veterinary treatment were excluded on the basis that they were not capable of industrial application.<sup>28</sup> Under the EPC 2000, however, methods of treatment and diagnosis are now directly excluded from patentability under Article 53(c) EPC 2000 rather than on the basis that they were not capable of industrial application, as was the case previously. Article 53(c) EPC 2000 provides that 'a patent shall not be granted for methods of treatment of the human or animal body by surgery or therapy, and diagnostic methods practiced on the human or animal body'.<sup>29</sup> Similar changes were made in the UK to bring the Patents Act 1977 into line with EPC 2000: the exclusion now being found in section 4A of the Act.<sup>30</sup> On the basis that the changes brought about by EPC 2000 in this area were primarily editorial in nature, the Enlarged Board of Appeal has said that the 'actual legal position remains unchanged'.<sup>31</sup> Given this, the case law previously decided under EPC 1973 is still applicable.

### 4.1 METHODS

It is important to note that the exclusion is confined to *methods* of medical and veterinary treatment.<sup>32</sup> As such, it does not prevent the patenting of surgical, therapeutic, or diagnostic substances and compositions (such as drugs), or apparatuses or products (such as ECG machines, prosthetic ball and socket joints, or pacemakers).<sup>33</sup>

<sup>24</sup> See above at pp. 366–7.

<sup>25</sup> See generally, D. Thums, 'Patent Protection for Medical Treatment: A Distinction between Patent and Medical Law' (1996) 27 *IIC* 423; G. Burch, 'Ethical Considerations in the Patenting of Medical Processes' (1987) 65 *Texas Law Review* 1139 (under US law, methods of medical treatment are patentable).

<sup>26</sup> *Wellcome/Pigs I*, T116/85 [1989] *EPOR* 1; [1989] *OJ EPO* 13; *Telectronics/Pacer*, T82/93 [1996] *EPOR* 409; *See-Shell/Blood flow*, T182/90 [1994] *EPOR* 320. A technique that results in death of the animal does not fall within the exception.

<sup>27</sup> *Diagnostic methods* G 01/04 (2006) *OJ EPO* 334, 348 (EBA).

<sup>28</sup> PA s. 4(2)/EPC 1973 Art. 52(4) (both provisions have been repealed). TRIPS Art. 27(3) allows members to exclude from patentability diagnostic, therapeutic, and surgical methods for the treatment of humans or animals.

<sup>29</sup> While Art 53 EPC 2000 and PA s 4A are drafted (slightly) differently, it is unlikely that this will have any significant consequences.

<sup>30</sup> Patents Act 2004, cl. 1 (inserting a new s. 4A into the Patents Act 1977). See also *Consultation on the proposed Patent's Act (Amendment) Bill: Summary of responses*, paras. 19, 20. Minor changes were also made to bring the language in the 1977 Act closer to that used in EPC 2000.

<sup>31</sup> *Diagnostic methods*, G01/04 (2006) *OJ EPO* 334, 360 (EBA). <sup>32</sup> PA s. 4A; EPC 2000 Art. 53(c).

## 4.2 SURGERY, THERAPY, OR DIAGNOSIS

For an invention to be caught by section 4A/Article 53(c), it must consist of a method of *surgery*, *therapy*, or *diagnosis*. In the past, when deciding whether an invention is for method of surgery, therapy, or diagnosis the tribunals have occasionally focused on the skill and knowledge that is needed for a person to use the method in question. Thus, if an activity needs to be carried out by or under the supervision of a doctor or a vet,<sup>34</sup> exercising medical or veterinary skills,<sup>35</sup> it was more likely to fall within the exclusion.<sup>36</sup> If the invention could be used by someone such as an engineer<sup>37</sup> or a farmer,<sup>38</sup> it was more likely to fall outside the scope of the exclusion. After the Enlarged Board of Appeal decision in *Diagnostic methods*,<sup>39</sup> this approach is no longer relevant. The reason for this is that the Board said that the decision as to whether an invention falls within the exclusion is not dependent on who carries out the method in question: ‘whether or not a method is a diagnostic method within the meaning of [EPC 1973 Article 52(4); EPC 2000 Art 53(c)] should neither depend on the participation of a medical or veterinary practitioner, by being present or by bearing the responsibility, nor on the fact that all method steps can also, or only, be practiced by medicinal or non-medicinal support staff, the patient himself or herself or an automated system.’<sup>40</sup> (While these comments were made in relation to diagnostic methods, it is likely that the reasoning would also be applied to surgery and therapy.) This means that, while the skill and knowledge needed to perform an invention may provide a useful indication as to whether it is excluded, this is not definitive.<sup>41</sup> Instead, it is necessary to look at whether the invention in question falls with the definition of surgery, therapy, or diagnosis.<sup>42</sup>

(i) *Surgery*. ‘Surgery’ has been defined as the branch ‘of medicine concerned with the healing of disease, accidental injury or bodily defects by operating on the living body’. It is said to include both ‘conservative (non-invasive) procedures such as repositioning and the far more numerous operative (invasive) procedures using instruments’.<sup>43</sup> In recent years it has become clear that there are two inconsistent approaches to the way that surgery is defined.<sup>44</sup> While one line of decisions focused on the nature of the physical intervention itself, a second line of decisions concentrated on the *purpose* of the intervention. Under the first and older approach, the tribunals have looked at the nature of the intervention and whether this could be classified as ‘surgery’. This approach is endorsed by the *EPO Guidelines* which state that surgery is defined by ‘the nature of the treatment rather than the purpose’.<sup>45</sup> It has also been

<sup>34</sup> *Thompson/Cornea*, T24/91 [1995] OJ EPO 512.

<sup>35</sup> *Ultrafem/Feminine hygiene device*, T1165/97 (15 Feb. 2000), para. 4.3 (a device used to collect vaginal discharge was not a method of medical treatment, even though it was inserted and removed by a medically trained person or doctor. The problem was that there were no ‘particular medical skills needed to position and remove the collector’).

<sup>36</sup> Cf. *Cygnus/Device and method for sampling substances*, T964/99 [2002] OJ EPO 4, 17 (‘it is immaterial that the claimed methods (for determining blood sugar levels) could be performed by a patient himself’. The invention was excluded under EPC Art. 52(4)).

<sup>37</sup> *Siemens/Flow measurement*, T2245/87 [1989] OJ EPO 171.

<sup>38</sup> *Wellcome/Pigs I*, T116/85 [1988] EPOR 1; [1998] OJ EPO 13.

<sup>39</sup> G01/04 [2006] OJ EPO 334 (EBA). <sup>40</sup> *Ibid*, 355.

<sup>41</sup> *Baxter/Blood extraction method*, T329/94 [1998] EPOR 363, 366–7.

<sup>42</sup> *Ibid*, 367–8 (an invention of performing a method with the *technical* aim of facilitating blood flow towards a blood extraction point, was held to have no therapeutic purpose or effect and was thus not excluded).

<sup>43</sup> *See-Shell/Blood flow*, T182/90 [1994] EPOR 320, 323.

<sup>44</sup> The TBA recognized other approaches, including the risk of the activity, may be applied: *Medi-Physics/Treatment by surgery*, T992/03 (2007) OJ EPO 557, 570.

<sup>45</sup> C-IV, 4.8.

applied in a series of decisions by the Technical Board of Appeal at the EPO.<sup>46</sup> It is also the approach that has been adopted in the UK.

In a second series of decisions, the EPO has moved beyond the nature of the intervention itself to focus on the *purpose* of the invention in question. In particular, this second line of decisions has focused on whether the physical intervention ‘is suitable for maintaining or restoring health, the physical integrity of the physical well being of a person or animal’. The Enlarged Board of Appeal seemed to support this approach when it said (in obiter) that surgery ‘includes any physical intervention on the human or animal body in which maintaining the life and health of the subject is of paramount importance’.<sup>47</sup> By emphasizing the purpose of the intervention rather than its nature, a distinction has been drawn between two different types of physical intervention in the body. The first, which falls within the definition of surgery, comprises those curative practices which aim to maintain or promote health. The second type of physical intervention, which does not qualify as surgery for the purposes of Article 53(c) EPC 2000, comprises interventions carried out for non-curative purposes. On the basis that surgery is limited to processes that give ‘priority to maintaining life or health of the human or animal body on which they are performed’, it does not include processes the end result of which is the death of living beings under treatment, either deliberately or incidentally.<sup>48</sup> In a similar vein, in the *General Hospital* decision, the Technical Board of Appeal said that surgical treatment aims at protecting curative activities. This means that the exception applies to activities aimed at maintaining and restoring the health, physical integrity, and physical well-being of a person (and also preventing diseases).<sup>49</sup> On this basis, it was held that surgical treatments<sup>50</sup> which were ‘neither clearly suitable nor potentially suitable for maintaining or restoring the health, the physical integrity, or the physical well being of human beings or animals’ did not fall with the exclusion in Article 52(4) EPC 1973 (Article 53(c) EPC 2000).<sup>51</sup> From this perspective, the Board concluded that an application that related to ‘methods for hair-removal using optical radiation’ (effectively applying optical radiation to a selected wavelength to damage the hairs and follicles without causing significant damage to the skin) was *not* excluded from patentability. While the invention involved ‘a non-intentional physical intervention which [was] to be regarded as a surgical operation’, it was not ‘potentially suitable for maintaining or restoring the health, physical integrity, or physical well-being of a person or animal’. The purpose of the application was to improve the aesthetic appearance of the person treated rather than to cure the underlying malady. As such the Board held that the application did not fall within the remit of Article 53(c). Applying a similar logic, the Board also said that tattooing and piercing, whose only possible object was to beautify the human or animal body, would not fall foul of Art 53(c). This was not the case, however, in relation to breast enlargement or nose reconstructions, which could be used to restore the physical integrity of the body following, for example,

<sup>46</sup> *See-Shell/Blood flow*, T182/90 [1994] EPOR 320; *Georgetown University/Pericardial access*, T35/99 (2000) OJ EPO 447; *Baxter/Blood extraction method*, T329/94 [1998] EPOR 363 (focused on the use of surgical instruments).

<sup>47</sup> *Diagnostic methods*, G01/04 (2006) OJ EPO 334, 352 (EBA).

<sup>48</sup> *Georgetown University/Pericardial access*, T35/99 [2000] OJ EPO 447, 451.

<sup>49</sup> *General Hospital Corp/Hair removal method*, T383/03 (2005) OJ EPO 159, 165. (the same applies to activities performed on animals).

<sup>50</sup> The board also stressed that ‘surgery’ and ‘treatment’ could not be considered as two distinct requirements for the exclusion *ibid*, 163. It did not matter if the medical profession referred to these activities as ‘treatment by surgery’. Instead, what was important was whether the activity fell within the language and spirit of the exclusion.

<sup>51</sup> *Ibid*, 166.

breast cancer or a car accident.<sup>52</sup> The key difference is that the latter methods *are* potentially suitable for maintaining or restoring the health, physical integrity, or physical well-being of a person. This was in contrast to methods whose only application is for aesthetic purposes, which could not be used for medical reasons, and thus would be excluded under Article 53(c).

As the *UK Intellectual Property Office Guidelines* for medical inventions note, the second approach (as outlined in the *General Hospital* decision) is out of step with British practice. Following the 1983 UK decision in *Unilever (Davis' Application)*, which held that claims for a method of surgery should be refused regardless of their purpose, the UK Intellectual Property Office has decided not to follow the EPO in this regard.<sup>53</sup>

The nature of the conflict between the two lines of decisions at the EPO was recognized by the Technical Board of Appeal in *Medi-Physics*, where the question of the proper approach to be followed was referred to the Enlarged Board for consideration.<sup>54</sup> In so doing, the Technical Board raised the familiar complaint of purpose-bound tests, namely that the same physical activity may be used for different purposes.<sup>55</sup> Thus the injection of a medicament (such as Botox) for treating a disease would be excluded, whereas the injection of the same medicament for the purpose of reducing wrinkles would not (on the basis that it would be carried out for cosmetic rather than curative reasons). In this context, the operation of the exclusion will depend on the motive of the person administering the drug; which runs counter to the Enlarged Board's decision that it was important to focus on the nature of the activity itself, rather than on the type of person who delivers the activity and what their motive might have been.

(ii) *Therapy*. 'Therapy' has been interpreted broadly as the curing of a disease or malfunction of the human or animal body<sup>56</sup> and includes *prophylactic* treatments with a view to maintaining health by preventing ill effects that would otherwise arise.<sup>57</sup> It has also been held to include *curative* treatments that aim to cure diseases or bodily malfunctions that have already arisen.<sup>58</sup> On the basis that pregnancy and lice infestation are not diseases, inventions for methods of treatment that prevented pregnancies<sup>59</sup> or removed lice were not caught by the exclusion.<sup>60</sup> However, a method of immunizing against coccidiosis,<sup>61</sup> and another for controlling mange in pigs, were held to relate to diseases and, as such, were excluded as methods of treatment by therapy.<sup>62</sup> The exclusion of therapeutic methods applies irrespective of whether the disease or bodily malfunction that the invention seeks to prevent or cure is internal or

<sup>52</sup> *Ibid*, 167.

<sup>53</sup> UK Intellectual Property Office, *Examination Guidelines for Patent Applications relating to Medical Inventions in the UK Intellectual Property Office* (June 2007), 17 para 46. The Guidelines said that the type of activities in the *General Hospital* decision would 'not generally be considered to be surgical in nature under UK Intellectual Property Office practice'. *Ibid*.

<sup>54</sup> See 'Communication for the Enlarged Board of Appeal concerning case G/107' (2007) *OJ EPO* 360.

<sup>55</sup> To be considered in G 1/07. The Board also asked whether the exclusion could be avoided by omitting or disclaiming the step in question.

<sup>56</sup> *Diagnostic methods*, note 27 above, 352 (EBA).

<sup>57</sup> *Duphar/Pigs II*, T19/86 [1988] *EPOR* 241, [1989] *OJ EPO* 24.

<sup>58</sup> *Duphar/Pigs II*, *ibid*; *Unilever's (Davis) Application* [1983] *RPC* 219; *Salimen/Pigs III*, T58/87 [1989] *EPOR* 125; *Thompson/Cornea*, T24/91 (1996) 27 *IIC* 530; *Eisai/Second medical indication*, G5/83 [1979–85] *B EPOR* 241.

<sup>59</sup> *Schering's Application* [1971] *RPC* 337; *BTG/Contraceptive Method*, note 10 above. But a method of contraception which includes a therapeutic method will be unpatentable even where that therapy is only present to counteract the side-effects of the contraceptive method: *General Hospital/Contraceptive Methods*, T820/92 [1995] *EPOR* 446.

<sup>60</sup> *Salimen/Pigs III*, T58/87 [1989] *EPOR* 125. <sup>61</sup> *Unilever's (Davis) Application* [1983] *RPC* 219.

<sup>62</sup> *Wellcome/Pigs I*, T116/85 [1988] *EPOR* 1; [1989] *OJ EPO* 13. Fatigue is not a disease: T469/94 (1998) *OJ EPO* 12.

external, and whether or not it is a temporary or a permanent infliction.<sup>63</sup> It also applies irrespective of the origin of the pain, discomfort, or incapacity that the therapy seeks to remedy.<sup>64</sup> Therapeutic methods (which are seen as being carried out for noble purposes) are often contrasted with cosmetic methods (which are carried out for less important reasons). As such, a method that leads to weight loss for the purpose of curing or preventing obesity would fall within the exclusion;<sup>65</sup> in contrast, a method for weight loss that is undertaken for cosmetic purposes would not and, as such, might be patentable.<sup>66</sup>

(iii) *Diagnostic Methods*. After some uncertainty, the nature and scope of the exclusion of diagnostic methods has been clarified by the decision of the Enlarged Board of Appeal in *Diagnostic methods*.<sup>67</sup> In this decision, the Enlarged Board said that methods of diagnosis typically consist of four subsidiary steps.<sup>68</sup> These are:

- (1) *Examination*: involving the collection of data (recording the case history),
- (2) *Comparison*: comparing this data with normal values,
- (3) *Identification*: identifying any significant deviation from the norm (i.e. symptom), and
- (4) *Diagnosis*: the ‘deductive medical or veterinary decision phase’ where the diagnosis for curative purposes is made (which represents a purely intellectual or non-technical exercise).

One of the questions that the Enlarged Board was asked to consider was whether to fall within the exclusion, an application only needed to include the fourth ‘deductive stage’ (narrow interpretation), or whether it had to include all four stages (broad interpretation). Drawing on a range of factors, the Enlarged Board adopted the narrow interpretation and said that to fall within the exclusion, *all* four steps needed to be present in an invention. (In so doing the Enlarged Board overturned the Technical Board’s decision of *Cygnus*<sup>69</sup> and reinstated the earlier decision of *Bruker/Non-invasive measurement*<sup>70</sup>). The Board also said that no distinction should be drawn between essential method steps that have a diagnostic character and non-essential steps that do not.<sup>71</sup>

A general distinction is now drawn between the act of making a diagnosis (which involves using examination and data to reach a decision) and methods of data acquisition or data

<sup>63</sup> *Wellcome/Pigs I*, T116/85 [1988] EPOR 1.

<sup>64</sup> *Rorer/Dysmenorrhea*, T81/84 [1988] EPOR 297; [1988] OJ EPO 207.

<sup>65</sup> A method of treating plaque, since it inevitably had a beneficial effect, was held not patentable: *ICI/Cleaning plaque*, T290/86 [1991] EPOR 157.

<sup>66</sup> A cosmetic method is patentable unless it inevitably has a therapeutic effect. It was therefore possible to patent a method of dieting involving suppression of appetite, since the effect would not necessarily have been positive: *Du Pont/Appetite suppressant*, T144/83 [1987] EPOR 6; [1986] OJ EPO 301.

<sup>67</sup> *Diagnostic methods*, G01/04 [2006] OJ EPO 334, 352 (EBA).

<sup>68</sup> As the EBA noted, these four steps overlap. The main point is that a diagnostic method is a multi-step process.

<sup>69</sup> *Cygnus/Sampling substances*, T964/99 [2002] OJ EPO 4, 13. The invention, which monitored sugar levels from the skin thus avoiding the need for the pricking of fingers to collect blood, did not involve all the steps in medical diagnosis (it only provided information used to make a diagnosis). The Board rejected *Bruker* (see below) and held that the patent was a method of medical diagnosis and as such was excluded from patentability. Drawing upon the French text of the EPC, the Board in *Cygnus* said that the EPC ‘does not favour an interpretation limiting the exception to patentability encompassing all steps required for reaching a medical diagnosis’. *Ibid.*, 15. Instead the Board said that ‘any medical activity concerning the gathering of information in the course of establishing a diagnosis qualifies as a diagnostic method’.

<sup>70</sup> *Bruker/Non-invasive measurement* T385/86 [1988] EPOR 357, para. 3.2–3.4 (for an invention to be classified as a non-patentable diagnostic method, *all* of the different steps had to be present).

<sup>71</sup> *Diagnostic methods*, G01/04 [2006] OJ EPO 334, 356 (EBA).

processing (the results of which may subsequently be used in diagnosis). If an invention only provides interim or preliminary results (data or information), the invention will not be excluded from patent protection by Article 53(c).<sup>72</sup> Put differently, the exclusion will only apply where an invention makes it immediately possible to decide on a particular course of medical treatment. As a result, a method of taking a sample or determining internal temperature or pH would not in itself identify a condition and as such would not be classified as a diagnostic method. This means that many diagnostic methods will no longer be caught by the exclusion despite the express language of the EPC 2000 and the 1977 Act. It also means that common diagnostic procedures practised on the human body, such as percussion or palpitation, could, in principle, be patented because they do not constitute a complete diagnosis. The reasoning of the Enlarged Board has been applied in a subsequent decision which concerned methods for magnetic resonance imaging. On the basis that the invention only led to the acquisition of data, it was held that the invention was not a diagnostic method as defined in Article 52(4) EPC 1973 [now Article 53(c) EPC 2000].<sup>73</sup>

The approach adopted by the Enlarged Board in *Diagnostic methods* has been followed by the UK Intellectual Property Office. Given the willingness of judges in the UK to change British law to ensure that it mirrors the jurisprudence at the EPO, it is unlikely that British courts will deviate from the approach outlined in *Diagnostic methods*. By reading down the scope of the exclusion, it seems that the Enlarged Board may reopen concerns about the negative impact that patent law has upon health care and delivery (exemplified most famously by the patents granted to Myriad over both the genes that highlight the propensity to breast cancer and the diagnostic tests that use such genes). The Board has also raised interesting questions about the changing role of technology in the delivery of medical and veterinary care, and whether this should change the way we think about the role that patents play in these fields.

### 4.3 TREATMENT ON OR IN THE BODY

The third point to note is that the exclusion of methods of medical or veterinary treatment only applies to methods of treatment that are practised *on*<sup>74</sup> or *in*<sup>75</sup> the human or animal body. The ambit of this provision has been interpreted broadly to include 'any interaction with the human or animal body, necessitating the presence of the later'.<sup>76</sup> It has also been suggested that there is no need to show a specific type of interaction with the body. This means that the steps can either be invasive processes (which require physical contact with the body), or non-invasive ones that are practiced at 'a certain distance to it'.<sup>77</sup> The key factor is that the step requires interaction with the body. This means that exclusion does not apply to methods practised on substances that are removed from the body.<sup>78</sup> Thus, neither the treatment of blood for storage in a blood bank nor diagnostic testing of blood samples is excluded. Similarly, operations that occur at a cellular level (such as the incorporation of an oncogene into the fertilized egg of an animal) are

<sup>72</sup> *Braker/Non-invasive measurement*, T385/86 [1988] EPOR 357. For criticisms see R. Moufang, 'Methods of medical treatment under Patent law' (1993) 24 IIC 18, 46–47.

<sup>73</sup> *Medi-physics/Treatment by Surgery*, T992/03 (2007) OJ EPO 557, 563.

<sup>74</sup> *Salimen/Pigs III*, T58/87 [1989] EPOR 125.

<sup>75</sup> *Siemens/Flow measurement* [1989] EPOR 241; T254/87 [1989] OJ EPO 171.

<sup>76</sup> *Diagnostic methods*, G01/04 (2006) OJ EPO 334, 357 (EBA).

<sup>77</sup> *Diagnostic methods*, G01/04 (2006) OJ EPO 334, 357 (EBA).

<sup>78</sup> The treatment of body tissues or fluids after removal from the body is not excluded: *EPO Guidelines* C-IV, 4.3.

not performed on or in the body.<sup>79</sup> In contrast, a treatment of blood by dialysis, where the blood is returned to the same body, would be excluded.<sup>80</sup> While an invention may interact with or relate to a human or animal body, it will only be excluded if it is classed as a form of treatment on the body. In line with this, the Technical Board of Appeal held that ‘a method and apparatus for preventing piglets from suffocating’ by blowing hot air under a mother pig to discourage piglets from going under her was patentable. While the invention protected the body, it was still patentable because the method was not practised *on* the body of the piglet.<sup>81</sup>

As we saw earlier, diagnostic methods typically consist of a number of steps, all of which much be present if an application is to fall within the ambit of the exclusion. While this is all well and good for the purposes of deciding whether an invention is a diagnostic method, it seems that a different approach is adopted when considering whether that diagnostic method is practised on or in the human or animal body. The reason for this is that some of the stages in a diagnostic method (particularly the final ‘deductive phase’) are intellectual exercises: they are carried out in the mind of the medical or veterinary practitioner. To get around the problems that this might pose, the Enlarged Board of Appeal said that the requirement that the invention be ‘practised on or in the human or animal body’ is only to be considered in relation to method steps of a *technical* nature. ‘Thus, it does not apply to the diagnosis for curative purposes *stricto sensu*, i.e. the deductive decision phase, which as a purely intellectual exercise cannot be practiced on the human or animal body.’<sup>82</sup> It also seems that the requirement would not be applied where the data gathered is compared to normal values. The requirement that the invention needs to be practised on or in the human or animal body would be important, however, where a step in an invention is deemed to be technical. This might be the case, for example, where part of the diagnosis makes use of a computer program, is carried out *in vitro*, or in a laboratory.<sup>83</sup> In these cases, as the (technical) step is not practiced on the body it would not fall within the exclusion in Article 53(c) EPC 2000.

#### 4.4 DIRECT TREATMENT

In order for a patent to fall within the therapeutic method exclusion, it is necessary to show that the invention constitutes a *direct* treatment by therapy. This means, for example, that while the programming of a pacemaker to control the way it uses energy undoubtedly has an indirect effect on the human body, this was held to be concerned more with improving an apparatus, than with health.<sup>84</sup> While it is difficult to draw the line between direct and indirect effects, a patent is more likely to fall within the exclusion if it can be shown that there is a ‘corresponding functional link’ between the invention and human or animal health.<sup>85</sup> That is, a method does not fall within Article 53(c) ‘if there is no functional link and hence no physical causality between its constituent steps carried out in relation to a therapy device and the therapeutic effect produced on that body by that device.’<sup>86</sup> In a similar vein, it has been held that to

<sup>79</sup> *Harvard/Onco-mouse* [2003] OJ EPO 473, 491 (OD). It added that ‘the incorporation of the oncogene into the genome is a method which is neither surgical nor therapeutic nor diagnostic in nature’.

<sup>80</sup> *EPO Guidelines*, C–IV, 4.8. See *Baxter/Blood extraction method*, T329/94 [1998] EPOR 363, 367.

<sup>81</sup> *Salimen/Pigs III*, T58/87 [1989] EPOR 125; *Thompson/Cornea*, T24/91 [1996] EPOR 19.

<sup>82</sup> *Diagnostic methods*, G01/04 [2006] OJ EPO 334, 356 (EBA). <sup>83</sup> *Ibid*, 357 (EBA).

<sup>84</sup> *Ela Medical*, T789/96 [2002] OJ EPO 364, 369 (para. 2.2.2.1). <sup>85</sup> *Ibid*, 369–70.

<sup>86</sup> *Siemens*, T245/87 [1989] OJ EPO 171 (para. 3.2.3).

fall within the exclusion, the invention must target a particular illness or disease,<sup>87</sup> and also provide a ‘defined, real treatment’ of a pathological condition.<sup>88</sup>

#### 4.5 TWO OR MORE USES

So long as an application has a use which falls within the scope of section 4A/Article 53(c) it will be excluded. This is the case even if the invention has other uses that do not fall within the exclusion.<sup>89</sup> Thus, an application for a method of cleaning plaque from human teeth which had both an (excluded) therapeutic effect and a (non-excluded) cosmetic effect was excluded from patentability by Article 53(c) EPC 2000 on the basis that the application claimed a therapeutic treatment.<sup>90</sup> While the presence of a surgical step in a multi-step method for treatment of the human or animal body normally confers a surgical character on the method, there may be some cases where this is not the case.<sup>91</sup> On the basis that methods that have a destructive purpose do not fall within the aim of section 4A/Article 53(c) surgery is limited to processes that give ‘priority to maintaining life or health of the human or animal body on which they are performed’.<sup>92</sup> As such, a process that has as its end result the death of a living thing (either deliberately or incidentally) will not be caught by the exclusion: even if the process involves a surgical step. Similarly, the fact that a chemical product has both a cosmetic and a therapeutic effect when used to treat the human or animal body does not render the cosmetic treatment unpatentable.<sup>93</sup>

#### 4.6 LIMITS

While section 4(A)/Article 53(c) impose important limits on the types of medical and veterinary invention that may be patented, it would be wrong to assume that all medical and veterinary inventions are excluded from the scope of patent protection. The reason for this is that the potential scope of the exclusion is restricted by the fact that it must be read in light of section 4A(4)/Article 54(5). While we deal with this in more detail later,<sup>94</sup> it is enough to note that these provisions have been construed in such a way that they permit the patenting of uses of known substances for the *manufacture* of a medicament to treat a particular disease.<sup>95</sup> As we will see, while the so-called second medical use patents continue to undermine the scope of the exception for methods of medical and veterinary treatment, the question of whether an application relating merely to a new dosage regime is patentable remains controversial.

<sup>87</sup> *Sequus Pharmaceuticals*, T4/98 [2002] OJ EPO 139, 149–50.

<sup>88</sup> *Eli Lilly/Serotonin receptor*, T241/95 [2001] OJ EPO 103, 109 (para. 3.1.2); See also *Norsk Hydro*, T135/98 (20 Nov. 2002) (a feed mixture for optimally satisfying the nutritional requirements of farmed fish was not a medical treatment practised on an animal body).

<sup>89</sup> Unlike PA s. 1(2)/EPC Art. 52, the exclusion is not confined to methods of treatment ‘as such’.

<sup>90</sup> *ICI/Cleaning plaque*, T209/86 [1991] EPOR 157; [1992] OJ EPO 414; *Du Pont/Appetite suppressant*, T144/83 [1986] OJ EPO 30; *General Hospital/Contraceptive methods*, T820/92 [1995] EPOR 446; *Meiji/Feeds*, T438/91 [1999] EPOR 452; *Telectronics/Pacer*, T82/93 [1996] EPOR 409 (if hybrid claims include a feature within the exception, the whole is unpatentable).

<sup>91</sup> *See-Shell/Blood flow*, T182/90 [1994] EPOR 320; *EPO Guidelines C-IV*, 4.3.

<sup>92</sup> *Georgetown University/Pericardial access*, T35/99 [2000] OJ EPO 447, 451. This is in contrast to processes whose end result is the death of living things ‘under treatment’ either deliberately or incidentally.

<sup>93</sup> *General Hospital Corp/Hair removal method*, T383/03 [2005] OJ EPO 159, 162.

<sup>94</sup> See below at pp. 479–80.

<sup>95</sup> *ICI/Cleaning plaque*, T209/86 [1991] EPOR 157; [1992] OJ EPO 414. For PA s. 2(6)/Art. 54(3) to operate, the use must fall within PA s. 4(2)/Art. 52(4): *Nycomed/Contrast agent for NMR Imaging*, T655/92 [1988] EPOR 206.

As section 4A(4)/Article 54(5) only apply to medical *methods* which use substances or compositions, the exclusion of methods of medical and veterinary treatment still applies where apparatuses and objects are used. The residual scope of the exclusion was reaffirmed by the Appeal Board of the EPO when it resisted attempts to extend the scope of Article 54(5) beyond the use of substances and compositions to include the surgical use of an instrument.<sup>96</sup>

## 5 EXCLUDED SUBJECT MATTER

Up until 1977, for a patent to be valid it was necessary to show a ‘manner of new manufacture’. This phrase, which was first used in the 1624 Statute of Monopolies, proved to be a remarkably versatile and flexible tool which enabled patent law to adapt to and accommodate many of the technological and scientific changes that have taken place over the last two-and-a-half centuries. The passage of the Patents Act 1977 saw a dramatic change in the way in which British patent law determined what was patentable subject matter. The reason for this was that unlike previous legislation, neither the 1977 Act nor the EPC upon which it is based contains a definition of ‘invention’.<sup>97</sup> Nor do they expressly require that applicants disclose an invention in order to be patentable. Instead, the 1977 Act and the EPC 2000 contain a non-exhaustive list<sup>98</sup> of creations which were deemed *not* to be inventions.<sup>99</sup> To this end section 1(2) (which is the equivalent of Article 52(2) EPC 2000) states:

It is hereby declared that the following (among other things) are not inventions for the purposes of this Act, that is to say, anything that consists of:

- (a) a discovery, scientific theory or mathematical method;<sup>100</sup>
- (b) a literary, dramatic, musical or artistic work or any other aesthetic creation whatsoever;
- (c) a scheme, rule or method for performing a mental act, playing a game or doing business, or a program for a computer;
- (d) the presentation of information;

but the foregoing provisions shall not prevent anything from being treated as an invention for the purposes of this Act only to the extent that a patent or application for a patent relates to that thing as such.

While the decision not to require the existence of an invention as an express requirement for patentability marked an important change in British patent practice, section 1(2) (and

<sup>96</sup> In response to an attempt to patent a second use of a surgical instrument, the Appeal Board said ‘a surgical use of an instrument is not analogous to a therapeutic use (of a medicament) ... since the former is not consumed in the application and could be repeatedly used for the same or even other purposes as well ... medicaments on the other hand are expended in the process of use and thus have a once for all utility’. *Codman/Second surgical use*, T227/91 [1994] *OJ EPO* 491; [1995] *EPOR* 82.

<sup>97</sup> Under s. 101 of the Patents Act 1949 inventions were defined by the phrase ‘manner of manufacture’.

<sup>98</sup> See *Lux Traffic v. Pike Signals* [1993] *RPC* 107, 137ff.; *Christian Franceries/Traffic regulations*, T16/83 [1988] *EPOR* 65.

<sup>99</sup> G. Kolle, ‘The Patentable Invention in the EPC’ (1974) 5 *IIC* 140, 144.

<sup>100</sup> For a discussion of ‘mathematical methods’ see *Citibank v. Comptroller General of Patents* [2006] *EWHC* 1676 (Ch), para 19 (concept did not merely operate at the rarefied atmosphere of calculus but also extended to ‘lower levels’: para 21).

Article 52) effectively codified the picture of the invention which had built up in Britain (and most other EPC countries) prior to 1977.<sup>101</sup>

On the face of it, the excluded categories of subject matter share little in common, other than the fact that they are unable to be patented.<sup>102</sup> It is clear, for example, that there is no single policy that unifies them: these vary from the fact that the subject matter is already protected by other forms of intellectual property (computer programs, literary, dramatic, musical, or artistic work, or any other aesthetic creations), through to the stifling effect that protection would have on research and development (discovery, scientific theory, or mathematical method). Lurking behind many of the categories of subject matter excluded from protection is an image of the invention as something that is concrete and technical in character. Whereas an invention leads to a practical concrete result, this is not the case with a discovery, a mathematical method, or a scientific theory. Neither is it the case with a scheme, rule, or method for performing a mental act, playing a game, or doing business, or the presentation of information: activities that are seen to be abstract and intellectual in nature and thus not patentable.

While most, but by no means all, of the material listed in section 1(2)/Article 52(2) is excluded because it is abstract and non-technical,<sup>103</sup> this is not the case with computer programs which were excluded because it was thought at the time the EPC was drafted that they were better protected by copyright law.<sup>104</sup> As we will see, a lot of time and effort has subsequently been expended attempting to undo this decision.<sup>105</sup>

### 5.1 AN INVENTION AS A POSITIVE REQUIREMENT FOR PATENTABILITY?

Despite the absence of any formal requirement to show the existence of an invention as a precondition for patentability, a number of recent decisions in the UK and the EPO have suggested that for an invention to be patentable it is necessary to show that the application discloses an invention.<sup>106</sup> In the UK, support for this view comes from the decision in *Genentech v. Wellcome*, where the Court of Appeal said that it was an essential requirement which ‘must be satisfied before a patent can properly be granted . . . that the applicant has made an “invention”’.<sup>107</sup> The question of whether the existence of an invention was a prerequisite for patentability was touched upon in the House of Lords decision of *Biogen v. Medeva*. While Lord Mustill suggested that the requirement that there be an invention may be of relevance in the future, the question was left unanswered.<sup>108</sup> As such, the only issue that applicants currently

<sup>101</sup> Because the exceptions were intended to harmonize existing laws, pre-1977 case law has been treated as of persuasive value when interpreting the exclusions: *Gale’s Application* [1991] *RPC* 305. Over time pre-1977 decisions have been replaced by decisions of the EPO and other member states.

<sup>102</sup> See J. Pila, ‘Art. 52(2) of the Convention on the Grant of European Patents: what did the framers intend?’ (2005) 36 *IIC* 755.

<sup>104</sup> Kolle, ‘The Patentable Invention in the EPC’, 147–8.

<sup>105</sup> ‘Given the ubiquity of computers in modern life it is not surprising that the precise limitations of [PA s(1)2(c)] have given rise to difficulty’. *Autonomy Corporation v. Comptroller General* [2008] *EWHC* 146 (Pat).

<sup>106</sup> *EPO Guidelines*, C–IV, 1.1, 2.2; EPC rr. 27 and 29.

<sup>107</sup> *Genentech’s Patent* [1989] *RPC* 147, 262 (Mustill LJ). Mustill LJ based his arguments on the wording of PA s. 1(2), EPC Art. 52 and the *EPO Guidelines* C–IV, 1.1, and 2.2.

<sup>108</sup> *Biogen v. Medeva* [1997] *RPC* 1, 31 (Lord Mustill), cf. Lord Hoffmann, 42.

need to concern themselves with in this context is whether their invention falls within the scope of the subject matter excluded by section 1(2) and Article 52(2).<sup>109</sup>

## 6 IS THE INVENTION EXCLUDED BY SECTION 1(2)/ARTICLE 52(2)?

The question whether an invention is denied patent protection on the basis that it falls within one of the excluded categories listed in section 1(2)/Article 52(2) plays an important role in determining the types of invention protected by patents.<sup>110</sup> The law in this area is currently in a state of flux. In part this is an inevitable consequence of the fact that law has to pass judgment over complex and rapidly changing technologies. Another reason for the uncertainty is that this area of law has become caught up in a power struggle between the institutions of the European Union and the EPO as to who controls the future direction of patents in Europe. There is also an ongoing pressure for the threshold for patent protection to be lowered in Europe to ensure that it is on a par with that in the USA (where non-technical business methods are patentable). At the same time, there is a growing concern about the number of trivial patents that have been granted (particularly for computer-related inventions) and the breadth of many gene-based patents.

While all these factors have played their part in muddying the waters, perhaps the single most important reason for the complexity that we now face is because (at least) two different approaches are used when deciding whether an invention falls foul of section 1(2)/Article 52(2). The first approach, which is called the *Aerotel* or ‘technical effect’ approach, was set out by the Court of Appeal in *Aerotel v Telco Holdings*. This consists of a four-step test to be followed when determining whether an invention falls within one of the excluded categories. This approach is currently applied in the United Kingdom and is very similar to the approach that was used at the EPO until (around) 2000. The second approach, which we call the ‘any hardware’ approach, was first suggested by the Technical Board of Appeal in the *Pension Benefit Systems Partnership* decision.<sup>111</sup> While focusing on the patentability of a business method invention, the decision has broader consequences for the way section 1(2)/Article 52(2) is applied. Although the any hardware approach was followed in one Patent Office decision in the UK<sup>112</sup> and incorporated into the *EPO Guidelines for Examination*,<sup>113</sup> it was resoundingly rejected in *Aerotel* by the Court of Appeal, who reaffirmed the technical effect approach in the UK. In contrast, the approach adopted in *Pension Benefits* has been applied and expanded in subsequent decisions at the EPO.

<sup>109</sup> EPC Art. 52 is repeated in EPC 2000, Art. 53(2). There are no substantive changes to the patentable subject matter: Art. 1, item 17 EPC 2000.

<sup>110</sup> In some cases, British Courts have taken to using the text of Art. 52 EPC rather than that set out in PA s 1(2). For a discussion on this see *Aerotel v. Telco Holdings* [2007] 1 All ER 225, para 6.

<sup>111</sup> *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441 (TBA).

<sup>112</sup> *John Edward Rose*, 0/075/01 (14 Feb. 2001) (Patent Office).

<sup>113</sup> See *EPO Guidelines C-IV, 2; C-IV, 9.5* (amended as of 31 Aug. 2001). See ‘Notice from EPO’ [2001] OJ EPO 464.

## 6.1 LAW IN THE UK PRIOR TO AEROTEL

The approach adopted in the UK when applying section 1(2)/Article 52(2) is set out in the Court of Appeal decision in *Aerotel*. In outlining the new four-step approach, the Court stressed that it was consistent with earlier Court of Appeal decisions (notably *Merrill Lynch* and *Fujitsu*: both of which are discussed below).<sup>114</sup> While the Court of Appeal said that it was merely reformulating British law, the decision may yet have indirect and unexpected consequences in the way that its provisions are applied. In order to appreciate the test in *Aerotel*, it may be helpful to look first at the way that British courts approached section 1(2) prior to this case.

In the pre-*Aerotel* era the first task that was undertaken when deciding whether an invention fell within one of the excluded categories was to determine what was being claimed. In particular, it was necessary to construe the claims to identify the contribution made by the invention. Once the invention had been characterized, it was then possible to determine whether it fell within the scope of section 1(2)/Article 52(2). In situations where the invention clearly fell within one of the excluded categories, it would not be patentable. This can be seen, for example, in *Merrill Lynch's Application*<sup>115</sup> where the Court of Appeal was called upon to consider whether an automatic share-trading system which operated using a computer program fell within the scope of section 1(2)(c). While the invention had a computer program as one of its elements, the court said that since the invention needed to be looked at as a whole, this did not necessarily mean that the patent was invalid. Rather, what the court needed to ask was whether, viewed as a whole, the invention made a contribution in a field not excluded from patentability. Unfortunately for the applicants, the Court of Appeal found that the contribution made by the invention was limited to the field of business (explicitly excluded by section 1(2)(c) and, as such, was unpatentable.<sup>116</sup>

Although in many situations it was relatively easy to determine whether an invention fell within the scope of section 1(2)/Article 52(2), in some circumstances this was not the case. In the 20 or so years during which tribunals in the UK and the EPO (pre-*Pension Benefits*) have been thinking about how applications which are solely made up of excluded subject matter can be distinguished from inventions which happen to include as a component something such as a computer program and are therefore prima facie patentable, a somewhat surprising situation developed. This is that in determining whether an invention fell within the scope of section 1(2)/Article 52(2), the courts ignored the often difficult question whether the invention was, for example, a computer program or a mathematical method. Instead, they asked whether the invention-as-claimed was 'technical'. If the invention exhibited technical character, or the problem that it solved was technical,<sup>117</sup> this was taken to mean that it fell outside the scope of section 1(2)/Article 52(2).<sup>118</sup> Conversely, the absence of technical character was treated as virtual proof that the invention fell within the scope of section 1(2)/Article 52(2) and that it was therefore unpatentable. In a sense what happened, before *Aerotel* at least in difficult borderline cases, was that the negative criteria set out in section 1(2)/Article 52(2) were recast in more

<sup>114</sup> *Aerotel v. Telco Holdings* [2007] All ER 225, para 41–48. <sup>115</sup> [1989] RPC 561 (CA).

<sup>116</sup> *Ibid*, 569.

<sup>117</sup> *IBM/Data processor network*, T6/83 [1990] OJ EPO 5; [1990] EPOR 91; *IBM/Computer-related invention*, T115/85 [1990] EPOR 107. The feature of using technical means for a purely non-technical purpose and/or for processing purely non-technical information does not necessarily confer technical character on any such individual steps of use or on the method as a whole: in fact, any activity in the non-technical branch of human culture involves physical entities and uses, to a greater or lesser extent, technical means.

<sup>118</sup> The mere occurrence of technical features in a claim is not enough: *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441, 450 (TBA).

positive terms. This meant that for an invention to be patentable it was necessary to show that the invention exhibited technical character or, in other words, that it made a technical contribution to the art.

The introduction of technical character as a de facto non-statutory requirement for patentability owes its origin to an imaginative interpretation of Article 52 of the EPC. This stated that what the categories in Article 52(2) have in common is that they are non-technical, either because they are abstract (discoveries, scientific theories) or because they are clearly non-technical (aesthetic creations or presentations of information).<sup>119</sup> As Article 52(1) and (2) only exclude from protection those inventions which are non-technical, it is a short inductive leap to conclude from this that the term ‘invention’ relates to inventions of a technical nature. This conclusion was reinforced by the Rules and Guidelines of the EPC that clearly state that in order for an invention to be patentable it must be technical.<sup>120</sup>

The use of technical character as a way of determining whether an invention falls within the scope of the excluded subject matter is set out in the leading EPO decision of *Vicom*.<sup>121</sup> In deciding that an application which related to a method of digitally filtering images using a device called an operator matrix which aimed at producing enhanced images was patentable the Board stressed that even if the idea underlying an invention was a mathematical method, it could still be patentable if the invention as a whole made a technical contribution to the known art.<sup>122</sup>

While some initial doubts were raised in the United Kingdom about the use of technical character as a way of distinguishing inventions which are ‘in reality’ or ‘in truth’ patentable from those which are made up solely of excluded subject matter,<sup>123</sup> before *Aerotel* British courts followed the lead of the EPO and adopted technical character as a way of determining whether an invention fell within section 1(2).<sup>124</sup> This was highlighted in the Court of Appeal in *Merrill Lynch* when Fox LJ said:

[I]t cannot be permissible to patent an item excluded by section 1(2) under the guise of an article which contains that item—that is to say, in the case of a computer program, the patenting of a conventional computer containing that program. Something further is necessary. The nature of that addition is, I think, to be found in the *Vicom* case where it was stated ‘Decisive is what technical contribution the invention makes to the known art’. There must, I think, be some technical advance on the prior art in the form of a new result.<sup>125</sup>

While Fox LJ’s language differs in certain respects from the language of the Technical Board of Appeal, the Court of Appeal accepted that the presence of technical character was sufficient

<sup>119</sup> *Sternheimer/Harmonic vibrations*, T366/87 [1989] EPOR 131.

<sup>120</sup> A patentable invention must relate to a technical field: EPC r. 27(1)(b); it must be concerned with a technical problem: EPC 2000 r. 43(1), and it must be characterized in the claims by means of technical features: EPC 2000 r. 43(1)(9b). *EPO Guidelines C-IV*, 1.2(ii).

<sup>121</sup> *Vicom/Computer-related invention*, T208/84 [1987] EPOR 74; [1987] OJ EPO 14. Beyer ‘Der Begriff der Information als Grundlage für die Beurteilung des technischen Charakters von programmbezogenen Erfindungen’ [1990] GRUR 399.

<sup>122</sup> *Hitachi/Auction Method* T258/03 (2004) OJ EPO 575, 580 (the term invention is to be construed as ‘subject matter having a technical character’).

<sup>123</sup> *Wang Laboratories* [1991] RPC 463, 470; *Fujitsu’s Application* [1996] RPC 511, 521. The Munich Diplomatic Conference on the establishment of the EPC abstained from limiting the concept of the invention by use of ‘technical’ as was earlier proposed: Kolle ‘Patentable Inventions in the EPC’, 145.

<sup>124</sup> Technical character has become decisive in determining whether or not a patent falls within the scope of s. 1(2). *CIPA*, para. 1.09.

<sup>125</sup> [1989] RPC 561, 569.

to show that an invention did not relate to a disqualified matter and, as such, that it was *prima facie* patentable.<sup>126</sup>

One of the main advantages of shifting attention towards the idea of technical character is that the courts are able to avoid the difficult task of having to define the subject matter listed in section 1(2)/Article 52(2), a task which is not only technically problematic but also one that changes in technology are likely to render obsolete. Indeed, one of the major problems with specific formulations such as section 1(2) and Article 52(2) is that because they are drafted in light of contemporary technologies, they are prone to obsolescence or, at least, convoluted interpretations.

Whatever advantages there may be in using technical character as a *de facto* requirement for determining whether an invention falls within the ambit of section 1(2)/Article 52(2), it still leaves us with the difficult task of having to formulate and understand what is meant by the term 'technical'. (As we will see, it is the difficulty in answering this question that led to adoption of the *Pension Benefits* approach at the EPO.) It is to this question that we now turn.

### 6.1.1 Determining whether an invention is technical

In the vast bulk of cases it is very easy to ascertain whether an invention is technical. This is because it is generally accepted that certain types of creation, such as those in the fields of mechanical engineering or organic chemistry, are technical and as such belong within the remit of patent law. This is made all the easier by the fact that applicants are required to specify the technical field into which their applications fall.

While in most circumstances it may be easy to determine whether an invention is technical, in some situations this is not the case.<sup>127</sup> Typically this arises in relation to creations which fall outside the currently accepted legal limits. This is presently the case with inventions in relation to financial systems, software-generating software, language processing, text editing, and computer programs. In these borderline cases, determining whether an invention is technical is often a difficult task. This problem was highlighted by the British Comptroller of Patents who complained that 'in practice it is often very difficult to determine whether a particular invention does as a matter of fact involve the sort of technical contribution or result alluded to in the cases'.<sup>128</sup> The difficulty of this task was borne out by the fact that while the legal studies which prompted the revision of the EPO guidelines were able to propose 'technical character' as one of the ways of determining whether subject matter was excluded from patentability, they were unable to provide a precise definition of what was meant by the term 'technical'.<sup>129</sup> Instead, they left the task of defining technology to the jurisprudence of the courts.

While the task of having to define what is meant by a technical creation may have been left to the respective courts, so far they have provided little direct guidance in this matter. In many cases where this issue has arisen, no indication is given as to how a decision was reached as to whether something was technical. In other cases, the tribunals have offered the equally unhelpful 'it depends on the facts of the case'.<sup>130</sup> Given that the fate of many inventions depends on the way technology is defined, it may be helpful to provide some guidance in this matter.

In determining whether an invention is technical, the courts have tended to fall back on the model of the invention that has long been employed in patent law.<sup>131</sup> This is one that sees

<sup>126</sup> *IBM/Document abstracting and retrieving*, T22/85 [1990] *OJ EPO* 12; [1990] *EPOR* 98, 103.

<sup>127</sup> See J. Thomas, 'An Epistemology of Appropriation: Patentable Subject Matter after *State Street Bank*' [2000] *IPQ* 27, 49 ff.

<sup>128</sup> *Fujitsu's Application* [1996] *RPC* 511, 521. <sup>129</sup> *WG/CP/I/1*.

<sup>130</sup> *Wang Laboratories* [1991] *RPC* 463, 473. See also *Fujitsu's Application* [1997] *RPC* 608 (CA).

<sup>131</sup> See *NRDC's Application* [1961] *RPC* 134, 142; *Rote Taube* (1970) 1 *IIC* 136, 137–8.

the process of invention as the reduction of the abstract to the specific, or as a transformation from the general to the concrete, processes which are mediated by the inventor. In turn, this model distinguishes between creations that are abstract, intellectual, mental, undefined, and unpatentable, and those that are concrete, physical, tangible, and patentable.<sup>132</sup> Drawing upon this model of the invention, it has been held that an invention is technical and patentable if it provides or leads to a concrete, causal, or non-abstract result or change in things. When translated into the context of section 1(2)/Article 52(2), this means that if it can be shown that the invention brought about a tangible physical change, this is taken as virtual proof that the invention is technical and that it therefore falls outside the scope of the excluded categories.<sup>133</sup>

The use of physical change to determine whether an invention is technical can be seen in *Vicom* where the Board of Appeal explained how unpatentable mathematical methods could be distinguished from patentable inventions:

the fact that a mathematical method or a mathematical algorithm is carried out on numbers... and provides a result also in numerical form, the mathematical method or algorithm being only an *abstract* concept prescribing how to operate on numbers. No direct technical result is produced by the mathematical method as such. [While abstract creations are not patentable,] if a mathematical method is used in a technical process, that process is carried out on a physical entity (which may be a material object but equally an image stored as an electrical signal) by some technical means implementing the method and provides as its result a certain *change* in that entity.<sup>134</sup>

Although the approach followed in the United Kingdom was less consistent than at the EPO, there were a number of cases (pre-*Aerotel*) where the physical model of the invention was used to determine whether a patent fell within the scope of section 1(2).<sup>135</sup>

In a move that has important ramifications for many inventions, particularly in the field of information technology, the physical conception of technology has been interpreted very broadly at the EPO. This can be seen in the comment that ‘physical entities’ includes ‘a real thing, i.e. an image, even if that thing was represented by an electrical signal’.<sup>136</sup> The wide definition given to physical entity can also be seen in the EPO decision of *Kock & Sterzel*. In this case, it was held that the fact that the invention controlled X-ray tubes in such a way as to ensure optimum exposure while at the same time minimizing the danger of overloading the tube was sufficient change for the application to be deemed technical.<sup>137</sup> Perhaps the best example of the way in which the meaning of ‘physical entity’ has been extended can be seen

<sup>132</sup> The ‘invention must belong not to the field of abstractions or speculations, but to that of practical achievement. It must concern not an abstract principle but a conception which is implemented in industry’. *Christian Francheries/Traffic regulations*, T16/83 [1988] EPOR 65, 70.

<sup>133</sup> The following inventions were held to be unpatentable because they did not bring about a physical change: inventions for document abstracting (*IBM/Document abstracting and retrieving*, T22/85 [1990] EPOR 98); linguistic expression processing (*IBM/Text clarity processing*, T38/86 [1990] EPOR 606); a system for listing semantically related linguistic expressions (*IBM/Semantically related expressions*, T52/85 [1989] EPOR 454); method for automatically detecting and correcting contextual homophone errors in a text document (*IBM/Text processing*, T65/86 [1990] EPOR 181).

<sup>134</sup> *Vicom/Computer-related inventions*, T208/84 [1987] EPOR 74, 79.

<sup>135</sup> *Gale's Application* [1991] RPC 305 (CA).

<sup>136</sup> *IBM/Document abstracting and retrieving*, T22/85 [1990] EPOR 98, 105.

<sup>137</sup> *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72; [1988] OJ EPO 14. See also *IBM/Computer-related invention*, T115/85 [1990] EPOR 107; and [1990] OJ EPO 30 (an invention which automatically gave visual indications of conditions prevailing in an apparatus or system was said to resolve a technical problem).

in *BBC/Colour television signal* where it was said that despite its transient character, as a TV signal could be detected by technical means it had a physical reality and therefore could not be considered to be an abstract entity.<sup>138</sup> As such, it was prima facie patentable.

## 6.2 THE AEROTEL TEST

In the UK, the approach that is currently adopted when considering whether an invention falls within the scope of section 1(2)/Article 52(2) was set out by the Court of Appeal in the decision of *Aerotel v Telco Holdings*.<sup>139</sup> In this case, the Court of Appeal said that to determine whether an invention falls within one of the excluded categories of subject matter, it was necessary to undertake four separate tasks. These are:

- (i) construe the claim,
- (ii) identify the contribution,
- (iii) ask whether the contribution falls within one of the excluded categories, and
- (iv) check to see whether the invention is technical.

We will look at each of these in turn.

### Step 1: Construe the claim

The first task that needs to be undertaken under the four-step test is that the claims need to be construed to determine the scope of the patented invention. While this may appear to be relatively inconsequential, it has proved to be crucially important in determining the validity of many patents.

One of the first questions that arose in relation to section 1(2)/Article 52(2) was what happens if an application contains a mixture of both excluded and permitted features? What should be done, for example, if an invention includes as one of its elements a discovery or a computer program which is expressly excluded under section 1(2)/Article 52(2) as well as other non-excluded elements? Initially, discussions in this area focused on the meaning that should be given to the proviso to section 1(2)/Article 52(2) which states that the listed exclusions only apply to the extent that the alleged invention relates to that thing *as such*. Given the ambiguous nature of the proviso, it is not surprising that it lent itself to a number of different and sometimes conflicting styles of interpretation.<sup>140</sup>

Despite initial doubts, courts in the UK and at the EPO (even after *Pension Benefits*) have come down in favour of what is known as the ‘whole-contents’ approach to interpretation.<sup>141</sup> In so doing they rejected the so-called ‘contribution approach’ (under which the courts only consider those aspects of the invention which were not excluded).<sup>142</sup> This means that when

<sup>138</sup> *BBC/Colour television signal*, T163/85 [1990] EPOR 599; [1990] OJ EPO (Suppl.) 19. On this basis the invention did not fall within EPC Art. 52(2)(d).

<sup>139</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, para 40. It should be noted that the Aerotel patent was subsequently held to be invalid.

<sup>140</sup> It was initially suggested that, when determining whether an invention falls within PA s. 1(2)/EPC Art. 52, the courts should separate the excluded and non-excluded elements of the application and focus only upon the non-excluded components. *Merrill Lynch's Application* [1988] RPC 1.

<sup>141</sup> In the UK see *Merrill Lynch's Application* [1989] RPC 561 (CA); *Genentech v. Wellcome* [1989] RPC 147, 204–14, 224 ff. At the EPO see *Vicom/Computer-related invention*, T208/84 [1987] OJ EPO 14; [1987] EPOR 74; *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72; [1988] OJ EPO 19.

<sup>142</sup> See *Aerotel v. Telco Holdings* [2007] 1 All ER 225, para 26 (1), paras 32–37 where Jacob LJ said that there was a lot to be said for the contribution approach, but that he was bound by precedent to follow *Merrill Lynch et al.*

considering whether an invention falls foul of section 1(2)/Article 52(2), the courts disregard the fact that the invention has as one of its elements, say, a computer program or a discovery, and focuses instead on the invention *as a whole*. In so doing the courts have stressed that when determining whether an invention is patentable, it is not necessary to compare the non-technical and the technical elements of the invention. That is, it is irrelevant that an invention is made up of a mixture of technical and non-technical elements.<sup>143</sup>

### Step 2: Identify the contribution

While the whole-contents approach offers guidance where a patent is made up of a mixture of excluded and non-excluded elements, it offers little assistance on the more general question of how the invention ought to be interpreted. In thinking about the nature of the invention a number of different approaches could have been adopted. The courts, for example, could have attempted to distil the essence or kernel of the invention from the claims themselves. One of the interesting features of the way the invention has been interpreted by courts in the UK and the EPO (pre-*Pension Benefits*) is that rather than attempting to identify the essential nature of the invention, they have focused on what the invention does. That is, when determining whether an invention falls within section 1(2)/Article 52(2) the courts have concentrated upon the *contribution* or *effect* that the invention has upon the known art (or knowledge in the area in question). This is now set out in the second step in the *Aerotel* test, where the court is required to identify the contribution made by the invention.

One of the problems that needs to be confronted when identifying the contribution made by an invention is that applicants may attempt to describe an invention which *prima facie* falls foul of section 1(2)/Article 52(2) in such a way that it appears to fall outside the scope of the excluded categories. Faced with the possibility of applicants dressing non-patentable inventions up in a way that makes them appear as if they are patentable, the courts have responded by ignoring the *form* of the claims and focusing instead on the *substance* of the invention.<sup>144</sup> In *Aerotel*, the Court of Appeal accepted that the test is an exercise in judgment, involving the problem to be solved, how the invention works, what its advantages are. They also said that the second step was best summed up by the question: what has the inventor really added to human knowledge?<sup>145</sup>

### Step 3: Determine whether the contribution falls within the excluded subject matter

Once the contribution made by an invention has been identified, the court then needs to consider whether that contribution falls within any of the categories of excluded subject matter set out in section 1(2)/Article 52(2). The way that that this question is answered largely depends on the way that the specific forms of subject matter listed in section 1(2)/Article 52(2) are interpreted: something that we look at in more detail in the next section. In this context, we will limit ourselves to some general comments about the approach that is taken by the courts when deciding whether an invention falls within one of the excluded categories.

The first point to note about the third-stage test is that because of the uncertainty that existed about the rationales behind the excluded categories, the Court of Appeal said that the third step should be carried out without bias either in favour of or against exclusion. Instead, the task was simply to try and make sense of the provisions using the language used in the legislation.<sup>146</sup>

<sup>143</sup> *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72; [1988] OJ EPO 1; *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441, 450 (TBA); Cf. *IBM/Text clarity processing*, T38/86 [1990] EPOR 606.

<sup>144</sup> *Ibid* (Fox LJ); *IBM/Document abstracting and retrieving*, T22/85 [1990] OJ EPO 12; [1990] EPOR 98, 105.

<sup>145</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, paras 43–44. <sup>146</sup> *Ibid*, para 21.

As we said above, in many cases it will be relatively easy to ascertain whether an invention falls within one of the excluded categories of subject matter. In some cases, however, it is difficult to predict whether a particular invention will fall within the ambit of section 1(2)/Article 52(2). It was this problem that led the courts to use ‘technical effect’ as a de facto test for deciding this aspect of patentability in the first place. Prior to *Aerotel*, British courts followed the approach of the EPO and used physical change as a way of determining whether an invention was ‘technical’ and thus whether it fell within excluded subject matter. One of the questions that arises post-*Aerotel* is whether a similar approach will now be followed when deciding the third step. Given the Court of Appeal’s statement that it was merely reformulating rather than changing the existing law, it may be safe to assume that technical effect and physical change would still be used to decide whether an invention is excluded by section 1(2)/Article 52(2). Against this, however, is the fact that in reformulating the law the Court of Appeal downplayed the role that ‘technical character’ plays in determining whether an application is excluded. Instead of being used as a way of deciding whether an invention was excluded, technical character has been relegated to the role of a final cross-check in the four-step test.<sup>147</sup> The downplaying of ‘technical effect’ as a tool for determining whether an invention complied with section 1(2)/Article 52(2) coincided with the argument, initially made by Pumfrey J but followed by others, that the technical contribution test needed to be qualified. In part, this was prompted by the realization that the word ‘technical’ was inherently vague (which is not surprising given that it is meant to act as a proxy for the equally vague ‘invention’).<sup>148</sup> The potential change in the law was highlighted by Warren J in *IGT v Comptroller of Patents* who said that after *Aerotel* ‘the issue of what is “technical” is of much less importance than in the past since that aspect ought to have been dealt with in looking at the third step. The ultimate question in each of the present applications is not whether a contribution is technical, but whether it lies in an excluded area.’<sup>149</sup> This view also found favour with Kitchin J in *Astron Clinica v Comptroller General of Patents* who said that ‘[t]aken together, the first three steps should provide the answer’ as to whether an invention fell within the scope of section 1(2) ‘with the important benefit that they avoid the vexed question of what is a relevant “technical” contribution’.<sup>150</sup> The idea that the technical character test and the corresponding use of physical change are not as important after *Aerotel* is also supported by Jacob LJ’s argument in the case that the various forms of excluded subject matter are not united by the common theme that they are abstract and intellectual in nature which, as we saw above, was used to justify the technical contribution test in the first place.

Despite this, one of the notable features of the way that British courts have answered the third question in *Aerotel*—namely, does the contribution fall within section 1(2)/Article 52(2)—is that they have resorted to some, but not all, of the practices that had been used previously. In particular, while the courts have been careful not to ask does the invention exhibit ‘technical character’, they have relied upon physical change as a way of helping to determine whether an invention falls within one of the excluded categories. That is, the courts have skipped ‘technical character’ and gone directly to ‘physical change’ as a way of determining whether an invention falls within section 1(2)/Article 52(2). This can be seen, for example, in *Aerotel* where

<sup>147</sup> As Pumfrey J noted, although the test is sometimes called the ‘technical effect approach’, the word ‘technical’ does not appear until the fourth and final stage: *IGT v Comptroller of Patents* [2007] EWHC 134, para 13.

<sup>148</sup> See, e.g. *ibid*, para 13; *CFPH LLC v. Comptroller-General of Patents, Designs, and Trade Marks* [2006] RPC 259 (‘technical is ‘a useful servant but a dangerous master’); *Aerotel v. Telco Holdings* [2007] 1 All ER 225, paras 121–24.

<sup>149</sup> [2007] EWHC 134, para 39. See also *Re Oneida Indian Nation’s Application* [2007] EWHC 954 (Pat), para 9.

<sup>150</sup> *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, para 45. (Pat).

one of the factors that seemed to sway the Court of Appeal in finding that the application for a new system for making telephone calls was not a method of doing business, was that the invention consisted of a ‘new physical combination of hardware’.<sup>151</sup> A similar approach was adopted in *IGT v Comptroller of Patents*, where the Warren J rejected the application on the basis that there was no new physical combination of hardware: instead, the ‘novelty lay in the computer program’.<sup>152</sup> Another example of the way that physical change has been used to help decide whether an invention falls within section 1(2)/Article 52(2) is *Cappellini v Comptroller of Patents*. While Pumfrey J stressed that he did not think that ‘every result must be a physical article before the claim is allowed’, he did reject a claim in the application in question on the basis that it was the ‘pure manipulation of data without the production of any physical or real-world effect’.<sup>153</sup> Pumfrey J highlighted the important role that physical change plays in answering the third *Aerotel* question when he said: while a claim to an algorithm standing alone may be objectionable, this would not be the case if the claim was tethered to a physical article. Using the language of *Aerotel*, Pumfrey J said that ‘there is no contribution lying outside excluded matter until the claim also covers the result of performing the claimed algorithm’.<sup>154</sup>

While the British courts post-*Aerotel* have embraced physical change as a guide to determine whether an invention falls within section 1(2)/Article 52(2), they have been careful to distance themselves from some of the more liberal readings at the EPO (which we discussed above). For example, in *Shopolotto.com’s Application*, Pumfrey J cast doubt over the Technical Board’s decision in *IBM/Computer Program II*,<sup>155</sup> which held that material technical effect was found ‘only in computer once programmed with the claimed software’.<sup>156</sup> In so doing, Pumfrey J reinforced a more traditional (empirical) understanding of the invention that has long dominated in British patent law.

#### Step 4: Check whether the contribution is technical in nature

The fourth and final step that needs to be undertaken under the *Aerotel* test is that the court needs to ask whether the contribution is technical in nature. As we explained above, in pre-*Aerotel* law technical effect was an integral part of any determination whether an invention fell within one of the excluded categories. It was something that went hand-in-hand with the examination, rather than something which was undertaken after the event. In explaining the operation of the four-step test, the Court of Appeal in *Aerotel* said that the fourth step might not be necessary because it should already have been covered by the third step (lending credence to the view that (relevant) ‘technical’ effect has a place to play in construing the meaning of the excluded categories). While some of the decisions applying *Aerotel* seemed to have slipped back into the ‘old’ approach under which the third and fourth steps were integrated (or lip service paid to the final task), it is too early to suggest that the third and fourth steps should be merged into a single test. In the meantime, it seems as if the approach that was adopted prior to *Aerotel* is still relevant. The only qualification that may need to be kept in mind is that the courts have begun to talk about the need for an invention to show *relevant* technical

<sup>151</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, para 40, 53. The fact that the invention involved the use of an apparatus was taken to show that the invention was technical. Ibid. *IGT v. Comptroller of Patents* [2007] EWHC 134, para 35.

<sup>152</sup> *IGT v. Comptroller of Patents* [2007] EWHC 134, para 35.

<sup>153</sup> *Cappellini v. Comptroller of Patents* [2007] EWHC 476, para 18. See also *Re Oneida Nation’s Application* [2007] EWHC 954 (Pat), para 9.

<sup>154</sup> *Cappellini v. Comptroller of Patents* [2007] EWHC 476. <sup>155</sup> T0935/97.

<sup>156</sup> *Shopolotto.com’s Application* [2006] RPC 29, para 11.

effect. This has been promoted by the realization that as most computer-related inventions are technical in nature, if technical character was used as a shorthand for determining whether an invention fell within one of the excluded categories this would have meant that most inventions would have satisfied the subject matter requirement. Faced with this problem, Pumfrey J suggested that not all technical effects are relevant and in particular that where computer programs are under consideration, the fact that a computer with *ex hypothesi* a new program will be a new machine and so have a technical effect ‘...the technical effect to be identified had to be technical effect over and above that to expected from the mere loading of a program into a computer’.<sup>157</sup> In a similar vein, it was also said that in ‘one sense computer programs are “technical” but they are also excluded from being inventions’.<sup>158</sup> The attempt to qualify the *type* of technical character needed to ensure that an invention does not fall within section 1(2)/Article 52(2) is an interesting development that needs to be watched in the future. While the EPO has taken a different course (to achieve a similar result), Pumfrey J’s approach deals directly with the issue that has driven a lot of the law in this area, namely how to reconcile the fact that computer-related inventions are an essential form of technology with the fact that computer programs *as such* are explicitly excluded from the scope of protection.

### 6.3 THE ‘ANY HARDWARE’ APPROACH AT THE EPO

The second approach used to determine whether an invention falls within Article 52(2)/section 1(2), which is currently applied at the EPO, has been called (somewhat pejoratively) the ‘any hardware’ approach. This approach was developed by EPO Technical Board of Appeal in the decision of *Pension Benefits Systems Partnership*<sup>159</sup> and subsequently expanded in *Hitachi*.<sup>160</sup> Under the any hardware approach (in its expanded form), an invention will not fall within any of the excluded categories in Article 52(2) if it embodies or is implemented by some technical means (such as a computer). This is the case even if the technical means is used in relation to a non-technical activity. In effect, under the any hardware approach, the tribunal will stand back from the invention—whether a method or an apparatus—and ask whether it can be classified as a form of technology (irrespective of whether it is novel or inventive): all that matters is that the invention makes use of, or embodies, some form of technology (or hardware).

The first key decision that outlined the any hardware approach was the *Pension Benefits* decision which was published in 2001. The patent at issue in *Pension Benefits* related to a computer-related invention that performed a number of different tasks that were necessary in running pension benefit schemes (such as calculating amounts payable and determining future assets). The patent included both method and apparatus claims for controlling a pension benefits system. The method claim (a method of controlling a pension benefits program by administering at least one subscriber employer account which is to receive periodic payments) was made up of a series of steps, including the provision of data, determining the average age of all employees,

<sup>157</sup> *Shopolotto.com’s Application* [2006] RPC 29, para 9. See also *Cappellini v. Comptroller of Patents* [2007] EWHC 476, para 5 (noting that the Court of Appeal did not disprove of this statement). In *Re Oneida Indian Nation’s Application* [2007] EWHC 954, para 13, it was said that Pumfrey J’s statements were entirely consistent with the judgment in *Aerotel*.

<sup>158</sup> *Re Oneida Indian Nation’s Application* [2007] EWHC 954, para 12 (‘it does not follow, just because [a] system of gaming machines is technical, that everything they do (e.g. tracking and controlling the operation of the system) is technical in the sense required’).

<sup>159</sup> *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441.

<sup>160</sup> *Hitachi/Auction Method*, T258/03 [2004] OJ EPO 575.

and so on. The apparatus claim was for a data processing means which was arranged to receive and process information to be used to control a pension benefits system.

The approach the Technical Board of Appeal adopted to the *method claim* in *Pension Benefits* was very similar to the approach previously adopted at the EPO and to the approach currently used in the United Kingdom. The Board began by noting that the question to be asked was whether the method claim represented a method of doing business as such. The Board then went on to characterize the invention, saying that all the features of the method claim were ‘steps of processing and producing information having purely administrative, actuarial and/or financial character. Processing and producing such information are typical steps of business and economic methods’.<sup>161</sup> On this basis the Board concluded that the method claim was merely a method of doing business as such and was therefore excluded from patentability under Article 52(2)(c).<sup>162</sup> The mere fact that the invention operated on a computer did not turn the subject matter of the claim into an invention within the meaning of Article 52(1).<sup>163</sup> (As we will see, this aspect of *Pension Benefits* has been modified in *Hitachi*.)

While the Board found that the method claims fell foul of Article 52(2), this was not the case with the *apparatus claims*. The apparatus claims in question were for an apparatus consisting of a suitably programmed computer or system of computers. In considering whether the apparatus claims were patentable, the Board made a number of general comments. It began by noting that there are four basic requirements for patentability under the EPC, namely that there must be an invention, and that the invention must satisfy requirements for industrial applicability, novelty, and inventive step.<sup>164</sup> The Board also said that the basic test of whether there is an invention within the meaning of Article 52(2) is *separable and distinct* from the questions whether the subject matter is susceptible of industrial application, is new, and involves an inventive step.<sup>165</sup> The Board added that ‘in addition to these basic requirements’ the EPC and the Implementing Regulations implicitly contain the further requirement that the invention must be of technical character.<sup>166</sup>

The Board also considered the way that an invention should be characterized when deciding whether it complies with Article 52(2). In particular they looked at the ‘contribution approach’ recommended in the *EPO Guidelines for Examination* (which is basically the same as the approach used in the United Kingdom). These said that, when deciding whether an invention complied with Article 52, it was necessary to:

disregard the form or kind of claim and concentrate on its content in order to *identify the real contribution* which the subject matter claimed, considered as a whole, adds to the known art. If this contribution is not of a technical character, there is no invention within the meaning of Art 52(1).<sup>167</sup>

The Board said that there were a number of problems with the contribution approach.<sup>168</sup> The first and most general was that there ‘is no basis in the EPC for distinguishing between “new features” of an invention and features of that invention which are known from the prior art

<sup>161</sup> *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441, 449 (TBA). <sup>162</sup> *Ibid.*

<sup>165</sup> *EPO Guidelines C–IV*, 1.2.

<sup>166</sup> *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441, 454; following *EPO Guidelines C–IV*, 1.2.

<sup>167</sup> *EPO Guidelines C–IV*, 2.2 (emphasis added). The revised Guidelines have taken out the reference to the contribution made by the invention.

<sup>168</sup> The Board said that the distinction drawn between a method of doing business and an apparatus situated to perform such a method was justified by the fact that, while ‘schemes, rules and methods’ are non-patentable categories in the field of economy and business, the category of ‘apparatus’ in the sense of ‘physical entity’ or

when examining whether the invention concerned to be an invention within the meaning of Article 52(1) EPC.<sup>169</sup> The contribution approach was also criticized because it failed to keep the Article 52(1) inquiry separate and distinct from the questions as to industrial applicability, novelty, and inventive step. The Board also said that the contribution approach confused the requirement of ‘invention’ with the requirements of ‘novelty’ and ‘inventive step’.<sup>170</sup> Moreover, the Board believed that the contribution approach incorrectly imported issues relating to inventive step into the inquiry into whether a patent complied with Article 52(1).<sup>171</sup> As a result, the Board rejected the contribution approach saying that there ‘is no basis in the EPC for applying this so-called contribution approach’.<sup>172</sup>

Rather than looking at the contribution made by the invention and determining whether this was technical, the Board focused on the *character* of the invention. That is, the Board attempted to distil the essence or kernel of the invention, rather than looking at what the invention did. On the facts the Board said that what was claimed was a computer system suitably programmed for use in a particular field. Once the invention had been characterized, the next question to be decided was whether the invention exhibited the requisite technical character. In answering this question, the Board said that ‘a computer system suitably programmed for use in a particular field, even if that is the field of business and economy, has the character of a concrete apparatus in the sense of a physical entity, man-made for a utilitarian purpose’. Given that an invention is likely to have a technical character if it leads to or produces a physical change in things, it is not surprising that the Board said that an ‘apparatus constituting a physical entity or concrete product suitable for performing or supporting an economic activity, is an invention within the meaning of Article 52(1) EPC’.<sup>173</sup> That is, unlike the situation with the method claim, the apparatus claim could not be classified as a method of doing business and, as such, did not fall foul of Article 52(1). (It is important to note that the patent was refused on the basis that it lacked inventive step.) The upshot of the reasoning in *Pension Benefits* was that where a claim is to a *method* which consists of an excluded category it is excluded, even if hardware is used to carry out the method. In contrast, a claim to an *apparatus* itself, being concrete, is not caught by Article 52(2).

The reasoning that was developed by the Technical Board of Appeal in *Pension Benefits* was applied and expanded in *Hitachi*.<sup>174</sup> The invention in *Hitachi* was an automatic auction method executed in a server computer. In essence the invention was for a method of carrying out a Dutch auction, that is an auction in which the seller starts at a high price which is lowered until a bid is received. As in *Pension Benefits*, the application included both a product and a method claim. The Technical Board of Appeal began by reaffirming that there was no basis in the EPC for applying the contribution approach when deciding whether an invention falls foul of Article 52 EPC.<sup>175</sup> The Board also said that as the reasoning used in *Pension Benefits* was independent of the category of the claim, it would be inconsistent to reject the contribution approach for

‘product’ is not mentioned in Article 52(2) EPC. *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441, 452 (TBA).

<sup>169</sup> Ibid, 454 (TBA).

<sup>170</sup> The TBA cited the German Federal Court of Justice (BGH) decision of *Sprachanalyseeinrichtung (Speech Analysis Apparatus)* (11 May 2000) X ZB 15/98 [2002] OJ EPO 415. For further discussion see *Dell USA*, O/177/02 (24 Apr. 2002), para. 24 (Patent Office).

<sup>171</sup> The Board said that the contribution approach used to determine whether a patent complied with Art. 52(1) was ‘so very closely related to examination with regard to the requirement of inventive step that the examining division decided in fact implicitly that there was lack of inventive step under Article 56 EPC’. *Pension Benefit Systems Partnership*, T931/95 [2001] OJ EPO 441, 455 (TBA).

<sup>172</sup> Ibid, 442. <sup>173</sup> Ibid, 453.

<sup>174</sup> *Hitachi/Auction Method*, T258/03 [2004] OJ EPO 575. <sup>175</sup> Ibid, 581–2.

apparatus claims, but not for method claims. On this basis, the Board held that '[i]n order to be consistent with the finding that the so-called contribution approach... is inappropriate for judging whether claimed subject-matter is an invention within the meaning of the Article 52(1) EPC there should be no need to further qualify the relevance of technical aspects of a method claim in order to determine the technical character of the method'. While in *Pension Benefits* the Board of Appeal had only been willing to apply the any hardware approach to apparatus claims (preferring to retain the contribution approach for the method claim), this was not the case in *Hitachi*, where the Board applied the any hardware approach to both apparatus and method claims.<sup>176</sup> That is, the Board concluded that a method involving a technical means is an invention within the meaning of Article 52(1). The upshot of *Hitachi*, which has been applied in subsequent decisions at the EPO,<sup>177</sup> is that (i) a claim to *hardware* is not caught by Article 52(2) and (ii) a claim to a *method* of using that hardware is also not excluded. This means that so long as a technical means such as a computer is used, the resulting invention will not fall foul of Article 52(1). This is the case even if the invention is for a purely non-technical purpose.<sup>178</sup>

There are a number of notable features of the any hardware approach. The first relates to the way the invention is to be characterized when determining whether it complies with Article 52(1). A key feature of the any hardware approach is the belief that it is not appropriate to look to the contribution made by the invention. Instead, the any hardware approach requires the tribunal to look to the character or essence of the invention: the contribution made by the invention is only looked at when novelty and inventive step are examined. One of the consequences of this is that under the any hardware approach, the tribunal is more concerned with categorizing the subject matter in question, than with asking whether the application has disclosed an invention.

As the Board noted in *Hitachi*, the broad interpretation given to the term 'invention' under the any hardware approach means that it will include activities which are so familiar that their technical character tends to be overlooked, such as the act of writing using pen and paper.<sup>179</sup> The breadth of the any hardware approach can be seen in the *Microsoft/Clipboard formats I* decision. The application in question, which was for a way of 'facilitating data exchange across different formats', consisted of both method claims and a claim to a program on a computer-readable medium. The Board said that the 'method was implemented in a computer and this amounted to a technical means sufficient to escape the prohibition in Article 52'. As Kitchin J said in *Astron Clinica*, 'the Board in *Microsoft/Clipboard formats* appears to have found that any program on a carrier has a technical character and so escapes the prohibition in Article 52'.<sup>180</sup> While the any hardware approach has meant that more applications are now able to satisfy Article 52, it does not mean that the applications will necessarily be patentable. While the any hardware approach has made it easier to satisfy the subject-matter threshold at the EPO, this does not mean that all inventions will necessarily cross the threshold. For example, in *Pitney Bowes/Undeliverable*

<sup>176</sup> In this sense, we see *Hitachi* as a continuation of the approach that was begun in *Pension Benefits*. Cf the comments by the UK Court of Appeal that these decisions are 'mutually contradictory'. *Aerotel v. Telco Holdings* [2007] 1 All ER 225, para 25 (CA).

<sup>177</sup> See, for example, *Man/Provision of product-specified data* [2007] OJ EPO 421, 427 (the claims in question did not bear scrutiny in light of *Pension Benefits*, T931/95 and *Hitachi*, T258/03); *Pitney Bowes/Undeliverable Mail*, T388/04 [2007] OJ EPO 16.

<sup>178</sup> As the *Microsoft/data transfer with expanded clipboard formats*. Simply ask whether there is a claim for something concrete e.g. an apparatus: if yes, the exclusion does not apply.

<sup>179</sup> *Hitachi/Auction Method*, T258/03 [2004] OJ EPO 575, 585.

<sup>180</sup> *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85.

*Mail*, an application for a method of responding by a mailer to notice from a postal service that a piece of mail was undeliverable was held to fall within Article 52(1). The telling factor in this case was that no technical means whatsoever were described in the application. The fact that the invention *might* have been implemented by an unspecified technical process was not enough to prevent the application from being excluded on the basis that it was for a method of doing business for the purposes of Article 52(2)(c).<sup>181</sup> Another reason why the any hardware approach does not necessarily mean that more inventions will now be patentable is because the invention still needs to be new, non-obvious, and susceptible to industrial application. One of the consequences of the any hardware approach is that it shifted the focus of attention at the EPO away from the inquiry whether a patent complies with Article 52(1) to the inquiry whether there is an inventive step (and arguably also novelty and industrial applicability).<sup>182</sup> This is spelt out clearly in the revised *EPO Guidelines* that say that when examining computer-related inventions, it may 'be more appropriate for the examiner to proceed directly to the questions of novelty and inventive step, without considering beforehand the question of technical character'. The shift towards inventive step is reinforced in the *EPO Guidelines* by the fact that when 'assessing whether there is an inventive step, the examiner must establish an objective technical problem. The solution of that problem constitutes the invention's technical contribution to the art. The presence of such technical information establishes that the claimed subject matter has a technical character and therefore is indeed an invention within the meaning of Art. 52(1)'.<sup>183</sup> The shift has also been confirmed in subsequent decisions at the EPO that have focused on inventive step rather than exclusion from patentability.<sup>184</sup>

While initial reactions in the United Kingdom were mixed,<sup>185</sup> in *Aerotel* the Court of Appeal clearly rejected the any hardware approach, suggesting that it 'must be wrong' and that it was 'not intellectually honest'.<sup>186</sup> Jacob LJ also said that *Pension Benefits*, and like-minded decisions at the EPO, were based on the mistaken assumption that the various categories of excluded subject matter were all limited to something abstract or intangible.<sup>187</sup> This reflects earlier criticisms of *Pension Benefits* that it runs contrary to a number of Court of Appeal decisions in the United Kingdom that had held that claims directed to a system (hardware or apparatus) did not avoid the terms of section 1(2).<sup>188</sup> The Board's decision was also criticized

<sup>181</sup> *Pitney Bowes/Undeliverable mail*, T388/04 [2007] OJ EPO 16, 23.

<sup>182</sup> The 'inference from *Pension Benefit*... is that lack of technical contribution might be a matter for inventive step rather than exclusion from patentability'. *Dell USA*, O/177/02 (24 Apr. 2002), para. 27 (M. Wilson) (Patent Office).

<sup>183</sup> *EPO Guidelines* C-IV, 2.3.

<sup>184</sup> *Comvik/Two identities*, T641/00 [2003] OJ EPO 352; *International Computers/Information modelling*, T49/99 (5 Mar. 2002).

<sup>185</sup> In one Patent Office decision, the *Pension Benefits* approach was used to decide whether an application for 'behaviour modification' fell within section 1(2). *John Edward Rose*, O/075/01 (14 Feb 2001) (as in *Pension Benefits*, the application was eventually excluded on the basis that it lacked inventive step). Cf *Pintos Global Service's Application*, O/171/01 (6 Apr. 2001) (Patent Office); *Hutchins' Application* [2002] RPC 264; *James Shanley*, O/422/02 (16 Oct. 2002) (Patent Office) which expressly rejected the *Pension Benefits* approach.

<sup>186</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, paras 27–29. Jacob LJ's arguments in this regard are far from convincing. In particular, it is difficult to imagine an application for an i-Pod loaded with a new piece of music being non-obvious. Interestingly, most of the criticisms of the EPO decisions are in relation to the way that they applied inventive step, rather than how they approach excluded subject matter.

<sup>187</sup> *Ibid*, para 30. Jacob LJ continued saying 'We have already observed that the categories are disparate with differing policies behind each. There is no reason to suppose there is some common factor (particularly abstractness) linking them. The *travaux préparatoires* at least confirm this'. *Ibid*.

<sup>188</sup> *Merrill Lynch's Application* [1989] RPC 561 (CA) (not possible to patent under the guise of an article which contains that item); *Fujitsu's Application* [1997] RPC 608 (CA) ('the fact that the invention was claimed

because it contradicts the established British view that questions of patentability should be decided as a matter of substance and not according to the actual form of the words.<sup>189</sup> Given that many of the applications excluded under section 1(2) via the *Aerotel* approach would be excluded under the any hardware approach because they lack inventive step, it is unlikely that the new approach will lead to different results.<sup>190</sup> This was reflected in Pumfrey J's comment that *Pension Benefits* was the correct result, but by the wrong approach.<sup>191</sup>

#### 6.4 SUMMARY

The law in this area is far from clear. There are many problems, both in the way that the rules are applied and in the way that different approaches have been represented. Having said this, it is possible to make some general statements about the two approaches. The key difference between the approach that has been adopted in the UK and that at the EPO relates to the way that the 'invention' is construed. In essence, the any hardware approach differs from the approach adopted in the UK in two ways. The first is in terms of the way that the invention is characterized. While British courts look to the contribution made by the invention, this approach has been rejected at the EPO where the focus is on the nature of the invention. As the Technical Board of Appeal said, 'the technical character of an invention is an inherent attribute independent of the actual contribution of the invention to the state of the art'.<sup>192</sup> The second way in which the two approaches differ is in terms of the way that technical character is determined. Technical character may be implied at the EPO in at least three ways. These are (i) by the physical features of an entity, (ii) by the nature of the activity, or (iii) conferred on a non-technical activity by the use of a technical means.<sup>193</sup> While the UK courts have adopted the first two approaches, they have rejected the third.

That different approaches that have been adopted in the UK and the EPO is not desirable. Given that the President of the EPO rejected Jacob LJ's request that the question of how

as a method, a way of manufacture or an apparatus was irrelevant when the only invention claimed revolved around the use of a computer program'). Cf. 'a computer system suitably programmed for use in a particular field, even if that use, for example, the field of business and economy, has the character of a concrete apparatus, in the sense of a physical entity or product and is thus an invention within the meaning of Article 52(1)'. *EPO Guidelines C-IV*, 2.3.

<sup>189</sup> This has led the Patent Office to conclude on a number of occasions that it is bound to follow the contribution approach set out in UK courts, and not the approach advocated in *Pension Benefits*. See, e.g. *Hutchins' Application* [2002] RPC 264, 270 (Patent Office); *Pintos Global Application*, O/171/01 (6 Apr. 2001), paras. 20–29.

<sup>190</sup> The nature of the change brought about by *Pension Benefit*, and the impact it has on the way a patent is examined, can be seen in the Patent Office decision in *James Shanley*, where the contribution approach and the *Pension Benefits* approach were applied to the same facts. *James Shanley*, O/422/02 (16 Oct. 2002). The invention in question was for dismountable partitions for buildings (that included both flat and curved panels). Using the contribution approach, the Hearing Officer said that the contribution made by the invention was wholly aesthetic insofar as it was solely directed 'to altering appearances'. As the invention neither solved a technical problem nor made a contribution in a non-excluded field, the application was excluded by section 1(2)(b). The Hearing Officer then went on to consider how the invention would have fared under the *Pension Benefits* approach. After reviewing the Technical Board's decision, the Hearing Officer said that 'what is claimed is a partition for buildings, and since this, taken as a whole and without regard to whether or not any technical contribution is involved, manifestly has a technical character... I would have to find that what is claimed... is an invention under section 1(2)'. As the Officer was bound by UK decisions, he did not follow the *Pension Benefits* approach: *ibid*, para. 22. The interesting question here is whether the application would have satisfied the requirements of inventive step.

<sup>191</sup> *Cappellini v. Comptroller of Patents* [2007] EWHC 476, para 9.

<sup>192</sup> *Quest International/Odour Selection*, T619/02 [2007] OJ EPO 63, 84.

<sup>193</sup> *Hitachi/Auction Method*, T258/03 [2004] OJ EPO 575, 585.

Article 52(2) should be construed be referred to the Enlarged Board of Appeal, it seems unlikely that the EPO will change its approach in the future. The most immediate change brought about by the any hardware approach is in the way computer-related inventions are excluded from protection. It is possible that the new approach might lead to changes in the way applications are examined.<sup>194</sup> It will be interesting to see whether the any hardware approach and the approach outlined in *Aerotel* bring about any other changes. While there are many issues that are unclear, there is little doubt that this is a topic that needs to be followed closely.

## 7 SPECIFIC APPLICATIONS

Having looked at the general approaches that are taken to the question of whether an invention falls within the scope of section 1(2)/Article 52(2), we now look at a number of more specific problems that arise in relation to the scope of the protected subject matter. These are in relation to naturally occurring substances and discoveries; computer programs and computer-related inventions; methods of doing business; the presentation of information; and methods for performing a mental act. After looking at these specific applications, we will look at possible reforms, particularly in relation to computer programs and computer-related inventions.

When thinking about these specific forms of subject matter, it is important to keep in mind the different approaches that are taken in the UK and at the EPO. While the case law at the EPO prior to *Pension Benefits* is still important in the UK, the liberalization brought about by the ‘any hardware’ approach means that they may no longer be as important at the EPO. Moreover, while the different approaches have not had much of an impact, at least to date, in relation to discoveries and natural substances, they have played an important role in the way that the other forms of subject matter have been treated.

### 7.1 DISCOVERIES AND NATURAL SUBSTANCES

Advances in genetic engineering over the last few decades have enabled scientists to isolate and replicate a host of naturally occurring substances. Given the considerable investment that has been made in this research, it is not surprising that attempts have been made to patent the results of that research. In part, the extent to which this biological research is patentable depends on whether the resulting products and processes are treated as discoveries or inventions. The reason for this is that discoveries as such are excluded from the remit of patentable subject matter.<sup>195</sup> However, if it can be shown that when viewed as a whole, an application that incorporates a discovery brings about a technical change, it may be patentable. This means

<sup>194</sup> It has been suggested that one of the most valid complaints about computer programs and business method patents ‘is that they are for inventions that [are] trivial or that they seek protection that is too broad for their scope’. Both of ‘these issues—obviousness and insufficiency—... get tested by the EPO before granting patent applications in other technologies, but in the case of applications for computer programs and business method patents, matters used never to get that far and discussion instead was limited to the rather sterile and philosophical issue of whether or not the alleged invention confers a “technical effect”’. T. Cook, ‘Intellectual Property Protection for Computer Programs’, *BCS Review* 2003.

<sup>195</sup> PA s. 1(2)(a); EPC 2000 Art. 52(2)(a). On attempts to protect discoveries see F. Neumeyer, ‘Legal Protection of Scientific Discoveries’ [1975] *Industrial Property* 348; K. Beier, ‘Scientific Research, Patent Protection and Innovation’ [1975] 6 *IIC* 367; E. Kitch, ‘The Nature and Function of the Patent System’ (1977) 20 *Journal of Law & Economics* 265, 288.

that if a person finds a new property of a known material or article, this will be treated as an unpatentable discovery. However, if that person puts the property to a practical use, the invention may be patentable. For example, the discovery that a known material is able to withstand mechanical shock would not be patentable. However, a railway sleeper made from that material could well be patentable.<sup>196</sup>

In thinking about the extent to which biological products and processes are patentable, it is important to bear in mind that patent law distinguishes between naturally occurring substances (unpatentable discoveries) and the products and processes which result from the human effort in isolating those substances from their natural environment (patentable inventions).<sup>197</sup> That is, a distinction is drawn between things that freely exist in nature (and can only be unearthed or discovered) and things that are artificial (and which contain the necessary degree of human intervention for the resulting product to be called an invention).<sup>198</sup>

Given this, the important question that we need to consider is: what is the difference between something that is 'natural' and thus unpatentable, and something that is 'artificial' and thus potentially patentable? More specifically, given that the act of discovery and the act of invention often both involve a considerable amount of time, effort, skill, and labour, we need to ask: what type of effort is needed for an activity to be described as an artificial invention as distinct from a natural unpatentable discovery? In answering these questions, it becomes apparent that the borders between discovery and invention are far more vague and problematic than they might seem at first glance. Perhaps the best way to think about the extent to which biological inventions are patentable is to look at the different types of patents that may be granted.<sup>199</sup>

(i) If a process is developed that enables a substance found in nature to be isolated and obtained from its surroundings, the *process* may be patentable.<sup>200</sup>

(ii) The finding of a *substance* freely occurring in nature is a mere discovery and, as such, is unpatentable. As the Opposition Division at the EPO explained this means that the 'discovery' of the Moon (when the Americans landed on it in 1969), the finding of a 5,000-year-old mummy in the Italian/Austrian Alps, or of a new animal, would not be patentable.<sup>201</sup> This is reflected in Article 5(1) of the Biotechnology Directive which says that the 'human body, at the various stages of its formation and development, and the simple discovery of one of its elements, including the sequence or partial sequence of a gene, cannot constitute a patentable discovery'. Similar provisions exist in the Patents Act 1977 and the EPC.<sup>202</sup>

<sup>196</sup> *EPO Guidelines C-IV*, 2.3.1. It is unclear whether the 'any hardware' approach will impact on the patentability of naturally occurring substances.

<sup>197</sup> See R. Whaite and N. Jones, 'Biotechnological Patents in Europe: The Draft Directive' [1989] *EIPR* 145, 149; A. White, 'The Patentability of Naturally Occurring Products' [1980] *EIPR* 37.

<sup>198</sup> For a different perspective on the issue of patenting of higher life forms see *Harvard College v. Canada (Commissioner of Patents)* [2002] *SCC* 76 (Supreme Ct of Canada) (rejecting an application to patent the genetically altered Onco-mouse).

<sup>199</sup> As yet there has been no case directly on this point in the UK. There is little reason to doubt that the position in the UK will be the same as that at the EPO. Cf. *Chiron v. Murex Diagnostics* [1996] *FSR* 153, 177.

<sup>200</sup> *EPO Guidelines C-IV*, 2.3.1.

<sup>201</sup> *Howard Florey/Relaxin*, T741/91 [1995] *EPOR* 541, 549. It is interesting to note that plant breeders' rights are available to those who 'discover' varieties, whether growing in the wild or occurring as a genetic variant, whether artificially induced or not: PVA, s. 4(3) and 4(6). Apparently the Braeburn apple was found in this way in 1952. See T. Boswell, *Hansard* (HC) (24 Jun. 1997) col. 717.

<sup>202</sup> See PA Sched. A2, para. 3(a) (introduced by Patents Regulations 2000 (SI 2000/2037)); EPC Rule 23(e)(1), Implementing Regulations to the EPC (introduced by [1999] *OJ EPO* 437).

(iii) If a natural substance that has been *isolated* from its surroundings can be properly characterized either by its structure, by the processes by which it is obtained, or by other parameters, the substance *per se* may be patentable. This means that, as long as ‘something’ is inside a human or animal body or a plant, it is a natural element and cannot be considered to be patentable. However, once this ‘something’ is isolated from the human or animal body or plant by means of a technical process, it becomes eligible for patent protection.<sup>203</sup> This is the case even if its structure is identical to that of a natural element, since the processes used to isolate the element are technical processes.<sup>204</sup> This can be seen in the *Relaxin* decision, which concerned claims relating to DNA sequences of a naturally occurring substance that relaxes the uterus during childbirth, which was obtained from the human ovary.<sup>205</sup> The Opposition Division of the EPO held that the invention was not a discovery and as such was not excluded from patentability. Following the *EPO Guidelines*, the Opposition Division said that, as the substance Relaxin had not previously been recognized, that a process had been developed to obtain Relaxin and the DNA which encoded it, that the products were characterized by their chemical structure, and that the products had a use, the claims were patentable under Article 52(2).

This position was affirmed in the Biotechnology Directive<sup>206</sup> and in equivalent provisions in the Patents Act 1977 and EPC 2000.<sup>207</sup> These provide that ‘biological material that is isolated from its natural environment or produced by means of a technical process may be the subject of an invention even if it previously occurred in nature’.<sup>208</sup> More specifically, Article 5(2) of the Biotechnology Directive states that an element isolated from the human body or otherwise produced by means of a technical process, including the sequence or partial sequence of a gene, may constitute a patentable invention even if the structure of that element is identical to that of a natural element. Equivalent provisions have been introduced in the UK<sup>209</sup> and in the EPC 2000.<sup>210</sup>

This means that ‘raw data’ on the human genome (including the human DNA sequence and its variations:<sup>211</sup> human genes, partial gene sequences, the human body at various stages of its development) which are not isolated, purified, or somehow produced by a technical process, are not patentable.<sup>212</sup> However, if the genetic information (including the sequence or partial sequence

<sup>203</sup> See Biotech. Directive Recitals 21–2. Similar arguments apply for the *purification* of a naturally occurring substance.

<sup>204</sup> S. Sterrckx, ‘Some Ethically Problematic Aspects of the Proposal for a Directive on the Legal Protection of Biotechnological Inventions’ [1998] *EIPR* 123, 124–5; cf. S. Crespi, ‘Biotechnology Patents: the Wicked Animal Must Defend Itself’ [1995] *EIPR* 431, 432–3.

<sup>205</sup> (1996) 27 *IIC* 704, 705–6. See *Icos Corporation/Seven transmembrane receptor* [2002] *OJ EPO* 293, 307 para. 11(i) (Opposition Division) (while ‘the V28 protein exists as a segment of the human genome and thus is a part of nature, the purified and isolated nucleic acid having that sequence does not exist in nature and thus cannot be discovered’).

<sup>206</sup> Biotech. Dir. Art. 3(2).

<sup>207</sup> Para. 2 of Schedule A2, to the Patents Act 1977, introduced by Patents Regulations 2000 (SI 2000/2037), in force 28 July 2000.

<sup>208</sup> Biotech. Dir. Art. 3(2); PA Sched. A2, para. 2 (introduced by Patents Regulations 2000); EPC Rule 23c(a) Implementing Regulations to the EPC (introduced by [1999] *OJ EPO* 437).

<sup>209</sup> See PA Sched. A2, para. 5 (introduced by Patents Regulations 2000).

<sup>210</sup> EPC 2000 Rule 29(2).

<sup>211</sup> This was confirmed by the joint statement by Tony Blair and Bill Clinton, ‘Joint Statement to ensure that discoveries for the human genome are used to advance human health’, 14 Mar. 2000.

<sup>212</sup> See Bostyn, ‘Patentability of Genetic Information Carriers’ [1991] *IPQ* 1; Lord Hoffmann adopted a similar approach in *Kirin-Amgen v. Transkaryotic Therapies* [2005] *RPC* (9) 169, 195, 201 (paras. 76 and 109) when

of a gene) has been isolated from the human body or somehow produced by a technical process, it will potentially be patentable. For example, if we take the situation where a research team successfully isolates the gene responsible for migraines, while the underlying genetic information would be in the public domain, the technique used to isolate the gene (which may include complicated processes of identification, purification, and classification) would be patentable. On the basis that the isolated gene would not have been identified without the human intervention (*techne*), the isolated gene may be patented.<sup>213</sup> This would also be the case where an invention is for a transgenic plant or animal, which by definition do not exist in nature.<sup>214</sup>

The *Kirin-Amgen* decision, which involved Amgen's highly valuable patent for a method of producing erythropoietin (EPO), offers another useful example of the impact that the invention–discovery dichotomy has upon patentable subject matter. EPO is the hormone that promotes the production of red blood cells, and is particularly useful in the treatment of anaemia. Underlying the patent was Amgen's discovery and subsequent sequencing of the gene that produces EPO. Building on this discovery Amgen isolated and cloned the DNA sequence that produces EPO. The DNA sequence was then introduced into a host cell (Chinese hamster ovary cell), which was used to manufacture the EPO. At first instance Neuberger J said the claim was 'ultimately to the use of information first revealed in the patent, namely, the genetic code for EPO, for the purpose of expressing EPO cells by artificial manipulation of DNA. The essence of the invention was not the artificial manipulation but the use of the information'.<sup>215</sup> As a result, the technique used to manufacture the EPO was irrelevant. The Court of Appeal disagreed, saying that Neuberger J's definition was too broad. While the Court of Appeal had no doubt that the discovery and sequencing of the gene that produced EPO was at the heart of the invention, the Court said that the gene sequence *per se* could not be claimed as the invention because it existed in nature. Instead, the Court held that what was claimed was an exogenous DNA sequence suitable for expressing EPO when introduced into a host cell. The House of Lords agreed. While the decision did not directly focus on discovery as patentable subject matter, it is important insofar as it exemplifies the way that the non-patentability of naturally occurring substances can influence not only the subject matter that is patentable, but also the decision as to whether a patent has been infringed.<sup>216</sup>

While the patenting of processes used to isolate natural substances is relatively uncontroversial, the same cannot be said about the patenting of the substances that are isolated using those processes. In particular, doubts have been raised as to whether the act of isolation and characterization of a naturally occurring substance is really that different from the mere finding of the substance. As one commentator has noted 'even if a natural element is isolated from the body by technical means, this does not change the "naturalness" of the element (neither does a purification

he treated the information as to the make up of DNA as an unpatentable discovery. But cf. Jacob LJ, speaking for the Court of Appeal, in *Aerotel Ltd v. Telco Holdings Ltd* [2007] *RPC* (7) 117, 134 (para. 37) (doubting whether the revelation of the precise sequence of a piece of DNA, as opposed to its general existence, could be described as a discovery).

<sup>213</sup> The requirement that there be technical intervention is closely related to the requirement that the invention be non-obvious (*DSM NV's Patent* [2001] *RPC* 675, 709 (talking about obviousness over nature)) and also be industrially applicable (*Salk Institute for Biological Studies*, T338/00 (6 Nov. 2002)).

<sup>214</sup> *Harvard/Onco-mouse* [2003] *OJ EPO* 473 (Opposition Division) ('transgenic animals of the present invention having an artificially inserted oncogene do not exist in nature as such but are the result of a technical intervention by man', at 491).

<sup>215</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2002] *RPC* 187, 201 (Neuberger J).

<sup>216</sup> [2003] *RPC* (3) 31 (CA); [2005] *RPC* (9) 169, 195 (para. 76). See above at Ch. 22 Section 3.

of the element)<sup>217</sup> However valid these arguments may be, they have been outweighed by the policy goal outlined in the Biotechnology Directive that research aimed at obtaining and isolating elements valuable to medicinal production should be encouraged by the patent system.<sup>218</sup>

## 7.2 COMPUTER PROGRAMS AND COMPUTER-RELATED INVENTIONS

When the Patents Act 1977 and the EPC 1973 were enacted it was commonly thought that copyright law rather than patents would be the area of intellectual property law which would regulate the creation and use of computer programs. While copyright has been important in this process, one of the most notable changes that has taken place since 1977 is the growing role played by patent law in relation to computer programs and computer-related inventions. Given that computer programs are expressly excluded from patentability by section 1(2)(c)/Article 52(2)(c), it may come as a surprise to learn that many patents have already been granted for computer-related inventions.<sup>219</sup> Moreover, while it may have been assumed when the EPC was first drafted that copyright rather than patent law would regulate information-technology-based creations, since 1977 the trend has been towards more and more patent protection for computer-related inventions. As we will see, in certain circumstances there has also been a move towards allowing the patenting of computer programs. One of the last hurdles facing those who favour greater use of patents in the field of information technology is the fact that computer programs *as such* are expressly excluded from the scope of patentable subject matter.<sup>220</sup> In this section, we will look at the way that the law has developed in this area. In so doing we will look at the current position in the UK, which was similar to the position at the EPO prior to the adoption of the any hardware approach. We will then look at the standing of computer programs and computer-related inventions at the EPO.

### 7.2.1 United Kingdom

In this section we look at the current position in the UK. It is important to keep in mind that the case law at the EPO prior to *Pension Benefits* is still relevant in the UK. As such, in our analysis of the current UK position, we will make reference to the pre-*Pension Benefits* decisions from the EPO. It is also important to bear in mind that there is a possibility that the law in the UK after *Aerotel* may have changed the approach that British courts take toward this old case law: although, as we suggested above, this has not been borne out in the UK decisions that have applied *Aerotel* to date.

The approach that has been adopted towards the patenting of computer-related inventions in the UK has seen the courts consistently apply the general approach that was outlined above.

Davis, 'The Patenting of the Products of Nature' [1995] *Rutgers Computer and Technology Law Journal* 331; cf. Bostyn, 'Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 3–4.

<sup>218</sup> Biotech. Dir., Recital 17.

<sup>219</sup> The Comptroller of the British Office reported on 2 Nov. 2000 that over 15 per cent of the patents granted by the British Patent Office have a software element. Interview with Alison Brimelow, *Patent Office News and Notices*, <<http://www.patent.gov.uk/softpat/en/index.html>>. The EPO has granted over 20,000 software-related patents, and it is said that objections are made in relation to fewer than 1 per cent of software-related applications. See I. Kober, 'Software Patents: An Essential Element of the European Patent System', *The Patent Office Conference on Software Patents* (<<http://www.patent.gov.uk/softpat/en/index.html>>).

<sup>220</sup> PA s. 1(2)(c); EPC 2000 Art. 52(2)(c).

One of the most important changes that led to the liberalization of the protection offered to computer-related inventions in the UK (and at the EPO pre-*Pension Benefits*) was the decision that an invention which included a computer program could be patentable so long as the invention as a whole was technical. The upshot of the acceptance of the whole contents approach was, as the Board of Appeal said in *Vicom*, that ‘an invention which would be patentable in accordance with conventional patentability criteria should not be excluded from protection by the mere fact that for its implementation modern technical means in the form of a computer program are used’.<sup>221</sup> This approach was adopted and endorsed by a number of decisions in the UK, notably the Court of Appeal decisions of *Gale’s Application* and *Merrill Lynch*.

While a computer program *per se* remains unpatentable in the UK, following the acceptance of the whole contents approach it is clear that applications which contain a computer program are *prima facie* patentable, so long as the invention as a whole makes a technical contribution to the art.<sup>222</sup> This can be seen, for example, in *Kearney*<sup>223</sup> where the Technical Board of Appeal held that a computer program that alerted machine operators when their machines needed to be repaired or a worn tool needed to be replaced solved a technical problem and as such was patentable subject matter. Similarly, in *Bosch* the Board of Appeal said that a device for monitoring computer components was technical because it considerably reduced ‘the operating time of the computer component and thus undoubtedly improved the effectiveness of the device’.<sup>224</sup> Both of these decisions were followed in the UK.

In contrast, if it *cannot* be shown that an application that contains a computer program is technical, then it will not be patentable. This was the case, for example, in *Gale’s Application* where the Court of Appeal decided that a ROM carrying a particular program was not distinguishable from the program itself and, as such, was unpatentable.<sup>225</sup> This was reinforced in *Fujitsu’s Application*<sup>226</sup> where the Court of Appeal held that a computer-related invention that enabled chemists to produce digital models of hybrid chemicals was not patentable. The reason for this was that, while the invention saved chemists a considerable amount of time and effort (in that they did not have to undergo the laborious task of building models by hand), it did not produce a technical result. More specifically the Court of Appeal said that the invention only achieved something that had previously been possible albeit at a much faster speed and more conveniently than had previously been the case. On this basis, the Court of Appeal held that the invention was for a conventional computer operating in a conventional way and as such was not patentable.<sup>227</sup>

Following these decisions it was clear that an invention which included a computer program could be patentable so long as the invention as a whole was technical. With this question settled, the next question that arose for consideration was in relation to the exclusion of computer programs as such. The question of the scope of the exclusion of computer programs was considered in two decisions by the Technical Board of Appeal, both involving applications by IBM. The invention in the first decision *IBM/Computer programs (T935/97)* was a method

<sup>221</sup> *Vicom/Computer-related invention*, T208/84 [1987] EPOR 74; [1987] OJ EPO 14.

<sup>222</sup> This means that, if it can be shown that the subject matter makes a technical contribution to the known art, patentability would not be denied merely on the ground that a computer program is involved in its implementation.

<sup>223</sup> *Kearney/Computer-related invention*, T42/87 [1997] EPOR 236, 241.

<sup>224</sup> *Bosch/Electronic computer components*, T164/92 [1995] EPOR 585, 592. See generally J. Pila, ‘Dispute over the Meaning of “invention” in Art 52(2) EPC: the patentability of Computer-Implemented Inventions in Europe’ (2005) 36 IIC 173.

<sup>225</sup> *Gale’s Application* [1991] RPC 305 (CA).

<sup>226</sup> *Fujitsu’s Application* [1997] RPC 608.

<sup>227</sup> *Gale’s Application* [1991] RPC 305.

for allowing information in a data-processing system that was displayed in one window to be altered if that window was obscured by another window. The application included claims for software in itself, and for software recorded in a computer-readable medium.<sup>228</sup> While some of the claims were accepted, the Examining Division refused the application insofar as it was directed to a computer-program product. The second *IBM* decision (T1173/97) related to ‘resource recovery in a computer system’.<sup>229</sup> Again, the Examining Division rejected the application insofar as it claimed a computer-program product. In both cases the question for consideration related to the scope of the exclusion of computer program *as such*. The reasoning in both cases was identical.

The Board of Appeal began by noting that the language of Articles 52(2) and (3) showed that the legislators did not want to exclude all computer programs from patentability.<sup>230</sup> Instead, all that was excluded were computer programs *as such*. Drawing upon the logic that has been applied to Article 52(2) and (3) generally, the Board said that when the EPC referred to computer programs *as such*, it meant mere abstract creations, lacking in technical character. In more positive terms this meant that computer programs that had a technical character were potentially patentable.<sup>231</sup> In so doing, the Board distinguished between computer programs *as such* (which are not patentable) and computer programs that had a technical character (which are patentable).<sup>232</sup>

This gives rise to the question: when does a computer program have a technical character? As with all inventions, the requisite technical character may exist either in technical effects or in the solution to a technical problem. In addressing this question, the Board began by noting that a computer program cannot be assumed to have a technical character merely for the reason that it is a program for a computer. This means that *normal* ‘physical modifications of the hardware (causing, for instance, the generation of electrical currents) deriving from the execution of the instructions given by programs for computers cannot *per se* constitute the technical character required for avoiding the exclusion of those programs’.<sup>233</sup> The Board added that such modifications were a common feature of all computer programs and therefore could not be used to distinguish programs with a technical character from programs ‘as such’. Instead, the Board said that the technical character must be found elsewhere in the effects caused by the execution of the computer program by the hardware. That is, a computer program product could be patentable if it resulted in additional technical effects that went beyond the ‘normal’ physical interaction between the program (software) and the computer (hardware) on which it was run.

The Board also noted that computer program products only produced and showed an effect when the program concerned was made to run on a computer. The effect only shows in ‘physical reality’ when the program is being run. On the basis that there was no good reason to distinguish between a direct technical effect and the potential to produce a technical effect, the Board accepted that a computer program that had the potential to cause a predetermined further technical effect was in principle not excluded from patentability under Article 52(2) and (3).<sup>234</sup>

After reviewing the scope of protection for computer programs, the Board remitted both cases to the Examining Division to determine whether the applications complied with this

<sup>228</sup> *IBM/Computer programs*, T935/97 [1999] EPOR 301.

<sup>229</sup> *IBM/Computer programs*, T1173/97 [2000] EPOR 219.

<sup>230</sup> *IBM/Computer programs*, T935/97 [1999] EPOR 301, 309; T1173/97 [2000] EPOR 219, 226.

<sup>231</sup> They did so on the basis of EPC r. 27, 29. *IBM/Computer programs*, T1173/97 [2000] EPOR 219, 226.

<sup>232</sup> In so doing, the Board overturned *EPO Guidelines C-IV 2.3* which state that a ‘computer program by itself or as a record on a carrier is not patentable, irrespective of its content’. The Board also distinguished *ATT/System for generating code*, T204/93 (unreported, 29 Oct. 1993). *IBM/Computer programs*, T935/97 [1999] EPOR 301, 308.

<sup>233</sup> *IBM/Computer programs*, T935/97 [1999] EPOR 301, 310; T1173/97 [2000] EPOR 219, 227.

<sup>234</sup> *IBM/Computer programs*, T935/97 [1999] EPOR 301, 313; T1173/97 [2000] EPOR 219, 230.

reading of Article 52(2)(c). While it is clear that the *IBM* decisions mark a victory for the proponents of greater protection for information-technology-related inventions, ultimately the extent to which computer programs are patentable depends on how ‘technical character’ is construed. One factor that suggests that the exclusion will be read narrowly flows from the Board’s comment that it does not make any difference for the purpose of the exclusion whether a computer program is claimed by itself or as a record on a carrier.<sup>235</sup> This means that so long as a computer program is technical, the medium in which it is recorded (the carrier) is irrelevant.<sup>236</sup> This would allow, for example, patents to be granted for software-implemented inventions distributed over the internet<sup>237</sup> and to computer-program products directly loadable into the internal memory of a digital computer.<sup>238</sup>

In order to ensure that practice at the UK Patent Office was consistent with the approach of the European Patent Office, in 1999 the UK Patent Office amended its practice guidelines to follow the *IBM* decisions.<sup>239</sup> The 1999 UK Patent Office *Practice Notice* provided that the British Patent Office would ‘accept claims to computer programs, either in themselves or on a computer, provided that the program is such that when it is run on a computer it produces a technical effect which is more than would necessarily follow merely from the running of any program on a computer.’<sup>240</sup> (As we will see below, it has been suggested that the approach adopted in the 1999 *Practice Notice* reflects law in the UK after *Aerotel*).

While the law at the EPO may have changed after the *IBM* decisions, the law in the UK (which was reflected in the Patent Office *Practice Notice* from 1999) remained stable for a number of years, at least until the 2007 decision in *Aerotel*. As part of his wide-ranging judgment, Jacob LJ attempted to provide some guidance as to how ‘computer program’ was to be construed. Jacob LJ began by noting that there are two views about what was meant by a computer program. Under the first narrow view, which has been followed in post-*Pension Benefits* case law at the EPO, a computer program is the set of instructions as an abstract thing, albeit they could be written down on a piece of paper. The second wider view, which was adopted in pre-*Pension Benefits* case law at the EPO and in UK decisions (such as *Gale’s Application*), sees a computer program as including the ‘instructions on some medium (floppy disk, CD, or hard drive) which cause a computer to execute the program—a program that works’.<sup>241</sup> Jacob LJ came down in favour of the later wider view, arguing that to do otherwise would render the exclusion meaningless.<sup>242</sup> He also suggested that the framers of the EPC ‘really meant to exclude computer programs in a practical and operable form. They meant to exclude real computer programs, not just an abstract series of instructions’.<sup>243</sup> In so doing, Jacob LJ appeared to

<sup>235</sup> *IBM/Computer programs*, T935/97 [1999] EPOR 301, 317; T1173/97 [2000] EPOR 219, 234.

<sup>236</sup> The Board said that if the ‘computer program product comprises a computer-readable medium on which the program is stored, this medium only constitutes the physical support on which the program is saved and thus constitutes hardware’. *IBM/Computer programs*, T935/97 [1999] EPOR 301, 312; T1173/97 [2000] EPOR 219, 229.

<sup>242</sup> On this see *IGT v. Comptroller of Patents* [2007] EWHC 134, para 10 (the definition also included a program which was actually open on a computer and operational, and not simply a program sitting, stored, unopened on a hard drive).

<sup>243</sup> *Ibid.*

reaffirm British practice in this area. He also reinforced the divide that has opened up between the approach that is taken to section 1(2)/Article 52 in the UK and at the EPO.

While the Court of Appeal expressly said that it was reformulating rather than changing the law in this area, nonetheless following *Aerotel*, in November 2007 the UK Intellectual Property Office changed its practice in relation to the patenting of computer programs, and reverted to its old practice of rejecting all computer program claims.<sup>244</sup> The question whether the Intellectual Property Office's reading of *Aerotel* was correct was raised in the first instance decision on *Astron Clinica v Comptroller General of Patents*. In this case, Kitchin J considered whether *Aerotel* prohibited the patenting of all computer programs and, in particular, those which would have been considered under the old approach to make a conventional computer operate in a new way so as to deliver a relevant technical contribution.<sup>245</sup> For various reasons, Kitchin J said that he thought that the approach that had been adopted at the Intellectual Property Office after *Aerotel* was incorrect: instead, he inclined more to the approach that had been set out in the 1999 *Practice Notice*.

Kitchin J noted that the Court of Appeal in *Aerotel* had been critical of the EPO's adoption of the 'any hardware approach'. The Court of Appeal had also been critical of the practice of focusing on form rather than substance that had developed at the EPO (particularly in relation to the distinction that had been drawn between a program as a set of instructions and a program on a carrier). Nonetheless, Kitchin J did not see anything in the judgment that suggested that all computer programs were necessarily excluded. In particular, he said that there was nothing to suggest that the Court of Appeal had any doubts about the earlier *IBM* decisions. As Kitchin J said, the approach outlined in *Aerotel* was consistent with the reasoning of the Board of Appeal in the *IBM* decisions.<sup>246</sup> On the basis that the Court of Appeal had set out to re-order rather than change the test in *Merrill Lynch*, Kitchin J also said that the new approach should produce the same result as had been obtained under the old approach.<sup>247</sup> Applying the *Aerotel* test to a computer-related invention which produces a substantive technical contribution, Kitchin J said that the application of the second stage in *Aerotel* will identify that contribution, while the application of the third step will lead to the answer that the invention does not fall wholly within excluded matter. Importantly, Kitchin J said that the way that the *Aerotel* tests are answered would be the same 'irrespective of whether the invention is claimed in the form of a programmed computer, a method involving the use of that programmed computer, or the program itself'.<sup>248</sup> As Kitchin J said, the court in *Aerotel* concluded, as it had done in *Merrill Lynch* and *Gale*, 'that a computer program remained just that, whether in abstract form or embodied in a storage medium or in a computer'.<sup>249</sup> This meant that if 'a conventional computer programmed with... a new program is patentable because it is no longer a computer program as such then... the same reasoning must apply to the program itself. It is in the program that the technical advance truly lies'.<sup>250</sup> From this basis, Kitchin J concluded that 'where claims to a method performed by running a suitably programmed computer or to

<sup>244</sup> Intellectual Property Office, *Practice Notice* (2 Nov 2006). On this see *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, para 46.

<sup>245</sup> *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, para 46.

<sup>246</sup> They had also been followed by the 2007 Board of Appeal decision of *Tao Group Limited* (2007) T121/06.

<sup>247</sup> *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, para 49. Kitchin J also said that the question of the patenting of computer programs did not arise in either *Aerotel* or *Macrosson's* inventions (para 47).

<sup>248</sup> *Ibid*, para 49.

<sup>249</sup> *Ibid*, para 41.

<sup>250</sup> *Ibid*.

a computer programmed to carry out the method are allowable, then, in principle, a claim to the program itself should also be allowable.<sup>251</sup>

Following the clear statements by Kitchin J in *Astron Clinica*, in February 2008 the Intellectual Property Office issued a statement saying that it was going to replace aspects of the *Practice Notice* issued in November 2007.<sup>252</sup> While the original 2007 *Practice Notice* said that claims for computer programs or for programs on a carrier were not patentable, the 2008 revision, which came into operation on 7 February 2008, follows the approach in *Astron Clinica*. As a result of the 2008 revisions, the 2007 *Practice Notice* now says: so long as a claim to a computer program is drawn to reflect the features of the invention which would ensure the patentability of the method which the program is intended to carry out when it is run, examiners will no longer reject claims for a computer program or a program on a carrier. In so doing the change made to the 2007 *Practice Notice* not only applies the decision of Kitchin J, it also re-opens the door in the UK to the patenting of computer programs *per se*.<sup>253</sup>

Although British courts have adopted a more liberal approach to the patenting of computer programs than might have been envisaged when the 1977 Act was passed, nonetheless there are still some important limitations. While the extent to which computer-related inventions will be patentable always depends on the particular application in question, it can safely be said that in the UK an ordinary computer program used in a general-purpose computer would normally be unpatentable. The reason for this is that while the implementation of the program in a computer transforms mathematical values into electrical signals, the electrical signals amount to no more than a reproduction of information which would not be regarded as bringing about a technical effect.<sup>254</sup> It also seems clear that the mere inclusion of a program on a carrier is not enough to circumvent the exclusion: more is needed, such as a change in the speed with which the processor works.<sup>255</sup> This was reinforced in another post-*Aerotel* decision which concerned an invention for inventory management (that consisted of databases that contained both textual and pictorial information). In rejecting the application, the court said that ‘the result is not a new combination of hardware as in *Aerotel*. Nor is [it] an improved computer or an improved display as in *Vicom*. The result is a computer of a known type operating according to a new program, albeit one which reduces the load on the processor and makes an economical use of the computer memory’.<sup>256</sup> On this basis the application was held to be a computer program and so excluded under section 1(2).

### 7.2.2 EPO

As we mentioned above, one of the consequences of the adoption of the any hardware approach at the EPO is that it is much easier for an invention to satisfy the subject matter requirement, whether for an apparatus or claim, than had previously been the case. Indeed, one commentator has suggested that Article 52 is now an insignificant bar to patentability, given that all that

<sup>251</sup> Ibid, para 50. Kitchin J said that he thought that the decision was consistent with *Re Oneida Indian Nation's Application* [2007] EWCA Civ 954 (Pat).

<sup>252</sup> Director of Patents, ‘Patents Act 1977: Patentable Subject Matter’ (7 February 2008).

<sup>253</sup> For a summary of the recent law and an example of a situation where claims were rejected see: *Autonomy Corporation v. Comptroller General* [2008] EWHC 146 (Pat).

<sup>254</sup> *Kock & Sterzel/X-ray apparatus*, T26/86 [1988] EPOR 72.

<sup>255</sup> Ibid, para 54. See also *Aerotel v. Telco Holdings* [2007] 1 All ER 225, para 92.

<sup>256</sup> *Raytheon v. Comptroller of Patents, Designs and Trade Marks* [2007] EWHC 1230.

is required to ‘impart the requisite technical character to a claimed method is the specification of some technical means, however banal or well-known’.<sup>257</sup>

If an invention is implemented by a computer, it will be considered to use technical means and by that very token will be taken to have technical character.<sup>258</sup> This means that, so long as an invention makes use of, or is implemented by, a computer, it will fall outside the subject-matter exclusion. This can be seen in *Hitachi/Auction method*, where a method of using a memory (clipboard) on a computer was held to be an invention for the purposes of Article 52(1).<sup>259</sup> The liberal interpretation can also be seen in the *Microsoft/Clipboard formats I* decision.<sup>260</sup> The application in question, which was for a way of ‘facilitating data exchange across different formats’, consisted of both method claims and a claim for a program on a computer-readable medium. The Board said that the ‘method was implemented in a computer and this amounted to a technical means sufficient to escape the prohibition in Article 52’. More specifically the Board said that ‘a method implemented in a computer system represents a sequence of steps actually performed and achieving an effect’. Even though a method, in particular a method of operating a computer, may be put into practice with the help of a computer program, a claim relating to such a method does not claim a computer program as such.<sup>261</sup>

The any hardware approach has been extended beyond computer-implemented inventions in relation to the medium on which a computer program is supported. (Jacob LJ in *Aerotel* said that this presupposes that computer program is defined narrowly as an abstract set of instructions.) As the Technical Board of Appeal said in the *Microsoft/Clipboard formats I* decision, an invention will have technical character where it relates to a computer-readable medium (a technical product involving a carrier). That is, a computer-readable medium is a technical product and thus has technical character. This means that where a computer program enhances the internal operations of a computer it will have technical character: so long as it goes beyond the elementary interaction of hardware and software of data processing.<sup>262</sup>

### 7.3 METHODS OF DOING BUSINESS

The approach which has been used in the UK and at the EPO to determine whether an application is excluded on the basis that it consists of ‘a method of doing business’ under section 1(2)(c)/Article 52(2)(c) is much the same as has been used with the other areas of section 1(2)/Article 52.<sup>263</sup>

<sup>262</sup> Ibid; *IBM/Computer programs* [1999] OJ EPO 609. In *Astron Clinica*, Kitchen J said that the Board in *Microsoft/Clipboard formats* appears to have found that any program on a carrier has a technical character and so escapes the prohibition in Article 52’.

<sup>263</sup> See *Trilateral Report on Comparative Study on Business Method Related Inventions* (14 June 2000) for a summary of approaches at EPO and US and Japanese Patent Offices. H. Hanneman, ‘The Patentability of “Methods of Doing Business”’ [2000] *epi Information* 16; D. Booton and P. Mole ‘The Action Freezes? The Draft Directive on the Patentability of Computer-implemented inventions’ [2002] IPQ 289.

### 7.3.1 United Kingdom

The approach adopted in the UK (and at the EPO prior to *Pension Benefits*) is the same as the general approach discussed earlier. This can be seen in *Merrill Lynch's Application*<sup>264</sup> where the Court of Appeal held that an automatic share-trading system operated by a computer program was unpatentable because it merely amounted to a method of doing business. This has been confirmed by a UK Patent Office *Practice Notice*<sup>265</sup> and in a number of subsequent decisions.<sup>266</sup> A similar approach had been followed at the EPO. This can be seen in *Petterson/Queueing system*,<sup>267</sup> which concerned a patent for a system for handling customers queuing at a number of service points. The patent consisted of a turn-number allocating unit, an information unit, a selection unit, and a computer program that decided which particular turn-number was to be served at a particular service point. While the patent was rejected in Sweden, the Board of Appeal at the EPO held that the claimed apparatus was clearly technical in nature and thus patentable.<sup>268</sup> Although the invention was used in a business context, a telling factor in the Board's decision to uphold the validity of the patent was their finding that the essence of the invention lay in the way the elements of the system were combined.<sup>269</sup> More specifically, the validity of the patent was upheld because the problem that the invention solved related to the way the components of the system interacted: which was seen as a technical rather than a business problem.<sup>270</sup>

The Court of Appeal in *Aerotel* said that business-method exclusion was not limited to abstract matters. The Court also said that there was no need for an activity to be completed—for the cash register to ring—for it to fall within the exclusion.<sup>271</sup> On the basis that the information was to be used in the conduct of the business, it was held that the idea of presenting information to be used in undertaking inventories in a pictorial form was a method of doing

<sup>264</sup> *Merrill Lynch's Application* [1989] RPC 561; *Maghsordi's Application* (SRIS O/86/96); *Stockburger/Coded distinctive mark*, T51/84 [1986] EPOR 229.

<sup>265</sup> Patent Office Practice Notice, *Patents Act 1977: Interpreting section 1(2)* (24 Apr. 2002) [2002] RPC 40. (Stressing that technical contribution is the basis for deciding patentability and in so doing rejecting the view that 'some excluded things cannot be patentable even if a technical contribution is present'. This means that 'inventions which involve a technical contribution will not be refused a patent merely because they relate to business methods or mental acts'.)

<sup>266</sup> *Crawford v. Jones* [2005] EWHC 2417 (Pat). The following applications were refused at the UK Patent Office on the basis that they were business methods: web-based on-line user system for ordering computer equipment—*Dell USA*, O/432/01 (4 Oct. 2001); system for exchange of information between providers and enquirers—*Pintos Global Services*, O/171/01 (6 Apr. 2001); a system for automating the ordering of food in a cafeteria—*Fujitsu Ltd*, O/324/03 (23 Oct. 2003); method for allowing users to buy personalized financial products over the internet—*Accucard Ltd*, O/145/03 (29 May 2003); a computer system for handling conflicting demands for resources, such as booking of meeting rooms—*Fujitsu Ltd*, O/317/00 (23 Aug. 2000).

<sup>267</sup> T1002/92 [1995] OJ EPO 605; [1996] EPOR 1; See also *Texas Instruments/Language-understanding system*, T236/91 [2000] EPOR 156; *Fujitsu's Application* (23 Aug. 2000) (O/317/00).

<sup>268</sup> The possibility of patenting business method inventions received a boost as a result of the *Sohei* decision where the Technical Board of Appeal suggested that 'business' ought to be construed narrowly: *Sohei/General-purpose management system*, T769/92 [1996] EPOR 253, 258. *Sohei* 'is generally acknowledged to have adopted an even more software-friendly approach in assessing patentability'. Kober (President of the EPO), 'Software Patents'.

<sup>269</sup> *NAT/Bagging plant* [1993] EPOR 517 (claims were allowed for a computer method which involved weighing and bagging on the quayside material transported in bulk by ship, because it used technical equipment to achieve a technical end (the production of sealed weighed bags of materials)). See also *Pension Benefit Systems*, T931/95 [2001] OJ EPO 441 (TBA) (claim for method of controlling a pension administration system).

<sup>270</sup> *Sohei/General purpose management system*, T769/92 [1996] EPOR 253; *Pitney Bowes/System for processing mail*, T767/99 (13 March 2002) (TBA), para. 2.6.

<sup>271</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, paras 67–71.

business.<sup>272</sup> It has also been said that the mere fact that an invention provides financial gains is not enough for it to be classified as a method of doing business: otherwise, nearly all patents would fall within the exclusion.<sup>273</sup>
