of certain trousers (having an oval kneepad and two lines of sloping stitching from hip height to crotch height) gave substantial value to the goods and so was unregistrable, it was of no consequence—for trade mark law—that consumers would recognize the shape and understand it as indicating that G-Star had made the trousers.<sup>36</sup> This result might be open to criticism, on the basis that consumers who do consider a shape as indicating trade origin might be deceived when competitors sell the same shape.<sup>37</sup> However, it seems that the law of passing off might operate in such circumstances at the very least to ensure that the product is sold in such a way that no deception occurs.<sup>38</sup>

### 2.1.1 Where the shape results from the nature of the goods themselves

Section 3(2)(a) of the 1994 Act/Article 7(1)(e)(i) of the CTMR provide that a sign shall not be registered where it consists exclusively of a shape that results from the nature of the goods themselves. While the need to identify the nature of the goods may create a number of difficulties, the logic of the section is relatively straightforward. If the shape results from the nature of the goods, the shape cannot possibly distinguish the product of one trader from another: any trader who sells goods of that type would necessarily have to use the same shape. They would have no choice as to the shape that the product took. To allow the registration of ‘basic shapes’ or ‘shapes which are indispensable to the manufacture or distribution of products’<sup>39</sup> would greatly inhibit the ability of competitors working in the same field. It would also permit traders to control the respective goods themselves.<sup>40</sup> This would be the case, for example, if a trade mark were given for the round shape of balls.

(i) *What are the ‘goods themselves’?* One question that is raised by the exclusion is: what is meant by the phrase, ‘the goods themselves’? The way in which this question is answered is important, given that the more narrowly the ‘goods themselves’ is defined, the more likely it is that the shape will correspond to the goods in question and thus be excluded. The question of what is meant by the ‘goods themselves’ was considered in *Philips v. Remington* both at first instance<sup>41</sup> and by the Court of Appeal,<sup>42</sup> where the issue was whether the shape of a three-headed rotary shaver fell within the scope of section 3(2)(a) (see Fig. 36.4).

At first instance, Jacob J said that it was possible for the ‘goods themselves’ to be defined either as ‘three-headed rotary shavers’, ‘electrical shavers’, ‘mechanical shavers’, or ‘shavers’ as such. While the way in which the goods were classified provided a useful starting point for determining what the ‘goods themselves’ were, Jacob J stressed that the question was not to be decided merely by reference to the way in which the applicant had categorized the goods in their specification; rather, it was necessary to ask ‘what are the goods as a practical business matter?’ The answer to this question depended on how the goods were viewed as articles of commerce.<sup>43</sup> On the facts, Jacob J concluded that the goods

<sup>36</sup> *Benetton v. G-Star*, Case C-371/06 [2007] ECR I-7709. See also *Bang & Olufsen v. OHIM*, Case T-508/08 [2011] ECR II-6975 (GC, Eighth Chamber), [44].

<sup>37</sup> G. Dinwoodie, ‘The Death of Ontology: A Teleological Approach to Trademark Law’ (1999) 84 *Iowa L Rev* 611 (arguing that courts ‘should explore the possibility of conditioning a defendant’s right to copy a functional design on compliance with labelling or other requirements that minimize consumer confusion’).

<sup>38</sup> See above at pp. 832–3. Indeed, the Court in *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403, [61], seems to hint that unfair competition rules might operate to prevent ‘slavish imitation’.

were ‘electrical shavers’, since, in business practice, they were viewed as a single type of commercial article.

While agreeing with Jacob J that the goods in question were electrical shavers, the Court of Appeal placed more reliance on the way in which the mark was classified than on the way in which the goods were viewed as articles of commerce. As Aldous LJ said:

[T]he words the goods refer to the goods in respect of which the trade mark is registered. Those are the goods which it must be capable of distinguishing and in respect of which the proprietor obtains, on registration, the exclusive right to use the trade mark.<sup>44</sup>

However, Aldous LJ added the caveat that the ‘purpose of the subsection is to prevent traders monopolizing shapes of particular goods and that cannot be defeated by the skill of the applicant when selecting the class of goods for which registration is sought’.<sup>45</sup>

(ii) *When does a shape ‘result from’ the nature of the goods?* The next question to ask is: when does the shape *result from* the nature of the goods? It seems that the exclusion will apply only where the designer of a product has no real or effective choice as to the shape that the product can take. This can be seen in *Philips v. Remington*, in which an important factor in the Court of Appeal’s decision that the shape of the razor did not fall foul of section 3(2)(a) was the fact that there were a number of different ways in which the shape of a three-headed razor could have been designed. Because there was a number of shapes other than the one in question that a three-headed electric shaver could have taken, this meant that the shape ‘did not result from the nature of the goods themselves’ (that is, electric shavers). As Aldous LJ explained, the reason why the trade mark was not excluded by section 3(2)(a) was that there ‘is no one shape, let alone that depicted in the trade mark, which results from the nature of such shavers’.<sup>46</sup> Consequently, it seems that if the applicant can demonstrate there are other shapes of the same goods on the market, no objection under section 3(2)(a) will be sustainable. Indeed, as Aldous LJ said in *Philips v. Remington*, it is difficult to envisage shapes that would fall within the scope of the section, ‘except those that are produced in nature, such as bananas’.<sup>47</sup> Although the Court

<sup>45</sup> *Ibid.* See also *Procter & Gamble Co. v. OHIM*, Case T-122/99 [2000] ECR II-265 (although specification for ‘soaps in class 3’, goods themselves were ‘soap bars’).

<sup>46</sup> *Philips v. Remington* [1999] RPC 809 (CA), 820.

<sup>47</sup> *Ibid.* See also *Société de Produits Nestlé SA v. Unilever plc* [2003] ETMR (53) 681, 688, [14]–[15].

of Justice has adopted similar reasoning,<sup>48</sup> in *Nestlé v. Cadbury*,<sup>49</sup> the UK Trade Marks Registry found that the slab shape, with its proportions of height, width, and depth, of a four-finger KIT-KAT chocolate bar resulted from the nature of the goods (see Fig. 36.3 above at p. 917). The Registry said that the fact that there were other shapes did not preclude a finding that this was a ‘basic’ shape (although it acknowledged that ‘a real diversity’ of shapes implied that no particular shape resulted from the nature of the goods).

Some light will likely be cast on this question by the Court of Justice when it rules on a reference from the Dutch Hoge Raad over the famous Danish design for a children’s high chair, known as the TRIPP-TRAPP (see Fig. 36.2 above). In *Hauck GmbH & Co. KG v. Stokke A/S*,<sup>50</sup> the Dutch court has asked the Court whether Article 3(1)(e)(i) of the Trade Marks Directive refers to a shape ‘which is indispensable to the function of the goods’, or whether it refers also ‘to the presence of one or more substantial functional characteristics of goods which consumers may possibly look for in the goods of competitors’? This seems to suggest that the Dutch court sees the first of the shape exclusions in terms that heavily overlap with the second (features necessitated by technical function). It is therefore useful that a further question is referred that offers the Court freedom to explain how the first limb is to be interpreted.

### 2.1.2 Where the shape is necessary to obtain a technical result

The second limitation on the types of shape that can be registered as trade marks is set out in section 3(2)(b) of the 1994 Act/Article 7(1)(e)(ii) CTMR.<sup>51</sup> These provide that a sign shall not be registered where it consists exclusively of a shape that is necessary to obtain a technical result. In many ways, section 3(2)(b) is very similar to section 3(2)(a). In *Philips v. Remington* and *Lego*, the Court of Justice has offered two explanations for the exclusion. On the one hand, it has said that the exclusion is designed to ensure that trade mark rights do not impede traders from offering products incorporating ‘technical solutions or functional characteristics’ that a user or consumer might want.<sup>52</sup> In addition, the Court has noted that the exclusion would also prevent individuals from using registration ‘to acquire or perpetuate exclusive rights relating to technical solutions’.<sup>53</sup> Nevertheless, it seems that the Court of Justice does not see the concept of ‘technical result’ as limited to the meaning given to it in patent law. Instead, it has interpreted ‘technical result’ as broadly including any desirable functional aspect of a shape. Consequently, the exclusion should encompass shapes that facilitate convenient storage or transportation of the goods, or which provide the purchaser with other ‘convenience features’. In *Nestlé SA v. Cadbury*, the question arose as to whether ‘technical result’ is broad enough to cover how the goods are manufactured, rather than how they are to be used. The matter arises in relation to the angle of the grooves—14°—that separate the four ‘fingers’ of the KIT-KAT chocolate bar (see Fig. 36.3 above at p. 917). The minimum angle of the ridge from vertical would be 10°, but the angle could have been greater (giving a squatter appearance). Nevertheless, the UK Trade Marks Registry found that the angle was a consequence of the manufacturing process and, on appeal, Nestlé contested this. Finding the matter not clear, Arnold J asked the Court of Justice for guidance and, at time of writing, the case is pending before the Court.<sup>54</sup>

<sup>48</sup> *Procter & Gamble v. OHIM*, Case T-122/99 [2000] ECR II-265.

<sup>50</sup> Case C-205/13 (pending). <sup>51</sup> TM Dir., Art. 3(1)(e). <sup>52</sup> *Koninklijke Philips v. Remington*, Case 299/99 [2002] ECR I-5475, [78]; *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403, [43].

<sup>53</sup> *Koninklijke Philips v. Remington*, Case 299/99 [2002] ECR I-5475, [82]; *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403, [45].

<sup>54</sup> *Société de Produits Nestlé SA v. Cadbury UK Ltd*, Case C-214/14 (pending); [2014] EWHC 16 (Ch), [68], [72] per Arnold J. Note also the appeal to the GC, pending as T 112/13, in parallel proceedings concerning the CTM.

(i) *When is a shape ‘necessary’ to achieve a technical result?* The key issue in relation to section 3(2)(b)/Article 7(1)(e)(ii) is: when is a shape *necessary* to achieve a technical result? Ultimately, the impact that the section has upon what may be registrable as a trade mark depends on how this question is answered.<sup>55</sup>

In *Philips v. Remington*, the reference arose from an action brought by Philips against its competitor Remington to prevent the latter from selling three-headed rotary shavers. Philips had developed the shaver in 1966 and, in 1985, had successfully registered a graphic representation of the shaver head as a trade mark.<sup>56</sup> In 1995, Philips brought an action against Remington, claiming infringement of this trade mark. Philips argued that, because the function that the razor was to perform—namely, providing a close and effective shave—could be achieved by shapes other than that shown in the representation, the shape did not fall foul of section 3(2)(b). More generally, Philips argued that ‘provided the trade mark owner can show that some other shape will also do the job, their sign will not fall within this exclusion no matter how functional it may be’—that is, if it were possible for the same result to be achieved by a different shape, then the shape in question would not fall within the exclusion. Jacob J found for Remington<sup>57</sup> and, on appeal,<sup>58</sup> the Court of Appeal formulated a number of questions on which it required guidance from the Court of Justice. In particular, the Court of Appeal asked whether the restriction relating to shapes necessary to achieve a technical result could ‘be overcome by establishing that there are other shapes which can obtain the same technical result’, or if not, what test was to be applied.

The Court of Justice interpreted the exclusion in question as intended to preclude the registration of shapes:

... whose essential characteristics perform a technical function, with the result that the exclusivity inherent in the trade mark right would limit the possibility of competitors supplying a product incorporating such a function or at least limit their freedom of choice in regard to the technical solution they wish to adopt.<sup>59</sup>

The Court added that the exclusion applies where the essential characteristics of the shape ‘perform a technical function and were chosen to fulfil that function’.<sup>60</sup> Finally, the Court stated that the mere existence of other shapes that could achieve the same technical result is not of itself sufficient to overcome this ground for refusal.<sup>61</sup> Given the choice between treating ‘necessary’ as describing a mandatory relationship between technical result and shape (that is, that the shape is the only one that could perform the function), and the broader interpretation of ‘necessary’ as indicative of a causal relationship, the Court chose the latter.<sup>62</sup>

<sup>55</sup> *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403.

<sup>56</sup> The registration was made under the TMA 1938. When this Act was replaced by the TMA 1994, the registration became a valid registration under that Act.

<sup>57</sup> *Philips v. Remington* [1998] RPC 283 (Pat).

<sup>58</sup> *Philips Electronics NV v. Remington Consumer Products* [1999] RPC 809 (CA).

<sup>59</sup> *Koninklijke Philips v. Remington*, Case 299/99 [2002] ECR I-5475, [79]. <sup>60</sup> *Ibid.*, [80].

<sup>61</sup> *Ibid.*, [81].

<sup>62</sup> The jargon is adapted from that of G. Dinwoodie, ‘Federalized Functionalism: The Future of Design Protection in the European Union’ (1996) 24 *AIPLA QJ* 611. While this clarification is helpful, ascertaining when the Court considers a shape to be attributable to a technical result is more difficult. If there are 50 shapes that could conceivably achieve the same technical result, then presumably the exclusion will not come into play—but what if there is a choice of only ten, or five, or three?

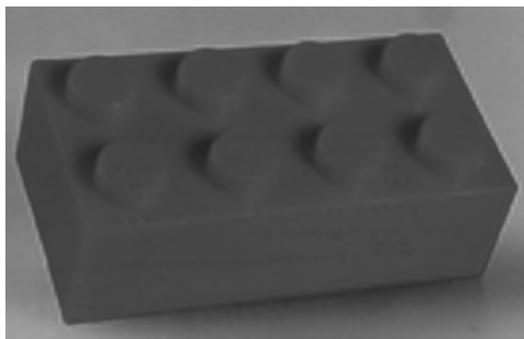

Fig. 36.5 LEGO brick

Source: *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403

While the Court of Justice in *Philips* made it clear that the mere possibility that more than one shape can achieve a technical function will not render a shape registrable, it provided little guidance as to what evidence is relevant when deciding whether a shape is ‘attributable to a technical result’.<sup>63</sup> The inconsistent language used by the Court suggests that subsequent tribunals should form an overall conclusion taking account of a variety of perspectives, in particular (i) whether the shape actually achieves a technical result (a *sine qua non* to the operation of the exception), (ii) whether the shape was chosen by the designer to do so,<sup>64</sup> and (iii) whether the shape is one of a limited number that a competitor could use to achieve the function.

Further clarification was provided in *Lego Juris*, in which the famous makers of LEGO bricks had registered an image of a red brick as a mark for, among other things, ‘teaching apparatus’ in Class 8 and ‘games and playthings’ in Class 28 (see Fig. 36.5).<sup>65</sup> Ritvik Holdings, a competitor that makes construction sets (sold as MEGA BLOKS), sought (in 1999) to cancel the registration as regards construction toys in Class 28. In 2004, following the Court of Justice decision in *Philips v. Remington*, the registration was cancelled and Lego appealed. The appeal was rejected at all stages, including by the Grand Board of Appeal of the Office of Harmonization in the Internal Market (OHIM), and ultimately, in 2010, by the Grand Chamber of the Court of Justice. The Board of Appeal had, in fact, found that all features of the brick (such as the two rows of studs) other than its colour (red) were necessary to achieve identified the essential features. The Grand Board referred to the fact that the inventor of the LEGO brick, Harry Fisher Page, had filed patents that covered many of the features, as pointing towards their technical functionality.<sup>66</sup> As already noted, the Court of Justice usefully explained how a tribunal is to determine when features are ‘essential’ and indicated that, thereafter, the key question is simply whether those features *perform* a technical function.<sup>67</sup> The Court saw

<sup>63</sup> When the answers of the Court of Justice were referred back to the UK courts, the trade mark was held to be invalid in the light of s. 3(2)(b) of the Act: *Koninklijke Philips v. Remington* [2006] FSR (30) 537 (CA), [6]. Unfortunately, there is no reasoned judgment explaining exactly why.

<sup>64</sup> In a subsequent case over the shape of a new version of Philips’ three-headed electric shaver, the relevant shape was a ‘clover leaf’, and this was also held to be unregistrable: *Koninklijke Philips v. Remington* [2006] FSR (30) 537.

<sup>65</sup> *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403.

<sup>66</sup> *Lego Juris v. OHIM*, Case R856/2004-G [2007] ETMR (11) 169, [40], citing *TrafFix Devices Inc. v. Marketing Displays Inc.*, 532 US 23 (2001) (US Supreme Court).

<sup>67</sup> *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403, [72], [84]. Considering US law, McKenna distinguishes ‘functionality’ from ‘competitive necessity’, and argues that references to the latter (while

nothing wrong in the OHIM's reliance on prior patents as indicating the features were functional.<sup>68</sup>

### 2.1.3 Where the shape gives substantial value to the goods

The third restriction placed on the types of shape that may be registered as trade marks is found in section 3(2)(c) of the 1994 Act/Article 7(1)(e)(iii) CTMR. These provide that a sign shall not be registered where it consists exclusively of a shape that gives substantial value to the goods.<sup>69</sup>

The leading case is now the General Court decision in *Bang & Olufsen v. OHIM*,<sup>70</sup> in which the applicant sought registration of a three-dimensional mark comprising the 'striking' shape of a speaker—which appears like a pencil or organ pipe, pointed at one end, at which it joins a square base (see Fig. 36.6)—for 'electronic apparatus' in Class 9 and 'music furniture' in Class 20. The application had initially been rejected as lacking distinctiveness (as we will see in Chapter 37), but, following a judgment of the General Court, was referred back to the OHIM, which found that while the shape was not devoid of distinctive character, it was excluded under Article 7(1)(e), third indent, of the Regulation (the equivalent of section 3(2)(c)). On appeal, the applicant claimed that the OHIM had failed to take account of the target public's primary interest in the sound quality of the speaker, rather than its shape. The General Court affirmed the finding. Drawing on the judgment in *Lego Juris*, the Court reiterated that there was no obligation to consider the views of the 'target public', which were not of decisive relevance to the question of whether the shape conferred substantial value on the goods; rather, the Court could infer from a range of matters that the shape gave substantial value. In particular, Bang & Olufsen's own marketing and other literature produced by distributors emphasized the aesthetic characteristics of the shape as a selling point: the speakers were a 'pure, slender, timeless sculpture for music reproduction'. The Court formed the view that even if consumers also look for other characteristics (sound quality, technical performance, etc.), design was nevertheless 'very important' to the consumer; the shape thus gave substantial value to the goods.<sup>71</sup>

The value attributable to the shape in its operation *as a trade mark* should not be taken into account when considering whether it falls within the scope of section 3(2)(c). As Jacob J said in *Philips v. Remington*,<sup>72</sup> good trade marks add value to goods—that is one of the things that they are for. For example, the ROLLS-ROYCE grille adds value to a Rolls-Royce,

appropriate in aesthetic functionality cases) are inappropriate in assessing technical functionality, which concerns only whether the feature makes the product useful or enables it to work: M. McKenna, '(Dys) Functionality' (2011) 48 *Hous L Rev* 823.

<sup>68</sup> *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403, [85].

<sup>69</sup> The section has been described as 'difficult territory': *Re Dualit's Trade Mark Application* [1999] RPC 890 903. For discussion, see A. Kur, 'Too Pretty to Protect? Trade Mark Law and the Enigma of Aesthetic Functionality', in J. Drexler et al. (eds), *Technology and Competition: Essays in Honour of Hans Ullrich* (2009), 139–60, updated in 2011 to reflect Court of Justice case law and available online at <[http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=1935289](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1935289)>

<sup>70</sup> Case T-508/08 [2011] ECR II-6975 (GC, Eighth Chamber).

<sup>71</sup> *Ibid.*, [75]–[77]. A similar question had been referred to the Court of Justice by the Dutch Hoge Raad in *Trianon Productie BV v. Revillon Chocolatier SAS*, Case C-2/12 (reference now withdrawn), concerning the shape of chocolates (in that case, to resemble the stem of a vine). The referring court asked whether a shape gives substantial value only if that shape must be regarded as the main or overriding value in comparison with other values (such as, in the case of foods, their taste or substance). The GC's answer, based on *Bang & Olufsen*, would have been 'no'.

<sup>72</sup> *Philips v. Remington* [1998] RPC 283, aff'd [1999] RPC 809 (CA), 822. See also *Julius Sämaan Ltd v. Tetrosyl Ltd* [2006] FSR (42) 849, [100] *per Kitchin J.*

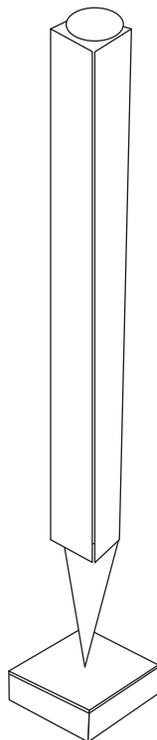

Fig. 36.6 Bang & Olufsen's speaker design

Source: Courtesy of Bang & Olufsen

but it does so primarily because it signifies ROLLS-ROYCE and not because of its inherent shape. As such, it would not fall foul of section 3(2)(c).<sup>73</sup> When applying the exclusion, the decisive question is therefore whether the contribution that the shape provides (that is, its aesthetic value as such) *other than* as a source reference is substantial.<sup>74</sup>

One way (and we can infer from *Bang & Olufsen* not the only way) in which to test whether a shape gives value to a product would be to compare the price of the product made to the relevant shape with the price of an equivalent product that is not made to that shape.<sup>75</sup> While the market offers one way of determining the value of the shape, there will often be difficulties in determining what value is attributable to shape as opposed to the differing quality of the materials from which the product is made.<sup>76</sup> Consequently, in many cases, courts will need to rely on other techniques to ascertain the value that the shape provides to the goods.

The question of whether the value provided by the shape is *substantial* is a question of degree. As Aldous LJ said:

[This] requires a comparison . . . to be made between the shape sought to be registered and shapes of equivalent articles. It is only if the shape sought to be registered has, in relative terms, substantial value that it will be excluded from registration.<sup>77</sup>

<sup>73</sup> US courts have talked in terms of whether 'exclusive use of the feature would put competitors at a significant non-reputation-related disadvantage': *Qualitex Co. v. Jacobson Prods Co., Inc.*, 514 US 159 (1995), 165.

<sup>74</sup> *Nestlé v. Unilever* [2003] ETMR (53) 681, 686, [8].

<sup>75</sup> See also *Julius Sämaan Ltd v. Tetrosyl Ltd* [2006] FSR (42) 849, [103] *per* Kitchin J.

<sup>76</sup> See, e.g., *Dualit Ltd's (Toaster Shapes) Trade mark Applications* [1999] RPC 304 (TMR).

<sup>77</sup> *Philips v. Remington* [1999] RPC 809, 822.

It seems that, in the normal run of things, a container will seldom give substantial value to a product. If the position were otherwise, the provision would exclude many shapes even though they operate to indicate source.

### 3 CAPABLE OF BEING REPRESENTED GRAPHICALLY

The second general hurdle that must be met for a trade mark to be validly registered under section 1(1) of the 1994 Act/Article 4 CTMR is that the sign must be ‘capable of being represented graphically’. This requirement was discussed in the previous chapter.<sup>78</sup>

### 4 CAPACITY TO DISTINGUISH

The third and final hurdle that must be met for a trade mark to be validly registered under section 1(1)/Article 4 is that the sign must be ‘capable of distinguishing the goods or services of one undertaking from the goods or services of another’. Corresponding to this, section 3(1)(a) provides that failure to comply with any of the requirements of section 1(1) is one of the absolute grounds under which a sign will not be registered.

Following the passage of the Trade Marks Act 1994,<sup>79</sup> the British courts spent a great deal of effort trying to define ‘capacity to distinguish’ in a way that would both give it meaning and avoid it undermining the other substantive requirements relating to distinctiveness (which we examine in the next chapter). In particular, the courts sought to make sense of the interrelationship between the requirement that a sign be ‘capable of distinguishing’ and the exclusion in section 3(1)(b) relating to marks that are ‘devoid of distinctive character’. The goal was to resolve the seeming conundrum raised by the statute, which seemed to presuppose the possibility of a sign that was simultaneously ‘capable of distinguishing’ and ‘devoid of distinctive character’. The judicial efforts produced a series of inconsistent decisions and impossible tests.<sup>80</sup> Thankfully, in *Philips v. Remington*,<sup>81</sup> the Court of Justice made it clear that these efforts were unnecessary.

As already noted, the reference arose from an action brought by Philips against its competitor Remington to prevent the latter from selling three-headed rotary shavers. The Court of Appeal held that the requirement that a sign be ‘capable of distinguishing’ the goods of one trader from those of another was a preliminary requirement.<sup>82</sup> As such, the Court needed to consider this matter before examining whether the mark was ‘devoid of distinctive character’. On the facts, the Court of Appeal held that the three-headed rotary shaver failed the test. This was because the Court considered that a sign needed to have some ‘capricious addition’ to render it capable of distinguishing. A sign with such a capricious alteration could pass the first step (that is, be capable of distinguishing), but fail the second (that is, be devoid of distinctive character).

<sup>78</sup> See pp. 892–7.

<sup>79</sup> Bently and Sherman (2001), 769–73.

<sup>80</sup> *Dyson v. Registrar of Trade Marks* [2003] *ETMR* (77) 937, 945, [16].

<sup>81</sup> *Koninklijke Philips v. Remington*, Case 299/99 [2002] *ECR I*-5475.

<sup>82</sup> *Philips v. Remington* [1999] *RPC* 809 (CA).

The Court of Justice held that there was no ‘capricious alteration’ test in European law.<sup>83</sup> It also made it clear that if a sign was, in fact, distinctive (either by nature or by use), then it would be treated by definition as ‘capable of distinguishing’ the goods of one undertaking from those of others.<sup>84</sup> More specifically:

[T]here is no category of marks which is not excluded from registration by Article 3(1)(b), (c), and (d) and Article 3(3) thereof on the ground that such marks are incapable of distinguishing the goods of the proprietor of the mark from those of other undertakings.<sup>85</sup>

The Court of Justice seems to have said that Articles 2 and 3(1)(a)–(d) of the Trade Marks Directive need to be ‘read together’. Each provides flavour to the other. Article 3(1)(a) ‘is intended essentially to exclude from registration signs which are not generally capable of being a trade mark’.<sup>86</sup> In this respect, it is ‘like the rule laid down by Article 3(1)(b), (c), (d)’.<sup>87</sup> The three specific exclusions are elaborations of the basic requirement of capacity to distinguish. If a mark is devoid of distinctive character, it lacks capacity to distinguish; if a sign is descriptive, it lacks capacity to distinguish, and so forth. But Article 3(1)(a) does not ‘constitute a separate ground for refusing registration in connection with lack of distinctiveness’.<sup>88</sup>

## 5 PROTECTION OF SERVICE MARKS FOR RETAIL SERVICES

Service marks—that is, signs that are used in connection with the provision of services—first became registrable in the United Kingdom as a result of the Trade Marks (Amendment) Act 1984. Service marks are treated in the same way as trade marks by the 1994 Act. This enables the providers of professional, financial, commercial, or personal services to obtain the same statutory protection for their goodwill as is given to the manufacturers and sellers of goods.

Although not listed in the Nice System of Classification, it is now clear that the OHIM and member states must allow for registration of marks for ‘retail services’. In *Praktiker Bau-und Heimwerkermärkte AG*,<sup>89</sup> the applicant had sought to register ‘Praktiker’ in Germany for ‘retail trade in building, home improvement and gardening goods for the do-it-yourself sector’. The German Federal Patent Court (*Bundespatentgericht*) referred various questions to the Court of Justice relating to registration for retail services. The

<sup>85</sup> *Ibid.*, [40]. <sup>86</sup> *Ibid.*, [37].

<sup>87</sup> *Ibid.*, [38]. It has been argued that this decision still leaves room for an understanding of s. 1 as concerned with whether a sign has capacity to distinguish in the abstract, whereas s. 3(1)(b)–(d) concerns whether a sign is distinctive for the particular goods or services for which registration is sought: D. Keeling, ‘About Kinetic Watches, Easy Banking and Nappies that Keep a Baby Dry’ [2003] *IPQ* 131, 134–6; *Sat. 1 v. OHIM*, Case C-329/02 P [2004] ECR I-8317, [AG16]–[AG17] (AG Jacobs). Indeed, the Court of Justice has stated that the fact that a sign is, ‘in general, capable of constituting a trade mark’ does not mean that the sign necessarily has distinctive character for the purposes of CTMR, Art. 7(1)(b), in relation to a specific product or service: *Henkel v. OHIM*, Joined Cases C-456/01 P and C-457/01 P [2004] ECR I-5089, [32]; *OHIM v. BORCO-Marken-Import Matthiesen GmbH & Co. KG*, C-265/09 P [2010] ECR I-8265, [29]. This view has been dubbed by Kerly ‘the German view’ and heavily critiqued: Kerly, 31–8, [2–089]–[2–116]. The authors of Kerly instead argue that the phrase introduces and encapsulates the ‘essential function’ of any trade mark.

<sup>88</sup> *Koninklijke Philips v. Remington*, Case 299/99 [2002] ECR I-5475, [46].

<sup>89</sup> Case C-418/02 [2005] ECR I-5873.

Court held that there was nothing in the Trade Marks Directive that required the concept of ‘services’ to be restrictively defined and noted that retail trade included the selection of goods, as well as the provision of services ‘aimed at inducing the consumer to conclude transactions with the trader rather than a competitor’.<sup>90</sup> The Court stated that objections to such registration being of undue breadth could largely be accommodated by judicious application of the ‘global assessment’ of likelihood on confusion in relation to relative grounds for refusal or infringement. Consequently, a specification would be acceptable in principle if it were to use general words such as ‘bringing together a variety of goods, enabling customers to conveniently view and purchase those goods’ as long as the goods or type of goods to which the service related was specified.

<sup>90</sup> Ibid., [34]. But see *Apple Inc v. German Patent Office*, Case C-421/13 (10 July 2014) (ECJ, Third Chamber), [26], where the Court recognizes that a mark can be registered for services ‘where those services do not form an integral part of the offer for sale of those goods’ such as ‘demonstrations by means of seminars of the products that are displayed there.’ The Court notes that such services might be ‘remunerated’. The tenor of the judgment is quite different from that in *Praktiker*, which specifically rejected the need to specify the services in any detail, and thus casts considerable doubt over the breadth of that holding. Probably the Court in *Apple* intended to clarify that a trader which was selling its own goods (rather than a variety of goods of diverse manufactures), might still offer relevant retail services.

## ABSOLUTE GROUNDS FOR REFUSAL

### CHAPTER CONTENTS

1 Introduction	928	3 Non-distinctive Marks	929
2 Subject Matter	929	4 Other Absolute Grounds for Invalidity	960

### 1 INTRODUCTION

In this chapter, we explore the ‘absolute’ grounds for refusing to register a trade mark. The absolute grounds for refusal are set out in section 3 of the Trade Marks Act 1994, Article 3 of the Trade Marks Directive, and Article 7 of the Community Trade Mark Regulation (CTMR). The ‘absolute grounds’ share two key characteristics. First, with one or two exceptions, the term ‘absolute’ indicates that the ground for objection relates to the sign itself, rather than to the rights of individual third parties. For this reason, absolute grounds for refusal concern matters that can be scrutinized easily by the various offices without reference to third parties.<sup>1</sup> Second, the ‘absolute’ grounds for refusal are grounds that give effect to a ‘public’ or ‘general’ interest (although the public interest underpinning each ground may vary).<sup>2</sup> One consequence of this is that if a sign is registered, which should have been refused on absolute grounds, any person may bring proceedings to have the mark declared invalid.<sup>3</sup>

The absolute grounds for refusal can conveniently be grouped into three general categories. The first is concerned with whether the sign falls within the statutory definition of a trade mark found in sections 1(1) and 3(1)(a) and (2). The second category of grounds, each of which is contained in section 3(1)(b)–(d), excludes from registrability marks that are non-distinctive, descriptive, and generic. The third and more eclectic category, which covers the absolute grounds for refusal set out in section 3(3)–(6), provides that trade marks shall not be registered if they are contrary to public policy or morality, if they are

<sup>1</sup> This is the chief contrast with ‘relative’ grounds, discussed in Chapter 38. An absolute ground cannot, in general, be overcome by demonstrating the ‘consent’ of the right holder to registration. For exceptions, relating to state emblems and, possibly, geographical indications, see below pp. 964–5, 970–1.

<sup>2</sup> *Sat. 1 Satellitenfernsehen GmbH v. OHIM*, Case C-329/02 P [2004] ECR I-8317, [25].

<sup>3</sup> TMA 1994, s. 47. A registered mark may be challenged at any stage by any person, by application to the UK Registrar or before the Cancellation Division at the OHIM (CTMR, Art. 52), or as a counterclaim to an action based on a national or Community mark (CTMR, Arts 52 and 100). Such applications cannot be rejected on the ground that the applicant is guilty of ‘abuse of rights’: *Ultra Air GmbH v. OHIM*, Case T-396/11 (30 May 2013) (General Court, Second Chamber).

likely to deceive the public, if they are prohibited by law, or if the application was made in bad faith. Special provisions also exist for specially protected emblems.

Before considering each of these general categories in turn, it is perhaps useful to step back and consider the question: when should a legal system deny the possibility of registration to an applicant? We suggest that there are at least five reasons. The first reason for denying registration is that the sign has not been sufficiently precisely defined—perhaps is incapable of the precise definition that is necessary to define a property right. This explains rejections under sections 1 and 3(1)(a), which were discussed in Chapter 35. A second reason why a trade mark regime might want to reject an application is where it is impossible, or unlikely, that the sign will function as a trade mark. If consumers will not see the sign as a trade mark, there is simply no justification for its protection as such. A third reason for refusing registration is that granting rights in the particular sign might limit, rather than promote, competition. This reason goes some way towards explaining the exceptions with respect to shapes that were reviewed in Chapter 36, but, as we will see, similar reasoning arises in the context of other grounds of refusal, particularly descriptiveness. Fourth, a legal system might exclude some types of mark from registration simply because it does not want to encourage the use of those types of sign (as would be the case with immoral or deceptive marks), or because it wants to preserve the use to particular contexts (as is the case perhaps, with state emblems). Finally, applications might be thought to need rejection not because of the character of the signs themselves, but because of the behaviour of the applicant. If the applicant appears in some way to be abusing the system, or using it opportunistically, this may be considered a good reason to reject the application.<sup>4</sup>

## 2 SUBJECT MATTER

Section 3(1)(a) of the 1994 Act provides that a sign that does not satisfy the requirements of a trade mark as set out in section 1(1)(a) will not be registrable. As we have noted, the requirements with regards to graphic representation of the mark and identification of goods or services are concerned with establishing boundaries to the property rights that registration confers. The types of sign that are potentially registrable are further restricted by section 3(2), which provides special rules in relation to the registration of shapes as trade marks. Because these topics were dealt with in Chapters 35 and 36, it is not necessary to look at them again here.

## 3 NON-DISTINCTIVE MARKS

The second category of absolute grounds for validity relates to what can be described as non-distinctive, descriptive, or generic marks. More specifically, section 3(1)(b)–(d) and Article 7(1)(b)–(d) of the Regulation provide that the following trade marks shall *not* be registered:

- (b) trade marks which are devoid of any distinctive character;
- (c) trade marks which consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, geographical origin,

<sup>4</sup> *Red Bull v. Sun Mark* [2012] EWHC 1929 (Ch), [135] (explaining TMA 1994, s. 3(6), on this basis and identifying two forms of abuse).

- or the time of production of the goods or of the rendering of the service, or other characteristics of the goods or service;
- (d) trade marks which consist exclusively of signs or indications which have become customary in the current language or in the bona fide and established practices of the trade;<sup>5</sup> . . .

Because each ground represents a separate basis for refusal (or invalidity), if it is to be valid, a mark must not fall within any of the three grounds. While each provision has a distinct sphere of operation, they will often be applied cumulatively<sup>6</sup>—that is, a mark will often be rejected on the basis of more than one ground. In many cases, the tribunals have said that a mark that is descriptive falls within section 3(1)(c) and, as a result, also lacks distinctive character, thus is excluded under section 3(1)(b). In contrast, a sign that is not descriptive may well lack distinctive character and thus be excluded under section 3(1)(b), even though it is not excluded under section 3(1)(c).

Subsections (b)–(d) are all subject to a proviso—namely, that a sign that falls within any of the provisions (that is, a sign that is non-distinctive, descriptive, or generic) is not to be treated as invalid if, as a result of use, it has ‘acquired distinctive character’. In other words, the objections in section 3(1)(b)–(d) apply to the ‘inherent’ characteristics of the sign and can be overcome if the sign comes to be understood by consumers as, in fact, communicating that the particular goods or services in relation to which the sign is used come from one particular trade origin. Sometimes, this distinction between inherent and acquired characteristics of a sign is likened to the characteristics that an individual has from ‘nature’ and those that they acquire as a result of ‘nurture’. A word perceived by consumers as intrinsically empty or meaningless (such as *ANDREX* or *NOXEMA*) will be innately distinctive from its ‘nature’, whereas a descriptive word (*DOUBLEMINT* for mint chewing gum or *OPTIONS* for insurance services) will acquire ‘distinctive character’, if at all, only if there has been such use as to educate the public that the sign operates to distinguish the goods of one undertaking from those of another.

### 3.1 GENERAL APPROACH

#### 3.1.1 What is the mark?

In order to decide whether a sign is excluded under section 3(1)(b)–(d), it is first necessary to decide what the sign is. In many ways, this is straightforward: we have seen that the sign is that for which registration is sought. This task is made somewhat easier by the fact that the applicant has to submit documentation identifying the mark and indicating whether protection is sought as a word mark, a figurative mark, a colour mark, or a three-dimensional mark.<sup>7</sup>

<sup>5</sup> The language of the CTMR is taken directly from TM Dir., Art. 3(1)(b)–(d), which is, in turn, derived from Paris, Art. 6*quinquies* (2). See also TRIPS, Art. 15(2).

<sup>6</sup> *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01, C-54/01, C-55/01, [2003] ECR I-3161, [45], [67]; *Société des Produits Nestlé SA v. Mars UK Ltd* [2003] ETMR (101) 1235, 1250, [42] *per Mummery LJ* (although the grounds overlap, they are independent grounds and have to be separately examined).

<sup>7</sup> It has been argued that the system might be more exacting if the Registry were to view the mark in the context of its actual or proposed use: Kerly, 17, [2–044]. The courts do look at such use in the context of assessing infringement (see below, pp. 985, 1040), so it is a fair question, if use has occurred, it should not be relevant in assessing applications.

### 3.1.2 The average consumer

In making the necessary predictive assessment, the relevant class from whose perspective the sign must be assessed has been defined as comprising the average consumers of the category of goods.<sup>8</sup> In turn, the relevant consumer has been construed as ‘reasonably well-informed and reasonably observant and circumspect’.<sup>9</sup> Although the consumer is assumed to be reasonably observant, the cases make clear that levels of attentiveness vary from sector to sector: the general consumer’s level of attentiveness in relation to everyday goods is lower than that of the consumer for expensive goods.<sup>10</sup>

In the case of national marks in the United Kingdom, the average consumer has the characteristics of a British person; whether marks in a foreign language will be treated as registrable or as descriptive will depend on whether the average consumer is likely to understand the meaning of the sign. In turn, this will depend on the extent to which the mark is recognized in its original language, how widely the language is spoken in the United Kingdom, how familiar the word is, and how common it is for foreign words to be used in that trade.<sup>11</sup> Even though this approach could lead to division in the Internal Market, the Court of Justice has given its imprimatur in a case in which the German word for mattresses—*MATRATZEN*—had been registered in Spain for mattresses!<sup>12</sup>

In contrast, Article 7(2) CTMR provides that the exclusions ‘shall apply notwithstanding that the grounds for non-registrability obtain in only part of the Community’. *OLUT* would thus be unregistrable as a Community mark for alcoholic beverages, given that *olut* means beer in Finnish.<sup>13</sup>

Under the Commission’s proposals for reform of the Trade Marks Directive, the ‘*Matratzen* rule’ would be reversed and member states would be required to refuse to register marks where ‘the grounds of non-registrability obtain . . . in other Member States’ or ‘where a trade mark in a foreign language is translated or transcribed in any script or official language of the Member States’.<sup>14</sup> However, the European Parliament indicated its

<sup>8</sup> The ‘average consumer’ is a pivotal figure in trade mark law, akin to the ‘person skilled in the art’ in patent law. For discussion of the historical origins of the ‘average consumer’, see J. Davis, ‘Locating the Average Consumer: His Judicial Origins, Intellectual Influences and Current Role in European Trade Mark Law’ [2005] *IPQ* 183. For valuable reflections on different visions of the consumer, see G. Austin, ‘Trademarks and the Burdened Imagination’ (2004) 69 *Brook L Rev* 827 (pointing out that the US equivalent of the average consumer—namely, the ‘ordinary prudent consumer’—is a legal construct, who is deemed to exhibit ‘unthinking and irrational responses to branding messages’; questioning whether the law might attend more to real/empirical consumers, or whether there might be advantages to constructing consumer as a more capable decision-maker).

<sup>9</sup> *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01, C-54/01, C-55/01 [2003] *ECR* I-3161, [41]; *Société des Produits Nestlé v. Mars UK Ltd* (*‘Have a Break’*) [2004] *FSR* (2) 16, [23].

<sup>10</sup> Cf. *Henkel KgaA v. OHIM*, Joined Cases C-456/01P and C-457/01P [2004] *ECR* I-5089; *Procter & Gamble v. OHIM*, Joined Cases C-473/01 P and C-474/01 P [2004] *ECR* I-5173, [62]. In *Smart Technologies*, Case C-311/11P (12 July 2012), [48], the Court of Justice observed that ‘it does not necessarily follow that a weaker distinctive character of a sign is sufficient where the relevant public is specialist’.

<sup>11</sup> UK IPO, *Foreign Descriptive Use: Interpretation of the Internet and Registrability of Non-English Words* (May 2007) PAN 1/07.

<sup>12</sup> *Matratzen Concord AG v. Hukla Germany SA*, Case C-421/04 [2006] *ECR* I-2303; *House of Donuts International v. OHIM*, Joined Cases T 333–334/04 [2007] *ETMR* (53) 877 (CFI) (*DONUTS* not lacking distinctiveness in Spain). Contrast the much stricter US position: *Otokoyama Co Ltd v. Wine of Japan Import Inc.*, 175 F. 3d. 266 (2nd Cir. 1999).

<sup>13</sup> With the expansion of the Community in 2004, 2011, and 2013, the potential for such objections increased. Note, however, that while existing registrations are automatically extended to these countries, absolute grounds for refusal under Art. 7 (or invalidity based on Art. 51) do not operate where such grounds became applicable merely because of the accession of a new member state: CTMR, Art. 165(2).

<sup>14</sup> European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Law of the Member States Relating to Trade Marks* (March 2013) COM(2013) 162 final, Art. 4(2). There is no comment in the Explanatory Memorandum.

opposition to this part of the proposed reform when making amendments to the proposal during its first reading in February 2014. The draft report that preceded adoption of the amendment explained that '[i]t would be disproportionate and practically unworkable to require national offices to examine absolute grounds for refusal in all national jurisdictions and languages of the Union'.<sup>15</sup> The report stated that such a requirement would also conflict with the principle of territoriality that underpinned the Directive. Given that opposition to the Commission's proposed change comes from national trade mark offices, it seems likely that the Council, too, will support the Parliament's amendment and that the proposed change is therefore unlikely to be accepted.

The tribunal must interpret the sign in the application as the notional consumer would. This process of interpretation will take into account so-called 'normal' and 'fair' use, including use on packaging and in advertising. Thus the assessment takes account of the possibility that the mark will normally be used not only in its represented form, but also orally. Consequently, the mark will be interpreted in terms of the overall impression that it makes on the average consumer—aurally, conceptually, and visually. In the past, British tribunals would operate a general rule that a word that was 'phonetically equivalent' to an unregistrable word was itself unregistrable. It seems today that there is no concrete rule; rather, the Registrar must consider the impression that is produced by the sign aurally and visually, taking account of the goods or services.<sup>16</sup> In situations in which purchasers are attentive and purchase is rarely made orally, a visual variation of a descriptive word (such as KA for cars) may render a sign registrable (even though the sign is phonetically equivalent to a description). However, where the goods are of the sort that are purchased orally, or advertised on the radio or television, mere visual alterations, such as misspellings, of otherwise non-distinctive marks are unlikely to render the sign registrable.

It is important to note in this respect that the sign will normally be viewed as a whole; a sign will not be rejected just because parts of the sign lack distinctiveness or are descriptive or customary in the trade.<sup>17</sup> Nevertheless, consumers may ignore certain elements that they regard as trivial or insignificant. Equally, consumers may readily expand abbreviated forms into their full unabbreviated form. Another situation in which the tribunal will have to assess how the 'reasonably circumspect' consumer interprets a sign is where an applicant combines, shortens, or telescopes two (or more) unregistrable terms. Although consumers tend to interpret signs as a whole, rather than to dismember them into their component parts, certain obvious combinations or abbreviations may immediately be translated back into their (non-registrable parts). Thus EUROLAMB would immediately be interpreted as European lamb and thus, being descriptive (for lamb), be unregistrable.

### 3.1.3 Assessment

Distinctiveness is assessed by the Registrar or the Office of Harmonization in the Internal Market (OHIM) at the time of examination or in response to observations.<sup>18</sup> It is assessed

<sup>15</sup> European Parliament, *Report on the Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (16 January 2014), A7-0032/2014, 18.

<sup>16</sup> *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 [2004] ECR I-1619, [99]; *Campina*, Case C-265/00 [2004] ECR I-1699, [40].

<sup>17</sup> *Procter & Gamble Co. v. OHIM (Baby Dry)*, Case C-383/99 P [2001] ECR I-6251; *Campina*, Case C-265/00 [2004] ECR I-1699, [37].

<sup>18</sup> TMA 1994, ss 37 (examination), 38(3) (observations). In the United Kingdom, absolute objections can be raised in opposition proceedings by any person: TMA 1994, s. 38(2).

as of the date of application.<sup>19</sup> Where an application is made and it is held that the sign lacks distinctiveness for certain goods, but not others, it should be refused only as regards those goods for which it lacks distinctiveness.<sup>20</sup> In deciding whether a sign is excluded, the tribunal should take account of all relevant facts and circumstances, including (where pertinent) opinion poll evidence.<sup>21</sup>

Ultimately, the assessment is one of fact. This has at least three consequences. First, care must be taken about making broad generalizations on the basis of previous decisions. It also means that it is not possible to formulate with any precision general rules about whether types of mark will be distinctive. A second consequence of the factual nature of the distinctiveness inquiry is that it is a subject on which different minds may well take different views. In *Doublemint*,<sup>22</sup> Advocate-General Jacobs indicated that, in many situations, ‘an element of subjective judgment’ will be required in order to determine whether a sign is within the exclusions. Third, the factual assessment in each individual case means that evidence of similar registrations at the UK Trade Marks Registry itself, or that the sign has been regarded as registrable elsewhere, will be of limited value. Although the Court of Justice has yet to confirm the approach,<sup>23</sup> the General Court and English courts have emphasized that each application must be assessed on its merits by the relevant registry,<sup>24</sup> however much inconsistency this may appear to produce.<sup>25</sup> British courts have gone one step further and said that evidence about ‘other marks on the Register is in principle irrelevant when considering a trade mark tendered for registration’.<sup>26</sup>

With these general principles in mind, we now turn to examine in detail the exclusions relating to signs that are intrinsically or innately lacking distinctiveness, are descriptive, or customary. After looking at these three heads, we then turn to consider how signs can be shown to have acquired distinctive character through use.

### 3.2 DEVOID OF DISTINCTIVE CHARACTER

Section 3(1)(b) of the 1994 Act/Article 7(1)(b) CTMR provide that trade marks that are devoid of any distinctive character shall not be registered. The primary function of this exclusion is to exclude marks that do not even perform the ‘distinguishing function’.<sup>27</sup>

<sup>19</sup> *Imagination Technologies Ltd v. OHIM*, Case C-542/07P [2009] ECR I-4937 (ECJ, Fifth Chamber); *OHIM v. Froch Touristick GmbH*, Case 332/09P [2010] ECR I-49. The Max Planck Institute proposed that this be altered to the date of examination: Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 79, [2.60].

<sup>20</sup> TM Dir., Art. 13; CTMR, Art. 38(1); *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 [2004] ECR I-1619, [112]–[117]. See UK IPO, Partial Refusal (2012) TPN 1/2012.

<sup>21</sup> *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 [2004] ECR I-1619, [33]–[37].

<sup>22</sup> *Wrigley (Doublemint)*, Case C-191/01 P [2003] ECR I-12447, [AG56]–[AG57] (AG Jacobs); *Nichols plc v. Registrar of Trade Marks*, Case C-404/02 [2004] ECR I-8499, [AG34] (AG Colomer).

<sup>23</sup> So far, the Court of Justice has stated only that a decision in respect of the registrability of a particular mark in one member state is non-binding when another member state or the OHIM is considering registration of the same mark for similar goods: *KPN Nederland NV*, Case C-363/99 [2004] ECR I-1619, [43]; *Develey v. OHIM*, Case C-238/06 P [2007] ECR I-9375, [72]–[73] (ketchup bottle); *Lindt v. OHIM*, Case C-98/11P (24 May 2012) (ECJ, Fourth Chamber), [50].

<sup>24</sup> *Sykes Enterprises Inc. v. OHIM (Real People, Real Solutions)*, T-130/0 [2002] ECR II-5179, [31].

<sup>25</sup> EU principles of equal treatment and sound administration require the OHIM to take into account decisions already taken in respect of similar applications, but requirements of legality mean that the OHIM must consider each case individually: *Getty Images (US), Inc v. OHIM*, Case T-338/11 (21 November 2012) (GC, Fifth Chamber), [69].

<sup>26</sup> *British Sugar v. James Robertson & Sons* [1996] RPC 281, 305.

<sup>27</sup> *Bio-ID*, Case C-37/03 P [2005] ECR I-7975, [61]–[63]. If a mark that is descriptive under Art. 7(1)(c) is necessarily devoid of distinctive character under Art. 7(1)(b)—on which, see *Campina*, Case C-265/00

As the Court of Justice stated in *Linde, Winward & Rado*,<sup>28</sup> distinctive character means ‘for all trade marks, that the mark must be capable of identifying the product as originating from a particular undertaking, and thus distinguishing it from other undertakings’. The focus is therefore on how the trade mark would be perceived by the relevant public, which consists of average consumers of the goods or services in question.<sup>29</sup> The focus of the tribunal is on the anticipated performance of the mark in relation to the goods or services for which it is proposed to be used: an informed guess at what the relevant class of consumers would understand from the sign. To avoid rejection under section 3(1)(b), the tribunal must conclude that the sign will be perceived as an indication that goods or services come from a single source—in other words, that it is a ‘badge of trade origin’.

Consumers will readily recognize as indicating origin words that have no relation to the goods, such as NOXEMA (for shaving cream) or APPLE (for sound recordings), and equally will see abstract logos as having the same function. It is more difficult to predict whether consumers would see colours, shapes, slogans, and the like as indicating origin.

Article 3(1)(b) excludes those signs that the average consumer ‘does not identify as reliably indicating the commercial origin of the product’.<sup>30</sup> Consequently, the provision excludes from registration those signs that would not be perceived to communicate any message (because they would be treated simply as part of the goods or the appearance thereof),<sup>31</sup> and those that while perceived as conveying information, are not perceived as indicating information as to trade source (for example where the sign is seen as a product number or perhaps as a slogan urging a person to do something). According to the Court of Justice, ‘it suffices that the trade mark should enable the relevant public to identify the origin of the goods or services protected thereby and to distinguish them from those of other undertakings’.<sup>32</sup> There is no requirement that the sign be inventive, imaginative, unusual, or linguistically or artistically creative, or that it differ from those ‘which from the point of view of the relevant public are commonly used in trade in connection with the presentation of goods or services or in respect of which they could be used in that way’.<sup>33</sup> Signs are excluded only if they are ‘devoid’ of distinctive character; the tribunals have indicated that a minimal degree of distinctive character suffices for the absolute ground not to apply.<sup>34</sup>

Although the courts have repeatedly indicated that the same tests are applicable to all marks, whether words, pictures, shapes, or colours, it is useful to look at the way in which the tribunals deal with these different types of sign. This is because ‘the perception of the relevant section of the public is not necessarily the same for exotic marks, such as colours or shapes, as for words or figurative devices which bear no relation to the appearance of the goods’.<sup>35</sup> Moreover, in its application to marks such as colours, section 3(1)(b) has been interpreted as requiring the tribunal to consider not only how the sign would be perceived

[2004] ECR I-1699, [19]—is it logical to say that the public interest underpinning Art. 7(1)(c) is not relevant under Art. 7(1)(b)? See further Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 58, [1.48].

<sup>35</sup> *Viking-Umwelttechnik GmbH v. OHIM*, T-16/00 [2002] ECR II-3715, [27].

by the average consumer of the goods, but also whether giving a single trader a monopoly over the sign would confer an unjustified competitive advantage on the applicant. The courts, however, have indicated that such considerations of ‘public’ or ‘general interest’ are not relevant in the case of words, names, slogans or shapes.<sup>36</sup> How far these kinds of consideration extend to other sorts of sign is controversial.<sup>37</sup>

### 3.2.1 Simple signs: letters, numbers, and grammatical signs

In most cases, single letters, numbers, grammatical signs, and simple geometric shapes will be treated as ‘devoid of distinctive character’.<sup>38</sup> This is because consumers would not be able to assume that such signs indicated one particular source. Even in these cases, however, the question of whether the sign lacks distinctive character must be assessed on the facts. The Registry and the courts should consider carefully how relevant consumers of the particular goods or services would react to the specific sign. More specifically, the tribunal should consider whether the sign would be taken to indicate catalogue numbers, sizes, model numbers, date of production, etc., as opposed to being understood to be a trade mark. The same is true of combinations, although in general the longer the combination, the more likely it would be thought to be a trade mark.

### 3.2.2 Colour marks

Simple colour marks are likely to be treated as devoid of distinctive character.<sup>39</sup> This is because, in the case of colours, the sign forms part of ‘the look of the goods’ and consumers are not in the habit of assuming the origin of goods merely based on the colour of packaging. Consequently, the Court of Justice in *Libertel* observed that ‘[a] colour *per se* is not normally inherently capable of distinguishing the goods of a particular undertaking’.<sup>40</sup> In addition, the Court has recognized that there is a strong public interest in favour of keeping colours free. This is because the number of colours actually available is limited and so a small number of trade mark registrations could exhaust the entire range of the colours available (an understanding sometimes referred to as ‘colour depletion theory’). Exclusive trade mark rights over any such colour would potentially create ‘an unjustified competitive advantage for a single trader’.<sup>41</sup> Consequently, in the case of a colour *per se*, ‘distinctiveness without any prior use is inconceivable save in exceptional circumstances, and particularly where the number of goods or services for which the mark is claimed is very restricted and the relevant market very specific’.<sup>42</sup> Prior to the judgment in *Libertel*, the General Court had allowed registration of a shade of orange in relation to ‘technical and business consultancy services in the area of plant cultivation, in particular the seed sector’ in Class 42.<sup>43</sup> This exceptional decision may be justified, given the relatively narrow scope of the specification to which the mark related.

<sup>36</sup> *Henkel v. OHIM*, Joined Cases C-456/01P and C-457/01P [2004] ECR I-5089; *Sat. 1 v. OHIM*, Case C-329/02 P [2004] ECR I-8317, [36].

<sup>37</sup> *In Re Bongrain’s Application* [2005] RPC (14) 306, [24] *per* Jacob LJ (refusing to accept that the ‘depletion’ public interest is confined to colour marks).

### 3.2.3 Shapes

Another area in which the exclusion relating to marks that are ‘devoid of distinctive character’ may have an important impact is in relation to shape marks. Although the courts have repeatedly stated that the same test is applicable to shape marks as is applied to word or device marks, because consumer perception of such marks is different, the result of applying the tests will not necessarily be the same.<sup>44</sup> This is because the relevant consumers are unlikely to think of a shape as communicating at all, let alone as being indicative of a particular trader’s goods.<sup>45</sup> Consequently, the vast majority of such applications are refused.

In the case of shapes, an assessment of whether the shape is registrable requires an appraisal of whether the shape ‘significantly departs from the norm or customs of the sector and thereby fulfils its essential original function’.<sup>46</sup> In turn, this requires, first, an assessment of whether there is anything unusual or idiosyncratic about the shape such that the relevant consumer would notice it and remember it, and then, if there is such individuality, an assessment as to whether the consumer would think of the shape as indicative of source, rather than being merely functional or decorative. The results of this assessment may change as practices change, and with them, consumer perceptions and expectations. Moreover, they may vary from sector to sector: a particular shape could be perceived as a trade mark in one field, but not in another.

The test of ‘significant departure’ is designed to ensure that consumers of the goods can perceive the difference between the shape in question and other shapes.<sup>47</sup> Basic geometric shapes will not be noticed by consumers and so will not perform the distinguishing function; nor will shapes that are not readily differentiable from those ordinarily used in trade.<sup>48</sup> In one case, the Court of Justice affirmed the (then) Court of First Instance (CFI) decision that the brown colour and shape of WERTHER’S ORIGINALS (see Fig. 37.1) was not a significant departure from those commonly used.<sup>49</sup> The Court said that the mark comprised ‘a combination of presentational features which come naturally to mind and which are typical of the goods in question, that it is a variation of certain basic shapes commonly used in the confectionery sector’.<sup>50</sup> Given that the alleged differences are not ‘readily perceptible’, the Court agreed that the shape in question could not be sufficiently distinguished from other shapes commonly used for sweets, and that it did not enable the relevant public to distinguish immediately and with certainty the appellant’s sweets from those of another commercial origin.<sup>51</sup> Similar reasoning led the Court to affirm the ruling of the General Court that a chocolate rabbit

<sup>44</sup> *Linde AG, Winward Industries, Rado Watch Co Ltd*, Joined Cases C-53/01, C-54/01, and C-55/01 [2003] ECR I-3161, [42], [46], [49]; *KWS Saat AG v. OHIM*, Case 447/02P [2004] ECR I-10107, [8].

<sup>45</sup> See, e.g., *Henkel*, C-218/01 [2004] ECR I-1725, [52]; *August Storck KG v. OHIM*, Case C-24/05 P [2006] ECR I-5677, [25]. Whether the public distinguishes goods by reference to shapes is a question of fact. The public, apparently, are used to identifying vehicles by reference to the design of the grille: *Daimler Chrysler Corp. v. OHIM*, Case T-128/01 [2003] ECR II-701, [42]. It seems that the Office may ‘infer’ that consumers do not normally see certain sorts of sign as an indication of origin and, in such cases, ‘it is for the applicant for a trade mark to show that consumers’ habits on the relevant market are different’: *Unilever NV v. OHIM*, T-194/01 [2003] ECR II-383, [48].

<sup>46</sup> *Henkel*, C-218/01 [2004] ECR I-1725, [49]; *Henkel v. OHIM*, Joined Cases C-456/01 P and C-457/01 P [2004] ECR I-5089, [39]; *Mag Instrument*, Case C-136/02 P [2004] ECR I-9165, [32].

<sup>47</sup> A ‘significant departure’ is a lower threshold than ‘a marked difference’: *August Storck*, Case C-24/05 P [2006] ECR I-5677, [28].

<sup>48</sup> *Procter & Gamble v. OHIM*, T-63/01 [2002] ECR II-5255 (CFI), [43].

<sup>49</sup> *August Storck*, Case C-24/05 P [2006] ECR I-5677.

<sup>50</sup> *Ibid.*, [29]–[30].

<sup>51</sup> *Ibid.*, [25].

Fig. 37.1 The shape of WERTHER'S ORIGINALS

covered in gold foil, with a red bow and a bell around its neck, was not a significant departure from what was common in the trade.<sup>52</sup>

Even if a shape is a significant departure from those ordinarily used in the sector, it does not follow that it is registrable. The shape must be one that the average consumer would view as indicating trade origin.<sup>53</sup> If average consumers would see a shape as simply there to 'do a job',<sup>54</sup> or as merely decorative, they are less likely to think of the shape as indicating source.<sup>55</sup> Hence the Court of Appeal has refused registration for a floral shape, comprising six lobes, for cheese (SAINT ALBRAY) (see Fig. 37.2),<sup>56</sup> and the Court of Justice has affirmed that the attractive, well-designed cylindrical shape of a MAG-LITE® torch would not function as an indicator of origin (see Fig. 37.3)<sup>57</sup> and neither would an abstract design comprising countless tiny strokes for application to the surface of glass products (showers, windows, etc.) (see Fig. 37.4).<sup>58</sup> In the cheese case, Jacob LJ explained that an average consumer would 'be astonished to be told that one of the shapes was a trade mark. Consumers do not expect to eat trade marks or part of them.'<sup>59</sup> In the *Mag* case, the Court of Justice explained that 'the fact that goods benefit from a high quality of design does not necessarily mean that a mark consisting of the three-dimensional shape of those goods enables *ab initio* those goods to be distinguished from those of other undertakings'.<sup>60</sup> In a rare counter-example, the CFI allowed registration of the distinctive shape of the grille of a JEEP, explaining that consumers had come to understand car grilles as signs of origin, so that the applicant's grille could serve as a trade mark (see Fig. 37.5).<sup>61</sup> Similarly, the CFI reversed a decision of the Examiner that the shape of a speaker was devoid of distinctive character: in the Court's view, the shape was different from the customary shapes

<sup>52</sup> *Lindt v. OHIM*, Case C-98/11P (24 May 2012) (ECJ, Fourth Chamber), [41]–[49]. See Fig. 37.9, p. 966, below.

of loudspeakers (Fig 36.6, above p. 924), and was characterized by specific and arbitrary features that would retain the attention of the average consumer.<sup>62</sup>

### 3.2.4 Get-up and trade dress

Although it is not possible to say that the overall packaging of a product ('get-up' or 'trade dress') can never be inherently distinctive, in most cases these matters will be devoid of distinctive character. This is for the simple reason that (as with shapes) average consumers do not treat the majority of packaging or get-up as indicating source; rather, they treat packaging as comprising protective material, which has decorative, attractive, or eye-catching features. In part, this is a matter of current social practice: consumers have long been invited to focus on the literature on packaging as indicating source and, as a result, the overall look of the get-up is ignored, at least in this regard.

In *Proctor & Gamble v. Registrar of Trade Marks*,<sup>63</sup> Robert Walker LJ confirmed the rejection by the Registrar of applications for registration in Class 3 of a three-dimensional bottle bearing a label for floor-cleaning products. The hearing officer had described the application as having three component parts—namely, the shape of the bottle, the pattern on the label, and the colours applied to both. Having concluded that none of the three components was individually distinctive, the hearing officer had found that the

<sup>62</sup> *Bang & Olufsen v. OHIM*, Case T-460/05 [2007] ECR II-4207 (CFI, Third Chamber).

<sup>63</sup> [1999] RPC 673, 680.

**Fig. 37.6** Long-necked bottle with lemon in spout

Source: *Eurocermex SA v. OHIM*, Case C-286/04P [2005] ECR I-5797

combination was lacking in distinctiveness. Affirming the Registry's conclusion, Robert Walker LJ emphasized that, in order to overcome an objection based on section 3(1)(b) of the 1994 Act, the applicant's trade mark must *readily* distinguish the applicant's product, and that where a close examination was required to identify differences, the get-up was not distinctive.

The Court of Justice has been faced with a steady trickle of appeals from refusals of the OHIM to register get-up on the ground that it is lacking in distinctiveness. In one case, the Court of Justice affirmed that the CFI had not erred in law when it found that the shape of a long-necked bottle with a piece of lemon placed in the spout was not distinctive of beer (see Fig. 37.6).<sup>64</sup> The CFI had found that this was a common way of presenting beer

<sup>64</sup> *Eurocermex SA v. OHIM*, Case C-286/04P [2005] ECR I-5797 (CORONA beer), affirming Case T-399/02 [2004] ECR II-1391. Although not the original image submitted by Eurocermex, this photograph gives an idea of what Eurocermex was trying to register.

**Fig. 37.8** The bottle design in *Nestlé Waters France v. OHIM*

Source: Courtesy of Nestlé Waters

for consumption and that, given that consumers paid little attention, the combination would not be viewed as indicating source. In another case, the Court of Justice affirmed that no error existed in the CFI’s decision that stand-up pouches for packaging fruit juices and fruit drinks were not distinctive (see Fig. 37.7).<sup>65</sup>

<sup>65</sup> *Deutsche Sisi-Werke GmbH & Co. Betriebs KG v. OHIM*, Case C-173/04P [2006] ECR I-551.

In contrast, in *Nestlé Waters France v. OHIM (Bottle shape)*,<sup>66</sup> the CFI allowed the registration of the shape of a bottle for non-alcoholic beverages (see Fig. 37.8). The CFI took the view that, because of repeated attempts over a number of years by various traders to educate consumers into treating bottle shapes as trade marks, the average consumer is now ‘quite capable of perceiving the shape of the packaging of the goods as an indication of commercial origin’ if the shape possessed characteristics that are sufficient to hold their attention.<sup>67</sup> The CFI reversed the OHIM’s view that the bottle was commonplace, finding that the whole formed a design ‘which is striking and easy to remember’. It was a combination capable of holding the public’s attention and distinguishing the goods from those with a different commercial origin. As a result, the mark had a minimum degree of distinctiveness and fell outside Article 7(1)(b) of the Regulation.

Similarly, in *Henkel KgaA v. OHIM*,<sup>68</sup> the CFI overturned the finding of the OHIM Board of Appeal that a container resembling the shape of an upturned pear, with flattened sides and coloured white and transparent, lacked distinctive character for washing liquids and detergents. The CFI found that the combination of elements had a ‘truly individual character’, commenting on its flat character and crystal shape.

The touchstone therefore appears to be whether traders in the sector have educated consumers to view packaging as indicative of commercial origin. If this has been achieved, then whether particular packaging is devoid of distinctive character is likely to turn on whether the get-up is sufficiently noticeable in the circumstances to catch the attention of consumers. If this is not the case, such as where a compact disc of a sound recording is suddenly sold in unusual packaging, the position is problematic. On the one hand, the packaging will be memorable; on the other, it is unlikely to be perceived as an indication of origin.

### 3.2.5 Names and signatures

Traditionally under UK law, surnames have been considered non-distinctive and thus unregistrable.<sup>69</sup> In part, the decision to exclude surnames was motivated by the inconvenience that the grant of a right would cause to other traders who shared the same name. The courts also stressed that third parties who made legitimate use of their names ought not to be forced to rely on a defence equivalent to that contained in section 11(2).<sup>70</sup> However, under the 1994 Act, there is no *a priori* exclusion of surnames, or personal names, and the question of registrability is determined by the same standards as for other marks. The question in any given case will be whether the average consumer of the goods would assume that the name operates to indicate one particular manufacturer or supplier. In making this assessment, the Court of Justice has indicated, in *Nichols’s Trade Mark Application*,<sup>71</sup> that an examining authority tribunal may not use *general* criteria, such as predetermined rules about how common the name is (for example a rule that if the name appears more than 500 times in the

<sup>66</sup> T-305/02 [2003] ECR II-5207. But cf. *Adelholxener Alpenquellen GmbH v. OHIM*, Case T-347/10 (19 April 2013) (General Court, First Chamber), [22]–[38] (French and German only) (complex mark comprising bottle shape with surface decoration representing mountain held to be non-distinctive).

<sup>67</sup> *Nestlé Waters France v. OHIM (Bottle shape)*, T-305/02 [2003] ECR II-5207, [40].

<sup>68</sup> Case T-393/02 [2004] ECR II-4115. A picture of the container can be seen in the case report.

<sup>69</sup> *Elvis Presley Trade Marks* [1997] RPC 543, 558.

<sup>70</sup> *Cadbury Bros’s Application* (1915) 32 RPC 9, 12.

<sup>71</sup> *Nichols v. Registrar*, Case C-404/02 [2004] ECR I-8499, [25]–[26]. The registration of the mark NICHOLS for vending machines was subsequently confirmed on 26 May 2006: TM 2241893.

London telephone directory, it should not be registered). Moreover, the Court of Justice was clear that the ‘unfair advantage’ obtained by the first person to register a name over other traders who might wish to use it is irrelevant.<sup>72</sup> However, commonness may be relevant to the consumer’s likely appreciation of the *specific* name as an indication of origin of the *specific* goods.<sup>73</sup>

The removal of the traditional rules for determining registrability of surnames has left something of a void, which has not yet been filled with much guidance from subsequent decisions. However, the Appointed Person provided some useful insights in *Oska’s Ltd’s Trade Mark Application*.<sup>74</sup> In the course of opposition proceedings, it was necessary to assess the distinctiveness of the opponent’s earlier mark, MORGAN, for clothing. Following the guidance of the Court of Justice, Richard Arnold QC took into consideration the commonness of the name ‘Morgan’, the frequency with which names were used in the clothing trade, and the number of traders in the clothing field, and concluded that the average consumer would regard the surname as devoid of distinctive character. Before the average consumer would consider a common surname in the clothing trade as an indication of source, they would expect the addition of a forename (as with PAUL SMITH OR TED BAKER).

One peculiarity should be noted here: the full name of a famous personality may well be devoid of distinctive character (at least for goods that would be understood as merchandise). In *Elvis Presley Trade Marks*,<sup>75</sup> the Court of Appeal refused to allow registration of ELVIS and ELVIS PRESLEY for toiletries, perfumes, cosmetics, and soaps. It had been argued by the applicants that, as a result of changes in public awareness about character merchandising, consumers seeing the name ELVIS would assume that the product to which it was attached was ‘genuine’—that is, they would assume that the goods originated from Elvis Presley’s estate or from someone with rights granted by the estate. At first instance, Laddie J was not willing to accept that this was an accurate portrayal of how the general public thought about the way in which the names of celebrities were used and the Court of Appeal affirmed that view: people treat a name as part of the product that they are purchasing, not as a feature that distinguishes the goods of one trader from those of another. For consumers, the goods are memorabilia or mementos of which the name is an essential component, rather than a different class of consumable commercial goods that people purchased because they came from a specific trader.<sup>76</sup>

In those cases in which a name itself lacks distinctiveness, registration may nevertheless be obtained where an application is for the name in conjunction with a device or represented in a special or particular manner, so that the whole is distinctive. Perhaps the most obvious example of this is where the name takes the form of a person’s signature. Signatures were specifically treated as registrable under the 1938 Act because they were seen as ‘a substantially unique and frequently highly distorted way of writing the author’s name. They are in a sense a private graphic tied to one person.’<sup>77</sup>

<sup>72</sup> *Ibid.*, [31]. The Court of Justice referred to the defence contained in Art. 6(1)(a).

<sup>73</sup> *Ibid.*, [AG46] (AG Colomer); *Barbara Becker v. Harman International Industries*, Case C-51/09P [2010] ECR I-5805 (ECJ, Fourth Chamber), [36] (in analysing relative grounds, the Court indicated that the commonness of a surname was relevant to its distinctive character); *Oska’s Ltd’s Trade Mark Application* [2005] RPC (20) 525 (AP, Arnold QC), [27]–[28]. <sup>74</sup> *Ibid.*

<sup>75</sup> [1999] RPC 567; [1997] RPC 543, 558. Cf. *Annette von Droste zu Hülshoff Stiftung*, 33 W (Pat) 550/11 (of 2 July 2013) (German Federal Patent Court held that the mere fact that a mark comprised the name of a famous person—here, the early nineteenth-century novelist Annette von Droste-Hülshoff—did not mean that it was devoid of distinctive character).

<sup>76</sup> *Elvis Presley Trade Marks* [1997] RPC 543 (Laddie J); [1999] RPC 567 (CA), 585. Although the case was decided under the 1938 Act, the reasoning, relating to an issue of fact, seems applicable under the 1994 Act.

<sup>77</sup> *Elvis Presley Trade Marks* [1997] RPC 543, 558 *per* Laddie J.

Under the 1994 Act, a ‘signature’ may be registrable even if it is not written in a distinctive graphic style—a simple cursive rendition of Elvis’s signature ‘Elvis A. Presley’ would probably be distinctive.<sup>78</sup> This may be the case even if the signature is not authentic.<sup>79</sup>

### 3.2.6 Slogans

The question of whether slogans can be registered highlights some of the real difficulties with assessing whether a particular sign will, when used, be understood to indicate origin. On the one hand, slogans are mostly understood as promotional communications and thus would not be understood as indicating origin. On the other hand, in many fields, slogans are used as marks, for example I CAN’T BELIEVE IT’S NOT BUTTER for margarine. Which form of use is the relevant authority to assume when it considers an application? Although English courts have tended to suggest that slogans lack distinctive character<sup>80</sup> and the General Court has often taken a similar view,<sup>81</sup> the Court of Justice has reiterated on a number of occasions that there are no special requirements for slogans. The case law of the Court demonstrates a reluctance to offer any concrete indications of what will make a slogan inherently registrable. While the Court acknowledges that consumers do not normally consider slogans to be trade marks,<sup>82</sup> the Court will not tolerate any suggestion that a slogan be imaginative or creative to be registrable,<sup>83</sup> although the presence of those characteristics is likely to endow that mark with distinctive character.<sup>84</sup> Moreover, the Court of Justice has denied that the mere capacity of a slogan to be understood as promotional does not mean that the slogan necessarily lacks distinctive character. In *Audi AG v. OHIM*,<sup>85</sup> an application to register VORSPRUNG DURCH TECHNIK (meaning ‘advance through technology’) had been refused for various goods and services on the basis that it was a slogan carrying an objective laudatory message.<sup>86</sup> The Court of Justice annulled the decision, observing that ‘the mere fact that a mark is perceived by the relevant public as a promotional formula . . . is not sufficient, in itself, to support the conclusion that that mark is devoid of distinctive character’.<sup>87</sup> A slogan could be promotional and distinctive. In effect, the Court is saying that there are no ‘sub-rules’: each application needs to be looked at in relation to its own individual

<sup>78</sup> *Ibid.* In *re Applications by the Estate of the Late Diana, Princess of Wales* (25 January 2002) (TM Registry) (Diana signature registrable, signatures being ‘a unique sign of authenticity’).

<sup>79</sup> *Elvis Presley Trade Marks* [1999] RPC 567 (CA), 586, although the Court presumed, at 576, that the signature was authentic and ultimately the application was refused on relative grounds: see 587.

<sup>80</sup> *Nestlé v. Mars* [2003] ETMR (101) 1235 (CA) (rejecting HAVE A BREAK for confectionery).

<sup>81</sup> *Sykes Enterprises (Real People, Real Solutions)*, T-130/0 [2002] ECR II-5179 [28], [30] (REAL PEOPLE, REAL SOLUTIONS would be perceived merely as promotional, so was devoid of distinctive character); *Dorel Juvenile Group, Inc. v. OHIM*, Case T-88/06 [2008] ECR II-10, affirmed by Order on appeal, Case C-131/08 [2009] ECR I-9) (SAFETY 1ST would be perceived as a general slogan that safety is a priority, not as an indication of origin); *Delphi Technologies v. OHIM*, T-515/11, (6 June 2013) (GC, Sixth Chamber), on appeal Case C-448/13P (rejecting INNOVATION FOR THE REAL WORLD for motor vehicles and motor products); *Interroll Holding AG v. OHIM*, T-126/12 (6 June 2013) (GC, First Chamber) (in French) (INSPIRED BY EFFICIENCY devoid for, e.g., logistical services); *Smart Technologies*, Case C-311/11P (12 July 2012) (affirming rejection of WIR MACHEN DAS BESONDERE EINFACH, meaning ‘we make special (things) simple’ for software).

<sup>82</sup> *OHIM v. Erpo Möbelwerk GmbH*, Case C-64/02 P [2004] ECR I-10031, [35].

<sup>83</sup> *Ibid.*

<sup>84</sup> *Audi v. OHIM*, Case C-398/08P [2010] ECR I-535 (ECJ, First Chamber), [47].

<sup>85</sup> *Ibid.*

<sup>86</sup> The slogan had been registered for cars on the basis of acquired distinctiveness. *Ibid.*, [5].

<sup>87</sup> *Ibid.*, [44]. At [59], the Court suggests that the mark is not devoid of distinctive character for these goods, because it is well known in relation to cars. This surely is inconsistent with the general principle that a mark is assessed independently for each category of goods or services.

characteristics—the nature and meaning of the slogan, as well as the goods or services for which registration is sought. Of course, slogans will be refused registration if they are descriptive.<sup>88</sup>

### 3.3 DESCRIPTIVE MARKS

The second category of marks excluded from registration relates to what may be called ‘descriptive marks’. More specifically, section 3(1)(c) of the 1994 Act/Article 7(1)(c) CTMR excludes from registration trade marks that consist *exclusively* of signs or indications that may serve, in trade, to designate the (i) kind, quality, or quantity, (ii) the intended purpose, (iii) the value, (iv) the geographical origin, (v) the time of production of the goods or of the rendering of the service, or (vi) other characteristics of the goods or service.

#### 3.3.1 The function of section 3(1)(c): the requirement for availability

Whereas section 3(1)(b) is largely aimed at ensuring that the only signs that are registered are those that could be perceived as trade marks, section 3(1)(c) has an additional purpose (which we can call the ‘protective function’)—namely, to minimize the negative impact that the grant of trade marks may have upon traders working in the same or related fields. If trade marks law were to permit one trader to obtain property protection over descriptive or generic marks, it could have a dramatic impact upon other traders. For example, if one greengrocer were given trade mark protection over the word ‘orange’ or ‘fruit’ (for oranges), it would interfere with the ability of other greengrocers to convey information about their goods or services. In other words, where there are a limited number of possible ways of describing or presenting one’s goods, the provision of legal monopolies over such signs might enable one trader to keep other traders completely out of the market.<sup>89</sup> The Court of Justice calls this ‘the requirement of availability’.<sup>90</sup>

The first occasion on which the Court of Justice considered Article 3(1)(c) of the Trade Marks Directive was in *Windsurfing Chiemsee v. Attenberger*.<sup>91</sup> In this case, the question before the Court was whether the word CHIEMSEE, the name of a lake in Bavaria, could be a trade mark for sports clothing or whether such a mark fell within Article 3(1)(c). More specifically, the Court was asked to consider whether the application of Article 3(1)(c) depends on whether there is a ‘real, current, or serious need to leave the sign or indication free’. In answering this question, the Court acknowledged that one of the aims of the Article was to protect the public interest by keeping descriptive signs or indications free for use by all traders.<sup>92</sup> The Court observed that:

Article 3(1)(c) of the Directive pursues an aim which is in the public interest, namely that descriptive signs or indications relating to the categories of goods or services in respect of which registration is applied for may be freely used by all, including as collective marks or as part of complex or graphic marks. Article 3(1)(c) therefore prevents such signs and indications from being reserved to one undertaking alone because they have been registered as trade marks.<sup>93</sup>

<sup>88</sup> *RheinfelsQuellen H. Hovelmann GmbH & Co. KG v. OHIM*, Case T-28/06 [2007] ECR II-4413 (CFI, First Chamber).

<sup>89</sup> Although the protective function is usually talked about in terms of the needs or desires of other traders, it can equally be expressed in terms of a trader’s rights to free commercial expression: see P. N. Leval, ‘Trademark: Champion of Free Speech’ (2004) 27 *Colum JL & Arts* 187.

<sup>90</sup> *Adidas AG and ors v. Marca Mode CV and ors*, Case C-102/07 [2008] ECR I-2439, [23], [AG27]–[AG45].

<sup>91</sup> Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779.

<sup>92</sup> *Ibid.*, [30]. <sup>93</sup> *Ibid.*, [25].

It continued:

As regards, more particularly, signs or indications which may serve to designate the geographical origin of the categories of goods in relation to which registration of the mark is applied for, especially geographical names, it is in the public interest that they remain available, not least because they may be an indication of the quality and other characteristics of the categories of goods concerned, and may also, in various ways influence consumer tastes by, for instance, associating the goods with a place that may give rise to a favourable response.<sup>94</sup>

The view that section 3(1)(c) must be understood in light of this public interest has, with one notorious exception,<sup>95</sup> been reiterated on many occasions.<sup>96</sup>

### 3.3.2 General

To avoid objection under section 3(1)(c), the applicant will need to establish that the sign is not used (and is unlikely to be used in the future) as a description of the characteristics of the goods or services. Consequently, invented words such as *MARANTZ* (for hi-fi equipment), or *PEPSI* (for drinks), are likely to be registrable, because it is unlikely that traders could use them descriptively or that consumers would perceive them to be anything other than an indication of origin. In contrast, *TREAT* would be understood as describing the fact that the product was especially good, and *EUROLAMB* would be understood as usable in describing the fact that the product was a particular type of meat from a particular place. In between these extremes is a huge array of signs, not wholly descriptive, but partly suggestive of a product quality; in such cases, the tribunal will have to make a judgment as to how consumers will interpret the sign.

### 3.3.3 Exclusively

Trade marks are excluded from registration by section 3(1)(c) only if they consist *exclusively* of signs that characterize the goods and services. This means that the mark *as a whole* must be descriptive for it to be excluded. The converse of this is that if it can be shown that part of a mark is non-descriptive, then it will fall outside the remit of the section, as long as that part is not *de minimis*. Thus marks that are made up of descriptive and non-descriptive matter may be protected. In the famous *Baby Dry* case (in which the Court of Justice held the words *BABY DRY* not to be exclusively descriptive of diapers), the Court suggested that ‘any perceptible difference’ between the applicant’s sign and a descriptive term or terms is ‘apt to confer distinctive character on the combination enabling it to be registered as a trade mark’.<sup>97</sup> In *Campina Melkunie BV v. Benelux-Merkenbureau*,<sup>98</sup> the Court of Justice stated that the mere combination of elements that are each descriptive will not normally create a neologism that is registrable; rather, there must be some ‘unusual variation, in particular to syntax or meaning’, which produces an impression on the relevant consumer of something that is ‘sufficiently far removed from that produced by the mere combination of meanings lent by the elements of which it is composed, with the result that the word is more than the sum of its parts’.<sup>99</sup> The application of this test would

<sup>94</sup> *Ibid.*, [26].

<sup>95</sup> *Procter & Gamble v. OHIM (Baby Dry)*, Case C-383/99 P [2001] ECR I-6251, [2002] ETMR (3) 22.

<sup>96</sup> *Wrigley (Doublemint)*, Case C-191/01 P [2003] ECR I-12447 (AG); *Linde AG, Winward Industries, Rado Watch Co. Ltd*, Joined Cases C-53/01, C-54/01, and C-55/01 [2003] ECR I-3161, [73]; *Campina*, Case C-265/00 [2004] ECR I-1699, [34]–[36]; *KPN Nederland NV*, Case C-363/99 [2004] ECR I-1619.

<sup>97</sup> *Procter & Gamble v. OHIM (Baby Dry)*, Case C-383/99 P [2001] ECR I-6251, [2002] ETMR (3) 22, [40].

<sup>98</sup> Case C-265/00 [2004] ECR I-1699.

<sup>99</sup> *Ibid.*, [41]. See also *KPN Nederland NV*, Case C-363/99 [2004] ECR I-1619.

leave the words *BABY DRY* as registrable for nappies, while rendering *BIO-MILD* and *DOUBLEMINT* unregistrable for natural yoghurt and chewing gum (respectively). In the first case, the words ‘baby’ and ‘dry’ each alluded to the function of diapers, but because of ‘the syntactically unusual juxtaposition’, it was not a familiar expression for designating nappies nor for describing their essential characteristics. The phrase was a ‘lexical invention’, bestowing distinctive power on the mark. In the last case, the subtraction of the space left the sign as no more than a designation of the characteristic of its being mint-flavoured.<sup>100</sup>

### 3.3.4 Multiple meanings

The requirement of ‘exclusivity’ does not mean that a sign is excluded only if all possible meanings of a sign fall within the exclusion. Consider, for example, a word with two or more meanings, such as ‘pen’ (referring to a writing implement, a female swan, and a small enclosure for animals). In assessing whether ‘pen’ would be registrable for writing implements, the tribunal should not be content simply to find that there is one signification—that of a female swan—which is not excluded. If that were the case, then the existence of a single obscure meaning would render the mark not exclusively descriptive (and hence registrable). In *Doublemint*, the CFI indicated that a sign is descriptive only if it enables the public ‘immediately and without further reflection to detect a description of the characteristics of the relevant goods’.<sup>101</sup> It thus held that the ambiguity in the types of mintiness (spearmint, peppermint) and the notion of doubling (the types or strength) rendered *DOUBLEMINT* registrable. On appeal, the Court of Justice rejected that approach, stating that a sign is excluded from registration if ‘at least one of its possible meanings designates a characteristic of the goods concerned’.<sup>102</sup> The test in Article 7(1)(c) is not whether the sign is ‘exclusively descriptive’, but rather whether the trade mark consists exclusively of signs or indications that may have a descriptive capacity. The mere existence of another, non-descriptive, meaning is irrelevant.

### 3.3.5 ‘May serve’: the element of futurity

Article 3(1)(c) of the Trade Marks Directive excludes from registration trade marks that consist of signs or indications that *may serve*, in trade, to designate the characteristics of the goods or service. The requirement that the tribunal should consider not only the current use of a term, but also its future associations, was recognized by the Court of Justice in *Windsurfing*,<sup>103</sup> in which the Court said that the relevant tribunal was to ask whether there was ‘an association in the mind of the relevant class of persons between the geographic name and the category of goods in question’ or, where there was none at the relevant date (that is, the date of application), ‘whether it is reasonable to assume that such an association may be established in the future’. In contrast, the Court in *Baby Dry* formulated a test based around descriptions in ‘common parlance’.<sup>104</sup> Any doubt cast by this on the *Windsurfing* approach has been removed by the *Doublemint* decision, in which the Court stated that, for the exclusion in Article 7(1)(c) CTMR to operate, it is not necessary for the sign in question actually to be in use as a description of the goods or their characteristics; it is sufficient ‘that such signs could be used for such purposes’.<sup>105</sup> The test therefore has an element of ‘futurity’ about it.

<sup>100</sup> *Wrigley (Doublemint)*, Case C-191/01 P [2003] ECR I-12447.

<sup>101</sup> *Ibid.*, [AG41].

<sup>102</sup> *Streamserve*, T-106/00 [2002] ECR II-723, [42].

<sup>103</sup> *Windsurfing*, Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779, [31].

<sup>104</sup> *Procter & Gamble v. OHIM (Baby Dry)*, Case C-383/99 P [2001] ECR I-6251, [2002] ETMR (3) 22, [40].

<sup>105</sup> *Wrigley (Doublemint)*, Case C-191/01 P [2003] ECR I-12447, [32].

### 3.3.6 Broad specifications and disclaimers

A final general point worth noting is that, when considering whether a sign is excluded, the tribunal should consider it in relation to each and every category of goods included in the specification. In many cases, a sign will be excluded only in relation to some categories of goods or services and not others. However, an application will be refused registration if it is descriptive of the characteristics of any of the goods or services in a specific category of the specification. So if an application relates to orange for ‘beverages’, it will be refused registration on the grounds that it is descriptive (of orange-flavoured drinks) even though it would not be descriptive of apple-flavoured drinks.<sup>106</sup> In some cases, an applicant may be able to avoid such an objection by amending the application to ‘apple drinks’, but not, it seems, to ‘beverages (other than those made from, coloured, or flavoured orange)’.<sup>107</sup>

### 3.3.7 Any characteristic of the goods or services

In the *Postkantoor* case,<sup>108</sup> the Court of Justice indicated that a sign falls within Article 3(1)(c) if it is capable of being used to designate the characteristics of goods or services, even if the characteristic in question is of peripheral significance to the goods in question. Thus STINKY might be unregistrable for a weedkiller, even though the most important characteristic of a weedkiller is whether it is effective in killing weeds. ‘Capability’ should not be understood as presenting a purely abstract test, but rather should be considered in the context of the existing market and foreseeable developments therein. In *Agencja Wydawnicza Technopol v. OHIM*,<sup>109</sup> the Court added further language: a descriptive mark is one that designates a property, ‘easily recognisable by the relevant class of persons’, of the goods or the services in respect of which registration is sought. It there agreed that ‘1,000’ would be such a term in relation to puzzle magazines.

### 3.3.8 Must the association be ‘specific and direct’?

The General Court requires that, for a sign to be descriptive, the association between sign and goods or services must be ‘sufficiently specific and direct to show that that sign enables the relevant public to identify those goods and services immediately’.<sup>110</sup> The effect of this is that vague references to the character of the goods, via laudatory epithets, may not be excluded under this provision (although they might nevertheless be excluded under section 3(1)(b) or (d)). So, for example, the CFI treated ULTRAPLUS as registrable for ovenware, and the English Court of Appeal held that E.S.B. (an abbreviation of ‘extra strong bitter’) was protectable for bitter beer.<sup>111</sup> The test has not yet received the endorsement of the Court of Justice<sup>112</sup> and, in some ways, seems at odds with the general

<sup>106</sup> *DaimlerChrysler AG v. OHIM*, T-355/00 [2002] ECR II-1939.

<sup>112</sup> But note *PTV Planung Transport Verkehr AG v. OHIM*, C-512/06P [2007] ECR I-148 (in French and German only), affirming by Order the CFI decision Case T-302/03 [2006] ECR II-4039, [40], without criticizing the test applied; *Telefon & Buch VerlagsgmbH v. OHIM*, Case C-326/01 P [2004] ECR I-1374, [33] (stating that the CFI had ‘acted correctly and committed no error in law’).

approach taken by the Court in *Doublemint* and *Postkantoor*. In *Doublemint*, in particular, Advocate-General Jacobs had offered three guidelines as to when marks might be descriptive, one of which related to the ‘specificity’ and the second, the ‘immediacy’ of the meaning conveyed by the sign in relation to the goods.<sup>113</sup> However, the Court of Justice gave no hint that it found them to be useful and (as we noted in the previous paragraph) in fact explicitly rejected the third (the significance of the characteristic in the purchases of the goods or services) in *Postkantoor*. Moreover, the Appointed Person, Geoffrey Hobbs QC, has said that he has ‘misgivings’ about such a narrow interpretation. In his view, signs such as BEST EVER OR SERIOUSLY GOOD should be regarded as excluded descriptions.<sup>114</sup>

### 3.3.9 Marks that are not words

Although section 3(1)(c) is most frequently applied to word marks, there is no reason why it should not also be applied to pictures, shapes, colours, and other exotic marks. In joined cases *Linde AG, Winward Industries, and Rado Watch Co. Ltd*,<sup>115</sup> the applicants sought to register three-dimensional marks comprising the shape of a forklift truck, a torch, and a watch, respectively. The Court of Justice held that Article 3(1)(c) of the Trade Marks Directive was equally applicable to shape marks. Although the Court did not provide any examples, two obvious ones are the bone shape of BONIO dog biscuits and the plastic lemon shape used by Reckitt’s for its JIF lemon juice.<sup>116</sup> In one case in which the descriptiveness of a shape was contested, the Court held that the shape of a pine tree was not inherently descriptive of pine-scented air freshener.<sup>117</sup>

### 3.3.10 Excluded significations

With these general points in mind, we now turn to look at the categories of descriptive mark excluded by section 3(1)(c).

(i) *Kind, quality, or quantity* The first group of marks excluded from registrability are those that consist exclusively of signs that may serve to designate the ‘kind, quality, or quantity’ of goods and services. Undoubtedly, the greatest problem faced by a tribunal in this context is that of distinguishing between unregistrable terms or descriptions, and registrable allusions or suggestions. The General Court has affirmed OHIM findings that BASICS is descriptive of paint,<sup>118</sup> GOLF USA of sports clothing,<sup>119</sup> MAP&GUIDE of computer software,<sup>120</sup> and TEK (the French and Italian word for ‘teak’) of metal shelves,<sup>121</sup> but that EUROPREMIUM is not descriptive of packaging.<sup>122</sup>

(ii) *Intended purpose* A mark that describes what the product does, suggests what the consumer is to do with the product, or outlines what happens when the product is

consumed will not be registrable. Consequently, for example, HEALTH was held to be descriptive of the intended purpose of ‘medical services’, because the sign indicated that such services were to restore the recipient’s good health.<sup>123</sup>

(iii) *Value* Trade marks that consist exclusively of signs that refer to the value of the goods or services will not be registrable. The reason for this is that consumers are unlikely to treat references to value as indications of origin. The provision also ensures that other traders are free to use common words and expressions to refer to things such as price and value. On this basis, signs such as CHEAP, ECONOMY, PREMIUM, or BEST BUY would lack inherent distinctiveness, but could, of course, acquire distinctiveness through use (as with BUDGET for car-hire services).

(iv) *Geographical origin* While trade mark law has long been reluctant to grant protection to signs that consist of geographical names and places,<sup>124</sup> not every sign that happens also to be the name of a stream, village, lake, mountain, or other geographical reference will be unregistrable. The precise application of the exclusion depends on careful consideration of what the average consumers of the goods or services would be likely to understand from their naming. In *Windsurfing*,<sup>125</sup> the question was whether the word CHIEMSEE, the name of the largest lake in Bavaria, could be a trade mark for sports clothing or whether such a mark fell within Article 3(1)(c) of the Directive. The Court of Justice said that the tribunal must assess whether a geographical name designates a place that is currently associated in the mind of the relevant class of persons with the category of goods concerned, or whether it is reasonable to assume that such an association may be established in the future.<sup>126</sup> As the Court explained, the exclusion does not necessarily preclude the registration of geographical names that are unknown to the relevant class of persons—or at least unknown as the designation of a geographical location—or of names in respect of which, because of the type of place they designate (say, a mountain or lake), such persons are unlikely to believe that the category of goods concerned originates there.<sup>127</sup>

If there is an established connection between the place and the products in question—as with CUBA for cigars, SHEFFIELD for steel, FRANKFURT for financial services, or SILICON VALLEY for computers<sup>128</sup>—registration will normally be refused. In the *Windsurfing Chiemsee* case, the Court of Justice observed that the connection was not necessarily confined to a belief that the goods were *manufactured* in a particular place, but ‘might depend on other ties, such as the fact that the goods were conceived and designed in the geographical location concerned’.<sup>129</sup> For example, an application to register SAVILE ROW for spectacle frames was refused because of the proximity that spectacles had to the goods for which Savile Row in London is famous (namely, tailors’ services), both being fashion items.<sup>130</sup>

One key factor in deciding whether a sign of geographical origin should be excluded is the size of the place, since this affects how consumers are likely to understand the sign (and, in turn, whether other traders are likely to want to use it). The larger the place, the more likely it is that another trader may wish to use the name. Hence the reluctance to register EUROLAMB for meat,<sup>131</sup> or NORDIC for buildings and building materials,<sup>132</sup> and the

<sup>132</sup> *Nordic Sauna Ltd’s Trade Mark Application* [2002] ETMR (18) 210 (Thorley QC).

willingness to register TOTTENHAM for various goods (all relating to Tottenham Hotspur Football Club).<sup>133</sup>

Where no connection exists between place and the products in issue, such as with SWEDISH FORMULA for cosmetics, the signs will be registrable.<sup>134</sup> Even the names of sizeable places may be registrable if there is no realistic connection with the goods concerned: an example that has often been given is that of NORTH POLE for bananas.<sup>135</sup>

(v) *The time of production of the goods or the time of rendering of the services* Marks such as NOW for on-demand television services,<sup>136</sup> 24 HOURS (for restaurant services), SUNDAY (for newspapers), or SUMMERTIME for travel agency services would be inherently unregistrable as descriptive of the time of production or rendering of the goods or services.

(vi) *Other characteristics* The final part of section 3(1)(c) excludes signs that exclusively serve to designate ‘other characteristics’ of the goods or service.<sup>137</sup> Perhaps the most troublesome set of cases under this head concern the situation in which a trader gives their goods or services an arbitrary quality and seeks to register as a trade mark a description of that quality. In *OHIM v. Zapf Creation*,<sup>138</sup> Advocate-General Jacobs advised the Court of Justice to annul the CFI’s finding that NEW-BORN BABY was not excluded from registration for toys and accessories for dolls under Article 7(1)(c) CTMR. While the Advocate-General agreed that NEW-BORN BABY was not a description of toys, he considered that the word combination was unregistrable, because it was a reference to the ‘characteristics’ of the goods—namely, that the toys represented or looked like newborn babies.<sup>139</sup> In contrast, in *Psytech International*,<sup>140</sup> the General Court agreed that the sign 16PF was not descriptive of various goods (software, printed matter) and services concerned with ‘personality testing’. It was argued by Psytech that ‘16PF’ referred to a test developed by Raymond Cattell in the 1940s, which focused on 16 different personality factors (such as warmth, dominance, sensitivity, and privateness). Viewing the relevant public as both the general public and specialists, the Court concluded that the general public would consider 16PF as ‘devoid of meaning’, while for specialists the term 16PF was primarily associated with the trade mark holder (which owned copyright in the questionnaire and was thus its main supplier). The Court of Justice observed that:

[I]f a section of the relevant public could perceive, without further thought, the intervenor’s mark as referring to Dr Cattell’s 16 factor personality test, that would suggest that that mark performs the essential function of a trade mark which is to allow identification of commercial origin.<sup>141</sup>

Importantly, perhaps, the Court did not think that there was any ‘16PF’ theory (so allowing a monopoly over the sign would not, in practice, prevent anyone else from offering—and being able to describe—functionally equivalent tests).

<sup>133</sup> *Tottenham Trade Mark* (6 January 2003) (AP, Prof. Annand).

<sup>134</sup> *Procter & Gamble/Swedish Formula*, R 85/98–2 [1999] *ETMR* 559.

<sup>135</sup> *British Sugar v. Robertson* [1996] *RPC* 281; *Yorkshire Copper* (1954) 71 *RPC* 150, 154, 156.

<sup>136</sup> *Starbucks (HK) Ltd v. British Sky Broadcasting Group Plc* [2013] *EWCA Civ* 1465 (referring to ‘nowness’ as a characteristic of the service).

<sup>137</sup> This is not included in Paris, Art. 6quinquies(B)(2), and thus may fall to be construed *ejusdem generis*.

<sup>138</sup> Case C-498/01 P [2004] *ECR I*–11349 (AG).

<sup>139</sup> It is notable that he considered that this was an essential characteristic of the goods—a contrast with the Court of Justice decision in *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 [2004] *ECR I*–1619, which indicated that the commercial significance of a characteristic was irrelevant when deciding whether it was excluded.

<sup>140</sup> *Psytech International Ltd v. OHIM*, T-507/08 (7 June 2011) (GC, Second Chamber), [24].

<sup>141</sup> *Ibid.*, [41].

The exclusion of marks that refer to ‘other characteristics’ has also been applied to certain insignia used in merchandising. In *Linkin Park LLC’s Application*,<sup>142</sup> the Appointed Person held that LINKIN PARK, the name of a rock band, was unregistrable for posters, because the term was descriptive of posters of the band (which consumers would doubtless refer to as ‘Linkin Park posters’). He rejected an argument that ‘other characteristics’ is confined to the ‘measurable properties’ rather than the ‘information content’ of the goods.<sup>143</sup> Similarly, in *Score Draw Ltd v. Finch*,<sup>144</sup> Mann J held that the ‘CBD’ device was so associated with the Brazilian football team that it could be said to designate the characteristics of goods bearing the device—Brazilian football shirts, boots, etc.

### 3.4 CUSTOMARY AND GENERIC MARKS

Section 3(1)(d) of the 1994 Act/Article 7(1)(d) CTMR provide that ‘trade marks which consist *exclusively* of signs or indications which have become customary in the current language or in the bona fide and established practices of the trade’ shall not be registrable.<sup>145</sup> Although it has been stated by the Court of Justice that the reason for this exclusion is that such signs are ‘incapable of distinguishing’ the goods or services of one undertaking from those of another,<sup>146</sup> it should be noted that the section is especially concerned with the languages and practices ‘of the trade’. In the view of Advocates-General Colomer and Jacobs, the so-called ‘requirement of availability’ or ‘protective function’ also underpins this exclusion: signs that are customary in the trade are ones that other traders should be free to use.<sup>147</sup> However, in contrast to the operation of the protective function under section 3(1)(c), the terms of section 3(1)(d) refer to the meaning that has already developed by the time of the application. Consequently, the possibility of the sign becoming a designation in the future is not relevant.

While the scope of the section has yet to be fully explored, it seems that it will cover so-called ‘generic’ marks. A mark, particularly a name mark, is generic if, even though

<sup>142</sup> O/035/05 [2006] ETMR (74) 1017 (AP, Arnold QC), [44].

<sup>143</sup> It should also be noted that distinctiveness seems to be more readily acquired for characters than the names of individuals. In a case concerning the 1930s cartoon character ‘Betty Boop’, Birss J found that the name and character were indicative of trade origin despite the fact that it might be equally possible for a consumer to ask in a shop for a ‘Betty Boop T-shirt’: *Hearst Holdings Inc v. A.V.E.L.A. Inc.* [2014] EWHC 439 (Ch), [97], [108], [109]. The judge emphasized that the issue is one of fact, and while there is no general rule, it may be easier to acquire distinctiveness in relation to a character: *ibid.*, [107]. On the facts, he found that the reaction of the average consumer was ‘multi-faceted’—i.e. the image would be seen as aesthetic or decorative, but also as indicating trade origin. He rejected the attacks on the validity of the marks: *ibid.*, [140].

<sup>144</sup> [2007] FSR (20) 508. The Court had already found that the device was devoid of distinctive character.

<sup>145</sup> The terms of this category are not dissimilar to those of TMA 1994, s. 46, on revocation (on which, see below at pp. 1030–3), although the differences are worthy of note. This ground covers not merely names, but all signs, and applies where the mark is customary in the ‘current language’ (which arguably may not be confined to trade). For the view that there are two exclusions in s. 3(1)(d), one relating to customary language and another to custom in the bona fide practices of the trade, see *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 12 (12 September 2013) (AG Cruz Villalón), [AG56], although the issue was not mentioned in the judgment of the Court: (6 March 2014) (ECJ, Third Chamber).

<sup>146</sup> See *Merz & Krell*, Case C-517/99 [2001] ECR I–6959. See also *Psytech International Ltd v. OHIM*, T-507/08 (7 June 2011) (GC, Second Chamber), [56]; *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 12 (12 September 2013) (AG Cruz Villalón), [AG55], (6 March 2014) (ECJ, Third Chamber).

<sup>147</sup> *Nichols v. Registrar*, Case C-404/02 [2004] ECR I–8499, [AG43]; *Sat. 1 v. OHIM*, Case C-329/02 P [2004] ECR I–8317, [AG21]–[AG23]. In the United States, these interests are regarded as overriding, so that a sign that is generic is unable to become a trade mark: *Abercrombie & Fitch Co. v. Hunting World Inc.*, 537 F.2d. 4 (2nd Cir. 1976).

when it was first adopted it was distinctive, over time it has come to designate a genus or type of product rather than a particular product originating from a particular source. Well-known examples include LINOLEUM, YO-YO, ASPIRIN, and CELLOPHANE. One of the features of a generic mark is that it is no longer capable of distinguishing the goods or services of different traders. Where a word comes to describe a class of products, it can no longer be relied upon to separate the products in the class from each other. In *Alcon Inc. v. OHIM*,<sup>148</sup> the Court of Justice held that the CFI had not erred in law when it found that BSS was unregistrable for sterile solutions for ophthalmic surgery. The CFI had found that ophthalmologists and ophthalmic surgeons practising in the European Union would have understood BSS as an abbreviation for ‘buffered saline solution’: scientific dictionaries and articles used the abbreviation, and many companies marketed products under designations containing ‘BSS’. The Court held that there was no error in deciding that the relevant public (for assessing whether the sign was customary) was the specialist medical public, nor in its assessment of the facts. In contrast, in *Psytech International*, the General Court agreed that the sign 16PF was not a generic designation of goods (software, printed matter) and services concerned with ‘personality testing’ because it was understood as referring to a questionnaire design by a particular person and used by authorized users rather than as referring to a type of test.<sup>149</sup>

Quite what is covered by section 3(1)(d) beyond ‘generic’ marks is less than clear. In *Merz & Krell*,<sup>150</sup> the Court of Justice was asked whether, in the case of terms such as BRAVO, which were used purely as terms of praise, or as incitements to purchase, or in advertising, there was a requirement that, before they fell within Article 3(1)(d), they had to be understood by the trade as descriptions of specific goods and services. The Court answered that the application of the provision needed to be considered in relation to the mark and goods or services concerned (which, in the case in hand, were writing implements).<sup>151</sup> However, the exclusion was not confined to terms that described the properties or characteristics of the goods or services covered by them; the exclusion also covered signs that ‘designate’ the characteristics of the goods or services. The Court failed, however, to elaborate on the distinction between a description and a designation. It seems that designation involves a looser association with the goods or services than description.<sup>152</sup> The Court of Justice also said that while the term need not describe the goods (as under Article 3(1)(c)), the mere use of the term in advertising did not of itself indicate that the term ‘designated’ the goods concerned.

Section 3(1)(d) may occasionally exclude pictorial marks. In *RFU & Nike v. Cotton Traders*,<sup>153</sup> a registration by the Rugby Football Union (RFU) of an image of a rose for clothing was held to be invalid. Evidence of sales of shirts bearing a rose crest by undertakings not associated with the RFU indicated that it was customary to associate the rose with the England rugby team. Consequently, the sign was customary and not distinctive of the goods of the RFU.

<sup>148</sup> *Alcon Inc. v. OHIM*, Case T-237/01 (5 March 2003), aff’d on appeal Case C-192/03 [2004] ECR I-8993.

<sup>149</sup> *Psytech International Ltd v. OHIM*, T-507/08 (7 June 2011) (GC, Second Chamber), [59].

<sup>150</sup> Case C-517/99 [2001] ECR I-6959, [36]–[40]. <sup>151</sup> *Ibid.*, [29].

<sup>152</sup> Advocate-General Colomer drew a distinction between Art. 3(1)(c), which he saw as concerned with ‘description’ by direct reference to characteristics, and Art. 3(1)(d), which was not so confined and did not specify the degree of association that must exist between the sign and the goods/services: *ibid.*, [AG48]–[AG50]. In his view, BRAVO—a mere expression of enthusiasm—would be registrable for typewriters, but not for sports clothing or services, because in the sporting field the term is ‘habitually used’ and, in bullfighting, it even refers to a characteristic of a fighting bull.

<sup>153</sup> [2002] ETMR (76) 861, 876 per Lloyd J; cf. *Score Draw v. Finch* [2007] FSR (20) 508, [45].

### 3.5 USED MARKS: ACQUIRED DISTINCTIVENESS

So far in our discussions of section 3(1)(b)–(d), we have been concerned with whether marks are inherently registrable—that is, we have been looking at marks in their ‘natural’ or unused state. In this section, we turn to look at the ways in which an inherently unregistrable mark can become registrable through use.

As we mentioned earlier, while a mark may be inherently unregistrable because it is non-distinctive, descriptive, or generic, it is possible for it become registrable through use. As the proviso to section 3 of the 1994 Act states, ‘a trade mark shall not be refused registration . . . if, before the date of application for registration, it has in fact acquired a distinctive character as a result of the use made of it’. Similarly, section 47(1) provides that a mark that is wrongly entered into the Register (because it lacks inherent distinctiveness) shall not be declared to be invalid where the mark has acquired distinctiveness after registration. The result of these provisions is that even if a mark inherently lacks distinctiveness, it is now possible to register the mark if it does *in fact* become distinctive.

Consequently, the only question that needs to be asked where a mark has been used is: has the mark in fact acquired a distinctive character?<sup>154</sup> The inquiry in relation to used marks is exclusively concerned with customer perception (that is, the ‘distinguishing function’); the ‘protective function’ (the needs of other traders) is irrelevant.<sup>155</sup> As a result, consumer recognition becomes the litmus test for whether a mark is registrable.<sup>156</sup> The primary goal is to minimize consumer confusion by preventing other traders from using a similar mark. To succeed in a claim that a mark has become registrable through use, an applicant must be able to show that, irrespective of how the mark was perceived in its natural state, it now operates as a trade mark—that is, an applicant must be able to show that the primary significance of the word or sign indicates a source rather than, for example, merely describes or praises the product. The sign must have acquired ‘secondary meaning’. In *Windsurfing*,<sup>157</sup> the Court of Justice explained that an unregistrable name (in that case, a geographical one):

. . . may be registered as a trade mark if, following the use which has been made of it, it has come to identify the product in respect of which registration is applied for as originating from a particular undertaking and thus to distinguish that product from goods of other undertakings.<sup>158</sup>

In effect, the trader must be able to show that they have appropriated the word and given it a new meaning. In this sense, all that the law is doing is recognizing what has already happened in practice.

#### 3.5.1 Displacement of the primary meaning

While the various authorities make it clear that, to be registrable, a sign must have become distinctive, there is less guidance as to the nature of the relationship between the old and new meanings. At the most extreme, some authorities seem to suggest that the new trade

<sup>154</sup> Note that it is not necessary to know the identity of the source; only that the product or service comes from a single source. This is sometimes termed the ‘anonymous source doctrine’.

<sup>155</sup> *Windsurfing*, Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779, 2829, [48]; *Audi Ag v. OHIM*, T-16/02 [2003] ECR II-5167, [50]. The competitive needs of traders are accommodated, if at all, through the few exclusions as regards shape marks and the defences to infringement contained in TMA 1994, s. 11.

<sup>156</sup> The ability for marks to become registrable through use, which is provided for under the 1994 Act, is in marked contrast to the position in the 1938 Act, under which held that certain marks could never become registrable irrespective of how distinctive they were ‘in fact’: *York TM* [1984] RPC 231.

<sup>157</sup> Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779. <sup>158</sup> *Ibid.*, [46].

mark meaning must have completely replaced the original meaning. This seems to be what Jacob J required in *Philips v. Remington*<sup>159</sup> when he said that ‘unless the word, when used for the goods concerned, has in practice displaced its ordinary meaning, it will not properly denote the trader’s goods and none other’.<sup>160</sup> However, to require that there be nothing left of the original meaning in any circumstances would be going too far (and indeed would be inconsistent with the idea that allusive marks will be registrable as long as the immediate impression given to consumers is not exclusively descriptive).<sup>161</sup> Other authorities acknowledge that it is possible for a sign to become distinctive even though the ‘primary meaning’ still exists. For example, in *Windsurfing Chiemsee*, the Court of Justice explained that, where a geographical name has come to identify the product as originating from a particular undertaking and thus to distinguish that product from goods of other undertakings, the geographical designation ‘has gained a new significance and its connotation, no longer *purely descriptive*, justifies its registration as a trade mark’.<sup>162</sup> The critical displacement of meaning is that which operates when the sign is used in relation to the particular goods or services, and the question is whether, in such a situation, the average consumer of the product immediately understands the sign as referring to source.

### 3.5.2 Numerical extent of recognition

It is clear that, for an unregistrable mark to become registrable, it is necessary for consumers to think about the sign as an indication of origin. One question that arises is: how widespread must the consumer recognition be? In *Windsurfing*, the Court of Justice said that the question is whether ‘the relevant class of persons, or at least a *significant proportion* thereof’, identify goods as originating from a particular undertaking because of the trade mark.<sup>163</sup>

The Court made it clear that it is not possible to say whether a mark is distinctive by reference to predetermined percentages.<sup>164</sup> This is because the evidence that is needed to support a claim that a mark has become registrable through use (or, where wrongly registered, that it deserves to stay on the register) depends on how descriptive (etc.) the mark is in its ‘natural’ state. Thus if the objections to the word are not strong, then it is likely that less evidence of acquired distinctiveness will be required. However, the more descriptive a mark is, the more convincing must be the evidence of acquired distinctiveness.<sup>165</sup> In *Windsurfing*, the Court said that, where a geographical name is very well known, it can

<sup>159</sup> [1998] *RPC* 283, 303.

<sup>160</sup> Having said this, a distinctive mark may contain other messages, such as suggestions or allusions as to quality or origin. As long as these are not deceptive, and thus contrary to TMA 1994, s. 3(3)(b), registration may proceed. See below at pp. 963–4.

<sup>161</sup> *West (Eastenders)* [2003] *FSR* (44) 816, 841, [68] *per* Arden LJ; Kerly, [7–103]–[7–112], [7–179]–[7–183].

<sup>162</sup> Joined Cases C-108/97 and C-109/97 [1999] *ECR* I-2779, 2829, [47].

<sup>163</sup> *Ibid.*, 2830, [52]; *Koninklijke Philips v. Remington*, Case C-299/99 [2002] *ECR* I-5475, [65] (substantial portion of the relevant class); *Bovemij Verzekeringen NV v. Benelux-Merkenbureau*, Case C-108/05 [2006] *ECR* I-7605 (ECJ, First Chamber); *Oberbank AG*, Case 217/13 (19 June 2014) (ECJ, Third Chamber), [42].

<sup>164</sup> Some member states persist in thinking in terms of percentages. See *British Sugar v. Robertson* [1996] *RPC* 281 (Jacob J) (in case of a mark that was inherently non-distinctive, 90 per cent recognition would suffice, but 60 per cent was not sufficient); *Stiftung Warentest*, BGH, I ZB 65/12 of 17 October 2013 (43 per cent recognition was insufficient to justify a finding of acquired distinctiveness for the term ‘test’ in relation to test magazines and consumer goods tests).

<sup>165</sup> See *Fine & Country v. Okotoks* [2013] *EWCA Civ* 672, [96], [97], [106], drawing attention to the statement of the Court of Justice in *Lloyd Schuhfabrik Meyer & Co. GmbH v. Klijsen Handel BV*, Case C-342/97 [1999] *ECR* I-3819, [23], that the assessment of distinctiveness required consideration of ‘the fact that [the sign] does or does not contain an element descriptive of the goods or services for which’ registration is sought. See also *Oberbank AG*, Case 217/13 (19 June 2014) (ECJ, Third Chamber), [45]–[48].

acquire distinctive character only if there has been long-standing and intensive use of the mark by the undertaking applying for registration.<sup>166</sup>

### 3.5.3 Geographical extent of recognition

How widespread geographically must the acquired distinctiveness be? In *Bovemij Verzekeringen*,<sup>167</sup> the Court of Justice had to advise on the registrability of the mark EUROPOLIS for insurance services with the Benelux Trade Mark Office (which grants rights for Belgium, Luxembourg, and the Netherlands). The sign was descriptive to Dutch speakers, who understood the word *polis* as referring to insurance policies, but not to French speakers. The Court indicated that, to be registrable, the sign must be shown to have acquired distinctiveness by use throughout the territory where the ground of objection subsisted, in effect for a ‘significant proportion’ of Dutch speakers.

In the case of a UK trade mark, acquired distinctiveness would thus need to be demonstrated amongst a ‘significant part’ of consumers as a result of use throughout the United Kingdom. Consequently, in *Bignell v. Just Employment Law Ltd*,<sup>168</sup> a trade mark was held to be invalid on the basis that the fact that it had acquired distinctiveness within Surrey and the neighbouring counties was not sufficient evidence that a significant proportion of the relevant class of persons *in the United Kingdom as a whole* would have identified goods as originating from a particular undertaking because of the trade mark. However, in *Evegate Publishing Ltd v. Newsquest Media (Southern) Ltd*,<sup>169</sup> Asplin J declined to invalidate a mark, SOUTH EAST FARMER, because even though use was demonstrated primarily in three counties in southeast England (Kent, Surrey, Sussex, and parts of Hampshire), it was not restricted to these areas. The Court concluded that the paper was advertised nationally, and so while its ‘reputation’ was geographically limited, its ‘distinctiveness’ existed outside the southeast.

In respect of the Community trade mark (CTM), parallel issues arise as to the geographical dimensions of acquired distinctiveness. Here, however, the issue is coloured by the linguistic diversity of the European Union and geopolitical assumptions about whether the Union is a single entity or really a bundle of nation states (as well as the logic of the relationship with national trade mark regimes). These assumptions find expression in the answer to the question of whether use and acquired distinctiveness ‘throughout’ the Union means ‘in each and every member state’ or rather amongst a ‘significant proportion’ of European citizens, irrespective of their geographical distribution.

Where a ‘word mark’ is inherently descriptive, this will usually be so only in relation to a particular language: to return to an earlier example, OLUT is descriptive of beer in Finnish, but not in English. In such situations, the CTM jurisprudence currently demands a showing of acquired distinctiveness in all of the territories in which the sign is inherently descriptive—in this example, Finland.<sup>170</sup> In *Ford Motor’s Application/Options*,<sup>171</sup> the applicant sought to register OPTIONS for, among other things, insurance services. When the examiner objected that the sign was devoid of distinctive character in French and English, the applicant filed evidence of use in a number of countries, including the

<sup>166</sup> Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779, 2830, [50].

<sup>167</sup> Case C-108/05, [2006] ECR I-7605 (ECJ, First Chamber).

<sup>168</sup> [2008] FSR (6) 125 (Englehart QC).

<sup>169</sup> [2013] EWHC 1975 (Ch), [238].

<sup>170</sup> *Ford Motor Company v. OHIM*, Case T-91/99 [2000] ECR II-1925 (CFI); *Diagnostiko v. OHIM*, Case 7/10 (17 May 2011) (GC, Third Chamber), [49]–[51] (where sign was descriptive in Greek, acquired distinctiveness needed to be demonstrated in Greece and Cyprus, rather than a substantial portion of the Greek-speaking public within the European Union).

<sup>171</sup> *Ibid.* See also *Audi v. OHIM (TDI)*, T 16/02 [2003] ECR II-5167, [52], [60], [66].

United Kingdom, but not France. The applicant asserted that acquired distinctiveness in the United Kingdom was sufficient to establish distinctiveness in a substantial part of the European Union, and that was all that was required under Article 7(3) CTMR. However, the CFI, affirming the opinion of the OHIM refusing registration, held that, in order to be accepted for registration, a sign must possess distinctive character throughout the European Union. Since the mark lacked distinctiveness in France, it was not registrable as a CTM.<sup>172</sup> However, the Court adopted a test that itself appears subtly different from that in *Bovemij*—namely, that there must be acquired distinctiveness in a ‘substantial part’ of the territory in which the ground of objection obtains.<sup>173</sup>

This seems like a sensible and pragmatic response, but doubtless requires numerous details to be considered further: for example, where a mark is descriptive in English, is it necessary to show acquired distinctiveness in Malta and Cyprus, as well as the United Kingdom and Republic of Ireland? If so, it may be onerous for trade mark applicants and may lead to further reliance on national marks (with all of the problems for the internal market that this may present).<sup>174</sup> However, if a sign is descriptive in Malta and there is no acquired distinctiveness there, why should traders be prevented from using the description by allowing a registration reflecting distinctiveness acquired elsewhere?

Where the marks are not words, it will often be the case that the inherent qualities of the sign are perceived identically throughout the Community (or so, at least, the General Court has said).<sup>175</sup> Consequently, acquired distinctiveness must be proved for the whole Community. In *Glaverbel v. OHIM*,<sup>176</sup> the CFI affirmed that, in relation to the application for chinchilla glass (see Fig 37.4 above<sup>177</sup>), which was inherently devoid of distinctive character, it was insufficient to provide evidence of acquired distinctiveness in only ten of the (then) 15 states. This was the position that the Court of Justice took in the *Storck* (sweet wrapper) decision.<sup>178</sup> In *Lindt v. OHIM*,<sup>179</sup> rejecting Lindt’s argument that demonstrating acquired distinctiveness of the golden rabbit (see Fig. 37.9 below<sup>180</sup>) in 16 of the (then) 25 member states was sufficient, the Court reaffirmed the general position that acquired distinctiveness must be shown ‘throughout’ all parts of the Union in which the initial ground of objection (of non-distinctiveness) exists, but added that ‘it would be unreasonable to require proof of such acquisition for each individual Member State’. As we will see, one peculiar effect of this reasoning is that a trade mark might be regarded as having a ‘reputation’ in the Union (within the meaning of Article 9(1)(c) CTMR), but be found to have been invalidly registered because the mark lacked acquired distinctive character.<sup>181</sup>

<sup>172</sup> *Ford v. OHIM*, Case T-91/99 [2000] ECR II-1925, [24]. <sup>173</sup> *Ibid.*, [27].

<sup>174</sup> In other areas, e.g. the transitional rules on acceding states, the convenience of Community harmony has been privileged over the needs of traders to describe their goods. Community marks are deemed to extend to the new territories and cannot be invalidated on the basis that they are descriptive in the languages spoken in these countries.

<sup>175</sup> *BIC SA*, Case T-262/04 [2005] ECR II-5959 (CFI), [68]; *Glaverbel v. OHIM*, Case T-141/06 [2007] ECR II-114 (CFI), [36]. In *Lindt v. OHIM*, Case C-98/11P (24 May 2012) (ECJ, Fourth Chamber), it was argued that the shape of chocolate rabbits was inherently distinctive in a number of member states in which there was no tradition of giving chocolate bunnies at Easter. Although it is clear that cultural factors might have a bearing on the inherent distinctiveness of a shape, the OHIM and General Court were unpersuaded, and the ECJ found no error of law.

<sup>176</sup> Case T-141/06 [2007] ECR II-114 (CFI). On appeal, *sub nom AGC Flat Glass Europe (formerly Glaverbel) v. OHIM*, Case C-513/07 P (17 October 2008) (ECJ, Sixth Chamber), the Court found it unnecessary to determine Glaverbel’s argument that what is required is a ‘synthetic’ assessment across the Community as a whole, rather than in each and every state. <sup>177</sup> See p. 939.

<sup>178</sup> *August Storck*, Case C-25/05 P [2006] ECR I-5739, [81]–[86], [AG 79] (sweet wrapper).

<sup>179</sup> Case C-98/11P (24 May 2012) (ECJ, Fourth Chamber), [62] (unfortunately, there is no Opinion of AG Trstenjak in this case). <sup>180</sup> See p. 966.

<sup>181</sup> *Pago Tirolmich*, Case C-301/07 [2009] ECR I-9429 (ECJ, Second Chamber), discussed below at p. 998.

This inconsistency might have been avoided if the approach in *BIC SA v. OHIM*,<sup>182</sup> in which the CFI stated that such proof must be produced in respect of ‘a substantial part’ of the Community,<sup>183</sup> had been adopted. However, it has not.<sup>184</sup> The Max Planck Institute’s review of the European trade mark regime recommends that it be made necessary for such an applicant to demonstrate acquired distinctiveness ‘for the majority of the markets making up the respective territory’.<sup>185</sup>

#### 3.5.4 The relevant consumers

On general principles, distinctiveness needs to be acquired across the full range of goods or services for which registration is sought. The fact that a descriptive sign acquires distinctiveness for some goods does not lead to the conclusion that it is registrable for other goods. This principle may cause problems where a mark is used in relation to goods or services targeted at a niche market, because the sign might come to be known by an elite, but not by the mass of consumers of goods of the relevant type. For example, in *Salvatore Ferragamo Italia SpA*,<sup>186</sup> the applicant sought registration of a bow that it had used on its shoes for the previous 20 years. While there was plenty of evidence of use and of advertising in elite magazines, it was by no means evident that ordinary purchasers of shoes would have been familiar with the mark. However, it would be at odds with the aims of trade mark law to have confined the applicant’s specification to ‘luxury’ shoes, since clearly one of aims of giving protection would be to allow a proprietor to prevent others from using the sign (here the bow) on cheap versions of the product. As it was, the OHIM held that the mark had acquired distinctiveness, likening it to marks such as ROLEX and ROLLS-ROYCE. The implication seems to be that the Board of Appeal thought that the bow had, in fact, become familiar not only to the elite purchasers of luxury shoes, but also to the broader public. As such, the decision leaves unclear the trickier situation in which evidence shows the mark to be known *only* to the elite customers.

#### 3.5.5 Types of supporting evidence

A range of different types of evidence may be used to support a claim for registrability through use. In *Windsurfing Chiemsee*,<sup>187</sup> the Court of Justice listed the following considerations: (i) the market share held by the mark; (ii) how intensive, geographically widespread, and long-standing the use of the mark has been; (iii) the amount invested by the undertaking in promoting the mark; (iv) the proportion of the relevant class of persons who, because of the mark, identify goods as originating from a particular undertaking; and (v) statements from chambers of commerce and industry or other trade and professional associations.<sup>188</sup>

<sup>182</sup> Case T-262/04 [2005] ECR II-5959.

<sup>183</sup> On the facts, despite substantial use of the lighter shape, the evidence failed to establish that it was seen as a trade mark and the geographical extent of the recognition was thus moot.

<sup>184</sup> *Louis Vuitton Malletier v. OHIM*, Case T-237/10 (14 December 2011) (GC, Third Chamber), aff’d as Case C-97/12P (15 May 2014) (ECJ, Eighth Chamber), although the question of the geographical extent of acquired distinctiveness was not in issue on appeal.

<sup>185</sup> Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 147, [3.74].

<sup>187</sup> Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779, 2830, [51].

<sup>188</sup> One of the factors is stated to be the proportion of the relevant class of persons who, because of the mark, identify goods as originating from a particular undertaking: *ibid.*, [51]. However, in our view, this is not really a ‘factor’ so much as the essence of the inquiry: see *ibid.*, [52]. Consequently, we think it is more helpful to distinguish, as patent law does in its non-obviousness inquiry, between ‘primary’ and ‘secondary’ evidence. See *Glaverbel*, Case T-141/06 (12 September 2007), [41].

(i) *Evidence of use* Acquired distinctiveness must be proved ‘on the basis of specific and reliable data.’<sup>189</sup> A tribunal may take into account evidence of the length of time for which the product has been on the market, the volume of the goods marketed, or the extent of services provided. Such evidence might be supplied by way of statutory declarations. Typically, examples of uses on packaging, marketing, and advertising, as well as details of expenditure, will also be submitted. However, the critical evidence concerns the impact of such activities. Consequently, the CFI has observed that ‘initiatives by the proprietor are to be taken into consideration insofar as they produce objective results in terms of the perception of the sign amongst the relevant public.’<sup>190</sup> In the absence of evidence of the impact of a proprietor’s actions, a tribunal will be reluctant to infer acquired distinctive character.<sup>191</sup>

In order for a mark to become registrable through use, it is necessary to show that the public has come to think of the sign as designating origin. In order for that to occur, the applicant must have used the sign as a mark.<sup>192</sup> The Court of Justice has made clear that there is no need for the sign to be used alone; other trade marks may also be present. Thus a slogan on a product (for example HAVE A BREAK) might acquire distinctive character even though it had been used only when accompanied by a registered mark (KIT KAT) in the phrase HAVE A BREAK . . . HAVE A KIT KAT.<sup>193</sup> Equally, a shape might acquire distinctive character even though it is accompanied by a verbal mark.<sup>194</sup>

Particular problems have arisen when attempting to show that a shape has acquired distinctiveness through use. In *Koninklijke Philips v. Remington*,<sup>195</sup> the Court of Justice was asked for guidance as to whether a sign could acquire distinctiveness where a trader had been the only supplier of particular goods to the market. Philips had previously been the only seller of three-headed shavers and there was evidence that, as a consequence, the public associated the shape with Philips. The potential problem with taking this evidence as indicative of distinctiveness lay in the fact that Philips had previously operated a monopoly, so that it had not been possible to ascertain how consumers would have understood the three-headed shape if it had been presented to them by traders other than Philips. The Court acknowledged that extensive use of the shape ‘*may be* sufficient to give the sign a distinctive character’, but hinted that it might be difficult to demonstrate that a substantial portion of the relevant class of persons associated the shape with a specific trader or believed that goods of that shape come from the trader. Because distinctiveness can be acquired only as a result of use of the mark *as a trade mark*, it seems that, on the facts of *Philips*, the mark had not acquired distinctiveness. While there may have been evidence of ‘familiarity’ with the shape—and even ‘association’ of the shape with Philips—it seems unlikely that this derived from use of the three-head shape *as a trade mark*.

Subsequent cases have confirmed the practical difficulties standing in the way of proving acquired distinctiveness through use. ‘Secondary evidence’ offered by means

<sup>189</sup> *Koninklijke Philips v. Remington*, Case C-299/99 [2002] ECR I-5475, [65].

<sup>190</sup> *Alcon Inc. v. OHIM*, Case T-237/01 (5 March 2003), [55], aff’d on appeal Case C-192/03 [2004] ECR I-8993.

<sup>191</sup> *Ibid.*

<sup>192</sup> *Koninklijke Philips v. Remington*, Case C-299/99 [2002] ECR I-5475, [64] (‘as a result of use of the mark *as a trade mark*, and thus as a result of the nature and effect of it’, emphasis added); *Nestlé*, Case C-353/03 [2005] ECR I-6135, [26]. This means that the sign must be used ‘for the purpose of the identification by the relevant class of persons of the product or service as originating from a given undertaking’: *ibid.*, [29].

<sup>193</sup> *Ibid.* The mark—which had been the subject of several contested applications over many years—was finally registered in July 2006: TM 2015684.

<sup>194</sup> *August Storck*, Case C-24/05 P [2006] ECR I-5677, [59].

<sup>195</sup> Case C-299/99 [2002] ECR I-5475.

of demonstrations of expenditure on advertising or the extent of market share are less probative than in other cases, because they rarely indicate that the public recognizes the shape as a trade mark, rather than likes the shape for its aesthetic or functional attributes. On the other hand, advertising that urges consumers to ‘look for’ a particular feature will have some probative value in establishing that such a feature has acquired trade mark significance.<sup>196</sup>

(ii) *Advertising expenditure* Although the Court of Justice specifically stated that tribunals may take account of the amount invested by the undertaking in promoting the mark, British courts have been more sceptical as to the value of matters such as advertising expenditure or evidence of sales success as indicators of acquired distinctiveness. This is because evidence of use will not inevitably lead to a finding of distinctiveness *through* use. It is not the extent of promotional efforts that is crucial so much as it is the effect on consumers.<sup>197</sup> Consequently, evidence that the word TREAT had been used for five years did not, on its own, demonstrate that the mark had become a badge of trade origin.

(iii) *Evidence of the trade* Moreover, although the Court of Justice also refers to the relevance of ‘statements from chambers of commerce and industry or other trade and professional associations’, UK courts have treated these as of only marginal significance.<sup>198</sup> The reason for this is that the relevant class of persons is not trade buyers, but the average customer of the product.<sup>199</sup>

(iv) *Consumer surveys* Since the inquiry is focused upon consumer attitudes to the sign, direct evidence from consumers and consumer surveys will most likely prove to be of value. The Court of Justice has stated that, in this context, EU law ‘does not preclude the competent authority, where it has particular difficulty in that connection, from having recourse, under the conditions laid down by its own national law, to an opinion poll as guidance for its judgment.’<sup>200</sup> Under UK law, opinion polls are not precluded, but must be scrutinized with considerable care and their real probative value appraised.<sup>201</sup>

#### 4 OTHER ABSOLUTE GROUNDS FOR INVALIDITY

The third and more eclectic category of absolute grounds for refusal is set out in section 3(3)–(6) of the 1994 Act. This provides that trade marks shall not be registered if they are contrary to public policy or morality, if they are likely to deceive the public, if they are prohibited by law, or if the application was made in bad faith. Particular provisions also exist for specially protected emblems.

<sup>196</sup> UK IPO, *Evidence of Acquired Distinctiveness through Use* (July 2007) PAN 6/07.

<sup>197</sup> *British Sugar v. Robertson* [1996] RPC 281. See also *L & D SA v. OHIM*, Case C-488/06P [2998] ECR I-5725, [AG86] (AG Sharpston) (some evidence must be presented that the mark in issue is actually perceived as linking the products that bear it with a particular undertaking, and such evidence cannot come solely from data such as market share and advertising investment or duration of use), and [75]–[76] (such evidence sufficed at least when coupled with ‘prolonged use’).

<sup>198</sup> *Wickes’s Trade Mark Application* [1998] RPC 698. <sup>199</sup> *Re Dualit* [1999] RPC 890, 898, [33].

<sup>200</sup> *Windsurfing*, Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779, 2830, [53].

<sup>201</sup> *Nestlé v. Unilever* [2003] ETMR (53) 681, [22]. In general, the question of admissibility will depend on the court balancing the probative value against the cost of the survey: *Interflora Inc. v. Marks & Spencer plc* [2012] EWCA Civ 1501, [2012] FSR (21) 415, [150]. However, it is notable that Lewison LJ implied that such a survey (or related witness-gathering exercise) might have greater probative value where the issue is whether a registered mark has acquired distinctiveness than in determining whether there is likely confusion: *ibid.*, [137]. See, below, p. 994.

## 4.1 PUBLIC POLICY AND MORALITY

Section 3(3)(a) provides that a trade mark shall not be registered if it is contrary to public policy or to accepted principles of morality.<sup>202</sup> The two exceptions relate to the intrinsic qualities of the sign, rather than the manner in which it is used.<sup>203</sup>

### 4.1.1 Morality

Rather like the corresponding ground for invalidity in the European Patent Convention,<sup>204</sup> this provision has generated a rather inconsistent case law, particularly with respect to the application of the notion of ‘morality’.<sup>205</sup> The UK Trade Marks Registry and the OHIM seem to have made matters all the more confusing by trying to interpret the notion in the light of Article 10 of the European Convention on Human Rights (ECHR), and permissible exceptions thereto.<sup>206</sup> In our view, the implications for ‘free speech’ of refusal to register a trade mark are negligible and these considerations irrelevant.<sup>207</sup> However, the topic is one that would benefit from the authoritative views of a higher tribunal.

In the United Kingdom, the question of morality has come before the Appointed Person four times. The test, which has repeatedly been mentioned as helpful in distinguishing cases of mere bad taste (which can be registered) from those that contravene principles of morality, has been said to be whether use of the sign would ‘justifiably cause outrage or would be subject of justifiable censure as being likely significantly to undermine current religious, family or social values’.<sup>208</sup> Despite the apparently high threshold, the test has been applied to reach the surprising conclusions that TINY PENIS,<sup>209</sup> JESUS,<sup>210</sup> and FOOK (all for, among other things, clothing) were ‘contrary to accepted principles of morality’,<sup>211</sup> while FCUK (for jewellery) was not.<sup>212</sup> TINY PENIS was held to be unregistrable for clothes because (according to Simon Thorley QC) use of the words would undermine an important social value—namely, that anatomical terms for parts of the genitalia should be retained for serious (educational) use and not tainted by ‘use as a smutty trade mark for clothing’.<sup>213</sup> JESUS was rejected for clothing and other goods because:

[B]randing which employs words or images of religious significance can quite easily have a seriously troubling effect on people whose religious beliefs it impinges upon and others

<sup>202</sup> Note also that a trade mark that contains a representation of one of the flags of the countries of the United Kingdom, the use of which would be ‘grossly offensive’, shall not be registered: TMA 1994, s. 4(2).

<sup>203</sup> *Durferrit GmbH v. OHIM, Kolene Corp. Intervening*, Case T-224/01 [2003] ECR II-1589, [76].

<sup>204</sup> EPC 1973, Art. 53(a). See pp. 515–21.

<sup>205</sup> For US case law, see T. Davis, ‘Registration of Scandalous, Immoral and Disparaging Matter under Section 2(a) of the Lanham Act: Can One Man’s Vulgarity be Another’s Registered Trademark?’ (1993) 83 *TM Rep* 863.

<sup>206</sup> *In re Basic Trademark SA’s Application* [2005] RPC (25) 611 (AP, Hobbs QC), [26]; *FCUK Trade Mark* [2007] RPC 1 (AP, Arnold QC), [60]. However, the General Court has been quick to cite fundamental rights as a reason for excluding certain signs from registration: *Paki Logistics GmbH v. OHIM*, T-526/09 [2011] ECR II-346 (GC, Third Chamber), [15] (referring to discrimination under Arts 2 and 3(3) TEU, Arts 9 and 10 TFEU, and Art. 21 of the Charter of Fundamental Rights of the European Union).

<sup>207</sup> J. Griffiths, ‘Is There a Right to an Immoral Trade Mark?’, in P. Torremans (ed.), *Intellectual Property and Human Rights* (2008).

<sup>208</sup> *Ghazilian’s Application* [2002] RPC (33) 628. <sup>209</sup> *Ibid.*

<sup>210</sup> *Basic Trademark* [2005] RPC (25) 611 (Hobbs QC). Registration was sought for various goods in Classes 3, 9, 14, 16, 18, 24, 25, and 28.

<sup>211</sup> *Scranage’s Trade Mark Application*, O/182/05 (24 June 2005) (Kitchin QC).

<sup>212</sup> *FCUK* [2007] RPC 1 (Arnold QC).

<sup>213</sup> *Ghazilian’s Application* [2002] RPC (33) 628. The reasoning is therefore consistent with the result at the OHIM in *Dick Lexic/Dick & Fanny*, R111/2002-4 (25 March 2003), since ‘Dick’ and ‘Fanny’ are not proper anatomical terms for genitalia. But Thorley QC’s conclusions were doubted in *FCUK* [2007] RPC 1 (AP, Arnold QC), [61].

who adhere to the view that religious beliefs should be treated with respect in a civilised society.<sup>214</sup>

FOOK was rejected because it was the phonetic equivalent of ‘fuck’, the use of which would apparently cause ‘justifiable outrage’ when used on clothing (despite its frequent use in football stadiums),<sup>215</sup> but FCUK was acceptable because, even though it could be used to evoke the swear word, it was not a phonetic or visual equivalent of ‘fuck’.<sup>216</sup> In reaching the last conclusion, Richard Arnold QC seems to have been particularly influenced by the fact that other regulatory authorities (such as the Advertising Standards Agency and Ofcom) had allowed use of FCUK and that 16 million articles of FCUK-branded clothing had been sold.

The OHIM has also struggled to apply the corresponding provision of the CTMR.<sup>217</sup> For example, the OHIM Board of Appeal accepted DICK AND FANNY as registrable for clothing: this was merely in poor taste, having a ‘rather smutty flavour’.<sup>218</sup> The Board was particularly taken by the fact that the words ‘merely designate things’, rather than proclaim an opinion, incite behaviour, or convey an insult. In contrast, the Grand Board of Appeal rejected SCREW YOU for sunglasses, clothing, and beverages (but not for sex toys and condoms).<sup>219</sup> Recognizing that ‘screw’ was a slightly less offensive profanity than ‘fuck’, the Board nevertheless held that ‘a substantial number of citizens with a normal level of sensitivity and tolerance would be upset by regular commercial exposure to the term’.<sup>220</sup> The sign therefore should not be registered for the goods that, in normal use, would be exposed to the general population, including children. However, because sex toys are normally sold in specialist shops, ‘a more relaxed attitude’ was appropriate and the sign was registrable. More strangely, perhaps, the Board held that a person who is ‘sufficiently interested in [condoms] to notice the trade marks under which they are sold is unlikely to be offended by a term with crude sexual connotations’.<sup>221</sup> The OHIM Board of Appeal also accepted REVA, a slang Finnish term for female genitalia, as registrable for electric cars because, in that context, it carried no rude or disrespectful message.<sup>222</sup>

#### 4.1.2 Public policy

The exclusion relating to ‘public policy’ has been invoked less frequently. According to the OHIM, ‘obviously malevolent racial and cultural slurs, whether by word or pictorial representation, should not be allowed on a trade mark register’.<sup>223</sup> The matter is judged not from the point of view of those who will be easily offended, but from the perspective

<sup>214</sup> *Basic Trademark* [2005] RPC (25) 611 (AP, Hobbs QC). Would the decision have been different if the Church of England or Jesus College, Cambridge, had been the applicant? If so, why should this make a difference? The Grand Board of Appeal of the OHIM has suggested that cases of religious offence might best be dealt with under the heading of ‘public policy’ rather than ‘morality’: *Application of Kenneth (trading as Screw You)*, Case R 495/2005–G [2007] ETMR (7) 111, [20].

<sup>215</sup> *Scranage’s Trade Mark*, O/182/05 (24 June 2005), [11] per Kitchin QC.

<sup>216</sup> In *FCUK* [2007] RPC 1, [74], Arnold QC notes the widespread use of ‘fuck’.

<sup>217</sup> CTMR, Art. 7(1)(f).

<sup>218</sup> *Dick Lexic*, R 111/2002–4 (25 March 2003) (for various goods in Classes 9, 16, and 25).

<sup>219</sup> *Application of Kenneth (t/a Screw You)*, Case R 495/2000–G [2007] ETMR (7) 111 (OHIM, Grand Board). <sup>220</sup> *Ibid.*, [26]. <sup>221</sup> *Ibid.*, [29].

<sup>222</sup> *Reva Electric Car Co. (PVT) Ltd*, Case R 558/2006–2 (18 July 2006) (OHIM, Board of Appeal).

<sup>223</sup> *Kenneth*, Case R 495/2005–G [2007] ETMR (7) 111, [19]–[20]; *Paki Logistics GmbH v. OHIM*, T-526/09 [2011] ECR II–346 (GC, Third Chamber) (French and German only) (affirming OHIM’s refusal to register ‘Paki’ for packaging, pallets, and transportation services, because in the United Kingdom the term would be understood as a racial slur).

of ‘a reasonable person with average levels of sensitivity and tolerance’.<sup>224</sup> The ground has been held to justify refusal of registration of a sign that included the hammer and sickle and a red star, on the basis that these were ‘symbols of despotism’ that, given its political and cultural history, would be offensive in Hungary.<sup>225</sup> The ground also justifies the exclusion of marks that promote illegal activity, for example by glamorizing drug-taking or terrorism. The exclusion is not concerned with economic grounds for objection, such as the effect that registration would have on competition.<sup>226</sup>

#### 4.2 DECEPTIVE MARKS

Section 3(3)(b) of the 1994 Act states that a trade mark shall not be registered if it is ‘of such a nature as to deceive the public (for instance as to the nature, quality or geographical origin of the goods or service)’.<sup>227</sup> This prohibition tends to be applied to marks that, although distinctive, contain some kind of suggestion or allusion that is inaccurate. This is likely to be assessed from the viewpoint of the consumer who is reasonably well informed, observant, and circumspect.<sup>228</sup> The risk of deception must be a real one and relate to the mark itself (as opposed to the way it is used). In *Elizabeth Emanuel*,<sup>229</sup> the opponent was a well-known designer of wedding clothes, Elizabeth Emanuel. Although she had assigned her business to a third party (including a trade mark application), she later opposed registration of the mark ELIZABETH EMANUEL on the absolute ground that its nature was such as to deceive the public into believing that the clothes sold by the trade mark owner were of her design. The Examiner refused the opposition and, on appeal, the Appointed Person referred several questions to the Court of Justice. According to the Court, the ground for refusal (and the corresponding ground for opposition) requires ‘the existence of actual deceit or of a sufficiently serious risk that the consumer will be deceived’.<sup>230</sup> The Court denied that the assignment of the mark of itself (as opposed to how the proprietor utilized it) gave rise to such a serious risk of deception. Even if the average consumer ‘might be influenced in his act of purchasing a garment bearing the trade mark ELIZABETH EMANUEL by imagining that the appellant in the main proceedings was involved in the design of that garment’, there was no deception because the ‘characteristics and the qualities of that garment remain guaranteed by the undertaking which owns the trade mark’.<sup>231</sup> Although the questions referred to, and answers given by, the Court of Justice related to a rather specific set of circumstances (and accordingly left some questions to be decided on another occasion),<sup>232</sup> the case appears to set a high threshold for the ground for refusal to apply.

<sup>224</sup> *Couture Tech Ltd v. OHIM*, Case T-232/10 (20 September 2011) (GC, Fourth Chamber), [51]; *Paki Logistics GmbH v. OHIM*, T-526/09 [2011] ECR II-346 (GC, Third Chamber), [12].

<sup>225</sup> *Couture Tech Ltd v. OHIM*, Case T-232/10 (20 September 2011) (GC, Fourth Chamber). It was relevant evidence that such symbols are illegal in Hungary.

<sup>226</sup> *Philips v. Remington*, Case C-299/99 [2002] ECR I-5475.

<sup>227</sup> CTMR, Art. 7(1)(g); TM Dir., Art. 3(1)(g). See below at pp. 1033–5.

<sup>228</sup> Consequently, mere advertising ‘puff’, as lawyers call it, as was present in the application KENCO THE REAL COFFEE EXPERTS, will not be misleading: *Kraft Jacobs Suchard Ltd’s Application; Opposition by Nestlé UK* [2001] ETMR (54) 585.

<sup>229</sup> *Elizabeth Florence Emanuel v. Continental Shelf 128 Ltd*, Case C-259/04, [2006] ECR I-3089 (ECJ, Third Chamber).

<sup>230</sup> *Ibid.*, [47], citing *Consorzio per la Tutela del Formaggio Gorgonzola v. Kaserei Champignon Hofmeister GmbH*, Case C-87/97 [1999] ECR I-1301, [41].

<sup>231</sup> *Elizabeth Florence Emanuel v. Continental Shelf 128 Ltd*, Case C-259/04, [2006] ECR I-3089, [48].

<sup>232</sup> In particular, the questions/answers were confined to the case in which the trade mark came to be assigned with goodwill of the business, leaving open the possibility of a different conclusion in cases of

The exclusion has been applied to signs that misleadingly suggest official approval and to signs that wrongly suggest goods are made out of particular materials or come from particular locations. The UK Trade Marks Registry refused an application for a collective mark, CHARTERED FINANCIAL ANALYST (for financial services), reasoning that the sign would give the impression to the average consumer that the users of the mark were members of a professional organization of the sort that benefits from a royal charter.<sup>233</sup> The OHIM Board of Appeal rejected an appeal from a decision refusing registration of TITAN (which means ‘titanium’ in German, Swedish, and Danish) for building units made of non-metallic materials,<sup>234</sup> and of WINE OH! for, among other things, beverages.<sup>235</sup> The term TITAN was misleading because consumers could be led into taking an interest in the products on the basis of an indication that they were made of titanium. The term WINE was misleading for water and the addition of OH! merely emphasized this. The Board was not able to assume that the misleading connotation would be corrected as a result of the nature of the packaging of the water. In contrast, if the mis-description is obvious and is such that it would immediately be corrected on further observation by the consumer, such mis-descriptions will not render the sign invalid.

Another situation in which a trade mark may be refused is if it gives rise to a real, but inaccurate, expectation that the goods come from a particular locality. For example, an application to register MCL PARFUMS DE PARIS for toiletries including perfumes was refused by the UK Registry, on the grounds that the mark created an expectation that the perfume would be manufactured in Paris, so that (if it were not) the trade mark would deceive the public not only as to the geographic origin of the goods, but also as to their nature and quality.<sup>236</sup> Similarly, the OHIM refused to register ARCADIA for wine, Arcadia being a Greek region known for wine.<sup>237</sup> The name was either descriptive of geographical origin or, if limited as proposed by the applicant to cover only Italian wines, misleading because the wines did not come from Arcadia. The refusal of signs involving geographical mis-descriptions parallels the role of section 3(4) discussed below. However, the circumstances in which the owner of a protected designation of origin can object to use of that designation or a similar one may be broader than the situations in which a mark will be treated as misleading.

### 4.3 MARKS PROHIBITED BY LAW

Section 3(4) provides that ‘a trade mark shall not be registered if or to the extent that its use is prohibited in the United Kingdom by any enactment or rule of law or by any provision of Community law’. Thus a mark will not be registered if it is unlawful under statutes such as the Geneva Conventions Act 1957 (protecting symbols of the Red Cross), the Plant

assignment or licensing ‘in gross’. For comment, see R. Moscona, ‘What really Matters? The Designer’s Name or the Name on the Label?’ (2007) 29(4) *EIPR* 152.

<sup>233</sup> *CFA Institute’s Application; Opposition of the Chartered Insurance Institute*, O/315/06 [2007] *ETMR* (76) 1253; UK IPO, *Trade Marks which Contain the Word ‘Chartered’* (2013) PAN 02/13 (deceptive because implies ‘chartered status’, which the UK IPO states thus ‘deceives the public as to the quality of the services claimed’).

<sup>234</sup> *Portakabin Ltd/Titan*, R789/2001–3 (23 January 2002) (OHIM Board of Appeal); cf. *Lord Corp./Metaljacket*, R314/2002–1 (23 October 2002) (ambiguous mark METALJACKET for non-metallic coatings for metals not misleading).

<sup>235</sup> *Wine Oh! LLC’s Application*, R 1074/2005–4 [2006] *ETMR* (95) 1319.

<sup>236</sup> *Madecourt’s Application; Opposition by Federation des Industries de la Parfumerie* [2000] *ETMR* 825.

<sup>237</sup> *Enotria Holdings/Arcadia*, R246/1999–1 (27 March 2000).

Varieties Act 1997,<sup>238</sup> or the Hallmarking Act 1973.<sup>239</sup> The illegality must be intrinsic or inherent in the mark, rather than in the goods for which its use is proposed.<sup>240</sup> The reference to Community law prevents the registration of ‘protected designations of origin’ (PDOs) and ‘protected geographical indications’ (PGIs) for wines, spirits, agricultural products, and food.<sup>241</sup>

#### 4.4 BAD FAITH

According to section 3(6), a trade mark shall not be registered if, or to the extent that, the application is made in bad faith.<sup>242</sup> The courts, tribunals, and offices have struggled to find a satisfactory definition of ‘bad faith’—in particular whether it is a question of conscious dishonesty or whether it is to be decided by reference to objective standards.<sup>243</sup> Ultimately, the Court of Appeal has decided to align the definition in trade mark law with that operating in other areas of civil liability, particularly so-called ‘knowing assistance’ in breach of trust.<sup>244</sup> This definition requires, first, an inquiry into what the applicant actually knew, and then an assessment as to whether a reasonable person would regard the applicant’s behaviour, given that knowledge, as ‘conduct falling short of acceptable commercial behaviour’.<sup>245</sup> The views of the applicant as to whether its behaviour is dishonest are of no consequence; the issue is whether the act of applying for the registration was dishonest as judged by the ‘ordinary standards of honest people’.<sup>246</sup>

<sup>238</sup> It is proposed to add a parallel provision referring to plant names to the amended CTMR, adding a new paragraph to Article 7, to read ‘(1) trade marks which contain or consist of an earlier variety denomination registered in accordance with Council Regulation (EC) No 2100/94 of 27 July 1994 on Community plant variety rights with respect to the same type of product’: European Commission, *Proposal for a Regulation of the European Parliament and of the Council Amending Council Regulation (EC) No. 207/2009 on the Community Trade Mark* (March 2013) COM(2013) 161 final, 10.

<sup>239</sup> Scotch Whisky Regulations 2009 (SI 2009/2890). See UK IPO, *Practice in Relation to Trade Marks Containing the Words ‘Scotch’ and ‘Scotch Whisky’* (2011) PAN 1/11.

<sup>240</sup> Paris, Art. 7.  
<sup>241</sup> CTMR, Art. 7 (1)(j), (k): see Chapter 43. Under Regulation (EU) No. 1151/2012 of the European Parliament and of the Council of 21 November 2012 on quality schemes for agricultural products and foodstuffs [2012] OJ L 343/1 (12 December 2012), Art. 13, protection of PDOs and PGIs extends to any ‘evocation’: *Gorgonzola v. Kaserer Champignon Hofmeister*, Case C-87/97 [1999] ECR I-1301.

<sup>242</sup> Pursuant to optional provision in TM Dir., Art. 3(2)(d); CTMR, Art. 51 (registration liable to be declared invalid where application was made in bad faith). See N. Dawson, ‘Bad Faith in European Trade Mark Law’ [2011] IPQ 229.

<sup>243</sup> *Gromax Plasticulture v. Don & Low Nonwovens* [1999] RPC 367, 379 (concept of bad faith is to be understood as requiring ‘dishonesty’ or at most ‘conduct falling short of acceptable commercial behaviour’); *Knoll AG’s Trade Mark* [2003] RPC (10) 175, 182, [27] per Neuberger J. For broader views, see *Road Tech. Computer Systems v. Unison Software UK* [1996] FSR 805; *Postperfect Trade Mark* [1998] RPC 255; *Artistic Upholstery v. Art Forma (Furniture)* [1999] 4 All ER 277, 290.

<sup>244</sup> *Harrison v. Teton Valley Trading Co.* [2005] FSR (10) 177 (CA). The case was heavily criticized by Richard Arnold QC, sitting as AP in *Robert McBride Ltd’s Application* [2005] ETMR (85) 990, [27]–[31]. However, he has subsequently observed, in *Target Fixings v. Brutt* [2007] RPC (19) 462, that much of the force of the criticisms has been removed by the clarification of Prof. Annand QC in *Ajit Weekly Trade Mark* [2006] RPC (25) 633. The point made by Arden LJ in *Harrison*, at [40], and reiterated by Arnold QC at in *Robert McBride*, at [30], that ‘good faith’ is a European concept, the meaning of which must be found in the ‘language, scheme and structure’ of the Directive, remains significant: ultimately, it will be the Court of Justice that determines the meaning of TM Dir., Art. 3(2)(d) and CTMR, Art. 51(1)(b).

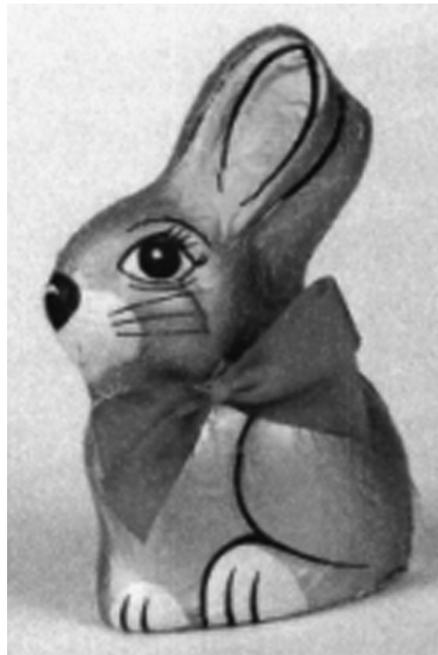

<sup>245</sup> *Ajit Weekly Trade Mark* [2006] RPC (25) 633 (AP, Ruth Annand); *Target Fixings v. Brutt* [2007] RPC (19) 462.

<sup>246</sup> *Ajit Weekly Trade Mark* [2006] RPC (25) 633, [41]; *Jules Rimet Cup Ltd v. Football Association Ltd* [2008] ECDR (4) 43, 65, [94] per Deputy Judge Wyand QC.

**Fig. 37.10** Hauswirth chocolate rabbit

Source: *Chocoladefabriken Lindt & Sprüngli AG v. Franz Hauswirth GmbH*, Case C-529/07 [2009] ECR I-4893

© L. Bently and B. Sherman 2014

The Court of Justice has yet to indicate whether this test is appropriate. In *Lindt v. Hauswirth*,<sup>247</sup> Lindt registered the appearance of a golden rabbit with a red bow around its neck for chocolate (see Fig. 37.9) and relied on the registration to bring an action against Hauswirth, which was also selling chocolate rabbits (see Fig. 37.10) and had done so in Austria since 1962. Hauswirth counterclaimed that the application had been made in ‘bad faith’. The Austrian Oberster Gerichtshof referred various questions to the Court of Justice, in particular as to whether it was bad faith to apply for a mark in circumstances in which the applicant knew others were using the same or similar mark. In a curious decision, the Court declined to define good faith at all, but merely indicated that the national court should assess bad faith by taking into account ‘all the relevant factors’. The Court said that particular attention should be paid to: (i) whether the applicant *knows or must know* that a third party is using an identical or similar sign for an identical or similar product capable of being confused with the sign for which registration is sought; (ii) the applicant’s *intention* to prevent that third party from continuing to use such a sign; and (iii) the degree of legal protection enjoyed by the third party’s sign and by the sign for which registration is sought.

In a subsequent case, the Court reiterated that mere knowledge that a third party is using or intends to use a particular mark is not of itself sufficient to establish bad faith.<sup>248</sup> If the applicant has their own legitimate reasons for seeking protection, the mere knowledge that someone else has an interest in the field does not amount to bad faith.

It may seem rather odd that the Court has avoided defining bad faith<sup>249</sup> and has merely endorsed a close analysis of all of the facts. In *Frost Products*,<sup>250</sup> in which a registrant was found to have applied for the mark FROST in bad faith, Vos J suggested that the tests are consistent with one another, the English courts ‘defining’ bad faith, while the Court of Justice has merely suggested ‘factors that may be taken into account in determining whether it exists’.

In many respects, this is a broad test that the courts have applied to a wide range of situations. The cases can be placed in three categories: where there is no intention to use the mark; where there is an abuse of a relationship; and where the applicant was aware that a third party had some sort of claim to the goodwill in the mark.

#### 4.4.1 No intention to use the mark

The first situation in which a mark may be refused because it was applied for in bad faith is where the applicant had no intention of using the mark in trade. Such applications might be said to be in ‘bad faith’ under UK law because the applicant declares, under section 32(3), that the trade mark is being used or that the applicant has a bona

<sup>247</sup> *Chocoladefabriken Lindt & Sprüngli AG v. Franz Hauswirth GmbH*, Case C-529/07 [2009] ECR I-4893 (ECJ, First Chamber).

<sup>248</sup> *Malaysian Dairy Industries Pte Ltd v. Ankenaernet*, Case C-320/12 (27 June 2013) (ECJ, Fifth Chamber).

<sup>249</sup> See A. Kur, ‘Not Prior in Time, but Superior in Right: How Trademark Registrations Can be Affected by Third-party Interests in a Sign’ [2013] *IIC* 790, 810 (defining bad faith is ‘no easy task, if at all feasible’). In contrast, other commentators have either found the potential created by the decision to be welcome or worrisome: N. Dawson, ‘Bad Faith in European Trade Mark Law’ [2011] *IPQ* 229, 258 (welcoming the interpretation as a ‘powerful pro-competitive weapon’); R. Moscona, ‘Bad Faith as Grounds for Invalidation under the Community Trade Mark’ [2010] *EIPR* 48 (criticizing the decision as introducing considerable uncertainty).

<sup>250</sup> *Frost Products Ltd v. FC Frost Ltd* [2013] *EWPC* 34, [128].

fide intention to use the mark in relation to those goods or services. If there is no such intention, the declaration is dishonest and the dishonesty taints the application.<sup>251</sup> However, because there is no such requirement of a declaration at the OHIM, it is not clear whether registering with no intention to use a mark would be regarded as bad faith (although the General Court has recognized that registering repeatedly merely to avoid the consequences of revocation for non-use could well be bad faith<sup>252</sup>). On the assumption that merely lacking an intention to use the mark would not be bad faith at the OHIM,<sup>253</sup> the question arises whether UK law would itself be regarded as incompatible with the Trade Marks Directive.<sup>254</sup> In *Red Bull v. Sun Mark*,<sup>255</sup> Arnold J indicated that, in an appropriate situation, the question would need to be referred to the Court of Justice for resolution.

There will be no problem with a UK tribunal finding bad faith where absence of intent to use of the part of the applicant themselves is coupled with some other goal. Thus there may be bad faith where a person applies to register a mark with the intent either of preventing a competitor from registering the mark or selling ('trafficking in') the registered right. So, for example, where an antique dealer realized that 'demon ale' was an anagram of 'lemonade' and applied to register DEMON ALE as a mark, with a view to selling the mark and with no intention of brewing, the Appointed Person held that the application was in bad faith.<sup>256</sup> As well as regulating the 'trafficking' in marks, the requirement of good faith can be used to prevent the registration of 'ghost marks'—that is, the registration of marks that are similar to an unregistrable mark that the trader is, in fact, using. A famous example, from pre-1994 case law, was the illegitimate registration of NERIT for cigarettes, when the applicant really intended to use the mark MERIT, but realized that it would not be accepted for registration (because it lacks distinctiveness).<sup>257</sup> However, where an applicant intended to use a three-dimensional mark and registered a two-dimensional device comprising an image of the mark, the Appointed Person held that the applicant had not lacked good faith because, in some circumstances, use of the shape could in fact count as use of the two-dimensional mark.<sup>258</sup>

#### 4.4.2 Abuses of relationships

The second situation in which an applicant may be held to lack good faith is where, in applying for the mark, they are knowingly abusing a relationship with a third party. The most obvious example of such abuse of a relationship is where the registration would

<sup>251</sup> *Demon Ale Trade Mark* [2000] RPC 345; *In re Ferrero SpA's Trade Marks (Kinder)*, O/279/03 [2004] RPC (29) 253, [25] per Kitchin QC. Merely drafting a specification broadly will not mean that the application is in bad faith: to say that one intends to use a mark, e.g. for pharmaceutical substances, where one intends to use the mark only in relation to a specific category of pharmaceutical products is not sufficient to warrant a finding of bad faith: *Knoll AG* [2003] RPC (10) 175, 182, [27] per Neuberger J. Cf. *Betty's Kitchen Coronation Street Trade Mark* [2000] RPC 825 (finding application to have been in bad faith because no intention to use all four words together as a single mark and used on only some of goods).

<sup>252</sup> *pelicantravel.com v. OHIM*, T-136/11 (13 December 2012) (GC, Fifth Chamber), [27]. There is some suggestion in this case that an applicant for cancellation might establish on the facts that there was no such intention to use the mark and that this might lead to a finding of bad faith: *ibid.*, [58].

<sup>253</sup> 53447/03 (OHIM Cancellation Division), discussed in *Robert McBride* [2005] ETMR (85) 990, [20].

<sup>254</sup> Cf. *Knoll AG* [2003] RPC (10) 175, 185, [33]–[34] per Neuberger J (warning against relying on the s. 32(3) declaration, on the basis that the requirement 'may be inconsistent with the Directive').

<sup>255</sup> [2012] EWHC 1929 (Ch) (where Red Bull had registered BULLIT for drinks and alleged that the defendant's use of BULLET infringed, the defendant counterclaimed that the BULLIT registration had been made in bad faith; on the facts, the judge found that there was sufficient evidence of intent to use).

<sup>256</sup> *Ibid.* <sup>257</sup> *Imperial Group v. Philip Morris & Co.* [1982] FSR 72.

<sup>258</sup> *Robert McBride* [2005] ETMR (85) 990.

give rise to a breach of trust or contract between them. This might be the case where the applicant is an employee or an agent, a partner or former partner, or co-venturer.<sup>259</sup> If the applicant is aware that their behaviour is wrongful in law, then an honest person would likely regard that behaviour as ‘conduct falling short of acceptable commercial behaviour’.<sup>260</sup> However, an application may be treated as in bad faith where the abuse falls short of a breach of a legal relationship, for example where the parties were in pre-contractual negotiations as to a licensing arrangement and, when this fell through, the disappointed licensee registered the mark.<sup>261</sup>

#### 4.4.3 Knowledge of third-party claims

Another situation in which an application may be rejected on the basis that it was made in bad faith is where a party attempts to register a mark when it knows that a third party has some better claim to the reputation or goodwill attaching to the sign.

One important example of bad faith occurs where an applicant identifies a foreign business that is expanding and races to the Trade Marks Registry to register a UK mark.<sup>262</sup> In *Ajit Weekly Trade Mark*,<sup>263</sup> a trade mark had been granted for a Punjabi word (meaning ‘invincible’) in relation to printed matter. The owner of a Punjabi newspaper of the same name, which had sold in India since 1959 and which was a ‘household name’ in the Punjab, applied to have the mark cancelled on the grounds that the application had been made in bad faith. The Examiner concluded that the proprietor of the mark had known of the Punjabi paper and its reputation, and that use of the mark in the United Kingdom would confuse the substantial Punjabi community present in the country. The Appointed Person affirmed the decision, holding that (as a matter of law) it was unnecessary to show that the applicant thought what he was doing was dishonest and that the Examiner had been entitled to reach a conclusion that an honest person would regard such behaviour as ‘conduct falling below acceptable standards’.

A second situation in which bad faith might exist is where an applicant seeks, through registration of a sign, to prevent a third party from continuing acts that they have already been doing and are entitled to do. The *Lindt* case<sup>264</sup> can be seen as a possible example: if the goal of registration of the image of the *Lindt* rabbit was primarily to prevent an existing competitor with established rights from continuing to sell its chocolate bunnies, then the application might have been regarded in bad faith (unless Lindt could establish that it

<sup>259</sup> *Mickey Dees (Nightclub) Trade Mark* [1998] RPC 359.

<sup>260</sup> *Target Fixings (Brutt Trade Marks)* [2007] RPC (19) 462, 485, [100]; *Mary Wilson Enterprises Inc.’s Trade Mark Application* [2003] EMLR (14) 259 (bad faith application to register THE SUPREMES contrary to agreement with Motown Records); *Saxon Trade Mark* [2003] FSR (39) 704 (bad faith application by former member of heavy metal band to register SAXON, which Laddie J considered to be a partnership asset); *Gromax Plasticulture* [1999] RPC 367 (bad faith on part of distributor not established); *SA.PAR Srl v. OHIM*, T-321/10 (11 July 2013) (GC, Sixth Chamber) (registration of GRUPPO SALINI by former member of group of Salini family-held companies cancelled as lacking good faith).

<sup>261</sup> *John Arthur Slater v. Prime Restaurant Holdings, Inc.*, Case R 582/2003–4 (13 December 2004) (OHIM Board of Appeal) (concerning the sign EAST SIDE MARIOS registered in the United States and Canada).

<sup>262</sup> TM Dir., Art. 4(4)(g), allows member states to provide that a trade mark application may be opposed, or a registered trade mark declared invalid, where the trade mark is liable to be confused with a mark that was in use abroad on the filing date of the application and which is still in use there, provided that, at the date of application, the applicant was acting in bad faith. It is proposed to introduce an equivalent relative ground into the CTMR. See generally A. Kur, ‘Not Prior in Time, but Superior in Right: How Trademark Registrations Can be Affected by Third-party Interests in a Sign’ [2013] IIC 790, 811–12ff.

<sup>263</sup> [2006] RPC (25) 633.

<sup>264</sup> *Chocoladefabriken Lindt & Sprüngli AG v. Franz Hauswirth GmbH*, Case C-529/07 [2009] ECR I–4893 (ECJ, First Chamber).

had legitimate reasons of its own to seek registration, for example to prevent other third parties from making and selling counterfeit chocolate rabbits).

A similar argument was run unsuccessfully in the *Hotel Cipriani* case. As we saw in Chapter 32, this case concerned an action by the Venice hotel, Hotel Cipriani, against a London restaurant, Cipriani London. The claimant relied on a Community trade mark for CIPRIANI, for which it had applied in 1996. The defendant counterclaimed that the registration was invalid. At first instance, Arnold J conducted an elaborate examination of ‘bad faith’, rejecting the counterclaim.<sup>265</sup> He particularly emphasized the claimant’s legitimate reasons to register and the ways in which its rights would be limited vis-à-vis earlier users and third parties.<sup>266</sup> The Court of Appeal, equipped with the Court of Justice judgment in *Lindt*, affirmed.<sup>267</sup> The application had not been made in bad faith because, being for hotels, it would not prevent any of the Cipriani family from carrying on any of their existing activities. The registration would not have conferred rights on the claimant that would implicate the freedoms of Villa Cipriani or Locanda Cipriani.

A finding of bad faith may also occur where a person seeks to appropriate for themselves the residual goodwill of a trader who has stopped trading. In *Jules Rimet Cup Ltd v. Football Association Ltd*,<sup>268</sup> the applicant sought to register an image of a lion in the English football strip, the World Cup logo from 1966, known as ‘World Cup Willie’. Before doing so, it had approached the Football Association to find out whether it still held rights in the mark, and had done searches and employed a trade mark attorney. As a consequence, it believed itself entitled to use the image of ‘World Cup Willie’. Nevertheless, because it was knowingly taking advantage of the Football Association’s residual goodwill, Deputy Judge Wyand QC held that the application was not in good faith and that the Association’s opposition should succeed.

#### 4.5 SPECIAL EMBLEMS

Section 4 excludes from registration trade marks that consist of, or contain, ‘specially protected emblems’.

- (i) Section 4(1) precludes registration of signs that include symbolic elements connected to the Crown. These include emblems such as the royal arms, the royal crown, and flags. The exclusion also covers any representation of any member of the royal family, or any other sign suggesting that the applicant has royal patronage.
- (ii) Section 4(2) excludes various national flags—that is, the Union Flag and the flags of the various British nations. Here, the criterion is that their use would be either misleading or grossly offensive.
- (iii) Section 4(3) has a similar exclusion for international emblems and flags that are protected under sections 57 and 58 of the Act.<sup>269</sup> Sections 57 and 58 contain a similar list of excluded emblems, flags, etc., for other countries that are members of the Paris Union. Applying the equivalent provision of the CTMR, the General Court held that an application relating to a flag containing a circle of 12 stars was

<sup>265</sup> *Hotel Cipriani srl v. Cipriani (Grosvenor St) Ltd* [2008] EWHC 3032 (Ch), [2009] RPC (9) 209, [165]–[202].

<sup>266</sup> *Ibid.*, [189].

<sup>267</sup> *Hotel Cipriani srl v. Cipriani (Grosvenor St) Ltd* [2010] EWCA Civ 110, [54]–[57].

<sup>268</sup> [2008] ECDR (4) 43 (Deputy Judge Wyand QC). See also *Pavel Maslyukov v. Diageo Distilling* [2010] EWHC 443 (Ch), [2010] ETMR (37) 641 (application to register DALLAS DHU for whisky was bad faith given that DALLAS DHU was name of defunct distillery).

<sup>269</sup> In accordance with Paris, Art. 6ter; TRIPS, Art. 15(2); CTMR, Art. 7(1)(h).

unregistrable for computer programs and arranging conferences, in light of the European Union's own flag, which it described, in heraldic terms, as 'on a field azure a circle of 12 mullets or, their points not touching'.<sup>270</sup> Whatever the 'geometric' differences, the Court ruled, the two signs were to be compared 'from a heraldic point of view' and because the applicant had not specified colour, from such a perspective, it was an unregistrable imitation.<sup>271</sup>

- (iv) Section 4(4) restricts registration of marks that include coats of arms, subjecting trade marks to the rules of the law of arms.
- (v) Section 4(5) also prohibits the registration of marks that consist of or contain a 'controlled representation' under the Olympic Symbol (Protection) Act 1995 (as amended by the London Olympic Games and Paralympic Games Act 2006). These controlled representations include the Olympic and Paralympic symbols, mottos, and various protected words ('Olympics', 'Paralympics', 'Olympiad', 'Olympian', etc.).

<sup>270</sup> *Concept—Anlagen u. Geräte nach 'GMP' für Produktion u. Labor GmbH v. OHIM*, Case T-127/02 [2004] ECR II-1113. See also *American Clothing v. OHIM*, Joined Cases C-202/08P and 215/06P [2009] ECR I-6933 (ECJ, First Chamber) (affirming rejection of application of maple leaf with letters RW for clothing and holding that CTMR provision applied to applications for service marks, even if Paris, Art. 6ter, did not); *Kreyenberg v. OHIM*, Case T-3/12 (10 July 2013) (GC); cf. *European Union v. Ten EWIV*, R5/2011-4 (11 October 2011) (Fourth Board of Appeal); *European Union v. EASI*, R1991/2010-4 (11 October 2011) (Fourth Board of Appeal) (both cases on appeal to GC).

<sup>271</sup> In this case, the interpretation of the heraldic description, a verbal description, has more in common with patent interpretation than traditional trade mark infringement analysis.

## RELATIVE GROUNDS FOR REFUSAL

### CHAPTER CONTENTS

1 Introduction	972	3 Relative Grounds in Relation to Earlier Rights	1012
2 Relative Grounds in Relation to Earlier Trade Marks	972		

### 1 INTRODUCTION

In this chapter, we explore the ‘relative grounds’ for refusing to register a trade mark. These are set out in section 5 of the Trade Marks Act 1994 and Article 8 of the Community Trade Marks Regulation (CTMR), and are a basis of opposition to registration, or for cancellation of registration of a mark that has been registered.<sup>1</sup>

The relative grounds for refusal fall into two general categories: those concerned with ‘earlier trade marks’; and those concerned with ‘earlier rights’. We deal with each in turn.

### 2 RELATIVE GROUNDS IN RELATION TO EARLIER TRADE MARKS

The objections relating to earlier trade marks are found in section 5(1)–(3) of the 1994 Act and Article 8(1) and (5) CTMR. These provide that a trade mark shall not be registered if, when compared with an earlier mark, it is found that:

- (i) the marks are identical *and* the goods or services are identical;<sup>2</sup>
- (ii) the marks are identical, *and* the goods or services are similar, *and* there is a likelihood of confusion, which includes the likelihood of association, with the earlier mark;<sup>3</sup>
- (iii) the marks are similar, *and* the goods or services are either identical or similar, *and* there is a likelihood of confusion, which includes the likelihood of association, between the marks;<sup>4</sup> or

<sup>1</sup> TMA 1994, s. 47(2)(a), (b); CTMR, Art. 51.

<sup>2</sup> TMA 1994, s. 5(1); CTMR, Art. 8(1)(a).

<sup>3</sup> TMA 1994, s. 5(2)(a); CTMR, Art. 8(1)(b).

<sup>4</sup> TMA 1994, s. 5(2)(b); CTMR, Art. 8(1)(b).

- (iv) the marks are either identical or similar, the earlier trade mark has a reputation, and use of the applicant's mark would take unfair advantage of, or be detrimental to, the distinctive character or the repute of the earlier trade mark.<sup>5</sup>

These grounds for refusal mirror the provisions dealing with trade mark infringement. In particular, section 5(1)–(3) corresponds to section 10(1)–(3), which deal with trade mark infringement. Effectively, these relative grounds for refusal enable the owner of an earlier mark (A) to prevent the registration of a sign by another (B) where the use of that sign would infringe A's rights. One of the consequences of this symmetry is that much of the case law on infringement is relevant to the relative grounds for refusal.<sup>6</sup> As such, in this chapter, we draw upon trade mark infringement cases where relevant.

## 2.1 PRELIMINARY QUESTIONS

When considering section 5(1)–(3)/Article 8(1) and (5), it is necessary to ask three preliminary questions, as follows.

- (i) What is an 'earlier trade mark'?
- (ii) Does the opponent (or applicant for cancellation) have an appropriate interest on which to base a challenge?
- (iii) Has the earlier mark been used?

### 2.1.1 What is an earlier trade mark?

In the United Kingdom, the definition of 'earlier trade mark' is quite complex. In essence, it covers earlier UK trade marks, earlier international trade marks (designated 'EC' or 'UK'), and earlier Community marks. The provisions make it clear that the concept of 'earlier trade marks' includes 'earlier trade mark applications' with priority over the application under scrutiny. They also indicate that earlier trade marks include earlier 'well-known' marks, which are protected under the Paris Convention, even though these marks may not have been registered.<sup>7</sup> The concept of a 'well-known mark' was discussed in Chapter 34. The specific list of earlier marks is as follows:

- (i) under section 6(1)(a), a registered British mark, a Community trade mark (CTM), or an international trade mark (UK or EC)—that is, a mark registered under the Madrid Protocol designating the United Kingdom or European Community<sup>8</sup>—which has a priority date earlier than the trade mark in question;<sup>9</sup>
- (ii) under section 6(1)(b), a CTM or international trade mark (EC) that has a valid claim to seniority from an earlier registered trade mark or international trade mark (UK);<sup>10</sup>
- (iii) under section 6(1)(ba), a registered trade mark or international mark (UK) that had been converted from a CTM or international trade mark (EC), which itself had

<sup>5</sup> TMA 1994, s. 5(3); CTMR, Art. 8(5).

<sup>6</sup> *SA Société LTJ Diffusion v. SA Sadas*, Case C-291/00 [2003] ECR I-02799, [43], [AG19].

<sup>7</sup> In such cases, an applicant cannot require the earlier trade mark owner to establish use in the previous five years: Trade Marks (Earlier Trade Marks) Regulations 2008 (SI 2008/1067).

<sup>8</sup> TMA 1994, s. 53.      <sup>9</sup> TMA 1994, s. 51.

<sup>10</sup> TMA 1994, s. 6(1)(b). See above at p. 904.

- a valid claim to seniority from an earlier registered trade mark or international mark (UK) and accordingly has the same claim to seniority;<sup>11</sup>
- (iv) under section 6(2), an application for a mark, which, when registered, would be an earlier trade mark;<sup>12</sup> and
  - (v) under section 6(1)(c), a trade mark that is entitled to protection as a well-known trade mark.<sup>13</sup>

If the registration of a mark falling within the first two categories (section 6(1)(a) or (b)) has lapsed, the mark can form the basis of an objection for a period of one year after expiry. However, this will not be the case if the Registrar is satisfied that there was no bona fide use of the mark during the two years immediately preceding expiry.<sup>14</sup>

In relation to oppositions brought against CTMs, the definition of earlier marks is both narrower and wider than that applicable in the United Kingdom. Under the CTMR, ‘earlier trade marks’ include not only CTMs and international trade marks specifying the Community (under the Madrid Protocol), but also all trade marks registered in *any* member state or at the Benelux Trade Marks Office, and international registrations under the Madrid Agreement and the Madrid Protocol nominating a member state.<sup>15</sup> Thus they include registrations in other member states—which could not be the basis for an opposition to a UK mark. The important consequence of this is that, in many circumstances, marks will be capable of being registered in national registries, but not at the Office of Harmonization in the Internal Market (OHIM). The CTMR also permits oppositions on the basis of earlier well-known marks. Here, however, the provision is narrower in one respect than the UK provision. This is because the ability of the owner of an earlier well-known mark to oppose registration in relation to dissimilar goods or services is confined to situations in which the mark has been *registered*.<sup>16</sup> No such limitation appears to exist under the UK Act (although this might well be as a result of an oversight).

### 2.1.2 Does the opponent (or applicant for cancellation) have an appropriate interest on which to base a challenge?

An opposition (or application for cancellation) on relative grounds can be commenced only by a person who has a relevant interest in an earlier mark.<sup>17</sup> Neither the office nor third parties may object if the same or a similar mark is registered for the same or similar goods—however much confusion this might produce. In the case of opposition to a UK registration, it is only the proprietor of the earlier trade mark who can bring proceedings. In contrast, a cancellation action can be brought by the proprietor or a licensee of an earlier mark (or, in the case of a certification mark, an authorized user). This latter position is perhaps most easily explained by the fact that a cancellation action may be by way of a counterclaim to infringement: it would be unfair were it not possible for a licensee of the earlier trade mark who is accused of infringing a later mark to be able to challenge that mark. At the OHIM, opposition (or an application for cancellation based on an earlier trade mark) may be brought by the proprietor or a licensee authorized by the proprietor.<sup>18</sup>

<sup>11</sup> TMA 1994, s. 6(1)(ba).      <sup>12</sup> TMA 1994, s. 6(2).

<sup>13</sup> TMA 1994, s. 56(1), as amended by the Patents and Trade Marks (WTO) Regulations 1999 (SI 1999/1899). See above at pp. 843–4.

<sup>14</sup> TMA 1994, s. 6(3). The concept of genuine use is explored at some length at pp. 1021–4 in the context of revocation.      <sup>15</sup> CTMR, Art. 8(2).

<sup>16</sup> CTMR, Art. 8(5); TRIPS, Art. 16(3); *Mühlens GmbH & Co. KG v. OHIM*, T-150/04 [2007] ECR II-2353 (CFI, Second Chamber).

<sup>17</sup> Trade Marks (Relative Grounds) Order 2007 (SI 2007/1976), arts 2 (opposition), 5.

<sup>18</sup> CTMR, Arts 42, 55(1)(b). If the earlier mark is revoked during proceedings, then the basis for objection falls away: *Just Music Fernsehbetriebs v. OHIM*, Case T-589/10 (4 July 2013) (GC).

### 2.1.3 Has the earlier trade mark been used?

Where an applicant for a mark is faced with an opposition on relative grounds on the basis of an earlier trade mark registered more than five years previously, the applicant can demand that the opponent produces evidence of use of the trade mark in the previous five years or proper reasons for non-use.<sup>19</sup> If the opponent fails to do so, the opposition will be rejected.<sup>20</sup> This requirement reflects the fact that a trade mark may be revoked if it has not been used for five years, and so an application should not be prevented by opposition based on a mark that itself could be revoked. The issue of revocation and the jurisprudence on when a mark is to be regarded as having been ‘used’ are discussed in Chapter 39.

## 2.2 DOUBLE IDENTITY: SECTION 5(1)/ARTICLE 8(1)(A)

The first relative ground for refusal, the so-called ‘double identity’ ground, is found in section 5(1) of the 1994 Act and Article 8(1)(a) CTMR.<sup>21</sup> This provides that a trade mark shall not be registered if it is identical to an earlier trade mark *and* the goods or services to which the trade mark application relates are identical to the goods or services for which the earlier trade mark is protected. Because earlier trade marks are protected unconditionally as against a later application to register an identical mark for identical goods and services, there is no need to prove confusion.<sup>22</sup> However, if the applicant is able to demonstrate that registration will not adversely affect any of the functions of the trade mark, the later application may be registrable.

In considering whether a mark falls foul of section 5(1)(a)/Article 8(1)(a), three questions arise, as follows.

- (i) When are marks ‘identical’?
- (ii) When are the goods and services ‘identical’?
- (iii) When will registration of the later mark be, nevertheless, regarded as legitimate?

### 2.2.1 Are the marks identical?

The first question to ask in relation to section 5(1)/Article 8(1)(a) is: are the marks identical? In answering this question, it is necessary to compare the representation of the earlier trade mark contained in the registration certificate with the trade mark that has been applied for (or, in the case of infringement, that being used by the defendant).

When considering the earlier mark, it is particularly important to bear in mind some of the conventions associated with representation of marks—in particular, the rules that a word mark represents that word in any form,<sup>23</sup> and that matter disclaimed in the

<sup>19</sup> For Community marks and international marks designating the European Union, use need only be demonstrated in the European Union. For well-known marks, the opponent is not required to demonstrate use.

<sup>20</sup> TMA 1994, s. 6A(2)–(7); CTMR, Art. 43(2).

<sup>21</sup> See A. Griffiths, ‘The Trade Mark Monopoly: An Analysis of the Core Zone of Absolute Protection under Art. 5(1)(a)’ [2007] *IPQ* 312.

<sup>22</sup> The rationale for this is that confusion will necessarily result: TRIPS, Art. 16(1); TM Dir., Recital 10; Griffiths, *op. cit.*, 317ff.

<sup>23</sup> *Faber Chimica v. OHIM and Nabersa*, T-211/03 [2005] *ECR* II-1297 (CFI, Second Chamber), [33]–[40]; *Present-Service Ullrich GmbH v. OHIM*, T-66/11 (31 January 2013) (GC, Fifth Chamber), [57]; *Ontex v. OHIM and Curon Medical*, T-353/04 [2007] *ECR* II-10\* (summary) (CFI, Fifth Chamber), [74]; *British Sky Broadcasting v. Microsoft Corp.* [2013] *EWHC* 1826 (Ch), [75] *per* Asplin J. It appeared to be British practice that a device mark registered in black and white was interpreted as giving the right to the device in any and every colour. The ECJ decision in *Specsavers Int’l Healthcare Ltd v. Asda Stores Ltd*, Case C-252/12 (18 July 2013) (ECJ, Third Chamber), was seen as requiring a deviation from such an approach

registration will be ignored.<sup>24</sup> If the mark has been used by the opponent, no attention is usually paid to how the mark was in fact used; rather, the exercise is a ‘paper one’.<sup>25</sup>

In contrast with the position on infringement,<sup>26</sup> under which the court has to decide on the parameters of the defendant’s sign, in the context of assessing relative grounds of validity, the comparison is between the earlier trade mark (as registered) and the sign in the applicant’s application. The two marks are considered as a whole; nothing in the applicant’s mark is ignored.

While few problems are likely to arise in determining whether marks are identical, one particular issue warrants consideration—namely, whether marks that are slightly different may nonetheless still be treated as being identical. While specific provisions exist that prevent a mark that is similar to an earlier mark from being registered, the reason why owners of earlier marks might wish to argue their case under section 5(1)/Article 8(1)(a) is that, unlike the other relevant relative grounds, there is no need to prove confusion.<sup>27</sup> Given this, it would seem reasonable for the courts to construe section 5(1)/Article 8(1)(a) narrowly. Applying this logic, in *SA Société LTJ Diffusion v. SA Sadas*,<sup>28</sup> the Court of Justice concluded that the criterion ‘must be interpreted strictly. The very definition of identity implies that the two elements should be the same in all respects.’ The Court then elaborated that there is identity where a sign reproduces ‘without any modification or addition, all the elements constituting the [trade mark].’<sup>29</sup> However, it qualified this strict interpretation by observing that the test is to be applied from the viewpoint of the average consumer and that such a person will usually assess two signs globally, looking at the overall impression. Consequently ‘insignificant differences between the sign and the trade mark may go unnoticed by the average consumer’.<sup>30</sup> The existence of such ‘insignificant differences’, then, would not cause the signs to be lacking in identity. The Court has provided little further guidance, taking the view that this is a matter of factual appraisal for national courts.<sup>31</sup> It is a question of fact whether consumers would see differences as

in the case of used trade marks. However, the various offices of member states and the OHIM have agreed to a different practice: see European Trade Mark and Design Network, *Common Communication on the Common Practice of the Scope of Protection of Black and White (“B&W”) Marks* (April 2014). An earlier trade mark in black and white is *not identical* to the same mark in colour unless the differences in colour are insignificant.

<sup>24</sup> *Torremar Trade Mark* [2003] RPC (4) 89, 98, [29]; *The European v. The Economist Newspaper* [1998] FSR 283, 289; *General Cigar Co. Inc. v. Partagas y Cia SA* [2005] FSR (45) 960 (Collins J). At the OHIM, disclaimed matter is treated as lacking distinctiveness: OHIM, *Guidelines for Examination in the OHIM*, Part C (‘Opposition’), section 2 (‘Identity and likelihood of confusion’), Chapter 4 (‘Distinctiveness’), [2.2.2.3] on disclaimers.

<sup>25</sup> *Reed Executive plc v. Reed Business Information Ltd* [2004] RPC (40) 767, [50] per Jacob LJ; *British Sky Broadcasting v. Microsoft Corp.* [2013] EWHC 1826 (Ch), [75] per Asplin J; cf. *Specsavers Int’l Healthcare v. Asda Stores*, [2010] EWHC 2035 (Ch), [2011] FSR (1) 1, discussed below at pp. 985, 1040.

<sup>26</sup> See pp. 1040–2.

<sup>27</sup> Moreover, as explained in Chapter 40, in assessing conflicts in cases of ‘double identity’, the Court of Justice’s jurisprudence allows regard to be had to all of the recognized functions of trade marks (not only the origin function, but also the so-called ‘quality’, ‘communication’, ‘advertising’, and ‘investment’ functions) See below at pp. 1049–58.

<sup>28</sup> Case C-291/00 [2003] ECR I-2799, [50]. The concept of ‘identity’ here is the same as that used in CTMR, Art. 34, in relation to assessing ‘seniority’ of marks: see p. 904, fn. 136. <sup>29</sup> *Ibid.*, [51].

<sup>30</sup> *Ibid.*, [53].

<sup>31</sup> In *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [47]–[49], the Court contemplated that the referring tribunal might regard ‘portacabin’, ‘portokabin’ and ‘portocabin’ as identical to PORTAKABIN. More surprisingly, in *Die BergSpechte GmbH v. trekking-at-reissen GmbH*, Case C-278/08 [2010] ECR I-2517 (ECJ, First Chamber), [25]–[27], the Court left it to the referring court to decide whether the word BERGSPECHTE was identical to a registered composite mark, which included as well a

significant.<sup>32</sup> Applying the test, Lewison J has held that consumers of computer software would not notice the difference between WEBSPHERE and WEB-SPHERE<sup>33</sup>—but Hart J held that KCS HERR VOSS was not identical to HERR-VOSS.<sup>34</sup>

### 2.2.2 When are goods or services identical?

The second element that must be proved for a mark to fall foul of section 5(1)/Article 8(1)(a) is that the goods or services to which the application relates must be identical with the goods or services for which the earlier mark is protected.<sup>35</sup> If the category of goods or services protected by an earlier trade mark is broader than, but includes, the category of goods or services to which the application relates, then the applicant's goods are identical to those of the earlier mark.<sup>36</sup> So if an earlier trade mark were to relate to 'broadcasting services', a later application relating to radio broadcasting services would be understood as being identical.<sup>37</sup> Equally, if the specifications of the trade mark applicant overlap with those of the earlier trade mark owner/opponent, those goods within the overlap will be regarded as identical.<sup>38</sup>

While the specification of goods or services for which the earlier mark is registered is the starting point for determining whether goods or services are identical, in some cases the language of the trade mark specification may need to be interpreted.<sup>39</sup> So, for example, courts may have to decide whether 'vermin' includes insects,<sup>40</sup> or whether 'cosmetics' includes 'skin-lightening cream'.<sup>41</sup> The dominant approach today seems to be that the words used in a specification should be given their 'natural', 'ordinary', 'usual' or 'core'

figurative element (a bird on skis) and other words *Outdoor-Reisen und Alpenschule Edi Koblmüller* (meaning 'outdoor travel and alpine school') and the name of an Austrian mountaineer.

<sup>32</sup> *Lewis v. Client Connection* [2011] EWHC 1627 (Ch), [18] *per* Norris J (debate can become 'metaphysical').

<sup>33</sup> *Websphere Trade Mark* [2004] FSR (39) 796.

<sup>34</sup> *Blue IP Inc v. KCS Herr-Voss Ltd* [2004] EWHC 97 (Ch), [49]. Note also *Bayer Cropscience SA v. Agropharm* [2004] EWHC 1661 (Ch) (Patten J) (issue whether PATRIOT C and PATRIOT P were identical to PATRIOT not suitable for summary judgment); *Datacard v. Eagle Technologies* [2011] EWHC 244 (Pat), [314]–[315] (holding that DATACARD is identical to Datacard and Data Card); *Lewis v. Client Connection* [2011] EWHC 1627 (Ch), [18](b) (MONEY SAVING EXPERT and MONEY CLAIMING EXPERT not identical); *United Airlines Inc. v. United Airways Ltd* [2011] EWHC 2411 (Ch), [40]–[41] (UNITED/UNITED AIRLINES and UNITED AIRWAYS were identical); *Powell v. Turner* [2013] EWHC 3242 (IPEC), [105] ('www.wishboneash.co.uk' not identical to word mark WISHBONE ASH).

<sup>35</sup> The reference to the goods or services *protected by* the earlier trade mark ensures that the section covered well-known marks (which may not have been registered): Kerly, 297, [9–038]–[9–039].

<sup>36</sup> *Oberhauser v. OHIM and Petit Liberto (Fifties)*, T-104/01 [2002] ECR II–4359 (CFI, Fourth Chamber), [32]–[33] (applicant's goods 'Denim clothing' identical to opponent's goods 'clothing'); *Aventis Parma v. OHIM*, T-95/07 [2008] ECR II–229\* (CFI, First Chamber), [35] (applicant's mark related to 'medicines'—a category that fell within the opponent's specification for 'pharmaceuticals'—and therefore the goods were identical); *British Sky Broadcasting v. Microsoft Corp.* [2013] EWHC 1826 (Ch), [76] *per* Asplin J.

<sup>37</sup> *Discovery Communications v. Discovery* [2000] ETMR 516.

<sup>38</sup> *Galileo Trade Mark* [2005] RPC (22) 569 (AP, Prof. Annand).

<sup>39</sup> The interpretation of the specification is done as of the date of registration: *Reed Executive plc v. Reed Business Information Ltd* [2004] RPC (40) 767, [46] *per* Jacob LJ. Where the specification itself expressly referred to a class, e.g. 'widgets included in Class X', the question of whether any particular goods fall within the specification is to be answered by reference to the Registrar's practice at the date of registration: see *Omega Engineering Inc. v. Omega SA* [2010] EWHC 1211 (Ch), [2010] FSR (26) 625, [4]–[25]; *Datacard v. Eagle Technologies* [2011] EWHC 244 (Pat), [320]–[326].

<sup>40</sup> *Bayer Cropscience v. Agropharm* [2004] EWHC 1661 (Ch).

<sup>41</sup> *Beautimatic International v. Mitchell International Pharmaceuticals* [1999] ETMR 912, 921 ('skin-lightening cream' and 'dry-skin lotion' were identical to earlier trade registration relating to 'toilet preparations and cosmetics').

meaning.<sup>42</sup> It is perhaps worth observing that a different approach is taken at the OHIM, which tends to rely heavily on the Nice System of Classification. Thus the OHIM reasons that ‘clothing’ does not include ‘footwear’, because they are distinct categories within the Nice System.

### 2.2.3 Registration of later mark will not adversely affect the functioning of the earlier mark

The Court of Justice has held, in the context of infringement, that there will be no liability in the case of use of an identical mark in relation to identical goods or services where the use does not adversely affect the functions of the mark.<sup>43</sup> It is difficult to envisage many circumstances under which normal and fair use of a later mark as a mark for identical goods would not adversely affect the capacity of a mark to indicate origin (let alone interfere with the owner’s capacity to use the earlier mark as a vehicle for advertising, investment, or communication). Nevertheless, the Court has indicated that the doctrine of functions might apply in a relative-grounds case in which the later applicant can demonstrate a lengthy period of honest concurrent use during which no such adverse affect has occurred. In *Budejovicky Budvar v. Anheuser-Busch Inc.*,<sup>44</sup> both Anheuser Busch and Budvar had been granted registration in the United Kingdom of the BUDWEISER word mark for beer and had been using it concurrently for 30 years. Anheuser-Busch sought to invalidate Budvar’s registration on the ground that Budvar’s application had a later priority date. The Court indicated that it would be open to the national authority to refuse such a request if Budvar could show that there was no likely adverse affect on Anheuser-Busch’s ability to use the BUDWEISER mark as an indicator of the origin of its beer.<sup>45</sup> The Court did, however, describe the factual background in the case as ‘exceptional’.<sup>46</sup>

## 2.3 CONFUSING SIMILARITIES: SECTION 5(2)/ARTICLE 8(1)(b)

According to section 5(2)/Article 8(1)(b) (which correspond to Article 4(1)(b) of the Trade Marks Directive), a trade mark shall not be registered where it is:

- (i) identical or similar to an earlier trade mark;
- (ii) to be registered for goods or services similar to those for which the earlier trade mark is protected; *and*
- (iii) there exists a likelihood of confusion on the part of the public, which includes the likelihood of association with the earlier trade mark.

In considering whether a mark falls foul of section 5(2)/Article 8(1)(b), a number of questions arise. We have already considered what is meant by an ‘earlier trade mark’ and the situations in which marks and services will be ‘identical’. As such, it remains only to consider when goods or services are ‘similar’, when marks are ‘similar’, and what is meant by ‘likelihood of confusion’.

<sup>42</sup> *You View TV Ltd v. Total Ltd* [2012] EWHC 3158 (Ch), [12] *per* Floyd J (avoid either a broad interpretation such that the limits of the specification become fuzzy, or a narrow meaning); *Omega Engineering Inc. v. Omega SA* [2012] EWHC 3440 (Ch), [2013] FSR (25) 534 (Arnold J); cf. previous guidance from Jacob J in *Avnet Inc v. Isoact* [1998] FSR 16, 19 (and *British Sugar* [1996] RPC 281, which may no longer be appropriate).

<sup>43</sup> See below at pp. 1049–58. <sup>44</sup> Case C-482/09 [2011] ECR I-8701 (ECJ, First Chamber).

<sup>45</sup> *Ibid.*, [74]. <sup>46</sup> *Ibid.*, [76]. Note the qualification at [83].

Before looking at these in more detail, it is important to note that, in *Canon Kabushiki Kaisha v. Metro-Goldwyn-Mayer*,<sup>47</sup> the Court of Justice said that the various elements of Article 4(1)(b) of the Directive are interdependent. This means that difficulties in proving one of the requirements may be offset by the way in which one of the other requirements is met. For example, low levels of similarity between goods might be offset by a high degree of similarity between marks. This has been called the ‘interdependency principle’. In other cases, however, the Court of Justice has indicated that the requirements—similarity of marks, similarity of goods, and a likelihood of confusion—are cumulative.<sup>48</sup> There are therefore circumstances in which a tribunal is correct to reject an opposition (or to find infringement) on the ground purely that the signs (or goods) are dissimilar—so dissimilar, at least, that there could be no confusion even were the goods (or signs) to be identical and the mark highly distinctive.<sup>49</sup> The seemingly contradictory approaches (‘interdependence’ and ‘cumulation’) are reconciled by saying that the interdependence of the factors falls to be assessed only once a ‘minimum level’ of similarity of marks or a ‘slight’ similarity of goods/services has been reached.

### 2.3.1 Similarity of marks

The case law provides voluminous guidance on when marks will be treated as similar. However, the starting point is *Sabel v. Puma*,<sup>50</sup> in which the Court of Justice laid down a basic framework that has been followed ever since: the so-called ‘global appreciation’ approach. According to this approach, the tribunal should compare the marks as a whole, in the way in which an average consumer would see them. As the Court of Justice has observed, the average consumer *normally* perceives a mark as a whole and does not proceed to analyse its various details.<sup>51</sup> Consequently, attention should be paid particularly to the dominant and distinctive components of the mark. The tribunal should examine the degree of aural, visual, or conceptual similarity between the marks. In so doing, the tribunal will take into account the inherent or acquired distinctiveness of the mark.<sup>52</sup> One of the consequences of looking at the marks as a whole is that the courts will not necessarily examine the marks in too much detail.

(i) *Visual, aural, and conceptual similarity* The marks should be assessed from the point of view of their visual, aural, and conceptual similarities (or, as the Americans put it, by reference to ‘sight, sound and meaning’).<sup>53</sup> Typically, tribunals consider each in turn, before reaching an overall conclusion. In so doing, they have observed that a trade-off can occur: visual and conceptual differences, for example, can offset aural similarities.<sup>54</sup>

**Fig. 38.1** Specsavers logo mark

Source: *Specsavers Int'l Healthcare v. Asda Stores* [2012] EWCA Civ 24, [2012] FSR (19) 555

Although the marks are compared as a whole, emphasis is placed on the ‘dominant’ components. The tribunals therefore struggle, particularly in the case of composite marks, to identify which are the dominant elements. In much of the case law, there is a tendency to emphasize the textual elements.<sup>55</sup> So, in *Claudia Oberhauser v. OHIM*,<sup>56</sup> an application for the word mark FIFTIES for denim clothing was successfully opposed because of similarities with the opponent’s composite mark, registered for clothing, including words MISS FIFTIES in its lower part. Likewise, in *Matratzen Concord GmbH v. OHIM*,<sup>57</sup> the earlier word mark MATRATZEN was a successful basis for opposition to registration of a composite mark, comprising MATRATZEN MARKT CONCORD and including a figure carrying a mattress, because the word MATRATZEN was found to be the dominant feature of the applicant’s composite mark. Difference in textual matter can also lead to a conclusion that marks are not similar. A dramatic example occurred in a recent UK infringement case in which Specsavers alleged that Asda had infringed its logo mark comprising two overlapping ovals (see Fig 38.1).<sup>58</sup> Finding no infringement, Mann J highlighted that the Asda mark (see Fig 38.2) comprised two abutting white ovals and contained the words ‘Asda Opticians’. He reasoned that:

[W]hile the ovals are an important part of the Specsavers sign they do not dominate so as to subordinate the wording as a matter of overall appearance. The wording is equally significant. That being the case, a different form of wording (in the form of the Asda wording) introduces a very significant difference. In my view a very different overall impression is given. Taking that comparison by itself, I do not see how the reasonably circumspect consumer would be confused by the only real element in common, namely the presence of ovals, and thereby think that the two marks connote the same trade origin. Asda is itself a well-known name, and I do not readily understand how its name expressly spelled out, in prominent letters, could leave a reasonably circumspect consumer thinking that the mark is, or even might be, Specsavers.<sup>59</sup>

Although, in a composite mark, text frequently dominates, the Court of Justice has provided a reminder that the assessment is a global one. In *Shaker de Laudato v. Limiñana y Botella*,<sup>60</sup> an applicant for a composite mark for alcoholic beverages that included the

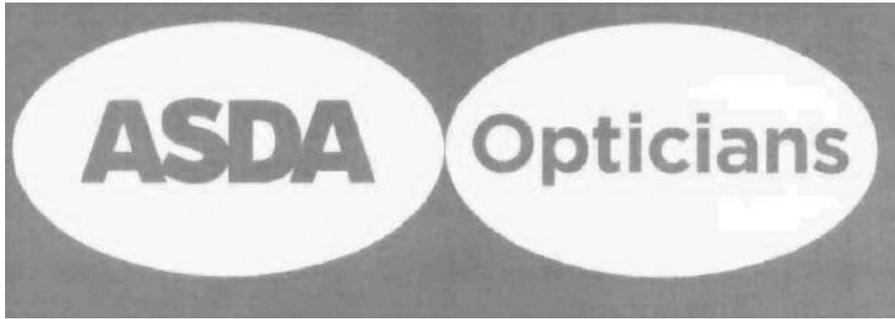

<sup>55</sup> Sometimes it is said that ‘words “speak louder” than devices’: *Oasis Stores’ Trade Mark Application* [1998] RPC 631, 644.

<sup>56</sup> T-104/01 [2002] ECR II-4359, [47]. <sup>57</sup> T-6/01 [2002] ECR II-4335.

<sup>58</sup> *Specsavers Int’l Healthcare v. Asda Stores* [2010] EWHC 2035 (Ch), [2011] FSR (1) 1.

<sup>59</sup> *Ibid.*, [136] per Mann J. The Court of Appeal affirmed this finding, but found that there was infringement under s. 10(3): [2012] EWCA Civ 24, [2012] FSR (19) 555.

<sup>60</sup> *Shaker de L. Laudato & C. Sas v. Limiñana y Botella, SL*, Case C-334/05 P [2007] ECR I-4529 (ECJ, Third Chamber).

**Fig. 38.3** 'Limoncello'

Source: *Shaker de L. Laudato & C. Sas v. Limiñana y Botella, SL*, Case C-334/05 P [2007] ECR I-4529

word LIMONCELLO above an image of a plate decorated with six lemons (see Fig. 38.3) was opposed by the owner of the Spanish word mark LIMONCHELO, also relating to goods in Class 33. The (then) Court of First Instance (CFI) had held that the signs were dissimilar because of the dominance of the dish feature in the applicant's mark, a feature that was absent in the opponent's. (This finding was itself surprising, given the general tendency to emphasize verbal components.) The Court of Justice overturned this finding, reminding the Court that the assessment was a global one and could not be conducted by comparing only one element. It is only where all other aspects are negligible that the assessment can be carried out on the basis solely of the dominant element.

The relative importance of each sort of similarity will vary with the circumstances in hand—in particular, the goods and the types of mark. In the case of certain kinds of goods, such as clothes or furniture, visual similarity between the marks in issue will be

© L. Bently and B. Sherman 2014

the most important form of similarity.<sup>61</sup> In contrast, it has been said that wine marks will be perceived ‘verbally’,<sup>62</sup> with restaurant services (in which word-of-mouth recommendation is highly important), it is likely that phonetic similarity will be key.<sup>63</sup> Each case is therefore to be viewed in its own context. However, the Court of Justice has ruled that, in an appropriate case, mere aural similarity may make marks so similar as to be likely to cause confusion.<sup>64</sup> In the case of device marks (as well as three-dimensional marks), visual similarity will usually be the most important factor,<sup>65</sup> and in the case of sound marks, clearly, the inquiry will depend chiefly on aural similarity.

In the case of word marks, a determination of visual similarity typically involves looking at the length of the marks, their structure (whether there are the same number of words), and whether the same letters are used. The courts also bear in mind that consumers may not be able to remember a mark perfectly (a notion known as ‘imperfect recollection’). The average consumer only rarely has the chance to make a direct comparison between marks and so must place their trust in the ‘imperfect picture of them that he has kept in his mind’.<sup>66</sup> In many cases, this means that while, at first glance, two marks may appear to be dissimilar, when the possibility of imperfect recollection is taken into account, the marks may in fact be similar. While the courts have used the notion of imperfect recollection to expand the ambit of protection given to earlier marks, they are always mindful of the need for the marks to be similar.

When comparing marks aurally, some attention must be paid to the relevant linguistic context. Words that might not seem similar aurally to an English-speaker may seem so to a person with a different linguistic background. In the case of Community trade marks to which oppositions arise from earlier national marks, it is the linguistic context of the country of registration of the opposing marks that is of relevance. Thus while the words *CULTRA* and *SCULPTRA* might seem aurally distinct in English, according to the General Court, for the relevant Hungarian and Czech public, the words were liable to give rise to similar sounds.<sup>67</sup>

The pertinent tribunals have tended to carry out a quantitative assessment: do the two signs have more syllables in common than not? For example, the CFI held that *GIORGIO AIRE* was not aurally similar to *MISS GIORGI* because only one syllable out of four was the same,<sup>68</sup> whereas *MYSTERY* and *MIXERY* were treated as similar.<sup>69</sup> In a short word, a slight variation may be sufficient to render the marks dissimilar. For example, *BASS* and *PASH* were treated as dissimilar by the CFI,<sup>70</sup> although in a different case it held *ILS* to be similar to *ELS*.<sup>71</sup> In assessing similarity, the tribunal will typically be more influenced by the first than the last syllable. So the CFI treated *BUD* and *BUDMEN*, *ZERO* and *ZERORH+*, *SEVEN* and

<sup>61</sup> *Inter-Ikea Systems BV v. OHIM*, T-112/06 [2008] ECR II-6 (CFI, Third Chamber), [79]; *Phillips-Van Heusen Corp. v. OHIM*, T-292/01 [2003] ECR II-4335, [55]; cf. *Claudia Oberhauser*, T-104/01 [2002] ECR II-4359, esp. [48].

<sup>71</sup> *Institut für Lernsysteme GmbH v. OHIM*, T-388/00 [2002] ECR II-4301.

SEVEN FOR ALL MANKIND as similar, the English High Court held VIAGRA and VIAGRENE to be similar,<sup>72</sup> and the OHIM Board of Appeal has ruled that SKYPE is similar to SKY.<sup>73</sup> Consistently with this logic, the CFI held words with common endings—NUTRIDE and TUFFTRIDE, ASTERIX and STARIX—not to be similar.<sup>74</sup> In other cases, similarity of the first syllable has proven insufficient to establish similarity, for example the CFI held that GIORGI LINE was not similar to GIORGIO AIRE.<sup>75</sup> Despite emphasis on the first part, the CFI also has held LA MER to be confusingly similar to LABORATOIRES DE LA MER (both in closely related goods in the cosmetics area).<sup>76</sup> These counter-examples are a useful reminder that the rulings are fact-specific, so that previous decisions are helpful only to provide a sense of the standards being applied; they have virtually no value as precedents.

Because similarity is assessed conceptually, as well as visually and phonetically, in thinking about whether marks are similar, it is necessary to take account of the ideas that lie behind or inform the earlier mark.<sup>77</sup> The important role that non-visual features may play in deciding whether marks are similar can be seen in the ‘Betty Boop’ case.<sup>78</sup> Here, the claimant had various registrations for the words BETTY BOOP, the name of a 1930s cartoon character, which had been held to have acquired distinctive character. The defendant had been licensing an image of the cartoon character, which it had acquired from out-of-copyright material. The court held that using the image infringed the word trade mark, because the average consumer seeing the image would immediately summon up the words ‘Betty Boop’.<sup>79</sup> The Court distinguished a case in which there was found to be no similarity between the word ALLIGATOR and Lacoste’s well-known registered device of a crocodile, because, on the facts, seeing the words would not cause the average consumer to perceive the earlier device mark.<sup>80</sup>

(ii) *Distinctiveness* The question of whether marks are similar will often be dependent on the inherent or acquired distinctiveness of the mark (for the goods or services for which it is registered).<sup>81</sup> This has a number of effects.<sup>82</sup>

<sup>72</sup> *José Alejandro SL v. OHIM*, T-129/01 [2003] ECR II–2251, [49]; *Zero Industry v. OHIM and zero Germany*, T-400/06 (16 September 2009) (CFI, Seventh Chamber), [49]; *Seven for All Mankind v. Seven SpA*, Case C-655/11P (21 February 2013) (ECJ, Second Chamber), [75]–[77]; *Pfizer v. Eurofood Link (UK)* [2000] ETMR 187 (EWHC); *L’Oréal v. OHIM and Spa Monopole (SPA THERAPY)*, T-109/07 [2009] ECR II–675 (CFI, Fifth Chamber), [30].

<sup>73</sup> R 2398/2010–4 (30 January 2013) (OHIM, Fourth Board of Appeal).

<sup>74</sup> *Durferrit GmbH v. OHIM*, T-224/01 [2003] ECR II–1589; *Les Éditions Albert René v. OHIM*, T-311/01 [2003] ECR II–4625, [56].

<sup>75</sup> *Laboratorios RTB*, T-156/01 [2003] ECR II–2789 (ECJ, Grand Chamber) (GIORGI was not thought particularly distinctive for perfumes). See also *Aldi GmbH & Co. v. OHIM*, T-505/11 [2014] ETMR (8) 162 (GC, Second Chamber) (annulling Opposition Division decision that DIALDI was dissimilar to ALDI, noting that the middle syllable can be as important as the opening one).

<sup>76</sup> *La Mer Technology Inc. v. OHIM*, T-418/03 [2007] ECR II–125\*, [2008] ETMR (9) 169 (CFI, Fifth Chamber); *Julian James; Opposition of Smart* [2005] ETMR (93) 1096 (AP, Arnold QC) (CARSMART similar to SMART, both for cars, in part because while ‘car’ was at beginning, it was descriptive).

<sup>77</sup> *Sir Terence Conran v. Mean Fiddler Holdings* [1997] FSR 856 (ZN similar to ZINC); *Osotspa v. OHIM*, T-33/03 [2005] ECR II–763 (CFI, Fourth Chamber), [51] (some conceptual similarity between SHARK and the word HAI, the latter being Finnish for ‘shark’); *Golden Balls Ltd v. OHIM*, T-437/11 [2014] ETMR (1) 1 (GC, First Chamber), [41]–[51] (in the context of printed matter, GOLDEN BALLS was regarded as having weak conceptual similarity with BALLON D’OR).

<sup>78</sup> *Hearst Holdings Inc. v. A.V.E.L.A. Inc.* [2014] EWHC 439 (Ch). <sup>79</sup> *Ibid.*, [156].

<sup>80</sup> *La Chemise Lacoste SA v. Baker Street Clothing Ltd* [2011] RPC 5 (AP, Hobbs QC). There is litigation in Germany as to whether Lindt’s golden bear-shaped chocolates infringe Haribo’s registered mark GOLDBÄREN: Landgericht Köln, 330 803/11, December 2012 (finding infringement), overturned by the Higher Regional Court.

<sup>81</sup> *Picasso v. OHIM*, C-361/04 [2006] ECR I–643 (ECJ, First Chamber), [32] (PICASSO was highly distinctive for painting, but not for cars).

<sup>82</sup> The status of some of these propositions—whether they are legal rules, presumptions of fact, or merely guidelines—has been a matter of dispute. Given the Court of Justice’s role, particularly on references from

First, the less distinctive the earlier trade mark, the less literal or visual alteration is necessary to ensure that the later mark is not similar. For example, comparing two words CASTELLANI and CASTELLUCA for wine from the point of view of a German consumer, the General Court found the two marks to be dissimilar, because the ‘castel’ element is a common descriptive component in wine names and the applicant’s suffix ‘luca’ would be seen as the Italian name and thus sufficient to differentiate the marks.<sup>83</sup> In *Reed Executive plc v. Reed Business Information Ltd*,<sup>84</sup> Jacob LJ stated that ‘where a mark is descriptive small differences may suffice to avoid confusion’, giving an illustration from the law of passing off concerning the terms OFFICE CLEANING ASSOCIATION and OFFICE CLEANING SERVICES. Where the distinctiveness of the earlier trade mark is very low, the later mark will have to be in close proximity for it to be similar.<sup>85</sup> The same principle applies to common names that intrinsically have a low level of distinctiveness.<sup>86</sup> When assessing similarity, what matters most is the similarity in the distinctive components of the marks being compared (so-called ‘distinctive similarity’), rather than in their descriptive elements.<sup>87</sup>

Second, if the earlier mark is highly distinctive, then a mark that has been substantially modified might nonetheless still be similar.<sup>88</sup>

Third, the chance of there being a likelihood of confusion on the basis of the ideas (or concepts) that underlie a mark is particularly influenced by the distinctiveness of the earlier mark.<sup>89</sup> In *Sabel v. Puma*,<sup>90</sup> which concerned two images of bounding felines, the Court of Justice suggested that *if* the earlier mark were well known by the public and/or the image of the puma were imaginative, mere conceptual similarity might be sufficient to give rise to a finding of a likelihood of confusion (see Fig. 38.4).<sup>91</sup>

Fourth, although the comparison is to be made between the particular mark registered and the sign applied for,<sup>92</sup> the relevance of acquired distinctiveness may permit the tribunal to consider the earlier mark in the context of a ‘family of marks’. Most readers will be familiar with the range of products marketed by Apple Inc., such as the iMac, iPad, iPhone, as well as services such as iTunes.<sup>93</sup> On the assumption that these are registered as trade marks, it might be that the existence of a ‘family’ allows each mark to reinforce each other and gain a broader scope of protection than they would otherwise have. This might mean that an application by a third party for ‘iSoft’ (for software), ‘iBroadcasting’ (for broadcasting services), or even ‘iBank’ (for financial services) would be refused.<sup>94</sup> The Court of Justice, in *Il Ponte Finanziaria SpA*,<sup>95</sup> has affirmed that the existence of a family of marks is a relevant

member states, it has been assumed that some statements must be propositions of law: *Reed Executive plc v. Reed Business Information Ltd* [2003] *RPC* (12) 207, 241, [103], [2004] *RPC* (40) 767 (CA), [83].

<sup>83</sup> *Castellani*, T-149/06 [2007] *ECR* II-4755 (CFI). However, the Court of Justice has held that the so-called ‘requirement of availability’ is irrelevant to the determination of similarity between marks, goods, or likelihood of confusion: *Adidas AG and ors v. Marca Mode CV and ors*, Case C-102/07 [2008] *ECR* I-2439 (ECJ, First Chamber).  
<sup>84</sup> [2004] *RPC* (40) 767, 792, [84].

<sup>85</sup> But cf. *Václav Hrbek v. OHIM*, Case C-42/12P (29 November 2012) (ECJ, Sixth Chamber, Order) (two composite marks containing word ALPINE were similar even though the common feature was of weak distinctiveness).

<sup>86</sup> *Reed Executive* [2004] *RPC* (40) 767, [86] (common surnames); *Barbara Becker v. Human International Industries*, Case C-51/09P [2010] *ECR* I-5805 (ECJ, Fourth Chamber).  
<sup>87</sup> Kerly, 313, [9-094].

<sup>88</sup> *Sabel v. Puma*, Case C-251/95 [1997] *ECR* I-6191, [24]; *Lloyd Schuhfabrik*, Case C-342/7 [1999] *ECR* I-3819, [21]-[22]; *Canon KK v. MGM*, Case C-39/97 [1998] *ECR* I-5507, [17]-[18].

<sup>89</sup> *Sabel v. Puma*, Case C-251/95 [1997] *ECR* I-6191, [24].  
<sup>90</sup> *Ibid.*  
<sup>91</sup> *Ibid.*, [25].

<sup>92</sup> *Ener-Cap* [1999] *RPC* 362.

<sup>93</sup> The example was suggested by Varun Shankar, Cambridge LLM Class 2013-14.

<sup>94</sup> There would, of course, need to be finding of a minimal level of similarity of the services with the goods or services covered by the Apple registrations. This is easier to foresee for software and broadcasting than for financial services, but might be the case if the latter were to be seen as including an Internet banking service.

<sup>95</sup> Case C-234/06 P [2007] *ECR* I-7333 (ECJ, Fourth Chamber).

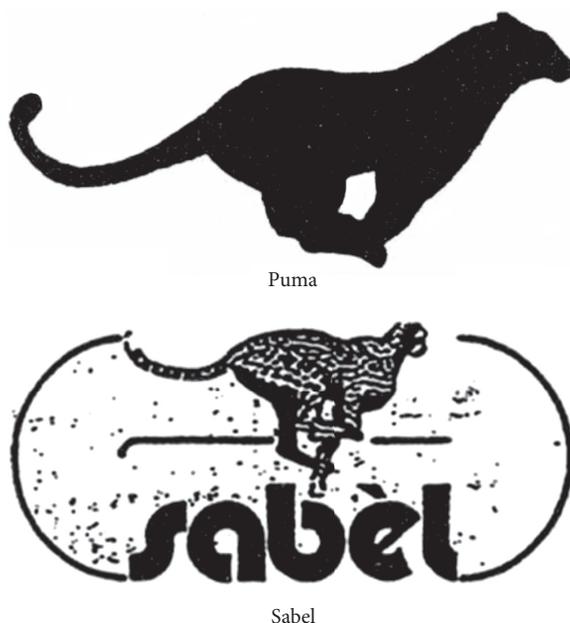

Fig. 38.4 The ‘bounding felines’ in *Sabel v. Puma*

Source: *Sabel v. Puma*, Case C-251/95 [1997] ECR I-6191

factor when assessing similarity, although it emphasized at the same time that the status of being a ‘family’ can be conferred only on marks that have been used in such a way that they would be recognized in the market as a family. Merely registering a series of marks will not confer this added strength.<sup>96</sup> Moreover, there needs still to be at least minimal similarity between the opponent and applicant’s mark. It seems unlikely that such similarity might exist where a family of marks is purely conceptual—for example bird marks (such as PENGUIN, PUFFIN, and PELICAN) for printed matter—and a third party seeks to register a trade mark that falls purely within the concept, such as RAVEN or MAGPIE.

Fifth, because there is a global assessment, account may be taken of how the earlier mark has in fact been used. This may seem surprising, given the focus in the case law on the importance of ‘graphic representation’ defining the mark. Nevertheless, in *Specsavers Int’l Healthcare v. Asda Stores*,<sup>97</sup> the Court of Justice indicated that even though the claimant’s registered mark (Fig. 38.1, above at p. 980) comprising two overlapping ovals was represented in black-and-white (and might have been assumed to cover use of the device in any colour), it was relevant to the assessment of likelihood of confusion that the claimant had used the device in a particular shade of green and that the defendant used the device in the same colour. The conclusion undermines the role of the register as a mechanism for defining the bounds of the property conferred by trade mark law, and may well be seen as reflecting the Court’s frustration with the fact that as yet there has been no harmonization of the law of unfair competition.

(iii) *Deviation from the global approach* Having adopted the ‘global approach’, the Court of Justice was confronted by a difficult case: what to do with an application for a mark that added a well-known ‘house mark’ or company name to a third party’s earlier registered mark. For example, where the distinctiveness of an earlier mark is weak,

<sup>96</sup> *Ibid.*, [63]–[64].

<sup>97</sup> *Specsavers Int’l Healthcare Ltd v. Asda Stores Ltd*, Case C-252/12 (18 July 2013) (ECJ, Third Chamber).

as with, say, SENSATIONS for crisps, does it inevitably follow from the global appreciation approach that there is no similarity with WALKERS SENSATIONS, where WALKERS is a highly distinctive component of the latter mark? If so, this leaves big firms with established names free to swamp the goodwill engendered by smaller proprietors. Rather than accept the injustice that would arise from strict application of the global appreciation approach, the Court of Justice has added a qualification for cases in which elements of a mark retain some 'independent distinctive role' in a later 'composite mark'. In *Medion AG v. Thomson Multimedia Sales*,<sup>98</sup> the Court of Justice stated that in such cases, at least where there is identity of goods or services, it suffices that 'because the earlier mark still has an independent distinctive role, the origin of the goods or services covered by the composite sign is attributed by the public also to the owner of that mark'.<sup>99</sup> While it is easy to understand the motivation behind this approach, one cannot help but wonder whether this does not drive the proverbial 'coach and horses' through the global appreciation test.<sup>100</sup>

The *Medion* test has been held to be applicable to the situation in which one component of an applicant's mark is similar to an earlier mark,<sup>101</sup> at least where that component has an 'independent distinctive role' within the later mark. In *Aveda Corp. v. Dabur India*,<sup>102</sup> an application to register DABUR UVEDA for specified goods in Classes 3 and 5 was opposed by Aveda on the basis of its earlier Community and UK marks for the word AVEDA also covering goods in Classes 3 and 6. Although the UK Trade Marks Registry rejected the opposition, applying the orthodox 'global appreciation', Arnold J upheld Aveda's appeal (at least in relation to some of the goods). He found that the Registry should have considered whether UVEDA had independent significance of its own, and if so, whether that would have been likely to lead the average consumer to be confused as to the existence of an economic connection between the earlier mark owner and the sellers of DABUR AVEDA. Given that DABUR had been used as a 'house mark' with other product names, that normal and fair use of DABUR UVEDA was admitted to include use of UVEDA in a distinct script, coupled with the high distinctive character of the opponent's AVEDA mark, the court found that there would have been confusion in relation to some identical and some similar goods.

### 2.3.2 When are goods or services similar?

The next question is whether goods or services are similar. When deciding whether a trade mark application falls foul of one of the relative grounds for refusal, the comparison is normally between the goods or services for which the earlier mark has been registered and the goods or services to which the application relates. This is largely a paper exercise. (However, in an infringement action, the court will usually compare the defendant's goods as they have actually been used with the goods in the claimant's specification. This requires the court to interpret the specification and then to characterize the defendant's goods or services to see if they fall within the specification.)

<sup>98</sup> Case C-120/04 [2005] ECR I-8551, [36].

<sup>99</sup> See also *L'Oréal v. OHIM and Spa Monopole (SPA THERAPY)*, T-109/07 [2009] ECR II-675 (CFI, Fifth Chamber); *Zero Industry v. OHIM and zero*, T-400/06 [2009] ECR II-150\* (CFI, Seventh Chamber), [51], [78], [79].

<sup>100</sup> In *Barbara Becker v. Harman International Industries*, Case C-51/09P [2010] ECR I-5805, [AG53], [AG56], AG Cruz Villalón has referred to the circumstances in which *Medion* is applicable as 'exceptional'.

<sup>101</sup> Components would not have independent significance where they are linked as with ERIC CANTONA CANTO, where the CANTO would be understood as an abbreviated nickname for the former French footballer-turned-actor: *Novartis Seeds BV's Application* [2006] ETMR (82) 1158 (AP, Hobbs QC).

<sup>102</sup> [2013] EWHC 589 (Ch). See *Bimbo SA v. OHIM*, T-569/10 [2013] ETMR (7) 91 (GC, Seventh Chamber) (BIMBO DOUGHNUTS similar to DOGHNUTS), appealed as Case C-591/12P (8 May 2014) (ECJ, Second Chamber).

In *Canon Kabushiki Kaisha v. Pathé Communications*,<sup>103</sup> the Japanese company Canon opposed MGM's registration of the sign CANNON for films in the German Trade Marks Registry. The opposition was based upon Canon's registration of CANON for 'still and motion picture cameras and projectors, television filming and recording devices, etc'. The question arose whether the goods were not similar. In response to a reference from the German Federal Court of Justice, the Court of Justice explained that, when assessing the similarity of the goods or services concerned, 'all the relevant factors' should be taken into account. Those factors include, among others, 'their nature, their end-users, and their method of use, and whether they are in competition with each other or are complementary'.<sup>104</sup> The methods by which the goods are distributed may also be a pertinent factor.<sup>105</sup> In an infringement scenario, the tribunal might also have relevant evidence of how the defendant has marketed its goods.<sup>106</sup>

*British Sugar v. Robertson*<sup>107</sup> illustrates how the courts have applied the factors in the case of a non-distinctive mark (namely, TREAT). In that case, the question was whether a sweet syrup to be poured over desserts was similar to a sweet-flavoured spread. Jacob J concluded that the goods were not similar, explaining that the goods were used differently (the spread could be used on desserts, but generally would not be), were not in direct competition, were located in different places in supermarkets (the spread with jams, the dessert sauce with desserts), were physically different (the spread was more viscous than the sauce), and were treated differently by market researchers.<sup>108</sup> In contrast, in *Balmoral Trade Mark*,<sup>109</sup> whisky and wine were held to be similar goods: although the two products have very different producers, it is common to find them being bought and sold by the same merchants, and sold through the same outlets.

It is clear that the fact that goods or services are registered in different classes does not inevitably mean that they are not similar. For example, the CFI held that the development of correspondence courses was similar to educational textbooks and printed materials.<sup>110</sup> The fact that the signs relate to different classes is irrelevant because the way in which the goods or services are classified is an administrative matter, whereas the question of whether goods or services are similar is an issue for substantive law.<sup>111</sup> It is also clear that if an earlier trade mark relates to goods, whereas the applicant's mark relates to services, they may nonetheless still be similar (and vice versa).<sup>112</sup> In one case, an application for the sign BALMORAL

<sup>103</sup> Case C-39/97 [1998] ECR I-5507. <sup>104</sup> *Ibid.*, [17].

<sup>105</sup> *Ampafrance SA v. OHIM*, T-164/03 [2005] ECR II-1401, [53]; *El Corte Ingles*, T-443/05 [2007] ECR II-2579 (CFI, Fourth Chamber, extended composition), [43]; *Serrano Aranda v. OHIM and Burg Groep (LE LANCIER)*, T-265/09 (26 September 2012) (GC), [40] (French and Dutch only) (sale in supermarkets a weak indication of similarity of goods).

<sup>106</sup> Case C-39/97 [1999] 1 CMLR 77, 95, [18]; *Pfizer v. Eurofood* [2000] ETMR 187.

<sup>107</sup> [1996] RPC 281, 297; cf. esp. *Vedial SA v. OHIM*, T-110/01 [2002] ECR II-5275 (CFI) (edible fats were similar to vinegars and sauces, among other things, because they are offered for sale on the same shelves), not discussed on appeal in Case C-106/03 [2004] ECR I-9573, and *Pedro Díaz v. OHIM*, T-85/02 [2003] ECR II-4835 (condensed milk and cheese held to be similar because they are in the same family of 'milk products', so consumers might think that they both come from the same enterprise).

<sup>108</sup> *Serrano Aranda v. OHIM and Burg Groep (LE LANCIER)*, T-265/09 (26 September 2012) (GC) (French and Dutch only) (finding 'little similarity' between 'edible oils, vinegar, mustard, salt and spices', on the one hand, and 'fresh fruit and vegetables', on the other). <sup>109</sup> [1999] RPC 297, 302.

<sup>110</sup> *Institut für Lernsysteme*, T-388/00 [2002] ECR II-4301.

<sup>111</sup> *El Corte Ingles*, T-443/05 [2007] ECR II-2579 (CFI, Fourth Chamber, extended composition), [38]; *Isdin SA v. OHIM*, Case C-597 P (17 October 2013) (ECJ, Seventh Chamber).

<sup>112</sup> The characterization of a defendant's activities may be such that it can be said that they are using the sign in relation to both goods and services. For example, a garage that advertises that it repairs BMW vehicles can be seen as using the sign BMW in relation both to cars and repairing services: *Bayerische Motorenwerke AG v. Ronald Karel Deenik*, Case C-63/97 [1999] ECR I-905, [38]-[42]. However, the cases in which use in

for wines was rejected because of the existence of an earlier trade mark BALMORAL for bar services.<sup>113</sup>

Although application of the *Canon* test has generally proved unproblematic, one question that has raised concern is the application of the ‘complementarity’ factor. The basic idea seems straightforward: consumers of some goods under a particular mark (say, KENZO for clothes) might believe complementary goods (say, shoes, scent, or bath towels) sold under the same (or a similar) mark are made under the authority of the trade mark holder, whereas such a connection might not be made in relation to non-complementing goods (say, hairdryers or fridges). Nevertheless, the General Court has tried to formulate a notion of ‘aesthetic complementarity’ that is unduly exacting. In one case, the Court said that goods would be regarded as complementary only where there is ‘a true aesthetic necessity’, such that consumers would think it ‘unusual or shocking’ if the two items did not match.<sup>114</sup> On this basis, footwear and bags were not complementary, nor were perfumes and clothes, but bags and clothes were.<sup>115</sup> Although the test seems to us to be unduly narrow, this should not be of too much concern as long as it is remembered that this is only one among a host of factors in determining similarity.

### 2.3.3 Likelihood of confusion

The final, and critical, element that has to be shown for a mark to fall foul of section 5(2)/Article 8(1)(b) is that (as a result of the similarities) there is ‘a likelihood of confusion on the part of the public, which includes the likelihood of association with the earlier trade mark’.

(i) *The standpoint of interpretation: who must be confused?* The likelihood of confusion is considered from the point of view of the average consumer of the products concerned, comparing the marks as a whole. As the Court of Justice observed in *Sabel v. Puma*,<sup>116</sup> ‘the average consumer of the type of goods or services in question plays a decisive role in the global appreciation of the likelihood of confusion’. Community law thus applies its own understanding of the consumer, rather than focusing on actual consumers (who might be ignorant or uninterested). In subsequent decisions, the Court of Justice has said that the average consumer is ‘reasonably well informed’ and ‘reasonably observant and circumspect’.<sup>117</sup> There is no confusion if only a minority of particularly inattentive consumers might possibly be confused.<sup>118</sup> However, these are the default characteristics of the ‘average consumer’ and the tribunals accept that the characteristics of the average consumer of the goods may vary with the sector concerned. For example, consumers purchasing cars take more care than those buying sweets.<sup>119</sup> In some circumstances in which consumers are advised (for example by medical professionals), they may be particularly attentive and

relation to services is simultaneously regarded as use in relation to goods is limited to situations in which there is a ‘specific and indissociable link’ between the products and services: *Adam Opel AG v. Autec*, Case C-48/05 [2007] ECR I-1017, [27]–[28].

<sup>113</sup> *Balmoral* [1999] RPC 297, 301.

<sup>114</sup> *Sergio Rossi SpA v. OHIM*, T-169/03 [2005] ECR II-685 (CFI), [62].

<sup>115</sup> *Ibid.* (footwear and bags); *Mühlens v. OHIM*, T-150/04 [2007] ECR II-2357 (CFI, Second Chamber) (indispensable or important); *El Corte Ingles*, T-443/05 [2007] ECR II-2579 (CFI, Fourth Chamber, extended composition), [38] (bags and clothes). See also *Serrano Aranda v. OHIM and Burg Groep (LE LANCIER)*, T-265/09 (26 September 2012) (GC, Fourth Chamber), [36] (French and Dutch only) (seasoning and vegetables are complementary).

<sup>116</sup> Case C-251/95 [1997] ECR I-6191, [23].

<sup>117</sup> *Lloyd Schuhfabrik*, Case C-342/7 [1999] ECR I-3819, [26]. See above, pp. 931–2.

<sup>118</sup> *Reed Executive* [2004] RPC (40) 767, [82] (approach guards against ‘too “nanny” a view of protection’).

<sup>119</sup> *Picasso v. OHIM*, C-361/04P [2006] ECR I-643 (ECJ, First Chamber), [39]; *Reed Executive* [2003] RPC (12) 207, 241, [103] *per* Pumfrey J; [2004] RPC (40) 767, [78]. Apparently, purchasers of tobacco products have an enhanced level of attention: *GRE Grand River Enterprises Deutschland GmbH v. OHIM*, T-206/12 (3 July 2013) (GC), [23] (in French).

thus unlikely to confuse superficially similar marks.<sup>120</sup> Beyond this, however, there has been as yet little discussion of the characteristics that ought to be attributed to the average consumer. Where the consumers of particular goods or services include some who are particularly attentive, but others who are less so, the General Court has indicated that the assessment is to be made from the perspective of the least attentive.<sup>121</sup>

(ii) *Which public?* Very frequently, the potential markets for an applicant and opponent's goods or services overlap. But sometimes one or other might have quite some niche. The question then arises: is it the opponent's public that must be confused, or the applicant's public? We have seen, for example, that the linguistic competencies of the average consumer are defined by reference to the territory of the earlier mark (so, for example, an opposition based on an Italian mark will be viewed from the perspective of Italian consumers). The General Court has observed that 'the relevant public for the assessment of the likelihood of confusion is composed of users likely to use *both* the goods or services covered by the earlier mark and those covered by the mark applied for'.<sup>122</sup> In identifying this 'overlap', the tribunal will consider the full breadth of the opponent's and applicant's specifications.<sup>123</sup> Where an applicant applies in relation to a particular category of goods, such as wines, the average consumer is determined by reference to the consumers of those goods in general, rather than the specific section to which the applicant in fact intends to market the goods (say, drinkers of kosher wine). This is because the applicant might change its strategy.<sup>124</sup>

(iii) *About what must the public be confused?* The next question to consider is what is meant by 'likelihood of confusion' in section 5(2)/Article 8(1)(b). In its 'classic' form, consumers must be confused about the source or origin of the goods or services—that is, they must be confused as to the designer, manufacturer, selector, or supplier of the goods or services. In other words, classic confusion is concerned with the situation in which consumers believe that the goods or services emanate from one organization, but they, in fact, come from a different, independent organization. This classic form of confusion has been extended to accommodate broader understandings of the source of goods or services. Consequently, a person will be confused for the purposes of section 5(2) if they incorrectly assume that there is some broader kind of *economic connection* between the users of marks,<sup>125</sup> for example that the goods are being provided by a subsidiary or licensee of the trade mark owner.<sup>126</sup> Confusion might also arise if the use of a sign leads consumers to believe that a person's repair business is 'authorized' by the trade mark owner.<sup>127</sup>

<sup>120</sup> *Ratiopharm's Trade Mark* [2007] RPC (28) 630 (AP, Hobbs QC), [18] (in the case of prescription medicines, the only relevant consumers are medical professionals); *Aventis Pharmaceuticals v. OHIM*, T-142/12 (11 July 2013) (GC, Sixth Chamber), [24]–[28] (with medical products, the degree of attention of end consumers is relatively high).

<sup>121</sup> *Yorma's v. OHIM and Norma Lebensmittelfilialbetrieb (YORMA'S)*, T-213/09 [2011] ECR II–19, [25], aff'd by Order, Case C-191/11P (8 February 2012) (ECJ, Eighth Chamber) (in French/German only).

<sup>122</sup> *Apple Computer v. OHIM and TKS-Teknosoft (QUARTZ)*, T-328/05 [2008] ECR II–104\* (CFI, Third Chamber), [23] (emphasis added); *ancotel v. OHIM and Acotel*, T-408/09 [2011] ECR II–151\* (GC, Third Chamber), [38] (French and German only); *The Cartoon Network v. OHIM*, T-285/12 (2 October 2013) (GC, Seventh Chamber), [19].

<sup>126</sup> *Durferrit*, T-224/01 [2003] ECR II–1589 (CFI), [62].

<sup>127</sup> Opinion of Advocate General Jacobs in *BMW v. Deenik*, Case C-63/97 [1999] 1 ECR I–905, [AG45].

In considering whether there is a likelihood of confusion, the tribunals must consider whether there is a genuine and properly substantiated likelihood of confusion;<sup>128</sup> it is not enough that confusion is hypothetical and remote.<sup>129</sup> The term ‘likelihood’ indicates probability rather than possibility.<sup>130</sup> In *Marca Mode*,<sup>131</sup> the Court of Justice indicated that the mere inability to rule out the possibility of confusion was not sufficient.

(iv) *How much confusion?* In the law of passing off, it is necessary to show deception of ‘a substantial proportion of the public’.<sup>132</sup> In contrast, by adopting the legal construct of the average consumer, European trade mark law seems to suggest that concern with how many real people are confused is not relevant; the question is simply whether the notional consumer would be confused. In some ways, this implies that the law would acknowledge only a single view of the impact of one sign on another. However, in *Interflora Inc. v. Marks & Spencer plc*,<sup>133</sup> the High Court rejected an argument that there was a ‘single meaning rule’ operative in trade mark law (analogous to that which formerly was recognized in the English law of malicious falsehood and defamation). Arnold J, after carefully reviewing the case law, found that the average consumer indicated a standard of assessment (involving ignoring the likely understandings of especially sophisticated and attentive, as well as those of particularly ignorant or careless, consumers), but not necessarily that all average consumers would reach the same conclusion. The question was whether a significant number would be confused.<sup>134</sup> In so holding, he seemed to prefer the views of Jacob LJ in *Reed Executive v. Reed Business Information*<sup>135</sup> to those of Lewison LJ in *Interflora v. Marks & Spencer (No. 1)*.<sup>136</sup> At some point, it would be useful to obtain clarification of these matters from the Court of Justice.

(v) *Is ‘mere association’ confusion?* Perhaps the most hotly contested issue immediately following the adoption and implementation of the Trade Marks Directive was the question what Article 4(1)(b) of the Directive/section 5(2) of the 1994 Act meant in indicating that ‘likelihood of confusion includes the likelihood of association with the earlier trade mark’? In particular, the debate focused on the question of whether likelihood of association is a separate ground for objection on which proprietors of an earlier mark can rely to oppose a later application, even where they cannot demonstrate a likelihood of confusion as to origin.<sup>137</sup> The matter was resolved in *Sabel v. Puma*.<sup>138</sup> Sabel had applied to the German Registry to register for leather products and clothing a picture mark of a ‘bounding feline’ with the word SABEL beneath it. Puma opposed the application on the basis that it was the proprietor of an earlier pictorial mark that had been registered in Germany for ‘leather and imitation leather, goods made therefrom (bags) and articles of clothing’ (see Fig. 38.4 above at p. 985).

It was common ground that Puma’s mark was not particularly well known (this was not the familiar Puma mark used on sportswear). It had been found that no likelihood of

<sup>138</sup> Case C-251/95 [1997] ECR I-6191.

confusion existed between the two marks, so the critical question was whether ‘association’ between the marks as a result of the shared idea or concept that the image conveyed (in this case, a ‘bounding feline’) was sufficient to ground an opposition. Relying on Recital 10 to the Directive, which states that ‘likelihood of confusion . . . constitutes the specific condition for such protection’, the Court of Justice held that ‘the concept of likelihood of association is *not* an alternative to that of likelihood of confusion, but serves to define its scope’.<sup>139</sup> This was reiterated by the Court in *Marca Mode*,<sup>140</sup> in which it was stated that mere existence of association will not suffice in the absence of genuine and substantiated likelihood of confusion—in particular, that the existence of a likelihood of association between two marks does not give rise to a presumption of confusion.

(vi) *Initial interest confusion* Does ‘likelihood of confusion’ include so-called ‘initial interest confusion’—that is, confusion engendered prior to a particular commercial transaction, but which comes to be corrected by the time of the transaction? An oft-deployed example is that of a roadside cafe (say, ‘Sherman’s Cafe’), which erects signs on a motorway suggesting that travellers can obtain the goods or services of a particular trade mark holder (say, MCDONALDS), but when the driver has turned off, it becomes apparent that sustenance can be provided only at Sherman’s. A certain proportion of travellers will stay and try Sherman’s burgers, and they will not at that point imagine that there is any connection with MCDONALDS—yet it was the ‘initial interest’ in MCDONALDS that got them there. Such practices may be objected to on the economic ground that the use of trade mark is not reducing the consumer’s search costs and also, perhaps, by reference to intuitive ideas of what is unethical.

In *Och-Ziff Management Europe Ltd v. OCH Capital Ltd*,<sup>141</sup> the High Court held that ‘likelihood of confusion’ could include so-called ‘initial interest confusion’.<sup>142</sup> Arnold J reasoned that because the acts that were deemed infringing uses included using a trade mark in advertising,<sup>143</sup> so it followed that ‘likelihood of confusion’ could not refer merely to confusion at the point of sale. Moreover, the ‘keyword advertising’ cases (discussed in Chapter 40) also seem to suggest that there can be a likelihood of confusion where an initial representation—the ad that appears immediately in response to an Internet search—is unclear, even though matters would become clear if the consumer were to ‘click through’ to the advertiser’s web page.<sup>144</sup> However, it should be noted that there has been little discussion of the desirability of such an expansion of trade mark owners’ rights to encompass forms of confusion that are operative other than at the point of sale, and parallel issues in the United States are by no means uncontroversial.<sup>145</sup>

(vii) *Post-sale confusion* Attempts have also been made to extend trade mark holders’ rights to encompass confusion of consumers who see the product away from the point of sale.<sup>146</sup> When discussing issues such as distinctiveness and trade mark ‘use’, the Court of Justice has indicated that familiarity with a mark in the post-sale environment can either confer acquired distinctiveness or jeopardize the sign’s ability to function as

<sup>139</sup> *Ibid.*, [18]. <sup>140</sup> *Marca Mode*, Case C-425/98 [2000] ECR I-4861, [40]–[42].

<sup>141</sup> [2010] EWHC 2599 (Ch), [2011] ETMR 1, [79]–[101].

<sup>146</sup> For discussion, see P. O’Byrne and B. Allgrove, ‘Post-sale Confusion’ [2007] *JIPLP* 315 (arguing that post-sale confusion is not irrelevant, but will not itself justify a finding of likelihood of confusion). See also McKenna, *op. cit.*, 130–3.

a mark.<sup>147</sup> So, in *Arsenal*,<sup>148</sup> the Court held that use of the mark ARSENAL on football scarves was a use likely to jeopardize the essential function of the mark, even though, at the time of selling the goods, a sign informed consumers that the goods were not official goods manufactured under the control of the football club. This was said to be because those who saw the sign away from the point of sale might have believed that the scarves in fact came from the football club. In the context of likelihood of confusion, however, a stricter approach seems to have been taken in the *Picasso* decision.<sup>149</sup> Here, the owners of the PICASSO mark for cars objected to registration at the OHIM of the mark PICARO for cars. The OHIM and CFI rejected the opposition, and the opponent appealed to the Court of Justice claiming that the CFI had been wrong to treat the average consumer as particularly attentive and thus to conclude that the marks lacked similarity, because many consumers would see the PICARO car after sale and, at such times, would be much less attentive. The Court of Justice rejected the submission. In so doing, it distinguished *Arsenal* as a case that did not concern likelihood of confusion and in which it had not been intended to establish a general rule, particularly one that would conflict with the many authorities that define the ‘average consumer’.

In *Datacard v. Eagle Technologies*,<sup>150</sup> Arnold J reviewed the case law and found that ‘post-sale’ confusion might be relevant in certain circumstances. The judge said that he did not think that the *Picasso* decision was intended to undermine the holding in *Arsenal*. One situation in which post-sale confusion might be relevant is where it leads to repeat purchases. The facts of *Datacard v. Eagle* were suggestive of such a possibility: consumers purchased printer ribbons from the defendant’s website, knowing them to be created by third parties and merely compatible with Datacard’s printers. However, on receiving packaging bearing Datacard branding, those customer might have had second thoughts, now wondering whether the products were made by Datacard or whether the website operator were licensed to produce the ribbons. If such a person were then to make a further purchase, the ‘post-sale’ confusion would have materialized into real, material, point-of-sale confusion. Whether that was what Arnold J had in mind, however, is unclear.

(viii) *The relevance of distinctiveness and repute* Although the signs and the goods or services of the parties must reach a minimal level of similarity before a tribunal need assess likelihood of confusion, the Court of Justice has made it clear that the inherent and acquired distinctiveness of the earlier sign may be a very significant factor when assessing whether there is a likelihood of confusion. In other words, the tribunal should also take into account ‘the distinctive character of the earlier trade mark, and in particular its reputation’ when determining whether the similarity ‘between the goods or services covered by the two trade marks is sufficient to give rise to the likelihood of confusion’.<sup>151</sup>

(ix) *The public interest/requirement of availability* In some circumstances, a person’s use of a registered trade mark might reflect the existence of a rather limited choice of obvious terms or devices. In considering likelihood of confusion, must the tribunal bear in mind the need to protect the freedom of such traders? In *Adidas v. Marca Mode*,<sup>152</sup> this question was put to the Court in a case concerning the use of two stripes on sportswear, a feature that was said to infringe Adidas’s three-stripe mark. The point was that if two and four stripes were regarded as similar to three stripes, the freedom of sportswear manufacturers would be severely limited.<sup>153</sup> The Court rejected the contention, saying that the

requirement of availability had no role to play in the assessment of confusion, which was a matter of perception of the relevant public.<sup>154</sup> It argued that if such considerations were taken into account, the rights of trade mark holders would be undermined. On the particular facts, it noted that Adidas's mark related to vertical stripes in particular positions, so that use of stripes in other ways were unaffected by Adidas's trade mark registration,<sup>155</sup> and that the rules on acquisition (in particular distinctiveness) were sufficient to ensure the maintenance of freedoms of competitors.

### 2.3.4 Questions of proof

The question whether a mark is likely to be confused with another mark is 'a matter upon which the judge must make up his mind and which he, and he alone, must decide. He cannot, as it is said, abdicate the decision in that matter to witnesses before him.'<sup>156</sup>

The nature of the inquiry into whether there is a likelihood of confusion will vary depending on whether the mark has been used. Normally (although not necessarily), where the relative grounds are heard by the Registrar, the mark will not have been used, thus there will be no evidence of actual confusion. In contrast, where it is argued that a mark should be declared invalid after registration because it falls foul of a relative ground for refusal, it is highly likely (as with an infringement action) that the mark will have been used and thus there might be evidence of actual confusion.

In the absence of evidence, the tribunal makes an intuitive and speculative judgment about whether there is a likelihood of confusion. In so doing, the tribunals assume that the marks are used in a normal and fair way. The reason for assuming normal and fair use is that:

[Unless] one assumes notional use of the earlier mark, the answer to the question of whether a later trade mark gives rise to a likelihood of confusion on the part of the public will always be no. If the public have never seen the earlier mark the later mark cannot cause confusion. Thus it is necessary to assume use of the earlier mark (and the later mark) when considering the likelihood of confusion.<sup>157</sup>

In situations in which the mark has been used, the courts will usually be able to draw on different forms of evidence to help them to decide whether there is confusion. For example, the tribunal might be informed by evidence of actual confusion where the applicant has used the mark prior to the application or in a post-grant application for a declaration of invalidity. A claimant will be in a strong position if they can produce testimony of a reasonably prudent purchaser who was in fact confused, or can provide examples of conduct probative of actual confusion (such as telephone calls to the registered proprietor about the defendant's goods or services, or misdirected letters).

In some cases, the absence of evidence of actual confusion *may* also be probative (especially where the marks have been used in parallel for a considerable time).<sup>158</sup> However, an inability to produce evidence of confusion is not always fatal to an action.<sup>159</sup> This is because there may be extraneous reasons that explain the absence of confusion. These include the possibility that the confusion has been so complete that customers are not

<sup>154</sup> *Ibid.*, [30].      <sup>155</sup> *Ibid.*, [32].

conscious of their mistakes.<sup>160</sup> In other cases, the appropriate evidence may simply be too difficult to obtain.

(i) *Trade and expert evidence* Sometimes, parties seek to rely on trade and expert evidence.<sup>161</sup> Whether such evidence will be admitted depends on precisely the issue to which it is said to relate.<sup>162</sup> It has long been held that expert evidence must not relate to the key question of whether the use is confusing;<sup>163</sup> instead, it should be confined to factual explanations of things such as how the trade is structured.<sup>164</sup>

(ii) *Surveys* Parties sometimes wish to offer survey evidence to demonstrate that marks are confusingly similar, or to introduce evidence from a selected group of witnesses gathered via such a survey. Before such evidence can be introduced, the permission of the Court is required,<sup>165</sup> and recent case law suggests that judges will permit this kind of evidence only in ‘special or unusual’ cases.<sup>166</sup> This is because the court must balance the cost of the evidence against its probative value.<sup>167</sup> The costs of surveys are typically high, not least because, in addition to the cost of conducting the survey, there will inevitably be further expense spent on determining its validity. In contrast with the inevitable costs, the courts rarely regard surveys as being of much probative value. One reason for this is that surveys are always subjected to criticism.<sup>168</sup> However, more importantly, the survey will rarely offer any insights that cannot be gained by the judge from the evidence of the parties. This is particularly so in a case concerning ordinary consumer goods and services, in which the court is able to put itself into the position of the average consumer without requiring expert evidence or a consumer survey.<sup>169</sup> If a survey is not of any value, then the evidence of consumers located while conducting such a survey will be even less useful (at least as far as the question on which evidence is sought is likelihood of confusion).<sup>170</sup> A similar approach is taken in application proceedings before the Registrar.<sup>171</sup>

<sup>160</sup> *Sämaan v. Tetrosyl* [2006] FSR (42) 849, [58] per Kitchin J.

<sup>166</sup> *Ibid.*, [150]. See further *Interflora Inc. v. Marks & Spencer plc (No. 2)* [2013] EWCA Civ 319, [2013] FSR (26) 559.

<sup>167</sup> *Interflora Inc. v. Marks & Spencer plc* [2012] EWCA Civ 1501, [2012] FSR (21) 415, [150] (a ‘cost–benefit’ analysis); *Interflora Inc. v. Marks & Spencer plc (No. 2)* [2013] EWCA Civ 319, [2013] FSR (26) 559, [26]–[27] (the evidence generated must be of real value).

<sup>168</sup> The criteria for a rigorous survey are the so-called ‘Whitford Guidelines’, from *Imperial Group plc v. Philip Morris* [1984] RPC 293, 310. Note Jacob LJ’s comment in *Interflora Inc. v. Marks & Spencer plc (No. 2)* [2013] EWCA Civ 319, [2013] FSR (26) 559, [33], that ‘[i]t is possible to conduct fair surveys and they may indeed lead to witnesses of value’.

<sup>169</sup> *Interflora Inc. v. Marks & Spencer plc* [2012] EWCA Civ 1501, [2012] FSR (21) 415, [45]–[56]; cf. *Schuh Ltd v. Shhh . . . Ltd* [2011] CSOH 123, [16] (stating that court should distrust its own reactions).

<sup>170</sup> In *Interflora Inc. v. Marks & Spencer plc* [2012] EWCA Civ 1501, [2012] FSR (21) 415, [137], Lewison LJ acknowledged that the court might need to be informed about ‘shopping habits’, ‘the characteristics of the market’, and the means by which goods are marketed. Moreover, witnesses might provide useful evidence of their ‘spontaneous reactions’ in relation to goods that are not within the judge’s experience or to amplify the results of a reliable survey.

(iii) *Intention* As noted, whether an applicant's mark is in conflict with an earlier mark, as well as whether use of a later mark infringes the rights in an earlier mark, does not depend on whether there was any intention to cause confusion. But that is not to say that intention can never be relevant. In fact, the British courts have historically taken the view that intention is, at the very least, a relevant factor. The courts typically cite the Court of Appeal decision in *Slazenger v. Feltham*,<sup>172</sup> in which the claimant's mark, an image of the devil's head with the word DEMON for tennis racquets, was held infringed by the defendant's use of DEMOTIC. Although the evidence was finely balanced, the Court took account of the fact that the defendant deliberately sought out a word as close to the claimant's mark as it could find in the dictionary. Lindley LJ observed:

One must exercise one's common sense, and, if you are driven to the conclusion that what is intended to be done is to deceive if possible, I do not think it is stretching the imagination very much to credit the man with occasional success or possible success. Why should we be astute to say that he cannot succeed in doing that which he is straining every nerve to do?<sup>173</sup>

In *Specsavers v. Asda Stores*,<sup>174</sup> the Court of Appeal considered the operation of this principle in the context of an advertising campaign by Asda that had deliberately set out to target Specsavers (an operation with something like 39 per cent of the UK market for spectacles). Initially, it was proposed to parody the Specsavers mark, but along the way a combination of legal advice and marketing strategy had led Asda to modify its campaign. In the end, it adopted a logo comprising two abutting white ovals containing the words 'Asda Opticians' in green (see Fig. 38.2 above at p. 981), in contrast to Specsavers' overlapping green ovals with 'Specsavers' in white writing (see Fig. 38.1 above at p. 980). It used the straplines 'Be a real spec saver at Asda' and 'Spec savings at Asda'. When determining whether there was a likelihood of confusion, the Court considered the role of intention. At first instance, Mann J had acknowledged that Asda had chosen to 'live dangerously', but also observed that its intention was to not confuse. As already noted, he found no likelihood of confusion as between the logos.<sup>175</sup> On appeal, Kitchin LJ agreed that the *Slazenger* principle was limited to the case in which someone intends to cause deception and deliberately seeks to take the benefit of another trader's goodwill, and even then, that 'intention' was only one factor in the global assessment.<sup>176</sup> There was therefore nothing wrong with the trial court's treatment of the matter.

## 2.4 PROTECTION OF NON-ORIGIN FUNCTIONS: SECTION 5(3)/ARTICLE 8(5)

The third absolute ground for refusal is found in section 5(3) of the 1994 Act and Article 8(5) CTMR. Section 5(3), which implements the optional Article 4(4)(a) of the Trade Marks Directive,<sup>177</sup> recognizes that the value of a trade mark may lie not simply in its ability to indicate source, but also in 'the image conveyed by the trade mark'—its so-called

<sup>172</sup> (1889) 6 RPC 531. <sup>173</sup> *Ibid.*, 538.

<sup>176</sup> [2012] EWCA Civ 24, [2012] FSR (19) 555, [115].

<sup>177</sup> *General Motors Corporation v. Yplon*, Case C-375/97 [1999] ECR I-5421, [29]. Only Cyprus has not adopted the provision. The Commission proposes that this be mandatory: European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate Law of the Member States Relating to Trade Marks* (March 2013) COM(2013) 162 final, Explanatory Memorandum 8.

‘advertising function’.<sup>178</sup> As the CFI stated in *Sigla SA v. OHIM*, as well as operating as an indication of trade origin:

[A] mark also acts as a means of conveying other messages concerning . . . for example, luxury, lifestyle, exclusivity, adventure, youth. To that effect the mark has an inherent economic value which is independent of and separate from that of the goods and services for which it is registered. The messages in question which are conveyed inter alia by a mark with a reputation or which are associated with it confer on that mark a significant value which deserves protection, particularly because, in most cases, the reputation of a mark is the result of considerable effort and investment on the part of its proprietor.<sup>179</sup>

Section 5(3) introduces protection for this ‘advertising function’ by protecting the mark against various forms of use, including ‘dilution’.<sup>180</sup> According to Advocate-General Jääskinen:

Trade mark dilution relates to the idea that the proper purpose of trade mark law should be to protect the efforts and investments made by the trade mark proprietor and the independent value (good will) of the trade mark. This ‘property-based’ approach to trade marks differs from the ‘deception-based’ idea that trade mark law primarily protects the origin function with a view to preventing consumers and other end users from erring as to the commercial origin of goods and services. The property-based approach also protects the communication, advertising and investment functions of trade marks with a view of creating a brand with a positive image and independent economic value (brand equity or good will). Consequently, the trade mark can be used for various goods and services having nothing in common apart from being under the control of the trade mark proprietor.<sup>181</sup>

The protection offered by section 5(3) encompasses: (i) the erosion of a mark’s distinctiveness by its use on the goods of another (what is referred to as ‘blurring’);<sup>182</sup> (ii) the related concept of ‘tarnishment’, whereby the repute or goodwill associated with a mark becomes tainted by its use in connection with products of an unsavoury quality, or as a consequence of being portrayed in an unwholesome context; and (iii) the prevention free-riding by another trader on the repute of the mark. We will return to these concepts in the course of this chapter.

Section 5(3)/Article 8(5) provide that a trade mark will not be registered where:

<sup>179</sup> T-215/03 [2007] *ECR* II-711 (CFI, Fifth Chamber), [35]. See also *Intel Corporation*, Case C-252/07 [2008] *ECR* I-8823, [AG8] (AG Sharpston). For a description of these as ‘atmospherics’, see J. Litman, ‘Breakfast with Batman: The Public Interest in the Advertising Age’ (1999) 108 *Yale LJ* 1717.

<sup>180</sup> The doctrine of dilution is usually said to derive from the work of Schechter, in particular ‘The Rational Basis of Trademark Protection’ (1927) 40 *Harv L Rev* 813. In turn, Schechter relied upon contemporary German case law, as well as English cases such as *Eastman Photographic Materials Co. v. John Griffiths Cycle Corporation* (1898) 15 *RPC* 105 (КОДАК confusing on bicycles). See further B. Beebe, ‘The Suppressed Misappropriation Origins of Trademark Antidilution Law’, in R. Dreyfuss and J. Ginsburg (eds), *Intellectual Property at the Edge* (2014), ch. 3.

<sup>181</sup> *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] *ECR* I-8625, [AG50]. Whether there is a justification for offering legal protection to such investments might be regarded as doubtful: see Chapter 31, pp. 814–19.

<sup>182</sup> It has been suggested that protection against blurring in fact protects the ‘origin function’: *Environmental Manufacturing v. OHIM*, T-570/10 [2012] *ETMR* (54) 972 (GC, Fourth Chamber), [50]. Indeed, US literature on blurring and tarnishment suggests that both can be conceptualized in terms of economic arguments relating to the reduction of search costs: see, e.g., *Ty Inc v. Perryman*, 306 *F.3d* 509, 511 (7th Cir., 2002) (Posner J).

- (a) the later mark is identical with or similar to an earlier mark;<sup>183</sup>
- (b) the earlier trade mark has a reputation in the United Kingdom or, in the case of a Community trade mark, in the European Union;
- (c) the use of the later mark must either take unfair advantage of, or be detrimental to, the distinctive character or the repute of the earlier trade mark; and
- (d) the use of the later mark is without due cause.

Before looking at these, it might be worth observing two critical features of section 5(3), which distinguish it from section 5(2): first, there is no requirement for the earlier trade mark holder to prove a likelihood of confusion;<sup>184</sup> and second, section 5(3) may apply where the goods are identical, similar, or even dissimilar.<sup>185</sup>

#### 2.4.1 Reputation

The first requirement that must be satisfied for a mark to fall foul of section 5(3)/Article 8(5) is that it has to be shown that the earlier trade mark has a ‘reputation’ in the United Kingdom or, in the case of a Community trade mark, in the European Union. The concept of reputation is thus a threshold that must be crossed before the whole provision comes into play. Given this pivotal role, it is important that clear guidance be offered as to what the concept entails. In *General Motors Corporation v. Yplon*,<sup>186</sup> the Court of Justice was asked to provide such guidance. The reference was prompted by an application by General Motors, the proprietor of the sign CHEVY for motor vehicles, to restrain Yplon from using the identical sign for detergents. The Court stated that ‘reputation’ involved some kind of knowledge threshold, so that ‘a mark would have a reputation where it was known by a significant part of the public concerned by the products or services covered by the trade mark’.<sup>187</sup> It was only when there was:

... [a] sufficient degree of knowledge of the mark that the public, when confronted with the later trade mark may possibly make an association between the two trade marks, even when used for non-similar products or services, and that the trade mark may consequently be damaged.<sup>188</sup>

The Court also said that a realistic assessment of whether a mark had a reputation should be determined on the basis of a number of different criteria. These included ‘the market share held by the trade mark, the intensity, geographical extent, and duration of its use, and the size of the investment made by the undertaking in promoting it’.<sup>189</sup>

In *Yplon*, the Court of Justice made it clear that the threshold for reputation is a relatively low one. The criteria cited by the Court echo those used in *Windsurfing*,<sup>190</sup> in relation to acquired distinctiveness. It appears from the judgment that the test is primarily quantitative, in the sense that the mark must be known—that is, that a significant number

<sup>183</sup> An opposition under CTMR, Art. 8(5), which is based on an earlier ‘well-known’ mark, can be brought only if that mark has been registered: *Mühlens*, T-150/04 [2007] ECR II-2353 (CFI, Second Chamber), [56].

<sup>184</sup> *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 [2003] ECR I-12537 (ECJ, Sixth Chamber), [27].

<sup>185</sup> *Davidoff & Cie SA v. Gofkid*, Case C-292/00 [2003] ECR I-389; cf. *32Red plc v. WHG (International) Ltd* [2011] EWHC 62 (Ch), [127] (criticizing the effect of *Davidoff* decision).

<sup>186</sup> Case C-375/97 [1999] ECR I-5421. <sup>187</sup> *Ibid.*, [22]. <sup>188</sup> *Ibid.*, [23].

<sup>189</sup> *Ibid.*, [27].

<sup>190</sup> *Windsurfing Chiemsee v. Attenberger*, Joined Cases C-108/97 and C-109/97 [1999] ECR I-2779, [51], discussed at p. 958.

of consumers must be familiar with the mark. The Court of Justice seems thus to equate the concept of ‘reputation’ with being ‘well known.’<sup>191</sup>

One possible problem with treating the concept of ‘reputation’ as purely ‘quantitative’ derives from the fact that the concept plays a second role in this context: ‘reputation’ is also one of the two ‘interests’ (along with ‘distinctive character’) that the provision seeks to protect from damage or unfair appropriation. As we will see in a moment, in that context, damage to reputation has been seen largely in terms of ‘tarnishment’ (that is, denigration of the mark’s good reputation). This implies that reputation has a qualitative dimension: it is hard to think what damage to reputation would be if reputation were to be understood as purely quantitative. This might suggest, as others have said, that reputation refers to a qualitative criterion that has been described as ‘symbolic character.’<sup>192</sup> However, a short answer to this apparent inconsistency might be that ‘good reputation’ is merely a subset of reputation—so that any mark that has ‘reputation’ meets the threshold, but ‘detriment to reputation’ can affect only those marks that have developed a good reputation.<sup>193</sup>

In the case of national marks, in *Yplon*, the Court of Justice said that while the reputation must exist in the member state, it need not exist throughout the territory; it is sufficient if the reputation exists in a substantial part of it.<sup>194</sup> Similarly, in the case of Community marks, in *Pago Intl v. Tirolmilch*,<sup>195</sup> the Court has held that the relevant reputation must exist in a substantial part of the European Union, but that this might be achieved even if the reputation is confined to a single member state. In that case, the claimant had a strong reputation in Austria, and the Court intimated that this would be sufficient to bring an action under Article 9(1)(c) CTMR against a defendant whose use was also in Austria. However, even though a Community trade mark owner might gain stronger protection by demonstrating that it has a reputation in only part of the European Union, it should be noted that this will not offer significant advantages in an infringement action in a member state in which the mark has no reputation. This is because injunctive relief is limited to territories in which the function(s) of the mark are likely to be damaged.<sup>196</sup>

#### 2.4.2 Similarity of marks

The second requirement is that the marks be identical or similar. We have already considered these ideas in the context of section 5(1) and (2). While the general approach is much the same, it is worth observing that a finding of similarity or dissimilarity of marks in a case under section 5(2) does not necessarily mean that those marks are similar or dissimilar for the purpose of section 5(3).<sup>197</sup> This is because the concept of ‘similarity’ is

<sup>191</sup> *Nieto Nuño v. Franquet*, Case C-328/06 [2007] ECR I-10093, [17]; *Pago v. Tirolmilch*, Case C-301/07 [2009] ECR I-9429, [AG32] (‘kindred concepts’); *L’Oréal SA and ors v. Bellure NV and ors*, Case C-487/07 [2009] ECR I-5185, [AG37], [AG57], [AG58], [AG73], [AG91] (AG Mengozzi, using terms interchangeably); Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 92, [2.132]; A. Kur, ‘Not Prior in Time, but Superior in Right: How Trademark Registrations Can be Affected by Third-party Interests in a Sign’ [2013] *IIC* 790, 799–800; cf. *Antartica Srl v. OHIM*, C-320/07 P [2009] ECR I-28\* (ECJ, First Chamber), [51].

<sup>192</sup> A. Kur, ‘Well-known Marks, Highly Renowned Marks and Marks Having a (High) Reputation: What’s it all about?’ (1992) 23 *IIC* 218.

<sup>193</sup> *Sigla v. OHIM*, T-215/03 [2007] ECR II-711 (CFI, Fifth Chamber), [35]. See also *Aktieselkabet of 21 November 2001 v. OHIM*, Case C-197/07P [2008] ECR I-193\* (ECJ, Eighth Chamber, Order), [21].

<sup>194</sup> Case C-375/97 [1999] ECR I-5421, [28].

<sup>195</sup> Case C-301/07 [2009] ECR I-9429 (ECJ, Second Chamber).

<sup>196</sup> *DHL Express France SAS v. Chronopost SA*, Case C-235/09 [2011] ECR I-2801 (ECJ, Grand Chamber), [46]–[48], discussed below at p. 1254.

<sup>197</sup> *Ferrero v. OHIM*, Case C-552/09 P [2011] ECR I-2063 (ECJ, Fifth Chamber), [53] (those provisions differ in terms of the degree of similarity required); cf. *Gateway, Inc. v. OHIM*, Case C-57/08P [2008] ECR

interpreted in light of the purpose of each provision. So while a tribunal must look at the marks as a whole, taking into account their dominant and distinctive components, and is required to assess similarity from a visual, aural, and conceptual viewpoint,<sup>198</sup> what it is looking for under section 5(3) is not the same as what it is looking for under section 5(2). Whereas, under section 5(2), the tribunal is asking whether the marks are ‘confusingly similar’, under section 5(3), the tribunal must assess whether the marks are sufficiently similar that the average consumer will *make a link* between them.<sup>199</sup> As the Court of Justice observed in *Adidas v. Fitnessworld*, ‘[i]t is sufficient for the degree of similarity between the mark with a reputation and the sign to have the effect that the relevant section of the public *establishes a link* between the sign and the mark’.<sup>200</sup> Without the link, there can be none of the ‘cross-pollination’ needed to transfer value to the applicant (or defendant).

What exactly is the ‘link’ that is required to establish that the marks are similar? In *Intel Corp. v. CPM UK Ltd.*,<sup>201</sup> a case in which Intel—owner of the unique, invented, and highly renowned mark INTEL for microprocessor chips—sought a declaration that a registration of INTELMARK for marketing services be declared invalid, the Court indicated that a ‘bringing to mind’ of INTEL would be sufficient to trigger section 5(3) even though the average consumer would not necessarily believe that there was any trade connection. The Court of Justice said that assessing whether there is sufficient similarity to give rise to a link will depend on a global appreciation of the marks.<sup>202</sup>

The Court suggested a multifactor approach to identifying whether such a link would be made. The factors include the degree of similarity of the marks, the similarity of the goods or services, the strength of the earlier mark’s reputation and its distinctive character (whether inherent or acquired), as well as the existence of a likelihood of confusion.<sup>203</sup> However, where a sign is perceived purely as decorative, no such link would exist.<sup>204</sup>

The first factor mentioned is the similarity of the marks. Clearly, a link is more likely to be established where marks are identical, such as where the stock exchange that had registered its mark NASDAQ objected to use of an identical mark for bicycle helmets.<sup>205</sup> Nevertheless, identity is not to be regarded as sufficient.<sup>206</sup> Where marks are not identical, similarity will depend on appreciation of the dominant components of the earlier and later marks. In cases concerning the SPA mark, which has a reputation in Benelux for mineral water, it has been held there would be a link with SPALINE, but not with SPAGO. In the former case,<sup>207</sup> the additional feature (‘line’) was highly descriptive, so the link would be formed,

It seems that the *Medion* principle applies: *Ella Valley Vineyards (Adulam) v. OHIM*, T-32/10 (9 March 2012) (GC, First Chamber).

<sup>203</sup> *Intel Corporation*, Case C-252/07 [2008] ECR I-8823, [42]; *Japan Tobacco, Inc. v. OHIM and Torrefacção Camelo*, C-136/08 P (30 April 2009) (ECJ, Seventh Chamber, Order), [26] (French).

<sup>204</sup> *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 [2003] ECR I-12537 (ECJ, Sixth Chamber), [27]–[31].

<sup>205</sup> *Antartica Srl v. OHIM*, C-320/07 P [2009] ECR I-28\* (ECJ, First Chamber).

<sup>206</sup> *Intel Corporation*, Case C-252/07 [2008] ECR I-8823, [45].

<sup>207</sup> *L’Oréal v. S.A. Spa Monopole*, T-21/07 [2009] ECR II-31\* (CFI, Fifth Chamber).

whereas in the latter case,<sup>208</sup> the ‘spa’ element was absorbed within what would appear as an invented word.

The second factor mentioned in *Intel* is the degree of similarity of goods or services.<sup>209</sup> Courts have found links readily where goods or services are in adjacent markets, such as jewellery and women’s clothing.<sup>210</sup> However, where goods and services are dissimilar, the question of drawing a link can become more complex. The goods or services might, for example, be so dissimilar that their users do not overlap (so no link is ever made); even if they do overlap, they may be so distant that the relevant consumers would not connect them.<sup>211</sup> However, even if goods or services are dissimilar—as in the *Nasdaq* case—if the repute of the earlier mark is so great as to reach the general public, then a link may be drawn.<sup>212</sup>

The third factor, the strength of the earlier mark (its repute and inherent or acquired distinctiveness) will often be critical. Certainly, it is easier to establish a link where the earlier mark is unique or invented than when it has some dictionary meaning.<sup>213</sup> This probably explains why a link would be drawn between BEATLE and BEATLES in the rather distant fields of wheelchairs and sound recordings,<sup>214</sup> but not between ONLY and a figurative mark including the words ‘only’ and ‘Givenchy’.<sup>215</sup>

In the United Kingdom, at least, the intention of the later user is regarded as a relevant factor in establishing a link. In *L’Oréal v. Bellure*,<sup>216</sup> a case relating to the packaging of various smell-alike perfumes, the claimant had registrations relating to certain names (including TRÉSOR and MIRACLE), and for various forms of bottle and packaging (see Figs 38.5 and 38.6). The issue arose whether the defendant’s packaging of its imitation scents was ‘similar’, and whether the names COFFRET D’OR and PINK WONDER were similar to the name marks (see Fig. 38.7).

Lewison J had found that some of the packaging was similar (for example the old packaging of LA VALEUR was similar to that of TRÉSOR and the bottle for the PINK WONDER perfume was similar to the MIRACLE bottle), but in other cases (for example the PINK WONDER and MIRACLE boxes) it was not. Both parties appealed. The Court of Appeal rejected the defendant’s appeal, noting with seeming approval that the judge had considered the appearance of the products, the public reaction, and the intention of the designers. Where the packaging was intended to convey the message ‘this is a bit like . . .’, the Court agreed that it is ‘a small step’ for a tribunal to conclude that the designer succeeded (and thus that the signs were similar enough to create a link).<sup>217</sup> Finally, the Court also affirmed the finding that the word marks were not sufficiently similar to create a ‘link’; while in French there was ‘some similarity at a high level of generality’ between COFFRET D’OR and LA VALEUR, this would have been lost on the average British consumer. The claim that there was sufficient similarity between MIRACLE and PINK WONDER to establish a link was described as ‘near fantastic’.<sup>218</sup>

<sup>208</sup> *Spa v. OHIM and De Francesco Import*, T-438/07 [2009] ECR II–04115 (CFI, Eighth Chamber).

<sup>209</sup> *Intel Corporation*, Case C-252/07 [2008] ECR I–8823, [82]; *Audi-Med Trade Mark* [1998] RPC 863, 874 (reputation would not easily transfer from cars to deafness aids).

The intention of the user of the later mark was again held to be relevant when assessing whether a link existed in the *Specsavers* case. Here, Asda's design process had started with Specsavers' logo, but ended up as two non-overlapping ovals in white with green writing, giving only a 'resonance' (see Figs 38.1 and 38.2 above at pp. 980 and 981). The Court of Appeal affirmed the view of the High Court that a link would be drawn between the Asda logo and the Specsavers mark. The Court of Appeal said that, although the test is objective, intention is relevant as evidence of someone familiar with the market.<sup>219</sup> More importantly, and in stark contrast with the decision in *L'Oréal*,<sup>220</sup> the Court of Appeal thought that the use of the logo needed to be viewed in the context of the campaign as a whole, including use of straplines such as 'Be a real spec saver at Asda'.<sup>221</sup> Seen in this way, there was no doubt that a link would have been established.

### 2.4.3 Unfair advantage or detriment

The third requirement that must be met for a mark to fall foul of section 5(3) is that it must be shown that the use of the later mark *either*:

- (i) is detrimental to the distinctive character of the earlier trade mark; *or*
- (ii) is detrimental to the reputation of the earlier trade mark; *or*
- (iii) takes unfair advantage of the earlier trade mark.

The provision is not intended to prevent *any* use of a mark with a reputation; it is essential in any case that the opponent establishes that use of a similar mark would have one of these three effects.<sup>222</sup> The Community courts have held that, as with the determination of likelihood of confusion, so when assessing whether one of the injuries exist requires a global assessment. In addition to the factors used when assessing whether there is a link, other factors that are relevant to such an assessment are the strength of the reputation and inherent or acquired distinctiveness of the earlier mark, and whether the earlier mark owner has registrations and has used a family of marks.<sup>223</sup> On the other hand, the requirement of availability is irrelevant.<sup>224</sup> Because the analysis will often be prospective (the later mark not having been used), the opponent will need to establish evidence on its face of future risk that is not hypothetical.<sup>225</sup> We will deal with each of these in turn.

(i) *Detrimental to the distinctive character of the earlier mark* The first type of 'injury' recognized is that the use of the later mark would be detrimental to the distinctive character of the earlier mark. This is usually equated with 'blurring'<sup>226</sup>—that is, 'the gradual

<sup>219</sup> *Specsavers Int'l Healthcare v. Asda Stores* [2012] EWCA Civ 24, [2012] FSR (19) 555, [158].

<sup>226</sup> *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 787; *DaimlerChrysler AG v. Alavi* [2001] RPC (42) 813, [88]; *Adidas v. Fitnessworld*, Case C-408/01 [2003] ECR I-12537, [AG37].

whittling away or dispersion of the identity and hold upon the public mind of the mark or name by its use upon non-competing goods'.<sup>227</sup>

The concern here is that the unauthorized use on similar or dissimilar products may undermine an established trade mark's uniqueness, and thus its selling power and 'commercial magnetism'. As Schechter said, 'if you allow Rolls-Royce Restaurants, and Rolls-Royce cafeterias, and Rolls-Royce pants and Rolls-Royce candy, in ten years you will not have the Rolls-Royce mark any more'.<sup>228</sup>

In *Intel Corp. v. CPM UK Ltd*,<sup>229</sup> the Court of Justice understood 'detriment to distinctive character' as blurring. In this case, the question was whether a registration of INTEL MARK for marketing services would be detrimental to the distinctive character of the INTEL mark registered for microprocessor chips. Jacob LJ referred the question to the Court of Justice, seeking advice as to whether the criterion applied only to a 'unique mark', whether a first conflicting use would suffice to establish detriment, and whether the requirement was satisfied only if the economic behaviour of the consumer would be affected. The Court of Justice began by defining 'detriment to distinctive character' as 'dilution', 'whittling away', or 'blurring', which occurs where there is a weakening of a mark's ability to identify the goods or services for which it is registered and used, because the use of the later mark leads to 'dispersion' of the earlier mark's 'identity and hold upon the public mind'.<sup>230</sup> The Court referred to the impact of such blurring on the length of time that the consumer would take to associate the mark with the goods—what some US scholars have referred to as 'imagination costs'.<sup>231</sup>

The Court in *Intel* then went on to establish a test for when such detriment would occur. It began by observing that a mark need not be unique for this sort of damage to be possible, and that any mark with a reputation, and thus acquired distinctive character, could have that character damaged.<sup>232</sup> However, if the earlier mark was unique, then the later use of an identical or similar mark would be more likely to damage the distinctive character. Moreover, the Court observed that the first use of an identical or similar mark could damage the distinctiveness (so that liability could be established as a result of the first use, rather than waiting for the fabled 'death by a thousand cuts'). In a passage worth setting out, the Court stated that proof that the use of the later mark is, or would be, detrimental to the distinctive character of the earlier mark:

... requires evidence of a change in the economic behaviour of the average consumer of the goods or services for which the earlier mark was registered consequent on the use of the later mark, or a serious likelihood that such a change will occur in the future.<sup>233</sup>

<sup>227</sup> F. Schechter, 'The Rational Basis of Trademark Protection' (1927) 40 *Harv L Rev* 813, 825.

<sup>233</sup> *Ibid.*, [77].

Commentators remarked that proving a change in the economic behaviour of consumers would be anything but an easy task,<sup>234</sup> and cases decided prior to *Intel* must now be regarded as of dubious authority.<sup>235</sup> However, subsequent courts have continued to infer such detriment,<sup>236</sup> often paying only lip service to the test adopted in *Intel*. In *Environmental Manufacturing v. OHIM*,<sup>237</sup> the applicant had applied to register a figurative mark comprising the image of a wolf's head (face on) for wood shredders. The opponent objected, relying on earlier marks that included a wolf's head (along with various words) for a range of goods, including garden machinery. The General Court had affirmed the OHIM decision that use of the applicant's mark would blur the distinctive character of the earlier trade mark. It argued that it was not necessary to show a change in the economic behaviour of consumers. Reading paragraph 77 of the *Intel* judgment in context, the General Court said that it was sufficient if there was any weakening or dispersion of the identity and hold upon the public mind of the earlier mark.<sup>238</sup> On appeal, the Court of Justice categorically rejected the proposed 'watering down' of the *Intel* decision,<sup>239</sup> observing that the requirement of a demonstration of a change in the economic behaviour of consumers was part of the operative section of the *Intel* judgment. Moreover, it rejected the argument that the *Intel* criterion was limited to cases of dissimilar goods (such as computer chips and marketing services), and indicated that it applied equally to similar goods such as those at issue in the case.<sup>240</sup> However, the Court acknowledged that blurring could be demonstrated by 'logical deductions', although these must not comprise 'mere suppositions'.<sup>241</sup> Thus account could be taken of *probable* behaviour of consumers in light of normal practice in the relevant sector. The matter was referred back to the General Court.

'Blurring' may not be the only form of 'detriment to the distinctive character of a mark'. As the *Interflora* case indicated, while blurring occurs where a unique mark is used on different goods, the distinctive character of a mark may be damaged by its use on identical goods as a description of those goods.<sup>242</sup> This type of detriment is sometimes called 'genericide', because it relates to use of marks that transform them from indications of origin to descriptions of a type or genus of product, thus rendering the sign generic. This might occur where a third party uses a protected trade mark as if it were a product description—for example Coca-Cola might object to 'Dying for a coke, take a Pepsi' and Xerox might be able to prevent 'Canon copiers, the best Xeroxing available'.

<sup>234</sup> D. Slopek, 'Case Comment' [2009] *IIC* 348, 352; A. Breitschaft, '*Intel, Adidas & Co*' [2009] *EIPR* 497, 503; D. Meale and J. Smith, 'Enforcing a Trade Mark When Nobody's Confused' (2010) 5(2) *JIPLP* 96; C. Davies, 'To Buy or Not to Buy' [2013] *EIPR* 373 (suggesting that a change in consumer behaviour should be only one way in which to establish blurring); cf. S. Middlemiss and S. Warner, 'The Protection of Marks with a Reputation' [2009] *EIPR* 326, 328 (criticizing the test as lacking clarity, but arguing that it is 'likely to give the right result in at least the majority of cases').

<sup>242</sup> *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] *ECR* I-8625 (ECJ, First Chamber), [79], [AG82]–[AG84] (AG Jääskinen).

(ii) *Damage to reputation* The second form of injury recognized by section 5(3) is ‘detriment to the repute of the earlier mark’. This is often referred to as ‘degradation’, or ‘tarnishment’.<sup>243</sup> The Court of Justice has held that it occurs:

... when the goods or services for which the identical or similar sign is used by the third party may be perceived by the public in such a way that the trade mark’s power of attraction is reduced. The likelihood of such detriment may arise in particular from the fact that the goods or services offered by the third party possess a characteristic or a quality which is liable to have a negative impact on the image of the mark.<sup>244</sup>

The owner of the earlier trade mark must establish that the negative association will be real, not fanciful. This involves not only substantiating the existence of a particular image in the earlier mark, but also the way in which the later mark will bring about the damage.<sup>245</sup>

There are two obvious ways in which tarnishment might occur. The first, suggested by the Court of Justice, is where the proposed use on the applicant’s goods would reflect badly on the opponent’s reputation. This would be the case where the mark is to be used on ineffective goods,<sup>246</sup> but there might equally be damage to reputation where there is some other negative association with goods—or, as it is sometimes called, ‘antagonism’ between the goods. So, in a classic pre-harmonization example (referred to with approval in some post-harmonization case law), the Benelux Court held that KLAREIN for detergent would tarnish CLAERYN for gin because ‘no one likes to be reminded of a detergent when drinking their favourite tippel’.<sup>247</sup> Trade mark owners commonly object to association with sexual products or services, and the tribunals are generally sympathetic.<sup>248</sup> Other ‘antagonisms’ might exist between cigarettes or alcohol and goods associated with health.<sup>249</sup> However, the CFI has held that there was no antagonism between mineral water and travel agency services such that the use of SPA-FINDERS for a travel agency would harm SPA for mineral water,<sup>250</sup> or between self-service restaurants and hotel computer systems such that the use of VIPS for the latter would tarnish the mark VIPS for the former.<sup>251</sup>

The second circumstance in which tarnishment might be thought to occur is where the later mark modifies the earlier sign in a denigratory way. Perhaps the most obvious example would be the modification of COCA-COLA in its familiar cursive script to ‘Cocaine’—a modification that might tarnish the contemporary image of COCA-COLA by suggesting that it contains cocaine.<sup>252</sup> It is notable that the Court of Justice’s definition of

<sup>243</sup> *L’Oréal SA and ors v. Bellure NV and ors*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [40]; *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625 (ECJ, First Chamber), [73], [AG52].

<sup>250</sup> *Spa finders*, T-67/04 [2005] ECR II-1825.

<sup>251</sup> *Sigla SA v. OHIM*, T-215/03 [2007] ECR II-711 (CFI, Fifth Chamber), [66]–[67].

<sup>252</sup> There are numerous examples from other jurisdictions of potential tarnishing modifications (and uses) of marks: *Mattel Inc. v. Walking Mountain Productions*, 353 F.3d 792, 809 (9th Cir., 2003); *South African Breweries v. Laugh It Off* [2005] FSR (30) 686 (Supreme Court of South Africa), (overturned on appeal by the Constitutional Court applying freedom of expression doctrine: [2005] ZACC 7, [2006] (1) SA 144).

'tarnishment' talks only in terms of damage to repute, which results from the character of the goods or services in relation to which a third party uses a mark. Such a narrow definition of tarnishment could be justified on the basis that it would prevent trade mark owners from unduly limiting the free speech of others (such as parodists).<sup>253</sup> However, such a narrow interpretation of the notion of detriment, is an abrupt contrast to the broad notion of 'repute' as relating to the image or atmospherics associated with a mark. It thus seems likely that, when faced with a case of denigratory modification of a mark, the Court will modify its definition.<sup>254</sup> It is hoped that it will nevertheless adopt a high threshold test for the demonstration of damage to repute, which excludes from any prohibition the sorts of humorous modifications of marks that circulate widely on the Internet and which do not appear to do any harm at all to trade mark proprietors.<sup>255</sup>

(iii) *Unfair advantage* The final form of 'injury' recognized in section 5(3)/Article 8(5) occurs where the use of the applicant's mark would take 'unfair advantage' of the earlier mark. According to the authorities, this is intended to enable a trade mark owner to prevent another trader from registering (or using) a similar mark when to do so would involve 'parasitism' or taking a 'free ride' on the reputation of the earlier mark.<sup>256</sup> Although it is referred to as an 'injury', the Court of Justice stated in *L'Oréal v. Bellure*, the 'concept relates not to the detriment caused to the mark but to the advantage taken by the third party'.<sup>257</sup> The Court explained:

It covers, in particular, cases where, by reason of a transfer of the image of the mark or of the characteristics which it projects to the goods identified by the identical or similar sign, there is clear exploitation on the coat-tails of the mark with a reputation.<sup>258</sup>

The principle underpinning this ground for objection seems to be the prevention of 'misappropriation' or free-riding. As we explained above, and as a number of commentators have elaborated at greater length,<sup>259</sup> there are good economic reasons to doubt the desirability of legal sanctions against free-riding, and it is not entirely obvious why free-riding on the reputation of another person's trade mark should be regarded as special circumstances under which the law provides a remedy. It is notable that there is no equivalent in the US federal dilution law.<sup>260</sup> This suggests that it would be desirable to give this ground a narrow construction.

However, difficulties of proof with the two previous heads of injury (blurring and tarnishment) mean that tribunals prefer to rely on the 'unfair advantage' ground. In applying the provision, it is necessary for the tribunal to proceed in three stages. First, it should identify the 'power of attraction, reputation and prestige' of the earlier mark.<sup>261</sup> Second,

<sup>253</sup> Indeed, it might be observed that damage from altering the mark can occur without any 'use' to distinguish goods or services at all. The Court of Justice thus might be intending to restrict the notion of tarnishment that is caused by use of the mark as a trade mark. Even the 'Cocaine' example might well fall outside such use.

the tribunal should establish whether any advantage has been shown to have transferred (or to be seriously likely to transfer) to the user of the later (identical or similar) mark. This is to be assessed from the perspective of the average consumer of the goods or services that are alleged to free-ride.<sup>262</sup> Third, it must be established that the advantage thereby secured has been ‘unfairly taken’.

The first stage then is to establish the repute of the earlier mark—that is, not merely its ‘known-ness’ (reputation), but also, if relevant, ‘the image of the mark or of the characteristics which it projects’.<sup>263</sup> In relation to the latter, the General Court seems to have readily adopted the characterizations used in the field of marketing, identifying a brand of mineral water as conveying messages of ‘health, beauty, purity and mineral richness’,<sup>264</sup> a mark for fast food as being associated with qualities of ‘speed’, ‘availability’, and ‘youth’,<sup>265</sup> a mark for a stock exchange as having associations with ‘modernity’,<sup>266</sup> and a mark for cigarettes as having an image of ‘relaxation’.<sup>267</sup> In order to establish the ‘repute’, it seems that tribunals can both take account of the characteristics of the goods or services that are sold under the mark, and examine the specific manner in which the mark is advertised and promoted, insofar as they draw attention to particular characteristics. Not every attribute or feature contained in a marketing campaign, however, can be assumed to constitute a relevant component of the ‘image’ that is created: some such features may simply be incidental, while others may have achieved no impact on consumers.

The second stage is to examine closely whether the reputation, or the repute (the image conveyed), will ‘transfer’ to the later mark (and the goods or service to which it relates), so as to confer an ‘advantage’ on the applicant (or user of the mark). This appears to require the court to revisit the various components involved in the ‘global appreciation’ and to examine closely the benefit, if any, which would accrue to the user of an identical or similar mark. In the case of identical or similar goods, that transfer may be almost self evident, but in the case of dissimilar goods or services, the possibility of such ‘cross-pollination’ is often unthinkable. Consider, for example, the use of TWIX, a well-known mark for chocolate, as the name of a garden plant (a viola or pansy): it is difficult to imagine how any advantage could accrue in relation to the plant. Where the goods or services are dissimilar, the most critical consideration is likely to be the distinctiveness of the earlier mark. As the Court of Justice said:

[T]he more immediately and strongly the mark is brought to mind by the sign, the greater the likelihood that the current or future use of the sign is taking, or will take, unfair advantage of the distinctive character or the repute of the mark.<sup>268</sup>

So far, there has been no suggestion that the benefit needs to be articulated in terms of increased sales; rather, tribunals seem to be looking for plausible explanations of consumer thought processes by which particular characteristics will be transferred.<sup>269</sup> In

<sup>262</sup> *Intel Corporation*, Case C-252/07 [2008] ECR I-8823, [36].

<sup>263</sup> *L'Oréal SA and ors v. Bellure NV and ors*, Case C-487/07 [2009] ECR I-5185, [41].

<sup>264</sup> *L'Oréal v. OHIM and Spa*, T-21/07 [2009] ECR II-00031\* (CFI, Fifth Chamber), [40]; *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625, [74].

<sup>265</sup> *Sigla v. OHIM*, T-215/03 [2007] ECR II-711 (CFI, Fifth Chamber).

<sup>266</sup> *NASDAQ*, T-47/06 [2007] ECR II-42\* (CFI, Fourth Chamber).

<sup>267</sup> *Japan Tobacco, Inc. v. OHIM and Torrefação Camelo*, Case C-136/08 P (30 April 2009), (ECJ, Seventh Chamber, Order) (French).

<sup>268</sup> *Ibid.*

<sup>269</sup> Sometimes, tribunals have set the threshold absurdly low: *NASDAQ*, T-47/06 (10 May 2007); Case C-320/07 P [2009] ECR I-28\* (ECJ, First Chamber).

*L'Oréal v. OHIM and Spa*,<sup>270</sup> the CFI thought it likely that the image that the mark SPA conveyed in relation to mineral water—namely, health, beauty, purity and mineral richness—might be transferred to the applicant's goods, cosmetics, were it to use the mark SPA-LINE because both products were used to preserve and improve health or beauty. Similarly, the General Court thought that the reputation of the mark BOTOX for pharmaceuticals would readily transfer onto the applicant's marks BOTOLIST and BOTOCYL, both relating to cosmetics including wrinkle creams, and the Court of Justice saw no reason to interfere with those conclusions of fact.<sup>271</sup> In contrast, the CFI said that the use of the mark SPA-FINDERS would not take unfair advantage of the distinctive character or the repute of the mark SPA (registered for mineral water), because there was no evidence that the reputation of the mark SPA would in any way transfer to the travel agency.<sup>272</sup> Similarly, despite suggestions that 'cigarettes' and 'coffee' were both associated with relaxation, the Court of Justice found no error when the CFI had not found any transfer of advantage from CAMEL cigarettes to the applicant's figurative trade mark for coffee, which included an image of a camel, a pyramid, and palm trees, and the word CAMELO (in precisely the same configuration as the opponent's earlier mark).<sup>273</sup>

In other cases, a 'transfer of image' can occur because of the way in which the earlier trade mark has been promoted. In *Aktieselskabet af 21 November 2001 v. OHIM and TDK*,<sup>274</sup> for example, the CFI held that the opponent, owner of the Community trade mark TDK for tapes, was justified in its objection to the registration of TDK for clothing. The evidence established that the opponent had a substantial reputation developed over decades. Because the opponent had used TDK on clothes at sponsorship events, albeit to promote its tapes, the CFI took the view that the use of the mark by the applicant on clothes would lead to the perception that clothing was manufactured by, or under licence from, the opponent. The CFI stated that this was in itself sufficient to constitute evidence on its face of a future risk of the applicant taking of unfair advantage of the reputation of the earlier marks, and the Court of Justice rejected an appeal.

In the case of three-dimensional marks, the English courts have been reluctant to assume any transfer of 'image' merely because products have similar features. In *Whirlpool v. Kenwood*,<sup>275</sup> the claimant had been selling a premium price food mixer under the mark KITCHENAID ARTISAN. This was a stand mixer, of a general shape that had been used for 70 years. It had a Community trade mark registration for the shape of the mixer (see Fig 38.8), which mark was distinctive, 'but not strongly so'.<sup>276</sup> The defendant marketed a mixer, known as the KMIX MIXER, which had certain similarities in appearance (see Fig. 38.9). Whirlpool objected that the bodywork of the KMIX was too close to its registered mark. While the similarities were regarded as sufficient to warrant the view that, on seeing the KMIX, the consumer would call to mind (and thus draw a link with) the reputed mark, affirming the decision of the deputy judge, Geoffrey Hobbs QC, that there was no infringement, the Court noted that the similarities were a consequence of the fact that

Source: *Whirlpool v. Kenwood* [2009] EWCA Civ 753

both products were stand mixers designed to a high standard of style, so as to be attractive products on the kitchen work surface. The two products bore the same ‘basic shape’ and the ‘reminder’ was not strong. Accordingly, there was no advantage to Kenwood (or if there was, it was not an ‘unfair one’).<sup>277</sup>

The third stage is to determine whether the advantage has been ‘unfairly taken’. The Court of Justice seems to have offered a rather narrow interpretation, which highlights the underpinning concern as being the *deliberate* misappropriation of repute. In *L’Oréal*, the Court of Justice stated that:

The advantage arising from the use by a third party of a sign similar to a mark with a reputation is an advantage taken unfairly . . . where that party seeks by that use to ride on the coat-tails of the mark with a reputation in order to benefit from the power of attraction, the reputation and the prestige of that mark and to exploit it, without paying any financial compensation, the marketing effort expended by the proprietor of the mark in order to create and maintain the mark’s image.<sup>278</sup>

<sup>277</sup> *Ibid.*, [138] *per* Lloyd LJ.

<sup>278</sup> *L’Oréal SA and ors v. Bellure NV and ors*, Case C-487/07 [2009] ECR I-5185, [50].

Some doubt exists as to the vitality of the criterion of ‘unfairness.’<sup>279</sup> While one panel of the English Court of Appeal considered that there must be an added factor of some kind for that advantage to be categorized as ‘unfair’,<sup>280</sup> the Court of Justice, in *Interflora v. Marks & Spencer*, seems now to have confirmed that ‘unfair’ indeed has no meaning in a situation in which there has been an intentional riding on the coat tails of the reputation of an earlier mark.<sup>281</sup>

In an opposition action, in which it will often be the case that the applicant has yet to use the mark, the tribunal will need to assess whether an advantage will be ‘taken’ if the mark comes to be used for the goods or services for which registration is sought. In *Helena Rubinstein*,<sup>282</sup> the Court of Justice indicated that the proprietor must adduce evidence on its face of a future risk, which is not hypothetical, of unfair advantage. As with detriment (through blurring or tarnishment), unfair advantage may be established on the basis of ‘logical deductions made from an analysis of the probabilities and by taking account of the normal practice in the relevant commercial sector as well as all the other circumstances of the case.’<sup>283</sup>

## 2.5 WITHOUT ‘DUE CAUSE’

Once an opponent has established that its earlier mark has a reputation and that use of the applicant’s mark will take unfair advantage of, or be detrimental to, the earlier mark, the obligation then falls upon the applicant to show that the use would not be ‘without due cause’.<sup>284</sup> It has hitherto been imagined that the threshold that an applicant would have to meet to demonstrate ‘due cause’ would be particularly onerous—perhaps requiring something akin to real commercial necessity.<sup>285</sup> However, given that the Court has removed any independent role for assessing whether a person has taken advantage of a mark ‘unfairly’, it may be that a range of deliberate uses might now fall to be justified on this basis. Indeed, in the *Interflora* case (which, as we just saw, confirmed that all deliberate takings were ipso facto unfair), the Court indicated that a use that was ‘fair competition’ would be regarded as a use with ‘due cause’.<sup>286</sup> Thus, it said, the use of a trade mark with a reputation (such as INTERFLORA) as a keyword that would generate Internet advertising could be justified on the basis that the advertiser is offering a competing product (as Marks and Spencer was with its flower service). The four conditions to which the Court referred were: (i) that the advertiser offered an ‘alternative’ to the goods associated with

<sup>281</sup> *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625 (ECJ, First Chamber), [89]. See *Interflora Inc. v. Marks and Spencer Plc* [2013] EWHC 1291 (Ch), [279]; Kerly, 325, [9–137], 469, [14–105], 471, [14–111] (in its insistence on a demonstration of ‘unfairness’, *Whirlpool* must be regarded as incorrect).

<sup>282</sup> *Helena Rubinstein SNC and L’Oréal SA v. OHIM*, Case C-100/11P (10 May 2012) (ECJ, First Chamber).

<sup>283</sup> *Ibid.*, [95]. <sup>284</sup> *Ibid.*, 792.

<sup>285</sup> *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 789–92; *L’Oréal v. OHIM and Spa*, T-21/07 [2009] ECR II-00031\* (CFI, Fifth Chamber), [40], [43]; *BSB v. Microsoft* [2013] EWHC 1826 (Ch), [193], [234] *per Asplin J.*

<sup>286</sup> *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625 (ECJ, First Chamber), [91]. This has been acknowledged to be a significant development: *Specsavers Int’l Healthcare v. Asda Stores* [2012] EWCA Civ 24, [2012] FSR (19) 555, [141]. Indeed, Graeme Dinwoodie has suggested that the *L’Oréal v. Bellure* decision ‘may already be seen to represent the high water mark of European dilution law’: G. Dinwoodie, ‘Dilution as Unfair Competition: European Echoes’, in R. Dreyfuss and J. Ginsburg (eds), *Intellectual Property at the Edge* (2014), 97.

the reputed mark; (ii) that the competing product that was offered was not a ‘mere imitation of the goods or services of the proprietor of that trade mark’; (iii) that the use did not dilute or tarnish the mark; and (iv) that the use did not adversely affect the functions of the trade mark.<sup>287</sup>

This case clearly suggests that (in an infringement context) a later user need not show a ‘compelling need’ to use the earlier mark, but rather merely a legitimate interest in so doing.<sup>288</sup> What seems to be required is a ‘balancing of interests’ as between the owner of the reputed mark and the later applicant or user.<sup>289</sup> In *Leidseplein Beheer*,<sup>290</sup> the defendant had, since the 1970s, run a bar in Amsterdam known as ‘The Bull Dog’. The claimant registered its RED BULL trade mark for non-alcoholic beverages in 1983 and later developed a reputation for the mark for energy drinks. The defendant registered its THE BULL DOG mark for hotel, restaurant, and cafe services soon after. Later, the defendant marketed an energy drink under the same name. The Dutch courts found that there was sufficient similarity between the marks to give rise to a link and that the defendant was taking unfair advantage of the reputation that RED BULL had acquired. The question arose whether there was ‘due cause’ to justify the actions of the defendant. The Court of Justice indicated that due cause did not require ‘objectively overriding reasons’ (necessity of use), but could also relate to ‘the subjective interests’ of the defendant.<sup>291</sup> The latter interests may be found in the historical investment in the later conflicting mark as well as the intention (‘good faith’) of the person when choosing to use the same mark for different goods or services (to which objection was being made). The Court of Justice left it to the national court to decide whether Leidseplein Beheer’s decision to sell THE BULL DOG energy drink involved a good faith, natural extension into an adjacent field of a mark registered and whether it had occurred before the RED BULL mark had acquired its own reputation. If so, Leidseplein’s use of ‘The Bull Dog’ was something that Red Bull would have to tolerate.

The *Leidseplein* and *Interflora* cases thus identify two specific situations in which a use might be regarded as with ‘due cause’. However, legitimate interests could also include an interest in exploiting the descriptive qualities of a mark,<sup>292</sup> or freedom of expression more generally. Moreover, neither case concerned an attempt to register a mark that was being opposed on relative grounds by the owner of a mark with a reputation. It is difficult to anticipate how ‘due cause’ would play out here. On the one hand, the Court in *Leidseplein Beheer* suggested that due cause should not lead to the recognition ‘for the benefit of that third party, of the rights connected with a registered mark, but rather obliges the proprietor of the mark with a reputation to tolerate the use of the similar sign’.<sup>293</sup> This might be taken to suggest that registration of the later mark—say, THE BULL DOG for energy drinks—is not envisaged. But the language of ‘due cause’ is present in section 5(3) of the 1994 Act, Article 4(4)(a) of the Trade Marks Directive, and Article 8(5) CTMR. If there is a legitimate interest in using the mark, it is difficult to see why the same mark should not be registrable.<sup>294</sup>

<sup>287</sup> Functions are further discussed in Chapter 40, pp. 1049–58.

<sup>288</sup> The distinction is drawn out well by Advocate-General Kokott in *Leidseplein Beheer BV v. Red Bull GmbH*, Case C-65/12 (Opinion, 21 March 2013).

<sup>289</sup> *Ibid.*, [AG34]–[AG36].

<sup>290</sup> *Leidseplein Beheer BV v. Red Bull GmbH*, Case C-65/12 (6 February 2014) (ECJ, First Chamber).

<sup>291</sup> *Ibid.*, [45], [48].

<sup>292</sup> *Evegate Publishing Ltd v. Newsquest Media (Southern) Ltd* [2013] EWHC 1975 (Ch), [208] (use of THE SOUTHERN FARMER for periodical was fair competition and thus with due cause).

<sup>293</sup> *Leidseplein Beheer BV v. Red Bull GmbH*, Case C-65/12 (6 February 2014) (ECJ, First Chamber), [46].

<sup>294</sup> As long as registration confers no immunity on the registrant, if they use the mark in a way that unjustifiably conflicts with the earlier reputed mark, they would incur liability.

### 3 RELATIVE GROUNDS IN RELATION TO EARLIER RIGHTS

In addition to refusal on the basis of earlier trade marks, a mark may also be rejected on the basis that it conflicts with ‘earlier rights’. The relative grounds for refusal in relation to *earlier rights* are found in section 5(4)(a) and (b), and Article 8(4) CTMR, respectively.<sup>295</sup> These provide that a trade mark shall not be registered where the use of the applicant’s mark would be restrained under the law of passing off—section 5(4)(a)/Article 8(4)—or by some other right, such as copyright—section 5(4)(b)/Article 52(2). We consider each in turn.<sup>296</sup>

#### 3.1 UNREGISTERED MARKS

Section 5(4)(a) provides that a trade mark shall not be registered if, or to the extent that, its use in the United Kingdom is liable to be prevented by virtue of any rule of law (in particular, the law of passing off) protecting an unregistered trade mark or other sign used in the course of trade. It seems this section is intended to implement Article 4(4)(b) of the Directive, although that provision uses the narrower language of ‘rights to a non-registered trade mark’.<sup>297</sup>

Section 5(4)(a) will cover passing off if the requisites of goodwill,<sup>298</sup> misrepresentation, and likely damage can be established.<sup>299</sup> The burden of proving the existence of the earlier right falls upon the opponent.<sup>300</sup> In this context, it is important to note that ‘in an action for passing off the likelihood of misrepresentation and the prospect of damage to goodwill must be sufficiently real and substantial to warrant the intervention of the court’.<sup>301</sup> Although it may be more costly and time-consuming to base an opposition on section 5(4) rather than section 5(2), there may be advantages in so doing, in that the tribunal may focus more upon how the mark has been used by the opponent and understood by the public.

In the case of Community trade marks,<sup>302</sup> the owners of rights in unregistered marks—which (depending on national laws) may include appellations of origin, company names, and trade names—may oppose registration only if the sign is ‘of more than mere local significance’.<sup>303</sup> The aim of the provision is to prevent a person from opposing registration

<sup>295</sup> CTMR, Art. 52(2), recognizes the equivalent relative ground for invalidity.

<sup>296</sup> These ‘earlier rights’ are unharmonized. In *OHIM v. National Lottery Commission*, Case C-530/12P (17 March 2014) (ECJ, First Chamber), it was held that while it is normally for the opponent or applicant for cancellation to demonstrate that the law, as well as the facts, establish its earlier right, the OHIM and General Court were entitled to apprise themselves independently as to the relevant national law. See also *macros consult GmbH v. OHIM*, T-579/10 (7 May 2013) (GC, First Chamber).

<sup>297</sup> *Wild Child Trade Mark* [1998] RPC 455, 457. See also CTMR, Art. 8(4).

<sup>298</sup> But the objection is not available if the goodwill is residual and there is no continuing use in the course of trade: *Dimian AG v. OHIM*, T-581/11 (23 October 2013) (GC, Seventh Chamber).

<sup>299</sup> See Chapters 32, 33, and 34.

<sup>300</sup> One as-yet-unresolved problem relates to the date on which the opponent must establish that there would have been passing off: is it the date on which the applicant commenced using the mark, or the date of application for the registration, or the date of registration? Cf. *Interlotto (UK) v. Camelot Group plc* [2004] RPC 186 (CA) (date of registration); *Last Minute Network v. OHIM*, Joined Cases T-114 and T-115/07 [2009] ECR II-1919 (General Court), [96] (implying date was application date); *Boxing Brands Ltd v. Sports Direct International* [2013] EWHC 2200 (Ch), [77], [95]–[96]; *Roger Maier v. Asos plc* [2013] EWHC 2831 (Ch), [71]–[81] *per* Rose J.

<sup>301</sup> *Corgi Trade Mark* [1999] RPC 549, 557.

<sup>302</sup> Cf. *Saxon Trade Mark* [2003] FSR (39) 704, [32] *per* Laddie J.

<sup>303</sup> CTMR, Art. 8(4).

of a Community mark by relying on a right that has no real presence on the relevant market.<sup>304</sup> The threshold appears to be quite high. In *Anheuser-Busch*,<sup>305</sup> the Court of Justice offered some useful guidance as to how this fell to be assessed.

- (i) The criterion is directed at the use of the sign, rather than the scope of its protection.<sup>306</sup> The fact that a sign is protected, for example, throughout England and Wales does not demonstrate that its use was of more than mere local significance.
- (ii) The use must be in the course of trade—that is, it must be commercial use, but not necessarily, given the varied nature of the rights, use ‘as a trade mark’ or ‘genuine use’.<sup>307</sup>
- (iii) There are two dimensions to the appraisal: first, was the use of the sign in the course of trade ‘sufficiently significant’; and second, was the geographical extent of the use more than merely local—that is, ‘in a substantial part of the territory’ for which protection is claimed?<sup>308</sup> Although there are no *a priori* standards, this would typically exclude uses in a town or province.<sup>309</sup>

### 3.2 COPYRIGHT, DESIGN RIGHT, AND REGISTERED DESIGN RIGHT

Section 5(4)(b) of the 1994 Act states that a trade mark shall not be registered if, or to the extent that, its use in the United Kingdom is liable to be prevented ‘by virtue of any earlier right . . . in particular by virtue of the law of copyright, design right or registered designs’. This provision is permitted by, but does appear a first sight not take complete advantage of, Article 4(4)(c) of the Directive.<sup>310</sup> In contrast, there is no provision for opposition on this ground at the OHIM. Article 53(2) CTMR, however, does recognize conflict with a non-exhaustive list of earlier rights as a ground of invalidity.<sup>311</sup>

<sup>304</sup> *Moreira de Fonseca Lda v. OHIM*, Joined Cases T-318–T-321/06 [2009] ECR II–663 (CFI, Second Chamber), [36]; *Anheuser-Busch Inc v. Budejovicky Budvar*, Case C-96/09P [2011] ECR I–2131 (ECJ, Grand Chamber), [157].

<sup>305</sup> Case C-96/09P [2011] ECR I–2131 (ECJ, Grand Chamber).

<sup>306</sup> *Ibid.*, [158]. See also *Peek & Cloppenburg v. OHIM*, T-506–507/11 (18 April 2013) (GC, Fifth Chamber), appeal pending as Cases C-326/13P and C-325/13P.

<sup>307</sup> *Anheuser-Busch Inc v. Budejovicky Budvar*, Case C-96/09P [2011] ECR I–2131 (ECJ, Grand Chamber), [144], [152].

<sup>308</sup> *Ibid.*, [159]–[163]. It is worth noting the Court’s qualification, however, that the test of use in a substantial part of the territory is appropriate only where the territory itself is ‘other than local’. Presumably, Malta and Luxembourg might be regarded as merely local territories, from the perspective of the European Union.

<sup>309</sup> *Moreira de Fonseca Lda v. OHIM*, Joined Cases T-318–321/06 [2009] ECR II–663 (CFI, Second Chamber), [36]–[42]; cf. *Frost Products Ltd v. FC Frost Ltd* [2013] EWPCC 34.

<sup>310</sup> Although Art. 4(4)(c) refers also to a person’s right to ‘names’ or ‘personal portrayal’ and s. 5(4)(b) does not refer to these, such interests may be protected under the law of passing off where use of a person’s image implies endorsement (see above, pp. 854–6) and through the extended law of confidentiality in circumstances that would implicate the individual’s privacy (see below, pp. 1157, 1184–92). The former circumstances are covered by TMA 1994, s. 5(4)(a), but it is an open question whether the latter could be protected as an ‘earlier right’ under s.5(4)(b). Insofar as the ECtHR has formulated rights to one’s own name or image, it seems arguable that, despite having been shoehorned into the law of confidence, they should count as rights.

<sup>311</sup> CTMR, Art. 53(2), allows invalidity proceedings to be brought on the basis of earlier national or Community rights, including a right to a ‘name’ or a right of ‘personal portrayal’. On the former, see *Edwin v. OHIM*, Case C-263/09P [2011] ECR I–5853 (ECJ, Grand Chamber). The protection is, in contrast to Art. 8(4), not subject to requirements of use in the course of trade and that the sign be a more than mere local significance. Where an applicant for invalidity relies on the protection given by the English law of passing off to the commercial exploitation of their name or image, it is thus easier to base the application on Art. 53(2)(a) or (b) rather than Art. 51(1)(c)/Art. 8(4).

If someone owns copyright in the design of a device, the effect of section 5(4)(b) is that the applicant cannot obtain protection for the device as a trade mark without the copyright owner's consent. For example, in *Karo Step Trade Mark*,<sup>312</sup> an applicant succeeded in having a registered proprietor's device mark cancelled on the basis that the applicant owned artistic copyright in the mark.<sup>313</sup> Similarly, in *Oscar Trade Mark*,<sup>314</sup> the Academy of Motion Pictures successfully opposed the registration of a device mark comprising a silhouette of the famous Oscar statue given out at the annual Academy Awards. Graham J held that the statue was protected by copyright as a sculpture and that the silhouette device had been copied from it.<sup>315</sup> It should be recalled that, because single invented words and short phrases do not ordinarily provide information, instruction, or literary pleasure, they are not usually protected by copyright as literary works.<sup>316</sup> Therefore section 5(2)(b) will not enable the creator of a word or short phrase to prevent someone else from using the word or short phrase as a trade mark.<sup>317</sup>

### 3.3 UNAUTHORIZED REGISTRATION BY AGENT

An application for registration of a trade mark by an agent or representative of a person who is the proprietor of the mark in a Convention country is to be refused if that proprietor opposes the application.<sup>318</sup> The CFI has explained that this provision is intended to prevent the former agent from unjustly benefiting from the knowledge and experience of its principal.<sup>319</sup> The opponent must establish that it is the proprietor of a mark in a Convention country, that the applicant is (or was) its 'agent or representative',<sup>320</sup> and that the application was not 'authorized'.<sup>321</sup> Where an agent applies for a trade mark using a corporate front, it may be necessary for the examiner to 'pierce the corporate veil' in order to reveal the true agency relationship. It has been observed that it is frequently easier to establish bad faith than that the applicant was an agent of the 'real trade mark owner'.<sup>322</sup>

<sup>312</sup> [1977] RPC 255. The device must, in fact, amount to an infringement: *Jules Rimet Cup Ltd v. Football Association Ltd* [2008] ECDR (4) 43 (Deputy Judge Wyand QC).

<sup>313</sup> *Karo Step Trade Mark* [1977] RPC 255, 273. <sup>314</sup> *Oscar Trade Mark* [1980] FSR 429.

<sup>315</sup> *Ibid.*, 439, 440. <sup>316</sup> See above at pp. 65–6.

<sup>317</sup> But see TMA 1994, s. 3(6), discussed at pp. 968–70 above.

<sup>318</sup> TMA 1994, s. 60; Paris, Art. 6septies; CTMR, Art. 8(3). See A. Kur, 'Not Prior in Time, but Superior in Right: How Trademark Registrations Can be Affected by Third-party Interests in a Sign' [2013] IIC 790, 804–8 (discussing the existing situation and potential reforms).

## REVOCATION

### CHAPTER CONTENTS

1 Introduction	1015	4 Misleading Uses	1033
2 Non-use	1016	5 Effect of Revocation	1036
3 Generic Marks	1030		

### 1 INTRODUCTION

In spite of the examination process, the trade mark register is not a guarantee of the validity of trade marks.<sup>1</sup> There are two reasons why a mark might be removed from the register. The first is if it is held to be *invalid*. The grounds for invalidity are set out in section 47 of the Trade Marks Act 1994 and Articles 51 and 52 of the Community Trade Marks Regulation (CTMR). These provide that a mark may be declared to be invalid on the basis that it was registered in breach of one of the absolute or relative grounds for refusal—topics that were dealt with earlier.<sup>2</sup>

The second reason why a mark might be removed from the register, which is the focus of this chapter, is if it is ‘revoked’. There are four grounds for revocation and these are found in section 46 of the 1994 Act and Article 50 CTMR (which largely correspond to the provisions in Articles 10 and 12 of the Trade Marks Directive). Section 46/Article 50 provides that a mark may be revoked (in relation to all or some of the goods and services in respect of which it is registered)<sup>3</sup> on the grounds that:

- (i) the trade mark has not been used for five years following the date of completion of the registration (that is, *non-use*);
- (ii) use of the trade mark has been suspended for an uninterrupted period of five years;
- (iii) the trade mark has become the ‘common name in the trade’ (that is, *generic*); or
- (iv) the trade mark has been used in such a way that it is liable to mislead the public (that is, it is *deceptive*).

Section 46(4) of the Act provides that an application for revocation may be made by any person and may be made either to the Registrar or to the court.<sup>4</sup> The onus of proving that a mark should be revoked falls upon the party seeking revocation of the mark.<sup>5</sup> In

<sup>1</sup> TMA 1994, s. 70.

<sup>2</sup> See Chapters 36, 37, and 38. TMA 1994, s. 47(6), provides that, where the registration of a trade mark is declared invalid to any extent, the registration shall to that extent be deemed never to have been made.

<sup>3</sup> TMA 1994, s. 46(5); CTMR, Art. 51(2) (ex Art. 50(2) of Regulation 40/94).

<sup>4</sup> As regards CTMs, an application for revocation may be made either directly to the Cancellation Division of the OHIM or by way of counterclaim to an action for infringement: CTMR, Arts 51(1) and 100(1) (ex Arts 50 and 95 of Regulation 40/94). Non-use can also be put in issue in opposition proceedings at the OHIM: CTMR, Art. 42(2) (ex Art. 43(2) of Regulation 40/94).

<sup>5</sup> TMA 1994, s. 72. © Bently and B. Sherman 2014

relation to revocation for non-use, however, section 100 modifies the general position by stating that the proprietor must show the use that has been made of the registered mark.<sup>6</sup> It should be noted that while section 46(1) appears to confer a discretion on the Registrar to leave an otherwise revocable mark on the register (but not to remove a mark that is not revocable), the better view is that no such discretion exists.<sup>7</sup>

With these general points in mind, we now consider the grounds on which a registered mark may be revoked. It is convenient to deal with the two non-use grounds together.

## 2 NON-USE

The first ground on which a mark may be revoked is on the basis of ‘non-use’. Revocation for non-use reflects the notion—also found in the law of passing off—that protection for marks is justified as a result of their use.<sup>8</sup> As Recital 9 CTMR explains, ‘there is no justification for protecting earlier trade marks except where the marks are actually used’. It is only by virtue of use that marks come to communicate information to consumers and thus operate in a way that merits legal protection. Consequently, if a mark is not put into use within a reasonable period of registration, or use comes to be suspended, there is no good reason for preventing another trader from adopting that mark. Revocation for non-use helps to ensure that such unused marks, as well as marks that have been registered and used, but use of which has ceased,<sup>9</sup> can be removed from the register so that other traders can safely use similar, as well as identical, marks.<sup>10</sup> Revocation for non-use also deters opportunistic stockpiling of good marks.<sup>11</sup>

### 2.1 RELEVANT PERIOD OF NON-USE

As indicated, there are two distinct types of non-use. The first ground for non-use is set out in section 46(1)(a)/Article 51(1)(a),<sup>12</sup> which provides that a trade mark may be revoked on the basis that:

<sup>6</sup> But there is no equivalent in the CTMR.

<sup>7</sup> *Premier Brands UK v. Typhoon Europe* [2000] FSR 767, 811.

<sup>8</sup> *Invermont Trade Mark* [1997] RPC 125; *Cabanas Havana (Device) Trade Mark* [2000] RPC 26, 34. TM Dir., Recital 8, refers to a desire to reduce the number of registered marks.

<sup>9</sup> Jacob J figuratively referred to these signs as ‘abandoned vessels in the shipping lanes of trade’: *Re Laboratories Goëmar SA* [2002] ETMR (34) 382, 389, [19]. Advocate-General Colomer has called them ‘corpses’: *Silberquelle*, Case C-495/07 [2009] ECR I–137, [AG45]. See also Mummery LJ in *La Mer Technology v. Laboratoires Goëmar SA* [2006] FSR (5) 49, [14].

<sup>10</sup> Given that the OHIM allows applications for very broad specifications, revocation plays a very significant role in restricting the rights of trade mark proprietors within appropriate confines. Many have expressed concern with cluttering of the register, but empirical evidence remains inconclusive: G. von Greavenitz et al, *Trade Mark Cluttering: An Exploratory Report* (2012) (not finding evidence of a systemic problem); Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), [1.32]ff (reviewing evidence), [1.39] (‘There is no sustainable documentation showing that access to trade marks is substantially impaired by congestion of registers’), [4.44] (‘Opinions differ as to whether congestion actually is a real problem in Europe’).

<sup>11</sup> As we saw in Chapter 37, pp. 967–8, the United Kingdom treats applications without intent to use the mark as made in bad faith, contrary to s. 3(6), and thus treats any resulting registration as liable to be held invalid. However, ‘bad faith’ can be difficult to establish in cases of ‘greedy’, rather than dishonest, applications and s. 46 is better suited to dealing with such cases. While revocation for non-use has sometimes also been said to reflect a public interest in maintaining the register as a reflection of enforceable marks—see, e.g., *Imperial Group v. Philip Morris* [1982] FSR 72, 84—the truth is that neither the national or Community registers come close to mirroring the enforceable marks.

<sup>12</sup> Ex Art. 50(1)(a) of Regulation 40/94; TM Dir., Art. 10(1). For the international standards limiting such powers, see Paris, Art. 5C; TRIPS, Art. 19.

... within the period of five years following the date of completion of the registration procedure it has not been put to genuine use in the United Kingdom, by the proprietor or with his consent, in relation to the goods or services for which it is registered, and there are no proper reasons for non-use. . .<sup>13</sup>

In order for a mark to be revoked under section 46(1)(a), it is necessary to show that, in the five-year period after registration, the mark has not been put to genuine use.<sup>14</sup> The fact that the non-use must be for a five-year period recognizes that the registrant should be given a reasonably lengthy period of time in which to arrange the use of the mark.

The second ground of revocation for non-use is found in section 46(1)(b). This states that a mark may also be revoked where 'use has been suspended for an uninterrupted period of five years, and there are no proper reasons for non-use'. In order for a mark to be revoked on this ground, it is necessary to show that use of the mark has been suspended for an uninterrupted period of five years.<sup>15</sup> The fact that the non-use must be for a five-year period recognizes that the goodwill built up from the use of a mark does not immediately disappear when the owner stops using the mark.<sup>16</sup>

A mark will not be revoked on the basis of non-use if use is commenced or resumed after the expiry of the five-year period and before the application for revocation is made.<sup>17</sup> Section 46(3) goes on to say, however, that the commencement or resumption of use is to be disregarded if it takes place 'within the period of three months before the making of the application'. This provision will not apply, however, 'where preparations for the commencement or resumption began before the proprietor became aware that the application might be made'. The three-month cut-off period operates to prevent trade mark proprietors who have not used the mark from defeating an application for revocation for non-use by (re)commencing use as soon as they get wind of the interest of the applicant. Thus applicants are theoretically able to write to the proprietor before they apply to have a mark revoked and ask whether there has been any use of the mark. In so doing, they will be safe in the knowledge that, although their inquiry may prompt the trade mark proprietor to use the mark, this will not defeat their application for non-use.

One question that has arisen is whether it was possible to register the same mark twice. If so, the further question arises: how does this impact on the five-year non-use rule? In *Origins Natural Resources v. Origin Clothing*,<sup>18</sup> the claimant, who had taken an assignment of a mark registered for various clothes in Class 25, applied to register the same mark for a wider range of clothes. The defendant argued that this should not be allowed because it would undermine the five-year non-use rule. Jacob J disagreed:

[I]f a man were to keep registering the same mark with no genuine intention of using it then he would lose his mark . . . If, on the other hand, a man had registered a mark with a bona fide intention to use it and found himself unable to use it for a number of years so that the mark was removable . . . but he still had genuine plans to use the mark then I see no reason why he should not apply again.<sup>19</sup>

<sup>13</sup> This has been interpreted as five years from the day after registration, so that the earliest date of revocation for a mark registered on 9 February 1999 was 10 February 2006: *Valent Biosciences Trade Mark* [2007] RPC (34) 829.

<sup>14</sup> TM Dir., Art. 12. On the issue as to whether the Directive defined the precise dates, see *Armin Häupl v. Lidl Stiftung & Co. KG*, Case C-246/05 [2007] ECR I-4673 (ECJ, Third Chamber).

<sup>15</sup> TMA 1994, s. 46.

<sup>16</sup> Note the corresponding rules in relation to passing off at pp. 837–8 above.

<sup>17</sup> TMA 1994, s. 46(3). But the Court of Justice has recognized that use after this period may be of relevance when assessing the extent to which use during the relevant period was genuine: *La Mer Technology Inc. v. Laboratoires Goëmar SA*, Case C-259/02 [2004] ECR I-1159 (ECJ, Third Chamber), [31].

<sup>18</sup> [1995] FSR 280.

<sup>19</sup> *Ibid.*, 284.

The Court of Justice has recognized that registering repeatedly merely to avoid the consequences of revocation for non-use could well be bad faith.<sup>20</sup>

## 2.2 WHAT IS USE OF THE MARK?

The next question to ask in relation to section 46(1)(a)–(b)/Article 50(1)(a) is what is meant by ‘use’ of the mark. One preliminary point to note is that not all uses of a trade mark that would infringe (if made by a third party) amount to use for the purposes of defending an application for revocation.

### 2.2.1 Use

The most obvious way in which a registered proprietor will be able to show use is by demonstrating sales of articles that are marked with the sign. Other uses, such as advertising, may also be sufficient (as long as they are in connection with the anticipated sale of products bearing or provision of services under the mark). Preparatory acts, such as gearing up a business to launch a product, are probably insufficient, at least if they are internal to the trade mark owner’s organization. Similarly, negotiations between businesses referring to possible licensing of a mark do not count as use of the mark for the purposes of section 46.<sup>21</sup> In *Ansul BV v. Ajax Brandbeveiliging BV*, the Court indicated that what is required is:

... use of the mark on the market for the goods or services protected by that mark and not just internal use by the undertaking concerned ... Use of the mark must therefore relate to goods or services already marketed or about to be marketed and for which preparations by the undertaking to secure customers are under way, particularly in the form of advertising campaigns.<sup>22</sup>

One interesting question that may need to be decided in due course is whether ‘oral use’ is relevant. Under section 103(2) of the Act, use is said to include ‘use ... otherwise than by means of a graphic representation’. This would suggest that oral use might suffice,<sup>23</sup> but in *Anheuser-Busch v. Bedejovicky Budvar*,<sup>24</sup> Deputy Judge Simon Thorley QC said that whether oral use by customers counts as use for section 46(1) ‘raised complex questions of trade mark law’.

### 2.2.2 Use as a trade mark

It seems that ‘use’ must be ‘as a trade mark’ in the sense of indicating trade origin of the goods or services in question. In *Animated Music Ltd’s Trade Mark*,<sup>25</sup> the UK Trade Marks Registry revoked the registration of the mark NELLIE THE ELEPHANT even though the proprietor had been able to show some use of the sign on brochures and invoices relating to the licensing of cartoons. The Registry found that the evidence was at best evidence of use of the sign as the title of the cartoon or name of the character, not use ‘as a trade mark’—that is, to indicate the trade origin of any of the services. It follows from the case

<sup>20</sup> *pelicantravel.com v. OHIM*, T 136/11 (13 December 2012) (GC, Fifth Chamber), [27].

<sup>21</sup> *Philosophy Inc v. Ferretti Studios* [2003] *RPC* (15) 287, 295–6, [18], [21] *per* Peter Gibson LJ. If this does count as use, it is not ‘genuine use’.

<sup>22</sup> *Ansul BV v. Ajax Brandbeveiliging BV*, Case C-40/01 [2003] *ECRI*–2439, [37].

<sup>23</sup> *Ensure Plus Trade Mark* (26 September 2002) (TM Registry), [39]; Kerly, [9–51].

<sup>24</sup> [2002] *RPC* (38) 748, [51]. See also *Second Skin Trade Mark* [2002] *ETMR* (CN3) 326 (TM Registry) (even if oral use would suffice, mere use by customers would not).

<sup>25</sup> [2004] *ETMR* (79) 1076.

law that use of marks to decorate products—or which would be understood (by the average consumer) in that way—will not amount to ‘genuine use’; similarly, use as a corporate name will not of itself justify maintenance of the mark.<sup>26</sup> Equally, evidence of use of a mark on the top of invoices, with addresses, etc. does not of itself prove genuine use.<sup>27</sup>

### 2.2.3 Use via associated marks

Trade mark owners might wish to modify their trade marks in accordance with changing fashions and styles. As long as the changes do not alter the distinctive character of the mark, the use of the modified mark will be recognized as use of the registered mark (unless the modified version is registered in its own right).<sup>28</sup> Section 46(2) explains that ‘use of a trade mark includes use in a form differing in elements which do not alter the distinctive character of the mark in the form in which it was registered’.<sup>29</sup> According to Lord Walker in *Anheuser-Busch v. Bedejovicky Budvar*,<sup>30</sup> it is for the tribunal first to ascertain the points of difference between the mark as used and the mark as registered. Having done this, the tribunal should then ask whether the differences alter the distinctive character of the mark as registered. The distinctive character in issue is what makes the mark ‘in some degree striking and memorable’, as judged from the point of view of the Registrar (rather than the average consumer), who is concerned with ‘the mark’s likely impact on the average consumer’.<sup>31</sup>

The question of whether a change to a mark alters the distinctive character of that mark is one of ‘first impression’ (and thus one that an appeal court should be reluctant to overturn).<sup>32</sup> Much will depend upon the type of mark (whether a word or device mark), the way in which the mark is typically used and understood (whether visually, aurally, or conceptually), and the way in which the mark is varied. To change the distinctive character of the mark, it is necessary to alter the identity or individuality of the mark.<sup>33</sup> In the case of short or simple marks, or marks with very little distinctive character, a slight modification may mean that use will not sustain the registration. So, for example, the (then) Court of First Instance (CFI) has held that the mark J. GIORGI was not used on invoices that bore the terms GIORGI, MISS GIORGI, or GIORGI LINE, because the distinctive character of the J. GIORGI mark was affected by such uses.<sup>34</sup> (‘Giorgi’ was viewed as a common name and so of low inherent distinctiveness.) In contrast, in the case of a word-and-device mark, substantial alteration to the device may have little impact if the average consumer sees the word as dominating the mark.<sup>35</sup> This was the case in the *Budweiser* case,<sup>36</sup> in which

<sup>26</sup> While use as a trade name is not necessarily use as a trade mark, certain uses of a trade name might be: *Céline SARL v. Céline SA*, Case C-17/06 [2007] ECR I-7041. See below p. 1049.

<sup>27</sup> *Orient Express Trade Mark* [1996] RPC 25, 42. In *Euromarket Designs Inc. v. Peters* [2000] ETMR 1025, [56], Jacob J stated that use as a shop name was not use in relation to goods.

<sup>28</sup> *Il Ponte Finanziaria SpA v. OHIM*, Case C-234/06 P [2007] ECR I-7333 (ECJ, Fourth Chamber), [86]. See further *Rintisch*, Case C-553/11 [2012] ECR I-0000, [21], [22].

<sup>30</sup> [2003] RPC (25) 477 (CA), 490, [41].

<sup>31</sup> *Ibid.* Sir Martin Nourse said that the Registrar’s failure to apply the right test would not have affected his view of the mark because the Registrar ‘would necessarily have to view the matter through the eyes of the average consumer’: *ibid.*, 483, [10].

<sup>32</sup> *Ibid.*

<sup>33</sup> The Court of Justice talks about ‘a slightly different form’: *Il Ponte Finanziaria*, Case C-234/06 P [2007] ECR I-7333 (ECJ, Fourth Chamber), [86].

<sup>34</sup> *Laboratorios RTB, SL v. OHIM*, T-156/01 [2003] ECR II-2789, [44]. See, to similar effect, *El Corte Inglés, SA v. OHIM*, T-39/10 (27 September 2012), (GC, Sixth Chamber) (E. TUCCI altered distinctive character of EMIDIO TUCCI), on appeal as Case C-578/12P.

<sup>35</sup> *J & F Participações SA v. OHIM/Plusfood Wrexham*, Case T-324/09 (17 February 2011) (GC, Sixth Chamber), [36] (addition of ribbon to registered word FRIBO did not alter distinctive character).

<sup>36</sup> *Anheuser-Busch v. Bedejovicky Budvar* [2003] RPC (25) 477 (CA).

a registration of BUDWEISER BUDBRÄU in a stylized form was successfully maintained by relying on use of the words in block capitals as a circular surround to a device consisting of a castle and shield.<sup>37</sup> Similar reasoning almost certainly explains the CFI's decision that variations in the style of QUANTIÈME (capitalization, modifying and underlining the 'Q') did not alter the distinctive character of the mark for watches.<sup>38</sup> If a mark includes a distinctive word or logo as its dominant element, additions or deletion of descriptive terms to a mark will not ordinarily affect the distinctive character.<sup>39</sup>

Under the 1938 Act, the UK tribunals were keen to prevent the maintenance of 'ghost marks', a technique used to provide indirect protection to non-registrable marks. This may occur where a person discovers that, for one reason or another, they cannot register the mark under which they wish to trade. One option in these circumstances is for the trader to trade under the unregistrable mark and, at the same time, attempt to register a similar mark. Based upon the fact that trade mark protection includes marks that are similar, the trader would hope to be able to use the registered mark indirectly to protect the mark under which they are actually trading. So, in one case in which it was impossible to register 'Huggers' as a mark for clothing (the term describing the closeness of fit) the trader registered HUGGARS. In due course, the question arose as to whether use of 'Huggers' could justify maintenance of the HUGGARS mark.<sup>40</sup> While noting that there was no phonetic distinction, Mummery J observed that, because much of the use of the mark was visual, it should be regarded primarily in such a context. Moreover, the concept suggested by the marks differed substantially, with 'Huggers' easily associated with clothing and HUGGARS less obviously so. Consequently, altering a single letter of a word was held to have substantially affected its identity, so that the HUGGARS mark was revoked.

Difficult questions have been raised about whether use of a mark in combination with other marks amounts to 'genuine use'. In *Rintisch*,<sup>41</sup> the Court of Justice has ruled that the mark PROTI had been used, even though the only use was PROTI-PLUS and the combination PROTI-PLUS was itself a registered mark. It is notable that the combination derived its distinctiveness primarily from its incorporation of the word PROTI. However, the Court has found there to have been use of a mark even in situations in which its use is combined with a distinctive sign that has itself been registered. Thus, in *Colloseum Holding*,<sup>42</sup> the Court held that there might be use of a registered mark comprising a red tab (to be position on the back pocket of jeans) even though the only examples of use of the tab were

<sup>37</sup> The Registrar accepted that the use of the words in this way was use of the mark in a form that did not alter its distinctive character, because the average consumer would view the graphic as use of the words (the underlining and different fonts not detracting from, or adding anything to, 'the central message'). In the Court of Appeal, Sir Martin Nourse observed that the Registrar had legitimately found that 'the words have a dominance which reduces to insignificance the other recognisable elements': *ibid.*, 483, [12]. Lord Walker, sitting in the Court of Appeal, said that if it had been for him to decide, he would have taken a view more like that of the judge than the Registrar—but since the Registry had not erred in principle, it was not for the High Court or the Court of Appeal to replace the Registrar's assessment with its own: *ibid.*, 491, [52]ff.

<sup>38</sup> *Devinlec Développement Innovations Leclerc SA v. OHIM*, T-147/03 [2006] ECR II-11, appealed on a different ground and aff'd as *T.I.M.E. ART v. OHIM*, Case C-171/06 P [2007] I-00041\*.

<sup>39</sup> *GfK v. OHIM and BUS*, T-135/04 [2005] ECR II-4865, [35]–[41]; *New Yorker SHK Jeans GmbH & Co. KG v. OHIM*, T-415/09 [2011] ECR II-366 (GC, Sixth Chamber), [63]–[64]; *Nirvana Trade Mark*, O/262/06 (18 September 2006) (AP, Arnold QC); *OAO Alfa-Bank v. alpha Bank AE* [2011] EWHC 2021 (Ch) (Briggs J).

<sup>40</sup> *Huggars Trade Mark* [1979] FSR 310. See also *Imperial v. Philip Morris* [1982] FSR 72 (registration of NERIT as a ghost mark for MERIT, an unregistrable, laudatory mark, was revoked for lack of a bona fide intent to use).

<sup>41</sup> *Bernhard Rintisch v. Klaus Eder*, Case C-553/11 (25 October 2012) (ECJ, Third Chamber).

<sup>42</sup> *Colloseum Holding AG v. Levi Strauss & Co.*, Case C-12/12 (18 April 2013) (ECJ, Fifth Chamber).

in tandem with the word LEVI'S, the word superimposed over the red flag. Likewise, the Court held that Specsavers' registered mark comprising two black intersecting ovals was used, even though the only use was of the mark with the words SPECSAVERS superimposed (see Fig. 38.1 at p. 980 above).<sup>43</sup>

These cases are, at first blush, difficult to square with the general rule that use of a mark that is different from the mark as registered counts as use of the latter mark only where the differences do not alter the distinctive character of the earlier mark. After all, the words LEVI'S and SPECSAVERS are themselves distinctive (as demonstrated by their registration, but also as evident from their use), and their addition must therefore have altered the distinctive character of the red flag or overlapping oval marks. However, the explanation appears to be that, despite the combination of the two marks physically (by superimposition of the words on the devices), both marks are regarded as retaining their distinctness to consumers, who view the combination as the use of two (or possibly three) individual marks: the word, the device, and the combination itself.

#### 2.2.4 Use by a licensee

According to section 46(1)(a)–(b)/Article 50(1)(a), the use must be by the proprietor or with *their consent*.<sup>44</sup> It will be for the proprietor of a mark to demonstrate consent, although a tribunal may infer this from the fact that the proprietor has evidence of use by a third party.<sup>45</sup> In *Hebrew University of Jerusalem v. Continental Shelf 128 Ltd (Einstein)*,<sup>46</sup> the applicant sought revocation of the mark EINSTEIN for clothing on the basis that it had not been used between 1999 and 2004. The proprietor provided a statement by a sales executive from a different company, Hornby Street Ltd, that it had used the mark on swing tags, sew-in labels, and invoices. Hornby Street Ltd was described as a sister company of the proprietor, but no further evidence of a connection was given. While the examiner accepted that the evidence established use, he held that the proprietor had not shown the use was *with its consent*. This was because, in his view, what was required was not mere consent, but some level of control. On appeal, the Appointed Person, Geoffrey Hobbs QC, conducted a thorough analysis of the history of the Trade Marks Directive to conclude that there was no requirement that the proprietor control the quality of the goods sold under the sign, so long as they have consented to the use—that is, that there existed an economic link between the proprietor and the user. Here, the common ownership of the two firms was sufficient.

### 2.3 GENUINE USE

For a mark to remain on the register, it is necessary to show that it has been put to genuine use in the United Kingdom (or, in the case of a Community mark, in the European Union). Two understandings of 'genuine use' have been employed in the case law.<sup>47</sup> According to the first understanding, any use that is not artificial, fictitious, or merely to retain the mark will suffice. In contrast, the second view, of 'genuineness' of use, demands real substantial use in the marketplace, such as to bring the mark to the attention of consumers.

<sup>43</sup> *Specsavers International Healthcare Ltd v. Asda Stores*, Case C-252/12 (18 July 2013) (ECJ, Third Chamber). See Fig. 38.1, p. 980 above.

<sup>44</sup> TM Dir., Art. 10(3); TRIPS, Art. 19(2); *Martin Y Paz Diffusion SA v. Depuydt*, Case C-661/11 (19 September 2013) (ECJ, Third Chamber), [AG64].

<sup>45</sup> *The Sunrider Corp. v. OHIM*, Case C-486/04P [2006] ECR I-4237.

<sup>46</sup> *Einstein Trade Mark* [2007] RPC (23) 539.

<sup>47</sup> L. Bently and R. Burrell, 'The Requirement of Trade Mark Use' (2002) 13 *AIPJ* 181.

Sometimes, these tests are articulated in terms of the subjective genuineness of the use (where the test is whether there was honest intent) and objective genuineness (where the test is ordinary commercial standards).<sup>48</sup> The key difference is that if the test is honest use, it can be *de minimis* (although it is also possible that substantial use in a trade mark protection programme might be disregarded); for objective genuineness, there must be substantial use (although what is 'substantial' will vary from sector to sector).

Despite a few decisions in which the 'objective' approach seems to have been taken by the General Court,<sup>49</sup> it is now clear that the Court of Justice has adopted a test that is much closer to the 'subjective approach'. In *Ansul BV v. Ajax Brandbeveiliging BV*,<sup>50</sup> Ansul had registered the mark MINIMAX in the Benelux countries in 1971 for fire extinguishers and associated products. However, it had not sold any extinguishers since 1989. Nevertheless, Ansul had sold component parts for the extinguishers, repaired and maintained them, and used the mark MINIMAX on invoices in relation to such services. A German company called Minimax GmbH had made and sold fire extinguishers, and had owned a German registration for MINIMAX for 50 years. In 1994, Ajax, a subsidiary of the German company, began to use the MINIMAX trade mark in the Netherlands. Ajax sought revocation of Ansul's 1971 registration and Ansul sought an injunction against Ajax to prevent it from using the MINIMAX mark in the Benelux countries. The outcome of the case depended on whether Ansul's mark had been put to genuine use in the period after 1989, when it had been used in relation to components and repairs. The referring court wanted to know whether this could be a genuine use.

The Court of Justice stated that the notion of genuine use required a uniform interpretation throughout the Community. It said that token use, serving solely to attempt to preserve rights, was not genuine use.<sup>51</sup> Genuine use must be consistent with the essential function of a trade mark, to guarantee the identity of the origin of goods or services to the consumer. It concluded that such use required:

. . . use of the mark on the market for the goods or services protected by that mark and not just internal use by the undertaking concerned . . . Use of the mark must therefore relate to goods or services already marketed or about to be marketed and for which preparations by the undertaking to secure customers are under way, particularly in the form of advertising campaigns.<sup>52</sup>

Moreover, the Court observed that, when assessing whether use was genuine, it was necessary to take account of all of the facts and circumstances to decide whether 'the commercial exploitation of the mark is real, in particular whether such use is warranted in the economic sector concerned to maintain or create a share in the market for the goods or services protected by the mark'.<sup>53</sup> Use of a mark need not always be quantitatively significant for it to be genuine. Finally, the Court indicated that use in relation to components or after-sales services could be use that 'related to' goods, even though the goods for which the mark was registered were no longer being sold. The Court declined to say anything about the specific case between Ansul and Ajax, pointing out that this was a matter for the national courts.

Although some aspects of the Court's judgment are a little vague, further clarification was offered in response to a reference from the United Kingdom. In *Re Laboratories*

<sup>48</sup> *Gerber Trade Marks* [2003] RPC (34) 637, 641 *per* Auld LJ (a 1938 Act case).

<sup>49</sup> *Harrison v. Kabushiki Kaisha Fernandes*, T-39/01 [2002] ECR II-5233; *Jean M. Goulbourn v. OHIM*, T-174/01 [2003] ECR II-789; *RTB v. OHIM*, T-156/01 [2003] ECR II-2789. All three cases were concerned with CTMR, Art. 42(2) (then Art. 43(2) of Regulation 40/94).

<sup>50</sup> Case C-40/01 [2003] ECR I-2439. <sup>51</sup> *Ibid.*, [36]. <sup>52</sup> *Ibid.*, [37].

<sup>53</sup> *Ibid.*, [38].

*Goëmar SA*,<sup>54</sup> the question was whether there was ‘genuine use’ sufficient to resist a section 46 revocation of the sign *LABORATOIRE DE LA MER* for cosmetics containing marine products. The proprietor was a small French company specializing in seaweed products and the applicant for revocation, Huber Laboratories, intended to launch a huge range of skincare products under the *LA MER* name. The proprietor had made sales worth only £800 to a Scottish agent. There was no suggestion that the use by *Goëmar* was ‘token’—that is, merely for the purpose of maintaining the mark on the register. Jacob J referred a number of issues to the Court of Justice.

The Court responded that even minimal use (not quantitatively significant) can qualify as genuine, ‘on condition that it is deemed to be justified, in the economic sector concerned, for the purpose of preserving or creating market share for the goods or services protected by the mark’.<sup>55</sup> That requires an assessment by the national court, on the facts in front of it. In certain cases, the criterion might be met by use of a mark by a single client, but it would have to appear that the operation had ‘a genuine commercial justification for the proprietor of the mark’. However, the need for such an assessment on the facts precludes any *a priori*, abstract, quantitative threshold.

Armed with the advice of the Court of Justice, Blackburne J held that the sales were not sufficient to constitute genuine use.<sup>56</sup> However, on appeal, the Court of Appeal reversed.<sup>57</sup> The Court said that the use could not be considered ‘internal’: the Scottish agent was an independent entity and not, for example, a subsidiary of *Goëmar*. *Goëmar* was genuinely trying to sell its goods—that is, to gain a share in the market; the fact that it had not been particularly successful and that the goods had not reached the attention of consumers was irrelevant. It was enough that there was a genuine attempt to sell goods bearing the mark. The Court of Appeal warned that any other approach would have amounted to setting a quantitative threshold (contrary to the Court of Justice’s view). Neuberger LJ (now Lord Neuberger) indicated that an approach that required the courts and offices to assess whether use was substantial would be difficult, expensive, and time-consuming to apply.<sup>58</sup>

The Court of Justice had stated that genuine use requires use that is warranted in the marketplace to maintain or establish market share. This criterion, which requires the assessor to take account of the kind of goods concerned and not to decide mechanically by reference to predetermined percentages, could easily have been understood as requiring some substantial presence. In contrast, the Court of Appeal has interpreted *Ansul* and *Goëmar* as merely requiring use as a trade mark that is neither token nor purely internal. This position had already been advocated by the Appointed Person and the Irish Patents Office,<sup>59</sup> and it looks likely to remain the standard at least for the foreseeable future.<sup>60</sup> However, one might doubt whether the judicial selection of a test that is easy to apply over one that requires the proprietor to prove a substantial presence in the marketplace is the right one from a policy perspective. After all, a trade mark proprietor is given a five-year period of exclusivity in which to establish usage. If the proprietor cannot show that it has

<sup>59</sup> *Police Trade Mark* [2004] RPC (35) 693 (Arnold QC); *Stefcom SPA’s Trade Mark; Application for Revocation by Travel Hurry Projects Ltd* [2005] ETMR (82) 960.

<sup>60</sup> See also *MFE Marienfelde GmbH v. OHIM*, T-334/01 [2004] ECR II-2787; *La Mer Technology, Inc. v. OHIM*, T-418/03 [2007] ECR II-125, in which the CFI viewed minimal use as sufficient in relation to the relevant goods.

made an impression on the market by then, ought they really be allowed to retain their registration?<sup>61</sup>

The Court has held that promotional use will not be ‘genuine use’.<sup>62</sup> Thus where the mark WELLNESS had been registered for clothing and non-alcoholic drinks, but the only occasion on which it had been used for drinks was as a promotional gift when WELLNESS clothing was sold, the Court indicated that there was no genuine use in relation to drinks. This was because the use was not ‘to create or preserve an outlet for’ drinks.<sup>63</sup> In so holding, the Court emphasized that, given the number of marks and potential conflicts, it was ‘essential’ to main the rights only where the mark has been used on the market for the relevant goods or services.<sup>64</sup>

#### 2.4 USE IN RELATION TO THE GOODS OR SERVICES FOR WHICH THE MARK IS REGISTERED

To ensure that a mark is not revoked because of non-use, the mark must be used in relation to *the* goods or services for which the mark is registered.<sup>65</sup> In general, therefore, use in relation to similar goods is *not* use in relation to the goods for which the mark is registered. However, it seem there may be use *in relation to* the goods or services for which the mark is registered, when the proprietor applies the marks either on parts to be used in the repair of the goods for which the sign is registered, or in connection with services involving repair or maintenance of the goods.<sup>66</sup>

A related problem arises if a proprietor uses the registered mark on promotional goods such as T-shirts: does this amount to use *in relation to* T-shirts or only in relation to the goods that are being promoted? This is probably a question of fact, the answer being dependent on how the average consumer would perceive the use.<sup>67</sup> It should be observed, however, that such use could be seen as both use in relation to T-shirts *and* the goods promoted on the shirt. In *Premier Brands UK v. Typhoon Europe*,<sup>68</sup> the proprietor of the TYPHOO mark for domestic utensils and containers resisted revocation by claiming that it had used the mark on tea canisters, biscuit barrels, etc. Neuberger J said that although the public would understand the use as promoting TYPHOO tea, it did not follow that the public would not *also* assume that the goods had been marketed by or with the approval of the makers of TYPHOO tea.

#### 2.5 PLACE OF USE

In relation to British marks, the relevant use must take place in the United Kingdom. An advertisement released in a foreign jurisdiction may also constitute use, so long as the

<sup>61</sup> See Kerly, 353, [10–058]; cf. the concept of signs of more than ‘local significance’, where the Court has required some evidence of impact on the market: Chapter 38, pp. 1012–13.

<sup>62</sup> *Silberquelle*, Case C-495/07 [2009] ECR I–137, [20]–[22].

<sup>63</sup> *Ibid.*, [18]. But cf. *Antartica Srl v. OHIM*, C-320/07 P [2009] ECR I–28\* (ECJ, First Chamber), [28]–[30] (on non-profit-making uses).

<sup>64</sup> *Silberquelle*, Case C-495/07 [2009] ECR I–137, [19], referring with approval to Advocate-General’s description of unused trade marks as ‘corpses’ and the goal of preventing trade mark offices becoming ‘cemetaries’: *ibid.*, [AG45], [AG55].

<sup>65</sup> TMA 1994, s. 45(1)(a); TMD, Art. 10; CTMR, Art. 15(1).  
<sup>66</sup> *Ansul v. Ajax*, Case C-40/01 [2003] ECR I–2439, [41]–[42]. This perhaps reflects an inclination to interpret the requirement of use more generously in relation to marks that have been used and retain residual goodwill than to marks for which a substantial goodwill has never been established.

<sup>67</sup> *Young v. Medici* [2004] FSR (19) 383, [3] *per* Jacob J (no use for boxes and packaging by selling trade marked goods in packaging).

<sup>68</sup> [2000] FSR 767. See also *Elle Trade Marks* [1997] FSR 529.

advertisement is available in the United Kingdom. For example, in *Elle Trade Marks*,<sup>69</sup> the proprietor of the mark ELLE for soap and perfume sought to rely on the fact that soaps and other cosmetics branded with ELLE had been offered for sale in the French edition of a well-known woman's magazine, of which the appellant was also proprietor. It was accepted that the French edition was sold in the United Kingdom and that it contained an advertisement for ELLE soap, which could be obtained by readers in Britain either by going to Paris or by ordering it by phone. Although there was no evidence of actual sale, Lloyd J held that this was a genuine use within the relevant class of goods. In contrast, mere use on an Internet site is not use in the United Kingdom: as the Registrar, Mr Salthouse, has said, were the position to be otherwise, 'the simple creation of a website would provide use in every country in the world on the basis that it could be accessed globally'.<sup>70</sup> It seems that, in such cases, what is required is evidence of a site targeting customers in the United Kingdom.<sup>71</sup>

A special provision of a trade mark includes situations in which the mark is affixed to goods or to the packaging of goods in the United Kingdom solely for export.<sup>72</sup> This has been interpreted broadly as including the situation in which the proprietor attaches the mark to goods in the United Kingdom and transfers them to a foreign subsidiary, rather than only circumstances in which export is made to an independent business abroad.<sup>73</sup> If this is right, the provision must be understood as an exception to the general requirement that the use be other than internal to the proprietor's organization.

In relation to Community marks, the relevant use must be in the European Union.<sup>74</sup> It was unclear for some time whether this required use in more than one country: Council and Commission Minutes had suggested that use in one country would suffice,<sup>75</sup> and case law at the Office of Harmonization in the Internal Market (OHIM) had ruled accordingly.<sup>76</sup> However, leading commentators had questioned whether this should be followed.<sup>77</sup> Indeed, the provision in Article 112(2)(a) CTMR, which allows for conversion of a revoked Community mark into marks operative in member states in which use has occurred, seems to imply that use in one member state would not suffice. In *Leno Marken*,<sup>78</sup> the Court rejected the 'one state' solution—that is, the view that use in one state was necessarily sufficient. In this case, Hagelkruis applied to the Benelux trade mark office to register OMEL for advertising and marketing services. The application was opposed by Leno Marken on the basis of a Community trade mark registration for ONEL, also for services in Class 35. It was accepted that there was a likelihood of confusion, but the opponent had demonstrated that it had used ONEL only in the Netherlands. The question arose whether this was sufficient to maintain a Community mark (under Article 15 CTMR). The Court

<sup>77</sup> C. Gielen, 'Genuine Use of Community Trade Mark: Where?' [2011] EIPR 40.

<sup>78</sup> *Leno Marken v. Hagelkruis Beheer B.V.*, Case C-149/11 (19 December 2012) (ECJ, Second Chamber).

indicated that the Minutes were non-binding<sup>79</sup> and that the question of whether there was genuine use in the European Union was to be assessed without reference to the territorial borders of member states.<sup>80</sup> The question is whether there has been use to maintain or create a market share in the EU market for those goods or services (which might require more use than to create or maintain a share in the national market).<sup>81</sup> Although the geographical extent of use was one factor in the assessment of whether there had been genuine use ‘in the Community’,<sup>82</sup> it could neither be categorically stated that use in a single state was (or was not) sufficient.<sup>83</sup> Not insignificantly, however, the Court rejected submissions, based on the analogous question of the location of marks with a reputation for the extended protection afforded against dilution,<sup>84</sup> to the effect that the use must be in a ‘substantial part’ of the Community.<sup>85</sup> The Advocate-General gave what she called a ‘slightly light-hearted example’:

[A] successful vendor of deep-fried chocolate bars in Scotland might formulate a marketing plan to expand his business into France, Italy, Estonia and Hungary. To that end, he registers an appropriate Community trade mark. Despite his best commercial endeavours, the plan proves ill-conceived: unaccountably, consumers in those Member States appear wedded to their own national culinary delicacies and unwilling to be tempted by the new offering. The lack of commercial success would not affect the analysis of whether there had been genuine use of the mark. By contrast, the fact that demand for a particular product in question was concentrated, at a particular point, in a specific geographical area would be relevant to the assessment.<sup>86</sup>

In the example, there would probably be genuine use ‘in the Community’, because the European market for deep-fried chocolate bars is limited to Scotland.

## 2.6 PROPER REASONS FOR NON-USE

Section 46(1)(a)–(b) of the 1994 Act and Article 50(1)(a) CTMR provide that failure to use a mark will not affect the fate of the mark if there are ‘proper reasons for non-use’.<sup>87</sup> The Court of Justice has interpreted this in a manner that makes it difficult for a proprietor to rely on. *Armin Häupl v. Lidl Stiftung & Co. KG*<sup>88</sup> concerned an Austrian mark, LE CHEF DE CUISINE, owned by the German supermarket chain Lidl. Lidl had faced bureaucratic obstacles in opening its supermarkets in Austria and, after five years had elapsed, Häupl sought revocation. In response to various questions from the Austrian Supreme Patent and Trade Mark Adjudication Tribunal, the Court of Justice indicated that, in order to rely on the proviso, a proprietor would need to demonstrate that (i) the obstacle arose independently of the will of the proprietor, (ii) there is a direct relationship between the obstacle and the failure to use the trade mark, and (iii) the obstacle is such as to make the use of the mark impossible or unreasonable. We examine each element in turn.

<sup>79</sup> Ibid., [45]–[47].      <sup>80</sup> Ibid., [44], [AG48].      <sup>81</sup> Ibid., [AG50].      <sup>82</sup> Ibid., [56].

<sup>83</sup> Ibid., [50]. As Advocate-General Sharpston explained, ‘if the national court finds, for example, that the internal market for the services covered by “ONEL” is particularly concentrated in the Netherlands and possibly in surrounding areas, use of the mark in only the Netherlands may be given particular weight’: *ibid.*, [AG57].

<sup>84</sup> On which, see Chapter 38, p. 998.

<sup>85</sup> *Leno Marken v. Hagelkruis Beheer B.V.*, Case C-149/11 (19 December 2012) (ECJ, Second Chamber), [53].

<sup>86</sup> *Ibid.*, [AG50, n. 31].

<sup>87</sup> Under the 1938 Act, a similar exclusion was made where non-use was attributable to ‘special circumstances in the trade’.

<sup>88</sup> Case C-246/05 [2007] ECR I-4673 (ECJ, Third Chamber).

### 2.6.1 Circumstances arising independently of the will of the proprietor

The Court of Justice interpreted the notion of ‘proper reasons’ in the light of Article 19 of the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS).<sup>89</sup> This states that ‘[c]ircumstances arising independently of the will of the owner of the trademark which constitute an obstacle to the use of the trademark . . . shall be recognised as valid reasons for non-use’. While Article 19 tells a tribunal about certain circumstances that shall be treated as ‘proper reasons for non-use’, the Court of Justice has gone further than this, indicating that these are the only reasons that will be regarded as proper.<sup>90</sup>

The idea of an obstacle arising ‘independently of the will of the proprietor’ is capable of being interpreted more or less broadly. It could be taken to refer only to matters wholly outside the proprietor’s control, or more broadly to cover all matters that the proprietor has not ‘willed’. While classic examples of such obstacles are ‘import restrictions or other government requirements’,<sup>91</sup> it is not obvious that one would say that other circumstances, such as a lack of resources, financial problems, lack of staff, marketing problems, or difficulties in perfecting technology, are ones that a proprietor ‘wills’. Probably, however, the tribunals will continue to apply similar standards to those that were applicable before the *Häupl* judgment. Accordingly, these latter kinds of difficulty are regarded as not being ‘independent of the will of the proprietor’ because they are matters that are ‘within the businessman’s own control’, for which the businessperson should plan accordingly.<sup>92</sup> The General Court has stated that:

[T]he concept of proper reasons . . . must be considered to refer essentially to circumstances unconnected with the trade mark owner which prohibit him from using the mark, rather than to circumstances associated with the commercial difficulties he is experiencing.<sup>93</sup>

### 2.6.2 A sufficiently direct relationship between the obstacle and the mark

For the ‘proper reasons’ proviso to operate, the Court of Justice requires there to be a direct relationship between the obstacle and the use of the mark. Bureaucratic obstacles in gaining building permits for supermarkets, it is implied by the Court in *Häupl*, did not have a sufficiently direct relationship with the use of the mark LE CHEF DE CUISINE on foodstuffs (the goods or services for which it is registered).<sup>94</sup> In contrast, a sufficiently direct relationship would exist, for example, if use of a particular name for the goods were dependent on obtaining authorization from a regulatory authority (such as the European Medicines Evaluation Agency). If the concept of obstacles arising ‘independently of the

<sup>89</sup> TRIPS, Art. 19, in full, reads:

Circumstances arising independently of the will of the owner of the trademark which constitute an obstacle to the use of the trademark, such as import restrictions or other government requirements for goods or services protected by the trademark, shall be recognised as valid reasons for non-use.

<sup>90</sup> *Häupl v. Lidl*, Case C-246/05 [2007] ECR I-4673 (ECJ, Third Chamber).

<sup>91</sup> TRIPS, Art. 19; *Invermont Trade Mark* [1997] RPC 125, 130 (non-use said to be justified under the 1994 Act to include ‘delays occasioned by some unavoidable regulatory requirement, such as the approval of a medicine’). External obstacles to use need not be ones imposed by the state. The UK Registry held that there were proper reasons for non-use of Team Lotus where the proprietor had applied for, but been refused, entry to Formula 1 racing: *Team Lotus Trade Mark* (29 May 2003) (TM Registry).

<sup>92</sup> *Invermont Trade Mark* [1997] RPC 125; *Philosophy v. Ferretti* [2003] RPC (15) 287 (CA), 298, [25].

<sup>93</sup> *RTB v. OHIM*, T-156/01 [2003] ECR II-2789, [41].

<sup>94</sup> *Häupl v. Lidl*, Case C-246/05 [2007] ECR I-4673 (ECJ, Third Chamber), [52].

will' is interpreted broadly to include matters such as lack of resources or financial problems, there is probably an insufficient connection between these circumstances and the use of a specific mark on specific goods for these to ever count as a proper reason for non-use.<sup>95</sup>

### 2.6.3 Rendering use impossible or unreasonable

The Court of Justice has noted that many circumstances arising independently of the will of the owner should only hinder preparation for use of the mark rather than prevent its use. As a consequence, these will not suffice to justify non-use and bring the proprietor within the proviso. To do this, the obstacle should make the use of the mark impossible or at least unreasonable. The Court has said that, where an obstacle seriously jeopardizes 'the appropriate use of the mark, its proprietor cannot reasonably be required to use it nonetheless'.<sup>96</sup>

Cases of 'impossibility' will be rare. In most cases, the question will be whether the obstacle is one to which the trade mark proprietor should respond flexibly to ensure that the mark is used (or lose it), or one that justifies retention of the mark until the impediment evaporates. This will be a fact-specific inquiry.<sup>97</sup> The tribunal can examine the proprietor's existing corporate strategy (and the amount invested in it), any goodwill already achieved by the proprietor, the likely duration of the obstacle,<sup>98</sup> alternative strategies available to the owner (such as using the mark in a different form),<sup>99</sup> or licensing others to use the mark. The Court of Justice has stated that 'the proprietor cannot reasonably be required to sell its goods in the sales outlets of its competitors'.<sup>100</sup> In one UK case, it was held that non-use of a mark for cigarettes was not justified where health regulations merely limited the tar content of cigarettes, because such regulations did not prevent use of the mark on cigarettes in general.<sup>101</sup> In another case, the court found that failure to perfect the technology for manufacturing certain sweets was a proper reason for non-use of the mark *MAGIC BALL*.<sup>102</sup> Both cases were pre-*Häupl*, and now careful consideration is required as to whether it would be reasonable to require the proprietor in either case to have used the mark *K-2* on low-tar cigarettes or *MAGIC BALL* on other confectionery.

Proper reasons for non-use may pertain, of course, to only a part of the specification. In such a case, a tribunal may permit the registration to be maintained for those goods or services in relation to which non-use was justified. For example, in the *Team Lotus* case,<sup>103</sup> the proprietor's registration was for 'advertising services in Class 35', but its efforts had (unsuccessfully) been directed towards gaining entry for its team to the Formula 1 motorsport championships: if successful, advertising activities would have followed as a matter of course. The UK Trade Marks Registry accepted that the peculiar barriers were a proper reason for non-use in relation to advertising in connection with Formula 1, although they would not have justified non-use for advertising in general or advertising related to motorsport. The Registry allowed maintenance of the mark, but only in relation to advertising services included in Class 35, 'all relating to Formula One motor racing'.

<sup>95</sup> *Anglian Mode Trade Mark SRIS*, O/181/00 (19 May 2000) (economic downturns, etc., 'do not constitute a proper reason for non-use of a trade mark over an extended period of time').

<sup>96</sup> *Häupl v. Lidl*, Case C-246/05 [2007] ECR I-4673 (ECJ, Third Chamber), [53]. <sup>97</sup> *Ibid.*, [54].

<sup>98</sup> If obstacles continue indefinitely (as with the US trade embargo on Cuba, which was first imposed in 1962), they come to be 'the normal conditions in the trade': *Cabanas Habana* [2000] RPC 26, 33.

<sup>99</sup> *Ibid.*, 33 (where use of the mark in a modified form, by removing the word *HABANA*, was treated as relevant).

<sup>100</sup> *Häupl v. Lidl*, Case C-246/05 [2007] ECR I-4673 (ECJ, Third Chamber), [53].

<sup>101</sup> *K-2 Trade Mark* [2000] RPC 413, 421.

<sup>102</sup> *Magic Ball Trade Mark* [2000] RPC 439 (Park J).

<sup>103</sup> *Team Lotus Trade Mark* (29 May 2003).

## 2.7 REWRITING THE SPECIFICATION

More difficult questions arise where the proprietor can demonstrate use (or proper reasons for non-use) for only part of the goods or services of the specification. If the Registry is to limit the scope of the registration, there arise issues of characterization of the goods for which the sign has actually been used. In many cases, this should be straightforward, for example there may be a registration for clothing and drinks, but only use in relation to drinks, so the mark will be struck off for clothing. But what if there is a registration for alcoholic drinks, but use only in relation to whisky? Should the specification be rewritten? Should it limit the party to whisky? Or to malt whisky? Or to Scottish single malt whisky? The question is significant, not least because the specification defines the core of the trade mark owner's rights with respect to which, if any, use of an identical mark is prohibited (without any need to establish likelihood of confusion).

This problem initially prompted a division of opinion among the intellectual property judges at the High Court of England and Wales, some being willing to rewrite the specification,<sup>104</sup> while others were prepared only to eliminate items from the proprietor's existing list.<sup>105</sup> In *Thomson Holidays v. Norwegian Cruise Line*,<sup>106</sup> the Court of Appeal expressed its approval of the former approach. In that case, the proprietor's mark was FREESTYLE for arrangement and booking of travel tours and cruises. It had used the mark only in relation to package holidays for young groups (akin to 18–30 holidays), although some holidays included skiing. Aldous LJ held that it was for the court or tribunal to look at the actual use by the proprietor and to arrive at a 'fair specification' having regard to that use. In determining what was fair, the tribunal should 'limit the specification so that it reflects the circumstances of the particular trade and the way the public would perceive the use'.<sup>107</sup> One useful approach is to ask how the average consumer would describe the proprietor's use. In the particular case, Aldous LJ rejected suggestions that the proprietor's use would be described as 'land-based holidays', or 'holidays excluding cruises', and decided to limit the specification to 'package holidays'.<sup>108</sup>

The CFI, in *Reckitt Benckiser*,<sup>109</sup> took a rather different approach. In this case, an opposition was based on a registration of the mark ALADDIN for 'polish for metals', but the opponent was able to prove use only in relation to 'magic cotton'—that is, cotton impregnated with a polishing agent. The Court considered what was the breadth of a specification that would correspond to such use, distinguishing between 'coherent categories' and 'subcategories', which 'cannot be divided other than in an arbitrary manner'.<sup>110</sup> If use is demonstrated in relation to one commercial variant in a subcategory that cannot be divided other than arbitrarily, that use justifies retention of the trade mark for the subcategory itself. In making this assessment, the CFI paid particular regard to the categories

<sup>104</sup> *Daimler v. Alavi* [2001] RPC 813; *Decon Laboratories Ltd v. Fred Baker Scientific Ltd* [2001] RPC 17 (Pumfrey J); *Minerva Trade Mark* [2000] FSR 734 (Jacob J).

Red Legal* [2012] EWPC 54; *Assos of Switzerland v. Asos plc* [2013] EWHC 2831 (Ch), [50], [62] *per* Rose J.

<sup>109</sup> T-126/03 [2005] ECR II–2861 (CFI, Fourth Chamber). See also *Mundipharma AG v. OHIM*, T-256/04 [2007] ECR II–449 (CFI, Second Chamber).

<sup>110</sup> T-126/03 [2005] ECR II–2861 (CFI, Fourth Chamber), [45]–[46].

and subcategories of the Nice Agreement, concluding that ‘polish for metals’ was a ‘particularly precise and narrowly defined subcategory’ of the Nice System of Classification, which mentioned ‘cleaning, polishing, scouring and abrasive preparations’. Consequently, there was no justification for defining it further, by reference to the use of impregnated cotton. One might question whether the CFI is correct in relying on Nice in this way. While the United Kingdom’s Appointed Person has adopted some of the concepts deployed by the CFI<sup>111</sup> and the different approaches will rarely, if ever, affect the outcome,<sup>112</sup> we prefer the approach of the English Court of Appeal, which utilizes the ‘average consumer’, to one that treats the Nice categories as representing some universal logic.<sup>113</sup>

### 3 GENERIC MARKS

The second reason why a mark may be revoked is because it has become generic—that is, it may have come to designate a genus or type of product rather than a particular product from a particular source.<sup>114</sup> As section 46(1)(c)/Article 50(1)(b) says, a mark may be revoked on the ground ‘that in consequence of the acts or inactivity of the proprietor, it has become the common name in the trade for a product or service for which it is registered’. Examples of marks that have become generic include GRAMOPHONE<sup>115</sup> and SHREDDED WHEAT.<sup>116</sup>

It has been argued that the revocation of generic marks is not justifiable. For example, Pendleton has suggested that the arguments for expunging generic marks seem ‘weak but rarely examined’.<sup>117</sup> Moreover, he argues that the rule is ‘an open invitation to commercial sharp practice through campaigns by a competitor to render a successful mark generic’.<sup>118</sup> In contrast, others have suggested that while the arguments for the revocation of generic trade marks may not have been articulated well, consumers and competitors would be harmed if generic marks were allowed to stay on the register.<sup>119</sup> This is because, where a mark has become generic, it loses its capacity to distinguish one trader’s goods or services from those of another.

The harm to consumers lies in the possible responses that a seller would give if consumers were to ask for the trade marked product by its generic name. If consumers are offered only the trade mark owner’s version of the product, consumers are not being offered the full range of prices, qualities, etc. that are available.

Another problem that arises where a mark becomes generic is that competitors are not legally able to use the term that most consumers use to refer to the product. While

<sup>111</sup> *WISI Trade Mark* [2006] RPC (22) 580 (AP, Hobbs QC), 584–7 (fair protection is to be achieved by identifying the categories of goods that the particular examples should realistically be taken to represent); *Datasphere Trade Mark* [2006] RPC (23) 590 (AP, Hobbs QC).

<sup>112</sup> *Pan World Brands v. Tripp (Extreme Trade Mark)* [2008] RPC (2) 21 (AP, Arnold QC), [54]; *Redd Solicitors v. Red Legal* [2012] EWPC 54.

<sup>113</sup> The Agreement is designed for administrative classification, rather than defining property rights: see pp. 891–2. See also Kerly, 366, [10–104]. Ultimately, a reference will be required: *ibid.*, 368, [10–110].

<sup>114</sup> TM Dir., Art. 12(2)(a). See *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 (12 September 2013) (AG Cruz Villalón), [AG40]–[AG46] (explaining that genericism relates to loss of the ‘origin’ function, and it is irrelevant whether consumers continue to understand a designation as referring to a particular quality in the product), (6 March 2014) (ECJ, Third Chamber), [19]–[23] (also relating genericism to loss of ‘origin’ function).

<sup>115</sup> [1910] 2 Ch 423. <sup>116</sup> (1940) 57 RPC 137.

<sup>118</sup> *Ibid.*, 116.

<sup>119</sup> R. Folsom and L. Teply, ‘Trademarked Generic Words’ (1980) 89 *Yale LJ* 1323, 1326.

competitors may be able to develop alternative names for the product, explain the situation to the consumer, or take licences from the trade mark holder, these are potentially ineffective and costly.<sup>120</sup>

### 3.1 NAME

For a mark to be revoked on the basis that it has become generic, it is necessary to show that it has become the common *name* in the trade for a product or service for which it is registered.<sup>121</sup> Although marks that become generic are often name marks, the restriction of the scope of section 46(1)(c)/Article 50(1)(b) to ‘names’ seems unnecessary and unsatisfactory. This is because it is possible to imagine situations in which what is generic does not involve words, for example the initially arbitrary use of a certain colour on a pharmaceutical, which may come to be taken as indicating its nature, or the shape of a bottle, which may come to be taken as indicating the type of contents, or (through the standardization of technology) aspects of computer-user interfaces, such as icons. In fact, a recent reference to the Court of Justice concerned the potential for the stitching on the pockets of denim jeans to be seen as generic—although no point seems to have been raised about whether such a sign could sensibly be described as a ‘name’.<sup>122</sup> In these cases, the same policy concerns exist as with words and revocation should be available. Hopefully, therefore, the Court of Justice will offer a broad construction of the clause (as its case law has done with other aspects of this ground of revocation).

### 3.2 COMMON IN THE ‘TRADE’

The wording of section 46(1)(c)/Article 50(1)(b) suggests that the name must have become common in the *trade*, rather than amongst the public. Numerous examples show that this is an important distinction, because trade mark owners, by aggressive policing, can ensure that traders continue to appreciate the trade mark significance of signs (such as GRAMOPHONE or ASPIRIN) even though consumers have come to see them as generic. However, in *Björnkulla v. Procordia*,<sup>123</sup> the Court of Justice held that, in most cases, the assessment was to be undertaken from the point of view of the consumer. The case concerned the mark BÖSTONGURKA registered in Sweden by Procordia for pickled gherkins. Evidence before the Swedish courts showed that consumers saw the sign as descriptive of the goods, but traders (grocers and stall holders) appreciated that it indicated the gherkins of a particular manufacturer, Procordia. The Court stated that both Articles 3 and 12 of the Trade Marks Directive reflected the need for a mark to perform the function of indicating origin in order to be placed on, or be permitted to remain on, the register.<sup>124</sup>

<sup>120</sup> Folsom and Teply argue that the question of whether a mark is generic should be decided by reference to any harm that may be caused. On this basis, the question would be whether ‘the challenged mark substantially increases ultimate consumer search costs or raises real entry barriers to new firms’: *ibid.*, 1352.

<sup>121</sup> Although the statutory text refers to the sign becoming *the* common name in the trade, it has been held to suffice if it has become *a* common name for the goods: *Hormel Foods Corp. v. Antilles Landscape Investment NV* [2005] RPC (28) 657, 700, [167].

<sup>122</sup> *Levi Strauss & Co. v. Casucci SpA*, Case C-145/05 [2006] ECR I-3703; cf. *Julius Sämaan Ltd v. Tetrosyl Ltd* [2006] FSR (42) 849, [113] *per* Kitchin J.

<sup>123</sup> *Björnekulla Fruktindustrier Aktiebolag v. Procodia Food Aktiebolag*, Case C-371/02 [2004] ECR I-5791. See also *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 (6 March 2014) (ECJ, Third Chamber).

<sup>124</sup> In so doing, the Court in *Björnekulla* implicitly suggests that it is appropriate to adopt a broad reading of this ground for revocation, so that it potentially encompasses any situation in which a sign has lost its

The Court thus held that the matter should normally be interpreted from the viewpoint of consumers or end-users rather than those in the trade.<sup>125</sup> Nevertheless, as ever fearful of laying down categorical rules, the Court provided for the possibility of exceptional situations in which ‘features of the product market’ meant that traders’ perceptions of the trade mark must also be considered.<sup>126</sup> Although it did not provide any examples, one circumstance in which this might be the case is in relation to prescription pharmaceuticals, where the influence of medical professionals on the choice of drug could make them the relevant class when assessing whether the trade mark for a drug has become generic.<sup>127</sup>

### 3.3 REQUIREMENT OF FAULT

Even if a mark has become the common name in the trade for a product or service for which it is registered, the mark will be revoked only if it has become generic as ‘a consequence of the acts or inactivity’ of the proprietor. The Court of Justice has referred to this as a ‘requirement of vigilant conduct’.<sup>128</sup> This requirement means that the proprietor must not only abstain from using a mark in a way that causes it to become generic (for example using the mark as a description of the product in their own advertising or labelling), but must also take action to ensure that other operators do not jeopardize the distinctiveness of the mark, for example by bringing infringement proceedings.<sup>129</sup> Beyond bringing infringement actions against traders, the exact steps that owners need to take are less clear. The CTMR provides the trade mark owner with an express power to have the trade mark status of certain words recognized in dictionaries and encyclopaedias, although there is no corresponding provision in UK law (and it seems doubtful whether such use would fall within current understandings of infringement).<sup>130</sup> There are, of course, non-legal steps that a trader can take to try to maintain the perception of their signs as trade marks: many have explicitly used advertising to inform consumers and ask them not to use the trade mark as a verb (‘to XEROX’ or ‘to HOOVER’) or as a noun

capacity to distinguish: *Björnekulla Fruktindustrier Aktiebolag v. Procodia Food Aktiebolag*, Case C-371/02 [2004] ECR I-5791.

<sup>125</sup> *Ibid.*, [23]–[24]; *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 (6 March 2014) (ECJ, Third Chamber), [28]–[30] (KORNSPITZ, understood by the public as common name for a bread roll made from dark flour with two pointed ends, but understood by bakeries to be made with the trade mark holder’s bread mix, was generic).

<sup>126</sup> *Björnekulla Fruktindustrier Aktiebolag v. Procodia Food Aktiebolag*, Case C-371/02 [2004] ECR I-5791, [25].

<sup>127</sup> *Backaldrin Österreich The Kornspitz Company GmbH v. Pfahnl Backmittel GmbH*, Case C-409/12 12 (12 September 2013) (AG Cruz Villalón), [AG59].

<sup>128</sup> *Levi Strauss v. Casucci*, Case C-145/05 [2006] ECR I-3703, [30]–[31]. The act/inactivity of the proprietor must be ‘a’ cause of the mark becoming generic, but need not be the only cause: *Hormel Foods* [2005] RPC (28) 657, 700, [171]–[172].

<sup>129</sup> *Levi Strauss v. Casucci*, Case C-145/05 [2006] ECR I-3703, [34]; *Hormel Foods* [2005] RPC (28) 657 (SPAMBUSTERS generic because owner had not policed its use, whereas SPAM was not so, because it had been subject to policing).

<sup>130</sup> See the material on trade mark use in Chapter 40, pp. 1048–9 and 1049–59, and that on the exceptions in Chapter 41, pp. 1067–9, 1071. There is an important, and yet underexplored, interrelationship between these three legal spheres. If a competitor uses a sign descriptively with the deliberate intent of genericizing the mark, as in *Stix Products, Inc. v. United Merchants and Manufacturers, Inc.*, 295 F.Supp. 479 (SDNY 1968), will the trade mark owner be able to take any action? The answer appears to be ‘yes’, at least insofar as the marks used are identical. First, it seems that such use ‘jeopardises one of the essential functions of the mark’ (i.e. its distinctiveness) even though no consumers are likely to be deceived, and so is infringement. Moreover, such use appears to fall outside the descriptiveness defence in TMA 1994, s. 11(2)(b), on the ground that the use is contrary to honest practices. But, is there use ‘in relation to’ goods or services?

(LEGO or LYCRA), but to use it as a proper adjective (LEGO bricks, XEROX copiers, or LYCRA fibre), accompanied by a ® or ™.

In light of the *Björnkulla* holding, the courts will need to decide to what extent ‘the requirement of vigilant conduct’ requires trade mark proprietors to take these kinds of step, so as to prevent consumers from seeing the sign as generic.<sup>131</sup> Subsequently, Advocate-General Villalón has indicated that ‘due diligence requires that the [trade mark] holder monitors the market and do everything that is reasonably practicable to protect its brand against the transformation generic designation.’<sup>132</sup> He has said that the owner of the mark must take all steps reasonably possible to prevent generic use by third parties, and must draw attention of the public to the fact that it is a trade mark. This could include advertising and labelling indicating the product name, and asking publishers of dictionaries to indicate that the particular word is a mark. Moreover, a trade mark owner should protect a mark from genericism by requiring licensees, if any, to use a mark in an appropriate fashion, and should take steps to enforce such obligations.

The Court of Justice explains the requirement of ‘vigilant conduct’ as a component in the balancing of the interests of the proprietor with those of other economic operators. In certain respects, it is difficult to understand the policy underpinning the requirement. First, it is not clear why any mark that lacks or has lost distinctive character should be allowed to remain on the register. Second, some commentators argue that money spent on policing is wasted and should be a factor in support of, rather than against, revocation.<sup>133</sup> This is because ‘from an economic perspective, such measures normally do not stimulate demand for a firm’s product and are therefore economically inefficient’.<sup>134</sup> However, the requirement of policing might be justified on the basis of the general principle that property should not be lost without acquiescence on the part of the owner.<sup>135</sup>

#### 4 MISLEADING USES

The third reason why a mark may be revoked is on the basis that it has been used in a way that misleads the public. To this end, section 46(1)(d) of the 1994 Act/ Article 50(1)(c) CTMR says that a mark may be revoked where:

... in consequence of the use made of it by the proprietor or with his consent in relation to goods or services for which it is registered, it is liable to mislead the public, particularly as to the nature, quality, or geographical origin of the goods or services.<sup>136</sup>

Section 46(1)(d) corresponds to the absolute ground of refusal in section 3(3)(b), but recognizes that changes might occur after registration that mean that the mark becomes misleading.

<sup>131</sup> See also Case No. 4 Ob 269/01 (29 January 2002) (Austrian Supreme Court) (WALKMAN), [2003] IIC 966 (holding WALKMAN to be generic because there was no other term available to describe the portable cassette player); *Jenken v. Creeks*, Paris Court of Appeal, Case No. 04/03753 (20 April 2005) (VINTAGE) [2006] IIC 347 (‘vintage’ generic for clothing).

<sup>136</sup> TM Dir., Art. 12(2)(b). See above at pp. 963–4.

#### 4.1 REQUIREMENT OF FAULT

In order for a mark to be revoked under section 46(1)(d), the mark must have become misleading *either* as a result of the acts of the proprietor *or* as a result of acts done with their consent.<sup>137</sup> Given that a mark can become misleading as a result of the conduct of third parties, it is good counsel for trade mark owners to include provisions in their licence agreements that ensure that the licensee does not misuse the mark in a way that might jeopardize the mark's viability.

#### 4.2 MISLEADING THE PUBLIC

In order for a mark to be revoked under section 46(1)(d), it must be shown that the use misleads the public, particularly as to the nature, quality, or geographical origin of the goods or services. The Court of Justice has held that, for the ground to apply, there must be evidence of 'the existence of actual deceit or of a sufficiently serious risk that the consumer will be deceived'.<sup>138</sup>

A mark may become misleading if, for example, a garment made entirely of wool, to which the mark ORLWOOLA is affixed, is subsequently manufactured with other materials (such as nylon), in which case the connotation of a homogeneous woollen garment arising from the verbal pronunciation of the mark ('all wool' with a meaningless suffix) is misleading as to the true nature of the goods.<sup>139</sup> A mark may also be misleading where a proprietor alters the geographical location of their business in such a way that a mark that was formerly suggestive of origin becomes deceptive.<sup>140</sup> However, in thinking about the situations in which a use may be misleading, it should be borne in mind that a trade mark proprietor is perfectly entitled to change the quality of its goods or services without informing the consumer, is perfectly entitled to move geographical locations or change the sources from which it gains its resources, and is perfectly entitled to assign the mark to a third party or license it to others.<sup>141</sup>

One question that arises in this context is whether a use that misleads the public as to the *trade origin of the goods* or services constitutes a misuse for the purposes of section 46(1)(d). If so, this gives rise to the further question of whether the very act of licensing a mark would justify removal under section 46(1)(d).<sup>142</sup> In *Elizabeth Emanuel*,<sup>143</sup> a famous designer who had assigned her business and mark ELIZABETH EMANUEL to a third party, sought revocation of that mark on the grounds that consumers believed that she had been involved in designing the garments sold under the mark. The Court of Justice was not persuaded that this fell within the purview of the section. This was because the mark had been assigned and the goods were, in fact, manufactured by or under the control of the owner of the mark. Consequently, the mark continued to carry out its function of indicating trade origin. Even if the average consumer imagined that Elizabeth Emanuel

<sup>137</sup> In *Bostitch Trade Mark* [1963] RPC 183, the licensee had begun selling certain articles of his own manufacture without the permission of the trade mark owner. Such actions would not be such as to render the proprietor's mark liable to be expunged.

<sup>138</sup> *Emanuel*, Case C-259/04 [2006] I-3089, [47] citing *Gorgonzola v. Kaserei Champignon Hofmeister GmbH*, Case C-87/97 [1999] ECR I-1301, [41].

<sup>139</sup> *Orlwoola Trade Mark* (1909) 26 RPC 683.  
<sup>140</sup> *Biscosuisse and Chocosuisse v. Mövenpick Holding*, R 697/2008-1 (12 February 2009) (OHIM, First Board of Appeal) (revocation of registered mark MÖVENPICK OF SWITZERLAND for biscuits, because biscuits had been sold by a licensee in Germany indicating that the product was made in Germany).

<sup>141</sup> *Bostitch* [1963] RPC 183, 197 *per* Lloyd Jacob J.

<sup>142</sup> H. Norman, 'Trade Mark Licences in the UK' [1994] EIPR 154, 158.

<sup>143</sup> *Elizabeth Florence Emanuel v. Continental Shelf 128 Ltd*, Case C-259/04, [2006] ECR I-3089 (ECJ, Third Chamber).

was personally involved in the design process, this was not misleading as to the nature or quality of the goods.

The exact reasoning is a little opaque and it may be worth teasing out some possibilities. The Court of Justice could be saying that the legal reality is that trade marks may comprise personal names, that these may be legally assigned or licensed, and if so, that the mark cannot be of itself misleading, even if consumers believe the individual is involved in production and their role has a significant impact on the quality or value of the goods. Alternatively, the case might simply be about what the average consumer would understand in the light of the legal reality—that is, the ‘average consumer’ is reasonably well informed about trade mark law and knows that a trade mark only signals that the goods have been made with the consent of the trade mark proprietor. Further, the case could instead be saying that misunderstandings as to trade origin are not relevant when assessing this ground for revocation, which is concerned with the nature, quality, or geographic origin of the goods. This leaves open the question of whether trade origin can affect the perceived qualities or nature of the goods. Finally, the Court might instead be saying that ‘imagining a person is involved’ is different from real deceit. While this could leave open the possibility of a trade mark comprising a personal name being deceitful, it is difficult to think of exactly when: one wonders whether the assignment by a visual artist of a mark comprising their signature for paintings and sculptures would be an example.

Although the *Elizabeth Emanuel* case indicates that revocation is not possible on this basis where there has been an assignment with goodwill, the logic probably extends further to encompass assignments in gross and licensing of a mark without any exercise of quality control. These questions were considered by the House of Lords in *Scandecor Developments AB v. Scandecor Marketing AB*.<sup>144</sup> In that case, an international group of companies operated in a way that afforded a degree of autonomy to its subsidiaries. While the international company held the marks, the local companies dealt with retailers. When one of the subsidiaries was sold off and the parent company refused to continue to license the mark to it, the (former) subsidiary argued (in a counterclaim to the claimant’s action for infringement) that, by allowing the defendant to affix the trade mark to its goods, the claimant had allowed the trade marks to become deceptive. More specifically, it was argued that the mark had come to acquire distinctiveness in relation to the defendant’s, rather than the claimant’s, goods. Because trade marks operate as indications of origin, the defendant therefore asserted that the claimant’s mark had become misleading and should be revoked. The House of Lords held that it was not possible to reach a conclusion in the case without first receiving guidance from the Court of Justice. In particular, the House asked whether use of a mark by a bare licensee (that is, without quality control being exercised by the trade mark owner) necessarily renders a trade mark liable to mislead. However, the case was settled before the Court of Justice was able to provide any guidance, so an understanding of the current law must be deduced, for the moment, from the decision of the House. Lord Nicholls was clear that, in his view, such use was not inherently liable to mislead, at least during the term of any such exclusive licence. However, at the end of the licence, whether the trade mark would become misleading would depend on how the respective parties operated—in particular, whether the former licensee carried on trading in the relevant goods or services. If customers of the former licensee associate goods bearing the mark, incorrectly, with the former licensee, the mark will have become deceptive. Whether it does so, according to Lord Nicholls, is a question of fact. The decision of the Court of Justice in *Elizabeth Emanuel* is consistent with this position.

<sup>144</sup> [2002] FSR (7) 122.

## 5 EFFECT OF REVOCATION

Section 46(6) states that the rights of the proprietor cease to have effect from the date of application for revocation, or if the registrar or court is satisfied that the grounds for revocation existed at an earlier date, that date.<sup>145</sup> If a party wants revocation to take effect from a date earlier than the date of application for revocation, it should explicitly allege that the grounds for revocation existed at the earlier date.<sup>146</sup> The importance of this can be seen in *Riveria Trade Mark*.<sup>147</sup> In that case, the mark RIVERIA, registered as of 1973, was the successful basis of an invalidity objection to a registration of FRANCO'S RIVERIA CONE, which had been registered as of 2000. Just over a month later, RIVERIA was held to be revocable for non-use, with effect from May 2001 (the date of application for revocation). The later revocation, however, was unable to affect the earlier holding as to the validity of FRANCO'S RIVERIA CONE. Had revocation been sought with earlier effect, however, the position might have been different.

Where a person began using a trade mark at a time when it was not revocable, but it later became so, no injunctive relief may be awarded; instead, the trade mark proprietor will be limited to financial remedies of damages and an account of profits.<sup>148</sup>

### 1 INTRODUCTION

One of the most remarkable aspects in the recent development of trade mark law has been the expansion in the scope of the rights conferred on the proprietor. In the United States, a leading commentator has talked of equivalent developments as 'the death of common sense'.<sup>1</sup> Indeed, the rights granted to the owners of registered trade marks have expanded to such an extent that it could be said that they now confer a form of quasi-copyright protection that protects traders rather than consumers.

The rights of the owner of a British trade mark are set out in sections 9 and 10 of the Trade Marks Act 1994 and the rights conferred on the owner of a Community trade mark (which are largely the same as those given to UK trade mark owners) in Article 9 of the Community Trade Marks Regulation (CTMR).<sup>2</sup> Community trade marks (CTMs) are enforced in national courts that have been designated as 'Community trade mark courts'.<sup>3</sup> When dealing with the infringement of a CTM, the national courts apply the CTMR, supplemented, where appropriate, by national law.<sup>4</sup> When sitting as a Community trade mark court, national courts are invested with the jurisdiction to grant relief in the territory of any member state.<sup>5</sup> Where an alleged infringement takes place in different

<sup>1</sup> M. Lemley, 'The Modern Lanham Act and the Death of Common Sense' (1999) 108 *Yale LJ* 1687.

<sup>2</sup> These provisions apply equally to marks that were registered under the 1938 Act: see TMA 1994, Sch. 3, para. 4, subject to certain savings as regards 'existing uses'. It is notable that while CTMR, Art. 10, gives trade mark proprietors a specific right to require the publishers of dictionaries, encyclopaedia, and other reference works to indicate that the mark is a registered mark, no such provision is contained in the TM Dir. The proposed reforms contained in European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COM(2013) 0162 final, if adopted, would bring the Directive into line by adding a new Art. 12.

<sup>3</sup> CTMR, Art. 95. See Chapter 47, p. 1223.

<sup>4</sup> CTMR, Art. 101.

<sup>5</sup> CTMR, Art. 98. See Chapter 48, pp. 1253–4.

member states, the appropriate forum is determined by jurisdictional rules that are similar to those operating under the Brussels Convention. Normally, it will be the state of the defendant's domicile.<sup>6</sup>

While trade mark infringement proceedings will normally be brought by the owner of the mark,<sup>7</sup> it is also possible for an action to be brought by an exclusive licensee.<sup>8</sup> Where licensees are not entitled to bring proceedings in their own right, they are usually able to call on the proprietor to take proceedings on their behalf.<sup>9</sup>

Proceedings to enforce a trade mark may be brought as soon as a mark is registered. It should be noted that the rights of the proprietor are enforceable against third parties with regard to acts done after the date of registration (which is the date of filing).<sup>10</sup> The rights continue for ten years from registration<sup>11</sup> and may be renewed for further ten-year periods, possibly indefinitely.<sup>12</sup> Similar principles apply in relation to CTMs, with the exception that the proprietors of CTMs are entitled only to 'reasonable compensation' for acts that occur between publication of the application and registration.<sup>13</sup>

## 2 INFRINGING ACTS

The circumstances in which a mark may be infringed are set out in sections 10(1)–(3) of the 1994 Act and Article 9 CTMR. Before looking at the circumstances in which a trade mark may be infringed, it is important to note that, to infringe, there is no requirement for knowledge, intention, or derivation on the part of the defendant.<sup>14</sup> This is because, as with patents and registered designs, liability for trade mark infringement is strict: the monopoly is an 'absolute' one. Moreover, and in contrast with passing off, there is no need for a trade mark owner to demonstrate damage. Indeed, a trade mark owner is able to commence an action for infringement even though the mark has not been used. It is also important to note that section 10(1)–(3) clearly provides that, in order to infringe, it must be shown that the defendant used the mark 'in the course of trade'. We discuss the meaning of this phrase below.

In order to determine whether a trade mark has been infringed, it is necessary to compare the registered mark with the alleged infringing sign. The circumstances in which a mark may be infringed are set out in sections 10(1)–(3). These are where:

- (i) the marks are identical *and* the goods or services are identical;<sup>15</sup>
- (ii) the marks are identical, *and* the goods or services are similar, *and* there is a likelihood of confusion, which includes the likelihood of association, with the registered mark;<sup>16</sup>
- (iii) the marks are similar, *and* the goods or services are either identical or similar, *and* there is a likelihood of confusion, which includes the likelihood of association, between the marks;<sup>17</sup> or

<sup>6</sup> CTMR, Arts 94, 97–100. See Chapter 47, section 10, pp. 1228–32, 1233–4.

<sup>7</sup> A co-proprietor may bring an action, TMA 1994, s. 23(5). <sup>8</sup> TMA 1994, s. 31.

<sup>9</sup> TMA 1994, s. 30; CTMR, Art. 22.

<sup>10</sup> TMA 1994, s. 9(3). No criminal liability can be incurred for acts done before the date of publication of the registration.

<sup>11</sup> TMA 1994, s. 42.

<sup>12</sup> TMA 1994, s. 43.

<sup>13</sup> CTMR, Art. 9(3).

<sup>14</sup> *Frisdranken Industrie Winters BV v. Red Bull GmbH*, Case C-119/10 [2011] ECR I-13179, [AG43] (AG Kokott); *Specsavers International Healthcare Ltd v. Asda Stores* [2010] EWHC 2035 (Ch), [95] *per* Mann J.

<sup>15</sup> TMA 1994, s. 10(1); CTMR, Art. 9(1)(a).

<sup>16</sup> TMA 1994, s. 10(2)(a); CTMR, Art. 9(1)(b).

<sup>17</sup> TMA 1994, s. 10(2)(b); CTMR, Art. 9(1)(b).

- (iv) the marks are either identical or similar, the registered trade mark has a reputation in the United Kingdom, and use of the defendant's mark would take unfair advantage of, or be detrimental to, the distinctive character or the reputation of the registered trade mark.<sup>18</sup>

The grounds for infringement in section 10(1)–(3) mirror the relative grounds for refusal in section 5(1)–(3). One of the consequences of this is that a mark will fall foul of the relative grounds for refusal in situations in which use of the later mark would amount to an infringement under section 10(1)–(3). Another consequence of the fact that the relative grounds for refusal mirror the provisions dealing with infringement is that the concepts used when deciding whether a mark has been infringed are the same as those used when deciding whether a mark falls within one of the relative grounds for refusal. Because we have already looked in Chapter 38 at the concepts that arise in deciding whether a mark will be refused on relative grounds, it is not necessary to look at them again here. However, a number of key differences exist between an action for infringement and the relative grounds for refusal. Some of these arise because the focus is on a specific real-life situation, rather than the speculative analysis called for in relation to many cases of relative grounds. As Advocate-General Mengozzi stated, compared with opposition proceedings that involve hypothetical situations, infringement proceedings involve an *ex post* analysis of use on the market.<sup>19</sup>

It is first necessary to identify the scope of the trade mark owner's property (the mark and the goods or services). Second, we need to identify the defendant's mark (a task that, in the context of relative grounds for validity, the applicant for the later mark carries out). In assessing whether there is liability, the court will consider the specific use of the mark by the defendant, whereas in the case of relative grounds, the tribunal would have to consider other 'notional uses'. The third difference is that, to establish infringement, it is necessary to show that the mark was (i) 'used', (ii) 'in the course of trade', (iii) in the relevant territory (for a UK mark, the United Kingdom; for a CTM, the Community), and, most controversially, (iv) in a way that affects one of the relevant functions of the mark. We treat each in turn.

### 3 WHAT IS THE CLAIMANT'S TRADE MARK?

The starting point for assessing infringement of a registered trade mark, evidently, is the register. As we saw in Chapter 35, it is the register that defines the property, via the graphic representation, which delineates the mark,<sup>20</sup> and the specification, which identifies the core of the goods or services in relation to which protection is granted.<sup>21</sup> However, both are, in material respects, 'starting points'.

First, and most obviously, if the registration is more than five years old, the specification of goods and services may need to be reformulated. Indeed, it is relatively common for an alleged infringer to challenge the scope of the registration, especially if it is more

<sup>18</sup> TMA 1994, s. 10(3); CTMR, Art. 9(1)(c).

<sup>19</sup> *Fédération Cynologique Internationale v. Federación Canina Internacional de Perros de Pura Raza*, Case C-561/11 (15 November 2012) (AG Mengozzi), [AG36].

<sup>20</sup> Disclaimed matter in the earlier trade mark will usually be ignored: *Saville Perfume v. June Perfect and F.W. Woolworth* (1941) 58 *RPC* 147; *The European v. The Economist Newspaper* [1998] *FSR* 283, 289.

<sup>21</sup> *Praktiker Bau-und Heimwerkermärkte AG*, Case C-418/02 [2005] *ECR* I-5873, [AG61]–[AG62] (AG Léger).

than five years old, through a counterclaim for revocation for non-use. As described in Chapter 39, this will often lead to a reformulation of the scope of the trade mark specification, so that it represents a fair description of the goods or services for which the claimant can demonstrate genuine use.

Moreover, in evaluating infringement, the court may be concerned with how the mark has been used.<sup>22</sup> As explained in Chapter 38, the assessment of confusion is ‘global’. According to the Court of Justice, attention can be paid in the global appraisal to how the mark has been used: the greater the intensity and geographical extent of the use, the greater the acquired distinctiveness of the mark, and the greater the likelihood of confusion.<sup>23</sup> Moreover, if the mark has been used in particular ways and the defendant uses its mark in a similar way, this could form part of the ‘global appreciation’. In *Specsavers International Healthcare Ltd v. Asda Stores Ltd*,<sup>24</sup> the claimant’s mark comprised two intersecting oval shapes and had been registered in black, which, under the prevailing conventions was assumed to confer rights irrespective of the colour in which the shape is used by the defendant. Nevertheless, the mark had been used primarily in a particular shade of green. The Court was asked whether this was relevant and it unhesitatingly replied that it was, both to the global appreciation of likely confusion, and also in appraising whether unfair advantage had been taken of the mark.<sup>25</sup>

#### 4 WHAT IS THE DEFENDANT’S SIGN?

In determining whether a person infringes a registered trade mark, it is necessary to compare the sign as registered (and, as just explained, in the light of any use) with the sign used by the defendant.<sup>26</sup> The question of exactly what constitutes the defendant’s sign is of primary importance when considering section 10(1)—the ‘double identity’ provision: if the marks and goods or services are identical, then a defendant will infringe irrespective of any confusion. However, determining exactly what the defendant’s sign comprises can prove problematic.

In *LTJ Diffusion*,<sup>27</sup> the owners of a figurative mark including the word ARTHUR in handwritten form for clothes brought infringement proceedings against a company selling children’s clothing under the name ARTHUR ET FÉLICIE. The French court sought clarification as to whether Article 5(1)(a) covers only identical reproduction without addition or can extend to reproduction of the sign with added matter. The Court of Justice, in stating that there is identity where a sign reproduces ‘without any modification or addition, all the elements constituting the [trade mark]’,<sup>28</sup> seems to imply that there is no doctrine of ‘added matter’ or ‘ineffective addition’. Although the Court’s decision provides no specific guidance as to whether the defendant’s sign was ARTHUR OR ARTHUR ET FÉLICIE, the clear implication is that it is to be regarded as the latter.<sup>29</sup>

<sup>22</sup> Cf. *L’Oréal SA v. Bellure NV* [2007] EWCA Civ 968, [2008] RPC 9, [110] per Jacob LJ (a statement that must now be treated as incorrect). See *Specsavers International Healthcare Ltd v. Asda Stores Ltd* [2012] EWCA Civ 24, [161] per Kitchin LJ.

<sup>23</sup> *Canon v. MGM*, Case C-39/97 [1998] ECR I-5507, [18].

<sup>24</sup> Case C-252/12 (18 July 2013). See Fig. 38.1, p. 980.

<sup>25</sup> *Ibid.*, [37]–[41]. This was the view of the Court of Appeal: [2012] EWCA Civ 24, [96] (although Kitchin LJ indicated that it would not affect the conclusion that there was no likelihood of confusion). See also *Evegate Publishing Ltd v. Newsquest Media (Southern) Ltd* [2013] EWHC 1975 (Ch), [180].

<sup>26</sup> *SA Société LTJ Diffusion v. SA Sadas*, Case C-291/00 [2003] ECR I-02799.

<sup>27</sup> *Ibid.*

<sup>28</sup> *Ibid.*, [51] (emphasis added).

<sup>29</sup> *Reed Executive plc v. Reed Business Information* [2004] RPC (40) 767, [33].

While the *LTJ Diffusion* case indicates that member states are not free to ignore added matter, it gives virtually no guidance on the critical question of how a tribunal is to identify the parameters of the defendant's mark. If we consider simple examples of signs featured in advertising or on packaging, it will be very rare for the sign to appear by itself, without any other material (slogans, images, colouring, decoration, ingredients, instructions, etc.). Nevertheless the mere proximity of other material surely does not mean that a defendant's use of a sign is not identical. Consequently, some rules or practices will need to be adopted to help tribunals to decide the limits of the defendant's sign. Perhaps the most plausible guide is that a tribunal will be justified in ignoring extraneous matter only if, in the eyes of the average consumer, it would not be regarded as being part of the sign.<sup>30</sup> One factor would be whether the matter is visually or syntactically interlinked so as to be perceived as part of a single visual or semiotic entity (for example the use of the same font might suggest that words form part of a single sign, the use of different fonts suggesting the opposite).<sup>31</sup> So REED BUSINESS INFORMATION in capitals might be regarded as a single semiotic entity (for trade mark purposes) whereas 'REED Business Information' (with only REED in capitals) might be taken to be use of REED as the trade mark.<sup>32</sup> Likewise, the combination RITZPOKER.NET involves the sign RITZPOKER, which is not identical to RITZ.<sup>33</sup> Such semiotic interlinking might also be conveyed by adding an adjective in front of a trade mark. So, for example, THE EDIBLE PLAY DOUGH would not be identical to PLAY-DOH, nor would TRANSPORT YELLOW PAGES be identical to YELLOW PAGES, because the adjective, correctly positioned from a syntactical perspective, renders EDIBLE PLAY DOUGH and TRANSPORT YELLOW PAGES individual semiotic entities.<sup>34</sup> Moreover, use of a term grammatically correctly within a slogan (for example 'designed to keep your baby dry') might render the slogan as a whole the relevant sign, but if, within the slogan, there were some changes in font or stylization that made a component distinct, then that alone might constitute the sign.<sup>35</sup> Thus the defendant used the sign 'spec saver' even though the context was the slogan 'Be a real spec saver at Asda', because 'spec saver' is by no means a normal way in which to describe a careful purchaser of the cheapest spectacles (and was evidently meant to allude to the market leader, Specsavers).<sup>36</sup> Another factor is whether the element is perceived as functioning in a distinct way—as might be the case if the extraneous matter were regarded as having no trade mark significance, for example where it is regarded as a list of ingredients or instructions, or a description or designation of the product. Thus, in the case of a person using the words CADBURY'S CHOCOLATE in advertising, a tribunal may treat the word 'chocolate' as a description rather than as part of the mark.<sup>37</sup> The prefix and suffix components of an email might also be seen as distinct entities (with different roles), and this would explain why HERR-VOSS@KCS-INDUSTRY.COM was

<sup>30</sup> SA *Société LTJ Diffusion v. SA Sadas*, Case C-291/00 [2003] ECR I-02799, [AG49]; cf. *Specsavers International Healthcare Ltd v. Asda Stores* [2010] EWHC 2035 (Ch), [127] *per* Mann J.

<sup>31</sup> If the claimant's mark itself is not a single semiotic entity, but a composite of disparate signs, the answer may be less obvious: see further R. Burrell and M. Handler, *Australian Trade Mark Law* (2010), 333–6.

<sup>32</sup> *Reed Executive plc v. Reed Business Information* [2004] RPC (40) 767, [33].

<sup>33</sup> *Ellerman Investments Ltd, The Ritz Hotel Casino Ltd v. Elizabeth C-Vanci and Eduardo C-Vanci* [2006] EWHC 1442 (Ch), [10]; *Och Ziff v. Och Capital* [2010] EWHC 2599 (Ch), [71] (finding OCH CAPITAL not identical to OCH).

<sup>34</sup> *Hasbro v. 123 Nahrungsmittel GmbH* [2011] EWHC 199 (Ch), [193]; *Yell Ltd v. Giboin* [2011] EWPC 9, [123].

<sup>35</sup> *Specsavers International Healthcare Ltd v. Asda Stores* [2010] EWHC 2035 (Ch), [127].

<sup>36</sup> *Ibid.*, [128].

<sup>37</sup> *Ibid.*, [37]. See also *Compass Publishing v. Compass Logistics* [2004] EWHC 520 (Ch), [21] (COMPASS LOGISTICS not identical to COMPASS, but 'at Compass logistics are king' would have been).

held to be use of a sign identical to the claimant's registered mark HERR VOSS.<sup>38</sup> The same might be the case if the composite were regarded not as a trade mark plus a description, but as two trade mark, such as where there is a house mark—say, CADBURY'S—and a product line—such as DAIRY MILK.<sup>39</sup>

Where it is unclear whether consumers would consider an element to be outside the mark, the 'strict' approach in *LTJ* suggests that the tribunal should treat the mark as a whole, and the comparison should be under section 10(2) not section 10(1). If the rationale for section 10(1) is to improve simplicity of decision making, its application should be confined to obvious cases; complex tests of 'identity', with commensurably protracted debate, are inappropriate.

## 5 SPECIFICS OF THE DEFENDANT'S USE

The third difference between assessing relative grounds and assessing infringement relates to the specificity of the defendant's acts. In the case of relative grounds, the tribunal has to imagine the likely forms of use of the mark by the defendant and assess whether any of them would give rise to an objection. In contrast, in the case of infringement, the defendant will have committed, or will be about to commit, specific acts.<sup>40</sup> Assessment of liability relates to the specific acts, viewed in their context.<sup>41</sup> In *Specsavers*,<sup>42</sup> Kitchin LJ reiterated that the assessment involved taking account of *all of the circumstances* that are likely to operate on the average consumer; thus, even though the trial court had held that Asda used the sign 'spec saver' in the slogan 'be a real spec saver at Asda', in assessing the likelihood of confusion, the court had been right to consider such use in the context of the slogan as a whole and, indeed, of the posters in which the slogan featured.

Moreover, in *Specsavers*, the Court of Justice indicated that the relevant context was broader than that: in the case of Asda's alleged infringement of Specsaver's logo trade marks,<sup>43</sup> a relevant circumstance was the fact that Asda was itself associated with the colour green. The Court indicated that this might reduce the likelihood of confusion or support a plea of 'due cause' for taking advantage of the distinctiveness of the registered mark.<sup>44</sup>

There is a geographical aspect here, too, which has significant ramifications in cases of infringement of Community trade marks. This is because the particular infringement may be localized, whereas in assessing relative grounds of refusal (for a Community trade mark

<sup>38</sup> *Blue IP Inc. v. KCS Herr-Voss Ltd* [2004] EWHC 97 (Ch), [53]. In *Antoni Fields v. Klaus Kobec Ltd* [2006] EWHC 350 (Ch), [68]–[72], Deputy Judge Sheldon QC held that KLAUS KOBEC LIMITED and KLAUSKOBEC.COM were identical to KLAUS KOBEC, but that KLAUSKOBECRUGBY.COM was not; cf. *Powell v. Turner* [2013] EWHC 3242 (IPEC), [105] ('www.wishboneash.co.uk' not identical to word mark WISHBONE ASH).

<sup>39</sup> *Datacard v. Eagle Technologies* [2011] EWHC 244 (Pat), [314]–[315] (holding that DATACARD PLUS-RIBBON™ is use of two signs, so identical to DATACARD); *Powell v. Turner* [2013] EWHC 3242 (IPEC), [105] ('Martin Turner's Wishbone Ash' not identical to word mark WISHBONE ASH).

<sup>40</sup> *O2 Holdings Ltd v. Hutchison 3G UK Ltd*, Case C-533/06 [2008] ECR I-4231 (ECJ, First Chamber), [66]–[67]; Kerly, 295, [9–030].

<sup>42</sup> *Specsavers International Healthcare Ltd v. Asda Stores* [2012] EWCA Civ 24, [87]–[88, approving [2010] EWHC 2035 (Ch), [145]. See *ibid.*, [101]. It is not clear whether Kitchin LJ regarded Arnold J's characterization of the context as too narrow.

<sup>43</sup> See Fig. 38.1, p. 980.

<sup>44</sup> *Specsavers International Healthcare Ltd v. Asda Stores*, Case C-252/12 (18 July 2013) (ECJ, Third Chamber), [48]–[49].

applicant), use must be assumed to be going to take place throughout the European Union. A good example is provided by a recent Dutch court decision, concerning the Community trade mark SPAM for meat, which had a reputation in the United Kingdom, but not elsewhere. The defendant used that mark SPAM for an energy drink in the Netherlands. Had the defendant been applying for a Community mark, use in the United Kingdom (the place of reputation) would have been assumed. But, in the specific circumstances of the alleged infringement, the use was outside the United Kingdom and in a place where the relevant public was unfamiliar with SPAM as a mark for meat. There was thus no infringement.<sup>45</sup>

## 6 TYPES OF USE

Section 10(4) of the 1994 Act/Article 9(2) CTMR provides a non-exhaustive list of the situations in which a person uses a sign.<sup>46</sup> These are where someone:

- (i) affixes the sign to the goods or to the packaging thereof;
- (ii) offers or exposes goods for sale, puts them on the market or stocks them for these purposes under the sign, or offers or supplies services under the sign;
- (iii) imports or exports goods under the sign; or
- (iv) uses the sign on business papers or in advertising.

### 6.1 WHERE THE SIGN IS AFFIXED TO GOODS

Section 10(4)(a)/Article 9(2)(a) provides that a sign is used where it is affixed to the goods or the packaging thereof. This is probably the most common form of trade mark infringement. This would occur, for example, if a counterfeiter were to place scented liquid in bottles to which they have attached the CHANEL label.<sup>47</sup> In order to affix a sign to goods, it seems that the defendant must engage in some positive act, such as stamping, engraving, or gluing a label onto the goods. However, filling cans with drink for a third party has been held not to be ‘use’. In *Frisdranken Industrie Winters BV v. Red Bull GmbH*,<sup>48</sup> the defendant, a Dutch company, filled cans on behalf of Smart Drinks, a firm based in the British Virgin Islands. Smart Drinks supplied the drink extract, as well as the empty cans and lids (which bore signs that were said to infringe the claimant’s trade marks). After filling the cans with the made-up drink, the defendant placed the filled cans at the disposal of Smart Drinks, which then exported them to countries outside the Benelux region. The Dutch appellate court had held that filling the cans was akin to affixing a mark to the goods, reasoning that, in relation to a liquid, a sign cannot be affixed in any other way than by placing it in packaging that already bears the sign, but the Dutch Supreme Court referred the issue to the Court of Justice. The Court answered that, in these circumstances, a party such as the defendant was not using the mark because it ‘merely executes a technical part of the production process of the final product without having any interest in the external presentation of those cans and in particular in the signs thereon’.<sup>49</sup>

<sup>45</sup> *Hormel Foods Corporation v. Dukka B.V. and Van Doorne Beverages B.V.* (9 October 2013) (District Court, The Hague) (Judge P.H. Blok).

<sup>46</sup> TM Dir., Art. 5(3); CTMR, Art. 9(2).

<sup>47</sup> See *Glaxo Group v. Dowelhurst* [2004] *ETMR* (39) 528, 551, [97].

<sup>48</sup> Case C-119/10 [2011] *ECR* I-13179, [2012] *ETMR* (16) 340 (ECJ, First Chamber).

<sup>49</sup> *Ibid.*, [30]. See also *ibid.*, [AG37]–[AG39], considering injunctive relief under Art. 11 of the Enforcement Directive and joint tortfeasance, discussed at pp. 1208–10, 1210–12.

To ‘affix a sign’, the mark must be used directly rather than indirectly on the goods; it is not enough if a mark incidentally appears on the defendant’s goods. This can be seen in *Trebor v. Football Association*,<sup>50</sup> an infringement action involving the Football Association’s ‘three lions’ logo. The action arose when a sweet manufacturer, Trebor, included photographs of footballers in packets of sweets that it sold. The Football Association argued that, because some of the footballers were wearing the English team strip, which had the ‘three lions’ logo attached to it, this amounted to an infringement of its mark. In dismissing the action, Rattee J explained that Trebor was ‘not even arguably using the logo, as such, in any real sense of the word “uses”, and [was] certainly not . . . using it as a sign in respect of its cards’.<sup>51</sup> Rattee J added that it was ‘unreal’ to suggest that Trebor was affixing the English football logo to its cards, and therefore to goods, within the meaning of section 10(4)(a). Whether this reasoning will be extended to situations in which a mark is deliberately used in the background, has yet to be determined. Because this would not be an incidental or accidental use, it would most probably fall within section 10(4)/Article 9(2)(a).

Affixing a trade mark owner’s mark to packaging, but not to goods, is not an infringement under section 10(4)(a), but falls under section 10(5). This states that a person who applies the mark to ‘material intended to be used for labelling or packaging goods, as business paper or for advertising goods or services’ is liable for any infringing use of the material. Unlike an action for primary infringement, in which knowledge is not a relevant factor, secondary infringement under section 10(5) arises only where the person who applied the mark ‘knew or had reason to believe that the application of the mark was not duly authorized by the proprietor or a licensee’.<sup>52</sup>

## 6.2 USE ‘UNDER THE SIGN’

Section 10(4)(b)/Article 9(2)(b) provides that a person uses a sign where they offer or expose goods for sale, put them on the market or stock them for these purposes ‘under the sign’, or offer or supply services ‘under the sign’. The key concept in section 10(4)(b) is that the goods are dealt with *under the sign*. This suggests that, although a sign may not be physically attached to the goods in question, a sign may nonetheless still be ‘used’ where it is placed in proximity to, or is connected with, the goods. This might be the case, for example, where it is sold from a place that is named as the sign.

One question that arises here is whether section 10(4)(b)/Article 9(2)(b) would apply in situations in which a consumer specifically asks for a product by a particular trade name, but is supplied with a competing product. This would be the case, for example, if, in response to a request for a particular brand of pharmaceutical, such as the painkiller NUROFEN, customers were provided with the generic product ibuprofen. While this would undermine the value of the mark, it is unlikely that this would be treated as a situation in which a mark was sold ‘under a sign’ for the purposes of section 10(4)(b)/Article 9(2)(b).

Although the situations in which goods are used under a sign are potentially very wide, the scope of section 10(4)(b)/Article 9(2)(b) is limited by the fact that the defendant must play a direct and positive role in ensuring that a connection is drawn between the sign and the goods in question. It is not enough that the connection is incidental

<sup>50</sup> [1997] FSR 211.      <sup>51</sup> *Ibid.*, 216.

<sup>52</sup> See *Beautimatic International v. Mitchell International Pharmaceuticals and Alexir Packaging* [1999] ETMR 912.

or accidental. This can be seen, for example, in *Trebor v. Football Association*,<sup>53</sup> in which the decision that the sweet manufacturer had not put ‘the cards on the market under the sign comprising the England logo within section 10(4)(b)’ was influenced by the fact that the inclusion of the sign on the card was not a direct consequence of the manufacturer’s actions—that is, the sign was there because the player was wearing the shirt when the photograph was taken, rather than being a direct result of the defendant’s actions. In these circumstances, it is more accurate to say that the goods were sold *with*, rather than *under*, the sign. On this basis, it seems that if a photograph of a cricketer with the trade mark of the team sponsor on their shirt were to appear on the cover of a book, this would not amount to a ‘use’ of the mark under section 10(4)(b)/Article 9(2)(b).

### 6.3 IMPORT OR EXPORT

Section 10(4)(c) states that a sign is also ‘used’ when someone imports or exports goods under the sign.<sup>54</sup> This provision is important because it means that a trade mark owner can prevent the importing of goods that bear the mark into the United Kingdom. As we will see, this right can sometimes be used even where those goods have been marketed elsewhere with the trade mark owner’s consent. The consequence of this is that a trade mark owner is empowered through this right to divide up markets on a territorial basis (and thus, possibly, to set prices differently for each territory). However, while a person need not have title to the goods to be treated as an importer,<sup>55</sup> merely transporting a product bearing a trade mark through a territory (that is, where the destination is somewhere else) is not an infringing use.<sup>56</sup> The Commission proposes to amend the Directive and Regulation, so that goods in transit are deemed to be used in the relevant territory.<sup>57</sup> Although right holders will support this, doubts have been raised as to whether seizing goods in these circumstances is compatible with the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS).<sup>58</sup>

### 6.4 USE ON BUSINESS PAPERS OR IN ADVERTISING

Section 10(4)(d)/Article 9(2)(d) provides that a person uses a sign where they ‘use the sign on business papers or in advertising’. It seems that ‘use on business papers’ covers things

<sup>53</sup> [1997] FSR 211.

<sup>54</sup> CTMR, Art. 9(2)(c). Under a proposed reform, this would cover the situation in which the consignor acts commercially, but the recipient is a private individual: European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COM(2013) 0162 final, proposed Art. 10(4).

<sup>55</sup> *Miller Brewing Co. v. The Mersey Docks and Harbour Co.* [2004] FSR (5) 81, 98 [68].

<sup>56</sup> *Philips Electronics v. Lucheng Meijing Industrial Co.; Nokia v. HMRC*, Joined Cases C-446/09 and C-495/09 (1 December 2011) (ECJ, First Chamber) (goods in transit were not ‘counterfeit goods’ for the purposes of the Border Measures Regulation, because there is no trade mark infringement unless the goods are imported into the European Union). See Chapter 48, pp. 1246–50, esp. n. 82. But cf. *Frisdranken Industrie Winters BV v. Red Bull GmbH*, Case C-119/10 [2011] ECR I-13179, [AG56] (AG Kokott) (organizing the manufacture and labelling of a product for export is infringing use, because the goods when made up are not subject to a customs procedure).

<sup>57</sup> European Commission, *Proposal for a Directive to approximate the Laws of the Member States Relating to Trade Marks (Recast)* (2013) COM(2013) 0162 final, proposed Art. 10(5). See also *ibid.*, 7.

<sup>58</sup> H. Grosse Ruse-Khan, ‘A Trade Agreement Creating Barriers to International Trade? ACTA Border Measures and Goods in Transit’ (2011) 26 *Am U Int’l L Rev* 645.

such as use on letterheads, envelopes, and invoices.<sup>59</sup> Whether such uses are ‘in relation to goods’ will depend on whether they refer to the goods (as opposed, for example, merely to the packaging).<sup>60</sup>

Use ‘in advertising’ might encompass a wide range of promotional activity—from advertisements at the cinema, on television, on billboards, and in magazines, as well as ‘below the line’ promotion (on beer mats and T-shirts). Because section 103(2) provides that reference to use of a trade mark includes use otherwise than by means of a graphic representation, this means that oral advertisements also fall within the notion of use. ‘Advertising’ also includes ‘comparative advertising’.<sup>61</sup> Use of a third party’s trade marks to generate advertising has been held to amount to use, even where the trade mark is typed into a search engine by a third party and the advertisement appears in a set of the search results designated ‘sponsored links’.<sup>62</sup> It seems that section 10(4)(d) would also apply to the use of another person’s trade mark as ‘meta-tags’ to attract people to a particular website.<sup>63</sup>

One of the notable features of section 10(4)(d)/Article 9(2)(b) is that, unlike the other examples listed in section 10(4)/Article 9(2), the section makes no mention of the goods. This means, for example, that where someone uses a sign on an advertising billboard, they will infringe, even though the goods are not pictured. In these circumstances, it seems that it is necessary only for the advert to ‘relate to’ goods of a relevant kind.

## 6.5 USE ON THE INTERNET

Use on publicly accessible websites will almost certainly count as use within section 10(4). This may be because there is an offer of goods ‘under the sign’, or use ‘in advertising’, or simply because this is a use of the same sort as those contained in the illustrative list provided by section 10(4) of the 1994 Act, Article 6(3) of the Trade Marks Directive, and Article 11(2) CTMR. Use as a domain name in such a context is also likely to be regarded as use within section 10(4).<sup>64</sup> But mere registration of a trade mark as a domain name, absent more, would probably not be advertising.<sup>65</sup>

So-called ‘keyword’ advertising, such as Google’s AdWords, has generated considerable jurisprudence (as well as academic commentary).<sup>66</sup> We have already noted that

<sup>59</sup> *Broad v. Graham (No. 2)* [1969] RPC 295, 298; *Cheetah Trade Mark* [1993] FSR 263; *Beautimatic International* [1999] ETMR 912, 925 (invoices).

<sup>60</sup> *Ibid.*, 927.

<sup>61</sup> *O2 Holdings Ltd v. Hutchison 3G UK Ltd*, Case C-533/06 [2008] ECR I-4231 (ECJ, First Chamber), [32]–[36].

<sup>62</sup> *Louis Vuitton v. Google France*, Cases 236/08–238/08 [2010] ECR I-2417 (ECJ, Grand Chamber), [51]–[52], [64]ff; *Die BergSpechte GmbH v. trekking-at-reissen GmbH*, Case C-278/08 [2010] ECR I-2517 (ECJ, First Chamber), [19]; *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [28]; *Eis.de GmbH v. BBY*, Case C-91/09 [2010] ECR I-43 (ECJ, Fifth Chamber), [18]. There is use in relation to the advertiser’s goods or services, even where the sign selected as a keyword does not appear in the advertisement itself.

<sup>63</sup> *Belgian Electronic Sorting Technology v. Bert Peelaers*, Case C-657/11 (11 July 2013) (ECJ, Third Chamber) (use of sign in meta-tag was advertising for purposes of MCAD); cf. *Reed Executive plc v. Reed Business Information Ltd* [2004] RPC (40) 767, [149] per Jacob LJ (uncertain).

<sup>64</sup> See, e.g., *BT v. One in a Million* [1999] 1 WLR 903 (a case of cyber-squatting, in which the Court of Appeal held there to be a threatened infringement: even if use was not for the same goods or services, there would be liability under TMA 1994, s. 10(3)); *Bonnier Media v. Smith* [2002] ETMR (86) 1050, 1069–70; *Musical Fidelity v. Vickers (David)* [2003] FSR (5) 898 (CA); *Tesco v. Elogicom* [2007] FSR (4) 83. But mere registration of a mark as a domain name would not, of itself, be. For discussion of cyber-squatting in the context of passing off, see pp. 850–1, 871–2. For discussion of dispute resolution outside the court system, see pp. 823–5.

<sup>65</sup> *Belgian Electronic Sorting Technology v. Bert Peelaers*, Case C-657/11 (11 July 2013) (ECJ, Third Chamber), [43].

<sup>66</sup> S. Dogan and M. Lemley, ‘Trademark and Consumer Search Costs on the Internet’ (2004) 41 *Hous L Rev* 777; G. Dinwoodie and M. Janis, ‘Confusion over Use: Contextualism in Trademark Law’ (2007) 92 *Iowa L Rev* 1597.

advertisers who use third-party trade marks as keywords to generate their advertisements ‘use’ those marks and thus may incur liability.<sup>67</sup> However, in a pioneering case, it was held that the act of the search engine provider in suggesting the mark as a keyword and generating the adverts in response to the keyword does not ‘use’ the mark,<sup>68</sup> the Court of Justice explaining that use ‘implies, at the very least, that that third party uses the sign in its own commercial communication’. For the same reason, an Internet market service provider, such as eBay, which provides a service that allows its customers to offer goods for sale under signs that may correspond to trade marks, does not itself ‘use’ those signs.<sup>69</sup> It should be observed that while these key decisions mean that search engines and auction sites are not primarily liable for wrongful use of trade marks, the possibility exists that they may be liable as joint tortfeasors (subject to the immunity offered to ‘hosters’ under Article 14 of the e-Commerce Directive),<sup>70</sup> and, whether liable or not, may be subject to remedies under Article 11 of the Enforcement Directive.<sup>71</sup> At the very least, such intermediaries will need to take action when they know about unlawful uses of marks by advertisers and sellers.

## 7 IN THE COURSE OF TRADE

In order to infringe the sign must be used ‘in the course of trade’.<sup>72</sup> In *Arsenal v. Reed*,<sup>73</sup> the Court of Justice stated that a sign is used in the course of trade where it is used ‘in the context of commercial activity with a view to economic advantage and not as a private matter’. It is not clear whether these criteria (economic advantage, non-private) are two cumulative requirements, or whether ‘not as a private matter’ merely clarified when usage is in the context of a commercial activity.<sup>74</sup> Given that the Court has indicated that use itself requires use in a person’s own commercial communication, it has been argued that ‘internal’ uses are not uses at all and that, implicitly, the phrase ‘course of trade’ relates purely to the existence of economic activity.<sup>75</sup> In *L’Oréal v. eBay*,<sup>76</sup> the Court gave guidance

<sup>67</sup> The key question is whether the advert affects the functions of the registered mark: see pp. 1049–58.

<sup>68</sup> *Louis Vuitton v. Google*, Case C-236/08 [2010] ECR I–2417, [56]. Bechtold and Tucker have studied the effect of the *Google* decision, finding as a general matter that the freedom granted to providers of search engines to offer ‘sponsored links’ by reference to third-party trade marks has not altered consumer search behaviour significantly: S. Bechtold and C. Tucker, ‘Trade Marks, Triggers and Online Search’ (May 2013), available online at <[http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2266945](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2266945)>

<sup>69</sup> *L’Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I–6011, [102]. On the possibility of accessory liability, see *ibid.*, [104].

<sup>70</sup> On joint liability, see pp. 1208–10. On the e-Commerce Directive, see pp. 174–5, 1059–60.

<sup>71</sup> On which, see Chapter 47, pp. 1210–12.

<sup>72</sup> TM Dir., Art. 5(1); CTMR, Art. 9(1). Trade is defined in the UK Act as including any business or profession: TMA 1994, s. 103(1).

<sup>73</sup> Case C-206/01 [2002] ECR I–10273, [40]. See also *Google France SARL v. Louis Vuitton Malletier SA*, Joined Cases C-236/08 to C-238/08 [2010] ECR I–2417 (ECJ, Grand Chamber), [50]; *Frisdranken Industrie Winters BV v. Red Bull GmbH*, Case C-119/10 [2011] ECR I–13179, [28].

<sup>74</sup> *Och Ziff v. Och Capital* [2010] EWHC 2599 (Ch), [55]–[66]. Use of trade marks in political campaigns is not use in the course of trade: *Unilever v. Griffin* [2010] EWHC 899 (Arnold J).

<sup>75</sup> *Frisdranken Industrie Winters BV v. Red Bull GmbH*, Case C-119/10 [2011] ECR I–13179 (ECJ, First Chamber), [28] (filling bottle was ‘in the course of trade’, but not ‘use’); *Anheuser-Busch Inc. v. Budejovicky Budvar*, Case C-96/09P [2011] ECR I–2131 (ECJ, Grand Chamber), [144]; *Och Ziff v. Och Capital* [2010] EWHC 2599 (Ch), [66] *per* Arnold J; cf. *Divineo v. Sony Computer Entertainment France* (15 January 2014) (Paris Court of Appeal) (importing the latest games consoles in order to investigate their operation was regarded as ‘in the course of trade’).

<sup>76</sup> *L’Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I–6011, [55].

on how this would apply to sales by individuals on Internet market services. In general, such sales do not take place in the context of commercial activity. However, if, as a result of their volume and frequency, the sales ‘go beyond the realms of private activity’, the seller will be regarded as acting in the course of trade. Quite where the line will be drawn is unclear, but the Court appeared to approve Arnold J’s assumption that the fourth to tenth defendants in the case were selling in the course of trade.<sup>77</sup> Although these were not subject to those proceedings, Arnold J described the level of activity (many had sold many thousands of items) and found that, in eBay’s own terms, these were ‘business sellers’.<sup>78</sup>

## 8 IN THE TERRITORY

In order to sustain an action for infringement of a British trade mark, the infringing act must take place in the United Kingdom.<sup>79</sup> Although it is usually relatively easy to say whether an act has occurred in the United Kingdom or not, particular problems arise in relation to Internet uses, because foreign sites can easily be accessed by consumers from the United Kingdom. Although such uses might appear to constitute a use in the United Kingdom *per se*, the Court of Justice has indicated that mere accessibility is insufficient to constitute use of a mark in a particular territory and that the assessment of whether such use exists depends on whether there is ‘targeting’ at consumers in that territory.<sup>80</sup> Indications of whether a mark is targeted would include the top level domain (a ‘.co.uk’ domain being on its face targeted at a UK audience),<sup>81</sup> the places to which the site indicates it will deliver or dispatch goods,<sup>82</sup> and the currencies in which payment can be made.<sup>83</sup> Subsequently, the Court of Justice has indicated that the sale of an item from a website outside the European Economic Area (EEA) to an individual customer constitutes infringement in the territory, such that the goods can be confiscated at the borders under the Border Measures Regulation.<sup>84</sup>

## 9 IN RELATION TO GOODS OR SERVICES

To infringe, a defendant must have used a sign ‘in relation to goods and services’ covered by the claimant’s rights (identical, similar to, or possibly even dissimilar to the claimant’s goods). The requirement that there be use ‘in relation to’ itself constitutes an important limitation on the scope of trade mark (compared, for example, with copyright). Some communications that might be damaging to the reputation of a mark, for example a news report, simply could not be said to be use ‘in relation to’ goods or services: featuring a mark in a news article, for example, cannot sensibly be said

<sup>77</sup> *Ibid.*, [56].

to distinguish the newspaper from other newspapers (that task being achieved by the name and logo). However, there are at least two difficulties in interpreting and applying the notion of use ‘in relation to’.

First, the breadth of ‘in relation to’ remains uncertain. The implication of Article 5 of the Trade Marks Directive is that ‘in relation to’ means ‘to distinguish’. This is because Article 5(5) confers on member states the option of offering additional protection.<sup>85</sup> The Court of Justice has tended to adopt this approach, but has taken a flexible approach to when a person uses a mark to distinguish goods or services. In *Céline SARL*,<sup>86</sup> the Court held that while use as a trade name was not of itself use within Article 5, for that required use to distinguish the goods or services of the user from those of other traders, a shop might use a trade name in a way that was perceived as distinguishing the goods of the shop from those of other traders. In such a case, the use would be infringing. Moreover, the Court has held that use in comparative advertising is use in relation to the advertiser’s goods (rather than the goods of the owner of the mark).<sup>87</sup>

Second, whatever the scope, difficult questions can arise when deciding in relation to what goods a mark is being used. This is important, because it logically precedes the inquiry as to whether those goods and services are identical or similar (or dissimilar) to those for which the claimant’s mark has been registered. In *Frisdranken v. Red Bull*, as we have noted already, W filled bottles supplied by SD and returned the filled bottles to SD.<sup>88</sup> The Court held that if it could be said that W was ‘using’ a mark (which might infringe Red Bull’s mark), it was being used ‘in relation to’ the services that W provided—filling bottles—rather than in relation to drinks.

A similar problem arises in relation to composite products: is the mark that features on a component being used ‘in relation to’ the component or the product as a whole? The answer appears to be that it depends on the understanding of the average consumer. As has been remarked, the average consumer of cars recognizes that the marks on the tyres relate to the tyres alone and not to the car as a whole.<sup>89</sup> Other cases may be less straightforward.

## 10 USE AS A MARK: THE CONTROVERSY OVER FUNCTIONS

Although, on its face, the protection afforded under Article 5(1)(a) (double identity) appears absolute, according to the Court of Justice, whether a use infringes depends upon whether the use affects or is liable to affect the functions of the trade mark, ‘in particular

<sup>85</sup> Although the United Kingdom has not taken advantage of TM Dir., Art. 5(5), it has enacted provisions governing the registration of company names that may produce a similar effect. Companies Act 2006, s. 69, allows persons to object to the registration of a company name that is ‘the same’ as a name associated with the applicant in which the applicant has ‘goodwill’ (which is defined as including ‘reputation of any description’), or which is ‘sufficiently similar’ to such a name that its use in the United Kingdom would be ‘likely to mislead by suggesting a connection between the company and the applicant’. Objections fall to be heard by a company names tribunal. By preventing the registration of company names that are likely to be confused with (used) trade marks, the trade mark owner can go some way toward ensuring that use of its trade mark as a trade name does not take place.

<sup>86</sup> *Céline Sarl v. Céline SA*, Case C-17/06 [2007] ECR I-7041.

<sup>89</sup> *Schütz (UK) Ltd v. Delta Containers Ltd* [2011] EWHC 1712 (Ch), [80], [85] *per* Briggs J.

its essential function of guaranteeing to consumers the origin of the goods'.<sup>90</sup> For some time, the only function to which the Court would refer in Article 5(1)(a) was the origin function (although it had already referred to other functions when considering questions of exhaustion under Article 7 and the Treaty).<sup>91</sup> However, in *L'Oréal v. Bellure*,<sup>92</sup> the Court announced that it was also necessary to consider other functions, 'in particular that of guaranteeing the quality of the goods or services in question and those of communication, investment or advertising'.<sup>93</sup> Subsequent case law, including that of the Grand Chamber, has reiterated the statement.<sup>94</sup>

Before going on to examine the content of the functions further, a few points are worth making. First, by limiting infringement under section 10(1)/Article 5(1) to situations in which functions were affected, the Court was initially narrowing the extent of protection afforded on a literal reading of the Directive (which referred to protection in such cases as 'absolute').<sup>95</sup> Second, it seems structurally inevitable that an interpreter would have to recognize a broader set of circumstances as infringing under section 10(1)/Art 5(1)(a) than under section 10(2)/Article 5(1)(b) (which, by requiring a likelihood of confusion, is necessarily concerned with one function only—the origin function).<sup>96</sup> Thus it is perhaps not surprising that the Court is inclined to offer protection to trade mark owners that goes beyond the origin function. Third, the notion of 'affect' seems synonymous with 'adverse affect'<sup>97</sup> or 'detriment',<sup>98</sup> and the courts have been clear that the question is whether there is a 'risk' that the function will be affected in this way.<sup>99</sup> In contrast with Article 5(2) liability, which includes unfair advantage (free-riding), benefit to the user is irrelevant to Article 5(1) liability.<sup>100</sup>

## 10.1 DAMAGE TO THE ORIGIN FUNCTION

The ‘origin’ function has been described as the function of ‘guaranteeing’ that goods or services bearing a registered mark have been placed on the market with the authority of the proprietor.<sup>101</sup> It is most clearly likely to be adversely affected if another person markets goods or services under the mark or in a way that leads consumers to believe that they originate with the trade mark proprietor. In this respect, the circumstances in which a trade mark is infringed under Article 5(1)(a) parallel those in which it would be infringed under Article 5(1)(b)—that is, where the use produces a ‘likelihood of confusion’. In the case of use of an identical mark on identical goods or services, such a likelihood can be presumed, so it is for the defendant in every case to demonstrate that the function would not, in fact, be implicated.

One circumstance in which the origin function may be unaffected is where a mark is used for purely descriptive purposes.<sup>102</sup> For example, in *Hölterhoff v. Freiesleben*,<sup>103</sup> the trade mark owner of the words SPIRIT SUN and CONTEXT CUT for ‘precious stones for further processing as jewellery’ had brought an action alleging infringement by Hölterhoff as a result of certain commercial dealings in which he had been asked to cut diamonds in the shape of ‘spirit sun’. The dealings were oral, and neither the customer nor the jeweller considered the term ‘spirit sun’ to indicate that the goods came from the claimant. The Court of Justice, in a decision focused on the specific facts that underpinned the reference, held that the rights conferred by Article 5 of the Directive did not cover these specific circumstances, in which there was no question of the trade mark used being perceived as a sign indicative of origin.<sup>104</sup>

A second example of a use that would not implicate the origin function is a purely decorative use. In *Adam Opel AG v. Autec AG*,<sup>105</sup> the well-known car manufacturer Opel had registrations of its logo (see Fig. 40.1) for cars and toys. The defendant sold remote-controlled scale models of the Opel Astra V8 Coupé bearing the OPEL logo on its radiator grille. Opel sued and the Landgericht Nürnberg-Fürth asked the Court of Justice for a ruling as to whether such use infringes Article 5(1)(a) of the Directive in circumstances under which consumers are used to scale models and accord importance to absolute fidelity, so that, viewing the toy, they would appreciate that it was a reduced-scale version of the Opel car. The Court of Justice responded that, as long as consumers did not think that the toys came from Opel or an economically linked undertaking, then the use did not affect the essential function of the mark.<sup>106</sup>

However, the circumstances in which an identical mark used for identical goods will not affect the function of indicating origin are relatively few. Certainly, the Court has indicated that third-party uses on merchandising do not escape the trade mark owner’s monopoly. In *Arsenal Football Club plc v. Matthew Reed*,<sup>107</sup> Arsenal Football Club, which owned the trade mark for ARSENAL in respect of clothing and footwear, brought an action for infringement against a stall holder, Reed, who sold scarves bearing the mark from a stall located outside Arsenal FC’s ground. The evidence indicated that the marks were not perceived by purchasers as indicating that the goods were made or supplied by the club; rather, they were seen as badges of support, loyalty, or affiliation, used to indicate that

those who possessed them supported Arsenal FC. On a reference to the Court of Justice, the Court indicated that the exercise of a trade mark owner's right was confined to cases in which a third party's use of the sign affects or is liable to affect the functions of the trade mark—in particular, its essential function of guaranteeing to consumers the origin of the goods.<sup>108</sup> The Court then went on to make some observations on the case itself. It noted that the use of the sign takes place in the context of sales to consumers 'and is obviously not intended for purely descriptive purposes'.<sup>109</sup> The use was 'such as to create the impression that there is a material link in the course of trade between the goods concerned and the trade mark proprietor'.<sup>110</sup> This was so even if the initial consumers were not confused because 'some consumers, in particular if they come across the goods after they have been sold . . . and taken away from the stall . . . may interpret the sign as designating Arsenal FC as the undertaking of origin of the goods'.<sup>111</sup> So the use was liable to jeopardize the guarantee of origin, which constitutes the essential function of the mark.<sup>112</sup> Interpreting the judgment of the Court of Justice, the Court of Appeal held that Reed had infringed Arsenal's trade mark.<sup>113</sup> According to the Court of Appeal, unchecked, non-descriptive use would damage the trade mark because it 'can no longer guarantee origin'; the 'wider and more extensive the use, the less likely the trade marks would be able to perform their function'.<sup>114</sup>

According to the House of Lords in *R v. Johnstone*, it will be a question of fact whether use of registered marks to identify the performers on CDs or similar items constitutes a use that is liable to jeopardize the origin function of the mark.<sup>115</sup> This case concerned a criminal action against a bootlegger, who had made and sold recordings of (among others) a performance of Bon Jovi. It was alleged that, by using the words 'Bon Jovi' on the CDs, the defendant had infringed the trade mark BON JOVI. Their Lordships indicated that such use might be purely descriptive of the contents of the disc and nothing more, or might indicate origin. Lord Walker suggested some factors that might be relevant, including the prominence

of the mark, use of other marks, the terms and prominence of any disclaimer, and any other matters ‘going to the alleged infringer’s good faith and honesty’.<sup>116</sup>

Is the origin function damaged by use of trade marks in ‘keyword advertising’? In a series of cases, the Court has ruled that the origin function *might* be damaged by the display of ‘ads’ (understood as the link, a heading, and a brief message) even though those ads do not themselves include the trade mark, but are generated in response to a consumer entering a particular trade mark into a search engine.<sup>117</sup> The cases involved a range of situations, including the use of trade marks to generate advertisements that link to sites selling variously counterfeit goods,<sup>118</sup> goods of competitors,<sup>119</sup> and second-hand versions of the trade mark proprietor’s goods.<sup>120</sup> Beginning with the *Louis Vuitton v. Google France* case,<sup>121</sup> the Court indicated that the relevant test turned on the impact of the advertisement (that is, the link and short message) on the ‘normally informed and reasonably attentive Internet user’<sup>122</sup>—terminology that is rather odd, given the ubiquity of the ‘average consumer’ within European trade mark jurisprudence.<sup>123</sup> The key question was whether the ‘ad’ enables such users:

... or enables them only with difficulty, to ascertain whether the goods or services referred to by the ad originate from the proprietor of the trade mark or an undertaking economically connected to it or, on the contrary, originate from a third party.<sup>124</sup>

The Court emphasized the importance of clarity in Internet communication<sup>125</sup> and adopted, it seems, a version of the ‘likelihood of confusion test’.<sup>126</sup> Indeed, in two cases, the Court has outlined the same test for damage to the origin function as ‘likelihood of confusion’.<sup>127</sup>

The Court’s test does not suggest that use of trade marks as keywords is inherently objectionable,<sup>128</sup> but rather requires attention to be paid specifically to the facts of any given particular use.<sup>129</sup> Consequently, national courts have reached different conclusions.<sup>130</sup> The only

<sup>116</sup> The reference to ‘good faith and honesty’ seems inappropriate in the context of determining whether use indicates origin.

<sup>117</sup> Moreover, the ‘ads’ appear under the heading ‘sponsored links’. The Court declined to consider the position were the ‘ads’ to appear in the ‘organic’ search results: *Die BergSpechte GmbH v. trekking-at-reissen GmbH*, Case C-278/08 [2010] ECR I-2517 (ECJ, First Chamber), [43]; *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [38].

<sup>126</sup> *DataCard Corp. v. Eagle Technologies Ltd* [2011] EWHC 244 (Pat), [2011] RPC (17) 443, [263]; *Interflora Inc. v. Marks & Spencer* [2013] EWHC 1291 (Ch), [233], [241], [256], [266] *per* Arnold J (describing the tests as ‘a test of likelihood of confusion, but with a reversed onus’).

<sup>127</sup> *Die BergSpechte*, Case C-278/08 [2010] ECR I-2517 (ECJ, First Chamber), [35] and [39]; *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [34] and [52].

<sup>128</sup> If anything, according to Arnold J, it has recognized that ‘as a general rule, keyword advertising promotes competition’: *Interflora Inc. v. Marks & Spencer* [2013] EWHC 1291 (Ch), [288].

<sup>129</sup> For the view that use of keywords should not be regarded as affecting the origin function in any circumstances, see G. Psaroudakis, ‘In Search of the Trade Mark Functions: Keyword Advertising in European Law’ [2012] *EIPR* 33.

<sup>130</sup> The national case law is reviewed in *Interflora Inc. v. Marks & Spencer* [2013] EWHC 1291 (Ch), [282]–[287]. Of the cases referred to the Court of Justice, liability was found in relation to the ads in *BergSpechte*

English case to apply the guidance is *Interflora Inc. v. Marks & Spencer*.<sup>131</sup> The claimant, Interflora, is a flower delivery network, comprising 1,618 independent florists with 1,879 shops (whose business comprises 10–15 per cent of the UK flower market).<sup>132</sup> It is owner of the registered mark INTERFLORA. The defendant, Marks and Spencer, used purchased advertising services that enabled it to display ads for its own flower-delivery service in response to user searches for INTERFLORA. The ‘ads’ generated simple phrases such as ‘M&S Flowers’ and did not mention Interflora. At the end of litigation lasting five years, and involving hearings before the Court of Justice and two trips to the Court of Appeal (concerning evidential questions), the High Court had to decide whether this practice damaged the origin function of the claimant’s mark. The Court considered that, as of 2008, the relevant date, average Internet users did not appreciate that Google operated a keyword system that produced results as part of a paid service.<sup>133</sup> The Court of Justice had indicated that, in assessing the effect on the average (reasonably well-informed and reasonably observant) Internet user, it was relevant to consider the general context—in particular, whether they knew that Marks and Spencer is not part of the Interflora network. If they did, there would probably be no liability.<sup>134</sup> However, Arnold J found that such general knowledge did not exist.<sup>135</sup> Moreover, the Court rejected the defendant’s argument that the presentation of the page would mean that the Internet user would realize that this was a competitive offering. The judge emphasized that there was nothing in the ‘ad’, such as a disclaimer, to clarify that there was no connection between the two organizations.<sup>136</sup> Moreover, given the peculiar nature of the Interflora network, which operated through businesses both big (it has a link with Tesco) and small, which used their own names, the average Internet user would not be able to infer that Marks and Spencer was not part of the Interflora network.<sup>137</sup> The Court was also impressed by a statistical study, which showed that a high proportion of those who entered Interflora as a search term, but clicked through to the defendant’s site, then went on and looked at the Interflora site. The inference drawn was that these consumers were looking for Interflora, and that the intermediate visit to Marks and Spencer’s site occurred because they believed that Marks and Spencer was part of the network (or at least were not certain that it was not).<sup>138</sup> Having regard to all of these matters, the Court concluded that the defendant’s keyword use of the INTERFLORA mark damaged the origin function.<sup>139</sup>

## 10.2 OTHER FUNCTIONS

In *L’Oréal NV v. Bellure NV*,<sup>140</sup> the Court had been asked about whether it was permissible for a maker of smell-a-like perfumes to use ‘comparison lists’, which referred to the trade marks by which the imitated perfumes were known. Almost certainly there was no damage to the ‘origin function’, because the consumer understood that the smell-a-like was not from the trade mark proprietor. So the restrictive effect of existing jurisprudence limiting

<sup>137</sup> *Ibid.*, [297].

<sup>138</sup> *Ibid.*, [301]–[306]. Arnold J treats this as ‘initial interest confusion’: on this concept, see p. 991.

<sup>139</sup> *Interflora Inc. v. Marks & Spencer* [2013] *EWHC* 1291 (Ch), [318].

<sup>140</sup> Case C-487/07 [2009] *ECR I*-5185 (ECJ, First Chamber).

liability to damage to the origin function was presented squarely to the Court: comparative advertising using trade marks would simply be exempt from liability. This unpalatable conclusion led the Court to sift through its own case law to identify other functions. It therefore recognized that a person would infringe under Article 5(1)(a) where they use an identical sign in a manner that, while it does not damage the origin function, does have an adverse affect on the other functions—‘in particular those of guaranteeing the quality of the goods or services in question and those of communication, investment or advertising’.<sup>141</sup>

Importantly, trade mark proprietors can use trade marks to achieve these functions even though the mark has yet to develop a reputation.<sup>142</sup> The precise nature of these other functions remains extremely unclear. So far, the Court has offered guidance on only the ‘quality’, ‘advertising’, and ‘investment’ functions.

### 10.2.1 The quality function

The ‘quality’ function seems the most straightforward. In *SA-CNL SUCAL v. HAG*, the Court of Justice observed:

[A]n undertaking must be in a position to keep its customers by virtue of the quality of its products or services, something which is possible only if there are distinctive marks which enable customers to identify products and services. For the trade mark to be able to fulfil [its] role, it must offer a guarantee that all goods bearing it have been produced under the control of a single undertaking which is accountable for their quality.<sup>143</sup>

Of course, there is no legal guarantee of quality. Trade mark proprietors are not obliged to maintain the standards of the products that they market under particular marks. However, they frequently do so, and they rely on the trade mark as a signal to consumers that the goods or services do in fact retain the characteristics of which the consumer has been apprised (either through advertising or experience).<sup>144</sup> In *Dior v. Evora*,<sup>145</sup> Advocate-General Jacobs observed that the quality function could properly be regarded as part of the origin function. Subsequently, however, the Court has appeared to offer the quality function a surprisingly broad construction. In *Copad SA v. Christian Dior Couture SA*,<sup>146</sup> the Court indicated that, in the case of luxury goods, quality was not confined to their physical or material characteristics, but also included an ‘aura of luxury’.<sup>147</sup> While this broad reading of the quality function served the Court’s purpose in that case, it seems to blur the analysis unnecessarily. In assessing whether there is damage to the quality function, we suggest that tribunals confine consideration to issues relating to the physical or material qualities and characteristics of products or services. The quality function is thus damaged where the goods bearing the unauthorized mark do not have the same physical characteristics that consumers associate with the goods or services that bear the mark.

<sup>141</sup> *Ibid.*, [58]. These functions were first referred to by Advocate-General Jacobs in *Parfums Christian Dior SA v. Evora BV*, Case C-337/95 [1997] ECR I-6013.

<sup>142</sup> *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625 (ECJ, First Chamber), [40].

<sup>143</sup> *SA-CNL SUCAL v. HAG*, Case C-10/89 [1990] ECR I-3752, [13]; *L’Oréal SA and ors v. Bellure NV and ors*, Case C-487/07 [2009] ECR I-5185, [AG53] (AG Mengozzi) (referring to ‘the guarantee of quality, or perhaps, to be more precise, consistency (or uniformity) in the quality of products’).

<sup>144</sup> *Ibid.*, [AG18].

<sup>145</sup> *Parfums Christian Dior SA v. Evora BV*, Case C-337/95 [1997] ECR I-6013, [41]. See also *Viking Gas A/S v. Kosam Gas A/S*, Case C-46/10 [2011] ECR I-6161, [AG45], [AG47] (collective or certification marks indicate quality rather than origin).

<sup>146</sup> Case C-59/08 [2009] ECR I-3421 (ECJ, First Chamber).

<sup>147</sup> *Ibid.*, [24].

### 10.2.2 The advertising function

In *Google France*,<sup>148</sup> the Court considered whether using keyword advertising might damage any of the functions of the trade mark. The Court identified a function of a trade mark as that of advertising the goods,<sup>149</sup> and consequently suggested that the proprietor of a trade mark is thus entitled to prevent any use that ‘adversely affects the proprietor’s use of its mark as a factor in sales promotion or as an instrument of commercial strategy’.<sup>150</sup> However, the Court indicated that this function was not harmed by third parties’ use of LOUIS VUITTON as a keyword merely because their bidding on the keyword meant that the trade mark owner would itself have to pay a higher price to obtain a better ranking for its own sponsored links.<sup>151</sup>

When would the ‘advertising function’ be damaged? Arnold J has held that the advertising function of a trade mark is its function of conveying a particular image to the average consumer of the goods or services in question.<sup>152</sup> Thus the advertising function is most likely to be in issue when the trade mark has been used by the trade mark proprietor in relation to prestigious goods that have a luxurious image. There will be an adverse affect if the defendant’s use associates the prestigious mark with down-market goods, marketing methods, or advertising.

### 10.2.3 Investment function

What about the ‘investment’ function? In *Interflora Inc. v. Marks & Spencer*,<sup>153</sup> the Court of Justice also provided some guidance on the investment function. It noted that trade marks are often used as ‘an instrument of commercial strategy’, so as to enable the proprietor to ‘acquire a reputation in order to develop consumer loyalty’.<sup>154</sup> It was this purpose that was the ‘investment’ function. Although the Court acknowledged that this might overlap with the ‘advertising’ function,<sup>155</sup> it is nonetheless distinct. Advertising was, according to the Court, only one commercial technique by which a trade mark could be used to acquire or preserve a reputation.<sup>156</sup> The Court then explained that this function would be damaged where a third party’s use of a mark ‘*substantially* interferes with the proprietor’s use of its trade mark to acquire or preserve a reputation capable of attracting consumers and retaining their loyalty’.<sup>157</sup>

Despite this, the investment function remains something of a mystery.<sup>158</sup> Arnold J made a valiant attempt to make sense of it in the context of alleged damage to the investment function through keyword advertising.<sup>159</sup> He argued that the ‘investment function’ is damaged if the use ‘adversely affects the reputation of the trade mark, as for example where the image the trade mark conveys is damaged’.<sup>160</sup> In effect, damage to the investment function is what, in the context of Article 5(2), has been called ‘tarnishment’.<sup>161</sup>

<sup>148</sup> *Louis Vuitton v. Google France*, Cases C-236/08–238/08 [2010] ECR I–2417 (ECJ, Grand Chamber), [91].

<sup>149</sup> *Ibid.*, [91]. <sup>150</sup> *Ibid.*, [92]. <sup>151</sup> *Ibid.*, [94].

<sup>152</sup> *Datacard v. Eagle Technologies* [2011] EWHC 244 (Pat), [2011] RPC (17) 443, [272] *per* Arnold J.

<sup>153</sup> Case C-323/09 [2011] ECR I–8625 (ECJ, First Chamber).

<sup>154</sup> *Ibid.*, [39]; *cf.* *Viking Gas A/S v. Kosam Gas A/S*, Case C-46/10 [2011] ECR I– 6161, [AG58], in which Advocate-General Kokott appeared to understand the investment function in terms of the ability of the proprietor to license the mark and thereby gain income.

<sup>155</sup> But *cf.* *Louis Vuitton v. Google France*, Cases C-236/08–238/08 [2010] ECR I–2417, [AG96], in which Advocate-General Poiares-Maduro indicated that the functions of guaranteeing quality, advertising, and communication were all specific examples of the function of promoting ‘innovation and commercial investment’.

<sup>156</sup> *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I–8625, [60]–[61].

<sup>157</sup> *Ibid.*, [66].

<sup>158</sup> For the view that investment is not a function of a mark, so much as an ‘attribute of the mark’ see Kerly, 8, [2–005].

<sup>159</sup> *Interflora Inc. v. Marks & Spencer* [2013] EWHC 1291 (Ch).

<sup>160</sup> *Ibid.*, [274].

<sup>161</sup> See pp. 1005–6.

#### 10.2.4 Communication function

So far, the Court of Justice has had nothing to say about the ‘communication’ function. However, in *L’Oréal v. Bellure*,<sup>162</sup> Advocate-General Mengozzi observed that a trade mark can convey to consumers various kinds of information about the goods identified by it. This could be within the sign itself (such as where a sign alludes to certain characteristics of the product) or, more commonly, by associating information with the sign through advertising and promotion. He treated the ‘communication’ function as encompassing informative advertising and communications that cultivate an image of the product (quality, trustworthiness, reliability, luxury, strength, etc.). In his view, this capacity of the trade mark to communicate information merits protection.<sup>163</sup> Unfortunately, it is not clear when this function would be damaged, other than—yet again—by confusion, blurring, or tarnishment.

#### 10.2.5 Criticism and reform

The Court of Justice case law on ‘functions’ has come under criticism from courts, commentators,<sup>164</sup> and policymakers. The most common criticism is that the concepts are incomprehensible. In *Interflora*, Arnold J complained that it was difficult to understand precisely what the functions referred to and what was their interrelationship.<sup>165</sup> In *L’Oréal v. Bellure*,<sup>166</sup> Jacob LJ was more acerbic, calling the functions ‘vague and ill-defined’. A second objection is that the Court has developed these concepts without any legislative basis for so doing.<sup>167</sup> Further, it is argued that it is difficult to understand how this interpretation of Article 5(1)(a) of the Directive can be reconciled with Article 5(2).<sup>168</sup> There are important limitations built into the protection conferred by Article 5(2)—most obviously, the requirement that, to infringe, the use of the trade mark be ‘without due cause’. No such requirement is contained explicitly in Article 5(1)(a), leading to the possibility the uses that would be excusable under Article 5(2) in relation to marks with a reputation might not be permissible under Article 5(1)(a), irrespective of whether the proprietor’s mark has a reputation.<sup>169</sup> Finally, it has been suggested that there is no justifiable reason for protecting many of these types of use of trade marks.<sup>170</sup>

Accepting some of these criticisms, the Max Planck Institute’s study recommended that the functions no longer play an autonomous role in Article 5(1)(a) determinations.<sup>171</sup> Subsequently, the European Commission has acknowledged that the ‘recognition of

<sup>162</sup> Case C-487/07 [2009] ECR I-5185, [AG54].

<sup>163</sup> Cf. *Viking Gas A/S v. Kosam Gas A/S*, Case C-46/10 [2011] ECR I-6161, [AG56]–[AG58] (‘communication function’ refers to the understandings of those who see a mark at a distance). See also Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), [2.186].

<sup>164</sup> A. Horton, ‘The Implications of *L’Oréal v. Bellure*: A Retrospective and Looking Forward’ [2011] *EIPR* 550.

<sup>165</sup> *Interflora Inc. v. Marks & Spencer* [2013] EWHC 1291 (Ch), [271].

<sup>166</sup> [2010] EWCA Civ 535, [30].

<sup>167</sup> *Ibid.*

<sup>168</sup> *L’Oréal v. eBay* [2009] EWHC 1094 (Ch), [2009] RPC (21) 693, [300] *per* Arnold J; *Datacard v. Eagle Technologies* [2011] EWHC 244 (Pat), [2011] RPC (17) 443, [272] *per* Arnold J; *Interflora Inc. v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625, [AG58] (AG Jääskinen); European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COM(2013) 0162 final, 6.

<sup>169</sup> On ‘due cause’, see pp. 1010–11. Various Advocates-General have sought to overcome this problem by requiring a balancing of interests when considering the functions other than the origin function: see *Louis Vuitton v. Google France*, Cases 236/08–238/08 [2010] ECR I-2417 (ECJ, Grand Chamber), [AG102] (AG Poireres Maduro); *Viking Gas A/S v. Kosam Gas A/S*, Case C-46/10 [2011] ECR I-6161, [AG59]–[AG64] (AG Kokott). This ‘solution’ seems merely to add extra uncertainty to the already problematic notion of functions. The Court seems to have accepted that Art. 5(1)(a) may give rise to liability even where there would be no such liability under Art. 5(2): *Leidseplein Beheer BV v. Red Bull GmbH*, Case C-65/12 (6 February 2014) (ECJ, First Chamber), [36].

<sup>170</sup> [2010] EWCA Civ 535, [30]; N. Dawson, ‘Non-Trade Mark Use’ [2012] *IPQ* 204, 224–5.

<sup>171</sup> Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), [2.184].

additional trade mark functions under Article 5(1(a) of the Directive has created legal uncertainty'.<sup>172</sup> It proposes that legislation clarifies that the only function implicated by the double identity or confusing similarity notion is the 'origin' function. However, at time of writing, some of the big brand owners have been lobbying to stop the proposed reform<sup>173</sup> and the European Parliament's amendments, adopted at the first reading in February 2014, would do precisely that.<sup>174</sup>

## 11 ACCESSORY LIABILITY

Doctrines of secondary liability for trade mark infringement fall outside the scope of the Directive and Regulation, and remain therefore unharmonized.<sup>175</sup> In France, they fall to be dealt with under the Civil Code, whereas in Germany, special remedies are frequently made available under a doctrine called *Störerhaftung* ('interferer liability') against third parties who wilfully make a causal contribution to the primary infringements of others without themselves carrying out infringing acts.<sup>176</sup> In the United Kingdom, there are two sources of potential liability for accessories: limited statutory protection for so-called 'secondary infringement', and the general rules of joint torts.

Statutory liability is provided for in section 10(5), which states that a person who applies the mark to 'material intended to be used for labelling or packaging goods, as business paper or for advertising goods or services' is liable for any infringing use of the material. Unlike an action for primary infringement, in which knowledge is not a relevant factor, secondary infringement under section 10(5) arises only where the person who applied the mark 'knew or had reason to believe that the application of the mark was not duly authorized by the proprietor or a licensee'.<sup>177</sup>

Defendants may also indirectly infringe the rights in a trade mark where they act as a joint tortfeasor. The principles are reviewed in Chapter 47: the alleged infringer must do more than facilitate infringement; they must be actively implicated in a 'common design' to infringe.

These matters are of increasing commercial importance (and legal contest). These doctrines regulate, for example, the suggestion by a search engine provider that offers keyword advertising services of certain keywords that might be terms used by users looking for counterfeits,<sup>178</sup> or of sales on eBay facilitating the auction of infringing goods.<sup>179</sup>

<sup>172</sup> European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COM(2013) 0162 final, 6.

<sup>173</sup> They seem especially concerned with the question of how the explicit limitation of the double-identity liability to the origin function will affect the trade mark owner's right to prevent importation into the EEA of goods that it has placed on the market outside the EEA. See further pp. 1088–93. See M. Senftleben, 'Function Theory and International Exhaustion: Why it is Wise to Confine the Double Identity Rule in EU Trademark Law to Cases Affecting the Origin Function?' [2014] *EIPR* 518–24.

<sup>174</sup> European Parliament, *Report on the Proposal for a Directive to Approximate the Laws of the Member States Relating to Trade Marks* (16 January 2014), A7-0032/2014, available online at <<http://www.europarl.europa.eu/sides/getDoc.do?type=REPORT&reference=A7-2014-0032&language=EN>>

<sup>175</sup> However, in the Internet context, immunities are harmonized through the e-Commerce Directive, esp. Art. 14 (hosting). See generally M. Leistner, 'Structural Aspects of Secondary (Provider) Liability in Europe' (2014) 9 *JIPLP* 75.

<sup>176</sup> *Ibid.*, 78–81.

<sup>177</sup> The knowledge requirement is in similar terms to that employed in the context of copyright. See Chapter 8.

<sup>178</sup> *Louis Vuitton v. Google France*, Cases 236/08–238/08 [2010] *ECR* I–2417 (ECJ, Grand Chamber), [57], [AG114]–[AG125] (AG Poiares Maduro).

<sup>179</sup> *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] *ECR* I–6011 (ECJ, Grand Chamber), [104], [AG55]–[AG56]; *Frisdranken Industrie Winters BV v. Red Bull GmbH*, Case C-119/10 [2011] *ECR* I–13179, [35].

Even if liability can be established under the principles of joint tortfeasance, Article 14 of the e-Commerce Directive offers important ‘safe harbour’ limitations on financial liability. This applies in relation to what is usually referred to as ‘hosting’. More specifically, where an information society service is provided that consists of the ‘storage of information’ provided by a recipient of the service, the service provider is not liable for the information stored at the request of a recipient of the service if it complies with certain conditions. These conditions are that the provider does not have actual knowledge of illegal activity or information and is not aware of facts or circumstances from which the illegal activity or information is apparent, and that the provider, upon obtaining such knowledge or awareness, acts expeditiously to remove or to disable access to the information.

The core idea behind the immunity for hosting lies in the ‘passive’ role of the service provider. As the Court of Justice stated in the *Google* case, the role played by the service provider must be ‘neutral, in the sense that its conduct is merely technical, automatic and passive, pointing to a lack of knowledge or control of the data which it stores’.<sup>180</sup> Such passivity is not inconsistent with being paid, but rather requires the services to be provided in a neutral, blind, and responsive manner. It seems likely that a provider of automated advertising in response to keywords chosen by the advertiser, or a site that offers a marketplace for the sale of goods that are selected and described by the seller, would be regarded as falling within the scope of the immunity.<sup>181</sup> It is, however, less clear whether a search tool that actively suggests trade marks as keywords would constitute a sufficiently passive role. Indeed, the Court in *Google* highlighted that the role ‘played by Google in the . . . selection of keywords’ was ‘relevant’ to whether the test of passivity was met.<sup>182</sup>

Even if the host is passive, the immunity will not apply where a service provider knows of the wrongdoing. This leaves open critical questions as to when there is such knowledge.<sup>183</sup> Is a host able to rely on the immunity where it specifically designs a system such that it cannot be said to have knowledge of acts, infringing or otherwise? Might it be sufficient that the host has generalized knowledge that the system is likely to be used to infringe and yet does nothing to prevent or deter such activity? In considering the concept of ‘knowledge’ in this context, it is important also to bear in mind that Article 15 of the e-Commerce Directive forbids member states to impose a ‘general obligation’ on providers ‘to monitor the information which they transmit or store, nor a general obligation actively to seek facts or circumstances indicating illegal activity’.<sup>184</sup> Thus it seems that any concept of imputed or constructive knowledge cannot assume that the provider monitors its users.

<sup>180</sup> *Louis Vuitton v. Google France*, Cases C-236/08–238/08 [2010] ECR I–2417 (ECJ, Grand Chamber), [114].

<sup>181</sup> *L’Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I–6011 (ECJ, Grand Chamber), [115] (indicating that merely storing offers for sale on its server, setting the terms of its service, and providing general information to its customers did not make the auction site ‘active’). Nevertheless, the French Cour de Cassation has held that eBay is, in fact, active and thus does not benefit from the immunity: *eBay Inc. v. LVMH* (3 May 2012) (Cour de Cassation, Comm. Ch). available online at <[http://www.legalis.net/spip.php?page=jurisprudence-decision&id\\_article=3398](http://www.legalis.net/spip.php?page=jurisprudence-decision&id_article=3398)>

<sup>182</sup> *Louis Vuitton v. Google France*, Cases C-236/08–238/08 [2010] ECR I–2417, [118]. It also referred to the role in ‘drafting of the commercial message which accompanies the advertising link’, but it seems clear that the advertisers draft the text and insert the link: *ibid.*, [AG126], [AG138].

<sup>183</sup> For reflections based on the US experience, see S. Dogan, ‘Principled Standards vs. Boundless Discretion: A Tale of Two Approaches to Intermediary Trademark Liability Online’ (2014) 36 *Colum JL & Arts* 1; M. Sentleben, ‘An Uneasy Case for Notice and Takedown: Context Specific Trademark Rights’ (March 2012), available online at <<http://www.ssrn.com/abstract=2025075>>

<sup>184</sup> See, however, e-Commerce Dir., Recital 48 (recognizing that some specific monitoring may be required without violating Art. 15).

The Court in *eBay* stated that the service would lose immunity:

... if [it were] aware of facts or circumstances on the basis of which a diligent economic operator should have realised that the offers for sale in question were unlawful and, in the event of it being so aware, failed to act expeditiously.<sup>185</sup>

The relevant knowledge could be provided by third parties, or arise from the service provider's own actions. The application of these rather vague criteria was left to the courts of member states and the *eBay* case has now been settled.

Although one might have expected the question of accessory liability (particularly the creation of positive criteria in which liability would arise) to have been included in the ongoing European Union reforms, so far all that has been mooted is a prohibition on 'secondary infringement'. Under Article 11 of the proposed Directive,<sup>186</sup> member states would be required to introduce protection with respect to 'get-up', 'packaging', or 'other means' to which a protected trade mark is affixed. The proposed provision would impose liability on those who stock or market such 'means' and on those who affix protected marks to such 'means' where it is 'likely' that the 'means' will be used in relation to goods or services for which the mark would be protected.

Beyond this, the most that has been achieved is a 'memorandum of understanding' between brand owners and intermediaries—particularly 'auction sites' (including eBay and Amazon)—by which the latter commit themselves to take down adverts when notified that the items are counterfeit and to take steps against users who are generally engaged in counterfeiting.<sup>187</sup> There appears to be no ongoing effort at the level of the World Intellectual Property Organization (WIPO).<sup>188</sup>

<sup>185</sup> *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011 (ECJ, Grand Chamber), [120].

2 Use of Registered Mark	1061	7 Local Use	1076
3 Use of Name or Address	1062	8 Exhaustion	1076
4 Descriptive Use	1067	9 Freedom of Expression	1093
5 Use to Indicate the Intended Purpose of a Product or Service	1069		

### 1 INTRODUCTION

In this chapter, we explore the various defences that are available to a person who has been charged with trade mark infringement. While the defences to trade mark infringement have always been important, the expanded scope of protection provided under the Trade Marks Act 1994 means that defendants are now likely to try to rely much more frequently on the defences provided.<sup>1</sup> It should be noted that a common tactic for a defendant who is accused of infringement is to assert that the claimant's registered right was invalidly registered or that it ought to be revoked.<sup>2</sup> These issues have been considered in Chapters 36, 37, 38, and 39.

### 2 USE OF REGISTERED MARK

The first defence to a claim of infringement of a UK trade mark is set out in section 11(1) of the 1994 Act. This provides that a trade mark is not infringed by the use of another registered trade mark in relation to goods or services for which the latter mark is registered. In effect, section 11(1) provides that registration gives a defence to an action for infringement. This is in contrast to the situation in copyright law where a person can simultaneously exploit their own work and infringe someone else's. The immunity conferred by registration acts as an incentive for traders to apply for trade mark registration.

<sup>1</sup> G. Dinwoodie, 'Developing Defenses in Trademark Law' (2009) 13 *LCLR* 99, 152; see also W. McGeeran, 'Rethinking Trademark Fair Use' (2008) 94 *Iowa L Rev* 49; M. Grynberg, 'Things are Worse than We Think: Trademark Defenses in a "Formalist" Age' (2009) 24 *BTLJ* 897; W. McGeeran, 'The Trademark Fair Use Reform Act' (2010) 90 *Boston U L Rev* 2267.

<sup>2</sup> Note also CTMR, Art. 99(3) (formerly Art. 95(3) of Regulation 40/94), providing a limited defence short of a counterclaim for revocation or invalidity.

On its face, this exception appears to be incompatible with EU law.<sup>3</sup> In *Fédération Cynologique Internationale v. Federación Canina Internacional de Perros de Pura Raza*,<sup>4</sup> the Court of Justice ruled in relation to the Community Trade Marks Regulation (CTMR) that the exclusive right of the proprietor of a Community trade mark (CTM) to prohibit ‘all third parties’ from using its trade mark applies even in respect of a third-party proprietor of a later registered CTM. The proprietor does not need to apply to invalidate the later mark *before* they can bring proceedings for infringement. While that case concerned CTMs, the same language of ‘all third parties’ appears in Article 5 of the Trade Marks Directive.

However, on closer examination, the question of incompatibility looks less straightforward. On the one hand, section 11(1) of the 1994 Act appears to be an exception to the trade mark proprietor’s rights that is not permitted under the Directive. But if one thinks through what happens in practice, it is perhaps easier to see that the defence does not preclude an action by the earlier trade mark owner unless there has been invalidation of the later mark ‘beforehand’.<sup>5</sup> This is because where a defendant relies on the section 11(1) defence, the claimant will usually respond by challenging the validity of the registered mark under section 47(3). This can (indeed, must) be done in the same proceedings, so does not operate as a procedural bar to continuing with the action.

In practice, the ability of the claimant to nullify the section 11(1) defence by challenging the validity of the defendant’s registration may be restricted if the claimant has acquiesced in the use of the later trade mark. This is because, where the owner of an earlier trade mark has knowingly acquiesced in the use of the mark for a continuous period of five years, section 48 of the 1994 Act provides that they lose the ability to apply for a declaration that the registration is invalid or to oppose the use of the mark.<sup>6</sup> Unless the defendant’s registration was in bad faith, where a claimant has acquiesced in the use of the later mark, they lose the ability to counteract the section 11(1) defence.

### 3 USE OF NAME OR ADDRESS

Section 11(2)(a) of the 1994 Act (or, with respect to Community marks, Article 12(a) CTMR) provides that a registered trade mark is not infringed by ‘the use by a person of his own name or address’.<sup>7</sup> As with all of the defences in section 11(2), this is subject to the proviso that the use is ‘in accordance with honest practices in industrial or commercial matters’.

#### 3.1 USE OF NAME

In contrast with the law of passing off,<sup>8</sup> trade mark law provides a defence to a claim of infringement where a person uses their own name. This defence is all the more important because of the way in which section 3(1)(b) of the Act has been interpreted in relation to surnames, which leaves open the possibility that the first person to apply to protect a

<sup>3</sup> Although it is notable that the Spanish Supreme Court has persisted with it: *Editorial Prensa Canarias, S.A. v. Radio Pública de Canarias SA* (24 July 2013).

<sup>4</sup> Case C-561/11 (21 February 2013) (ECJ, First Chamber).

<sup>5</sup> Note the operative part of the Court ruling: *ibid.*

<sup>6</sup> TM Dir., Art. 9; *Budejovicky Budvar v. Anheuser Busch*, Case C-482/09 [2011] ECR I-8701 (ECJ, First Chamber).

<sup>7</sup> TM Dir., Art. 6(a). <sup>8</sup> See p. 849.

surname as a trade mark in a given field will be able to obtain protection,<sup>9</sup> and that there will on its face be a case of infringement where others utilize their own names.<sup>10</sup>

In *Anheuser-Busch*,<sup>11</sup> the owner of the BUDWEISER mark for beer sued its Czech trade rival, which was importing its BUDVAR beer into Finland. The defendant's beer bore the BUDVAR mark, but also stated below the trade mark—and in considerably smaller lettering—that the product had been 'brewed and bottled by the brewery Budweiser Budvar national enterprise'. The Court of Justice provided guidance on the interpretation of Article 6(1)(a) of the Directive, which, in its view, was necessary for the Finnish court to dispose of the case. Most significantly, the Court held that the defence was not confined to personal names. This was in spite of a Council and Commission Minute stating that the exception was so limited.<sup>12</sup> The Court of Justice noted that these Minutes were non-binding and that there was nothing in the text of the Directive to suggest such a limitation. While this resolved the most important question about the scope of the exception, which had existed since its enactment, controversy still remains over the breadth of the concept of one's 'own name'. The English courts had favoured a restrictive interpretation, permitting slight variation from the formal registered company name, for example by dropping 'Ltd',<sup>13</sup> but not more substantial abbreviations,<sup>14</sup> nor the adoption of a trading name.<sup>15</sup> However, the Court of Appeal decision in *Hotel Cipriani*<sup>16</sup> signals a more flexible approach. There is no *per se* rule that a trading name is not a person's own name, although a substantial variation from it is not. Thus Cipriani Grosvenor Street was able, in principle, to rely on the defence to justify using the name 'Cipriani (London)', its trading name, even though such use would otherwise have infringed the claimant's CIPRIANI mark, but not 'Cipriani' (which was not its name at all).<sup>17</sup> The High Court had previously held that the section 11(2)(a) defence would not apply to the use of a nickname,<sup>18</sup> but the Court of Appeal indicated the opposite—that:

[I]n principle an individual ought to be able to use the defence in relation to an adopted name by which he or she is known for business purposes or generally, for example an actor's stage name or a writer's nom de plume.<sup>19</sup>

It should be noted that current draft legislation to reform the CTMR proposes to limit the 'own name' defence to 'personal names'.<sup>20</sup> The reason that has been given is that this

<sup>9</sup> The debate over the appropriate test for distinctiveness, explained in Chapter 37, has been informed by different views as to the scope and usefulness of the defences: see *Nichols plc's Trade Mark* [2003] RPC (16) 301, 305–6; cf. esp. *Procter & Gamble v. OHIM (Baby Dry)*, Case C-383/99P [2001] ECR I–6251; *Wrigley v. OHIM (Doublemint)*, Case C-191/01P [2003] ETMR (88) 1068 (AG Jacobs).

corresponds to the scope of the exception that was originally envisaged by the Council and Commission (as was evident from the Agreed Statement). It seems that the Commission feels it to be more important to ensure that its 'original intention' is imposed than to look for any evidence that the Court's broader interpretation has caused damage to trade mark holders.<sup>21</sup>

### 3.2 HONEST PRACTICES

The notion of 'honest practices in industrial and commercial matters' has its origins in the provisions of the Paris Convention that require member states to take steps to prohibit unfair competition.<sup>22</sup> The thinking behind its use in Article 6 of the Trade Marks Directive is that certain uses of a registered mark by third parties should be permissible, but only insofar as they do not legitimize unfair competitive practices by the third party. Perhaps unsurprisingly, therefore, the Court of Justice has interpreted the proviso as imposing 'a duty to act fairly' towards the trade mark owner.<sup>23</sup> The same approach is taken in relation to all three defences in section 11(2) (Article 6 of the Directive),<sup>24</sup> although the application may vary from one situation to another.

This is an objective test. It requires the circumstances to be viewed globally,<sup>25</sup> taking into account how the sign came to be adopted,<sup>26</sup> the impact of the use on the interests of the proprietor of the mark, the knowledge of the alleged infringer,<sup>27</sup> and the efforts that they make to ensure that there is no confusion or unfair advantage.<sup>28</sup> It is now clear that the proviso does not preclude use of a sign as a trade mark.<sup>29</sup> In deciding whether use of a trade mark is in accordance with honest practice, a tribunal needs to examine the overall presentation of the goods (or advertising of the services) by the defendant.<sup>30</sup>

<sup>21</sup> An effort is made to justify the restriction to personal names in Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), [2.254]–[2.254] (referring to the 'priority principle').

<sup>22</sup> Paris, Art. 10bis(2). Note also *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] ECR I-10989 (ECJ, Grand Chamber) (referring to TRIPS, Art. 17, requiring regard to be had to the legitimate interests of the proprietor).

<sup>23</sup> *BMW v. Deenik*, Case C-63/97 [1999] ECR I-905, [61]; *Céline Sàrl v. Céline SA*, Case C-17/06 [2007] ECR I-7041, [32]; *Gerolsteiner Brunnen GmbH & Co. v. Putsch GmbH*, Case C-100/02 [2004] ECR I-691, [24]; *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] ECR I-10989 (ECJ, Grand Chamber), [82]; *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-228/03 [2005] ECR I-2337, [41]; *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [67].

<sup>24</sup> For example, the Court of Justice in both *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] ECR I-10989 and *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-228/03 [2005] ECR I-2337 cites the earlier *Gerolsteiner Brunnen GmbH & Co. v. Putsch GmbH*, Case C-100/02 [2004] ECR I-691. See also *Samuel Smith Old Brewery v. Lee* [2011] EWHC 1879 (Ch), [2012] FSR (7) 263, [113].

<sup>25</sup> *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-228/03 [2005] ECR I-2337, [46] ('an overall assessment of all the relevant circumstances').

<sup>26</sup> *Céline Sàrl v. Céline SA*, Case C-17/06 [2007] ECR I-7041, [AG53]–[AG57]; *Hotel Cipriani SRL v. Cipriani (Grosvenor St) Ltd* [2009] RPC (9) 209, [151].

<sup>27</sup> *Céline Sàrl v. Céline SA*, Case C-17/06 [2007] ECR I-7041, [34]; *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] ECR I-10989, [83]; *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963, [67], [70].

<sup>28</sup> *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-228/03 [2005] ECR I-2337, [46]. The question of how the user of the sign responded to changing appreciation of the effects of use of the mark was emphasized in *Samuel Smith Old Brewery v. Lee* [2011] EWHC 1879 (Ch), [2012] FSR (7) 263, and *Maier v. Asos plc* [2013] EWHC 2831 (Ch), [157].

<sup>29</sup> *Reed Executive plc v. Reed Business Information Ltd* [2004] RPC (40) 767, [121], [124], [125].

<sup>30</sup> There are now many examples applying the standard. In the context of the 'own name' defence, see *Hotel Cipriani SRL v. Cipriani (Grosvenor St) Ltd* [2009] RPC (9) 209, [153]–[164], on appeal at [2010] EWCA

Despite the framing of the test of honest practices in terms of broad notions of fairness, dependent on an overall understanding of the circumstances, in at least one case the Court of Justice appears also to have indicated that there are some minimum conditions that must be met before the defence can come into play.<sup>31</sup> More specifically, the Court has indicated that a use will not be in accordance with honest practices if it is done in such a manner that it may give the impression that there is a commercial connection between the re-seller and the trade mark proprietor,<sup>32</sup> if the use affects the value of the trade mark by taking unfair advantage of its distinctive character or repute,<sup>33</sup> if it discredits or denigrates that mark,<sup>34</sup> or if it presents its product as an imitation or replica of the product bearing the trade mark.<sup>35</sup> These latter factors seem to have been drawn from the Directive on Misleading and Comparative Advertising (under which they operate as conditions, rather than factors). English case law, like the earlier Court of Justice jurisprudence,<sup>36</sup> treats these as ‘important factors’ in the overall assessment, rather than as conditions.<sup>37</sup> As will become clear, this more flexible approach has much to be said for it—after all, we are assessing ‘fairness’.

The first two of the conditions (or factors) warrant a little further elaboration. In the first instance, the defence will not be available if consumers would understand the use of the trade name to be implying a link with the trade mark owner,<sup>38</sup> for example by suggesting that the trader’s business is part of or affiliated with the trade mark owner’s business.<sup>39</sup> This will doubtless depend on exactly how the defendant used the sign (in displays, advertising, packaging, or on the product) and how observant the average consumer is likely to be. The Court of Justice said that this was a question of fact to be decided by national courts.<sup>40</sup> However, it has also indicated that some confusion may be permissible: the Court in *Gerolsteiner*<sup>41</sup> acknowledged that the defences might be available even though there was some limited evidence of aural confusion. Presumably, the greater the level of confusion, the more likely that the use will be regarded as falling outside the defence.<sup>42</sup> Later cases have added that it is important also to consider the extent to which the defendant was aware, or ought to have been aware, that the consumer would consider there to be a link. If it is obvious to the defendant that such a conclusion would be drawn by consumers, then most likely the use will not be regarded as honest.

<sup>32</sup> *BMW v. Deenik*, Case C-63/97 [1999] *ECR* I-905, [51]; *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-228/03 [2005] *ECR* I-2337, [42]; *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] *ECR* I-10989, [83].

<sup>33</sup> *BMW v. Deenik*, Case C-63/97 [1999] *ECR* I-905, [52]; *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-228/03 [2005] *ECR* I-2337, [43].

<sup>34</sup> *Ibid.*, [44].

<sup>35</sup> *Ibid.*, [45].

<sup>36</sup> *Céline Sàrl v. Céline SA*, Case C-17/06 [2007] *ECR* I-7041, [34]; *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] *ECR* I-10989, [83].

<sup>37</sup> *Hotel Cipriani SRL v. Cipriani (Grosvenor St) Ltd* [2009] *RPC* (9) 209, [145] *per Arnold J*; *Samuel Smith Old Brewery v. Lee* [2011] *EWHC* 1879 (Ch), [2012] *FSR* (7) 263, esp. [116], [118]; *Maier v. Asos plc* [2013] *EWHC* 2831 (Ch), [148] *per Rose J*. The justification for so doing seems to be that it is only if these are ‘factors’ that the conclusion in *Gerolsteiner Brunnen*, Case C-100/02 [2004] *ECR* I-691, [25], that some confusion does not preclude a finding of honest practices, can be reconciled with the statement in *Gillette*.

<sup>38</sup> *Anheuser-Busch v. Budvar*, Case C-245/02 [2004] *ECR* I-10989, [83].

<sup>39</sup> *BMW v. Deenik*, Case C-63/97 [1999] *ECR* I-905, [52], [63], [64].

<sup>40</sup> *Ibid.*, [55].

<sup>41</sup> Case C-100/02 [2004] *ECR* I-691.

<sup>42</sup> *Fine & Country v. Okotoks* [2012] *EWHC* 2230, [2013] *EWCA Civ* 672, [123].

In *Portakabin Ltd v. Primakabin BV*,<sup>44</sup> the Court indicated that even if the defendant's use of the sign on its goods falls within the terms of section 11(2)/Article 6, it will rarely be in accordance with honest practices to utilize that trade mark as a keyword to generate adverts, at least if it is not clear from those adverts that the two enterprises are unconnected economically. The Court did not close the door completely, however.<sup>45</sup>

Second, the Court has emphasized that the defendant's use must not take 'unfair advantage' of the reputation associated with the mark. However, the mere accrual of some 'advantage' is not determinative: the Court of Justice has said that if there is no risk that the public will be led to believe that there is a commercial connection between the trader and the trade mark proprietor, the mere fact that the trader derived an advantage from using the mark (for example because the advertisements lend an aura of quality to their business) would not of itself mean that the use was dishonest.<sup>43</sup>

The emphasis in the case law on 'unfair advantage' is, in many respects, understandable, but any attempt to elevate it into a condition for the operation of the defence must be regarded as regrettable for two reasons. Both reasons stem from the fact that the same language appears as a condition for liability in the context of 'dilution', discussed in detail in Chapter 38, and the concepts have been assumed to be identical.

The first objection is that this understanding of section 11(2)/Article 6 denudes it of any role in actions for infringement based on section 10(3)/Article 5(2).<sup>46</sup> Because 'unfair advantage' is one of the conditions for liability, if 'unfair advantage' precludes a defence, then there can never be a defence to any such claim. The same reasoning applies insofar as section 10(3) provides for liability based on blurring and tarnishment, and the existence of any blurring or tarnishment could also be said to preclude the defence. All of this is regrettable because it is precisely in situations in which liability extends beyond confusion that most commentators regard there to be a pressing need for exceptions. The inevitable effect of removing the availability of the section 11(2)/Article 6 exceptions from section 10(3)/Article 5(2) claims is to force tribunals to develop the vague language of 'due cause' (so that there is no liability to begin with). Thus while use of a sign comprising a third party's keyword may necessarily confer an unfair advantage, in *Interflora*<sup>47</sup> the Court seemed to recognize that a trade might have 'due cause' to utilize a keyword (there, in order to offer alternatives to the trade mark proprietor's goods to the consumer).

The second objection to a rule that the existence of unfair advantage precludes the operation of the section 11(2) defences is that the concept of 'unfair advantage' has itself been deprived of much content. Indeed, as we saw in Chapter 38, the notion of 'unfairness' has been equated with the deliberateness of the use. One possible way in which to avoid an undesirably restrictive application of the defences would be to give 'unfairness' a different meaning when deciding whether an act is in accordance with honest practices (as the Court did in the *BMW* case<sup>48</sup>). It might be added that similar problems would be caused were it to be concluded that

<sup>43</sup> *BMW v. Deenik*, Case C-63/97 [1999] ECR I-905, [53]. See *Mercedes Star* (5 July 2001) (Düsseldorf Court of Appeal), (2003) 34 IIC 438.

<sup>44</sup> Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [68]–[72].

<sup>45</sup> *Ibid.*, [71]. See also *Maier v. Asos plc* [2013] EWHC 2831 (Ch), [165] *per Rose* J.

<sup>46</sup> *Céline Sàrl v. Céline SA*, Case C-17/06 [2007] ECR I-7041, [AG47]. Cf. Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), [2.250] (uses of reputation marks that would benefit from one of the exceptions are made 'with due cause').

<sup>47</sup> *Interflora v. Marks & Spencer*, Case C-323/09 [2011] ECR I-8625.

<sup>48</sup> *BMW v. Deenik*, Case C-63/97 [1999] ECR I-905. But cf. *L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [77] (unfair advantage has the same meaning in TM Dir., Art. 5(2), and MCAD, Art. 4(f)); *O2 Holdings Ltd v. Hutchison 3G UK Ltd*, Case C-533/06 [2008] ECR I-4231 (ECJ, First Chamber), [49] (confusion has the same meaning in TM Dir. and MCAD, Art. 4(h)).

it is a condition for the operation of the defence that a use must not be detrimental to the distinctive character of a mark, given that jurisprudence suggests that if there is a likelihood of confusion, then there is detriment to distinctive character.<sup>49</sup> Because there is no ‘due cause’ limitation on section 10(1) (double identity) or section 10(2) (confusing similarity) liability, elevating these factors into conditions could potentially deprive the defences of all operation.

Under proposed reforms to Community trade mark law, these two conditions would be codified in a non-exhaustive definition of ‘honest practices’.<sup>50</sup> The proposed amendments to the Directive and CTMR identify two situations that are *per se* contrary to honest practices: first, where the use gives the impression of a commercial connection between the user and the trade mark proprietor; and second, where the use takes unfair advantage of, or is detrimental to, the distinctive character or repute of the trade mark.<sup>51</sup> Importantly, the amendment would add the qualification that dilution precludes the availability of the exception only where it occurs ‘without due cause’. This proposal would simultaneously codify some aspects of the existing jurisprudence, while restoring some of the flexibility that the Court may have incidentally removed.

## 4 DESCRIPTIVE USE

Section 11(2)(b) of the 1994 Act (and, for Community trade marks, Article 12(b) CTMR)<sup>52</sup> provides that a registered trade mark is not infringed where the mark is used to indicate the kind, quality, quantity, intended purpose, value, geographical origin, time of production (goods) or of rendering (services), or other characteristics of goods or services. This is subject to the proviso that the use is in accordance with honest practice in industrial or commercial matters. Although descriptive terms are inherently unregistrable,<sup>53</sup> as noted in Chapter 37, if a descriptive term becomes registrable because it has ‘acquired distinctiveness’ through use, the section 11(2)(b) defence ensures that the rights conferred on the proprietor do not restrict other traders from using the same word or sign to describe goods or services.

### 4.1 DESCRIPTIVENESS

The notion of descriptive use is not limited to ‘purely descriptive’ uses such as those that have no effect on the functions of a trade mark, and thus might include, for example, descriptive use in advertising.<sup>54</sup> The most obvious situation in which the section 11(2)(b) defence applies is where a trader uses a sign that is a registered trade mark to describe their own goods, for example where, in the face of the trade mark *BABY DRY* registered for diapers, a competitor advertises its own nappies with the slogan ‘guaranteed to keep your baby dry’.

<sup>49</sup> *Fine and Country Ltd v. Okotoks Ltd* [2012] EWHC 2230 (Ch), [270] per Hildyard J.

<sup>50</sup> Following the recommendation of the Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), [2.265].

<sup>51</sup> European Commission, *Proposal for a Directive to Approximate the Laws of the Member States Relating to Trade Marks (Recast)* (2013) COM(2013) 0162 final, proposed Art. 10(5). See also *ibid.*, 7.

<sup>52</sup> See also TM Dir., Art. 6(b).

<sup>53</sup> The debate over the appropriate test for descriptiveness has been informed by different views as to the scope and usefulness of the descriptiveness defence: cf. *Procter & Gamble v. OHIM (Baby Dry)*, Case C-383/99P [2001] ECR I-6251 and *Wrigley v. OHIM (Doublemint)*, Case C-191/01P [2003] ETMR (88) 1068 (AG Jacobs).

<sup>54</sup> *L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [61]–[62]. On ‘purely’ descriptive uses that do not jeopardize the ‘origin function’, see Chapter 40, p. 1051.

The defence can also apply where a person uses a descriptive indication as part of their own trade mark. For example, in *Gerolsteiner Brunnen GmbH & Co. v. Putsch GmbH*,<sup>55</sup> the question referred to the Court of Justice was whether bottled water bearing the mark KERRY SPRING could rely on the defence to an action brought by the owner of the registered GERRI for mineral water. Although the defendant used the sign ‘as a trade mark’, the Court accepted that the sign KERRY SPRING was also an indication of geographical origin within Article 6(1)(b). The fact that a sign is used additionally as a mark is a factor pertinent to the assessment whether the use is in accordance with honest practice, rather than whether the sign indicated geographical origin.

However, there are now a number of relatively clear situations in which the descriptiveness defence cannot be relied upon. It does not apply where a person uses the mark to describe the claimant’s goods (as with ‘PAMPERS soak up twice as much liquid as BABY DRY’,<sup>56</sup> nor to the use of third-party marks as ‘keywords’ to generate advertising.<sup>57</sup> Moreover it does not justify ‘decorative’ use. In *Adidas AG v. Marca Mode CV*,<sup>58</sup> the Court of Justice explained that a decorative use (in the case of two stripes on athletic clothing) is not a descriptive indication.

A more difficult case is the use of a trade marked feature of a product to indicate that what is being sold is a representation or miniature model of the product (that the seller is entitled to make or sell). In *Adam Opel AG v. Autec AG*,<sup>59</sup> the well-known car manufacturer Opel had registrations of its logo for cars and toys (see Fig. 40.1, above at p. 1052), and brought an action against Autec, which featured the Opel logo on its replica toys. The defendant asserted that this could be regarded as use to describe the goods—that is, to indicate that the goods were replicas of cars made by Opel. The Court of Justice indicated that Article 6(1)(b) of the Directive could not be stretched to exempt such uses (if indeed they fell within Article 5 of the Directive). The Court stated bluntly that:

The affixing of a sign which is identical to a trade mark registered, inter alia, in respect of motor vehicles to scale models of that make of vehicle in order to reproduce those vehicles faithfully is not intended to provide an indication as to a characteristic of those scale models, but is merely an element in the faithful reproduction of the original vehicles.<sup>60</sup>

It therefore contradicted Advocate-General Colomer’s view that such use should be within the exception. Unfortunately, it is unclear why the use of the logo is not regarded by the Court of Justice as a use that indicates that the toy is a replica of the Opel car.

## 4.2 HONEST PRACTICES

A descriptive use will provide a defence only if it is in accordance with ‘honest practices in industrial and commercial matters’.<sup>61</sup> Readers are referred back to the discussion of this in the previous section. One factor that is worth drawing attention to here, however, is the

<sup>55</sup> Case C-100/02 [2004] ECR I-691 (ECJ, Fifth Chamber); cf. *Windsurfing Chiemsee*, Cases C-108 & 109/97 [1999] ECR I-2779, [28]; *Adidas AG and ors v. Marca Mode CV and ors*, Case C-102/07 [2008] ECR I-2439, [AG77].

<sup>56</sup> *L’Oréal SA v. Bellure*, Case C-487/07 [2009] ECR I-5185, [AG25] (AG Mengozzi); *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [60]–[61].

<sup>57</sup> *Ibid.*, [60].

<sup>58</sup> Case C-102/07 [2008] ECR I-2439 (ECJ, First Chamber), [48]; cf. *Samuel Smith Old Brewery v. Lee* [2011] EWHC 1879 (Ch), [2012] FSR (7) 263, esp. [127].

<sup>59</sup> *Adam Opel AG v. Autec AG*, Case C-48/05 [2007] ECR I-1017; cf. *ibid.*, [AG51] (AG Colomer). See Fig. 40.1, p. 1052.

<sup>60</sup> *Ibid.*, [44].

<sup>61</sup> For examples in this context, see *Samuel Smith Old Brewery v. Lee* [2011] EWHC 1879 (Ch), [2012] FSR (7) 263; *Fine and Country Ltd v. Okotoks Ltd* [2012] EWHC 2230 (Ch), [270] *per* Hildyard J.

impact of linguistic diversity in the European Union. Although the question of infringement, like distinctiveness,<sup>62</sup> is viewed from the perspective of the average consumer with the particular characteristics associated with the territory,<sup>63</sup> it may be that, when considering honest practices, it will be relevant that the sign was adopted as descriptive in the member state from which the goods originate. In *Gerolsteiner*,<sup>64</sup> the Court observed that a certain amount of confusion might need to be tolerated in an economic union of the size and diversity of the European Union. The Court stated that, given the great linguistic diversity, ‘the chance that there exists some phonetic similarity between a trade mark registered in one Member State and an indication of geographical origin from another Member State is . . . substantial’.<sup>65</sup> Such confusion was not conclusive evidence that a defendant was not acting in accordance with honest practices. That case concerned a geographical indication, but the observations are all the more relevant to descriptive terms from different languages.

#### 4.3 PROPOSED EXTENSION TO NON-DISTINCTIVE ELEMENTS

Pending proposed reforms would extend the ‘descriptiveness’ defence to cover the use of ‘non-distinctive’ signs.<sup>66</sup> Because trade mark applications are rejected only when they consist *exclusively* of elements that are non-distinctive, it is possible to register marks that include non-distinctive components. If adopted, this defence might enable traders to use non-distinctive components of earlier registered marks as decorations or in their own marks. While this aspect of the proposal seems desirable, other aspects lack clarity. Presumably, the new defence would not allow the use of inherently non-distinctive signs that have acquired distinctiveness, but only the use of those components of registered marks that remain non-distinctive. In this respect, its application would be rather different from the descriptive use exception.

### 5 USE TO INDICATE THE INTENDED PURPOSE OF A PRODUCT OR SERVICE

Section 11(2)(c) of the 1994 Act/Article 12(c) CTMR provides that a registered trade mark is not infringed where the defendant finds it necessary to use the mark to indicate the intended purpose of a product or service (in particular, as accessories or spare

<sup>62</sup> Recall *Matratzen Concord AG v. Hukla Germany SA*, Case C-421/04 [2006] ECR I-2303, discussed in Chapter 37, at p. 931, in which the German word for mattresses, *Matratzen*, was registrable as a trade mark in Spain for mattresses.

<sup>63</sup> It may be worth considering whether a country-of-origin rule (similar to that adopted recently for orphan works and discussed at p. 331 above) should be applicable to the question of whether an indication is descriptive: if it is descriptive in its country of origin, then the defence should be applicable (subject to a finding of honest practices). This, presumably, is the situation under the CTM, so the system would have greater coherence if it were also the rule for TM Dir., Art. 6.

<sup>64</sup> *Gerolsteiner Brunnen*, Case C-100/02 [2004] ECR I-691. <sup>65</sup> *Ibid.*, [25].

<sup>66</sup> European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COM(2013) 0162 final, proposed Art. 14(1)(b). No suggestion was made by the Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), and the Commission does not propose to add a defence where a person uses ‘functional’ components of a trade mark (cf. the US Trademark Act of 1946, §33(b)(8), 15 USC §1115(b)(8)), although as long as those functional components have not acquired distinctive character, the proposed extension to non-distinctive elements will secure some freedom. See above pp. 916–17.

parts).<sup>67</sup> This is subject to the proviso that the use must be in accordance with honest practice in industrial or commercial matters. It is peculiar that these acts warrant an explicit defence, because section 11(2)(b) itself encompasses the use of ‘indications’ of the ‘intended purpose’ of the goods or services. However, it has been assumed that section 11(2)(c) constitutes a special provision, explicitly referring to the use of a ‘trade mark’, and thus controls exclusively cases falling within its ambit.<sup>68</sup>

In effect, this defence recognizes that while a trader may not be formally linked to the trade mark owner, they might find it necessary to refer to the trade mark as a part of the normal course of their trade. This would occur, for example, where a trader sells spare parts for a particular type of product.<sup>69</sup> In these circumstances, the trader will wish to inform consumers that the parts fit particular products. The most efficient way in which this can be done is by referring to the trade mark for that product. Another situation in which it will be necessary to use a trade mark in the course of trade is where a trader repairs a particular brand of goods (such as SONY televisions). If trade mark owners were able to control such uses, they would unfairly restrict trade. As the Court of Justice said, the defence in Article 6(1)(c) of the Directive seeks to reconcile the ‘fundamental interests of trade mark protection with those of the free movement of goods and freedom to provide services.’<sup>70</sup>

The nature of this defence was considered by the Court of Justice in *BMW v. Deenik*.<sup>71</sup> The defendant in this action ran a garage that specialized in repairing and maintaining BMW cars. Notably, he was not a part of the official BMW dealer network. BMW claimed that when the defendant described himself as specializing in the repair and maintenance of BMWs, he made unlawful use of the BMW mark. The Court of Justice disagreed, explaining that, in these circumstances, the defendant could rely on the defence in Article 6(1)(c) of the Directive. This was because the defendant could not communicate the fact that he repaired and maintained BMW cars without using the BMW mark.<sup>72</sup> In relation to the question of whether the use was *necessary* to indicate the intended purpose, the Court of Justice said that ‘if an independent trader carries out the maintenance and repair of BMW cars or is in fact a specialist in the field, that fact cannot in practice be communicated to his customers without using the BMW mark.’<sup>73</sup>

The Court of Justice revisited the question of the scope of this exception in *Gillette*.<sup>74</sup> In this case, the claimant, Gillette, had registered trade marks for the words GILLETTE and SENSOR for razors. The defendant was selling blades under its mark PARASON FLEXOR, with a sticker on the packaging stating that ‘all PARASON FLEXOR and GILLETTE SENSOR handles are compatible with this blade’. When Gillette sought to prevent this, the Finnish courts were uncertain as to whether the blades constituted ‘spare parts’ and therefore referred the matter to the Court. The Court of Justice responded by observing that the scope of the exception was not limited to spare parts and accessories, which were simply examples of possible intended uses of goods that would likely fall within the exception. The Court therefore stated that it was unnecessary to decide whether blades were

<sup>67</sup> See also TM Dir., Art. 6(c). This would also count as comparative advertising within that Directive, since it implicitly states that the two products have equivalent technical features: *Toshiba Europe GmbH v. Katun Germany GmbH*, Case C-112/99 [2002] 3 CMLR (7) 164, [32]–[40]. As we have noted at p. 1065, the Court of Justice has increasingly used the conditions from MCAD, Art. 4, to define the notion of ‘honest practices’ under TM Dir., Art. 6(1)(c). <sup>68</sup> *BMW v. Round and Metal Ltd* [2012] EWHC 2099 (Pat), [113].

<sup>69</sup> *PAG v. Hawk-Woods* [2002] FSR (46) 723, 729 *per* Pumfrey J.

<sup>70</sup> *Bayerische Motorenwerke AG and BMW Nederland BV v. Deenik*, Case C-63/97 [1999] ECR I-905, [64].

<sup>71</sup> *Ibid.* <sup>72</sup> *Ibid.*, [54]. <sup>73</sup> *Ibid.*, [AG54], [60].

<sup>74</sup> *Gillette Co. v. L.A.-Laboratories Ltd Oy*, Case C-288/03 [2005] ECR I-2337, [24]–[39]. See also *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber), [62]–[66].

accessories or spare parts; instead, the key issue was whether it was ‘necessary’ to refer to Gillette’s marks to indicate the intended purpose of the blades. The Court helpfully explained that this would be so only if it were necessary to use the trade mark to provide the public with comprehensible and complete information about the intended purpose of the product (including its compatibility). Having given a generally broad definition of the scope, the Court gave a rather narrow interpretation of ‘necessary’ when it stated that this meant that use of the claimant’s trade mark must be the only way of conveying the relevant information. Consequently, where technical standards and other norms are available that are well understood by the public, it would not be necessary to use the claimant’s trade mark to convey full information about compatibility. Armed with this advice, the Helsinki Supreme Court held that the reference to GILLETTE and SENSOR was indeed ‘necessary’ (and in accordance with honest practices).<sup>75</sup>

### 5.1 HONEST PRACTICES

For the defence to be available, the use must be ‘in accordance with honest practices in industrial and commercial matters’. Readers are referred back to the discussion in section 3.2 of this chapter (pp. 1064–7). In this context, the key danger that a trader must avoid is that consumers believe there to be an affiliation, for example that a repairer of automobiles is an ‘authorized repairer’ or that a provider of spare parts is, in fact, associated with the original manufacturer.<sup>76</sup> Although we have argued that the question of honest factors should be assessed by reference to ‘factors’, it is particularly in this context that the Court of Justice has emphasized that absence of confusion, unfair advantage, blurring, and tarnishment operate as conditions.

### 5.2 REFERENTIAL USE PROPOSAL

Under current reform proposals, the ‘intended purpose’ defence would be extended to be a more general referential use defence. In the United States, a body of case law has emerged in which traders are permitted to use trade marks to refer to the trade mark owner’s goods or services. The proposed amendment of EU law would offer equivalent freedom of European actors. Any use of a trade mark ‘for the purpose of identifying the goods or services as those of the proprietor of the trade mark’ would be permitted, as long as the use complied with the proviso.<sup>77</sup> Although this would bring about a notional broadening of the exception, it is notable that, in the Commission’s proposal, a necessity requirement is retained and that the terms of the reform do not extend to, for example, parodic references, as the Max Planck Institute had suggested.<sup>78</sup> Importantly, however, the European Parliament has proposed an amendment that would elaborate the ‘referential use’ exception further, indicating that it would include comparative advertising, resale of goods, and offering a legitimate alternative to the trade mark proprietor, as well as artistic expression, parody, and criticism.<sup>79</sup>

## 6 COMPARATIVE ADVERTISING

‘Comparative advertising’ is the term used to describe advertisements in which the goods or services of one trader are compared with the goods or services of another trader.<sup>80</sup> To show the advertiser’s wares in a favourable light, comparative advertisements usually emphasize differences in things such as price, value, durability, or quality. In so doing, advertisers often refer to the competitor’s products or services by their trade mark. The European Union has created specific legislation—the Directive on Misleading and Comparative Advertising (MCAD)<sup>81</sup>—dealing with the circumstances in which comparative advertising is permissible, and those in which it should be prevented.<sup>82</sup> However, the exact relationship between these rules and those relating to trade marks is rather unclear.<sup>83</sup>

In principle, the Directive requires member states to permit comparative advertising,<sup>84</sup> but does so only if the advertisement satisfies the eight conditions specified in Article 4:

- (a) it is not misleading within the meaning of Articles 2(b), 3, and 8(1) of this Directive . . . [these oblige member states to provide a minimum of protection against ‘misleading’ advertising, although leave that concept undefined];<sup>[85]</sup>
- (b) it compares goods or services meeting the same needs or intended for the same purpose;<sup>[86]</sup>
- (c) it objectively compares one or more material, relevant, verifiable, and representative features of those goods and services, which may include price;<sup>[87]</sup>
- (d) it does not discredit or denigrate the trade marks, trade names, other distinguishing marks, goods, services, activities, or circumstances of a competitor;<sup>[88]</sup>

<sup>80</sup> See A. Ohly and M. Spence, *The Law of Comparative Advertising* (2000).

<sup>81</sup> Directive 2006/114/EC of the European Parliament and of the Council of 12 December 2006 concerning misleading and comparative advertising [2006] *OJ L 376/21* (27 December 2006).

<sup>82</sup> For background, see A. Ohly and M. Spence, *The Law of Comparative Advertising* (2010). For suggestions going forward, see J. Glockner, ‘The Regulation of Comparative Advertising in Europe’ [2012] *IIC* 35.

<sup>83</sup> The curious provision in TMA 1994, s. 10(6), is now being treated by the UK courts as redundant: *O2 v. Hutchison* [2007] *RPC* (16) 407, [58]. For the case law on this, see Bently & Sherman (2004), 917–20.

<sup>84</sup> MCAD, Art. 2a, defines ‘comparative advertising’ as ‘any advertising which explicitly or by implication identifies a competitor or goods or services offered by a competitor’. This is ‘particularly broad’: *L’Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] *ECR I-5185* (ECJ, First Chamber), [52]. On whether registration of a domain name counts as advertising and metatags, see *Belgian Electronic Sorting Technology v. Bert Peelaers*, Case C-657/11 (11 July 2013) (ECJ, Third Chamber) (use of sign in meta-tag was advertising). On when advertising is ‘comparative’, see *De Landtsheer Emmanuel SA v. Comité Interprofessionnel du Vin de Champagne, Veuve Clicquot Ponsardin SA*, Case C-381/05 [2007] *ECR I-3115* (ECJ, First Chamber). On whether ‘keyword advertising’ might be so regarded, see *Interflora Inc. v. Marks & Spencer plc* [2013] *EWHC* 1291 (Ch), [325] *per* Arnold J.

<sup>85</sup> See *Pippig Augenoptik GmbH & Co. KG v. Hartlauer Handelsgesellschaft mbH*, Case C-44/01 [2003] *ECR I-3095*, [53], [65]; *Lidl Belgium GmbH & Co. KG v. Etablissements Franz Colruyt NV*, Case C-356/04 [2006] *ECR I-8501* (ECJ, Grand Chamber); *Lidl v. Vierzon*, Case C-159/09 [2010] *ECR I-11761* (ECJ, Fourth Chamber); *Kingspan Group plc v. Rockwool* [2011] *EWHC* 250 (Ch).

<sup>87</sup> *Lidl Belgium GmbH & Co. KG v. Etablissements Franz Colruyt NV*, Case C-356/04 [2006] *ECR I-8501*, [47], [49], [61], [70]–[74].

<sup>88</sup> See *Pippig*, Case C-44/01 [2003] *ECR I-3095*, [80].

- (e) for products with designation of origin, it relates in each case to products with the same designation;<sup>[89]</sup>
- (f) it does not take unfair advantage of the reputation of a trade mark, trade name, or other distinguishing marks of a competitor or of the designation of origin of competing products;<sup>[90]</sup>
- (g) it does not present goods or services as imitations or replicas of goods or services bearing a protected trade mark or trade name;<sup>[91]</sup>
- (h) it does not create confusion among traders, between the advertiser and a competitor or between the advertiser's trade marks, trade names, other distinguishing marks, goods or services and those of a competitor.

These conditions are to be interpreted in the sense most favourable to the comparative advertiser.<sup>92</sup> Member states are to ensure that 'adequate and effective' means exist to combat misleading advertising and to enforce compliance with the rules on comparative advertising 'in the interests of traders and competitors'. Such means are to include the taking of legal action.

The United Kingdom implements its obligations under the Directive through a patchwork of provisions.<sup>93</sup> One of the most important of these is the UK Code of Non-Broadcast Advertising, Sales Promotion and Direct Marketing (the 'CAP Code'), which was drafted by the Committee on Advertising Practice (CAP) and is administered by the Advertising Standards Authority (ASA).<sup>94</sup> The CAP Code establishes what is primarily a self-regulatory system, and was drawn up by representatives from relevant trade and professional bodies. The Code applies to advertisements in newspapers and other printed publications, cinema and video commercials, and promotions. A parallel code, applicable to broadcast media—the UK Code of Broadcast Advertising (the 'BCAP Code')—is also administered by the ASA.

The CAP Code permits comparative advertising so long as the comparisons comply with the terms of MCAD.<sup>95</sup> Conformity with these requirements is assessed according to the advertisement's probable impact, taken as a whole and in context. The impact that an advertisement has will depend on the audience, the medium, the nature of the product, and any additional material distributed to consumers at the time. Before releasing an advertisement, advertisers must have documentary evidence to prove all claims, whether

<sup>89</sup> Although products outside a designation can be compared with ones within: *De Landtsheer Emmanuel SA v. Comité Interprofessionnel du Vin de Champagne, Veuve Clicquot Ponsardin SA*, Case C-381/05 [2007] ECR I-3115.

Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [2010] EWCA Civ 535. For criticisms, see R. Burrell and D. Gangjee, 'Because You're Worth It' (2010) 73 *MLR* 282, 288–92.

<sup>91</sup> *L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [75]–[76] (comparison list for smell-a-likes implicitly presented goods as imitations of fragrances, so breached condition), [2010] EWCA Civ 535, [38]. On the latter, see A. Kur, L. Bently, and A. Ohly, 'Sweet Smells and a Sour Taste: The ECJ's *L'Oréal* Decision' (2009), available online at <[http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=1492032](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1492032)>

<sup>92</sup> *Toshiba v. Katun*, Case C-112/99 [2001] ECR I-7945 (ECJ, Fifth Chamber), [37].

<sup>93</sup> See D. Fitzgerald, 'Self-regulation of Comparative Advertising in the UK' [1997] *Ent L Rev* 250.

<sup>94</sup> This, along with the ASA, dates back to 1962, but has been amended many times and is now in its 12th edition (2010). The ASA is funded by a levy on marketing and advertising. The CAP Code can be accessed online at <<http://www.cap.org.uk/Advertising-Codes/-/media/Files/CAP/Codes%20CAP%20pdf/CAP%20Code%200712.ashx>>

<sup>95</sup> CAP Code, [3.33]–[3.37], [3.41]–[3.44] (corresponding with the eight conditions of MCAD, Art. 4).

direct or implied, that are capable of being objectively substantiated.<sup>96</sup> The adequacy of this evidence will be judged against whether it supports both the detailed claims and the overall impression created by the advertisement.

The ASA investigates complaints.<sup>97</sup> The ASA may request that a company withdraw or amend its advertisements or promotions.<sup>98</sup> The judgment of the ASA Council on interpretation of the Code is final,<sup>99</sup> although there is some provision for appeal.<sup>100</sup> A number of sanctions exist to counteract advertisements and promotions that conflict with the Code. The media may deny access to space, the publication of a ruling on the ASA's website may generate adverse publicity, trading sanctions may be imposed or recognition revoked by the advertiser's, promoter's, or agency's professional association, and financial incentives provided by trade, professional, or media organizations may be withdrawn.<sup>101</sup>

The self-regulatory system is reinforced by the Business Protection for Misleading Marketing Regulations 2008.<sup>102</sup> Under these Regulations, an enforcement authority, such as the Competition and Markets Authority, can seek injunctive relief in relation to advertisements that do not comply with the requirements of the MCAD.<sup>103</sup>

The MCAD refers to trade mark law only in its Recitals and, for some time, there was uncertainty as to how trade mark rights and the MCAD related to one another.<sup>104</sup> The position has, however, been clarified: a comparative advertisement that uses another's trade mark, but complies with the eight conditions, is exempt from liability for trade mark infringement.<sup>105</sup> If such an advertisement does not comply with the conditions, it almost certainly infringes the proprietor's trade marks rights. To begin, the use of the mark in comparative advertising is regarded as use in relation to the advertiser's goods.<sup>106</sup> If it uses an identical mark to that registered and the goods being advertised are identical, there is infringement under section 10(1).<sup>107</sup> If there is a similar mark and/or the use is for similar goods, there is liability under section 10(2)—and the use necessarily fails Article 4(h) of the MCAD (ex Article 3a(1)(d) CAD).<sup>108</sup> If the earlier mark has a reputation, then comparative advertising will usually count as taking unfair advantage of the repute of the trade mark.<sup>109</sup> Because one of the MCAD conditions (Article 4(f)) is that no unfair advantage is taken, and this has the same meaning as with Article 5(2) of the Trade Marks Directive (section 10(3) of the 1994 Act),<sup>110</sup> the logical conclusion is that the owner of a

<sup>104</sup> MCAD, Recitals 13–15.

<sup>105</sup> *O2 Holdings Ltd v. Hutchison 3G UK Ltd*, Case C-533/06 [2008] ECR I-4231 (ECJ, First Chamber), [45], [51]; *L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [54], [71].

<sup>106</sup> *O2 Holdings Ltd v. Hutchison 3G UK Ltd*, Case C-533/06 [2008] ECR I-4231 (ECJ, First Chamber), [35]; *L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [53].

<sup>107</sup> *Ibid.*, [55]–[56].

<sup>108</sup> *O2 Holdings Ltd v. Hutchison 3G UK Ltd*, Case C-533/06 [2008] ECR I-4231 (ECJ, First Chamber), [46]. The possibility exists that the use of a similar mark may not produce a likelihood of confusion and yet might, for example, be disparaging and thus breach MCAD, Art. 4(d). If the earlier mark does not have a reputation, it is conceivable it could not comply with the MCAD, but not give rise to liability for trade mark infringement. In such a case, a trade mark owner might use the CAP Code, or bring an action for a declaration that the use breaches the MCAD and/or Business Marketing Regulations 2008.

<sup>109</sup> *Specsavers International Healthcare Ltd v. Asda Stores* [2012] EWCA Civ 24, [150]–[151].

<sup>110</sup> *L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I-5185 (ECJ, First Chamber), [77] (unfair advantage has the same meaning in TM Dir., Art. 5(2), and MCAD, Art. 4(f)). It may be that this proposition

Fig. 41.1 O<sub>2</sub>'s bubble trade mark

Source: Courtesy of O<sub>2</sub>

mark with a reputation can always prevent a competitor from using that mark in comparative advertising.<sup>111</sup> This final conclusion seems wholly unsatisfactory.<sup>112</sup>

Given that the MCAD provides a defence to trade mark infringement, the question has been raised whether, in addition to the eight conditions in Article 4 (then Article 3(a)), the Recitals imposed a further condition of 'indispensability'. In *O2 v. Hutchison*,<sup>113</sup> the defendant had advertised its mobile phone service using bubble imagery similar to that for which the claimant had a registered mark (in relation to telecommunication services) (see Fig. 41.1). It was argued by the claimant that, to be permissible under the MCAD, the use of a trade mark in a comparative advertisement must be 'indispensable' and that while it might have been necessary for Hutchison to refer to O<sub>2</sub>, it was not necessary for it

needs reconsideration. It would be better to say that a comparative advertisement breaches MCAD, Art. 4(f), only where greater advantage of the repute of a mark is taken than is inevitable in any effect comparative advertisement.

<sup>111</sup> Recall from Chapter 38, pp. 1006–1010, that deliberately taking advantage of that reputation is always unfair—*L'Oréal NV and ors v. Bellure NV*, Case C-487/07 [2009] ECR I–5185, [50]; *Interflora v. Marks & Spencer*, Case C-323/09 [2011] ECR I–8625, [89]—and a comparative advertisement always deliberately takes advantage of the repute of the earlier mark: *Specsavers Int'l Healthcare v. Asda Stores* [2012] EWCA Civ 24, [2012] FSR (19) 555, [164].

<sup>112</sup> Indeed, it might imply that comparative advertising using trade marks is never permissible, because no one would ever comparatively advertise using an unknown trade mark and a known trade mark almost certainly has a reputation: see Chapter 38, pp. 997–8. Such a conclusion would, however, be inconsistent with the premise under which *Pippig Augenoptik GmbH & Co. KG v. Hartlauer Handelsgesellschaft mbH*, Case C-44/01 [2003] ECR I–3095 and *Toshiba v. Katun*, Case C-112/99 [2001] ECR I–7945 (ECJ, Fifth Chamber) were decided.

<sup>113</sup> *O2 Holdings Ltd v. Hutchison 3G Ltd*, Case C-533/06 [2008] ECR I–4231 (ECJ, First Chamber).

to use the bubble marks. Advocate-General Mengozzi's opinion was that there is no such requirement for 'indispensability',<sup>114</sup> but the Court did not deal with this question.

## 7 LOCAL USE

Section 11(3) of the 1994 Act provides that a UK registered trade mark is not infringed by the use in a particular locality of an earlier right that applies only in that locality.<sup>115</sup> An earlier right applies in a locality 'if, or to the extent that, its use in that locality is protected by virtue of any rule of law (in particular, the law of passing off)'. The defence arises only if the use of the earlier right began before both the use and the registration of the claimant's mark.

The relationship between local uses and Community trade marks (CTMs) is complex. While the CTMR does not have an equivalent to the earlier rights defence contained in national law, Article 110 allows the owner of any earlier right to rely on national law against the CTM owner.<sup>116</sup> Thus the owner of a national mark who has not opposed the grant of a CTM may utilize its national rights in national fora to prevent use of that Community mark (including, presumably an action for infringement against it).<sup>117</sup> This is subject, however, to the principle of acquiescence—that is, five years of continuous use by the owner of the CTM in the member state in which the earlier right operates.<sup>118</sup> But even then the proprietor of the earlier right will have a defence to an action brought by the owner of the CTM.<sup>119</sup>

These provisions are of increasing importance since the expansion of the Community from 15 to 25 states in 2004, to 27 in 2008, and 28 in 2013. While existing registrations of CTMs will automatically apply to the 13 new territories, Article 111 CTMR protects those who previously were operating in those territories from the otherwise potentially devastating effect of such automatic extension.

## 8 EXHAUSTION

Traditionally, trade marks have been territorial in nature, so that a proprietor may own distinct rights in different territories. Typically, those rights have included the right to prevent the import of goods bearing the mark into the territory in which the rights apply.<sup>120</sup> This led to the situation in which the owner of a trade mark was able to use the rights in one territory (A) to prevent the import of goods from another territory (B). This was the case *even where* the goods had been put on the market in territory B with the consent of the owner. In practice, there are a number of reasons why the import of goods from

<sup>114</sup> *Ibid.*, [AG43].

<sup>115</sup> TMA 1994, s. 11(3). This reflects TM Dir., Art. 6(2). See further Kerly, 491–4, [15–029]–[15–035].

<sup>116</sup> As defined in CTMR, Art. 8. However, while this excludes mere local rights, CTMR, Art. 111, provides similar protection for earlier rights that apply only to a particular locality, which presumably encompasses earlier rights of mere local significance: the law of the member state concerned may be utilized to prevent use of the Community mark in the territory in question.

<sup>117</sup> As we saw at pp. 1012–13, according to CTMR, Art. 8(4), use of rights of no more than mere local significance cannot prevent registration on relative grounds.

<sup>118</sup> CTMR, Art. 54(2) (ex Art. 53(2)).

<sup>119</sup> CTMR, Art. 54(3).

<sup>120</sup> TMA 1994, s. 10(4)(c); CTMR, Art. 9(2)(c); TM Dir., Art. 5(3)(c).

one country to another may be desirable. The most obvious is where the price of the goods is cheaper in territory B than territory A, or where demand in territory A is not being met. At first glance, it seems that if import were permitted, it would be to the advantage of all concerned. The public in territory A would benefit from cheaper products, while the trade mark owner's interests would be satisfied by sale in territory B. However, first impressions give way to more complex realities. This is because trade mark owners may have good reasons for wishing to divide markets up and to prevent parallel imports.<sup>121</sup> Given that it may be difficult to distinguish between legitimate and counterfeit goods at the border, parallel importing may also weaken the trade mark owner's capacity to prevent the import of counterfeit goods.

### 8.1 DEVELOPMENT OF THE BASIC RULES

Prior to the adoption of the Trade Marks Directive, the Court of Justice developed a series of sophisticated rules that detailed the situations in which the owner of a national trade mark for one member state could prevent goods put on the market elsewhere in the European Union from being distributed in that member state.<sup>122</sup> Since Article 7 of the Directive and section 12 of the 1994 Act embody the notion of exhaustion developed under the case law, it is worth noting the basic features of that case law.

The jurisprudence that developed prior to the passage of the Directive recognized the conflicting demands of Articles 34 and 36 of the Treaty on the Functioning of the European Union (TFEU). Under Article 34 TFEU, 'quantitative restrictions on imports or measures having equivalent effect' are prohibited. However, under Article 36 TFEU, prohibitions or restrictions on imports between member states are permissible if they can be justified on grounds of the protection of industrial and commercial property. This is on the proviso that they do not constitute a means of arbitrary discrimination or a disguised restriction on trade between member states.

As we observed in Chapter 1, in striking a compromise between the demands of the internal market and national industrial property rights,<sup>123</sup> the Court of Justice recognized the principle of exhaustion of rights, where the goods were placed on the market under a trade mark with the consent of the trade mark proprietor.<sup>124</sup> On the other hand, in order to ensure that trade marks continue to function as indicators of origin and as guarantors of quality to the consumer,<sup>125</sup> the Court also said that the rights were not

<sup>121</sup> In the case of pharmaceuticals, the price differentials are largely the result of the fact that regulatory mechanisms for price setting differ on a national basis. If parallel importing were always possible, effectively the trade mark owner would have to live with the lowest price set by any of the national authorities. On the legality of controlling markets by restricting supply, see section 8.3.6 below.

<sup>122</sup> See Chapter 1, esp. at pp. 12–15. See generally C. Stothers, *Parallel Trade in Europe: Intellectual Property, Competition and Regulatory Law* (2007).

<sup>123</sup> *Bristol-Myers Squibb v. Paranova A/S and C. H. Boehringer Sohn; Boehringer Ingelheim KG and Boehringer Ingelheim A/S v. Paranova A/S, and Bayer Aktiengesellschaft and Bayer Danmark A/S v. Paranova A/S*, Joined Cases C-427/93 and C-429/93 [1996] ECR I-3457, I-3528, [31].

<sup>124</sup> The principle of exhaustion applies where the same person owns the mark in the country of import and export. It also applies where the parties are economically linked—e.g. as subsidiaries of the same group: *Centrafarm BV and Adriaan De Peijper v. Sterling Drug*, Case C-15/74 [1974] ECR 1147—and where the distribution is effected by a licensee, as long as it does not breach core terms of the licence. However, economic linkage does not cover the situation in which an assignment of the trade mark rights has occurred: *IHT Internationale Heiztechnik v. Ideal Standard*, Case C-9/93 [1994] ECR I-2789, I-1850, [43]–[45].

<sup>125</sup> See, e.g., *Hoffmann-La Roche v. Centrafarm*, Case C-102/77 [1978] ECR 1139, [7]; *IHT Internationale Heiztechnik v. Ideal Standard*, Case C-9/93 [1994] ECR I-2789, [33].

exhausted where the trade mark owner had a legitimate reason for opposing further circulation of the goods.<sup>126</sup>

This jurisprudence on exhaustion of rights was carried over into Article 7(1) of the Directive<sup>127</sup> and section 12(1) of the 1994 Act.<sup>128</sup> This provides that a ‘registered trade mark is not infringed by use of the trade mark in relation to goods which have been put on the market in the European Economic Area under that trade mark by the proprietor, or with his consent’.<sup>129</sup> As with the pre-Directive jurisprudence, the principle of exhaustion found in Article 7(1) and section 12(1) is subject to the general rider that, in certain circumstances, the rights of the owner will not be exhausted. As Article 7(2) says, ‘[p]aragraph 1 shall not apply where there exist legitimate reasons for the proprietor to oppose further commercialisation of the goods, especially where the condition of the goods is changed or impaired after they have been put on the market’.<sup>130</sup>

## 8.2 CONDITIONS FOR EXHAUSTION

In order for the trade mark owner’s rights to be exhausted, two conditions must be satisfied: (i) the goods must have been put on the market in the European Economic Area (EEA); and (ii) this must have been done by the proprietor or with its consent. It has been said that these two components constitute the ‘decisive factors’ that extinguish the rights of the trade mark holder (with respect to further commercialization of those goods).<sup>131</sup>

### 8.2.1 Put on the market

In most cases, assessing whether this has occurred will be straightforward. The question is whether the power of disposal of the goods has passed from the mark owner (or its licensee) to a third party. If it has, those goods have been placed on the market.<sup>132</sup>

In *eBay*,<sup>133</sup> however, the Court of Justice, sitting in Grand Chamber, reasoned that the testers and samples of perfumes had not been put on the market at all because they had been distributed to the retailers for free. In so holding, it explicitly contradicted a German Supreme Court decision that had been cited by the referring court.<sup>134</sup> The Court of Justice instead cited its own jurisprudence in the *Silberquelle* case on when there was ‘genuine use’ of a mark.<sup>135</sup> The reasoning is unpersuasive. In particular, reliance on *Silberquelle* misconstrues that decision. As a leading commentary observes, that case ‘does not mean that use on promotional items can never be considered genuine use. The test is whether the proprietor of the mark is using the mark in order to create an outlet for the goods in question.’<sup>136</sup> In *eBay*, promotion was precisely the purpose of giving the samples away.

<sup>126</sup> See *Hoffmann-La Roche v. Centrafarm*, Case C-102/77 [1978] ECR 1139; *Centrafarm v. American Home Products Corporation*, Case C-3/78 [1978] ECR 1823.

<sup>127</sup> *Bristol-Myers*, Joined Cases C-427/93 and C-429/93 [1996] ECR I-3457, I-3528, 3529.

<sup>128</sup> CTMR, Art. 13. To the extent that TM Dir., Art. 7, is narrowly drafted, Arts 34 and 36 TFEU operate as previously: see *Pharmacia & Upjohn SA v. Paranova*, Case C-379/97 [2000] 1 CMLR 51, 81, [28]; cf. *Oracle America Ltd v. M-Tech Data* [2012] UKSC 27, [13] *per* Lord Sumption.

<sup>129</sup> Although TM Dir. Art. 7(1), refers to marketing in the Community, the principle of the exhaustion of rights was extended for certain purposes to the EEA. See Chapter 1.

<sup>130</sup> TMA 1994, s. 12(2), is slightly different in its wording, referring to ‘further dealings’ rather than further ‘commercialization of goods’. The difference in language does not affect the scope of the provisions.

<sup>131</sup> *Viking Gas A/S v. Kosan Gas A/S*, Case C-46/10 [2011] ECR I- 6161 (ECJ, First Chamber), [27].

<sup>132</sup> *Peak Holding AB v. Axolin-Elinor ABR*, Case C-16/03 [2004] ECR I-11313.

<sup>133</sup> *L’Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011.

<sup>134</sup> [2009] EWHC 1094, [2009] RPC (21) 693.

<sup>135</sup> See Chapter 38, p. 1024. <sup>136</sup> Kerly, 356, [10–072].

The Court's conclusion that where 'items are supplied free of charge, they thus cannot, as a rule, be regarded as being put on the market by the trade mark proprietor' thus seems incorrect.<sup>137</sup>

Two days later, the Court of Justice decided *Viking Gas A/S v. Kosan Gas A/S*,<sup>138</sup> and again seemed to make exhaustion dependent on sale. The case concerned the sale of refilled gas bottles, and the initial question was whether the rights in the bottles were exhausted. In contrast with *eBay*, the Court said that they were, going out of its way to reason that the bottles had been purchased. The purchase was not merely of the gas, because the bottles of gas cost more than gas in canisters and 'are intended for re-use a number of times, do not constitute mere packaging of the original product, but have an independent economic value and must be regarded as goods in themselves'.<sup>139</sup>

Despite this case law, we think that it would be better for the Court to recognize that exhaustion is a consequence not of 'sale', but of any transfer of property rights in the goods. This is the position in relation to copyright, where transfers other than 'sales' can exhaust rights.<sup>140</sup> Moreover, as a general matter, focusing on the issue of consideration seems to leave downstream actors in some difficulty: goods do not normally indicate whether they were sold or given away, and such actors will not readily obtain access to the contractual details of any initial marketing. Indeed, even if it were clear that the parties designated a transfer of particular items as 'free', an economist would often be sceptical about whether that represented a truthful account of the transaction: think, for example, of 'buy one, get one free'.

For all of these reasons, we are unpersuaded by the rationale offered in *eBay* (and seemingly perpetuated in *Viking*) as to why the trade mark proprietor's rights in the tester bottles and samples were not exhausted. Perhaps the Court should have considered distinguishing between the demonstration units and the samples: it seems plausible to say that the demonstration units, supplied only to the retailers and distinguishable in form from the goods that were being marketed, were not put on the market at all; with respect to the samples, if they were given to customers by the retailers (as intended), they would have been placed on the market at that point, but if (as seems likely) there had been no such authorized transfer of the units that were being resold on eBay,<sup>141</sup> then the conclusion is best explained as a situation in which there was no consent to transfer of the units at all.<sup>142</sup>

### 8.2.2 Consent

Exhaustion occurs only where the goods have been placed on the market with the 'consent' of the trade mark holder. The concept of consent has been harmonized at EU level.<sup>143</sup> Consent must amount to an unequivocal demonstration of an intention to renounce the right to control further distribution.<sup>144</sup> Such consent will usually be express, but could

<sup>137</sup> *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011, [71].

<sup>138</sup> Case C-46/10 [2011] ECR I-6161 (ECJ, First Chamber). Four of the five members of the Chamber, including Rapporteur Judge Ilešič, were in the Grand Chamber in *eBay*.<sup>139</sup> *Ibid.*, [30].

<sup>140</sup> Cf. Info. Soc. Dir., Art. 4 (which provides for the exhaustion of the distribution right in the event of first sale or *first other* transfer of ownership of an 'object'), discussed above at p. 151.

<sup>141</sup> [2009] EWHC 1094 (Ch), [323].

<sup>142</sup> But cf. *Coty Prestige Lancaster Group GmbH v. Simex Trading AG*, Case C-127/09 [2010] ECR I-4965 (ECJ, Fourth Chamber); note also *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011, [AG67].

<sup>143</sup> *Zino Davidoff*, Joined Cases C-414/99 and C-416/99 [2001] ECR I-8691, [43]; *Makro v. Diesel spA*, Case C-324/08 [2009] ECR I-10019 (ECJ, First Chamber). See Stothers, 345–7.

<sup>144</sup> *Makro v. Diesel spA*, Case C-324/08 [2009] ECR I-10019 (ECJ, First Chamber), [22].

be implied.<sup>145</sup> The Court has stated that consent may be inferred from facts and circumstances prior to, simultaneous with, or subsequent to the placing of the goods on the market, if those facts and circumstances unequivocally demonstrate that the proprietor has renounced their exclusive rights.<sup>146</sup>

If a licensee markets goods under a licence, this is treated as marketing with the consent of the trade mark proprietor. But what if goods are placed on the market by a licensee of the trade mark owner, but outside the scope of the licence? In *Copad SA v. Christian Dior Couture SA*,<sup>147</sup> Dior marketed its lingerie through a selective distribution agreement that forbade licensees from selling to, among others, discount stores. SIL, a licensee with a stock of Dior products, found itself in financial difficulty and sold goods, in breach of the agreement, to a discount store operator, Copad. The Court of Justice held that there would be no exhaustion if the marketing occurred in breach of a clause in the licence equivalent to one of those listed in Article 8(2) of the Directive. This indicates that a licensee infringes trade mark rights where they breach terms relating to duration, the form of the trade mark, the scope of the goods or services, the territory in which the mark may be affixed, and the quality of the goods manufactured or services provided by the licensee. If the breach was of one of these five types of term, the marketing was not to be said to be with the consent of the proprietor.<sup>148</sup> Although the list is exhaustive, the Court offered the concept of 'quality' a broad interpretation, saying that, in the case of luxury goods such as those at issue, it was not confined to their physical or material characteristics, but also included its 'aura of luxury'.<sup>149</sup> Whether the breach of the term not to sell to discount stores related to the quality of the goods depended on whether doing so would damage 'the allure and prestigious image which bestows on the goods an aura of luxury'.<sup>150</sup> That was a matter to be assessed by the national court, the Court of Justice offering a series of factors that might be taken into account (the nature of the luxury goods, the volume of sales, whether the sales outside the selective distribution arrangement are regular or occasional, the practices of the purchaser, and the methods of marketing that are normal in the sector).

In *Coty v. Simex*,<sup>151</sup> the question arose as to whether a trade mark proprietor's rights had been exhausted in relation to 'tester bottles' of perfume. The testers had been made available to retailers to use freely in demonstrations, but in formal terms the claimant retained property in the goods. The tester bottles were packaged bearing the words 'demonstration' and 'not for sale', but nevertheless had come into the defendant's hands. As with the decision in *eBay*, the Court found that the trade mark proprietors' rights were not exhausted, but the Court in *Coty* (sitting in Chamber, a couple of years before the *eBay* decision) offered a quite different explanation. The Court reasoned that there was no consent to marketing, rather than that the goods had not been placed on the market at all. Although it was clear that some of the items came from outside the EEA, the Court considered whether the trade mark proprietor could be said to have 'consented' to the marketing of the tester bottles even if they had supplied them to retailers in the EEA. The Court suggested that providing tester bottles in this way would not amount to 'consent' to placing the goods on the market, given the labelling.<sup>152</sup>

### 8.3 LEGITIMATE REASONS TO PREVENT FURTHER DEALINGS IN GOODS BEARING THE MARK

Trade mark owners are able to utilize their rights to prevent further dealings in goods bearing their mark that have been placed on the market in the EEA only when there are 'legitimate reasons' to do so.<sup>153</sup> The mere fact that the further dealing is to another trader's advantage is not a legitimate reason for the trade mark owner to prevent the use from taking place.<sup>154</sup> However, there are a number of situations in which a trade mark owner may have a legitimate reason to oppose further dealings in goods bearing the mark. These include situations in which the goods are altered or repacked, or in which the mark is altered, or in which the goods or services are advertised. We will consider each in turn.

#### 8.3.1 Altering the goods

One situation in which a trade mark owner has a legitimate reason to oppose further dealings in a mark is where the condition of the goods has changed or been impaired after they have been put on the market. For example, a trader that manufactures and sells video-game consoles under a particular registered mark in France may wish to prevent another trader from exporting the console from France to the United Kingdom, opening the packaging, adding adaptors to enable the console to work in the United Kingdom, and selling the repackaged goods. The trade mark owner may have a legitimate reason to object to the resale of such goods, for example if the adaptor is of a different standard from that which the trader would supply in the authorized UK packages—at least where the repackaged goods do not clearly indicate the origin of the adaptors.<sup>155</sup> If the owner were unable to control such acts, the role that the mark plays in enabling the trade mark proprietor to control the quality of products placed on the market under the mark would be undermined.

Change in the characteristics of the goods is not only objectionable where it interferes with the capacity of the mark to guarantee origin (and thus quality), but also may be objectionable if it seriously affects the reputation associated with the mark. In *Viking Gas A/s v. Kosan*,<sup>156</sup> the Court of Justice held that while trade mark rights in the shape of bottles that had been sold as gas containers were exhausted, the trade mark holder might nevertheless have grounds on which to object to the later sale of such bottles refilled with gas from other sources. Whether this was so would depend on how they were labelled and the circumstances in which the bottles were resold or exchanged. For the sales to be unobjectionable, the labelling must make clear that there is no commercial connection between the trade mark holder and both the re-seller and the provider of gas that it contains. Whether an erroneous impression exists depends on the practices in the sector, but clearly where an individual consumer gets their gas bottle refilled that absence of connection will be most apparent.<sup>157</sup>

<sup>153</sup> *Oracle America Ltd v. M-Tech Data* [2012] UKSC 27, [16].

<sup>154</sup> Moreover, there are some risks that are inherent in trade in second-hand goods; the trade mark proprietor must live with these. See *Viking Gas A/S v. Kosan Gas A/S*, Case C-46/10 [2011] ECR I-6161, [AG25] (AG Kokott). But, even with resale, the re-seller must not give the impression that there is a commercial connection between it and the trade mark proprietor.

<sup>155</sup> *Sony Computer Entertainments v. Tesco Stores* [2000] ETMR 104.

<sup>156</sup> Case C-46/10 [2011] ECR I-6161 (EC), First Chamber.

<sup>157</sup> See also *Schütz (UK) Ltd v. Delta Containers Ltd* [2011] EWHC 1712 (Ch), [80], [85] *per* Briggs J).

### 8.3.2 De-packaging

A trade mark owner may seek to oppose the resale of goods that have been removed from their packaging. The Court of Justice considered this question in the *eBay* case,<sup>158</sup> in which a number of sellers had been selling goods on the defendant's auction site without the original packaging. The Court indicated that the trade mark owner would have a legitimate reason to oppose further commercialization if the effect of removing the packaging were that essential information, such as information relating to the identity of the manufacturer or the person responsible for marketing the cosmetic product, was missing. Moreover, the trade mark owner would be also able to oppose resale if it could establish that the removal of the packaging had damaged the image of the product and thus the reputation of the trade mark.

### 8.3.3 Repackaging

Another situation in which a trade mark owner may have a legitimate reason to control further dealings is where the goods are repackaged.<sup>159</sup> In *Bristol-Myers v. Paranova*,<sup>160</sup> Bristol-Myers marketed pharmaceutical products in various member states. It was the owner of certain trade marks for those pharmaceuticals in Denmark. Paranova purchased products sold by Bristol-Myers in member states such as Greece and the United Kingdom, in which the prices were relatively low, and then imported them into Denmark. The pharmaceuticals had originally been marketed as tablets in blister packs, flasks, phials, and ampoules. For the purposes of sale in Denmark, Paranova repackaged all of the pharmaceuticals in new external packaging. In so doing, Paranova gave the pharmaceuticals a uniform appearance—namely, white with coloured stripes corresponding to the colours of the manufacturers' original packaging. The new packaging displayed the respective trade marks of the manufacturer (namely, BRISTOL-MYERS). It also included statements that the products had been manufactured by Bristol-Myers, and were imported and repackaged by Paranova. Bristol-Myers claimed that the import infringed various trade marks that it had registered in Denmark. The matter was referred to the Court of Justice for consideration.

The Court of Justice began by noting that Article 7(1) of the Trade Marks Directive provides that owners of a trade mark cannot rely on their rights in the mark to prevent the importing or marketing of a product that has been put on the market in another member state by them or with their consent. However, where those goods had been repackaged, the trade mark owner was entitled to prevent further commercialization, because the repackaging jeopardized the 'guarantee of origin'.<sup>161</sup>

Nevertheless, the Court in *Bristol Myers* acknowledged that this may create problems insofar as it enables owners to exercise their rights in a way that constitutes a disguised restriction upon the free movement of goods under Article 34 TFEU. To ensure that this did not occur, the Court said that the owner could *not* prevent the parallel import of repackaged goods where the use of the trade mark right by the owner contributes to the artificial partitioning of the markets between member states. In so doing, the Court of Justice limited the scope of the trade mark owner's rights.

To ensure that this derogation from the owner's rights did not adversely affect the subject matter of the trade mark, the Court said that parallel importing of repackaged

<sup>158</sup> *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011 (ECJ, Grand Chamber).

<sup>159</sup> See *Stothers*, 74–103. <sup>160</sup> Joined Cases C-427/93 and C-429/93 [1996] ECR I-3457, I-3528.

<sup>161</sup> *Ibid.*, 3532–3, [47]. See also *Boehringer Ingelheim KG, Boehringer Ingelheim Pharma KG v. Springward Ltd; Merck, Sharp & Dohme GmbH v. Paranova Pharmazeutica Handels GmbH*, Joined Cases C-143/00 and 443/99 [2002] ECR I-3759, [30].

goods is permissible only where the parallel importer satisfies certain conditions. These are that:

- (i) the repackaging does not adversely affect the original condition of the product;
- (ii) the parallel importer complies with certain obligations as to labelling and provision of samples; and
- (iii) the quality of the repackaging does not adversely impact on the reputation of the mark.<sup>162</sup>

After looking at the question of what is meant by ‘artificial partitioning of the market’, we will look at each of the three conditions imposed on the parallel importer.

(i) *Artificial partitioning of the markets between member states* Repackaging by a parallel importer is justified only where and insofar as it is necessary to avoid artificial partitioning of the market.<sup>163</sup> The test for whether there has been an ‘artificial partitioning’ of the market is decided by objective standards. This means that the importer does not need to show that the trade mark owner deliberately intended to partition the markets between member states. The Court of Justice said that partitioning is artificial if it prevents access to the market. In other words, the power of the trade mark cannot be used to prevent repackaging that is *necessary* for the importer to market the product in the member state of import.<sup>164</sup>

One situation in which repackaging would be justified is if the goods were marketed in different packaging in different member states and the goods could not be sold in the second member state unless they were repackaged.<sup>165</sup> For example, if a whisky were marketed as ‘pure whisky’ in one country, but regulations in another member state meant that the whisky could not be described as ‘pure’, it would be necessary to remove the word ‘pure’ from the packaging before the product could be imported into the latter state.<sup>166</sup>

Equally, a trade mark owner cannot oppose the repackaging of a product where the size of the original packet cannot be marketed in the importing member state.<sup>167</sup> This would occur, for example, where the size of the packaging was dictated by national regulations. In *Bristol-Myers*, the Court of Justice made it clear that a ‘need’ to repackage may exist even where a number of different types of packaging are used in the importing state.<sup>168</sup> This is so even if this includes the form of packaging in which the goods in question have been marketed. The reason for this is that ‘partitioning of the markets would exist if the importer were able to sell the product in only part of his market’.<sup>169</sup> It is possible too that repackaging may be justified in response to consumer practices. In *Boehringer Ingelheim (No. 1)*,<sup>170</sup> the Court of Justice indicated that while consumer resistance would not always constitute an impediment to effective market access such as to render repackaging necessary, it might do so. More specifically, it stated that ‘there may exist on a market, or on a substantial part of it, such strong resistance from a significant proportion of consumers to

relabelled pharmaceutical products that there must be held to be a hindrance to effective market access'.<sup>171</sup>

The question of necessity is a threshold question.<sup>172</sup> Thus the 'necessity' requirement 'is directed solely at the fact of repackaging not at the manner and style of repackaging'.<sup>173</sup> Details of the repackaging need be scrutinized only when assessing whether there has been compliance with the other conditions.

(ii) *Whether the original condition of the product is adversely affected* Even if it is necessary to repackage to gain access to a market, a trade mark owner may oppose this if it involves either a risk that the product inside the package might be tampered with or that the original condition of the goods will be adversely affected.<sup>174</sup> This is sometimes referred to as the doctrine of 'adverse effects'. In order to constitute a legitimate reason for a trade mark owner to oppose further commercialization of goods that have been repackaged, the risks of adverse effects must be *real*; the hypothetical risk of isolated error will not do. An example of this is provided by *Bristol-Myers*, in which it was argued that the repackaging of blister packs might affect the condition of the drugs.<sup>175</sup> It was suggested that combining blister packs with different use-by dates into single sets might lead to the sale of products that might have been stored for too long—but the Court of Justice did not consider this to be a real risk.

To determine whether the repackaging adversely affects the original condition of the product, both the nature of the product and the method of repackaging must be taken into account. Parallel importation is permissible where the repackaging affects only the external layer, leaving the inner packaging intact, or where the repackaging is carried out under the supervision of a public authority to ensure that the product remains intact. Similarly, the addition of accurate information by the re-packer will not constitute a legitimate reason to oppose the further circulation of the goods.<sup>176</sup>

The Court of Justice has recognized that the original condition of the product inside the packaging might be indirectly affected where the repackaged product omits important information, or gives inaccurate information about the nature, composition, effect, use, or storage of the product.<sup>177</sup>

(iii) *The parallel importer must comply with certain obligations* Moreover, to protect the owner against misuse, an importer of repackaged pharmaceuticals must comply with certain requirements.<sup>178</sup> First, the packaging should indicate both who manufactured the product<sup>179</sup> and who repackaged it.<sup>180</sup> That indication must be clearly shown on the

<sup>178</sup> *Ibid.*, 3533, [49]. In *Frits Loendersloot v. George Ballantine & Son*, Case C-349/95 [1997] ECR I–6227, 6261, [48], which concerned the re-labelling of alcoholic drinks, the Court of Justice suggested that while, in the case of pharmaceuticals, it was necessary for a parallel importer to comply with the requirements set out in *Bristol-Myers*, it might not be necessary to do so in the case of other goods. In the case of the parallel import of alcohol, the interests of the trade mark owner, particularly to combat counterfeiting, required only that the re-labeller/importer provide them with advance notice that the re-labelled products are to be put on sale.

<sup>179</sup> *Pfizer v. Eurim-Pharm*, Case C-1/81 [1081] ECR 2913, 2926–7, [11]; *Bristol-Myers*, Joined Cases C-427/93 and C-429/93 [1996] ECR I–3457, I–3528, 3540, [74].

<sup>180</sup> *The Wellcome Foundation Ltd v. Paranova Pharmazeutika Handels GmbH* [2008] ECR I–10479 (ECJ, Second Chamber) (this need not be the actual packager in cases in which that act has been delegated, but can be simply the person who arranged for the repackaging).

repackaged product<sup>181</sup> and must be printed in such a way as to be understood by a person with normal eyesight, exercising a normal degree of attentiveness.<sup>182</sup> It is not necessary that a statement be made that the repackaging was carried out without the authorization of the trade mark owner.<sup>183</sup>

Second, the trade mark owner must be given advance notice that the repackaged product is being put on sale.<sup>184</sup> The owner may also require that they be supplied with a specimen of the repackaged product before it goes on sale. This enables the owner to check that the repackaging does not affect the original condition of the product or damage the reputation of the trade mark. This also affords trade mark owners with a better opportunity to protect themselves against counterfeiting.<sup>185</sup> It is incumbent on the parallel importer itself to give notice, which must provide the proprietor with ‘a reasonable time to react to the intended repackaging.’<sup>186</sup> In one case, the Court indicated that, were a sample to be provided along with the notice, a period of 15 working days would be a reasonable time.<sup>187</sup> Failure to comply with the notice requirements renders the commercialization of the goods an infringement.<sup>188</sup>

(iv) *Quality of packaging* The repackaging must not adversely affect the reputational interests of the trade mark proprietor. In *Bristol-Myers*,<sup>189</sup> the Court of Justice recognized ‘the possibility that the reputation of the trade mark and thus of its owner may nevertheless suffer from an inappropriate presentation of the repackaged product’. This is particularly the case if the repackaging is defective, untidy, or poor quality. When assessing whether the presentation of the repackaged product is liable to damage the reputation of the trade mark, it is necessary to take account of the nature of the product and its market.<sup>190</sup> In the case of pharmaceutical products that are marketed directly to the public, packaging could be crucial in maintaining or inspiring public confidence in the quality and integrity of the product. In these cases, defective, poor-quality, or untidy packaging could damage the trade mark’s reputation.<sup>191</sup> However, where a pharmaceutical is sold to hospitals, the presentation of the product will be of little importance.<sup>192</sup> In the intermediate situation, in which the product is sold on prescription through pharmacies, presentation may be important to consumers even though some degree of confidence in the quality of the product would flow from the fact that the products were sold only on prescription.<sup>193</sup> The reputation of the trade mark holder might be damaged through ‘de-branding’ (where, in repackaging, the parallel importer removes many of the manufacturer’s trade marks) and ‘co-branding’ (where the parallel importer adds its own brand).<sup>194</sup>

### 8.3.4 Rebranding

Another situation in which the trade mark owner may have a legitimate reason to restrict further dealings of goods bearing their trade mark arises where the parallel importer

<sup>190</sup> *Ibid.* <sup>191</sup> *Ibid.*, [76]. <sup>192</sup> *Ibid.*, [77]. <sup>193</sup> *Ibid.*

<sup>194</sup> *Boehringer Ingelheim v. Swingward*, Case C-348/04 [2007] ECR I-3391 (ECJ, Second Chamber), [38]; *Boehringer Ingelheim v. Swingward Ltd* [2008] EWCA Civ 83.

alters the mark. In *Pharmacia & Upjohn v. Paranova*,<sup>195</sup> Upjohn marketed an antibiotic called clindamycin under the trade mark DALACIN in Denmark, Germany, and Spain, and under the mark DALACINE in France. Paranova bought DALACINE capsules in France, with the intention of reselling the antibiotic in Denmark. When Upjohn sought to prevent this, the question arose as to whether it was legitimate for Paranova to replace the DALACINE mark with DALACIN. The Court of Justice said that there is no difference between this situation and that of repackaging.<sup>196</sup> Applying the *Bristol-Myers* conditions, to justify affixing the DALACIN mark, the parallel importer needed to show that it was objectively necessary for it to do so to access the market. In so stating, the Court made it clear that the suggestion that had been made in *American Home Products*<sup>197</sup> that, to justify reaffixing the mark, the parallel importer had to prove that the owner had a subjective intention to divide up the market, was not correct. The Court of Justice indicated that the ‘condition of necessity’ would be satisfied if, for example, consumer protection legislation were to prohibit use of the mark DALACINE, or if use of the mark were not allowed because it was misleading.<sup>198</sup> The Court added that the requisite ‘conditions of necessity’ did not exist, however, if the replacement of the trade mark was ‘explicable solely by the parallel importer’s attempt to secure a commercial advantage’.<sup>199</sup>

In *Speciality European Pharma Ltd v. Doncaster Pharmaceuticals Group*,<sup>200</sup> Asplin J held that such necessity was not proven in a case in which the claimant, who was licensed by Medeus to use the mark REGURIN in the United Kingdom, had only 8 per cent of the UK market for tropsium chloride (used in the treatment of incontinence), and 60 per cent of the market was supplied by generics (the drug having come off patent). In such a case, permitting the parallel importer to rebrand products sold by licensees of Medeus in France as CÉRIS and in Germany as URIVESC with the REGURIN mark would merely give it a ‘commercial advantage’ (allowing it to be sold at a higher price than other generics). There was no need to rebrand to access the market in general and it was inappropriate to define the market to tropsium chloride sold as REGULIN.<sup>201</sup>

### 8.3.5 Advertising the goods

In *Christian Dior v. Evora*,<sup>202</sup> the Court of Justice indicated that while commercial resellers had a legitimate interest in using a trade mark proprietor’s mark to advertise those goods, there might be situations in which the proprietor could prevent such advertising. The reference to the Court arose out of a complaint by perfume maker, Dior, that Evora infringed its trade marks by advertising that it was selling Dior perfume in Evora’s chemist shops in the Netherlands. The Court of Justice held that the damage done to the reputation of a trade mark might, in principle, be a legitimate reason for opposing the advertising of goods that have been put on the market in the European Union,<sup>203</sup> but that ‘a balance must be struck’ between the legitimate interest of the trade mark owner and that of the re-seller.<sup>204</sup> In the case of prestigious luxury goods, resellers must endeavour to prevent their advertising from affecting the value of the trade mark by detracting from the allure and prestigious image of the goods in question, and from their aura of luxury.<sup>205</sup> However, if the reseller is merely employing techniques that are customarily used for goods of the kind, but not necessarily of

<sup>205</sup> *Ibid.*, [45].

the same quality in issue, then an objection to such advertising is legitimate only if it ‘seriously damages the reputation of the trade mark’.<sup>206</sup> The Court suggested that this would occur if, in advertising goods bearing the mark, the trade mark were placed in a context that seriously detracted from the image that the trade mark owner had succeeded in creating around their trade mark.<sup>207</sup>

Is use of ‘keywords’ of the trade mark holder justified in the case of resellers of the trade marked goods? The issue was broached by the Court of Justice in *Portakabin v. Primakabin*,<sup>208</sup> in which the defendant used the PORTAKABIN mark (and other variants thereof) to generate sponsored links that fed through to its website, which sold, among other things, second-hand structures made by the claimant. The Court noted that, for liability to exist in the first place, the ads (being the few lines generated under the ‘sponsored links’ heading when the consumer entered the claimant’s trade mark in the search engine) must leave the relationship between the trade mark owner and the advertiser unclear, and this itself meant that there was a legitimate reason for the trade mark proprietor to object to the commercial practice.<sup>209</sup> Nevertheless, the Court sought to elaborate three further points. First, because of the widespread sale of second-hand goods, consumers would not assume there to be any commercial link between a trade mark owner and a seller of second-hand goods.<sup>210</sup> Second, there would be legitimate reasons to oppose the use of the keyword if the goods sold by the defendant, although originating with the trade mark proprietor, had subsequently been subjected to processes of ‘de-branding’ (removal of the PORTAKABIN mark) and rebranding (with the PRIMACABIN mark).<sup>211</sup> Third, the Court indicated that it was not determinative that the defendant sold second-hand goods that originated with traders other than the claimant. The Court accepted that it might be tolerable to allow use of the claimant’s trade mark as a keyword, as long as volume, presentation, and quality of the other goods did not create a risk of ‘seriously damaging the image which the proprietor has succeeded in creating for its mark’.<sup>212</sup>

### 8.3.6 Competition law: parallel imports and Article 102

Given the rule on exhaustion within Europe, some pharmaceutical firms have sought to limit parallel trade by restricting the supply of drugs in low-priced markets. In *Sot. Lelos kai Sia EE v. GlaxoSmithKline*,<sup>213</sup> it was argued that the refusal of GSK to supply Greek wholesalers with more LAMICTAL than it regarded to be necessary to meet demand in that market was an abuse of a dominant position. GSK argued that, given the regulatory context—in particular, the fixing of drug prices in Greece—all that it was doing was protecting its legitimate commercial interests: were it to be obliged to supply the Greek wholesalers, the ultimate effect would be that it would have to supply the whole European market at the price set by the Greek authorities. The Greek competition authority referred several questions to the Court of Justice. The Court ruled that while refusal to supply within the European Union that was motivated by a desire to limit parallel

<sup>206</sup> *Ibid.* (emphasis added).

<sup>207</sup> *Ibid.*, [47]. In *BMW v. Deenik*, Case C-63/97 [1999] ECR I-905, [64], the Court of Justice added that if there is no risk that the public will be led to believe that there is a commercial connection between the trader and the trade mark proprietor, the mere fact that the trader derived an advantage from using the mark (e.g. because the advertisements lend an aura of quality to their business) would not of itself mean that the use was dishonest. See above, p. 1066.

<sup>208</sup> Case C-558/08 [2010] ECR I-6963 (ECJ, First Chamber). <sup>209</sup> *Ibid.*, [81]. <sup>210</sup> *Ibid.*, [84].

<sup>211</sup> *Ibid.*, [86]. See also *Viking Gas v. Kosan Gas A/S*, Case C-46/10 [2011] ECR I-6161, [AG31]. Despite these statements, there is no basis in trade mark law for an objection to the resale of goods from which all of the marks have been removed.

<sup>212</sup> *Portakabin Ltd v. Primakabin BV*, Case C-558/08 [2010] ECR I-6963, [91].

<sup>213</sup> *Sot. Lelos kai Sia EE v. GlaxoSmithKline Anonimi Emporiki Viomikhaniki Etairia Farmakeftikon Proionton*, Case C-468/06 [2008] ECR I-7139 (ECJ, Grand Chamber). See Stothers, 254–62.

imports would ordinarily amount to an abuse of a dominant position, there were circumstances in which a trader in a dominant position might justify such a refusal to protect their legitimate commercial interests. Importantly, the Court drew a distinction between 'ordinary orders' and other 'out of the ordinary' orders (assessed in light of previous business relations and the requirements of the market in the member state). The Court held that the refusal to meet ordinary orders would be an abuse, but refusal to meet extraordinary orders might be permissible to counter 'in a reasonable and proportionate way the threat to its own commercial interests' posed by the recipient exporting the medicines to other (higher-priced) markets.<sup>214</sup>

#### 8.4 PARALLEL IMPORT OF TRADE MARKED GOODS AND COPYRIGHT IN LABELS

While a parallel importer may be entitled to re-label goods for resale, the question may arise as to whether the proprietor can prevent import by relying on any copyright that they have in the label. Since the parallel importer would presumably reproduce and issue copies of such labels, there is on its face infringement of copyright. Nevertheless, a different approach has been taken in relation to labels. This can be seen in *Christian Dior v. Evora*,<sup>215</sup> in which Christian Dior sought to rely on its copyright in the picture marks to prevent Evora from reproducing the marks on advertising leaflets. The Court of Justice held that, in these circumstances, 'the protection conferred by copyright as regards the reproduction of protected works in a reseller's advertising may not . . . be broader than that which is conferred on a trade mark owner in the same circumstances'.<sup>216</sup> The Court added that the holder of copyright may not oppose the use of a trade mark by a reseller who habitually markets articles of the same kind, but not necessarily of the same quality, as the protected goods unless it is established that the use of those goods seriously damages the reputation of those goods.<sup>217</sup>

#### 8.5 INTERNATIONAL EXHAUSTION

The scope of Article 7 of the Trade Marks Directive and section 12 of the 1994 Act is confined to products placed on the market in the EEA.<sup>218</sup> It does not matter that the product bearing the mark has been manufactured in a non-member country if it has been lawfully put on the market in the member state from which it has been imported by the owner of the mark or with their consent.<sup>219</sup> Article 7 gives no explicit guidance as to what happens if the product is imported from outside the EEA and has not yet been placed on the market in the EEA with the consent of the trade mark owner. It is to this issue that we now turn.

##### 8.5.1 Background

Prior to the passage of the Directive, the question of international exhaustion was a matter for individual member states.<sup>220</sup> The Commission's original proposal would have

<sup>214</sup> *Sot. Lelos kai Sia EE v. GlaxoSmithKline Anonimi Emporiki Viomikhaniki Etairia Farmakeftikon Proionton*, Case C-468/06 [2008] ECR I-7139 (ECJ, Grand Chamber).

<sup>215</sup> Case C-337/95 [1997] ECR I-6013.

<sup>216</sup> *Ibid.*, 6053, [58]. <sup>217</sup> *Ibid.*, [59].

<sup>218</sup> Since the rules differ so dramatically, it is important to know when goods are placed on the market in the EEA and when outside it: see *Glaxo Group v. Dowelhurst Ltd* [2004] ETMR (39) 528, [2004] EWCA Civ 290.

<sup>219</sup> *Phytheron v. Bourdon*, Case C-352/95 [1997] ECR I-1729, I-1748, 1748, [21].

<sup>220</sup> *EMI Records v. CBS United Kingdom*, Case 51/75 [1976] ECR 811, 845.

imposed international exhaustion—that is, trade mark owners would not have been permitted to oppose the resale of products that had been put on the market with their consent anywhere in the world.<sup>221</sup> The Commission subsequently changed its view and its amended proposal explicitly limited the exhaustion principle to goods that had been put on the market ‘in the Community’.<sup>222</sup> This left unclear the position in relation to goods placed on the market outside the European Union.

### 8.5.2 *Silhouette*

This issue was addressed in *Silhouette International v. Hartlauer*,<sup>223</sup> in which the Court of Justice was called upon to decide whether the principle of international exhaustion applied under the Directive.<sup>224</sup> Silhouette manufactured high-quality fashion spectacles, which it distributed worldwide under the trade mark SILHOUETTE. The claimant was the registered proprietor for the mark in Austria and many other countries. Silhouette sold an out-of-date range of frames to a firm in Bulgaria. The defendant, Hartlauer, acquired the out-of-date frames from the Bulgarian firm and then imported them into Austria for resale. Silhouette sought an order prohibiting Hartlauer from marketing the spectacles in Austria under its trade mark. It did this on the basis that the frames had not been put on the market in the EEA by it or with its consent. As such, Silhouette had not exhausted its trade mark rights. Silhouette argued that the Directive provides that such rights can be exhausted only by reason of marketing within the EEA.

The Supreme Court of Austria sought a ruling from the Court of Justice as to whether Community law requires member states to provide for exhaustion only when the goods have been marketed in the EEA, or whether member states may (or perhaps must) provide for exhaustion when the goods have been marketed in a third country. The Court rejected the argument that the Directive left the member states free to provide for exhaustion in their national law. In light of Recitals 1 and 9, the Court said that Articles 5–7 of the Directive must be construed as ‘embodying a complete harmonization of the rules relating to the rights conferred by a trade mark’.<sup>225</sup> A single rule was also necessary to safeguard the functioning of the internal market. Given the terms of Article 7, the only plausible harmonized rule was that member states are obliged to confer on trade mark owners the ability to prevent imports of trade marked goods from outside the EEA (even where the same trade mark owner has consented to that marketing).

### 8.5.3 Consent

Although *Silhouette* made clear that member states were not to apply rules of international exhaustion, it took another Court of Justice decision to clarify the next logical

<sup>221</sup> [1980] OJ C 351/80, proposed art. 6; for the Explanatory Memorandum, see European Commission, *Proposal for a First Council Directive to Approximate the Laws of the Member States Relating to Trade-marks; Proposal for a Council Regulation on the Community Trade-Mark* (November 1980) COM (80) 635 final. See also Stothers, 335–6.

<sup>222</sup> European Commission, *Amended Proposal for a Council Regulation on the Community Trade Mark* (July 1984) COM (84) 470 final; [1985] OJ C 351/80, 4; Stothers, 336–7.

<sup>223</sup> Case C-355/96 [1998] ECR I-4799. For commentary, see A. Carboni, ‘Cases about Spectacles and Torches: Now, Can We See the Light?’ [1998] *EIPR* 471; Stothers, 342–4.

<sup>224</sup> The question had already been decided differently by the EFTA court in *Mag Instrument v. California Trading Company Norway*, Case E-2/97[1998] 1 *CMLR* 331, [28], in which the Court concluded that it was for each of the EFTA states to decide whether to introduce or maintain the principle of international exhaustion with regard to goods originating outside the EEA. That conclusion was reversed in the light of *Silhouette: L’Oréal Norge AD v. Per Aarskog*, Cases E-9/07 and E-10/07 [2008] *ETMR* (60) 943 (EFTA Ct).

<sup>225</sup> *Silhouette*, Case C-355/96 [1998] ECR I-4799, [25].

question: what amounts to consent to import goods into the EEA? In *Zino Davidoff*,<sup>226</sup> Laddie J asserted that even though, in principle, the trade mark owner has the right to stop importation into the EEA of goods not previously marketed in the EEA by or with their consent, this right cannot be used where the trade mark owner had consented to such import—and, remarkably, he held that, at least under English law, consent existed where the proprietor ‘has agreed, expressly or otherwise to such entry, or he has, directly or otherwise, placed the goods in the hands of a third party under conditions which give the third party a right to distribute and onward sell them without restriction.’<sup>227</sup> In effect, in the absence of full and explicit restrictions being imposed on the purchasers at the time of purchase, according to Laddie J a trade mark owner is treated as impliedly consenting to further distribution of those goods (including their import into the EEA). On the facts of the case, placing goods on the market in Singapore was sufficient consent to their import into the EEA.

The Court of Justice, following the logic of *Silhouette*, rejected Laddie J’s approach.<sup>228</sup> First, it held that it was implicit from the Directive that there must be a harmonized concept of consent in this context.<sup>229</sup> Second, the Court held that consent need not be express, but could be implied. Nevertheless, that consent must indicate an intention to renounce one’s right to object to the import of the item into the EEA unequivocally.<sup>230</sup> Consequently, while in some cases consent could be inferred from facts and circumstances prior to, simultaneous with, or subsequent to the placing of goods on the market outside the EEA, consent could not be implied from the failure to express positively that goods were not to be imported into the EEA, or from silence.

In effect, it will be very difficult for a parallel importer to persuade a court that consent exists in the absence of evidence of express agreement. One example might be a situation in which the trade mark owner has known about and facilitated, but not objected to, a practice of importing trade marked goods into the EEA.<sup>231</sup>

#### 8.5.4 Proving consent

The *Davidoff* decision seemed to imply that a trader operating within the EEA who is faced with an allegation that the goods have been imported from outside the EEA must be able to show that a trade mark proprietor has consented to the circulation of goods in the EEA. In *van Doren + Q GmbH v. lifestyle + sportswear Handelsgesellschaft mbH*,<sup>232</sup> the Court of Justice indicated that the issue of the onus of proof was one for member states, but that the national rule should not itself inhibit the free movement of goods within the EEA. Here, Stüssy Inc., a company based in California, owned the mark STÜSSY for clothes and Van Doren was the exclusive distributor of the STÜSSY clothes for Germany. Lifestyle was selling STÜSSY clothes in Germany and Van Doren claimed that there was trade mark infringement. Van Doren alleged that the goods came from the United States, whereas Lifestyle alleged that it had sourced them in the EEA (so that the trade mark rights were exhausted), but refused to name its suppliers. Under German law, it was for the defendant to prove exhaustion, although the appeal court had sought to place some

<sup>226</sup> *Zino Davidoff v. A. & G. Imports* [1999] 3 All ER 711. <sup>227</sup> *Ibid.*, 725, [38].

<sup>232</sup> Case C-244/00 [2003] ECR I-3051.

onus on the claimant. The Court of Justice was asked whether Article 34 TFEU required there to be an exception to the rule that the full burden of proof fall on the defendant.

First, the Court held that the German rule of evidence is consistent with Community law, including Articles 5 and 7 of the Directive. However, the Court qualified this by stating that such a rule of evidence might need to be qualified where its application might lead to a ‘real risk of partitioning of national markets’.<sup>233</sup> In such circumstances, Article 34 TFEU requires the rule of evidence to be qualified and, instead, a national court should divide up the different matters to be proved. More specifically, the onus would fall on the proprietor of the mark to prove that the goods were first marketed outside the EEA; it would then be for the parallel importer to prove consent to subsequent import of the products.

The Court gave an example of a situation in which there could be such a risk of partitioning as to qualify the general approach—that is, where European marketing is by way of an exclusive distribution system. In such cases, the effect of requiring the parallel importer to prove consent is tantamount to requiring it to reveal its sources (and hence to expose the breaches in the trade mark owner’s exclusive distribution system). Such exposure would enable the trade mark proprietor to remove its leaky distributor from the supply chain and thus prevent the parallel importer from continuing to obtain supplies in this way. In such cases, therefore, the Court requires the trade mark proprietor to prove that the goods were marketed outside the EEA. It might do so by referring to batch numbers, or other characteristics that demonstrate that first marketing was outside the EEA.

In *Oracle America Ltd v. M-Tech Data*,<sup>234</sup> the claimant was a manufacturer of computer hardware that it had placed on the market bearing its trade marks in China, Chile, and the United States. The defendant imported them into the United Kingdom and supplied a third party (who was, in fact, acting on behalf of the claimant). When the claimant sought summary judgment in an action for infringement of its trade mark, the defendant argued that the claimant’s trade mark rights were not enforceable because the object and enforcement was to partition the EEA market in Oracle hardware contrary to Articles 34–36 TFEU. The argument was made that the defendant could not know whether these were goods that Oracle had permitted to be marketed in the EEA. This was said to be the case because the market in disks (and computer hardware) was a global market, and Oracle could easily provide the information by making available a list of the serial numbers of disks that had been marketed in the EEA. M-Tech argued that Oracle refused to do so precisely so that it could prevent unauthorized trade in its legitimate products in Europe.<sup>235</sup> Unfortunately, M-Tech was unable to show that the particular sales in issue in the case had been affected by Oracle’s alleged wrongful behaviour,<sup>236</sup> and so sought to claim that its general practice rendered its trade marks unenforceable on the basis that Article 5 of the Trade Marks Directive ‘is subject to an implied limitation to be derived as a matter of construction from Articles 34 to 36 of the EU Treaty’.<sup>237</sup> At first instance, Kitchin J rejected the defence, but on appeal the Court of Appeal found that the defence was not unarguable, so that the case should have been permitted to go to trial. On appeal to the Supreme Court, the judgment at first instance was reinstated. Lord Sumption, with whom the Court unanimously agreed, found that, once the distinction was understood between the rules relating to goods placed on the market in the EEA and goods that had not been so placed, it was apparent that there was no arguable defence. The conduct to

<sup>235</sup> *Ibid.*, [9]. For the purposes of the hearing, the Court assumed this to be true.

<sup>236</sup> If so, it might have been able to rely on a Euro-defence: *ibid.*, [11]. <sup>237</sup> *Ibid.*, [11].

which the defendant objected was ‘collateral to the particular right which [the claimant was] seeking to enforce’<sup>238</sup>—namely, the absolute right to oppose first marketing in the EEA. The defence could not succeed and no reference to the Court of Justice was required.

### 8.5.5 Competition rules

Even if the rule that there is no international exhaustion is now quite clear, there are unresolved issues concerning the interrelationship between European trade mark policy and European competition law, particularly Article 101 TFEU. The relevance of the latter was made clear by the Court of Justice in the *Javico v. Yves St Laurent* decision.<sup>239</sup> In that case, Yves St Laurent sought to terminate a distribution contract with Javico under which Javico undertook to sell products only in Russia and the Ukraine, because it had been discovered that some of the products had found their way to the United Kingdom. The Cour d’Appel of Versailles sought the advice of the Court of Justice as to whether such a contract might be prohibited by Article 81. The Court held that the agreement had as its object the restriction of competition, so that the key question was whether it was capable of affecting trade between member states. If the agreement specifically prohibited imports into the EEA, it would have as its object the restriction of competition in the EEA and would be likely to be void. However, here, the contract specified that there were to be no sales outside the territory (whether to the EEA or not). Consequently, the Court said that the question was: what was the ‘effect’ of the agreement? This involved assessing the economic context, particularly the relative position and importance of the parties on the market in question. However, if the effects were insignificant, the contract would be outside the prohibition and hence valid. If the Community market is oligopolistic, or the price differentials are significant, it is necessary to examine the likely impact of the disputed contract. If the market outside the Community is relatively small compared to that within the Community, the impact is likely to be insignificant. However, assessing such matters is the task of national courts.

While, in *Silhouette*, the Court of Justice clearly indicated that trade marks law should enable a proprietor to keep legitimate goods first marketed outside the EEA out of the market, when examining competition policy, the Court in *Javico* suggested that agreements that prohibit marketing in the EEA are contrary to Article 101 TFEU (ex Article 81 EC and Article 85 of the Treaty). The two policies are in conflict, and the likely reconciliation is through a limited application of *Javico*. In any case, *Davidoff* reduces the likely application of *Javico* for two reasons: first, because the definition of ‘consent’ (and onus-of-proof issues) means that the trade mark proprietor need not support their trade mark rights through contractual prohibitions on import into the EEA, and so can avoid Article 101 (which applies to agreements rather than unilateral acts); and second, because even if a contract selling goods outside the EEA obliges the purchaser not to resell within the EEA, it is arguable that such a clause has no effect on competition over and above that attributable to the proprietor’s rights under trade marks law.<sup>240</sup>

### 8.5.6 Reform?

Following the *Silhouette* decision, the European Commission raised the question of reform of the rules relating to international exhaustion. It commissioned a study of the

<sup>238</sup> *Ibid.*, [24].

<sup>239</sup> *Javico International and Javico AG v. Yves St Laurent Parfums SA*, Case C-306/96 [1998] ECR I-1983.

<sup>240</sup> Commission Staff Working Paper, *Possible Abuses of Trade Mark Rights within the EU in the Context of Community Exhaustion* (May 2003) SEC (2003) 575 (finding the current legal position to be satisfactory).

economic effects of changing to international exhaustion, which, in turn, indicated that the issues were complex (there might be effects not only on pricing, but also on matters such as product quality or after-sales services) and that the price benefits to consumers of changing the regime would probably be limited (in some sectors, up to 2 per cent).<sup>241</sup> The Commission then consulted widely with member states and interested parties, mooting various possible options, such as having international exhaustion only for certain products (for example excluding pharmaceuticals and sound recordings).<sup>242</sup> However, in May 2000, the Commission decided not to propose any action in this field.

## 9 FREEDOM OF EXPRESSION

In general, trade mark rights rarely create significant limitations on free speech. For example, use of a trade mark to criticize a company or its products will not normally amount to an infringement of trade mark rights. This is because such speech will rarely be regarded as an act occurring in the ‘course of trade’,<sup>243</sup> nor in relation to the user’s goods or services.<sup>244</sup> A *Which?*-style review of the merits of goods or services may utilize trade marks, but will not do so ‘in relation to’ the publisher’s goods (only to refer to the trade mark owner’s goods). It is less clear whether there could be infringement by use of a sign as the subject matter of a painting (as with Warhol’s famous depictions of CAMPBELL’s soup cans) or even as the title of a pop song (as with The Undertones’ song ‘Mars Bars’ or Scandinavian dance act Aqua’s use of the mark BARBIE in its song ‘Barbie Girl’).<sup>245</sup> On the assumption that these acts occur in the course of trade,<sup>246</sup> there would be a serious issue as to whether the use was in relation to (that is, as a distinguishing sign for) the painting or song (which is marginally more plausible in relation to the song titles). In that case, liability would probably depend on whether these uses took unfair advantage of, or were detrimental to, the repute of the CAMPBELL’s mark, and if so, whether they were ‘without due cause’.<sup>247</sup> We have argued (in Chapter 38) that ‘due cause’ might leave room to accommodate freedom of speech.

While, for the most part, trade mark law should not compromise freedom of speech, sometimes a person may trade in goods that have expressive qualities that could infringe trade marks: an obvious example is a T-shirt that parodies trade marked goods, for example mimicking the blue oval FORD logo, but replacing the word ‘Ford’ with the word ‘Fraud’. Another example, drawn from US case law, would be the sale of dog toys as CHEWY VUITTON, which could be understood as a parody of LOUIS VUITTON.<sup>248</sup> In these cases, trade mark law may come into conflict with freedom of expression (especially if Louis Vuitton has acquired trade mark rights in relation to ‘textile goods’ in Class 24 or

'playthings' in Class 28).<sup>249</sup> Might there be liability under section 10(2) or (3) of the 1994 Act? If so, in these situations, there is a possibility that an appeal could be made to fundamental freedoms recognized in national, regional, or international law.<sup>250</sup>

<sup>249</sup> W. Sakulin, *Trademark Protection and Freedom of Expression* (2011); W. Sadurski, 'Allegro without Vivaldi: Trademark Protection, Freedom of Speech, and Constitutional Balancing' [2012] *EUConst* 456; L. Ramsey and J. Schovsbo, 'Mechanisms for Limiting Trade Mark Rights to Further Competition and Free Speech' (2013) 44 *IIC* 671; R. Burrell and D. Gangjee, 'Trade Marks and Freedom of Expression: A Call for Caution' (2010) 41 *IIC* 544. Burrell and Gangjee suggest that resort to freedom of expression 'concedes too much', and that the problem (and solution) is to be found in the problematic and unjustified extension of trade mark rights through 'dilution' and extended concepts of confusion. Moreover, they argue that appeals to freedom of expression may not be sufficient to counter the undesirable effects of trade mark law's expansion (among other things), noting how unreceptive some common law judges have been to draw on Art. 10 ECHR in English courts. Finally, they suggest that while some of these difficulties with utilizing freedom of expression might be reduced by deploying particular categories of exception (such as 'parody'), such a strategy brings its own problems (in part of arbitrariness).

## EXPLOITATION AND USE OF TRADE MARKS

### CHAPTER CONTENTS

1 Introduction	1095	3 Modes of Exploitation	1096
2 Ownership	1096	4 Limits on Exploitation	1102

### 1 INTRODUCTION

Given that the law of registered trade marks developed from the law of passing off, it is not surprising that it has long carried with it limitations derived from the law of passing off. One such limitation is that passing off does not protect property in the mark; instead, it protects traders against misrepresentations affecting a distinct proprietary interest—namely, ‘goodwill’. While this limitation has gradually been removed from the law of registered trade marks (trade marks are now treated as forms of property in their own right),<sup>1</sup> the law relating to the exploitation of trade marks has yet to embrace wholeheartedly the idea that a trade mark is an asset over which its proprietor should have full control.<sup>2</sup> Although it is now common practice for trade marks to be included on the balance sheets of companies,<sup>3</sup> the law still imposes a number of restrictions on the use that can be made of marks. We begin this chapter by looking at the ownership of trade marks, focusing in particular on the problems that arise in relation to co-ownership. After going on to look at the ways in which trade marks can be exploited, we will focus on the limitations placed on the uses that can be made of a trade mark.

Before examining these matters in more detail, it is worth observing that while the exploitation of British trade marks is governed by the Trade Marks Act 1994, the Community Trade Mark Regulation (CTMR) sets out only a partial code for dealing with Community trade marks (CTMs). In the absence of harmonized EU laws on transfers, assignments, security interests, testamentary dispositions, and insolvency, the drafters of the Regulation decided that the most appropriate approach would be for transactions in

<sup>1</sup> TMA 1994, s. 22 (personal property); CTMR, Art. 16 (an object of property). For a history of the same trend in the United States, see L. Johnston, ‘Drifting towards Trademark Rights in Gross’ (1985) 85 *TM Rep* 19.

relation to CTMs to be governed by the laws of the most closely connected member state. As a result, CTM transactions will normally be dealt with by the laws of the country in which the proprietor has their seat or domicile on the relevant date.<sup>4</sup>

## 2 OWNERSHIP

### 2.1 PROPRIETORSHIP

The owner of a trade mark is the person who registers it.<sup>5</sup> In contrast with patent law, which recognizes the concept of the ‘inventor’ and ‘person entitled’ as entities that have an existence prior to (and thus independently of) the application for a patent, the 1994 Act does not recognize that a trade mark may have a proprietor before an application is made. In short, the Act treats the first person to register as the proprietor, and the only proprietor is the registered proprietor. Where there is competition as to who should be entitled to a trade mark, those disputes are decided by reference to the relative grounds for invalidity and by the requirement that all applications be made in good faith.

### 2.2 CO-OWNERSHIP

One potential problem that arises in the exploitation of a trade mark is when the mark is owned by two or more parties. In these circumstances, the question arises as to whether one co-owner can utilize the trade mark without the consent of other co-owner(s). Where there is no contract between two or more co-owners of a trade mark, the Trade Marks Act 1994 declares that each of the co-owners is ‘entitled to an equal undivided share in the registered trade mark’.<sup>6</sup> This means that each owner is permitted ‘by himself or his agents, to do for his own benefit and without the consent of or the need to account to the other or others, any act which would otherwise amount to an infringement of the registered trade mark’.<sup>7</sup> The power and immunity given to each co-proprietor is limited because, without the consent of the other co-owner(s), the joint owner cannot license others to use the trade mark.<sup>8</sup>

## 3 MODES OF EXPLOITATION

Trade marks can be exploited in a number of different ways.<sup>9</sup> Perhaps the most common technique is for owners to exploit the mark themselves. Trade marks may also be assigned, licensed, mortgaged, or devolve by operation of law (notably through death or bankruptcy).<sup>10</sup> We will look at each in turn.

<sup>4</sup> CTMR, Art. 16(1). See also CTMR, Art. 20(2) (levy of execution); cf. Art. 21(1) (applicable rules on insolvency are to be those of the state in which the debtor has its ‘centre of main interests’).

<sup>5</sup> In fact, an application is itself regarded as an object of property that can be transferred and has value, and is even protected as property under the ECHR: *Anheuser-Busch v. Portugal*, App. No. 73049/01 [2007] ECHR (36) 830, [2007] ETMR (24) 343.

<sup>6</sup> TMA 1994, s. 23.

<sup>7</sup> TMA 1994, s. 23(3).

<sup>8</sup> TMA 1994, s. 23(4).

<sup>9</sup> For a discussion of the many issues that may arise in the exploitation of trade marks, see N. Wilkof, *Trade Mark Licensing* (2005).

<sup>10</sup> TMA 1994, s. 24(1); CTMR, Art. 21 (insolvency).

### 3.1 SELF-EXPLOITATION

One of the most common ways in which trade marks are used is for owners to exploit the marks themselves. Often, this will involve the owner making the goods, applying the mark, and selling the goods. While trade mark owners may do all of these acts themselves, they often use third parties. For example, a trade mark owner will use goods manufactured by someone else, a 'contract manufacturer', to which they apply their marks. In these circumstances, the mark is not used to indicate that the goods were manufactured by the trade mark owner; instead, the mark indicates that the goods were selected and approved by the trade mark owner.<sup>11</sup> By and large, such relationships are not problematic. However, if they break down, for example through bankruptcy or failure to meet contractual stipulations, difficulties may arise in determining whether parties other than the trade mark owner can sell the goods that have been marked with the trade mark proprietor's consent.<sup>12</sup>

Trade mark proprietors use a number of strategies when placing their goods on the market. In many instances, they will be happy for the goods to reach the market by any means. In other cases, however, to maintain the allure of the product, they may wish to restrict distribution to particular persons. This is the case with perfumes, which many manufacturers have deemed unsuitable for sale in certain kinds of outlet, such as supermarkets.<sup>13</sup>

Once the goods are on the market in the European Economic Area (EEA), the rights of the trade mark owner are exhausted. Usually, therefore, distributors of the trade marked goods do not need permission to sell goods bearing the mark. A trade mark owner may, however, wish to control certain uses of the mark by such a distributor. As we noted in Chapter 41, there will be limitations on the ways in which the distributor may use the mark in advertising and as regards any alteration of the goods.

### 3.2 ASSIGNMENT

An assignment is a transfer of ownership of the trade mark (or application). As a result of an assignment, the assignee stands in the shoes of the assignor and is entitled to deal with the trade mark as they please. In contrast with a licence, under which the licensor retains an interest in the trade mark, once a trade mark owner has assigned the trade mark, they no longer have any interest in, or responsibility to maintain, the trade mark.<sup>14</sup>

Assignments of trade marks can occur without any corresponding transfer of business or goodwill.<sup>15</sup> This is a critical difference between passing off and registered trade marks. An owner of an unregistered mark can assign the benefit of the mark only by assigning the goodwill of the business with which it has been used. This common law distrust of the trading in marks reflects the understanding that marks are protected because they operate in the consumers' eyes as indications of source. Following this logic, if assignments were allowed, it would create confusion as to the source of the goods or services. With registered trade marks being treated increasingly as assets, this rationale for restricting assignments carries less weight.

<sup>11</sup> Indeed, Millett J has noted that a trade mark owner 'may have the components made by one company, assembled by another, the trade mark affixed by a third and the goods marketed by a fourth': *Accurist Watches v. King* [1992] FSR 80, 88.

<sup>12</sup> As in *Accurist Watches*, *ibid.* (sale by manufacturer in exercise of retention of title clause); N. Wilkof, *Trade Mark Licensing* (2005), ch. 8.

<sup>13</sup> *Ibid.*, ch. 7. <sup>14</sup> TMA 1994, s. 24.

<sup>15</sup> TMA 1994, s. 24(1); CTMR, Art. 17(1). The change was first brought about in the United Kingdom by TMA 1938, s. 22.

An assignment can be made in part or in a limited manner. A national trade mark may be assigned in relation to part of the goods and services for which the mark is registered, limited in the manner of its use,<sup>16</sup> or geographically (subject to compliance with the Treaty on the Functioning of the European Union).<sup>17</sup> In contrast, a Community trade mark must be dealt with ‘in its entirety, and for the whole area of the Community’.<sup>18</sup>

In order for an assignment to be valid, it must be in writing and signed by the assignor. In the case of a Community mark, the assignment must be signed by all of the parties to the transaction.<sup>19</sup> In situations in which the trade mark or application is owned by more than one party, each co-owner can assign only their share and then only if the others consent to such an assignment.<sup>20</sup> It follows that a full assignment of a mark would require the cooperation and signatures of all co-owners. While the assignment does not need to be registered to be effective, there are a number of advantages that follow from registration, which are reviewed below. With respect to the assignment of Community marks, the Office of Harmonization in the Internal Market (OHIM) is obliged not to register any transfer that is likely to mislead the public as to the nature, quality, or geographical origin of the goods or services in respect of which it is registered. In contrast, the UK Trade Marks Registry has relinquished even a minimal supervisory role.<sup>21</sup>

### 3.3 VOLUNTARY LICENCES

Another common mode of exploitation is for a trade mark owner to grant a licence that enables others to carry out specified activities in relation to the mark. The licensing of trade marks, which facilitates merchandising, franchising, and distribution agreements more generally, is at the heart of a multibillion-pound industry,<sup>22</sup> which ‘pervades the way . . . goods and services are distributed, marketed and sold, both domestically and internationally’.<sup>23</sup> At a basic level, a licence is merely a permission to do an act that would otherwise be prohibited without the consent of the trade mark owner. A licence enables the licensee to use the trade mark for specified goods or services without infringing.<sup>24</sup> So long as the use falls within the terms of the licence, the licensee is immune from an action by the trade mark owner.<sup>25</sup> For the most part, the terms of a voluntary licence are up to the parties to determine, and thus will depend on the needs, capacities, and wishes of the parties.<sup>26</sup>

However, under trade mark law, a licence amounts to much more than a mere permission to use a mark. In the absence of an agreement to the contrary, a trade mark licence

<sup>16</sup> TMA 1994, s. 24(2).      <sup>17</sup> TMA 1994, s. 24(2)(b).      <sup>18</sup> CTMR, Art. 16(1).

<sup>19</sup> TMA 1994, s. 24(3) (must be signed by assignor); CTMR, Art. 17(3) (must be signed by parties to the contract).      <sup>20</sup> TMA 1994, s. 23(4).

<sup>21</sup> For refusal of transfer to be justified, such deception must be clear from the transfer documents. Moreover, the OHIM should accept the transfer insofar as the transferee agrees to limit registration of the Community mark to goods or services in respect of which it is registered: CTMR, Art. 17(4). In addition, under CTMR, Art. 17(2), a presumption exists that a transfer of the whole of an undertaking includes the transfer of the Community trade mark.

<sup>22</sup> G. Battersby and C. Grimes, ‘Merchandising Revisited’ (1986) 76 *TM Rep* 271, 275.

<sup>23</sup> N. Wilkof, *Trade Mark Licensing* (2005), 1.

<sup>24</sup> *Martin Y Paz Diffusion SA v. Depuydt*, Case C-661/11 (18 April 2013) (Opinion of AG Cruz Villalón), [AG62] (‘A licence is the most common way in which consent to the use of the trade mark in the course of trade is given’). See also *Pie Opitiek v. Bureau Gevers*, Case C-376/11 (19 July 2012) (ECJ, Second Chamber).

<sup>25</sup> *Sport International v. Inter Footwear* [1984] 2 *All ER* 321.

<sup>26</sup> If provision is made for such action, the law recognizes that a licensee may grant sub-licences: TMA 1994, s. 28(4).

binds a successor in title to the grantor's interest.<sup>27</sup> In addition, the 1994 Act enables a licensee of a trade mark to enforce their rights against third parties.<sup>28</sup> Given the almost proprietary nature of a trade mark licence,<sup>29</sup> it is not surprising that the law requires the licence to be in writing for it to be 'effective'.<sup>30</sup> A licence need not be registered to be valid as against the licensor, but there are several advantages from registration, which are discussed below.<sup>31</sup>

Licences may take many forms, from a one-off permission through to an exclusive licence. Licences (even of Community trade marks) may be limited geographically,<sup>32</sup> temporally, in relation to particular goods or services, or as to manner of use.<sup>33</sup>

Of the different forms of licence, perhaps the most significant (in terms of law, at least) is the 'exclusive licence'. An exclusive licence is an agreement according to which the registered proprietor of a trade mark not only confers permission on the licensee to use the trade mark, but also promises that they will not grant any other licences and that they will not exploit the mark themselves.<sup>34</sup> The legal consequence of this is that an exclusive licence confers a right in respect of the trade mark *to the exclusion of all others including the licensor*. In some ways, it is the intangible property's equivalent to a 'lease'.<sup>35</sup>

An exclusive licence confers powers on the licensee that are equivalent to those of an assignee.<sup>36</sup> Undoubtedly, the most significant aspect of this is that, unlike a mere licensee,<sup>37</sup> an exclusive licensee can sue infringers without having to persuade the proprietor to take action on their behalf.<sup>38</sup> An exclusive licensee is given the same rights as an assignee and therefore has the right to bring proceedings in respect of any infringement that occurs after the date of the licence agreement. Indeed, an action can be brought by both the trade mark proprietor and an exclusive licensee.<sup>39</sup> The statute provides guidance where concurrent rights exist.<sup>40</sup>

Although the law distinguishes between bare, contractual, and exclusive licences, commercial dealings are less precise in the way in which the term 'licence' is used. Indeed, it has been said that 'both business executives and lawyers use the word "licence" indiscriminately and conclude agreements they call "licences" when no licence is really necessary'.<sup>41</sup> From a commercial point of view, it is possible to characterize licences and similar arrangements in a more functional manner as product trade mark licences, franchise agreements, and distributorship agreements.<sup>42</sup>

Under a *product trade mark licence*, the licensee will manufacture the product and be permitted to apply the mark to it. This often occurs with character merchandising, and also with the manufacture of many products (such as soft drinks, where the trade mark

<sup>27</sup> TMA 1994, s. 28(3); CTMR, Art. 23(1). But note CTMR, Art. 23(2).

<sup>28</sup> TMA 1994, s. 30; CTMR, Art. 22(3).

<sup>29</sup> See N. Wilkof, *Trade Mark Licensing* (2005), ch. 12. For discussion of the distinction between licences and proprietary interests in the context of relief from forfeiture, see esp. *ibid.*, [12.43]–[12.55], 278–84.

<sup>30</sup> TMA 1994, s. 28(2). Presumably, the law will continue to recognize implied licences and oral consents, as well as to apply the traditional principles relating to estoppel.

<sup>31</sup> Where there are joint proprietors, all of them must consent to any licence: TMA 1994, s. 23(4)(a).

<sup>32</sup> TMA 1994, s. 28(1)(b); CTMR, Art. 22(1). <sup>33</sup> TMA 1994, s. 28(1).

<sup>34</sup> TMA 1994, s. 29(1). See *Scandecor International v. Scandecor Marketing* [2002] FSR 122, [14].

<sup>35</sup> For an analogy between a franchise agreement and a lease of 'goodwill', see *Kall-Kwik Printing (UK) v. Frank Clarence Rush* [1996] FSR 114. <sup>36</sup> TMA 1994, s. 31(1).

<sup>37</sup> For the position of a mere licensee, see TMA 1994, s. 28(2)–(5). <sup>38</sup> TMA 1994, s. 31(1).

<sup>39</sup> TMA 1994, s. 31(2). <sup>40</sup> TMA 1994, s. 31(4)–(8).

<sup>41</sup> R. Joliet, 'Trademark Licensing Agreements under the EEC Law of Competition' (1983–84) 5 *Nw J Intl L & Bus* 755, 765. <sup>42</sup> *Ibid.*, 765–6.

owner supplies the syrup, but the licensee makes up, bottles, and sells the drink). Product trade mark licences are also often linked to licences of patents and technology.

It has been said that franchising accounts for a third of retail turnover with the United Kingdom.<sup>43</sup> Under a *franchise agreement*, the franchisor provides the framework within which the franchisee operates. While the nature of the agreement varies from case to case, the franchisor effectively provides the shell within which the business operates. The franchisor may provide things such as the corporate image (including the mark), the advertising, training, premises, know-how, and support service.<sup>44</sup> Familiar examples of franchises include PRONUPTIA'S wedding attire and KALL-KWIK photocopying shops.<sup>45</sup>

A *distributorship agreement* is merely a means by which a producer regulates how their goods reach the market.<sup>46</sup> Although distribution agreements are not usually trade mark licences, such agreements may include clauses requiring the distributor to sell the goods under the producer's trade mark in a manner specified by the producer. Alternatively, they may require a licensee to use particular distributor's marks.<sup>47</sup> In order to protect the reputation of the brand, a supplier may restrict distribution to certain specialist shops, a recent example of which has been the refusal of perfume manufacturers to supply supermarkets.

### 3.4 MORTGAGES

Like other forms of property, trade marks may be used as security for a debt.<sup>48</sup> This can be a useful technique to enable the proprietors of trade marks to raise funds. One form of such security is the legal mortgage, which involves an assignment of the trade mark by the trade mark owner (mortgagor-borrower) to the mortgagee-lender. This is subject to a condition that the trade mark will be reassigned to the mortgagor when the debt is repaid (or, as the law says, 'on redemption'). It is important that the assignment reserves for the mortgagor a right to continue using the trade mark. This is probably best achieved by reservation of an exclusive licence.<sup>49</sup> An alternative form of security is to subject the trade mark to a 'charge',<sup>50</sup> in which case there is no assignment; instead, the chargee gains certain rights over the trade mark. In the case of both forms of security, to be valid, the transaction must be in writing and signed by the parties.<sup>51</sup> Where there are joint proprietors, all of them must consent to the grant of a security interest.<sup>52</sup> While such an interest need not be registered to be valid, there are advantages from registration, which are reviewed below.

### 3.5 TESTAMENTARY DISPOSITIONS

Because a trade mark is personal property, it is capable of passing on the death of the proprietor either by will or according to the rules applicable in cases of intestacy. In the case of the death of one co-owner, because co-owners hold the trade mark as tenants in

<sup>43</sup> M. Abell, 'Clouds on the Horizon for Franchisors in the EU' (August 1998) *Trademark World* 34.

<sup>44</sup> *Kall-Kwik v. Rush* [1996] FSR 114.

<sup>45</sup> Franchises have been subdivided into three categories: 'service franchise agreements', which concern the supply of services (e.g. KALL-KWIK); 'production' or 'industrial franchise agreements', which concern the manufacturing of goods; and 'distribution franchise agreements', which involve the sale of goods (e.g. PRONUPTIA).

<sup>46</sup> In some circumstances, distribution franchises can share many facets of distribution agreements: R. Joliet, 'Trademark Licensing Agreements under the EEC Law of Competition' (1983–84) 5 *Nw J Intl L & Bus* 755, 764–5.

<sup>47</sup> *Consten & Grundig v. EC Commission*, Case C-56/64 [1966] CMLR 418.

<sup>48</sup> TMA 1994, s. 24(4); CTMR, Art. 19(1). See further C. Smith, 'Trade Marks as Collateral in the United Kingdom', in D. Campbell, H. Harmeling, and E. Keyzer (eds), *Trademarks: Legal and Business Aspects* (1994), 247.

<sup>49</sup> *Ibid.*, 250–2 (advising that the legal mortgage technique be avoided).

<sup>50</sup> TMA 1994, s. 24(5).

<sup>51</sup> TMA 1994, s. 24(3)–(5).

<sup>52</sup> TMA 1994, s. 23(4).

common (rather than as joint tenants),<sup>53</sup> the share of the deceased co-owner passes along with the rest of its estate rather than accrues to the other co-owners. In devolving the trade mark, the personal representative must sign a written assent.

### 3.6 REGISTRATION OF INTERESTS AND TRANSACTIONS

We observed earlier that trade mark registration performs a number of different functions:<sup>54</sup> it helps to overcome difficulties in proving the existence of goodwill; it allocates priorities between competing traders wishing to secure rights over a particular trade mark; and it acts as a repository of information that alerts third parties who might independently wish to use the same or a similar mark about the proprietor's rights.

Although legal transparency might be an admirable goal, because there is no statutory obligation to register marks or transactions therewith, and indeed transactions are valid in the absence of registration, the register cannot be said to operate as a 'mirror' of legal rights over commercial signs in the way that the Land Registry system purports to be a reflection of proprietary rights over real property. Nevertheless, the usefulness of the register is ensured because of the existence of incentives for parties to transactions in marks to enter them on the register: because unregistered transactions are vulnerable to later dealings, it is highly advisable to register them immediately.<sup>55</sup> Registrable transactions are listed in section 25(2) of the 1994 Act as assignments, the making of assents, the granting of securities, and the grant of licences.<sup>56</sup> Notice of trusts may not be registered.<sup>57</sup>

While similar transactions may be registered with the UK Trade Marks Registry and at the OHIM, the consequences of failing to register a transaction differ between the two regimes. As such, they will be considered separately.

Registration of transactions with regards to UK marks at the UK office has three distinct effects. First, registration ensures that the interest of the registrant survives further inconsistent transactions in relation to the mark. More specifically, section 25(3) states that an unregistered transaction is 'ineffective' as against a person acquiring a conflicting interest in or under the mark in ignorance of it.<sup>58</sup> Second, as regards licences, registration enables the licensee to acquire the full scope of available rights and remedies.<sup>59</sup> Third, costs in an unsuccessful infringement action are withheld from assignees and licensees who do not register promptly—that is, within six months of the transaction—as regards any acts of infringement that occur prior to registration.<sup>60</sup>

According to the CTMR, similar consequences flow from non-registration of transactions affecting Community trade marks. Article 23 states that transfers, grants of security, and licences of CTMs shall only have effect vis-à-vis third parties after entry in the register, unless that third party knew of the relevant transaction at the date on which they acquired their interest. The effect of levies of execution and bankruptcy on third parties are matters for the law of the relevant member states.

<sup>53</sup> TMA 1994, s. 23(1).

<sup>54</sup> See above at p. 887.

<sup>55</sup> See N. Wilkof, *Trade Mark Licensing* (2005), chs 3 and 4.

<sup>56</sup> The CTMR provides that, on request of one of the parties, the following shall be entered on the register and published—a transfer, security, levy of execution, licence (or transfer thereof): CTMR, Arts 17(5), 19(2), 20(3), 21(2), and 22(5).

<sup>57</sup> TMA 1994, s. 26.

<sup>58</sup> The effect of this can be illustrated as follows: A assigns the trade mark to B on 1 July 2013, and A then licenses the trade mark to C on 1 August 2013; B had not registered the assignment and C had no knowledge of it on 1 August—but B is bound by C's licence. See N. Wilkof, *Trade Mark Licensing* (2005), 58.

<sup>59</sup> TMA 1994, s. 25(3)(b).

<sup>60</sup> TMA 1994, s. 25(4), as amended by the Intellectual Property (Enforcement, etc.) Regulations 2006 (SI 2006/1028), Sch. 2, para. 17. This corresponds to PA 1977, s. 68, discussed above at p. 646.

A special incentive to register is placed on transferees of CTMs. According to Article 17(6) of the CTMR, as long as the transfer has not been entered in the OHIM, the successor may not invoke the rights arising from registration of the CTM. It is important to note that the OHIM must not register any transfer that is likely to mislead or deceive the public as to the nature, quality, or geographical origin of the goods or services in respect of which it is registered.<sup>61</sup> For refusal of a transfer to be justified, the deception must be clear from the transfer documents. Moreover, the OHIM should accept the transfer insofar as the transferee agrees to limit the registration of the CTM to goods or services in respect of which it is registered.

### 3.7 COMPULSORY LICENCES

In contrast with other areas of intellectual property law such as designs, copyright, and patents, there are no compulsory licences in relation to trade marks. Such a remedy is formally prohibited under the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS). However, occasionally, competition authorities may seek to remedy abuses of monopolistic position by requiring the trade mark proprietor to license a number of manufacturers.<sup>62</sup> Presumably, this is justified under TRIPS by reference to its competition provision.

## 4 LIMITS ON EXPLOITATION

The terms and conditions under which a trade mark is exploited are usually determined contractually by the parties; the Trade Marks Act 1994 merely provides a shell within which parties are able to manoeuvre. Where parties have agreed upon the way in which a trade mark is to be exploited, the law has been loath to substitute its view of what should have been agreed. Having said this, as with all forms of intellectual property law, the power conferred by trade mark law on a proprietor is limited in a number of ways.

The restrictions imposed by British trade mark law are changing. Whereas the law previously imposed a number of impediments on the licensing of marks, after the liberalization effected by the 1994 Act, the major restriction on licensing arises through the operation of the revocation provisions contained in section 46.<sup>63</sup> This is because if the terms or extent of the licensing (or assignment) are such that the mark becomes deceptive, the registration may be revoked. As a result, in exploiting a trade mark, the proprietor should take care to ensure that the mark does not become deceptive or generic. In order to avoid the mark becoming deceptive, trade mark owners would be wise to include quality control provisions in any licences that they grant and to operate some sort of monitoring policy to ensure that those standards are complied with.

Another important limitation placed on the use that can be made of a trade mark is provided by UK and European competition law. In the next section, we outline the general nature of these regulations, before considering the ways in which these regimes treat a selection of commonly used trade mark licence terms.

### 4.1 EU COMPETITION LAW

The key provision of European competition law affecting trade mark licences and exploitation agreements is Article 101 of the Treaty on the Functioning of the European Union

<sup>61</sup> CTMR, Art. 17(4).

<sup>62</sup> Licensing obligations are also used to remedy competition problems in merger control. See European Commission, *Merger Regulation Remedies Notice* [2008] OJ C 267/1, [65].

<sup>63</sup> See at pp. 1033, 1034.  
© L. Bently and B. Sherman 2014

(TFEU). This renders void all agreements that affect trade between member states and which have the object or effect of preventing, restricting, or distorting competition within the Common Market. The issue of whether an element in an agreement ‘restricts trade’ is usually looked at by the Commission in terms of whether it restricts the activities of the parties to the agreement (or third parties) to an ‘appreciable extent’.<sup>64</sup>

For minor agreements, the Commission has issued a Notice on Agreements of Minor Importance,<sup>65</sup> which treats agreements between firms that are not competitors as falling outside of Article 101(1) if the market share held by each of the parties does not exceed 15 per cent of any of the relevant markets affected by the agreement. This does not apply, however, where those agreements contain provisions relating to resale price-fixing or territorial protection.

Even if an agreement falls within the Article 101 TFEU (ex Article 85 EEC and Article 81 EC) prohibition, it may nonetheless fall within one of the block exemptions issued by the Commission. The two block exemptions that are relevant relate to (i) technology transfer agreements (the Technology Transfer Block Exemption Regulation 2014, or TTBER 2014<sup>66</sup>) and (ii) vertical agreements (the Vertical Restraints Regulation, or VRR).<sup>67</sup>

We considered the TTBER 2014 in Chapter 22. Here, it should be noted that the Regulation applies only where trade marks are ancillary to the main purpose of the agreement—namely, the licensing of patents or know-how.<sup>68</sup> If trade marks are a central component, the agreement cannot fall within the TTBER 2014.<sup>69</sup> However, much more important for trade mark licences is VRR.<sup>70</sup> The idea behind this block exemption is that vertical agreements often have positive consequences by increasing inter-brand competition and are anti-competitive only in limited circumstances, such as where the supplier has a high level of market power.

The VRR applies to ‘vertical agreements’, which are defined as agreements or concerted practices entered into between two or more undertakings, each of which operates (for the purposes of the agreement) at a different level of the production or distribution chain, and relating to the conditions under which the parties may purchase, sell, or resell certain

<sup>64</sup> This is often called ‘freedom of action theory’ and has been widely criticized as casting the prohibition too broadly. The Court, e.g. in *Javico v. Yves Saint Laurent*, Case C-306/96 [1998] ECR I-1983, [23]–[26], has tended to look at the effect in the market and has treated a number of agreements as falling outside Art. 101(1) TFEU because they are objectively necessary for particular kinds of transactions. For discussion, see N. Green, ‘Article 85 of the EC Treaty in Perspective: Stretching Jurisdiction, Narrowing the Concept of a Restriction and Plugging a Few Gaps’ [1988] ECLR 190; H. P. Lugard, ‘Vertical Restraints under EC Law: A Horizontal Approach’ [1996] 17 ECLR 166. The Commission seems to be signalling a change towards a less formalistic approach: see R. Whish, ‘Regulation 2790/99: The Commission’s “New Style” Block Exemption for Vertical Agreements’ (2000) 37 CMLR 887, 889–90.

<sup>65</sup> [2001] OJ C 368/13. Below the threshold, the Commission considers that the competition authorities of member states should provide primary supervision.

<sup>66</sup> Council Regulation (EU) No. 316/2014 of 21 March 2014 on the application of Article 101(3) of the Treaty on the Functioning of the European Union to categories of technology transfer agreements [2014] OJ L 93/17 (28 March 2014). See above at pp. 648–50.

<sup>67</sup> Commission Regulation (EU) No. 330/2010 of 20 April 2010 on the application of Article 101(3) of the Treaty on the Functioning of the European Union of categories of vertical agreements and concerted practices [2010] OJ L 102/1 (23 April 2010) (the ‘Vertical Restraints Regulation’, or VRR).

<sup>68</sup> TTBER 2014, Art. 1 (defining technology transfer agreement by reference to technology rights).

<sup>69</sup> *Commission Decision of 23 March 1990: Moosehead/Whitbread* [1990] OJ L 100/36 (in which the agreement was held to fall outside the Know-How BER because the trade mark licence was central to the agreement). See R. Subiutto, ‘Moosehead/Whitbread: Industrial Franchises and No-challenge Clauses Relating to Licensed Trade Marks under EEC Competition Law’ [1990] 11 ECLR 226.

<sup>70</sup> Note also European Commission, *Guidelines on Vertical Restraints* [2010] OJ C 130/1 (19 May 2010) (‘VRR Guidelines’).

goods or services.<sup>71</sup> However, while it is explained that this covers agreements containing provisions that relate to the assignment to the buyer or use by the buyer of intellectual property rights, those provisions must be directly related to the use, sale, or resale of goods or services by the buyer or its customers.<sup>72</sup> However, the VRR does not apply if those provisions relating to intellectual property constitute the primary object of such agreement.<sup>73</sup> It should be noted from the outset, then, that the block exemption does not cover many trade mark transactions: it does not cover assignments, or such things as merchandising arrangements.<sup>74</sup> However, for the most part, it will be potentially applicable to franchising and distribution agreements, where trade mark issues often arise, but the provisions are directly related to the use, sale, or resale of goods or services.<sup>75</sup>

The VRR declares initially that that vertical agreements are not prohibited by Article 101 TFEU<sup>76</sup> and provides for the exemption of many agreements that contain restraints. In particular, agreements containing ‘vertical restraints’ are permitted where the market share of the supplier is less than 30 per cent.<sup>77</sup> Nevertheless, even some agreements between small undertakings will not be exempt where they include provisions on the ‘hard core’ list (for example price-fixing and strict territorial restraints): these are prohibited in all agreements.<sup>78</sup> If the agreement constitutes a vertical restraint, does not contain a forbidden (‘hard core’) term, and does not fall outside the market share limitation, then the agreement is exempt. This is so irrespective of the other terms of the agreement: the exemption works on the basis that anything not forbidden is permitted. If, on the other hand, the VRR does not apply, a restrictive agreement may be contrary to Article 101 TFEU.<sup>79</sup>

#### 4.2 UK COMPETITION LAW

UK competition law is made up of a complex mixture of common law principles restricting the terms that may legitimately be imposed in contracts, such as the doctrine of restraint of trade, and statutory interventions, of which the most important is the Competition Act 1998. This Act establishes a system that parallels European competition law, by enacting a provision equivalent to Article 101 TFEU (ex Article 85 EEC and Article 81 EC).<sup>80</sup> An agreement may be regarded as falling outside the prohibition under section 9 of the 1998 Act (which parallels Article 101(3) TFEU) without any need for prior notification or exemption. Nevertheless, an agreement will be deemed to be exempt from the national prohibition if it is exempt from the EU prohibition.<sup>81</sup>

<sup>71</sup> VRR, Art. 1(1)(a). <sup>72</sup> VRR, Art 2(3). <sup>73</sup> VRR, Art. 2(3).

<sup>74</sup> VRR Guidelines, [33]. But the Commission intimates such agreements would be treated in a similar way: *ibid.*, [43].

<sup>75</sup> *Ibid.*, [42]–[44] (on franchising). <sup>76</sup> VRR, Art 2(1).

<sup>77</sup> VRR, Art. 3. In the case of an ‘exclusive supply obligation’, the relevant share is that of the purchaser. The Commission may withdraw the benefit of a block exemption regulation, pursuant to Council Regulation (EC) No. 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] *OJL* 1/1 (4 January 2003), Art. 29(1), where it finds in a particular case that an agreement to which the exemption provided for in this Regulation applies nevertheless has effects that are incompatible with Art. 101(3) TFEU. Under Recitals 15–16, the Commission may withdraw the benefit of the VRR where 50 per cent of the market is covered by similar agreements.

<sup>78</sup> VRR, Art. 4. Where an agreement includes a term under Art. 5, these can be severed.

<sup>79</sup> There is no longer a system of notification.

<sup>80</sup> Competition Act 1998, s. 2. See OFT, *Vertical Agreements* (April 2004) OFT 419a.

<sup>81</sup> Competition Act 1998, s. 10 (parallel exemptions). But note *Days Medical Aids v. Pihsiang Machinery* [2004] *EWHC* 44 (Comm), [254]–[266] (raising doubts about application of the common law restraint of trade doctrine in a manner inconsistent with an outcome required by Art. 101 TFEU. See also *Jones v. Ricoh UK Ltd* [2010] *EWHC* 1743, [49].

### 4.3 COMMONLY USED TRADE MARK LICENCE TERMS

In this section, we look at terms that are commonly used in trade mark licence agreements and the approach that competition law takes towards them.

#### 4.3.1 Exclusivity

A trade mark licence commonly includes terms guaranteeing the licensee the exclusive right to sell the goods or to provide the services under the mark in a particular territory, such as the United Kingdom. It may also include associated undertakings by the licensor not to put the goods on the market under the same mark in that territory or to compete with the licensee by providing the same services. In turn, the licensee may undertake not to sell goods bearing the mark in territories of other licensees.<sup>82</sup> The guidelines on vertical restraints treat these arrangements as exclusive distribution.<sup>83</sup> The inclusion of a guarantee of exclusivity may be important to a licensee who has to make a considerable investment in the establishment of production facilities (in the case of trade mark product licences) or retail outlets (in the case of distribution or service franchisees). In these cases, the licensee may wish to ensure that they have a reasonable degree of control over the relevant market. In the absence of exclusivity, the licensee would not only be exposed to competition that exists in the market in the goods or services, but also to competition from others dealing in goods or services bearing the brand name, and (not surprisingly) may prefer not to risk such investment. Consequently, exclusivity agreements may encourage the production and dissemination of goods and services with the mark into the market—and thus foster competition. Simultaneously, exclusive licences cause little detriment to third parties because the trade mark owner had such exclusivity as a result of the ownership of the trade mark. On the other hand, exclusive licensing—by dividing up territories—may have serious detrimental effects on the achievement of the internal market.

The VRR recognizes a compromise position: Article 4(b) states that the exemption will not be available where the object of the agreement is ‘the restriction of the territory into which, or of the customers to whom, the buyer may sell the contract goods and services’. However, it is permissible to impose a restriction on active sales into ‘the exclusive territory or to an exclusive consumer group reserved to the supplier or allocated by the supplier to another buyer where such a restriction does not limit sales by the customers of the buyer’. The key distinction is thus between ‘passive’ and ‘active’ sales—that is, between sales that are a response to customer action and sales that involve the trader actively approaching the customer.<sup>84</sup> The basic idea underpinning the various exemptions is that an agreement is exempt only if the prohibition is limited to active selling outside the territory.

#### 4.3.2 Manufacturing standards

To ensure that certain standards are maintained, a trade mark proprietor who is either involved in franchising or licensing others to manufacture and sell goods to which a mark is applied will often wish to impose conditions on the manufacture or operation of the licensee’s business.<sup>85</sup> Since one of the functions of a mark is to guarantee quality,<sup>86</sup>

<sup>82</sup> R. Joliet, ‘Trademark Licensing Agreements under the EEC Law of Competition’ (1983–84) 5 *Nw J Intl L & Bus* 755, 789–90 (distinguishing between territorial licences, exclusive territorial licences, and territorial sales restrictions). <sup>83</sup> VRR Guidelines, [39].

<sup>84</sup> *Ibid.*, [51]–[52] (advertising and Internet selling are treated as passive).

<sup>85</sup> R. Joliet, ‘Trademark Licensing Agreements under the EEC Law of Competition’ (1983–84) 5 *Nw J Intl L & Bus* 755, 779–85. <sup>86</sup> On functions, see pp. 1049–58.

such clauses are readily justified and, in general, are not treated as restrictions on trade. However, because such clauses might require the licensee to purchase ingredients, components, or other material from certain limited sources, such obligations may look like anti-competitive tie-ins. Nevertheless, the competition authorities have treated such clauses with less severity than they have patent agreements that include tie-ins.<sup>87</sup>

If such clauses are caught by Article 101 TFEU, the VRR appears to permit them as long as they are not too long in duration or too extensive in scope. Article 5(a) excludes from the block exemption 'any direct or indirect non-compete obligation, the duration of which is indefinite or exceeds five years'. Article 1 defines 'non-compete' obligations as including 'any obligation on the buyer to purchase from the supplier or from an undertaking designated by the supplier more than 80 per cent of the buyer's total purchases of the contract goods or services and their substitutes on the relevant market'. Consequently, in many cases, such clauses will be permissible.

### 4.3.3 Non-competition

A trade mark owner may be keen to prevent licensees from selling other goods. In *Campari*,<sup>88</sup> the European Commission approved such a clause on the ground that it would ensure that licensees focused on selling the licensed product. The Commission said that although such clauses in patent licences might be objectionable on the basis that they constituted barriers to technical and economic progress, such a prohibition in trade mark licences 'makes for improved distribution of the relevant product in the same way as do exclusive distribution agreements'.<sup>89</sup>

Trade mark owners might also wish to protect their interests by prohibiting licensees from competing in the same goods after termination of the licence. This is particularly desirable where the licence of the trade mark has been part of a deal involving trade secrets. It may be equally desirable to protect the trade mark owner's goodwill. Under the VRR, it seems that such restrictions are permitted in limited circumstances: the restriction must not exceed one year; it must be confined to sales of competing goods or services from the point of sale at which the buyer operated during the contract period; and the restriction must be indispensable to protect 'know-how' transferred from the supplier to the buyer.<sup>90</sup>

In domestic law, such matters are also governed by the doctrine of restraint of trade, which requires restraints to be reasonable having regard to the legitimate interests of the parties and the public interest. In *Kall-Kwik Printing (UK) v. Rush*,<sup>91</sup> a franchise agreement for a photocopying shop contained a restraint not to engage directly or indirectly in any business competitive with the business of the franchisor. It also said that the restraint operated within a 10-mile radius of the premises of any franchisee of the franchisor for two years after termination. During the term of the franchise, the franchisee set up a competing shop a short distance from the franchised premises. The court held that the clause was too widely drawn geographically. This was because, since the franchisor had 191 franchisees, the effect of the clause would have been tantamount to a nationwide prohibition. However, the judge construed the clause as being confined to businesses competitive with

<sup>87</sup> OFT, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline* (November 2001) OFT 418, [2.25]–[2.27].

<sup>88</sup> *Re the Agreements of Davide Campari Milano SpA* [1978] FSR 528 (European Commission).

<sup>89</sup> *Ibid.*, 540, [72].

<sup>90</sup> VRR, Art. 5(b). This obligation is without prejudice to the possibility of imposing a restriction, which is unlimited in time on the use and disclosure of know-how that has not entered the public domain.

<sup>91</sup> [1996] FSR 114.

that of the business and this allowed him to uphold it. Judge Cooke said that he considered the two-year period to be reasonable.<sup>92</sup>

#### 4.3.4 No-challenge clauses

Trade mark licence agreements often include undertakings prohibiting the licensee from challenging the validity of the registration. These are known as ‘no-challenge clauses’. These are not dealt with in the VRR and are probably permissible. In *Moosehead/Whitbread*,<sup>93</sup> a no-challenge clause was upheld in the context of a trade mark licence between the Canadian beer manufacturer and its UK licensee. A distinction was drawn in the case between obligations not to contest the validity of the registration and no-challenge clauses concerned with the ownership of the mark. Clauses preventing the licensee from challenging ownership did not contravene Article 85 of the EC Treaty (now Article 101 TFEU), because, according to the Commission, they did not restrict competition. However, a clause preventing the challenge to the validity of the mark might be a restriction within Article 101 TFEU. In the case itself, the Commission held that, because the obligation related to both, it did not constitute an appreciable restriction on competition. In the main, this was because the MOOSEHEAD mark was new to the market.

We will return to the question of no-challenge clauses in the context of trade mark delimitation agreements, which are discussed below.

#### 4.3.5 Price restrictions

A trade mark owner may wish to restrict the price at which the licensee sells the trade marked product. Such restrictions are treated as anti-competitive under Article 101(1) TFEU, and exemptions are not possible under Article 101(3) unless the agreement allows consumers a fair share of resulting benefit. Unsurprisingly, such terms fall within the ‘hard core’ prohibited terms, which, if present, prevent an agreement from benefiting from the VRR.<sup>94</sup> Nevertheless, it is possible for an agreement to contain price recommendations. Similarly, under the Competition Act 1998, agreements that ‘directly or indirectly fix purchase or selling prices’ are specifically referred to as examples of prohibited agreements under section 2(2)(a).

### 4.4 TRADE MARK DELIMITATION AGREEMENTS

In the previous section, we examined the application of competition regulations to various common clauses in vertical arrangements relating to trade marks—that is to agreements that operate down the chain from manufacturer to consumer, such as those between trade mark owner and franchisee or distributor. We now need briefly to consider horizontal arrangements—that is, arrangements at the same level of distribution between competing manufacturers or trade mark owners. These are generally treated as much more likely to be anti-competitive. Our interest in them extends as far as ‘consent agreements’ or ‘trade mark delimitation agreements’. Trade mark delimitation agreements are contracts between owners of similar marks that are intended to settle conflicts (or potential conflicts) between them.<sup>95</sup> While these arrangements may not be licences at all,

<sup>92</sup> See also *Kall-Kwik (UK) v. Bell* [1994] FSR 674 (18 months not unreasonable restraint); *Prontaprint v. London Litho* [1987] FSR 315 (three years).

<sup>93</sup> *Commission Decision of 23 March 1990: Moosehead/Whitbread* [1990] OJ L 100/36, [1991] 4 CMLR 391. See R. Subiotto, ‘*Moosehead/Whitbread: Industrial Franchises and No-challenge Clauses Relating to Licensed Trade Marks under EEC Competition Law*’ [1990] 11 ECLR 226. <sup>94</sup> VRR, Art. 4(a).

<sup>95</sup> See generally N. Wilkof, *Trade Mark Licensing* (2005), ch. 9; M. Fawlk, ‘*Trademark Delimitation Agreements under Article 85 of the Treaty of Rome*’ (1992) 82 *TM Rep* 223.

because they contain many terms similar to those found in licence agreements, which are regulated by competition law, we will consider them in this section.<sup>96</sup>

There seem to be a number of typical ways of resolving such conflicts:

- (i) by agreeing that only one party may use the mark, so that the other must adopt a new mark;
- (ii) by agreeing that one party will use the mark only in one field and the other, in a distinct field, so as to avoid the possibility of overlap;
- (iii) by agreeing that one party will use the mark in a particular geographical area and the other, in a different one; and
- (iv) by agreeing that each will use the mark only with specified get-up, so that consumer confusion is minimized.

The contents of trade mark delimitation agreements will vary, but in each case they will need to be scrutinized under both European and domestic law. As regards European competition law, the key provision is Article 101 TFEU. The Commission and the Court of Justice have indicated that such settlement agreements may be acceptable because, by resolving protracted litigation between the parties, they eliminate restraints on competition and the internal market that conflicting rights under national laws might cause.<sup>97</sup> The Commission has indicated, however, that, in forging the compromise, the enterprises should try to reach the least restrictive solution possible.<sup>98</sup>

If the agreement restricts competition or produces market sharing, it will contravene Article 101(1) TFEU. Whether the agreement restricts competition has been said largely to depend on the use to which the mark was previously being put. In *BAT Cigaretten-Fabrik GmbH v. EEC*,<sup>99</sup> for example, an agreement restraining a Dutch competitor of British American Tobacco from using its *TOLTECS* mark in Germany was an unlawful restraint, because *BAT*'s *DORCET* mark was dormant (or unused). Where, however, the party who submits to the restraint has not used the mark (or was not utilizing it to a significant extent), the Commission has taken the view that assignment of that mark to the other party will not amount to a restriction on the assignor's ability to compete.<sup>100</sup> Indeed, the Commission seems to take the view that an unused mark has no value, and that a person can simply choose a different mark for their goods or services.

However, in most cases of conflict, both parties will have been using their marks to some extent. As indicated, the Commission then favours the least restrictive solution. If conflict can be avoided by the parties merely agreeing to utilize different 'get-up', that is likely to be treated as outside Article 101.<sup>101</sup> Alternatively, it may be that the conflict can be settled by assigning one mark to one party and a different mark to another. Although the effect will be to force the party to re-establish goodwill under other marks and this may have a restrictive effect, bringing it within Article 101, such an arrangement might be acceptable if there is a transitional phasing out and/or the party is allowed to continue using the name as a trade name. It seems that the Commission has looked least favourably on agreements that give different parties use of the mark in different parts of the Common Market.<sup>102</sup> It also has indicated that it disapproves of widely drawn or lengthy 'no-challenge' clauses.<sup>103</sup>

<sup>96</sup> R. Joliet, 'Trademark Licensing Agreements under the EEC Law of Competition' (1983–84) 5 *Nw J Intl L & Bus* 755, 765.

<sup>97</sup> *BAT Cigaretten-Fabrik v. EEC* [1985] *FSR* 533, 541, [33].

<sup>98</sup> *Commission Decision 78/193/EEC of 23 December 1977 relating to a proceeding under Article 85 (Penney's)* [1978] *FSR* 385, 395.

<sup>99</sup> [1985] *FSR* 533.

<sup>100</sup> *Penney's* [1978] *FSR* 385, 396.

<sup>101</sup> *Ibid.*

<sup>102</sup> *Sirdar/Phildar* [1975] 1 *CMLR D* 93; *Community v. Syntex/Synthelabo* [1990] *FSR* 529.

<sup>103</sup> *BAT Cigaretten-Fabrik* [1985] *FSR* 533. In other cases, more flexibility has been shown: *Penney's* [1978] *FSR* 385, 396–7 (acceptable if under five years).

As regards UK law, trade mark delimitation agreements have until now been treated as enforceable commercial contracts. The only ground for objection that seems to have been raised in the case law is restraint of trade. While, in principle, this would require a person imposing a restraint to demonstrate that it is reasonable, according to the Court of Appeal in *WWF–World Wide Fund for Nature v. World Wrestling Federation Entertainment Inc.*,<sup>104</sup> there is a presumption that the restraint represents a reasonable division of their interests. Consequently, the defendant must show that the restraint is unreasonable, for example by demonstrating that there was no goodwill to justify the restraint. In *Apple Corp. Ltd v. Apple Computer Inc.*,<sup>105</sup> when considering various difficult procedural questions concerning litigation over a consent agreement, the Court of Appeal held that restraints contained in such agreements were legitimate only where they were necessary to protect the legitimate interests of the parties. The ownership of registered marks would not of itself justify such an agreement; rather, the restraint would be justified only where it was necessary to protect the goodwill of the restrainer. As a consequence, such a restraint would be justified only where the mark had been used. The Court of Appeal observed that the approach under Article 85 of the EC Treaty (now Article 101 TFEU) and under the common law were largely similar.<sup>106</sup>

<sup>104</sup> [2004] FSR (10) 161. See also *Fenchurch Environmental Group Ltd v. Bactiguard AG* [2007] RPC (31) 701 (TM Registry).

<sup>105</sup> [1991] 3 CMLR 49.

<sup>106</sup> Such an agreement may include a no-challenge clause: *Apple Corp. v. Apple Computer Inc.* [1992] FSR 431. For subsequent litigation over the scope of the delimitation, see *Apple Corp. Ltd v. Apple Computer Inc.* [2006] EWHC 996 (Ch), [2006] *Info TLR* 9 (Ch D).

## GEOGRAPHICAL INDICATIONS OF ORIGIN

### CHAPTER CONTENTS

1 Introduction	1110	3 Traditional Specialities Guaranteed	1134
2 Geographical Designations of Origin and Indication	1119	4 Optional Quality Terms	1135

### 1 INTRODUCTION

Over time, the European Union has introduced a raft of measures to control the way agricultural products are described and labelled. These vary from laws regulating the marketing standards for olive oil<sup>1</sup> and the labelling of beef products,<sup>2</sup> through to complicated laws that regulate the description, designation, presentation, and protection of wines.<sup>3</sup> In this chapter, we look at three regimes that form part of this overarching legal framework. First, we look at the scheme developed by the European Union to regulate geographical designations of indication and origin.<sup>4</sup> These are the names that are used to describe foods and other agricultural products that originate from particular geographic areas. Some well-known regional products include Kalamata olives and Parma ham. Second, we look at the traditional specialities guaranteed scheme developed by the European Union to protect the names of traditional foods and recipes. Third, we look at the optional quality terms scheme that was introduced in 2013.

While it may seem, depending on one's age, as if Elizabeth David or Jamie Oliver invented geographical or traditional designations, in fact they have a very old lineage.<sup>5</sup>

<sup>1</sup> Regulation (EC) No. 2815/98 of 22 December 1998 concerning marketing standards for olive oil [1998] *OJ L* 349/56 (regulates designations of origin on the labelling and packaging of virgin and extra virgin olive oils).

<sup>2</sup> Regulation (EC) No. 1760/2000 of 17 July 2000 establishing a system for the identification and registration of bovine animals and regarding the labelling of beef and beef products [2000] *OJ L* 204/1, Recital 31, Art. 16(6).

<sup>3</sup> Regulation (EC) No. 1493/1999 of 17 May 1999 on the common organization of the market in wine [1999] *OJ L* 179/1; Regulation (EC) No. 753/2002 of 19 April 2002 laying down certain rules for applying Regulation (EC) No. 1493/1999 as regards the description, designation, presentation and protection of certain wine sector products [2002] *OJ L* 118/1; Regulation (EC) No. 1607/2000 of 24 July 2000 laying down detailed rules for implementing Regulation 1493/1999 [2000] *OJ L* 185/17.

<sup>4</sup> Regulation (EEC) No. 2081/92 of 14 July 1992 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [1992] *OJ L* 208/1 (the 'GI Reg. 1992').

<sup>5</sup> See D. Gangjee, 'Melton Mowbray and the GI Pie in the Sky: Exploring Cartographies of Protection' (2006) 3 *IPQ* 291.

This is especially the case in countries such as Spain, France, Italy, Portugal, and (to a lesser extent) Germany. Given the important role that food and agricultural products play in all cultures, it is not surprising that special legal regimes have long been used to regulate geographical designations. For example, special legislation existed in fourteenth-century France to protect Roquefort cheese. Over time, a number of different legal regimes have been used to regulate geographical designations. In common law countries, the names of agricultural products and foodstuffs have been protected by passing off, trade marks, and certification marks.<sup>6</sup> While civil law countries have relied on collective marks and unfair competition, they have also developed more specialized regimes, such as appellations of origin, to regulate the use that is made of agricultural names. Civil law countries have also entered into a series of bilateral and (occasionally) multilateral treaties that recognize rights in the names given to wines, cheeses, olive oils, and other agricultural products. More recently, the European Union has introduced a series of regulations to standardize the protection available for regional and traditional food names within Europe.

One of the questions that sometimes arises in discussions about the legal regimes that regulate geographical designations is their status as a form of intellectual property. While the Paris Convention expressly includes agriculture within its remit,<sup>7</sup> there are still some who doubt whether the laws covering geographical designations properly belong within intellectual property law. In Europe, there is little doubt that this is the case, given that both the Court of Justice and the British House of Lords have explicitly acknowledged that the geographic designations protected under European law are forms of intellectual property.<sup>8</sup> The laws regulating geographic designations also share a number of conceptual similarities with other areas of intellectual property.<sup>9</sup> For example, they share with certification and collective marks the idea that rights are controlled by groups or collectives, rather than individuals. As we will see below, one of the defining features of protected designations of origin and appellations of origin is that they presuppose an exclusive link between product and place. As with the idea of the unique expression of the author or the novelty of patented inventions, the 'uniqueness' of the intangible property ensures that the granting of property rights does not jeopardize the rights of third parties.

In this chapter, we focus on the names given to agricultural products and foodstuffs. However, it is important to note that geographic designations potentially apply to all products. This has led to the suggestion that indigenous creations could be protected via a style of law modelled on geographic designations. This is an interesting possibility, since it recognizes both collective rights and the connection between 'product' and 'place' that are so important for many indigenous groups.<sup>10</sup>

<sup>6</sup> See N. Dawson, 'The Parma Ham Case: Trade Descriptions and Passing Off—Shortcomings of English Law' [1991] *EIPR* 487; F. Gevers, 'Geographical Names and Signs Used as Trade Marks' [1990] *EIPR* 285.

<sup>7</sup> Paris, Art. 1(3) (industrial property shall apply not only to industry and commerce proper, but also to agriculture and to manufactured or natural products, e.g. wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers, and flour). See D. Rangnekar, 'The Intellectual Properties of Geography' (2009) 30 *EIPR* 537.

## 1.1 TYPES OF PROTECTION

There are subtle and often important differences between the various forms of legal protection that have been adopted to protect the names given to agricultural products and foodstuffs.<sup>11</sup> While the enactment of European legislation regulating the naming of wines, spirits, and agricultural products has gone some way towards alleviating this problem in Europe, widely different approaches are still adopted elsewhere. The failure of the World Trade Organization (WTO) negotiations in Cancun, combined with the hostile reception that greeted the EU proposal to extend the level of protection required under the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS), suggests that this situation is likely to continue for some time in the future. Given this, it may be helpful to define some of the key terms used in this area.

(i) *Indication of source* An ‘indication of source’—which is also known as an ‘indication of provenance’ or as a simple or qualified ‘geographical indication of origin’—is the most general of the terms used to describe geographical designations.<sup>12</sup> A defining feature of an indication of source is that it connects a product to a particular geographical location; there is no requirement that there be any correlation between the characteristics or quality of a product and the place from which the product originated. Instead, an indication of source simply informs consumers that the product bearing the sign comes from a particular place, region, or country.<sup>13</sup> As a result, indication of source is broader than both appellations of origin and geographical indications.

(ii) *Geographical indication of origin* Another term used to describe geographical designations is ‘geographical indication of origin’. Article 22(1) of TRIPS defines geographical indications as ‘indications, which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin’.<sup>14</sup>

(iii) *Appellation of origin* An ‘appellation of origin’ is a specific type of geographical indication.<sup>15</sup> It is the ‘geographic name of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially due to the geographical environment, including natural and human factors’.<sup>16</sup> The defining feature of an appellation of origin is that the ‘product for which an appellation of origin is used must have a quality and characteristics which are due exclusively or essentially to its geographic environment’.<sup>17</sup>

The indication of source is the most general of these three modes of protection: it simply signals that a product originates from a particular geographic location (for example ‘French perfume’). In contrast, geographical indications of origin and appellations of origin both require the geographic location to imbue the product with particular traits or characteristics. Where

<sup>11</sup> See generally D. Gangjee, *Relocating the Law of Geographical Indications* (2012).

<sup>12</sup> Used in the Paris Convention and the Madrid Agreement for the Repression of False or Deceptive Indications of Source of Goods of 1891.

<sup>13</sup> See *Exportur*, Case C-3/91 [1992] 1 ECR 5529, [11]; *Jacques Pistre*, Cases C-321–324/94 [1977] CMLR 565 (ECJ), 587.

<sup>14</sup> For previous attempts to define geographical indications, see WIPO Committee of Experts on the International Protection of Geographical Indications, *The Need for a New Treaty and its Possible Contents: Memorandum Prepared by the International Bureau* (April 1990) GEO/CE/I/2; General Assembly of the International Vine and Wine Office, *Resolution* (1992) ECO 2/92.

<sup>15</sup> Derived from the French *appellation d’origine*.

<sup>16</sup> Article 2 of the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration of 1958. See below at p. 1115.

<sup>17</sup> For comparisons, see F. Gevers, ‘Geographical Names and Signs Used as Trade Marks’ [1990] *EIPR* 285.

they differ is in terms of the nature of the relationship and the types of trait that they recognize. In particular, with an appellation of origin, the quality or characteristics of the product must be exclusively or essentially as a result of the geographical environment—that is, there must be a link between product and place. In contrast, geographical indications of origin extend beyond the quality of the product to include ‘reputation or other characteristic of the good’. By shifting the focus beyond the strict connection of product to place, it subtly changes the nature of the protected interest away from something that mirrors the model of creation used in patents, copyright, and design law, toward something more akin to that used in trade mark law.<sup>18</sup>

As part of its ongoing reform of agricultural policy in Europe, the European Union has passed a series of laws that regulate geographic designations. In so doing, it has introduced a number of new terms into the legal lexicon.

(i) *Protected designation of origin (PDO)*<sup>19</sup> This is the term used to describe a designation of origin that has been registered under the Quality Schemes Regulation.<sup>20</sup> In this context, a ‘designation of origin’ is defined as the name of a region, a specific place, or, in exceptional cases, a country used to describe an agricultural product or foodstuff. To qualify as a PDO, the named product must originate in that region, specific place, or country. It is also necessary to show that the quality or characteristics of the product are ‘essentially or exclusively due to a particular geographical environment with its inherent natural and human factors,’<sup>21</sup> and that the production, processing, and preparation take place in the defined geographical area. Registration as a PDO allows (in some cases, requires) producers to use the appropriate designation and logo on their labelling (see Fig. 43.1).<sup>22</sup>

(ii) *Protected geographical indication (PGI)* This second new term introduced by the European Union is used to describe a geographical indication that has been registered under the Quality Schemes Regulation. ‘Geographical indication’ is defined as the name of a region, a specific place, or, in exceptional cases, a country used to describe an agricultural product or foodstuff. To qualify for protection, a geographical indication must originate in that region, specific place, or country. The product or foodstuff must also possess a specific quality, reputation, or other characteristic attributable to that geographical origin. It is also necessary to show that the production, processing, or preparation takes place in the defined geographical area.<sup>23</sup> Again, registration as a PGI requires producers in certain situations to use the appropriate designation and logo on their labelling (see Fig. 43.1).

(iii) *Traditional speciality guaranteed (TSG)* This is the term used in relation to traditional foods and recipes registered under the Quality Schemes Regulation.<sup>24</sup> For a name to be registered as TSG, it must be specific, express the specific character of the foodstuff or product, and be traditional or established by custom.<sup>25</sup> ‘Specific character’ in this context means ‘the features or set of features which distinguishes an agricultural product or a foodstuff clearly from other similar products or foodstuffs belonging to the same

<sup>18</sup> On the different models of creation used in intellectual property (other than trade marks), see Sherman and Bently, 166–72.

<sup>19</sup> This is the translation of *appellation d’origine contrôlée* (AOC).

<sup>20</sup> Regulation (EU) No. 1151/2012 of 21 November 2012 on quality schemes for agricultural products and foodstuffs [2012] OJ L 343/1 (14 December 2012) (the ‘Quality Schemes Reg.’), in force of 3 January 2013.

<sup>21</sup> *Ibid.*, Art. 5(1)(b).

<sup>22</sup> Quality Schemes Reg., Art. 12(3), provides that, in ‘the case of products originating in the Union that are marketed under a protected designation of origin or a protected geographical indication registered in accordance with the procedures laid down in this Regulation, the Union symbols associated with them shall appear on the labeling’ (emphasis added).

<sup>23</sup> *Ibid.*, Art. 2.1(a)(b) (ex GI Reg. 1992, Art. 2(2)(b)).

<sup>24</sup> Previously, ‘traditional speciality guaranteed’ was governed by Regulation (EC) No. 509/2006 of 20 March 2006 on agricultural products and foodstuffs as traditional specialities guaranteed [2006] OJ L 93/1 (‘GI Reg. 2006’), which had in turn replaced the GI Reg. 1992.

<sup>25</sup> Quality Schemes Reg., Art. 2(1).

category'.<sup>26</sup> As well as granting rights over use of the registered name, registration as a certificate of special character also enables producers to use the designation 'Traditional Speciality Guaranteed (TSG)' and the accompanying logo (see Fig. 43.1).

(iv) *Optional quality term* A fourth term that was introduced by the Quality Schemes Regulation refers to the optional quality term scheme, which was established by the Quality Schemes Regulation and came into effect on 3 January 2013. The aim of the scheme is to 'facilitate the communication within the internal market of the value-adding characteristics or attributes of agricultural products by the producers thereof'.<sup>27</sup>

## 1.2 INTERNATIONAL TREATIES

In this section, we look at some of the more important of the international treaties that impact upon the legal regulation of geographic designations.<sup>28</sup>

### 1.2.1 Paris Convention for the Protection of Industrial Property

The 1883 Paris Convention for the Protection of Industrial Property provides for limited protection over geographical designations. Article 1(2) provides that the protection of industrial property has as its purpose, among other things, indications of source or appellations of origin. Article 10(1), read in conjunction with Article 9, provides for the seizure of goods on import where there is 'direct or indirect use of a false indication of the source of the goods'. These provisions are limited to false indications; they make no reference to the situation in which a term is translated, or where the name is accompanied by suffixes such as '-type', '-like' or '-style'. It has been argued that use of a false indication of source may constitute an act of unfair competition covered by Article 10*bis*(2)(3).

### 1.2.2 Madrid Agreement for the Repression of False or Misleading Indications of Source on Goods

The Madrid Agreement for the Repression of False or Misleading Indications of Source on Goods, finalized in Madrid in 1891, aims to protect consumers against false indications of source.<sup>29</sup> The Agreement requires seizure or import prohibition of all goods bearing a

<sup>26</sup> Quality Schemes Reg., Art. 3(5).

<sup>27</sup> Quality Schemes Reg., Art. 27.

<sup>28</sup> There are a number of other treaties. See, e.g., the 1951 Stresa Convention on Designations of Origin for Cheese.

<sup>29</sup> 14 April 1891, revised in Washington (2 June 1911), The Hague (6 November 1925), London (2 June 1934), and Lisbon (31 October 1958), and by the Additional Act of Stockholm (14 July 1967). In December 2013, there were 36 members of Madrid, including the United Kingdom, France, and Germany.

false or misleading indication. The question of whether an indication has become generic is decided by member states, with the exception of regional appellations for wine, which cannot be declared to be generic.

The primary aim of the Madrid Agreement was to protect consumers from being misled. To this end, the Madrid Agreement was designed to cover all false indications of source, irrespective of the intention of the user. When the Madrid Agreement was drafted, this was particularly important given that, prior to the Lisbon revision of the Paris Convention in 1958, Article 10 of the Paris Convention protected indications of source only if there was fraudulent intent. However, with the Lisbon revision in 1958, Article 10 of the Paris Convention now protects indications of source without the need to show fraud. As a result, the continuing need for the Madrid Agreement was thrown into doubt.<sup>30</sup>

### 1.2.3 Lisbon Agreement for the Protection of Appellations of Origin and their International Registration

The Lisbon Agreement for the Protection of Appellations of Origin and their International Registration, which was concluded on 31 October 1958,<sup>31</sup> establishes an international system for the protection of appellations of origin.<sup>32</sup> The Agreement defines an 'appellation of origin' as the 'geographic name of a country, region, or locality, which serves to designate a product originating therein, the quality or characteristics of which are due exclusively or essentially due to the geographical environment, including natural and human factors'.<sup>33</sup>

Article 1 of the Lisbon Agreement provides that member states must protect the appellations of origin of other member states that are registered with the World Intellectual Property Organization (WIPO). For a name to be placed on the international register administered by WIPO, an appellation of origin must first be protected in its country of origin. An application for registration at WIPO can be made only by the relevant administrative agencies in the member states, who act on behalf of the group who 'owns' the appellation. The appellation is published and member states are notified of the registration. Upon notification, member states have 12 months in which to make a declaration that they are unable to protect the appellation. If no declaration is made, the member state must protect the appellation of origin, so long as it is protected in its country of origin.

The Lisbon Agreement requires member states to provide protection against misleading use of a protected appellation of origin. While the Madrid Agreement was primarily concerned with the protection of consumers, the Lisbon Agreement also protects producers against misuse, even where consumers may not be deceived about the nature or origin of the product.<sup>34</sup> More specifically, the Lisbon Agreement requires member states to protect against usurpation or imitation, even if the true origin of the product is indicated (for example 'Cornish clotted cream' made in Queensland), or if the appellation is translated or accompanied by terms such as 'kind', 'type', 'make', or 'imitation'.<sup>35</sup>

<sup>30</sup> See M. Leaffer, *International Treaties on Intellectual Property* (1990), 270.

<sup>31</sup> Revised in Stockholm on 14 July 1967 (amended 28 September 1979). In December 2013, there were 28 members.

<sup>32</sup> The bulk of these were for French wines: M. Hopperger, 'International Protection of Geographical Indications: The Present Situation and Prospects for Future Developments' [1999] *WIPO Symposium: South Africa* 5.

<sup>33</sup> Lisbon Agreement, Art. 2.

<sup>34</sup> See M. Leaffer, *International Treaties on Intellectual Property* (1990), 278.

<sup>35</sup> Lisbon Agreement, Art. 3.

### 1.2.4 TRIPS

Perhaps the most important international treaty in this area, not the least because of its broad membership, is the 1994 Agreement on Trade Related Aspects of Intellectual Property Rights. TRIPS requires member states to provide legal means for interested parties to prevent:

- (i) the use of any means in the designation or presentation of an item that indicates or suggests that it originates in a geographic area other than the true place of origin in a manner that misleads the public as to the geographical origin of the item; or
- (ii) any use that constitutes an act of unfair competition within the meaning of Article 10*bis* of the Paris Convention.

As we saw earlier, geographic indications are defined in TRIPS as ‘indications, which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin’.<sup>36</sup> It is important to note that TRIPS applies to all products, and not only agricultural products or foodstuffs.

A notable feature of TRIPS is that it provides for higher levels of protection for wines and spirits than for other agricultural products. In particular, Article 23 requires member states to provide protection even where the true origin of the goods is indicated, the geographical indication is used in translation, or is accompanied by expressions such as ‘kind’, ‘type’, ‘style’, ‘imitation’, or the like. It also requires member states to determine the status of homonymous names. Article 23(4) also provides that the TRIPS Council should undertake negotiations for the establishment of a multilateral system of notification and registration for wines. Article 24 sets out certain exceptions (for example in relation to overlap between geographical indications and trade marks).

Despite protests from the United States and other WTO members, a group of WTO members led by the European Union succeeded at the 2001 WTO Ministerial Conference in Doha to get reform of geographical indication protection placed on the agenda.<sup>37</sup> In particular, the Doha Declaration set a mandate for the negotiation of a multilateral system of notification and registrations of geographical indications for wines and spirits, and the possibility of extending the higher level of protection given to wines and spirits under Article 23 TRIPS to all agricultural products.<sup>38</sup> In a sense, what was proposed was that TRIPS should adopt the approach adopted in Europe as a global standard. It was also decided that the deadline for completing the negotiations was the Fifth Ministerial Conference to be held in Cancún in 2003.<sup>39</sup>

These proposals to amend TRIPS met with a degree of hostility, particularly from ex-British colonies, who have little to gain (at least directly) from these changes. The hostility was exacerbated by the fact that in the lead-up to the Ministerial Conference in Cancún, the European Union put forward a list of 40 names that were to be given absolute protection. Given this divergence of opinion among WTO members (there was a dispute over whether there was even a mandate to launch negotiations on extension), it was not

<sup>36</sup> TRIPS, Art. 22(1). See generally T. Kongolo, ‘Any New Developments with Regards to GI Issues Debated under WTO?’ (2011) 33 *EIPR* 83.

<sup>38</sup> *Ibid.*, [12], [18].

<sup>39</sup> WTO, *Trade Negotiations Committee: Minutes of Meeting* (14 February 2002) WTO Doc. TN/C/M/1, in particular [4], [9]–[12].

possible to reach a consensus on this issue at Cancún. As a consequence, it may be some time before the proposed extension of TRIPS takes place (if at all). As we will see, the WTO dispute settlement provisions have been used successfully against the European Union in relation to aspects of the 1992 Geographical Indications (GI) Regulation (now repealed).<sup>40</sup>

### 1.2.5 Bilateral agreements

The European Union has entered into a number of bilateral agreements to protect agricultural products and foodstuffs. For example, it has negotiated treaties with Australia (wine),<sup>41</sup> Chile (wines, spirit drinks, and aromatized drinks),<sup>42</sup> and Mexico (spirits).<sup>43</sup> Given the limited membership of the international treaties regulating geographic designation and the impasse in the TRIPS negotiations at Cancún, the European Union may now look more closely at bilateral agreements as a way of protecting European products in other jurisdictions.

## 1.3 EU REGULATIONS

Specific laws regulating the way in which agricultural products are named were introduced in the European Union in 1993 by two regulations. The first, which introduced PDOs and PGIs into the Community, was the 1992 GI Regulation.<sup>44</sup> The second, which established the TSG scheme, was the 1992 Traditional Specialties Regulation.<sup>45</sup>

As part of a dispute between the European Union and a number of ex-colonies over geographical indications, a complaint was made by Australia and the United States to the WTO Dispute Settlement Body that aspects of the 1992 GI Regulation were in breach of TRIPS.<sup>46</sup> Finding in favour of Australia and the United States, the Panel said that the 1992 GI Regulation did not provide national treatment to non-European WTO members because registration of a geographical designation from a country outside the European Union was contingent on the government of that country adopting a system of reciprocal protection. The Panel also said that the requirement for government-monitored inspection structures under the 1992 GI Regulation discriminated against foreign nationals.

<sup>40</sup> Australia launched a dispute against Europe at the WTO in relation to the way in which geographical indications were protected in Europe: *Australia v. Europe*, WTO DS/290 (15 March 2005).

<sup>41</sup> Council Decision 94/184/EC of 24 January 1994 concerning the conclusion of an Agreement between the European Community and Australia on trade in wine [1994] *OJ L* 086/1 (31 March 1994) (the Australia-EU Agreement).

<sup>42</sup> Agreement establishing an association between the European Community and its Member States, of the one part, and the Republic of Chile, of the other part: Final Act [2002] *OJ L* 352/3 (30 December 2002) (the EU-Chile Association Agreement).

<sup>43</sup> Council Decision 97/361/EC of 27 May 1997 on mutual recognition and protection of designations for spirits and drinks [1997] *OJ L* 152/15 (11 June 1997) (the EU-Mexico Agreement).

<sup>44</sup> This Regulation was amended in an attempt to ensure the procedure for obtaining Community geographical indications was available to producers from third countries: Regulation (EC) No. 535/97 of 17 March 1997 amending Regulation (EEC) No 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [1997] *OJ L* 83/3; Regulation (EC) No. 692/2003 of 8 April 2003 amending Regulation (EEC) No. 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [2003] *OJ L* 99/1. See B. Schwab, 'The Protection of Geographical Indications in the European Economic Community' [1995] *EIPR* 242.

<sup>45</sup> Regulation (EC) No. 2082/92 of 14 July 1992 on certificates of specific character for agricultural products and foodstuffs [1992] *OJ L* 201/9 (the 'Traditional Specialties Reg. 1992').

<sup>46</sup> *US v. EC*, WT/DS174; *Australia v. EC*, WTO DS/290. See M. Handler, 'The WTO Geographical Indications Dispute' (2006) 69 *MLR* 70; M. Handler, 'The EU's Geographical Indications Agenda and its Potential Impact on Australia' (2004) 15 *AIPJ* 173.

Following the Panel decision, the Council repealed and replaced the 1992 GI Regulation with the 2006 Geographical Indications (GI) Regulation.<sup>47</sup> Although the WTO panel decision was not concerned with TSGs, nonetheless the Commission also decided to repeal and replace the 1992 Traditional Specialties Regulation with the 2006 Traditional Specialties Regulation.<sup>48</sup> The main difference between the 1992 and 2006 Regulations was that protection under the 2006 Regulation was extended to foreign geographical indications, irrespective of whether the foreign government provided reciprocal protection. Foreign parties with an interest in a geographical indication were also able to apply directly to the Commission, rather than first having to register with a national government. Beyond these changes, the 2006 Regulation was similar to its 1992 predecessor.

While the European Union proudly announced the registration of the 1,000th labelled product in 2011 (*Piacentinu Ennese* cheese from Sicily),<sup>49</sup> nonetheless the scheme has attracted a lot of criticism. Complaints have been made that the application process was long and burdensome (22 months for the fastest approval), that the schemes were confusing and inconsistent, and that consumer recognition of the EU logos was very low (only 8 per cent).<sup>50</sup> Smallholder farmers, who were meant to be one of the primary beneficiaries of the schemes, found the burdens of certification and compliance to be particularly onerous. Following a number of consultations and reviews, a Green Paper was issued in 2008.<sup>51</sup> The ideas that this and subsequent work generated were eventually adopted in 2012 in the Quality Schemes Regulation.<sup>52</sup> The Quality Schemes Regulation, which came into force on the 3 January 2013, repealed and replaced both the 2006 GI Regulation and the 2006 Traditional Specialties Regulation.

The 2012 Quality Schemes Regulation contains three complementary schemes. These are for designations of origin and geographical indications, traditional specialities guaranteed, and the newly established 'optional quality terms'. Geographical schemes for wines, spirits, and aromatized wines are dealt with in separate legislation. The Quality Schemes Regulation was underpinned by a number of goals, including: providing more coherence and clarity to the EU quality schemes; shortening procedure; reinforcing the existing schemes for designations of origin and indication; overhauling the TSG scheme; improving consumer trust in the schemes;<sup>53</sup> and introducing a new scheme to protect optional quality terms.

For the most part, the scheme regulating designations of origin and geographical indications is unaltered. The main changes made were the amendment of the definition of a geographical indication to bring it into line with Article 22 of TRIPS, a reduction in the administrative burdens and registration time (opposition time was reduced from six to

<sup>47</sup> Regulation (EC) No. 510/2006 of 20 March 2006 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [2006] *OJ L* 109.

<sup>52</sup> Regulation (EU) No. 1151/2012 of 21 November 2012 on quality schemes for agricultural products and foodstuffs [2012] *OJ L* 343/1 (14 December 2012).

<sup>53</sup> See European Commission, *Proposal for a Regulation of the European Parliament and of the Council on Agricultural Product Quality Schemes* (December 2010) COM(2010) 733 final, [1.1].

three months), and the introduction of new provisions to clarify the rules on control. The changes to the TSG scheme were more substantial. The option of using registration merely to publicize a name (in this situation, there were no sanctions for misuse) was withdrawn, and the time needed for a name to be 'traditional' was increased from 25 to 30 years. The Quality Schemes Regulation also introduced a new type of designation—namely, the 'optional quality term'. The Regulation empowers the Commission to reserve new terms (and to amend the conditions of use of existing ones) by delegated acts. The aim of this new scheme is to highlight and protect what the Commission sees as value-adding attributes of products in the marketplace.

## 2 GEOGRAPHICAL DESIGNATIONS OF ORIGIN AND INDICATION

In this section, we look at the scheme for the protection of designations of origin and geographical indications, which is governed by the Quality Schemes Regulation. *Designations of origin*, which are called 'protected designations of origin' (PDOs) once they are registered,<sup>54</sup> are defined as the name of a region, a specific place or, in exceptional cases, a country used to describe an agricultural product or foodstuff. To qualify for protection as a PDO, the named product must originate in the defined region, specific place, or country. It is also necessary to show that the quality or characteristics of the named product are essentially or exclusively the result of a particular geographical environment, with its inherent natural and human factors. It is also necessary to show that the production, processing, and preparation take place in the defined geographical area.<sup>55</sup> A number of different product names have been registered as PDOs in the United Kingdom, including Cornish clotted cream, West Country farmhouse Cheddar cheese, Jersey Royal potatoes, Shetland lamb, and White Stilton.<sup>56</sup> Some other well-known PDOs include Roquefort cheese (France), Gorgonzola (Italy), Feta (Greece), Camembert de Normandie (France), Kalamata olives (Greece), Chianti Classico olive oil (Italy), and Prosciutto de Parma (Italy).

The second type of designation protected by the Quality Schemes Regulation is known as *geographical indications*. Once a geographical indication is registered, it is known as a 'protected geographical indication' (PGI). Geographical indications are defined as the name of a region, specific place, or, in exceptional cases, a country, used to describe an agricultural product or foodstuff. To qualify for protection, a geographical indication must originate in that region, specific place, or country. The product or foodstuff needs to possess a specific quality, reputation, or other characteristic attributable to that geographical origin and the production. It is also necessary to show *either* that the production, processing, *or* preparation takes place in the defined geographical area.<sup>57</sup> A number of different geographical names have been registered as PGIs in the United Kingdom, including Cornish pasty, Rutland bitter, Whitstable oysters, Scottish beef, and Welsh lamb.<sup>58</sup>

<sup>54</sup> This is the translation of *appellation d'origine contrôlée* (AOC).

<sup>55</sup> Quality Schemes Reg., Art. 5(1) (ex GI Reg. 2006, Art. 2(1); GI Reg. 1992, Art. 2(2)(a)).

<sup>56</sup> Other British PDOs include Orkney beef, Orkney lamb, Blue Stilton cheese, Beacon Fell Lancashire cheese, Swaledale cheese, Swaledale ewe's cheese, Bonchester cheese, Buxton cheese, Dovedale cheese, and Single Gloucester.

<sup>57</sup> Quality Schemes Reg., Art. 5(2) (ex GI Reg. 2006, Art. 2(1)).

<sup>58</sup> Other PGIs include Scottish lamb, Welsh beef, Teviotdale cheese, Dorset Blue cheese, Exmoor Blue cheese, Herefordshire cider, Herefordshire perry, Worcestershire cider, Worcestershire perry, Gloucestershire cider, Gloucestershire perry, Kentish ale, and Kentish strong ale.

As Lord Hoffmann said, ‘a PGI is similar to a PDO except that the causal link between the place of origin and the quality of the product may be a matter of reputation rather than verifiable fact’.<sup>59</sup> Another difference is that while the production, processing, and preparation of a PDO *all* need to take place in the named geographic area, with a PGI it is only necessary for the production, processing, *or* preparation to take place in the named area.

The protection of designations of origin and geographical indications performs a number of different roles. On one level, the schemes aim to ensure that consumers are able to rely upon the names of goods as indicators of the quality of the items that they are purchasing. This enables them to purchase quality products with guarantees as to the methods of production and origin. The Quality Schemes Regulation also performs an educative role, insofar as it informs consumers about the origin and quality of agricultural products. The Regulation also aims to protect producers against piracy and unfair competition. In so doing, it aims to encourage investment in the production of quality local products. This is reflected in the fact that registered names are protected even where consumers are not misled about the origin of the goods. Another important and often overlooked feature of the Regulation is that it helps to promote and protect agricultural heritage in Europe. Indeed, as the European Parliament has said, designations of origin ‘form part of a rich national heritage, which must be preserved’.<sup>60</sup> While the scheme has not been as popular in the United Kingdom as in some other member states,<sup>61</sup> it has generated interest in regional and traditional foods in the United Kingdom.<sup>62</sup> At a general level, the Regulation forms part of the Community’s Agricultural Policy.<sup>63</sup> More specifically, it is designed to encourage the diversification of agricultural production and to promote products having certain characteristics to the benefit of the rural economy—particularly small farmers in disadvantaged, outlying, and upland areas.<sup>64</sup> The development of distinctive products is particularly important given the rapid market liberalization that is taking place in the agricultural sector.<sup>65</sup>

While the scheme has attracted a lot of support, it is not without its critics. For example, it has been suggested that insofar as the Regulation allows product names to be used as ‘protective devices’,<sup>66</sup> it introduces significant new ‘barriers to compositional and processing innovation’.<sup>67</sup> In particular, ‘competing manufacturers offering costs or nutritional advantages will be required to overcome the special benefits’ of registration.<sup>68</sup> While the

<sup>59</sup> *Consorzio Parma v. Asda* [2002] FSR 3, [8].

<sup>60</sup> This was a motivating factor in the early discussions. See *Motion for a Resolution on Protecting Community productions of cheeses with designations of origin* (28 April 1989) EEC Parliamentary Session Documents PE 128 390/Fin (withdrawn). See M. Kolia, ‘Monopolising Names: EEC Proposals on the Protection of Trade Descriptions of Foodstuffs’ [1992] *EIPR* 233, 234.

<sup>61</sup> Of the 1,170 or so names registered by October 2013, only 49 products originated from the United Kingdom. The list of protected names is available in the EU Database of Origin Registration (DOOR), online at <<http://ec.europa.eu/agriculture/quality/door/list.html>>

<sup>62</sup> L. Mason and C. Brown, *Traditional Foods of Britain: An Inventory* (1999)—part of a Europe-wide initiative to list foods and food products produced in one place for three generations or more.

<sup>63</sup> It is also part of a suite of laws regulating the naming of foods. See C. Lister, ‘The Naming of Foods: The European Community’s Rules for Non-brand Food Product Names’ [1993] *ELR* 179.

<sup>64</sup> See *Opinion of the Committee of the Regions on the Protection of Geographical Indications and Designations of Origin for Agricultural Products and Foodstuffs* (14 November 2001) Opinion COR/2001/58. The romantic notion of the ‘farmer’ is evoked here in much the same way as the ‘author’ is used in copyright law.

<sup>65</sup> *Opinion of the Economic and Social Committee on the Proposal for a Council Regulation Amending Regulation No. 2081/92* (17 July 2002) COM (2002) 139 final, [2.10].

<sup>66</sup> See C. Lister, ‘The Naming of Foods: The European Community’s Rules for Non-brand Food Product Names’ [1993] *ELR* 179, 201.

<sup>67</sup> *Ibid.* <sup>68</sup> *Ibid.*

Quality Schemes Regulation allows for the protection of new designations, many of the registered names are from established producers. This has led critics to complain that the Regulation is not, as is claimed, an attempt to reorient European agriculture, but rather ‘an effort to agree to mutually acceptable allocation of monopolies to each Member State in accordance with the interests which it represents’.<sup>69</sup>

## 2.1 REGISTRATION

For a name to be protected as a designation of origin or as a geographical indication, it must be registered. Once a name is registered, it is automatically protected in all member states. It also enables parties who comply with the relevant rules to use the appropriate EU logo (see Fig. 43.1 above). Products designated as PDO or PGI on their labelling must accompany the designation with the appropriate logo.<sup>70</sup>

When EU laws to protect designations of origin and geographical indication were first introduced in 1993, a name could be registered using one of two routes: either the ‘normal registration process’; or an ‘accelerated (or simplified) process’.<sup>71</sup> The aim of the accelerated procedure was to ensure that names that had been protected in member states prior to the enactment of the 1992 GI Regulation were registered at the Community level. It was also meant to encourage the rapid harmonization of the national legal systems of the member states. The accelerated process was abolished in 2003,<sup>72</sup> primarily because it did not provide for a right of objection, which was said to be ‘an essential requirement for protecting acquired rights and preventing injury on registration’, and for legal security and transparency.<sup>73</sup> The abolition of the accelerated process did not affect the validity of the names that had previously been registered under the accelerated process, which continue to receive the same levels of protection as they received previously.<sup>74</sup>

### 2.1.1 Who can apply for registration?

Applications for registration may be made by groups of producers or processors. A ‘group’ is defined as ‘any association, irrespective of its legal form, mainly composed of producers or processors working with the same product’.<sup>75</sup> Where a single individual or legal person is the only producer willing to submit an application and the defined geographical area possess ‘characteristics which differ appreciably from those of neighbouring areas’, the individual will be treated as a group.<sup>76</sup> Groups are only able to apply for registration in respect of agricultural products and foodstuffs that they ‘produce or obtain’.<sup>77</sup>

<sup>69</sup> See M. Kolia, ‘Monopolising Names: EEC Proposals on the Protection of Trade Descriptions of Foodstuffs’ [1992] *EIPR* 233, 238. The comments made about the Commission’s policy on the quality of food—namely, that it is ‘[g]uided by parochialism, sentiment or fading memories of childhood pleasures’—might also apply here. See C. Lister, ‘The Naming of Foods: The European Community’s Rules for Non-brand Food Product Names’ [1993] *ELR* 179, 200.

<sup>70</sup> Quality Schemes Reg., Art. 12(3)(4) (ex GI Reg. 2006, Art. 8(2)).

<sup>71</sup> See European Commission, *Communication to Traders Involved with Designations of Origin and Geographical Indications for Agricultural Products and Foodstuffs Concerning the Simplified Procedures as Laid Down in Art. 17 of Council Regulation (EEC) No. 2081/92* [1993] *OJ C* 273.

<sup>72</sup> Regulation (EC) No. 692/2003 of 8 April 2003 amending Regulation (EEC) No. 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [2003] *OJ L* 99/1, Art. 1(15).

<sup>73</sup> *Ibid.*, Recital 13. <sup>74</sup> *Ibid.*, Art. 1(15).

<sup>75</sup> Quality Schemes Reg., Art. 3(2) (ex GI Reg. 2006, Art. 5(1)).

<sup>76</sup> Quality Schemes Reg., Art. 49(1)(a)(b). Notably, the provision does not mention processors. Applications can be made with another member state or with a third country that complies with the procedure set out in Art. 49.

<sup>77</sup> Quality Schemes Reg., Art. 49(1) (ex GI Reg. 2006, Art. 5(2)).

Special provisions are made for the fact that geographical areas may not coincide with geopolitical borders. While the scheme envisages that applicants will ordinarily be from one member state, groups or individuals in different member states are able to lodge a joint application where the geographical area extends beyond state borders.<sup>78</sup> Unless a decision was ‘tainted by manifest error’, it is for national courts, rather than the Court of Justice, to rule on the lawfulness of an application for a protected designation, such as the way in which geographical boundaries are drawn.<sup>79</sup>

### 2.1.2 The product specification

One of the central elements of the scheme regulated by the Quality Schemes Regulation is the ‘product specification’. The specification performs a number of different roles. During the registration process, it sets out the information that is used to determine whether a name should be protected. Once a name is registered, the specification, which contains a detailed definition of the protected product, sets out the standards that producers and processors must meet if they wish to use the protected name. As a corollary, the specification also helps to delineate the scope of protection—that is, it provides the basis for ascertaining the scope of the intangible interest conferred by registration.<sup>80</sup>

Article 7(1) of the Regulation provides a non-exhaustive list of the information that needs to be included in a product specification.<sup>81</sup> This includes:

- (a) the name to be protected as a designation of origin or geographical indication [of the agricultural product or foodstuff] as it is used, whether in trade or common language, and only in the languages which are or were historically used to describe the specific product in the defined geographical area;
- (b) a description of the product, including the raw materials, if appropriate, as well as the principal physical, chemical, microbiological, or organoleptic characteristics of the product;
- (c) the definition of the geographical area . . . ;
- (d) evidence that the product originates in the defined geographical area . . . ;
- (e) a description of the method of obtaining the product and, where appropriate, the authentic and unvarying local methods as well as information concerning packaging, if the applicant group so determines and gives sufficient product-specific justification as to why the packaging must take place in the limited geographical area to safeguard quality, to ensure the origin or ensure control . . . ;
- (f) details establishing the following:
  - (i) the link between the quality or characteristics of the product and the geographical environment . . . ; or
  - (ii) . . . the link between a given quality, the reputation or other characteristics of the product and the geographical origin . . .

### 2.1.3 Registration

There are a number of steps that must be undertaken for a product name to gain protection (see Fig. 43.2). Applicants must submit an application form and a product

<sup>78</sup> Ibid.

<sup>79</sup> See *Carl Kuhne and ors v. Jutro Konservenfabrik*, Case C-269/99 [2001] ECR I-9517 (the decision as to where boundaries were to be drawn in relation to the PGI Spreewald gherkins was not a matter for the Court of Justice, but for the German courts).

<sup>80</sup> *Consorzio del Prosciutto di Parma v. Asda*, Case C-108/01 [2003] ECR I-5121, [46]–[47].

<sup>81</sup> Previously, this was dealt with under GI Reg. 2006, Art. 4(2).

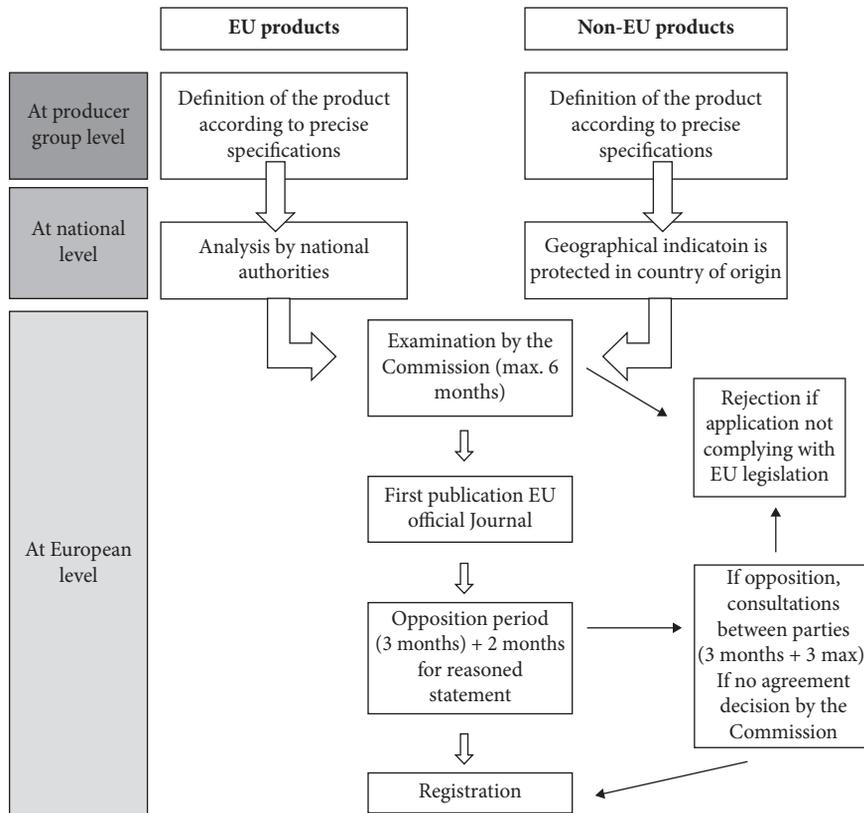

Fig. 43.2 Overview of the GI registration process

specification to the relevant national agency.<sup>82</sup> The application form is then examined by that national agency to see whether it is 'justified' in light of the criteria for protection.<sup>83</sup> If approved, the application and supporting documentation are submitted to the European Commission for final approval. The Commission then undertakes a formal examination of the application (for no more than six months) to determine whether it includes all of the particulars provided for in Article 7.<sup>84</sup> If the Commission decides that the name qualifies for protection, a summary sheet is published in the Official Journal of the European Communities.<sup>85</sup> Once the summary of the specification is published in the Official Journal, third parties have three months in which they are able to object to the registration on the basis that the name does not comply with criteria for protection in Article 5.<sup>86</sup> The Commission then invites the parties to try to reach a solution. If an acceptable solution is found, the 'summary sheet' for the product is republished in the

<sup>82</sup> Quality Schemes Reg., Art. 49(1)(2).

<sup>83</sup> Quality Schemes Reg., Art. 49(2) (ex GI Reg. 2006, Art. 5(4)).

<sup>84</sup> Quality Schemes Reg., Art. 50(1).

<sup>85</sup> This includes the name and address of the applicant, the name of the product, the main points of the application, references to the national provisions governing the preparation, production, or manufacture of the product, and, if necessary, the reasons for the decision: Quality Schemes Reg., Art. 50(2) (ex GI Reg. 2006, Art. 6(2)).

<sup>86</sup> Quality Schemes Reg., Art. 51(1) (previously the period was six months). Third parties are able to object to the registration on the basis that the name does not comply with conditions/criteria for protection

Official Journal to confirm that the product is registered. If no valid objections are made to the proposed registration, the name of the group and the relevant inspection agency are entered into the Database of Origin Register (DOOR), which is kept by the Commission.<sup>87</sup> The Commission then publishes the names entered into DOOR in the Official Journal. Once registered, the product name is automatically protected in all member states.

## 2.2 CRITERIA FOR PROTECTION: NAMES

There are a number of different criteria that must be satisfied for a name of an agricultural product or foodstuff to be registered as a geographical indication or a designation of origin. When thinking about the threshold that must be passed for a name to be registered, it is helpful to distinguish between criteria relating to the 'name' and criteria that relate to the 'agricultural product or foodstuff' to which the name applies. We will look at each of these in turn.

### 2.2.1 Limitation on names

There are a number of restrictions that are placed on the types of name that are registrable under the Regulation.

(i) *Geographic names* The first point to note is that the Quality Schemes Regulation applies only to geographic names,<sup>88</sup> which are defined as names of regions, specific places, or, in exceptional cases, countries (the latter was introduced to accommodate very small countries, such as Luxembourg).<sup>89</sup> As such, it would not be possible to register the name of a member state (France), nor a fictitious or invented name. Similarly, where numbers were added to a geographical designation to distinguish mineral waters from the same area, the names were rejected on the basis that they were not 'geographical names'.<sup>90</sup> Article 5(3) creates an exception to the general rule that only geographic names are registrable (and, as we will see below, the rule that the name must identify a product that originates from a specific place). In particular, it provides that certain names shall be treated as designations of origin even though the raw materials for the product concerned come from a geographical area that is larger than or different from the geographical area. This is on condition that the production area of the raw material is defined, that special conditions exist for the production of the raw materials, that there are arrangements in place to control these conditions, and that the designations of origin were recognized as such prior to 1 May 2004.<sup>91</sup> For example, 'Feta', which is derived from the Latin and means 'to slice', does not designate a geographic place; nonetheless it was held to be registrable on its face under the 2006 Regulation.<sup>92</sup>

in Quality Schemes Reg., Art. 49(1) (ex GI Reg. 2006, Art. 7(1)). On the 2006 provision, see *La Conquete v. Commission*, T-215/00 [2001] ECR II-181 (CFI), [44]–[47].

<sup>87</sup> Quality Schemes Reg., Art. 51(1).

<sup>88</sup> It has been said that this refers to 'homogeneous areas': *Italian Republic v. Commission*, Case C-99/99 (14 December 2000) (ECJ, Fifth Chamber).

<sup>89</sup> *Commission v. Germany*, Case C-325/00 [2003] 1 CMLR 1 (AG Jacobs).

<sup>90</sup> The names were Dauner Quelle I, Dauner Quelle II, and Dauner Quelle III. See Regulation (EC) No. 1285/2001 or 28 June 2001 rejecting a list of applications for the registration of designations communicated under [GI Reg. 1992, Art. 17] [2001] OJ L 176/27 (29 June 2001), Recitals 1–4.

<sup>91</sup> Quality Schemes Reg., Art. 5(3)(a)–(d) (ex GI Reg. 2006, Art. 2(2)).

<sup>92</sup> Quality Schemes Reg., Art. 5(1)(a); cf. Advocate-General La Pergola, *Denmark v. Community*, Joined Cases C-289/96, C-293/96 and C-299/96 [1999] ECR I-1541, [7] (arguing, on substantive grounds, that Feta should not have been registered). The question of the status of Feta was considered and held not to be generic in *Germany v. Commission of the European Communities*, Joined Cases C-465/02 and C-466/0 [2005] ECR I-09115. See generally D. Gangjee, 'Say Cheese: A Sharper Image of Generic Use through the Lens of Feta' [2007] EIPR 172.

(ii) *Generic names* A name will be not be registered as a protected designation where it is generic.<sup>93</sup> The name of a product is generic where it has ‘become the common name of a product in the Union’.<sup>94</sup> That is, a name is generic where it designates the product *as such* without, in the view of the public, involving any reference to the geographic origin of the product.<sup>95</sup> This is the case even though the name originally related to the place or region where the product or foodstuff was originally produced or marketed. On this basis, names such as Cheddar, Brie, Camembert, Edam, Emmentaler, and Gouda would be generic and thus unregistrable.<sup>96</sup> While it is not possible to register names that are generic *per se*, it is possible to register a geographical name that incorporates a generic name.<sup>97</sup> For example, Cheddar is a generic form of hard cheese and, as such, would not be eligible to be registered either as a PDO or PGI. Nonetheless, West Country farmhouse Cheddar cheese has been registered as a PDO.<sup>98</sup> To date, the courts have been very lenient when considering whether a name is generic. It seems that even in the face of overwhelming evidence that a name is widely used as the common name of a product in many countries throughout the Union, if it can be shown that the name is still able to evoke the place of production, it will not be excluded on the basis that it is generic.<sup>99</sup>

A range of factors will be taken into account when deciding the essentially evidential question of whether a name has become generic. These include the situation in the member state in which the name originates and the areas in which the product is consumed,<sup>100</sup> and relevant national and Community laws, as well as how the product is viewed by consumers.<sup>101</sup> Once a name is registered, it cannot become generic.<sup>102</sup>

(iii) *Homonymous names* Special rules exist in relation to the registration of homonyms of names that are already registered<sup>103</sup>—that is, names that are spelled or

<sup>93</sup> Quality Schemes Reg., Arts 6(1), 13(2) (ex GI Reg. 2006, Art. 3(1)).

<sup>94</sup> Quality Schemes Reg., Art. 3(6). One issue that is unclear is *where* the name must be generic, ‘in’ the Union being non-specific. See generally *Denmark v. Commission*, Joined Cases C-289/96, C-293/96 and C-299/96 [1999] ECR I-1541. In relation to the marketing of a cheese in France labelled as ‘parmesan’, which did not comply with the specification for the PDO Parmigiano Reggiano (registered by Italy under the accelerated Art. 17 process), the German government argued that ‘parmesan’ was generic insofar as it had become the common name for a foodstuff. The Court of Justice said that Germany had not provided sufficient evidence to conclude that parmesan was generic. See also *Canadane Cheese Trading v. Kouri*, Case C-317/95 [1997] ECR I-4681 (AG Ruiz-Jarabo Colomer).

<sup>95</sup> *Denmark v. Commission*, Joined Cases C-289/96, C-293/96 and C-299/96 [1999] ECR I-1541, [36].

<sup>96</sup> As was required by GI Reg. 1992, Art. 3(3), a non-exhaustive indicative list of the names of agricultural products and foodstuffs regarded as generic was presented by the Commission in 1996. However, it was not passed. See European Commission, *Proposal for a Council Decision Drawing up a Non-exhaustive, Indicative List of the Names of Agricultural Products and Foodstuffs Regarded as Being Generic, as Provided for in Article 3(3) Of Council Regulation No. 2081/92* (March 1996) COM/96/0038/FINAL. This included Brie, Camembert, Cheddar, Edam, Emmentaler, and Gouda. See *Denmark v. Commission*, Joined Cases C-289/96, C-293/96 and C-299/96 [1999] ECR I-1541, [44].

<sup>97</sup> In *ibid.*, the Court of Justice stressed that all of the factors had to be taken into account.

<sup>98</sup> The registration of ‘Feta’, which had been to Greece under Regulation 1107/96, was annulled because the Commission had not taken account of all of the factors listed in Art. 3(1) when deciding whether the name should be registered: *ibid.*, [103]. Feta was reinstated as a PDO by the Commission on 14 October 2002 by Regulation (EC) No. 1829/2002 amending the Annex to Regulation 2081/92 with regard to the name ‘Feta’ [2002] OJ L 277. This decision was upheld in *Germany v. Commission*, Joined Cases C-465/02 and C-466/0 [2005] ECR I-09115 (Feta was not generic).

<sup>99</sup> See *Feta* [2005] ECR I-9115; *Parmesan* [2008] ECR I-957; *Bavaria* [2009] ECR I-5491.

<sup>100</sup> Quality Schemes Reg., Art. 41(2). Article 41(1) adds that the Regulation shall not affect the use of terms that are generic in the Union, even if the generic term is part of a name that is protected.

<sup>101</sup> For a consideration of the type of evidence that may be used, see *Consorzio per la tutela del formaggio Grana Padano v. OHIM*, T-291/03 [2008] ETMR 3; (‘grana’ was not generic); *Germany v. Commission*, Joined Cases C-465/02 and C-466/0 [2005] ECR I-09115.

<sup>102</sup> Quality Schemes Reg., Art. 41(1).  
<sup>103</sup> Quality Schemes Reg., Art. 6(3); European Commission, *Proposal for a Council Regulation Amending Regulation (EEC) 2081/92 on the Protection of Geographical Indications and Designations of Origin for Agricultural Products and Foodstuffs* (July 2002) COM(2002) 139 Final.

pronounced in the same way. While there is no guidance as to the degree of similarity that is needed for these rules to apply, the Recitals to the 2003 amendments spoke of geographical names that are ‘entirely or partially homonymous’.<sup>104</sup>

A homonymous name that meets the requirements of the Regulation can be registered, so long as there is a clear distinction (in practice) between the name on the register and the (subsequent) homonymous name. However, if a homonymous name misleads the public into believing that products come from another territory, it will not be registered. This is the case even if the name is used accurately for the territory in question.<sup>105</sup> In deciding whether a homonymous name will be registered, the Regulation says that it is necessary to take into account the need ‘to ensure equitable treatment of the producers concerned’ whether consumers will be misled, local and traditional usage, and the actual risk of confusion.<sup>106</sup>

(iv) *Plant or animal names* A name that conflicts with the name of a plant variety or an animal breed, which is likely to mislead consumers as to the ‘true origin’ of the product, may not be registered.<sup>107</sup>

(v) *Trade marks* As we will see, special rules were developed to prevent the dual protection of geographic names under both the Quality Schemes Regulation and as trade marks.<sup>108</sup> A designation of origin or geographical indication will not be registered where, in light of a trade mark’s reputation, renown, and the length of time for which it has been used, registration is liable to mislead consumers as to the true identity of the product.<sup>109</sup>

## 2.3 CRITERIA FOR PROTECTION: AGRICULTURAL PRODUCTS AND FOODSTUFFS

There are also a number of restrictions placed on the types of agricultural product and foodstuff that can be protected as designations of origin and indication under the Quality Schemes Regulation.

### 2.3.1 Subject matter

The first and most general restriction is that the Quality Schemes Regulation only applies to certain agricultural products and foodstuffs. In order for a product to be protected as a designation of origin or indication, it must fall within one of the types of product listed in Annex I to the Quality Schemes Regulation.<sup>110</sup> These are: beer; chocolate and derived products; bread, pastry, cakes, confectionery and other bakers’ wares; beverages made from plant extracts; pasta; salt; natural gums and resins; mustard paste; hay; essential oils; cork; cochineal (a raw product of animal origin); flowers and ornamental plants; wool; wicker; scutched flax; leather; fur; and feather.

The Quality Schemes Regulation does not apply to wines (with the exception of wine vinegars), or to spirits (which are governed by specific legislation).<sup>111</sup> When the laws dealing with designations of origin and indication were first enacted, they applied to the names of mineral and spring water. However, as a result of problems such as the use of identical names for different waters and the use of invented names,<sup>112</sup> the 1992 GI

<sup>104</sup> Regulation (EC) No. 692/2003 of 8 April 2003 amending Regulation (EEC) No. 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [2003] *OJ L* 99/1, Recital 4.

<sup>105</sup> Quality Schemes Reg., Art. 6(3) (ex GI Reg. 2006, Art. 3(3)(a)).

<sup>106</sup> *Ibid.* (ex GI Reg. 2006, Art. 3(3)(b)). <sup>107</sup> *Ibid.*, Art. 6(2) (ex GI Reg. 2006, Art. 3(2)).

<sup>108</sup> See generally A. de Almeida, ‘Key Differences between Trade Marks and Geographical Indications’ (2008) 30 *EIPR* 406.

<sup>109</sup> Quality Schemes Reg., Art. 6(4) (ex GI Reg. 2006, Art. 3(4)).

<sup>110</sup> Quality Schemes Reg., Art. 2(1) (ex GI Reg. 2006, Art. 1(1)).

<sup>111</sup> Quality Schemes Reg., Art. 2(2) (ex GI Reg. 2006, Art. 1(1)).

<sup>112</sup> See Regulation (EC) No. 1285/2001 of 28 June 2001 rejecting a list of applications for the registration of designations communicated under [GI Reg. 1992, Art. 17] [2001] *OJ L* 176/27 (29 June 2001), Recitals 1–4.

Regulation was amended to exclude mineral and spring waters from the types of product that are protectable.<sup>113</sup>

### 2.3.2 The product or foodstuff must originate from the named place

To qualify for protection as geographical indication or a designation of origin, the agricultural product or foodstuff must originate from the named geographical area, be it a region, specific place, or (exceptionally) a country<sup>114</sup>—that is, a name will not be protected where the product comes from outside the geographic area. In one decision, it was held that ‘originating’, ‘originate’, and ‘origin’ referred to the place where the product (in this case, Melton Mowbray pork pies) had their origin in the past, not where they come from now.<sup>115</sup>

An exception is made to the requirement that the agricultural product or foodstuff must originate from the named geographic area in the case of ‘raw materials’ (which are defined as live animals, meat, and milk).<sup>116</sup> In particular, where the raw materials of a product originate from a geographic area that is larger than or different from the processing area, the product name may still be protected. For this to occur, the production area of the raw materials must be limited, there have to be special conditions for the production of the raw materials, and inspection arrangements need to be in place to ensure that these conditions are adhered to.<sup>117</sup> It is also necessary to show that the designation in question had been recognized as a designation of origin in the country of origin prior to 1 May 2004.<sup>118</sup>

### 2.3.3 Quality or character of the product or foodstuff

For a name to be protected as a geographical indication or a designation of origin under the Quality Schemes Regulation, it is necessary to show that the nominated geographic area imbues products from that region with certain characteristics or traits. The requirement that there must be a link between product and place means that abstract and general names that transcend geographic areas, such as ‘mountain’, would not qualify for protection, since there is no link between the quality or characteristics of the product and its specific geographical origin.<sup>119</sup> (As we will see, the term ‘mountain product’ is now protected as an optional quality term, which is able to protect geographically non-specific names.) Similarly, the fact that a product or foodstuff is closely linked to a country’s traditional gastronomy, as distinct from a geographic area, would not, of itself, show the necessary connection to place.<sup>120</sup>

The nature of the relationship between product and place necessary for a name to be registered is different for designations of origin (PDOs) from the nature that is necessary

Germany applied to have 314 names registered under the accelerated Art. 17 process: 125 of the names were not designations of origin and 15 names, which included ‘numbers’ to distinguish names of the same designation, were rejected because they were not geographic names.

<sup>113</sup> Regulation (EC) No. 692/2003 of 8 April 2003 amending Regulation (EEC) No. 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [2003] *OJL* 99/1.

<sup>114</sup> Quality Schemes Reg., Art. 5(1)(a) (for PDOs), (2)(a) (for PGIs) (ex GI Reg. 2006, Art. 2(1)).

<sup>115</sup> *Northern Foods v. Department for the Environment, Food and Rural Affairs* [2005] *EWHC* 2971 (Admin), [21].

<sup>116</sup> Quality Schemes Reg., Art. 5(3) (ex GI Reg. 2006, Art. 2(3)).

<sup>117</sup> Quality Schemes Reg., Art. 5(3)(b)(c). <sup>118</sup> Quality Schemes Reg., Art. 5(3)(d).

<sup>119</sup> *Jacques Pistre*, Cases C-321–324/94 [1977] *CMLR* 565 (ECJ), 587.

<sup>120</sup> *Consorzio per la Tutela del Formaggio Gorgonzola v. Kaserei Champignon Hofmeister*, Case C-87/97 [1999] *ECR* I-1301, [9] (AG La Pergola).

for geographic indications (PGIs). A *designation of origin* is defined as a name that identifies a product ‘whose quality or characteristics are essentially or exclusively due to a particular geographical environment with its inherent natural and human factors’.<sup>121</sup> As Advocate-General La Pergola said:

[T]he relationship between product and territory must be *exclusive*, in the sense that the product must have been conceived of, developed, and established exclusively in that area and nowhere else. Only this exclusive relationship justifies the grant of a collective monopoly: Precisely by virtue of the place where they are established.<sup>122</sup>

In contrast, for a name to qualify as a *geographical indication*, it is only necessary to show that the ‘quality, reputation or other characteristics’ of the named product is ‘essentially attributable to its geographical origin’.<sup>123</sup> This definition differs from the 2006 GI Regulation in that it requires the product’s attributes to be *essentially* attributable to its geographical origin. While Recital 22 of the 2012 Quality Schemes Regulation says that the changes to the definition of geographical indication (which were made to bring the EU scheme into line with TRIPS) were done ‘without changing the concept of [the EU scheme]’, it is possible that the 2012 Regulation may be interpreted as imposing a more rigorous threshold than had previously been the case.

### 2.3.4 Place of production, processing, or preparation

Another factor that must be satisfied for a name to be registered relates to the place where the named agricultural product or foodstuff is produced. Again, different standards apply depending on whether a name is to be registered as a PDO or a PGI. In relation to *designations of origin*, all of the ‘production steps’ must take place in the named geographic area.<sup>124</sup> (It is important to note that ‘production step’ is defined broadly to mean production, processing, or preparation.<sup>125</sup>) In contrast, to be protected as a *geographical indication*, it is necessary only for one of the production steps to take place in the defined geographic area.<sup>126</sup>

## 2.4 EXPLOITATION

One of the distinguishing features of the scheme established under the 2006 GI Regulation is that it does not confer the right to use a registered name on either particular individuals or a specific group; rather, it confers the right to use the registered name and the relevant logo on *any* undertaking the products of which meet the prescribed geographic and qualitative requirements.<sup>127</sup> In other words, the right is not addressed to specific producers, but to an abstract group.<sup>128</sup> This means that producers who were not part of the original application are able to use a protected name, so long as their products conform to the registered specification.<sup>129</sup> It also means that the interest in a protected name cannot be licensed or assigned to a third party (especially outside the nominated geographic area).

<sup>121</sup> Quality Schemes Reg., Art. 5(1)(b) (ex GI Reg. 2006, Art. 2(1)(a)).

<sup>122</sup> *Consorzio Gorgonzola v. Hofmeister*, Case C-87/97 [1999] ECR I-1301, [7] (AG La Pergola).

<sup>123</sup> Quality Schemes Reg., Art. 5(2)(b) (ex GI Reg. 2006, Art. 2(1)(b)).

<sup>124</sup> Quality Schemes Reg., Art. 5(1)(c) (ex GI Reg. 2006, Art. 2(1)(a)).

<sup>125</sup> Quality Schemes Reg., Art. 3(7).

<sup>126</sup> Quality Schemes Reg., Art. 5(2)(c) (ex GI Reg. 2006, Art. 2(1)(b)).

<sup>127</sup> *La Conquête*, T 215/00 [2001] ECR II-181 (CFI), [32]. <sup>128</sup> *Ibid.*, [32]–[33].

<sup>129</sup> To be eligible to use a PDO or a PGI, an agricultural product or foodstuff must comply with the specification: Quality Schemes Reg., Art. 7(1) (ex GI Reg. 2006, Arts 4(1)).

While, in theory, the Quality Schemes Regulation might enable anyone to use a registered name if they comply with the specification, in practice, agricultural cooperatives, cartels of producers, or state interests may impose restrictions on the ability of third parties to produce or process agricultural products and foodstuffs.<sup>130</sup>

## 2.5 INFRINGEMENT

In this section, we look at the situations in which a registered name will be infringed (or misused). In particular, we consider who is entitled to sue in case of abuse, the scope of protection, and the situations in which the name will be infringed.

### 2.5.1 Who is entitled to sue?

One of the defining characteristics of the regime established under the Quality Schemes Regulation is that there is no 'owner' *per se*; rather, anyone who complies with the specification is eligible to use the name. It is clear that producers and processors using a registered name are able to sue to prevent abuses. Organizations formed to represent producers or processors working with the same product are also entitled to sue to protect a registered name.<sup>131</sup>

### 2.5.2 Scope of protection

The starting point for ascertaining the scope of protection available for a PDO or a PGI is the product specification. While the specification helps to delineate the scope of the intangible property protected by the Quality Schemes Regulation, the mere fact that something is included in a specification does not mean that it is automatically protected. This is because the only matters within a specification that are relevant are those that impact upon the quality of the product. This is important given, as Lord Hoffmann said, that the product specification is a 'discursive document', meaning that it contains information that is not intended to be enforceable.<sup>132</sup> For example, the 84-page specification submitted in support of the registration of Prosciutto di Parma as a PDO included information on the history of the pig in the Po Valley, and details about breeding and slaughtering, as well as how the ham was to be cured, stored, and sliced.

In other registration-based intellectual property regimes, such as patents and trade marks, one of the key issues in an infringement action is how the registered documents are to be interpreted. For example, in patent law, a lot of attention is given to whether the claims should be read literally, purposively, and so on. Less problematic, but equally important, is the question of the types of activity that fall within the owner's exclusive control. In relation to names registered under the Quality Schemes Regulation, such issues are dealt with by Article 13(1), which sets out both the types of activity that infringe and also how the underlying property interest is to be construed. While there will undoubtedly be situations in which the courts are called upon to decide how a name should be interpreted or whether products are the same, most of these issues are dealt with by Article 13(1).

Registered names are protected against any direct or indirect commercial use in respect of products not covered by the registration, including (but not limited to) situations in which the named product is used as an ingredient.<sup>133</sup> This is subject to the proviso that

<sup>130</sup> See M. Kolia, 'Monopolising Names: EEC Proposals on the Protection of Trade Descriptions of Foodstuffs' [1992] *EIPR* 233.

<sup>131</sup> Quality Schemes Reg., Art. 45(1)(b).

<sup>132</sup> See *Consorzio Parma v. Asda* [2002] *FSR* 3 (HL), [29] *per* Lord Hoffmann.

<sup>133</sup> Quality Schemes Reg., Art 13(1)(a) (ex GI Reg. 2006, Art. 13(1)(a)).

the products are ‘comparable’ to the registered product or that using the name exploits the reputation of the protected name. Registered names are also protected against any ‘misuse, imitation, or evocation.’<sup>134</sup> This is the case even if the true origin of the product or service is indicated (‘Cornish clotted cream’ made in Spain), the name is translated, or the name is accompanied by an expression such as ‘style’, ‘type’, ‘method’, ‘as produced in’, ‘imitation’, or something similar. The provision not only applies to the named product as a product in its own right, but also applies where the named product is used as an ingredient in another product. A name is ‘evoked’ where the term used to designate a product incorporates part of a protected designation so that, ‘when a consumer is confronted with the name of a product, the image triggered in his mind is that of the product whose designation is protected’.<sup>135</sup> As the Court of Justice has said, it ‘is possible for a protected designation of origin to be evoked where there no likelihood of confusion between the products concerned’—and this was the case ‘even where no Community protection extends to the parts of the designation which are echoed in the term or terms in issue’.<sup>136</sup> On this basis, the Court held that the name ‘Gorgonzola’ (which was a protected designation) was evoked, and thus infringed, where the phonetically and visually similar name ‘Cambozola’ was used in relation to a soft blue cheese that looked like Gorgonzola.<sup>137</sup>

Article 13(1)(c), which focuses on the product to which the name attaches, provides that registered names are protected against:

... any other false or misleading indication of the provenance, origin, nature or essential qualities of the product that is used on the inner or outer packaging, advertising material or documents relating to the product concerned, and the packaging of the product in a container liable to convey a false impression as to its origin.<sup>138</sup>

Finally, registered names are also protected against ‘any other practice liable to mislead the consumer as to the true origin of the product’.<sup>139</sup>

As we saw above, it is possible to register a name where it includes terms that are deemed to be generic. However, as Article 41(1) says, the Regulation does not affect how generic terms are used. This principle is embodied in Article 13(1), which provides that use of a name of a product that is deemed to be generic does not fall within the scope of protection.

*Secondary uses of agricultural products* One issue that has attracted a lot of attention is whether registration confers protection over what might be called ‘secondary uses’ of an agricultural product. While it might be acceptable for a specification to stipulate that a name can only be used if the product was grown and processed in the nominated geographic area, the question arises: is it also acceptable for the specification to stipulate that secondary activities—such as grating, slicing, bottling, or packaging of products—must also be carried out in the region? Is it acceptable, for example, for a specification to state that the name ‘Parma ham’ can only be used in relation to sliced ham, the slicing of which takes place in the nominated geographic area? What about the slicing of ham in a delicatessen, a restaurant, or at home in another location? Put differently, at what point in the food chain are the rights in a name exhausted?

<sup>134</sup> Quality Schemes Reg., Art. 13(1)(b) (ex GI Reg. 2006, Art 13(1)(b)).

<sup>135</sup> *Consorzio Gorgonzola v. Hofmeister*, Case C-87/97 [1999] ECR I-1301, [25] (AG La Pergola).

<sup>136</sup> *Ibid.*, [26].

<sup>137</sup> *Ibid.*, [27]. In a similar vein, it was held that ‘parmesan’ would appear in principle to constitute an evocation of the PDO ‘Parmigiano Reggiano’: *Commission v. Germany*, Case C-132/05 (28 June 2007) (Opinion of AG Mazák), [40].

<sup>138</sup> Quality Schemes Reg., Art. 13(1)(c) (ex GI Reg. 2006, Art. 13(1)(c)).

<sup>139</sup> Quality Schemes Reg., Art. 13(1)(d) (ex GI Reg. 2006, Art. 13(1)(c)).

The question of whether protection should extend to secondary uses was considered by the Court of Justice in the *Parma Ham*<sup>140</sup> and the *Ravil*<sup>141</sup> decisions. In both cases, the Court's starting point was to note that secondary activities carried out in relation to agricultural products have the potential to harm the quality and thus the reputation of the designation of origin.<sup>142</sup> That is, the Court accepted that the grating of cheese, and the slicing and packaging of ham, had the potential to impact upon the quality of the final product. The Court also added that if controls were not exercised over the way the particular activity was carried out, consumers would have no guarantee of the quality of the product other than the word of the retailer. It might also undermine the reputation of the protected name. Given this, the Court of Justice held that the requirement that secondary activities be carried out in the region was justifiable, so long as they were required to protect or preserve the quality of the agricultural product or foodstuff. In both cases, the Court found the requirement that the secondary activity (the slicing of the ham and the grating of the cheese) be carried out in the nominated geographic area to be necessary to ensure the quality of the products in question.

One situation in which quality is at issue is where the transportation of a product outside of a region creates risks to the quality and thus the reputation of the product. Where wine is transported in bulk, which is required if the wine is to be bottled outside the region, this increases the risk of oxidization.<sup>143</sup> The quality of the wine might also be affected by variations in temperature that arise during transportation. Similar problems might arise where delays between the picking and processing of a fruit undermine the quality of the end product (as with olive oil).<sup>144</sup>

Any remaining doubts there might have been about whether registration covers secondary activities was resolved when the legislation was amended to state that producer groups were able to indicate in their specifications that packaging shall take place solely in the defined geographical area. This change is now reflected in Article 7(1)(e) of the 2012 Quality Schemes Regulation, which requires applicants to justify why the packaging needs to take place in the geographical area to safeguard quality.<sup>145</sup>

## 2.6 MONITORING AND ENFORCEMENT

One of the complaints that is made about the scheme to protect geographical indications and designations of origin is that the monitoring and enforcement of protected names

<sup>140</sup> *Consorzio del Prosciutto di Parma v. Asda*, Case C-108/01 [2003] ECR I-5121.

<sup>141</sup> *Ravil*, Case C-469/00 [2003] ECR I-5053.

<sup>142</sup> Advocate-General Alber was not willing to extend the scope of protection to secondary factors such as packaging and grating, focusing instead on the 'uniqueness' of the product in relation to the environment in which it was produced.

<sup>143</sup> See *Belgium v. Spain*, Case C-388/95 [2000] ECR I-3123 (rebottling of Rioja wine).

<sup>144</sup> A more difficult situation arises, however, where it is technically feasible for the secondary activities to be carried on outside the nominated geographical area. The Court of Justice has consistently said that controls undertaken outside the geographical area provide fewer guarantees as to the quality and authenticity than those carried on within the nominated geographic area. They have also said that it was not reasonable to expect producers to have to monitor and supervise the way in which their products were prepared throughout the Community.

<sup>145</sup> 'Packaging' refers to the operations needed to prepare the product for sale, such as bottling or canning: *Opinion of the Economic and Social Committee on the Proposal for a Council Regulation Amending Regulation 2081/92* (17 July 2002) COM(2002) 139 final, [2.6]. See also GI Reg. 1992, Art. 4(2)(e). The later part of the Article dealing with packaging was introduced by Regulation (EC) No. 692/2003 of 8 April 2003 amending Regulation (EEC) No. 2081/92 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs [2003] OJ L 99/1, Art. 1(2). In the *Parma Ham* decision, the

is onerous and ineffectual. One of the goals of the Quality Schemes Regulation was to remedy these problems. To this end, Title V of the Regulation sets out what member states are required to do in order to monitor products and foodstuffs that are registered. This includes designating the competent authority (or authorities) that is (are) required to verify that named products comply with the corresponding specification and to monitor the use of registered names.<sup>146</sup> In the United Kingdom, the task of enforcement was delegated to the Trading Standards Services (now known as the Trading Standards Institute) under Article 10(1) of the 2006 GI Regulation,<sup>147</sup> and presumably also under Article 36 of the 2012 Quality Schemes Regulation. If an inspection body finds that a producer is not complying with the registered specification, it is obliged to ensure that the GI Regulation is complied with.<sup>148</sup> Member states are also required to take ‘all necessary measures’ in the event of a breach.<sup>149</sup>

## 2.7 AMENDMENT AND CANCELLATION

In certain situations, the European Commission is able to amend or cancel a registration. The Commission is given a general power to amend a specification to take account of matters such as scientific and technical developments, or to redefine a geographic area.<sup>150</sup> The Commission is also given power to cancel a registration where ‘compliance with the conditions of the specifications is not ensured’ or where no product under the PDO or PGI has been placed on the market for at least seven years.<sup>151</sup>

## 2.8 REMEDIES

While other member states have implemented legislation setting out the penalties and remedies where a registered name is infringed, to date no such legislation has been introduced in the United Kingdom. In the absence of specific provisions, applicants need to rely on common law or equitable remedies.<sup>152</sup> This might include an injunction, an action for breach of statutory duty, or some equivalent order. An interesting development relates to the possibility of cross-border injunctions to enforce and protect names registered under the Regulation. In one decision, an Italian court (the Court of Bolzano) granted injunctive relief against defendants residing outside Italy (but within the European Union). This was done on the basis that the (then applicable) GI Regulation was directly and immediately applicable in all

House of Lords accepted that protection would not extend to the slicing of ham in restaurants and delicatessens, because this was not something that a specification ought to be able to control: see *Consorzio Parma v. Asda* [2002] FSR 3 (HL), [85] per Lord Scott of Foscote.

<sup>146</sup> Quality Schemes Reg., Arts 36–40.

<sup>147</sup> *Consorzio del Prosciutto di Parma v. Asda* [1998] FSR 697, 709.

<sup>148</sup> Quality Schemes Reg., Art. 36(1) (ex GI Reg. 2006, Art. 10(1)); *Consorzio del Prosciutto di Parma v. Asda* [1998] FSR 697. An action for infringement might be brought under legislation such as of the Food Safety Act 1990, ss 14 and 15, the Food Labelling Regulations 1999 (SI 1996/1499), or the Consumer Protection from Unfair Trading Regulations 2008 (SI 2008/1277), regs 5(5)(p), 5(4)(b), 5(2)(a), 3(4)(a), 3(1). See *Consorzio del Prosciutto di Parma v. Asda* [1998] FSR 697, 709.

<sup>149</sup> Quality Schemes Reg., Art. 38. Article 13(3) requires member states to take appropriate administrative and judicial steps to prevent or stop the unlawful use of PDOs and PGOs.

<sup>150</sup> Quality Schemes Reg., Art. 53.

<sup>151</sup> *Ibid.*

<sup>152</sup> Lord Hoffmann said that enforcement depends on the fact that of the GI Reg. 1992, Art. 8 [now Quality Schemes Reg., Art. 13(3)], lays down a clear rule and upon a general principle that the courts of the member states are obliged to provide remedies to enforce community rights: *Consorzio Parma v. Asda* [2002] FSR 3 (HL), [25].

member states. The Court also said that because infringing acts would be sanctioned equally by courts in the defendant's country, this gives rise to rights directly enforceable against any EU citizen.<sup>153</sup>

## 2.9 RELATION WITH OTHER REGIMES

Member states are able to maintain national protection of communicated names until such time as a decision on registration has been taken.<sup>154</sup> Once a name has been registered at the Community level, national rules cease to apply.<sup>155</sup> In some situations, the Commission may allow an existing (unregistered) name to coexist with an identical registered name for a period not exceeding 15 years. For this to occur, it must be shown that the identical unregistered name has been used consistently and fairly for at least 25 years prior to the application for registration, that the unregistered name has never been used to profit from the reputation of the registered name, and that consumers have not been, nor could have been, misled as to the true origin of the product.<sup>156</sup> It is also necessary to show that the problems resulting from the use of the identical names were raised before the name was registered. The ongoing use of an identical unregistered name will be allowed only where the country of origin clearly and visibly appears on the labelling.<sup>157</sup> The Quality Schemes Regulation does not preclude member states from entering into bilateral agreements with non-member countries,<sup>158</sup> or from protecting 'simple' or 'qualified' geographical indications of source under national laws.<sup>159</sup>

A name cannot be registered as a PDO or a PGI if, in good faith, a similar trade mark already exists, has been applied for, or is established by use that, because of its reputation and renown or the length of time for which it has been used, might lead to confusion as to the true identity of the product.<sup>160</sup> Conversely, a name that has been registered as a PDO or a PGI under the Quality Schemes Regulation cannot subsequently be registered as a trade mark, so long as the product to which the name attaches is the same. It is also necessary to show that if the name were registered as a trade mark, it would fall within the scope of the protection offered to the PDO or PGI.<sup>161</sup>

<sup>153</sup> *Consorzio per promozione dello Speck dell'Alto Adige* (28 April 1998) (unreported). See *Societa Italiana Brevetti*, 'Geographical Indications of Origin: Cross-Border Injunctions May Come in Handy' [2000] *EIPR* N 31.

<sup>154</sup> *Commission of the EC v. French Republic*, Case C-6/02 [2003] *ECR* I-2389.

<sup>155</sup> *Consorzio per la Tutela del Formaggio Gorgonzola v. Kaserei Champignon Hofmeister*, Case C-87/97 [1999] *ECR* I-1301. See also *Consorzio Parma v. Asda* [2002] *FSR* 3 (HL), [22]–[23] per Lord Hoffmann.

<sup>156</sup> Quality Schemes Reg., Art. 15(1), (2). <sup>157</sup> *Ibid.*, Art. 15(3) (ex GI Reg. 2006, Art. 13(4)).

<sup>158</sup> *Budejovicky Budvar v. Rudolf Ammersin*, Case C-216/01 [2005] *CMLR* 56 (ECJ).

<sup>159</sup> Where there is no link between provenance and quality or reputation: *Schutzverband gegen Unwesen in der Wirtschaft v. Warsteiner Brauerei Haus Cramer*, Case C-312/98 (7 November 2002) (ECJ), [40]–[47]; *Schutzverband gegen Unwesen in der Wirtschaft v. Warsteiner Brauerei Haus Cramer*, Case C-312/98 (Opinion of Advocate General Jacobs) (25 May 2000), [35]; *Jacques Pistre*, Cases C-321 to 324/94 [1977] *CMLR* 565.

<sup>160</sup> TMA 1994, s. 3(1)(c), says that trade marks that consist exclusively of signs or designations that serve to indicate geographical origin should not be registered. See above pp. 950–1.

<sup>161</sup> On relationship with domain names, see WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications, *Study Concerning the Use of Trademarks on the Internet* (April 1999) SCT/2(2)/9, [115]; M. Hopperger, 'International Protection of Geographical Indications: The Present Situation and Prospects for Future Developments' [1999] *WIPO Symposium: South Africa* 5, 17; GI Reg. 2006, Art. 14. The date at which conflict is judged is the date of submission of the application for registration (instead of the date of notice conferring the right as was initially the case: *ibid.*, Art. 14(2)).

### 3 TRADITIONAL SPECIALITIES GUARANTEED

The third type of designation recognized under the Quality Schemes Regulation is the so-called ‘traditional specialities guaranteed’ (TSG).<sup>162</sup> The aim of the TSG scheme is to safeguard traditional methods of production and recipes.<sup>163</sup> Unlike in the case of protected designations of origin and protected geographical indications, there is no need to establish a link between the named product and the nominated geographical area to qualify for protection as a certificate of specific character; instead, registration depends on a product having traditional features or characteristics. To date, the scheme has not proved to be very popular. As the Quality Schemes Regulation notes, with ‘only few names registered, the current scheme for traditional specialities guaranteed has failed to meet its potential’.<sup>164</sup> ‘Traditional Farmfresh Turkey’ and ‘Traditionally Farmed Gloucestershire Old Spots Pork’ are, at time of writing, the only products to receive TSG protection in the United Kingdom.<sup>165</sup> Other products that have been protected as TSG include Mozzarella (cheese) and Jamon Serrano (meat). Names that are registered as certificates of special character are able to use the designation ‘Traditional Speciality Guaranteed’ (TSG) and the accompanying logo (see Fig. 43.1 above).

#### 3.1 REGISTRATION

For a name to be protected as TSG, it must be registered. As with PGIs and PDOs, it is only possible for a group to apply to register a name as a TSG<sup>166</sup> (although, as was noted above, in certain situations, a single person may be treated as a group). As part of this process, the group must submit a product specification that contains: the name of the product; a description of the product showing the product’s specific character (including its main physical, chemical, microbiological, or organoleptic characteristics); a description of the production method that producers must follow, including, where appropriate, the nature and characteristics of the raw material or ingredients used and the methods by which the product is prepared; and the key elements establishing the product’s traditional character.<sup>167</sup> The application for registration is submitted to the competent authority in the member state.<sup>168</sup> After examination, the application is sent to the Commission who, in turn, sends a translation of the application to the other member states. The Commission also publishes the main points of the application in the Official Journal.<sup>169</sup> Third parties have three months from the date of publication in which to object to the proposed registration. If no one objects to the proposed registration, the name is entered into the Database of Origin Register (DOOR).<sup>170</sup> Once registered, a TSG can be amended or cancelled.<sup>171</sup> Where an objection is made, the Commission will invite the applicant and the party who opposed the application to engage

<sup>162</sup> This repealed and replaced Regulation (EC) No. 509/2006 of 20 March 2006 on agricultural products and foodstuffs as traditional specialities guaranteed [2006] *OJ L* 93/1 (the ‘Traditional Specialties Reg. 2006’). In turn, the 2006 Regulation had replaced the earlier Traditional Specialties Reg. 1992, which came into force on 24 July 1993.

<sup>163</sup> Quality Schemes Reg., Art. 17.

<sup>164</sup> Quality Schemes Reg., Recital 34.

<sup>165</sup> In October 2013, a number of applications were pending, including for Watercress and Traditional Bramley apple pie filling.

<sup>166</sup> Quality Schemes Reg., Art. 49.

<sup>167</sup> Quality Schemes Reg., Art. 19(a)-(d) (ex 2006 Traditional Specialties Reg. 2006, Art. 6).

<sup>168</sup> In the United Kingdom, this is the same as for PGIs and PDOs. See above pp. 1122–4.

<sup>169</sup> Quality Schemes Reg., Art. 50 (ex 2006 Traditional Specialties Reg. 2006, Art. 8(2)).

<sup>170</sup> Quality Schemes Reg., Art. 22(1) (ex 2006 Traditional Specialties Reg. 2006, Art. 3).

<sup>171</sup> Quality Schemes Reg., Arts 53, 54 (ex Traditional Specialties Reg. 2006, Arts 10, 11).

in ‘appropriate consultations’ for no more than three months, following which, if no agreement is reached, the Commission will decide on the fate of the application. Provisions in the 2006 Traditional Foods Regulation that were designed to safeguard the established rights of third parties who are shown to be economically disadvantaged do not reappear in the 2012 Quality Scheme Regulation.<sup>172</sup>

### 3.2 CRITERIA FOR PROTECTION

The products or foodstuffs that are able to receive TSG protection are limited to: prepared meals; beer; chocolate and derived products; bread, pastry, cakes, confectionary, biscuits and other baker wares; beverages made from plant extracts; pasta; and salt.<sup>173</sup> According to Article 18(1) of the Quality Schemes Regulation, to qualify for TSG registration, a name must describe a specific product or foodstuff that ‘(a) results from a mode of production, processing or composition corresponding to a traditional practice for that product or foodstuff; or (b) is produced from raw materials that are those traditionally used’.<sup>174</sup> It is also necessary for the name to have been ‘traditionally used to refer to the specific product’ or to ‘identify the traditional character or specific character of the product’.<sup>175</sup> ‘Traditional’ is defined hereditarily as ‘proven usage on the domestic market for period that allows transmission between generations’ (which is deemed to require at least 30 years).<sup>176</sup> A name will not be registered if it only refers to claims of a general nature used for a set of products, or to claims provided by specific Union legislation.<sup>177</sup> To qualify for a certificate of special character, the product or foodstuff must comply with a product specification.<sup>178</sup> It is also necessary for inspection structures to be in place that ensure that products comply with the specification.<sup>179</sup>

### 3.3 SCOPE OF PROTECTION

Groups who comply with the product specification have the exclusive use of the name, the designation ‘traditional speciality guaranteed’ (TSG), and the accompanying logo. Registered names are protected against any misuse, imitation or evocation, or against any other practice liable to mislead the consumer.<sup>180</sup>

## 4 OPTIONAL QUALITY TERMS

The fourth type of designation recognized in the Quality Schemes Regulation is the ‘optional quality term’. The aim of the new scheme is to ‘facilitate the communication within the internal market of the value adding characteristics of attributes of agricultural products’.<sup>181</sup> For a term to qualify as an optional quality term, it must relate either to a characteristic of one or more categories of products (but not a technical characteristic),<sup>182</sup>

<sup>172</sup> See Traditional Specialties Reg. 2006, Art. 13(2) (repealed in 2013).

<sup>173</sup> Quality Schemes Reg., Art. 2(1) (ex Traditional Specialties Reg. 2006, Art. 1).

<sup>174</sup> Quality Schemes Reg., Art. 18(1) (ex Traditional Specialties Reg. 2006, Art. 4(2)(a)).

<sup>175</sup> Quality Schemes Reg., Art. 18(2). ‘Specific character’ is defined in Art. 3(5) as ‘the characteristic production attributes which distinguish a product in the Union’.

<sup>176</sup> Quality Schemes Reg., Art. 3(3).

<sup>177</sup> Quality Schemes Reg., Art. 18(4) (ex Traditional Specialties Reg. 2006, Art. 4(3)(a)).

<sup>178</sup> Quality Schemes Reg., Art. 19(1) (ex Traditional Specialties Reg. 2006, Art. 6(1)).

<sup>179</sup> Quality Schemes Reg., Art. 37 (ex Traditional Specialties Reg. 2006, Arts 14–15).

<sup>180</sup> Quality Schemes Reg., Art. 24. <sup>181</sup> Quality Schemes Reg., Art. 27.

<sup>182</sup> Quality Schemes Reg., Art. 29(2).

or to a farming or processing attribute that applies in specific areas. It is also necessary to show that use of the term adds value to the product as compared to products of a similar type and that the term has a 'European dimension' (whatever this may mean).<sup>183</sup> The Commission is empowered to reserve new terms and to amend the conditions of use of existing ones by delegated acts. An optional quality term may only be used to describe products that comply with the conditions of use that are attached to the term.<sup>184</sup>

'Mountain product' is the first optional quality term to be recognized by the Commission. As a result, in relation to the agricultural products listed in Annex 1 of the Quality Schemes Regulation, the term 'mountain product' can only be used to describe products in respect of which *both* the raw materials and the feedstuffs for farm animals come 'essentially' from mountain areas. In the case of processed products, the process must also take place in a mountain area.<sup>185</sup> A 'mountain area' is defined as an area characterized by a considerable limitation of the possibilities for using the land and an appreciable increase in the cost of working it owing:

- (i) to the existence, because of altitude, of very difficult climatic conditions, the effect of which is to shorten the growing season substantially;
- (ii) at a lower altitude, to the presence over the greater part of the area in question of slopes too steep for the use of machinery or requiring the use of very expensive special equipment; or
- (iii) to a combination of these two factors, where the handicap resulting from each taken separately is less acute, but the combination of the two gives rise to an equivalent handicap.<sup>186</sup>

While it is too early to determine whether this scheme will have any notable impact, it has added weight to the debate about the status of geographical indications as a form of intellectual property.<sup>187</sup>

<sup>183</sup> Quality Schemes Reg., Art. 29(1).

<sup>184</sup> Quality Schemes Reg., Art. 33(1).

<sup>185</sup> Quality Schemes Reg., Art. 31(1). See European Commission, *Report from the Commission to the European Parliament and the Council on the Case for an Optional Quality Term 'Product of Island Farming'* (December 2013) COM(2013) 888 final (setting out arguments for and against the adoption of the new term).

<sup>186</sup> Quality Schemes Reg., Art. 31(2), referring to Regulation (EC) No. 1257/1999 of 17 May 1999 on support for rural development from the European Agricultural Guidance and Guarantee Fund (EAGGF) and amending and repealing certain Regulations [1999] *OJ L* 160/80 (26 June 1999), Art. 18(1).

# PART V

# CONFIDENTIAL INFORMATION

## 1 INTRODUCTION

Up until now, the law has refused to recognize a property right in ideas or information.<sup>1</sup> Nevertheless, people who generate ideas or have in their control previously undisclosed information will have the ability to prevent others from using or disclosing those ideas or that information if they can demonstrate that the latter are bound by an obligation. The common law of breach of confidence determines when such obligations exist.<sup>2</sup> Because the action is largely concerned with the imposition of obligations, as long as the idea or information is (and remains) secret, there are few restrictions placed on the type of subject matter that can be protected. Accordingly, the action for breach of confidence is broad-ranging and has been used in relation to personal, commercial, and technical information, as well as trade secrets, know-how, and information about the government. As Keene LJ said, ‘breach of confidence is a developing area of the law, the boundaries of which are not immutable but may change to reflect changes in society, technology and business practice’.<sup>3</sup>

Because the action is so broad-ranging, it performs a number of different roles and protects a variety of interests. Insofar as the action provides a space in which ideas can be tested and developed without fear of appropriation, it enables organizations to invest in and carry out research (and thus operates as an important supplement to the statutory intellectual property regimes).<sup>4</sup> In some cases, confidentiality encourages information to be disclosed to a small circle of confidants. More often, however, the action operates to restrict disclosure<sup>5</sup> in order to protect individual autonomy, personality, and privacy.<sup>6</sup> By

<sup>1</sup> But cf. *Veolia ES Nottinghamshire Ltd and Nottinghamshire County Council v. Downen* [2010] EWCA Civ 1214 (a decision that has already prompted criticism); *Force India Formula One Team v. 1 Malaysian Racing Team* [2012] EWHC 616 (Ch), [376].

<sup>2</sup> See Gurry (2012).

<sup>3</sup> *Douglas v. Hello!* [2001] QB 967, 1011 (CA), [165], [2001] EMLR 199, 251.

<sup>4</sup> The action presents the possibility of a person gaining some limited protection as regards intellectual creations that, for some reason, are not covered by statutory regimes, e.g. business ideas: *Wheatley v. Bell* [1984] FSR 16. For empirical evidence of a growing use of secrecy as a means of protecting inventions, see the sources cited in Gurry (2012), 5–7, [1.09]–[1.15]. For an overview of the justifications for protecting trade secrets, see Gurry (2012), ch. 3. For a sceptical view, see R. Bone, ‘A New Look at Trade Secret Law: Doctrine in Search of a Justification’ (1998) 86 *Cal L Rev* 241.

<sup>5</sup> E. Hettinger, ‘Justifications for Intellectual Property’ (1989) 19 *Philos Public Aff* 31.

<sup>6</sup> L. Paine, ‘Trade Secrets and the Justifications of Intellectual Property: A Comment on Hettinger’ (1991) 20 *Philos Public Aff* 247.

encouraging respect for agreements, it also promotes fair competition.<sup>7</sup> As such, breach of confidence has done some of the work that unfair competition law does in other legal systems.<sup>8</sup> Breach of confidence also performs many of the tasks performed by a general right of privacy.

The origins of the breach of confidence action are obscure.<sup>9</sup> Recent work has highlighted two possible genealogies. The first traces the action to a series of eighteenth-century decisions dealing with common law property rights (copyright) in unpublished works,<sup>10</sup> where rights over undisclosed information were first recognized.<sup>11</sup> A second history, espoused by Megarry J in *Coco v. Clark*,<sup>12</sup> traces the action back to the sixteenth century, when, in speaking about the general jurisdiction of the Court of Chancery (or conscience), Sir Thomas More said that ‘three things are to be helped in conscience; Fraud, Accident and things of confidence’. Although the claim seems dubious as a matter of history, a number of modern commentators have adopted the corresponding view that the action for breach of confidence is an application of a broader notion of good faith.<sup>13</sup> While the origins of the action may be obscure, it is clear that, by the mid-nineteenth century, the courts had developed a series of principles that were relied upon to protect what we now call ‘confidential information’. For example, in the 1849 decision in *Prince Albert v. Strange*,<sup>14</sup> Lord Cottenham LC ordered that publication of a catalogue describing Prince Albert’s etchings be restrained, noting that ‘this case by no means depends solely upon the question of property, for a breach of trust, confidence, or contract would itself entitle the plaintiff to an injunction’.

### 1.1 INTERNATIONAL INFLUENCES

Until recently, the action for breach of confidence has largely fallen outside the remit of international treaties. This situation changed, however, as a result of the fact that the 1994 Agreement on Trade-related Aspects of Intellectual Property Rights (TRIPS) requires members to afford protection to those who lawfully control ‘undisclosed information’.<sup>15</sup> More specifically, Article 39 of TRIPS states that, in the course of providing protection against unfair competition (as required by Article 10bis of the Paris Convention), members shall provide natural and legal persons with the possibility of preventing information lawfully within their control from being disclosed to, acquired by, or used by others without their consent in a manner contrary to honest commercial practice. Article 39 requires information to be protected if it is secret, has commercial value because it is secret, and has been subject to reasonable steps to keep it secret. Although British law probably complies with Article 39, where there is doubt (such as

<sup>7</sup> *Interfirm Comparison v. Law Society of NSW* [1977] RPC 137.

<sup>8</sup> See J. Reichman, ‘Legal Hybrids between Patent and Copyright Paradigms’ (1994) 94 *Colum L Rev* 2432.

<sup>9</sup> See Gurry (2012), ch. 2; M. Richardson, M. Bryan, M. Vranken, and K. Barnett, *Breach of Confidence: Social Origins and Modern Developments* (2011).

<sup>10</sup> G. Hammond, ‘The Origins of the Equitable Duty of Confidence’ (1979) 8 *AALR* 71; S. Ricketson, ‘Confidential Information: A New Proprietary Interest?’ (1977–78) 11 *Melb UL Rev* 223, 233–5.

<sup>11</sup> But this was limited to unpublished ideas that were in recorded form, either in manuscript or otherwise: *Abernethy v. Hutchinson* (1824) 1 *H & Tw* 28; 47 *ER* 1313.

<sup>12</sup> [1969] *RPC* 41; *Fraser v. Evans* [1969] *QB* 349.

<sup>13</sup> *Seager v. Copydex (No. 1)* [1967] 2 *All ER* 415.

<sup>14</sup> (1849) 2 *De G & Sm* 652, 64 *ER* 293 (Knight Bruce LJ); (1849) 1 *Mac & G* 25; 41 *ER* 1171. See further L. Bently, ‘*Prince Albert v. Strange*’, in C. Mitchell and P. Mitchell (eds), *Landmark Cases in Equity* (2012), ch. 8.

<sup>15</sup> See R. Krasser, ‘The Protection of Trade Secrets in the TRIPS Agreement’, in Beier and Shricke, 216–25; S. Sandeen, ‘The limits of trade secret law: Article 39 of the TRIPS Agreement and the Uniform Trade Secrets Act on which it is based’, in R. Dreyfuss and K. Strandburg (eds), *The Law and Theory of Trade Secrecy: A Handbook of Contemporary Research* (2011), ch 20.

in relation to the obligations of third parties), Article 39 may influence the way in which the case law is interpreted.

## 1.2 DOCTRINAL BASIS OF THE ACTION

One issue that has preoccupied commentators over the last few decades is the doctrinal basis for the action. In particular, commentators have discussed whether breach of confidence has its roots in contract, tort, property, or equity.<sup>16</sup> While these debates may appear to be sterile, the decision as to the appropriate doctrinal basis of the action may have important consequences when it comes to matters such as conflicts of laws and limitation periods.<sup>17</sup> It has also been said that the failure to identify a single doctrinal or conceptual basis for the action is the reason why so many aspects of the action are unclear. In particular, the conceptual uncertainty is said to be the reason why there is confusion about the liability of third-party recipients (and accessories),<sup>18</sup> strangers, bona fide purchasers of information, and the remedies that are available to a confider.<sup>19</sup>

Instead of attempting to locate an assumed, but ever-elusive, doctrinal basis for breach of confidence, a preferable option is to treat breach of confidence as a separate cause of action in its own right.<sup>20</sup> This approach, which has found support in Canadian courts,<sup>21</sup> would mean that the action was not dependent upon a particular jurisdictional basis. The advantage of seeing breach of confidence as a *sui generis* action is that the courts would not be hidebound by particular conventions or models. As such, they could tailor rules to the circumstances as and when they present themselves. There is some evidence that courts are adopting precisely such an approach in relation to remedial responses and accessory liability.

It may also be more fruitful to consider whether the existing law could be reorganized so as to make it more comprehensible, predictable, or just. One possibility would be to divide breach of confidence into several related actions. In so doing, the courts could better attune the rules to the interests involved and thereby provide greater clarity and certainty. Such an approach would recognize that different rules apply to different types of information—notably, personal,<sup>22</sup> commercial,<sup>23</sup> or government information. This could take place along lines similar to the changes that took place in the United States during the last century.<sup>24</sup> Indeed, given recent developments in the treatment of informational privacy, as well as government data, and if EU harmonization currently proposed in relation to trade secrets occurs,<sup>25</sup> it may not be too long before it makes real sense to divide the law of confidentiality into distinct domains.

<sup>16</sup> Gurry (2012), ch. 4. The Supreme Court, in its most recent intervention in relation to trade secrets, seemed to favour equity: *Vestergaard Frandsens A/s v. Bestnet Europe Ltd* [2013] UKSC 31, [22].

<sup>17</sup> See pp. 1228, 1234–5. See also C. Wadlow, ‘Bugs, Spies and Paparazzi: Jurisdiction over Actions for Breach of Confidence in Private International Law’ [2008] *EIPR* 269.

<sup>18</sup> See *Vestergaard Frandsens A/s v. Bestnet Europe Ltd* [2013] UKSC 31, discussed in Chapter 46, pp. 1178–9 (seeming to meld equitable principles drawn from ‘knowing assistance’ liability with other notions from joint tortfeasance).

<sup>24</sup> This followed from the famous article on privacy by S. Warren and L. Brandeis, ‘The Right to Privacy’ (1890) 4 *Harv L Rev* 193. <sup>25</sup> See below pp. 1198–1200.

### 1.3 BREACH OF CONFIDENCE AND PRIVATE INFORMATION

While breach of confidence has performed many, but not all,<sup>26</sup> of the tasks that might otherwise be performed by a tort of privacy,<sup>27</sup> there have long been calls for the introduction of such a tort into British law.<sup>28</sup> While, for a long time, these calls fell on deaf ears, following the introduction of the Human Rights Act 1998, the courts began to give effect to the requirement, contained in Article 8 of the European Convention on Human Rights (ECHR), that persons be afforded the ‘right to respect for his private and family life, his home and his correspondence’. The prospects of British law recognizing a general tort of privacy, at least one developed by the courts, received a serious setback in the House of Lords’ decision in *Wainwright v. Home Office*,<sup>29</sup> in which, after speaking critically about a general right to privacy, Lord Hoffmann rejected ‘the invitation to declare that since at the latest 1950 there has been a previously unknown tort of invasion of privacy’. As such, the question of whether there was a high-level principle of invasion of privacy ‘would have to wait another day’.<sup>30</sup> Lord Hoffmann’s comments in *Wainwright* were confirmed by the House of Lords in *Campbell v. MGN*.<sup>31</sup> While the Lords may not have agreed on how the law was to be applied, they were in agreement that there was ‘no over-arching, all-embracing cause of action for “invasion of privacy”’.<sup>32</sup>

While there are still some areas of private life that the British courts are not willing to protect, it is clear that, since the turn of the millennium, there has been a remarkable change in the role that the breach of confidence action plays in protecting private information. The law of confidentiality has been developed dramatically so as to protect personal information.<sup>33</sup> There are at least two important modifications to the law of confidence that apply in cases of privacy.<sup>34</sup> The first is that the courts have held there to be obligations of confidentiality and non-disclosure on recipients of private information where there is no relationship between the parties. This is the case even where the recipient acquired the personal information from legitimate public sources. As Lord Nicholls said in *Campbell v. Mirror Group*:

[T]his cause of action has now firmly shaken off the limiting constraint of the need for an initial confidential relationship. In so doing it has changed its nature ... Now the law imposes a ‘duty of confidence’ whenever a person receives information he knows or ought to know is fairly and reasonably to be regarded as confidential.<sup>35</sup>

<sup>26</sup> *Peck v. UK* (2003) 36 EHRR (41) 719 (British law of confidence at that time did not provide adequate remedy where a party had been filmed using a CCTV camera); cf. *Earl Spencer v. UK* (1998) 25 EHRR CD 105 (law of confidence provided adequate remedy to restrain the publication of private information).

<sup>27</sup> See *Duchess of Argyll v. Duke of Argyll* [1967] 2 Ch 302; *Stephens v. Avery* [1988] Ch 499; cf. *Kaye v. Robertson* [1991] FSR 62.

<sup>28</sup> See generally G. Phillipson, ‘Transforming Breach of Confidence? Towards a Common Law Right of Privacy under the Human Rights Act’ [2003] MLR 726.

<sup>29</sup> [2003] UKHL 53, [2003] All ER 279, [35] (favouring specific legislative remedies rather than a general tort of privacy).

<sup>30</sup> *Ibid.*, [30]. See also *McKennitt v. Ash* [2008] QB 73, [8].

<sup>31</sup> [2004] 2 AC 457. <sup>32</sup> *Ibid.*, 464, [11] per Lord Nicholls.

<sup>33</sup> *Campbell v. MGN* [2003] QB 633 (CA), 663, [69]–[70] (describing the process as ‘shoe-horning’).

<sup>34</sup> At a greater level of detail, it is possible to say that recognition of privacy through the law of confidence has involved the following changes: (i) protection now extends to ‘private’ information that might not have been regarded as confidential; (ii) protection may exist even though the private information is widely known; (iii) there is no need to establish an existing relationship of confidence; (iv) there is no need for a claimant to prove damage; and (v) a claimant may recover for emotional distress. For an insightful analysis of whether the scope of the ‘tort of misuse of private information’ extends, or should be extended, to corporate as well as individual claimants, see T. Aplin, ‘A Right of Privacy for Corporations?’, in P. Torremans (ed.), *Intellectual Property and Human Rights* (2008), ch. 19.

<sup>35</sup> *Campbell v. MGN* [2004] 2 AC 457, 464, [13]–[14] per Lord Nicholls.

The second change that has occurred is that the courts have firmly embodied Articles 8 and 10 ECHR at the heart of the action. Indeed, as Lord Woolf said, Articles 8 and 10 are not merely of persuasive or parallel effect, but ‘are the very content of the domestic tort that the English court has to enforce’.<sup>36</sup> As we will see, Articles 8 and 10 play a central role in all aspects of the action for disclosure of private information. As well as providing guidance as to whether there is a right to be protected, in deciding whether to grant relief, the courts routinely balance the impact that the disclosure will have on private life (Article 8) against the impact that non-disclosure might have on the defendant’s freedom of expression (Article 10).

The application of the breach of confidence action to private information has, in the words of Buxton LJ, created a ‘feeling of discomfort’<sup>37</sup> amongst lawyers. In part, this is because the use of the label ‘breach of confidence’ is misleading. The reason for this is that the confidence label ‘harks back to a time when the cause of action was based on improper use of information disclosed by one person to another in confidence’;<sup>38</sup> now, however, the action applies where there is no ‘disclosure’ of confidential information or any relationship of trust or reliance. Another reason for the discomfort is that information about an ‘individual’s private life would not, in ordinary usage, be called “confidential”. The more natural description today is that such information is private. The essence of the tort is better encapsulated now as misuse of private information.’<sup>39</sup> The feeling of ‘discomfort’ created by the shoe-horning of the protection for private information into the traditional action for breach of confidence leads to the question: should the right be treated as a separate action? While there are many good reasons for doing so,<sup>40</sup> the protection against the misuse of private information shares many features with the traditional action. As such, we have kept the action for misuse of private information as a part of the general law of breach of confidence.<sup>41</sup>

#### 1.4 DATA PROTECTION LEGISLATION

A discussion of the protection of personal confidential information cannot be seriously conducted without reference to the Data Protection Act 1998, which controls the way in which information about living identifiable persons is used. This became clear after *Campbell v. MGN*,<sup>42</sup> in which, as well as relying on the common law action for breach

<sup>36</sup> *A v. B* [2003] QB 195, [4]; *McKennitt v. Ash* [2008] QB 73, [11]. But cf. *Douglas v. Hello!* [2008] 1 AC 1, 47–48, 72, [118] per Lord Hoffmann, [255] per Lord Nicholls (both treating traditional breach of confidence and the privacy-informed action as distinct and, it seems, potentially cumulative in a case concerned with information about a person’s personal life).

<sup>37</sup> *McKennitt v. Ash* [2008] QB 73, [8](iii).

<sup>38</sup> *Campbell v. MGN* [2004] 2 AC 457, [13]–[14] per Lord Nicholls.

<sup>39</sup> *Ibid.*, [14] per Lord Nicholls.

<sup>40</sup> *Douglas v. Hello!* [2001] QB 967 (CA), 1012, [166]. For an overview, see below pp. 1184–92.

<sup>41</sup> The precise relationship between the traditional action and the privacy variant has yet to be clarified in an authoritative manner, with different judges taking different views. See, e.g., *Tchenguiz v. Imerman* [2010] EWCA Civ 908, [67] per Lord Neuberger MR (‘privacy is still classified as part of the confidentiality *genus*, the law should be developed and applied consistently and coherently in both privacy and “old fashioned confidence” cases, even if they sometimes may have different features. Consistency and coherence are all the more important given the substantially increased focus on the right to privacy and confidentiality, and the corresponding legal developments in this area, over the past twenty years’); *Ferdinand v. MGN* [2011] EWHC 2454 (QB), [106] (treating actions as distinct but overlapping). See T. Aplin, ‘The Relationship between Breach of Confidence and the “Tort of Misuse of Private Information”’ [2007] *Kings LJ* 329–36.

<sup>42</sup> [2003] 1 *All ER* 224, [72]–[138]. Also applied in *Douglas v. Hello! (No. 3)* [2003] 3 *All ER* 996, [230]–[239] (no defence to compensation). See generally M. Tugendhat, ‘The Data Protection Act and the Media’ [2000] *YC 8 ML* 135.

of confidence, Naomi Campbell also sought relief under the 1998 Act. While the action did not succeed in *Campbell*, it highlights an alternative cause of action that may be, and indeed has been, employed in other situations in which a person's image has been used without their permission.

The 1998 Act, which implemented the EU Data Protection Directive,<sup>43</sup> contains eight data protection principles. These state that data must be: processed fairly and lawfully; obtained and used for only specified and lawful purposes; adequate, relevant and not excessive; accurate, and where necessary, kept up to date; kept for no longer than necessary; processed in accordance with individuals' rights (as defined); kept secure; and transferred only to countries that offer adequate data protection.<sup>44</sup> In due course, it seems that the Directive will be replaced by an EU Regulation, although negotiations over the details of the new regime are ongoing.<sup>45</sup>

## 2 ELEMENTS OF THE ACTION

However confused the details of the law relating to breach of confidence may be, its basic traditional framework is now well established. According to the seminal case of *Coco v. Clark*,<sup>46</sup> in order to establish a claim for breach of confidence, the claimant must show that:

- (i) the information is capable of being protected;
- (ii) the defendant owes the claimant an obligation to keep the information confidential; and
- (iii) the defendant used the information in a way that breached that duty.

Once these three points have been proved, a defendant may raise a defence, the most significant being that the disclosure was justified in the public interest.

In the next three chapters, we will explore the elements of breach of confidence in more detail. Thus, in Chapter 44, we look at the type of information that is capable of being protected by the action. In Chapter 45, we look at the situations in which a duty of confidence arises between the parties. In Chapter 46, after looking at whether the duty of confidence has been breached, we examine the defences to breach. We finish by looking at the remedies available.

<sup>43</sup> Directive 95/46/EC of the European Parliament and of the Council of 24 October 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data [1995] OJL 281/31 (23 November 1995).

<sup>44</sup> See *Murray v. Express Newspapers* [2007] EMLR (22) 583, [69]ff.

<sup>45</sup> European Commission, *Proposal for a Regulation of the European Parliament and of the Council on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data (General Data Protection Regulation)* (January 2012), COM(2012) 11 final.

<sup>46</sup> [1969] RPC 41. It is important to note that there is a degree of fluidity in its application. For example, faced with similar facts, one court might justify its conclusion on the ground that the defendant is not under a duty, while another court would accept that the defendant was under a duty of confidentiality, but either limit the duty so as not to cover the defendant's conduct or provide a defence.

## IS THE INFORMATION CAPABLE OF BEING PROTECTED?

### CHAPTER CONTENTS

1 Introduction	1143	5 Information in the Public Domain	1147
2 Trivial Information	1144	6 Novel and Original Information?	1156
3 Immoral Information	1145	7 Private Information	1157
4 Information that is Vague	1145		

### 1 INTRODUCTION

The first factor that must be shown in a breach of confidence action is that the information is capable of being protected. First, it is necessary to identify the information in issue. As O'Connor J said, 'it was essential that the claimant should make it absolutely clear and certain what it was that he alleged to be confidential [and] which he sought to protect'.<sup>1</sup> This is not an inquiry into the quality of the information *per se*, so much as it is a preliminary examination as to whether the information has been identified in such a way that the action can proceed. As such, it is akin to the question of what is a work in copyright law.

If a claimant does not identify the information in sufficient detail, their action may be struck out on the basis that it is speculative and an abuse of process.<sup>2</sup> Failure to identify the information may also lead the court to refuse to grant an injunction. For example, in *Suhner v. Transradio*,<sup>3</sup> the claimant gave the defendant 246 documents, saying that about 100 of the documents contained confidential designs and that part of the information in the other 146 documents was confidential. The court refused to grant an injunction primarily because 'it was very difficult to know precisely what information it is which the plaintiffs say is confidential'.<sup>4</sup> Laddie J reiterated this position in the *Ocular Sciences*

<sup>1</sup> *PA Thomas v. Mould* [1968] QB 913, 922. See also *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 359–69; *CMI—Centers for Medical Innovation v. Phytopharm* [1999] FSR 235, 243; Gurry (2012), [5.73]–[5.77]. For consideration of whether there might be liability under professional disciplinary rules for disclosing a letter labelled 'private and confidential' even though it contained no confidential information, see *R v. The Chartered Institute of Management Accountants, ex p. May* [2013] EWHC 1574 (Admin) (no breach of the rules as formulated, nor at common law, without private or confidential information).

<sup>2</sup> *John Zinc v. Lloyds Bank* [1975] RPC 385; *Inline Logistics v. UCI Logistics* [2002] RPC 611, 620, [29]; *The Gadget Shop v. The Bug.Com* [2001] FSR 383, 405; *Devon and Cornwall Autistic Community Trust v. Pyrah and ors* [2012] EWPC 46. <sup>3</sup> *Suhner v. Transradio* [1967] RPC 329. <sup>4</sup> *Ibid.*, 334.

decision,<sup>5</sup> in which he said that the claimant should give full and proper particulars of all confidential information upon which they intend to rely. The reason for this is that unless the confidential information is properly identified, the injunction might be of uncertain scope and difficult to enforce. The absence of ‘proper particulars of claim’ could also compromise a defendant’s ability to defend themselves. On this basis, Laddie J said that if the claimant fails to give proper particulars, it is open to the court to infer that the purpose of the litigation is harassment rather than the protection of the claimant’s rights. On this basis, the action could be struck out as an abuse of process.<sup>6</sup>

With the exception of trivial or immoral information, no restrictions are placed on the *subject matter* that is protected by breach of confidence. As a result, the action has been used to protect a variety of subject matter: the idea for a new type of ‘carpet grip’;<sup>7</sup> the designs of Formula One cars,<sup>8</sup> a concept for a new television programme;<sup>9</sup> the genetic structure of a nectarine tree;<sup>10</sup> medical lectures;<sup>11</sup> marital secrets;<sup>12</sup> the cultural and religious secrets of an Aboriginal community;<sup>13</sup> and a report by the Department of Education on employment conditions.<sup>14</sup>

Information is protected irrespective of the *format* in which it appears. Thus the action applies equally to information when embodied in writing,<sup>15</sup> drawings,<sup>16</sup> photographs,<sup>17</sup> goods or products, or where it has been disclosed orally.<sup>18</sup> It is also clear that the information does not need to be fixed or in a permanent form. As such, the information may be written, oral, encrypted, embodied in physical objects (whether it be the genetic code of a tree or the design of a product), or take shape as a formula, a plan, or a sketch.

While there are very few restrictions placed on the subject matter that is capable of being protected and the format that the information needs to take, there are four limitations placed on the *type* of information that may be protected under the action. These are where the information is trivial, immoral, vague, or in the public domain. We will deal with each in turn.

## 2 TRIVIAL INFORMATION

The first limit placed on the type of information that is protected by breach of confidence is that the courts may not protect information that is trivial.<sup>19</sup> In *Coco v. Clark*,<sup>20</sup> Megarry J said that he doubted ‘whether equity would intervene unless the circumstances are of sufficient gravity; equity ought not to be invoked to protect trivial tittle-tattle, however

<sup>5</sup> *Ocular Sciences* [1997] RPC 289, 359.

<sup>6</sup> *Ibid.* But cf. *Douglas v. Hello!* [2008] 1 AC 1, in which the House of Lords was prepared to protect all photographic images of the wedding.

<sup>12</sup> *Argyll v. Argyll* [1967] Ch 302.

<sup>13</sup> *Foster v. Mountford* [1978] FSR 582.

<sup>14</sup> *Director General of Education v. Public Services Association of New South Wales* (1985) 4 IPR 552.

<sup>15</sup> *Interfirm Comparison (Aust.) Pty v. Law Society of New South Wales* [1975] 2 NSWLR 104.

<sup>16</sup> *Saltman Engineering v. Campbell Engineering* (1948) 65 RPC 203; *Inline Logistics* [2002] RPC 611.

<sup>17</sup> *Hellewell v. Chief Constable of Derbyshire* [1995] 1 WLR 804; *Douglas v. Hello!* [2008] 1 AC 1; *Campbell v. MGN* [2004] 2 AC 457 (HL); *Theakston v. MGN* [2003] EMLR 398, [2002] EWHC 137 (QB).

<sup>18</sup> *Fraser v. Thames* [1983] 2 All ER 101.

<sup>19</sup> *Attorney-General v. Guardian* [1990] AC 109, 281–2; Gurry (2012), [5.57]–[5.60].

<sup>20</sup> [1969] RPC 41, 48. Where information is expressly protected through contract, the contract defines the coverage and can extend to trivial information: *Deloitte & Touche v. Dickson and ors* [2005] EWHC 721, [40] *per* Laddie J.

confidential'. In the context of trade secrets, the courts have occasionally suggested that, to be protectable, an idea must be economically valuable or 'commercially attractive'.

The trivia exception has had little impact upon the information protected by breach of confidence. This is because the courts have been reluctant to label information as trivial. The potential scope of the exception is further restricted by the fact that it has been suggested that it would never apply to government information. The reason for this is that it is impossible for the court to determine whether such information is important or not.<sup>21</sup> As part of the new approach adopted in relation to personal information, in *Mills v. News Group Newspapers*,<sup>22</sup> the court held that the address of Heather Mills (model and then wife of Paul McCartney) was protectable despite the 'relatively trivial character of the information'.

The reluctance of the courts to categorize information as trivial and thereby exclude it from the scope of protection can also be seen from the House of Lords' decision in *Douglas v. Hello!*.<sup>23</sup> While Lord Walker, in his dissenting speech, seems almost to have been prepared to dismiss the action on the ground that the information that the *Hello!* photographs revealed about the Douglas/Zeta-Jones wedding could not be said to be anything other than trivial,<sup>24</sup> the majority did not take the same view. Indeed, Baroness Hale, while emphasizing the importance of the triviality exception in restricting the scope of the breach of confidence action, said that she saw 'no principled reason' why photographic images of a wedding should not be protected.<sup>25</sup>

### 3 IMMORAL INFORMATION

It also seems that the courts will not enforce obligations of confidentiality relating to matters that are grossly immoral.<sup>26</sup> However, in the absence of a generally accepted code of morality, the courts have said that they should be extremely careful about castigating certain types of behaviour on the basis that it is immoral.<sup>27</sup> As such, as with the trivia exclusion, it seems that the exclusion of immoral information will have little impact upon the information protected by the action.

### 4 INFORMATION THAT IS VAGUE

In many cases, the information protected by breach of confidence is detailed and specific. Information of this nature presents few problems. Thus detailed plans of a prototype engine shown by an inventor to a manufacturer or a detailed formula for a new

<sup>21</sup> *Attorney-General v. Guardian Newspapers* [1990] AC 109, 269 per Lord Griffiths; cf. *ibid.*, 284 per Lord Goff (recognizing exclusion, but limiting it to trivia of the most humdrum kind).

<sup>22</sup> [2001] EMLR 957 (when considering whether the information should be disclosed, the trivial nature of the information was weighed against the serious risk that stalkers would pose if the address were disclosed); cf. *M v. Secretary of State for Work and Pensions* [2006] AC 91, [83] (interference with private life had to be of some seriousness before Art. 8 ECHR was engaged).<sup>23</sup> [2008] 1 AC 1.

<sup>24</sup> *Douglas v. Hello!* [2008] 1 AC 1, 81–3, [287]–[291] (clearly, Lord Walker also thought that *Creation Records* was wrongly decided and that the collection of objects around the swimming pool in that photograph was pure trivia) See Fig. 3.1 above at p. 60.

<sup>25</sup> *Douglas v. Hello!* [2008] 1 AC 1, 87, [307] per Baroness Hale. For criticism of the majority on this point, see C. Michalos, 'Douglas v. Hello: The Final Frontier' [2007] *Ent L Rev* 241.

<sup>26</sup> Following from decisions in copyright law: see pp. 122–4.

<sup>27</sup> *Stevens v. Avery* [1988] 2 All ER 477, 480–1.

pharmaceutical may be protected. However, breach of confidence also applies to more general ideas and concepts, such as a proposal for a new television series. The problem here is that if a claimant were able to impose confidentiality on very general ideas, this might enable them to impose unjustifiable burdens on anyone who received the information in confidence. To protect against this, the courts have said that the law will not protect information that is vague or general. More specifically, the courts have said that an aspiration or a desirable goal, the flavour of which can be captured in the phrase ‘wouldn’t it be great if . . . ?’, will not be protected by the action.<sup>28</sup> Instead, such information is in the public domain, free to be used by all. It should be noted that the courts have been careful to stress that vagueness and simplicity are not the same thing.<sup>29</sup>

The exclusion of vague information can be seen in *De Maudsley v. Palumbo*.<sup>30</sup> The claimant in this case argued that the defendant, which ran the dance club called the Ministry of Sound, had appropriated his ideas for a new type of dance club about which the claimant had told the defendant at a dinner party. The claimant’s idea for the new dance club consisted of five features: the club would legally be open all night; it would be very large and fitted out in hi-tech industrial warehouse style; it would incorporate separate areas for drinking, dancing, and socializing; it would have an enclosed dance area in which the sound quality would be high; and it would employ top-quality DJs. Knox J held that all five features of the claimant’s ideas were ‘individually too vague’ and thus not protectable. With the exception of the idea that the club would be legally open all night, he also said that the ideas were not novel. A similar approach was adopted in *Secton v. Delawood*.<sup>31</sup> In this case, the claimant company, which was involved in developing methods of separating oil and water, brought an action to prevent the defendants, who were former employees, from working in the same field. The Court refused to grant relief, holding that a bare goal, purpose, or possibility—a mere speculative idea—was not capable of being protected as a trade secret.

While general ideas may not be protected by breach of confidence, this does not mean that all ideas or concepts are therefore excluded. Indeed, one of the notable features of the action is that, unlike other areas of intellectual property such as copyright, breach of confidence provides protection over some of the more abstract aspects of the creative process. As with similar inquiries in other areas of intellectual property law, the difficult question is determining where and how the boundary is to be drawn between detailed information (which is clearly protectable) and very general ideas (which are not).

In thinking about where the dividing line is to be drawn, the courts have said that, to be protected, a concept or idea must be ‘sufficiently developed to be capable of being realized’—that is, it is necessary to go beyond simply identifying a desirable goal and to show a ‘considerable degree of particularity in a definitive product’.<sup>32</sup> This can be seen, for example, in *Fraser v. Thames TV*,<sup>33</sup> which concerned an idea for a television series about the formation of a female rock group and the subsequent experiences of the members. Hirst J said that ‘to be capable of protection the idea must be sufficiently developed, so that it would be seen to be a concept that has at least some attractiveness for a television programme and which is capable of being realised in actuality’.<sup>34</sup> Similarly, in *Talbot v. General Television*,<sup>35</sup> it was held that a new concept for a television series was protectable

<sup>28</sup> *De Maudsley v. Palumbo* [1996] FSR 447, 456.

<sup>29</sup> *Ibid.*; *Cranleigh Precision Engineering v. Bryant* [1965] 1 WLR 1293, 1309, 1310.

<sup>30</sup> [1996] FSR 447.

<sup>31</sup> *Secton Pty v. Delawood Pty* (1991) 21 IPR 136, 155 (Supreme Court of Victoria). See also *Intelsec Systems v. Grechi-Cini* [1999] 4 All ER 11, 31; cf. the simple idea developed into the finished business plan in *Wheatley v. Bell* [1984] FSR 16.

<sup>32</sup> *De Maudsley v. Palumbo* [1996] FSR 447; *Sales v. Stromberg* [2006] FSR (7) 89, 110 (designs of decorative pendants, although simple geometric shapes, were confidential).

<sup>33</sup> *Fraser v. Thames* [1983] 2 All ER 101.

<sup>34</sup> *Ibid.*, 122.

<sup>35</sup> [1981] RPC 1, 9.

because it was ‘capable of being realized in actuality’. The requirement that the idea must be capable of being realized ‘as an actuality’ has been taken to mean that the idea must be capable of being transformed into ‘a finished product in the relevant medium’.<sup>36</sup>

Perhaps the best way in which to get a sense of the level of detail needed for an idea to be protected is to look at the way in which the issue has been construed in the cases. We have already seen above how, in *Palumbo*, the claimant’s ideas for a new dance club were held to be too vague to be protected. In contrast, in *Talbot*, the court held that the proposal for a new television programme was sufficiently developed to be the subject of confidence. In this case, the claimant approached the defendant with an idea for a television series about real-life millionaires. While the claimant subsequently sent the defendant a more detailed outline, this did not add very much of substance to the initial idea.<sup>37</sup> As such, it seems that the general proposal for a new type of programme involving real-life millionaires would have been protected in its own right. In effect, this is what transpired in *Fraser v. Thames TV*, in which it was held that the claimant’s concept for an idea for a television series about the formation of a female rock group was specific enough to be protected.

The level of detail required for an idea or concept to be protectable varies depending on the case in hand. Speaking about the level of detail needed for a proposal for a television programme to be protected, Hirst J said:

I do not think that [the requirement of actuality] necessitates in every case a full synopsis. In some cases the nature of the idea may require extensive development of this kind in order to meet the criteria. But in others the criteria may be met by short unelaborated statement of an idea.<sup>38</sup>

One factor that will influence the level of specificity required is the way in which information is normally treated in the industry in question. Thus, in *Fraser v. Thames TV*, Hirst J said that the fact that it was normal practice in the theatre, television, and film industries to treat general proposals for new programmes as if they were protected was an important factor in his reaching the conclusion that the information was in fact protected.<sup>39</sup>

In some cases, the courts have suggested that the test for whether an idea or concept is sufficiently developed to be protectable is to consider whether the idea or concept is ‘attractive’.<sup>40</sup> However, as Knox J pointed out in *Palumbo*, this requirement ‘doesn’t advance things much because if the element is missing it is hardly likely to be appropriated’.<sup>41</sup> The flip side of this is that if a defendant uses the information, this would be proof of its attractiveness. As such, the relative attractiveness of the information adds little to the inquiry.

## 5 INFORMATION IN THE PUBLIC DOMAIN

One of the most important restrictions placed on the information that is protected by breach of confidence is that the action does not apply to material that is in the public domain. As Laddie J said, ‘[p]rima facie, information that is in the public domain is not capable of being treated as confidential’.<sup>42</sup> The upshot of this is that, however confidential

<sup>36</sup> *De Maudsley v. Palumbo* [1996] FSR 447. Knox J distinguished between a ‘mental product’, which could be protected, and a mere ‘aspiration’, which could not.

<sup>37</sup> *Fraser v. Thames* [1983] 2 All ER 101, 121.

<sup>38</sup> *Ibid.* See further *Wade v. BBC* [2014] EWHC 634 (Ch), [55]–[56], [62] per Birss J (pitch document for music talent show to be called *The Real Deal* was found to have the necessary quality of confidence).

<sup>39</sup> *Fraser v. Thames* [1983] 2 All ER 101, 121–2.

<sup>40</sup> *Talbot v. General TV* [1981] RPC 1, 9.

<sup>41</sup> *De Maudsley v. Palumbo* [1996] FSR 447 (Knox J).

<sup>42</sup> *CMI v. Phytopharm* [1999] FSR 235, 255. See also *A-G v. Guardian* [1990] AC 109, 282.

the circumstances of communication, ‘there can be no breach of confidence in revealing to others something which is already common knowledge’.<sup>43</sup> In more positive terms, this means that, to be protected, the information must be relatively secret.

The notion of public domain has a different meaning in relation to breach of confidence than it has in other areas of intellectual property law. Before looking at what is meant by the ‘public domain’ in this context, it should be noted that the status of the information is a question of fact, not of intention. Consequently, information is still capable of being protected even though the confider intended the information to be published, but failed to do this.<sup>44</sup> Conversely, if material is in the public domain, it does not matter that the confider intended, but failed, to keep the information secret.<sup>45</sup>

### 5.1 ‘RELATIVE SECRECY’

In patent law, a single disclosure to one person is sufficient to place the information in the public domain and thus to destroy the novelty of an invention. In contrast, breach of confidence is built around a notion of ‘relative secrecy’. In essence, this means that it is possible for a number of people to know about the ‘secret’ and the information still not be in the public domain. The upshot of this is that the fact that information has been disclosed to a number of people does not necessarily mean that the information is incapable of being treated as confidential. For example, in *Prince Albert v. Strange*,<sup>46</sup> the court held that while Prince Albert had disclosed details of his engravings to friends and relatives, this did not destroy the confidentiality that existed in the information.

The crucial question is: how widespread must the information be for it to lose its status as a secret and for it to fall into the public domain? The degree of publication required before secrecy is lost depends on a range of different factors.<sup>47</sup> These include: the type of information; the section of the public that has an interest in knowing about the information;<sup>48</sup> the domain in which the information was published; the location and extent of publication within that domain; the form in which the information is published; the length of time for which the publication is accessible;<sup>49</sup> and the vigour with which the information is likely to be pursued within that domain.<sup>50</sup>

In order to deprive confidential information of its quality, a particular publication must reveal the substance of that information. Thus a partial disclosure deprives only that part of the information disclosed of its confidentiality.<sup>51</sup> The House of Lords in *Douglas v. Hello!* was divided over precisely the question of whether the information that had

<sup>43</sup> *Coco v. Clark* [1969] RPC 41, 47.

<sup>44</sup> A mere intention to publish in due course should not deprive information of its confidential status: *Douglas v. Hello!* [2008] 1 AC 1; cf. *Times v. Mirror Group* [1993] EMLR 443.

<sup>45</sup> It is clear that if the confider publishes the information, the obligation comes to an end: *Mustad v. Allcock and Dosen* (1928) [1963] 3 All ER 416.

<sup>46</sup> (1849) 2 DeG & Sm 652, 64 ER 293 (Knight Bruce LJ); (1849) 1 Mac & G 25, 41 ER 1171 (Cottenham LC).

<sup>47</sup> *BBC v. HarperCollins Publishers* [2010] EWHC 2424 (Ch), [53].

<sup>48</sup> In *Ryan v. Capital Leasing* (2 April 1993, High Court of Ireland) it was said that the public domain means that ‘the information is well known to that section of the public which has an interest in knowing the information’. See P. Lavery, ‘Secrecy, Springboards and the Public Domain’ [1998] EIPR 93.

<sup>49</sup> Inclusion of formulae for cement in particulars of claim did not deprive the information of the quality of confidence despite the fact that, between the time the claim was lodged and trial, the public might have sought to inspect them: *Orr-Adams v. Bailey* [2013] EWPC 30, [43]–[47] per Judge A. Michaels. See also *Burrows v. Emmett Smith* [2010] EWHC 22 (Ch), [34]–[35]; *G v. Day* [1982] 1 NSWLR 24 (ephemeral revelation on television did not deprive information of confidential status).<sup>50</sup> Dean, 123–9.

<sup>51</sup> *House of Spring Gardens v. Point Blank* [1983] FSR 213, 255; *Attorney-General v. Times Newspapers* [2001] 1 WLR 885 (CA), 892–3.

been confidential remained so after publication of the authorized photographs by *OK!*. According to Lord Nicholls, once the claimant had published its photos (an action that was expedited so as to limit the impact of *Hello!*'s revelation), there was nothing really left that was confidential in the defendant's photographs. In contrast, the majority took a broader view. The content of the photographs was not equivalent to a verbal description of the event; each photograph was a separate piece of information. As Lord Brown explained, '[t]he secret consists no less of each and every visual image of the wedding than of the wedding as a whole'.<sup>52</sup> Disclosure of some photographs of the wedding therefore did not deprive other photographs of their 'quality of confidence'.

A publication will not 'reveal' information if it is merely speculative. In *BBC v. HarperCollins Publishers*,<sup>53</sup> the BBC sought an injunction to prevent publication of an autobiography of Ben Collins in which he revealed that he had played the part of 'The Stig' on the BBC show *Top Gear* between 2003 and 2010. In the show, 'The Stig' test drives motor cars dressed in a white suit and wearing a white helmet. His identity is deliberately concealed from the public. The BBC claimed that Collins was under an obligation to keep his identity secret and Morgan J found that there was indeed an equitable duty of confidence.<sup>54</sup> Nevertheless, Morgan J rejected the application, finding that the fact that Collins played 'The Stig' was, by that time, in the public domain. In so finding, he carefully distinguished between speculative claims that Collins was 'The Stig' and assertions of fact. In 13 newspaper articles reporting that the BBC was trying to restrain publication of an autobiography by a person playing 'The Stig', eight national newspapers 'made increasingly confident and increasingly clear statements that Mr Collins was The Stig'.<sup>55</sup> These statements would not be understood as speculation, but as statements of fact. The fact was thereafter generally accessible to all who had an interest in knowing it.<sup>56</sup>

The idea that information is in the public domain when it can be accessed by those with an interest in knowing has other implications. In *Franchi v. Franchi*,<sup>57</sup> the court was called upon to consider whether information was still confidential after it had been published in a patent specification in Belgium, but before it had been published in the United Kingdom. It was held that the fact that the information was in the public domain in another country might be relevant when considering whether the information was confidential in the United Kingdom. The court also held that, because patent agents were in the habit of inspecting foreign specifications, the information was in the public domain. As Internet use grows, it will be increasingly difficult for a claimant to establish that information known in one place is confidential elsewhere.<sup>58</sup>

Another factor that may be useful in indicating whether information remains confidential is the extent to which further publication would harm the claimant. In some cases, the requirement of harm and the finding that the information is confidential have operated as alternative grounds. This can be seen, for example, in the *Spycatcher* decision.<sup>59</sup> Peter Wright, who was under an obligation of confidentiality as a member of the Security Services, wrote a book called *Spycatcher*. The book was published in Australia, Ireland, and the United States. The *Sunday Times* began to serialize the book in England and *The Guardian/Observer* sought to repeat the story. The Attorney-General sought an

<sup>52</sup> [2008] 1 AC 1, 73, [257] *per* Lord Nicholls; *ibid.*, 48–9, [122] *per* Lord Hoffmann; *ibid.*, 94, [329] *per* Lord Brown. <sup>53</sup> [2010] EWHC 2424 (Ch).

<sup>54</sup> As is common in the entertainment business, Collins acted through his service company, Collins Autosport Ltd, and it was the company that had contracted to provide Collins' services to the BBC.

<sup>55</sup> [2010] EWHC 2424 (Ch), [43]. <sup>56</sup> *Ibid.*, [56]. <sup>57</sup> [1967] RPC 149.

<sup>58</sup> *Attorney-General v. Guardian Newspapers* [1987] 1 WLR 1248, 1269 *per* Browne-Wilkinson V-C.

<sup>59</sup> *Attorney-General v. Guardian* [1990] AC 109.

injunction to prevent publication. Lord Keith said that the continued serialization of the book would not be a breach of confidence. This was because it would not have caused any further damage to the government.<sup>60</sup>

## 5.2 SPRINGBOARD DOCTRINE

One situation in which the breach of confidence action may provide protection over information that is in the public domain is where one party uses information that they have obtained in confidence to steal a march on competitors. This issue is dealt with by the so-called ‘springboard’ doctrine. In essence, the doctrine aims to ensure that a person who breaches a duty of confidence is not able to benefit from the breach. As Lord Denning said in *Seager v. Copydex*,<sup>61</sup> a person who obtained the information from a private source should not be in a better position than someone who went to the public source. The effect of the doctrine is to prevent a person who obtained the information from a private source from getting a head start without paying for it. As Roxburgh J said in *Terrapin v. Builders’ Supply Co.*:

[A] person who has obtained information in confidence is not allowed to use it as a springboard for activities detrimental to the person who made the confidential communication, and a springboard it remains even when all the features have been published or can be ascertained by actual inspection by any member of the public.<sup>62</sup>

The claimant in this case manufactured prefabricated portable buildings. As part of a joint venture, the claimant gave the defendant detailed technical information about the prefabricated buildings. When the relationship broke down and the defendant continued to manufacture the buildings, the claimant sued for breach of confidence. The defendant claimed that the information was no longer capable of being protected by breach of confidence. This was because the claimant had sold buildings to members of the public (which could be dismantled to reveal the details) and also published a brochure that disclosed the technical details of the buildings. In short, the defendant argued that, because the information was now in the public domain, it was no longer capable of being protected. Roxburgh J held that, to obtain information equivalent to that initially given to the defendant, the defendant would have had to dismantle a portable building and construct tests. The initial information gave the confidant a head start over a member of the public. Under the springboard doctrine, the defendants were to be placed under a special disability to ensure that they did not get a head start over competitors.

The springboard doctrine was subject to a typically careful review by Arnold J in *Vestergaard Frandsen v. Bestnet*<sup>63</sup> (a case concerned with mosquito nets that were developed to exude an insecticide). Arnold J found that the proper basis of the springboard doctrine lay in the notion of ‘relative secrecy’—that is, ‘that information may possess a

<sup>60</sup> *Attorney-General v. Guardian* [1990] AC 109, 260. Lord Keith said that, in relation to government secrets, it was necessary to show that there was a public interest in restraining disclosure and that, given that no harm would occur, this was absent.

<sup>61</sup> *Seager v. Copydex* [1967] 2 All ER 415, 417. See also *Schering Chemicals v. Falkman* [1982] QB 1, 15–16 (Denning MR dissenting).

<sup>62</sup> [1967] RPC 375, 391. See also *Saltman* (1948) 65 RPC 203 (the defendant could have taken the leather punch to pieces and constructed drawings, but had not done so and thus was liable). For criticism of the springboard doctrine on the basis of its inconsistency with the rule that, once in the public domain, the confidence ceases to exist, see Buxton LJ in *EPI Environmental Technologies v. Symphony Plastic Technologies* [2006] EWCA Civ 3.

<sup>63</sup> *Vestergaard Frandsen A/S v. Bestnet* [2009] EWHC 1456 (Ch), [42]ff.

limited degree of confidentiality even though it can be ascertained by reverse engineering or by a process of compilation from public domain source'.<sup>64</sup> In such a situation, he explained, a limited injunction would be appropriate. He rejected an alternative view that injunctive relief might be an appropriate remedy to prevent a person from continuing to benefit from past misuse (but other courts still persist with such thinking).<sup>65</sup>

The springboard doctrine thus attempts to prevent a person from using any special (relatively secret) information that they may have obtained in confidence to gain an advantage over others who would have had to obtain the information by other means (such as reverse engineering the publicly available embodiment of the information). In so doing, the doctrine serves two goals: it promotes the integrity of confidential relations by minimizing any benefits that can be gained by a confidant utilizing information obtained in confidence; and it promotes fair relations between potential competitors.<sup>66</sup>

So far, we have focused on situations in which a person acquires information in confidence that could *later* be located from public sources. However, the springboard doctrine has also been extended to situations in which the confidential information was itself collated from public sources (rather than where private information has been disclosed to the public in a different form).<sup>67</sup> In *Roger Bullivant v. Ellis*,<sup>68</sup> the defendant had taken a copy of the list of customers from his employer during the course of his employment. While each of the names could have been acquired from public domain sources such as professional and trade directories, Falconer J granted an injunction to prevent the defendant from taking unfair advantage of the information. The Court of Appeal allowed the appeal and discharged the injunction, saying that such an injunction should not normally extend beyond the period for which the unfair advantage is expected to continue.<sup>69</sup>

The springboard doctrine has a number of important features. The first is that the restrictions imposed on private information do not last forever. In *Potters Ballotini v. Weston Baker*, Lord Denning explained that:

Although a man must not use such information as a springboard to get a start over others, nevertheless the springboard does not last forever. If he does use it, a time may come when so much has happened that he can no longer be restrained.<sup>70</sup>

Accordingly, the appropriate remedy was to restrict the confidant from using the information for a limited time. The appropriate period is calculated by reference to the time that it would take to discover the information from legitimate public sources.<sup>71</sup>

The second feature of the action is that, because of the difficulties in calculating the duration of the confidant's head start and the problems of enforcing it by way of injunction, the courts have indicated that they prefer to give monetary, rather than injunctive, relief.<sup>72</sup>

<sup>64</sup> *Ibid.*, [78].

<sup>65</sup> *Ibid.*, [93]. See also *Murray v. Yorkshire Fund Managers* [1998] 1 WLR 951, 960 *per* Nourse LJ ('the springboard principle can have no application where, as here, the information has ceased to be confidential').

<sup>66</sup> *Aquaculture v. New Zealand Mussel Co.* (1985) 5 IPR 353, 383 ('a principle, founded on the concept of fairness'). Dean describes the springboard doctrine 'as close to a de facto doctrine of unfair competition as Anglo-American courts have come': Dean, 143.

<sup>67</sup> *But cf. Schering v. Falkman* [1982] QB 1.

<sup>68</sup> [1987] FSR 172. <sup>69</sup> *Ibid.*, 184.

<sup>70</sup> *Potters Ballotini v. Weston Baker* [1977] RPC 202; *Sun Valley Foods v. John Philip Vincent* [2002] FSR 82 (application for springboard relief rejected because the advantage that the defendant received from the misuse of the information was ephemeral and short term in nature).

<sup>71</sup> If reverse engineering is not a possibility, the springboard metaphor is inappropriate: *Electro Cad Australia v. Mejati RCS SDN BHD* [1999] FSR 291, 307.

<sup>72</sup> *Coco v. Clark* [1969] RPC 41, 47.

### 5.3 ENCRYPTED INFORMATION

Another situation in which questions about the status of information arise is where information is encrypted. What is the effect of disclosing information in an encrypted form? If a person places encrypted information in the public domain, does this mean that the information is secret and potentially protectable? Or does it mean that the information is published and thus not protectable?

The question of whether the encrypted information that is in the public domain is capable of being protected by the law of confidentiality was considered in *Mars v. Teknowledge*.<sup>73</sup> The claimant in the case designed and manufactured coin-receiving and coin-changing mechanisms (which are used in vending machines). The mechanisms included ‘discriminators’ that function to determine the authenticity and denomination of a coin fed into the machine. One of the problems with the discriminators was that, whenever there was a change in the coinage, they had to be reprogrammed. The claimant developed a new discriminator (called the ‘Cashflow’), which had the ability to be reprogrammed for new coin data. Cashflow consisted of ‘a data layout, a serial communications protocol and an encryption system to make it difficult for third parties to find out by reverse engineering how to recalibrate (reprogram) the Cashflow discriminator’. Importantly, none of this information was published directly by the claimant. The defendant had broken the encryption system and reverse-engineered the Cashflow discriminator. The claimant brought an action arguing, among other things, that the defendant’s activities by way of reverse engineering amounted to a breach of confidence.

Jacob J held that the encrypted information in the Cashflow machine did not have the necessary quality of confidence. After noting that the machine was freely available on the market,<sup>74</sup> Jacob J said that:

Anyone with the necessary skill to de-encrypt had access to the information. The fact that only a few have those skills is ... neither here nor there. Anyone can acquire the skills and, anyway, a buyer is free to go to a man who has them.<sup>75</sup>

On this basis, Jacob J concluded that, because the information had been published, it was not capable of being protected.

The courts have adopted a similar approach in situations in which the information is embodied in an object in the public domain that can be accessed only through reverse engineering.<sup>76</sup> The cases have suggested that where information is embodied (or hidden) in a machine or a product that is in the public domain, the information is also in the public domain and thus not capable of being protected. The upshot of this is that information will be treated as having been published and thus in the public domain, even though it can be accessed only through a process of decryption or reverse engineering.

We think that while the outcome of these cases is correct, they are wrongly reasoned. In our view, the encrypted information in the *Mars* case was relatively secret.<sup>77</sup> Indeed, Jacob J acknowledged this when he indicated that a person who had received that information confidentially would be liable if they were to disclose it. The result in the cases is correct, however, because a person who reverse engineers a publicly available product should not be regarded as owing any duty of confidentiality.<sup>78</sup>

<sup>73</sup> [2000] FSR 138.

<sup>74</sup> For consideration of the situation in which the product has been hired rather than sold, so that the product is not ‘freely available’, see *K. S. Paul (Printing Machinery) v. Southern Instruments (Communications)* [1964] RPC 118.

<sup>75</sup> *Mars v. Teknowledge* [2000] FSR 138, 149.

<sup>76</sup> *Saltman* (1948) 65 RPC 203.

<sup>77</sup> But cf. *Ackroyds v. Islington Plastics* [1962] RPC 97, 104 (if what is in the public domain needs reverse engineering, that information ought to be treated as relatively secret).

<sup>78</sup> See below, pp. 1165–6

#### 5.4 PUBLIC INFORMATION THAT BECOMES SECRET

In patent law, the standard for deciding whether information is in the public domain is absolute. This means that, once information is in the public domain, it can never become secret. In contrast, with the breach of confidence action, the test for whether information is in the public domain is more flexible. As a result, the status of information may change over time. This means that it is possible for information that is in the public domain to become secret. This may occur because the public forgets the information, or because the individuals that make up the relevant public change. For example, in *Schering Chemicals v. Falkman*,<sup>79</sup> details had been widely publicized between 1975 and 1978 that a drug called PRIMODOS, which Schering manufactured for use as a pregnancy test, had damaged unborn children. In order to improve its image, which had been damaged by the adverse publicity, Schering engaged a public relations firm, Falkman, to train its staff in the handling of television interviews in relation to the drug. One of Falkman's employees approached Thames TV with a view to making a documentary about Schering and PRIMODOS. Even though the information upon which the programme was based could have been derived from public sources, the Court of Appeal granted Schering an injunction on the grounds of a breach of confidence. Shaw LJ stated that 'to revive the recollection of matters which may be detrimental or prejudicial . . . is not to be condoned because the facts are already known and linger in the memories of others'.<sup>80</sup>

#### 5.5 DISCLOSURE BY THE CONFIDANT

For some time, it was thought that, where information had entered the public domain as a result of a breach of confidence, this did not affect the status of the information. While the information may have been *public knowledge*, the fact that the information entered the public domain wrongfully meant that it was not *public property*.<sup>81</sup> This meant that the information remained confidential in spite of the fact that it was widely available. Others argued that once information was in the public domain, it was not capable of being protected by the action. This was the case even where disclosure arose through a breach of confidence.

Most of the confusion as to whether information disclosed through a breach of confidence is still capable of being protected by the action was resolved in *Spycatcher*.<sup>82</sup> In this decision, Lord Goff held that once information was widely available, there could be no obligation respecting it. This was because the subject matter of the obligation had vanished: once information is in the public domain, the courts cannot restrain further publication.<sup>83</sup>

Even though information that enters the public domain via a breach of confidence is not capable of being protected by the action, this does not mean that the confidant is thereby absolved of liability. In these circumstances, the confidant has clearly committed a wrong and will be subject to the regular remedies for breach of confidence. Some cases have referred to the provision of remedies against the confidant in these circumstances as the 'springboard' doctrine,<sup>84</sup> the idea being that a person who obtained information in confidence is not allowed to use it as a springboard for activities detrimental to the

<sup>79</sup> [1982] QB 1. <sup>80</sup> *Ibid.*, 28.

<sup>81</sup> *Cranleigh Precision Engineering v. Bryant* [1964] 3 All ER 289; *Speed Seal Products v. Paddington* [1986] FSR 309.

<sup>82</sup> *Attorney-General v. Guardian* [1990] AC 109. For commentary, see G. Jones, 'Breach of Confidence: After *Spycatcher*' (1990) 42 CLP 48.

<sup>83</sup> *Ibid.* <sup>84</sup> *Ocular Sciences* [1997] RPC 289, 399.

person who made the confidential communication. We prefer to reserve the spring-board metaphor for a different category of cases (which were discussed above). We will look at the remedies against an errant confidant when we look at remedies for breach of confidence later.

## 5.6 COMPILATIONS OF INFORMATION THAT IS IN THE PUBLIC DOMAIN

While information that is in the public domain will not be protected by the breach of confidence action, a distinction is drawn between such information (which is not protected) and information that builds upon such information (which may be protected). It is clear that where someone collects, arranges, or elaborates on elements that are already in the public domain, the resulting information is capable of being protected.<sup>85</sup> As Lord Greene MR said in *Saltman Engineering*,<sup>86</sup> ‘it is perfectly possible to have a confidential document ... which is the result of work done by the maker on materials which may be available for the use of anybody’. He added that ‘what makes it confidential is the fact that the maker of the document has used his brain and thus produced a result which can only be produced by somebody who goes through the same process’.<sup>87</sup> In a similar vein, Megarry J said in *Coco v. Clark* that:

[S]omething constructed solely from materials in the public domain may possess the necessary quality of confidentiality ... But whether it is described as originality or novelty or ingenuity or otherwise, I think there must be some produce of the human brain which suffices to confer a confidential nature upon the information.<sup>88</sup>

It is clear that not all acts of compilation will produce results that are capable of being protected. Indeed, as Knox J has said, ‘a combination of features which were not individually novel does not automatically become novel by being added together’.<sup>89</sup>

The status of compilations of information that is in the public domain was considered in *Ocular Sciences v. Aspect Vision*.<sup>90</sup> In this case, the claimant asserted that a booklet that contained a compendium of the detailed dimensions of the claimant’s range of contact lenses was confidential. This was the case even though each of the lenses had been put on the market. The claimant argued that, to obtain even a small amount of the information contained in the booklet, a lens manufacturer would need to analyse thousands of lenses—a process that would take considerable time and effort. Laddie J said that he had great doubts as to whether ‘a mere mechanical collection of data which is in the public domain’ could be confidential.<sup>91</sup> He added that *Saltman* and *Coco* do not establish that the compilation of information in the public domain is always enough to confer confidentiality. While valuable and novel ideas could be produced by the judicious selection and combination of a number of items that are separately in the public domain, and such ideas would be capable of being the subject of an obligation of confidence, they would be such only if they were the ‘product of the skill of the human brain’.<sup>92</sup> In contrast, Laddie J said that a ‘mere non-selective list of publicly available information should not be treated as confidential even if putting it together involves some time and effort. No relevant skill is employed.’<sup>93</sup>

<sup>85</sup> TRIPS, Art. 39(2).      <sup>86</sup> (1948) 65 RPC 203, 215.      <sup>87</sup> *Ibid.*, 215.      <sup>88</sup> [1969] RPC 41, 47.

<sup>89</sup> *De Maudsley v. Palumbo* [1996] FSR 447, 459; cf. *Burrows v. Emmett Smith* [2010] EWHC 22 (Ch), [34] (the combination of elements in a proposed video game was original).      <sup>90</sup> [1997] RPC 289.

<sup>91</sup> *Ibid.*, 374.      <sup>92</sup> *Ibid.*, 375.      <sup>93</sup> *Ibid.*

As is the case with the copyright protection for derivative works and compilations of fact, the difficult question is identifying the type and level of labour that needs to be exerted on material in the public domain for the resulting information to be capable of being protected.<sup>94</sup> While this topic has attracted very little attention, it seems that the threshold for protection is low.<sup>95</sup> This can be seen in *Talbot*,<sup>96</sup> in which the court was called upon to decide whether a proposal for a television programme about real-life millionaires was capable of being protected by the action. While similar television programmes had already been made, the court held that the claimant's programme had a 'commercial twist' or a 'particular slant' that distinguished it from previous programmes. The unique feature of the proposal was that, as part of the programme, successful millionaires, such as Alan Bond and Neil Diamond, were to give the recipe for their success.

### 5.7 CONFIDENTIAL INFORMATION ABOUT PUBLIC INFORMATION?

The account so far has left at least one issue unexplained. This relates to the level of protection to be afforded to private information about public information. In *Cranleigh Precision Engineering v. Bryan*,<sup>97</sup> the defendant had been managing director of the claimant firm, which manufactured swimming pools made according to a patent owned by the company. In the course of his employment, the defendant learned of the previous grant of a patent for similar swimming pools. Instead of informing the claimant, the defendant set up a rival business and purchased the patent. The claimant sought an injunction to restrain the defendant from making use of information received in his capacity as managing director—in particular, 'the knowledge of the possible effect to and on the [claimant] of the existence and publication of the specification'. Roskill J granted an injunction preventing the defendant from making use of the patent.<sup>98</sup> In so doing, Roskill J rejected the defendant's argument that, because the information related to a patent that was in the public domain, the information in question was also in the public domain.

Although *Cranleigh* was initially interpreted as supporting the proposition that confiders could not be released from an obligation of confidentiality by their own acts,<sup>99</sup> subsequent case law has rejected this approach. How, then, are we to explain the result in *Cranleigh*? If we ignore the easy option of arguing that it was wrongly decided, two alternative ways of explaining the decision present themselves. According to the first view, the defendant was under a fiduciary duty, which meant that instead of taking advantage of the opportunity for himself, he should have exploited the patent for his employer. *Cranleigh* can also be explained as a case concerning confidential private information about public information: while information about the patent was in the public domain, the impact (and thus the value) of the patent depended on private information that the defendant had acquired through his employment with the claimants. As such, what was protected here was not the information disclosed in the patent *per se*, so much as it was the information

<sup>94</sup> See pp. 94, 103–5. Note also that the springboard notion may limit relief in such cases.

<sup>95</sup> *International Scientific Communications v. Pattison* [1979] FSR 429, 434 *per* Goulding J.

<sup>96</sup> *Talbot v. General TV* [1981] RPC 1, 9. See also *Fraser v. Thames* [1983] 2 All ER 101; cf *Wade v. BBC* [2014] EWHC 634 (Ch), [64]–[75] *per* Birss J (finding various individual elements of pitch document for music talent show to be called *The Real Deal* to lack novelty).

<sup>97</sup> [1964] 3 All ER 289.  
<sup>98</sup> More specifically, 'from overtly making use of their acquisition of [the patent] or any licence granted in respect thereof in support of or in connection with sales ... etc. of above-ground swimming-pools in competition with the plaintiff's above-ground swimming-pools': *ibid.*, 303.

<sup>99</sup> *Speed Seal* [1986] FSR 309.

about the consequences and importance of the patent to the defendant, which depended on information that was not in the public domain.<sup>100</sup>

## 6 NOVEL AND ORIGINAL INFORMATION?

One of the key differences between breach of confidence and the statutory forms of intellectual property relates to the qualitative restrictions placed upon the intangible property that is protected. For example, novelty and non-obviousness play a key role in limiting the inventions that are patentable; similar restrictions exist in all of the other areas that we have covered in this book. With the exception of information that is vague, or in the public domain, there are few restrictions imposed on information that is protected. In a number of recent cases, however, the courts have begun to use language that suggests that they are working towards the imposition of some type of qualitative restriction upon the type of information protected by the action. For example, in *Coulthard v. Disco Mix*,<sup>101</sup> the High Court held that information relating to the techniques that the defendant used for creating mega-mixes was not confidential. The technique involved the defendant listing the recordings, identifying the beat and key of each song, and then mixing the songs together in an order that enabled them to be blended smoothly. Judge Sher QC doubted that information about the techniques used by the claimant in creating mega-mixes would be protected. The reason for this was that the techniques were ‘pretty obvious once one is setting out to create a beat-mix’.<sup>102</sup> In other contexts, the courts have also spoken of the need for information to be *original* and *novel*. For example, in *De Maudsley v. Palumbo*,<sup>103</sup> Knox J said that, with the exception of the idea that the club would be legally open all night, the ideas were not novel.<sup>104</sup> The courts have also used novelty and originality as a way of gauging whether information that builds upon material in the public domain is capable of being protected.

It is difficult to know what to make of these statements. In part, this is because the language of the decisions is unclear. Another problem is that most of the comments were *obiter*, with little, if anything, turning on them. In thinking about the potential relevance of novelty and related criteria to the information that is capable of being protected by breach of confidence, it is helpful to ask: what purpose could they serve? In other words, what is to be gained from looking at breach of confidence in this way? Unlike the situation with patents, the obligation of confidentiality applies only to those who are in a confidential relationship with the claimant. As such, the consequence of protecting information that is not novel is much more limited than with patents. Having said that, problems could still arise if protection were to be given over information that was not novel. For example, in the absence of any restrictions as to the need for novelty (or obviousness), what would happen if a person were to approach a publisher and say, in confidence, ‘I have an idea to write a textbook on intellectual property law’? In the absence of a novelty requirement, there is a possibility that the publisher could be prevented from commissioning other authors from working in the area.<sup>105</sup> This consequence seems particularly undesirable where there are only very few people who have the potential to exploit a particular idea

<sup>100</sup> [1965] 1 WLR 1293, 1312–14.      <sup>101</sup> [1999] 2 All ER 457.

<sup>102</sup> *Ibid.*, 474. (The claimant had not argued that the idea of a mega-mix was confidential.)

<sup>103</sup> *De Maudsley v. Palumbo* [1996] FSR 447.

<sup>104</sup> *Ibid.*, 456 (idea ‘must contain some significant element of originality’).

<sup>105</sup> Although the publisher would not be prevented from going ahead with an identical proposal independently put forward by another author.

(here, legal publishers). Whether the novelty (etc.) requirement is intended to meet such concerns, and if it is, the degree to which the law succeeds in protecting the public from such restraints, are far from clear.

## 7 PRIVATE INFORMATION

As mentioned earlier, the English courts have sought to adapt the action for breach of confidence to give effect to the obligation under Article 8 of the European Convention on Human Rights (ECHR) to provide a right to respect for a person's private life. To do so, the courts have extended the action to cover some information that is to be regarded as 'private', but which the legal system would not have traditionally treated as confidential. The test adopted in *Campbell v. Mirror Group Newspapers*<sup>106</sup> for determining whether information is protected is whether the claimant has a 'reasonable expectation of privacy'.

Three points are worth observing about this test. First, if a person has a reasonable expectation of privacy, information is to be protected even though it might otherwise have been considered trivial. As Lord Walker explained in *Douglas v. Hello!*,<sup>107</sup> the argument that information is trivial or anodyne carries much less weight in a case concerned with facts about an individual's private life, 'which he or she reasonably expects to be kept confidential'.

Second, even if information is so widely disclosed that it would not be regarded as confidential, it may still retain its private character.<sup>108</sup> Consequently, courts may enjoin the further publication of private information even though its dissemination is already widespread. This was recognized both by the House of Lords in *Campbell v. MGN*, when it enjoined further publication of photographs of Naomi Campbell leaving a meeting of Narcotics Anonymous, and by the Court of Appeal in *Douglas v. Hello!*, when it granted Douglas and Zeta-Jones injunctive relief preventing further publication of unauthorized photographs of their wedding.<sup>109</sup>

Third, there remain troublesome questions as to the extent to which any photograph of a public figure in a public place comprises 'private' information (even though it would be difficult to think of such information as confidential). To date, the UK courts have indicated that such images are private only if they contain something embarrassing or offensive. A picture of a celebrity 'popping to the shops' is not to be regarded as private. In contrast, the European Court of Human Rights (ECtHR), in its famous *von Hannover* decision,<sup>110</sup> seems to suggest that all photographic images of a person (other than a public figure performing public duties) are to be regarded as 'private'. In that case, it was held that the German courts had erred when they failed to prevent publication of images of Princess Caroline of Monaco doing acts as quotidian as eating an ice cream and riding a horse. Presumably, as the jurisprudence of the ECtHR develops, the House of Lords may need to revisit the threshold applicable under UK law.

Fourth, while the question of whether a person has a reasonable expectation of privacy will always depend on the particular circumstances, the Court of Appeal has provided a useful checklist of considerations. In *Murray v. Express Newspapers*,<sup>111</sup> when holding that the infant child of a famous figure (J. K. Rowling) had a reasonable expectation of privacy

<sup>106</sup> [2004] 2 AC 457.      <sup>107</sup> [2008] 1 AC 1, [291].      <sup>108</sup> *Ibid.*, [255] *per* Lord Nicholls.

<sup>109</sup> *Campbell v. MGN* [2004] 2 AC 457; *Douglas v. Hello!* [2006] QB 125 (CA), 162, [105].

<sup>110</sup> *Von Hannover v. Germany* [2005] EHRR 1.

<sup>111</sup> [2008] EWCA Civ 446.

even when out in public, Sir Anthony Clarke MR set out a series of factors that a tribunal should consider. These included: the attributes of the claimant (whether a child or an adult); the nature of the activity in which the claimant was engaged (public duties, recreation, etc.); the place in which the claimant was at the time of the intrusion; the nature and purpose of the intrusion; whether the observer was aware of the absence of consent from the claimant; the effect on the claimant; and how the information came into the hands of the publisher.

## OBLIGATION OF CONFIDENCE

### CHAPTER CONTENTS

1 Introduction	1159	4 Strangers	1163
2 Direct Relationship	1159	5 Private Information	1167
3 Third-party Recipients	1162	6 Employees	1167

### 1 INTRODUCTION

The second element that must be proved in a breach of confidence action is that the defendant was under a legal (as opposed merely to a moral) obligation of confidentiality.<sup>1</sup> While the rights recognized by copyright, patents, design right, and trade marks apply against anyone who deals with the intangible property within the relevant jurisdiction, traditionally the breach of confidence action applies only to those who receive information in confidence. (As we will see, a different position now holds in relation to private information.) In describing the situations in which an obligation of confidentiality will arise, it is common practice to focus on the nature of the relationship between the parties. In following this model, we look at the duties that arise where the parties are in a direct relationship, where there is an indirect relationship, and where there is no relationship between the parties. We then look at the duties that arise when the parties are in an employment relationship.<sup>2</sup>

### 2 DIRECT RELATIONSHIP

The first and most straightforward situation in which a duty of confidence may arise is where the parties are in a direct relationship with each other. In these circumstances, a duty of confidence may arise contractually, as a result of the type of relationship that exists between the parties, or because of the way in which the information is communicated. We will deal with each in turn.

<sup>1</sup> See *Attorney-General v. Jonathan Cape* [1976] QB 752; *Malone v. Metropolitan Police Commissioner* [1979] Ch 344.

<sup>2</sup> For considerations that arise in relation to disclosures to statutory bodies, see Gurry (2012), ch. 13.

## 2.1 CONTRACTUAL PROVISIONS AS TO CONFIDENTIALITY

A person may be under a contractual obligation not to use or disclose information. The contractual conditions of confidentiality may be express or implied.<sup>3</sup> Express obligations typically arise in employment contracts (at which we look later) and in the licensing of know-how, and more generally in commercial ‘non-disclosure agreements’. The relationship between banker and customer is an example of a situation in which an obligation of confidentiality will normally be implied into the contract.<sup>4</sup>

## 2.2 INTRINSIC NATURE OF THE RELATIONSHIP

In some cases, an obligation of confidentiality arises as a result of the type of the relationship that exists between parties. More specifically, an obligation of confidentiality might exist as part of a fiduciary relationship that exists between the parties. A ‘fiduciary relationship’ is an equitable relationship in which one party has a duty to act for the benefit of another,<sup>5</sup> and it arises, for example, between solicitor and client, or trustee and beneficiary.<sup>6</sup> Other relationships also attract obligations of confidentiality, for example between doctor and patient, priest and penitent, or husband and wife.<sup>7</sup> It is unclear whether a duty arises automatically in relation to other personal relationships,<sup>8</sup> particularly transient or commercial sexual relationships.<sup>9</sup> Because information disclosed in such circumstances will often be private, protection can now arise (under Article 8 of the European Convention on Human Rights, or ECHR) irrespective of the existence of any prior obligation.

The manner in which the law of confidence and the law of fiduciaries interrelate is unclear.<sup>10</sup> Some courts and commentators have suggested that all confidential obligations are examples of fiduciary obligations.<sup>11</sup> However, such conflation seems inappropriate given that a number of persons normally subject to obligations of confidentiality (such as employees)<sup>12</sup> are not normally treated as fiduciaries.<sup>13</sup> It would seem preferable, at least for the sake of clarity, to keep the notions of ‘fiduciaries’ and ‘confidences’ distinct.

## 2.3 FROM THE MANNER OF COMMUNICATION

In some cases, an obligation of confidence may arise from the way in which the information is communicated between the parties.<sup>14</sup> In these circumstances, the test for whether

<sup>3</sup> However, an express confidentiality agreement may be void. In the case of software, for example, a click-wrap restriction prohibiting decompilation may be void: see p. 229, 262–3, 329–30.

<sup>10</sup> See Gurry (2012), [9.126]–[9.142] (confidentiality and fiduciary obligations are conceptually distinct, but may be overlapping or intertwined).

<sup>11</sup> *Schering v. Falkman* [1982] 1 QB 1, 27; *Attorney-General v. Blake* [1998] 1 All ER 833, 843 (not discussed by the House of Lords); *Ocular Sciences v. Aspect Vision* [1997] RPC 289, 413.

<sup>12</sup> *Balston v. Headline Filters* [1990] FSR 385; cf. *Attorney-General v. Blake* [1998] 1 All ER 833, 842.

<sup>13</sup> *Indata Equipment Supplies v. ACL* [1998] FSR 248, 256, 262, 264; *LAC Minerals v. International Corona Resources* [1990] FSR 441.

<sup>14</sup> *Vestergaard Frandsens A/s v. Bestnet Europe Ltd* [2013] UKSC 31 (a person ‘had agreed, or ought to have appreciated, that it was confidential’); Gurry (2012), [7.36]–[7.45].

there is a duty of confidence is to ask: would a reasonable recipient have realized that the information was given to them in confidence? As Megarry J said in *Coco v. Clark*:

[I]t seems to me that if the circumstances are such that any reasonable man standing in the shoes of the recipient of the information would have realized that upon reasonable grounds the information was being given to him in confidence, then this should suffice to impose upon him the equitable obligation of confidence.<sup>15</sup>

This is an objective test, but assessed in the light of the knowledge of the recipient.<sup>16</sup> The question of whether a reasonable person would consider the information to have been communicated to them in confidence always depends on the facts of the case. Perhaps the most straightforward situation is where a party makes an *express* statement that the information is confidential. In these circumstances, a defendant would find it very difficult to show that a reasonable confidant would not think themselves to be under an obligation of confidence.<sup>17</sup>

An obligation of confidence may also be *inferred* from the circumstances in question. When considering whether a reasonable person would infer that the information was confidential from the circumstances, the courts will take account of commonly held views, usages, and practices of the industry or trade in question. The way in which the parties understand their moral obligations may also be relevant.<sup>18</sup> While the question of whether the reasonable person would infer that the information is confidential always depends on the facts in hand, it may be helpful to outline some examples.

(i) *Normal conversation* Where a person blurts out information in public, no obligation of confidentiality would arise.<sup>19</sup> Equally, where information is disclosed in an informal, social setting, normally no obligation would arise.<sup>20</sup>

(ii) *Disclosures for a limited purpose* In most instances, where a person reveals information to someone for a limited purpose, this will give rise to an obligation that the information should be used only for that purpose.<sup>21</sup> This is because, where information is supplied for a specific purpose, the reasonable confidant would readily infer that the information should not be used for another purpose. This is sometimes referred to as the 'limited purpose' test. There may be circumstances, however, under which information is transferred for a limited purpose, but it is not appropriate to infer an obligation of confidence. This might be so outside the commercial field, particularly with respect to disclosures at social events or to public bodies.<sup>22</sup> Even in the commercial field, where the information could be protected by copyright, patent, or design right protection, a reasonable recipient might not assume that the information was given to them under an obligation of confidence.<sup>23</sup>

<sup>15</sup> *Coco v. A. N. Clark (Engineers)* [1969] RPC 41, 48.

<sup>23</sup> *Carflow v. Linwood* [1996] FSR 424.

### 3 THIRD-PARTY RECIPIENTS

One of the most difficult issues that arises in this area of law concerns if and when parties outside an initial confider–confidant relationship will be bound by a duty of confidence.<sup>24</sup> More specifically, if a person owing an obligation of confidence discloses confidential information to a third party, what factors determine when that third party will be treated as being subject to an obligation not to use or disclose the information?<sup>25</sup>

The precise approach to the question of when a third party will come under an obligation has frequently been informed by assumptions about the proper jurisdictional basis for breach of confidence. If confidential information is property, should all recipients not be liable? Or is confidential information equitable property, binding all recipients other than bona fide purchasers without notice? Or is protection focused on the equitable obligation of confidence and third-party liability analogous to the liability of ‘accessories’ in a breach of trust? If the focus is on the obligation, where it is contractual, are the relevant standards those for inducing breach of contract? At different times, each of these approaches seems to have been taken. However, it is now possible to offer a few more concrete principles.

(i) An indirect recipient of the information who is aware of its confidential status will normally be bound by a duty of confidence. In *Spycatcher*,<sup>26</sup> Lord Keith said that ‘[i]t is a general rule of law that a third party who comes into possession of confidential information which he knows to be such, may come under a duty not to pass it on to anyone else’.

(ii) If a person receives information innocently, but subsequently discovers that the information is confidential, they will be bound by a duty of confidence.<sup>27</sup> For example, in *English & American v. Herbert Smith*,<sup>28</sup> the papers of the counsel acting for the claimants in an action pending in the Commercial Court were mistakenly sent to the solicitors for the other side, Herbert Smith. The solicitors, who were the first defendants in this case, realized the mistake, but were instructed by their client to inspect the papers. The claimant sought an interim injunction preventing the solicitors from using information derived from the privileged documents. Browne-Wilkinson V-C granted the injunction on the ground that it did not matter whether the defendants were innocent when they received the documents, given that later use of the information was unconscionable.

(iii) It is not yet completely clear what standard of ‘knowledge’ is required to establish the liability of a recipient of information. The critical distinction seems to be between so-called ‘subjective knowledge’—that is, where a person knew or turned a blind eye to the realities (that the information was confidential)—and ‘objective knowledge’—that is, where a person knew, or a reasonable person would have appreciated, that the information was confidential. One Court of Appeal decision, *Thomas v. Pearce*,<sup>29</sup> embraced

<sup>24</sup> Gurry (2012), [7.104]; J. Stuckey, ‘The Liability of Innocent Third Parties Implicated in Another’s Breach of Confidence’ (1981) 4 *UNSWLJ* 73; S. Ricketson, ‘Confidential Information: A New Proprietary Interest?’ (1977–78) 11 *Melb U L Rev* 223, 244–5.

<sup>25</sup> If a third party has actively sought the information, it may be that they will have committed the tort of inducing breach of contract: see *British Industrial Plastics v. Ferguson* [1940] 1 *All ER* 479.

<sup>26</sup> *Attorney-General v. Guardian Newspapers (No. 2)* [1990] AC 109, 260 *per* Lord Keith, 268 *per* Lord Griffiths.

<sup>27</sup> *Stephenson Jordan & Harrison v. MacDonald & Evans* (1951) 68 *RPC* 190, (1952) 69 *RPC* 10; *Hoechst v. Chemiculture* [1993] *FSR* 270; *Cadbury Schweppes v. FBI Foods* [2000] *FSR* 491 (SCC), 504; *Vestergaard Frandsens A/s v. Bestnet Europe Ltd* [2013] *UKSC* 31, [25]; cf. *Fractionated Cane Technology v. Ruiz-Avila* (1988) 7 *Qd R* 610.

<sup>29</sup> [2000] *FSR* 718 (awareness or willingness to turn a blind eye). Note also *Attorney-General v. Guardian Newspapers (No. 2)* [1990] AC 109, 281–2 (knowledge includes circumstances under which the confidant has deliberately closed their eyes to the obvious).

the subjective knowledge (or dishonesty test). However, the House of Lords in *Campbell* seemed to recognize that ‘constructive’ notice was sufficient,<sup>30</sup> and in the *Vestergaard v. Bestnet* decision,<sup>31</sup> Lord Neuberger refers to the situation in which the recipient knew, or ought to have appreciated, that the information was confidential. Moreover, international standards require that liability exist where a person acquired or used information contrary to honest commercial practices, which includes where they knew ‘or were grossly negligent in failing to know’ that the information was revealed in breach of contract or confidence.<sup>32</sup> Given the additional trend towards recognizing the liability of recipients and strangers (see below) on the basis of objective knowledge, Arnold J has gone so far as to suggest that it is now clear that the relevant standard is objective knowledge and that *Thomas v. Pearce* is ‘no longer good law’.<sup>33</sup>

(iv) It seems that the courts might grant an injunction, but not damages against a bona fide purchaser.<sup>34</sup> In *Valeo Vision Société Anonyme v. Flexible Lamps*,<sup>35</sup> Valeo, which designed and manufactured lights for cars, disclosed details of the design to M. In turn, M revealed details of the lights to the defendant, which produced similar lights. Valeo sued the defendant for breach of confidence. Aldous J held that the information was confidential and that, despite being a bona fide purchaser, the defendant was subject to a duty of confidentiality. In so doing, Aldous J drew a distinction between a duty that will give rise to injunctive relief and one that would result in an award of damages. Aldous J indicated that while, when deciding whether to grant injunctive relief, the bona fide purchaser rule was too narrow, in order to get damages, the conscience of the defendant had to be affected. On the facts, the plaintiff failed to establish that the defendant knew that the information it used ‘was the confidential property of the plaintiff nor did it know that it should not be used without the plaintiff’s consent’.<sup>36</sup>

## 4 STRANGERS

A person may come by confidential information without having it imparted to them by the confidant or by a person owing an obligation of confidence,<sup>37</sup> for example a burglar might uncover confidential files, or a member of the public might find a confidential document in the street. In some cases, it is possible for a duty of confidence to arise even though there is no relationship between the parties.

Until recently, the case law dealing with the question as to whether (and if so, when) a stranger comes under an obligation of confidentiality was unclear. The House of Lords’ decision in *Douglas v. Hello!*<sup>38</sup> clarified the matter to a large extent. Prior to this, there were two competing views as to when a stranger receiving information was to be treated as owing a duty of confidence. The first focused on the conduct of the stranger in acquiring the information. Here, the courts looked at whether the stranger had *acted illegally*. The second line of cases focused on whether the stranger *knew* that the information was

<sup>30</sup> *Campbell v. Mirror Group Newspapers* [2004] AC 457, [44] *per* Lord Hoffmann; P. Stanley, *The Law of Confidentiality: A Restatement* (2008), 27–30; Gurry (2012), [7.110].

<sup>31</sup> [2013] UKSC 31, [26] *per* Lord Neuberger (referring to ‘blind-eye knowledge’ in defining the liability of an accessory who does not receive the information).

<sup>32</sup> See footnote to TRIPS, Art. 39.

<sup>33</sup> *Primary Group v. RBS* [2014] EWHC 1082 (Ch), [223]–[224].

<sup>35</sup> [1995] RPC 205.

<sup>36</sup> *Ibid.*, 226.

<sup>37</sup> G. Wei, ‘Surreptitious Takings of Confidential Information’ (1992) 12 *Legal Studies* 302; M. Richardson, ‘Breach of Confidence, Surreptitiously or Accidentally Obtained Information and Privacy: Theory Versus Law’ (1994) 19 *Melb UL Rev* 673.

<sup>38</sup> [2008] 1 AC 1.

confidential. As we will see, the courts have been willing to impose an obligation of confidentiality on recipients of information even where they were not in any relationship with the claimant and where the information was acquired legitimately. It is this latter approach, based on knowledge and conscionability, that was adopted by their Lordships in *Douglas v. Hello!*

#### 4.1 WAY IN WHICH THE INFORMATION WAS OBTAINED

In the early cases, the courts focused on the conduct of the person who acquired the information. More specifically, the courts looked at whether the stranger has acted illegally: if strangers acted illegally, they come under an obligation; if strangers acted legally, they do not. This distinction could be seen to explain the different outcomes in two cases of telephone tapping: *Malone v. Commissioner of Metropolitan Police*<sup>39</sup> and *Francome v. Mirror Group Newspapers*.<sup>40</sup> In the first case, the police tapped a telephone line and, as a result, prosecuted the claimant for handling stolen goods. The claimant sued the police for breach of confidence. The court held that the police did not come under an obligation of confidentiality.<sup>41</sup> In contrast, in *Francome*, it was a private investigator investigating breaches of Jockey Club rules (rather than the police) who illegally tapped the phone conversation of a jockey. The jockey concerned sought an interim injunction to prevent disclosure of the information. The Court of Appeal distinguished *Malone* and held that, in these circumstances, there was a serious question to be tried. Fox LJ noted that *Malone* was concerned with a case of authorized tapping rather than, as with the case in hand, with illegal tapping by private persons.

The different conclusions in *Francome* and *Malone* seem to depend on a distinction between a person who obtains information lawfully, who does not come under an obligation, and a person who obtains information unlawfully, who is subject to a duty of confidence.

#### 4.2 KNOWLEDGE OF THE STRANGER

However, a second line of cases seemed to ground liability on a different basis: whether the stranger had *knowledge* that the information was confidential. In *Attorney-General v. Guardian (No. 2)*, Lord Goff said:

I start with the broad general principle (which I do not intend in any way to be definitive) that a duty of confidence arises when confidential information comes to the knowledge of a person (the confidant) in circumstances where he has notice, or is held to have agreed, that the information is confidential, with the effect that it would be just in all the circumstances that he should be precluded from disclosing the information to others ... I have expressed the circumstances in which the duty arises in broad terms, ... to include certain situations, beloved of law teachers—where an obviously confidential document is wafted by an electric fan out of a window into a crowded street, or where an obviously confidential document, such as a private diary, is dropped in a public place, and is then picked up by a passer-by.<sup>42</sup>

According to Lord Goff, the key factor is not whether the stranger is acting illegally; rather, it is whether the stranger knows that the information is private or confidential. As

<sup>39</sup> [1979] Ch 344.      <sup>40</sup> [1984] 1 WLR 892.      <sup>41</sup> *Malone v. MPC* [1979] Ch 344, 376.

<sup>42</sup> [1990] AC 109, 281–2. But cf. C. Hunt, ‘Rethinking Surreptitious Takings in the Law of Confidence’ [2011] IPQ 66 (arguing that knowledge should not be sufficient to give rise to equitable obligations).

such, the question is whether ‘anything reasonably leads the observer to realize that what he or she observes is confidential’.<sup>43</sup> In *Shelley Films v. Rex Features*,<sup>44</sup> Judge Mann QC held that there was a serious question to be tried that a person acted in breach of confidence by publishing photographs of the set of the film *Frankenstein*. The photographs had been taken without authority by a stranger during filming. But the judge thought it could be assumed that the photographer saw the signs at the entrance to the film studios that said ‘Absolutely No Photography—All Films Will Be Confiscated’ and ‘No Admittance—Access to Authorized Persons Only’. These might have fixed the photographer with knowledge that the claimant regarded the information as confidential. Importantly, the judge seemed to regard knowledge, rather than illegality, as the touchstone.

The decision of the House of Lords in *Douglas v. Hello!* conclusively demonstrates that strangers can come under an obligation of confidence. In this case, *Hello!* had received the images of the Zeta-Jones/Douglas wedding from a paparazzo photographer, Mr Thorpe, who had not been invited to the wedding. From various notices, however, it was clear that both he and *Hello!* must have been aware that the wedding was regarded as confidential (because photographs were to be published exclusively by *OK!*). Affirming the analysis of Lindsay J at first instance, Lord Hoffmann (with whom Lords Brown and Baroness Hale agreed) had no doubt that Thorpe came under an obligation of confidentiality, which was binding upon *Hello!*. Douglas and Zeta-Jones had made it clear that there was to be no unauthorized photography, and had taken steps to exclude the uninvited and to preclude the taking of photographs. The rationale provided by Lindsay J—and seemingly adopted by their Lordships—was that Thorpe came under an obligation not because he was present illegally, but because he knew that the event was regarded as confidential. As for *Hello!*, Lindsay J explained that its ‘conscience’ was tainted and its actions lacked good faith, again because of its knowledge that the event was subject to an exclusive publication agreement with *OK!*.<sup>45</sup>

In *Tchenguiz v. Imerman*,<sup>46</sup> the logic was taken a step further. In this case, Tchenguiz accessed a server used by Mr Imerman to obtain his financial records. Tchenguiz wished to provide these to his sister, Mrs Imerman, to assist her in her divorce proceedings. Mr Imerman issued proceedings seeking to restrain use of the material. Having outlined the historical origins of the law of confidence, Lord Neuberger MR observed:

If confidence applies to a defendant who adventitiously, but without authorisation, obtains information in respect of which he must have appreciated that the claimant had an expectation of privacy, it must, *a fortiori*, extend to a defendant who intentionally, and without authorisation, takes steps to obtain such information.<sup>47</sup>

#### 4.2.1 Reverse engineering

These developments in the liability of strangers raise interesting questions with respect to potential liability for breach of confidence from acts of reverse engineering. If a person obtained information by dismantling a product (or decrypting a computer program), is that person to be taken to have appreciated that the information so acquired is confidential? The case law indicates that the answer is ‘no’—at least where the product that is dismantled is freely available in the marketplace.

<sup>43</sup> M. Richardson, ‘Breach of Confidence, Surreptitiously or Accidentally Obtained Information and Privacy: Theory Versus Law’ (1994) 19 *Melb U L Rev* 673, 699.

<sup>44</sup> *Shelley Films v. Rex Features* [1994] *EMLR* 134.

<sup>45</sup> [2008] 1 *AC* 1, 46–7, [113]–[115] *per* Lord Hoffmann. See Gurry (2012), [7.94].

<sup>46</sup> [2010] *EWCA Civ* 908. <sup>47</sup> *Ibid.*, [67].

In *Mars v. Teknowledge*,<sup>48</sup> the claimant argued that a person buying a coin-operating machine that contained the encrypted information was under an implied duty of confidentiality in relation to the information. Applying the reasonable person test, Jacob J said that the information embodied in the machine was *not* obviously confidential. More specifically, Jacob J said:

I cannot see why the mere fact of encryption makes that which is encrypted confidential or why anyone who de-crypts something in code, should necessarily be taken to be receiving information in confidence. He will appreciate that the source of the information did not want him to have access, but that is all.<sup>49</sup>

The decision in *Mars* should be contrasted with that in *Volkswagen v. Flavio Garcia*,<sup>50</sup> which concerned a threatened publication of an academic paper that would disclose the algorithms that were used by the claimant in its vehicle demobilizers. The defendants were cryptographers and had reverse engineered the algorithm from a chip, known as the ‘Tango Programmer’, which they had acquired from a Bulgarian website. The court, which was asked to grant an interim injunction, had to determine whether there was sufficient probability that the claimant would succeed at trial. The key question was whether the defendants were under an obligation of confidentiality. The court found that they were: the Tango Programmer, and thus the algorithm, had not been obtained from a legitimate source (such as one of the claimant’s Porsche cars), but ‘has a clearly murky origin’.<sup>51</sup> This was apparent to the judge from the website, which suggested that the vendor knew that the Tango Programmer was ‘likely to facilitate crime’. Given that the defendants appreciated this, their ‘consciences’ were affected and they were under an obligation of confidence.

#### 4.3 TO WHOM IS THE OBLIGATION OWED?

Another question of significance that arose in *Douglas v. Hello!* was the question to whom the obligation was owed.<sup>52</sup> This question arose because the appeal was brought by *OK!* against *Hello!*, Douglas and Zeta-Jones having been satisfied by their victory, on Article 8 ECHR grounds, in the Court of Appeal. There, the Court had held that any obligation of confidence was owed to Douglas and Zeta-Jones, and that the agreement into which they had entered with *OK!* had failed to transfer the benefit of any obligations to it. Indeed, Lord Phillips MR had gone so far as to say that the benefit of an obligation of confidence is not assignable. On appeal, the key issue was whether the obligations owed by Thorpe and *Hello!* were obligations owed to *OK!*. The majority held that they were, although Lord Hoffmann’s reasoning is far from transparent. He explained that:

[The point] of which one should never lose sight is that *OK!* had paid £1 million for the benefit of the obligation of confidence imposed upon all present at the wedding in respect of any photographs of the wedding ... Unless there is some conceptual or policy reason why they should not have the benefit of that obligation, I cannot see why they were not entitled to enforce it.<sup>53</sup>

What is strange about Lord Hoffmann’s reasoning is that it leaves unclear the precise legal mechanism by which an obligation came to be owed to *OK!*, as opposed to Douglas and

<sup>48</sup> [2000] FSR 138, discussed above.

<sup>49</sup> *Ibid.*, 150. See T. Aplin, ‘Reverse Engineering and Commercial Secrets’ (2013) *CLP* 1

<sup>53</sup> [2008] 1 *AC* 1, 47, [117].

Zeta-Jones. At one level, the implication is that any licensee of confidential information can bring an action against someone who uses that information in breach of confidence (at least if the latter person was aware that the licence or sharing arrangement existed). Lord Walker rightly observed, however, that, rather surprisingly, this would place a licensee of confidential information in a stronger legal position than licensees of other intellectual property rights.

## 5 PRIVATE INFORMATION

A number of changes have taken place in the way in which the breach of confidence action is applied to personal and private information. One of the most important is that it is 'no longer a necessary element of the cause of the action that the [personal] information arises from a confidential relationship'; instead, as the House of Lords held in *Campbell*, a defendant will be under an obligation of confidentiality when the person publishing the information 'knows or ought to know that there is a reasonable expectation that the information in question will be kept confidential'.<sup>54</sup> In determining whether there is a reasonable expectation of privacy, the primary focus has been 'on the nature of the information'.<sup>55</sup>

One of the consequences of the adoption of this approach is that decisions about whether private information is able to be disclosed depend not only on the threshold questions of whether the claimant has a reasonable expectation of privacy and whether the defendant was (or ought to have been) aware of this, but also often on whether or not the defendant has a good reason for disclosing the information. More specifically, in many of the recent cases, the courts have concentrated on whether the obligation is trumped by other interests (such as freedom of expression). We look at these issues below.<sup>56</sup>

## 6 EMPLOYEES

As we mentioned earlier, special considerations apply in relation to the application of the breach of confidence action between employer and employee. Because different obligations are imposed on an employee during employment from those that continue after the employment relationship has ended, we will deal with each separately.

### 6.1 DURING THE COURSE OF EMPLOYMENT

#### 6.1.1 Express duties during employment

In many cases, the contract of employment will include express provisions dealing with the nature and scope of the duty of confidence owed by the employee to the employer. During the period of employment, the courts will enforce the express terms of the contract.<sup>57</sup> Any express terms imposing a duty of confidentiality upon the employee (it is

<sup>54</sup> *Campbell v. MGN* [2004] 2 AC 457 (HL), [13], [14] *per* Lord Nicholls, [135] *per* Baroness Hale. The Lords rejected the test of Gleeson CJ in *ABC v. Lenah Game Meats* (2001) 185 ALR 1, 13, [42], that 'disclosure or observation would be highly offensive to a reasonable person of ordinary expectations'.

<sup>55</sup> *McKennitt v. Ash* [2006] EWCA Civ 1714, [15], citing Lord Goff in *A-G v. Guardian (No. 2)* [1990] AC 109, 218.

<sup>56</sup> See pp. 1184–92.

<sup>57</sup> But note the Public Interest Disclosure Act 1998, s. 1, introducing the Employment Rights Act 1996 s. 43J (agreement void insofar as it purports to preclude a worker from making a protected disclosure). For other qualifications of such express obligations, see Gurry (2012), ch. 11.

rare for an employer to be under equivalent duty) are subject to the general rules of contract.

### 6.1.2 Implied duties during employment

While a contract might not contain express clauses imposing a duty of confidentiality upon an employee, this does not mean that employees will not be bound by a duty of confidence. This is because, in some cases, the courts may imply a duty of confidence into the employment relationship. The courts have said that employees are under an implied duty of fidelity to their employers.<sup>58</sup> The duty of fidelity will prevent employees from disclosing information, from copying documents, and from competing with their employers.<sup>59</sup>

The courts have sometimes imposed more onerous obligations on more senior employees, primarily because of the fiduciary duty that they owe to their employer.<sup>60</sup> Fiduciary duties are automatically owed by directors and others in similar positions of trust.<sup>61</sup> The duty of a fiduciary is said to be one of ‘single-minded or exclusive loyalty’, to act in the employer’s interests and not their own. The duty of fidelity is a less onerous obligation of loyalty, which is merely ‘to take into consideration the interests of another’.<sup>62</sup>

## 6.2 AFTER EMPLOYMENT

Once the employment relationship has ended, different considerations apply.<sup>63</sup> On the one hand, employers have an interest in controlling the use that an employee is able to make of information that they acquired during the course of their employment. At the same time, this has been balanced against the fact that it would be unfair to enable employers to prohibit an employee from working in the same area again. This would effectively be the result if employers were able to control more generic skills that an employee might have gained during the course of their employment. If an employer repudiates the contract, it is unclear whether confidentiality obligations survive at all.<sup>64</sup>

### 6.2.1 Express obligations after employment: restraint of trade

An obligation specifically not to disclose trade secrets will rarely provide satisfactory protection to an ex-employer, since they would need to monitor carefully what every ex-employee is doing.<sup>65</sup> In order to protect themselves, therefore, employers often include in their contracts of employment a clause—usually referred to as a ‘restrictive covenant’—to the effect that the employee will not work in the same industry for a specified period after leaving employment. While acknowledging the importance of such clauses, the law also recognizes that employees should be free to make use of the personal skills, knowledge,

<sup>58</sup> *Robb v. Green* [1895] 2 QB 315, 320; *Thomas Marshall v. Guinle* [1979] 1 Ch 227.

<sup>59</sup> *Hivac v. Park Royal Scientific Instruments* [1946] Ch 169.

<sup>60</sup> *Balston v. Headline Filters* [1990] FSR 385; *Helmet Integrated Systems Ltd v. Tunnard* [2007] IRLR 126; *Crowson Fabrics Ltd v. Rider* [2007] EWHC 2942 (Ch) [77]–[85].

<sup>62</sup> *University of Nottingham v. Fishel* [2000] ICR 1462, 1492 per Elias J; *Helmet Integrated Systems Ltd v. Tunnard* [2007] FSR (16) 437, 448, [36] per Moses LJ.

<sup>63</sup> *Vestergaard Frandsens A/s v. Bestnet Europe Ltd* [2013] UKSC 31, [44] per Lord Neuberger (reiterating the social value of ex-employees engaging in honest competition with former employers).

<sup>64</sup> See *Campbell v. Frisbee* [2002] EMLR 31; *Rock Refrigerator Ltd v. Jones* [1977] 1 All ER 1; *General Billposting Co. Ltd v. Atkinson* [1909] AC 118.

<sup>65</sup> *Littlewoods Organisation v. Harris* [1978] 1 All ER 1026.

experiences, and abilities gained in the course of their employment.<sup>66</sup> The courts have attempted to navigate these conflicting goals through the doctrine of restraint of trade.<sup>67</sup> In essence, this provides that a restrictive covenant will be struck down if the obligations go beyond what is reasonably necessary to protect the employer's interests. More specifically, a restraint of trade clause will be enforceable only if it is appropriately limited as to time,<sup>68</sup> geographical coverage,<sup>69</sup> and the scope of activities (by reference to sector and roles).<sup>70</sup>

The operation of the doctrine can be seen from *Mont v. Mills*.<sup>71</sup> In this case, the defendant had been employed in the paper tissue industry for 20 years. He left the claimant company and signed a severance agreement, under which he received a large sum of money. The agreement also said that the defendant was required not to join another company in the tissue industry for one year. The defendant failed to honour this promise and became joint managing director of a competitor, whereupon the claimant sought an injunction. The Court of Appeal held that the severance agreement was unenforceable on the basis that it was an unjustifiable restraint of trade. This was because the undertaking was not limited as regards geographical area or the nature of the activities to which it applied. The Court declined to construe the clause restrictively—for to do so would provide employers with no incentive to impose restraints in appropriately limited terms.<sup>72</sup> Simon Brown LJ noted that the fact that the company had paid the ex-employee during the period of restraint did not prevent the agreement from being unenforceable. The law's concern was not merely that all persons should be able to earn a living. If that were the only policy, the law would permit an employer to buy such restraints. Rather, Simon Brown LJ argued, '[p]ublic policy clearly has regard to the public interest in competition and in the proper use of an employee's skills'.<sup>73</sup>

'Garden leave' The level of duty owed by employees to their employers differs markedly depending on whether or not they are employed.<sup>74</sup> If a company wishes to restrain an employee from entering into similar employment, the most effective mechanism is to retain them as an employee.<sup>75</sup> This is often done by placing employees on 'garden leave'. This occurs where an employee remains as a paid employee for a specified period of time, during which they are not required to attend work or carry out normal duties. In contrast with post-employment provisions, 'garden leave' agreements are not normally subject to the doctrine of restraint of trade; rather, they are enforceable. Even so, questions remain as to what remedy is appropriate to enforce the contract.<sup>76</sup> In *GFI Group v. Egglestone*,<sup>77</sup> in which an employee was required to give 20 weeks' notice, the court granted an injunction to prevent the employee from working for a competitor for three months after he had given notice of resignation. Here, the court was influenced by the high pay that the employee received and the fact that the agreement had been negotiated between the parties (rather than imposed by the employer). Although the courts recognize employees'

interest in exercising their skills, a ‘garden leave’ agreement will be enforced if failure to do so would harm the employer. The courts have suggested that an employer can utilize both a ‘garden leave’ agreement and a restrictive covenant, although the existence of the ‘garden leave’ agreement may be taken into account when determining the reasonableness of the restrictive covenant.<sup>78</sup>

### 6.2.2 Implied obligations after employment

In the absence of an express duty of confidence in the contract of employment, the courts may imply certain limited obligations on the use that ex-employees can make of information acquired during the course of their employment. In a normal business context,<sup>79</sup> the obligations imposed are primarily limited to the use that can be made of trade secrets.

The classic authority on the position of ex-employees is *Faccenda Chicken v. Fowler*.<sup>80</sup> In this case, the claimant, who sold fresh chickens from refrigerated vans, attempted to prevent a former employee from participating in a competing venture. The claimant argued that, in so doing, the ex-employee was utilizing confidential information concerning the customers, prices, products sold, and so forth. Because the ex-employee’s contract contained no restrictive covenant, the Court of Appeal was called upon to decide the scope of implied post-employment obligations. The Court of Appeal held that an ex-employee’s obligations were confined to ‘trade secrets’, which include things such as chemical formulae,<sup>81</sup> secret manufacturing processes,<sup>82</sup> designs and special methods of construction,<sup>83</sup> and ‘other information of a sufficiently high degree of confidentiality to amount to a trade secret’.<sup>84</sup>

In *Faccenda*, the Court of Appeal said that, in deciding whether information amounts to a trade secret, the court should consider four factors.

(i) *Nature of the employment* Under this heading, the court would consider things such as how near the employee is to the ‘inner counsel’ of the employer. This is because information made available only to trusted employees is more likely to constitute a trade secret than information disclosed to shop-floor workers.

(ii) *Nature of the information* To be capable of protection, the information must be defined with some degree of precision. Protection will not be available for general business methods and practices.<sup>85</sup> It has been said that just because the information is technical does not mean that it relates to trade secrets. If an employee is an expert or specialist, their general skill and knowledge might extend into the field of formulae, blends, or chemical processes.<sup>86</sup>

(iii) *Whether the employer impressed on the employee the confidentiality of the information* If information was specifically designated as a trade secret by the employer, it is more likely to be treated as such by the courts. However, the courts have noted that ‘it would be unrealistic to expect a small and informal organization to adopt the same business

<sup>78</sup> *Credit Suisse v. Armstrong* [1996] ICR 882.

<sup>79</sup> But cf. *A-G v. Blake* [1998] 1 All ER 833 (in Secret Service context, duty of confidence survives as long as the information remains confidential). <sup>80</sup> *Faccenda Chicken v. Fowler* [1987] 1 Ch 117.

<sup>81</sup> *Amber Size & Chemical Co. v. Menzel* [1913] 2 Ch 239.

<sup>82</sup> *Herbert Morris* [1916] AC 688, 701.

<sup>83</sup> *Reid and Sigris v. Moss and Mechanism* (1932) 49 RPC 461.

<sup>84</sup> *Printers & Finishers v. Holloway* [1965] RPC 239, 253; *Faccenda Chicken* [1987] 1 Ch 117, 136.

<sup>85</sup> *Lancashire Fire v. S. & A. Lyons* [1996] FSR 629, 668; *Aveley/Cybervox v. Boman and Sign Electronic Signal* [1975] FSR 139; *Searle & Co. v. Celltech* [1982] FSR 92.

<sup>86</sup> *Ocular Sciences* [1997] RPC 289, 385 per Laddie J (court should guard against imposing more stringent restraints on more technical employees).

disciplines as a larger and more bureaucratic concern'.<sup>87</sup> In the case of small businesses, the courts may treat information as a trade secret even though the employer did not identify it as such.

(iv) *Ease of isolation of the information* The final consideration taken into account when assessing whether information is a trade secret is whether the information can easily be isolated from other information (such as the employee's own stock of knowledge, skill, and expertise), which the employee is free to use or disclose.<sup>88</sup>

One issue that remains undecided is whether the obligations implied into an employment contract for the post-employment period change when an ex-employee intends to disclose, rather than use, the information. Because the policy considerations that restrict implied post-employment obligations to trade secrets aim to promote the mobility of labour and socially productive use of skills, it seems that the courts will be less generous to an ex-employee who sells information or exposes it gratuitously.<sup>89</sup>

## BREACH, DEFENCES, PRIVATE INFORMATION, AND REMEDIES

### CHAPTER CONTENTS

1 Introduction	1172	5 Private Information	1184
2 Breach	1172	6 Remedies	1192
3 Accessory Liability	1178	7 Proposal for an EU Directive	1198
4 Defences	1179		

### 1 INTRODUCTION

In this chapter, we complete our examination of the breach of confidence action. After looking at the third factor that a claimant must show to sustain an action—namely, that the obligation of confidence has been breached, we look at the defences upon which a defendant may rely to escape liability and the remedies available where a duty of confidence has been breached. Finally, we briefly consider a proposal for harmonization at the EU level.

### 2 BREACH

The third and final factor that must be shown to establish breach of confidence is that the obligation of confidence has been breached.

#### 2.1 SCOPE OF THE OBLIGATION

In order to determine whether the duty of confidence has been breached, it is first necessary to determine the scope of the obligation. At its most general, the duty of confidence prohibits the use and disclosure of the confidential information. While, logically, this would appear to mean that *acquisition* of information cannot be a breach of confidence (at least in cases in which no obligation arises until the information is acquired), the Court of Appeal has in fact held that the deliberate acquisition of information both gives rise to an obligation of confidence and involves the breach of that obligation.<sup>1</sup>

<sup>1</sup> *Tchenguz v. Imerman* [2010] EWCA Civ 908 ('Intentionally obtaining such information, secretly and knowing that the claimant reasonably expects it to be private, is itself a breach of confidence'). Note that TRIPS, Art. 39, speaks of the disclosure, *acquisition*, or use of information.

While the scope of the action *potentially* extends to any use or disclosure of the information, the scope of the obligations that are *actually* imposed upon an individual always depends on the facts of the case. In some circumstances, the obligation may provide that the confidential information should not be used or disclosed in any circumstances. In other situations, the confidant may use the information only for limited purposes, or for a limited period of time. Despite its importance, the question how the scope of the obligation is determined has received very little attention.

Perhaps the most straightforward situation is where the obligation arises as a result of an *express* term in a contract or an express obligation in equity. In these situations, the scope of the obligation depends on the way in which the relevant provisions are interpreted. The task of determining the scope of the obligation becomes more difficult where the obligation is *implied* into a contract or imposed by equity. Presumably, in these cases, the scope of the obligation would depend on the views of the reasonable person in the circumstances.<sup>2</sup>

One area that warrants special attention is where the scope of the obligation arises via the so-called 'limited purpose test'.<sup>3</sup> As we saw earlier, where information is imparted for a limited purpose, this may give rise to an obligation of confidence. Where information is supplied for a specific purpose, one can readily infer that the information should not be used for another purpose. In these circumstances, if the information is used for any purpose other than the limited one for which the information was imparted, there may be a breach. In many cases, it will be clear from the circumstances that the confidant actually knew that the information being disclosed to them was to be used only for a restricted purpose. In other cases, the scope of the obligation is determined by the objective standard of what the confidant *ought* to have known. This can be seen from the Australian decision in *SmithKline & French v. Department of Community Health*.<sup>4</sup> In this case, the pharmaceutical company SK&F applied to the Australian Department of Community Services and Health for permission to market certain drugs. As part of the application process, SK&F supplied the Department with information concerning the drug. The Department of Community Services later proposed to use that information to decide whether it should authorize a different company to sell a related drug. SK&F argued that, in so doing, the Department had breached the duty of confidence owed to it. The reason for this was that SK&F had disclosed the information to the Department for only one specific purpose—namely, to enable its drug to be approved. The Federal Court refused the claimant's application for an injunction. The Court said that the scope of the obligation was not to be determined by the subjective views of the confider (here, SK&F); instead, it was to be decided by the objective standard of what the confidant knew or ought reasonably to have known in the circumstances. As such, the question to be considered was whether the relevant officers of the Department ought to have known that the data furnished by SK&F was disclosed for a limited purpose (thus excluding the Department's practice of using the data to evaluate other applications).

In so ruling, the Court suggested that a number of factors should be taken into account when determining the scope of the obligation. These include: whether the information was supplied gratuitously or for a consideration; whether there were any past practices that gave rise to an understanding that the use was limited; how sensitive the information was; whether the confider had any interest in the purpose for which the information was

<sup>2</sup> Gurry (2012), [15.05]. <sup>3</sup> See above at p. 1161.

<sup>4</sup> [1990] FSR 617, 647, 20 IPR 643. For the equivalent UK decision, see *R v. Licensing Authority, ex p. Smith-Kline & French Laboratories* [1989] FSR 440, 446 (obligation of confidence interpreted as of limited scope).

to be used; and whether the confider expressly warned the confidant against a particular disclosure or use of the information.

On the facts, the Federal Court held that the scope of the obligation did not restrict the Department's use of the information to the SK&F application. Two factors influenced the Court in deciding that the equitable obligation had not been breached. The first was that previous practices (SK&F itself had submitted other applications in assessing which the Department relied upon information supplied earlier by SK&F) meant that 'it went without saying that the Department would look back at data that had already been submitted'.<sup>5</sup> The second factor that the Court stressed was that, in determining the scope of the obligation, it was necessary to 'have regard to the effect of the legal framework within which the parties were dealing', the Court adding that it would 'be slow to attribute to a regulatory authority knowledge that a party dealing with it expected it to act in a manner which would inhibit it in the exercise of its legal powers and obligations'.<sup>6</sup>

The question of the way in which the scope of the obligation should be determined was also considered by the Court of Appeal in *Source Informatics*.<sup>7</sup> In this case, Source collected information about doctors' prescribing habits and patterns, which it then sold to pharmaceutical companies, so that they could market their products more effectively. In return for a fee, pharmacists collated the relevant information from the prescription forms that had been completed by doctors and forwarded it to Source. Importantly, the information sent to Source did not include the name of the patients. The Department of Health issued a policy document that said that this process amounted to a breach of patient confidentiality. Source brought an action for judicial review, challenging the Department's policy. In particular, the company argued 'that disclosure by doctors or pharmacists to a third party of anonymous information (that is information from which the identity of the patients may not be determined), does not constitute a breach of confidentiality'.<sup>8</sup> At first instance, the Department's policy had been upheld—but the Court of Appeal overturned the decision.

Simon Brown LJ began by noting that while the 'reasonable person' test is useful in determining whether there is a duty of confidence, it does not give guidance as to the scope of the obligation of confidentiality. In considering how the scope of the obligation was to be determined, Simon Brown LJ said that 'the touchstone by which to judge the scope of [the confidant's] duty and whether or not it has been fulfilled or breached is his own conscience, no more and no less'.<sup>9</sup> On the facts, this meant that it was necessary to ask 'would a reasonable pharmacist's conscience be troubled by the proposed use to be made of patients' prescriptions? Would he think that by entering Source's scheme he was breaking his customers' confidence, making unconscientious use of the information they provide?'<sup>10</sup> If the language used here is stripped bare, the test proposed is the same objective standard as that put forward in *SmithKline & French*.

Given this, it would be reasonable to assume that Simon Brown LJ would then have gone on to consider what the reasonable pharmacist knew or ought reasonably to have known in the circumstances.<sup>11</sup> Instead of adopting such an approach, Simon Brown LJ turned to focus on the type of information in question. In particular, he said that, in relation to personal information, 'the concern of the law is to protect the confider's personal privacy'.<sup>12</sup> Simon Brown LJ went on to say that the 'patient [has] no property in the information and

<sup>7</sup> *R v. Department of Health, ex p. Source Informatics* [2000] 1 All ER 786 (CA).

<sup>8</sup> *Ibid.*, 788.

<sup>9</sup> *Ibid.*, 796.

<sup>10</sup> *Ibid.*

<sup>11</sup> *SmithKline & French v. Department of Community Services and Health* (1991) 99 ALR 679, 691; followed in *ex p. Source Informatics* [2000] 1 All ER 786 (CA), 793.

<sup>12</sup> *Ibid.*, 797.

no right to control its use provided only and always that his privacy is not put at risk.<sup>13</sup> Using the language of rights, the Court held that the scope of the obligation was limited to uses that would affect the confider's personal privacy. On the facts, the Court of Appeal held that, because the information had been used anonymously, the patient's privacy was safeguarded. The reasonable pharmacist's conscience ought not to have been troubled. As such, there was no breach of confidence. Despite the gesture towards the use of an objective standard of the reasonable pharmacist, the Court of Appeal relied more on the *a priori* language of rights (the patient's right of privacy) than on what a reasonable pharmacist would have concluded from the circumstances.<sup>14</sup>

One area in which problems may arise is where a number of people jointly generate information and one party later wants to develop it, but the others do not. For the most part, this question is decided in terms of the nature of the relationship between the parties. This can be seen in *Murray v. Yorkshire Fund Managers*.<sup>15</sup> In this case, a group of businessmen (including the claimant) developed a plan to take over an ailing business. While the financial backers were happy with the remainder of the team, they refused to work with the claimant. The claimant brought an action for breach of confidence, arguing that confidential information was disclosed to the defendant for the limited purpose of deciding whether the financier should invest in the venture disclosed in the business plan.<sup>16</sup> Rejecting this approach, Nourse LJ observed that there had never been a binding agreement that all of the members would continue to participate in the project, so that any of them could have withdrawn. He therefore concluded that the confidential information came into being for the purpose of facilitating the project and was best viewed as 'an adjunct of a relationship'. It followed that, when the claimant was excluded from the relationship, he lost the ability to control how the information was used.

The Court of Appeal decision should not be taken to be endorsing a view that one of several 'owners' of confidential information may use or exploit that information without the approval of the other 'co-owners'. Such a rule would raise complicated questions about who generated and contributed what information, and when such information came to be 'co-owned'. Rather, the Court of Appeal appears to have been attempting to produce a solution based on the expectations of the parties. This is also a sensible approach, in that if a different conclusion had been reached, it would have led to the unacceptable position in which one member of a team could prohibit the remaining members from using the information. If an individual member of a team has problems with the way in which jointly developed information is to be used, they should deal with it contractually at the outset of the arrangement.

## 2.2 HAS THE OBLIGATION BEEN BREACHED?

Once the scope of the obligation has been ascertained, it is then possible to consider whether the obligation has been breached. This is primarily a factual question. Before looking at this in more detail, it is important to note three things.

### 2.2.1 Derivation

The first is that, in order for a breach of confidence to occur, the information used by the defendant must have been *derived* from the confider's information and not

<sup>13</sup> Ibid.

<sup>14</sup> The Court of Appeal might have reached the same conclusion had it looked at the conclusions that a reasonable pharmacist would have reached from the circumstances.

<sup>15</sup> [1998] 1 WLR 951.

<sup>16</sup> Ibid., 960.

from some other source. If the information has been independently generated, there is no breach. In *CMI-Centers for Medical Innovation v. Phytopharm*,<sup>17</sup> Laddie J noted that there are three ways of proving that a defendant has used the confidential information.

- (i) The first is to show *direct evidence* of derivation. This would stem, for example, from an employee of the defendant who had seen the information being copied and then used.
- (ii) The second way of proving derivation is *indirect*. For example, if the protected information were to contain a ‘significant fingerprint’<sup>18</sup> and the defendant’s use bore the same fingerprint, the court would infer that the defendant derived its product (etc.) from the claimant. For example, the defendant’s product might have dimensions, a design, composition, or behaviour that is to be found only in the claimant’s product, and which is consistent with use of the information and inconsistent with use of non-contaminated sources. Laddie J also said that it might be possible to show that the defendant has gone to all of the same suppliers and customers as the claimant, and that it would be ‘highly unlikely that the same group would have been approached had the defendant been working from uncontaminated sources’.<sup>19</sup>
- (iii) Third, a claimant may be able to ‘persuade the court that the defendant could not have got to the position they have with the speed he has had he simply started from legitimate sources and worked everything out for himself’.<sup>20</sup>

Even if an inference of derivation can be made from similarities, it is always open to the defendant to demonstrate independent creation. This is precisely what happened in the television format case, *Wade v. BBC*.<sup>21</sup> Here, the claimant had submitted a proposal for a music talent show, called *The Real Deal*, to the defendant. The proposed show was to feature singer-songwriters, with singer-songwriters as judges, and to have a ‘whittle-down approach’. The defendant rejected the pitch, but went on to make a show entitled *Must Be the Music*. In contrast to the claimant’s proposal, this was a Sunday night, rather than a prime-time, show, with an anti-music-industry tone (a cash prize rather than a record deal). However, the shows shared some features, including allowing downloads of the songs featured on the show, singer-songwriter contestants and judges, and the use of lapel badges, (none of which was individually original). Without deciding that the shared features were sufficient in themselves to comprise confidential information,<sup>22</sup> Birss J considered whether the same features in the defendant’s programme had been derived from the claimant’s pitch. Given the evidence from those involved in developing *Must Be the Music*, he was persuaded that there was no derivation.<sup>23</sup> Only one person at the defendant company had seen the pitch and the ideas for *Must Be the Music* came from other people. A persuasive account was offered as to when and how the *Must Be the Music* format adopted each of the features that the two shows had in common.

<sup>17</sup> [1999] FSR 235, 257–8.

<sup>21</sup> [2014] EWHC 634 (Ch). <sup>22</sup> *Ibid.*, [81], [122] *per* Birss J.

<sup>23</sup> [2014] EWHC 634 (Ch), [121].

### 2.2.2 The defendant's state of mind

The second general point to note is that the defendant's state of mind is not relevant when determining breach.<sup>24</sup> There is no need for a claimant to show that the breach was conscious or deliberate. Thus it does not matter if the defendant acted in good faith, did not know that the information was confidential, or used the information accidentally<sup>25</sup> or subconsciously.<sup>26</sup>

### 2.2.3 Damage?

While there has been little discussion of whether, to be actionable, a breach of confidence must cause damage, it seems that it is necessary to show harm only in relation to government secrets. In fact, in the case of government secrets, it is now established that the Crown must demonstrate a public interest in restraining disclosure.<sup>27</sup> In *Attorney General v. Guardian (No. 2)*,<sup>28</sup> Lord Keith refused the government's claim to an injunction on the ground that it was necessary for the government to prove damage from the continued publication of *Spycatcher*, and it could prove none. In contrast, in the case of personal secrets, there is no need to prove damage. As the Court of Appeal said in *McKennitt v. Ash*,<sup>29</sup> in relation to an action for violation of private information, there was no need to show detriment beyond the fact that there had been an invasion of the claimant's private life. It also appears that, despite Megarry J's expression of doubt in *Coco v. Clark*,<sup>30</sup> there is no reason for a claimant to prove harm in relation to commercial information. The Court of Appeal has said that if detriment is a requirement, the diversion of business opportunities could amount to a detriment to the person imparting the confidential information.<sup>31</sup>

### 2.2.4 Partial uses

A breach of confidence can occur even though the confidant does not use or disclose all of the confidential information that has been imparted or is subject to an obligation. Whether it will do so will vary with the circumstances of the case. If the claimant's confidential information is the product of a lot of work, a defendant might infringe if they use a part of the information.<sup>32</sup> However, if the confidential information was the product of very little effort, it is likely that there will be a breach of confidence only if all (or most) of the information was used. An approach of this nature was supported by the Court of Appeal in *Source Informatics* when Simon Brown LJ agreed with the comment that 'a confidant will be liable for breach of his duty if he misuses *only part* of the confidential information which has been disclosed to him, provided that the misuse relates to a *material* part of the information'.<sup>33</sup>

<sup>24</sup> But *mens rea* is often a component when establishing the defendant's obligation. See above pp. 1161, 1162–3, 1164–5.

<sup>25</sup> A confidant cannot escape liability by arguing that the disclosure was accidental: *Weld-Blundell v. Stephens* [1919] 1 KB 520.

<sup>26</sup> *Seager v. Copydex* [1967] 2 All ER 415; *Talbot v. GTV* [1981] RPC 1, 17.

<sup>27</sup> *Lord Advocate v. The Scotsman Publications Ltd* [1989] FSR 580.

<sup>28</sup> [1990] AC 109, 260 per Lord Keith.

<sup>29</sup> [2006] EWCA Civ 1714. See also *Bluck v. Information Commissioner* (2007) WL 4266111, [2008] WTLR 1, [15]; *Attorney-General v. Guardian* [1990] AC 109, 256.

<sup>30</sup> *Federal Bank of the Middle East v. Hadkinson* [2000] 2 All ER 395, 413–14.

<sup>31</sup> *Amber Size v. Menzel* [1913] 2 Ch 239, 248 ('material part of the plaintiff's secret method').

<sup>32</sup> Gurry (1984), [15.10], quoted with approval in *ex p. Source Informatics* [2000] 1 All ER 786 (CA), 796.

The question whether partial use of information could constitute a breach was considered in *De Maudsley v. Palumbo*.<sup>34</sup> As we saw earlier,<sup>35</sup> this was a breach of confidence action brought in relation to an idea for a nightclub (which was rejected because the information was too vague). The court suggested that, to breach, the defendant would have needed to have used substantially the same idea. The defendant had adopted only two of the five features of the claimant's idea for a nightclub (namely, that the club was to be open all night and to have separate dancing areas). Knox J held that (in these circumstances) partial use would not be sufficient to constitute an unauthorized use for the purposes of breach of confidence. The judge also took into account that the defendant had added a number of important features, such as the idea that the club would not sell alcohol and that admission would be limited to those over the age of 21.

### 2.2.5 Where the defendant alters the confidential information

Another situation in which questions about the nature of the breach arise is where the defendant adds to or alters the confidential information. In these cases, the information ultimately used or disclosed is different from the information that was originally disclosed by the claimant. In *Ocular Sciences*,<sup>36</sup> Laddie J took the view that it was a question of fact whether the use of a derived product should be treated as a use of the information employed in its creation. He said:

It is not every derived product, process or business which should be treated as a camouflaged embodiment of the confidential information and not all ongoing exploitation of such products, processes or business should be treated as continued use of the information. It must be a matter of degree whether the extent and importance of the use of the confidential information is such that continued exploitation of the derived matter should be viewed as continued use of the information.<sup>37</sup>

It seems that similar reasoning would apply in other situations in which the information used by the defendant is different from the information that was originally disclosed by the claimant. Following similar logic, the courts held that information about etchings was replicated when it appeared in a catalogue containing descriptions of those etchings.<sup>38</sup> In another case, it was held that information about the processes for making sausage casings was used by the import of sausage casings that had been bought from a manufacturer who had wrongfully used that information.<sup>39</sup> However, it has been held that the use of a confidential computer program did not justify broader relief relating to the defendant's business, which had benefited from previous use of the program.<sup>40</sup> The problem here was that there was no evidence that the program made any significant contribution to the business.

## 3 ACCESSORY LIABILITY

As already observed, a third party who receives confidential information can come under an obligation of confidence. Such obligations are (almost certainly) treated in the same way as the primary obligations of a confidant. However, courts have been confronted

<sup>34</sup> [1996] FSR 447.      <sup>35</sup> See above at pp. 1146–7.      <sup>36</sup> [1997] RPC 289.      <sup>37</sup> *Ibid.*, 404.

<sup>38</sup> *Prince Albert v. Strange* (1849) 2 DeG & Sm 652, 64 ER 293 (Knight Bruce LJ); (1849) 1 Mac & G 25, 41 ER 1171 (Cottenham LC).

<sup>39</sup> *Union Carbide Corp. v. Naturin Ltd* [1987] FSR 538, 547.

<sup>40</sup> *Ocular Sciences* [1997] RPC 289, 403.

also with issues of potential accessory liability. In cases of ‘tort’, the principles are well established, but the peculiar status of the action for breach of confidence has left doubts as to the way in which accessory liability should be assessed. In *Vestergaard Frandsens A/s v. Bestnet Europe Ltd*,<sup>41</sup> the Supreme Court was asked to consider precisely such a question. Here, Vestergaard had been involved in the manufacture of mosquito nets that were designed to leech insecticide slowly and thus protect users. Vestergaard had been assisted in developing its product by a consultant; in due course, the consultant established a competing firm (Bestnet) and, relying on information that originated with Vestergaard, produced a similar product. The liability of Bestnet and the consultant was established, but what was at issue before the Supreme Court was the liability of Ms Sig, an ex-employee of Vestergaard, who had worked as a sales and marketing assistant. Sig was, in fact, a key figure in setting up Bestnet, but had never received the confidential information, either while an employee of Vestergaard, or afterwards. Lord Neuberger, with whom the Supreme Court agreed, found that Sig was not liable under her employment contract, or under the standard rules of confidence. However, he acknowledged that ‘a person who assists . . . in the misuse can be liable in a secondary sense’.<sup>42</sup> Drawing on the principles of the law of ‘knowing assistance’ in breach of trust, for such liability to exist, a person ‘would normally have to know that the recipient was abusing confidential information. Knowledge in this context . . . would include what is sometimes called “blind-eye knowledge”’.<sup>43</sup> Because Sig was unaware that the consultant was using Vestergaard’s confidential information, such liability was not established. There was no ‘blind-eye knowledge’, because there was no finding of dishonesty on Sig’s part, and merely taking a risk in acting as she did was not sufficient to establish such dishonesty.<sup>44</sup> Although Lord Neuberger purported to adopt ‘the approach of equity in this area’, he later acknowledged that ‘common design can, in principle, be invoked against a defendant in a claim based on misuse of confidential information’<sup>45</sup> (even though ‘common design’ is very much the language of joint tortfeasance). However, to be said to be a party to a common design, a person ‘must share with the other party, or parties, to the design, each of the features of the design which make it wrongful’.<sup>46</sup> Although she was party to various activities that rendered the consultant and Bestnet liable, because Ms Sig did not know that confidential information was being misused, she was not herself party to any common design to commit a wrong.

#### 4 DEFENCES

Once it is established that a defendant has breached an obligation of confidentiality, the only way in which they can escape liability is if they can show that they fall within one of the defences that are available to them. These include consent or authorization to use the information and disclosure in the public interest, as well as a number of other equitable and statutory immunities. We examine these in turn.

<sup>41</sup> [2013] UKSC 31. <sup>42</sup> *Ibid.*, [26].

<sup>43</sup> Citing *Royal Brunei Airlines Sdn Bhd v. Tan* [1995] 2 AC 378, 390–1 *per* Lord Nichols.

<sup>44</sup> [2013] UKSC 31, [40]–[43].

<sup>45</sup> *Ibid.*, [33]. At first instance, Arnold J had found that ‘common design’ might be available to substantiate accessory liability for breach of confidence: [2009] EWHC 1456 (Ch), [19].

<sup>46</sup> [2013] UKSC 31, [34].

#### 4.1 CONSENT OR AUTHORIZATION

If a defendant is able to show that the claimant consented to or authorized the use of the information, they will be exempt from breach. Consent to the use or disclosure of information can arise through an express licence or from a release from liability. An express licence might be contractual in nature, as with a technology-licensing agreement, or gratuitous. Consent or authorization might also be implied from the circumstances.

#### 4.2 PUBLIC INTEREST DEFENCE

The most important defence available to a defendant is the public interest defence. This provides defendants with the opportunity to escape liability for breach if they can establish that the disclosure is justified in the public interest. As Lord Phillips said, ‘the right of confidentiality, whether or not founded in contract, is not absolute. That right must give way where it is in the public interest that the confidential information shall be made public.’<sup>47</sup> The origin of the defence lies in the dicta of Wood V-C in the 1856 decision in *Gartside v. Outram*.<sup>48</sup> In that case, the claimant, who carried on business as a woolbroker, brought an action to restrain the defendant, an ex-employee, from communicating information about its business dealings. The defendant asserted that the claimant had been defrauding its customers using falsified business records. Wood V-C held that if the defendant were to make out the case pleaded by him, he would have ‘a very good case for resisting this injunction’.<sup>49</sup> He said that:

[T]here is no confidence as to the disclosure of iniquity. You cannot make me the confidant of a crime or a fraud, and be entitled to close up my lips upon any secret which you have the audacity to disclose to me relating to any fraudulent intention on your part: such a confidence cannot exist.<sup>50</sup>

Although Wood V-C’s comments suggest that the public interest is not so much a defence as a reason why the court will not recognize an obligation of confidence in the first place, case law since the 1960s has treated public interest as a defence in its own right. For example, in *Initial Services v. Putterill*,<sup>51</sup> the defendant had been employed as a sales manager by the claimant company, a laundry firm. The defendant resigned and revealed documents to the *Daily Mail* exposing the claimant’s price fixing. After the *Daily Mail* published articles about the price fixing, the claimant brought an action for breach of confidence. In response, the ex-employee argued that the disclosure was in the public interest because it revealed that the claimant was party to a price-fixing agreement contrary to the Restrictive Trade Practices Act 1956. The claimant’s action failed. Salmon and Winn LJ applied the iniquity rule, but widened it to include improper trade practices. This was on the ground that ‘what was iniquity in 1856 differed from what was iniquity in 1967’.<sup>52</sup> Lord Denning suggested a different test altogether: that the defence was not limited to crime or fraud, but rather covered any misconduct of such a nature that it is in the public interest to disclose.<sup>53</sup> Lord Denning reasserted this view in *Fraser v. Evans*,<sup>54</sup> in which he said that iniquity is merely an example of a ‘just cause or excuse’

<sup>47</sup> *Campbell v. Frisbee* [2002] EMLR 31, [23]. See also *Douglas v. Hello!* [2008] 1 AC 1, [272] per Lord Walker, [307] per Baroness Hale (contrasting public interest in disclosure with private interest in secrecy).

<sup>48</sup> (1856) 26 LJ (NS) Ch 113, 5 WR 35, 3 Jur (NS) 39, 28 LTOS 120. The judgment was delivered *extempore* and the reports vary.

<sup>49</sup> *Ibid.*, 116.

<sup>50</sup> *Ibid.*, 114.

<sup>51</sup> [1968] 1 QB 396.

<sup>52</sup> *Ibid.*, 410.

<sup>53</sup> *Ibid.*, 405.

<sup>54</sup> [1969] 1 QB 349.

for breaking a breach of confidence. More recently, the courts have incorporated the generalized public interest defence into a balancing process. For example, in *Spycatcher*, Lord Goff explained that, ‘although the basis of the law’s protection of confidence is a public interest that confidences should be preserved and protected by law, nevertheless that public interest may be outweighed by some other countervailing public interest which favours disclosure’.<sup>55</sup>

Because many of the limitations to the action for breach of confidence have been modified in relation to personal information, the courts have been willing to widen the exceptions.<sup>56</sup> Certainly, some of the limitations of the standard public interest test seem to have been modified—particularly those relating to disclosure to a responsible authority. For example, in *A v. B*,<sup>57</sup> Lord Woolf MR spoke of the public having an understandable and legitimate interest in being told information—an interest that should be taken into account even though it could not really be called a ‘public interest’.

#### 4.2.1 What is the public interest?

While it is impossible to delimit the types of circumstance in which a particular disclosure will be in the public interest, a number of different factors are taken into account when deciding whether the disclosure is in the public interest.<sup>58</sup>

(i) *Nature of the information* A key factor to be considered will be the nature of the information. If a disclosure relates to misdeeds of a serious nature and importance to the country, then it is likely to be justified as being ‘in the public interest’.<sup>59</sup> Disclosure relating to a criminal offence, civil wrong,<sup>60</sup> non-compliance with a legal obligation, a miscarriage of justice, behaviour likely to endanger health or safety, or damage the environment are obvious examples of cases in which disclosure might be justified. Although the public interest defence is defined broadly, it does not permit the unauthorized disclosure of information that is merely ‘interesting to the public’.<sup>61</sup> In this context, the law draws a distinction between matters that affect the moral, political, medical, or material welfare of the public (or a section thereof), *and* the public’s entertainment, curiosity, or amusement.

Having said this, the courts have been willing to permit the disclosure of confidential information in the public interest where it serves to correct a false image that a person has created about themselves. As the House of Lords made clear in *Campbell v. MGN*,<sup>62</sup> where a public figure makes untrue statements as to their private life, the press will normally be entitled to put the record straight—particularly where they have courted, rather than shunned, publicity. This can be seen, for example, in *Woodward v. Hutchins*,<sup>63</sup> in which the Court of Appeal held that disclosure by their former press agent of the private activities of a group of pop stars (including Tom Jones and Engelbert Humperdink) was justifiable where they had falsely represented to the public that they were clean-living. According to Lord Denning, if the image that a public figure fostered was ‘not a true

<sup>55</sup> *Attorney-General v. Guardian* [1990] AC 109, 282. See also Lord Griffiths, *ibid.*, 269.

<sup>56</sup> *Theakston v. MGN* [2002] EMLR 398, 420, [66]–[67].

<sup>57</sup> [2002] EMLR 371, [2002] 3 WLR 542, guideline (xii).

<sup>58</sup> These factors are reflected in the provisions of the Public Interest Disclosure Act 1998, which protects employees from action by employers as regards ‘protected disclosures’.

<sup>59</sup> *Beloff v. Pressdram* [1973] 1 All ER 241, 260; cf. *Bunn v. BBC* [1998] 3 All ER 552.

<sup>60</sup> *Frankson v. Home Office* [2003] 1 WLR 1952.

<sup>61</sup> *Lion Laboratories v. Evans* [1985] QB 526, 537.

<sup>62</sup> [2004] 2 AC 457 (HL), 467, [24] *per* Lord Nicholls; 474–5, [58] *per* Lord Hoffmann; 479, [82] *per* Lord Hope; 500, [151]–[152] *per* Baroness Hale.

<sup>63</sup> [1977] 1 WLR 760, 763.

image, it is in the public interest that it should be corrected', because, in these cases, 'it is a question of balancing the public interest in maintaining the confidence against the public interest in knowing the truth'.<sup>64</sup> While there have been doubts cast over the ongoing relevance of *Woodward v. Hutchins*, it has been followed in a number of decisions.<sup>65</sup>

(ii) *Consequences of non-disclosure* A disclosure may be justified as being in the public interest, even though it does not reveal wrongful behaviour or misconduct,<sup>66</sup> for example where the disclosure will protect public health or safety.<sup>67</sup> In *Lion Laboratories*,<sup>68</sup> the court held that it was legitimate for the press to disclose confidential internal papers that suggested that an alcohol-measuring machine was faulty. (The machine was used to test whether drivers were guilty of driving under the influence of alcohol.) The disclosure was justified because if the information had remained concealed, the life and liberty of an unascertainable number of persons might have been affected. Revelation in the press was justified because disclosure to the police might not have been adequate.<sup>69</sup>

(iii) *Type of obligation* Another factor that is likely to play a significant role in determining whether a disclosure is permissible is the type of obligation involved. It seems that the courts will treat some obligations as more absolute than others. For example, a disclosure by a priest or doctor could rarely be justified in the public interest.<sup>70</sup> In a rare case, the Court of Appeal held that a psychiatrist was justified in breaching the obligation of confidence that he owed to a patient who had been interned under the Mental Health Act 1983, by alerting the Home Office to the patient's interests in firearms and explosives.<sup>71</sup> This was vital information, directly relevant to public safety. The courts have also suggested that they will give more weight to obligations that arise through agreement than through other means. For example, in *Campbell v. Frisbee*, it was said that:

[A] duty of confidentiality that has been expressly assumed under a contract [arguably] carries more weight, when balanced against the restriction of the right of freedom of expression, than a duty of confidentiality that is not buttressed by express agreement.<sup>72</sup>

(iv) *Beliefs of the confidant* Because the public interest defence covers any situation in which there is 'just cause or excuse' for breaking a confidence, the court is not confined to considering whether the information is *in fact* real misconduct. Instead, the court can also take into account whether the confidant believed on reasonable grounds that revelation was required in the public interest.<sup>73</sup> In other words, according to the broader 'just cause' characterization of the defence, a disclosure may be justified where the confidant reasonably believed that they were disclosing an iniquity, even if it turns out that they were wrong.<sup>74</sup> For example, in *Malone v. Metropolitan Police Commissioner*,<sup>75</sup> it was held that if the police owed a duty of confidentiality, nevertheless there was a reasonable suspicion of iniquity such as to justify the disclosure.

<sup>64</sup> *Ibid.*, 764.

<sup>65</sup> *Campbell v. MGN* [2003] QB 633, 658, [40]–[41]. The House of Lords did not refer to *Woodward*, although it accepted the general principle.

<sup>66</sup> *Malone v. Metropolitan Police Commissioner* [1979] Ch 344, 362 *per* Megarry V-C.

<sup>67</sup> *Hubbard v. Vosper* [1972] 2 QB 84. <sup>68</sup> *Lion Laboratories v. Evans* [1985] QB 526.

<sup>69</sup> See also *W v. Egdell* [1990] 2 WLR 47; *Schering Chemicals v. Falkman* [1982] 1 QB 1.

<sup>70</sup> *X Health Authority v. Y* [1988] RPC 379, 395. <sup>71</sup> *W v. Egdell* [1990] 2 WLR 47.

<sup>72</sup> *Campbell v. Frisbee* [2002] EMLR 31, [22]. See R. Arnold, 'The Protection of Confidential Information in the Human Rights Era: Two Aspects' [2007] *JIPLP* 599 (questioning the significance of express contractual obligation). <sup>73</sup> *Fraser v. Evans* [1969] 1 *All ER* 8.

<sup>74</sup> Y. Cripps, *Disclosure in the Public Interest* (1994), 25–6.

<sup>75</sup> [1979] Ch 344, 377. See also *Woolgar v. Chief Constable of Sussex Police* [2000] 1 *WLR* 25, 36.

(v) *Party to whom the information was disclosed* Another factor that will influence whether a disclosure is justified is the party to whom the information is disclosed.<sup>76</sup> It may be legitimate to disclose information to one body, but not another. For example, while a disclosure is likely to be justified if it is made to a responsible body,<sup>77</sup> it is less likely to be justified if it is disclosed to the general public via a newspaper. As the Court of Appeal emphasized in *Lion Laboratories*,<sup>78</sup> newspapers must take special care not to confuse the public interest with their own interest in increasing circulation. Thus if the confidence relates to a crime, for a disclosure to be justified, it should normally be made to the police.<sup>79</sup> In *Francome v. Mirror Group Newspapers*,<sup>80</sup> an interim injunction was granted preventing disclosure in a newspaper of conversations that were alleged to reveal that Johnny Francome had breached Jockey Club regulations and possibly committed criminal offences. The main basis of the decision appears to have been that disclosure to the Jockey Club would have sufficed: there was no need for full newspaper disclosure.<sup>81</sup> While the courts have been wary about using the public interest defence to justify publication in a newspaper, in some cases publication in the press might be justified.<sup>82</sup>

(vi) *Other factors* A number of other factors may influence the court in determining whether disclosure is in the public interest. For example, in *Francome*, the court took account of the manner in which the information was acquired.<sup>83</sup> Another relevant factor is whether the person claiming the defence received remuneration for the disclosure.<sup>84</sup> While receipt of remuneration does not preclude the operation of the defence,<sup>85</sup> it may indicate that a defendant confused their own interests with those of the public.<sup>86</sup> Finally, it seems that the extent to which the information is already publicly available may impact on the operation of the public interest defence. If the information is not very confidential, disclosure may be justified even if there is only a low level of public interest.

(vii) *Public and private interests* Typically, the public interest defence is characterized as the balancing of one public interest against another. The idea that it might involve a balancing of public interest against a private interest was rejected in *W v. Egdell*,<sup>87</sup> in which the relevant private interest was that of the confider. It has yet to be seen, however, whether the courts might accept a defence of disclosure in the private interests of the person to whom the disclosure was made. For example, if a doctor who knew that a patient had a contagious disease were to disclose that information to a person in a sexual relationship with the patient, the court might be tempted to develop a defence of justified disclosure in the private interest.<sup>88</sup>

A related question is whether disclosure can be justified by reference to the confider's own interests. For example, is a doctor justified in revealing information about treatment

<sup>76</sup> The Employment Rights Act 1986 allows for disclosures to employers, prescribed bodies, and 'in other cases'. In the latter instance, the person to whom the information is revealed is a significant factor in assessing whether a disclosure is 'qualifying': ERA 1986, ss 43G(3)(a), 43H(2). See also *R v. Plymouth City Council* [2002] 1 WLR 2583, 2599, [50]; *Jockey Club v. Buffham* [2003] QB 462, 475–79.

of a child to the child's parents? While, in *Gillick*,<sup>89</sup> the majority of the House of Lords held that doctors did not have a duty to inform parents about the advice that the doctor had given to the children (here, in relation to contraception), the Lords did not express any view on whether, if doctors were to do so, they would be in breach. Lord Templeman, dissenting, was clear that 'confidentiality owed to an infant is not breached by disclosure to a parent responsible to that infant if the doctor considers that such disclosure is necessary in the interests of the infant'.<sup>90</sup>

#### 4.3 FREEDOM OF EXPRESSION

One of the factors that the courts take into account in deciding whether to grant relief for breach of confidence is the right to freedom of expression provided for in Article 10 of the European Convention of Human Rights (ECHR). This right, which is directly applicable as between the parties to private litigation,<sup>91</sup> operates independently of the public interest defence. As the Court of Appeal said, interference with the right has to be justified 'even where there was no identifiable special public interest in the material in question being published, since the existence of a free press was desirable in itself'.<sup>92</sup> While freedom of expression is valuable as a counterforce to privacy, the courts have been at pains to point out that it is not an 'ace of trumps'<sup>93</sup>—that is, freedom of speech is not paramount and must be balanced against other interests.<sup>94</sup>

#### 4.4 MISCELLANEOUS IMMUNITIES

A defendant may also be immune from a breach of confidence action where they have revealed information pursuant to a statutory obligation or a court order. Another way in which a defendant might be able to escape liability is via the equitable principle that, for a claimant to bring an action in equity, they must have 'clean hands'.<sup>95</sup>

## 5 PRIVATE INFORMATION

There has been a proliferation of cases in recent years in which the modified breach of confidence action has been used to protect private information. The decision as to whether private information has been violated involves two steps. First, it must be asked: is there an interference with the right to respect for one's private life? Once this has been ascertained, the next question to ask is whether the interference with that right is justified.

### 5.1 IS THERE AN INTERFERENCE WITH THE RIGHT TO RESPECT FOR ONE'S PRIVATE LIFE?

Article 8 ECHR provides that:

<sup>89</sup> *Gillick v. West Norfolk & Wisbech Health Authority* [1985] 3 All ER 402, 410–13.

<sup>90</sup> *Ibid.*, 434.

<sup>91</sup> *Douglas v. Hello!* [2001] 2 WLR 992 (CA), 1027, [133] per Sedley LJ; *Response Handling v. BBC* (2008) SLT 51 (OH).

<sup>92</sup> See *A v. B* [2003] QB 195 (CA), 205.

<sup>93</sup> *Douglas v. Hello! (No. 3)* [2003] 3 All ER 996, [185].

<sup>94</sup> *Imutran* [2002] FSR 21, 28, [17].

<sup>95</sup> See *Hubbard v. Vosper* [1972] 2 QB 84, 101 per Megaw LJ; *Church of Scientology v. Kaufman* [1973] RPC 627.

- (1) Everyone has the right to respect for his private and family life, his home and his correspondence.
- (2) There shall be no interference by a public authority with the exercise of this right except such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others.

As we explained earlier, ‘the touchstone of private life is whether in respect of the disclosed facts the person in question had a reasonable expectation of privacy.’<sup>96</sup> As Lord Hope stated:

The mind that has to be examined is not [that] of the reader in general, but [that] of the person who is affected by the publicity ... The question is what a reasonable person of ordinary sensibilities would feel if she was placed in the same position as the claimant and faced with the same publicity.<sup>97</sup>

For the most part, the courts have not had many difficulties in determining whether information is private. This is the case, for example, with information about a person’s health, their personal relationships, and their finances, as well as their name or image. It was common ground in *Campbell*,<sup>98</sup> for example, that all of the categories of information at issue potentially qualified for protection under Article 8—that is, (i) information about Ms Campbell’s drug addiction, (ii) information that she was receiving treatment, (iii) information that this was at Narcotics Anonymous, (iv) the details of the treatment (length and frequency of treatment), and (v) the visual portrayal of her leaving a Narcotics Anonymous meeting with other addicts. While, as we will see, the House of Lords may not have been willing to protect all of these different types of information, it was willing to recognize that the information was private and thus potentially able to be protected.

While ascertaining that the private life of ordinary citizens has not created any real problems, this is not the case with celebrities and public figures. The problems have manifested in two ways. The first relates to the question of how the law should deal with private information that is commercialized. What should the law do, for example, where the image rights to a celebrity wedding (that of Michael Douglas and Catherine Zeta-Jones) are pre-sold for a considerable amount of money? Should the wedding be treated as a commercial secret, a private event, or as ‘a hybrid kind in which by reason of it having become a commodity, elements that would otherwise have been merely private become commercial’?<sup>99</sup> The Court of Appeal’s response to this question was that there was ‘no reason in principle why equity should not protect the opportunity to profit from confidential information about oneself in the same circumstance that it protects the opportunity to profit from confidential information in the nature of a trade secret’<sup>100</sup>—that is, the fact that information is commodified does not affect its ability to be protected as private information.

The second problem area relates to the scope of protection that ought to be given to public figures in a public places. In essence, the question here is how much control a public figure should have over images that are taken of them in a public place. The high-water

<sup>96</sup> *Campbell* [2004] 2 AC 457, 466, [21] per Lord Nicholls. See above pp. 1157–8.

<sup>97</sup> *Ibid.*, 484, [99] per Lord Hope. In *Campbell*, this meant that, to determine whether the breach was objectionable, it was necessary to put oneself into the shoes of a reasonable person who is in need of that treatment: see *ibid.*, 481–3 per Lord Hope.

<sup>98</sup> *Ibid.*

<sup>99</sup> *Douglas v. Hello! (No. 3)* [2003] 3 All ER 996, [227].

<sup>100</sup> *Douglas v. Hello!* [2006] QB 125, [13].

mark for protection of public figures in public places is the decision in *von Hannover (No. 1)*, in which the European Court of Human Rights (ECtHR) restated the rights and expectations of public figures with regard to their private lives.<sup>101</sup> The German Federal Constitutional Court had said that, as a leading figure in contemporary society, Princess Caroline had to tolerate the publication of photographs of herself in a public place, even if they showed her in scenes of daily life, rather than in official duties. The ECtHR unanimously held that the publications had been a violation of Article 8. This was based on the fact that, in certain situations, a person has a legitimate expectation of protection for their private life—that is, ‘there is a zone of interaction of a person with others, even in a public context, which may fall within the scope of private life’.<sup>102</sup> In reaching this decision, the Court drew a distinction between celebrities and people engaged in official public business. As the Court said:

[A] fundamental distinction needs to be drawn between reporting facts—even controversial ones—capable of contributing to a debate in a democratic society relating to politicians in the exercise of their functions, for example, and reporting details of the private life of an individual who, as in this case, does not exercise official functions. While in the former case the press exercises its vital role of ‘watchdog’ in a democracy by contributing to imparting information and ideas on matters of public interest it does not do so in the latter case.<sup>103</sup>

The ECtHR said that the decisive factor in balancing the protection of private life against freedom of expression lies in the contribution that the published photographs and articles make to a debate of general interest.<sup>104</sup> In this case, the Court said that the public does not have a legitimate interest in knowing where the applicant is and how she behaves in her private life. The Court also said that the photographs in question did not ‘come within the sphere of any political or public debate because the published photos and accompanying commentaries relate exclusively to details of the applicant’s private life’.<sup>105</sup> The Court also noted that new communication technologies increased the need for the courts to be extra-vigilant to protect private life.

The question of the protection to be afforded to public figures when they undertake activities in a public space under British law may not as yet be as broad as the ECtHR has suggested. Following *Campbell*, it was widely thought that protection in the United Kingdom was limited to information of a personal or embarrassing kind. In contrast, the ECtHR had taken a much wider view of what should be regarded as falling within the scope of an individual’s private life for the purpose of Article 8 ECHR.<sup>106</sup> This was clear from *von Hannover*, which recognized that an individual whose life and activities are of public interest may have a legitimate expectation of privacy in relation to private family and personal activities that are not in themselves either embarrassing or intimate in a sexual or medical sense.<sup>107</sup> The Court in *von Hannover* also made it clear that the disclosure of information could not be justified as a legitimate exercise of the right to freedom of expression where the sole purpose of the publication is to satisfy readers’ curiosity, rather than to contribute to a debate on, or raising of, an issue of general public interest or importance.<sup>108</sup>

<sup>101</sup> *Von Hannover (No. 1)*, App. No. 59320/00 [2004] ECHR 294, (2005) 40 EHRR 1, [51].

<sup>102</sup> *Ibid.*, [50]. <sup>103</sup> *Ibid.*, [63]. <sup>104</sup> *Ibid.*, [76]. <sup>105</sup> *Ibid.*, [64].

<sup>106</sup> In *Sciacca v. Italy*, App. No. 50774/99 (2006) 43 EHRR 20, [29], the ECtHR said that ‘the concept of private life includes elements relating to a person’s right to their picture and that the publication of a photograph falls within the scope of private life’.

<sup>107</sup> *Murray v. Express Newspapers* [2007] EWHC 1908, [47]. <sup>108</sup> *Ibid.*

In contrast, Baroness Hale (among the majority) in *Campbell*, said that ‘there is nothing essentially private about how Naomi Campbell looks when she pops out to the shops for a bottle of milk... nor can [that information] be expected to damage her private life’.<sup>109</sup> Following this, Eady J refused to grant an injunction to prevent publication of an innocuous photograph of Elton John wearing a tracksuit and a baseball cap taken in a street outside his London home.<sup>110</sup> Acknowledging the divergence, in *McKennitt v. Ash*<sup>111</sup> Buxton LJ observed that ‘it is far from clear that the House of Lords that decided *Campbell* would have handled *von Hannover* in the same way as did the European Court of Human Rights’.

An attempt to minimize the divergence was made by the Court of Appeal in *Murray v. Express Newspapers*.<sup>112</sup> This was an action to prevent publication of a photograph taken of J. K. Rowling and her husband pushing their son in a pram down a public street in Edinburgh. The photograph, which was taken through a long-range lens, showed the infant’s face in profile. The action was brought by the parents on behalf of their infant son. The question arose whether routine acts, such as a visit to a shop or a ride on a bus, should not attract a reasonable expectation of privacy.

The Court of Appeal allowed Murray’s appeal from the decision of Patten J (who had struck out Murray’s claim). The Court of Appeal took the view that there was an arguable case that her child had a reasonable expectation of privacy.<sup>113</sup> The Court recognized the apparent inconsistency between *von Hannover* and *Campbell*, but held that a person could have a reasonable expectation of privacy when carrying out routine activities. A reasonable expectation of privacy was not limited to formal recreation such as playing sport. Much depended on the facts and, here, Rowling had shielded the child from publicity.

## 5.2 IS THE INTERFERENCE JUSTIFIABLE?

Once the information is identified as ‘private’, the court must then balance the claimant’s interest in keeping the information private against the countervailing interest of the recipient in publishing it.<sup>114</sup> In other words, once it has been shown that information is private, the next question to ask is: ‘[I]n all the circumstances, must the interest of the owner of the private information yield to the right of freedom of expression conferred on the publisher by Article 10?’<sup>115</sup> Article 10 ECHR provides that:

- (1) Everyone has the right to freedom of expression. This right shall include freedom to hold opinions and to receive and impart information and ideas without interference by public authority and regardless of frontiers. This article shall not prevent States from requiring the licensing of broadcasting, television or cinema enterprises.
- (2) The exercise of these freedoms, since it carries with it duties and responsibilities, may be subject to such formalities, conditions, restrictions or penalties as are prescribed by law and are necessary in a democratic society, in the interests of national security, territorial integrity or public safety, for the prevention of disorder or crime, for the protection of health or morals, for the protection of the reputation or the rights of others, for preventing the disclosure of information received in confidence, or for maintaining the authority and impartiality of the judiciary.

In balancing these competing interests, it has been held that the ‘restrictions which the courts impose on the Article 10 right must be rational, fair and not arbitrary, and they

<sup>109</sup> *Campbell* [2004] 2 AC 457 (HL), [154].      <sup>110</sup> [2006] EMLR 722.

<sup>111</sup> *McKennitt v. Ash* [2006] EWCA Civ 1714, [37].      <sup>112</sup> [2008] EWCA Civ 446.      <sup>113</sup> *Ibid.*

<sup>114</sup> *Campbell* [2004] 2 AC 457, 496, [137] *per* Baroness Hale.

<sup>115</sup> *McKennitt v. Ash* [2006] EWCA Civ 1714, [11].

must impair the right no more than is necessary'.<sup>116</sup> This can be seen from *Green Corns v. Claverley Group*,<sup>117</sup> in which, in granting an injunction to prevent a local newspaper from disclosing the addresses of care homes for troubled children, the court said that while the public interest in debating how children in need should be cared for was a question of the highest public interest, the injunction would not prevent debate.<sup>118</sup> The court added that there was no public interest in the publication of specific addresses, but only a series of private interests of those living nearby. In this situation, the court held that Article 10 interests did not outweigh the right to privacy that existed in relation to home addresses in accordance with Article 8.

The task of balancing the competing interests in Articles 8 and 10 essentially involves a factual inquiry. One of the consequences of this is that appeal courts will interfere with a trial judge's assessment of the balance between Article 8 and 10 only when there has been an error of principle.<sup>119</sup> Another consequence of the factual nature of the inquiry is that it operates as a vehicle for policy-type issues. While, following *Campbell* and *von Hannover (No. 1)*, it appeared that the pendulum had swung in favour of protection of private information and away from the protection of freedom of the press, subsequent case law—in particular *Springer*,<sup>120</sup> *von Hannover (No. 2)*,<sup>121</sup> and *von Hannover (No. 3)*<sup>122</sup>—has seen something of a rebalancing.<sup>123</sup> While the factual nature of the inquiry means that it is difficult, if not impossible, to provide detailed guidance as to how and where the line will be drawn, the ECtHR has highlighted some of the factors that are relevant to the balancing of the competing interests.<sup>124</sup>

The critical factor is that the publication contributes to a debate of general interest. Thereafter, four key considerations include:

- (i) the public profile of the claimant;
- (ii) the claimant's conduct prior to the threatened publication;
- (iii) the manner in which the information about the claimant's private affairs was obtained; and
- (iv) the content, form, and potential for harm of the publication.<sup>125</sup>

We address each in turn.

### 5.2.1 Contributing to a debate of general interest

In *von Hannover (No. 1)*, the ECtHR said that the decisive factor in balancing the protection of private life against freedom of expression was the contribution that published photos and articles make to a debate of general interest.<sup>126</sup> As noted already, this action grew out of

<sup>116</sup> *Campbell* [2004] 2 AC 457 (HL), 490, [115] per Lord Hope. <sup>117</sup> [2005] EWHC 958.

<sup>118</sup> While the need to disseminate information about Naomi Campbell's drug addiction was of a lower order than the need to disseminate information on other subjects, such as political information, the degree of latitude given to the journalists was reduced but not excluded altogether: *Campbell* [2004] 2 AC 457, 468, [29] per Lord Nicholls. Note, however, that the majority held that the newspaper had gone too far in including the images of Campbell with the report. <sup>119</sup> *McKennitt v. Ash* [2006] EWCA Civ 1714, [45].

<sup>120</sup> *Axel Springer v. Germany*, App. No. 39954/08 (2012) 55 EHRR 6.

<sup>121</sup> *Von Hannover (No. 2)*, App. No. 40660/08 (7 February 2012) (ECtHR).

<sup>122</sup> *Von Hannover (No. 3)*, App. No. 8772/10 [2014] EHRLR 61.

<sup>123</sup> E. Reid, 'Rebalancing Privacy and Freedom of Expression' [2012] *Edin L Rev* 253, 28.

<sup>124</sup> *Axel Springer v. Germany*, App. No. 39954/08 (2012) 55 EHRR 6, [89]–[95]; *Von Hannover (No. 2)*, App. No. 40660/08 (7 February 2012) (ECtHR), [108]–[113]; *Tănăsioaica v. Romania*, App. No. 3490/03 (19 June 2012) (ECtHR), [41]; *Von Hannover (No. 3)*, App. No. 8772/10 [2014] EHRLR 61, [46]; *RocknRoll v. NGN Ltd* [2013] EWHC 24 (Ch), [31].

<sup>125</sup> The Court added a further factor: the severity of the sanction.

<sup>126</sup> *Von Hannover (No. 1)*, App. No. 59320/00 [2004] ECHR 294, (2005) 40 EHRR 1, [76].

a complaint made by Princess Caroline of Monaco about a number of photographs that had been taken of her in public places and subsequently published in a number of German magazines. These included images of Princess Caroline eating at a restaurant, shopping, and playing sport. Additional photographs showed Princess Caroline at the Monte Carlo Beach Club, dressed in a swimsuit and towel, tripping over and falling down. In relation to the publication of the photographs, the Court said, the ‘public does not have a legitimate interest in knowing where the applicant is and how she behaves in her private life’.<sup>127</sup>

In subsequent case law, the Court has reiterated the critical importance of the question of whether a disclosure contributes to a matter of ‘general interest’.<sup>128</sup> Not insignificantly, it has offered a rather broad notion of the general interest, which can relate to political issues, crimes, sporting issues, and performing artists, but not the marital difficulties of a president or the financial difficulties of a singer.<sup>129</sup> In another case brought by Princess Caroline, she and her husband complained about the publication in *Frau im Spiegel* of a photograph of them out for a walk while on holiday in St Moritz, which accompanied a story about the health of Caroline’s father, Prince Rainier.<sup>130</sup> On this occasion, the Court said that it did not think the German courts had violated Article 8 ECHR in refusing relief to Caroline; rather, it accepted that the illness of Prince Rainier was a matter of general interest and that publication of the photograph was justified under Article 10. In so holding, the Court saw as relevant the facts that: Princess Caroline and her husband are ‘very well known’ and ‘public figures’; the photographs were taken of them in a public place (the middle of street); and the photographs were not in themselves offensive (even if they were taken without their consent). In a parallel hearing, a publisher complained that its freedom of expression had been unjustifiably restricted when a German court prohibited publication of a story about a well-known actor.<sup>131</sup> The actor had been arrested and convicted of taking cocaine at the Munich beer festival. The Court ruled in favour of the publisher. It said that the public had interest in being informed of the actor’s crime and his conviction, and that it was relevant that he was a popular actor ‘sufficiently well known to qualify as a public figure’, that the crime was in a public place, that the actor had previously revealed his private life to the press, that the information came from police, and that the publisher did not object to an injunction against the use of the photographs.

More remarkably, in yet another case brought by Princess Caroline, *von Hannover (No. 3)*,<sup>132</sup> the ECtHR has confirmed the German court’s assessment that an article discussing the increasing tendency of celebrities to let out their holiday homes contributed to a debate of general interest. The Court did not find that the discussion was merely a pretext for including a photograph of the complainants.

### 5.2.2 The public profile of the claimant

As we have already explained, in *von Hannover (No. 1)*, the Court drew a distinction between public figures performing official duties (in which case there is no ECtHR expectation of privacy) and private persons.<sup>133</sup> However, when it comes to balancing, the Court seems to recognize a sliding scale. At one end, there are politicians, celebrities,

<sup>127</sup> Ibid.

<sup>128</sup> See also *Mosley v. The United Kingdom*, App. No. 48009/08 (10 May 2011) (ECtHR), [113]–[114] (highlighting the difference between what is in the general or public interest and what is interesting to the public).

<sup>129</sup> *Von Hannover v. Germany (No. 2)*, App. No. 40660/08 [2012] ECHR 227, (2012) 55 EHRR 15, 388, [109].

<sup>130</sup> Ibid. <sup>131</sup> *Axel Springer v. Germany*, App. No. 39954/08 (2012) 55 EHRR 6, 183.

<sup>132</sup> *Von Hannover v. Germany (No. 3)*, App. No. 8772/10 [2014] EHRLR 61, [48]–[52].

<sup>133</sup> *Von Hannover (No. 1)*, App. No. 59320/00 [2004] ECHR 294, (2005) 40 EHRR 1, [63].

sportsmen, and actors; at the other, ordinary citizens. At the former end, while there will be a reasonable expectation of privacy, this will readily give way to Article 10 where there is a contribution to debate of general interest. In *von Hannover (No. 1)*, there simply was no such contribution, whereas in *von Hannover (No. 2)* and *von Hannover (No. 3)*, there was (albeit that the latter was quite trivial). In part, this is because a higher standard of conduct is expected of people such as headmasters, clergy, politicians, senior civil servants, surgeons, and journalists.<sup>134</sup> The same level of care might also be expected where a person acts as a role model in some way or another. In contrast, in cases concerning ordinary individuals, the privacy interests weigh more heavily. Thus, for example, in *Peck v. United Kingdom*,<sup>135</sup> the ECtHR held that the repeated broadcast on television of an embarrassing event relating to a private individual (which had been caught on CCTV) was an invasion of Peck's right to privacy, and not justified by the alleged goal of detecting and preventing crime.

### 5.2.3 The claimant's conduct prior to the threatened publication

In some situations, the conduct of the claimant plays a role in determining whether it is permissible to disclose information about them. This is particularly the case in situations in which a person has actively courted publicity about their private life. Here, the question arises: should the celebrity be able to prevent disclosure of personal information that undermines the public image of themselves that they have cultivated? The key consideration is whether the law is protecting the private sphere or whether non-disclosure is sought to protect a valuable 'brand'. This issue was addressed in the House of Lords decision in *Campbell v. MGN*,<sup>136</sup> which was an action brought by the supermodel, Naomi Campbell, in response to the publication of newspaper stories and related photographs about her attendance at Narcotics Anonymous meetings. The House of Lords held that Naomi Campbell's 'public lies' that she did not use drugs precluded her from preventing the press from disclosing that this was untrue:

Public disclosure that contrary to her assertions she did in fact take drugs and had a serious drug problem was not disclosure of private information ... where a public figure chooses to present a false image and make untrue pronouncements about his or her life, the press will normally be entitled to put the record straight.<sup>137</sup>

While the press is able to disclose information that 'puts the record straight', the fact that a person has revealed or discussed some information about their private life does not mean that they have a greatly reduced expectation of privacy in relation to other information about their private life.<sup>138</sup>

### 5.2.4 The manner in which the information about the claimant's private affairs was obtained

The way in which the information was obtained may be an important consideration. If information has been obtained through clandestine filming, this will weigh against disclosure. In *Mosley v. News of the World*,<sup>139</sup> Max Mosley—the son of notorious right-wing politician, Oswald Mosley—had been surreptitiously filmed engaging in sexual acts. The

<sup>134</sup> *McKennitt v. Ash* [2006] EWCA Civ 1714, [65].

<sup>135</sup> App. No. 44647/98 (2003) 36 EHRR 719, [79] (attempting to commit suicide by cutting his own wrists).

<sup>136</sup> [2004] 2 AC 457 (HL).

<sup>137</sup> *Ibid.*, 467, [24] *per* Lord Nicholls, 479, [82] *per* Lord Hope. See also *Ferdinand v. MGN* [2011] EWHC 2454 (QB).

<sup>138</sup> *McKennitt v. Ash* [2006] EWCA Civ 1714, [19].

<sup>139</sup> *Mosley v. The United Kingdom*, App. No. 48009/08 (10 May 2011) (ECtHR).

*News of the World*, which organized the filming, published the pictures. Although Mosley failed in his attempt to obtain interim injunctive relief, he brought a successful action for invasion of his privacy and was awarded damages. When he took the issue further to the ECtHR (claiming that English law should have required the newspaper to notify him before publishing such a damaging story), the Court called the filming ‘a flagrant and unjustified’ invasion of Mosley’s private life.<sup>140</sup> The fact that information was obtained in breach of confidence might also be relevant here—that said, the ‘confidential’ nature of material relating to a one-night stand or visits to prostitutes will be, in the Court of Appeal’s words, ‘modest’.<sup>141</sup> In other cases, for example where information is supplied by the police or pictures are taken in public places, this factor weighs in favour of publication.

### 5.2.5 The content, form, and potential for harm of the publication

After the question of whether publication is in the general interest, the most important factor is the harm to the claimant (and others). This can be seen from the *Campbell* case. It will be recalled that the House of Lords found that it was permissible to disclose information about her drug addiction to the public, so the question in *Campbell* was whether the disclosure of additional information relating to her attendance at Narcotics Anonymous could be protected by Article 8. The majority held that while the press was able to ‘put the record straight’ about Campbell’s comments about her (lack of) drug use, information about the treatment which she was receiving ought to be treated differently.<sup>142</sup> While the minority downplayed the importance of the disclosure, the majority felt that the information about Campbell’s treatment at Narcotics Anonymous was equivalent to the disclosure of treatment of a medical condition. As Lord Hope of Craighead said, ‘there are few areas of the life of an individual that are more in need of protection on the grounds of privacy than the combating of addiction to alcohol or drugs’.<sup>143</sup> Importantly, the majority felt that there was a chance that the disclosure might undermine and disrupt Campbell’s treatment. The Lords also noted that recovering addicts were particularly vulnerable and that an assurance of privacy was an essential part of the treatment.<sup>144</sup> On this basis, the Lords upheld Campbell’s claims.<sup>145</sup> A similar approach was adopted in *Peck*, in which the ECtHR held that widespread publication of a photograph that revealed a person in a situation of humiliation or severe embarrassment was an infringement of the right to respect for private life.<sup>146</sup>

In determining the harm likely to be caused, two key factors are the nature of the information and the extent of its disclosure. The more intimate the aspects of private life that are being interfered with, the more serious must be the reasons for doing so.<sup>147</sup> Moreover, the more extensive the publication, the greater potential there will be for real harm. This can be seen in *Peck*, in which the Court held that an embarrassing moment involving Peck, which was filmed on CCTV and repeatedly broadcast on television, was an invasion of Peck’s right to privacy. Here, ‘the relevant moment was viewed to an extent which far exceeded any

<sup>140</sup> *Ibid.*, [104].

<sup>141</sup> *Theakston* [2002] *EMLR* 398, [57], [61] 2354, [56]. See also *A v. B* [2003] *QB* 195 (CA), 217, [45].

<sup>142</sup> The minority held that the additional information was of such an unremarkable and inconsequential nature that it could not be protected: *Campbell* [2004] 2 *AC* 457 (HL), 467, [26] *per* Lord Nicholls.

<sup>143</sup> *Ibid.*, 479, [81] *per* Lord Hope.

<sup>144</sup> *Ibid.*, 481, [90] *per* Lord Hope, 499, [146] *per* Baroness Hale.

<sup>145</sup> *The Mirror* challenged the conclusion, but the ECtHR thought that the decision was sound: *Mirror Group Newspapers v. UK*, App. No. 39401/04 [2011] *ECHR* 66, [151].

<sup>146</sup> *Peck v. United Kingdom*, App. No. 44647/98 (2003) 36 *EHR* 719. See also *Campbell* [2004] 2 *AC* 457, 478, [75] *per* Lord Hoffmann.

<sup>147</sup> *Mosley v. News Group Newspapers* [2008] *EWHC* 1777 (QB), [98] *per* Eady J.

exposure to a passer-by or to a security observation and to a degree surpassing that which the applicant could possibly have foreseen when he walked' in the public street.<sup>148</sup> In this situation, the artificiality of the disclosure—which meant that it was much greater than could ordinarily be expected in a public place—combined with the embarrassing content, led the Court to decide that the disclosure had violated Peck's right to privacy.<sup>149</sup>

The potential for harm may decrease with time, particularly after the person to whom the information relates has died. While a duty of confidence in respect of private information can survive the death of the individual to whom the duty was owed,<sup>150</sup> the nature and scope of that duty may change over time. For example, while an injunction to prevent publication of an account by President Mitterrand's doctor of his relationship with Mitterrand was held not to be in violation of Article 10 ECHR when Mitterrand was alive, the situation changed after Mitterrand's death. As the ECtHR said, the ongoing prohibition on distribution was no longer justified nine-and-a-half months after President Mitterrand's death. This was because:

... the more remote the date of the President's death became, the more this factor declined in importance and the more the public interest in the debate concerning his two seven-year terms of office outweighed the imperatives of protecting the rights of others and medical secrecy.<sup>151</sup>

In assessing likely harm, it is also possible to take into account the privacy interests of third parties and especially children. In *ETK v. Newsgroup Newspapers*,<sup>152</sup> the Court of Appeal awarded injunctive relief preventing publication of details of an extramarital affair in part because there was little public interest in knowing the details, but also because the interests of third parties justified restraint: '[T]he purpose of the injunction is both to preserve the stability of the family while the appellant and his wife pursue a reconciliation and to save the children from the ordeal of playground ridicule that would inevitably follow publicity.'<sup>153</sup> The rights of the children are to be 'placed in the scale'.<sup>154</sup> This was also a significant factor in awarding an injunction restraining publication of a photograph of a celebrity naked at a party: the celebrity had subsequently married an actress and the judge formed the view that her children might suffer significant teasing were publication of their naked stepfather to be permitted.<sup>155</sup> At the same time, the publication would merely demonstrate Ned Rocknroll's foolishness rather than contribute to debate of general interest.<sup>156</sup>

## 6 REMEDIES

In this final section, we look at the more important remedies that may be granted where there has been a finding of breach. While we examine intellectual property remedies more

<sup>148</sup> *Peck v. United Kingdom*, App. No. 44647/98 (2003) 36 EHRR 719.

<sup>149</sup> In *ETK v. Newsgroup Newspapers* [2011] EWCA Civ 439, the fact that the extramarital relationship was known to ETK's work colleagues did not deprive her of a reasonable expectation of privacy. See also *Mr Rocknroll v. NGN Ltd* [2013] EWHC 24 (Ch) (Briggs J) (reasonable expectation of privacy as regards photographs of him naked at party, despite the fact that they could be seen on Facebook by 1,500 people).

<sup>150</sup> *Bluck v. Information Commissioner* (2007) WL 4266111, [2008] WTLR 1, [17]. The tribunal also held that, in this situation, the breach would be actionable by personal representatives of the deceased: *ibid.*, [30].

<sup>156</sup> *Ibid.*, [35].

generally elsewhere,<sup>157</sup> in this section we wish to highlight the peculiar considerations that arise in relation to breach of confidence.

## 6.1 INTERIM RELIEF

The primary remedy that a claimant is likely to pursue in a breach of confidence action is an interim injunction to restrain use or disclosure of the information.<sup>158</sup> In other areas of intellectual property law, the test for whether an injunction should be granted is that outlined in *American Cyanamid*.<sup>159</sup> In essence, this provides that, once a claimant has established that there is a serious question to be tried, then the court will exercise its discretion to grant or withhold interim relief on the basis of the ‘balance of convenience’. (We review its application in greater detail in Chapter 48.) While this test is widely used in other areas of intellectual property, in some circumstances, as we will see, the courts have decided not to apply this test in breach of confidence actions. This is particularly the case in relation to personal information, for which the courts have said that the threshold for injunction is higher than that in *American Cyanamid*.<sup>160</sup> In *A v. B*,<sup>161</sup> the Court of Appeal put forward a set of guidelines for dealing with interim applications in privacy cases. Essentially, the guidelines advocate a balancing of the facts, rather than a technical approach to the law.<sup>162</sup> When thinking about the grant of injunctive relief in this context, it is important to take account of the House of Lords’ decision in *Cream Holdings v. Banerjee*,<sup>163</sup> particularly in terms of the way in which section 12(3) of the Human Rights Act 1998 modified the threshold test for injunctive relief set out in *American Cyanamid*. This issue is discussed in detail below.<sup>164</sup>

### 6.1.1 Interim relief restraining publication

Where the defendant proposes to publish the information, the claim for injunctive relief is normally directed at preserving the confidential nature of the information. If the *American Cyanamid* test were applied, it would almost always lead to the grant of injunctive relief.<sup>165</sup> This is because the balance of convenience almost always favours restraint in order to ensure that the information concerned retains its confidential quality until trial. However, such automatic grant of interim relief raises serious questions about freedom of expression. To avoid this, the courts have been wary about using the *American Cyanamid* test in these circumstances, preferring to pay greater attention to the merits of the parties’ claims.<sup>166</sup>

Section 12(3) of the Human Rights Act 1998 now confirms that, where the relief impinges upon freedom of expression, a claimant must show that there is more than a serious question to be tried. Section 12(3) provides that, where a court is considering

<sup>157</sup> See Chapter 47. It is by no means clear whether the action for breach of confidence is to be regarded as relating to ‘intellectual property’ and thus subject to interpretation in the light of the Enforcement Dir.

<sup>158</sup> See *Douglas v. Hello! (No. 8)* [2005] *EWCA Civ* 595, [25].

<sup>159</sup> *American Cyanamid v. Ethicon* [1975] *AC* 396, considered below at pp. 1239–46.

<sup>160</sup> *Douglas v. Hello!* [2001] 2 *WLR* 992 (CA), 1028, [136] *per* Sedley LJ.

<sup>161</sup> [2003] *QB* 195 (CA), 204–10, [11].

<sup>162</sup> *Ibid.*, 210, [12]. The court has jurisdiction to grant an injunction against the world: *Venables v. News Group Newspapers* [2001] 2 *WLR* 1038; not applied in *Mills v. NGN* [2001] *EWHC* 412 (Ch), [37].

<sup>163</sup> [2004] *UKHL* 44. <sup>164</sup> See below pp. 1241–3.

<sup>165</sup> *Attorney-General v. Newspaper Publishing* [1988] *Ch* 333, 358 *per* Sir John Donaldson MR.

<sup>166</sup> *Hubbard v. Vosper* [1972] 2 *QB* 84, 96, 98; *Cambridge Nutrition v. BBC* [1990] 3 *All ER* 523; *Times v. Mirror Group* [1993] *EMLR* 443.

whether to grant relief that might affect the exercise of the right to freedom of expression, no relief should be granted that will restrain publication prior to trial ‘unless the court is satisfied that the applicant is likely to establish that publication should not be allowed’. Courts are also instructed to take account of the extent to which the material has or is about to become available to the public, and whether it is, or would be, in the public interest for the material to be published.<sup>167</sup> The tribunal is also instructed to take into account ‘any relevant privacy code’.

### 6.1.2 Interim relief restraining use

Where injunctive relief is being sought to prevent *use* of confidential information, different considerations operate. Interim relief restraining use prevents wrongdoers from benefiting from their wrongful acts or from continuing to inflict damage on the claimant. Often, also, the grant of an injunction restricting use operates to restrain manufacture, sale, and competition. The stakes can therefore be very high. Where the effect of injunctive relief is likely to be that no trial will ever take place, the courts have taken it upon themselves to consider the strength of the parties’ cases before deciding whether to grant interim relief.

The courts have also been reluctant to apply the *American Cyanamid* test in restraint of trade cases, on the basis that it might interfere with a person’s right to trade.<sup>168</sup> The rejection of the *American Cyanamid* test is sometimes said to be justified on the ground that, in the absence of a speedy trial, matters are resolved by interim relief. For example, in *Lansing v. Kerr*,<sup>169</sup> in which trial would not take place before a 12-month restraint clause had expired, the Court of Appeal declined to apply the *American Cyanamid* test; instead, the Court looked at the parties’ chances of success. Since the express restraint, although temporary, was worldwide, the judge considered it would be unlikely that it would be enforceable. The Court of Appeal held that such a consideration was appropriate. In contrast, where a speedy trial was pending and the restraint in question was two years, the Court of Appeal has used the *American Cyanamid* test to grant an interim injunction preventing a former employee from taking up a post at a competitor firm.<sup>170</sup>

### 6.1.3 Permanent injunctions (and delivery up)

If a claimant succeeds in establishing a breach of confidence at trial, they are entitled on its face to injunctive relief preventing use or disclosure of the information.<sup>171</sup> Nevertheless, claimants are not entitled as of right to an injunction. Because the courts retain discretion as to whether to grant the injunction, if there are special or exceptional factors, the court may refuse to do so. This would be the case, for example, if the effect of a permanent injunction would be oppressive or out of all proportion to the value of the information used.<sup>172</sup> It is important that any injunction granted be formulated in specific terms.<sup>173</sup> As an adjunct to an injunction, a court may require the defendant to deliver up material

<sup>167</sup> Human Rights Act 1998, s. 12(4). See J. Griffiths, ‘The Human Rights Act 1998, s. 12: Press Freedom over Privacy?’ [1999] *Ent L Rev* 36.

<sup>168</sup> *Fellowes v. Fisher* [1976] QB 122, 133 *per* Lord Denning, 138, 142 *per* Browne LJ and Sir John Pennycuik. [1991] 1 *All ER* 418; *Credit Suisse First Boston v. Lister* [1998] *EWCA Civ* 1551.

<sup>169</sup> *Lawrence David v. Ashton* [1991] 1 *All ER* 385.

<sup>170</sup> *Ocular Sciences* [1997] *RPC* 289, 410; *Vestergaard Frandsen A/S v. Bestnet* [2009] *EWHC* 1456 (Ch), [41] *per* Arnold J. But note that they are not entitled to broader relief, e.g. preventing a person for working in a particular business: *Caterpillar Logistics Services (UK) Ltd v. Huesca de Crean* [2012] *EWCA Civ* 156, [61]–[65].

<sup>171</sup> *Ocular Sciences* [1997] *RPC* 289, 410–11.

<sup>172</sup> *Potters Ballotini v. Weston Baker* [1977] *RPC* 202.

containing confidential information for destruction.<sup>174</sup> This remedy is dealt with in Chapter 48.

## 6.2 DAMAGES

Specific problems have arisen in relation to financial remedies for breach of confidence as a result of the confusion as to the juridical nature of the obligation. Where the obligation of confidentiality is contractual, the promisee will usually be entitled to damages for breach of contract under normal contractual principles. However, doubts have been raised as to whether damages are available for breach of an equitable duty of confidentiality.<sup>175</sup> This was because only common law courts, rather than equity, awarded damages. Instead, it is said that if the claimant desires a financial remedy in a court of equity, it should be in the form of an account of profits. Despite these doubts, the courts have awarded damages—even though the obligation was equitable.<sup>176</sup> In some cases, the basis for doing so has been attributed to a ‘beneficent construction of Lord Cairns’ Act’, which enables a court to grant damages ‘in lieu of’ an injunction.<sup>177</sup> In other cases, the award is referred to as ‘equitable compensation’.<sup>178</sup>

It has been said that the measure of damages for breach of confidence should be tortious, reflecting loss to the claimant.<sup>179</sup> In *Seager v. Copydex (No. 2)*,<sup>180</sup> the Court of Appeal held that damages were to be assessed by reference to the market value of the information. This has been subsequently said to be one, but not the only, way of assessing damages.<sup>181</sup> Other techniques for the assessment of damages are by way of fair remuneration for a licence, loss of profit that the claimant would have gained,<sup>182</sup> or depreciation in the value of the right to have the information kept confidential. It has been suggested that, in calculating damages, the courts are able to take account of distress and injury to feelings,<sup>183</sup> but it does not seem possible to award exemplary damages.<sup>184</sup>

Douglas (No. 3)* [2003] 3 All ER 996, [273]; cf. *Aquaculture* (1985) 5 IPR 353, 301.

### 6.3 ACCOUNT OF PROFITS

Historically, a claimant relying on an equitable duty of confidence was entitled to an account of profits for the wrongful use or disclosure of confidential information. This restitutionary remedy now also appears to be available in cases in which the obligation of confidence is contractual.<sup>185</sup> In both situations, it seems, the courts regard the remedy as discretionary, in the sense that the court will determine whether it is an appropriate response to the wrong.<sup>186</sup> Even if awarded, an account of profits can raise difficult questions of computation.<sup>187</sup> A court may deduct from the profits made by the defendant an allowance for the skill and expertise that they deployed.

### 6.4 CONSTRUCTIVE TRUSTS

One feature that distinguishes the law of breach of confidence from other areas of intellectual property law is that the award of a constructive trust is a possible remedy. If a confider succeeds in a claim for breach of confidence, the court might order that property derived from the breach is held by the confidant on trust for the confider. The effect of this may be to enable a claimant to obtain priority over general creditors, to recover profits from profits made by the defendant, and to obtain compound interest.<sup>188</sup>

The first signs that the remedy of the constructive trust may be available against an errant confidant appeared in the *Spycatcher* case, in which various of the Law Lords suggested that Peter Wright held copyright on constructive trust for the Crown.<sup>189</sup> Although emanating from the House of Lords, these views were *obiter*, were expressed without the benefit of any argument from Wright, and might easily have been interpreted as being confined to the narrow situation in which the confidant was also a fiduciary. However, in *LAC Minerals*,<sup>190</sup> the majority in the Supreme Court of Canada held that it was appropriate to impose a constructive trust over land that the defendant had bought after he had been told in confidence that it might be gold-bearing. In *Ocular Sciences v. Aspect Vision*,<sup>191</sup> Laddie J accepted that a constructive trust might be available where there was an existing fiduciary relationship and that there would usually be such a relationship where there existed a confidential obligation. This reasoning, which has much in common with that of Wilson J in *LAC Minerals*,<sup>192</sup> paves the way for the availability of constructive trusts in almost all cases of breach of confidence. This should not be taken to mean, however, that this remedy should be granted other than in exceptional cases.

But the Leveson Inquiry, *Report into the Culture, Practice and Ethics of the Press: Vol. 1* (2012), 1512, [5.12], supported their introduction, and Crime and Courts Act 2013, ss 34–42, will make possible their award in breach of confidence cases against ‘relevant publishers’. At time of writing, these powers are not yet in force: ss 34–39 come into force at the end of the period of one year beginning with the day on which a body is established by royal charter with the purpose of carrying on activities relating to the recognition of independent regulators of relevant publishers (as defined by s. 41). See generally pp. 1259–60 below.

<sup>185</sup> *Peter Pan Manufacturing Corp. v. Corsets Silhouette* [1963] 3 All ER 402; *Attorney-General v. Blake* [2000] 3 WLR 625, 641 per Lord Nicholls.

<sup>186</sup> *Veroe v. Rutland Fund Management Ltd* [2010] EWHC 424 (Ch), [339] per Sales J; *Walsh v. Shanahan* [2013] EWCA Civ 411, [64] per Rimer LJ (approving refusal of account of profits in a case described as one of misuse of private information).

<sup>187</sup> See pp. 1261–2 below.  
<sup>188</sup> See also Tang Hang Wu, ‘Confidence and the Constructive Trust’ (2003) 23 *Legal Studies* 135; M. Conaglen, ‘Thinking about Proprietary Remedies for Breach of Confidence’ [2008] *IPQ* 82.

<sup>189</sup> *Attorney General v. Guardian (No. 2)* [1990] AC 109, 139 per Scott J, 211 per Dillon LJ, 286 per Lord Goff.

<sup>190</sup> [1990] FSR 441, 445, 452. Sopinka J, dissenting, recognized that the remedy would be available in very special circumstances: *ibid.*, 497.

<sup>191</sup> [1997] RPC 289, 413–14.

<sup>192</sup> [1990] FSR 441, 444.

Doubt has been cast over whether the constructive trust is a remedy that is available in an action for breach of confidence from developments in the general law of restitution. There, it has been held by the House of Lords that a constructive trust cannot be awarded as a remedy for unjust enrichment.<sup>193</sup> It has therefore been argued that constructive trusts can be recognized in relation to breach of confidence only if they are ‘institutional constructive trusts’.<sup>194</sup> The sentiments expressed in *Spycatcher* are thought to be explicable on that basis. With the exception of such institutional constructive trusts, constructive trusts will be found to exist only where confidential information is used by a fiduciary either to make a secret profit or to acquire property in circumstances under which the fiduciary’s duty and interest are in potential conflict.

## 6.5 CRIMINAL LAW

In English law, taking confidential information is not theft.<sup>195</sup> Section 1 of the Theft Act 1968 defines ‘theft’ as the ‘dishonest appropriation of property belonging to another with the intention of permanently depriving the other of it’. While section 4 says that property includes ‘other intangible property’, it has been held in a number of cases that, for these purposes, information is not intangible property. In *Oxford v. Moss*,<sup>196</sup> an undergraduate at Liverpool University obtained the proofs of an examination paper before the exam. After reading the exam, the student returned the paper, but ‘retained’ the information. Smith J held that this did not amount to theft: information was not property and there was no intention to deprive the university of the information. While it might be possible in certain situations to treat specific breaches of confidence as carrying criminal liability on other grounds, these all carry limitations.<sup>197</sup>

A number of calls have been made for the criminalization of the act of misappropriating trade secrets<sup>198</sup> and, in the 1990s, the Law Commission issued a Consultation Paper.<sup>199</sup> The paper provisionally concluded that the case for criminal offences of trade secret misuse is a strong one, basing that view primarily on the close analogy between trade secrets and property ‘in the strict sense’, and on the economic importance of protecting business investment.<sup>200</sup> The paper reviewed the practical problems of legislating—in particular, difficulties associated with reaching a satisfactory definition of the concept of ‘trade secrets’. The Law Commission said that it wanted to ensure that all misuses of trade secrets that were criminalized would be breaches of confidence at civil law, but made it clear that it did not wish to criminalize all acts that would incur civil liability under the present law. Views were sought, in particular, about the definition of ‘trade secret’, whether errant employees should be subject to criminal liability, and the appropriate scope of a public interest defence.<sup>201</sup> It seems, however, that the consultation

<sup>193</sup> *Westdeutsche Bank v. Islington LBC* [1996] AC 669 (HL). <sup>194</sup> Gurry (2012), ch. 19.

<sup>195</sup> See A. Coleman, *The Legal Protection of Trade Secrets* (1992), ch. 7.

<sup>196</sup> (1979) 68 Cr App R 183.

<sup>197</sup> If two people steal a trade secret, this may constitute conspiracy to defraud: *R v. Lloyd* [1985] QB 29, [1985] 3 WLR 30. Other criminal charges may be available under the Bribery Act 2010, s. 2, or the Computer Misuse Act 1990, which creates the offence of gaining unauthorized access to data held on a computer.

<sup>200</sup> Law Commission, *op. cit.*, [3.1].

<sup>201</sup> For the Law Commission’s provisional proposal, outlining specific purposes for disclosure that are in the public interest, but without prejudice to the generality of the defence, see *ibid.*, [6.54].

exercise has been abandoned and that the Law Commission is no longer pursuing the question.

## 7 PROPOSAL FOR AN EU DIRECTIVE

As will be clear, breach of confidence has a peculiarly common law heritage, and has recently undergone considerable upheaval as a consequence of the need to accommodate Article 8 ECHR and the corresponding ECtHR jurisprudence. Further upheaval might have to occur in the near future as a result of the desire for intellectual property to be harmonized in the European Union. The European Commission became interested in the topic in 2011, when it put out tenders for a report on the state of the law,<sup>202</sup> followed by a further report on the role of trade secrets in encouraging innovation.<sup>203</sup> In November 2013, these were followed with a proposal for a directive.<sup>204</sup>

The proposed Directive, if adopted, would require member states to offer protection against the unlawful acquisition, use, and disclosure of trade secrets. The proposed Directive does not define the type of protection: it does not, for example, require that trade secrets are treated as ‘property’ or ‘intellectual property’, or that protection be afforded under the rubric of ‘unfair competition’. Rather, it requires that various types of ‘measures, procedures and remedies’ be available in order to prevent, or to obtain redress for, the unlawful acquisition, use, or disclosure of a trade secret.

It is proposed to adopt the definition of ‘subject matter’ applied in Article 39 of the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS).<sup>205</sup> This, of course, represents a minimum standard in TRIPS, whereas, in the context of a harmonizing directive, it would also define the limits of member states’ law (on this topic).<sup>206</sup> In that respect, it is worth noting that the definition includes a condition—namely, that ‘the information has been subject to reasonable steps under the circumstances, by the person lawfully in control of the information, to keep it secret’.<sup>207</sup>

The proposed Directive will define the circumstances under which acquisition, use, or disclosure is unlawful. Acquisition would be unlawful where the information is acquired by bribery, theft, inducing breach of confidence, or ‘any other conduct which, under the circumstances, is considered contrary to honest commercial practices’.<sup>208</sup>

<sup>202</sup> Hogan Lovells International, *Study on Trade Secrets and Parasitic Copying (Look-alikes): Report on Trade Secrets for the European Commission* (September 2011) MARKT/2010/20/D.

<sup>203</sup> Baker and Mackenzie, *Study on Trade Secrets and Confidential Business Information in the Internal Market* (April 2013) MARKT/2011/128/D.

<sup>204</sup> European Commission, *Proposal for a Directive of the European Parliament and of the Council on the Protection of Undisclosed Know-how and Business Information (Trade Secrets) against their Unlawful Acquisition, Use and Disclosure* (2013) COM/2013/0813 final.

<sup>205</sup> *Ibid.*, proposed Art. 2. Note also proposed Recital 8 (such definition should exclude trivial information, and should not extend to the knowledge and skills gained by employees in the normal course of their employment, and which are known among or accessible to persons within the circles that normally deal with the kind of information in question).

<sup>206</sup> *Ibid.*, proposed Recital 8.

<sup>207</sup> *Ibid.*, proposed Art. 2(1)(c). The requirement can be traced back to the US Uniform Trade Secrets Act of 1979, as amended. On this aspect of US law, see especially B. Bone, ‘Trade Secrecy, Innovation and the Requirement of Reasonable Secrecy Precautions’, in R. Dreyfuss and K. Strandburg (eds), *The Law and Theory of Trade Secrecy: A Handbook of Contemporary Research* (2012). For signs of a similar requirement in English law, see *Cray Valley v. Deltech Europe* [2003] EWHC 728 (Ch).

<sup>208</sup> European Commission, *Proposal for a Directive of the European Parliament and of the Council on the Protection of Undisclosed Know-how and Business Information (Trade Secrets) against their Unlawful Acquisition, Use and Disclosure* (2013) COM/2013/0813 final., proposed Art. 3(2)(f). See pp. 1165, 1172.

The latter phrase, derived from Article 10*bis* of the Paris Convention, has become familiar through the harmonized law of trade marks, but will nevertheless raise concerns amongst common lawyers. There are important safeguards for independent creation and reverse engineering. Under proposed Article 4(1), the acquisition of trade secrets is said to be lawful when obtained by ‘independent discovery or creation’ or the ‘observation, study, disassembly or test of a product or object that has been made available to the public or that it is lawfully in the possession of the acquirer of the information’.<sup>209</sup> The distinction between *Mars v. Teknowledge*<sup>210</sup> and *Volkswagen*<sup>211</sup> would thus likely be maintained.<sup>212</sup>

Moreover, the proposed Directive explicitly deals with products made using trade secrets, which it designates ‘infringing goods’. It is intended to provide that ‘the conscious and deliberate production, offering or placing on the market of infringing goods’ shall be considered an unlawful use of a trade secret.<sup>213</sup> ‘Infringing goods’ are defined as goods ‘whose design, quality, manufacturing process or marketing *significantly* benefits from trade secrets unlawfully acquired, used or disclosed’.<sup>214</sup> The requirement of ‘significance’ will need elucidation in the context of specific cases and may prove difficult to apply in cases other than those of straightforward appropriation. It is not clear whether the Commission intends the *scienter* component (‘conscious and deliberate’) to qualify the act of production etc., or rather the fact that the goods are ‘infringing’ but it would seem to make more sense if it is the latter.

The proposed Directive is general in its terms, and thus appears applicable to trade secrets held by employees and ex-employees. Thus the rule in proposed Article 3(3) as to when the use of a trade secret should be unlawful seems applicable to employees and ex-employees. This covers any situation in which a trade secret is used, without the consent of the trade secret holder, intentionally or with gross negligence, by a person who is ‘in breach of a confidentiality agreement or any other duty to maintain secrecy of the trade secret’ or ‘is in breach of a contractual or any other duty to limit the use of the trade secret’.<sup>215</sup> What is unclear is whether the legitimate scope of these duties falls to be regulated by member states under doctrines such as that relating to restraint of trade—that is, whether there is liability only if the agreement referred to is valid or enforceable *under national law*. If so, existing limitations on contracting designed to protect ex-employees will remain applicable. However, there is a danger that the proposal might be taken not to refer to national laws (of contract and equity), but rather as requiring European legal concepts. If this is the effect, there is a possibility that the framework may end up restricting the freedoms of former employees (freedoms that studies have shown benefit competition and innovation). First, it should be noted that the EU definition of ‘trade secret’ in proposed Article 2 is different from, and almost certainly less restrictive than, the notion referred to in *Faccenda Chicken v. Fowler*.<sup>216</sup> Although proposed Recital 8 states that the definition of a trade secret does ‘not extend to the knowledge and skills gained by employees in the normal course of their employment and which are known among or accessible to persons within the circles that normally deal with the kind of information in question’, this is a narrower exclusion than would be effected by application of the *Faccenda* criteria to an ex-employee. It may be that the provision in proposed Article 4(2)(e), which prevents the use of measures against a person whose acquisition,

<sup>209</sup> *Ibid.*, proposed Recital 10. <sup>210</sup> [2000] FSR 138, discussed above at p. 1166.

<sup>211</sup> *Volkswagen Aktiengesellschaft v. Flavio D Garcia and ors* [2013] EWHC 1832 (Ch), discussed in above, p. 1166.

<sup>212</sup> But cf. the position under current German law, where reverse engineering may not be permissible.

<sup>213</sup> European Commission, *op. cit.*, proposed Art. 3(5). <sup>214</sup> *Ibid.*, proposed Art. 2(4).

<sup>215</sup> *Ibid.*, proposed Art. 3(3). <sup>216</sup> [1987] 1 Ch 117, discussed above at p. 1170.

use, or disclosure is ‘for the purpose of protecting a legitimate interest’, might offer ex-employees the freedom that they now possess.<sup>217</sup> Whatever the ultimate answer, the current legislative drafting poses two serious threats: that the freedom of ex-employees will end up being restricted; and that even if that does not happen, there will be years of uncertainty before we can be sure.

The proposed Directive contains safeguards that would correspond to the ‘public interest’ defence. More specifically, proposed Article 4(2) states that member states should ensure that measures to prevent use or disclosure are not available when it is ‘for making legitimate use of the right to freedom of expression and information’ or ‘for the purpose of revealing an applicant’s misconduct, wrongdoing or illegal activity, provided that the alleged acquisition, use or disclosure of the trade secret was necessary for such revelation and that the respondent acted in the public interest’.<sup>218</sup> The latter is more narrowly drawn than the ‘public interest’ defence, being more akin to the older ‘iniquity’ formulation. However, the former is broader and would, it seems, justify for example disclosures of the sort at issue in the *Lion Laboratories* case.<sup>219</sup>

The proposed Directive would require member states to offer a panoply of civil law procedures and remedies, including measures relating to keeping information secret during litigation,<sup>220</sup> interim relief,<sup>221</sup> injunctions,<sup>222</sup> the destruction of infringing goods,<sup>223</sup> and damages.<sup>224</sup> There is much here that replicates the Enforcement Directive, and one wonders whether it would not have been simpler to state that misuse of trade secrets falls within the scope of that Directive (as some English courts have already found) than to develop this instrument. The proposed Directive would also require member states to offer remedies in cases in which actions for misuse of trade secrets are themselves misused.<sup>225</sup> There is no proposal on criminal sanctions.

<sup>217</sup> For example, Art. 16 of the Charter protects the freedom to conduct a business.

<sup>218</sup> European Commission, *op. cit.*, proposed Recital 12.

<sup>219</sup> *Lion Laboratories v. Evans* [1985] QB 526, discussed at p. 1182 above.

<sup>220</sup> European Commission, *op. cit.*, proposed Art. 8. <sup>221</sup> *Ibid.*, proposed Arts 9–10.

<sup>222</sup> *Ibid.*, proposed Arts 11–12. <sup>223</sup> *Ibid.*, proposed Art. 11(2)(d), (e), (3).

<sup>224</sup> *Ibid.*, proposed Art. 13. <sup>225</sup> *Ibid.*, proposed Art. 6(2).

# PART VI

## LITIGATION AND REMEDIES

It is sometimes said that intellectual property rights are only as good as the procedures and remedies by which they are enforced.<sup>1</sup> While we would not necessarily subscribe wholly to that view, it highlights the importance of the so-called ‘adjectival’ aspects of intellectual property law—that is, the rules of evidence, procedure, litigation, and remedies. In the following two chapters, we intend to provide an introduction to these aspects of intellectual property law.

Until recently, the rules and practices that regulate litigation, procedure, and remedies have developed on a national basis, largely unaffected by international standards. There are, for example, only a few references in the Berne<sup>2</sup> and Paris<sup>3</sup> Conventions to matters of enforcement. As a result of recent changes in regional and international intellectual property law, the relative insularity of the adjectival aspects of British intellectual property law has ended.

Probably the most significant change at the international level is that matters relating to enforcement are comprehensively dealt with by Part III of the 1994 Agreement on Trade-related Aspects of Intellectual Property Rights (TRIPS).<sup>4</sup> This requires that members ensure that enforcement procedures are available so that intellectual-property right holders can take effective action against infringers. More specifically, the law of the member state must enable remedies to be obtained *expeditiously* so that imminent infringements can be prevented. Members are also required to provide remedies that are severe enough to deter further infringements. Procedures should be fair, equitable, and only as complicated, costly, or lengthy as is necessary.<sup>5</sup> TRIPS provides further details in relation to civil procedures, remedies, provisional measures, border measures, and criminal liability. Because the standards required are expressed in terms of particular purposes or goals (such as that the procedures must not be unduly costly), it may be difficult to assess whether national procedures and remedies satisfy the international standards. Indeed,

<sup>1</sup> C. Greenhalgh, J. Phillips, R. Pitkethly, M. Rogers, and J. Tomalin, *Intellectual Property Enforcement in Smaller UK Firms* (2010), 3.

<sup>2</sup> Berne, Arts 16 (obligation to seize unlawful copies), 13(3).

<sup>3</sup> Paris, Arts 9 (seizure on import of goods unlawfully bearing a trade mark), 6*bis*(1), and 6*septies*(2) (injunctive relief for wrongful use of well-known mark).

<sup>4</sup> T. Dreier, ‘TRIPS and the Enforcement of Intellectual Property Rights’, in Beier and Shricke, 248.

<sup>5</sup> TRIPS, Art. 41.

the vague manner in which the effects are enunciated means that they are unlikely to be enforced at the World Trade Organization (WTO).

Following the lead of TRIPS, the World Intellectual Property Organization (WIPO) Copyright Treaty (WCT) and the WIPO Performances and Phonograms Treaty (WPPT) also require contracting parties to have enforcement procedures in place that provide effective action against acts of infringement covered by the treaties. These include expeditious remedies to prevent infringement and remedies that deter further infringement.<sup>6</sup> In addition, contracting states are required to provide ‘effective legal remedies’ for violation of Berne, TRIPS, and components of the WIPO treaties dealing with the digital agenda.<sup>7</sup>

While these changes mark an important shift in direction for international intellectual property law, for the most part they have had little impact upon British law. This has not been the case, however, with the changes that have taken place at the European level. In considering the impact of European initiatives on procedural and remedial matters, we need to distinguish between intellectual property rights at the EU level and EU rules relating to the enforcement of national rights. We deal with these in turn.

The development of EU intellectual property rights—currently Community trade marks and plant varieties, registered and unregistered design rights, and, in the near future, the unitary patent—has brought with it a degree of EU regulation of the procedures by which rights are enforced. The most obvious impact is that member states must designate particular domestic courts as ‘Community courts’. These are courts in which actions to enforce Community rights and, in some circumstances, actions for declaration of invalidity are brought.<sup>8</sup> While matters of procedure and, with some exceptions, remedies are left to the law of the relevant member state,<sup>9</sup> the right to injunctions in relation to Community rights is governed by EU law: injunctive relief will be granted unless there are special reasons to the contrary.<sup>10</sup> Moreover, Community courts have general jurisdiction to grant provisional measures (including protective ones, such as interim injunctions) that operate in all contracting states.<sup>11</sup> Perhaps the most dramatic changes will occur when the unitary patent comes into operation, along with the unified patent court. This is discussed below.

The procedures and enforcement of *national* intellectual property rights has also been the focus of attention at the European level. Three matters are worth mentioning at this stage.<sup>12</sup> First, the European Union has adopted a Regulation governing jurisdiction and

<sup>6</sup> WCT, Art. 14; WPPT, Art. 23.

<sup>7</sup> Technological measures: WCT, Art. 11; WPPT, Art. 18; rights management information: WPPT, Arts 12 and 19. Further standardization at international level has been proposed, most notably in the controversial Anti-Counterfeiting Trade Agreement (ACTA), which is unlikely ever to come into force. On 4 July 2012, the European Parliament rejected the ACTA 478 votes to 39, with 165 abstentions.

<sup>8</sup> CDR, Arts 80–7; CTMR, Arts 95–6.

<sup>9</sup> In the case of procedure, the forum, and in the case of remedies, those available in the country in which the infringement takes place: CDR, Art. 88; CTMR, Arts 101, 102; *H. Gautzsch Großhandel GmbH & Co. KG v. Münchener Boulevard Möbel Joseph Duna GmbH*, Case C 479/12 (13 February 2014) (ECJ, Third Chamber).

<sup>10</sup> Protocol on Litigation, Art. 35(1); CTMR, Art. 102; CDR, Art. 89; *Nokia Corp. v. Wardell*, Case C-316/05 [2007] 1 CMLR (37) 1167; *H. Gautzsch Großhandel*, Case C-479/12 (13 February 2014) (ECJ, Third Chamber), [48] (‘special reasons’ relates to factual circumstances specific to a given case).

<sup>11</sup> CTMR, Art. 103; CDR, Art. 90; Protocol on Litigation, Art. 14.

<sup>12</sup> Another influence is the ECHR. In *Neij and Kolmisoppi (The Pirate Bay) v. Sweden*, App. No. 40397/12 [2013] ECDR (7) 213 (ECtHR, Fifth Section), [38], a claim was made that Article 10 rights (freedom of expression) were infringed by imposing severe penalties on the defendants, the operators of the Pirate Bay file-sharing site. They had been sentenced to ten months and eight months in prison, plus joint liability of €5 million. The Court found no violation of their Article 10 rights. While, at [38], the Court acknowledged that the nature and severity of the penalties imposed are factors to be taken into account when assessing the

recognition of judgments (based on the Brussels Convention).<sup>13</sup> These provisions are examined in more detail in Chapter 47.

Second, the European Union has also adopted measures that regulate the external borders of the Union. More specifically, it has put in place mechanisms that ensure that goods that infringe intellectual property rights can be retained by customs authorities when they are introduced into or exported from the Community.<sup>14</sup> These are discussed in Chapter 48.

The third matter that should be noted is the so-called Enforcement Directive.<sup>15</sup> In part, the Directive was motivated by a concern that different member states had different rules on enforcement, leading some to argue that some countries were softer on piracy than others. The Directive cherry-picked legal remedies and procedures from a host of different states, and directed member states to make the full panoply available to its judicial authorities. While much of the Directive sets out to harmonize remedies that are familiar to a British lawyer (seizure orders,<sup>16</sup> disclosure orders,<sup>17</sup> interim injunctions,<sup>18</sup> final injunctions,<sup>19</sup> and the like), it is worth highlighting a few features of the Directive.

- (i) It sets out certain standards, in particular ‘proportionality’, that are to be taken into account when applying its provisions.<sup>20</sup>
- (ii) It introduced some provisions hitherto unknown, such as publicity orders.<sup>21</sup>
- (iii) It adds a modicum of confusion to some existing concepts, such as the distinction between (compensatory) damages and (restitutionary/disgorgement) profits awards.<sup>22</sup>

The Directive also required some changes to British intellectual property law, which were introduced by the Intellectual Property (Enforcements) Regulations 2006.<sup>23</sup>

Not long after the Enforcement Directive was adopted, a concerted attempt was made to introduce a directive requiring criminal remedies.<sup>24</sup> In the face of doubts over competence to legislate in relation to criminal matters, however, the proposal was abandoned.

proportionality of interference with the freedom of expression, on the facts of this case, the sanctions were not disproportionate. The Court noted that the defendants had not taken any action to remove the torrent files in question, despite having been urged to do so. That indifference meant the response of the national court was proportionate.

### 1 INTRODUCTION

This chapter provides an overview of some of the more important aspects of intellectual property litigation.<sup>1</sup>

### 2 WHO CAN BRING PROCEEDINGS?

Most intellectual property proceedings are concerned with the infringement of rights. In some cases, however, would-be defendants might want reassurance that their proposed activities will not infringe. In these circumstances, a person may be able to apply to the court for a declaration that their activities are non-infringing.

#### 2.1 ACTION FOR INFRINGEMENT

Usually, it is the rights holder, as defined in the relevant legislation, who is able to bring an action for infringement. In certain situations, however, other parties are able to litigate to protect their interests. For example, in some cases, equitable owners are able to bring an action where their intellectual property rights have been breached or infringed. To do so, they must join the legal owner before final judgment can be given.<sup>2</sup> A co-owner can also bring an action for infringement.<sup>3</sup> While exclusive licensees are usually able to bring

<sup>1</sup> For an assessment, see C. Greenhalgh et al., *Intellectual Property Enforcement in Smaller UK Firms* (2010).

<sup>2</sup> *Columbia Pictures Industries v. Robinson* [1988] FSR 531, 547; *Batjac Productions v. Simitar Entertainment* [1996] FSR 139, 149–52.

<sup>3</sup> PA 1977, s. 66(2); TMA 1994, s. 23(5) (but must join all other co-owners to proceedings, other than for interim relief); CDPA 1988, ss 173(2), 259; *Cescinsky v. Routledge* [1916] 2 KB 325. In the case of patents and

an action for infringement,<sup>4</sup> the question of whether a licensee of a sign is able to bring a passing off action depends on the circumstances.<sup>5</sup> In some cases, the courts have allowed representative actions to be brought, notably by trade associations such as the British Phonographic Industry.<sup>6</sup> Representative actions are allowed where there is a common interest and a common grievance, so that the remedy sought will be of benefit to all those who are represented. Despite a general prohibition on trading in litigation (so-called ‘champerty’), the courts have permitted copyright holders to delegate to third parties decisions about whether to bring litigation, in exchange for a percentage on returns.<sup>7</sup>

In cases of criminal infringement, the police and other relevant public authorities, such as the local weights and measures authority, may be empowered to take action,<sup>8</sup> while in many cases private prosecutions are also possible.

## 2.2 DECLARATION OF NON-INFRINGEMENT

Given the cost and uncertainty of intellectual property litigation, it may be important for someone who plans to invest a lot of money in a particular activity to find out whether the proposed conduct is non-infringing.<sup>9</sup> One option is to seek legal advice.<sup>10</sup> If greater assurance is needed, would-be defendants are able to apply to the court for a declaration that their activities are non-infringing. A declaration of non-infringement can be made either under the court’s general powers or (in relation to potential patent infringements) under the powers provided by the Patents Act 1977. We will look at each in turn.

For a court to grant a declaration of non-infringement under its general powers, it must be satisfied that the possibility of infringement is real and not theoretical. The court must also be satisfied that the applicant has a real interest in seeking the declaration and that there is a proper ‘contradictor’—that is, a defendant who has a true interest in opposing the claim.<sup>11</sup> This means that declarations of non-infringement will be granted only where legal rights have been contested or, more specifically, where the right holder has already made a claim against the applicant for the declaration.<sup>12</sup> Where granted, the declarations will be in narrow terms—the courts being unwilling to make broad declarations, such as the ‘patent is, and has at all times, been invalid’, without the benefit of a full trial.<sup>13</sup>

trade marks, acts done or authorized by another co-owner may not amount to an infringement: PA 1977, s. 36; TMA 1994, s. 23(3).

<sup>4</sup> PA 1977, s. 67; RDA 1949, ss 15C, 24F; CDPA 1988, ss 101, 191L; TMA 1994, s. 31 (if the exclusive licence specifically grants the right to bring proceedings); CDR, Art. 32(3) (exclusive licensee can bring action if proprietor, having been given notice to do so); CTMR, Art. 22(3). The position of a bare licensee is more varied: normally, a bare licensee cannot bring an action—but cf. TMA 1994, s. 30(3); CDPA 1988, s. 101A; *Douglas v. Hello!* [2008] 1 AC 1.

<sup>5</sup> *Scandecor Developments v. Scandecor Marketing* [1998] FSR 500 (CA).

<sup>6</sup> *CBS Songs v. Amstrad* [1988] RPC 567.

<sup>7</sup> *Golden Eye International Ltd v. Telefónica UK Ltd* [2012] EWHC 723 (Ch), [2012] RPC 28; [2012] EWCA Civ 1740, [2013] RPC (14) 452. On the emergence of ‘anti-piracy’ businesses, see R. Lobato and J. Thomas, ‘The Business of Anti-Piracy: New Zones of Enterprise in the Copyright Wars’ (2012) 6 *Int J Comm* 606.

<sup>8</sup> The Consumer Protection (Unfair Commercial Practices) Regulations 2008 (SI 2008/127) also create certain offences, discussed at p. 1268, which the trading standards offices enforce.

<sup>9</sup> *Research in Motion (UK) Ltd v. Visto Corp.* [2008] EWCA Civ 153, [7]; *Actavis UK Ltd v. Eli Lilly & Co.* [2014] EWHC 1511 (Pat), [216].

<sup>10</sup> In the context of registered rights, would-be defendants may also apply to have the right revoked or declared invalid. We have dealt with this in the relevant chapters.

<sup>11</sup> *Point Solutions v. Focus Business Solution* [2006] FSR (31) 567.

<sup>12</sup> *Biogen v. Medeva* [1993] RPC 475, 489; *Coflexip v. Stolt Comex Seaway* [1999] FSR 473, 484.

<sup>13</sup> *Lever Fabergé Ltd v. Colgate Palmolive* [2006] FSR 19.

In addition to the general power that the courts have to make declarations of non-infringement, the Patents Act 1977 contains specific statutory provisions that empower the courts to make declarations of non-infringement in relation to potential infringements of patents.<sup>14</sup> The provisions recognize the burdensome nature of patent litigation. In order to provide certainty to potential competitors and to facilitate investment, section 71 of the 1977 Act enables applicants to apply to the court or the Comptroller for a declaration that certain acts do not constitute an infringement of the patent. This is the case even though no claim has been made against the applicant.<sup>15</sup> Declarations will be made only where it can be shown that the person has applied in writing to the proprietor for a written acknowledgement that they are not infringing and the proprietor has refused or failed to provide such an acknowledgement.<sup>16</sup> The onus of proof lies on the party seeking the declaration.<sup>17</sup> When a declaration is issued, patentees are estopped from later claiming that the matters in the declaration constitute an infringement of the patent.<sup>18</sup>

### 3 WHO CAN BE SUED?

There are a number of parties who may be sued for infringement of intellectual property rights. In deciding who should be sued, claimants will be guided by a range of factors. These include pragmatic concerns such as the convenience of suing a central party rather than a range of disparate infringers (a manufacturer rather than a retailer, or an Internet service provider rather than a person who posts or receives information). In other cases, the relative financial robustness of the parties may determine who is sued.

#### 3.1 PRIMARY INFRINGERS

The most obvious person to sue is the primary infringer—that is, the person directly responsible for the infringement or breach. We have dealt with the circumstances in which such persons will be liable in each of the infringement chapters.<sup>19</sup>

#### 3.2 SECONDARY AND INDIRECT INFRINGERS

Most intellectual property regimes extend the scope of liability from immediate infringers such as manufacturers of infringing goods to include parties who provide means that enable infringement or engage in the marketing or distribution of infringing materials.

<sup>14</sup> PA 1977, s. 71. The section does not prevent a person applying under the inherent jurisdiction, but it appears that it is not possible to put the validity of the patent in issue when seeking a declaration under the inherent jurisdiction, because of PA 1977, s. 74. On the limits, see *Organon Teknika v. F. Hoffmann-La Roche AG* [1996] FSR 383.

<sup>15</sup> *Plastus Kreativ v. Minnesota Mining and Manufacturing Co.* [1995] RPC 438, 442.

<sup>16</sup> *MMD Design & Consultancy* [1989] RPC 131, 135; *Wollard's Patent* [1989] RPC 141.

<sup>17</sup> *Rohm & Haas Co. v. Collag* [2001] FSR 426. The court has a discretion: *Apotex v. Beecham* [2003] EWHC 1395.

<sup>18</sup> In some European countries, the declaration of non-infringement has been used as a 'torpedo' by defendants to pre-empt a claimant's selection of a different jurisdiction. For example, a defendant who anticipates being sued in Germany might bring an action for a declaration of non-infringement in a more sympathetic country such as Italy: see, e.g., M. Franzosi, 'Comments to Novara High Court, 20 April 2000, *Novamont v. Biotec*' [2000] EIPR N142; *Research in Motion (UK) Ltd v. Visto Corp.* [2008] EWCA Civ 153. On jurisdictional issues, see section 9 below.

<sup>19</sup> See Chapters 6, 8, 13, 22, 28, 30, 40, and 46.

Often, these are referred to as ‘secondary infringers’. In most instances, to be liable, secondary or indirect infringers must have known, or it must have been obvious to a reasonable person, that they were enabling the infringement or dealing in infringing copies. As with primary infringers, the special provisions relating to secondary infringers have been considered in the earlier chapters on infringement.

### 3.3 EMPLOYERS

The general tortious rule that the employer will be vicariously liable when an employee commits an infringing act in the course of their employment applies as much to intellectual property rights as to other torts. Where the wrong is equitable, the position is not so clear. It is difficult to see, however, why an employer should not be just as liable for a breach of an equitable duty of confidentiality by an employee as they are for a breach of any other obligation.<sup>20</sup>

### 3.4 JOINT TORTFEASORS

It is also possible to bring an action against a party where they are acting as a joint tortfeasor.<sup>21</sup> A person will be liable as a joint tortfeasor where they are connected, or somehow associated, with the infringement. It is important to note that not every connection is sufficient to render an associated person a joint tortfeasor.<sup>22</sup> In particular, mere assistance in the commission of a tort (knowing or otherwise) will not suffice to make a person civilly liable as a joint tortfeasor; rather, the test for a joint tortfeasor is that ‘each person has made the infringing acts his own’.<sup>23</sup> The situations in which a party will be liable as a joint tortfeasor fall into two (overlapping) categories.<sup>24</sup> The first concerns the situation in which one party intends and procures, or *induces*, the commission of the tort; the second, the situation in which two or more persons joined in a *common design* pursuant to which the tort was committed.<sup>25</sup> We deal with each in turn.

#### 3.4.1 Inducement

A person will be liable where they induce the infringement.<sup>26</sup> An extreme example of this is where a person controls the operations of another (such as a company), which is merely that person’s tool (or ‘cat’s paw’) and the other (the company) infringes. In such a case,

<sup>20</sup> *Vestergaard Frandsen A/S v. Bestnet Europe Ltd* [2013] UKSC 31, [27] per Lord Neuberger.

<sup>21</sup> P. Davies, ‘Accessory Liability: Protecting Intellectual Property Rights’ [2011] *IPQ* 390; J. Riordan, ‘The Liability of Internet Intermediaries’ (Unpublished PhD thesis, University of Oxford, 2013), 149–51; H. Carty, ‘Passing off and Instruments of Deception: The Need for Clarity’ [2003] *EIPR* 188.

<sup>22</sup> See *Crédit Lyonnaise v. Export Credit Guarantee Department* [1998] 1 *Lloyds LR* 19, 44, appealed on a different issue [1999] 2 *WLR* 540 (HL); *Lancashire Fires v. SA Lyons* [1996] *FSR* 629 (CA), 675 (breach of confidence); *Vestergaard Frandsen A/S v. Bestnet Europe Ltd* [2013] UKSC 31, [32]–[39] per Lord Neuberger. But cf. *Evans v. Spritebrand* [1985] *FSR* 267 (distinguishing between strict liability torts and those dependent on *mens rea*); *MCA Records Inc. v. Charly Records* [2002] *FSR* (26) 401, [51] (hinting that there might be principles of joint tortfeasance specific to intellectual property).

<sup>23</sup> *SABAF SpA v. MFI Furniture* [2003] *RPC* 264, [58]. In comparative law terms, this is ‘a very high threshold’: G. Dinwoodie, ‘Secondary Liability for Online Trademark Infringement: The International Landscape’ (2014) 36 *Colum JL & Arts* forthcoming.

<sup>24</sup> *Unilever v. Gillette (UK)* [1989] *RPC* 583, 608; cf. *MCA Records Inc. v. Charly Records* [2002] *FSR* (26) 401, [51], [52].

<sup>25</sup> *Unilever v. Gillette (UK)* [1989] *RPC* 583, 608.

<sup>26</sup> *Twentieth Century Fox v. Newzbin* [2010] *EWHC* 608 (Ch), [108] per Kitchin J (‘induced, incited or persuaded’).

the moving spirit of the company may be found to have induced its acts.<sup>27</sup> Similarly, if a person sells an article in kit form with instructions, and that article, when constructed, infringes the claimant's intellectual property right, the seller will be a joint tortfeasor with the person who puts the kit together, because they have *induced* that infringement.<sup>28</sup> In contrast, while people who sell an article knowing that it is going to be used to infringe may assist infringement, they will not be treated as having induced the infringement. For example, in *CBS Songs v. Amstrad*,<sup>29</sup> the House of Lords was asked to consider whether, in selling a high-speed tape-to-tape recorder that the manufacturer and vendor knew was likely to be used to infringe copyright in sound recordings, the supplier was a joint tortfeasor. The House of Lords held that, because the supplier did not have control over how purchasers used the tape recorders nor had it asked purchasers to use the tape recorder in a particular way, the supplier was not a joint tortfeasor with purchasers who made illegal recordings.

It therefore seems unlikely that an English court could find inducement merely because a person makes available peer-to-peer software, even if there is no attempt to prevent infringing use of that software and the business model depends on such use.<sup>30</sup> This is because the provider will likely be unaware of any specific acts of infringement and 'absent the identification of such specific acts a finding of procurement would not in general be appropriate'.<sup>31</sup> That said, in a number of cases, the High Court has found there to have been inducement through offering these sorts of services—although how these cases stand as authorities waits to be seen.<sup>32</sup> In contrast, if a person actually makes material available online, it has been held by the Court of Appeal that they procure acts of infringement by those who access that material.<sup>33</sup> The Supreme Court has given leave to appeal this rather draconian conclusion.

#### 3.4.2 Common design

Where a group of people share a 'common design' (a plan or a purpose) and one of the group commits a tort while carrying out the common design, the other members will be liable as joint tortfeasors.<sup>34</sup> Although one member of the group commits the tort, it is treated as if it were committed on behalf of and in concert with the other members of

<sup>27</sup> Normally, directors are not liable for tortious acts done by servants of a company unless they are privy to the act, i.e. they ordered or procured it: *PRS v. Cyril Theatrical Syndicate* [1924] 1 KB 1, 14–15. If a director is acting constitutionally, only rarely can they be said to have procured the acts of the company (since, in principle, they have acted for it): *MCA Records Inc. v. Charly Records* [2002] FSR 401, [49]. There is authority that, for directors to be liable as joint tortfeasors, they must have directed that an act be carried out knowing that it would be tortious: *Canon Kabushiki Kaisha v. Green Cartridge Co.* [1996] FSR 874, 894 (Hong Kong Court of Appeal); *White Horse Distillers v. Gregson Associates* [1984] RPC 61, 91.

<sup>28</sup> *Rotocrop International v. Genbourn* [1982] FSR 241, 259. <sup>29</sup> [1988] RPC 500, 606.

<sup>30</sup> P. S. Davies, 'Accessory Liability: Protecting Intellectual Property Rights' [2011] IPQ 390, 403; cf. *Metro-Goldwyn-Mayer Studios Inc v. Grokster Ltd*, 545 US 913 (2005).

<sup>31</sup> *Twentieth Century Fox v. Newzbin* [2010] EWHC 608 (Ch), [2010] FSR (21) 512, [110] *per* Kitchin J.

<sup>32</sup> *Ibid.* (finding joint tortfeasance through inducement, common design, authorization, and primary infringement by making available); *Dramatico Entertainment Ltd v. British Sky Broadcasting Ltd* [2012] EWHC 268 (Ch), [2012] 3 CMLR (14) 328, [83] (in which Arnold J concluded that the 'operators of [The Pirate Bay] induce, incite or persuade its users to commit infringements of copyright', but neither The Pirate Bay nor the defendant were represented); *EMI v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [74] (finding that unrepresented websites KAT, H33T, and FENOPY had induced infringement, although this action was also undefended and there were alternative bases for liability); *Football Association Premier League v. British Sky Broadcasting Ltd* [2013] EWHC 2038 (Ch), [43].

<sup>33</sup> *Football Dataco Ltd v. Stan James Plc* [2013] EWCA Civ 27, [96]–[100].

<sup>34</sup> *Morton-Norwich Products v. Intercen (No. 1)* [1978] RPC 501, 512, 515.

the group. For parties to operate in a common design, it is not necessary for the secondary party to have mapped out a plan with the primary offender;<sup>35</sup> tacit agreement will suffice.<sup>36</sup> The common design need not be to infringe if the agreed action leads to an infringement.<sup>37</sup> Also, at least where liability is strict, it does not matter whether or not the parties knew they were infringing.<sup>38</sup> The fact that a parent company has financial control of a subsidiary is not enough of a connection to constitute a common design; the parent company must be shown to have ‘taken part’ in the primary act.<sup>39</sup> Equally, under this head, directors will be liable for acts of the company only where they and the company ‘joined together in concerted action to secure that [the infringing] acts were done’.<sup>40</sup>

‘Common design’ tortfeasance has provided a mechanism for holding some facilitators of online copyright infringement to be liable. In the *Newzbin* case,<sup>41</sup> for example, the operator of an indexing service for subscribers was held liable as a joint tortfeasor, and Arnold J later held that The Pirate Bay would be liable on a similar basis.<sup>42</sup> In contrast, in *L'Oréal v. eBay International AG*,<sup>43</sup> eBay was not a joint tortfeasor for the infringements of online sellers.

### 3.5 INTERMEDIARIES

Under Article 11 of the Enforcement Directive, member states are required to make provision for right holders ‘to apply for an injunction against intermediaries whose services are used by third parties to infringe an intellectual property right’. A parallel provision, applicable to copyright and related rights can be found in Article 8(3) of the Information Society Directive.<sup>44</sup> The rationale is that such intermediaries are often ‘best placed to bring such infringing activities to an end’.<sup>45</sup> There is no need to establish that the intermediary is liable either as a primary or secondary infringer. Indeed, Article 11 might offer the possibility of injunctive relief even when the intermediary is *within* the safe harbour and thus immune from monetary liability.<sup>46</sup> Member states are free to establish the ‘conditions and modalities’ of implementation,<sup>47</sup> and in the Untied Kingdom such action against intermediaries *in relation to copyright* is conditioned on the presence of actual knowledge of the infringing acts.<sup>48</sup> In relation to other intellectual property rights,

<sup>35</sup> *Puschner v. Tom Palmer (Scotland)* [1989] RPC 430. But mere supply does not amount to a common design: *SABAF v. MFI* [2003] RPC 264, [59].

<sup>36</sup> *Unilever v. Gillette* [1989] RPC 583, 609. See also *Lubrizol v. Esso Petroleum (No. 1)* [1992] RPC 281.

<sup>43</sup> [2009] EWHC 1094, [2009] RPC (21) 693, in which Arnold J found there to be no liability under the common design head, because facilitation with knowledge and an intention to profit is not enough. See also *ibid.*, [359] (rejecting procurement).

<sup>44</sup> Info. Soc. Dir. Art. 8(3); CDPA 1988, s. 97A.

<sup>45</sup> Info. Soc. Dir., Recital 59.

<sup>46</sup> *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC (28) 855, [113].

<sup>47</sup> Info.Soc.Dir., Recital 59.

<sup>48</sup> CDPA 1988, s. 97A. See further *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC (28) 855, [148] (‘it is not essential to prove actual knowledge of a specific infringement of a specific copyright work by a specific individual’).

there has been no express implementation, but the High Court has indicated that such injunctions are available under the general powers of the court.<sup>49</sup> It is unclear whether knowledge is required.<sup>50</sup>

The power has proved particularly useful in the context of ‘online intermediaries’, where it has been used not only against service providers whose services support websites featuring infringing material, but also against those that offer their customers access to websites that themselves are infringing.<sup>51</sup> The power has been used to require service providers to block customer access to particular sites that facilitate infringement.<sup>52</sup> Because the intermediary is essentially innocent, it might seem appropriate that the costs incurred in executing such an order (as well as the costs of defending such an order) ought to be paid by the copyright owner that is seeking to enlist their assistance.<sup>53</sup> However, while the English courts have said that the costs of initiating proceedings should be borne by the rights holders,<sup>54</sup> if the Internet services provider (ISP) defends the proceedings, the costs of implementing the order should be paid by the ISP (as long as it is not ‘excessive’).<sup>55</sup> It seems conceivable that similar orders might be made against search engines that provide access to infringing sites, perhaps by requiring ‘de-indexing’. However, orders that require service providers to monitor the activities of their customers are precluded by the e-Commerce Directive,<sup>56</sup> and it has been held that this necessarily precludes systems designed to filter copyright material.<sup>57</sup>

The power is relevant to trade mark infringements as well as to copyright. In *eBay*,<sup>58</sup> for example, the Court of Justice held that trade mark owners could secure, against the operator of an online marketplace by means of which their rights have been infringed,

<sup>49</sup> *L'Oréal v. eBay International AG*, [2009] EWHC 1094, [2009] RPC (21) 693, [447]–[454].

<sup>50</sup> *Ibid.*

<sup>51</sup> *LSG-Gesellschaft zur Wahrnehmung von Leistungsschutzrechten GmbH v. Tele2 Telecommunication GmbH*, Case C-557/07 [2009] ECR I-1227, [46]; *UPC Telekabel Wien GmbH v. Constantin Film Verleih GmbH*, *Wega Filmproduktionsgesellschaft mbH*, Case C-314/12 (27 March 2014) (ECJ, Fourth Chamber), [30]–[40] (it is not even necessary to show that any of the IAP’s customers have accessed the site providing illegal material); *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC (28) 855, [108], [113].

<sup>52</sup> See, e.g., *ibid.*; *Dramatico Entertainment Ltd v. British Sky Broadcasting Ltd* [2012] EWHC 268 (Ch); *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch).

<sup>53</sup> The injunction limits the freedom to conduct business that is protected under Art. 16 of the Charter. See *UPC Telekabel Wien GmbH v. Constantin Film Verleih GmbH*, *Wega Filmproduktionsgesellschaft mbH*, Case C-314/12 (27 March 2014) (ECJ, Fourth Chamber), [50]. In *Scarlet Extended v. SABAM*, Case C-70/10 [2011] ECR I-11959 (ECJ, Third Chamber), [48], and *SABAM v. Netlog NV*, Case C-360/10 (16 February 2012) (ECJ, Third Chamber), [46], the Court said that it would be inappropriate to grant an injunction that would compel a social networking site to install a filtering system, because that ‘would result in a serious infringement of the freedom of the hosting service provider to conduct its business since it would require that hosting service provider to install a complicated, costly, permanent computer system at its own expense’ (emphasis added). Whether the objection still exists if the copyright holder pays is yet to be seen.

<sup>54</sup> *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 2714 (Ch), [53]–[55] (differentiating between various stages in proceedings).

<sup>55</sup> *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC (28) 855, [177]; *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 2714 (Ch), [32]–[33] (initial cost would be £5,000, plus £100 for each notification); *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011, [139] (such measures ‘must not be excessively costly’).

<sup>56</sup> e-Commerce Dir., Art. 15; *Scarlet Extended*, Case C-70/10 [2011] ECR I-11959, [35]; *SABAM v. Netlog NV*, Case C-360/10 (16 February 2012) (ECJ, Third Chamber), [33].

<sup>57</sup> *Scarlet Extended*, Case C-70/10 [2011] ECR I-11959, [39]–[40]; *SABAM v. Netlog NV*, Case C-360/10 (16 February 2012) (ECJ, Third Chamber), [37]–[38].

<sup>58</sup> *L'Oréal SA v. eBay International AG*, Case C-324/09 [2011] ECR I-6011, [128]–[143]. See above pp. 1058–60.

injunctions requiring the operator to take measures to prevent future infringements of those rights. The Court indicated that the precise measures were for national courts to devise using the procedural devices available to them. The Court said that the measures must be 'effective and dissuasive', 'proportionate', and must 'strike a fair balance between the various rights and interests'.<sup>59</sup> Unfortunately, the case settled before the national judge could consider an appropriate form of order. Professor Kur has argued that a German doctrine known as *Storehaftung* might provide valuable guidance.<sup>60</sup>

## 4 OBTAINING AND PRESERVING EVIDENCE

Often, intellectual property right holders find out about infringement by chance. For example, a dissatisfied customer of a counterfeiter might complain to the right holder that the goods made by the infringer are faulty. Intellectual property rights owners also have more systematic ways of discovering infringements. In particular, collecting societies and trade associations such as the British Phonograph Industry's Anti-Piracy Unit, the Federation against Copyright Theft (FACT), which polices video piracy, and the Federation against Software Theft (FAST), which monitors software infringement, play an important role in identifying and policing infringement.

### 4.1 COLLECTING EVIDENCE

Once right holders discover that their rights are being infringed, it will often be necessary for them to gather the relevant evidence. This might include evidence that an infringement has taken place, the details of the parties involved, and the extent of infringement. In some cases, evidence of infringement is obtained by ambushing or entrapping the defendant. For example, a legal practitioner might pose as a bona fide customer of a person selling infringing products or services. Such actions, which are called 'trap orders', often involve a degree of deception by the person collecting the evidence. Despite this, the courts have not objected to evidence obtained in this way, nor have claimants relying on such evidence been treated as lacking 'clean hands'.<sup>61</sup> Instead, the courts have left the probity of such techniques to be regulated by the appropriate professional bodies. Copyright owners and anyone whom they authorize are also given the power to seize and detain infringing copies without first obtaining a court order.<sup>62</sup> To protect the expectations of property owners and the public more generally, the availability of such self-help mechanisms is limited.

### 4.2 DISCLOSURE ORDERS

Another important source of evidence derives from the fact that intellectual property right holders are able to obtain a court order requiring a person to reveal information relevant

<sup>59</sup> Ibid., [136]–[143].

<sup>60</sup> A. Kur, 'Secondary Liability for Trademark Infringement on the Internet: Situation in the EU with A Special Focus on Germany' (2014) 36 *Colum JL & Arts* forthcoming, [8] (noting that German courts applying the *Storerhaftung* doctrine to Internet auction sites 'did not confine [filtering] duties to future identical offers made by the same person, but extended them to infringements that were essentially of the same character').

<sup>61</sup> *Marie Claire Album v. Hartstone Hosiery* [1993] FSR 692.

<sup>62</sup> CDPA 1988, ss 100, 196; PACE 1984, ss 24–5.

to the action.<sup>63</sup> This may include the names and addresses of relevant parties, the dates and quantities imported, and the source of goods or materials. Orders for discovery are particularly useful in that they enable right holders to trace the channels through which infringing goods are distributed. The so-called ‘*Norwich Pharmacal* order’ may require parties to identify, for example, persons serving as the source of goods in their possession or providing access to works online.<sup>64</sup> The order may even address third parties, who are not themselves named as a wrongdoer, if they are shown to have become involved in the transaction in question, and even where the wrongdoer is not in the United Kingdom.<sup>65</sup> The topic has taken on particular importance in relation to right holders’ efforts to tackle file-sharing.<sup>66</sup> The most common scenario concerns an application to the court to force an Internet intermediary to reveal the identities of customers who appear to be infringing copyright. Here, a range of rights and freedoms need to be balanced: the right of the intellectual property owner; the right of the service provider to do business; and the rights of the user to their personal data. In *Promusicae*,<sup>67</sup> the Court of Justice held that the various directives did not require member states to provide for such orders in copyright proceedings, but merely that, when implementing the directives, member states ensure that ‘a fair balance’ is struck between the various fundamental rights protected by the European legal order.<sup>68</sup>

By placing the onus of balancing the ‘various fundamental rights protected by the Community legal order’ on national courts, the Court of Justice has adopted the rhetoric of balance (frustratingly) familiar in British intellectual property law. In *Golden Eye International Ltd v. Telefónica UK Ltd*,<sup>69</sup> the claimant involved in making pornographic films sought a *Norwich Pharmacal* order against O<sub>2</sub>, a large ISP, to obtain disclosure of the names and addresses of more than 9,000 O<sub>2</sub> customers who were alleged to have committed infringements of copyright through peer-to-peer file-sharing. The ISP did not oppose the application, but the Court benefited from an intervention by the consumer rights organization Consumer Focus, putting the case for the ‘real defendants’—that is, those whose names would be revealed. Arnold J observed that the key factor in determining whether to make an order was its proportionality, in relation to which a number of factors fell to be weighed.<sup>70</sup> On the one hand, the order sought to protect property rights,<sup>71</sup> but on the other revealing the identities of users of certain IP addresses implicates the right to privacy and the right to the protection of personal data under Article 8 of the European

<sup>63</sup> CPR, r. 31. J. Riordan, ‘The Liability of Internet Intermediaries’ (Unpublished PhD thesis, University of Oxford, 2013), ch. 6, offers a useful account.

<sup>68</sup> *Ibid.*, [71]. These were the e-Commerce Directive, the Information Society Directive, the Enforcement Directive, and the Directive on privacy and electronic communications.

<sup>69</sup> [2012] EWHC 723 (Ch), [2012] RPC (28) 698, [117] *per* Arnold J. Arnold J’s decision not to award relief to two claimants who had outsourced their capacity to bring claims to Golden Eye was overturned on appeal: [2012] EWCA Civ 1740, [2013] RPC (14) 452, although Arnold J’s general approach was not questioned.

<sup>70</sup> See *Rugby Football Union v. Viagogo Ltd* [2012] UKSC 55, [2012] 1 WLR 3333, [45] *per* Lord Kerr of Tonaghmore JSC.

<sup>71</sup> ECHR, First Protocol, Art. 1; Charter, Art. 17(2).

Convention on Human Rights (ECHR).<sup>72</sup> Because neither right automatically has precedence over the other, what is required to resolve the conflict is an intense focus on the comparative importance of the specific rights being claimed in the individual case and the justifications for interfering with or restricting each right. The proportionality test—or ‘ultimate balancing test’—must be applied to each. For Arnold J, in the circumstances, it was necessary and proportionate to reveal the identities of those whose IP addresses appeared to be implicated in illegal file-sharing. As he explained, without the disclosure of this data, it would be impossible for the copyright owner to enforce its rights. The judge saw no reason to differentiate between owners of rights in non-pornographic material and those of rights in pornographic material. Nevertheless, the Court sought to safeguard the interests of the subscribers whose identities were disclosed by regulating the contents of the letters that the rights holders would subsequently send. In particular, the judge was conscious that any threat to publicize the identities of the subscribers was especially inappropriate given the potential embarrassment arising from the nature of the alleged infringement.<sup>73</sup> Moreover, the judge said that it would not be correct to demand a standard sum of £700 damages.<sup>74</sup>

One problem with an overly solicitous approach to the revelation of the identities of alleged infringers is the part that it has played in the practice of so-called ‘speculative invoicing’. This problem, which became visible in litigation before the (then) Patents County Court,<sup>75</sup> involves an entity acting supposedly on behalf of copyright holders (under some sort of profit-sharing arrangement) to pursue small-scale infringers by sending letters before action to thousands of Internet subscribers, claiming a substantial sum in relation to alleged violations of copyright at the subscriber’s Internet address. The idea is to scare people into paying, not to ascertain whether there has been an actual infringement for which they were in some way legally responsible, nor actually to commence legal proceedings. In *Media CAT v. Adams*,<sup>76</sup> Judge Birss QC suggested that safeguards might be needed to prevent abuse of *Norwich Pharmacal* orders in this way.<sup>77</sup>

#### 4.3 DIGITAL ECONOMY ACT 2010

Inspired by a French precedent known as the ‘Hadopi’ regime,<sup>78</sup> the Digital Economy Act 2010 established the basis for a system of what has been variously termed ‘graduated response’ or ‘three strikes and you’re out’ to deal with online copyright infringement by end-users.<sup>79</sup> The underlying idea is to impose obligations on ISPs to assist copyright

<sup>72</sup> ECHR, Art. 8(1); Charter, Art. 7.

<sup>73</sup> [2012] EWHC 723 (Ch), [2012] RPC (28) 698, [122] (commenting on the draft order, which would accompany the letter). <sup>74</sup> *Ibid.*, [133]–[138].

<sup>75</sup> *Media CAT v. Adams* [2011] EWPC 6, [2011] FSR 28, [112]. <sup>76</sup> *Ibid.*

<sup>77</sup> Suggesting that a group litigation order under CPR, Pt 19, might be a potential safeguard. However, in *Golden Eye International Ltd v. Telefónica UK Ltd* [2012] EWHC 723 (Ch), [2012] RPC (28) 698, [142], Arnold J offers several reasons as to why such orders are unlikely to work.

<sup>78</sup> D. le Franc, ‘The Metamorphosis of *Contrfaçon*’, in L. Bently, J. Davis, and J. Ginsburg (eds), *Copyright and Piracy* (2010), ch. 4; C. Geiger, ‘Honourable Attempt but (Ultimately) Disproportionately Offensive against Peer-to-peer on the Internet’ [2011] JIC 457; J. de Beer and C. Clemmer, ‘Global Trends in Online Copyright Enforcement: A Non-neutral Role for Network Intermediaries?’ (2009) 49 *Jurimetrics J* 375; R. Giblin, ‘Evaluating Graduated Response’ (2014) 37 *Col JL. & Arts* 147.

<sup>79</sup> For background, see BIS/DCMS, *Digital Britain: Final Report* (Cm. 7650, June 2009). For commentary, see A. Barron, ‘“Graduated Response” à l’Anglaise: Online Copyright Infringement and the Digital Economy Act 2010’ (2011) 3 *J Media L* 305; J. Riordan, ‘The Liability of Internet Intermediaries’ (Unpublished PhD thesis, University of Oxford, 2013), ch. 5, 165ff.

holders in policing the activities of end-users by sending notices (so as to create a feeling that the activities are being watched) and, if necessary, limiting or terminating the service. The response is ‘graduated’ in the sense that it offers techniques of dealing with infringers that are less draconian than starting civil litigation (or criminal proceedings), as well as that the measures taken can be made proportionate to the severity or persistence of the activity. However, the French legislation has itself proved very controversial (particularly with respect to the possibility of termination and whether there is a ‘human right’ to access the Internet).<sup>80</sup> Consumers and many Internet access providers are resistant (the latter on the basis primarily of the cost of the system).<sup>81</sup>

The 2010 Act creates a regulatory framework within the Communications Act 2003 for providing information to copyright holders about end-users who utilize ISP services for the purposes of infringement. Ofcom, the regulator of the communications industry, is to establish a so-called ‘obligations code’ to govern when and how an ISP would have to notify its subscribers of alleged infringements of copyright, and these notices would serve as preconditions for disconnecting infringing subscribers.<sup>82</sup> As envisaged, only the six largest ISPs would be subject to the code,<sup>83</sup> and only copyright holders submitting ‘copyright infringement reports’ and paying towards the costs of the system would be able to take advantage of it. According to the proposed obligations code, if such reports were made in relation to their respective IP addresses in any given month, subscribers of a given ISP would be notified by that provider. If a subscriber were sent three notifications within a 12-month period, their details would be included on a ‘copyright infringement list’. Copyright holders would, in turn, have powers to view the list and, on the basis of that information, to target judicial action.<sup>84</sup>

Although an application for judicial review of the Act on a number of grounds, including non-compliance with the e-Commerce Directive, was unsuccessful,<sup>85</sup> four years after passage of the Act the topic remains so sensitive that the system has yet to be brought into operation.<sup>86</sup> While the UK government continues to indicate a commitment to bring the Act into operation, it has also expressed a preference for a voluntary scheme.<sup>87</sup> It is understood that just such a scheme (known as Vcap, the Voluntary Copyright Alert Programme) has been negotiated between the music and film industry and four ISPs (BT, Virgin, Sky, and TalkTalk), modelled upon the ‘copyright alert system’ that was voluntarily adopted

<sup>80</sup> The Court of Justice comes close to recognizing such a right in *UPC Telekabel Wien GmbH v. Constantin Film Verleih GmbH, Wega Filmproduktionsgesellschaft mbH*, Case C-314/12 (27 March 2014) (ECJ, Fourth Chamber), [55]–[56].

<sup>81</sup> It has been estimated that the cost will be in the region of £30 million. Under the draft Online Infringement of Copyright (Initial Obligations) (Sharing of Costs) Order 2011, 75 per cent was to be paid by copyright owners and 25 per cent by ISPs. The draft Order has, however, been withdrawn—and it is understood that there is some concern that the charging of ISPs/IAPs is a tax.

<sup>82</sup> Communications Act 2003, ss 124A–J. A technical obligations code, which would enable or require service providers to suspend or restrict the online access of subscribers, has not yet been developed: Communications Act 2003, s. 124G.

<sup>83</sup> BT, Everything Everywhere, O<sub>2</sub>, Sky, TalkTalk Group, and Virgin Media.

<sup>84</sup> Draft Online Infringement of Copyright (Initial Obligations) (Sharing of Costs) Order 2011; Ofcom, *Online Infringement of Copyright and the Digital Economy Act 2010: Notice of Ofcom’s Proposal to Make by Order a Code for Regulating Initial Obligations* (2012). in the United States. There must be concerns as to whether the interests of subscribers and the public will be appropriately safeguarded by such private arrangements and whether the public law solution embodied in the Digital Economy Act might not, in the end, be a preferable compromise.

#### 4.4 SEARCH ORDERS

To enable intellectual property right owners to preserve evidence prior to trial, the English courts developed the so-called ‘*Anton Piller* order’,<sup>88</sup> now renamed ‘search order’.<sup>89</sup> In essence, a search order permits a claimant (and their solicitor) to inspect the defendant’s premises and to seize or copy any information that is relevant to the alleged infringement. Applications for search orders are made either to a patents judge in the High Court or the Intellectual Property Enterprise Court, or to a Chancery judge.<sup>90</sup> Because the order aims to ensure that evidence is not destroyed, the application is made without giving notice to the other party. Given their potentially draconian nature,<sup>91</sup> search orders will be made only if the matter is urgent or otherwise desirable in the interests of justice.<sup>92</sup> Before an order will be granted, the courts require claimants to show that they have an extremely strong case of infringement on its face and that the potential damage to them is very serious. The claimant must also provide clear evidence that the defendant has incriminating material in their possession and that there is a real possibility that the evidence will be destroyed.<sup>93</sup> The search order is subject to procedural safeguards,<sup>94</sup> such as the need for a supervising solicitor (unconnected with the applicant) who is experienced in the operation of search orders.<sup>95</sup> The order may be served only on a weekday between 9.30 am and 5.30 pm (unless the court orders otherwise), and supervising solicitors must explain the terms of the order to the respondents in everyday language and advise them of their rights.<sup>96</sup> Failure to comply with an order is a contempt of court, resulting in imprisonment or a fine.<sup>97</sup>

The application for a search order may be combined with an interim injunction against infringement and a ‘freezing order’ (formerly known as a ‘*Mareva* injunction’) ordering the retention of property pending the outcome of the litigation.<sup>98</sup> In addition, the search order may require the defendant to provide information about the source of the infringing copies or their intended destination.<sup>99</sup>

<sup>88</sup> *Anton Piller v. Manufacturing Processes* [1976] Ch 55. See S. Gee, *Mareva Injunctions and Anton Piller Relief* (4th edn, 1998); M. Hoyle, *The Mareva Injunction and Related Orders* (1997), ch. 8. For a Marxist interpretation of the development of the order, see F. Carrigan, ‘The Political Economy of *Anton Piller* Orders’ (1995) 11 *AJL & Soc* 33.

<sup>94</sup> *Ibid.*

<sup>95</sup> *Ibid.*, [7.2] (supervising solicitor must not be an employee or member of the applicant’s firm of solicitors).

<sup>96</sup> *Ibid.*, [7.4]. Where the supervising solicitor is a man and the respondent is likely to be an unaccompanied woman, at least one other person named in the order must be a woman and must accompany the supervising solicitor: *ibid.*, [7.4(5)].

<sup>97</sup> *Taylor Made* [1996] FSR 528 (fine of £75,000). See the Notice to the Respondent in the sample order annexed to CPR Practice Direction 25A.

<sup>98</sup> CPR, r. 25(f) (sometimes called ‘asset preservation orders’).

<sup>99</sup> There is a statutory exception to the privilege against self-incrimination: Senior Courts Act 1981, s. 72.

## 5 PRESUMPTIONS

Normally, in civil actions, the obligation falls upon the claimant to prove their case on the balance of probabilities. However, in a number of situations, intellectual property legislation creates presumptions that alter the normal burden of proof. The most important is that it is presumed that registered rights have been granted validly. Thus the obligation falls on the alleged infringer of a patent, a registered trade mark, or a registered design to prove that the right is invalid (or obtain revocation). Presumptions also operate in the field of unregistered design right, copyright, publication right, performers rights, and the database right. These relate to the identity of the author,<sup>100</sup> publisher, performer, or (in the case of database right) the maker,<sup>101</sup> and the date on which a work (etc.) was published.<sup>102</sup> In copyright law, when an author is dead, it is presumed that the work was original and that it was first published where and when the claimant alleges.<sup>103</sup>

## 6 UNJUSTIFIED THREATS TO SUE

The cost and burden of intellectual property litigation means that the mere threat of litigation has the scope to act as a potent commercial weapon.<sup>104</sup> To ensure that the threat to sue is not misused, special provisions offer remedies against unjustified threats to litigate.<sup>105</sup> These exist in the case of patents, trade marks, registered designs, the unregistered design right, and Community designs, whether registered or unregistered.<sup>106</sup> There are no statutory provisions that protect against unjustified threats to sue in relation to copyright, passing off, or breach of confidence. In these cases, persons unjustifiably threatened with litigation have to resort to other means.<sup>107</sup>

### 6.1 THREATS TO SUE: PATENTS, TRADE MARKS, DESIGNS

Special statutory provisions exist in the case of patents,<sup>108</sup> trade marks,<sup>109</sup> registered designs,<sup>110</sup> and the unregistered design right<sup>111</sup> to protect parties against unjustified

<sup>100</sup> CDPA 1988, s.104(2)–(4); *Waterlow Publishers v. Rose* [1995] FSR 207, 218. These presumptions do not operate for the purposes of the publication right: Rel. Rights Regs, reg. 17(2)(b). As regards films, additional presumptions operate concerning statements as to who was the director or producer of the film, as well as who was the principal director, author of the screenplay, author of dialogue, or composer of music.

<sup>101</sup> See Database Regs, reg. 22(1).

<sup>102</sup> As regards copyright in sound recordings and computer programs, it is presumed that statements naming the copyright owner, or giving the date or place of first publication, are true: CDPA 1988, s. 105. See *Microsoft Corp. v. Electrowide* [1997] FSR 580, 594. Where copies of the database as published bear a label or a mark stating that the database was first published in a specified year, the label or mark shall be admissible as evidence of the facts stated and shall be presumed to be correct until the contrary is proved: Database Regs, reg. 22(3).

<sup>103</sup> CDPA 1988, s. 104(5).

<sup>104</sup> Another technique that is used to avoid unnecessary litigation is the issuing of certificates of contested validity. As well as acting as a victory trophy, the certificate may deter subsequent litigation: RDA 1949, s. 25; PA 1977, s. 65; TMA 1994, s. 73.

<sup>105</sup> See I. Davies and T. Scourfield, 'Threats: Is the Current Regime Still Justified?' [2007] *EIPR* 259; G. Schwartz and M. Gardner, 'Groundless Threats of Proceedings for IP Infringement' [2006] *Communications Law* 85.

<sup>106</sup> Community Designs Regulations 2005 (SI 2005/2339), [2].

<sup>107</sup> For a general discussion, see *Reckitt Benkiser UK v. Home Pairfum* [2004] FSR 774.

<sup>108</sup> PA 1977, s. 70. <sup>109</sup> TMA 1994, s. 21.

<sup>110</sup> RDA 1949, s. 26; see, e.g., *Jaybeam v. Abru Aluminium* [1975] FSR 334.

<sup>111</sup> CDPA 1988, s. 253.

threats to sue. These statutory provisions ‘ensure that threats of infringement proceedings are not made casually or recklessly, because of the potential damage and concern they can cause.’<sup>112</sup> As a result, if owners threaten to sue, they must ensure that the threat can be justified.

In order to qualify for relief against a groundless threat, a claimant must establish that an actionable threat has been made and that, as a result, they have been aggrieved. If the defendant fails to justify the threat, the court will grant relief. We will deal with these factors in turn.

### 6.1.1 Actionable threats

In order for a claimant to be entitled to the relief provided, they must show that an actionable threat has been made. It should be noted that, in the case of patents, registered designs, and trade marks, special provisions limit the circumstances in which groundless threats are actionable.<sup>113</sup> In essence, these exclude threats made in relation to primary acts of infringement: rival manufacturers may threaten each other. The idea is that threats made to retailers are particularly likely to cause the retailer to stop stocking the goods, and thus to harm the supplier, without legal proceedings ever being commenced. However, problems have occurred where a threat relates both to primary and secondary acts. In the case of patent infringement, such threats are permitted; in cases of designs and trade marks, the inclusion of secondary acts gives rise to liability.<sup>114</sup>

Threats can take many different forms. Although actionable threats will usually be explicit, they may also be implicit<sup>115</sup> and may arise from a single letter or a circular.<sup>116</sup> It is necessary to show that a threat has been made against someone in particular; it is not enough for a claimant to show that a general threat has been made.<sup>117</sup> There is no need for an actionable threat to be communicated to the person threatened:

If I threaten a man that I will bring an action against him, I threaten him none the less because I address that intimation to himself, and I threaten him none the less because I address the intimation to a third person.<sup>118</sup>

An interesting example of such an indirect threat occurs where a person complains to an online auction site that a third party is selling goods that infringe trade mark or design rights. One such case concerned a complaint to eBay about the advertisement of children’s motor bikes in which the complainant claimed to hold a Community registered design right. When faced with such complaints, eBay takes what the court described as ‘the line of least resistance’—that is, it will remove the listing; eBay does not, and could not be expected to, check the accuracy of the infringement claims. On the basis that ‘unsupported and unchallengeable allegations of infringement are potentially an exceedingly

<sup>112</sup> *Prince v. Prince Sports Group* [1998] FSR 21, 33.

<sup>113</sup> PA 1977, s. 70(4); RDA 1949, s. 26(2A); CDPA 1988, s. 253(3); TMA 1994, s. 21(1).

<sup>114</sup> PA 2004, s. 12 (adding PA 1977, s. 70(4)(b)). For proposals to extend the patent rule to trade marks and designs, see Law Commission, *Patents, Trade Marks and Design Rights: Groundless Threats* (April 2014) Law Com No. 346.

<sup>115</sup> *Bowden Controls v. Acco Cable Controls* [1990] RPC 427, 431; *Scandecor Development v. Scandecor Marketing* [1999] FSR 26, 47.

<sup>116</sup> When read in conjunction with other letters or circulars, the communication as a whole may be construed as giving rise to a threat of litigation: *Brain v. IBBG (No. 3)* [1997] FSR 511, 521–4. Later letters cannot nullify an earlier threat: *Prince v. Prince Sports* [1998] FSR 21, 33.

<sup>117</sup> *Speedycranes v. Thompson* [1978] RPC 221.

<sup>118</sup> *Skinner & Co. v. Perry* (1893) 10 RPC 1, 7; cited with approval in *Sudarshan Chemical Industries v. Clariant Produkte* [2013] EWCA Civ 919, [120].

damaging abuse of registered rights', the court held that there was 'arguably a threat in the notification to eBay'.<sup>119</sup> An injunction was granted to restrain the making of such complaints.

When considering whether a threat had been made, the document in question is looked at through the eyes of a reasonable and normal recipient.<sup>120</sup> In so doing, the court will take into account matters such as the circumstances of the business or the background information available to a reasonable recipient.<sup>121</sup> The courts will pay particular attention to the initial impression that the communication makes on a reasonable addressee. Mere notification of the existence of a patent, trade mark, or other right will not constitute a threat of proceedings. It has been suggested, however, that notification of a patent (and presumably other statutory intellectual property rights) may constitute an actionable threat if it is 'given in such a context that a threat is seen to be intended'.<sup>122</sup> Certainly, it is not always easy to determine what may legitimately be said and when it becomes a threat.

### 6.1.2 Aggrieved

A person is able to bring an application for relief even though the threats have not been made against them. This means that right owners can bring an action where a shop-keeper who sells their products is threatened with litigation by a competitor. The availability of the action is limited by the requirement that claimants must show that they were 'aggrieved' by the threats. This excludes frivolous applications or applications by busybodies who have no real interest in the threats.<sup>123</sup> While a person can be aggrieved without having to prove actual damage at trial, they must show that something more than a merely fanciful or minimal commercial interest has been interfered with. The courts are more likely to infer an adverse effect where the threats are made directly against a party.<sup>124</sup> Where threats are made indirectly, claimants will need to demonstrate that they suffered actual or potential loss (which is not minimal).<sup>125</sup> This will be easier to prove where the threat was intended to scare off the claimant's customers.<sup>126</sup>

### 6.1.3 Groundless threats

Once a claimant has established that a threat has been made and that, as a result, they were aggrieved, the statutory provisions shift the onus onto the defendant to prove that the threats were justified.<sup>127</sup> To do this, the defendant will need to show that the right in question is valid<sup>128</sup> and that the acts in respect of which proceedings were threatened would constitute an infringement of the right. This means, for example, that where a threat was made after a patent application had been made, but before the patent had been granted, it will not be possible to justify the threat if the patent is not granted before trial.<sup>129</sup>

<sup>119</sup> *Quads 4 Kids v. Colin Campbell* [2006] EWHC 2482 (Ch), [31].

<sup>120</sup> *Brain v. IBBG (No. 3)* [1997] FSR 511, 521.

<sup>121</sup> *Brain v. Ingledew Brown Bennison & Garrett* [1996] FSR 341, 349. On whether 'without prejudice' discussions can be used as a basis for a threats claim, see *Unilever v. Procter & Gamble* [2000] FSR 344 (CA), 358; *Kooltrade v. XTS* [2001] FSR 158; *ALM Manufacturing v. Black & Decker* [2003] All ER (D) 300 (May).

<sup>126</sup> *Dimplex v. De'Longhi* [1996] FSR 622.

<sup>127</sup> RDA 1949, s. 26(2); PA 1977, s. 70(2); CDPA 1988, s. 253(2); TMA 1994, s. 21(2).

<sup>128</sup> TMA 1994, s. 21(3).

<sup>129</sup> *Brain v. Ingledew Brown Bennison & Garrett (No. 2)* [1997] FSR 271, 275.

### 6.1.4 Relief

If a claimant can show that they have been aggrieved as a result of an actionable threat and the defendant cannot establish that the threat was justified, the claimant is entitled to the relief provided in the relevant statutory provisions.<sup>130</sup> This includes a declaration that the threats are unjustifiable,<sup>131</sup> an injunction against the continuance of the threats,<sup>132</sup> and damages for any losses that were sustained as a result of the threats.<sup>133</sup>

## 6.2 THREATS TO SUE: COPYRIGHT, PASSING OFF, AND BREACH OF CONFIDENCE

There are no statutory provisions that protect against unjustified threats to sue in relation to copyright, passing off, or breach of confidence. In these circumstances, a person who suffers damage as a result of an unjustified threat will have to seek relief through alternative avenues.<sup>134</sup> In some cases, an aggrieved party may be able to bring an action for the tort of abuse of process.<sup>135</sup> A more important option is provided by the action for injurious falsehood. To succeed in an action for injurious falsehood, a claimant must prove that the statements were untrue and malicious. They must also show that they suffered special damage as a result of the statements. The notion of malice has proved difficult to define. It seems to require that the threat must be issued with a view to injuring the claimant rather than defending the defendant's rights. Moreover, it has been said that an honest belief in an unfounded claim is not malicious.<sup>136</sup>

## 6.3 REFORM

In April 2012, the Law Commission embarked on a project to reform the law relating to groundless threats of litigation over patents, trade marks and design right.<sup>137</sup> One problem that the Commission identified was inconsistency between the different statutory regimes (particularly as regards liability for threatening a primary actor). Another was the uncertainty as to what constitutes a threat, and the failure to accommodate the legitimate interests of persons who communicate with secondary actors, such as the seller, for example to try to ascertain the source of products that are thought to infringe. A third issue was the tension between the rules on groundless threats and the ethos of the Civil Procedure Rules, which encourage parties to discuss their differences before going to court. Following consultation, the Law Commission concluded that the threats provisions should be retained, but subject to limited reform.<sup>138</sup> In particular, it proposed that the trade mark and design rules be reformulated to correspond with the patent rules, that greater clarification be

<sup>130</sup> RDA 1949, s. 26(2); PA 1977, s. 70(3); CDPA 1988, s. 253(1); TMA 1994, s. 21(2).

offered as to what may be said without giving rise to possible liability, and that immunities be offered to legal advisers when communicating on behalf of clients.

## 7 COURTS AND TRIBUNALS

One of the methods that have been adopted to deal with the technical nature of intellectual property litigation has been to develop special courts and tribunals. In this section, we provide a brief overview of some of the courts and tribunals that operate in the United Kingdom.

### 7.1 VARIOUS TRIBUNALS

#### 7.1.1 High Court

Disputes to do with all forms of intellectual property can be brought before the Chancery Division of the High Court. Proceedings under the Patents Act 1977 and Registered Designs Act 1949 are dealt with by the Patents Court, which is a specialist court within the Chancery Division.<sup>139</sup> Proceedings before the Patents Court are heard before a specialist judge, sitting without a jury. The Patents Court has a reputation for the quality of its decisions.<sup>140</sup> Despite this, it has been said that litigation before the Patents Court is time-consuming, laborious, long drawn-out, and, as a consequence, expensive.<sup>141</sup>

#### 7.1.2 Intellectual Property Enterprise Court (formerly the Patents County Court)

The Patents County Court was established in 1990<sup>142</sup> with the aim of providing ‘cheaper, speedier and more informal procedures to ensure that small and medium sized enterprises, and private individuals, were not deterred from innovation by the potential cost of litigation to safeguard their rights’.<sup>143</sup> In October 2013, the Patents County Court was renamed the Intellectual Property Enterprise Court (IPEC) and made a part of the specialist list of the High Court.<sup>144</sup> The IPEC has jurisdiction to hear and determine any action or matter relating to patents, design right (registered and unregistered), trade marks, passing off, copyright, and database rights.<sup>145</sup> The Court is equipped with a full range of remedies (such as interim and final injunctions, and search orders).<sup>146</sup>

After initial problems,<sup>147</sup> a series of changes that have been made to ensure proceedings in the IPEC are cheap and quick.<sup>148</sup> These include active case management by the judge,

<sup>139</sup> CPR Practice Direction 63, r. 63.1(2)(e), defines ‘patent’ to include SPCs and r. 63.3 defines the business of the Patent Court to include proceedings under the RDA 1949, Community registered designs, and plant varieties.

<sup>147</sup> *Composite Gutters v. Pre-Formed Components* [1993] *FSR* 305, 308; *Chaplin. v. Lotus*, The Times, 12 January 1994 (CA)

<sup>148</sup> These are a product of a number of initiatives, including: Intellectual Property Court User’s Committee, *Final Report* (July 2009); Lord Justice Jackson, *Review of Civil Litigation Costs* (May 2009); and

as well as limitations on disclosure, use of expert evidence, and cross examination.<sup>149</sup> Moreover, from 2010, a cost cap of £50,000 was introduced, along with scaled costs (so that, within that £50,000, only certain amounts can be claimed in relation to particular parts of the proceedings).<sup>150</sup> In these cases, there is a limit on damages of £500,000.<sup>151</sup> In 2012, a further innovation was the introduction of a small claims track. The small claims track is available only for claims with value of up to £10,000 in relation to copyright, UK and Community registered trade marks, passing off, and UK and Community unregistered design right.<sup>152</sup> Decisions on the small claims track will be made by district judges, frequently on the basis of the papers.<sup>153</sup>

When deciding whether to transfer a (multi-track) matter to or from the IPEC, a number of factors fall to be considered.<sup>154</sup> First to be considered is the financial position of the parties: the IPEC is designed to offer access to the court system to those who could not otherwise afford it; thus a key factor is specified to be whether ‘a party can only afford to bring or defend the claim in a patents county court’.<sup>155</sup> Second, the court should consider whether it would be more convenient or fair for the hearing to be held in another court, having regard especially to the value of the claim (including the value of an injunction), the relative complexity of the legal issues, and the estimated length of trial,<sup>156</sup> the importance of the outcome to the public, and the facilities available at the court where the claim is being dealt with.<sup>157</sup>

### 7.1.3 County court

Occasionally, cases are heard in the regular county courts. These have jurisdiction to hear cases on copyright,<sup>158</sup> unregistered design right, registered national and Community trade marks, passing off, and performances,<sup>159</sup> but not patents or registered designs.<sup>160</sup> The jurisdiction of the county court is local: a defendant should be sued in the county court in the district in which they reside. Patent and trade mark agents have no right of

the Hargreaves Review. See generally S. Thambisetty, ‘Patent Litigation in the United Kingdom: Solutions in Search of a Problem’ [2010] *EIPR* 238; J. Morton, ‘Emerging Trends in the Patents Country Court’ [2013] *EIPR* 181.

<sup>149</sup> For a useful description, see *Caljan Rite-Hite v. Solvex* [2011] *EWHC* 669 (Ch), [7] per Kitchin J.

<sup>150</sup> On deviation from the cap and scale, see *Henderson v. All around the World Recordings* [2013] *EWPC* 19 (deviation from cap only in truly exceptional cases); *Brundle v. Perry* [2014] *EWHC* 979 (IPEC), [16] (deviation from scale will seldom happen, but likely to be more frequent than deviation from the cap).

<sup>151</sup> Patents County Court (Financial Limits) No. 2 Order 2011 (SI 2011/2222).

<sup>152</sup> CPR Practice Direction 63 (‘Intellectual Property Claims’), [16.1]; CPR, Pt 63, r. 63.2(1). The small claims track came into effect on 1 October 2012.

<sup>153</sup> An international trend is emerging of trying to improve ‘access to justice’ for creators and small enterprises. See, e.g., US Copyright Office, *Copyright Small Claims* (September 2013); Irish Copyright Committee, *Modernising Copyright* (2013), 10, 25–7.

<sup>154</sup> CDPA 1988, s. 289(2); CPR Practice Direction 30, [9.1]; *Alk-Abello Ltd v. Meridian Medical Technologies* [2010] *EWPC* 14, [30] (providing guidance on transfers after the introduction of the costs cap). This is the ‘decisive factor’: *ibid.*, [55]. But even so, if a small enterprise takes an aggressive and unfocused approach to litigation, the High Court may be the appropriate venue: *Comic Enterprises Ltd v. Twentieth Century Fox Film* [2012] *EWPC* 13; cf. *Destra Software Ltd v. Comada (UK) LLP* [2012] *EWPC* 39.

<sup>155</sup> CPR Practice Direction 30, [9.1(2)]; *Chaplin v. Lotus*, *The Times*, 12 January 1994 (CA).

<sup>156</sup> CPR, r. 30.3(e); CDPA 1988, s. 289(2).

<sup>157</sup> *PSM v. Specialised Fastener* [1993] *FSR* 113, 116; *McDonald v. Graham* [1994] *RPC* 407.

<sup>158</sup> High Court and County Court Jurisdiction (Amendment) Order 2005 (SI 2005/587); CTMR, Art. 91; Community Trade Mark Regulations 2006 (SI 2006/1027), reg. 12.

<sup>159</sup> PA 1977, s. 130(1); RDA 1949, s. 27(1); TMA 1994, s. 75.

audience. While certain forms of relief, such as search orders and delivery up,<sup>161</sup> are not available,<sup>162</sup> the county court can award interim injunctions, damages, and accounts of profits. It is common to transfer proceedings from county courts to the IPEC.

#### 7.1.4 Comptroller of Patents

The Comptroller of Patents, and the UK Intellectual Property Office (IPO) more generally, have important powers to determine matters relating to the validity and revocation of patents.<sup>163</sup> On being authorized by the parties, the Comptroller has the ability to hear infringement actions and counterclaims for revocation.<sup>164</sup> The Comptroller also has jurisdiction over certain issues concerning unregistered design right.<sup>165</sup> The Comptroller provides litigants with a cheaper, quicker, and more specialized and informal forum than is offered by the Patents Court.<sup>166</sup> One advantage of using the Comptroller is that the parties can be represented by patent agents rather than by counsel.<sup>167</sup> However, the jurisdiction has rarely been used. This may be because the Comptroller has no jurisdiction to grant injunctive relief and because failed proceedings do not give rise to any issue of estoppel. Moreover, the courts have been extremely reluctant to stay court proceedings pending determination of the issues by the Comptroller. Hoffmann J said that these factors mean that the Comptroller and the UK IPO can be made to work as an alternative tribunal in infringement cases only by the giving of undertakings by the parties that will enable it to decide finally on those issues that are before it, and even then resort may still be had to the High Court in order to obtain injunctions.<sup>168</sup>

#### 7.1.5 Community courts

The various Community regimes, such as those relating to designs and trade marks, operate through national tribunals that are designated to function as Community design and trade mark courts.<sup>169</sup> The High Court and IPEC have been designated as Community trade mark and designs courts, while some county courts are also Community trade mark courts.<sup>170</sup> Issues of validity can be determined by the Office of Harmonization in the Internal Market (OHIM).<sup>171</sup>

#### 7.1.6 Unified patent court

As we saw earlier, one of the key components of the unitary patent package that has taken shape in the last couple of years is the establishment of a unified patent court.<sup>172</sup> The desire to establish a central Europe-wide patent court grew out of concerns about the current

<sup>161</sup> County Courts Act 1994, s. 15, gives the court power to hear ‘any action’.

<sup>162</sup> CPR Practice Direction 25A, [8.5].

<sup>163</sup> The most important is the power to revoke the patent as invalid: PA 1977, ss 72, 73. The Comptroller may also grant compulsory licences, settle the terms of licence of right, and award compensation to employees.

<sup>164</sup> PA 1977, s. 61(3). <sup>165</sup> CDPA 1988, s. 246.

<sup>166</sup> But cf. *Ferro Corporation v. Escol Products* [1990] RPC 651. <sup>167</sup> PA 1977, s. 102(1).

<sup>168</sup> [1990] RPC 651, 652.

<sup>169</sup> CDR, Art. 80; CTMR, Art. 95 (designation); *DHL Express France SAS v. Chronopost SA*, Case C-235/09 [2011] ECR I-2801, [AG20]–[AG27].

<sup>170</sup> Community Trade Mark (Designation of Community Trade Mark Courts) Regulations 2005 (SI 2005/440) (designating: for England, the High Court, Patents County Court (now IPEC), and seven county courts; for Scotland, the Court of Session; and for Northern Ireland, the High Court); Community Designs (Designation of Community Design Courts) Regulations 2005 (SI 2005/696) (designating: for England, the High Court and Patents County Court (now IPEC); for Scotland, the Court of Session; and for Northern Ireland, the High Court). See also Community Designs Regulations 2005 (SI 2005/2339).

<sup>171</sup> CDR, Art. 52. <sup>172</sup> See below pp. 394–5.

system—notably, legal uncertainty, forum shopping, duplication of costs, and the resulting fragmentation of the internal market. To remedy these problems, on 19 February 2013 25 member states signed an international agreement to set up a unified patent court.<sup>173</sup> When established, the unified patent court will consist of a Court of First Instance, which, in turn, will consist of local, regional, and central divisions located in the member states.<sup>174</sup> The central division of the Court of First Instance will be divided between London (responsible for chemical, pharmaceutical, and the life science patents), Munich (responsible for mechanical engineering patents), and Paris (responsible for all other patents).<sup>175</sup> There will also be a Court of Appeal, which will be based in Luxembourg. It is not expected that the unified patent court will become operational until, at best, 2015.

## 8 PARALLEL PROCEEDINGS

Where rights are granted centrally (and can be challenged centrally)—as with European patents, Community trade marks, and Community designs—but are enforced locally, parallel proceedings can occur. Such proceedings raise at least two problems: first, which tribunal should stay proceedings—the central one, or the local one—and when? Second, what happens if the local proceedings reach a conclusion and the right on which they were based is then invalidated?

### 8.1 STAYS

The question of what to do in relation to parallel proceedings has existed for some time in relation to patents. Since issues of validity may be heard before the Comptroller, or opposition proceedings may be taking place at the European Patent Office (EPO),<sup>176</sup> a possibility exists that proceedings will be duplicated. These problems arise because the UK courts and the EPO have concurrent jurisdiction over questions of validity (infringement is heard only at the national level). The frequency of such parallel proceedings has increased by the introduction in the 2000 European Patents Convention (EPC 2000) of the possibility of central amendments at the EPO.<sup>177</sup> Such concurrent proceedings are potentially problematic, since while both decisions are *in rem* (meaning that they ‘determine the validity of the patent not only as between the parties to the proceedings’), nonetheless the English court’s jurisdiction over the question of validity is purely national.<sup>178</sup> A decision of an English court declaring a patent invalid or revoking it will have effect only in the United Kingdom. In contrast, a corresponding decision of the EPO will have effect in all of the states for which the patent is granted. This gives rise to the problem of duplication of validity proceedings and conflicting decisions in the United Kingdom and at the EPO.

With domestic proceedings, some attempt is made to avoid such duplication by a provision that prohibits issues of validity from being raised before the Comptroller pending the outcome of a decision in the Patents Court. As between UK infringement (or invalidity)

<sup>173</sup> *Agreement on a Unified Patent Court* [2013] OJ C 175/1 (20 June 2013).

<sup>174</sup> *Ibid.*, Art. 7(1).

<sup>175</sup> The division is based on the International Patent Classification (IPC) system.

<sup>176</sup> EPC 2000, Art. 99; *Memminger-Iro* [1992] RPC 210.

<sup>177</sup> EPC 2000, Art. 105a; *Samsung Electronics Co. Ltd v. Apple Retail UK Ltd* [2014] EWCA Civ 250, [18], [26].

<sup>178</sup> *Virgin Atlantic Airways v. Zodiac Seats* [2013] UKSC 46, [7].

proceedings and oppositions at the EPO, the court has a discretion to order a stay, which it will exercise according to the facts of the case: often, the problem is how to balance the competing issues of (i) the costs of duplicating proceedings (perhaps unnecessarily) with (ii) the delays involved in staying local proceedings and awaiting the outcome of opposition at the EPO. In recent years, English courts have become frustrated with delays in the processes at the EPO and have tended to refuse stays where they could decide the issue more speedily.<sup>179</sup> However, that, in turn, exacerbated the problem as to what arises when a person has been found to infringe a patent in national proceedings, only for the patent to be revoked or amended (in a material manner) at the EPO. Following the decision of the Supreme Court in *Virgin v. Zodiac*,<sup>180</sup> dealing with the latter issue, the courts were asked to review the circumstances in which a stay will be ordered. The Court of Appeal did so in *IPCOM GmbH v. HTC Europe Co. Ltd.*<sup>181</sup> Although the ‘guidelines’ have not changed radically, the Court reiterated that the default position should be to order a stay and that ‘it is for the party opposing a stay to demonstrate why it should not be granted’.<sup>182</sup> Timing remains important (showing that the EPO proceedings will take considerably longer is a factor against a stay), as does the possibility that national proceedings will be concluded in a manner that deprives the party of the benefit of the EPO decision (although here undertakings to repay damages may remove this potential injustice).

The question of parallel proceedings also arises in Community trade mark and design litigation, in which invalidity proceedings are possible at the OHIM and infringement proceedings (with potential counterclaim for invalidity) in national courts. The provisions of the Community Trade Marks Regulation (CTMR) and Community Design Regulation (CDR) indicate that where invalidity proceedings have already commenced at the OHIM, or validity is in issue before another Community trade mark or design court, a court hearing an action relating to a Community trade mark or design shall stay the proceedings ‘unless there are special grounds for continuing the hearing’.<sup>183</sup> This has led to the so-called ‘OHIM torpedo’,<sup>184</sup> in which a defendant responds to letters before action by launching invalidity proceedings at the OHIM (where, the cases tell us, it might take ten years before the issues are concluded).<sup>185</sup> In such cases, the issue of when a national court can decline a stay become critically important. When do such ‘special reasons’ exist to refuse a stay? The presumption of stay has been described as a ‘strong one’,<sup>186</sup> but even so, on a number of occasions, the English courts have been willing to refuse a stay.<sup>187</sup> They have declined to give much guidance as to when such refusal is appropriate, but it is clear that ‘the nature and force of the special grounds’ would have to be of sufficient importance and substance to justify the risk necessarily engendered by parallel and active

<sup>179</sup> *Unilin Beheer v. Berry Floor* [2007] EWCA Civ 364, [25]; *Glaxo Group Ltd v Genentech Inc.* [2008] EWCA Civ 23, [2008] FSR (18) 459 (stays were generally declined if the question of validity would be likely to be resolved quicker in the English court than in the EPO).

<sup>180</sup> *Virgin Atlantic Airways v. Zodiac Seats* [2013] UKSC 46.

<sup>181</sup> [2013] EWCA Civ 1496. See further *Samsung Electronics Co. Ltd v. Apple Retail UK Ltd* [2014] EWCA Civ 250; *Actavis v. Pharmacia* [2014] EWHC 2265 (Pat).

<sup>184</sup> *Regent University v. Regent’s University London* [2013] EWPC 39, [34] per Wilson QC.

<sup>185</sup> *Ibid.*, [14]; *Starbucks (UK) Ltd v. British Sky Broadcasting Group Plc* [2012] EWHC 1842 (Ch), [56]. The length of time of the OHIM proceedings is ‘irrelevant’: *ibid.*, [110].

<sup>186</sup> *Ibid.*, [112]; *Guccio Gucci Spa v. Shipton & Heneage Ltd* [2010] EWHC 1739 (Ch), [18] per Lewison J.

<sup>187</sup> *Samsung Electronics (UK) Ltd v. Apple Inc.* [2012] EWCA Civ 729 (stay granted); *Starbucks (UK) Ltd v. British Sky Broadcasting Group Plc* [2012] EWHC 1842 (Ch) (stay refused); *Hearst Holdings Inc. v. A.V.E.L.A. Inc.* [2014] EWHC 1553 (Ch), [38]–[43] (stay refused because both parties had allowed the English proceedings to take place in parallel with an Italian action and the English proceedings had been virtually completed).

proceedings of possible inconsistent decisions on the same point in different tribunals.<sup>188</sup> If there is no likelihood of conflicting judgments, because local proceedings relate only to infringement, this may justify continuation of local proceedings.<sup>189</sup> Equally, if the matter is very urgent and local proceedings would be expedited, there may be good grounds for refusal of a stay.<sup>190</sup> Otherwise, the norm should be to order a stay, but provide the local claimant with appropriate interim relief.<sup>191</sup>

## 8.2 EFFECT OF CENTRAL INVALIDATION ON A LOCAL JUDGMENT

If a stay is refused and litigation concludes in the United Kingdom, what happens if the EPO or the OHIM holds that the patent, trade mark, or design is invalid? The Court of Appeal had held that the matter was closed once judgment was given.<sup>192</sup> However, in *Virgin Atlantic Airways Ltd v. Zodiac Seats*,<sup>193</sup> the Supreme Court indicated that this was not so. In this case, a damages award of a staggering £49 million was at stake, the award being made in English proceedings before the claimant amended the patent at the EPO (to avoid invalidity) so that the valid patent did not cover the defendant's acts. A stay had been refused, but the money had not been paid over. Faced with the contention that the local decision was *res judicata*, the Supreme Court stated that, were this so, it would 'make the outcome dependent on the wholly adventitious question which of two concurrently competent jurisdictions completes its procedures first'.<sup>194</sup> Such a conclusion was indefensible. At least where the enquiry as to damages was not complete, the local judgment could be reviewed.

But what if damages had been paid over? Lord Sumption was doubtful whether anything could be done (in the absence of a pending appeal), but indicated that this was 'a question which will have to await a case in which it arises'.<sup>195</sup> Lord Neuberger was similarly vague indicating that, in such a case, 'a restitutionary claim' might be available, but declining to express 'a view on the strength of such a claim, which may well be highly dependent on the facts of the particular case'.<sup>196</sup> If the Court really thinks that the position should not depend on which procedure is completed first, such awards should be capable of being reopened. But such an approach would raise further questions, such as whether transactions entered into on the assumption that the patent is valid should be capable of being reopened. Once we move away from the simplest case, the issues surrounding the reopening of decisions and transactions become more problematic. No wonder the Court wanted the *Glaxo* principles, which had caused the English courts to refuse applications for stays, to be reviewed.<sup>197</sup>

## 9 EXPERTS

Given the technical and novel nature of the subject matter of intellectual property law, it is not surprising that the courts frequently rely on experts for a range of different matters.

<sup>188</sup> *Samsung Electronics (UK) Ltd v. Apple Inc.* [2012] EWCA Civ 729, [49] per Lloyd J.

<sup>189</sup> *Ibid.*, [19]–[24].

<sup>190</sup> *Starbucks (UK) Ltd v. British Sky Broadcasting Group Plc* [2013] EWCA Civ 1201.

<sup>191</sup> *Regent University v. Regent's University London* [2013] EWPC 39.

<sup>192</sup> *Unilin Beheer BV v. Berry Floor NV* [2007] FSR 635; *Coflexip SA v. Stolt Offshore MS Ltd (No. 2)* [2004] FSR 708.

<sup>194</sup> *Ibid.*, [34]. <sup>195</sup> *Ibid.*, [36].

<sup>196</sup> *Ibid.*, [67]; cf. *IPCOM GmbH v. HTC Europe Co. Ltd* [2013] EWCA Civ 496, [49] per Floyd LJ.

<sup>197</sup> *Glaxo Group Ltd v. Genentech Inc.* [2008] EWCA Civ 23, [2008] FSR (18) 459.

Courts can hear expert evidence in relation to matters of which the court is ignorant and needs to be informed. Because the use of expert evidence increases the cost of intellectual property litigation, the permission of the court is required to call an expert or to put an expert's report in evidence. In practice, the courts strictly limit the use of experts to situations in which the cost is likely to be justified.<sup>198</sup> Thus expert evidence will likely be admitted in relation to the interpretation of scientific documents or as to the state of foreign law, but much less so on issues where a court feels itself able to decide (such as whether a substantial part of a copyright work has been reproduced, or whether two designs create the same overall impression or the likelihood of confusion in a passing off or trade mark action).<sup>199</sup> An expert's report should be addressed to the court and not to the party from whom the expert has received instructions. The courts have emphasized that experts should be impartial—that is, they should not assume the role of an advocate.<sup>200</sup>

## 10 JURISDICTIONAL ISSUES AND CONFLICTS OF LAW

Given the nature of intellectual property, it should come as no surprise that many intellectual property actions have a transnational dimension.<sup>201</sup> For example, the claimant may be domiciled in country A and the defendant in country B. In these circumstances, it is necessary to decide whether the action should be brought in country A or country B. More complex questions arise where the infringement occurs in a number of countries. This would be the case, for example, where the defendant manufactures infringing goods in country C and an importer sells them in country D. In these cases, a claimant may wish to sue both infringers in a single action. Even more complicated scenarios arise, for example, where copyright infringement takes place on the Internet.<sup>202</sup> Where disputes cross national boundaries, a number of questions arise. Here, we focus on whether a court has jurisdiction to hear a matter, the type of law that should be applied, and the situations in which foreign judgments will be recognized and enforced. A number of considerations arise in answering these questions: the convenience and efficiency of litigation; the impact on national sovereignty; the desirability of allowing litigants to choose the jurisdiction most favourable to their claim (so-called 'forum shopping'); and national interests in attracting legal business.

### 10.1 JURISDICTION

The question of whether a court has jurisdiction to hear a matter where the infringement or breach of an intellectual property right crosses national boundaries depends on a number of factors.

<sup>198</sup> In *Interflora Inc. v. Marks & Spencer plc (No. 2)* [2013] EWCA Civ 319, [2013] FSR (26) 559, Lewison LJ noted that the growing cost of civil litigation has, as of 1 April 2013, led to the introduction of a reformulated 'overriding objective' into the CPR—namely, dealing with cases justly *and at proportionate cost*.

<sup>199</sup> On trade marks, see above p. 994. On designs, see *Procter Gamble Co. v. Reckitt Benckiser (UK) Ltd* [2007] EWCA Civ 936.

<sup>200</sup> The rules on experts are codified in CPR Practice Direction 35. On the duties and responsibilities of experts identified, see *The Ikarian Reefer* [1993] FSR 563.

<sup>201</sup> See Fawcett and Torremans; American Law Institute, *Intellectual Property: Principles Governing Jurisdiction, Choice of Law, and Judgments in Transnational Disputes* (2008); Max Planck Institute, *Conflicts of Law in Intellectual Property: The CLIP Principles and Commentary* (2013). The last has proved influential: see, e.g., *Lucasfilm v. Ainsworth* [2011] UKSC 39, [94], [95], [109].

<sup>202</sup> Fawcett and Torremans, ch. 10.

### 10.1.1 Under the Brussels Regulation

The question of whether a British court has jurisdiction over a matter is largely governed by the Brussels Regulation (often also referred to as the ‘Judgments Regulation’).<sup>203</sup> The basic rule of the Regulation is that a person domiciled in a member state should be sued in the courts of that state.<sup>204</sup> Consequently, a British copyright owner must normally bring an action against a French infringer in French courts—the domicile of the claimant and the familiarity of the court with the relevant law being largely irrelevant. As Jacob J put it, in footballing terms, the claimant must ‘play away’.<sup>205</sup> There are five qualifications to this basic rule that need to be noted, as follows.<sup>206</sup>

- (i) Where the matter involves a tort, a claimant *may* bring an action in the place where the harmful event occurred.<sup>207</sup>
- (ii) Where there are a number of defendants, an action may be brought in the country in which any one of the defendants is domiciled.<sup>208</sup>
- (iii) An action can be brought in a country other than that of the defendant’s domicile if both parties agree.<sup>209</sup>
- (iv) In proceedings concerned with the registration or validity of patents, trade mark, designs, or other similar rights required to be deposited or registered, the courts of that state have exclusive jurisdiction.<sup>210</sup>
- (v) Different rules apply in relation to preliminary measures.<sup>211</sup>

We consider each of these exceptions in turn. First, as regards ‘tort’, an action may be brought in the place in which the harmful event occurred. This exception to the defendant’s domicile rule could be of wide application in the field of intellectual property, since most infringements of intellectual property are regarded as tortious. Doubts may exist, however, in relation to breach of confidence and the action relating to undisclosed private information.<sup>212</sup>

Where the action does relate to a tort, the key question will be where the harmful event occurred.<sup>213</sup> The Court of Justice has indicated that this embraces two distinct possibilities—the place of the event and the place of the harm—and the claimant may elect whichever they prefer.<sup>214</sup> One problem concerns whether, in the case of use on a website,

<sup>203</sup> Regulation (EC) No. 44/2001 of 22 December 1000 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters [2001] *OJ L* 12/1. This replaces the 1968 Brussels Convention, which in turn came into force in England on 1 January 1987.

<sup>204</sup> Brussels Reg., Art. 2 (ex Brussels, Art. 2). Domicile is determined under national law: Brussels Reg., Art. 59.

<sup>205</sup> *Mecklermedia v. DC Congress* [1997] *FSR* 627, 633.

<sup>206</sup> Which are to be narrowly construed: see *Athanasios Kalfelis v. Bankhaus Schroeder*, Case 189/87 [1988] *ECR* 5565.

<sup>207</sup> Brussels Reg., Art. 5(3) (ex Brussels, Art. 5(3)).

<sup>208</sup> Brussels Reg., Art. 6(1).

<sup>209</sup> Brussels Reg., Art. 23 (ex Brussels, Art. 17). See, e.g., *Kitechnology v. Unicor Plastmaschinen* [1995] *FSR* 765, 774.

<sup>210</sup> Brussels Reg., Art. 22(4) (ex Brussels, Art. 16(4)). See *Wadlow* (1998), 104ff, 112ff.

<sup>211</sup> Brussels Reg., Art. 31.

<sup>212</sup> On what is a ‘tort’, see *Athanasios Kalfelis v. Bankhaus Schroeder*, Case 189/87 [1988] *ECR* 5565. In matters of contract, jurisdiction is given to the courts of the place of performance of the obligation. On breach of confidence, see *Vidal-Hall v. Google Inc.* [2014] *EWHC* 13 (QB), [52]–[71] (not a tort, although misuse of private information might be); cf. *Rickshaw Investments and anor v. Nicolai Baron von Uexkull* [2006] *SGCA* 39; C. Wadlow, ‘Bugs, Spies and Paparazzi: Jurisdiction over Actions for Breach of Confidence in Private International Law’ [2008] *EIPR* 269.

<sup>213</sup> Brussels Reg., Art. 5(3) (ex Brussels, Art. 5(3)).

<sup>214</sup> See *Bier v. Mines de Potasse d’Alsace*, Case 21/76 [1976] *ECR* 1735; *Shevill/Presse Alliance SA*, Case C-68/93 [1995] *ECR* I-415. There are disincentives in place to prevent a person from relying on the place of damage—in particular, that damages can be recovered only for that jurisdiction.

the event takes place or the damage occurs in every country from which the site can be accessed. An alternative possibility is to limit the place in which the harmful event occurs to those jurisdictions that are targeted by the website (as evidenced, for example, through references to particular currencies).<sup>215</sup> Such an approach has proven attractive to courts when determining *substantive* questions of liability in relation to e-commerce.<sup>216</sup> The jurisprudence on this in a state of development and, at present, it is difficult to make much sense of the increasing number of judgments from the Court of Justice. Advocate-General Jääskinen has stated that the case law reveals ‘two lines of jurisprudence, one favoring an interpretation of that provision less extensive than the other’,<sup>217</sup> although we wonder whether even that analysis overstates the level of coherency in thinking. Certainly, the stated goal of the Brussels Regulation (in Recital 11) that ‘the rules of jurisdiction must be highly predictable’ seems nowhere near being achieved.

Looking first at where the ‘event’ occurs, in one case, concerning database right, the Court held that the place where the event occurred was (at the very least) the place at which a communication of the database was targeted.<sup>218</sup> In a trade mark case, in contrast, the place where the event occurs (that is, from which an Internet communication, such as an advertisement, is made) is to be regarded as the place of establishment of the communicator rather than, for example, the place where the server is located.<sup>219</sup> Finally, in a personality rights case<sup>220</sup> (at least encompassing privacy), the Court has held that the place of the ‘harmful event’ also includes ‘the centre of the claimant’s interest’—that is, typically the place of domicile of the claimant—and that this court has jurisdiction to hear all alleged violations.<sup>221</sup> This latter approach, which is very ‘claimant-friendly’, seems likely to be strictly limited to personality torts and probably does not extend to copyright.<sup>222</sup>

The alternative component of Article 5(3) is the place in which the damage occurs. In another case concerning copyright, *Pinckney*,<sup>223</sup> in which music was reproduced onto a CD in Austria and sold by a third party from a website in the United Kingdom to a purchaser in France, the Court seemed to take the view that jurisdiction would exist *anywhere* that the right existed (and thus that the French court had jurisdiction). This is because the damage could, and would only, occur where the right existed. In a subsequent

case, it was held that a claimant could sue in a place where a book that was alleged to infringe was being distributed (Germany), even if the publication of the infringing book had been authorized in a different country (France).<sup>224</sup> In *Coty*, the Court has been faced with a parallel question: where goods which were alleged to unfairly compete with the claimant were distributed in Belgium, but found their way into Germany through the act of a third party, is Germany a place in which the damage occurs? The Court has ruled that it was for the German court to assess whether under the relevant German law damage could be said to exist in Germany.<sup>225</sup>

Second, the Regulation states that co-defendants may be sued in the country in which one of them is domiciled.<sup>226</sup> In practice, this seemingly straightforward provision has been construed rather inconsistently in the context of infringements of intellectual property rights. The Court of Justice has held that the provision is applicable only where a multiplicity of hearings based on the domicile of the defendant would present the possibility of contradictory judgments. In *Roche*,<sup>227</sup> in the context of a claim relating to infringement of a series of national patents brought against multiple defendants from the same corporate group (marketing the same product in Belgium, Germany, the United Kingdom, and elsewhere), the Court of Justice took an extremely narrow approach. It held that the Dutch court did not have jurisdiction to determine claims against non-Dutch co-defendants for infringements that took place outside the Netherlands because the co-defendants were alleged to infringe different national laws, so that there could be no possibility of contradictory judgments. However, in *Solvay v. Honeywell*,<sup>228</sup> *Roche* was distinguished where a number of the defendants from different countries were active in a single national market; then, joinder was necessary to avoid different conclusions.<sup>229</sup> An even more flexible approach still was taken in relation to copyright in the *Painer* case.<sup>230</sup> There, a photograph alleged to infringe the claimant's copyright was published in a number of independent papers in Germany and Austria. The claimant sued in Austria. The Court thought that proceedings in Germany and Austria might lead to irreconcilable judgments even though the laws operating in the two countries differed (possibly to a greater extent than the laws in the *Roche* case).<sup>231</sup> Thus the application of Article 6(1) might be justified. The Court hinted at an analysis based on a number of factors, of which the substantially identical nature of the laws was one,<sup>232</sup> whether the acts were 'substantially identical' another, and whether the co-defendants acted (or did not act) independently could be a third.<sup>233</sup> One cannot help but think that the Court was interested in providing flexibility for the personal claimant in the case, but we consequently seem once again to find ourselves faced with inconsistent, unpredictable, and ultimately incoherent guidance on to an important issue. *Roche* had attracted near universal criticism,<sup>234</sup> but the distinctions being drawn between the facts of it and *Solvay* do little to ameliorate the position, while the *Painer* decision seems to allow—perhaps surprisingly, in the copyright field—for the joinder of

wholly unconnected parties.<sup>235</sup> Where an action is brought against the coordinator of the infringements, joinder of foreign participants seems sensible in terms of ‘procedural economy’.

The third and fourth exceptions concern the situation in which the parties have selected a forum (Article 23),<sup>236</sup> or the action concerns the registration or validity of patents, trade mark, designs, or other similar rights required to be deposited or registered (Article 22(4)). In these cases, the jurisdiction is *exclusive*: there is no question of alternative jurisdictions. If a court of a contracting state is presented with a *claim* that is ‘principally concerned’ with a matter over which the courts of another contracting state have exclusive jurisdiction, it should decline jurisdiction. While it should be relatively easy to determine whether the parties have a formal agreement governing the choice of jurisdiction (Article 23), it is more difficult to determine when Article 22(4) applies.<sup>237</sup>

Article 22(4) applies to the registration or validity of patents, trade marks, designs, or other similar rights required to be deposited or registered. The phrase ‘other similar rights’ refers to other registrable rights such as plant varieties, supplementary protection certificates (SPCs), and utility models. As such, it does not apply where the intellectual property right is unregistered, as with copyright, unregistered design right, or passing off.<sup>238</sup> Article 22(4) applies only to proceedings concerning the ‘validity’ of such rights.<sup>239</sup> Although, in certain circumstances, it is clear that an issue relating to a registered right does not concern validity (such as where the dispute is over ownership),<sup>240</sup> in many situations the matter is less clear. For example, in an action for infringement of a patent or design registration, one of the most common ‘defences’ is that the registration is invalid. The problem here is that while questions of validity and infringement are technically distinct, in British intellectual property law they are inextricably linked.

The question of whether an action is ‘concerned with the registration or validity of patents, trade marks designs, or other similar rights’ is a crucial one. In *GAT v. Luk Lamellen*,<sup>241</sup> the Court of Justice provided a very broad reading of the provision. The case concerned whether a German court had jurisdiction to hear an action between two German companies in which one alleged that the other had infringed its French patents. In effect, the Court of Justice held that the German court lacked jurisdiction (since issues of validity had been raised before the Düsseldorf court). The Court of Justice stated that Article 22(4) is applicable ‘whatever the form of proceedings in which the issue of a patent’s validity is raised, be it by way of an action or a plea in objection, at the time the case is brought or at a later stage in the proceedings’.<sup>242</sup> The decision seems to suggest that a court seised with jurisdiction must divest itself as soon as a defendant pleads a defence of invalidity.<sup>243</sup>

There are a number of problems with the *GAT v. LuK* ruling, the most obvious being that the same issues of patent validity might have to be simultaneously litigated in a number of countries, with a consequent negative impact on costs and convenience. The only positive thing that can be said for the decision is that it gave an impetus to negotiations over the unitary patent court.

<sup>235</sup> P. Torremans, ‘Intellectual Property Puts Art 6(1) Brussels I Regulation to the Test’ [2014] *IPQ* 1.

<sup>236</sup> The parties, however, cannot override the impact of Art. 22(4) by agreement. But note the possible impact of the Hague Convention on Choice of Court Agreements (2005), discussed in A. Kur, *op. cit.*, 852.

<sup>237</sup> See, e.g., *Coin Controls* [1997] *FSR* 660. <sup>238</sup> *Pearce v. Ove Arup* [1997] *FSR* 641.

<sup>241</sup> Case C-4/03 [2006] *ECR I*-6509 (EC), First Chamber. <sup>242</sup> *Ibid.*, [25].

<sup>243</sup> A. Briggs, ‘Jurisdiction over Defences and Connected Claims’ [2006] *LMCLQ* 447, 450, 451.

The fifth possible exception to the golden rule of the Brussels Regulation that a defendant should be sued in their state of domicile relates to ‘provisional measures’. More specifically, Article 31 states that an application may be made to the courts of a contracting state for provisional measures (including protective measures that are available under the law of that state) even if, under the Brussels Regulation, the courts of another contracting state have jurisdiction over the substance of the matter. In appropriate circumstances, claimants can choose the forum in which they prefer to get an interim injunction even if that court could not grant final relief (because, for example, the case concerns a registered right in relation to which validity will be in issue).<sup>244</sup>

Because the first two exceptions to the rule that an action be brought in the domicile of the defendant give rise to *alternative* jurisdictions, they enable claimants to choose the forum. The possibility of alternative jurisdictions creates the problem that simultaneous proceedings might produce inconsistent judgments. Consequently, the Brussels Regulation contains provisions that deal with pending actions (*lis pendens*). These provide that, where a court of a contracting state is presented with a claim (for example on the basis of domicile) that has already been commenced elsewhere (for example on the basis of harm), the later action should be stayed. More specifically, Article 27 states that where a later court is presented with *the same cause of action* between the *same parties*, that court *must* decline jurisdiction.<sup>245</sup> In addition, a further provision gives the court a discretion to stay proceedings if it is presented with an action that is ‘related’ to one that is already being heard in the courts of another contracting state. This discretion arises only where the actions are ‘related’—that is, where they are so closely connected that it is expedient that the actions be tried together to avoid the risk of irreconcilable judgments.<sup>246</sup> In exercising the discretion, the court will take into account the domicile of the defendant, the applicable law, and whether any UK action will need to be decided in any case.<sup>247</sup>

### 10.1.2 Where the Brussels Regulation is not applicable

The Brussels Regulation applies where a person is domiciled in a contracting state. This is the case even if the claimant is domiciled outside the European Union,<sup>248</sup> the right is granted by a state outside the European Union, or the infringing acts took place outside of EU territories or member of the European Free Trade Association (EFTA). If the defendant is domiciled in the United Kingdom and a claim relates to infringement of American copyright by acts in the United States, the Regulation will apply and the UK court must accept jurisdiction. The Regulation will not necessarily apply where the defendant is not domiciled in a contracting state. Thus, if US citizen A were resident, but not domiciled, in the United Kingdom, and claimant B were to argue that the court should take jurisdiction

<sup>244</sup> *Solvay SA v. Honeywell Fluorine Products Europe BV*, Case C-616/10 (12 July 2012) (ECJ, Third Chamber), [49]–[50].

<sup>245</sup> Brussels Reg., Art. 27 (ex Brussels, Art. 21). An action for infringement of a trade mark is not the ‘same action’ as an action for passing off: *Mecklermedia* [1997] FSR 627, 637. While a wholly owned subsidiary might be regarded as the ‘same party’, a mere licensee will not: *ibid.* See also *Prudential v. Prudential of America* [2003] ETMR (69) 858, 867, [47].

<sup>246</sup> *Research in Motion (UK) Ltd v. Visto Corp.* [2008] EWCA Civ 153; *Mecklermedia* [1997] FSR 627; *ABKCO Music Records v. Jodorowski* [2003] ECDR (3) 13.

<sup>247</sup> *Ibid.*  
<sup>248</sup> *Société Group Josi Reinsurance Company SA v. Compagnie d’Assurances Universal General Insurance Company*, Case C-412/98 (13 July 2000) (an insurance case). But note the view in *Lucasfilm Ltd v. Ainsworth* [2010] Ch 503 that Art. 2 could not have abolished limits on subject matter jurisdiction, a view that the Supreme Court left unaddressed: [2011] UKSC 39, [112]–[114].

over A for infringement of B's American copyright by acts in the United States, it seems that the traditional UK rules would apply.<sup>249</sup>

The traditional British rules on jurisdiction were long understood to preclude an action based on infringement of foreign intellectual property rights.<sup>250</sup> However, in *Lucasfilm v. Ainsworth*,<sup>251</sup> the Supreme Court has indicated that, at least in relation to cases for infringement of copyright, those objections no longer apply. Thus Lucasfilm could bring an action against Ainsworth, who was domiciled in England, for infringement of the claimant's US copyright. The Court reviewed the various grounds that had been raised to such action (such as the 'Mocambique rule', the 'rule in *Phillips v. Eyre*', and the 'act of state' doctrine<sup>252</sup>), and found that the rationales for them had largely been undermined over the course of the twentieth century. The Court therefore held, quite narrowly, that:

[I]n the case of a claim for infringement of copyright *of the present kind*, the claim is one over which the English court has jurisdiction, provided that there is a basis for *in personam* jurisdiction over the defendant, or, to put it differently, the claim is justiciable.<sup>253</sup>

The position might well be different had the court been considering a copyright dispute over subsistence (as opposed to ownership and infringement) or other registered intellectual property rights, particularly if validity were in issue.<sup>254</sup> That said, in an action for a declaration of non-infringement of a patent owned by a US company in which validity was not in issue, Arnold J rejected a claim that the court should reject jurisdiction on the basis that it was '*non conveniens*'.<sup>255</sup>

### 10.1.3 Community rights

Special rules exist on the allocation of jurisdiction in relation to ownership of European patents<sup>256</sup> and more generally for community rights (such as the Community trade mark, design and plant variety rights). For example, Articles 94 and 97 of the Community Trade Mark Regulation (CTMR) incorporate principles similar to those in the Brussels Regulation.<sup>257</sup> The basic rule of the Brussels Regulation is maintained—namely, that a person should sue in the jurisdiction in which the defendant is domiciled. This is extended to those who are not domiciled, but who have an 'establishment', in the jurisdiction. The CTMR also modifies the application of the Brussels Regulation by excluding Article 4, thereby conferring jurisdiction on the Community trade mark courts over defendants domiciled outside of contracting states (rather than applying national rules).

<sup>249</sup> Similarly, if a British claimant were to want to bring an action against a US company alleging infringement of copyright in the United Kingdom, the UK court might give leave to serve a claim form outside the jurisdiction. See Fawcett and Torremans, chs 6 and 9; *Beecham Group v. Norton Healthcare* [1997] FSR 81; *Conductive Inkjet Technology Ltd v. Uni-Pixel Displays Inc.* [2013] EWHC 2968 (Ch); *Vidal-Hall v. Google Inc.* [2014] EWHC 13 (QB). For refusal of an application for a stay pending the outcome of parallel proceedings, see *Macdermid Offshore Solutions LLV v. Niche Products Ltd* [2013] EWHC 1493 (Ch).

<sup>250</sup> See Fawcett and Torremans, ch. 6. <sup>251</sup> [2011] UKSC 39. <sup>252</sup> *Ibid.*, [54]–[87].

<sup>253</sup> *Ibid.*, [106] (emphasis added).

<sup>254</sup> *Ibid.* See P. Torremans, 'Star Wars Rids Us of Subject Matter Jurisdiction: The Supreme Court Does not Like Kafka either when it Comes to Copyright', [2011] *EIPR* 813, 817; G. Austin, 'The Concept of "Justiciability" in Foreign Copyright Infringement Cases' (2009) 40 *IIC* 393.

<sup>255</sup> *Actavis Group HF v. Eli Lilly & Co.* [2012] EWHC 3316 (Pat).

<sup>256</sup> Protocol on Jurisdiction and the Recognition of Decisions in respect to the Right to the Grant of a European Patent, 1973. Art. 4, allocates jurisdiction to the courts of the contracting state whose law determines the right. In EPC 2000, Art. 60, this is the law of the state in which the employee is mainly employed.

<sup>257</sup> CTMR, Arts 94, 97. The Community Design Regulation, Art. 82, applies very similar rules. Rather oddly, the CPVR bases its rules on the Lugano Convention. See Fawcett and Torremans, ch. 8.

If the defendant is not domiciled in the European Union, the action should be brought where the claimant is domiciled. Where neither party is domiciled nor established in the EU, the action should be brought in the place in which the Community trade mark office is situated (that is, Alicante). These rules are mandatory and applied in strict sequence. As a result, there is a reduced possibility of there being competing alternative jurisdictions, and hence less scope for forum shopping. However, despite the strict scheme, Article 97(5) CTMR also allocates jurisdiction based on the place of infringement.<sup>258</sup> If a claimant uses this forum, relief is territorially limited. Consequently, this route is less attractive than an action brought in the state of the defendant's domicile. Moreover, Article 6 of the Brussels Convention is maintained, so that an action can also be brought against a co-defendant in a court other than the court of the state in which they are domiciled. Because the applicable right is a Community one, the limitation imposed to the applicability of the Article by the Court of Justice in *Roche* is inapplicable.

Because the Community systems for registered trade marks and designs coexist beside harmonized national laws, provision is also made for dealing with simultaneous proceedings and successive actions.<sup>259</sup> These require the latter court to stay proceedings pending the determination of the earlier one, or, if judgment has been given, to follow suit. However, the rules apply only if the actions involve the same cause of action and the same parties. In *Prudential Assurance Co. v. Prudential Insurance Co. of America*,<sup>260</sup> the Court of Appeal held that the claimant was not prevented from bringing an infringement action in England based on infringement of its Community trade marks PRU or PRUDENTIAL by the defendant's use of PRUMERICA, merely because the claimant had been unsuccessful when opposing a national registration of PRUMERICA in opposition proceedings before the French Trade Marks Registry. While Article 109(2) CTMR (ex Article 105 of Regulation 40/94) requires the court to reject an action for infringement 'if a final judgment on the merits has been given on the same cause of action and between the same parties on the basis of an identical national trade mark valid for identical goods or services', the Court of Appeal found that the English action did not concern an 'identical trade mark': the French action related to the validity of PRUMERICA, whereas the English one dealt with infringement of PRUDENTIAL.<sup>261</sup> This seems a rather formalistic way of applying Article 90.

## 10.2 APPLICABLE LAW

Once the court accepts that it has jurisdiction, the next issue to decide is the law that applies. With the abolition of the so-called 'double actionability' rule in determining whether a tort is actionable,<sup>262</sup> the law to apply is usually that of the country for which protection is claimed (*lex protectionis*),<sup>263</sup> which will usually be where the infringement took place (*lex*

<sup>258</sup> *Coty Germany GmbH v. First Note Perfumes NV*, Case C-360/12 (5 June 2014) (ECJ, Fourth Chamber), (adopting a narrow construction distinct from that recognized in the jurisprudence under Brussels, Art. 5(3)).

<sup>259</sup> CTMR, Art. 105 (ex Art. 105); CDR, Art. 95. See above pp. 1225–6.

<sup>260</sup> [2003] *ETMR* (69) 858. See further *Hearst Holdings Inc. v. A.V.E.L.A. Inc.* [2014] *EWHC* 1553 (Ch), [30], [33], finding that a prior Italian action did not relate to the same cause of action, even though it was based on the same mark, because it involved 'different defendants selling different goods with different images of Betty Boop'.

<sup>261</sup> *Ibid.*, [39] *per* Chadwick LJ.

<sup>262</sup> Private International Law (Miscellaneous Provisions) Act 1995, s. 10.

<sup>263</sup> It has been argued that Berne, Art. 5(2), contains international harmonization of the rule on the applicable law for copyright—namely, that it should be the law of the country 'where protection is claimed'. See

*loci delicti*).<sup>264</sup> For example, if a claimant brings an action in an English court against a defendant domiciled in the United Kingdom, alleging infringement of their Dutch copyright by acts in the Netherlands, the applicable law would be Dutch copyright law.<sup>265</sup> This is both the place where the act occurred and the law from which protection is claimed. Occasionally, these places will differ, as where a person in the Netherlands authorizes an infringement in the United Kingdom; in such circumstances, the governing law should be UK law.<sup>266</sup> The ‘universally acknowledged principle’ that the *lex protectionis* is the applicable law in the case of non-contractual actions relating to intellectual property rights is now a rule of European law, following the enactment of the so-called ‘Rome II’ Regulation.<sup>267</sup> Parties are not allowed to agree that a different law should apply.<sup>268</sup>

While the law to apply is normally that of the country in which the tort occurred, in certain cases, the law to be applied is determined by special rules. For example, disputes about the ownership of European patents for employee inventions are determined by the law of the state in which the employee is mainly employed.<sup>269</sup> Where the right infringed is a Community right, such as a Community trade mark, the relevant law is that of the regulation concerned. However, where the regulations do not apply, the relevant law is the law of the country in which the act of infringement took place.<sup>270</sup>

### 10.3 RECOGNITION OF JUDGMENTS

Where intellectual property matters cross jurisdictional boundaries, questions often arise about the recognition and enforcement of foreign judgments. This is largely governed by the Brussels Regulation. The general policy of the Regulation is that there should be free movement of judgments. This means that, once a court has assumed jurisdiction over a matter, any determinations that it makes should be recognized and, if necessary, enforced in other member states. So, for example, if a Dutch court holds that a British-domiciled co-defendant infringed the Dutch claimant’s copyright, then the order of that court should be enforced by English courts. The procedure for recognition is straightforward: the judgment must first be registered and then notice is served on the person subject to it.<sup>271</sup>

The requirement that a court of a contracting state automatically recognizes judgments from other contracting states is qualified in a number of ways.<sup>272</sup> The most important

M. Van Echoud, *Choice of Law in Copyright and Related Rights: Alternatives to the Lex Protectionis* (2003), 106–10; M. F. Makeen, *Copyright in the Global Information Society* (2000), 185–92.

<sup>264</sup> Breach of confidence is probably not a ‘tort’ for these purposes, and defamation (and hence injurious falsehood) is not subject to the reform: Private International Law (Miscellaneous Provisions) Act 1995, s. 13.

<sup>265</sup> *Pearce v. Ove Arup* [1997] FSR 641, 542.

<sup>266</sup> For systematic analysis, see G. B. Dinwoodie, R. C. Dreyfuss, and A. Kur, ‘The Law Applicable to Secondary Liability in Intellectual Property Cases’ (2010) 42 *NYU JILP* 201.

<sup>267</sup> Regulation (EC) No. 864/2007 of 11 July 2007 on the law applicable to non-contractual obligations [2007] *OJL* 199/40 (31 July 2007) (‘Rome II’), Art. 8. The concept of intellectual property is defined, by example, in Recital 21. A different principle applies to cases of ‘unfair competition’: see Arts 6, 4. The Regulation does not regulate the rules on applicable law for violations of privacy and rights relating to personality, including defamation: Art. 1(2)(g). For consideration of breach of confidence, see C. Wadlow, ‘Trade Secrets and the Rome II Regulation on the Law Applicable to Non-contractual Obligations’ [2008] *EIPR* 309. For elaboration of the concept of unfair competition, see C. Wadlow, ‘The Emergent European Law of Unfair Competition and Its Consumer Law Origins’ [2012] *IPQ* 1.

<sup>268</sup> Rome II, Art. 8(3) (excluding the operation of Art. 14). <sup>269</sup> EPC 2000, Art. 60(1).

<sup>270</sup> Rome II, Art. 8(2); CTMR, Art. 101; CDR, Art. 88. <sup>271</sup> C/JA 1982, s. 4.

<sup>272</sup> Brussels, Arts 27(1) and 28. See also *Renault v. Maxicar*, Case C-38/98 [2000] *ECR* I-2973.

is that, where the originating court assumed jurisdiction in breach of Article 22, then recognition must be refused. Thus, if a Dutch court were to order the revocation of a British patent, UK courts would not have to recognize the judgment, since it was made in respect of a claim principally concerned with validity. However, because the scope of Article 22(4) is unclear, it will be difficult to predict whether a British court would be able to refuse to recognize the Dutch judgment that a UK patent had been infringed. This is especially the case if the Dutch court were to form a conclusion as to the validity of the patent. A court can also refuse to enforce a judgment that is irreconcilable with a judgment given in a dispute between the same parties in the state in which recognition is sought.<sup>273</sup> In *Italian Leather SpA v. WECO Polstermobil GmbH*,<sup>274</sup> an Italian court ordered an interim injunction preventing the use of the claimant's mark *LONGLIFE* by a German defendant, whereas the German court had refused interim relief. When the German court was asked to enforce the Italian judgment in Germany, the German court sought the advice of the Court of Justice as to whether the judgments were irreconcilable, and if so, what were the consequences. The Court of Justice was clear that the judgments were irreconcilable and that the German court was obliged to enforce its own, rather than the Italian, decision.

## 11 ALTERNATIVE DISPUTE RESOLUTION

In many areas of law, the cost and hassle of litigation has encouraged the growth of mechanisms such as arbitration and mediation for resolving disputes outside the court framework. For obvious reasons, it is difficult to know how widely such methods are used to resolve disputes concerning intellectual property.<sup>275</sup> The Civil Procedure Rules promote the use of alternative dispute resolution (ADR) by providing that proceedings may be stayed pending ADR<sup>276</sup> and by allowing courts to make early neutral evaluations of the merits of the case (thus prompting settlement).<sup>277</sup> Another reason is that ADR is becoming more widely used by international bodies. A notable example is the World Intellectual Property Organization (WIPO) Arbitration and Mediation Centre (established in 1994), which has more than 1,500 arbitrators and mediators.

Another mechanism that has been developed in the United Kingdom to minimize the costs of intellectual property litigation is the Intellectual Property Office's 'Patent Opinion Service', which was introduced in 2005.<sup>278</sup> The aim of the Opinion Service is to provide a 'quick, balanced, affordable and impartial assessment of issues relating to the validity or infringement of patents'.<sup>279</sup> Following a 2009 review, which found that

<sup>273</sup> Brussels, Art. 27(3).

<sup>274</sup> Case C-80/00 [2002] ECR I-4995.

Kingston, 'Reducing the Cost of Resolving Intellectual Property Disputes' [1995] *Eur J L Econ* 85. Research from the United States demonstrates that the likelihood of patent disputes being settled often depends on whether smaller or larger firms are involved: see J. Lanjouw and M. Schankerman, *Enforcing Intellectual Property Rights* (December 2001) NBER Working Paper No. 1656.

<sup>276</sup> CPR, r. 26.4. Note also the cooling-off period for friendly settlement of opposition proceedings in the OHIM and the UK TM Registry. See *Samuel Smith Old Brewery v. Lee* [2011] EWHC 1879 (Ch), [2012] FSR (7) 263, [164] (Arnold J), emphasizing that the case should have gone to mediation at an early stage).

<sup>277</sup> Prior to the House of Lords' decision in *American Cyanamid v. Ethicon* [1975] AC 396 (see Chapter 48), litigants used to treat the grant of interlocutory relief as equivalent to such an early neutral evaluation. See pp. 1238–40.

<sup>278</sup> The Patent Opinion Service was introduced in PA 2005, ss 74A and 74B; Patents Rules 2007, r. 92–100.

<sup>279</sup> UK IPO, *Consultation on the Patent Opinions Service* (2012), [7.4].

opinions, although non-binding in nature, were helping to resolve disputes,<sup>280</sup> the UK IPO conducted a further review, which recommended that the scope of the service should be extended.<sup>281</sup> These recommendations were taken up in the new Intellectual Property Act 2014, which extends the scope of the Patents Opinions Service to allow the UK IPO to give non-binding opinions on a wider range of issues concerning patent validity, and the validity and infringement of supplementary protection certificates. The Act also gave the UK IPO the power to revoke a clearly invalid patent in certain cases.<sup>282</sup> The 2014 Act also extended the 'Opinion Service' (as it is now known) to provide voluntary, non-binding opinions on the validity and infringement of registered designs. It now provides opinions on the existence of unregistered design right, how long the right will last, and who holds it.<sup>283</sup>

## CIVIL AND CRIMINAL REMEDIES

### CHAPTER CONTENTS

1 Interim Injunctions	1238	6 Account of Profits	1260
2 Stopping Imports	1246	7 Publicity Orders	1262
3 Final Injunction	1250	8 Time Limits	1263
4 Delivery up	1254	9 Criminal Remedies	1263
5 Damages	1256		

In this chapter, we examine the civil and criminal remedies that a claimant may obtain for violation of intellectual property rights. We begin by considering the civil relief available before trial: interim injunctions; and prevention of imports. We then go on to look at the civil remedies available at full trial: final injunction; delivery up or destruction; damages; account of profits; and publicity orders. Finally, we turn to the various criminal remedies that may be available to an intellectual property right holder.

### 1 INTERIM INJUNCTIONS

Although, in appropriate cases, a tribunal will make an order for a speedy trial,<sup>1</sup> in many situations, there will be a significant delay between the time when a rights holder discovers that their rights are being infringed and the time when the matter is heard at trial. In order to ensure that the rights holder's interests are not undermined during this period, provision exists for interim orders, sometimes referred to as 'interlocutory', 'preliminary', 'provisional', or 'protective' relief.<sup>2</sup> The most important of these is the interim injunction.<sup>3</sup> This is a court order to stop the defendant's activities pending a final determination. An interim injunction will be granted only if the matter is urgent or this is otherwise

<sup>1</sup> The most important consideration is whether resolution of the dispute is so urgent as to justify the prejudice caused to other litigants. See *J. W. Spear & Sons v. Zynga Inc.* [2012] EWHC 1374, [16]–[25] *per* Henderson J; *Starbucks (HK) Ltd v. British Sky Broadcasting Group plc & ors* [2012] EWHC 1842 (Ch), [66]–[78].

<sup>2</sup> TRIPS, Art. 50(2) and Enforcement Dir., Art. 9 (*ex parte* orders); TRIPS, Art. 50(6), Enforcement Dir., Art. 8, CTMR, Art. 103, and CDR, Art. 90 (interim orders); *Hermès v. FHT* Case C-53/96 [1998] ECR I-3603; *Dior and ors*, Joined Cases C-300/98 and C-392/98 [2000] ECR I-1130; *Schieving-Nijstad vof and ors v. Robert Groeneveld*, Case C-89/99 [2001] ECR I-5851.

<sup>3</sup> CPR, r. 25.1(a). *Ex parte* orders might be granted in appropriate cases and these include injunctions against persons unknown: *Bloomsbury Publishing Ltd v. News Group Newspapers Ltd* [2003] FSR 360.

desirable in the interests of justice.<sup>4</sup> Given the urgency, applications for interim injunctions are disposed of quickly. They are usually considered on the basis of sworn written evidence that has not been subjected to cross-examination. Consequently, there is a danger that the tribunal's interim decision will differ from the result after matters are fully aired at trial. It is therefore important that, when a court grants interim relief, it does so in a way that minimizes the irreparable consequences to the parties that might arise from a hasty view of the merits of the case. In these circumstances, the courts must reconcile the conflicting demands of speed and correctness in decision making. On the one hand, there is a desire to examine the issues as fully as possible to ensure that the interim decision is accurate. On the other, since the evidence is necessarily inadequate, there is a desire to ignore the legal issues and focus instead on minimizing the injustices that will ensue from incorrect preliminary intervention.

Applications for interim injunctions in England and Wales are usually assessed according to the approach set out by the House of Lords in *American Cyanamid v. Ethicon*.<sup>5</sup> It is important to note that some recent cases have been reluctant to follow these guidelines strictly and that questions have been raised as to whether the test might need to be reviewed in the light of European law.<sup>6</sup> It should also be noted that the Human Rights Act 1998 has modified the approach that must be taken in cases that concern freedom of expression.

In *American Cyanamid*, the claimant sought interim relief to restrain the defendant from infringing the claimant's patent. The defendant company planned to argue at trial either that it had not infringed or that the claimant's patent was invalid. When considering whether to grant interim relief, the High Court and the Court of Appeal said that the key question was whether the claimant had established a strong case on its face.<sup>7</sup> Overturning this approach, the House of Lords rejected previous suggestions to the effect that a case must be established on its face before a court could grant interim relief; instead, the Lords laid down a reduced threshold requirement: for a court to be vested with the discretion to grant an interim injunction, it was necessary for a claimant to establish that there was 'a serious question to be tried'.<sup>8</sup> Once a claimant has established this, the House of Lords said that the court should then go on to consider a series of other matters. First, it should compare the possible effects of granting and not granting the injunction on the defendant and the claimant. Lord Diplock explained that this involved deciding whether the claimant's or defendant's interests were capable of being satisfied solely by financial means. If these considerations do not produce a clear indication of the best course of action, the court should consider the 'balance of convenience'. In turn, if there is no clear result from considering the balance of convenience, the court should look at the merits of the case.

The goal of *American Cyanamid* was to reduce the number of mini-trials that occurred at the interim stage and thereby speed up the process of granting interim relief. In turn, it was thought that this would avoid duplication and produce a more efficient judicial process. Nevertheless, the approach set out in *American Cyanamid* has been criticized on a number of grounds.<sup>9</sup> First, it has been said that Lord Diplock failed to deal adequately with, or to refer to, a number of existing House of Lords' authorities that are

<sup>4</sup> CPR, r. 25.2(2)(b).

<sup>5</sup> [1975] AC 396. For the position in Scotland, see *Schuh Ltd v. Shhh . . . Ltd* [2011] CSOH 123, [12]–[13].

British Sky Broadcasting Group plc* [2012] EWCA Civ 1201, [110]; *Regents University v. Regent's University London* [2013] EWPCC 39, [34]–[37].

<sup>7</sup> [1974] FSR 312. <sup>8</sup> *American Cyanamid v. Ethicon* [1975] AC 396, 407–9.

<sup>9</sup> See P. Prescott, 'American Cyanamid v. Ethicon' (1975) 91 LQR 168.

difficult to reconcile with *American Cyanamid*.<sup>10</sup> Second, while the approach set out in *American Cyanamid* is supposed to be of general application, it is inflexible, especially where a claimant's case is strong.<sup>11</sup> Many commentators have noted that it gives rise to the perverse situation in which the availability of interim injunctive relief to a claimant with an open-and-shut case turns on questions of convenience. Third, it is also said that it is unrealistic to expect judges not to take into account obvious conclusions as to the merits of the case.<sup>12</sup> Fourth, ignoring the merits and basing the availability of relief on matters such as the adequacy of (including the ability to pay) damages sometimes favours established businesses unduly, at the expense of newer, financially weaker, competitors.<sup>13</sup> Fifth, the refusal to consider the merits overlooks the value to litigants of the kind of 'mini-trials' that took place prior to *American Cyanamid*. More specifically, it has been argued that, because interim relief required the merits of the parties' cases to be considered, the interim decision was often treated as indicating the final outcome of the case. In effect, interim relief was used as a cheap method of litigation and as a way of avoiding long drawn-out final trials.<sup>14</sup>

While the general applicability of *American Cyanamid* to intellectual property cases has been accepted, a number of exceptions have been introduced to the *American Cyanamid* approach.<sup>15</sup> The most important of these was the recognition that, where the interim decision would be determinative of the action, the approach in *American Cyanamid* is not appropriate. This is because the problem that *American Cyanamid* seeks to redress—namely, to minimize the harm when a preliminary decision turns out to have been incorrectly made—does not arise where the preliminary decision is going to be the only decision. In these cases, the court should simply do its best to resolve the legal issues.<sup>16</sup>

In general, however, when considering the grant of interim relief, the court should operate in two stages. First, the court should decide whether there is a serious question to be tried (or, in freedom of expression cases, whether the claimant is likely to succeed). Second, if the court decides that this threshold has been passed, it should then go on to consider whether to exercise its discretion to grant an injunction—that is, it will consider whether it would be fair to grant interim relief.<sup>17</sup> We now examine these two stages in more detail.

### 1.1 SERIOUS QUESTION TO BE TRIED

The first task confronting a claimant seeking an interim injunction is that they must satisfy the threshold requirement that there is a serious question to be tried. In other words, if the evidence reveals that the claimant does not have any real prospect of succeeding in their claim for a permanent injunction at trial, the court will not even consider the balance of convenience. According to Lord Diplock, when determining whether there is

<sup>10</sup> See, e.g., *Stratford & Son v. Lindley* [1965] AC 269 (a requirement of a 'sufficient prima facie case'); *Hoffmann-La Roche v. Secretary of State for Trade and Industry* [1975] AC 295 (requiring a strong prima facie case).

<sup>11</sup> *Rubycliff v. Plastic Engineers* [1986] RPC 573, 583. See A. Gore, 'Interlocutory Injunctions: A Final Judgment?' (1975) 38 MLR 672, 678.

<sup>12</sup> *Alfred Dunhill v. Sunoptic* [1979] FSR 337, 372–3.

<sup>13</sup> P. Prescott, 'American Cyanamid v. Ethicon' (1975) 91 LQR 168.

<sup>14</sup> *Ibid.*, 169.

<sup>15</sup> *MacMillan Magazines v. RCN Publishing* [1998] FSR 9, 12.

<sup>16</sup> The general principle was established in *NWL v. Woods* [1979] 3 All ER 614. It has frequently been applied in intellectual property disputes: *Mirage Studios v. Counter-feat Clothing* [1991] FSR 145, 154; *Barnsley Brewery Co. v. RBNB* [1997] FSR 462.

<sup>17</sup> *United Biscuits v. Burton Biscuits* [1992] FSR 14, 15.

a serious question to be tried, the court should investigate only whether a known cause for action is revealed. In so doing, it should take account of points of law that necessarily arise on the facts that are revealed at the interlocutory stage. However, the courts should not embark upon mini-trials of disputed questions of fact or difficult questions of law.

A claimant might fail to demonstrate that there is a serious question to be tried for a number of reasons. In some cases, a claimant might fail to show a realistic cause for action. For example, if a straightforward reading of existing case law suggests that no cause of action exists, the application will be refused.<sup>18</sup> Moreover, if the claimant's case is dependent on overseas authorities,<sup>19</sup> or the extension of an existing action to new circumstances, the court might take the view that this falls before the threshold.<sup>20</sup> In contrast, where the existing authorities are merely unclear, the court will usually decline to resolve the dispute and treat the situation as raising a serious question to be tried.

More commonly, a court will find that there is no arguable case because the evidence is so insubstantial that it is clear that the case will fail.<sup>21</sup> In many situations, particularly in passing off and trade mark cases, the court will be able to make a fairly confident judgment on factual matters such as whether a name or get-up is not distinctive,<sup>22</sup> and whether there is a misrepresentation<sup>23</sup> or a likelihood of confusion.<sup>24</sup> The fact that a reasonable person could bring the action in good faith will not matter if it is so hopeless a case that no interim relief should be available.<sup>25</sup> Having said that, a case may be 'thin', but arguable.<sup>26</sup> Another reason why the court might hold that there is no serious question to be tried is because the defendant has a very strong prospect of a successful defence.<sup>27</sup> It should be noted that the question is not whether there is an arguable defence: if the defence is only arguable, there is a serious question to be tried.<sup>28</sup>

An important qualification to the threshold for injunctive relief set out in *American Cyanamid* was introduced by section 12(3) of the Human Rights Act 1998. This provides that, where a court is considering whether to grant relief that might affect the exercise of the Convention right to freedom of expression,<sup>29</sup> no relief should be granted that restrains publication prior to trial 'unless the court is satisfied that the applicant is likely to establish that publication should not be allowed'. The court is further to take into consideration the extent to which the material has or is about to become available to the public. The courts also take account of whether it would be in the public interest for the material to be published.<sup>30</sup> The impact of section 12(3) was considered by the House

<sup>18</sup> *Mail Newspapers v. Insert Media* [1987] RPC 521, 529–30; *Schulke & Mayr v. Alkapharm* [1999] FSR 161, 166.

<sup>19</sup> *Lyngstrad v. Anabas Products* [1977] FSR 62, 68 per Oliver LJ.

<sup>20</sup> *Times Newspapers v. MGN* [1993] EMLR 443; *Marcus Publishing v. Hutton Wild Communications* [1990] RPC 576, 584.

<sup>21</sup> On the nature of evidence, see CPR Practice Direction 25A, r. 3.

<sup>22</sup> *Marcus Publishing v. Hutton Wild Communications* [1990] RPC 576, 583; *County Sound* [1991] FSR 367, 372.

<sup>23</sup> *Consorzio Parma v. Marks & Spencer* [1991] RPC 351, 372.

<sup>24</sup> *Morning Star Co-operative Society v. Express Newspapers* [1979] FSR 113.

<sup>25</sup> *Mothercare v. Robson Books* [1979] FSR 466, 472–3.

<sup>26</sup> *Metric Resources Corporation v. Leasemetrix* [1979] FSR 571, 580.

<sup>27</sup> *News Group Newspapers v. Rocket Records* [1981] FSR 89, 102.

<sup>28</sup> But. cf. *Warner v. Channel Four* [1994] EMLR 1.

<sup>29</sup> Freedom of expression is most obviously at stake in cases of newspaper disclosure of private information, but there are plenty of other situations involving copyright, trade marks, and confidential information in which freedom of expression might be implicated. See, e.g., *Volkswagen Aktiengesellschaft v. Garcia* [2013] EWHC 1832 (Ch); *Unilever plc v. Griffin* [2010] EWHC 899 (Ch). The approach in *Cream* has been held by the Court of Appeal to be applicable in all cases of comparative advertising: *Boehringer v. Vetplus* [2007] FSR (29) 737.

<sup>30</sup> Human Rights Act 1998, s. 12(4). The tribunal is also instructed to take into account 'any relevant privacy code'.

of Lords in *Cream Holdings v. Banerjee*.<sup>31</sup> This case arose when Banerjee, a disgruntled ex-employee of Cream Holdings (a company that ran nightclubs, dance parties, and similar events), sent confidential information about corruption within Cream to Echo (which published the *Daily Post* and the *Liverpool Echo*). After some of the information was published, Cream sought injunctive relief to prevent further publication of the confidential information. The Court of Appeal, like the judge at first instance, granted an interlocutory injunction preventing the defendant from publishing the information until the matter could be heard at trial. The defendant appealed to the House of Lords, where the key question before the Lords was the meaning of ‘likely’ in section 12(3).

Delivering the judgment of the House, Lord Nicholls began by explaining that, when the Human Rights Bill was under consideration, concerns arose about the adverse impact that it might have on freedom of the press. In particular, the fear arose that:

[A]pplying the conventional *American Cyanamid* approach, orders imposing prior restraint on newspapers might readily be granted by the courts to preserve the status quo until trial whenever applicants claimed that a threatened publication would infringe their rights under Article 8 [of the European Convention on Human Rights, or ECHR]. Section 12(3) was enacted to allay these fears.<sup>32</sup>

Confirming that the test to be applied under section 12(3) was more stringent than that under *American Cyanamid*, the Lords said that the principal purpose of section 12(3) was:

. . . to buttress the protection afforded to freedom of speech at the interlocutory stage. It sought to do so by setting a higher threshold for the grant of interlocutory injunctions against the media than the *American Cyanamid* guideline of a ‘serious question to be tried’ or a ‘real prospect’ of success at the trial.<sup>33</sup>

Lord Nicholls then went on to consider whether, as Echo had argued, ‘likely’ in section 12(3) bears the meaning of ‘more likely than not’ or ‘probably’. Rejecting this construction, Lord Nicholls said that such an interpretation would not be workable in practice, not least because it would ‘produce results Parliament cannot have intended’.<sup>34</sup> The reason for this is that if Echo’s reading of section 12(3) were applied, it would mean that the courts would not be able to make a restraining order to prevent disclosure in the period during which the court was deciding whether the claim would succeed at trial—something that was very important in relation to confidential information, which cannot be protected once it is published. Another situation in which Lord Nicholls felt that the court should be able to exercise its discretion was where the consequences of the disclosure would be extremely serious, ‘such as a grave risk of personal injury to a particular person’.<sup>35</sup> Practical considerations such as these led Lord Nicholls to say ‘that “likely” in section 12(3) cannot have been intended to mean “more likely than not” in all situations’.<sup>36</sup> He went on to say that:

There can be no single, rigid standard governing all applications for interim restraint orders. Rather, on its proper construction the effect of section 12(3) is that the court is not to make an interim restraint order unless satisfied the applicant’s prospects of success at the trial are sufficiently favourable to justify such an order being made in the particular circumstances of the case.<sup>37</sup>

<sup>31</sup> [2005] AC 253.

<sup>32</sup> *Ibid.*, [15].

<sup>33</sup> *Ibid.*

<sup>34</sup> *Ibid.*, [16].

<sup>35</sup> *Cream Holdings* [2005] AC 253, [2004] UKHL 44, [18].

<sup>36</sup> *Ibid.*, [20].

<sup>37</sup> *Ibid.*, [22].

This in turn gave rise to a further question: what degree of likelihood makes the prospects of success ‘sufficiently favourable’? In answering this, Lord Nicholls said that:

[T]he general approach should be that courts will be exceedingly slow to make interim restraint orders where the applicant has not satisfied the court he will probably (‘more likely than not’) succeed at the trial. In general, that should be the threshold an applicant must cross before the court embarks on exercising its discretion, duly taking into account the relevant jurisprudence on Article 10 and any countervailing Convention rights. But there will be cases where it is necessary for a court to depart from this general approach and a lesser degree of likelihood will suffice as a prerequisite.<sup>38</sup>

This would include, for example, situations in which ‘the potential adverse consequences of disclosure are particularly grave, or where a short-lived injunction is needed to enable the court to hear and give proper consideration to an application for interim relief pending the trial or any relevant appeal.’<sup>39</sup> On this basis, the Lords allowed the appeal and discharged the injunction.

## 1.2 IS IT FAIR THAT THE INJUNCTION BE GRANTED?

Where the claimant passes the threshold and establishes that there is a serious question to be tried, the court will then consider whether to exercise its discretion to grant an injunction—that is, it will consider whether it would be fair to grant interim relief. The aim is to reduce the chances of the provisional decision providing an unjust result.<sup>40</sup> In so doing, the court will focus on three factors: whether damages would be an adequate remedy, the balance of convenience, and the relative strength of the parties’ cases. In some situations, such as with copyright, the relevant statute may provide that, where a party has acted innocently, the remedies will be limited to damages.<sup>41</sup>

### 1.2.1 Adequacy of damages

The first matter to be considered is the adequacy of damages. Here, the court asks whether, if an injunction were refused, damages awarded at full trial would be a satisfactory remedy for the claimant. If damages are an adequate remedy for a claimant and the defendant is able to pay them, no relief should be granted.<sup>42</sup>

In considering whether damages would be an adequate remedy, the courts will consider whether the damage suffered by the claimant is repairable at all. In other words, they ask whether the claimant’s interest can be compensated by a financial remedy that may be granted at trial. If the damage is to a non-financial interest, such as privacy or personal reputation, it is highly unlikely that the claimant would be compensated for the loss in question. As a result, interim injunctions are less likely to be awarded in patent cases, compared with confidentiality or copyright cases in which non-financial interests are often present.<sup>43</sup> In addition, if the claimant has been in the habit of licensing rights for royalties, it is likely that damages will be seen to be an adequate remedy.<sup>44</sup>

<sup>38</sup> Ibid.      <sup>39</sup> Ibid., [22].      <sup>40</sup> *Barnsley Brewery Co.* [1997] FSR 462, 472.

<sup>41</sup> CDPA 1988, s. 233(2). But cf. *Badge Sales v. PMS International Group* [2006] FSR 1 (despite limitation of final remedy available against innocent acquirers to damages, interim injunctive relief was granted).

<sup>42</sup> *Roussel-Uclaf v. Searle & Co.* [1977] FSR 125; *Baywatch Productions v. The Home Video Channel* [1997] FSR 22.

<sup>43</sup> *Catnic v. Stressline* [1976] FSR 157.

<sup>44</sup> *Smith & Nephew v. 3M United Kingdom* [1983] RPC 92, 102; cf. *Games Workshop v. Transworld Publishers* [1993] FSR 704, 714.

The courts also consider whether the defendant is likely to be able to pay such damages.<sup>45</sup> In general, the impact of this is that the smaller a defendant's business, the more likely it is that interim relief will be granted.<sup>46</sup> In some cases, in order to avoid unduly favouring rich claimants over poorer defendants, the courts have devised orders that allow a defendant to continue their allegedly infringing operations even where they cannot provide an undertaking. In these orders, the courts protect the claimant's rights by requiring the defendant to make payments into an account on a royalty-type basis.<sup>47</sup>

Where damages are not an adequate remedy, the courts will consider whether it is possible to formulate a cross-undertaking that compensates the defendant for any harm caused in the period during which their activities were curtailed. If the cross-undertaking would be satisfactory, then an injunction should be granted. Usually, the question is merely one of the adequacy of damages, not of the claimant's ability to pay. The reason for this is that if there were any doubt as to the reliability of the cross-undertaking, the court might require the claimant to provide security. If the claimant acted promptly, the chances are that the cross-undertaking will be satisfactory and that the interim relief will be granted. (This is because money spent in preparations for trade is usually quantifiable.)<sup>48</sup> Moreover, pending trial, the defendant can continue to trade in non-infringing ways (for example by selling non-infringing items or selling goods under a different trade mark). This, however, will not be the case if timing is crucial to the defendant, for example where the defendant is satisfying a short-term fashion or seasonal demand,<sup>49</sup> where a third-party competitor of the defendant is about to launch,<sup>50</sup> or where the defendant's whole business is in allegedly infringing goods.<sup>51</sup> If the defendant is already selling the allegedly infringing goods on the market, the cross-undertaking is liable to be inadequate. This is because it will be very difficult to quantify losses incurred from withdrawing from a (usually expanding) market.<sup>52</sup>

### 1.2.2 Balance of convenience

In deciding whether to grant an interim injunction, the court will consider the balance of convenience.<sup>53</sup> The facts that are taken into account will vary depending on the circumstances of the case. It has sometimes been suggested that the public interest should be taken into account in assessing the balance of convenience. For example, if granting injunctive relief might prevent the public from having access to a life-saving drug, then such relief might be refused.<sup>54</sup> The court will also compare the likely impact that its decision will have on both parties. For example, in a case of alleged copying of a dress design, the Court of Appeal held that the risks to which the claimant was exposed were 'more dreadful' and their 'consequences more lasting and more irreparable'.<sup>55</sup> As such, they granted an interim injunction. In contrast, where there is only a remote risk of damage to the claimant, but the defendant would certainly suffer substantial unquantifiable damage, the balance of convenience will be against the grant of interim injunctive relief.<sup>56</sup>

<sup>45</sup> *Dyrlund Smith v. Turbervill Smith* [1998] FSR 774.

<sup>46</sup> *Quantel v. Shima Seiki Europe* [1990] RPC 436.

<sup>48</sup> *Mothercare v. Robson Books* [1979] FSR 466, 475; cf. *Polaroid v. Eastman Kodak* [1977] FSR 25, 35.

<sup>49</sup> *Aljose Fashions v. Alfred Young & Co.* [1978] FSR 364; cf. *Monet of London v. Sybil Richards* [1978] FSR 368.

<sup>50</sup> *Silicon Graphics v. Indigo Graphic Systems* [1994] FSR 403, 418.

<sup>51</sup> *Mirage v. Counter-feat* [1991] FSR 145, 153.

<sup>52</sup> *Quantel* [1990] RPC 436.

<sup>53</sup> It has been said that the phrase is rather inept, and alternative phrases such as the 'balance of injustice' or 'prejudice' have sometimes been deployed.

<sup>54</sup> *Roussel-Uclaf* [1977] FSR 125, 131–2.

<sup>55</sup> *Monadress v. Bourne & Hollingsworth* [1981] FSR 118, 122.

<sup>56</sup> *John Walker v. Rothmans International* [1978] FSR 357, 363; *British Association of Aesthetic Plastic Surgeons v. Cambright* [1987] RPC 549; *John Wyeth v. Pharmachem* [1988] FSR 26, 33.

If the order would prevent the defendant from earning a living, it is more likely that the court will be reluctant to grant interim relief.<sup>57</sup>

Another factor often considered in the determination of the balance of convenience is whether the claimant brought the action promptly. If the claimant has delayed bringing the action, the court will usually refuse interim relief.<sup>58</sup> This is especially the case where, over the period during which the claimant failed to act, the defendant spent a considerable amount of money or put themselves at risk.<sup>59</sup> However, if the claimant can explain the delay or show that they acted diligently, the court is unlikely to treat this as a basis for refusing interim relief.<sup>60</sup> Another factor often considered in the determination of the balance of convenience is whether the defendant deliberately took a risk. If the defendant deliberately risked infringing, this might tip the balance of convenience in favour of an injunction.<sup>61</sup>

Where the factors are evenly balanced, Lord Diplock suggested that the best course is to preserve the status quo. Subsequent cases have said that the status quo refers to the period preceding the issue of the 'statement of case' claiming a permanent injunction.<sup>62</sup> Thus if a defendant is doing something that they have not done before, all that the injunction does is to postpone their activities;<sup>63</sup> if the injunction would stop them from continuing to do something that they were already doing, this would cause greater inconvenience. The courts have been careful to prevent the desire to preserve the status quo from being used tactically. In particular, they have been careful to ensure that a defendant cannot alter the status quo, for example by embarking on a high-risk strategy.<sup>64</sup>

### 1.2.3 The merits of the case

The third factor that the court will consider in deciding whether an interim injunction should be granted is the relative strength, or merits, of the parties' cases. According to the traditional reading of *American Cyanamid*, the court should consider the merits of each party's case only in the last resort. Applying the approach strictly, the courts have often refused to indicate which of the parties' cases they consider to be stronger, for fear that it might prejudice the ultimate outcome.<sup>65</sup>

While *American Cyanamid* suggests that the strength of the parties' cases should not be considered until this final stage, nonetheless, in a number of cases, the courts have been influenced by the merits of the claimant's case when considering factors such as the adequacy of damages and the balance of convenience.<sup>66</sup> This generated a growing feeling of unease that judges were not following *American Cyanamid*.<sup>67</sup> In *Series 5 Software*, Laddie J criticized this trend, saying that he did 'not believe it is satisfactory to exercise

<sup>57</sup> *Raindrop Data Systems v. Systemics* [1988] FSR 354, 361; *ESL Fuels Ltd v. Fletcher* [2013] EWHC 3726 (Ch).

<sup>58</sup> *Silicon Graphics* [1994] FSR 403.

<sup>59</sup> *Financial Times v. Evening Standard* [1991] FSR 7, 12–13.

<sup>60</sup> *Mirage v. Counter-feat* [1991] FSR 145, 153 (three-month delay explained by claimant trying to enforce claim through trading standards authorities).

<sup>61</sup> *News Group v. Rocket* [1981] FSR 89, 107; *Elanco Products v. Mandops (Agrochemical Specialists)* [1979] FSR 46; *SmithKline Beecham plc v. Apotex Europe* [2003] EWCA Civ 137, [40].

<sup>62</sup> *Garden Cottage Foods v. Milk Marketing Board* [1983] 2 All ER 770, 774. But not always: *Dunhill v. Sunoptic* [1979] FSR 337, 376 (date may well vary in different cases).

<sup>63</sup> *Elanco Products* [1979] FSR 46.

<sup>64</sup> *Jian Tools for Sales Inc. v. Roderick Manhattan Group Ltd* [1995] FSR 924, 943.

<sup>65</sup> *Sodastream v. Thorn Cascade* [1982] RPC 459, 467.

<sup>66</sup> *Dunhill v. Sunoptic* [1979] FSR 337, 374; *County Sound* [1991] FSR 367, 372.

<sup>67</sup> C. Gray, 'Interlocutory Injunctions since *American Cyanamid*' (1981) 40 *CLJ* 307, 338–9, refers to differences of appearance rather than substance.

the court's discretion to grant an interlocutory injunction by paying lip service to the guidance given in *American Cyanamid* while in practice applying different criteria'.<sup>68</sup> Laddie J took the opportunity in *Series 5 Software* 'to look again at *American Cyanamid* to see what it decided'.<sup>69</sup> His primary concern was to consider the extent to which Lord Diplock's judgment prevents a court from considering the legal and factual merits of the case. Laddie J argued that Lord Diplock could not have been intended the sea change attributed to him, given the fact that, in a subsequent decision, Lord Diplock himself said that to 'justify the grant of such a remedy the claimant must satisfy the court first that there is a strong prima-facie case'.<sup>70</sup> Laddie J argued that, when Lord Diplock said that the court should not consider the strength of the claimant's case, he was merely referring to the 'mandatory initial hurdle'. Indeed, a close analysis of the factors that Lord Diplock thought were relevant suggested that even he would consider the strength of the case.<sup>71</sup> Laddie J therefore argued that the prospect of success was still a relevant factor when considering the balance of convenience. However, he did accept that Lord Diplock had intended that this should be conducted so as to avoid a mini-trial.

Laddie J's reformulation has met with a mixed reception. In *Barnsley Brewery Company v. RBNB*,<sup>72</sup> Robert Walker J signalled his approval, stating that while *Series 5* 'is sometimes regarded as surprising or even heretical', it provided a valuable reminder of the background to and basic message contained in *American Cyanamid*. However, other judges have ignored *Series 5*, preferring to stick to *American Cyanamid* and the acknowledged exceptions to it.<sup>73</sup> In *Guardian Media Groups v. Associated Newspapers*,<sup>74</sup> the Court of Appeal said that the *American Cyanamid* principles had a degree of flexibility and:

... do not prevent the court from giving proper weight to any clear view which the court can form at the time of the application for interim relief (and without the need for a mini-trial on copious affidavit evidence) as to the likely outcome at trial. That is particularly so when the grant or withholding of interim relief may influence the ultimate commercial outcome.

The better view appears to be that the strength of each case is a relevant factor for the court to take into account when it exercises its discretion. However, strength should be considered only where there is no credible dispute as to the evidence and it is clear that one party's case is likely to succeed.<sup>75</sup>

## 2 STOPPING IMPORTS

In many situations, the infringing products originate from other jurisdictions. In these circumstances, the claimant may try to prevent the infringement at its source.

<sup>68</sup> *Series 5 Software v. Clarke* [1996] 1 All ER 853, [1996] FSR 273, 277.

<sup>69</sup> Ibid. (the analysis appears to have been *obiter*).

<sup>70</sup> *Hoffmann-La Roche v. Secretary of State for Trade and Industry* [1975] AC 295, 360.

<sup>71</sup> For example, Lord Diplock stated that if damages would satisfy a claimant, no injunction should be granted, 'however strong the plaintiff's claim'—implying that if damages were not adequate, the strength of the claim was a relevant consideration: *ibid.*, 408, as highlighted by Laddie J, in *Series 5 Software v. Clarke* [1996] 1 All ER 853, [1996] FSR 273, 284.

<sup>72</sup> [1997] FSR 462, 472 (refusing injunction largely because claimant's case in passing off, although not unarguable, was weak).

<sup>73</sup> *EMAP National Publications v. Security Publications* [1997] FSR 891; *Dyno-Rod v. Reeve* [1999] FSR 149, 151–2, 158–9.

<sup>74</sup> (20 January 2000) (EWCA Civ., unreported).

<sup>75</sup> *Intelsec Systems v. Grech-Cini* [1999] 4 All ER 11, 26.

Alternatively, a claimant may try to intercept the infringing articles or materials at the point of import. There are two legal mechanisms for stopping articles that infringe intellectual property rights at their point of import to the United Kingdom.<sup>76</sup> The most important of these are the European procedures specified in the so-called ‘Border Measures Regulation’ of 2013 (which repealed and replaced an earlier Regulation from 2003).<sup>77</sup> In 2012, using the European procedure then in place, there were more than 90,000 interceptions of goods, said to have a value of some €1 billion, and the bulk of which (65 per cent) came from China. The most frequently seized goods were cigarettes (30 per cent), but 10 per cent was washing powder and 8 per cent of the goods seized were clothes.<sup>78</sup> The other set of procedures, which are now of limited scope, derives from domestic legislation.<sup>79</sup>

## 2.1 EUROPEAN PROCEDURE

The European regulations<sup>80</sup> establish mechanisms that ensure that goods that infringe intellectual property rights, other than travellers’ personal luggage,<sup>81</sup> can be retained by customs authorities when they are introduced into the European Union.<sup>82</sup> The Border Measures Regulation defines ‘intellectual property rights’ in Article 2(1) to cover goods infringing rights in trade marks, designs, copyright and related rights, geographical indications, patents, plant breeders’ rights, and supplementary protection certificates, plus national laws of utility models and trade names.<sup>83</sup> The Regulation does not apply to parallel imports or overruns.<sup>84</sup>

Provisions are made in the Border Measures Regulation for a proactive intellectual property rights holder who gets wind of the fact that goods are going to be imported to make an ‘application for Customs action’. That is, the right holder can apply to the relevant customs authorities designated by each member state (in the United Kingdom,

<sup>76</sup> TRIPS, Arts 51 and 52, require such measures.

<sup>77</sup> Regulation (EU) No. 608/2013 of 12 June 2013 concerning customs enforcement of intellectual property rights and repealing Council Regulation (EC) No 1383/2003 [2013] *OJ L* 181/15.

<sup>78</sup> European Commission, *Customs Action to Tackle IPR Infringing Goods: Frequently Asked Questions* (5 August 2013) IP/13/738.

<sup>79</sup> TMA 1994, s. 89; Trade Marks (Customs) Regulations 1994 (SI 1994/2625); CDPA 1988, s. 111.

<sup>80</sup> See generally O. Vriens and M. Schneider (eds), *Enforcement of Intellectual Property Rights through Border Measures: Law and Practice in the EU* (2006).

<sup>81</sup> BMR, Art. 1(4) (goods of a non-commercial nature contained in a traveller’s personal luggage). But goods sent from outside the European Union to a personal address within are liable to seizure if they would be infringing within the Union: *Blomqvist v. Rolex SA*, Case C-98/13 (6 February 2014) (ECJ, Second Chamber).

<sup>82</sup> Goods ‘in transit’, where there is no evidence that the goods are to be directed at the European, are outside the scope of the Regulation: *Koninklijke Philips Electronics NV v. Lucheng Meijing Ind. Co.*, Joined Cases C-446/09 and C-495/09 [2012] *ETMR* (13) 248 (ECJ, First Chamber). Special provision is made in BMR, Art. 22(2), permitting customs authorities to cooperate in relation to information about such goods. But note attempts that are being made by the European Commission, (*Proposal for a Regulation of the European Parliament and of the Council amending Council Regulation (EC) No. 207/2009 on the Community Trade Mark* (March 2013), COM(2013) 0161 final, proposed Art. 9(5)), to confer on the holder of a Community trade mark the right to prevent introduction:

... in the context of commercial activity, into the customs territory of the Union without being released for free circulation there, where such goods, including packaging, come from third countries and bear without authorization a trade mark which is identical to the European trade mark registered in respect of such goods, or which cannot be distinguished in its essential aspects from that trade mark.

The aim is to reverse the *Philips* decision and thus to enhance the ‘fight against counterfeiting’.

<sup>83</sup> BMR., Art. 2. See pp. 2–3, discussing the meaning of ‘intellectual property right’.

<sup>84</sup> BMR, Art. 1(5).

HM Revenue and Customs, or HMRC, but the request can apply to authorities in other member states, too) to detain the goods, should they come into its hands.<sup>85</sup> As one would expect, right holders are required to describe the goods so that they can be 'readily' identified and to provide proof that they are entitled to submit the application.<sup>86</sup> The applicants must accept liability towards the persons involved in the event that action is discontinued or goods are found to be non-infringing.<sup>87</sup> The customs authorities must process the application by deciding whether the information is sufficient, determine the relevant 'action period', and forward details to the relevant offices.<sup>88</sup> If the customs office comes across goods that it suspects are infringing (within the decision), 'it shall suspend release of the goods or detain them'.<sup>89</sup> The office then informs the right holder and 'declarant or holder of the goods'. Right holders are given information necessary to assist them in establishing whether an intellectual property right has been infringed, including the opportunity to inspect the goods and to remove samples for analysis.<sup>90</sup>

Even if advance warning has not been given, but the relevant authority has sufficient grounds for suspecting that goods are infringing, the Regulation empowers the authority to prevent their transit temporarily.<sup>91</sup> The authority will attempt to contact the relevant intellectual property right holder, who must complete the standard application for customs action within four days. The customs office will not detain the goods indefinitely. Under the newly formulated Regulation, it seems that there are three possible scenarios that might ensue.

First, the intellectual property right holder may take no further action. If so, the customs office should release the goods after ten days.<sup>92</sup>

Second, the intellectual property right holder (or other relevant third party) may commence an action for infringement in the relevant national tribunal (which could be a court or administrative body, depending of national provisions).<sup>93</sup> If this occurs, and the right holder informs the authority, detention of the goods can be continued pending the outcome of proceedings.<sup>94</sup> However, since that may not be for some time, the owner of the goods has an option of seeking the release of the goods on condition that they provide an appropriate security.<sup>95</sup> This option, it should be noted, is available only where the allegation is infringement of patent, design, plant breeders' right, utility model, or semi-conductor topography right (and thus not in cases of infringement of copyright, trade marks, or geographical indications). If the goods are found to be infringing at the substantive hearing, the competent authorities are empowered to destroy the goods and to take any measures that deprive the persons concerned of the economic benefits of the transaction.<sup>96</sup> Removing trade marks affixed to counterfeit goods is not normally regarded as sufficient.<sup>97</sup>

The third scenario is that the goods may be destroyed. Here two procedures are available: a general one; and one concerned with small packages. First, the parties may agree to destruction of the goods without the need for proceedings.<sup>98</sup> This 'simplified procedure'

<sup>85</sup> BMR, Art. 5. Apparently, in 2012, there were 23,134 such applications: European Commission, *Report on EU Customs Enforcement of Intellectual Property Rights: Results at the EU Border* (2012), 9.

<sup>86</sup> BMR, Art. 6(3). Persons entitled to submit an application are specified in Art. 3, and include not only rights holders, but also collective rights management organizations and 'professional defence bodies'.

<sup>87</sup> BMR, Art. 6(3)(n), (o). <sup>88</sup> BMR, Arts 7–14.

<sup>89</sup> BMR, Art. 17(1). If it fails to detect them, the authority is not liable to the right holder: BMR, Art. 27.

<sup>90</sup> BMR, Arts 17(3), (4), 18(5), 19. <sup>91</sup> BMR, Arts 18, 5(3). <sup>92</sup> BMR, Art. 23.

<sup>93</sup> *Sintex Trading OÜ v. Maksu ja Tolliamet*, Case C-583/12 (9 April 2014) (ECJ, Second Chamber), [44] (customs authorities may themselves initiate proceedings), [49] (proceedings might be before customs authority).

<sup>94</sup> BMR, Art. 23.

<sup>95</sup> *Ibid.*

<sup>96</sup> BMR, Art. 17.

<sup>97</sup> *Ibid.*

<sup>98</sup> BMR, Art. 23.

for abandonment is to be used by the customs authorities only if three conditions are met:<sup>99</sup>

- (i) the right holder must inform the authority within ten working days that the goods infringe intellectual property rights;
- (ii) the authorities must have the written agreement of the ‘declarant or the holder of the goods’, or their deemed consent;<sup>100</sup> and
- (iii) the right holder must agree.

Before the goods are destroyed, samples may be taken for, among other things, educational purposes.<sup>101</sup>

The second procedure for destruction relates to ‘small consignments’ (that is, posted parcels comprising fewer than three items and weighing under 2 kilos), where the goods are counterfeit or pirated.<sup>102</sup> Here, the customs authority may give the declarant or holder notice of its intention to destroy the goods.<sup>103</sup> The ‘declarant or holder’ has ten days in which to respond to such a notice and may agree to destruction, or oppose it, or, in some cases, will ‘be deemed to have agreed’.<sup>104</sup> Where there is agreement, or deemed agreement, the goods may be destroyed.<sup>105</sup>

## 2.2 DOMESTIC PROCEDURE

A residual domestic procedure continues to coexist with the European Regulation, but does not apply to goods within the Regulation or goods that are already in free circulation within the European Economic Area (EEA). Under this procedure, copyright and trade mark owners may notify HMRC that infringing goods, materials, or articles are about to be imported, and request that this be prohibited.<sup>106</sup> Its impact in this sphere is thus restricted to parallel imports and overruns. The Commissioners may require an indemnity and security against any liability and expense that might accrue.<sup>107</sup> Once a notice is in force, import of the goods is prohibited. If HMRC finds such goods (other than for the private and domestic use of the person importing them), they will be seized and the owner informed.<sup>108</sup> The owner has one month in which to make a claim that the goods were not liable to seizure. If such notice is given, the Commissioners are obliged to bring proceedings for ‘condemnation’ of the goods (either in the magistrates’ court or the High Court).<sup>109</sup> If successful, the goods will usually be destroyed.<sup>110</sup>

<sup>99</sup> Until 1 January 2014, this procedure was optional for member states. It is now mandatory.

<sup>100</sup> BMR, Art. 23(1)(c). The declarant is the person making the customs declaration in their own name or the person in whose name a customs declaration is made. The holder is the owner or a person ‘who has a similar right of disposal, or physical control, over the goods’: BMR, Art. 2(14).

<sup>101</sup> BMR, Art. 23(2).

<sup>102</sup> BMR, Art. 26(6). For the definition of pirated or counterfeit goods, see Art. 2(5) and (6). This covers certain infringements of copyright, related rights, and designs, trade marks, and geographical indications.

<sup>103</sup> BMR, Art. 26(1). <sup>104</sup> BMR, Art. 26(6).

<sup>105</sup> BMR, Art. 26(7). Otherwise, the right holder is informed and, if it takes no action, the goods will be released.

<sup>106</sup> CDPA 1988, s. 111; Copyright (Customs) Regulations 1989 (SI 1989/1178), amended by Copyright (EC Measures Relating to Pirated Goods and Abolition of Restrictions on the Import of Goods) Regulations 1995 (SI 1995/1445); TMA 1994, ss 89, 112; Trade Marks (Customs) Regulations 1994 (SI 1994/2625). <sup>107</sup> CDPA 1988, s. 112.

<sup>108</sup> Customs and Excise Management Act 1979, Sch. 3, para. 1(2). <sup>109</sup> *Ibid.*, para. 8.

<sup>110</sup> CDPA 1988, s. 111(4); TMA 1994, s. 89(2).

### 3 FINAL INJUNCTION

A final or perpetual injunction is usually granted to intellectual property right owners who prove at trial that their rights have been infringed by the defendant.<sup>111</sup> A final injunction will order the defendant not to carry on with certain activities. As such, it is directed at future conduct, whereas financial remedies operate in relation to past acts. The injunction, being equitable in origin, is a discretionary remedy. This means that while final injunctions are normally awarded, they are not granted automatically. Although the law of injunctions is a topic with implications that extend well beyond intellectual property rights, here we consider four specific issues.

#### 3.1 GENERAL APPROACH

According to the traditional approach taken by the English courts, if a defendant was found to be infringing intellectual property right, a claimant is normally entitled to an injunction. Nevertheless, the courts have indicated a few of the circumstances under which an injunction might be refused.<sup>112</sup> These include situations in which the infringement is trivial, its value can be estimated in financial terms and adequately compensated, and an injunction would be oppressive on the defendant;<sup>113</sup> where a claimant is interested only in money; where the claimant's action is vexatious; or where the infringing act is old and there is no future threat.<sup>114</sup> Moreover, in circumstances under which licences of right are available to a defendant, injunctive relief will not normally be granted.<sup>115</sup> An injunction will not be refused simply because there is a public interest in widespread exploitation or dissemination of a particular product (such as a cure for HIV),<sup>116</sup> or because the infringing material comprises only a small portion of the defendant's products.<sup>117</sup>

Although the Court of Appeal recently stated that 'the principles upon which the court will grant an injunction in intellectual property cases are exactly the same as those which apply in other cases',<sup>118</sup> the better view is that the conventional principles need to be considered in the light of the Enforcement Directive and specific EU legislation (where relevant).<sup>119</sup> In particular, Article 3(1) of the Enforcement Directive requires

<sup>111</sup> *Chiron v. Organon (No. 10)* [1995] FSR 325.

<sup>112</sup> The leading authority is *Shelfer v. City of London* [1895] 1 Ch 287.

<sup>113</sup> *Sterwin v. Brocades* [1979] RPC 481; *Navitaire Inc v. EasyJet Airline Co Ltd (No. 2)* [2005] EWHC 282 (Ch), [2006] RPC (4) 213, [104] (i.e. grossly disproportionate) (approved by Jacob LJ in *Virgin Atlantic Airways Ltd v. Premium Aircraft Interiors Group* [2009] EWCA Civ 1513, [2010] FSR 396, [23]–[25] (approving *Navitaire* as correct approach under the Enforcement Directive).

<sup>114</sup> *Raleigh v. Miller* (1949) 66 RPC 23; *Frayling Furniture v. Premier Upholstery* (unreported, 5 November 1999) (no injunction where infringement had taken place five years earlier apparently inadvertently and had not been repeated). Delay was an important consideration in the court's refusal of an injunction in *Banks v. EMI Songs Ltd (No. 2)* [1996] EMLR 452.

<sup>115</sup> RDA 1949, s. 11B(1)(a); PA 1977, s. 46(3)(c); CDPA 1988, ss 98(1)(a), 191K.

<sup>116</sup> *Chiron v. Organon (No. 10)* [1995] FSR 325; cf. *Roussel Uclaf* [1977] FSR 125, 131.

<sup>117</sup> *Macmillan v. Reed* [1993] FSR 455; *Mawman v. Tegg* (1826) 2 Russ 385. Some flexibility here is regarded by many as desirable to prevent 'hold-outs', particularly by patent owners who do not manufacture products themselves and thus seek to maximize license fees: see M. Lemley and C. Shapiro, 'Patent Holdup and Royalty Stacking' (2007) 85 *Texas L Rev* 1991; S. Subramanian, 'Patent Trolls in 'Thickets'' [2008] *EIPR* 182; *eBay Inc. v. MercExchange, LLC*, 126 S.Ct. 1837 (2006).

<sup>118</sup> *Specsavers International Healthcare Ltd v. Asda Stores Ltd* [2012] EWCA Civ 494, [20].

<sup>119</sup> CTMR, Art. 98; CDR, Art. 89 (indicating that the court should grant an injunction 'unless there are special reasons for not doing so'); *Nokia Corp. v. Joachim Wärdell*, Case C-316/05 [2006] ECR I-12083 (ECJ, First Chamber) ('special reasons' given a very narrow construction).

that ‘measures, procedures and remedies shall be fair and equitable and shall not be unnecessarily complicated or costly, or entail unreasonable time-limits or unwarranted delays’. Moreover Article 3(2) adds that they should be ‘effective, proportionate and dissuasive and shall be applied in such a manner as to avoid the creation of barriers to legitimate trade and to provide for safeguards against their abuse’. Whether the conventional approach in all circumstances meets these standards—particularly that of ‘proportionality’—is difficult to say. Nevertheless, we agree with Arnold J’s statement in *HTC v. Nokia* that:

[T]he time has come to recognise that, in cases concerning infringements of intellectual property rights, the criteria to be applied when deciding whether or not to grant an injunction are those laid down by Article 3(2): efficacy, proportionality, dissuasiveness, the avoidance of creating barriers to legitimate trade and the provision of safeguards against abuse.<sup>120</sup>

Thus Arnold J proposed that the ‘traditional approach’ be abandoned at least for intellectual property rights within the meaning of the Directive (which probably would not include much of the law of confidentiality or passing off). Unfortunately, on the facts of the case, even taking this approach, Arnold J awarded an injunction (rendering his opinion on the Directive unnecessary for the decision).

### 3.2 FORM OF INJUNCTION

It is normal practice to grant an injunction that corresponds to the rights that were infringed. For example, an injunction will usually be granted that restrains the defendant from infringing the patent in suit or restrains the defendant from passing off their goods as those of the claimant. Such broadly worded relief is appropriate because ‘claimants cannot be adequately protected by orders which are cabined or confined’.<sup>121</sup> Despite criticism that such vaguely worded relief is unfair to a defendant,<sup>122</sup> it has been stated by the Court of Appeal in a patent case that the ‘traditional form’ of injunction sets out with as much clarity as the context admits what may not be done. This is because while the wording of the order may look vague, the Patents Act 1977 and the claims form a context from which the specific meaning of the terms of the order can be understood.<sup>123</sup> Nevertheless, Aldous LJ has said that an order that simply restrains ‘breach of confidence’ will not be precise enough. Moreover, Aldous LJ reiterated that ‘each case must be determined on its own facts and the discretion exercised accordingly’.<sup>124</sup> Consequently, although the traditional form of injunction will often be appropriate, in some cases more narrowly couched orders will be required, depending on the right involved, the honesty of the defendant, and all other circumstances.

#### 3.2.1 Springboard injunctions

In the last few years, the courts have been asked to develop new forms of injunction on the grounds that it is ‘just and convenient’ to do so.<sup>125</sup> One such claim has been for injunctions that continue after the expiry of an intellectual property right (also known as ‘springboard

<sup>120</sup> *HTC v. Nokia* [2013] EWHC 3778 (Pat), [26].

<sup>121</sup> *Spectravest v. Aperknit* [1988] FSR 161, 174; *Aktiebolaget Volvo v. Heritage* [2000] FSR 253, 265–6.

<sup>122</sup> *Coflexip v. Stolt Comex Seaway* [1999] FSR 473, 476; *Microsoft v. Plato Technology* [1999] FSR 834; *Beautimatic v. Mitchell Pharmaceuticals* [2000] FSR 267, 284.

<sup>123</sup> *Coflexip v. Stolt Comex Seaway* [2001] RPC (9) 182, 188, [18] per Aldous LJ. <sup>124</sup> *Ibid.*

<sup>125</sup> Senior Courts Act 1981, s. 37.

relief’). Although the idea of a post-expiry injunction may seem strange, given the policy of fixing the duration of many intellectual property rights, such orders have been thought to be desirable in cases in which infringing acts that have already taken place (during the term of the intellectual property right) have given a defendant a head start in the process of marketing legitimate goods in the post-expiry period. In *Dyson Appliances v. Hoover* (No. 2),<sup>126</sup> Judge Fysh QC granted such an injunction against Hoover for a period of 12 months following expiry of Dyson’s patent. The case concerned the patent for Dyson’s well-known ‘bagless’ vacuum cleaner. During the patent’s life, Hoover had developed a cyclone-based vacuum cleaner and had been granted clearances by certifying authorities. In October 2000, the vacuum cleaner was held to infringe Dyson’s patent. Dyson argued that it would be unfair if Hoover were able to relaunch the model when Dyson’s patent expired in June 2001. The Court agreed. Having noted that the remedies prescribed in section 61 of the Patents Act 1977 were ‘without prejudice to any other jurisdiction of the court’, the judge held that such an order was ‘just’ and ‘convenient’ because it sought to place the claimant in the position in which it would have been had its rights been respected (and, incidentally, it saved the tribunal from having to calculate damages relating to such acts). The judge did, however, indicate that the scope of the injunction should be circumscribed to the model developed during the patent term, and to a period corresponding to the time that it had taken Hoover to develop the model and get the relevant clearances.

### 3.2.2 Long-arm injunctions

The courts have proved less amenable to the idea of injunctions covering foreign territories (so-called ‘long-arm relief’). In *Kirin-Amgen Inc. v. Transkaryotic Therapies Inc.* (No. 2),<sup>127</sup> the claimant owned a patent relating to the production of erythropoietin (EPO) (using genetic engineering), which the defendant had been held to infringe. Although appeals were pending, the claimant sought to amend the relief that it was seeking to include an order restraining the defendant from using outside the United Kingdom ‘UK-derived cells’, which could produce EPO. Refusing leave to amend in this way, Neuberger J held that the court could not ‘at least in the absence of very exceptional circumstances, grant an injunction in a patent infringement case, restraining a person’s activities abroad, even if those activities were only possible as a result of an infringement in this jurisdiction’.<sup>128</sup> This view was informed by the terms of the statutory tort defined in section 60 of the Patents Act 1977, as well as a clear sense that acts occurring abroad were matters for foreign law. In another case, the Court of Session refused to grant an injunction relating to infringement of unregistered design right that extended beyond Scotland to cover England and Wales.<sup>129</sup>

### 3.2.3 Blocking injunctions

In Chapter 47, we examined the possibility of an intellectual property right holder bringing an action against ‘intermediaries’—in particular, Internet access providers (IAPs) or Internet service providers (ISPs).<sup>130</sup> This power has been used by the courts to order ISPs to block customer access to websites, such as Newzbin and the Pirate Bay, containing or giving

<sup>126</sup> [2001] *RPC* 544; cf. *Smith Nephew v. Convatec* [2013] *EWHC* 3955 (Pat) (Birss J).

<sup>127</sup> [2002] *RPC* 203, 216. <sup>128</sup> *Ibid.*, 216, [54].

<sup>129</sup> *UVG Ambulances v. Auto Conversions* [2000] *ECDR* 479.

<sup>130</sup> See pp. 1210–12; CDPA 1988, ss 97A, 191JA, as inserted by Copyright and Related Rights Regulations 2003 (SI 2003/2498). See generally J. Riordan, ‘The Liability of Internet Intermediaries’ (Unpublished PhD thesis, University of Oxford, 2013).

access to copyright material without the permission of the relevant rights holder.<sup>131</sup> In exercising the power, the Court needs to consider the impact on fundamental rights, including private life and freedom of expression of the defendant, the website operator, and its users.<sup>132</sup> In particular, careful assessments need to be made as to the costs to the parties,<sup>133</sup> and the effectiveness and proportionality of such orders. The question is ‘context-sensitive’ and the Court should not make an order ‘without thorough consideration of whether it is appropriate to make an order in the light of the specific facts of each case’.<sup>134</sup>

As to effectiveness, it is acknowledged that blocking injunctions can be circumvented, but nevertheless it has been said on a number of occasions that they are ‘reasonably effective’ to protect the rights of persons, the communication of whose works are facilitated or promoted from specific websites.<sup>135</sup> Indeed, the ‘ranking’ of ‘The Pirate Bay’ site fell considerably after the Court issued the blocking order.<sup>136</sup>

As to proportionality, courts must take special care that they are not unduly inhibiting freedom of expression and access to information. In cases in which the only contents of a site are infringing materials that comprise complete copies, proportionality favours protecting a copyright owner’s (property) rights. If, however, a site contains parodic versions of copyright material, or quantities of non-infringing speech (for example the political positions of The Pirate Party) a blocking injunction is unlikely to be appropriate: it would go beyond what was required to protect the property rights of the intellectual property owners and prejudice the legitimate interests of the public.

### 3.3 EUROPEAN REMEDIES FOR INFRINGEMENT OF EUROPEAN RIGHTS

One of the most important attributes of Community rights (trade marks, designs, etc.) is that they result in a single action in a designated Community court, which is given

<sup>131</sup> *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC 855; *Twentieth Century Fox Film Corp. v. British Telecommunications plc (No. 2)* [2011] EWHC 2714 (Ch); *Dramatico Entertainment Ltd v. British Sky Broadcasting Ltd* [2012] EWHC 268 (Ch), [2012] 3 CMLR (14) 328; *Dramatico Entertainment Ltd v. British Sky Broadcasting Ltd (No. 2)* [2012] EWHC 1152 (Ch), [2012] 3 CMLR (15) 360; *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [2013] ECDR (8) 224; *Football Association Premier League Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 2058 (Ch), [2013] ECDR (14) 377; *Paramount Home Entertainment International v. British Sky Broadcasting Ltd* [2013] EWHC 3479 (Ch), [2014] ECDR (7) 101. See also M. Husovec, ‘Injunctions against Innocent Third Parties: The Case of Website Blocking’ [2013] *JIPITEC* (arguing that these remedies signify a transformation in the nature of remedies from tortious to *in rem*).

<sup>132</sup> *UPC Telekabel Wien GmbH v. Constantin Film Verleih GmbH, Wega Filmproduktionsgesellschaft mbH*, Case C-314/12 (27 March 2014) (ECJ, Fourth Chamber), [30]–[40]; *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [2013] ECDR (8) 224, [94].

<sup>133</sup> No orders have yet been made that impose significant costs on the website operators; rather, the technical measures have so far already been available, and the cost of compliance is modest: *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC (28) 855, [177], [200]; *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 2714 (Ch), [32]–[33] (initial cost would be £5,000, plus £100 for each notification); *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [2013] ECDR (8) 224, [101].<sup>134</sup> *Ibid.*, [100].

<sup>135</sup> *Football Association Premier League Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 2058 (Ch), [2013] ECDR (14) 377, [55(v)]; *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [2013] ECDR (8) 224, [104]. Arnold J said that he was of the view that ‘a blocking order may be justified even if it only prevents access by a minority of users’: *Twentieth Century Fox Film Corp. v. British Telecommunications Plc* [2011] EWHC 1981 (Ch), [2011] RPC (28) 855, [192]–[198].

<sup>136</sup> In *EMI Records Ltd v. British Sky Broadcasting Ltd* [2013] EWHC 379 (Ch), [2013] ECDR (8) 224, [106], Arnold J noted that the ranking of The Pirate Bay site by the web analyst Alexa fell from 43 to 293.

jurisdiction in respect of all of the member states.<sup>137</sup> That court can award Europe-wide relief.<sup>138</sup> The principles governing such relief were explained by the Court of Justice in *DHL v. Chronopost*,<sup>139</sup> a trade mark case in which Chronopost sought to enforce its trade mark, WEB-SHIPPING for logistics services, against the defendant. The Paris Court of Appeal had limited the injunction to France, and the Cour de Cassation referred questions to the Court as to the approach to be taken. The Court indicated that, given the unitary nature of a Community right, ‘as a rule’ the court should grant Europe-wide relief.<sup>140</sup> That general approach might be departed from, for example, either where the claimant chooses not to seek Europe-wide relief or where use of a particular sign in some part of the Union had no damaging effect on any of the functions of the mark.<sup>141</sup> The former proposition seems unremarkable. In respect of the latter, it seems likely that the Court had in mind the possibility that uses of ‘web-shipping’ in English-speaking countries might be non-damaging, non-confusing, or descriptive uses (falling within a defence).<sup>142</sup> However, other situations in which a court might restrict relief include: (i) where a trade mark action depends on damage to (or taking unfair advantage of) the reputation of the mark, but the mark has no reputation in particular parts of the Union; or (ii) where a mark has not been used at all in parts of the Union, so that there is no possibility of confusion or other damage to functions in those parts. It seems that it will fall to a defendant in a particular case to justify a carve-out of this sort from Europe-wide relief. It is not obvious that such a carve-out would be justifiable in relation to enforcement of Community design right.

#### 4 DELIVERY UP

As an adjunct to a final injunction, a court may order the delivery up or destruction of infringing articles.<sup>143</sup> While the defendant usually chooses which option to take,<sup>144</sup> if they have shown themselves to be unreliable, the court may demand delivery up.<sup>145</sup> The long-standing inherent equitable jurisdiction to make an order for delivery up aims to ensure that a defendant is not tempted to put the infringing copies into circulation in breach of the injunction.<sup>146</sup> If the infringement relates to a separable part of an article, the order will be for delivery up of that part.<sup>147</sup> In the case of trade marks and passing off, if a sign can be removed, the court will

<sup>138</sup> CTMR, Art. 102.

<sup>139</sup> *DHL Express France SAS v. Chronopost SA*, Case C-235/09 [2011] ECR I-2801 (ECJ, Grand Chamber). For the response of the French Court, see [2013] *ETMR* (8) 109. See V. Barresi, ‘The Scope of CTM Injunctions: Constitutional and Practical Aspects’ [2013] *IPQ* 344; L. Zelechowski, ‘Infringement of a Community Trade Mark: Between EU-wide and non-EU-wide Scope of Prohibitive Injunctions’ [2013] *EIPR* 287.

<sup>140</sup> Case C-235/09 [2011] ECR I-2801, [44].

<sup>141</sup> *Ibid.*, [46]–[48].

<sup>142</sup> The Court specifically refers to ‘linguistic reasons’: *ibid.*, [48].

<sup>143</sup> Note CDR, Art. 89(1)(b)–(c) (on finding of infringement of Community design right, the court should order seizure of infringing products and materials used to manufacture infringing goods).

<sup>144</sup> *Lady Anne Tennant v. Associated Newspapers* [1979] *FSR* 298, 305.

<sup>145</sup> *Industrial Furnaces v. Reaves* [1970] *RPC* 605.

<sup>146</sup> *Mergethaler Linotype v. Intertype* (1926) 43 *RPC* 381. In *Chappell v. Columbia Gramophone Co.* [1914] 2 *Ch* 745, the Court of Appeal utilized the remedy to prevent the defendant from benefiting from its infringement by making it deliver up sound recordings derived from infringing acts, even though these were not infringing articles. For discussion of the case, see *Union Carbide v. BP* [1998] *FSR* 1. And note *Merck Canada v. Sigma (No. 2)* [2013] *RPC* (2) 33, [24]; [2013] *EWCA Civ* 326, [2013] *RPC* (35) 925 [94] (‘retention of unlawfully imported stock would give it an unwarranted advantage when the SPC expires’).

<sup>147</sup> *Mergethaler Linotype v. Intertype* (1926) 43 *RPC* 381; cf. *Industrial Furnaces* [1970] *RPC* 605.

order that this be done rather than order delivery up of the goods.<sup>148</sup> Normally, such an order cannot be made once the right has expired.<sup>149</sup> Moreover, the order does not extend to third parties who have come into possession of infringing articles.<sup>150</sup>

In the case of patents and trade marks, there is an express statutory power to order delivery up and/or obliteration.<sup>151</sup> The statutory provisions, like the inherent jurisdiction, provide that, in cases in which it appears ‘likely that such an order would not be complied with’, the court can order delivery up to the claimant (or some other person) for erasure or destruction.

A more significant statutory extension has been made available in respect of the infringements of trade marks, performers’ rights, unregistered design right, or copyright.<sup>152</sup> More specifically, a statutory procedure exists for the delivery up of infringing goods, illicit recordings, infringing articles, and infringing copies for the purposes of ‘destruction’ or ‘forfeiture’. The new Intellectual Property Act 2014 has made changes in relation to registered designs to allow for the forfeiture of infringing products or articles.<sup>153</sup>

In most cases, the power is available only where a person has infringing goods (etc.) in their possession, custody, or control in the course of business.<sup>154</sup> The power also applies where a person has in their possession anything specifically designed or adapted for making infringing goods (etc.), knowing or having reason to believe that it has been or is to be used to make infringing goods (etc.). The court may order delivery up to the right owner (or some other person), pending a further order either for destruction *or forfeiture* as the court thinks fit. The ability to order forfeiture goes well beyond the inherent power, which is confined to delivery for destruction.<sup>155</sup>

In considering whether the discretionary order for destruction or forfeiture is appropriate, the court is directed to take into account ‘whether other remedies available in an action for infringement would be adequate to compensate the right owner and protect their interests’.<sup>156</sup> As yet, there is little indication as to when a forfeiture order will be made.<sup>157</sup> However, one obvious case in which the other remedies might be inadequate is where the defendant is bankrupt or unable to pay damages. Because the order might affect the rights of third parties having interests in the goods, third parties may appear in proceedings.<sup>158</sup>

## 5 DAMAGES

The most common financial remedy for infringement of intellectual property rights is an award of damages.<sup>159</sup> The damages recoverable are the same as with other torts: the aim is to restore the victim to the position in which they would have been had no wrong been committed; the aim is not to punish the defendant.<sup>160</sup>

In some cases, damages will not be available where the defendant's infringement was innocent. More specifically, damages will not be awarded in an action for infringement of a registered design or a patent where the defendant proves that, at the date of infringement, they were not aware and had no reasonable grounds for supposing that the design was registered or the patent existed.<sup>161</sup> In either case, a person will not be deemed to have been aware or have had reasonable grounds for supposing that the design was registered or patent existed merely because the article is marked 'registered' or 'patented'.<sup>162</sup> This does not apply, however, where the marking is accompanied by the registration, a patent number,<sup>163</sup> or a web address that provides relevant patent numbers.<sup>164</sup>

In the case of copyright, rights in performances, and unregistered design right, the legislation provides that damages will not be awarded in an action for infringement where it is shown that, at the time of the infringement, the defendant did not know, and had no reason to believe, that copyright (etc.) subsisted in the work to which the action relates.<sup>165</sup> In certain cases of infringement of performers' rights by a person who 'innocently acquired' an illicit recording, the only remedy available is damages 'not exceeding a reasonable royalty in respect of the act complained of'.<sup>166</sup> In contrast, in the case of trade mark infringement and passing off,<sup>167</sup> it seems that damages will be awarded even against an innocent defendant. It is difficult to conceive of any rational basis for such inconsistent approaches.

The financial remedies that are available in an intellectual property action (both damages and account of profits) need to be viewed in light of the Intellectual Property (Enforcement, etc.) Regulations 2006.<sup>168</sup> Regulation 3, which applies to cases of knowing infringement, explains that damages should reflect the 'actual prejudice' suffered by the claimant. Regulation 3(3) elaborates that 'all appropriate aspects shall be taken into account', including 'the negative economic consequences, including any lost profits, which the claimant has suffered, and any unfair profits made by the defendant', as well as

<sup>159</sup> PA 1977, s. 61(1)(c); CDPA 1988, ss 96(2), 191(3), 229(2); RDA 1949, s. 24(2); TMA 1994, s. 14(2); PVA 1997, s. 13(2); CPVR, Art. 94.

<sup>160</sup> *General Tire & Rubber v. Firestone Tyre & Rubber* [1976] RPC 197, 214.

<sup>161</sup> RDA 1949, s. 24B; PA 1977, s. 62(1); CDPA 1988, ss 191J, 233.

<sup>162</sup> It is not enough to mark goods with the words 'patented'. In order to fix a defendant with knowledge or reasonable grounds, the 'patent number must be given': *Schenck Rotec v. Universal Balancing* [2012] EWHC 1920, [209] (Pat) (noting that PA 1977, s. 62(1), was compliant with Enforcement Dir., Art. 13).

<sup>163</sup> *Lancer Boss v. Henley Forklift Co.* [1974] FSR 14; *Texas Iron Works Inc.'s Patent* [2000] RPC 207.

<sup>164</sup> In the next best thing to introducing a patent bar code, the IP Act 2014 allows patent owners to mark patented products with a web address that details relevant patent numbers: IP Act 2014, s. 15, amending PA 1977, s. 62, and introducing new s. 62(1A).

<sup>165</sup> CDPA 1988, ss 97(1), 191J, 233(1); *Nottinghamshire Healthcare v. News Group* [2002] RPC 962, [52] (a very limited defence); *Badge Sales* [2006] FSR 1; *Kohler Mira v. Bristan Group* [2014] EWHC 1931 (IPEC), [18].

<sup>166</sup> CDPA 1988, s. 184(2).

<sup>167</sup> *Gillette UK v. Edenwest* [1994] RPC 279, 291–4; cf. *Marengo v. Daily Sketch* (1948) RPC 242 (leaving undecided whether there could be damages for innocent passing off); C. Best, 'Damages against the Innocent Infringer in Passing off and Trade Mark Infringement' (1985) 1 *IPJ* 205.

<sup>168</sup> SI 2006/1028 (effective for infringements occurring after 29 April 2006).

‘elements other than economic factors, including the moral prejudice caused to the claimant by the infringement’. Alternatively, ‘where appropriate’, damages may be awarded ‘on the basis of royalties or fees which would have been due had the defendant obtained a licence’.

### 5.1 LOST PROFITS

One way in which damages may be calculated is by reference to the profits that the claimant lost as a result of the competing sales of infringing goods (or services) made by the defendant. For example, if, prior to an infringement, the patentee of a widget was selling 200 widgets per year, but sold only 150 widgets after the infringement (the defendant selling 50 widgets), the damages are likely to be calculated as the profits that the patentee would have made on the 50 widgets. Clearly, this method of calculation will be used only where the intellectual property right owner exploits the right by manufacturing goods. Although the courts have indicated that proof of lost profits need not be minutely accurate, a claimant will often encounter difficulties.<sup>169</sup> In particular, problems may arise in relation to causation.<sup>170</sup> For example, where an infringer sells an infringing product at a cost that is less than that of the claimant’s product, it will often be difficult to be certain that, absent infringement, sales that went to the defendant would have gone to the claimant.<sup>171</sup> Other difficulties may arise, including: discovering how many infringing items the defendant sold; establishing that the claimant’s expected sales figures were justified; proving that the claimant would have had sufficient stock to cover the defendant’s sales; or proving that the defendant’s sales would not have gone to a competitor of the claimant (rather than the claimant).<sup>172</sup> In certain circumstances, the courts have got over these difficulties by presuming that the claimant would have made the sales.<sup>173</sup>

### 5.2 ROYALTY

If a claimant is unable to claim damages on the basis of lost profits, the court may make an award on a royalty basis—that is, the court can award the claimant a notional fee for each infringing act.<sup>174</sup> Here, the damages compensate for the misappropriation and represent the fee that the defendant would have paid for a licence for the use of the rights that they infringed. Such a royalty will be easy to determine where a claimant has been in the practice of granting licences: it will be the ‘going rate’. In these cases, the claimant will need to show that the circumstances in which the going rate was being paid by others are the same or comparable with those in which the intellectual property right holder and infringer are assumed to strike their bargain.<sup>175</sup> The defendant’s own financial position is not regarded

<sup>169</sup> *Watson Laidlaw* (1914) 31 RPC 104, 113.

<sup>170</sup> See *Coflexip SA v. Stolt Offshore MS* [2003] FSR (41) 728 (considering problems of causation in relation to defendant’s acquisition of contracts, in execution of which it used claimant’s patented process).

<sup>171</sup> *Columbia Pictures Industries v. Robinson* [1988] FSR 531, 535. See also *Prior v. Lansdowne Press* [1977] RPC 511.

<sup>172</sup> *Cow v. Cannon Rubber Manufacturers* [1961] RPC 236, 240.

<sup>173</sup> *Catnic Components v. Hill & Smith* [1983] FSR 512, 524; cf. *Blayney (t/a Aardvark Jewellery) v. Clogau St Davids Gold Mines* [2003] FSR (19) 360 (CA).

<sup>174</sup> Where the claimant has granted licences at a royalty rate, it is ‘almost a rule of law’ to assess damages as the amount that the defendant infringer would have had to pay for the number of infringing articles at the royalty rate had they had a licence: *Meters v. Metropolitan Gas Meters* (1910) 28 RPC 157, 164; *Catnic Components* [1983] FSR 512, 518. But the ‘lost profits’ approach is preferred in cases of trade marks and passing off: *Games Workshop* [1993] FSR 704, 713–14; *Dormeuil Frères v. Feraglow* [1990] RPC 449.

<sup>175</sup> *General Tire v. Firestone* [1976] RPC 197, 213.

as a relevant circumstance, and so it is not open to the defendant to argue that they could not have afforded to pay a reasonable rate.<sup>176</sup>

Where claimants have not been in the practice of granting licences, they will have to find some other basis from which the court can estimate an appropriate royalty:

[This] may consist of the practice, as regards royalty, in the relevant trade or in analogous trades; perhaps of expert opinion expressed in publications . . . possibly of the profitability of the invention; and any other factor on which the judge can decide the measure of loss.<sup>177</sup>

The aim of the evidence is to establish what royalty a willing licensee would have been prepared to pay and a willing licensor to accept<sup>178</sup>—that is, the goal is to establish what terms would have been reached between the actual licensor and the actual licensee, bearing in mind their strengths and weaknesses and the market as it exists, on the assumption that each was willing to negotiate with the other.<sup>179</sup> The process of calculation is ‘intended to represent a robust and inexpensive cutting of a Gordian knot’.<sup>180</sup>

*Relationship between different methods of calculating damages* Where neither avenue suggests itself as the most appropriate, the choice between the ‘lost profits’ and ‘royalty’ approaches to the calculation of damages is left to the claimant (even in ‘licence of right cases’).<sup>181</sup> In some circumstances, it may be appropriate to choose both. For example, if a defendant sold 25 infringing works and the claimant would have made only 15 sales, then the claimant may claim for lost profits on those 15 sales plus a royalty in relation to the other 10 sales.<sup>182</sup>

### 5.3 SECONDARY LOSSES

Although the sum awarded is usually calculated on the basis of the loss to the value of the intellectual property right as a chose in action,<sup>183</sup> other secondary losses may also be recovered.<sup>184</sup> These are sometimes referred to as ‘consequential’ or ‘parasitic’ damages. The ability to claim such losses may be particularly important where goods incorporating intellectual property are marketed at low profit margins and the profits are largely made from the sale of associated goods or services. Such losses can be claimed if they are foreseeable, caused by the wrong,<sup>185</sup> and not excluded from recovery by public policy.<sup>186</sup>

<sup>179</sup> *General Tire v. Firestone* [1976] RPC 197, 221.

<sup>180</sup> *Douglas v. Hello! (No. 8)* [2004] EMLR 13, [61]; *Force India Formula One Team Ltd v. 1 Malaysia Racing Team Sdn Bhd* [2012] EWHC 616 (Ch), [376] per Arnold J (breach of confidence); 32 *Red plc v. William Hill (International) Ltd* [2013] EWHC 815 (Ch) (award of £150,000 in trade mark case).

<sup>181</sup> *Gerber Garment Technology v. Lectra Systems* [1997] RPC 443 (CA), 486; *Douglas v. Hello! (No. 8)* [2004] EMLR 13, [13].

<sup>182</sup> *Watson Laidlaw* (1914) 31 RPC 104; *Catnic v. Hill & Smith* [1983] FSR 512, 522; *Gerber Garment Technology v. Lectra Systems* [1997] RPC 443 (CA), 486; *Blayney* [2003] FSR 360 (CA).

<sup>183</sup> *Sutherland Publishing Co. v. Caxton Publishing* [1936] 1 All ER 177, 180.

<sup>184</sup> But cf. *Catnic v. Hill & Smith* [1983] FSR 512, 534.

<sup>185</sup> *Work Model Enterprises v. Ecosystem & Clix Interiors* [1996] FSR 356, 362.

<sup>186</sup> *Gerber Garment Technology* [1997] RPC 443, 452. In *Kuwait Airways* [2002] 2 AC 833, [69]–[73], Lord Nicholls treated causation as encompassing two stages: a ‘but for’ test; and an enquiry into whether the loss was one for which the defendant ‘ought fairly or reasonably or justly to be held liable’. The latter includes aspects of foreseeability and public policy, although normally evokes ‘an immediate intuitive response’.

A conceivable, but remote, result could not be deemed to be reasonably foreseeable. Applying these principles, the courts have held, for example, that a copyright infringer would not be liable for cash-flow consequences for the copyright owner,<sup>187</sup> nor would an infringer be liable for losses on sales of the claimant's goods as a result of the defendant's distribution of an infringing catalogue.<sup>188</sup>

#### 5.4 EXEMPLARY DAMAGES

According to the House of Lords in *Rookes v. Barnard*,<sup>189</sup> a court may award exemplary damages where, in cynical disregard of a claimant's rights, a defendant infringed those rights, calculating that they would make a profit that would exceed the compensation payable to the claimant. The award is proper 'whenever it is necessary to teach a wrongdoer that a tort does not pay'.<sup>190</sup> The House of Lords made it clear in *Kuddus v. Chief Constable of Leicestershire Constabulary*<sup>191</sup> that the availability of exemplary damages is not confined (as had been previously thought) to causes of action in which the remedy had been recognized prior to *Rookes v. Barnard*. Nevertheless, such damages will rarely be awarded.<sup>192</sup>

#### 5.5 ADDITIONAL STATUTORY DAMAGES

In relation to copyright and rights in performances,<sup>193</sup> as well as publication right, database right, and unregistered design right,<sup>194</sup> a court may consider all of the circumstances—particularly the flagrancy of the infringement and any benefit accruing to the defendant<sup>195</sup>—and award such additional damages as the justice of the case requires.<sup>196</sup> The nature of additional damages is unclear. In particular, it is unclear whether they are compensatory, exemplary, or restitutionary.<sup>197</sup> However, it has been held that their award is the exception rather than the rule, and a claimant needs to show special circumstances that would justify the imposition of an additional financial penalty.<sup>198</sup> Ideally, this should be done by full pleading, and the determination as to whether such damages should be awarded may be dealt with by the trial judge or the inquiry.<sup>199</sup> However, if there are issues on which evidence has not been given during the trial that might be relevant, the court will probably leave the assessment of additional damages to the inquiry stage.<sup>200</sup>

<sup>187</sup> *Claydon Architectural Metalwork v. Higgins & Sons* [1997] FSR 475.

<sup>188</sup> *Work Model Enterprises* [1996] FSR 396; *Paterson Zochonis v. Merfarken Packaging* [1983] FSR 273, 295; *Dyson v. Hoover* [2001] RPC (27) 544, 572.

<sup>189</sup> [1964] AC 1129, 1226–7.

<sup>190</sup> See Law Commission, *Aggravated, Exemplary and Restitutionary Damages* (1997) Law Com No. 247, [1.110].

<sup>191</sup> [2002] AC 122.

<sup>192</sup> *Morton-Norwich Products v. Intercen (No. 2)* [1981] FSR 337, 353.

<sup>193</sup> CDPA 1988, ss 97(2), 191J (i.e. the performers' property rights, but not for infringement of the non-property or recording rights).

<sup>194</sup> Copyright and Related Rights Regulations 1996 (SI 1996/2967), reg. 17(1); Copyright and Rights in Databases Regulations 1997 (SI 1997/3032), reg. 23; CDPA 1988, s. 229(3).

<sup>195</sup> *Ravenscroft v. Herbert* [1980] RPC 193, 208 (benefit implies a pecuniary advantage in excess of damages that they would otherwise have to pay).

<sup>196</sup> CDPA 1988, s. 97. This amended and replaced CA 1956, s. 17(3), which had confined such damages to circumstances under which 'effective relief would not otherwise be available'.

<sup>197</sup> *Redrow Homes* [1998] 1 All ER 385, 391, 393; *Ludlow v. Williams* [2002] FSR 868, 891–2; *Nottinghamshire Healthcare* [2002] RPC 962 [48]–[51].

<sup>198</sup> *Pro Sieben, Media AG v. Carlton UK Television* [1998] FSR 43, 61 per Laddie J.

<sup>199</sup> *ZYX Music GmbH v. King* [1997] 2 All ER 129 (CA), 149.

<sup>200</sup> *O'Mara Books v. Express Newspapers* [1999] FSR 49, 57–8.

Factors that may be relevant in deciding to award additional damages include: (i) whether the defendant acted deliberately or ‘couldn’t care less’;<sup>201</sup> (ii) whether the defendant was acting on legal advice;<sup>202</sup> (iii) whether the defendant was merely out to make money or had other motives;<sup>203</sup> (iv) whether the claimant and defendant were involved in negotiating a licence;<sup>204</sup> (v) the impact of the defendant’s action on the claimant (such as disruption or upset);<sup>205</sup> (vi) whether there are any other mitigating circumstances;<sup>206</sup> and (vii) possibly the means of the defendant.<sup>207</sup> Additional damages are not available in addition to an account of profits.<sup>208</sup>

## 5.6 DAMAGES IN LIEU OF AN INJUNCTION

Where an injunction is refused,<sup>209</sup> damages may be awarded in lieu. In contrast with the normal situation, where damages relate to past acts, this requires that the court must estimate damages prospectively. The conventional view is that this must be done once and for all.<sup>210</sup> The quantum is calculated by reference to the usual standard (what would be agreed by a willing licensor and licensee),<sup>211</sup> although there are clear problems with calculating not only the future value of a licence, but also precisely estimating what the defendant will do. The courts have contemplated the possibility of either a lump sum or an ongoing royalty.<sup>212</sup>

## 6 ACCOUNT OF PROFITS

In relation to most intellectual property rights,<sup>213</sup> a claimant may elect for an ‘account of profits’ instead of claiming damages.<sup>214</sup> An account of profits is an equitable remedy that deprives the defendant of any profits made as a result of their infringement.<sup>215</sup> Because account of profits has its origins in the Court of Chancery, it has been treated as an alternative financial remedy to damages.<sup>216</sup> It cannot be claimed in addition to damages, even

<sup>201</sup> *Ravenscroft* [1980] *RPC* 193, 208; *Fulton v. Totes Isotoner* [2003] *RPC* 499, [116] (flagrancy implies something approaching premeditated commercial amorality); *Nottinghamshire Healthcare* [2002] *RPC* 962, [52]–[53]; *Flogas Britain Ltd v. Calor Gas Ltd* [2013] *EWHC* 3060 (Ch), [136] (‘scandalous and deceitful conduct’).

<sup>202</sup> *Pro Sieben Media v. Carlton UK Television* [1998] *FSR* 43, 61–2.

<sup>203</sup> *ZYX Music GmbH v. King* [1995] *FSR* 566, 587, aff’d [1997] 2 *All ER* 129 (CA).

<sup>204</sup> *Ludlow v. Williams* [2002] *FSR* 868.

<sup>205</sup> *Nottinghamshire Healthcare* [2002] *RPC* 962, [55], [60]. <sup>206</sup> Such as an apology: *ibid.*, [60].

<sup>207</sup> *O’Mara Books* [1999] *FSR* 49, 57–8. <sup>208</sup> *Redrow Homes* [1998] 1 *All ER* 385.

<sup>210</sup> *Jaggard v. Sawyer* [1995] 1 *WLR* 269, 280–1, 285–6; *HTC v. Nokia* [2013] *EWHC* 3778 (Pat) (Arnold J).

<sup>211</sup> These have been called ‘negotiating damages’: see *Force India Formula One Team Ltd v. 1 Malaysia Racing Team Sdn Bhd* [2012] *EWHC* 616 (Ch), [2012] *RPC* (29) 757, [383]–[386]. For discussion in the US context, see T. Gomez-Arostegui, ‘Prospective Compensation in Lieu of a Final Injunction in Patent and Copyright Cases’ (2010) 78 *Fordham L Rev* 1661.

<sup>212</sup> *HTC v. Nokia* [2013] *EWHC* 3778 (Pat), [14] *per* Arnold J.

<sup>213</sup> For registered design right see RDA 1949, s. 24A.

<sup>214</sup> PA 1977, s. 61(1)(d); CDPA 1988, s. 96(2); TMA 1994, s. 14(2); *My Kinda Town v. Soll* [1982] *FSR* 147 (passing off); *Peter Pan v. Corsets Silhouette* [1963] 3 *All ER* 402 (breach of confidence).

<sup>215</sup> But cf. *Twentieth Century Fox Film Corp. v. Harris* [2013] *EWHC* 159 (Ch) (a copyright holder has no basis on which to claim a proprietary interest in money derived from an infringement).

<sup>216</sup> For the history, see L. Bently and C. Mitchell, ‘Combining Money Awards for Patent Infringement: *Spring Form Inc. v. Toy Brokers Ltd*’ [2003] *Restitution L Rev* 79.

where the loss to the claimant and profit to the defendant are unrelated so that, when combined, the two remedies would not result in double liability.<sup>217</sup> Usually, election is solely a matter for the claimant, but because the remedy for account of profits is equitable (and therefore discretionary), the court may refuse it.<sup>218</sup> Where there is more than one claimant (for example a proprietor and exclusive licensee) or more than one defendant, it has been held that a single election must be made: as regards a single course of action, a claimant may not have an account against one defendant and damages against another.<sup>219</sup> The profits to be sought would be those actually made by the defendant through the infringement,<sup>220</sup> or if there are multiple defendants, the profit that each and every one of them has made.<sup>221</sup> If appropriate, the court will apportion a part of the total profit as that attributable to the infringement.<sup>222</sup>

In the case of patents, passing off, registered designs, and trade marks,<sup>223</sup> no order of an account will be made where a defendant acted innocently—that is, no order will be made if, at the date of infringement, the defendant was not aware and had no reasonable grounds for supposing that the intangible property right existed. For some time, it was thought that the decision to elect for an account of profits had to be made at the time of judgment. However, since a claimant would not necessarily have sufficient information on which to base the election, greater flexibility has been introduced so that the election should optimally take place only when the claimant can make an informed decision.<sup>224</sup>

The main difficulty raised by the remedy of an account concerns the way in which the profits are calculated. In part, this is because it will be very rare for the infringement of the intellectual property right to be the single cause of any profit. It is more likely that only part of the product sold by the defendant will have been infringing. In such cases, the court must try to determine what profits have been caused, in a legal sense, by those acts.<sup>225</sup> Under what is called the ‘incremental approach’, it has been suggested that, to determine the profits payable, the courts should compare the profit that the defendant made with that which they would have made had they not used the infringing material or process, the ‘increment’ being the profits attributable to the infringement.<sup>226</sup> However, this approach has been rejected on

<sup>217</sup> *Neilson v. Betts* (1871) LR 5 HL 1; *Redrow Homes* [1998] 1 All ER 385 (HL), 393 (explaining requirement on basis that the two remedies are inconsistent); *Hollister Inc. v. Medik Ostomy Supplies* [2012] EWCA Civ 1419, [2013] FSR (24) 502, [56] (explaining election by reference to two very different ‘bases’ of remedies); PA 1977, s. 61(2). But cf. *Watson Laidlaw* (1914) 31 RPC 104, 119 (explaining the requirement of an election as a mechanism to prevent overlapping).

<sup>224</sup> *Island Records v. Tring International* [1995] FSR 560; *Brugger v. Medicaid* [1996] FSR 362, 364.

<sup>225</sup> *Celanese v. BP* [1999] RPC 203; *Union Carbide v. BP* [1998] FSR 1, 6. In a case of parallel importation in which the act would have been legitimate had notice been given to the trade mark proprietor, the same principles apply: *Hollister Inc. v. Medik Ostomy Supplies*, [2012] EWCA Civ 1419, [2013] FSR (24) 502, [73].

<sup>226</sup> *Siddell v. Vickers* (1888) 5 RPC 416; *My Kinda Town v. Soll* [1983] RPC 15.

a number of occasions in favour of a less refined approach, under which the courts simply apportion the total net profits.<sup>227</sup>

With the ‘apportionment approach’, the court first ascertains the total net profits made by the defendant from the activity in question.<sup>228</sup> In calculating net profits, the court will deduct relevant expenses such as costs, overheads, and taxes<sup>229</sup> from the revenue received in relation to the infringing project. The court then attempts to locate a principled means for dividing up the profits, so as to define the portion attributable to the infringement. This is not a mathematical exercise, but one of reasonable approximation.<sup>230</sup> So if the infringing process is one of five steps in the production of a particular product, in the absence of evidence suggesting otherwise, one fifth of the profits from the sale of the product would be attributed to the infringement. It has been said that the proportion of profits attributable to the infringing activity might best be determined by looking at the corresponding costs of the process of production.<sup>231</sup> In some—probably rare—circumstances, the court will ask itself what is the importance of the infringing activity or part to the ultimate profits.<sup>232</sup>

As with damages, where licences of right are made available, the amount to be rendered in an account of profits is not to exceed double the amount that would have been payable by the defendant as a licensee if such a licence on those terms had been granted before the earliest infringement.<sup>233</sup>

## 7 PUBLICITY ORDERS

It is very common for a successful party in litigation to advertise their victory, often as a warning to others who might be thinking of infringing. However, as a result of implementation of the Enforcement Directive, an unsuccessful party can now be ordered to give notice of their opponent’s success.<sup>234</sup> In *Samsung Electronics (UK) Ltd v. Apple Inc.*,<sup>235</sup> the Court of Appeal was faced with an application for an order for dissemination of judgment by Samsung, the successful defendant in design litigation over so-called ‘tablet’ designs of smartphones and other portable electronic devices. The Court indicated that an order was normally appropriate only where there was commercial uncertainty in the marketplace that there is a ‘real need to dispel’ or to act as a ‘supplementary deterrent to future infringers’.<sup>236</sup> Although Jacob LJ thought that such orders should not be granted

<sup>227</sup> *Potton v. Yorkclose* [1990] FSR 11 (incremental approach is suitable only where the infringement was in the process of producing the work); *Cala Homes v. McAlpine* [1996] FSR 36, 44; *Celanese v. BP* [1999] RPC 203. See T. Moody-Stuart, ‘Quantum in Accounts of Profits: The Acid Test’ [1999] EIPR 147.

<sup>228</sup> *Potton v. Yorkclose* [1990] FSR 11.

<sup>229</sup> Overheads may be deducted if they can be shown to be properly attributable to the activity: *Hollister Inc. v. Medik Ostomy Supplies* [2012] EWCA Civ 1419, [2013] FSR (24) 502, 529, [85]; *Nigel Woolley and Timesource Ltd v. UP Global Sourcing UK Ltd* [2014] EWHC 493 (Ch).

<sup>230</sup> *My Kinda Town* [1993] RPC 15.

<sup>231</sup> *Potton v. Yorkclose* [1990] FSR 11, 18.

<sup>232</sup> *Celanese v. BP* [1999] RPC 203, 225; cf. *Potton v. Yorkclose* [1990] FSR 11, 18.

<sup>233</sup> PA 1977, s. 46(3)(c); CDPA 1988, ss 98(1)(a), 191K, 239(1)(c).

<sup>234</sup> The Enforcement Dir. requires this only for a successful holder of an intellectual property right, but the general power under the Senior Courts Act 1981, s. 37, means that a parallel power is available for the benefit of a successful defendant: *Samsung Electronics (UK) Ltd v. Apple Inc.* [2012] EWCA Civ 1339, [2013] FSR (9) 134, [75].

<sup>235</sup> *Ibid.*, [69]. See further *ITV v. TV Catchup* [2013] EHC 3638 (Ch), [5] per Floyd LJ; *Brundle v. Perry* [2014] EWHC 979 (IPEC), [18]–[24] per Judge Hacon.

<sup>236</sup> *Samsung Electronics (UK) Ltd v. Apple Inc.* [2012] EWCA Civ 1339, [2013] FSR (9) 134, [71].

as a matter of course, such an order was justified on the extraordinary facts of the *Samsung* case. What was extraordinary was that, after the finding of non-infringement in the English proceedings, Apple had secured Community-wide injunctive relief from a German court in proceedings that appeared to be a breach of the Brussels Regulation. Given the ‘massive publicity’ attendant on the German order, it was appropriate that Apple be required to dispel the ‘real commercial uncertainty’ surrounding the legitimacy of the Samsung product.<sup>237</sup> Apple was required within seven days to give notice of the judgment for one month on the home page of its website with a link to the judgment itself,<sup>238</sup> and to publish advertisements to similar effect in a number of national newspapers and relevant magazines. Apple’s implementation of the order, however, was ‘lackadaisical’ and lacking ‘in integrity’, and after a further hearing the original order was replaced with one that was to be on the home page for longer (with Samsung being awarded its costs on an indemnity basis).<sup>239</sup>

## 8 TIME LIMITS

Delay in bringing proceedings may lead to an action for infringement being barred, under either statutory provisions or equitable principles. An action for infringement of copyright, patent, or trade mark must be commenced within six years of the wrongful act.<sup>240</sup> If proceedings are not commenced within the requisite period, it will be struck out for want of prosecution only if there is real prejudice to the defendant, as well as inordinate delay.<sup>241</sup>

Where a claimant expressly or impliedly represents that the defendant’s conduct is non-infringing, they will thereafter be estopped from asserting their right. Where the claimant knows of their right against the defendant and that the defendant mistakenly believes that they are entitled to do what they are doing, yet the claimant stands by without asserting their right, they will be taken to have acquiesced in the wrong.<sup>242</sup>

## 9 CRIMINAL REMEDIES

Until recently, there has been little demand for criminal sanctions to protect intellectual property rights.<sup>243</sup> In part, this has been because the rights holders have preferred the lower standard of proof associated with the civil action. Recently, there has been increased interest in the scope of criminal liabilities and sanctions, especially in the case of piracy and counterfeiting.<sup>244</sup> Criminal prosecution is attractive because of the publicity that a criminal trial can attract and the deterrent effect of the sanction.<sup>245</sup> There are

<sup>237</sup> *Ibid.*, [83].      <sup>238</sup> *Ibid.*, [87].      <sup>239</sup> [2012] *EWCA Civ* 1430, [2013] *FSR* (10) 166, [7], [32].

<sup>240</sup> Limitation Act 1980, s. 2.

<sup>241</sup> *Birkett v. James* [1978] *AC* 297; *Compagnie Française de Télévision v. Thorn* [1978] *RPC* 735.

<sup>242</sup> See *Film Investors Overseas Services SA v. Home Video Channel* [1997] *EMLR* 347, 365; *Farmers Build v. Carrier Bulk Materials Handling* [1999] *RPC* 461, 486–9.

<sup>243</sup> For a useful collection of essays on the topic, see C. Geiger (ed.), *Criminal Enforcement of Intellectual Property* (2012).

<sup>244</sup> The government has funded the creation of the City of London Police Intellectual Property Crime Unit (PIPCU), dedicated to tackling serious organized intellectual property crime online. It has already targeted operators of websites that facilitate infringements. For surveys of activity, see IP Crime Group, *IP Crime Annual Report 2011–12* (2013), available online at <<http://www.ipo.gov.uk/ipcreport11.pdf>>

<sup>245</sup> In addition, criminal prosecutions are likely to be quicker than civil actions, and a losing prosecutor may avoid paying costs: Prosecution of Offences Act 1985, ss 16–18. TRIPS, Art. 61, requires members

four categories of crime that concern us here: (i) crimes relating to copyright and trade mark infringements under the relevant statutes; (ii) the common law crime of conspiracy to defraud (and the statutory crime of obtaining services dishonestly); (iii) the crimes created by the Consumer Protection from Unfair Trading Regulations 2008; and (iv) finally, special crimes created by the intellectual property statutes that are intended to protect the integrity of intellectual property registers.

If a right owner chooses to pursue a criminal prosecution, they can do so by three routes. First, the right owner or a representative<sup>246</sup> may commence criminal proceedings by 'laying an information' (or complaint) at a magistrates' court,<sup>247</sup> on the basis of which the court will issue a summons.<sup>248</sup> Alternatively, the claimant may seek the assistance of the police, which might be advantageous because the police may obtain a search warrant and police action carries a significant social stigma. However, if a charge is made by the police, the prosecution must be conducted either by the Department of Public Prosecutions or the Crown Prosecution Service (CPS); it cannot then be handed back to the claimant.<sup>249</sup> This may be a dangerous tactic, because the CPS might decide not to prosecute.<sup>250</sup> The right holder may also enlist the help of administrative authorities, in particular trading standards departments or local weights and measures authorities. These authorities are obliged to enforce the Consumer Protection Regulations, the criminal provisions of the Trade Marks Act 1994 and the Copyright, Designs and Patents Act 1988 (for copyright and performances),<sup>251</sup> and, as a result of the Intellectual Property Act 2014, the new criminal provisions relating to registered designs.<sup>252</sup>

## 9.1 STATUTORY INTELLECTUAL PROPERTY OFFENCES

In order to buttress the civil remedies and to help to combat piracy, bootlegging, and counterfeiting, a number of statutory criminal offences have been introduced in relation to copyright, performers' rights, and trade mark law. There are no criminal sanctions for

to provide for criminal procedures and penalties at least in cases of wilful trade mark counterfeiting and copyright piracy 'on a commercial scale'. On the international regime, see H. Grosse Ruse-Khan, 'Criminal Enforcement and International IP Law', in C. Geiger (ed.), *Criminal Enforcement of Intellectual Property* (2012), ch. 9.

<sup>246</sup> For example, a representative organization such as the Federation against Copyright Theft (FACT), the Federation against Software Theft (FAST), or a collecting society. See *Thames & Hudson v. Designs & Artists Copyright Society* [1995] FSR 153; *Scopelight Ltd v. Chief Constable of Northumbria* [2010] QB 438 (CA) (referring to role of FACT and determining that property seized by the Police under PACE 1984, s. 22, could be retained for use by FACT in a private prosecution).

<sup>247</sup> There should be separate 'information' for each individual copyright work: *R v. Ward* [1988] *Crim LR* 57.

<sup>248</sup> Any citizen may bring a private prosecution: Prosecution of Offences Act 1985, s. 6(1). See G. Harbottle, 'Criminal Remedies for Copyright and Performers' Rights Infringement under the Copyright, Designs and Patents Act 1988' [1994] *Ent L Rev* 12.

<sup>249</sup> See *R v. Ealing Justices, ex p. Dixon* [1989] 2 *All ER* 1050 (proceedings begun by police could not be prosecuted by FACT); cf. *R v. Croydon Justices, ex p. Holmberg* (1992) 157 *JP* 277.

<sup>250</sup> The Director of Public Prosecutions is under a duty to prosecute certain offences and may (in its discretion) prosecute others: Prosecution of Offences Act 1985, ss 3, 6(2).

<sup>251</sup> CDPA 1988, s. 107A, introduced by the Criminal Justice and Public Order Act 1994, s. 165 (effective 6 April 2007). In Northern Ireland, enforcement is the responsibility of the Department of Enterprise, Trade and Investment: CDPA 1988, s. 107A(3). A similar enforcement provision exists with respect to performances. No such duty or authority applies in relation to proceedings in Scotland.

<sup>252</sup> IP Act 2014, s. 13, introduces new RDA 1949, ss 35ZB–D (also allows for the forfeiture of products or articles).

the infringement of patents or for unregistered designs. As is discussed below, one of the most controversial aspects of the Intellectual Property Act 2014 was the introduction of criminal sanctions for UK registered designs.

In relation to copyright, criminal liability is not confined to those normally considered to be pirates;<sup>253</sup> rather, criminal infringement covers most acts of primary and secondary infringement,<sup>254</sup> although in all cases criminal relief requires proof of knowledge or reason to know that copyright was being or would be infringed.<sup>255</sup> A successful criminal prosecution can result either in a fine or imprisonment, and the maximum penalty is ten years' imprisonment.<sup>256</sup> In sentencing, the courts have indicated that they consider copyright infringement to be an offence of 'real dishonesty' equivalent to cheating or stealing.<sup>257</sup> Conscious of the prevalence of such offences and the difficulties of detection,<sup>258</sup> the courts have emphasized that criminal copyright infringement is to be regarded as a very serious matter. Even small-scale infringement, such as the copying of 48 videos, has led to custodial sentences.<sup>259</sup> The greater the numbers of copies made<sup>260</sup> and the greater the value of each copy,<sup>261</sup> the more severe the sentence.

Criminal offences also exist to protect performers.<sup>262</sup> These largely correspond to civil infringements and deal with the making, importing, and commercial dealing in illicit recordings, without sufficient consent. 'Sufficient consent' is defined, in relation to

<sup>253</sup> *Thames & Hudson v. DACS* [1995] FSR 153. On pirates, see D. Halbert, 'Intellectual Property Piracy: The Narrative Construction of Deviance' (1997) 10 *IJSL* 55; A. Johns, *Piracy: The Intellectual Property Wars from Gutenberg to Gates* (2009).

<sup>254</sup> CDPA 1988, ss 107–10. Note also CDPA 1988, ss 297 (fraudulently receiving programmes), 297A (making, etc. unauthorized decoders), 296ZB (circumventing technological measures), 198 (illicit recordings of performances); Rel. Rights Regs, reg. 17(1), (3) (applying offences to publication right but with modified penalties). There are no criminal offences in relation to the database right.

<sup>255</sup> CDPA 1988, ss 107–10. The presumptions of authorship, etc., do not apply, and problems of proving copyright ownership may arise: *Musa v. Le Maitre* [1987] FSR 272.

<sup>256</sup> CDPA 1988, s. 107(4), as amended by the Copyright and Trade Marks (Offences and Enforcement) Act 2002. Note that the maximum period for communicating the work to the public is two years: CDPA 1988, s. 107(2A), (4A), following Copyright and Related Rights Regulations 2003 (SI 2003/2498), reg. 26. A maximum of three months applies to many of the other offences, such as showing a film, or playing a sound recording in public: CDPA 1988, s. 107(3), (5), as amended by the Copyright, Designs and Patents Act 1988 (Amendment) Regulations 2010 (SI 2010/2694) (reducing the term from six months).

<sup>257</sup> *R v. Carter* [1983] FSR 303; *R v. Ian Dukett* [1998] 2 *Cr App R* (S) 59; *R v. Roy John Gibbons* (1995) 16 *Cr App R* (S) 398.

<sup>258</sup> *R v. Paul Godfrey Kemp* (1995) 16 *Cr App R* (S) 941; *R v. Roy John Gibbons* (1995) 16 *Cr App R* (S) 398.

<sup>259</sup> *R v. Paul Godfrey Kemp* (1995) 16 *Cr App R* (S) 941 (six months). See also *R v. Lloyd* (1997) 2 *Cr App R* (S) 151 (six months); *R v. Gross* (1996) 2 *Cr App R* 189 (nine months); *R v. Roy John Gibbons* (1995) 16 *Cr App R* (S) 398 (seven months). But cf. *R v. Nimley* [2010] *EWCA Crim* 2752 (six-month sentence inappropriate where defendant made recordings of four films in cinema and uploaded onto website for kudos, rather than money).

<sup>260</sup> *R v. Lewis* (1997) 1 *Cr App R* (S) 208 (sentence of 12 months for a person who ran a computer bulletin board for swapping more than 1,000 computer games); *R v. Dowd* [2005] *EWCA Crim* 3582 (Openshaw J); *R v. Kirkwood* (2006) 2 *Cr App R* (S) 39 (small-scale operation copying and distributing music, films, and video games, which developed from defendant's hobby, justified sentence of 21 months because infringement extended for three years); *R v. Alphon Holborough* [2002] *EWCA Crim* 2631 (CA) (three years' imprisonment for conspiracy to defraud based on sale of some 20,000 devices for over £400,000); *R v. Harold Christopher Carey* (1999) 1 *Cr App R* (S) 322 (four years for sale of some 650,000 smart cards); *R v. Maxwell King* (2001) 2 *Cr App R* (S) 28 (150 hours of community service for inciting the supply of 20 devices to enable unauthorized access to cable television contrary to the Computer Misuse Act 1990, s. 3).

<sup>261</sup> *R v. Dukett* (1998) 2 *Cr App R* (S) 59 (27 months' imprisonment for four copyright offences of distributing CD-ROMs was justified because while the numbers sold were relatively small, each CD contained material worth several thousand pounds); *R v. Manders* [2012] *EWCA Civ* 908 (two years appropriate in case of 'cottage industry' making counterfeit DVDs).

<sup>262</sup> CDPA 1988, s. 198.

performers' rights, as the consent of the performers or owner of the performers' property rights, and in relation to recording rights, as the consent of the performer or the owner of the recording rights. Criminal liability is also imposed for infringement by making available a work, for example on the Internet, where the act took place in the course of business or 'to such an extent as to affect prejudicially the owner of the making available right'.<sup>263</sup> Liability depends on proof of knowledge or reason to believe that the recordings are 'illicit'.<sup>264</sup> The penalties are equivalent to those for infringement of copyright, so that a person convicted on indictment may receive a prison sentence of up to ten years.<sup>265</sup>

Special criminal provisions also exist to deal with trade mark infringement.<sup>266</sup> In particular, section 92 of the Trade Marks Act 1994 states that a person commits an offence if they apply to goods or their packaging a sign 'identical to, or likely to be mistaken for, a registered trade mark' without the consent of the proprietor and 'with a view to gain for himself or another, or with intent to cause loss to another'.<sup>267</sup> It is now clear that this requires a showing of trade mark use.<sup>268</sup> The section goes on to create further offences that capture parties who deal commercially in goods bearing such a sign or are otherwise involved in ancillary or preliminary acts that enable such exploitation.<sup>269</sup> The requirement that the sign be 'identical to, or likely to be mistaken for, a registered trade mark' uses language that differs from that used in civil infringement.<sup>270</sup> Moreover, it is an offence to apply the sign (etc.) to goods for which it is registered or to other goods only 'if the trade mark has a reputation in the UK, and the use of the sign takes . . . unfair advantage of; or is . . . detrimental to, the distinctive character or repute of the mark'.<sup>271</sup> It is a defence to a criminal prosecution to show that the accused 'believed on reasonable grounds that the use of the sign in the manner in which it was used . . . was not an infringement of the registered trade mark'.<sup>272</sup> As Lord Nicholls has explained, '[t]hose who act honestly and reasonably are not to be visited with criminal sanctions'.<sup>273</sup> Thus the defence applies equally to a situation in which a defendant did not believe the mark was registered and that in which a defendant believed a mark was registered, but that the act was non-infringing.<sup>274</sup> This could be a belief that the use fell outside the scope of protection (for example that it was not in the course of trade), or that the use fell within an exception (for example of legitimate referential use). It is for the defendant to establish on the balance of probabilities an affirmative case of reasonable belief.<sup>275</sup>

<sup>263</sup> CDPA 1988, s. 198(1A), (5A) (with a possible sentence of two years).

<sup>264</sup> On what is acceptable proof, see *Radford v. Kent County Council* (unreported, 18 February 1998) (QBD).

<sup>265</sup> CDPA 1988, s. 198(5), for making, importing, and distributing illicit recordings (as amended by the Copyright, etc, and Trade Marks (Enforcement and Offences) Act 2002); other offences carry a maximum of six months' imprisonment.

<sup>266</sup> *S v. London Borough of Havering* (unreported, 20 November 2002), [10] (explaining rationale for criminal protection).

<sup>267</sup> On the meaning of 'with a view to' in TMA 1994, s. 92(1)(c), see *R v. Zaman* [2003] FSR (13) 230.

<sup>268</sup> *R v. Johnstone* [2003] FSR (42) 748.

<sup>269</sup> But not importing: on which see BMR, Art. 30, and pp. 1246–9 above.

<sup>270</sup> TMA 1994, s. 10(2). Note also BMR, Art. 2(5)a, referring to an identical sign or one 'which cannot be distinguished in its essential aspects from such trade mark' in the definition of counterfeit goods.

<sup>271</sup> TMA 1994, s. 92(4). <sup>272</sup> TMA 1994, s. 92(5).

<sup>273</sup> *R v. Johnstone* [2003] FSR (42) 748, 763, [43]. <sup>274</sup> *Ibid.*

<sup>275</sup> *Ibid.*, 764, [46]. This is a legal or persuasive burden, but was deemed by the House of Lords to be a justified derogation from the presumption of innocence contained in Art. 6(2) ECHR. Lord Nicholls found there to be 'compelling reasons' why the legislation should place the persuasive burden on the accused: *ibid.*, 766, [52]–[53].

The criminal penalties for infringement of trade marks are similar to those for criminal copyright infringement. A summary conviction can result in a custodial sentence of six months or a fine of up to £5,000; a conviction on indictment can result in a fine or imprisonment for up to ten years. The courts have not been swayed by pleas that counterfeiting has not misled anyone<sup>276</sup> and have repeatedly emphasized that trade mark infringement is ‘properly a criminal offence’ akin to stealing goodwill.<sup>277</sup> Consequently, it has been said that it is important that sentences be serious enough to operate as a deterrent.<sup>278</sup> The punishment will depend largely on the gravity and the scale of the infringement, and the persistence of the defendant.<sup>279</sup> As to gravity, the courts have treated the counterfeiting of pharmaceuticals as particularly heinous, because of the potential effects on public safety.<sup>280</sup> As to scale, the Court of Appeal has held three years was an appropriate sentence for applying false trade marks to perfume such as CHANEL NO. 5, on a scale of 5,000–10,000 bottles per week.<sup>281</sup> With regard to persistence, an isolated lapse by a generally honest businessman will merely warrant a fine,<sup>282</sup> but even small-scale dealing in counterfeit watches has been held to warrant a prison sentence of three months.<sup>283</sup>

On convicting a defendant for criminal copyright infringement, trade mark infringement, or registered design infringement the courts also have the power to order delivery up of infringing copies or goods, and to make certain compensation and confiscation orders.<sup>284</sup> Moreover, criminal proceedings concerning copyright are not subject to any statute of limitations.

As mentioned above, one the controversial aspects of the Intellectual Property Act 2014 relates to the introduction of criminal sanctions for registered design infringement. (The criminal sanctions do not apply to unregistered designs.) As is often the case, it is argued that criminal sanctions will increase the effectiveness of the law. The new provisions introduced criminal sanctions for the intentional copying of a registered design so as to make a product ‘exactly to’ or ‘with features that differ only in immaterial details from’ the design.<sup>285</sup> The new provisions are restricted to activities carried out in the course of business where the alleged infringer knew or had reason to believe that the design was registered, and they did not have the appropriate consent.<sup>286</sup> A defence applies where the alleged infringer reasonably believed that the design in question was invalid, for example if it was widely known in a design field.

<sup>276</sup> *R v. Priestly* (1996) 2 Cr App R (S) 144.      <sup>277</sup> *R v. Bhad* (1999) 2 Cr App R (S) 139.

<sup>278</sup> *R v. Adam* (1998) 2 Cr App R (S) 403.

<sup>279</sup> *R v. Kelly* (1996) 1 Cr App R (S) 61 (defendant’s persistence in dishonest conduct justified imprisonment).

<sup>280</sup> *R v. Yanko* (1996) 1 Cr App R (S) 217 (four–five years for counterfeiting of medicinal products—steroids—under signs SYNTEX and ANAPOLON was not excessive).

<sup>281</sup> *R v. Priestly* (1996) 2 Cr App R (S) 144. See also *R v. Ansari, Horner, Ling & Ansari* (2000) 15 Cr App R (S) 94 (three years); *R v. Brayford* [2010] EWCA Crim 2329 (two years not ‘out of kilter’ for importing 25,000 kilos of washing powder and 2,875 boxes bearing PERSIL marks, which would likely produce a profit of £20,000).

<sup>282</sup> *R v. Bhad* (1999) 2 Cr App R (S) 139.

<sup>283</sup> *R v. Kelly* (1996) 1 Cr App R (S) 61 (possession of 30 watches).

<sup>284</sup> Powers of Criminal Courts Act 1973, ss 35, 43 (property deprivation order); Magistrates’ Courts Act 1980, s. 40 (power to award compensation up to £5,000); Criminal Justice Act 1988, as amended by the Proceeds of Crime Act 1995 and Criminal Justice Act 1988 (Confiscation Orders) Order 1995 (SI 1995/3145) (court may make confiscation order under Powers of Criminal Courts Act 1973, s. 43, in relation to offences under TMA 1994, s. 92, and CDPA 1988, s. 107); RDA 1949, ss 24C–D.

<sup>285</sup> These are, for indictments, imprisonment for a term not exceeding ten years, a fine, or both: RDA 1949, s.35ZA(8). For summary convictions in England, Wales, and Northern Ireland, imprisonment up to six months, a fine, or both (in Scotland, imprisonment is up to 12 months, a fine, or both): RDA 1949, s. 35ZA(8)(b)–(c).

<sup>286</sup> IP Act 2014, s. 13, introduces a new RDA 1949, s. 35ZA.

## 9.2 CRIMINAL TO DEFRAUD

In some cases, the general common law crime of ‘conspiracy to defraud’ may be used to protect intellectual property rights. This crime will be committed where someone dishonestly tries to obtain an economic advantage without the need to show that anyone was deceived.<sup>287</sup> It will be useful only in cases of organized piracy, in which there is some agreement between the parties. One advantage of bringing a charge of common law conspiracy to defraud is that the courts’ discretion to imprison or fine an adult offender is unlimited.<sup>288</sup> Two statutory offences, carrying on a business for a fraudulent purpose and obtaining services dishonestly, introduced in sections 9 and 11 of the Fraud Act 2006, are also being used as a basis to prosecute persons involved in intellectual property infringement. The former provision was successfully invoked against a trader dealing in unauthorized copies of video games.<sup>289</sup>

## 9.3 CONSUMER PROTECTION

The Consumer Protection from Unfair Trading Regulations 2008,<sup>290</sup> which implement the 2005 EU Unfair Commercial Practices Directive,<sup>291</sup> impose criminal penalties where businesses mislead consumers (by act or omission), for example as to the main characteristics of a product (including the geographical or commercial origin of the product). These provisions thus apply to many cases of wrongful use of registered trade marks and passing off. Brand owners had hoped that the regulations, as proposed, would give private businesses the right to bring private civil actions (as Ireland has chosen to do), but the government declined to do so, confining liability to criminal proceedings and leaving enforcement to the Competition and Markets Authority (CMA) and trading standards officers.<sup>292</sup> Trading standards officers are employed by local authorities (which are under a statutory duty to enforce the Act). The officers are empowered to make test purchases, enter premises, and inspect and seize goods. They do not have power to arrest offenders.<sup>293</sup> The authorities also bring proceedings, but if prosecution is not thought to be appropriate, they have power to issue ‘formal cautions’. Offences under the 2008 Regulations carry a maximum of two years’ imprisonment.<sup>294</sup>

<sup>287</sup> *Scott v. Metropolitan Police Commissioner* [1975] AC 819; *R v. Bridgeman & Butt* [1996] FSR 538. In *Scott*, the defendant bribed cinema employees to hand over films so that they could be surreptitiously copied. The House of Lords held that this amounted to a conspiracy to defraud the owners of the copyright.

<sup>288</sup> See Criminal Law Act 1977, s. 5. See *R v. Dowd* [2005] EWCA Crim 3582 (defendant, member of an Internet group that hacked into technologically protected copyright software, was not motivated by malice, but seriously damaged commercial interests; sentenced to 12 months). But see *R v. Holborough* [2002] EWCA Crim 2631 (taking into account the statutory limitation on sentencing of the specific offence—i.e. selling unauthorized decoders contrary to CDPA 1988, s. 297A, then subject to a maximum of two years’ imprisonment—when reducing the defendant’s sentence for conspiracy to defraud to three years).

<sup>289</sup> IP Crime Group, *IP Crime Report 2012–13* (2013), 8.

<sup>290</sup> SI 2008/1277 (repealing and replacing much of the Trade Descriptions Act 1968.) See further OFT, *Consumer Protection from Unfair Trading* (2008).

<sup>291</sup> Directive 2005/29/EC of 11 May 2005 concerning unfair business-to-consumer commercial practices in the internal market and amending Council Directive 84/450/EEC, Directives 97/7/EC, 98/27/EC and 2002/65/EC of the European Parliament and of the Council and Regulation (EC) No 2006/2004 of the European Parliament and of the Council [2005] OJ L 149/22.

<sup>292</sup> Consumer Protection from Unfair Trading Regulations 2008, reg. 19.

<sup>293</sup> *Ibid.*, regs 20–22.

<sup>294</sup> *Ibid.*, reg. 13(b). See *R v. Ahmadi* (1993) 15 Cr App R (S) 254 (six months for supplying recycled toner cartridges); *R v. Shekhar Kumar* (1992) 13 Cr App R (S) 498 (hirer of 26 counterfeit videos fined £5,000).

#### 9.4 PROTECTING REGISTRATION

A number of criminal sanctions exist that aim to maintain the veracity of the registration regimes. In particular, it is an offence to make false entries on the register<sup>295</sup> and to make unauthorized claims to rights.<sup>296</sup> An interesting variation is contained in section 201 of the Copyright, Designs and Patents Act 1988, which makes it an offence for a person 'falsely to represent that he is authorised by another to give consent . . . in relation to a performance unless he believes on reasonable grounds that he is so authorised'. There is no criminal offence of wrongly representing that a work is protected by copyright, although a person who obtains benefits from such a false representation may well be guilty of an offence under section 2 of the Fraud Act 2006.

<sup>295</sup> PA 1977, s. 109; TMA 1994, s. 59; RDA 1949, s. 34.

<sup>296</sup> See, e.g., PA 1977, s. 110; TMA 1994, s. 60; Trade Marks (International Registration) Order 1996 (SI 1996/714), r. 18; Community Trade Mark Regulations 1996 (SI 1996/1908), reg. 8; RDA 1949, s. 35; Community Designs Regulations 2005 (SI 2005/2339), reg. 3.
