<sup>50</sup> EPC 2000 Regs, r. 43(1)(b); *EPO Guidelines*, C–III: 2. In the United States, there are three parts: the preamble, the transition, and the body. See R. Merges, *Patent Law and Policy* (1992), 12.

<sup>51</sup> *CIPA*, [14.22].

<sup>52</sup> *Raleigh Cycle v. Miller* (1948) 65 RPC 141; *Surface Silo v. Beal* [1960] RPC 154; *Deere v. Harrison McGregor & Guest* [1965] RPC 461.

<sup>53</sup> See *CIPA*, [14.26]; *Bayer/Polyamide moulding composition*, T 150/82 [1981] OJ EPO 431. In *Philips Electronics’ Patent* [1987] RPC 244, the patentee was permitted to add an omnibus claim to a European patent (UK) on the grounds that it did not extend the scope of protection.

the drafting and reading of claims builds upon well-established and sophisticated techniques and procedures that make them difficult for the uninitiated to understand.<sup>54</sup> Another reason why the claims may be difficult to understand is that they often use expressions not ordinarily employed in everyday speech. For example, while most people commonly talk about ‘mice’, a claim may refer to ‘non-human mammals’. Similarly, a door handle may be called a ‘rotatable actuating means’<sup>55</sup> and a train’s sleeping car, ‘a communal vehicle for the dormitory accommodation of nocturnal viators.’<sup>56</sup> Moreover, while in other contexts the rules of grammar are used to make the language that we use easier to understand, this is not so with patents, where claims are often made up of single lengthy, repetitive sentences.<sup>57</sup> Indeed, in one case an attempt to divide claims up into separate (shorter) phrases was considered to be ambiguous in scope.<sup>58</sup> One problem that has arisen is the number of claims incorporated in a patent. As part of their drafting strategy, some applications include a very large number of claims. To prevent this, the fees charged at the EPO increase to €225 where a patent includes more than 15 claims and €555 where it includes more than 50 claims.<sup>59</sup>

### 4.3.1 Types of claim

Given that claims operate to demarcate and define the patented invention, they will always vary from case to case. Having said that, claims are usually grouped together on the basis either of the subject matter that is protected or the way in which the claims are formulated. While there are many different types of claim, such as ‘Swiss claims’, ‘Markush claims’, ‘reach-through claims’,<sup>60</sup> and ‘novelty-of-use claims’, in this section we wish to focus on some of the more common types.

(i) *Product claims* Product claims, which were the first type of patent to be recognized by British law, provide protection over physical entities or things (such as products, apparatuses, devices, and substances). Such a patent could be, for example, for a new type of contact lens or, as a patent agent might say, ‘a new type of optical membrane being made up of at least one polymer and at least one solvent’.<sup>61</sup> Product claims (or, as they are also known, ‘claims for a product *per se*’) confer protection over all uses of that product, no matter how the product was derived.<sup>62</sup> As we will see, this has been the subject of some controversy, particularly in relation to claims for gene patents.

<sup>54</sup> For example, see *Virgin Atlantic v. Delta Air Lines* [2011] EWCA Civ 162, [19]; R. Macleod, ‘What Does “for” Mean in “Means for”? The Role of Functional Limitations in Apparatus Claims’ (2011) 33 *EIPR* 499.

<sup>55</sup> *Southco v. Dzus Fastener Europe* [1992] RPC 299.

<sup>56</sup> *Hookless Fastener v. GE Prentice* (CCA 2d, 1934) 68 F (2d) 940, 941. See also W. Woodward, ‘Definiteness and Particularity in Patent Claims’ (1948) 46 *Mich L Rev* 755.

<sup>57</sup> ‘The repetitiveness of the claims and the lack of any indication of the strategic links between them is part of what makes them so hard for a non-lawyer to read’: G. Myers, ‘From Discovery to Invention’ (1995) 25 *SSS* 57, 75. The technique of drafting claims in this way can have important implications for their interpretation: see *Glaverbel SA v. British Coal* [1995] RPC 255, 281.

<sup>58</sup> *Leonard’s Application* [1966] RPC 269.

<sup>59</sup> *Decision of the President of the European Patent Office dated 22 November 2011 revising the Office’s fees and expenses* [2011] OJ EPO 658.

<sup>60</sup> These are ‘claims directed to a chemical compound (or the use of that compound) defined only in functional terms with regard to the technical effect it exerts on one of the molecules’: *EPO Guidelines*, F, [9].

<sup>61</sup> *Advanced Semiconductor Products/Limiting feature*, T 384/91 [1995] EPOR 97, [1994] OJ EPO 169.

<sup>62</sup> See *Mobil/Friction reducing additive*, G 2/88 [1990] OJ EPO 93; *Telectronics/Pacer*, T 82/93 [1996] EPOR 409, [1996] OJ EPO 274, 285. In *Moog/Change of category*, T 378/86 [1988] OJ EPO 386, the EPO explained:

[The] division of patents into various categories (process or product) is legally important because the extent of protection depends to a crucial extent on the category selected, specific types of use being allocated to each category which in some cases differ substantially from each other. The difference in effect on the right conferred by a patent is the reason why it is at all justifiable to classify patents in categories.

(ii) *Process claims* In contrast, process claims, which were recognized by patent law in the early part of the nineteenth century, protect activities or actions (such as methods, processes, or uses).<sup>63</sup> Such a patent would claim, for example, the particular method by which a contact lens is made (or ‘the method of making an optical membrane from a solution comprising at least one polymer and at least one solvent’).<sup>64</sup> Sometimes, a claim for a product *per se* will not be available because the product is already known in the field and a claim for the process or use is therefore all that is possible.

(iii) *Product-by-process claims* Beyond these two broad categories of claim there is a range of hybrids.<sup>65</sup> A well-known example is the ‘product-by-process’ claim.<sup>66</sup> To continue with the example used above, a product-by-process patent might claim ‘a contact lens made by a particular method’. Where a product already exists, but a new process is devised for producing that product, it might be desirable to claim both the process and the product produced by the process. It is important to bear in mind the Court of Appeal’s reminder that:

[I]t is not right to lump all claims which contain a process feature into a category called product-by-process claims . . . a patentee can define the monopoly claimed so as to disclaim products made by a particular process or only disclaim products which do not have the features of products made by a particular process. The two types of claims can be loosely called product-by-process claims, but to do so is likely to hide the differences between the two.<sup>67</sup>

For many years, product-by-process claims were viewed differently in the United Kingdom and at the EPO. As a result of the House of Lords’ 2005 decision in *Kirin-Amgen*,<sup>68</sup> however, the approach in the United Kingdom is now the same as that at the EPO. The EPO’s Technical Board of Appeal (TBA) has consistently said that product-by-process claims are not recognized at the EPO, except where the ‘product cannot be satisfactorily defined by reference to its composition, structure or other testable parameter’.<sup>69</sup> That is, product-by-process claims are only acceptable as ‘a manner of claiming structurally indefinable product claims’ or where a product cannot be satisfactorily defined by its features. In contrast, prior to *Kirin-Amgen*, British courts had expressly rejected the position at the EPO and said that, other than the general criteria for patentability, there were no limits either in the PA 1977 or in the EPC as to how the monopoly is defined.<sup>70</sup> As such, there were no additional limits on when product-by-process claims were allowed in the United Kingdom.<sup>71</sup> Recognizing the need for consistency between the approach adopted

<sup>63</sup> *Crane v. Price* (1842) 134 ER 239. See Sherman and Bently, 108.

<sup>64</sup> *Advanced Semiconductor Products/Limiting feature*, T 384/91 [1995] EPOR 97, [1994] OJ EPO 169.

<sup>65</sup> ‘There are no rigid lines of demarcation between the various possible forms of claim’: *Mobil/Friction reducing additive*, G 2/88 [1990] OJ EPO 93, 98–9. See also *IBM/Computer-related claims*, T 410/96 [1999] EPOR 318.

<sup>66</sup> *Ethylene Polymers/Montedison*, T 93/83 [1987] EPOR 144; *Eli Lilly/Antibiotic*, T 161/86 [1987] EPOR 366.

<sup>67</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 3 (CA), [27].

<sup>68</sup> *Kirin-Amgen Inc v. Hoechst Marion Roussel* [2005] RPC 9 (HL), [101].

<sup>69</sup> *IFF/Claim categories*, T 150/82 [1984] OJ EPO 309, [10]–[11]. This decision was made in the knowledge of the different approach in the United Kingdom.

<sup>70</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 3 (CA), [29]–[31], upholding the finding of the Patents Court on this point in *Kirin-Amgen v. Roche Diagnostics* [2002] RPC 1, [296] (‘as a matter of ordinary language, I find it impossible to construe a product-by-process claim . . . in an absolute sense as the Board apparently felt able to do in T 219/83’).

<sup>71</sup> In essence, the difference between the approach adopted at the EPO and the pre-*Kirin Amgen* approach turned on the way in which the invention was defined, the Board placing more emphasis on the interaction of the process and the product as a separate entity. On one level, the different approaches can be traced to different legal cultures (British compared to a more German approach). More specifically, the difference can be

in the United Kingdom and that at the EPO, the House of Lords rejected previous British law and followed the approach at the EPO. The upshot of this is that where a product is known, product-by-process claims are no longer accepted in the United Kingdom on the basis that they lack novelty.

Product-by-process claims remain useful at the EPO and in the United Kingdom where there is no other information available to define the product by reference to its composition, structure, or other testable parameter.<sup>72</sup> This is particularly the case in relation to certain biotechnological and chemical inventions, where the product-by-process claim offers the only way ‘to define certain or macromolecular materials of unidentified or complex composition which have yet to be defined structurally’.<sup>73</sup>

(iv) *Representative claims* It has long been accepted practice for patents to be granted for extremely large classes of object. This is particularly the case in relation to chemical and biotechnological inventions, where patents may claim hundreds of thousands—sometimes even millions—of compounds, DNA sequences, and the like.<sup>74</sup> If patentees were required to outline every particular manifestation of their invention, it would make those patents unwieldy, cumbersome, and, in some cases, unworkable. Because of this, where a patent is for a class of compounds, it is not necessary for applicants to spell out each and every product or process covered by the patent,<sup>75</sup> nor to show that they have ‘proved their application in every individual instance’.<sup>76</sup> Instead, patentees are able to claim a broad range of products on the basis of a limited number of (representative) examples. This can be done, for example, through the use of functional language (particularly where the relevant features cannot be defined more precisely), the use of ‘Markush claims’<sup>77</sup> (where a claim refers to a chemical structure by means of symbols indicating substituent groups), or the inclusion of a practical application of a theoretical principle or a formula. In other cases, a patent may include variations, analogues, or deemed equivalents that greatly expand the scope of the claims.<sup>78</sup>

Functional claims define the invention by reference to the function that the invention performs or its purpose, rather than the structure or elements of the invention—that is, instead of specifying what the invention is, a functional claim outlines what the invention does. For example, instead of claiming a modified form of bacteria in terms of its elements or structure, the invention might be described functionally as a bacterium that eats

traced to differences in the way in which the invention is characterized. The crux of the difference is that the EPO sees the invention in terms of the relationship between the product and the process, whereas the UK tribunals seem to draw a clear divide between product and process. For example, at the EPO, it has been said that ‘the effect of a process manifests itself in the result, i.e. in the product in chemical cases together with all its internal characteristics’: *Gelation/Exxon*, T 119/82 [1984] *OJ EPO* 217. In a similar vein, ‘the product is in consequence of the invention, without being the invention itself, which is rather the novel interaction represented by the process in such cases. Any attempt to claim the in itself non-inventive product by means of product-by-process claims is claiming the mere effects instead’: *IFF/Claim categories*, T 150/82 [1984] *OJ EPO* 309. As we will see below at pp. 543–4, this has important consequences when a patent is being examined for novelty.

<sup>72</sup> *IFF/Claim categories*, T 150/82 [1984] *OJ EPO* 309.

<sup>73</sup> *EPO Guidelines*, C–III, [4.12]. The benefits of product-by-process claims are less important under the European Patent Convention, since infringement of a process occurs where a person disposes of, uses, or imports any product obtained directly by means of that process: PA 1977, s. 60(1)(c); EPC 2000, Art. 64(2).

<sup>74</sup> See K. Luzzatto, ‘The Support and Breadth of Claims to New Classes of Chemical Compounds’ (1989) *Patent World* 21.

<sup>75</sup> *Biogen v. Medeva* [1997] *RPC* 1 (HL), 48 per Lord Hoffmann.

<sup>76</sup> *Kirin-Amgin v. Transkaryotic Therapies* [2003] *RPC* 31 (CA), 67.

<sup>77</sup> Named after US patent application 1,506,316 by Eugene Markush. See M. Franzosi, ‘Markush Claims in Europe’ [2003] *EIPR* 200.

<sup>78</sup> For problems that may arise, see *American Home Products v. Novartis Pharmaceuticals* [2001] *RPC* 159 (CA).

pollution.<sup>79</sup> Functional claims are permissible so long as they provide instructions that are sufficiently clear for the expert to reduce them to practice without undue burden<sup>80</sup> and ‘if, from an objective point of view, such features cannot otherwise be defined more precisely without restricting the scope of the claim.’<sup>81</sup>

In some cases, patentees use functional claims because language and concepts are not available to describe the invention in any other way.<sup>82</sup> This is often the case with biological inventions.<sup>83</sup> In other cases, patentees might use functional language because it offers them a strategic advantage over competitors. For example, in describing how two metal plates are attached, a patentee might use functional language and claim a ‘means for attaching’ instead of claiming a ‘nut and bolt’. This has the advantage of preventing a competitor from getting round the claim by using a screw.

#### 4.3.2 Regulating the form and content of claims

A number of different rules and procedures regulate the form that claims ought to take.<sup>84</sup> At a general level, the contents of the claims must comply with the substantive requirements for patentability—namely, subject matter, novelty, and non-obviousness. The claims must also define the matter for which protection is sought in terms of the technical features of the invention,<sup>85</sup> be clear and concise,<sup>86</sup> be supported by the description,<sup>87</sup> and relate to one invention, or a group of inventions that are so linked as to form a single inventive concept.<sup>88</sup> We look at these criteria in more detail later.<sup>89</sup>

### 4.4 DRAWINGS

The final component of a patent is the drawings. These provide a representation of the invention.<sup>90</sup> Along with the description, the drawings may be used to interpret the claims.<sup>91</sup> The Patent Office Rules provide very detailed rules as to the nature and form of the drawings. These range from the quality of the paper,<sup>92</sup> the size of the margin,<sup>93</sup> and the use of shading,<sup>94</sup> through to the height of the letters or numerals used. The standardization of the way inventions are represented plays an important role in ensuring the usefulness of the information provided by the patentee.

<sup>79</sup> See *Biogen v. Medeva* [1997] RPC 1 (HL), in which the claim was to a DNA molecule characterized by the way in which it was made (recombinant DNA) and what it did (display HBV antigen specificity).

<sup>80</sup> For US analogues, see *In re Donaldson* (1994) 16 F.3d 1189; K. Adamo, ‘The Waiting at the Patent Bar is over: The Supreme Court decides Hilton Davis’ (1996) 78 JPTOS 367.

<sup>81</sup> *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 119; *EPO Guidelines*, C-III, [4.7]–[4.9]; *CIPA*, [14.24].

<sup>82</sup> The TBA said that the use of structural description of chemical compounds by means of Markush-style formulae, which was part of the standard toolkit of the skilled-person chemist, is the most concise means of defining a class of chemical compounds in a claim: *Bayer CropScience/Safeners*, T 1020/98 [2003] OJ EPO 533, 540–1.

<sup>83</sup> *Genentech/Polypeptide expression*, T 292/85 [1989] EPOR 1, [1989] OJ EPO 275.

<sup>84</sup> Beyond the requirements that are set out in the PA 1977, British law provides no guidance as to the particular format that the claims ought to take. This is in marked contrast to the EPC, which provides detailed guidance as to the form and content that claims ought to follow.

<sup>85</sup> PA 1977, s. 14(5)(a); EPC 2000, Art. 84; EPC 2000 Regs, r. 43(1).

## PROCEDURE FOR GRANT OF A PATENT

### CHAPTER CONTENTS

1 Introduction	416	4 Procedure for Grant	423
2 Preliminary Considerations	416	5 Amendment	431
3 Features of the Patent Application Process	420	6 Reform	434

### 1 INTRODUCTION

Unlike the position under copyright law where rights arise without formality, patents are only granted after a series of formal procedures have been complied with. The process of registration plays a key role in defining many aspects of patent law and practice. In this chapter, we explore some of the key features of those processes. We begin by exploring some of the issues that would-be applicants ought to consider when deciding whether to take out a patent to protect their inventions in the United Kingdom. We then follow the trajectory of a patent through the administrative process, from its inception as a patent application through to grant. In so doing, we discuss the British and European patent systems, the Patent Cooperation Treaty (PCT), and how they intersect.

### 2 PRELIMINARY CONSIDERATIONS

#### 2.1 DECIDING TO PATENT

A range of factors are taken into account when considering whether to patent an invention. A potential applicant will need to consider the benefits that may flow from patenting. Perhaps the most obvious benefit is that because a patent confers an exclusive right to make, use, and sell the patented invention for a period of up to 20 years, it provides the owner with associated monopoly profits. It should be noted that the economic value derived from a patent will vary according to the type of invention in question. For example, where competitors are able to develop new ways of achieving the same result that fall outside the scope of the monopoly (known as 'inventing around the patent'), the economic benefits are reduced. Another benefit associated with patenting flows from the fact that patenting translates inventions from the world of science and technology to the world of commerce. In so doing, patenting enables inventions to be included on the balance

© L. Bently and B. Sherman 2014

sheets of organizations and on the research returns of publicly funded institutions. This may be particularly important in attracting funds to pay for research.

Other less obvious benefits flow from patenting. These include the esteem or symbolic capital that flow from being recognized as an inventor. Indeed, in some cases it is the romantic appeal of becoming an inventor that encourages a person to enter into the patent system in the first place.<sup>1</sup> Another benefit of patenting is that it enables manufacturers to enhance the image of their goods. By advertising that their goods are patented, sellers are able to represent to consumers that they are buying cutting-edge technologies. There is also a sense in which the mere fact that something has been patented carries with it the belief that the product has public approval; this has been particularly important in relation to the patenting of life forms.

The benefits that flow from patenting need to be weighed against the associated costs. The financial costs of patenting include patent agent fees (possibly £150 per page), the administrative charges imposed by national and international institutions as a condition of grant,<sup>2</sup> and (where a patent is sought in a non-English-speaking country) the costs of translation. A 2012 study commissioned by the European Patent Office (EPO) showed that the average cost of obtaining a patent directly at the EPO was €32,000.<sup>3</sup> Non-financial costs, such as the time and effort involved in transforming a practical technical idea into the form required by the patent system, also need to be taken into account. Another cost associated with patenting relates to the fact that the applicant must make their invention available to the public. While competitors may not be able to copy the patented invention, the disclosure of the invention makes it easier for them to invent around the patent. Another factor to be taken into account is whether the benefits that flow from patenting can be achieved through other means with fewer of the associated costs.<sup>4</sup> An important factor here is that an inventor (or owner) may be able to rely upon other techniques to protect their creations that do not require the invention to be disclosed to the public. These include contractual restrictions on the use or disclosure of the process, the law relating to breach of confidence, or non-legal techniques such as secrecy. The problem with these techniques is that they carry with them the risk that if the information is disclosed to the public (even if through a breach of contract or confidentiality), in most cases the invention becomes part of the public domain, free for all to use.<sup>5</sup> Another factor that may influence the decision to seek a patent is the ease with which the details of the invention can be ascertained or reverse-engineered when the invention or the products thereof are made available to the public.

Given that the decision to patent is influenced by a range of factors, it is not surprising that patenting practices vary from industry to industry. For example, in the pharmaceutical industry, where research and development costs are high and the products are readily and cheaply copied, the patent process is commonly relied on to protect inventions. In

<sup>1</sup> G. Myers, 'From Discovery to Invention: The Writing and Re-writing of Two Patents' (1995) 25 SSS 57, 59.

<sup>2</sup> Roland Berger Market Research on behalf of the EPO, *Study on the Cost of Patenting in Europe* (2004); EPO, 'Cost of Patenting in Europe' (1995) 26 IIC 650; M. Bednarek, 'Planning a Global Patent Strategy: Where to Get the Most "Bang for Your Buck"' (1995) 77 JPTOS 381; S. Helfgott, 'Why Must Filing in Europe Be So Costly?' (1994) 76 JPTOS 787.

<sup>3</sup> Commission Staff Working Paper, *Impact Assessment* (13 April 2012), SEC(2011) 482 final, 36.

<sup>4</sup> There may be a danger of another person patenting the invention. This has occasionally prompted defensive patenting, which, at one time, prompted a third of all applications in the United States: W. Davis (1947) 12 L & CP 796, 799–800.

<sup>5</sup> On the trade secret/patenting decision, see D. Munson 'The Patent/Trade Secret Decision: An Industrial Perspective' (1996) 78 JPTOS 689.

other industries, such as in the aviation field, where the expense of copying is very high, greater emphasis is placed on secrecy as a mode of protection.

## 2.2 ROLE OF PATENT AGENTS

It is common for decisions concerning patent applications to be made in consultation with a patent agent. Since emerging as a discrete profession during the nineteenth century,<sup>6</sup> patent agents have come to play a central role in the operation of the patent system. Under the European Patent Convention (EPC), a new breed of expert, the ‘European patent agent’, has developed to deal with the intricacies of the European patent system.<sup>7</sup> Patent agents normally have knowledge of the law, the patent administration process, and a particular branch of science. As well as assisting in the drafting and processing of patents, patent agents also offer advice as to whether a patent should be taken out and where and how patents are best exploited. In some cases, they are also able to litigate on behalf of patentees. In a sense, patent agents act as go-betweens who unite the technical–scientific domains with the legal and commercial. The patent system encourages the use of patent agents by penalizing the owners of poorly drafted patents. For example, where a patent is found to be partially valid, relief by way of damages, costs, or expenses is only available where a claimant can show that the patent was framed in good faith and with reasonable skill and knowledge<sup>8</sup>—a matter that may be difficult for non-specialists to prove.

## 2.3 CHOICE OF ROUTES TO GRANT

Once the decision is made to protect an invention in the United Kingdom by patent, it is then necessary to decide the particular route to take to secure grant of the patent. In particular, it is necessary to decide whether to take out a British patent or a European patent (UK).<sup>9</sup> In turn, it is necessary to decide whether to apply directly to the UK Intellectual Property Office (UK IPO) or the EPO, or whether it would be better to make use of the application system provided by the Patent Cooperation Treaty (PCT).<sup>10</sup> It should be noted

<sup>6</sup> See D. Van Zyl Smit, ‘Professional Patent Agents and the Development of the English Patent System’ (1985) 13 *Int J Sociol L* 79; H. Dutton, *The Patent System and Inventive Activity during the Industrial Revolution 1750–1852* (1984), ch. 5; F. Kittel, ‘Register of Patent Agents: A Historical Review’ (1986–87) 16 *CIPAJ* 195.

<sup>7</sup> See EPC 2000, Arts 133–134a; L. Osterborg, ‘The European Patent Attorney: A New Profession’ (1994) 25 *IIC* 313.

<sup>8</sup> PA 1977, s. 63(2). See *General Tire v. Firestone Tyre* [1975] *RPC* 203, 269; *Hallen v. Brabantia* [1990] *FSR* 134, 143; *Chiron v. Organon Teknika* (No. 7) [1994] *FSR* 458. Good faith primarily depends on whether the patentee knew something detrimental to the patent or something that escaped the eye of the patent examiner. Reasonable skill and knowledge relates to the competence employed in framing the specification. See *Hoechst Celanese v. BP Chemicals* [1997] *FSR* 547. For criticisms of the provision, see Jacob LJ in *Beheer BV v. Berry Floor NV* [2005] *EWCA Civ* 1292, [35] (it makes no sense to restrict the right to damages, but not account of profits). Jacob LJ also questioned whether the provisions comply with the Enforcement Directive.

<sup>9</sup> Applications to the EPO and UK IPO are alternatives, so a patentee cannot have patents via both mechanisms. To prevent this, PA 1977, s. 73(2), requires the Comptroller to revoke a UK patent where there is a European patent (UK) for the same invention, having the same priority date, which was applied for by the same applicant. Before revocation, the patentee is given an opportunity to justify holding two patents: PA 1977, s. 73(3), amended by CDPA 1988, Sch. 5, para. 19.

<sup>10</sup> There are four routes available to get a patent for the United Kingdom: directly to the UK IPO; indirectly to the UK IPO via the PCT; directly to the EPO; or indirectly to the EPO via the PCT. See *AstraZeneca/Priorities from India*, G 2/02 and G 3/02 [2004] *OJ EPO* 483 (not possible to claim priority for a European patent from first publication in India by way of TRIPS, because India was not a party to PCT).

that if the proposed unitary patent package is implemented, it will introduce yet another option: the unitary patent, which will provide uniform protection across 25 participating member states. The particular route that is chosen depends on a variety of factors; perhaps the most important are the countries where protection is desired.

When deciding whether to bring an application to the United Kingdom or the EPO, commercial and strategic considerations may come into play. From a commercial point of view, the primary variable is the fees charged by the respective patent offices. Because the cost of an application to the EPO is greater than to the UK IPO, if an applicant only wishes to file in the United Kingdom or in a few countries, it will be cheaper for them to apply to the respective national offices. There comes a point, however, where the cumulative cost of applying to several national offices will exceed the cost of a European application.<sup>11</sup>

Applicants may also be influenced by strategic considerations when they are considering whether to apply to the EPO or to national offices. An important factor relates to the fact that although the substantive law of the national systems and the EPC are largely the same, there are a number of other important differences.<sup>12</sup> In particular, while the EPC has a full examination system, some national offices do not require examination at all,<sup>13</sup> some allow for deferred examination, and some require patent agents to provide the examination service, while others will only reject applications on limited grounds (such as novelty).<sup>14</sup> Another factor that may influence the route taken is the relative vulnerability of the patent. In particular, while a national patent can only be challenged in national tribunals, the EPC allows for a central challenge to be made against a European patent (which takes the form of an ‘opposition’ to the grant and can be brought within the nine-month period after grant).<sup>15</sup> If a would-be-patentee believes that the application is likely to be challenged, the applicant might prefer to maximize the survival chances of the patent by registering in a range of national offices rather than to risk the possibility of a successful central attack, which would deprive the applicant of protection in all of the designated states.

Similar factors will influence inventors when they are considering whether to apply directly to the UK IPO or the EPC, or whether they want to make use of the international filing system provided by the PCT.<sup>16</sup> While the PCT does not issue patents, it does provide an alternative starting point by which both UK and European patents (UK

<sup>11</sup> While translation costs have been a significant consideration in the decision whether to file for a European patent or a national patent, this became less important after 1 May 2008, when the London Agreement became operational.

<sup>12</sup> Early versions of the EPC proposed a two-stage approach: a provisional grant, which was subject only to formal examination and novelty report, followed by the possibility of confirmation as a final European patent within five years at the behest of applicant or a third party. See G. Oudemans, *The Draft European Patent Convention* (1963), 53–60, 164–76.

<sup>13</sup> There is no examination in Belgium, the Netherlands, Switzerland, or Ireland. On the latter, see *Rajan v. Minister for Industry and Commerce* [1988] 14 FSR 9; A. Parkes, ‘The Irish Patent Act 1992’ (1991–92) 21 *CIPAJ* 426.

<sup>14</sup> For example, the French Patent Office will not refuse on grounds of lack of inventive step: Law of 2 January 1968, Art. 16; J. Schmidt-Szalewski, ‘Non-obviousness as a Requirement of Patentability in French Law’ (1992) 23 *IIC* 725. For Germany, see E. Fischer, ‘The New German Patent Procedure: From the View of a Corporate Patent Department’ (1971) 2 *IIC* 277.

<sup>15</sup> EPC 2000, Arts 99–101.

<sup>16</sup> See above at p. 398; D. Perrott, ‘The PCT in Use’ [1982] *EIPR* 67; B. Bartels, ‘Patent Cooperation Treaty: The Advantages for the Applicant in the UK’ (1983) 13 *CIPAJ* 3; J. Cartiglia, ‘The Patent Cooperation Treaty: A Rational Approach to International Patent Filing’ (1994) 76 *JPTOS* 261; J. Anglehart, ‘Extending the International Phase of PCT Applications’ (1995) 77 *JPTOS* 101.

can be obtained.<sup>17</sup> Under the PCT,<sup>18</sup> an international application can be made to the patent office of one of the contracting states, which is called the ‘receiving office’.<sup>19</sup> The application must contain a request, a description, at least one claim, drawings (where appropriate), and an abstract.<sup>20</sup> Prior to 1 January 2004, applicants also had to designate the states in which protection was sought.<sup>21</sup> This is no longer necessary, however, because the filing of a request automatically applies in all contracting states to the PCT (unless the applicant specifies otherwise).<sup>22</sup> Applicants can apply to designated international offices for an international search and an international preliminary examination to be carried out.<sup>23</sup> At this point, the applicant can shift to the designated national offices, which will decide whether to grant national patents.<sup>24</sup> At this stage, the national office treats the application as if it has been filed in that office. Instead of going directly to the national stage, an applicant may ask for an international preliminary examination by an examining authority.<sup>25</sup> The examining authority issues an international preliminary examination report indicating whether the invention appears to meet international standards of novelty, inventive step, or industrial applicability.<sup>26</sup> It should be noted that the examination is merely advisory and not binding on designated countries.<sup>27</sup>

The procedures are useful for countries in which the patent office is not capable of carrying out its own examination. Another factor in favour of the PCT is convenience. Rather than having to apply in each individual country, a single application can be submitted to a relevant PCT body. The PCT is also attractive because of the lengthy period between the initial application to the international office and the time when the application is forwarded to the relevant national offices, at which time the expensive process of translation must be completed.

### 3 FEATURES OF THE PATENT APPLICATION PROCESS

Before looking in detail at the procedures for grant of a patent, it may be helpful to highlight some of the key features of the UK and EPO patent application processes.<sup>28</sup>

<sup>17</sup> This was signed in 1970 and came into operation from 1978. As of 1 December 2013, there were 148 contracting parties. PA 1977, s. 89, gives statutory effect to some of the Treaty’s provisions.

<sup>18</sup> PCT, Art. 3.

<sup>19</sup> The receiving office retains one copy of the application, transmits another to the WIPO, and sends a third to an international search authority (ISA). The receiving office checks to ensure that a filing date should be granted (Art. 14) and that appropriate fees have been paid. The ISA conducts a search and reports its findings to the WIPO: PCT, Art. 15. The application can then be amended within two months—PCT, Art. 19; PCT Regs, r. 46—and it and the search report are then communicated to the patent offices of the designated states: PCT, Art. 20. The application must be published after the expiry of 18 months from the priority date: PCT, Art. 21(2).

<sup>20</sup> PCT Regs, rr 4–8.  
<sup>21</sup> On the need to correct failure to designate during the international phase, see *Vapocure Technologies Application* [1990] RPC 1.

<sup>22</sup> PCT Regs, r. 53.7.  
<sup>23</sup> There are 17 ISAs and international preliminary examining authorities (IPEAs).

<sup>24</sup> At 20 months after the priority date, the national stage begins, by formally initiating prosecution in the designated states, filing translations, and paying fees as necessary.

<sup>25</sup> PCT, Ch. II; PCT, Art. 22 (revised by the PCT Assembly on 3 October 2001) (provides for a minimum period of 30 months within which the applicant must provide certain documents and fees); implemented in the United Kingdom by the Patent (Amendment) Rules 2002 (SI 2002/529) (1 April 2002). See now PA Rules, r. 66. <sup>26</sup> PCT, Art. 35(2). <sup>27</sup> PCT, Art. 33.

<sup>28</sup> The Strasbourg Agreement concerning International Patent Classification 1971 (which the United Kingdom joined on 7 October 1975) has led to a degree of uniformity in the presentation of patent documents. See A. Wittmann, R. Schifffels, and M. Hill, *Patent Documentation* (1979), 124–34.

### 3.1 REQUIREMENT OF REGISTRATION

Registration has long been a prerequisite for grant of a patent in the United Kingdom. In modern times, this is largely explained by reference to the type of monopoly that a patent confers. The decision to make patent protection dependent upon registration is said to result from the fact that patents confer an absolute monopoly that enables the patentee to prevent all others from practising the invention. This is the case even if the infringer developed the same invention independently from the patented invention. Consequently, as a matter of fairness, it is necessary to have a register that is open to the public. This ensures that third parties are able to ascertain whether they are infringing someone else's rights. The process of filing also helps to establish the priority of the invention and is a prerequisite to systems of pre-grant examination such as those that operate in the United Kingdom and EPO.

### 3.2 FIRST-TO-FILE

Most patent systems, including that of the United Kingdom and the EPC, operate on the basis that the first person to file an (acceptable) application for an invention should be granted a patent over the invention. The fact that patents are granted via a system of registration does not necessarily mean that the patent ought to be granted to the first person to file an application.<sup>29</sup>

While the first-to-file system may be incompatible with a regime of intellectual property predicated on natural rights, it avoids the need to consider difficult questions about who was the first person to have a particular idea or to reduce the idea to a working model (as occurs in first-to-invent systems).<sup>30</sup> Instead, the first-to-file system replaces such investigations with an administrative practice that delivers rough, but simple, justice.<sup>31</sup> The first-to-file system is also justified on the basis that it provides inventors with an incentive to disclose (or a reward for having disclosed) the invention: the first applicant to disclose the invention obtains the patent.<sup>32</sup> As we will see, the adoption of a first-to-file system has certain consequences that need to be taken into account later in the grant process.<sup>33</sup>

### 3.3 EXAMINATION

Another notable feature of the patent application processes in the United Kingdom and the EPO is that applications are subject to a full examination.<sup>34</sup> That is, all applications are examined to ensure that they comply with the formalities of filing, as well as the requirements of subject matter, novelty, non-obviousness, and sufficiency.

<sup>29</sup> On 16 March 2013, the United States changed from first-to-invent to first-to-file: The America Invents Act of 2011 (Leahy-Smith Act, or AIA), H.R. 1249 (16 September 2011).

<sup>30</sup> The preference for a first-to-file system, however, does not avoid all legal investigations into who was the 'inventor'. This is because inventors are entitled to be named on the patent, even if they are not the applicant: PA 1977, s. 13; EPC 2000, Arts 62, 81. If the inventor is not designated, the application is treated as having been withdrawn: EPC 2000, Art. 90(3); EPC 2000 Regs, r. 57. However, there is no investigation into the correctness of the designation. Where the designated inventor and the applicant are different people, the practice is to inform the inventor of the application, thereby enabling the inventor to raise any objection that they may have. Procedures are also available for inventors to be omitted from published versions of the application if they wish: EPC 2000 Regs, r. 20(1).

<sup>31</sup> T. Nicolai, 'First-to-File vs First-to-Invent: A Comparative Study Based on German and United States Patent Law' (1972) 3 *IIC* 103; T. Roberts, 'Paper, Scissors, Stone' [1998] *EIPR* 89.

<sup>32</sup> For arguments for first-to-file, see Anon., 'Prior Art in Patent Law' (1959) 73 *Harv L Rev* 369, 380.

<sup>33</sup> See below at section 5, and Chapter 20, section 4.

<sup>34</sup> G. Smith, 'Why Examine?' (1982) 12 *CIPAJ* 9.

For most of their long history, British patents were granted without examination. The question whether examination as a prerequisite for grant should be introduced into the United Kingdom was considered and rejected on a number of occasions during the nineteenth century.<sup>35</sup> One of the main arguments against examination was that it would have made the recognition of property rights subject to the discretion of government officials. Examination would also have added to the cost and time of obtaining a patent<sup>36</sup>—changes that would have run counter to the spirit of much nineteenth-century reform, which aimed to simplify the system and to reduce the ‘taxes’ imposed on inventors.

After much deliberation, a limited system of examination was introduced into the United Kingdom in 1905.<sup>37</sup> An important factor that helped to support the case for examination was the finding of the 1901 Fry Committee that 40 per cent of the patents registered at the time were for inventions that had already been described in previous patents.<sup>38</sup> Because these patents would not have withstood litigation, they were theoretically harmless. Nevertheless, it was believed that they deterred others from working in the same field. Moreover, the lack of examination brought the system into disrepute and undermined the trust placed in valid patents. For some, the prospect of an examination system sanctioned and controlled by the state was attractive because it would have created a legal (and thus a commercial) presumption that any patents that had been granted were valid. Another factor that supported the case for examination was that fears of arbitrary or self-seeking exercise of discretion on behalf of those in charge of the register had been allayed by a growing trust in bureaucracy—a trend that was cemented by the increased use of experts.<sup>39</sup>

The limited examination system established in 1905 was maintained until the passing of the Patents Act 1977, when the current full examination system was introduced.<sup>40</sup> While the examination system currently forms an integral part of the British patent system, there may come a time when the United Kingdom may wish to follow other countries in the EPC who, in the face of falling national applications, have abandoned full examination as part of national procedure. If this were to happen, it would provide applicants with greater choice, the alternatives being an unexamined national patent or an examined European patent.

### 3.4 AMENDMENT

Another notable feature of the grant system is that applicants are able to alter or amend their initial applications both during and after grant of the patent. The decision to give patentees the opportunity to amend their patents recognizes that the first-to-file system

<sup>35</sup> (1864) 29 *PP* 321; (1871) 10 *PP* 603; (1872) 11 *PP* 395.

<sup>36</sup> The most common criticism of examination today is delay. Many patent systems operate with time limits in an attempt to reduce such problems. In the United Kingdom, examination should occur not later than four years and six months from priority.

<sup>37</sup> Patents Act 1902. The Office began to search British patents in 1905.

<sup>38</sup> *Report of the Committee Appointed by the Board of Trade to Inquire into the Working of the Patents Act on Certain Specified Questions* (Cd. 506) (1901) 23 *PP* 59, 602, [6] (page 4 of the report) (indicating that 42 per cent of the sample from the previous three years was wholly or partially invalid).

<sup>39</sup> EPC 2000, Art. 113, gives an applicant whose patent has been refused an opportunity to comment. This is of fundamental importance for ensuring a fair procedure and reflects the generally accepted notion of a right to be heard. The examiner must give the grounds for refusal—that is, the essential reasoning—sufficient for the case to be properly understood. See *NEC/Opportunity to comment*, T 951/92 [1996] *EPOR* 371, [1996] *OJ EPO* 53.

<sup>40</sup> Prior to the 1977 Act, examination was for patentability and novelty only. Examination for inventive step was introduced by the 1977 Act.

may encourage applicants to register without a full understanding of the invention or complete familiarity with the relevant prior art. It is also based on the fact that subsequent examination, either by the applicant or the patent office, may reveal the existence of a piece of prior art that requires the application to be reformulated to ensure its validity.<sup>41</sup> Similarly, an applicant may wish to amend the application (as filed) in light of subsequent experiments carried out on the invention. Where a patent is found to be partially valid,<sup>42</sup> it is desirable that the patent be amended by the deletion of the invalid claims, which otherwise might remain as a potential nuisance to industry.<sup>43</sup> At the end of this chapter, we look at the situations in which applicants and patentees are able to amend their applications and the restrictions under which they operate.

## 4 PROCEDURE FOR GRANT

The basic procedure for application for a patent to the UK Intellectual Property Office is roughly the same as at the European Patent Office. In this section, we provide an overview of some of the more important features of those processes (see Fig. 16.1).

### 4.1 WHO IS ENTITLED TO APPLY FOR A PATENT?

There are virtually no restrictions on who may apply for a patent. In contrast with the rules relating to copyright and trade marks, there are no limitations as regards the nationality or residency of the applicant.<sup>44</sup> Where appropriate, an application for a patent may be made by two or more applicants. While anyone may apply for a patent, there are a number of restrictions placed on those who are entitled to be granted a patent. The issue of entitlement to grant is dealt with later.<sup>45</sup>

During the application process, disputes over who is entitled to a patent that may subsequently be granted are dealt with differently, depending on whether it is a British or a European application.<sup>46</sup> For the purposes of proceedings before the EPO, it is assumed that the applicant is entitled to exercise the right to the European patent; issues about entitlement are determined elsewhere.<sup>47</sup> The EPO will only take account of the question of entitlement if a decision is made by an appropriate national court that a person other than the applicant is entitled to the patent.<sup>48</sup>

Dood, 'Pursuing the Essence of Inventions: Reissuing Patents in the 19th Century' (1991) 32 *Technol & Cult* 999. For the history of 'intervening rights', see P. Federico, 'Intervening Rights in Patent Re-issues' (1962) 30 *Geo Wash L Rev* 603.

<sup>42</sup> PA 1977, s. 63(1).

<sup>43</sup> *Van der Lely v. Bamfords* [1964] *RPC* 54, 73–4 *per* Pearson LJ.

<sup>44</sup> PA 1977, s. 7(1); EPC 2000, Art. 58; cf. Paris, Art. 2(1), which requires members to provide the same protection as nationals receive to nationals of any other country in the Union. See also PCT, Art. 9.

<sup>45</sup> See Chapter 21 below.

<sup>46</sup> Under EPC 2000, Art. 60, the right to a European patent belongs to the inventor or his or her successor in title. The rights of employees depend on the law of the state in which they are mainly employed or, if that cannot be determined, that in which the employer has its place of business. See below at pp. 601–7.

<sup>47</sup> EPC 2000, Art. 60(3). See G. Le Tallec, 'The Protocol on Jurisdiction and the Recognition of Decisions in Respect of the Right to the Grant of a European Patent' (1985) 16 *IIC* 318; *Kirin-Amgen/Erythropoietin*, T 412/93 [1995] *EPOR* 629 (questions of entitlement could not be considered in opposition proceedings).

<sup>48</sup> Three courses of action are available: prosecution of the application in place of the applicant; filing of a new application; or a request that the application be refused: EPC 2000, Art. 61(1). See *Latchways/Unlawful applicant*, G 3/92 [1995] *EPOR* 141.

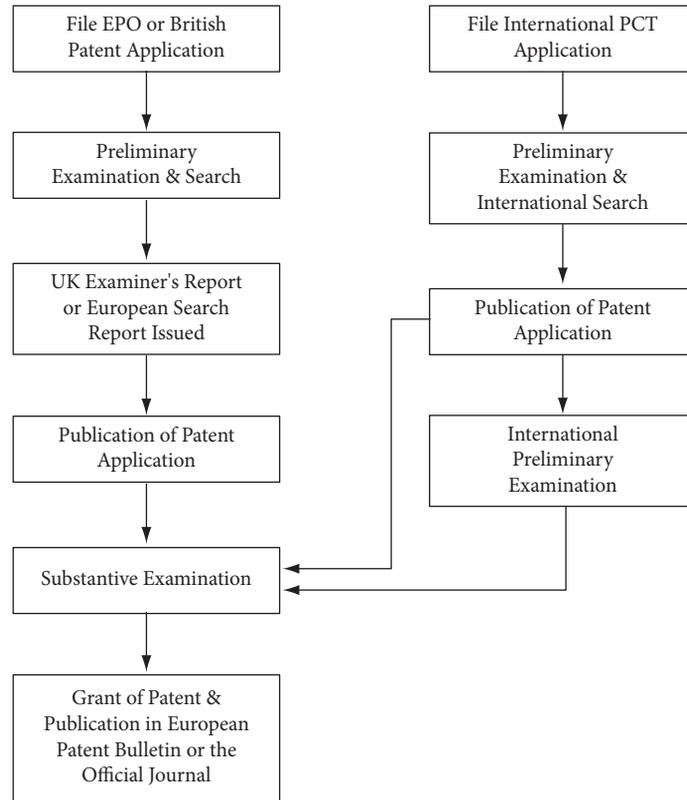

Fig. 16.1 Flowchart of a patent application

As with the EPC, an applicant for a British patent is presumed to be entitled to grant of the patent.<sup>49</sup> However, in contrast with the EPC, the Comptroller is able to consider issues of entitlement that are raised before grant.<sup>50</sup> If a person ‘properly entitled’ to a patent decides to submit a new application, they may be able to use the wrongful applicant’s priority date.<sup>51</sup> The Comptroller of the UK IPO is given similar powers to determine entitlement where a patent has already been granted.<sup>52</sup>

## 4.2 FILING A PATENT APPLICATION

Applications for British patents are filed online or by post to Newport, Wales. The contents of all documents included in an application for a British patent must be in English or Welsh.<sup>53</sup> Applications for a European patent may be filed either with the EPO in Munich or in The Hague, or with national patent offices in the contracting states.<sup>54</sup> Unlike the EPC

<sup>49</sup> PA 1977, s. 7(4).

<sup>50</sup> PA 1977, s. 8. See T. Gold, ‘Entitlement Disputes: A Case Review’ [1990] *EIPR* 382.

<sup>51</sup> PA 1977, s. 8(3).

<sup>52</sup> PA 1977, s. 37. See *James Industries Patent* [1987] *RPC* 235 (applicant’s claim for share of patent for net beds rejected in absence of contract evincing clear understanding that patent rights were to be shared); *Nippon* [1987] *RPC* 120; *Norris’ Patent* [1988] *RPC* 159.

<sup>53</sup> PA Rules, r. 14(1).  
<sup>54</sup> EPC 2000, Art. 75(1)(2). On designation costs, see O. Bossung, ‘The Return of European Patent Law to the European Union’ (1996) 27 *IIC* 287, 296. On the international status, see *Lenzing* [1997] *RPC* 245.

1973, under which applications had to be in one of three official languages and the text of the patent had to be in that language, the EPC 2000 allows European patent applications to be filed in any language.<sup>55</sup> If the application is not made in an official language of the EPO (English, German, or French), the applicant is given two months in which to translate the application into an official language.<sup>56</sup>

Applicants at the UK IPO and the EPO are faced with the choice of either making a ‘full application’ or alternatively of taking advantage of the facility that allows for ‘early filing’.<sup>57</sup> A full application for a patent must contain a request for grant of a patent, a description of the invention, one or more claims, any drawings referred to in the description or the claims, and an abstract.<sup>58</sup>

In order to provide applicants with greater flexibility, the patent systems provide that instead of filing a full application, applicants are able to make an ‘early filing’.<sup>59</sup> Early filing occurs where an applicant supplies an indication that a patent is sought, information identifying the applicant, and a description of the invention.<sup>60</sup> Essentially, early filing provides applicants with a 12-month breathing space in which they can decide whether they wish to pursue a patent, decide whether they are able to carry out further experiments on the invention, look for investors, and consider the countries in which they wish to seek patents.<sup>61</sup>

The applicant must file the claims and abstract within 12 months of the early filing (the so-called ‘filing date’) if an early application is not to lapse.<sup>62</sup> While early filing offers a breathing space ‘for completion of the formalities and the interim preservation of priority’, early filing was not intended ‘to provide a cover for making improvements in the disclosed invention by bringing in new material not covered by the disclosure whilst preserving for it the priority conferred by the original filing date’.<sup>63</sup>

### 4.3 PRIORITY DATE OF THE APPLICATION

The initial application is important in that it sets in play the sequence of steps that may ultimately result in the grant of the patent. Irrespective of whether the filing is an early filing or a full application, filing is also important since it establishes the ‘priority date’ of the patent. In the absence of a claim to an earlier date, the priority date is the filing date of the application.<sup>64</sup> As we will see, the priority date is the date when the novelty, inventiveness, and other aspects of the invention are assessed. As such, it is often of critical importance for the validity of the patent. The priority date is of practical significance in several other ways. First, because novelty is assessed as of the priority date, once the date

<sup>55</sup> EPC 2000, Art. 14(2); EPC 2000 Regs, r. 40. <sup>56</sup> EPC 2000 Regs, rr 6(1), 58.

<sup>57</sup> Patent application fees at the UK IPO were abolished from 1 October 2000.

<sup>58</sup> PA 1977, s. 14(2); EPC 2000, Art. 78(1); PCT, Arts 3–7; PCT Regs, rr 3–8, 10, 11, 13, and 32; *A. C. Edwards v. Acme Signs* [1990] RPC 621, 642. See also *Xerox/Amendments*, T 133/85 [1988] OJ EPO 441, 448. Patent applications must also designate the inventor: PA 1977, s. 13; PA Rules, r. 10; EPC 2000, Art. 81; EPC 2000 Regs, rr 19–21; *EPO Guidelines*, A–III, 5.

<sup>59</sup> PA 1977, s. 15(1); EPC 2000, Art. 80; EPC 2000 Regs, r. 49; PCT, Arts.11 and 14(2); PCT Regs, rr 7, 14.1(b), 15.4(a), 16, 20.2(a)(iii).

<sup>60</sup> It is no longer necessary for applications to the EPO to include one or more claims: EPC 2000 Regs, r. 40(1); see also EPC 2000 Regs, r. 57(c); PCT, Art. 4(ii).

<sup>61</sup> To clear up application backlogs and to speed up clearance times, the Intellectual Property Act 2014 allows the UK IPO to share information on unpublished patent applications: IP Act 2014, s. 18, which introduces the new PA 1977, s. 118(3)(aa), (3A)–(3C).

<sup>62</sup> See *Antiphon’s Application* [1984] RPC 1, 9. On late submission of drawings, see *VEB Kombinat Walzlager* [1987] RPC 405. <sup>63</sup> *Asahi Kaei Kogyo* [1991] RPC 485 (HL), 526 per Lord Oliver.

<sup>64</sup> PA 1977, s. 5; PA Rules, r. 6; EPC 2000, Arts 87–9. An application for which a date of filing has been accorded under the PCT is treated as an application for a patent under the 1977 Act.

is established, an applicant is able to exploit their invention without fear of invalidating the patent. Secondly, applicants are able to use the priority date established by filing in the United Kingdom or EPO as the priority date for applications in other countries.

#### 4.4 PRELIMINARY EXAMINATION AND SEARCH

The next formal step in the process of grant is the preliminary examination and search.<sup>65</sup> When the claims and abstract have been submitted, the applicant should request a preliminary examination and search.<sup>66</sup>

On preliminary examination, the application is examined to see whether it complies with certain formal requirements.<sup>67</sup> These are that the application contains a request for grant, a description of the invention, one or more claims, any drawings referred to in the description or claim, and an abstract. In addition, the preliminary examination also ensures that the inventor(s) have been identified and that the application accords with other formalities (such as payment of fees).<sup>68</sup>

Applicants are alerted to any problems that may have been identified in the preliminary examination in a report that is issued to them.<sup>69</sup> Applicants are then given the opportunity to respond to the report or, if necessary, to amend their application to overcome the problems. If an applicant fails to change their application in a manner that satisfies the respective patent offices, the application may be refused.

The examiner or (at the EPO) the Search Division also carries out a limited search of the existing literature for relevant prior art—that is, information similar to the invention in question.<sup>70</sup> The aim of the search is to identify the documents that may be used at the substantive examination stage when the application is examined for novelty and inventive step.<sup>71</sup> The applicant is informed of the findings of the search by way of an examiner's report or, as it is known at the EPO, the 'European search report'.<sup>72</sup>

As well as identifying the documents that may be relied upon when the application is examined for novelty and inventive step, the application is also examined during the search stage to ensure that it relates to one invention or to a group of inventions that form a single inventive concept.<sup>73</sup> That is, it is examined to ensure that it meets the requirement of 'unity of invention'.<sup>74</sup>

Where two or more inventions are claimed in the one application, the application will fail to comply with the requirement of unity of invention unless it can be shown that the inventions form a single inventive concept.<sup>75</sup> To do this, it is necessary to show that the inventions share the same 'special technical features'. Special technical features are the

<sup>65</sup> PA 1977, s. 17; PA Rules, rr 23, 27; EPC 2000, Art. 90; PCT, Arts 14, 15, 17, and 18; PCT Regs, rr 26–30, 33, 37, 38, 40, and 43.

<sup>66</sup> PA 1977, s. 17(1). Under the EPC 2000, the search and examination stages of the application process were combined.

<sup>67</sup> The receiving office retains one copy of the application, transmits another to the WIPO, and sends a third to an ISA. The receiving office checks to ensure that a filing date should be granted and that appropriate fees have been paid: EPC 2000, Art. 90.

<sup>68</sup> PA Rules, r. 31; EPC 2000 Regs, r. 40, 55; *EPO Guidelines*, A–II.

<sup>69</sup> PA Rules, r. 29; EPC 2000 Regs, r. 57.

<sup>70</sup> PA 1977, s. 17(1); EPC 2000, Art. 92; EPC 2000 Regs, rr 61–64.

<sup>71</sup> PA 1977, s. 17(4)(5); EPC 2000, Art. 92; EPC 2000 Regs, r. 61(1).

<sup>72</sup> PA 1977, s. 17(5); EPC 2000 Regs, r. 65.

<sup>73</sup> PA 1977, ss 14(5)(d) and (6), 17(6); PA Rules, r. 17; EPC 2000, Art. 82; EPC 2000 Regs, r. 64.

<sup>74</sup> Lack of unity is not a ground for revocation: PA 1977, s. 26; PA Rules, r. 16. There is no EPC equivalent, but see EPC 2000, Art. 82.

<sup>75</sup> PA 1977, s. 14(5)(d) and (6); PA Rules, r. 16; EPC 2000, Art. 82; EPC 2000 Regs, r. 64.

features that define the contribution that each of the claimed inventions considered as a whole makes to the claimed advance over the prior art.<sup>76</sup> There are at least two reasons for limiting patent applications to a single inventive concept. The first is that patent protection should not be available for two inventions for the price of one. The second, and more important, is that to allow more than one inventive concept to be included in a single patent is likely to undermine the administrative systems for locating, identifying, and searching for patents.

If it is found that the application contains more than one invention, the search is limited to the first invention that is set out in the claims.<sup>77</sup> In the face of a finding that an application contains more than one patent, applicants may simply pursue a patent for one of the inventions. Alternatively, they may divide the initial application into two (or more) fresh applications. So long as additional fees are paid and no new material is added, they may use the priority date for the original application for the new applications.<sup>78</sup>

#### 4.5 PUBLICATION

The next stage in the grant process is the publication of the patent application. The application will be published and made available for public inspection 18 months from the date of filing (or ‘as soon as possible thereafter’).<sup>79</sup> This process informs third parties that the application has been made. While third parties are not able to oppose the grant of a patent at this stage, they are able to make observations as to whether the patent should be granted.<sup>80</sup>

The documents published in the United Kingdom and the EPO include the description, claims, and drawings (if any) that have been filed. In the United Kingdom, the publication must include the original claims and any amendments that have been made to the claims, as well as any new claims. The UK IPO is also given power not to publish parts of the application that are offensive or disparaging,<sup>81</sup> or which might be prejudicial to national security.<sup>82</sup> At the EPO, the abstract and (where available) the search report are also published.<sup>83</sup>

Publication is important for two reasons. First, since the act of publication discloses the invention to the public, an unwanted publication may prevent applicants from relying on other ways of protecting their invention (such as confidentiality). Similarly, once a patent application has been published, the application can no longer be resubmitted (whereas if the application is withdrawn prior to publication, it is possible to make a

<sup>76</sup> PA Rules, r. 16(2); EPC 2000 Regs, r. 44. Technical features ‘are the physical features which are essential to the invention’; with respect to a product, these are ‘the physical parameters of the entity’; in relation to a process, the technical features are ‘the physical steps which define such activity’: *Mobil Oil/Friction Reducing additive*, G 2/88 [1990] EPOR 73, [1990] OJ EPO 93, 100. See also *May & Baker v. Boots* [1950] 67 RPC 23, 50; *Biogen v. Medeva* [1995] RPC 25, 92–3; *Bayer/Benzyl esters*, T 110/82 [1983] OJ EPO 274; *Siemens/Unity*, G 1/91 [1992] OJ EPO 253.

<sup>77</sup> *Hollister’s Application* [1983] RPC 10, G 2/92 [1993] OJ EPO 591.

<sup>78</sup> Failure to meet an objection of lack of unity is frequently remedied by the making of divisional applications: EPC 2000 Regs, r. 36; PA 1977, s. 18(3); PA Rules, r. 100.

<sup>79</sup> PA 1977, s. 16; PA Rules, r. 26; EPC 2000, Art. 93; EPC 2000 Regs, rr 67–70; PCT, Arts 21, 29; PCT Regs, rr 9.1, 48.

<sup>80</sup> PA 1977, s. 21; PA Rules, r. 33; EPC 2000, Art. 115; EPC 2000 Regs, r. 114.

<sup>81</sup> PA 1977, s. 16(2); PA Rules, r. 33.

<sup>82</sup> PA 1977, s. 22 (no EPC 2000 equivalent). PA 1977, s. 23, provides that British residents need prior written approval from the Comptroller before they file applications outside the United Kingdom. This gives the Office the opportunity to examine applications to see if the information is prejudicial to the defence of the realm or the safety of the public. If so, the Office may prohibit or restrict publication.

<sup>83</sup> EPC 2000 Regs, r. 68(1).

later application).<sup>84</sup> Secondly, if the patent proceeds to grant, the date of publication is the date from which the patentee is able to sue for infringement of the patent. This is on the condition that the act would have infringed both the patent as granted and the claims in the form in which they were published.<sup>85</sup> In these circumstances, the patentee is only entitled to damages for infringement in the period between publication and grant.

As mentioned, a third party may respond to the publication of the application by submitting ‘observations’ to the patent office (at any time before grant).<sup>86</sup> Such observations should focus on whether the invention is a patentable invention.<sup>87</sup> Observations may be made by ‘any person’ and must be submitted in writing accompanied by appropriate reasons. The Comptroller of the UK IPO is instructed to consider the observations, whereas the EPO is merely required to communicate the observations to the proprietor, who, in turn, is permitted to comment on them. If the EPO wishes, it can take account of such observations when examining the application.<sup>88</sup> In both fora, the party submitting the observations does not become party to the proceedings and so will not be asked to any hearing, nor be made to pay the costs of any proceedings.

#### 4.6 SUBSTANTIVE EXAMINATION

Once the requirements of preliminary examination and search have been satisfied, the next stage in the application process is the ‘substantive examination’.<sup>89</sup> The applicant must request this within six months from the date of publication of the application or, at the EPO, the publication of the search report.<sup>90</sup> In some situations, it is possible for an applicant to request that the examination process is accelerated or fast-tracked.<sup>91</sup>

The purpose of the substantive examination is to ascertain whether the application complies with the requirements of the Patents Act 1977 or, in the case of the EPO, the EPC 2000.<sup>92</sup> Unlike the preliminary examination, which is mainly concerned with ensuring the presence of certain documents, during the substantive examination the application is scrutinized to ensure that it is valid in all aspects. In particular, the invention is examined to ensure that it does not consist of subject matter excluded from patentability—that is, that it is novel, involves an inventive step, and is industrially applicable. The substantive

<sup>84</sup> EPC 2000, Art. 128, specifies that the application prior to this point is confidential and may be viewed by third parties only with the consent of the applicant.

<sup>85</sup> PA 1977, s. 69(2); EPC 2000, Art. 67; PCT, Art. 29. <sup>86</sup> PA 1977, s. 21; EPC 2000, Art. 115.

<sup>87</sup> That is, matters covered in PA 1977, ss 21(1), 1; EPC 2000, Arts 115, 52.

<sup>88</sup> EPC 2000, Art. 114.

<sup>89</sup> PA 1977, s. 18(1); PA Rules, rr 28, 29; EPC 2000, Art. 94; EPC 2000 Regs, rr 70, 71. Under the PCT, the national stage begins 20 months after the priority date by formally initiating prosecution in the designated states, filing translations, and paying fees as necessary. Instead of going straight into the national stage, an applicant may ask for an international preliminary examination by an examining authority: PCT, Art. 31. This is dealt with in Ch. II of the Convention. This delays entry into the national systems for a further ten months, so that entry is within 30 rather than 20 months of the priority date. The IPEA establishes an international preliminary examination report indicating whether the invention appears to meet international standards of novelty, inventive step, or industrial applicability: PCT, Art. 35(2). Such examination is merely advisory and not binding on designated countries: PCT, Art. 33.

<sup>90</sup> PA Rules, r. 28(2); EPC 2000 Regs, r. 70(1). This distinction is not of great significance given that, in the United Kingdom, an applicant should receive the search report before the date of ‘early’ publication.

<sup>91</sup> In the United Kingdom, see *Relaxation of requirements for PCT (UK) Fast Track Practice Notice* (8 June 2012). For the EPO, see, e.g., ‘Patent Prosecution Highway pilot programme between the Trilateral Offices based on PCT work products’ (2012) *OJ EPO* 89.

<sup>92</sup> Substantive examinations of EPO applications are carried out in Munich, The Hague, and Berlin.

examination also ensures that the application has been sufficiently disclosed, that the claims are concise, and that they are supported by the description.

The substantive examination takes the form of a dialogue between the examiner and the applicant. When examining the application, the examiner should consider whether if the matter in issue were to be fully investigated at trial with the aid of expert evidence, it would be resolved in the applicant's favour.<sup>93</sup> After the examination has taken place, the examiner draws up a report, which outlines any objections to the application that have been identified. The report is supplied to the applicant, who is given an opportunity to comment on the objections, often in the hope of persuading the examiner that any doubts they have about the application are ill-founded. Alternatively, the applicant may respond to the objections by amending the patent application.<sup>94</sup> If they think it necessary, the examiners may make or require further searches. Ultimately, the dialogue may lead in the United Kingdom to a hearing before the Senior Examiner or, at the EPO, before the full Examining Division of the EPO, and from there by way of appeal to the UK Patents Court or the Boards of Appeal of the EPO.<sup>95</sup>

#### 4.7 GRANT OF THE PATENT

If the respective patent office is not satisfied that the application satisfies the various requirements for grant, the application will be refused.<sup>96</sup> If the respective patent office is satisfied that all of the necessary requirements have been satisfied, the patent will be granted.<sup>97</sup> The decision to grant a patent does not take effect until the date on which it is mentioned in the *Official Journal* (for a UK patent) or the *European Patent Bulletin* (for a European patent).<sup>98</sup> The protection afforded by a patent can last up to 20 years from the filing date.<sup>99</sup> Renewal fees must be paid after four years.<sup>100</sup> As we will see, the protection may extend beyond the 20-year period if a supplementary protection certificate is issued. The extent of protection conferred by a patent will be considered later.<sup>101</sup>

The date of the grant of a European patent is also the date of its transition from a European application to a bundle of separate national rights.<sup>102</sup> With the exception of opposition proceedings, questions of validity and infringement are thereafter considered at a national level.<sup>103</sup> Once granted, a European patent (UK) is given the same level of protection as those granted by the national patent office.<sup>104</sup> As discussed above, it is no longer necessary to translate European patents in French or German into English within three months of grant at the EPO for them to be valid in the United Kingdom.<sup>105</sup>

<sup>93</sup> *Blacklight Power v. The Comptroller-General of Patents* [2009] RPC (6) 173.

<sup>94</sup> PA 1977, s. 18(3); EPC 2000, Art. 94(3)(4); EPC 2000 Regs, r. 71; PCT, Ch. II (preliminary examination).

<sup>95</sup> PA 1977, s. 97(1); EPC 2000, Arts 106–112a; EPC 2000 Regs, rr 90–96. EPC 2000, Art 112a, provides parties with the ability to petition for review by the EBA in limited circumstances.

<sup>96</sup> PA 1977, s. 18(3); EPC 2000, Art. 97(2); *EPO Guidelines*, C–VI, 7.6.

<sup>97</sup> PA 1977, s. 18(4); EPC 2000, Art. 97(1). <sup>98</sup> PA 1977, s. 24(1); EPC 2000, Art. 97(3).

<sup>99</sup> PA 1977, s. 25; EPC 2000, Art. 63(1).

<sup>100</sup> The fees increase over time to ensure that the Registry does not become cluttered with useless patents.

<sup>101</sup> See Chapter 22 below. <sup>102</sup> EPC 2000, Art. 64(1); PA 1977, s. 77.

<sup>103</sup> EPC 2000, Art. 64(3). <sup>104</sup> PA 1977, s. 77(1)(a).

<sup>105</sup> See above at pp. 385–6; EPC 2000, Art. 97(1), EPC 2000 Regs, r. 71(3), (7). Under PCT, Art. 3, an international application can be made to a patent office of one of the contracting states, which is termed the 'receiving office'. Rules 4–8 of the PCT Regs set out the contents of a filing, i.e. a request, a description, at least one claim, drawings where appropriate, and an abstract. The application must designate the states in which protection is sought.

## 4.8 REVOCATION

While the patent examination processes at the UK IPO and EPO are relatively rigorous, they are not conclusive. As such, it is possible for patents to be revoked after grant on a limited number of grounds. The grounds on which a patent may be revoked are set out in section 72 of the 1977 Act and Article 138 of the EPC 2000. These are that:

- (i) the invention is not a patentable invention;<sup>106</sup>
- (ii) the patent was granted to a person who was not entitled to that patent;<sup>107</sup>
- (iii) the specification of the patent does not disclose the invention clearly enough and completely enough for it to be performed by a person skilled in the art;<sup>108</sup> or
- (iv) the material in the patent extends beyond the material in the application as filed (impermissible amendment).<sup>109</sup>

In addition, the UK IPO has limited power to revoke patents on its own initiative.<sup>110</sup>

One of the notable features of section 72 is that it says that ‘any person’ can apply to have a patent revoked. This has been taken to mean that there is no need for a person to have any interest, whether commercial or otherwise, in the outcome of proceedings to bring an action to revoke a patent.<sup>111</sup> Unlike the position under the Patents Act 1949, a person who has no interest in the revocation is nevertheless entitled to apply to have the patent revoked. As Jacob J said: ‘Parliament purposively made patents vulnerable to attack from anyone.’<sup>112</sup>

## 4.9 OPPOSITION PROCEEDINGS AT THE EPO

While the grant of a European patent generally brings the European stage to an end, a central challenge can be made to the validity of the European patent in the nine-month period following grant of the patent.<sup>113</sup> This process, known as ‘opposition’, has a number of advantages over leaving decisions about the validity of patents exclusively to national offices or courts. The most obvious advantage is cost: it is cheaper to launch or defend a single attack in one place than it is to engage in revocation proceedings in each of the countries in which the patent was issued.

Any person may file a notice of opposition. For a period, it was common for the proprietor to file oppositions in order to make post-grant amendments (which otherwise would have to be made at national level).<sup>114</sup> This practice has now been curtailed.<sup>115</sup> Opposition has to be filed within nine months from grant and must be based on one of three grounds.<sup>116</sup> These are that:

<sup>106</sup> PA 1977, s. 72(1)(a); EPC 2000 Arts 138(1)(a), 52–7.

<sup>107</sup> PA 1977, s. 72(1)(b); EPC 2000, Art. 138(1)(e).

<sup>108</sup> PA 1977, s. 72(1)(c); EPC 2000, Art. 138(1)(b).

<sup>109</sup> PA 1977, s. 72(1)(d)–(e); EPC 2000, Art. 138(1)(c)–(d). <sup>110</sup> PA 1977, s. 73.

<sup>111</sup> *Cairnstores v. Aktiebolaget Hassle* [2002] FSR 35 (there were circumstances in which the commencement of revocation proceedings might amount to an abuse of process). See also *Indupack Genentech/Third party opposition*, G 3/97 [2000] EPOR 8.

<sup>112</sup> *Oystertec’s Patent* [2003] RPC 559, 563; cf. PA 1949, ss 14 and 32 (an applicant for revocation had to be a ‘person interested’).

<sup>113</sup> EPC 2000, Art. 99. See generally Bossung, ‘The Return of European Patent Law to the European Union’ (1996) 27 *IIC* 287, 296.

<sup>114</sup> *Mobil Oil/Opposition by proprietor*, G 1/84 [1985] OJ EPO 299, [1986] EPOR 39; *Mobil/Admissibility*, T 550/88 [1992] OJ EPO 117, [1990] EPOR 391.

<sup>115</sup> *Peugeot & Citroen/Opposition by patent proprietor*, G 9/93 [1995] EPOR 260.

<sup>116</sup> EPC 2000, Art. 100. The procedure for opposition is set out in EPC 2000 Regs, rr 75–89.

- (i) the subject matter of the European patent is not patentable under Articles 52–57 of the EPC 2000;<sup>117</sup>
- (ii) the European patent does not disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art;<sup>118</sup> or
- (iii) the subject matter of the European patent extends beyond the content of the application as filed.<sup>119</sup>

Any opposition to a European patent is communicated to the patent proprietor, who may contest the opposition, make observations, and/or make amendments. The opposition proceedings will determine whether the patent should be revoked, maintained, or maintained in an amended form.<sup>120</sup> If the proceedings result in revocation, the patent is deemed from its outset not to have had any of the effects specified in the EPC.<sup>121</sup>

## 5 AMENDMENT

As we mentioned earlier, applicants are able to alter or amend their initial application both during and after grant of the patent. *Prior to grant*, applicants are able to amend their application where the examination reveals that the formal and substantive requirements are not complied with.<sup>122</sup> In addition, applicants have a general power to amend their application at any time before a patent is granted.<sup>123</sup> The ability to amend while the application is being processed is based on a belief that it would be unreasonable to expect applicants to be fully aware of all prior art at the point when they filed their application. This is especially the case given that the patent system provides for a search and examination at a later stage.

*After a patent has been granted*, the owner of a patent is also able to amend their patent.<sup>124</sup> In addition, the Comptroller is able to instigate proceedings that may prompt such amendment.<sup>125</sup> Under the EPC 1973, post-grant amendment only occurred in opposition proceedings;<sup>126</sup> otherwise, such matters were for national law.<sup>127</sup> Under the EPC 2000, however, patent owners are given a general power to revoke or limit European patents after grant at the EPO.<sup>128</sup> Article 138(3) of the EPC 2000 also provides proprietors of

<sup>117</sup> EPC 2000, Art. 100(a).      <sup>118</sup> EPC 2000, Arts 100(b), 83.

<sup>119</sup> EPC 2000, Arts 100(c), 123(2). On the question of whether it is possible to amend a claim by way of a disclaimer under EPC 2000, Art. 123(2), see (identical decisions) *PPG/Disclaimer*, G 1/03 (8 April 2004) and *Genetic Systems/Disclaimer*, G 2/03 (8 April 2004).      <sup>120</sup> EPC 2000, Art. 101.

<sup>121</sup> EPC 2000, Art. 68.

<sup>122</sup> PA 1977, s. 18(3); PA Rules, r. 31; EPC 2000, Art. 123(1); EPC 2000 Regs, r. 137; PCT, Ch. II (preliminary examination).

<sup>123</sup> PA 1977, s. 19(1); PA Rules, r. 3; EPC 2000, Art. 123(1); PCT, Arts 19 and 34(2)(b); PCT Regs, rr 46 and 66.

<sup>124</sup> PA 1977, ss 27(1), 72, 75; EPC 2000, Art. 105a–c.      <sup>125</sup> PA 1977, s. 73.

<sup>126</sup> *Advanced Semiconductor Products/Limited Feature*, G 1/93 [1994] *OJ EPO* 169. Amendments in opposition proceedings are considered only where they are appropriate and necessary—i.e. that they can fairly be said to arise out of the grounds of opposition: *Mobil/Admissibility*, T 550/88 [1992] *OJ EPO* 117, [1990] *EPOR* 391, 397. For a discussion of the situations in which amended claims will be allowed at the EPO, see *Minnesota Mining and Manufacturing Company*, G 1/99 [2001] *OJ EPO* 381 (EBA); *Lubrizol Corporation*, T 525/99 [2003] *OJ EPO* 452, 457–8.

<sup>127</sup> *Mobil/Admissibility*, T 550/88 [1992] *OJ EPO* 117, [1990] *EPOR* 391, 394.

<sup>128</sup> EPC 2000, Art. 105a–c. See also Art. 1, items 51, 62, of the Act Revising the Convention on the Grant of European Patents (Munich) (29 November 2000) MR/3/00 Rev 1e (the ‘EPC Revision Act’). It has been proposed that where a patent not in English is limited at the EPO, the United Kingdom will require a translation of the patent as granted, limited, or amended within a specific time before that limited patent can take effect in the United Kingdom: *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of Responses and the Government’s Conclusions* (13 November 2003), [32]–[33].

European patents with the right to amend a patent in national proceedings relating to the patent's validity. As we will see, this has ramifications for the way the judicial discretion to allow amendment is exercised. Under the procedures in the United Kingdom and EPO, the application to amend is advertised so that any person may oppose it within two months. If granted, the amendment is deemed to have taken effect from the grant of the patent. Following changes in 2004, a proprietor is able to amend their patent in any proceedings in which the validity of a patent *may* (rather than *is*) be put in issue.<sup>129</sup> This has overcome the lacuna in the (old) legislative scheme, which made no provision in circumstances where there were infringement proceedings and amendment was desired, but validity was not in issue.<sup>130</sup>

## 5.1 RESTRICTIONS ON AMENDMENT

In order to ensure that any amendments that are made comply with the overriding aims of the patent system,<sup>131</sup> a number of restrictions are placed on an owner's ability to amend their application/patent. The amended patent must comply with the requirements that have to be met by all patents. These include the requirements of subject matter, novelty, and inventive step. The amended claims must also be clear and concise, be supported by the description, and relate to one invention or group of inventions that are linked to form a single inventive concept.

There are a number of other provisions that restrict an owner's ability to amend either the application or the patent. Perhaps the most important of these, with which we deal in Chapter 20, strike at the validity of the patent. Under these provisions, if the amendment introduces subject matter that was not in the original application or the amendment extends the scope of protection beyond the initial application, the amended patent is liable to be revoked.<sup>132</sup> In this section, we focus on the situations in which validity is not at stake.

A post-trial application to amend a patent following revocation proceedings (in which the validity of the patent was at stake) will also be refused if it would lead to a second trial on validity (primarily because procedural fairness requires the parties to put forward their cases prior to trial).<sup>133</sup> Another important factor that limits the owner's ability to amend their application as filed arises from the fact that post-grant amendment is at the discretion of the Comptroller and the courts.<sup>134</sup> The onus is on the patentee to establish

<sup>129</sup> PA 1977, s. 75(1) (amended by Patents Act 2004, Sch. 2, para. 19).

<sup>130</sup> *Norling v. Eez Away* [1997] RPC 160, 165: 'All this suggests that the sooner the whole procedure of amendment of a patent is rethought and provided for by an amended statute and rules the better. Preferably, so far as European patents are concerned, there should be one, effective and cheap, procedure.' In *Boston Scientific v. Palmaz* (unreported, 20 March 2000), cited at [2000] EIPR N-115, the Court of Appeal held that if the EPO had amended a patent 'after judgment in UK patent litigation, but before an appeal of that judgment is heard, the Court of Appeal must consider the patent as amended'.

<sup>131</sup> R. Krasser, 'Possibilities of Amendment of Patent Claims during the Examination Procedure' (1992) 23 IIC 467, 471; Gunzel, *Staking Your Claim: Claiming Options and Disclosure Requirements in European Patent Practice* (1990), 29; A. Bubb, 'Implied Added Subject Matter: A Practitioner's View of History' (1991) CIPA 444.

<sup>132</sup> PA 1977, ss 72(1)(d) and (e), 76; EPC 2000, Art. 138(1)(c).  
<sup>133</sup> *Nokia v. ICom* [2011] EWCA Civ 6. See D. Wilson and A. Moir, 'Court of Appeal Warns Patent Holders Defending Revocation Proceedings to "Put up in Time or Shut up" if They Wish to Propose Amendments in Their Patent Claims' (2011) 33 EIPR 326.

<sup>134</sup> PA 1977, ss 27(1), 75(1); EPC 2000, Art 105a. The Court of Appeal confirmed the general discretion of the courts to refuse post-grant amendments in the public interest under PA 1977, s. 75, in *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 422, 435. In so doing, it overturned Laddie J's decision in the Patents Court in *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 424; cf. *Palmaz's European*

that the amendment should be allowed.<sup>135</sup> As a result of changes made in 2004, when deciding whether to allow an amendment, the courts and the Comptroller are directed to take account of ‘any relevant principles applicable’ under the EPC 2000.<sup>136</sup>

The courts have tended to use their discretion to deny amendments where the owner has not acted innocently. As Jacob J noted: ‘No patent office is there for the purpose of enabling people deliberately to impose bogus monopolies on the public.’<sup>137</sup> There are two situations in which the discretion has been exercised against the patentee. The first is where a patentee knowingly and deliberately obtained claims that were wider than justified by what was invented.<sup>138</sup> The second situation in which discretion has not been exercised is where knowing of the doubtful validity of the patent, a patentee has been slow to take action to amend.<sup>139</sup> In *Raleigh Cycle v. Miller*,<sup>140</sup> the House of Lords emphasized that a patentee who suspects that a patent is too widely drawn should amend it promptly. If they do not, the discretion to amend will be refused. Lord Normand explained that ‘the public interest is injured when invalid claims are persisted in so that inventors are illegitimately warned off an area ostensibly monopolised by the claims.’<sup>141</sup> In this situation, patentees should either litigate or amend. However, if they choose to litigate, they should not be permitted to amend later. It is reasonable for a patentee to delay where they believed on reasonable grounds that the patent was valid.<sup>142</sup>

Another factor that regulates the way in which patents are amended arises from the fact that the courts may limit the damages that are awarded where an amended patent is infringed. There are two situations in which this may occur. If an amended application expands the claims beyond those that were reasonably to be expected from the application as it was initially published, the courts may limit the damages that are available to the patentee. The question of whether the inference is reasonable is decided objectively. As such, it does not matter what the defendant (subjectively) thought.<sup>143</sup> Another factor that regulates the way patents are amended arises from the fact that damages are only awarded prior to the date of an amendment if the court is satisfied that the specification, as originally published, was framed in good faith and with reasonable skill and knowledge.<sup>144</sup> In practice, it is rare for the courts to find that patents were not framed in these terms.

*Patent (UK)* [1999] RPC 47, 63–5, which distinguished Laddie J on this point. For the application of the CA decision, see *Oxford Gene Technology v. Affymetrix (No. 2)* [2001] RPC 310 (CA). See generally P. Cliffe, ‘A Sorry Case of Making Amends’ [2002] EIPR 277.

<sup>135</sup> *SKF v. Evans Medical* [1989] FSR 561, 569; *Chevron Research Company’s Patent* [1970] RPC 580.

<sup>136</sup> PA 1977, s. 75(5).

<sup>137</sup> *Richardson-Vicks Patent* [1995] RPC 561. See also *Hallen v. Brabantia* (1990) FSR 134, 149; *Kimberly-Clark Worldwide v. Procter & Gamble* [2000] RPC 422 (CA), 435.

<sup>138</sup> *ICI (Whyte’s) Patent* [1978] RPC 11. In *Richardson-Vicks Patent* [1995] RPC 561, 568, Jacob J observed that there was little EPO jurisprudence as regards post-grant amendment in opposition proceedings. Nonetheless, he assumed that if it were to be shown that an applicant had deliberately sought to patent an unjustifiably wide claim, the EPO would refuse leave to amend. Beyond this, however, Jacob J predicted that the EPO might allow a patent to be amended. Consequently, Jacob J held that, for purposes of consistency, nothing short of really blameworthy conduct by a patentee should act as bar to amendment in the United Kingdom. See also *Kimberly-Clark Worldwide v. Procter & Gamble (No. 2)* [2001] FSR 339, 342–3.

<sup>139</sup> *SKF v. Evans* [1989] FSR 561, 577. <sup>140</sup> (1950) 67 RPC 226. <sup>141</sup> *Ibid.*, 230.

<sup>142</sup> On occasion, the courts have suggested that delay is more justified where the patentee operates outside the United Kingdom: *Bristol Myers Company v. Manon Freres* [1973] RPC 836, 857; *Mabuchi Motor KK’s Patent* [1996] RPC 387 (not blameworthy for delay when involved in worldwide litigation in which the United Kingdom was not an important country). <sup>143</sup> *Unilever v. Chefaro* [1994] RPC 567, 592.

<sup>144</sup> PA 1977, s. 62(3). See *General Tyre & Rubber v. Firestone Tyre & Rubber* [1975] RPC 270 (CA); *Chiron v. Organon (No. 7)* [1994] FSR 458. PA 1977, s. 62(3), does not apply to an account of profits: *Codex Corporation v. Racal Milgo* [1983] RPC 369 (CA).

## 5.2 ERRORS AND CLERICAL MISTAKES

Instead of amending a patent, a patentee may seek to have the patent altered to correct errors and clerical mistakes.<sup>145</sup> Such corrections take effect retroactively. The ability to correct mistakes does not conflict with the general policy of protecting third parties, which forbids amendments that extend the patent beyond the scope of the application as filed. The reason for this is that ‘if the mistake was obvious, it cannot have misled’.<sup>146</sup>

If the request to correct a mistake concerns the description, claims, or drawings, the correction must be obvious. A correction will be obvious where it is immediately evident that nothing else would have been intended other than what is offered as the correction.<sup>147</sup> If there are any doubts, a correction will not be allowed. A useful example of the limits imposed on a patentee’s ability to correct mistakes can be seen in *PPG Industries Patent*.<sup>148</sup> In this case, it was said that faced with the proposition ‘2 + 2 = 5’, a person might readily presume that this was obviously incorrect and that, to correct the mistake, the ‘5’ should be changed to a ‘4’. However, as Dillon and Slade LJ pointed out, since an alternative solution was to change one of the ‘2s to a 3’, in the absence of an indication as to where the mistake lay, the correction was not obvious within the meaning of the 1977 Act.

## 6 REFORM

There are currently a number of different plans to reform patent procedure. These relate to the proposed unitary patent, the idea that patent applicants should be required to disclose any traditional knowledge that they are using in their patents, and suggestions that aim to improve patent examination.

### 6.1 UNITARY PATENT SYSTEM

As we saw in Chapter 14, there are plans under way to introduce a new unitary European patent, which will provide uniform protection across the 25 participating member states. While the new unitary patent, which will be issued by the EPO, will build upon existing procedures at the EPO, a number of changes will need to be made to the procedures by which patents are granted to allow this to happen.

### 6.2 TRADITIONAL KNOWLEDGE AND PRIOR INFORMED CONSENT

In recent years, there has been increased attention given to the information that applicants have to disclose in their patent applications, particularly as a way of attempting to regulate the way in which indigenous knowledge is used by patentees. Discussions are taking place at the national, community, and international levels about the possibility of requiring inventors who draw upon or utilize genetic resources in the development of

<sup>145</sup> PA 1977, s. 117(1); PA Rules, r. 105; EPC 2000 Regs, r. 139.

<sup>146</sup> *Holtite v. Jost* [1979] RPC 81, 91 per Lord Diplock. In *Correction under Rule 88*, G3/89 [1993] EPOR 376, it was held by the EBA that, as a matter of construction of the EPC, the correction must not extend protection contrary to EPC 1973, Art. 123(2) (which is the same as EPC 2000, Art. 123(2)).

<sup>147</sup> This was the position under PA 1949, s. 31(1): *Holtite v. Jost* [1979] RPC 81.

<sup>148</sup> [1987] RPC 469, 478, 483.

their inventions to disclose information in their patent application, such as the fact that they have prior informed consent to use the genetic resources. These discussions have been prompted by Article 15 of the CBD (which recognizes equitable benefit sharing for access providers) and by Article 8(j) of the Convention on Biological Diversity (CBD), which encourages the equitable sharing of benefits arising from the use of indigenous knowledge.<sup>149</sup> The discussions have also been prompted by the growing concern about biopiracy and the general misuse of genetic resources in the biodiscovery process. The idea that applicants should be required to disclose information about their invention builds upon the idea that patent law has the potential to modify behaviour to promote good corporate and scientific conduct.<sup>150</sup> The fact that an organization might not be able to patent products derived from genetic resources if it does not have the informed consent of the access provider in advance will act as a powerful incentive for such organizations to ensure that they have the necessary prior consent. As we mentioned earlier, debates are presently taking place over whether or not prior informed consent should be incorporated into patent law, and if so, how.<sup>151</sup>

This question has taken on a new significance following the adoption in 2012 of the Nagoya Protocol to the CBD (discussed above). This is because the Protocol requires parties to adopt legislative, administrative, or policy measures to monitor and enhance transparency about the utilization of genetic resources. This system includes the designation of checkpoints at which specified information regarding prior informed consent and mutually agreed terms may be required. It envisages the establishment of a standardized international system of certificates of compliance to act as evidence of prior informed consent and mutually agreed terms. Proposals for the inclusion in the Protocol of a disclosure-of-origin system requiring disclosure of information on prior informed consent and mutually agreed terms as a condition for the grant of patent rights were not included in the final text.

Discussions have taking place within Europe for some time about the best way in which the goals of the CBD might be achieved.<sup>152</sup> The issue of prior informed consent has already been recognized in Europe in the Biotechnology Directive, albeit only in the non-binding Recitals. In particular, Recital 27 encourages patent applications to include information on the geographical origin of biological material. In turn, Recital 55 requires member states to recognize Article 8(j) of the CBD when developing laws and regulations. To date, these have had minimal impact on member states.<sup>153</sup>

Early responses to the Convention were not positive. At one stage, the Commission suggested that there should be a debate over the unilateral development under EC law of 'a self-standing obligation for patent applicants to disclose the origin of genetic resources'.<sup>154</sup> This built upon existing requirements that encourage disclosure of information—namely,

<sup>149</sup> See also the *Bonn Guidelines on Access and Benefit Sharing*, adopted at the Sixth Conference of the Parties to the CBD (The Hague, 2002). These are voluntary provisions that act as a guide to the implementation of CBD, Arts 1, 8(j), 10(c), 15, 16, and 19.

<sup>150</sup> See B. Sherman, 'Regulating Access and Use of Genetic Resources: Intellectual Property Law and Biodiscovery' (2003) *EIPR* 301.

<sup>151</sup> Particularly at the CBD, the TRIPS Council, and at WIPO. See above at pp. 401–3.

<sup>152</sup> See *EC Thematic Report on Access and Benefit-Sharing*, submitted to CBD Secretariat in October 2002, available online at <<http://biodiversity-chm.eea.eu.int/>>

<sup>153</sup> For discussion, see G. van Overwalle, 'Belgium Goes its Own Way on Biodiversity and Patents' [2002] *EIPR* 233.

<sup>154</sup> Communication from the Commission to the European Parliament and the Council, *The Implementation by the EC of the 'Bonn Guidelines' on Access to Genetic Resources and Benefit-Sharing under the Convention on Biological Diversity* (19 December 2003) COM/2003/0821 final.

enabling disclosure, disclosure of relevant prior art for novelty examination, and the disclosure of the inventors.<sup>155</sup> Initial proposals by the Commission were fairly modest. These provided that prior informed consent would not be treated as an additional or formal requirement for patentability; rather, the Commission suggested that failure to comply with the requirement for prior informed consent would carry consequences outside patent law. For example, it might prompt civil law claims for compensation or administrative sanctions (such as a fee for refusal to submit relevant information). The Commission was also looking at introducing a similar requirement for plant variety rights.<sup>156</sup> Despite the modest nature of these proposals, they were not implemented.

Discussions about the way in which European law should deal with the question of access to genetic resources and related questions were reopened following the adoption of the Nagoya Protocol. In December 2012, the European Union published a draft legislative proposal for implementation of the Protocol. A modified version was adopted by the EU on 16 April 2014.<sup>157</sup> While the Union, has taken the lead in the development of legislation to implement the Protocol, it seems that this is not being done in the spirit in which the Protocol was drafted. Indeed, the original draft law was criticized for, among other things, primarily focusing on enabling economic utilization of genetic resources and traditional knowledge, and restricting its temporal scope to genetic resources and traditional knowledge accessed after the Protocol comes into force.<sup>158</sup> Criticism has also been made of the law's adoption of a very narrow definition of protectable traditional knowledge,<sup>159</sup> which renders it almost meaningless as a tool for the protection of traditional knowledge rights. It has also been criticized for its failure to take into consideration customary law in both its preparation and redaction.<sup>160</sup> As such, it seems that little will change in the way in which European law deals with traditional knowledge and access to genetic resources.

### 6.3 PATENT EXAMINATION

Another area where reform might be considered is in relation to examination. Here, there are two issues that are currently attracting interest. The first relates to the rigour with which examinations are conducted. Some argue that, given the fact that the number of patent applications vastly exceeds the number of commercially significant inventions, it is a waste of resources to examine every application in detail. The most efficient approach, it is said, is to perform a cursory examination of all applications and to review seriously the validity of any grant that has commercial significance.<sup>161</sup> Because the validity of any commercially valuable patent will be subjected to a thorough review in any litigation, we should not bother to waste resources on pre-grant examination of patents. On the other hand, some argue that examination is important to protect the public—in particular,

<sup>155</sup> *Ibid.*, 17. The proposal also builds on a Concept Paper submitted by the EC to the TRIPS Council in October 2003 on the relationship between TRIPS and the CBD.

<sup>156</sup> *Ibid.*, 18.

<sup>157</sup> Regulation (EU) 511/2014 of 16 April 2014 on compliance measures for uses from the Nagoya Protocol on Access to Genetic Resources.

small traders—from threats of patent litigation on the basis of granted patents of dubious validity by well-resourced claimants. Essentially, the argument is that even invalid patents can be used to chill activity of legitimate traders or to extort settlements from risk-averse or poorly financed potential defendants. A related problem is said to be the activity of ‘patent trolls’—that is, commercial organizations that acquire patents specifically with a view to bringing actions in the hope of making money by forcing settlements.<sup>162</sup> Although the causes and effects of patent trolling are controversial, some argue that the impact has been made much worse by the practices of some patent offices in granting patents that rigorous examination would have shown related to subjects that lacked novelty or were obvious.

The second issue that has arisen in relation to examination arises from increasing backlogs in the processing of applications. Filings at the EPO, for example, have more than quadrupled over the last thirty years to more than 265,690 in 2013, leaving substantial backlogs. One possible solution that has been mooted is to farm out examinations to other countries, such as India or Korea, where they can be processed more cheaply and quickly. Another possible solution would be for the EPO examiners to rely on the decisions of other offices. So, for example, a patent that passed examination at the US Patent Office might be regarded as automatically registrable in Europe. The problem with such a proposal for ‘mutual recognition’ is that not all offices apply the same standards. Substantive patent harmonization may need to be effected first.

<sup>162</sup> For a discussion of the use of remedies to deal with the behaviour of trolls, see M. Lemley and C. Shapiro, ‘Patent Holdup and Royalty Stacking’ (2007) 85 *Texas L Rev* 1991; J. Golden, ‘“Patent Trolls” and Patent Remedies’ (2007) 85 *Texas L Rev* 2111.

## PATENTABLE SUBJECT MATTER

### CHAPTER CONTENTS

1 Introduction	438	6 Is the Invention Excluded by Section 1(2)/Article 52(2)?	455
2 Patentable Subject Matter	438	7 Specific Applications	471
3 Industrial Application	439	8 Biological Subject Matter	499
4 Methods of Medical and Veterinary Treatment	444	9 Immoral Inventions	515
5 Excluded Subject Matter	453		

### 1 INTRODUCTION

In the previous two chapters, we looked at the nature of patents and the processes by which patents are granted. In this and the following three chapters, we look at the criteria that an invention must satisfy to be patentable. These are that the invention must:

- (i) consist of subject matter that is patentable (this chapter);
- (ii) be new (Chapter 18);
- (iii) involve an inventive step (Chapter 19); and
- (iv) comply with the internal requirements of patentability (Chapter 20).

If an application fails to meet any one of these criteria, a patent will not be granted. If a patent has already been granted, failure may mean that the patent is revoked. With these general points in mind, we now look at the subject matter that is capable of being patented.

### 2 PATENTABLE SUBJECT MATTER

The exercise of deciding the types of subject matter that ought to be patentable often generates conflict and uncertainty. This is because patent law often finds itself dealing with technologies that it may not yet understand. It is also because the task of having to decide whether to grant property rights in a particular type of invention raises a complex mix of legal, cultural, political, and social questions. Over time, a range of different factors has restricted the subject matter protected by patents. Perhaps the most important is the image of the invention as something concrete and physical, which results from human

© L. Bently and B. Sherman 2014

intervention in nature.<sup>1</sup> A range of other more explicit policy factors has also limited the type of subject matter that is protected by patents.

The subject matter that is potentially patentable under the Patents Act 1977 and the 2000 European Patents Convention (EPC 2000) is regulated in five ways.

- (i) To be patentable, an invention must be capable of ‘industrial application’.<sup>2</sup> While this is probably the least important of the five requirements, it has been important in relation to inventions involving naturally occurring substances.
- (ii) The second restriction on patentable subject matter arises from the fact that patents are not granted for methods of medical and veterinary treatment.<sup>3</sup>
- (iii) The third restriction on the subject matter protected by patents is set out in section 1(2) and Article 52(2)(3). In essence these provide a non-exhaustive list of things that are not regarded as inventions.<sup>4</sup> If the subject matter of an application falls within the scope of these provisions, it will not be patentable.
- (iv) The fourth restriction on the subject matter excluded from patent protection provides that a patent shall not be granted for ‘any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a microbiological process or the product of such a process’.<sup>5</sup>
- (v) The fifth factor that restricts the subject matter protected by patent law is that patents are not granted for immoral inventions or inventions that are contrary to public policy.<sup>6</sup> While rarely used in the past, this exclusion has taken on a new significance in light of developments in biotechnology. A number of specific exclusions relating to immoral biological inventions are also contained in Schedule A2, paragraph 3(a)–(d), to the Patents Act 1977 and Rule 28 of the EPC 2000 Implementing Regulations (EPC 2000 Regs).<sup>7</sup>

We will look at each of these in turn.

### 3 INDUSTRIAL APPLICATION

In order for an invention to be patentable, it must be capable of ‘industrial application’.<sup>8</sup> This reflects the long-held view that patent protection should not be available for purely abstract or intellectual creations. The need to show industrial applicability also reflects the image of the patentable invention as having a concrete and technical character.<sup>9</sup>

<sup>1</sup> Sherman and Bently, 46, 150–7.      <sup>2</sup> PA 1977, ss 1(1)(c), 4; EPC 2000, Art. 52(1).

<sup>3</sup> PA 1977, s. 4A(1); EPC 2000, Art. 53. Previously, methods of medical and veterinary treatment were excluded on the basis that they were not industrially applicable.

<sup>4</sup> PA 1977, s. 1(2); EPC 2000, Art. 52(2), (3).

<sup>5</sup> PA 1977, Sch. A2, para. 3(f), introduced by the Patents Regulations 2000 (SI 2000/2037) and replacing PA 1977, s. 1(3)(b) (as enacted); EPC 2000, Art. 53(b).

<sup>6</sup> PA 1977, s. 1(3), introduced by the Patents Regulations 2000 and replacing PA 1977, s. 1(3)(a) (as enacted); EPC 2000, Art. 53(a).

<sup>7</sup> Implementing Regulations to the Convention on the Grant of European Patents (2006). This provision was formerly EPC 1973 Regs, r. 23d.      <sup>8</sup> PA 1977, s. 1(1)(c); EPC 2000, Art. 52(1).

<sup>9</sup> EPC 2000, Art. 52(1), provides that European patents ‘shall be granted for any inventions *in all fields of technology*, provided that they are new, involve an inventive step and are susceptible of industrial application’ (emphasis added). See Art. 1, item 17, of the Act Revising the Convention on the Grant of European Patents (EPC) (29 November 2000) MR/3/00 Rev., 1e (the ‘EPC Revision Act’); Base Proposal for the Revision of the European Patent Convention (2000) CA/100/00 e, 38. PA 1977, s. 1, was to be amended to reflect EPC 2000, Art. 52(1); HM Government, *Consultation on the Proposed Patents Act (Amendment) Bill: Summary*

An invention is capable of industrial application if it can be used or made in ‘any kind of industry’.<sup>10</sup> ‘Industry’ is construed in its widest sense, including activities whether or not for profit.<sup>11</sup> It also expressly extends to include agriculture.<sup>12</sup> As such, the requirement that an invention be made or used in industry presents few problems. In a controversial decision, however, it was held that a private and personal activity (the application of a contraceptive composition to the cervix) was not industrial in character and thus not patentable.<sup>13</sup>

As well as being used or made in any kind of industry, for an invention to be industrially applicable, it is also necessary to show that it has a ‘useful purpose’.<sup>14</sup> This is satisfied if a patent discloses ‘a practical application’ or has a ‘concrete benefit’.<sup>15</sup> Because the Patents Act 1977 and the EPC 2000 provide that inventions only need to be *susceptible* or *capable* of industrial application, this implies that there is no need to show actual use; it is enough to show that the invention has the *potential* to be used or made in industry. Where a product has been used (or put on the market), the commercial success of the product is not relevant when deciding its industrial applicability.<sup>16</sup> Inventions that contravene well-established scientific laws will be excluded on the basis that they are not industrially applicable. This is the case, for example, with inventions for perpetual motion machines and self-generating machines (which contravene the first law of thermodynamics that says that, in a closed system energy can neither be created or destroyed; it can only be transferred from one state to another).<sup>17</sup> In this context, the Technical Board of Appeal has stressed that it is not an appropriate forum in which to discuss new physical theories; these matters were to be decided in appropriate scientific arenas.<sup>18</sup>

The requirement that inventions need to exhibit a useful purpose is particularly important in relation to biological material. This is because while researchers have been successful in locating and identifying new gene structures, they have been less successful in ascertaining what many of these genes do.<sup>19</sup> While researchers have been able to identify

*of Responses and the Government’s Conclusions* (13 November 2003), [17]. Despite earlier plans, this was not adopted in the Patents Act 2004.

<sup>10</sup> PA 1977, s. 4(1); EPC 2000, Art. 57. But not when the invention contravenes well-established natural laws: *Duckett v. Patent Office* [2005] EWHC 3140 (application for machine that contravened the principle of conservation of energy was rejected); *Thompson v. Comptroller General of Patents, Designs and Trade Marks* [2005] EWHC 3065 (invention that purported to contravene Newton’s third law of motion was rejected); *Ward v. Comptroller-General* (unreported) (19 May 2000) (application for perpetual motion machine was rejected).

<sup>11</sup> *Chiron v. Murex (No. 12)* [1996] RPC 535, 607.

<sup>12</sup> PA 1977, s. 4(1); EPC 2000, Art. 57.

<sup>13</sup> *British Technology Group/Contraceptive method*, T 74/93 [1995] EPOR 279, 284. For criticisms of the decision, see J. Pagenberg, ‘Comment’ (1996) 27 IIC 104.

<sup>14</sup> *Chiron v. Murex (No. 12)* [1996] RPC 535, 607.

<sup>15</sup> *Max-Planck/BDP1 phosphatase*, T 870/04 [2006] EPOR 14, [6], [7], [21]; *Zymogenetics/Hematopoietic cytokine receptor*, T 898/05 [2007] EPOR 2, [2], [4], cited with approval by the Supreme Court in *Human Genome Sciences v. Eli Lilly* [2011] UKSC 51, [107].

<sup>16</sup> *Harvard/Onco-mouse* [2003] OJ EPO 473 (Opposition Division), 494. The fact that the transgenic mice were commercially unsuccessful was not relevant; all that mattered in this context was that they were on the market.

<sup>17</sup> *Blacklight Power v. Comptroller-General of Patents* [2008] EWHC 2763 (sets out criteria to be used when considering whether a scientific theory was true); *Nigel Buck’s Applications*, BL O/106/13 (8 March 2013); *Peter Crowley’s Application*, BL O/389/13 (27 September 2013).

<sup>18</sup> *Zagyansky/New Atomic scale physics*, T 1358/05 (26 May 2006).

<sup>19</sup> This problem has been exacerbated by the success of the human (and other) genome projects that attempt to identify the thousands of genes that comprise the genetic blueprint of biological entities: see T. Wilkie, *Perilous Knowledge* (1993); BMA, *Our Genetic Future: The Science and Ethics of Genetic Technology* (1992); P. Gannon, T. Guthrie, and G. Laurie, ‘Patents, Morality and DNA: Should There be Intellectual

the genes that make up the human genome, the role that many of these genes play remains unknown. Unless a useful purpose can be found for these genes, they will not be industrially applicable and, as such, not patentable.<sup>20</sup> This is reinforced by the Biotechnology Directive, insofar as it attempts to clarify the industrial applicability requirement in relation to biological inventions.<sup>21</sup> As the Recitals to the Directive explain, a mere DNA sequence without any indication of function does not contain any technical information and is therefore not a patentable invention.<sup>22</sup> In relation to gene sequencing, the Biotechnology Directive and the Patents Act 1977 (as amended) specify that the industrial application of a sequenced or a partial sequence of a gene must be disclosed in the application.<sup>23</sup>

The Opposition Division at the European Patent Office (EPO) applied this style of reasoning in *Icos Corporation*<sup>24</sup> to deny patent protection for a purified and isolated polynucleotide encoding for the amino acid sequence of the V28 protein.<sup>25</sup> The specification in question listed a number of predicted uses for the claimed protein (in relation to ‘immunological and inflammatory events’). The problem for the applicant, however, was that these uses were based on the *predicted* function of the protein as a receptor.<sup>26</sup> Importantly, the applicants were unable to show that the receptor was actually involved in any specific immunological and/or inflammatory events. The Opposition Division said that it was not enough for the application to disclose uses that were merely speculative.<sup>27</sup> Echoing (but not citing) the Guidelines of the US Patent and Trademarks Office (USPTO),<sup>28</sup> the Opposition Division added that ‘DNA sequences with indications of function which are not substantial, specific, and credible shall not be patentable inventions according to Article 52(1) EPC [2000]’.<sup>29</sup> On this basis, the Opposition Division said that the application lacked industrial applicability and, as such, was not patentable.

A somewhat more pro-industry approach was adopted by the UK Supreme Court in *Human Genome Sciences v. Eli Lilly*,<sup>30</sup> which concerned the validity of a patent that claimed the nucleotide sequence of the human Neutrokin- $\alpha$  gene, which encodes for a

Property Protection of the Human Genome Project?’ (1995) 1 *Med L Int* 321; J. Straus, ‘Patenting Human Genes in Europe: Past Developments and Prospects for the Future’ (1995) 26 *IIC* 920.

<sup>20</sup> On the proposal for a probationary or interim patent pending discovery of the function of a gene sequence, see M. Llewellyn, ‘Industrial Applicability/Utility and Genetic Engineering: Current Practices in Europe and the United States’ [1994] *EIPR* 473, 480.

<sup>21</sup> In *Icos Corporation/Seven transmembrane receptor* [2002] *OJ EPO* 293, [9]. The Opposition Division said that the Recitals to the Biotech. Dir. were relevant as supplementary rules of interpretation when examining European patent applications.

<sup>22</sup> Biotech. Dir., Recital 23.  
<sup>23</sup> Biotech. Dir., Art. 5(3), Recital 22; PA 1977, s. 76A and Sch. A2, para. 6. See also *Decision of the Administrative Council of the EPO of 16 June 1999 amending the Implementing Regulations of the EPC, EPC Rule 23e(3)* [1999] *OJ EPO* 437 (which introduced Biotech. Dir., Art. 5(3), into the EPC 1973).

<sup>24</sup> [2002] *OJ EPO* 293.

<sup>25</sup> The (then) UK Patent Office said that it will follow *Icos Corporation* [2002] *OJ EPO* 293: UK Patent Office, *Biotechnology Examination Guidelines* (September 2002), [33]–[35].

<sup>26</sup> This was because the specification did not disclose any antibody substances that specially recognize V28 protein.

<sup>27</sup> This was based on Biotech. Dir., Recital 23 (which provides that ‘a mere DNA sequence without indication of a function does not contain any technical information and is therefore not a patentable invention’).

<sup>28</sup> The USPTO issued guidelines on the interpretation of the utility requirement under US patent law on 5 January 2001. These state that, for an invention to have requisite utility (which is similar to industrial application), there must be a ‘specific, substantial and credible’ use. The Guidelines are available online at <<http://www.uspto.gov/web/menu/utility.pdf>>

<sup>29</sup> *Icos Corporation/Seven transmembrane receptor* [2002] *OJ EPO* 293 (Opposition Division), [11(ii)].

<sup>30</sup> [2011] *UKSC* 51, following *Human Genome Sciences/Neutrokin*, T 18/09 (21 October 2009).

novel protein.<sup>31</sup> The patent also included predictions about the therapeutic activities of the gene. There were three notable features of the invention. The first was that the Neutrokin- $\alpha$  gene had been found by (bioinformatic) data-mining techniques—that is, computer-assisted sequence homology studies, rather than wet lab techniques. The second was that the novel Neutrokin- $\alpha$  gene was a member of the TNF ligand superfamily of cytokines (which were proteins that acted as intercellular mediators in inflammation and other immune responses). The third was that the function of Neutrokin- $\alpha$  described in the patent was based on its homology (or similarity) to other members of the TNF ligand superfamily. The description of the function of the gene in the patent was not supported in any way by data obtained from *in vivo* or *in vitro* studies; rather, the application of the patented gene was essentially a prediction based on what was known about other members of the TNF superfamily—that is, the gene's function was determined on the assumption that, as a member of a general class of genes, it shared the same functions as other members of that group.

At first instance, Kitchen J held the patent to be invalid on the basis that 'there was nothing in the way of experimental evidence to support the claims about the effectiveness' of the patent.<sup>32</sup> Because the benefits were merely speculative, Kitchen J held that the patent lacked industrial application. The decision was upheld on appeal.<sup>33</sup> Following a similar approach to that of Kitchen J, the Court of Appeal said that to be industrially applicable, the patent needed to show a particular 'use' for the product that had actually been demonstrated—that is, the Court was looking for something more than a reasonable expectation that the molecule would be able to be used for the purposes of research work. A key factor in the Court of Appeal's finding that the patent lacked industrial applicability was that neither the patent nor the common general knowledge identified any disease or condition that Neutrokin- $\alpha$  could be used to diagnose or treat.<sup>34</sup> On the basis that the first step at the onset of research work did not provide an immediate and concrete benefit,<sup>35</sup> the Court held that the patent was too speculative to provide anything of practical value other than information on which a research programme could be based.<sup>36</sup>

In contrast, on appeal to the Supreme Court, the Court was satisfied with a more relaxed test of whether the product has plausibly been shown to be 'usable'.<sup>37</sup> In relation to a new protein and its encoding gene, the Court noted that it was not enough merely to identify the structure of a protein, without attributing a 'clear role' or a 'practical use' for the protein. The key question here was: what did an applicant need to do to show this practical use? The Supreme Court answered by saying that it was not enough to suggest 'a vague and speculative indication of possible objectives that might or might be achieved'.<sup>38</sup> While a merely speculative use would not suffice, the Court was willing to accept that a 'plausible' or 'reasonably credible' claimed use would. The Supreme Court was also willing to accept that an 'educated guess' about the use of an invention could suffice for a patent to be industrially applicable.<sup>39</sup>

<sup>31</sup> More accurately, the patent described the encoding nucleotide, the amino acid sequence, and certain antibodies of a novel human protein, which it calls 'Neutrokin- $\alpha$ ', and includes contentions as to its biological properties and therapeutic activities, as well as those of its antibodies.

<sup>32</sup> *Eli Lilly v. Human Genome Sciences* [2008] EWHC 1903 (Pat), [134].

<sup>33</sup> *Eli Lilly v. Human Genome Sciences* [2008] RPC 29 (CA). <sup>34</sup> *Ibid.*, [234].

<sup>35</sup> *Ibid.*, [149]. <sup>36</sup> *Ibid.*, [145].

<sup>37</sup> *Human Genome Sciences v. Eli Lilly* [2011] UKSC 51, [107]. Drawing upon jurisprudence at the TBA, Lord Neuberger summarized the essence of the Board's approach to Art. 57 in relation to biological material. The 15 principles are set out at *ibid.*

<sup>38</sup> *Max-Planck/BDP1 phosphatase*, T 870/04 [2006] EPOR 14, [6], [7], [21]; *Zymogenetics/Hematopoietic cytokine receptor*, T 898/05 [2007] EPOR 2, [7], [10].

<sup>39</sup> The plausibility could be confirmed by later evidence; although this on its own will not do: *John Hopkins/Factor-9*, T 1324/04 [2006] EPOR 8, [6], [11]; *Genentech/Human PF4A receptors*, T 640/04 [2006]

As Lord Neuberger noted, the important question here was how are we to draw the line between permissible ‘plausibility’ or ‘educated guesses’ on the one hand, and impermissible speculation, on the other. That is: how are we to distinguish between a real possibility of exploitation and a purely theoretical possibility of exploitation?<sup>40</sup> In essence, the way this question is answered depends on the type of evidence that the Court is willing to accept: how specific and precise must the information be for a patent to be industrially applicable? While the lower courts had demanded concrete empirical evidence of use, the Supreme Court was willing to accept the predictions based upon Neutrokin- $\alpha$ ’s membership of the TNF ligand superfamily as evidence of its industrial applicability. As the Supreme Court said, the question to ask was whether, taking common general knowledge into account, it had *plausibly* been shown that the patented molecule was usable. On the facts, the Court held that the disclosure of the existence of Neutrokin- $\alpha$ , its gene sequence, and membership of the TNF ligand superfamily was sufficient to satisfy Article 57 of the EPC. Following the Technical Board of Appeal in *Human Genome Sciences/Neutrokin*,<sup>41</sup> the Supreme Court held that the patent had ‘delivered sufficient technical information . . . to satisfy the requirement of disclosing the nature of the invention and how it can be used in industrial practice.’<sup>42</sup> The fact that further work was required to see whether the disclosure actually had therapeutic benefits did not affect its validity.<sup>43</sup> The upshot of this is that identification of a proposed function of a gene or protein based on homology will be enough to give rise to industrial applicability.<sup>44</sup>

While the threshold for showing industrial applicability for gene- and protein-related inventions may have been raised at the EPO over the last decade, the Supreme Court decision will no doubt please certain parts of the biotechnology industry.<sup>45</sup> Critics who argue that gene patents have a chilling impact on research will, however, be less pleased. In particular, it is now being suggested that the problem with patents over genes is that while a patentee only has to disclose one specific use to show industrial applicability, once this threshold is satisfied they are given control over *all* uses of the patented gene—even those uses that they had not discovered or even imagined. The problem here is that there is a lack of symmetry between what is disclosed and what is protected. This has led some to argue that protection should be limited to what is actually disclosed in the

*EPOR* 8, [6]; *Zymogenetics/Hematopoietic cytokine receptor*, T 898/05 [2007] *EPOR* 2, [8], [21], [27], [31]; *Bayer/Serine protease*, T 1452/06 (10 May 2007), [6]; *Schering/IL-17 related polypeptide*, T 1165/06 (19 July 2007), [25].

<sup>40</sup> We can get a sense of the Supreme Court’s approach to this issue in Lord Neuberger’s statement that ‘it would wrong to set the hurdle for patentability too high’: *Human Genome Sciences v. Eli Lilly* [2011] UKSC 51, [120]; Lord Walker said that the policy goal was to ‘reduce the risk of a chilling effect in investment in bioscience’: *ibid.*, [171]. Interestingly, Lord Neuberger based his argument on the views of the BioIndustry Association (which intervened in the decision) that the purpose of the patent system was to provide a temporary monopoly that acted as an incentive to innovation and also to facilitate the early dissemination of any such innovations: *ibid.*, [99].

<sup>41</sup> T 18/09 (21 October 2009).

<sup>42</sup> *Human Genome Sciences v. Eli Lilly* [2011] UKSC 51, [155], following the TBA in *Human Genome Sciences/Neutrokin*, T 18/09 (21 October 2009), [27].

<sup>43</sup> *Human Genome Sciences v. Eli Lilly* [2011] UKSC 51, [120].

<sup>44</sup> According to the *Examination Guidelines for Patent Applications Relating to Biotechnological Inventions in the Intellectual Property Office* (July 2012), [55], it remains a requirement for polynucleotides that the industrial application must be fully established in the application as filed.

<sup>45</sup> T. Minssen and D. Nilsson, ‘The Industrial Applicability Requirement for Biotech Inventions in Light of Recent EPO & UK Law: A Plausible Approach or a Mere “Hunting License”?’ (2012) 34 *EIPR* 689, 701. See also A. Sharples, ‘Industrial Applicability, Patents and the Supreme Court: *Human Genome Sciences Inc. v. Eli Lilly and Co*’ (2012) 34 *EIPR* 284.

application.<sup>46</sup> Despite its importance, this issue has not yet been given the attention that it clearly requires.

## 4 METHODS OF MEDICAL AND VETERINARY TREATMENT

The second category of subject matter excluded from patentability are inventions for methods of medical and veterinary treatment.<sup>47</sup> Such inventions are excluded to ensure that people who carry out medical or veterinary treatments are not inhibited by patents.<sup>48</sup> As the Enlarged Board of Appeal (EBA) noted, this helps to achieve the socio-ethical and public health goal that '[m]edical and veterinary practitioners should be free to take the actions they consider suited to diagnose illness by means of investigative methods'.<sup>49</sup> Prior to the EPC 2000, methods of medical and veterinary treatment were excluded on the basis that they were not capable of industrial application.<sup>50</sup> Under the EPC 2000, however, methods of treatment and diagnosis are now directly excluded from patentability under Article 53(c), rather than on the basis that they are not capable of industrial application, as was the case previously. Article 53(c) of the EPC 2000 provides that 'a patent shall not be granted for methods of treatment of the human or animal body by surgery or therapy, and diagnostic methods practiced on the human or animal body'.<sup>51</sup> Similar changes were made in the United Kingdom to bring the Patents Act 1977 into line with EPC 2000; the exclusion is now in section 4A of the Act.<sup>52</sup> On the basis that the changes brought about by EPC 2000 in this area were primarily editorial in nature, the EBA has said that the 'actual legal position remains unchanged'.<sup>53</sup> Given this statement, the case law previously decided under the earlier European Patent Convention of 1973 (EPC 1973) is still applicable.

In thinking about the application of this, it is important to keep a number of things in mind. In the following section, we look at some of the more important of these.

### 4.1 METHODS

It is important to note that the exclusion is confined to *methods* of medical and veterinary treatment.<sup>54</sup> As such, it does not prevent the patenting of surgical, therapeutic,

<sup>46</sup> See above at pp. 412–14.

<sup>47</sup> See generally, D. Thums, 'Patent Protection for Medical Treatment: A Distinction between Patent and Medical Law' (1996) 27 *IIC* 423; G. Burch, 'Ethical Considerations in the Patenting of Medical Processes' (1987) 65 *Texas L Rev* 1139 (under US law, methods of medical treatment are patentable).

<sup>48</sup> *Medi-Physics/Treatment by surgery*, G 1/07 [2011] *OJ EPO* 134; *Wellcome/Pigs I*, T 116/85 [1989] *EPOR* 1, [1989] *OJ EPO* 13; *Telectronics/Pacer*, T 82/93 [1996] *EPOR* 409; *See-Shell/Blood flow*, T 182/90 [1994] *EPOR* 320. A technique that results in death of the animal does not fall within the exception.

<sup>49</sup> *Diagnostic methods*, G 1/04 (2006) *OJ EPO* 334 (EBA), 348.

<sup>50</sup> PA 1977, s. 4(2); EPC 1973, Art. 52(4) (both provisions have been repealed). TRIPS, Art. 27(3), allows members to exclude from patentability diagnostic, therapeutic, and surgical methods for the treatment of humans or animals.

<sup>51</sup> While EPC 2000, Art. 53, and PA 1977, s. 4A, are drafted (slightly) differently, it is unlikely that this will have any significant consequences.

<sup>52</sup> Patents Act 2004, cl. 1 (inserting a new s. 4A into the Patents Act 1977). See also HM Government, *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of Responses and the Government's Conclusions* (13 November 2003), [19]–[20]. Minor changes were also made to bring the language in the 1977 Act closer to that used in EPC 2000.

<sup>53</sup> *Diagnostic methods*, G 1/04 (2006) *OJ EPO* 334 (EBA), 360.

<sup>54</sup> PA 1977, s. 4A; EPC 2000, Art. 53(c).

or diagnostic substances, compositions (such as drugs), apparatuses, or products (such as electrocardiogram, or ECG, machines, prosthetic ball and socket joints, or pacemakers).<sup>55</sup>

## 4.2 SURGERY, THERAPY, OR DIAGNOSIS

For an invention to be caught by section 4A/Article 53(c), it must consist of a method of *surgery, therapy, or diagnosis*. We will look at each of these in turn.

### 4.2.1 Surgical methods

‘Surgery’ has been defined as the branch ‘of medicine concerned with the healing of disease, accidental injury or bodily defects by operating on the living body’.<sup>56</sup> It is said to include both ‘conservative (non-invasive) procedures such as repositioning and the far more numerous operative (invasive) procedures using instruments’.<sup>57</sup> In recent years, it has become clear that there are two inconsistent approaches to the way in which surgery is defined:<sup>58</sup> while one line of decisions focused on the *nature* of the physical intervention itself, a second line of decisions concentrated on the *purpose* of the intervention. Under the first and older approach, tribunals looked at the nature of the intervention and asked whether this could be classified as ‘surgery’. This is the approach adopted in the UK. In a second series of decisions, the EPO moved beyond the nature of the intervention itself to focus on the *purpose* of the invention in question. In particular, this second line of decisions focused on whether the physical intervention ‘is suitable for maintaining or restoring health, the physical integrity of the physical well being of a person or animal’.<sup>59</sup> The Enlarged Board of Appeal (EBA) seemed to support this approach when it said (*obiter*) that surgery ‘includes any physical intervention on the human or animal body in which maintaining the life and health of the subject is of paramount importance’.<sup>60</sup>

By emphasizing the purpose of the intervention rather than its nature, a distinction was drawn between two different types of physical intervention in the body. The first, which falls within the definition of surgery, comprises curative practices that aim to maintain or promote health. As the Technical Board of Appeal said in the *General Hospital* decision, surgical treatment aims at protecting curative activities. This means that the exception applies to activities aimed at maintaining and restoring the health, physical integrity, and physical well-being of a person (and also preventing diseases).<sup>61</sup> The second type of physical intervention, which does not qualify as surgery for the purposes of Article 53(c), consists of interventions carried out for non-curative purposes. Under this approach, surgical treatments which were ‘neither clearly suitable nor potentially suitable for maintaining or restoring the health, the physical integrity, or the physical well being of human beings or animals’ did not fall with the exclusion in Article 52(4) of the EPC 1973 (now Article 53(c) of the EPC 2000).<sup>62</sup> On this basis, things such as hair removal, tattooing and

<sup>55</sup> *Joint Medical Products/Ball and socket bearing for artificial joint*, T 712/93 [1998] *OJ EPO* (Special edn) 12; *Visx v. Nidek* [1999] *FSR* 405, 465. <sup>56</sup> *See-Shell/Blood flow*, T 182/90 [1994] *EPOR* 320, 323.

<sup>57</sup> *Ibid.*

<sup>58</sup> The TBA recognized that other approaches, including the risk of the activity, may be applied: *Medi-Physics/Treatment by surgery*, T 992/03 (2007) *OJ EPO* 557, 570.

<sup>59</sup> *General Hospital Corp./Hair removal method*, T 383/03 (2005) *OJ EPO* 159, 165.

<sup>60</sup> *Diagnostic methods*, G 1/04 (2006) *OJ EPO* 334 (EBA), 352.

<sup>61</sup> *General Hospital Corp./Hair removal method*, T 383/03 (2005) *OJ EPO* 159, 165 (the same applies to activities performed on animals).

<sup>62</sup> *Ibid.*, 166.

piercing, the only possible object of which was to beautify the human or animal body, would not fall foul of Article 53(c). This was not the case, however, in relation to breast enlargement or nose reconstructions, which could be used to restore the physical integrity of the body following breast cancer or a car accident, for example.<sup>63</sup> The key difference is that the latter methods *are* potentially suitable for maintaining or restoring the health, physical integrity, or physical well-being of a person.

In *Medi-Physics/Treatment by surgery*,<sup>64</sup> which is a comprehensive and wide-ranging review of European law on the exclusion of surgical methods, the EBA rejected the broad interpretation of ‘surgery’. Instead, it adopted the narrow approach that has been followed in the United Kingdom which says that the definition of surgery relates to the nature of the treatment and not to its purpose.<sup>65</sup> As the EBA said, ‘the meaning of the term “treatment by surgery” is not to be interpreted as being confined to surgical methods pursuing a therapeutic purpose.’<sup>66</sup> As a result, the exclusion is not limited to surgical methods pursuing a therapeutic purpose; *any* method of surgical treatment, whether curative, prophylactic, cosmetic, or for non-therapeutic purposes (such as sterilization), will be caught by the exclusion. In so doing, the Board overturned previous practice in the EPO (such as the *General Hospital* decision), which had held that the only surgical methods to be excluded from patentability were to be those potentially suitable for ‘maintaining and restoring the health, the physical well-being of a human being or animal, and to prevent disease’.<sup>67</sup> It also brought law at the EPO into line with British law.<sup>68</sup>

In reaching its decision in *Medi-Physics*, the EBA was at pains to point out that the speed of technical and medical change meant that it was not possible to provide a definitive definition of ‘surgery’. It also stressed that the question was to be decided on a case-by-case basis. Nonetheless, the Board did say that the exclusion should be limited to the kinds of interventions that represented the core of the medical profession’s activities—that is, the kind of activities for which professionals are specifically trained and for which they assume particular responsibility. More specifically, the Board held that ‘a method should be excluded if it constitutes a non-significant physical intervention, which entails a substantial health risk even when carried out by a medical professional’.<sup>69</sup> In effect, what were excluded were physical interventions on the body that require professional medical skills to be carried out with the required medical professional care and expertise. This ruled out uncritical methods involving only minor intervention and no substantial health risks.<sup>70</sup> On this basis, it was held that invasive techniques of a routine character that are performed on uncritical parts of the body and generally carried out in non-medical commercial environments are not excluded, for example tattooing, piercing, hair removal by

<sup>63</sup> *Ibid.*, 167.      <sup>64</sup> G 1/07 [2011] OJ EPO 34.

<sup>65</sup> In so doing, the EBA endorsed the approach of the *EPO Guidelines*, which state that surgery is defined by ‘the nature of the treatment rather than the purpose’: *EPO Guidelines*, C-IV, 4.8.

<sup>66</sup> *Medi-Physics/Treatment by surgery*, G 1/07 [2011] OJ EPO 34.

<sup>67</sup> This would not have been patentable under UK practice: UK IPO, *Examination Guidelines for Patent Applications Relating to Medical Inventions in the UK Intellectual Property Office* (May 2013), [49].

<sup>68</sup> In 2007, the UK IPO said that the second approach (as outlined in the *General Hospital* decision) was out of step with British practice: UK IPO, *Examination Guidelines for Patent Applications relating to Medical Inventions in the UK Intellectual Property Office* (June 2007), [46]. This was reconfirmed in UK IPO, *Examination Guidelines for Patent Applications Relating to Medical Inventions in the UK Intellectual Property Office* (May 2013), [46]. *Medi-Physics* also aligned with a series of decisions by the TBA at the EPO: *See-Shell/Blood flow*, T 182/90 [1994] EPOR 320; *Georgetown University/Pericardial access*, T 35/99 [2000] OJ EPO 447; *Baxter/Blood extraction method*, T 329/94 [1998] EPOR 363 (focusing on the use of surgical instruments).

<sup>69</sup> *Medi-Physics/Treatment by surgery*, G 1/07 [2011] OJ EPO 34, [3.4.2.3].

<sup>70</sup> *Ibid.*

optical radiation, and micro-abrasion of the skin.<sup>71</sup> The position was the same in relation to non-critical medical interventions with no substantial health risks.

This is in contrast with methods that involve the implanting or insertion of devices by surgical means, or the injection of a contrast agent into the heart, catheterization, and endoscopy, which are excluded. These methods would be excluded on the basis that they encompass a substantial physical intervention on the body that requires professional medical expertise to be carried out and which entails a health risk. In this context, the Board noted that when deciding whether a method for introducing an agent (such as a pharmaceutical) is a surgical method, it is the risk of the invasive procedure and not the risk of side effects that are to be considered.<sup>72</sup>

It is important to remember that for a procedure to be excluded, there must be an *intervention* on the body. ‘Intervention’ has been defined broadly: it does not necessarily need to be invasive or the tissues penetrated; repositioning body limbs or manipulating a body part is ‘surgery’. The need to show intervention on the *body* means that the exclusion does not apply to a process the end result of which is the death of a living being under treatment, either deliberately or incidentally.<sup>73</sup> It also means that a method such as an imaging method, which generates information about the body that is useful for or during surgery, or which allows a surgeon to make real-time decisions during a surgical intervention, is not a method of surgery as such.<sup>74</sup>

While the EBA in *Medi-Physics* held that the question of whether a method is excluded as a method of surgery cannot depend on who carries it out, not least because of changing medical roles in the healthcare systems, nonetheless it did find that the level of medical skill needed to perform a method could be a useful guide in determining whether a method was excluded.<sup>75</sup> This is reflected in the comment by the Board that any operation on the body that needs the skill or knowledge of a surgeon or medical practitioner would be a surgery (such as a method of embryo implantation that required the intervention of a surgeon or a veterinary surgeon).<sup>76</sup>

#### 4.2.2 Therapeutic methods

‘Therapy’ has been interpreted broadly as the curing of a disease or malfunction of the human or animal body<sup>77</sup> and includes *prophylactic* treatments with a view to maintaining health by preventing ill effects that would otherwise arise.<sup>78</sup> It has also been held to include *curative* treatments that aim to cure diseases or bodily malfunctions that have already arisen.<sup>79</sup> On the basis that pregnancy and lice infestation are not diseases,

<sup>71</sup> This test has been followed in subsequent TBA decisions and at the UK IPO, where examiners ask ‘Is the method invasive?’, ‘Does it require professional skill?’, and ‘Does it carry a potential risk?’: *ibid.*, [3.4.2.2]. See also *EPO Guidelines*, G, [4.2.1.1]. The Guidelines say that simple injection methods, either for taking blood samples or introducing compositions would not be regarded as methods of surgery because they involve relatively low levels of technical expertise. This is in contrast to more complicated procedures such as lumbar puncture to deliver epidural injections, which are likely to be excluded: *ibid.*

<sup>72</sup> *Medi-Physics/Treatment by surgery*, G 1/07 [2011] OJ EPO 34, 134.

<sup>73</sup> *Georgetown University/Pericardial access*, T 35/99 [2000] OJ EPO 447, 451.

<sup>74</sup> *Medi-Physics/Treatment by surgery*, G 1/07 [2011] OJ EPO 34. <sup>75</sup> *Ibid.*, [3.4].

<sup>76</sup> *Ibid.*, [50].

<sup>77</sup> *Cygnus/Diagnostic methods*, G 1/04 [2006] OJ EPO 334 (EBA), 352. See E. Ventose, ‘Patent Protection for Therapeutic Methods under the European Patent Convention’ (2010) 32 *EIPR* 120.

<sup>78</sup> *Duphar/Pigs II*, T 19/86 [1988] EPOR 241, [1989] OJ EPO 24.

<sup>79</sup> *Ibid.*; *Unilever’s (Davis) Application* [1983] RPC 219; *Salimen/Pigs III*, T 58/87 [1989] EPOR 125; *Thompson/Cornea*, T 24/91 (1996) 27 *IIC* 530; *Eisai/Second medical indication*, G 5/83 [1979–85] B EPOR 241.

inventions for methods of treatment that prevented pregnancies<sup>80</sup> or removed lice were not caught by the exclusion.<sup>81</sup> However, a method of immunizing against coccidiosis,<sup>82</sup> and another for controlling mange in pigs were held to relate to diseases and, as such, were excluded as methods of treatment by therapy.<sup>83</sup> The exclusion of therapeutic methods applies irrespective of whether the disease or bodily malfunction that the invention seeks to prevent or cure is internal or external and whether it is a temporary or a permanent inflection.<sup>84</sup> It also applies irrespective of the origin of the pain, discomfort, or incapacity that the therapy seeks to remedy.<sup>85</sup> Therapeutic methods (which are seen as being carried out for noble purposes) are often contrasted with cosmetic methods (which are carried out for less important reasons). As such, a method that leads to weight loss for the purpose of curing or preventing obesity would fall within the exclusion;<sup>86</sup> in contrast, a method for weight loss that is undertaken for cosmetic purposes would not and, as such, might be patentable.<sup>87</sup>

#### 4.2.3 Diagnostic methods

After some uncertainty, the nature and scope of the exclusion of diagnostic methods was clarified by the decision of the EBA in *Diagnostic methods*.<sup>88</sup> In this decision, the Board said that methods of diagnosis typically consist of four subsidiary steps.<sup>89</sup>

- (i) *Examination* This involves the collection of data (recording the case history).
- (ii) *Comparison* This data is then to be compared with normal values.
- (iii) *Identification* Any significant deviation from the norm is to be identified (that is, any symptom).
- (iv) *Diagnosis* The ‘deductive medical or veterinary decision phase’ is the final stage at which the diagnosis for curative purposes is made (which represents a purely intellectual or non-technical exercise).

One of the questions that the Board was asked to consider was whether to fall within the exclusion, an application only needed to include the fourth ‘deductive stage’ (a narrow interpretation), or whether it had to include all four stages (a broad interpretation).

<sup>80</sup> *Schering’s Application* [1971] RPC 337; *British Technology Group/Contraceptive method*, T 74/93 [1995] EPOR 279, 284. But a method of contraception that includes a therapeutic method will be unpatentable even where that therapy is present only to counteract the side-effects of the contraceptive method: *General Hospital/Contraceptive methods*, T 820/92 [1995] EPOR 446.

<sup>81</sup> *Salimen/Pigs III*, T 58/87 [1989] EPOR 125.

<sup>82</sup> *Unilever’s (Davis) Application* [1983] RPC 219.

<sup>83</sup> *Wellcome/Pigs I*, T 116/85 [1988] EPOR 1, [1989] OJ EPO 13. *Fatigue is not a disease*: T 469/94 (1998) OJ EPO 12.

<sup>84</sup> *Wellcome/Pigs I*, T 116/85 [1988] EPOR 1.

<sup>85</sup> *Rorer/Dysmenorrhea*, T 81/84 [1988] EPOR 297, [1988] OJ EPO 207.

<sup>86</sup> A method of treating plaque, since it inevitably had a beneficial effect, was held not patentable: *ICI/Cleaning plaque*, T 290/86 [1991] EPOR 157. A claim for the manufacture of the medicament for use in the treatment of certain respiratory disorders where the patient is suffering from a pre-existing heart condition fell foul of s. 4A(1)(a). This was because the inventiveness of the claim lay in the identification by the doctor of the patient as suffering from a heart problem: *Laboratorios Almirall v. Boehringer Ingelheim* [2009] EWHC 102, [289].

<sup>87</sup> A cosmetic method is patentable unless it inevitably has a therapeutic effect. It was therefore possible to patent a method of dieting involving suppression of appetite, since the effect would not necessarily have been positive: *Du Pont/Appetite suppressant*, T 144/83 [1987] EPOR 6, [1986] OJ EPO 301.

<sup>88</sup> *Cygnus/Diagnostic methods*, G 1/04 [2006] OJ EPO 334 (EBA), 352.

<sup>89</sup> As the EBA noted, these four steps overlap. The key point is that a diagnostic method is a multi-step process.

Drawing on a range of factors, the Board adopted the narrow interpretation and said that to fall within the exclusion, *all* four steps needed to be present in an invention.<sup>90</sup> (In so doing, the EBA overturned the decision of the Technical Board of Appeal in *Cygnus*<sup>91</sup> and reinstated the earlier decision of *Bruker/Non-invasive measurement*.<sup>92</sup>) The EBA also said that no distinction should be drawn between essential method steps that have a diagnostic character and non-essential steps that do not.<sup>93</sup> The Board also said that the question of whether a method is excluded as a diagnosis is not dependent on who carries out the method or whether a medical or veterinary practitioner needs to be present;<sup>94</sup> rather:

[W]hether or not a method is a diagnostic method within the meaning of [Article 52(4) of the EPC 1973; Article 53(c) of the EPC 2000] should neither depend on the participation of a medical or veterinary practitioner, by being present or by bearing the responsibility, nor on the fact that all method steps can also, or only, be practiced by medicinal or non-medicinal support staff, the patient himself or herself or an automated system.<sup>95</sup>

A general distinction is now drawn between the act of making a diagnosis (which involves using examination and data to reach a decision) and methods of data acquisition or data processing (the results of which may subsequently be used in diagnosis). If an invention only provides interim or preliminary results (data or information), the invention will not be excluded from patent protection under Article 53(c).<sup>96</sup> Put differently, the exclusion will only apply where an invention makes it immediately possible to decide on a particular course of medical treatment. As a result, a method of taking a sample or determining internal temperature or pH would not, in itself, identify a condition and, as such, would not be classified as a diagnostic method. This means that many diagnostic methods will no longer be caught by the exclusion despite the express language of the EPC 2000 and the Patents Act 1977. It also means that common diagnostic procedures practised on the human body, such as percussion or palpitation could, in principle, be patented because they do not constitute a complete diagnosis. The reasoning of the EBA has been applied in a subsequent decision, which concerned methods for magnetic resonance imaging.<sup>97</sup> On the basis that the invention only led to the acquisition of data, it was held that the invention was not a diagnostic method as defined in Article 52(4) of the EPC 1973 [now Article 53(c) of the EPC 2000].

The approach adopted by the EBA in *Diagnostic methods* has been followed by the UK Intellectual Property Office (IPO). Given the willingness of judges in the United Kingdom

<sup>90</sup> Where a method includes the first and final steps, the intermediate steps may be implied: UK IPO, *Examination Guidelines for Patent Applications Relating to Medical Inventions in the UK Intellectual Property Office* (May 2013), [53].

<sup>91</sup> *Cygnus/Sampling substances*, T 964/99 [2002] OJ EPO 4, 13. The invention, which monitored sugar levels from the skin, thus avoiding the need for the pricking of fingers to collect blood and did not involve all of the steps in medical diagnosis (it only provided information used to make a diagnosis). The Board rejected *Bruker* (see next), and held that the patent was a method of medical diagnosis and, as such, was excluded from patentability. Drawing upon the French text of the EPC 2000, the Board in *Cygnus* said that the EPC ‘does not favour an interpretation limiting the exception to patentability encompassing all steps required for reaching a medical diagnosis’: *ibid.*, 15. Instead, the Board said that ‘any medical activity concerning the gathering of information in the course of establishing a diagnosis qualifies as a diagnostic method’.

<sup>92</sup> *Bruker/Non-invasive measurement*, T 385/86 [1988] EPOR 357, [3.2]–[3.4] (for an invention to be classified as a non-patentable diagnostic method, *all* of the different steps had to present).

<sup>93</sup> *Cygnus/Diagnostic methods*, G 1/04 [2006] OJ EPO 334 (EBA), 356. <sup>94</sup> *Ibid.*

<sup>95</sup> *Ibid.*, 355.

<sup>96</sup> *Bruker/Non-invasive measurement*, T 385/86 [1988] EPOR 357. For criticisms, see R. Moufang, ‘Methods of Medical Treatment under Patent Law’ (1993) 24 *IIC* 18, 46–47.

<sup>97</sup> *Medi-physics/Treatment by surgery*, T 992/03 (2007) OJ EPO 557, 563.

to change British law to ensure that it mirrors the jurisprudence at the EPO, it is unlikely that British courts will deviate from the approach outlined in *Diagnostic methods*. By reading down the scope of the exclusion, it seems that the EBA may reopen concerns about the negative impact that patent law has upon health care and delivery (exemplified most famously by the patents granted to Myriad over both the genes that highlight the propensity to breast cancer and the diagnostic tests that use such genes). The Board has also raised interesting questions about the changing role of technology in the delivery of medical and veterinary care, and whether this should change the way in which we think about the role that patents play in these fields.

#### 4.3 TREATMENT PRACTISED ON OR IN THE BODY

The third point to note is that the exclusion of methods of medical or veterinary treatment only applies to methods of treatment that are practised *on*<sup>98</sup> or *in*<sup>99</sup> the human or animal body. The ambit of this provision has been interpreted broadly to include ‘any interaction with the human or animal body, necessitating the presence of the later’.<sup>100</sup> It has also been suggested that there is no need to show a specific type of interaction with the body. This means that the steps can be either invasive processes (which require physical contact with the body), or non-invasive ones that are practised at ‘a certain distance to it’.<sup>101</sup> The key factor is that the step requires interaction with the body. This means that the exclusion does not apply to methods practised on substances that are removed from the body.<sup>102</sup> Thus neither the treatment of blood for storage in a blood bank nor the diagnostic testing of blood samples is excluded. Similarly, operations that occur at a cellular level (such as the incorporation of an oncogene into the fertilized egg of an animal) are not performed ‘on’ or ‘in’ the body.<sup>103</sup> In contrast, a treatment of blood by dialysis, where the blood is returned to the same body, would be excluded.<sup>104</sup> To be excluded, diagnostic methods must be carried out on the living human or animal body; a method carried out on a dead body, for example to determine cause of death, would not be excluded.<sup>105</sup> While an invention may interact with or relate to a human or animal body, it will only be excluded if it is classed as a form of treatment on the body. In line with this, the Technical Board of Appeal held that ‘a method and apparatus for preventing piglets from suffocating’ by blowing hot air under a mother pig to discourage piglets from going under her was patentable.<sup>106</sup> While the invention protected the body, it was still patentable because the method was not practised *on* the body of the piglet.

As we saw earlier, diagnostic methods typically consist of a number of steps, all of which much be present if an application is to fall within the ambit of the exclusion. While this is all well and good for the purposes of deciding whether an invention is a diagnostic method, it seems that a different approach is adopted when considering whether that diagnostic method is practised on or in the human or animal body. The reason for this is

<sup>98</sup> *Salimen/Pigs III*, T 58/87 [1989] EPOR 125.

<sup>99</sup> *Siemens/Flow measurement*, T 254/87 [1989] EPOR 241, [1989] OJ EPO 171.

<sup>100</sup> *Cygnus/Diagnostic methods*, G 1/04 [2006] OJ EPO 334 (EBA), 357. <sup>101</sup> *Ibid.*

<sup>102</sup> The treatment of body tissues or fluids after removal from the body is not excluded: *EPO Guidelines*, C-IV, 4.3.

<sup>103</sup> *Harvard/Onco-mouse* [2003] OJ EPO 473, 491 (Opposition Division). It added that ‘the incorporation of the oncogene into the genome is a method which is neither surgical nor therapeutic nor diagnostic in nature’.

<sup>104</sup> *EPO Guidelines*, C-IV, 4.8. See *Baxter/Blood extraction method*, T 329/94 [1998] EPOR 363, 367.

<sup>105</sup> *EPO Guidelines*, [54].

<sup>106</sup> *Salimen/Pigs III*, T 58/87 [1989] EPOR 125; *Thompson/Cornea*, T 24/91 [1996] EPOR 19.

that some of the stages in a diagnostic method (particularly the final ‘deductive phase’) are intellectual exercises: they are carried out in the mind of the medical or veterinary practitioner. To get around the problems that this might pose, the Enlarged Board of Appeal said that the requirement that the invention be ‘practised on or in the human or animal body’ is only to be considered in relation to method steps of a *technical* nature; ‘Thus, it does not apply to the diagnosis for curative purposes *stricto sensu*, i.e. the deductive decision phase, which as a purely intellectual exercise cannot be practiced on the human or animal body.’<sup>107</sup> It also seems that the requirement would not be applied where the data gathered is compared to normal values. The requirement that the invention needs to be practised on or in the human or animal body would be important, however, where a step in an invention is deemed to be technical. This might be the case, for example, where part of the diagnosis makes use of a computer program, is carried out *in vitro*, or is carried out in a laboratory.<sup>108</sup> In these cases, because the (technical) step is not practised on the body, it would not fall within the exclusion in Article 53(c) of the EPC 2000.

#### 4.4 DIRECT TREATMENT

In order for a patent to fall within the therapeutic method exclusion, it is necessary to show that the invention constitutes a *direct* treatment by therapy. This means, for example, that while the programming of a pacemaker to control the way in which it uses energy undoubtedly has an indirect effect on the human body, this was held to be more concerned with improving an apparatus than with health.<sup>109</sup> While it is difficult to draw the line between direct and indirect effects, a patent is more likely to fall within the exclusion if it can be shown that there is a ‘corresponding functional link’ between the invention and human or animal health.<sup>110</sup> That is, a method does not fall within Article 53(c) ‘if there is no functional link and hence no physical causality between its constituent steps carried out in relation to a therapy device and the therapeutic effect produced on that body by that device’.<sup>111</sup> In a similar vein, it has been held that to fall within the exclusion, the invention must target a particular illness or disease,<sup>112</sup> and must also provide a ‘defined, real treatment’ of a pathological condition.<sup>113</sup>

#### 4.5 TWO OR MORE USES

One issue that has arisen in this context relates to the familiar complaint about purpose-bound tests—namely, that the same physical activity may be used for different purposes. What would be the case, for example, in relation to the injection of a medicament (such as Botox), which might be administered both to treat a disease and for the purpose of reducing wrinkles? It is clear that so long as an application has a use that falls within the scope of section 4A/Article 53(c), it will be excluded. This is the case even if the invention has other uses that do not fall within the exclusion.<sup>114</sup> Thus an application for a method

<sup>107</sup> *Cygnus/Diagnostic methods*, G 1/04 [2006] OJ EPO 334, 356 (EBA). <sup>108</sup> *Ibid.*, 357.

<sup>109</sup> *Ela Medical*, T 789/96 [2002] OJ EPO 364, 369, [2.2.2.1]. <sup>110</sup> *Ibid.*, 369–70.

<sup>111</sup> *Siemens*, T 245/87 [1989] OJ EPO 171, [3.2.3].

<sup>112</sup> *Sequus Pharmaceuticals*, T 4/98 [2002] OJ EPO 139, 149–50.

<sup>113</sup> *Eli Lilly/Serotonin receptor*, T 241/95 [2001] OJ EPO 103, 109, [3.1.2]. See also *Norsk Hydro*, T 135/98 (20 November 2002) (a feed mixture for optimally satisfying the nutritional requirements of farmed fish was not a medical treatment practised on an animal body).

<sup>114</sup> Unlike PA 1977, s. 1(2)/EPC 2000, Art. 52, the exclusion is not confined to methods of treatment ‘as such’.

of cleaning plaque from human teeth that had both an (excluded) therapeutic effect and a (non-excluded) cosmetic effect was excluded from patentability by Article 53(c) of the EPC 2000 on the basis that the application claimed a therapeutic treatment.<sup>115</sup> While the presence of a surgical step in a multi-step method for treatment of the human or animal body normally confers a surgical character on the method, there may be some instances where this is not the case.<sup>116</sup> On the basis that methods that have a destructive purpose do not fall within the aim of section 4A/Article 53(c), surgery is limited to processes that give ‘priority to maintaining life or health of the human or animal body on which they are performed’.<sup>117</sup> As such, a process that has as its end result the death of a living thing (either deliberately or incidentally) will not be caught by the exclusion—even if the process involves a surgical step. Similarly, the fact that a chemical product has both a cosmetic and a therapeutic effect when used to treat the human or animal body does not render the cosmetic treatment unpatentable.<sup>118</sup>

#### 4.6 METHODS WITH A NUMBER OF STEPS

Where a claimed method involves a number of steps, one or more of which constitutes a method of therapy or surgery (but not diagnosis), the method as a whole will be excluded.<sup>119</sup> Thus a method of producing a transgenic animal that includes a surgical method of embryo transplantation is objectionable under section 4A(1)/Article 53(c).<sup>120</sup> This is not the case, however, with diagnostic methods. This is because, since diagnostic methods are inherently multi-step methods, claims will only be excluded if they include *all of the steps* necessary for making a diagnosis.<sup>121</sup>

#### 4.7 LIMITS

While section 4(A)/Article 53(c) impose important limits on the types of medical and veterinary inventions that may be patented, it would be wrong to assume that all medical and veterinary inventions are excluded from the scope of patent protection. The reason for this is that the potential scope of the exclusion is restricted by the fact that it must be read in light of section 4A(4)/Article 54(5). While we deal with this in more detail later,<sup>122</sup> it is enough to note that these provisions have been construed in such a way that they permit the patenting of uses of known substances for the *manufacture* of a medicament to treat a particular disease.<sup>123</sup> As we will see, while the so-called ‘second medical use’ patents

<sup>115</sup> *ICI/Cleaning plaque*, T 209/86 [1991] EPOR 157, [1992] OJ EPO 414; *Du Pont/Appetite suppressant*, T 144/83 [1986] OJ EPO 30; *General Hospital/Contraceptive methods*, T 820/92 [1995] EPOR 446; *Meiji/Feeds*, T 438/91 [1999] EPOR 452; *Telectronics/Pacer*, T 82/93 [1996] EPOR 409 (if hybrid claims include a feature within the exception, the whole is unpatentable).

<sup>116</sup> *See-Shell/Blood flow*, T 182/90 [1994] EPOR 320; *EPO Guidelines*, C-IV, 4.3.

<sup>117</sup> *Georgetown University/Pericardial access*, T 35/99 [2000] OJ EPO 447, 451. This is in contrast to processes the end result of which is the death of living things ‘under treatment’ either deliberately or incidentally.

<sup>118</sup> *General Hospital Corp./Hair removal method*, T 383/03 [2005] OJ EPO 159, 162.

<sup>119</sup> The mere presence of one therapeutic or surgical step in a multi-step method was enough to exclude that method from patentability: *Medi-Physics/Treatment by surgery*, G 1/07 [2011] OJ EPO 34, [3.2.3.2].

<sup>120</sup> *UK IPO Guidelines*, [68].

<sup>121</sup> *Cygnus/Diagnostic methods*, G 1/04 [2006] OJ EPO 334 (EBA).

<sup>122</sup> See below at pp. 545–8.

<sup>123</sup> *ICI/Cleaning plaque*, T 209/86 [1991] EPOR 157m [1992] OJ EPO 414. For PA 1977, s. 2(6)/EPC 2000, Art. 54(3), to operate, the use must fall within PA 1977, s. 4(2)/EPC 2000, Art. 52(4): *Nycomed/Contrast agent for NMR imaging*, T 655/92 [1988] EPOR 206.

continue to undermine the scope of the exception for methods of medical and veterinary treatment, the question of whether an application relating merely to a new dosage regime is patentable remains controversial.

Because section 4A(4)/Article 54(5) only apply to medical *methods* that use substances or compositions, the exclusion of methods of medical and veterinary treatment still applies where apparatuses and objects are used. The residual scope of the exclusion was reaffirmed by the EPO's Technical Board of Appeal when it resisted attempts to extend the scope of Article 54(5) beyond the use of substances and compositions to include the surgical use of an instrument.<sup>124</sup>

## 5 EXCLUDED SUBJECT MATTER

Up until 1977, for a patent to be valid, it was necessary to show a 'manner of new manufacture'. This phrase, which was first used in the 1624 Statute of Monopolies, proved to be a remarkably versatile and flexible tool which enabled patent law to adapt to and accommodate many of the technological and scientific changes that have taken place over the last two-and-a-half centuries. The passage of the Patents Act 1977 saw a dramatic change in the way in which British patent law determined what was patentable subject matter. The reason for this was that, unlike previous legislation, neither the 1977 Act nor the EPC 1973 upon which it is based contains a definition of 'invention';<sup>125</sup> nor do they expressly require that applicants disclose an invention in order to be patentable. Instead, the 1977 Act and the EPC 2000 contain a non-exhaustive list<sup>126</sup> of creations that are deemed *not* to be inventions.<sup>127</sup> To this end, section 1(2) of the Patents Act 1977, which is the equivalent of Article 52(2) EPC 2000, states:

It is hereby declared that the following (among other things) are not inventions for the purposes of this Act, that is to say, anything that consists of:

- (a) a discovery, scientific theory or mathematical method;<sup>128</sup>
- (b) a literary, dramatic, musical or artistic work or any other aesthetic creation whatsoever;
- (c) a scheme, rule or method for performing a mental act, playing a game<sup>129</sup> or doing business, or a program for a computer;
- (d) the presentation of information;

but the foregoing provisions shall not prevent anything from being treated as an invention for the purposes of this Act only to the extent that a patent or application for a patent relates to that thing as such.

<sup>124</sup> In response to an attempt to patent a second use of a surgical instrument, the Board said that 'a surgical use of an instrument is not analogous to a therapeutic use (of a medicament) . . . since the former is not consumed in the application and could be repeatedly used for the same or even other purposes as well . . . medicaments on the other hand are expended in the process of use and thus have a once for all utility': *Codman/Second surgical use*, T 227/91 [1994] OJ EPO 491, [1995] EPOR 82, [5.2].

<sup>125</sup> Under PA 1949, s. 101, inventions were defined by the phrase 'manner of manufacture'.

<sup>126</sup> See *Lux Traffic v. Pike Signals* [1993] RPC 107, 137ff; *Christian Franceries/Traffic regulations*, T 16/83 [1988] EPOR 65.

<sup>127</sup> G. Kolle, 'The Patentable Invention in the EPC' (1974) 5 IIC 140, 144.

<sup>128</sup> For a discussion of 'mathematical methods', see *Citibank v. Comptroller General of Patents* [2006] EWHC 1676 (Ch), [19], [21] (concept did not merely operate at the rarefied atmosphere of calculus, but also extended to 'lower levels').

<sup>129</sup> On games, see IPO Practice Notice, *Patents Act 1977: Patentability of Games* (25 November 2005, amended 2 November 2006); *Thomas Anderson's Application*, BL O/112/12 (9 March 2012) (application for a word game excluded).

While the decision not to require the existence of an invention as an express requirement for patentability marked an important change in British patent practice, section 1(2) (and Article 52) effectively codified the picture of the invention that had built up in Britain (and most other EPC countries) prior to 1977.<sup>130</sup>

On the face of it, the categories of excluded subject matter share little in common, other than that they are unable to be patented.<sup>131</sup> A number of different explanations are used to justify the exclusions. These vary from the fact that the subject matter is protected by other forms of intellectual property (used to explain the exclusion of computer programs, literary, dramatic, musical, and artistic works, and other aesthetic creations), through to the stifling effect that protection would have on research and development (used to explain the exclusion of discoveries, scientific theories, and mathematical methods). Lurking behind many of the categories of subject matter excluded from protection is an image of the invention as something concrete and technical in character. Whereas an invention leads to a practical concrete result, this is not the case with discoveries, mathematical methods, or scientific theories. Neither is it the case with schemes, rules, or methods for performing a mental act, playing a game, doing business, or the presentation of information—activities that are seen to be abstract and intellectual in nature, and thus not patentable.

While most, but by no means all, of the material listed in section 1(2)/Article 52(2) is excluded because it is abstract and non-technical,<sup>132</sup> this is not the case with computer programs which were excluded because it was thought at the time that the EPC 1973 was drafted, that they were better protected by copyright law.<sup>133</sup> As we will see, a lot of time and effort has been expended in attempting to undo this decision.<sup>134</sup>

## 5.1 AN INVENTION AS A POSITIVE REQUIREMENT FOR PATENTABILITY?

Despite the absence of a need to show the existence of an invention as a precondition for patentability, it has been suggested that for an invention to be patentable, it is necessary to show that the application discloses an invention.<sup>135</sup> In the United Kingdom, support for this view came from the decision in *Genentech's Patent*,<sup>136</sup> where the Court of Appeal said that it was an essential requirement that 'must be satisfied before a patent can properly be granted . . . that the applicant has made an "invention"'. While Lord Mustill said, in *Biogen v. Medeva*,<sup>137</sup> that the requirement that there be an invention may be of relevance in the future, the question of whether the existence of an invention was a separate prerequisite for patentability was left unanswered. As such, the only issue which applicants need

<sup>130</sup> Because the exceptions were intended to harmonize existing laws, pre-1977 case law has been treated as of persuasive value when interpreting the exclusions: *Gale's Application* [1991] *RPC* 305. Over time, pre-1977 decisions have been replaced by decisions of the EPO and other member states.

<sup>131</sup> For a history of Art. 52, see *President's Reference/Patentability of programs for computers*, G 3/08 (12 May 2010). See also J. Pila, 'Art. 52(2) of the Convention on the Grant of European Patents: What Did the Framers Intend?' (2005) 36 *IIC* 755.

<sup>132</sup> Cf. Jacob LJ in *Aerotel v. Telco Holdings* [2007] 1 *All ER* 225, [9].

<sup>133</sup> G. Kolle, 'The Patentable Invention in the EPC' (1974) 5 *IIC* 140, 147–8.

<sup>134</sup> 'Given the ubiquity of computers in modern life it is not surprising that the precise limitations of [PA 1977, s. (1)2(c)] have given rise to difficulty': *Autonomy Corporation v. Comptroller General* [2008] *EWHC* 146, [14].

<sup>135</sup> *EPO Guidelines*, C-IV, 1.1, 2.2; EPC 2000 Regs, rr 27 and 29.

<sup>136</sup> [1989] *RPC* 147, 262. Mustill LJ based his arguments on the wording of PA 1977, s. 1(2), EPC 1973, Art. 52, and the *EPO Guidelines*, C-IV, 1.1, and 2.2.

<sup>137</sup> [1997] *RPC* 1, 31; cf. 42 *per* Lord Hoffmann.

to concern themselves with is whether their invention falls within the scope of the subject matter excluded by section 1(2)/Article 52(2).<sup>138</sup>

## 6 IS THE INVENTION EXCLUDED BY SECTION 1(2)/ARTICLE 52(2)?

The question of whether an invention is denied patent protection on the basis that it falls within one of the excluded categories in section 1(2)/Article 52(2) plays an important role in determining the types of invention protected by patents.<sup>139</sup> Determining whether something ought to qualify as patentable subject matter is an important and often problematic process. In part, this is an inevitable consequence of the fact that the law has to pass judgment over complex and rapidly changing technologies. It is also a consequence of the fact that this area of law has become caught up in a power struggle between the institutions of the European Union and the EPO as to who controls the future of patents in Europe. There was also an ongoing pressure for the threshold for patent protection to be lowered in Europe to ensure that it is on a par with that in the United States (where non-technical business methods are patentable).<sup>140</sup> At the same time, there is a growing concern about the number of trivial patents that have been granted (particularly for computer-related inventions) and the breadth of many gene-based patents. While all of these factors have played their part in muddying the waters, perhaps the single most important reason for the complexity that we now face is because two different approaches are used when deciding whether an invention falls foul of section 1(2)/Article 52(2).

The first approach, which is called the ‘technical effect’ approach, was developed in a series of decisions in the United Kingdom and at the EPO. This approach is currently applied in the United Kingdom. It is similar to the approach that was used at the EPO until (around) 2000. The second approach, often called the ‘any hardware’ approach, was suggested by the Technical Board of Appeal in the *Pension Benefit Systems Partnership* decision.<sup>141</sup> While focusing on the patentability of a business method invention, the decision has broader consequences for the way in which section 1(2)/Article 52(2) is applied. Although the ‘any hardware’ approach was followed in one (then) Patent Office decision in the United Kingdom<sup>142</sup> and incorporated into the EPO’s *Guidelines for Examination*,<sup>143</sup> it was resoundingly rejected by the Court of Appeal in *Aerotel v. Telco Holdings*,<sup>144</sup> and later in *Symbian*,<sup>145</sup> in which the Court reaffirmed the technical effect approach in the United Kingdom. In contrast, the approach adopted in *Pension Benefits*

<sup>138</sup> EPC 1973, Art. 52, is repeated in EPC 2000, Art. 53(2). There are no substantive changes to the patentable subject matter: EPC 2000, Art. 1, item 17.

<sup>139</sup> In some cases, British courts have taken to using the text of EPC 2000, Art. 52, rather than that set out in PA 1977, s. 1(2): see *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [6]. For a general discussion of the position at the EPO, see S. Sterckx and J. Cockbain, *Exclusions from Patentability: How Far Has the European Patent Office Eroded Boundaries?* (2012).

<sup>140</sup> The situation in the United States has changed following the Supreme Court decision of *Alice Corp. v. CLS Bank* (19 June 2014).

<sup>141</sup> *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441.

<sup>142</sup> *John Edward Rose*, BL O/075/01 (14 February 2001).

<sup>143</sup> See *EPO Guidelines*, C-IV, 2; C-IV, 9.5 (amended as of 31 August 2001). See *Notice from EPO* [2001] OJ EPO 464.

<sup>145</sup> *Symbian v. Comptroller-General of Patents* [2008] EWCA Civ 1066, [16].

<sup>144</sup> [2007] 1 All ER 225.

has been applied and expanded in subsequent decisions at the EPO. It has also been confirmed by the EPO Enlarged Board of Appeal as the correct way to approach patentable subject matter.<sup>146</sup>

### 6.1 ‘TECHNICAL EFFECT’ APPROACH IN THE UNITED KINGDOM

While there may occasionally be problems in determining how the rules will be applied in particular situations, the approach taken in the United Kingdom to the question of whether an application falls foul of section 1(2) is relatively straightforward. Put simply, the question asked is: does the invention, when viewed as a whole, make a technical contribution to the art that does not fall within one of the areas excluded by section 1(2)?

One thing that has complicated the law in this area (like many areas of patent law) is the growing tendency for judges, as would-be treatise writers, to reduce the law to a set of rules or guidelines (which are invariably applied as if they were algorithms). This is what occurred in *Aerotel v. Telco Holdings*,<sup>147</sup> where the Court of Appeal said that, to determine whether an invention falls within one of the excluded categories of subject matter, it was necessary to undertake four separate tasks:

- (i) to construe the claim;
- (ii) to identify the contribution;
- (iii) to ask whether the contribution falls within one of the excluded categories; and
- (iv) to check to see whether the invention is technical.

While, as subsequent decisions have noted, the staged approach in *Aerotel* is a useful summary of the law, as the Court of Appeal subsequently said in *Symbian*, it should not be followed blindly.<sup>148</sup> The Court of Appeal in *Symbian* also said that the third and fourth questions in *Aerotel* could be conflated and that the order in which the stages are dealt with could be changed without affecting either the applicable principles or the outcomes. By downplaying the third stage set out in *Aerotel*, the Court of Appeal in *Symbian* restored technical effect as the touchstone for determining patentable subject matter.<sup>149</sup> In so doing, the Court subtly changed the way in which UK courts approach the question of whether an invention falls foul of section 1(2). This is because while the Court of Appeal in *Symbian* said that it was dangerous to suggest that there was a clear rule to determine whether a program was excluded by Article 52(2), it did say that the key question to be asked when determining patentable subject matter is whether the invention, when considered as whole, makes a technical contribution to the known art that does not fall within one of the areas excluded by section 1(2).<sup>150</sup> As we will see below, the decision in *Symbian* to refocus attention on the technical contribution of an application led the Court of Appeal to reject the argument that computer programs were only patentable when

<sup>146</sup> *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010).

<sup>147</sup> [2007] 1 All ER 225, [40] (the patent was subsequently held to be invalid on other grounds).

<sup>148</sup> *Symbian v. Comptroller-General of Patents* [2008] EWCA Civ 1066, [16].

<sup>149</sup> Following *Gameaccount/Gamemachine*, T 1543/06 (29 June 2007), [2.5].

<sup>150</sup> This was on the basis of the Board’s analysis in *Vicom/Computer-related invention*, T 208/84 [1987] OJ EPO 14, the two IBM decisions (*IBM/Data processor network*, T 6/83 [1990] OJ EPO 5, [1990] EPOR 91; *IBM/Computer-related invention*, T 115/85 [1990] EPOR 107), and the UK decisions of *Merrill Lynch’s Application* [1989] RPC 561 (CA) and *Gale’s Application* [1991] RPC 305 (CA): *Symbian v. Comptroller-General of Patents* [2008] EWCA Civ 1066, [49], [51], [59].

they brought about a novel effect outside of a computer. Instead, the question to be asked was whether the program brought about a technical effect or solved a technical problem, which could occur either within or outside the computer.

In explaining the approach that is adopted in the United Kingdom to determine whether an invention falls foul of section 1(2), we will follow the approach outlined in *Symbian* (and subsequent decisions). This requires us to:

- (i) construe the invention;
- (ii) identify the contribution made by the invention; and
- (iii) determine whether the contribution is technical and does not fall within one of the areas excluded by section 1(2).

We will look at each of these in turn.

### 6.1.1 Construe the claim: the ‘whole contents’ approach to interpretation

The first task that needs to be undertaken is that the claims need to be construed to determine the scope of the patented invention. While this may appear to be relatively inconsequential, it has proved to be crucially important in determining the validity of many patents.

In interpreting the scope of the claim, the courts adopt what is known as a ‘purposive’ approach to interpretation—that is, they look at the way the person skilled in the art would construe the claims. This is discussed in Chapter 22. One question that arose in relation to section 1(2)/Article 52(2) was: what happens if an application contains a mixture of both excluded and permitted features? What should be done, for example, if an invention includes a discovery or a computer program that is expressly excluded under section 1(2)/Article 52(2) *as well as* other non-excluded elements? Initially, discussions in this area focused on the meaning that should be given to the proviso to section 1(2)/Article 52(2), which states that the listed exclusions apply only to the extent that the alleged invention relates to that thing *as such*.<sup>151</sup> Given the ambiguous nature of the proviso, it is not surprising that it lent itself to a number of different and sometimes conflicting styles of interpretation.<sup>152</sup>

In determining how applications should be interpreted, courts in the United Kingdom (and the EPO, even after *Pension Benefits*) have come down in favour of what is known as the ‘whole contents’ approach to interpretation.<sup>153</sup> In so doing, they rejected the so-called ‘contribution’ approach (under which the courts would only consider those aspects of the invention that were not excluded).<sup>154</sup> This means that, when considering whether an invention falls foul of section 1(2)/Article 52(2), the courts disregard the fact that the invention has as one of its elements say a computer program or a discovery, and focus instead on the invention *as a whole*. In so doing, the courts have stressed that, when

<sup>151</sup> PA 1977, s. 1(2); EPC 2000, Art. 52.

<sup>152</sup> It was initially suggested that, when determining whether an invention falls within PA 1977, s. 1(2)/EPC 1973, Art. 52, the courts should separate the excluded and non-excluded elements of the application and focus only upon the non-excluded components: *Merrill Lynch’s Application* [1988] RPC 1.

<sup>153</sup> In the United Kingdom, see *Merrill Lynch’s Application* [1989] RPC 561 (CA); *Genentech v. Wellcome* [1989] RPC 147, 204–14, 224ff. At the EPO, see *Vicom/Computer-related invention*, T 208/84 [1987] OJ EPO 14, [1987] EPOR 74; *Kock & Sterzel/X-ray apparatus*, T 26/86 [1988] EPOR 72, [1988] OJ EPO 19.

<sup>154</sup> See *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [26], [32]–[37], in which Jacob LJ said that there was a lot to be said for the contribution approach, but that he was bound by precedent to follow *Merrill Lynch et al.* See also *Cranway v. Playtech* [2009] EWHC 1588, [132]–[134] (which seems not to have followed the ‘whole contents’ approach).

determining whether an invention is patentable, it is not necessary to compare the non-technical and the technical elements of the invention. That is, it is irrelevant that an invention is made up of a mixture of technical and non-technical elements.<sup>155</sup>

### 6.1.2 Identify the contribution made by the invention

While the ‘whole contents’ approach offers guidance where a patent is made up of a mixture of excluded and non-excluded elements, it offers little assistance in helping us to answer the more general question of how the invention ought to be identified. In thinking about the nature of the invention, a number of different approaches could have been adopted. The courts, for example, could have attempted to distil the essence or kernel of the invention from the claims themselves. One of the interesting features of the way in which the invention has been interpreted by UK courts and by the EPO (pre-*Pension Benefits*) is that rather than attempting to identify the essential nature of the invention, they have focused on what the invention does or what it adds. That is, when determining whether an invention falls within section 1(2)/Article 52(2), the courts concentrate upon the *contribution* or *effect* that the invention has upon the known art (or knowledge in the area in question). This is now captured in the second step in the *Aerotel* test, under which the court is required to identify the contribution made by the invention. As a result, when deciding whether an invention falls within one of the excluded categories, it is necessary to construe the claims to identify the contribution made by the invention. Once the invention has been characterized, it is then possible to determine whether it falls within the scope of section 1(2)/Article 52(2).

One of the problems that needs to be confronted when identifying the contribution made by an invention is that applicants may attempt to describe an invention that prima facie falls foul of section 1(2)/Article 52(2) in such a way that it appears to fall outside the scope of the excluded categories. Faced with the possibility of applicants dressing non-patentable inventions up in a way that makes them appear as if they are patentable, the courts have responded by ignoring the *form* of the claims and focusing instead on the *substance* of the invention.<sup>156</sup> In *Aerotel*, the Court of Appeal accepted that the test is an exercise in judgment, involving the problem to be solved, how the invention works, and what its advantages are. The Court also said that the second step was best summed up by the question: what has the inventor really added to human knowledge?<sup>157</sup>

### 6.1.3 Determine whether the contribution is ‘technical’

Once the contribution made by an invention has been identified, it is then necessary to consider whether that contribution falls within any of the categories of excluded subject matter set out in section 1(2)/Article 52(2). Although, in many situations it is relatively easy to determine whether an invention falls within section 1(2)/Article 52(2), in some circumstances this is not the case. In the thirty or so years during which UK tribunals and the EPO (pre-*Pension Benefits*) have been thinking about how applications that are solely made up of excluded subject matter can be distinguished from inventions that happen to include something such as a computer program and are therefore prima facie patentable, a somewhat surprising situation developed: in determining whether an invention falls

<sup>155</sup> *Kock & Sterzel/X-ray apparatus*, T 26/86 [1988] EPOR 72, [1988] OJ EPO 1; *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441, 450; cf. *IBM/Text clarity processing*, T 38/86 [1990] EPOR 606.

<sup>156</sup> *Merrill Lynch’s Application* [1989] RPC 561; *IBM/Document abstracting and retrieving*, T 22/85 [1990] OJ EPO 12, [1990] EPOR 98, 105.

<sup>157</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [43]–[44].

within the scope of section 1(2)/Article 52(2), the courts have ignored the difficult question of whether the invention was, for example, a computer program or a mathematical method; instead, they asked whether the invention-as-claimed was ‘technical’.<sup>158</sup> If the invention exhibits technical character or the problem that it solves is technical,<sup>159</sup> this is taken to mean that it falls outside the scope of section 1(2)/Article 52(2).<sup>160</sup> Conversely, the absence of technical character is treated as virtual proof that the invention falls within the scope of section 1(2)/Article 52(2) and that it is therefore unpatentable. In a sense, what happened—at least in difficult borderline cases—is that the negative criteria set out in section 1(2)/Article 52(2) were recast in more positive terms. This meant that for an invention to be patentable, it was necessary to show that the invention exhibited technical character or, in other words, that it made a technical contribution to the art.

The introduction of technical character (effect or contribution) as a de facto non-statutory requirement for patentability owes its origin to an imaginative interpretation of Article 52 of the EPC 1973 (now Article 52 of the EPC 2000). This stated that what the categories in Article 52(2) have in common is that they are non-technical, either because they are abstract (discoveries, scientific theories) or because they are clearly non-technical (aesthetic creations or presentations of information).<sup>161</sup> Because Article 52(1) and (2) only exclude from protection those inventions that are non-technical, it is a short inductive leap to conclude from this that the term ‘invention’ relates to inventions of a technical nature. This conclusion was reinforced by the rules and guidelines under the EPC, which clearly state that in order for an invention to be patentable, it must be technical.<sup>162</sup>

The use of technical character as a way of determining whether an invention falls within the scope of the excluded subject matter is set out in the leading EPO decision of *Vicom*.<sup>163</sup> In deciding that an application that related to a method of digitally filtering images using a device called an ‘operator matrix’, which aimed at producing enhanced images was patentable, the Technical Board of Appeal (TBA) stressed that even if the idea underlying an invention was a mathematical method, it could still be patentable if the invention as a whole made a technical contribution to the known art.<sup>164</sup>

While some doubts were initially raised in the United Kingdom about the use of technical character as a way of distinguishing inventions that are ‘in reality’ or ‘in truth’

<sup>158</sup> As Lewison LJ lamented, it was regrettable that, because the apparently simple words in Art. 52(2) have no clear meaning, British courts and the Boards of Appeal at the EPO have stopped even trying to understand them (‘Instead of arguing what the legislation means, we argue about what the [technical] gloss means’): *HTC v. Apple* [2013] *EWCA Civ* 451, [143].

<sup>159</sup> *IBM/Data processor network*, T 6/83 [1990] *OJ EPO* 5, [1990] *EPOR* 91; *IBM/Computer-related invention*, T 115/85 [1990] *EPOR* 107. The feature of using technical means for a purely non-technical purpose and/or for processing purely non-technical information does not necessarily confer technical character on any such individual steps of use or on the method as a whole; in fact, any activity in the non-technical branch of human culture involves physical entities and uses, to a greater or lesser extent, technical means.

<sup>160</sup> The mere occurrence of technical features in a claim is not enough: *Pension Benefit Systems Partnership*, T 931/95 [2001] *OJ EPO* 441, 450.

<sup>161</sup> *Sternheimer/Harmonic vibrations*, T 366/87 [1989] *EPOR* 131.

<sup>162</sup> A patentable invention must relate to a technical field (EPC 1973 Regs, r. 27(1)(b)), it must be concerned with a technical problem (EPC 2000 Regs, r. 43(1)), and it must be characterized in the claims by means of technical features (EPC 2000 Regs, r. 43(1)9b)): *EPO Guidelines*, C-IV, 1.2(ii).

<sup>163</sup> *Vicom/Computer-related invention*, T 208/84 [1987] *EPOR* 74, [1987] *OJ EPO* 14. See also H. Beyer, ‘Der Begriff der Information als Grundlage für die Beurteilung des technischen Charakters von programmbezogenen Erfindungen’ [1990] *GRUR* 399.

<sup>164</sup> *Hitachi/Auction method*, T 258/03 (2004) *OJ EPO* 575, 580 (the term ‘invention’ is to be construed as ‘subject matter having a technical character’).

patentable from those that are solely made up of excluded subject matter,<sup>165</sup> British courts followed the lead of the EPO and adopted technical character as a way of determining whether an invention falls within section 1(2).<sup>166</sup> This was highlighted in the Court of Appeal in *Merrill Lynch*, when Fox LJ said:

[I]t cannot be permissible to patent an item excluded by section 1(2) under the guise of an article which contains that item—that is to say, in the case of a computer program, the patenting of a conventional computer containing that program. Something further is necessary. The nature of that addition is, I think, to be found in the *Vicom* case where it was stated ‘Decisive is what technical contribution the invention makes to the known art’. There must, I think, be some technical advance on the prior art in the form of a new result.<sup>167</sup>

While Fox LJ’s language differs in certain respects from that of the TBA, the Court of Appeal accepted that the presence of technical character was sufficient to show that an invention did not relate to a disqualified matter and that, as such, that it was patentable on its face.<sup>168</sup> While there was some uncertainty following *Aerotel* about the role that technical character should play in determining whether an invention is excluded under section 1(2),<sup>169</sup> it is now clear that technical effect is the touchstone to be used to determine whether an application falls foul of one of the excluded categories of subject matter in section 1(2). As Judge Birss said in *Halliburton Energy Service’s Patent Application*,<sup>170</sup> at the heart of the law is the consistent principle that an inventor must make a technical contribution to the art that does not fall within one of the areas excluded by Article 52(2).

One of the advantages of shifting attention towards the idea of technical character is that the courts are able to avoid the difficult task of having to define the subject matter listed in section 1(2)/Article 52(2)—a task that is not only technically problematic, but also one that changes in technology are likely to render obsolete. Indeed, one of the major problems with specific formulations such as section 1(2) and Article 52(2) is that because they are drafted in light of contemporary technologies, they are prone to obsolescence or at least convoluted interpretations.

Whatever advantages there may be in using technical character as a de facto requirement for determining whether an invention falls within the ambit of section 1(2)/Article 52(2), it still leaves us with the difficult task of having to formulate and understand what is meant by the term ‘technical’. As we will see, it is the difficulty in answering this question that led to adoption of the *Pension Benefits* approach at the EPO.

#### (i) What is a ‘technical’ contribution?

Given that the law in this area is underpinned by the consistent principle that an inventor must make a technical contribution to the art that does not fall within one of the areas

<sup>165</sup> *Wang Laboratories* [1991] RPC 463, 470; *Fujitsu’s Application* [1996] RPC 511, 521. The Munich Diplomatic Conference on the establishment of the EPC abstained from limiting the concept of the invention by use of ‘technical’ as was earlier proposed: G. Kolle, ‘Patentable Inventions in the EPC’ (1974) 5 *IIC* 140, 145.

<sup>166</sup> Technical character has become decisive in determining whether or not a patent falls within the scope of s. 1(2): *CIPA*, [1.09].

<sup>167</sup> *Merrill Lynch’s Application* [1989] RPC 561, 569.

<sup>168</sup> *IBM/Document abstracting and retrieving*, T 22/85 [1990] OJ EPO 12, [1990] EPOR 98, 103.

<sup>169</sup> In part, this was prompted by the realization that the word ‘technical’ was inherently vague (which is not surprising, given that it is meant to act as a proxy for the equally vague ‘invention’): *CFPH LLC v. Comptroller-General of Patents, Designs, and Trade Marks* [2006] RPC 259 (‘technical’ is ‘a useful servant but a dangerous master’); *Aerotel v. Telco Holdings* [2007] 1 *All ER* 225, [121]–[124]; *IGT v. Comptroller of Patents* [2007] EWHC 134, [39]; *Re Oneida Indian Nation’s Application* [2007] EWHC 954 (Pat), [9]; *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, [45].

<sup>170</sup> [2011] EWHC 2508, [27].

excluded by section 1(2)/Article 52(2), a key question for determining patentable subject matter is how a technical contribution is to be construed. While the way in which this question is answered changes depending on the technology in question (something at which we look at in more detail below), in this context we will limit ourselves to some general comments about the approach that is taken by the courts when determining whether a contribution is technical.

In the vast bulk of cases, it is relatively easy to determine whether an invention is technical. This is because it is generally accepted that certain types of creations, such as those in the fields of mechanical engineering or organic chemistry, are technical in nature and, as such, that they belong within the remit of patent law. This is made all the easier by the fact that applicants are required to specify the technical field to which their application relates.

While, in most circumstances, it may be easy to determine whether an invention is technical, in some situations this is not the case.<sup>171</sup> This has been the case with inventions in relation to financial systems, software-generating software, language processing, text-editing, and computer programs. In these borderline cases, determining whether an invention is technical is often very difficult. One of the reasons for this is that because computer programs and computer-related inventions are inherently technical, to give some meaning to section 1(2)/Article 52(2) it was not enough merely to say that any technical effect was sufficient for an invention to be patentable. As a result (as we see below), the tribunals have had to determine the type of technical effect that is sufficient to confer patentability.<sup>172</sup> The problems in this area were highlighted by the Comptroller of Patents who complained that ‘in practice it is often very difficult to determine whether a particular invention does as a matter of fact involve the sort of technical contribution or result alluded to in the cases’.<sup>173</sup> The difficulty of this task was borne out by the fact that while the legal studies that prompted the revision of the EPO Guidelines were able to propose ‘technical character’ as one of the ways of determining whether subject matter was excluded from patentability, they were unable to provide a precise definition of what was meant by the term ‘technical’.<sup>174</sup> Instead, they left the task of defining technology to the jurisprudence of the courts.

While the task of having to decide what is meant by a technical creation may have been left to the respective courts, so far they have provided little direct guidance in this matter. In many cases where this issue has arisen, no indication is given as to how a decision was reached as to whether something was technical. In other cases, the tribunals have offered the equally unhelpful ‘it depends on the facts of the case’.<sup>175</sup> Given that the fate of many inventions depends on the way ‘technology’ is defined, it may be helpful to provide some guidance in this matter.

In determining whether an invention is ‘technical’, the courts have tended to fall back on the model of the invention that has long been employed in patent law.<sup>176</sup> This is one that sees the process of invention as the reduction of the abstract to the specific, or as a transformation from the general to the concrete—processes that are mediated by the

<sup>171</sup> See J. Thomas, ‘An Epistemology of Appropriation: Patentable Subject Matter after *State Street Bank*’ [2000] *IPQ* 27, 49ff.

<sup>172</sup> As the EBA explained, the drafters of the EPC saw a computer algorithm as a non-technical, purely abstract, mathematical-logical exercise. The Board noted that computer programs could also validly be seen as defining a procedure to make a machine carry out a task: *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [13.5].

<sup>174</sup> WG/CP/I/1.

<sup>175</sup> *Wang Laboratories* [1991] *RPC* 463, 473. See also *Fujitsu’s Application* [1997] *RPC* 608.

<sup>176</sup> See *NRDC’s Application* [1961] *RPC* 134, 142; *Rote Taube* (1970) 1 *IIC* 136, 137–8.

agency of the human inventor. In turn, this model distinguishes between creations that are abstract, intellectual, mental, undefined, and non-patentable, and those that are concrete, physical, tangible, and patentable.<sup>177</sup> Drawing upon this model of the invention, it has been held that an invention is technical and patentable if it provides or leads to a concrete, causal, or non-abstract result or change in things. When translated into the context of section 1(2)/Article 52(2), this means that if it can be shown that the invention brings about a tangible physical change, this is taken as virtual proof that the invention is technical and that it therefore falls outside the scope of the excluded categories.<sup>178</sup> One question that is yet to be considered in this context is whether recent case law has extended the concept of invention beyond its physical roots to embrace a new type of (immaterial) information-based invention.<sup>179</sup>

The use of physical change to determine whether an invention is technical can be seen in *Vicom* where the Technical Board of Appeal explained how non-patentable mathematical methods could be distinguished from patentable inventions:

[T]he fact that a mathematical method or a mathematical algorithm is carried out on numbers . . . and provides a result also in numerical form, the mathematical method or algorithm being only an *abstract* concept prescribing how to operate on numbers. No direct technical result is produced by the mathematical method as such. [While abstract creations are not patentable,] if a mathematical method is used in a technical process, that process is carried out on a physical entity (which may be a material object but equally an image stored as an electrical signal) by some technical means implementing the method and provides as its result a certain *change* in that entity.<sup>180</sup>

In a move that has important ramifications for many inventions, particularly in the field of information technology, the physical conception of technology has been interpreted very broadly. This is reflected in the comment that ‘physical entities’ includes ‘a real thing, i.e. an image, even if that thing was represented by an electrical signal’.<sup>181</sup> The wide definition given to physical entity can also be seen in the EPO decision of *Kock & Sterzel*.<sup>182</sup> In this case, it was held that the fact that the invention controlled X-ray tubes in such a way as to ensure optimum exposure while minimizing the danger of overloading the tube was sufficient change for the application to be deemed technical.<sup>183</sup> Perhaps the best example of the way in which the meaning of ‘physical entity’ has been extended can be seen in *BBC/Colour television signal*,<sup>184</sup> where it was said that despite its transient character,

<sup>177</sup> The ‘invention must belong not to the field of abstractions or speculations, but to that of practical achievement. It must concern not an abstract principle but a conception which is implemented in industry’: *Christian Francies/Traffic regulations*, T 16/83 [1988] EPOR 65, 70.

<sup>178</sup> The following inventions were held not to be patentable because they did not bring about a physical change: inventions for document abstracting (*IBM/Document abstracting and retrieving*, T 22/85 [1990] EPOR 98); linguistic expression processing (*IBM/Text clarity processing*, T 38/86 [1990] EPOR 606); a system for listing semantically related linguistic expressions (*IBM/Semantically related expressions*, T 52/85 [1989] EPOR 454); a method for automatically detecting and correcting contextual homophone errors in a text document (*IBM/Text processing*, T 65/86 [1990] EPOR 181).

<sup>179</sup> See M. Biagioli, ‘Between Knowledge and Technology: Patenting Methods, Rethinking Materiality’ (2012) 22 *Anthro Forum* 285.

<sup>180</sup> *Vicom/Computer-related inventions*, T 208/84 [1987] EPOR 74, 79.

<sup>181</sup> *IBM/Document abstracting and retrieving*, T 22/85 [1990] EPOR 98, 105.

<sup>182</sup> *Kock & Sterzel/X-ray apparatus*, T 26/86 [1988] EPOR 72, [1988] OJ EPO 14.

<sup>183</sup> See also *IBM/Computer-related invention*, T 115/85 [1990] EPOR 107, [1990] OJ EPO 30 (an invention that automatically gave visual indications of conditions prevailing in an apparatus or system was said to resolve a technical problem).

<sup>184</sup> T 163/85 [1990] EPOR 599, [1990] OJ EPO (Suppl.) 19. On this basis, the invention was held not to fall within EPC 1973, Art. 52(2)(d).

because a television signal could be detected by technical means, it had a physical reality and therefore could not be considered to be an abstract entity. As such, it was *prima facie* patentable.

Another example of the way physical change has been used to help to decide whether an invention falls within section 1(2)/Article 52(2) is *Cappellini and Bloomberg's Application*.<sup>185</sup> While Pumfrey J stressed that he did not think that 'every result must be a physical article before the claim is allowed', he did reject a claim in the application in question on the basis that it was the 'pure manipulation of data without the production of any physical or real-world effect'.<sup>186</sup> Pumfrey J highlighted the important role that physical change plays in determining whether an invention is excluded under section 1(2) when he said that while a claim to an algorithm standing alone may be objectionable, this would not be the case if the claim were tethered to a physical article.<sup>187</sup> Using the language of *Aerotel*, Pumfrey J said that 'there is no contribution lying outside excluded matter until the claim also covers the result of performing the claimed algorithm'.<sup>188</sup>

While the British courts have embraced physical change as a guide to determine whether an invention falls within section 1(2)/Article 52(2), they have (at times) been careful to distance themselves from some of the more liberal readings at the EPO. For example, in *Shopolotto.com's Application*,<sup>189</sup> Pumfrey J cast doubt over the decision of the Technical Board of Appeal in *IBM/Computer program II*,<sup>190</sup> which held that material technical effect was found 'only in computer once programmed with the claimed software'. In so doing, Pumfrey J reinforced a more traditional (empirical) understanding of the invention that has long dominated in British patent law. As we will see below, however, British courts have recently been willing to construe 'technical' more broadly and, in so doing, have brought British law closer to the approach at the EPO.

#### (ii) *Limitations on the use of technical effect to determine patentability*

It is important to note that not all technical contributions or effects will give rise to a patentable invention—that is, 'some apparently technical effects do not always count'.<sup>191</sup>

(a) *Where the technical contribution falls within one of the areas excluded by section 1(2)*  
One situation where a technical effect will not be sufficient to save an invention is where the contribution falls within one of the excluded categories set out in section 1(2)/Article 52. The fact that the exclusions are generic means that an application will be excluded if it falls within one of the excluded categories. This is the case even though it is otherwise 'technical' because, for example, it is carried out on a computer. As the Court of Appeal said in *Symbian*,<sup>192</sup> the computer program exclusion prevents other excluded material becoming patentable merely by use of a computer in its implementation. Thus a business method, mathematical method, or presentation of information implemented on a conventional computer system or network would still be excluded. As we will see below, this logic does not apply to situations where a mental act is carried out on a computer, which would 'never be caught by the mental act exclusion because the claim does not encompass carrying out the calculation mentally'.<sup>193</sup> As a result, it does not matter that an invention leads to a faster, more

<sup>193</sup> *Halliburton Energy Service's Patent Application* [2011] EWHC 2508, [43]. See also *Symbian v. Comptroller-General of Patents* [2008] EWCA Civ 1066, [27].

efficient computer if the effect of the invention is limited to one of the excluded categories. Thus an improved way of presenting information using a computer would not be patentable; so too with a more efficient computerized book-keeping system. The generic nature of the exclusions can be seen in *Merrill Lynch's Application*,<sup>194</sup> where the Court of Appeal was called upon to consider whether an automatic share-trading system which operated using a computer program fell within the scope of section 1(2)(c). While the invention was clearly technical, the Court found that the contribution made by the invention was limited to the field of business (explicitly excluded by section 1(2)(c)) and, as such, was not patentable.<sup>195</sup>

(b) *Where the technical effect is not relevant* Another situation where a technical effect will not be sufficient to save an application from being excluded is where it is deemed to be the wrong *type* of technical effect or, as the courts prefer, the effect is not 'relevant'. The need to distinguish relevant and irrelevant technical contributions was promoted by the realization that because all computer-related inventions are technical in nature, if the presence of technical character of any sort were used as a shorthand for determining whether an invention fell within one of the excluded categories, this would have meant that all computer-related inventions would have satisfied the requirement.<sup>196</sup>

To ensure that section 1(2) is not rendered meaningless (which in the Court of Appeal's eyes is what has happened at the EPO<sup>197</sup>), the UK courts have been forced to deal directly with the issue that has driven a lot of the law in this area—namely, how to reconcile the fact that computer-related inventions are clearly technological with the fact that computer programs *as such* are explicitly excluded from the scope of protection.<sup>198</sup> Faced with this problem, Pumfrey J suggested that not all technical effects are relevant and that, in particular where computer programs are under consideration, 'the technical effect to be identified had to be technical effect over and above that to expected from the mere loading of a program into a computer'.<sup>199</sup> As Floyd J said:

All the difficulties arise because, as matter of ordinary language, the programming of a computer is a technical exercise, and the consequences of so programming it can, in ordinary language, be regarded as achieving a technical effect. It is therefore the case that in applying the exclusion one is seeking to distinguish a relevant technical effect from one which is irrelevant.<sup>200</sup>

<sup>194</sup> [1989] *RPC* 561 (CA). <sup>195</sup> *Ibid.*, 569.

<sup>196</sup> A computer program's 'interdependence with the technical device makes the technical content hard to deny': Mellulis J, as cited in *Symbian v. Comptroller-General of Patents* [2008] *EWCA Civ* 1066, [31]. The technical effect test was 'singularly unhelpful' because the interaction of hardware and software in a computer was inherently technical: *HTC v. Apple* [2013] *EWCA Civ* 451, [147].

<sup>197</sup> In *Fujitsu/File search method*, T 1351/04 (18 April 2007), it was said that, because the claimed method required the use of a computer, it was technical in character and therefore an invention for the purposes of Art. 52. In *Symbian*, the Court of Appeal said that if this view 'represents the Board's view', the exclusion may have lost all meaning: *Symbian v. Comptroller-General of Patents* [2008] *EWCA Civ* 1066, [46].

<sup>198</sup> One of the reasons why it has been so difficult to determine whether an invention involving computer program has a technical effect or makes a technical contribution is because 'computers are self evidently technical in nature': *Halliburton Energy Service's Patent Application* [2011] *EWHC* 2508, [35].

<sup>199</sup> *Shopolotto.com's Application* [2006] *RPC* 29, [9]. See also *Cappellini and Bloomberg's Application* [2007] *EWHC* 476, [5]; *Oneida Indian Nation's Application* [2007] *EWHC* 954, [12] ('it does not follow, just because [a] system of gaming machines is technical, that everything they do (e.g. tracking and controlling the operation of the system) is technical in the sense required').

<sup>200</sup> *Protecting Kids the World Over's Patent Application* [2011] *EWHC* 2720, [14]. In *Halliburton*, Judge Birss QC said that there 'are no doubt cases in which the task carried out [by the computer] is not within the excluded areas but nevertheless there is no technical contribution at all': *Halliburton Energy Service's Patent Application* [2011] *EWHC* 2508, [38].

We look at what is meant by a *relevant* technical effect when we look at the specific applications below.<sup>201</sup>

## 6.2 ‘ANY HARDWARE’ APPROACH AT THE EPO

The second approach used to determine whether an invention falls within Article 52(2)/section 1(2), which is currently applied at the EPO, is called (somewhat pejoratively) the ‘any hardware’ approach. This approach was developed by the Technical Board of Appeal (TBA) in the decision of *Pension Benefits Systems Partnership*<sup>202</sup> and subsequently expanded in *Hitachi*.<sup>203</sup> Under the ‘any hardware’ approach (in its expanded form), an invention will not fall within any of the excluded categories in Article 52(2) if it embodies or is implemented by some technical means (such as a computer). This is the case even if the technical means are used in relation to a non-technical activity. In effect, under the ‘any hardware’ approach, the tribunal will stand back from the invention—whether a method or an apparatus—and ask whether it can be classified as a form of technology (irrespective of whether it is novel or inventive); all that matters is that the invention makes use of, or embodies, some form of technology (or hardware).

The first key decision that outlined the ‘any hardware’ approach was the *Pension Benefits* decision, which was published in 2001. The patent at issue in *Pension Benefits* involved a computer-related invention that performed a number of different tasks which were integral to the operation of pension benefit schemes (such as calculating amounts payable and determining future assets). The patent included both method and apparatus claims for controlling a pension benefits system. The method claim (a method of controlling a pension benefits program by administering at least one subscriber employer account, which is to receive periodic payments) was made up of a series of steps, including the provision of data, determining the average age of all employees, and so on. The apparatus claim was for a data processing means that was arranged to receive and process information to be used to control a pension benefits system.

The approach that the TBA adopted in relation to the *method claim* in *Pension Benefits* was very similar to the approach previously adopted at the EPO and to the approach currently used in the United Kingdom. The Board began by noting that the question to be asked was whether the method claim represented a method of doing business as such. It then went on to characterize the invention, saying that all of the features of the method claim were ‘steps of processing and producing information having purely administrative, actuarial and/or financial character. Processing and producing such information are typical steps of business and economic methods.’<sup>204</sup> On this basis, the Board concluded that the method claim was merely a method of doing business as such and was therefore excluded from patentability under Article 52(2)(c).<sup>205</sup> The mere fact that the invention operated on a computer did not turn the subject matter of the claim into an invention within the meaning of Article 52(1).<sup>206</sup> (As we will see, this aspect of *Pension Benefits* has been modified in *Hitachi*.)

While the Board found that the method claims fell foul of Article 52(2), this was not the case with the *apparatus claims*. The apparatus claims in question were for an apparatus consisting of a suitably programmed computer or system of computers. In considering

<sup>201</sup> See pp. 482–4. <sup>202</sup> *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441.

<sup>203</sup> *Hitachi/Auction method*, T 258/03 [2004] OJ EPO 575.

<sup>204</sup> *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441, 449. <sup>205</sup> *Ibid.*

<sup>206</sup> *Ibid.*

whether the apparatus claims were patentable, the Board made a number of general comments. The Board began by noting that there are four basic requirements for patentability under the EPC—namely, that there must be an invention, and that the invention must satisfy the requirements for industrial applicability, novelty, and inventive step.<sup>207</sup> The Board also said that the basic test of whether there is an invention within the meaning of Article 52(2) is *separable and distinct* from the questions of whether the subject matter is susceptible of industrial application, is new, and involves an inventive step.<sup>208</sup> The Board added that, ‘in addition to these basic requirements’, the EPC and the Implementing Regulations implicitly contain the further requirement that the invention must be of technical character.<sup>209</sup>

The Board also considered the way in which an invention should be characterized when deciding whether it complies with Article 52(2). In particular, it looked at the ‘contribution’ approach (then) recommended in the EPO *Guidelines for Examination* (which is basically the same as the approach used in the United Kingdom). These said that when deciding whether an invention complied with Article 52, it was necessary to:

... disregard the form or kind of claim and concentrate on its content in order to *identify the real contribution* which the subject matter claimed, considered as a whole, adds to the known art. If this contribution is not of a technical character, there is no invention within the meaning of Art 52(1).<sup>210</sup>

The Board said that there were a number of problems with the contribution approach.<sup>211</sup> The first and most general was that:

[There] is no basis in the EPC for distinguishing between “new features” of an invention and features of that invention which are known from the prior art when examining whether the invention concerned to be an invention within the meaning of Article 52(1) EPC.<sup>212</sup>

The contribution approach was also criticized because it failed to keep the Article 52(1) inquiry separate and distinct from industrial applicability, novelty, and inventive step. The Board also said that the contribution approach confused the requirement of ‘invention’ with the requirements of ‘novelty’ and ‘inventive step’.<sup>213</sup> Moreover, the Board believed that the contribution approach incorrectly imported issues relating to inventive step into the inquiry into whether a patent complied with Article 52(1).<sup>214</sup> As a result,

<sup>207</sup> EPO Guidelines, C-IV, 1.1. (The Guidelines were changes as of 31 August 2001 to bring them into line with EPO case law on computer-related inventions.)

<sup>208</sup> EPO Guidelines, C-IV, 1.2.

<sup>209</sup> *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441, 454, following EPO Guidelines, C-IV, 1.2.

<sup>210</sup> EPO Guidelines, C-IV, 2.2 (emphasis added). The revised Guidelines have taken out the reference to the contribution made by the invention.

<sup>211</sup> The Board said that the distinction drawn between a method of doing business and an apparatus situated to perform such a method was justified by the fact that while ‘schemes, rules and methods’ are non-patentable categories in the field of economy and business, the category of ‘apparatus’ in the sense of ‘physical entity’ or ‘product’ is not mentioned in EPC 1973. Art. 52(2) (now EPC 2000, Art. 52(2)): *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441, 452.

<sup>212</sup> *Ibid.*, 454.

<sup>213</sup> The TBA cited the German Federal Court of Justice (BGH) decision of *Sprachanalyseeinrichtung (Speech Analysis Apparatus)*, X ZB 15/98 (11 May 2000) [2002] OJ EPO 415. For further discussion, see *Dell USA*, BL O/177/02 (24 April 2002), [24].

<sup>214</sup> The Board said that the contribution approach used to determine whether a patent complied with Art. 52(1) was ‘so very closely related to examination with regard to the requirement of inventive step that the examining division decided in fact implicitly that there was lack of inventive step under Article 56 EPC’: *Pension Benefit Systems Partnership*, T 931/95 [2001] OJ EPO 441, 455.

the TBA rejected the contribution approach saying that there ‘is no basis in the EPC for applying this so-called contribution approach.’<sup>215</sup>

Rather than looking at the contribution made by the invention and determining whether this was technical, the Board focused on the *character* of the invention. That is, the Board attempted to distil the essence or kernel of the invention, rather than looking at what the invention did. On the facts, the Board said that what was claimed was a computer system suitably programmed for use in a particular field. Once the invention had been characterized, the next question to be decided was whether the invention exhibited the requisite technical character. In answering this question, the Board said that:

[A] computer system suitably programmed for use in a particular field, even if that is the field of business and economy, has the character of a concrete apparatus in the sense of a physical entity, man-made for a utilitarian purpose.<sup>216</sup>

Given that an invention is likely to have a technical character if it leads to or produces a physical change in things, it is not surprising that the Board said that an ‘apparatus constituting a physical entity or concrete product suitable for performing or supporting an economic activity, is an invention within the meaning of Article 52(1) EPC.’<sup>217</sup> Unlike the situation with the method claim, the apparatus claim could not be classified as a method of doing business and, as such, did not fall foul of Article 52(1). (It is important to note that the patent was refused on the basis that it lacked inventive step.) The upshot of the reasoning in *Pension Benefits* is that a claim to a *method* that consists of an excluded category will be excluded, even if hardware is used to carry out the method. In contrast, a claim to an *apparatus* itself, being concrete, is not caught by Article 52(2).

The reasoning that was developed by the TBA in *Pension Benefits* was applied and expanded in *Hitachi*.<sup>218</sup> The invention in *Hitachi* was an automatic auction method executed in a server computer. In essence, the invention was for a method of carrying out a Dutch auction—that is, an auction in which the seller starts at a high price, which is lowered until a bid is received. As in *Pension Benefits*, the application included both a product and a method claim. The Board began by reaffirming that there was no basis in the EPC for applying the contribution approach when deciding whether an invention falls foul of Article 52 of the EPC.<sup>219</sup> The Board also said that because the reasoning used in *Pension Benefits* was independent of the category of the claim, it would be inconsistent to reject the contribution approach for apparatus claims but not for method claims. On this basis, the Board held that:

In order to be consistent with the finding that the so-called contribution approach . . . is inappropriate for judging whether claimed subject-matter is an invention within the meaning of the Article 52(1) EPC there should be no need to further qualify the relevance of technical aspects of a method claim in order to determine the technical character of the method.<sup>220</sup>

While in *Pension Benefits*, the Board of Appeal had only been willing to apply the ‘any hardware’ approach to apparatus claims (preferring to retain the contribution approach for the method claim), this was not the case in *Hitachi*, where the Board applied the ‘any hardware’ approach to both apparatus *and* method claims.<sup>221</sup> That is, the Board

<sup>215</sup> Ibid., 442.      <sup>216</sup> Ibid., 452.      <sup>217</sup> Ibid., 453.

<sup>218</sup> *Hitachi/Auction method*, T 258/03 [2004] OJ EPO 575.      <sup>219</sup> Ibid., 581–2.      <sup>220</sup> Ibid.

<sup>221</sup> In this sense, we see *Hitachi* as a continuation of the approach that was begun in *Pension Benefits*, T 931/95 [2001] OJ EPO 441. Cf. the comments by the UK Court of Appeal that these decisions were ‘mutually contradictory’: *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [25].

concluded that a method involving a technical means is an invention within the meaning of Article 52(1). The upshot of *Hitachi*, which has been applied in subsequent decisions at the EPO,<sup>222</sup> is that (i) a claim to *hardware* is not caught by Article 52(2), and (ii) a claim to a *method* of using that hardware is also not excluded. This means that so long as a technical means such as a computer is used, the resulting invention will not fall foul of Article 52(1). This is the case even if the invention is for a purely non-technical purpose.

There are a number of notable features of the ‘any hardware’ approach. The first relates to the way in which the invention is characterized when determining whether it complies with Article 52(1). A key feature of the approach is the belief that it is not appropriate to look to the contribution made by the invention; instead, it requires the tribunal to look to the character or essence of the invention. The contribution made by the invention is only looked at when novelty and inventive step are examined. One of the consequences of this is that under the ‘any hardware’ approach, the tribunal is more concerned with categorizing the subject matter in question than with asking whether the application has disclosed an invention.

As the Board noted in *Hitachi*, the broad interpretation given to the term ‘invention’ under the ‘any hardware’ approach means that it will include activities that are so familiar that their technical character tends to be overlooked, such as the act of writing using pen and paper.<sup>223</sup> In the words of the EBA, a computer-readable data storage medium and a cup both have technical character.<sup>224</sup> The breadth of the ‘any hardware’ approach can be seen in the *Microsoft/Clipboard formats I* decision.<sup>225</sup> The application in question, which was for a way of ‘facilitating data exchange across different formats’, consisted of both method claims and a claim to a program on a computer-readable medium. The Board said that the ‘method was implemented in a computer and this amounted to a technical means sufficient to escape the prohibition in Article 52’.<sup>226</sup> As Kitchin J said in *Astron Clinica*, ‘the Board in *Microsoft/Clipboard formats* appears to have found that any program on a carrier has a technical character and so escapes the prohibition in Article 52’.<sup>227</sup> While the ‘any hardware’ approach has meant that more applications are now able to satisfy Article 52, it does not mean that the applications will necessarily be patentable. That is, while the approach has made it easier to satisfy the subject matter threshold at the EPO, this does not mean that all inventions will necessarily cross the threshold. For example, in *Pitney Bowes/Undeliverable Mail*,<sup>228</sup> an application for a method of responding by a mailer to notice from a postal service that a piece of mail was undeliverable was held to fall within Article 52(1). The telling factor in this case was that no technical means whatsoever were described in the application. The fact that the invention *might* have been implemented by an unspecified technical process was not enough to prevent the application from being excluded on the basis that it was for a method of doing business for the purposes of Article 52(2)(c).<sup>229</sup> Another reason why the ‘any hardware’ approach does not necessarily mean that more inventions will now be patentable is because the invention still needs to be new, non-obvious, and susceptible to industrial application. One of the consequences of the ‘any hardware’ approach is that it has shifted the focus of attention at the EPO away from an inquiry into whether a patent complies with Article 52(1) towards an inquiry

<sup>222</sup> See, e.g., *Man/Provision of product-specified data* [2007] OJ EPO 421, 427 (the claims in question did not bear scrutiny in light of *Pension Benefits* and *Hitachi*); *Pitney Bowes/Undeliverable mail*, T 388/04 [2007] OJ EPO 16.

<sup>223</sup> *Hitachi/Auction method*, T 258/03 [2004] OJ EPO 575, 585.

<sup>224</sup> *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [9.2].

<sup>225</sup> *Microsoft/Clipboard formats I*, T 424/03 (23 February 2006). <sup>226</sup> *Ibid.*, [5.1].

<sup>227</sup> *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, [39].

<sup>228</sup> T 388/04 [2007] OJ EPO 16. <sup>229</sup> *Ibid.*, 23.

into whether there is an inventive step (and, arguably, also novelty and industrial applicability).<sup>230</sup> This is spelt out clearly in the revised EPO Guidelines which say that when examining computer-related inventions, it may ‘be more appropriate for the examiner to proceed directly to the questions of novelty and inventive step, without considering beforehand the question of technical character.’<sup>231</sup> The shift towards inventive step is reinforced in the Guidelines by the fact that:

[When] assessing whether there is an inventive step, the examiner must establish an objective technical problem. The solution of that problem constitutes the invention’s technical contribution to the art. The presence of such technical information establishes that the claimed subject matter has a technical character and therefore is indeed an invention within the meaning of Art. 52(1).<sup>232</sup>

The shift has also been confirmed in subsequent decisions at the EPO, which have focused on inventive step rather than exclusion from patentability.<sup>233</sup>

### 6.3 COMPARING THE DIFFERENT APPROACHES

The ‘any hardware’ approach and the ‘technical effect’ approach represent very different ways of approaching the question of how patentable subject matter should be determined. The key difference between the approach that has been adopted in the United Kingdom and that adopted at the EPO relates to the way the ‘invention’ is construed. In essence, the ‘any hardware’ approach differs from the UK approach in two ways. The first is in terms of the way the invention is characterized: while British courts look to the contribution made by the invention, this approach has been rejected at the EPO, where the focus is on the nature of the invention. As the Technical Board of Appeal said, ‘the technical character of an invention is an inherent attribute independent of the actual contribution of the invention to the state of the art’.<sup>234</sup> The second way in which the two approaches differ is in terms of the way technical character is determined. Technical character may be implied at the EPO in at least three ways: (i) implied by the physical features of an entity; (ii) implied by the nature of the activity; or (iii) conferred on a non-technical activity by the use of a technical means.<sup>235</sup> While the UK courts have adopted the first two approaches, they have rejected the third.

One of the consequences of adopting the ‘any hardware’ approach at the EPO is that far fewer applications will be rejected on the basis that they do not have the appropriate subject matter. The impact that the different approaches have on the way in which an application is examined was highlighted by the Enlarged Board of Appeal (EBA), using the example of the fate of a patent application that claimed a cup carrying a picture (a company logo).<sup>236</sup> The effect of the application was information, brand awareness, and aesthetic

<sup>230</sup> The ‘inference from *Pension Benefit* . . . is that lack of technical contribution might be a matter for inventive step rather than exclusion from patentability’: *Dell USA*, BL O/177/02 (24 April 2002), [27].

<sup>231</sup> *EPO Guidelines*, C-IV, 2.3. <sup>232</sup> *Ibid.*

<sup>233</sup> *Comvik/Two identities*, T 641/00 [2003] OJ EPO 352; *International Computers/Information modelling*, T 49/99 (5 March 2002). As the EBA said, the adoption of the any hardware approach does not mean that the ‘list of subject-matters in Article 52(2) . . . has no effect on’ patentability; rather, what has happened is that these factors are now taken into account when considering inventive step, where an ‘elaborate system for taking that effect into account in the assessment of whether there is an inventive step has been developed’: *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [10.13.1].

<sup>234</sup> *Quest International/Odour selection*, T 619/02 [2007] OJ EPO 63, 84.

<sup>235</sup> *Hitachi/Auction method*, T 258/03 [2004] OJ EPO 575, 585.

<sup>236</sup> *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [10.6]. The nature of the change brought about by *Pension Benefits* and the impact that it has on the way in which a patent is

pleasure. Under the ‘technical effect’ (or contribution) approach, ‘cups are known, so that the “contribution to the art” is only in a field excluded from patentability’.<sup>237</sup> As such, it would be excluded. In contrast, according to the ‘any hardware’ approach, the claimed subject matter is considered without regard to the prior art. Applying this approach, a claim to a cup would not be excluded from patentability by Article 52(2) at the EPO. This is because ‘whether or not the claim also includes the feature that the cup has certain picture on it is irrelevant’.<sup>238</sup> It would, however, be rejected in the United Kingdom.

While initial reactions in the United Kingdom were mixed,<sup>239</sup> in *Aerotel* the Court of Appeal clearly rejected the ‘any hardware’ approach, suggesting that it ‘must be wrong’ and that it was ‘not intellectually honest’.<sup>240</sup> The rejection of the approach was confirmed by the Court of Appeal in *Symbian*, which made it clear that the ‘any hardware’ approach should not be followed in the United Kingdom.<sup>241</sup> A number of reasons have been given for not following the approach in the United Kingdom, perhaps the most pertinent being that the EPO’s approach to patentability goes hand-in-hand with its approach to inventive step which is not followed in the United Kingdom.<sup>242</sup> Jacob LJ also said that *Pension Benefits* and like-minded decisions at the EPO were based on the mistaken assumption that the various categories of excluded subject matter were all limited to something abstract or intangible.<sup>243</sup> This reflects earlier criticisms of *Pension Benefits* that it runs contrary to a number of British Court of Appeal decisions that had held that claims directed to a system (hardware or apparatus) did not avoid the terms of section 1(2) of the Patents Act 1977.<sup>244</sup> The Board’s decision was also criticized because it contradicts the established

examined can be seen in the Patent Office decision in *James Shanley*, in which the contribution approach and the *Pension Benefits* approach were applied to the same facts: *James Shanley*, O/422/02 (16 October 2002). The invention in question was for dismountable partitions for buildings (which included both flat and curved panels). Using the contribution approach, the Hearing Officer said that the contribution made by the invention was wholly aesthetic insofar as it was solely directed ‘to altering appearances’. Because the invention neither solved a technical problem nor made a contribution in a non-excluded field, the application was excluded by s. 1(2)(b). The Hearing Officer then went on to consider how the invention would have fared under the *Pension Benefits* approach. After reviewing the TBA’s decision, the Hearing Officer said that ‘what is claimed is a partition for buildings, and since this, taken as a whole and without regard to whether or not any technical contribution is involved, manifestly has a technical character . . . I would have to find that what is claimed . . . is an invention under section 1(2)’: *ibid.*, [22]. Because the Officer was bound by UK decisions, he did not follow the *Pension Benefits* approach. The interesting question here is whether the application would have satisfied the requirements of inventive step.

<sup>237</sup> *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [10.6].

<sup>238</sup> *Ibid.*

<sup>239</sup> In one Patent Office decision, the *Pension Benefits* approach was used to decide whether an application for ‘behaviour modification’ fell within s. 1(2): *John Edward Rose*, O/075/01 (14 February 2001) (as in *Pension Benefits*, the application was eventually excluded on the basis that it lacked inventive step).

<sup>240</sup> *Aerotel v. Telco Holdings* [2007] 1 *All ER* 225, [27]–[29]. Jacob LJ’s arguments in this regard are far from convincing. In particular, it is difficult to imagine an application for an iPod loaded with a new piece of music being non-obvious. Interestingly, most of the criticisms of the EPO decisions are in relation to the way in which they applied inventive step, rather than how their approach excluded subject matter.

<sup>241</sup> *Symbian v. Comptroller-General of Patents* [2008] *EWCA Civ* 1066, [48]–[51].

<sup>242</sup> *Halliburton Energy Service’s Patent Application* [2011] *EWHC* 2508, [79(iii)].

<sup>243</sup> *Aerotel v. Telco Holdings* [2007] *RPC* 117, [30]. Jacob LJ added (*ibid.*) that we ‘have already observed that the categories are disparate with differing policies behind each. There is no reason to suppose there is some common factor (particularly abstractness) linking them. The *travaux préparatoires* at least confirm this.’

<sup>244</sup> *Merrill Lynch’s Application* [1989] *RPC* 561 (CA) (not possible to patent under the guise of an article that contains that item); *Fujitsu’s Application* [1997] *RPC* 608 (CA) (‘the fact that the invention was claimed as a method, a way of manufacture or an apparatus was irrelevant when the only invention claimed revolved around the use of a computer program’). Cf. ‘[A] computer system suitably programmed for use

British view that questions of patentability should be decided as a matter of substance and not according to the actual form of the words.<sup>245</sup>

To date, there has been little to suggest that the different approaches adopted in the two jurisdictions have led to different results. Given that many of the applications excluded in the United Kingdom via the contribution approach under section 1(2) would be excluded under the ‘any hardware’ approach at the EPO because they lack inventive step, it is unlikely that the different approaches will lead to different results.<sup>246</sup> This was reflected in Lord Justice Kitchen’s comment that ‘whichever route is followed, one ought to end up at the same destination.’<sup>247</sup> Despite this, the growing divergence between the two jurisdictions is not desirable—particularly because there are suggestions that the ‘any hardware’ approach is having an impact in other areas of patent law at the EPO. Given that the EBA has confirmed existing practice at the EPO in this area, however, it seems unlikely that the EPO will change its approach in the future. One option is for legislative reform: as the EBA said, when ‘judiciary-driven legal development meets its limits, it is time for the legislators to take over.’<sup>248</sup> However, given the problems that have prevented legislative changes in relation to computer-related inventions in the past, it is highly unlikely that reform will occur. As such, it seems that the only option for change is for the UK courts to adopt the ‘any hardware’ approach. Given that British courts are free, but not bound, to depart from previous jurisprudence on a specific issue in patent law where the EPO Boards of Appeal have developed a settled view (which was not ‘plainly unsatisfactory’<sup>249</sup>)—which, in the eyes of the EBA, has occurred—it will be interesting to see whether UK courts jettison the contribution approach in favour of the ‘any hardware’ approach. Given that there has been a consistent string of decisions in the United Kingdom in support of the contribution approach, this is unlikely. If this were to occur, it would mark a radical change in British patent law.

## 7 SPECIFIC APPLICATIONS

Having looked at the general approaches taken to the question of whether an invention falls within the scope of section 1(2)/Article 52(2), we now look at the way in which the law deals with a number of specific types of inventions. These are: (i) naturally occurring substances and discoveries; (ii) computer programs and computer-related inventions; (iii) methods of doing business; (iv) the presentation of information; and (v) methods for performing a mental act. After looking at these specific applications, we will look at possible reforms, particularly in relation to computer programs and computer-related inventions.

in a particular field, even if that use, for example, the field of business and economy, has the character of a concrete apparatus, in the sense of a physical entity or product and is thus an invention within the meaning of Article 52(1): *EPO Guidelines*, C-IV, 2.3.

<sup>245</sup> This has led the (then) Patent Office to conclude on a number of occasions that it is bound to follow the contribution approach set out in UK courts and not the approach advocated in *Pension Benefits*. See, e.g., *Hutchins’ Application* [2002] RPC 264, 270; *Pintos Global Application*, BL O/171/01 (6 April 2001), [20]–[29].

<sup>246</sup> *Halliburton Energy Service’s Patent Application* [2011] EWHC 2508, [79(ii)]; *Cappellini and Bloomberg’s Application* [2007] EWHC 476, [9].

<sup>247</sup> *HTC v. Apple* [2013] EWCA Civ 451, [41]; *Cappellini and Bloomberg’s Application* [2007] EWHC 47 (*Pension Benefits* was the correct result, but by the wrong approach).

<sup>248</sup> *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [7.2.7].

<sup>249</sup> *Actavis UK v. Merck & Co.* [2008] EWCA Civ 444, [48]; *Human Genome Sciences v. Eli Lilly* [2011] UKSC 51, [3].

When thinking about these specific forms of subject matter, it is important to keep in mind the different approaches that are taken in the United Kingdom and at the EPO. While the EPO case law prior to *Pension Benefits* is still important in the United Kingdom, the liberalization brought about by the ‘any hardware’ approach means that it may no longer be as important at the EPO. Moreover, while the different approaches have not had much of an impact at least to date in relation to discoveries and natural substances, they have played an important role in the way in which the other forms of subject matter have been treated.

## 7.1 DISCOVERIES AND NATURAL SUBSTANCES

Advances in genetic engineering over the last few decades have enabled scientists to isolate and replicate a host of naturally occurring substances. Given the considerable investment that has been made in this research, it is not surprising that attempts have been made to patent the results of that research. In part, the extent to which this biological research is patentable depends on whether the resulting products and processes are treated as discoveries or inventions. The reason for this is that discoveries as such are excluded from the remit of patentable subject matter.<sup>250</sup> However, if it can be shown that when viewed as a whole, an application that incorporates a discovery brings about a technical change, it may be patentable. This means that if a person finds a new property of a known material or article, this will be treated as an unpatentable discovery—but if that person puts the property to a practical use, the invention may be patentable. For example, the discovery that a known material is able to withstand mechanical shock would not be patentable—but a railway sleeper made from that material could well be patentable.<sup>251</sup>

In thinking about the extent to which biological products and processes are patentable, it is important to bear in mind that patent law distinguishes between naturally occurring substances (unpatentable discoveries) and the products and processes that result from the human effort in isolating those substances from their natural environment (patentable inventions).<sup>252</sup> To put it another way, a distinction is drawn between those things that freely exist in nature (and which can be only unearthed or discovered) and those things that are artificial (and which contain the necessary degree of human intervention for the resulting product to be called an invention).<sup>253</sup>

Given this, the important question that we need to consider is: what is the difference between something that is ‘natural’ and thus unpatentable, and something that is ‘artificial’ and thus potentially patentable? More specifically, given that the act of discovery and the act of invention often both involve a considerable amount of time, effort, skill, and labour, we need to ask: what type of effort is needed for an activity to be described as an

<sup>250</sup> PA 1977, s. 1(2)(a); EPC 2000, Art. 52(2)(a). On attempts to protect discoveries, see F. Neumeyer, ‘Legal Protection of Scientific Discoveries’ [1975] *Industrial Property* 348; K. Beier, ‘Scientific Research, Patent Protection and Innovation’ [1975] 6 *IIC* 367; E. Kitch, ‘The Nature and Function of the Patent System’ (1977) 20 *JL & Econ* 265, 288. For the current position in the United States, see *Mayo v. Prometheus* 132 S. Ct. 3218 (2012).

<sup>251</sup> *EPO Guidelines*, C-IV, 2.3.1. It is unclear whether the ‘any hardware’ approach will impact on the patentability of naturally occurring substances.

<sup>252</sup> See R. Whaite and N. Jones, ‘Biotechnological Patents in Europe: The Draft Directive’ [1989] *EIPR* 145, 149; A. White, ‘The Patentability of Naturally Occurring Products’ [1980] *EIPR* 37.

<sup>253</sup> For a different perspective on the issue of patenting of higher life forms, see *Harvard College v. Canada (Commissioner of Patents)* [2002] SCC 76 (rejecting an application to patent the genetically altered OncoMouse).

artificial invention as distinct from a natural unpatentable discovery? In answering these questions, it becomes apparent that the borders between discovery and invention are far more vague and problematic than they might seem at first glance. Perhaps the best way in which to think about the extent to which biological inventions are patentable is to look at the different types of patent that may be granted.<sup>254</sup>

(i) If a process is developed that enables a substance found in nature to be isolated and obtained from its surroundings, the *process* may be patentable.<sup>255</sup>

(ii) The finding of a *substance* freely occurring in nature is a mere discovery and, as such, is unpatentable.<sup>256</sup> As the Opposition Division at the EPO explained, this means that the ‘discovery’ of the Moon (when the Americans landed on it in 1969), the finding of a 5,000-year-old mummy in the Italian/Austrian Alps, or the identification of a new animal would not be patentable.<sup>257</sup> This is reflected in Article 5(1) of the Biotechnology Directive, which says that the ‘human body, at the various stages of its formation and development, and the simple discovery of one of its elements, including the sequence or partial sequence of a gene, cannot constitute a patentable discovery’. Similar provisions exist in the Patents Act 1977 and the EPC 2000.<sup>258</sup>

(iii) If a natural substance that has been *isolated* from its surroundings can be properly characterized either by its structure, by the processes by which it is obtained, or by other parameters, the substance *per se* may be patentable. This means that as long as ‘something’ is inside a human or animal body or a plant, it is a natural element and cannot be considered to be patentable; once this ‘something’ is isolated from the human or animal body or plant by means of a technical process, it becomes eligible for patent protection.<sup>259</sup> This is the case even if its structure is identical to that of a natural element, since the processes used to isolate the element are technical processes.<sup>260</sup> This can be seen in the *Relaxin* decision, which concerned claims relating to DNA sequences of a naturally occurring substance that relaxes the uterus during childbirth, which was obtained from the human ovary.<sup>261</sup> The Opposition Division of the EPO held that the invention was not a discovery and, as such, was not excluded from patentability. Following the EPO Guidelines, the Opposition Division said that because a process had been developed to obtain Relaxin and the DNA that encoded it they were patentable under Article 52(2). This was because the substance Relaxin had not previously been recognized, because the products were characterized by their chemical structure, and because the products had a use.

<sup>254</sup> As yet, there has been no case directly on this point in the United Kingdom. There is little reason to doubt that the position in the United Kingdom will be the same as that at the EPO. Cf. *Chiron v. Murex Diagnostics* [1996] FSR 153, 177. <sup>255</sup> *EPO Guidelines*, C-IV, 2.3.1.

<sup>256</sup> *Tate & Lyle Technology v. Roquette Frères* [2009] EWHC 1312, [74]–[76].

<sup>257</sup> *Howard Florey/Relaxin*, T 741/91 [1995] EPOR 541, 549. It is interesting to note that plant breeders’ rights are available to those who ‘discover’ varieties, whether growing in the wild or occurring as a genetic variant, whether artificially induced or not: PVA 1997, s. 4(3) and (6). Apparently, the Braeburn apple was found in this way in 1952: see T. Boswell, *Hansard* (HC) (24 June 1997), col. 717.

<sup>258</sup> See PA 1977, Sch. A2, para. 3(a) (introduced by Patents Regulations 2000); EPC 1973 Regs, r. 23(e)(1).

<sup>259</sup> See *Biotech. Dir.*, Recitals 21–2. Similar arguments apply for the *purification* of a naturally occurring substance.

<sup>260</sup> S. Sterrckx, ‘Some Ethically Problematic Aspects of the Proposal for a Directive on the Legal Protection of Biotechnological Inventions’ [1998] *EIPR* 123, 124–5; cf. S. Crespi, ‘Biotechnology Patents: The Wicked Animal Must Defend Itself’ [1995] *EIPR* 431, 432–3.

<sup>261</sup> (1996) 27 *IIC* 704, 705–6. See *Icos Corporation/Seven transmembrane receptor* [2002] *OJ EPO* 293 (Opposition Division), [11(i)] (while ‘the V28 protein exists as a segment of the human genome and thus is a part of nature, the purified and isolated nucleic acid having that sequence does not exist in nature and thus cannot be discovered’).

This position was affirmed in the Biotechnology Directive,<sup>262</sup> and in equivalent provisions in the Patents Act 1977 and EPC 2000.<sup>263</sup> These provide that ‘biological material that is isolated from its natural environment or produced by means of a technical process may be the subject of an invention even if it previously occurred in nature’.<sup>264</sup> More specifically, Article 5(2) of the Biotechnology Directive states that an element isolated from the human body or otherwise produced by means of a technical process, including the sequence or partial sequence of a gene, may constitute a patentable invention even if the structure of that element is identical to that of a natural element. Equivalent provisions have been introduced in the United Kingdom<sup>265</sup> and in the EPC 2000.<sup>266</sup>

This means that ‘raw data’ on the human genome (including the human DNA sequence and its variations:<sup>267</sup> human genes; partial gene sequences; the human body at various stages of its development), which are not isolated, purified, or somehow produced by a technical process, are not patentable.<sup>268</sup> However, if the genetic information (including the sequence or partial sequence of a gene) has been isolated from the human body or somehow produced by a technical process, it will potentially be patentable. For example, consider the situation if a research team successfully isolated the gene responsible for migraines: while the underlying genetic information would be in the public domain, the technique used to isolate the gene (which may include complicated processes of identification, purification, and classification) would be patentable. On the basis that the isolated gene would not have been identified without the human intervention (*techne*), the isolated gene may also be patented.<sup>269</sup> This would also be the case in relation to transgenic plants or animals, which by definition do not exist in nature.<sup>270</sup>

The *Kirin-Amgen* decision, which involved Amgen’s highly valuable patent for a method of producing erythropoietin (EPO), offers another useful example of the impact that the invention–discovery dichotomy has upon patentable subject matter. Erythropoietin is the hormone that promotes the production of red blood cells and is particularly useful in the treatment of anaemia. Underlying the patent was Amgen’s discovery and subsequent sequencing of the gene that produces EPO. Building on this discovery, Amgen isolated and cloned the DNA sequence that produces EPO. The DNA sequence was then introduced into a host cell (a Chinese hamster ovary cell), which was used to manufacture the EPO. At first instance, Neuberger J said that the claim was:

<sup>262</sup> Biotech. Dir., Art. 3(2).

<sup>263</sup> PA 1977, Sch. A2, para. 2 (introduced by Patents Regulations 2000).

<sup>264</sup> Biotech. Dir., Art. 3(2); PA 1977, Sch. A2, para. 2 (introduced by Patents Regulations 2000); EPC 1973 Regs, r. 23c(a).

<sup>265</sup> See PA 1977, Sch. A2, para. 5 (introduced by Patents Regulations 2000).

<sup>266</sup> EPC 2000 Regs, r. 29(2).

<sup>267</sup> This was confirmed by the joint statement by Tony Blair and Bill Clinton, *Joint Statement to Ensure that Discoveries for the Human Genome Are Used to Advance Human Health* (14 March 2000).

<sup>268</sup> See S. Bostyn, ‘Patentability of Genetic Information Carriers’ [1991] *IPQ* 1; Hoffmann LJ adopted a similar approach in *Kirin-Amgen v. Transkaryotic Therapies* [2005] *RPC* 169, [76], [109], when he treated the information as to the makeup of DNA as an unpatentable discovery. But cf. Jacob LJ, speaking for the Court of Appeal, in *Aerotel Ltd v. Telco Holdings Ltd* [2007] *RPC* 117, [37] (doubting whether the revelation of the precise sequence of a piece of DNA, as opposed to its general existence, could be described as a discovery).

<sup>269</sup> The requirement that there be technical intervention is closely related to the requirement that the invention be non-obvious—*DSMNV’s Patent* [2001] *RPC* 675, 709 (talking about obviousness over nature)—and also be industrially applicable: *Salk Institute for Biological Studies*, T 338/00 (6 November 2002).

<sup>270</sup> *Harvard/OncoMouse* [2003] *OJ EPO* 473 (Opposition Division), 491 (‘transgenic animals of the present invention having an artificially inserted oncogene do not exist in nature as such but are the result of a technical intervention by man’).

... ultimately to the use of information first revealed in the patent, namely, the genetic code for EPO, for the purpose of expressing EPO cells by artificial manipulation of DNA. The essence of the invention was not the artificial manipulation but the use of the information.<sup>271</sup>

As a result, the technique used to manufacture the EPO was irrelevant. The Court of Appeal disagreed, saying that Neuberger J's definition was too broad.<sup>272</sup> While the Court of Appeal had no doubt that the discovery and sequencing of the gene that produced EPO was at the heart of the invention, the Court said that the gene sequence *per se* could not be claimed as the invention because it existed in nature. Instead, the Court held that what was claimed was an exogenous DNA sequence suitable for expressing EPO when introduced into a host cell. The House of Lords agreed.<sup>273</sup> While the decision did not directly focus on discovery as patentable subject matter, it is important insofar as it exemplifies the way in which the non-patentability of naturally occurring substances can influence not only the subject matter that is patentable, but also the decision as to whether a patent has been infringed.

While the patenting of processes used to isolate natural substances is relatively uncontroversial, the same cannot be said about the patenting of the substances that are isolated using those processes. In particular, doubts have been raised as to whether the act of isolation and characterization of a naturally occurring substance is really that different from the mere finding of the substance. As one commentator has noted, 'even if a natural element is isolated from the body by technical means, this does not change the "naturalness" of the element (neither does a purification of the element)'.<sup>274</sup> However valid these arguments may be, they have been outweighed by the policy goal outlined in the Biotechnology Directive that research aimed at obtaining and isolating elements valuable to medicinal production should be encouraged by the patent system.<sup>275</sup>

## 7.2 COMPUTER PROGRAMS AND COMPUTER-RELATED INVENTIONS

When the Patents Act 1977 and the EPC 1973 were enacted, it was commonly thought that copyright law rather than patents would be the area of intellectual property law that would regulate the creation and use of computer programs. While copyright has been important in this process, one of the most notable changes that have taken place since 1977 is the growing role played by patent law in relation to computer programs and computer-related inventions.<sup>276</sup> Given that computer programs are expressly excluded from patentability by section 1(2)(c)/Article 52(2)(c), it may come as a surprise to learn not only that many patents have already been granted for computer programs and for computer-related inventions, but also that it is also one of the fastest areas of growth in both the United Kingdom and at the EPO.

<sup>271</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2002] RPC 187, 201. <sup>272</sup> [2003] RPC 31 (CA).

<sup>273</sup> [2005] RPC 169 (HL), [76]. See Chapter 22, section 3.

<sup>274</sup> S. Sterrckx, 'Some Ethically Problematic Aspects of the Proposal for a Biotech Directive' [1998] *EIPR* 123, 124–5. See also M. Davis, 'The Patenting of the Products of Nature' [1995] *Rutgers Comput Technol LJ* 331; cf. S. Bostyn, 'Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 3–4.

<sup>275</sup> Biotech. Dir., Recital 17.

<sup>276</sup> A computer program claim 'referred to a sequence of instructions specifying a method rather than to the method itself', whereas a claim to a computer-implemented invention 'could not be divorced from the computer on which it was carried out': *President's Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [11.2].

In this section, we will look at the way the law has developed in this area. In so doing, we will look at the current position in the United Kingdom, which was similar to the position at the EPO prior to the adoption of the ‘any hardware’ approach. It is important to keep in mind that the case law at the EPO prior to *Pension Benefits* is still relevant in the United Kingdom. As such, in our analysis of the current UK position, we will make reference to the pre-*Pension Benefits* decisions from the EPO. We will then look at the standing of computer programs and computer-related inventions at the EPO.<sup>277</sup>

### 7.2.1 Approach in the United Kingdom

One of the most important changes that led to the liberalization of the protection offered to computer-related inventions in the United Kingdom (and at the EPO, pre-*Pension Benefits*) was the decision that an invention that includes a computer program could be patentable so long as the invention as a whole was technical. The upshot of the acceptance of the ‘whole contents’ approach was, as the Technical Board of Appeal (TBA) said in *Vicom*, that ‘an invention which would be patentable in accordance with conventional patentability criteria should not be excluded from protection by the mere fact that for its implementation modern technical means in the form of a computer program are used’.<sup>278</sup> This approach was adopted and endorsed by a number of decisions in the United Kingdom, notably the Court of Appeal in *Gale’s Application*<sup>279</sup> and *Merrill Lynch*.<sup>280</sup>

While a computer program *per se* remains unpatentable in the United Kingdom, following the acceptance of the ‘whole contents’ approach, it is clear that applications which contain a computer program are patentable on their face, so long as the invention as a whole makes a technical contribution to the art.<sup>281</sup> This can be seen, for example, in *Kearney*,<sup>282</sup> where the TBA held that a computer program that alerted machine operators when their machines needed to be repaired or a worn tool needed to be replaced solved a technical problem and, as such, was patentable subject matter. Similarly, in *Bosch*,<sup>283</sup> the TBA said that a device for monitoring computer components was technical because it considerably reduced ‘the operating time of the computer component and thus undoubtedly improved the effectiveness of the device’. Both of these decisions were followed in the United Kingdom.

In contrast, if it *cannot* be shown that an application that contains a computer program is technical, then it will not be patentable. This was the case, for example, in *Gale’s Application*, where the Court of Appeal decided that a ROM carrying a particular program was not distinguishable from the program itself and, as such, was unpatentable.<sup>284</sup> Following these decisions, it was clear that an invention that includes a computer program

<sup>277</sup> One question that needs to be addressed is whether discussions at the EPO about the meaning of technical character in relation to inventive step are relevant in the United Kingdom in relation to subject matter (via ‘technical character’).

<sup>278</sup> *Vicom/Computer-related invention*, T 208/84 [1987] EPOR 74, [1987] OJ EPO 14, [16].

<sup>279</sup> [1991] RPC 305. <sup>280</sup> *Merrill Lynch’s Application* [1989] RPC 561.

<sup>281</sup> This means that if it can be shown that the subject matter makes a technical contribution to the known art, patentability will not be denied merely on the ground that a computer program is involved in its implementation.

<sup>282</sup> *Kearney/Computer-related invention*, T 42/87 [1997] EPOR 236, 241.

<sup>283</sup> *Bosch/Electronic computer components*, T 164/92 [1995] EPOR 585, 592.

<sup>284</sup> *Gale’s Application* [1991] RPC 305 (CA); cf *Fujitsu’s Application* [1997] RPC 608 (CA). The invention only achieved something that had previously been possible, albeit at a much faster speed and more conveniently than had previously been the case. As such, it was merely a conventional computer operating in a conventional way and so was not patentable. In light of subsequent decisions, notably *Symbian v. Comptroller-General of Patents* [2008] EWCA Civ 1066, [42], which questioned the way in which Aldous J interpreted ‘technical’, it is likely that *Fujitsu* would be decided differently today.

is potentially patentable so long as the invention as a whole is technical. With this question settled, the next question that arose for consideration was in relation to the exclusion of computer programs as such. The question of the scope of the exclusion of computer programs was considered in two decisions by the TBA, both involving applications by IBM. The invention in the first decision, *IBM/Computer programs* (T 935/97),<sup>285</sup> was a method for allowing information in a data-processing system that was displayed in one window to be altered if that window were obscured by another window. The application included claims for software and for software recorded in a computer-readable medium. While some of the claims were accepted, the Examining Division refused the application insofar as it was directed to a computer-program product. The second decision, *IBM/Computer programs* (T 1173/97),<sup>286</sup> related to 'resource recovery in a computer system'. Again, the Examining Division rejected the application insofar as it claimed a computer-program product. In both cases, the question for consideration related to the scope of the exclusion of computer program *as such*. The reasoning in both cases was identical.

The Board began by noting that the language of Article 52(2) and (3) showed that the legislators did not want to exclude all computer programs from patentability;<sup>287</sup> instead, all that was excluded were computer programs *as such*. Drawing upon the logic that has been applied to Article 52(2) and (3) generally, the Board said that when the EPC referred to computer programs 'as such', it meant mere abstract creations, lacking in technical character. In more positive terms, this meant that computer programs that had a technical character were potentially patentable.<sup>288</sup> In so doing, the Board distinguished between computer programs as such (which are not patentable) and computer programs that had a technical character (which are patentable).<sup>289</sup>

This gives rise to the question: when does a computer program have a technical character? As with all inventions, the requisite technical character may exist either in technical effects or in the solution to a technical problem. In addressing this question, the TBA began by noting that a computer program cannot be assumed to have a technical character merely for the reason that it is a program for a computer. This means that *normal* 'physical modifications of the hardware (causing, for instance, the generation of electrical currents) deriving from the execution of the instructions given by programs for computers cannot *per se* constitute the technical character required for avoiding the exclusion of those programs'.<sup>290</sup> The Board added that such modifications were a common feature of all computer programs and therefore could not be used to distinguish programs with a technical character from programs 'as such'. Instead, the Board said that the technical character must be found elsewhere in the effects caused by the execution of the computer program by the hardware. That is, a computer program product could be patentable if it resulted in additional technical effects that went beyond the 'normal' physical interaction between the program (software) and the computer (hardware) on which it was run.

<sup>285</sup> [1999] EPOR 301.      <sup>286</sup> [2000] EPOR 219.

<sup>287</sup> *IBM/Computer programs*, T 935/97 [1999] EPOR 301, 309; T 1173/97 [2000] EPOR 219, 226.

<sup>288</sup> They did so on the basis of EPC 1973 Regs, rr 27, 29; *IBM/Computer programs*, T 1173/97 [2000] EPOR 219, 226.

<sup>289</sup> In so doing, the Board overturned *EPO Guidelines*, C-IV 2.3, which states that a 'computer program by itself or as a record on a carrier is not patentable, irrespective of its content'. The Board also distinguished *ATT/System for generating code*, T 204/93 (29 October 1993); *IBM/Computer programs*, T 935/97 [1999] EPOR 301, 308.

<sup>290</sup> *IBM/Computer programs*, T 935/97 [1999] EPOR 301, 310; *IBM/Computer program product*, T 1173/97 [2000] EPOR 219, 227.

The TBA also noted that computer program products only produced and showed an effect when the program concerned was made to run on a computer. The effect only shows in ‘physical reality’ when the program is being run. On the basis that there was no good reason to distinguish between a direct technical effect and the potential to produce a technical effect, the Board accepted that a computer program that had the potential to cause a predetermined further technical effect was, in principle, not excluded from patentability under Article 52(2) and (3).<sup>291</sup>

After reviewing the scope of protection for computer programs, the Board remitted both cases to the Examining Division to determine whether the applications complied with this reading of Article 52(2)(c). While it is clear that the *IBM* decisions mark a victory for the proponents of greater protection for inventions relating to information technology, ultimately the extent to which computer programs are patentable depends on how ‘technical character’ is construed. One factor that suggests that the exclusion will be read narrowly flows from the Board’s comment that it does not make any difference for the purpose of the exclusion whether a computer program is claimed by itself or as a record on a carrier.<sup>292</sup> This means that so long as a computer program is technical, the medium in which it is recorded (the carrier) is irrelevant.<sup>293</sup> This would allow, for example, patents to be granted for software-implemented inventions distributed over the Internet<sup>294</sup> and to computer-program products directly loadable into the internal memory of a digital computer.<sup>295</sup>

To ensure that practice at the (then) Patent Office was consistent with the approach of the EPO, the UK Patent Office amended its practice guidelines in 1999 to follow the *IBM* decisions.<sup>296</sup> The resulting 1999 Practice Notice provided that the UK Patent Office would:

... accept claims to computer programs, either in themselves or on a computer, provided that the program is such that when it is run on a computer it produces a technical effect which is more than would necessarily follow merely from the running of any program on a computer.<sup>297</sup>

While the law at the EPO may have changed after the *IBM* decisions, the law in the United Kingdom (which was reflected in the 1999 Practice Notice) remained stable for a number of years, at least until the 2007 decision in *Aerotel*.<sup>298</sup> As part of his wide-ranging judgment, Jacob LJ attempted to provide guidance as to how ‘computer program’ was to be construed. Jacob LJ began by noting that there are two views about what was meant by a computer program. Under the first narrow view, which has been followed in post-*Pension*

<sup>291</sup> *IBM/Computer programs*, T 935/97 [1999] EPOR 301, 313; *IBM/Computer program product*, T 1173/97 [2000] EPOR 219, 230.

<sup>292</sup> *IBM/Computer programs*, T 935/97 [1999] EPOR 301, 317; *IBM/Computer program product*, T 1173/97 [2000] EPOR 219, 234.

<sup>293</sup> The Board said that if the ‘computer program product comprises a computer-readable medium on which the program is stored, this medium only constitutes the physical support on which the program is saved and thus constitutes hardware’: *IBM/Computer programs*, T 935/97 [1999] EPOR 301, 312; *IBM/Computer program product*, T 1173/97 [2000] EPOR 219, 229.

<sup>298</sup> *Aerotel v. Telco Holdings* [2007] 1 *All ER* 225.

*Benefits* case law at the EPO, a computer program is the set of instructions as an abstract thing, albeit that they could be written down on a piece of paper. The second wider view, which was adopted in pre-*Pension Benefits* case law at the EPO and in UK decisions such as *Gale's Application*, sees a computer program as including the 'instructions on some medium (floppy disk, CD, or hard drive) which cause a computer to execute the program—a program that works'.<sup>299</sup> Jacob LJ came down in favour of the later wider view, arguing that to do otherwise would render the exclusion meaningless.<sup>300</sup> He also suggested that the framers of the EPC 'really meant to exclude computer programs in a practical and operable form. They meant to exclude real computer programs, not just an abstract series of instructions'.<sup>301</sup> In so doing, Jacob LJ appeared to reaffirm British practice in this area. He also reinforced the divide that has opened up between the approach that is taken to section 1(2)/Article 52 in the United Kingdom and that taken at the EPO.

While the Court of Appeal expressly said that it was reformulating rather than changing the law in this area, nonetheless following *Aerotel*, the UK Intellectual Property Office (IPO) changed its practice in relation to the patenting of computer programs in November 2007 and reverted to its old practice of rejecting all computer program claims.<sup>302</sup> Following *Aerotel*, the UK IPO refused applications for computer-related invention 'unless it related to a technical process outside the computer or a solution to a technical problem within the computer', and, in so doing, it created a gap between the United Kingdom and EPO.<sup>303</sup>

The question of whether the UKIPO's reading of *Aerotel* (and indirectly that of whether the decision itself) was correct was raised in the first-instance decision in *Astron Clinica v. Comptroller General of Patents*.<sup>304</sup> In this case, Kitchin J considered whether *Aerotel* prohibited the patenting of all computer programs, in particular those that would have been considered under the old approach to make a conventional computer operate in a new way, so as to deliver a relevant technical contribution.<sup>305</sup> For various reasons, Kitchin J said that he thought that the approach that had been adopted at the IPO after *Aerotel* was incorrect; instead, he inclined more to the approach that had been set out in the 1999 Practice Notice. Kitchin J concluded that 'where claims to a method performed by running a suitably programmed computer or to a computer programmed to carry out the method are allowable, then, in principle, a claim to the program itself should also be allowable'.<sup>306</sup>

Following the clear statements by Kitchin J in *Astron Clinica*, in February 2008 the UK IPO revised aspects of the Practice Notice issued in November 2007.<sup>307</sup> While the original 2007 Practice Notice said that claims for computer programs or for programs on a carrier were not patentable, the 2008 revision, which came into operation on 7 February 2008, followed the approach in *Astron Clinica*. As a result of the 2008 revisions, the (revised) 2007 Practice Notice said that so long as a claim to a computer program is drawn to reflect the features of the invention that would ensure the patentability of the method that the

<sup>299</sup> *Ibid.*, [31].

<sup>300</sup> On this, see *IGT v. Comptroller of Patents* [2007] EWHC 134, [10] (the definition also included a program that was actually open on a computer and operational, and not simply a program sitting, stored, unopened on a hard drive).

<sup>302</sup> IPO Practice Notice, *Patents Act 1977: Patentable Subject Matter* (2 November 2006). On this, see *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, [46].

<sup>303</sup> *CIPA*, [1.10].

<sup>304</sup> [2008] EWHC 85. <sup>305</sup> *Ibid.*, [46].

<sup>306</sup> *Ibid.*, [50]. Kitchin J said that the approach outlined in *Aerotel* was consistent with the reasoning of the Board in the *IBM* decisions. He also thought that the decision was consistent with *Oneida Indian Nation's Application* [2007] EWCA Civ 954.

<sup>307</sup> IPO Practice Notice, *Patents Act 1977: Patentable Subject Matter* (7 February 2008).

program is intended to carry out when it is run, examiners will no longer reject claims for a computer program or a program on a carrier.

Kitchin J's reading of section 1(2)/Article 52(2) was reconfirmed in *Symbian*,<sup>308</sup> where the Court of Appeal was called upon to determine whether Symbian's invention—which changed the way in which computers stored and used functions common to a number of different applications, meaning not only that computers were faster, but also that they needed less power and memory—was patentable. The UK IPO argued that computer programs were only patentable when they brought about a novel effect outside a computer. This would have meant that while a program that contained a method of carrying out a new procedure would be patentable, this would not have been the case if the effect of the procedure was solely within the computer itself. In contrast, Symbian argued that Article 52(2)(c) only excludes programs that do not provide a technical solution to a technical problem. Specifically, Symbian argued that a program that improves the performance of a computer would not be excluded any more than would a program that improved the performance of any machine. This was in contrast to a program that simply embodied a theory, which would have been excluded because it did not make a technical contribution.

The Court of Appeal agreed with Symbian and held that the question to be asked was whether the program brought about a technical effect or solved a technical problem, which could occur either within or outside the computer. A technical innovation 'whether within . . . or outside the computer will normally suffice to ensure patentability subject . . . to the claimed invention not falling foul of the other exclusions in Art. 52(2)'.<sup>309</sup> While the decision is important insofar as it clarified that inventions are potentially patentable even where their technical contribution is limited to the computer, in the end the result was straightforward given that the Court found that the effect of Symbian's invention was not limited to the computer programmed with relevant instructions, but also extended to cameras, mobile phones and other devices, and products connected to computer systems. Following *Symbian*, the UK IPO issued yet another Practice Notice in December 2008.<sup>310</sup> It began by noting that in the past, the Office had recognized two classes of computer-related invention as being potentially patentable: first, inventions that solved technical problems external to the computer; and second, inventions that solved technical problem within the computer. Following *Symbian*, another class of invention was now treated as potentially patentable:

[I]nventions which improve the operation of a computer by solving a problem arising from the way the computer was programmed—for example, a tendency to crash due to conflicting library program calls—can also be regarded as solving “a technical problem within the computer” if it leads to a more reliable computer.<sup>311</sup>

This meant that ‘a program that results in a computer running faster or more reliably may be considered to provide a technical contribution even if the invention solely addresses a problem in the programming’.<sup>312</sup>

Following *Symbian*, it is clear that the question to be asked when determining whether an application falls foul of section 1(2)(c)/Article 52(2)(c) in the UK is whether the invention

<sup>309</sup> *Ibid.*, [58].

<sup>310</sup> IPO Practice Notice, *Patents Act 1977: Patentable Subject Matter* (8 December 2008), [5]. In light of *Halliburton Energy Service's Patent Application* [2011] EWHC 2508, the December 2008 notice was replaced by IPO Practice Notice, *Patents Act 1977: Patentability of Mental Acts* (17 October 2011).

<sup>311</sup> IPO Practice Notice, *Patents Act 1977: Patentability of Computer Programs* (8 December 2008), [5].

<sup>312</sup> *Ibid.*

as a whole brings about a technical effect (which does not fall within one of the excluded categories). In some cases, this will occur outside of the computer. Thus, where the computer program represents something specific and external to the computer (a technical contribution), and it does not fall within one of the excluded categories, it is potentially patentable. In these cases, there was something more than ‘just a computer program’; it ‘evidently perform[s] a task which has real world consequences’.<sup>313</sup> Somewhat more controversially, the relevant technical effect may also occur only within the computer itself. It is clear that an invention that makes a technical contribution to the art is patentable even if it is entirely implemented on a computer and ‘even if the way that it works is entirely as a result of a computer program operating on that computer’.<sup>314</sup> A contribution that is implemented entirely as a result of a computer program operating within a computer is not excluded if the contribution is technical in nature.<sup>315</sup> In these situations, as Birss J said, a ‘patentee is entitled to claim the computer program itself’.<sup>316</sup> Thus a range of inventions involving computer programs have been held to be patentable, including ‘a new method of communicating between programs and data files within the computer’,<sup>317</sup> a new data structure system embodied in an algorithm that was faster and required less data storage than the state of the art (which displayed messages to users on the screen),<sup>318</sup> and programs that increase processing speed,<sup>319</sup> reliability, or simply lead to a ‘better computer’.<sup>320</sup> Importantly, this is the case ‘even if the invention solely addresses a problem in the programming’.<sup>321</sup>

In *AT&T Knowledge Ventures*,<sup>322</sup> Lewison J set out a number of signposts that can help to determine whether an invention involving a computer program is excluded by section 1(2)(c) of the Patents Act 1977. In effect, this is a useful summary of the types of computer-related invention that have been patented to date. These are where:

- (i) the claimed technical effect had a technical effect on a process that is carried on outside the computer;
- (ii) the claimed technical effect operated at the level of the architecture of the computer—that is, where the effect was produced irrespective of the data being processed or the applications being run;
- (iii) the claimed technical effect resulted in the computer being made to operate in a new way;
- (iv) the program made the computer a better computer, in the sense of running more efficiently and effectively as a computer;<sup>323</sup> or
- (v) the perceived problem was overcome by the claimed invention as opposed to merely being circumvented.<sup>324</sup>

<sup>320</sup> An invention that solved the problem of how to deal with multiple simultaneous touches on a multi-touch device, which caused a ‘device to operate in a new and improved way and the application software which it is running for that purpose’, was held to be technical: *HTC Europe v. Apple* [2013] EWCA Civ 451, [56]–[59].

<sup>321</sup> IPO Practice Notice, *Patents Act 1977: Patentability of Computer Programs* (8 December 2008).

<sup>322</sup> *AT&T Knowledge Ventures and CVON Innovations v. Comptroller General of Patents, Designs and Trade Marks* [2009] EWHC 343.

<sup>323</sup> Initially, the fourth signpost developed by Lewison J (as he then was) asked whether ‘there was an increase in the speed or reliability of the computer’. In *HTC Europe v. Apple* [2013] EWCA Civ 451, Lewison LJ revised the fourth signpost. We have reproduced the revised signpost here.

<sup>324</sup> *AT&T Knowledge Ventures and CVON Innovations v. Comptroller General of Patents, Designs and Trade Marks* [2009] EWHC 343, [45].

Along with the staged approach in *Aerotel* (as modified in *Symbian*), these ‘signposts’ have been used by the examiners at the UK IPO and by the Court of Appeal<sup>325</sup> when determining whether an application relating to a computer program is patentable.<sup>326</sup> While these are useful, it is always important to remember that the key issue here is whether, when viewed as a whole, the invention makes a technical contribution that does not fall within one of the excluded categories.

Although British courts have adopted a more liberal approach to the patenting of computer programs than might have been envisaged when the 1977 Act was passed, nonetheless there are still some important limitations on the types of thing that qualify as patentable subject matter. While some computer-based applications have been excluded on the basis that they are not technical,<sup>327</sup> as the Court of Appeal said in *Symbian*, if section 1(2) is not to be rendered meaningless, there must be some limits to the types of computer program that can be patented. As we explained above, this is because all inventions that use a computer are technical; as a result, it is not enough to show simply that a computer-related invention is technical. This means that the mere presence of conventional computing hardware does not necessarily mean that an invention is patentable;<sup>328</sup> rather, something more is needed.

While the extent to which computer-related inventions will exhibit the relevant technical effect and thus be patentable will depend on the particular application in question, it can safely be said that an ordinary computer program used in a general-purpose computer would normally not be patentable in the United Kingdom. The reason for this is that while the implementation of the program in a computer transforms mathematical values into electrical signals, the electrical signals amount to no more than a reproduction of information, which would not be regarded as bringing about a relevant technical effect.<sup>329</sup> It is also clear that the mere inclusion of a program on a carrier is not enough to circumvent the exclusion; more is needed, such as a change in the speed with which the processor works.<sup>330</sup>

We can get a sense of what is meant by a relevant technical effect from *Gemstar v. Virgin*,<sup>331</sup> which concerned patents for electronic programming guides used to display information about television programs. One of the patents at issue, the so called ‘Single Channel’ patent, involved the delivery of information about television programming. The essential inventive step involved the formats in which that information was displayed on the television.<sup>332</sup> The invention worked by displaying programme listings in grid form, showing a number of programmes for a number of channels for various periods of time. The viewer was able to move a cursor to highlight a particular cell (and therefore a

<sup>325</sup> *HTC Europe v. Apple* [2013] EWCA Civ 451, [50]–[51].

<sup>326</sup> See, e.g., *Really Virtual v. UK Intellectual Property Office* [2012] EWHC 1086 (Ch); *Protecting Kids the World Over’s Patent Application* [2012] RPC (13) 323; *HTC Europe v. Apple* [2013] EWCA Civ 451.

<sup>327</sup> A computer program that determined whether data that may be uploaded to a server ‘relates to how information is administered and managed in a database on a server’ was held to be a computer program *per se* and, as such, was not patentable: *Sony Corporation’s Application*, BL O/240/12 (21 June 2012), [34].

<sup>328</sup> See *Motorola Mobility’s Application*, BL O/174/13 (29 April 2013), [14] (what is important was the contribution, not only the difference over the prior art; quicker user interaction was not technical); *Lantana v. Comptroller General of Patents, Designs and Trade Marks* [2013] EWHC 2673 (effects within computer held to be non-technical).

<sup>329</sup> *Kock & Sterzel/X-ray apparatus*, T 26/86 [1988] EPOR 72.

<sup>330</sup> *Ibid.*, [54]. See also *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [92].

<sup>331</sup> [2009] EWHC 3068 (Ch). The question of the patentability of the subject matter was not discussed in the appeal (which focused on novelty): *Gemstar v. Virgin* [2011] EWCA Civ 302 (upholding decision of Mann J).

<sup>332</sup> While the decision dealt with three patents, we have limited our analysis to the first patent.

particular programme). If a cell were selected, the display would switch to ‘single channel’ mode. In this mode, the screen would show a list of the programmes appearing on the selected programme’s channel (and no others) at and around the selected time. When this occurred, the focus of the display would shift from a survey of various channels to only the one. The user could scroll up and down that list, and if a particular programme was ‘selected’, then the screen would toggle back to the multi-channel mixed mode. Thus this patent was for a switch from a larger-scale grid to a single channel; hence the name given to it for the purposes of this action. Another feature of the invention was that whenever a programme was selected, the programme’s information (cast list, etc.) was retrieved in a separate box or window superimposed onto part (but not the whole) of the listing display. The programme’s listing could still be seen above or below the box.<sup>333</sup>

Mann J began by looking at the technical effects within the computer. While the computer program within the invention produced a technical effect in the sense that any functioning program did—the computer would not work in the same way without such effects—this was not enough. As Mann J said, ‘[m]ore is required to avoid the exclusion, and (in this context) that “more” is something which makes the computer work better’<sup>334</sup>—that is, the relevant technical effect needed for the program to be patentable in this case was one that ‘made the computer a better computer in the sense of running more efficiently and effectively as a computer’, or which solved a technical problem lying within the computer itself. Unfortunately for Gemstar, Mann J said that in the case at hand, these traits were not present. This was because while the invention made the computer, as a computer, work differently in the sense of processing data in a different way, it did not make it work better, faster, or differently (in that sort of performance sense). While the invention was clearly technical, Mann J held that producing a different or better user interface was not a (relevant) technical effect.

Mann J then looked at whether there were any relevant technical effects outside of the computer.<sup>335</sup> Specifically, he looked at the question of whether the computer-generated appearance of the information on the screen of the computer (treating the screen as being separate from the computer for these purposes) was a relevant technical effect. Because of the technical consequences of firing electrons at phosphor, or applying charges across pixel cells, it was clear that the invention had a technical effect outside the computer. However, Mann J said that this was ‘not the right sort of technical effect’; it ‘is merely painting information on a screen so that it can be read, the user having had the opportunity to select the manner in which that happens by operating the controlling mechanism accordingly’.<sup>336</sup> There was no technical contribution in the sense that the cases require. While there was a different display on the screen, Mann J said that this was not enough: ‘A different display to that shown before does not seem to me to go far enough to amount to a technical effect which makes a difference.’<sup>337</sup> This was because the technical effect relied on by Gemstar—namely, a better or a different interface—was not a relevant technical effect. The reason for this was that a better (or different) interface was an abstract concept; it did not describe some physical activity or effect.<sup>338</sup> Highlighting the problem that has long bedevilled patent law in this area, Mann J said:

Many computers running a program are likely to have a display output, and if that were enough to be a technical effect then every program in such a computer would be likely to fall outside the exclusion, which is unlikely to have been the intention of the draftsman of the Act.<sup>339</sup>

<sup>333</sup> *Gemstar v. Virgin* [2009] EWHC 3068, [4]–[5].

<sup>334</sup> *Ibid.*, [42].

<sup>335</sup> *Ibid.*, [43].

<sup>336</sup> *Ibid.*

<sup>337</sup> *Ibid.*, [50].

<sup>338</sup> An ‘interface’ was an abstract, not a physical, concept.

<sup>339</sup> *Gemstar v. Virgin* [2009] EWHC 3068, [42].

*Gemstar* can usefully be contrasted with the decision of *Protecting Kids the World Over*,<sup>340</sup> which concerned an application for a system that monitored the content of electronic communications to ensure that children were not exposed to inappropriate content or language. Where certain content was identified on the monitored computer, an alarm was triggered alerting the user (parents) at a remote terminal (such as a mobile device) that inappropriate content was being processed on the monitored computer. This was seen to be qualitatively different from the invention in *Gemstar*, where information was ‘simply displayed on a screen’. As Floyd J said, if, as in *Gemstar*,

... the task that the program or computer performs is simply producing a different display, there is no relevant technical effect. Such an effect is too “abstract” ... [However,] if the effect outside the computer can in principle fairly be described as a physical concept, process or effect then the same considerations do not ... apply.<sup>341</sup>

On the facts, Floyd J held that the invention in question was sufficiently technical for it not to fall foul of section 1(2)(c). This was because, unlike the abstract and ephemeral invention in *Gemstar*, the invention in *Protecting Kids* not only brought about a physical change, but was also technically superior to what had gone before and solved a technical problem lying outside the computer.<sup>342</sup>

While the issue is far from clear, it seems that when determining whether something is a *relevant* technical effect, the courts simply apply the same test that they use to determine whether something is technical. While the courts will no doubt continue to pay lip service to the idea that certain types of ‘technical’ effect are not—at least for the purposes of patent law—technical, the reference to a relevant technical effect is perhaps best seen as a judicial fiction that allows the courts to resolve the conundrum of using technical effect to exclude things that are inherently technical (such as a computer program *per se*).

### 7.2.2 Approach at the EPO

As we mentioned above, one of the consequences of the adoption of the ‘any hardware’ approach at the EPO is that it is much easier for an invention to satisfy the subject matter requirement, whether for an apparatus or claim, than had previously been the case. Indeed, one commentator has suggested that Article 52 is now an insignificant bar to patentability, given that all that is required to ‘impart the requisite technical character to a claimed method is the specification of some technical means, however banal or well-known’.<sup>343</sup> It should be noted that as in the United Kingdom, there are limits on the types of technical effect that will be taken into account when deciding whether an invention involving a computer program is patentable. In order to reconcile the exclusion of computer programs with the fact that all computer programs have technical effects, since they cause different electrical currents to circulate in the computer they run on, the Enlarged Board of Appeal (EBA) said that ‘such technical effects are not sufficient to confer “technical character” on the programs, they must cause further technical effects’, or that the ‘programmer must have had technical considerations beyond “merely” finding a computer algorithm to carry out some procedure’.<sup>344</sup> While this does suggest some type of qualitative limitation on the types of technical effect that will suffice to confer

<sup>340</sup> [2011] EWHC 2720 (Pat). <sup>341</sup> *Ibid.*, [18]. <sup>342</sup> *Ibid.*, [35].

<sup>343</sup> D. Booton, ‘The Patentability of Computer-Implemented Inventions’ [2007] *IPQ* 92, 102; J. Pila, ‘Dispute over the Meaning of Invention in Art 52(2) EPC: The Patentability of Computer-Implemented Inventions in Europe’ (2005) 36 *IIC* 173.

<sup>344</sup> *President’s Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [13.5].

patentability on computer programs, in practice it has had little impact. As in the United Kingdom, when determining whether a relevant technical effect exists, the tribunals have simply followed the usual approach to determining patentable subject matter.

If an invention is implemented by a computer, it will be considered to use technical means and, by that very token, will be taken to have technical character.<sup>345</sup> This means that so long as an invention makes use of, or is implemented by, a computer, it will fall outside the subject matter exclusion.<sup>346</sup> As the EBA said:

[A] claim to a computer implemented method or a computer program on a computer-readable storage medium will never fall within the exclusion of claimed subject-matter under Articles 52(2) and (3), just as a claim to a picture on a cup will never fail under this exclusion.<sup>347</sup>

This can be seen in *Hitachi/Auction method*,<sup>348</sup> where a method of using a memory (clipboard) on a computer was held to be an invention for the purposes of Article 52(1). The liberal interpretation can also be seen in the decision in *Microsoft/Clipboard formats I*.<sup>349</sup> The application in question, which was for a way of ‘facilitating data exchange across different formats’, consisted of both method claims and a claim for a program on a computer-readable medium. The Technical Board of Appeal said that the ‘method was implemented in a computer and this amounted to a technical means sufficient to escape the prohibition in Article 52’.<sup>350</sup> More specifically, the Board said that ‘a method implemented in a computer system represents a sequence of steps actually performed and achieving an effect’.<sup>351</sup> Even though a method, in particular a method of operating a computer, may be put into practice with the help of a computer program, a claim relating to such a method does not claim a computer program as such.

The ‘any hardware’ approach has been extended beyond computer-implemented inventions in relation to the medium on which a computer program is supported. (Jacob LJ, in *Aerotel*, said that this presupposes that computer program is defined narrowly as an abstract set of instructions.<sup>352</sup>) As the Technical Board of Appeal said in *Microsoft/Clipboard formats I*, an invention will have technical character where it relates to a computer-readable medium (a technical product involving a carrier)—that is, a computer-readable medium is a technical product and thus has technical character. This means that where a computer program enhances the internal operations of a computer, it will have technical character—so long as it goes beyond the elementary interaction of hardware and software of data processing.<sup>353</sup> While the EBA noted that there was some inconsistency in EPO case law in this area,<sup>354</sup> it said that *Microsoft/Clipboard formats I* had been applied consistently and was good law. Applying the logic of the ‘any hardware’ approach, the Board said that a computer-readable data-storage medium (‘storing computer program X’) could not be excluded from patentability anymore than a cup, ‘which

In *Astron Clinica*, Kitchen J said that the Board in *Microsoft/Clipboard formats I* ‘appears to have found that any program on a carrier has a technical character and so escapes the prohibition in Article 52’: *Astron Clinica v. Comptroller General of Patents* [2008] EWHC 85, [39].

<sup>354</sup> *IBM/Computer programs*, T 1173/97 [1999] OJ EPO 609, was said to be inconsistent with *Microsoft/Clipboard formats I*, T 424/03 (23 February 2006).

was a technical article, could be excluded from patentability merely because it was decorated with picture X.<sup>355</sup>

### 7.3 METHODS OF DOING BUSINESS

Despite its lineage, the exclusion of business methods from patentable subject matter has been somewhat controversial. In part, this is a consequence of developments in the United States, which are now under review, which provided more liberal protection to methods of doing business than had hitherto been the case.<sup>356</sup> The approach that has been used in the United Kingdom and at the EPO to determine whether an application is excluded on the basis that it consists of ‘a method of doing business’ under section 1(2)(c)/Article 52(2)(c) is much the same as that which has been used with the other areas of section 1(2)/Article 52.<sup>357</sup>

#### 7.3.1 Approach in the United Kingdom

The approach adopted in the United Kingdom (and at the EPO prior to *Pension Benefits*) is the same as the general approach discussed earlier. This can be seen in *Merrill Lynch's Application*,<sup>358</sup> where the Court of Appeal held that an automatic share-trading system operated by a computer program was unpatentable because it merely amounted to a method of doing business. This has been confirmed by a UK IPO Practice Notice<sup>359</sup> and in a number of subsequent decisions.<sup>360</sup> This has led to a range of applications being rejected, including a computer programmed to operate as a securities trading system,<sup>361</sup> a method of setting up a company,<sup>362</sup> an invention that ‘calculates and moves currency

<sup>355</sup> *President's Reference/Patentability of programs for computers*, G 3/08 (12 May 2010), [11].

<sup>356</sup> *State Street Bank & Trust v. Signature Financial Group* 149 F. 3d 1368 (1998). The Federal Circuit Court of Appeals (23 July 1998) said, at 1374, that:

[S]ince the 1952 Patent Act, business methods have been, and should have been, subject to the same legal requirements (utility, novelty, non-obviousness, disclosure) for patentability as applied to any other process or method ‘so that a patent application relating to the transformation of data, representing discrete dollar amounts, by a machine, through a series of mathematical calculations into a final share price, constitutes a practical application of a mathematical algorithm, formula or calculation, and is thus patentable subject matter. There is no exception for methods of doing business’.

<sup>357</sup> See *Trilateral Report on Comparative Study on Business Method Related Inventions* (14 June 2000) for a summary of approaches at the European, US, and Japanese patent offices. See also H. Hanneman, ‘The Patentability of “Methods of Doing Business” ’ [2000] *epi Information* 16; D. Booton and P. Mole, ‘The Action Freezes? The Draft Directive on the Patentability of Computer-implemented Inventions’ [2002] *IPQ* 289.

<sup>358</sup> [1989] *RPC* 561; *Stockburger/Coded distinctive mark*, T 51/84 [1986] *EPOR* 229.

<sup>359</sup> IPO Practice Notice, *Patents Act 1977: Interpreting Section 1(2)* (24 April 2002), 1, stressing that technical contribution is the basis for deciding patentability and, in so doing, rejecting the view that ‘some excluded things cannot be patentable even if a technical contribution is present’. This means that ‘inventions which involve a technical contribution will not be refused a patent merely because they relate to business methods or mental acts’.

<sup>360</sup> *Crawford v. Jones* [2005] *EWHC* 2417. The following applications were refused at the (then) UK Patent Office on the basis that they were business methods: a web-based online user system for ordering computer equipment (*Dell USA*, BL O/432/01 (4 October 2001)); a system for the exchange of information between providers and enquirers (*Pintos Global Services*, O/171/01 (6 April 2001)); a system for automating the ordering of food in a cafeteria (*Fujitsu Ltd*, BL O/324/03 (23 October 2003)); a method for allowing users to buy personalized financial products over the Internet (*Accucard Ltd*, BL O/145/03 (29 May 2003)); and a computer system for handling conflicting demands for resources, such as booking of meeting rooms (*Fujitsu*, BL O/317/00 (23 August 2000)).

<sup>361</sup> *Merrill Lynch's Application* [1988] *RPC* 1.

<sup>362</sup> *Macrosson's Application* [2006] *EWHC* 705 (Ch).

electronically and turns that currency into other value systems (prizes, credits etc),<sup>363</sup> an invention that provided decisions as to how to use employees to generate additional revenue streams,<sup>364</sup> and a payments advice system that allowed a payer to send a payment to a payee and associate it with a document stored in the advice system.<sup>365</sup> All of these alleged inventions were excluded on the basis that they were non-technical business methods.

A similar approach had been followed at the EPO. This can be seen in *Petterson/Queueing system*,<sup>366</sup> which concerned a patent for a system for handling customers queuing at a number of service points. The patent consisted of a turn-number allocating unit, an information unit, a selection unit, and a computer program that decided which particular turn number was to be served at a particular service point. While the patent was rejected in Sweden, the Technical Board of Appeal at the EPO held that the claimed apparatus was clearly technical in nature and thus patentable.<sup>367</sup> Although the invention was used in a business context, a telling factor in the Board's decision to uphold the validity of the patent was its finding that the essence of the invention lay in the way the elements of the system were combined.<sup>368</sup> More specifically, the validity of the patent was upheld because the problem that the invention solved related to the way in which the components of the system interacted, which was seen as a technical rather than a business problem.<sup>369</sup>

The Court of Appeal in *Aerotel* said that business method exclusion was not limited to abstract matters; it also said that there was no need for an activity to be completed—for the cash register to ring—for it to fall within the exclusion.<sup>370</sup> On the basis that the information was to be used in the conduct of the business, it was held that the idea of presenting information to be used in undertaking inventories in a pictorial form was a method of doing business.<sup>371</sup> It has also been said that the mere fact that an invention provides financial gains is not enough for it to be classified as a method of doing business; otherwise, nearly all patents would fall within the exclusion.<sup>372</sup>

### 7.3.2 Approach at the EPO

As we noted above, the fate of methods of doing business under the 'any hardware' approach at the EPO was clearly spelt out in the *Pension Benefits* decision.<sup>373</sup> (It is

<sup>363</sup> *IGT's Application*, BL O/140/13 (27 March 2013), [49].

<sup>372</sup> *Quest International/Odour selection*, T 619/02 [2007] OJ EPO 63.

<sup>373</sup> This is reflected in the EPO Guidelines, which state that, 'in relation to an apparatus claim which contains computers, computer networks or other conventional programmable apparatus or a program thereof,

important to note that the reasoning developed in *Pension Benefits* was subsequently extended to both apparatus and method claims.) Given that the corresponding patent application was granted in the United States, the decision also highlights the difference in approach between Europe and the United States in relation to patent protection for business method inventions.<sup>374</sup>

## 7.4 PRESENTATION OF INFORMATION

The approach that has been used in the United Kingdom and at the EPO to determine whether an invention consists of the presentation of information and thus falls foul of section 1(2)(d)/Article 52(2)(d) is similar to the approach that has been used in relation to the other categories of subject matter excluded from protection.<sup>375</sup>

### 7.4.1 Approach in the United Kingdom

When considering whether a patent is excluded under Article 52(2) and (3), the EPO (pre-*Pension Benefits*) drew a distinction between ordinary (cognitive) information, which is excluded by section 1(2)(d)/Article 52(2)(d), and special (functional) information, which is not excluded.<sup>376</sup>

*Ordinary cognitive information*, which is the type of information excluded under section 1(2)(d)/Article 52(2)(d) as a presentation of information, includes subject matter that merely conveys cognitive or aesthetic content directly to a human.<sup>377</sup> In essence, ordinary cognitive information includes any representation of information that is characterized solely by the content of the information. This would include, for example, a television signal solely characterized by the information *per se* (for example moving pictures, modulated upon a standard television signal). Similarly, digital data that encodes cognitive content (such as a picture) in a standard manner would also be excluded.<sup>378</sup> As the EPO Guidelines explain, a claim will be excluded where it is directed to the presentation of information *per se* (for example acoustic signals, spoken words), to information recorded on a carrier where the carrier (that is, the book, the gramophone record, or magnetic

for carrying out at least some steps of a scheme, it is to be examined as a computer-related invention': *EPO Guidelines*, C-IV.

<sup>374</sup> A patent had been granted on the appellant's pension system in the United States in *Pension Benefit Systems*, T 931/95 [2001] *OJ EPO* 441, 447, [iv], despite the fact that the reasoning of the Board was said to be reminiscent of USPTO, *Guidelines for the Examination of Computer-Related Inventions* (1996). See M. Likhovski, 'Fighting the Patent Wars' [2001] *EIPR* 267, 270.

<sup>375</sup> See, e.g., *Texas Instruments/Language-understanding system*, T 236/91 [2000] *EPOR* 156. See also *Hiroki Ashizawa*, BL O/235/03 (18 August 2003); *Crawford v. Jones* [2005] *EWHC* 2417 (application excluded on the basis that it was limited to display of information).

<sup>376</sup> The Board said that, with the growth of information technology in the last half-century, information in its 'special sense had become much more important'. Nonetheless, the Board noted that the information mentioned in Art. 52(2)(d) was limited to information in the ordinary (cognitive sense): *Koninklijke Philips Electronics/Picture retrieval system*, T 1194/97 [2000] *OJ EPO* 525, [3.7.2].

<sup>377</sup> *Ibid.* The Board said that the only decision that appeared to have construed 'presentation of information' to include an aspect of the special sense of information was *Kock & Sterzal/X-ray apparatus*, T 26/86 [1988] *EPOR* 72. The Board noted that *Kock & Sterzal* dealt with the exclusion of computer programs and, as such, was 'strictly *obiter* as far as Article 52(2)(d) is concerned': *Koninklijke Philips Electronics/Picture retrieval system*, T 1194/97 [2000] *OJ EPO* 525, [3.7.4].

<sup>378</sup> In rejecting an application for a configuration for simultaneously displaying several images on a computer screen, the TBA said that imparting information on events in a screen window merely drew attention to the content of the images and, as such, was not technical: *Siemens*, T 599/93 [1997] *OJ EPO* (Special edn), 14.

computer tape) is characterized solely by the content being carried (the subject of the book, musical content, or data or programs), or to processes and apparatus for the presentation of information.<sup>379</sup> In all of these cases, the key aspect of the invention is the content of the message.

In contrast, a patent for *functional information* (or data) does not fall within the scope of Article 52(2)(d). As with all enquiries into excluded subject matter, if it can be shown that the information carrier or the process or apparatus for presenting the information, has a technical feature, the invention may be patentable. It is also possible that the arrangement or manner of representation, as compared with the content of the information itself, may be patentable. This would include instruments designed to measure information or the use of a code to represent characters. In explaining what is meant by functional information, the EPO supported the view that information (in its special sense) must not be confused with meaning. In fact, two messages, one of which is heavily loaded with meaning and the other of which is pure nonsense, can be exactly equivalent from the information technology point of view. Information in communication theory relates not so much to what you *do* say as to what you *could* say—that is, information is a measure of one's freedom of choice when one selects a message.<sup>380</sup>

Using this definition, the Technical Board of Appeal (TBA) said that information in the special (non-excluded) sense includes physical interactions within and between machines that do not convey any humanly understandable meaning. It has also said that a television signal solely characterized by the information *per se* (for example moving pictures, modulated upon a standard television signal) would be an excluded presentation of information while, in contrast, a television signal defined in terms that included the technical features of the television system in which it occurs has been held not to be a presentation of information.<sup>381</sup> In a similar fashion, the TBA held that an invention that was defined in terms that inherently included the technical features of the system in which the record carrier operated was not excluded as a presentation of information.<sup>382</sup> In *Koninklijke*, the Board said that the difference between (excluded) cognitive information and (non-excluded) functional data was illustrated by the fact that if the cognitive data or content was lost, the result would be a humanly meaningless picture, like snow on a television screen. This would not have any effect whatsoever on the technical working of the system. In contrast, the loss of functional data would impair the technical operation of the system and might indeed bring the system to a halt.<sup>383</sup> The approach that was adopted at the EPO prior to *Pension Benefits* in relation to the presentation of information can be seen in *Broselow/Measuring tape*,<sup>384</sup> where the invention was for a method of ascertaining information about accident victims (such as drug dosage or defibrillation techniques). More specifically, the method involved an ambulance officer measuring the body length of the emergency victim using a particular tape, which provided information about how the patient was to be treated. Importantly, this was done without the need for clinical expertise or reference to other

<sup>379</sup> EPO Guidelines, C-IV, 2.

<sup>380</sup> *Koninklijke Philip's Electronics*, T 1194/97 (15 March 2000), [3.7.1], citing C. Shannon and W. Weaver, *The Mathematical Theory of Communication* (1949) [no page number provided].

<sup>381</sup> *BBC/Colour television signal*, T 163/85 [1990] EPOR 599, 603, [1990] OJ EPO 379, 603.

<sup>382</sup> On the facts, the Board held that the claim in question was not a presentation of information, since it had functional data recorded thereon (in particular a data structure of picture line syntonization, line numbers, and addressees): *Koninklijke Philip's Electronics/Picture retrieval system*, T 1194/97 (15 March 2000). The Board followed *IBM/Computer programs*, T 1173/97 [1999] OJ EPO 609.

<sup>383</sup> *Koninklijke Philip's Electronics*, T 1194/97 (15 March 2000).

<sup>384</sup> T 77/92 [1998] EPOR 266.

sources. Highlighting the importance of the way the invention is construed, the TBA held that the ‘co-relation between the measured length and the information on the tape measure results in the tape . . . becoming a new gauge for directly measuring the patient treatment values’ and that such a new gauge, ‘for directly measuring the patient values, is clearly technical in character’.<sup>385</sup>

After some uncertainty, it is now clear that UK courts will follow the approach adopted at the EPO (pre-*Pension Benefits*). This is a result of *Gemstar v. Virgin*,<sup>386</sup> where Mann J endorsed the approach that had been adopted at the EPO pre-*Pension Benefits*. Drawing on the EPO Examination Guidelines, Mann J said that to be patentable, there had to be some effect beyond the information being processed. While a representation of information defined solely by the content of the information would not be patentable, this is in contrast to situations where the presentation of information has some real-world technical achievement outside the information itself, which is potentially patentable. Mann J used this test to reject the application in *Gemstar*, arguing that because the invention in question only provided a better or new user interface that allowed the starting information to be presented in a different way, there was no new technical effect. As such, it was a mere presentation of information.

The upshot is that if it can be shown that an application has some real-world technical achievement outside the information itself, it will not be caught by the exclusion. This is the case, for example, with the slide lock features on the iPhone: while the slide lock provided visual information to users, it also brought about a real-world effect and, as such, it was a not a presentation of information.<sup>387</sup> A similar approach can be seen in *Samsung Electronic’s Application*,<sup>388</sup> where it was held that an application for a method and apparatus for showing images embedded in an electronic map was *not* a mere presentation of information. The invention in question consisted of four stages. First, the user was presented with an electronic map. After the user selected a location on the map, the program analysed and then filtered the information contained in the map to identify images located within a certain radius of the selected location. In the final stage, the user was presented with images of nearby locations. A key feature of the application was that it identified and presented images of places of interest nearby the chosen location. This was in contrast to pre-existing electronic maps (such as Google Earth), which merely revealed images of the chosen location. While the invention was, at least from the perspective of the end-user, primarily concerned with the presentation of information, nonetheless it was held *not* to be a mere presentation of information. This was because while the invention began and ended by presenting information to the user (in the form of the initial map and the final map with the selected images), in between these two steps, the user selected the target point on the map, and the program analysed and filtered the information contained in the map. As the Hearing Officer held, the presence of the two middle steps meant that there was something more than the mere presentation of information; as such, the application was not excluded under section 1(2).<sup>389</sup> What was not clear, however,

<sup>385</sup> *Ibid.*, 270. The Board added that ‘the subject matter as a whole of a claim consisting of a mix of known technical elements and non-technical elements is not excluded from patentability under Art. 52(2) and (3) when the non-technical elements interact with the known technical elements in order to produce a technical effect’: *ibid.*

<sup>386</sup> [2009] *EWHC* 3068, [52]–[60]; upheld on appeal [2011] *EWCA Civ* 302. See also *Re Townsend’s Patent Application* [2004] *EWHC* 482 (‘presentation of information’ was not limited to the way in which information is presented or expressed, in terms of the format, font, etc., but also includes the provision of information; as such, an application for an advent calendar designed so that it could be used simultaneously by more than one person was excluded under s. 1(2)(d)).

<sup>387</sup> *HTC Europe v. Apple* [2012] *EWHC* 1789.

<sup>388</sup> BL O/347/12 (8 October 2012).

<sup>389</sup> *Ibid.*, [37].

was why the selection of information by the end-user in *Gemstar* did not save the application, whereas in this case it did.

#### 7.4.2 Approach at the EPO

The approach adopted at the EPO under the ‘any hardware’ approach in relation to presentations of information has been consistent with the general approach outlined above. Thus if an invention employs some technical means, it will not fall foul of Article 52(2)(d)—even if the contribution made by the invention is limited to the presentation of information. One of the consequences of the adoption of the ‘any hardware’ approach is that some of the earlier decisions at the EPO, which were based on the contribution test, will no longer be followed.<sup>390</sup> In *Hitachi/Auction method*,<sup>391</sup> the Technical Board of Appeal said that the EPO Guidelines were inconsistent with the approach outlined in *Pension Benefits* insofar as they say that ‘devices such as visual displays, books, gramophone records, traffic signs and apparatus are said not to be patentable . . . if defined solely by the content of the information’. It seems clear that applications of this nature will now pass the subject matter test in Article 52(2)(d) if they include *some* technical means—no matter how old, banal, or trivial.

### 7.5 METHODS FOR PERFORMING A MENTAL ACT

At first glance, the exclusion of methods for performing a mental act seems to be relatively straightforward. While this is the case if an application is limited to a purely mental process (unaided by technology), this has not been the case where the mental process is carried out by a computer. One reason why this has been so problematic is that the courts have had to grapple with the fact that while computer-related inventions may perform tasks analogous to those carried out by humans, there comes a time when the analogy breaks down—that is, there is a point at which a process that is carried out by a computer is so qualitatively different from a functionally equivalent process carried out by the human mind that the two events cannot be equated with each other. The question that we look at below is where and how this line is drawn.

#### 7.5.1 Approach in the United Kingdom

Of all of the categories of excluded subject matter, the one where there has been the greatest divergence, both within the United Kingdom and between the approaches adopted in the United Kingdom and at the EPO (pre-*Pension Benefits*), is in relation to the exclusion of methods, schemes, or rules for performing a mental act. As we will see below, there is now much more consistency both in the United Kingdom and between the approaches adopted in the United Kingdom and at the EPO (pre-*Pension Benefits*).

Although UK courts were largely in agreement that a patent would not be granted if the only contribution that the invention offers was mental (or intellectual), for some time there was disagreement as to what is meant by a ‘mental act’.<sup>392</sup> More specifically, there was disagreement as to whether or not, and if so, in what circumstances

<sup>390</sup> This can be seen, e.g., in the decision of the Board in *Infineon Technologies/Circuit simulation I*, T 1227/05 [2007] OJ EPO 574, 584–7, that the decisions of *IBM/Method for physical VLSI-chip design*, T 453/91 (31 May 1994), and *International Computers/Information modelling*, T 49/99 (5 March 2002), were no longer to be followed.

<sup>391</sup> T 258/03 [2004] OJ EPO 575, 583.

<sup>392</sup> See D. Wells, ‘Expert Systems, Mental Acts and Technical Effects’ (1995) *CIPAJ* 129; C. Muse, ‘Patented Personality’ (1988) 4 *Santa Clara Computer & High Tech LJ* 285.

a process that automatically performs a mental act fell within the scope of section 1(2)(c)/Article 52(2)(c).

Over time, two different readings of the provisions developed: a wide and a narrow construction of the exclusion. While there has been support for the wider construction, following *Halliburton Energy Service's Patent Application*,<sup>393</sup> the narrow approach is now applied in the United Kingdom. Given that this outcome is still somewhat fragile (and could benefit from the approval of a superior court), it is important to understand the difference between the two approaches.

Under the wide construction, an application that is *capable* of being performed mentally is excluded irrespective of whether it is in fact performed mentally. It does not matter if, in fact, the application only claims use of a computer. Thus a claim to a computer programmed to carry out a method of performing a calculation (say, a square root) would be excluded on the basis that it is a mental act. This is because calculations are the types of thing that are 'capable of being performed mentally'.<sup>394</sup> This is the case even if the invention does not actually cover performing the calculation mentally at all because the claim is limited to using a computer.

While the EPO (pre-*Pension Benefits*) had accepted that where a mental act is automatically performed by a computer, the activity may change in such a way that it can no longer be seen as the performance of a mental act, under the wide construction such activities remained a method for performing a mental act. This was the case even when the computer carried out the process in a way that could not be mimicked by the human mind.<sup>395</sup> This point was reinforced by the Court of Appeal in *Fujitsu's Application*,<sup>396</sup> where it was held that the concept for performing a mental act should be construed widely to include all methods of the type performed mentally, even if the particular method in question would not be carried out by the human mind. This was because a method 'remains a method for performing a mental act, whether a computer is used or not'.<sup>397</sup> As Aldous LJ said:

[A] method of solving a problem, such as advising a person whether he has acted tortiously, can be set out on paper or incorporated into a computer program. The purpose is the same, to enable advice to be given, which appears to me to be a mental act.<sup>398</sup>

Aldous LJ added that:

[The] method may well be different when a computer is used, but to my mind it still remains a method for performing a mental act, whether or not the computer program adopts steps that would not ordinarily be used by the human mind.<sup>399</sup>

Applying the wide construction, UK courts refused applications that amounted to the automation of operations that could otherwise be performed by humans.<sup>400</sup> This included

<sup>393</sup> [2011] EWHC 2508.      <sup>394</sup> *Ibid.*, [42].      <sup>395</sup> *Fujitsu's Application* [1996] RPC 511, 518–19.

<sup>396</sup> [1997] RPC 608.

<sup>397</sup> *Ibid.*, 620, citing *Wang Laboratories' Application* [1991] RPC 463, 472. The suggestion was made that the provision be limited to those acts that can be carried out by the human mind. This was rejected on the basis that it would require the courts to engage in the extremely difficult task of deciding how the human mind actually works: *ibid.*, 619–20.      <sup>398</sup> *Ibid.*

<sup>399</sup> *Ibid.* See also *Fujitsu's Application* [1997] RPC 620 (CA), 621. The Comptroller adopted a similar approach to reject an application for a computerized system for resolving disputes for resources (such as room or flight bookings) according to certain priorities more easily accessible to users: *Fujitsu's Application*, BL O/317/00 (23 August 2000), 11.

<sup>400</sup> Claims for an inference processor forming the core of an expert system have been allowed in a hearing at the Patent Office: see D. Wells, 'Expert Systems, Mental Acts and Technical Effects' [1995] CIPAJ 129.

inventions in the fields of expert systems,<sup>401</sup> pattern recognition systems,<sup>402</sup> and systems for rearranging conflicting demands for resources (such as room bookings),<sup>403</sup> Somewhat bizarrely, this was the case even if the invention could not be carried out by the unaided human mind.<sup>404</sup>

While there was support in the United Kingdom for the wide construction, over time there was growing support for a narrower, more limited, reading of the exclusion. Under the narrow approach, a claim is only excluded where it ‘covers a method of arriving at a particular result by the exercise of rational processes alone’.<sup>405</sup> There are two notable features of the narrow reading. The first, which is based on the idea that the purpose of the mental act exclusion is to ‘make sure that patent claims cannot be performed by purely mental means and that is all’,<sup>406</sup> is that the exclusion only applies where the application *actually* claims a mental process. The fact that calculations are the type of things that are *capable* of being performed as mental acts is irrelevant. The second is that the exclusion will only apply where the application is limited to mental processes—that is, to processes that occur (exclusively) within the human mind.<sup>407</sup> This means that a process carried out on a computer would ‘never be caught by the mental act exclusion because the claim does not encompass carrying out the calculation mentally’.<sup>408</sup>

The question of the correct way to approach the exclusion of mental acts in the United Kingdom was discussed in detail by Birss J in *Halliburton Energy Service’s Patent Application*.<sup>409</sup> After reviewing UK case law, Birss J concluded that the balance of authority was in favour of the narrow approach to the exclusion.<sup>410</sup> He also said that he would have favoured the narrow reading in any case, not least because it prevented ‘patents being granted which could be infringed by a purely mental process. Allowing for the possibility of patent infringement by thought alone seems to me to be undesirable.’<sup>411</sup> Following the clear statements in *Halliburton*, the UK IPO amended the relevant Practice Notice to make it clear that the mental acts exclusion will now be construed narrowly in the United Kingdom.<sup>412</sup>

<sup>401</sup> *Wang Laboratories* [1991] RPC 463 (expert system—comprising a conventional computer operating in the normal way, with an expert system program, the knowledge base of which was in the form of hierarchically defined terms and their definitions—was a mental act and was therefore excluded from protection).

<sup>402</sup> *Raytheon’s Application* [1993] RPC 427 (patent for a method of ‘pattern recognition and the matching of silhouettes, particularly those of ships’, was rejected); *Fujitsu’s Application* [1996] RPC 511 (application directed to methods for modelling a synthetic crystal structure by combining images of two structures to display a third image representing a further crystal structure rejected).

<sup>403</sup> *Fujitsu’s Application*, BL O/317/00 (23 August 2000).

<sup>404</sup> *KK Toshiba* [1993] IPD 160 (19 February 1993).

<sup>405</sup> *Cappellini and Bloomberg’s Application* [2007] EWHC 476, [8].

<sup>406</sup> *Halliburton Energy Service’s Patent Application* [2011] EWHC 2508, [63].

<sup>407</sup> As Jacob LJ said, ‘there is no particular reason to suppose that “mental act” was intended to exclude things wider than, for instance, methods of doing mental arithmetic . . . or remembering things’: *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [98]. One question is how much external (technical) assistance, if any, is permissible: what of paper, pen, chalk, abacus, calculators?

<sup>408</sup> *Halliburton Energy Service’s Patent Application* [2011] EWHC 2508, [42]. <sup>409</sup> *Ibid.*

<sup>410</sup> *Ibid.*, [57]. <sup>411</sup> *Ibid.*

<sup>412</sup> IPO Practice Notice, *Patents Act 1977: Patentability of Mental Acts* (17 October 2011) (‘examiners will now take a narrow view of the mental act exclusion . . . claims which specify that the invention is implemented by a computer will not be considered to be excluded from patentability as a mental act’), adopted by the Comptroller in *Protecting Kids the World Over’s Patent Application* [2011] EWHC 2720, [2]–[3]. The October 2011 Practice Notice replaced the Notice (of the same name) (8 December 2008), issued following *Symbian*, which adopted the wide construction of the mental act exclusion. For criticisms of the 2008 Practice Notice, see *Halliburton Energy Service’s Patent Application* [2011] EWHC 2508, [78].

The adoption of the narrow interpretation means that a claim will only ever be excluded where it is limited to a purely mental or rational process. One of the consequences of the adoption of the narrow approach is that whenever a mental process is implemented by a computer, it will not be caught by the exclusion. Another consequence is that the exclusion only applies where the application is limited to a purely mental process; the exclusion will not apply if there are appropriate non-mental limitations in the claim.<sup>413</sup> This means that where an invention consists of a mixture of mental and non-mental elements, the exclusion will not apply.

Another consequence of adopting the narrow approach is that UK law is now closer to the approach adopted at the EPO (pre-*Pension Benefits*). One difference, however, is that UK courts have tended to focus on the meaning of ‘mental act’, whereas the EPO followed the standard approach of using the existence of technical character to determine the scope of the exclusion. It also seems that the approach in the United Kingdom is not only more cut and dry (if a computer is used, a claim will not fall within the exclusion), but also a much restrictive reading of the exclusion.

Prior to the adoption of the ‘any hardware’ approach, the EPO accepted that patents would not fall foul of Article 52(2)(c) if the invention viewed as a whole was technical.<sup>414</sup> Many of the activities that are carried out by a computer, such as object recognition or the checking of text for spelling mistakes, are tasks that can also be performed by humans. Nonetheless, the EPO pre-*Pension Benefits* had been willing to accept that activities carried out automatically by machine may be *qualitatively* different from similar activities carried out by humans. That is, while a computer and a human may perform the same task, when this task is carried out automatically by computer, it might be done with such speed or accuracy that it is not the same as a functionally equivalent task performed by a human.<sup>415</sup>

Thus, when considering whether inventions based on text editing were patentable, the EPO pre-*Pension Benefits* largely followed the line of thought used in relation to other areas of Article 52(2). This meant that if an application only related to the internal, linguistic elements of the text (which are seen to be non-technical), it fell foul of Article 52(2) and was thus unpatentable. This can be seen in *IBM/Text-clarity processing*,<sup>416</sup> where the Technical Board of Appeal (TBA) was called upon to decide whether an application for improving the clarity of texts was patentable. The invention in question was made up of a program that first identified linguistic expressions that were difficult to understand, then offered alternative expressions that were easier to understand. An important factor in the decision that the invention was directed to text editing and, as such, that it was not patentable was that the inventive element of the application lay in the mental elements of the process—namely, in the process of identifying parts of texts that were difficult to understand and offering alternatives.

In contrast, if it can be shown that the contribution made by the application is technical and not merely linguistic (mental) in nature, then it was *prima facie* patentable. That is, if it

For the position in Germany (following the approach at the EPO), see *Sprachanalyseeinrichtung (Language analysis device)*, X Z.B 15/98 [2002] *OJ EPO* 415 (BGH).

<sup>416</sup> T 38/86 [1990] EPOR 606 (application for a method for detecting and replacing incomprehensible expressions using conventional hardware and a dictionary); *IBM/External interface simulation*, T 833/91 [1998] EPOR 431 (method of designing external interfaces for a computer application program excluded).

can be shown that the application extends beyond text processing to provide a technical contribution or to resolve some technical problem, then it will be patentable. A helpful example of this is provided by *IBM/Editable document form*,<sup>417</sup> which concerned an application for a method for transforming printer control items in word-processing documents from one format to another (which in turn allowed documents to be transferred from one text-processing format to another). Using the same logic that is used in relation to the other parts of Article 52(2), the TBA said that in considering whether the application was valid, it needed to ‘investigate whether the claim seen as a whole constitutes nothing more than a method for performing mental acts as such, albeit carried out on a computer’.<sup>418</sup> After reviewing the nature of the invention in question, the Board found that the application could not be described as a method for performing a mental act (nor could it be described as a computer program). The reason for this was that the invention was concerned above all with (printer) control items in the source document. Given that the ultimate purpose of these control items was the control of hardware, the Board said that the application had nothing to do with the linguistic meaning of the texts being processed; rather, it represented features of the technical, internal working of that system.<sup>419</sup> As such, the application did not fall foul of Article 52(2)(c).

The adoption of the narrow reading of the mental act exclusion is out of step with other areas of section 1(2), in relation to which the courts have been careful to say that the mere use of a computer will not prevent an application claiming a business method, a mathematical method, or a presentation of information from falling foul of section 1(2).

One of the consequences of the narrow reading is that it renders the mental act exclusion all but meaningless. This is because while the exclusion will still apply where an application claims a purely mental processes, it will not apply where a computer is involved. While the adoption of the narrow approach may mean that the mental act exclusion has effectively been rendered redundant, this does not necessarily mean that there will be a corresponding increase in the number of patents granted. This is because what has happened is that the focus of attention has shifted from the exclusion of mental acts to the exclusion of computer programs *per se*. This can be seen in *IBM/Text-clarity processing*<sup>420</sup> (which we discussed above). While the invention may not have fallen foul of the mental act exclusion, the Board found that the process by which these mental acts were placed in a format in which they could be performed automatically by a computer only involved the routine, straightforward application of conventional techniques. Given that the only contribution made by the application was in relation to the mental steps of the process and not (for example) in the way in which these steps were automatically carried out by a computer, the Board declared that the application was invalid. A number of other text-editing applications have been rejected on the basis that they used the same steps as mental processes and, when automated, merely employ conventional equipment ordinarily programmed.<sup>421</sup> A similar approach has been adopted at the UK IPO.

<sup>417</sup> T 110/90 [1995] EPOR 185. <sup>418</sup> *Ibid.*, [4].

<sup>419</sup> They were said to be akin to the technical functions carried out in mechanical typewriters, such as carriage return, new page, and new paragraph.

For example, while the process of interpretation occurs solely within the interpreter's brain, nonetheless following the finding in *Halliburton* that mental acts performed by a computer cannot be considered a 'mental act', the Hearing Officer held that a claim to a method and apparatus for determining the competency of human language interpreters using a computer program was not a mental act.<sup>422</sup> While this may have meant that the application was not excluded on the basis that it was a mental act, this did not mean that it was patentable. This was because in the absence of any technical effect either within or outside the computer, the invention was excluded on the basis that it was a computer program as such.

### 7.5.2 Approach at the EPO

For the most part, the approach adopted at the EPO under the 'any hardware' approach in relation to methods for performing mental acts has been consistent with the general approach outlined above. This can be seen, for example, in *Quest International/Odour selection*,<sup>423</sup> where the invention was directed to matching the tastes of the public to the design of perfumes. More specifically, it involved a 'perceptual evocation test' in which a person was presented with certain odours and with a target or priming stimulus of a visual or auditory nature. This was used to select an odour according to the response of the test subject. Insofar as the method in question involved physical activities ('activities in the physical world such as presenting test persons with odours and stimuli'), the Technical Board of Appeal held that the method did not constitute a mental act.<sup>424</sup> In this respect, the decision follows the 'any hardware' approach. In other respects, however, the Board seemed to adopt some of the techniques that had been applied under the contribution approach. The Board also provided a detailed analysis of what is meant by 'methods for performing mental acts'. In particular, the Board said that the selection method used in the application relies on the test subject's 'implicit odour memory'—that is, non-conscious associative recollections as opposed to explicit memory. It added that:

[Such] perceptual processes (emotions, impressions, feelings etc) are psychological in nature and relate to—at least to a predetermined degree—subconscious processes that take place in the human mind, in contrast to the abstract nature of mental acts within the meaning of Article 52(2)(c)—are primarily based on cognitive, conceptual or intellectual processes conducted by the human mind.<sup>425</sup>

On this basis, the Board said that not even the perceptual processes in the mind of the test subject constituted mental acts within the meaning of Article 52(2)(c).

## 7.6 REFORM

The last four decades have seen a remarkable transformation in the way in which computer programs and computer-related inventions are dealt with under European law. From a situation in which computer programs 'as such' were expressly excluded from patentability, approximately 16 per cent of all applications for patents received by the EPO in 2013 were for computer-implemented inventions.<sup>426</sup> The scope of protection available for

expressions); *IBM/Text processing*, T 65/86 [1990] EPOR 181 (detecting contextual homophone errors, e.g. 'there' for 'their'). All were held not patentable because they were 'mental acts'.

<sup>422</sup> *Language Line Services' Application*, BL O/193/13 (14 May 2013), [22].

<sup>423</sup> T 619/02 [2007] OJ EPO 63. <sup>424</sup> *Ibid.*, 73. <sup>425</sup> *Ibid.*

<sup>426</sup> EPO, *Annual Report 2013: European Patent Applications* (March 2014), 1; UK IPO, *Progress on Directive for Software Patents* (September 2003) (15 per cent of 30,000 applications received).

computer-related inventions was enhanced by the fact that while computer programs *per se* have long been considered to be non-technical and thus outside the scope of patent law, this way of thinking about computer programs was called into question. In particular, a number of decisions at the EPO have recast computer programs as technical creations.<sup>427</sup> This reconfiguration of computer programs has been particularly important in light of Article 27 of the 1994 Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS), which states that ‘patents shall be available for any inventions, whether products or processes, in all fields of technology’ and that ‘patents shall be . . . enjoyable without discrimination as to . . . field of technology’.<sup>428</sup>

Notwithstanding (or possibly because of) these changes, there have been growing calls for reform of the scope of protection available for computer programs and computer-related inventions in Europe. In part, these debates have been stimulated by changes in US patent law that facilitated the patenting of computer programs and business methods.<sup>429</sup> As well as setting a benchmark against which European law is judged, the liberalization of the level of protection in the United States also led to a flood of applications for computer-related inventions in Europe. In turn, these changes have led to the suggestion that the threshold for protection in Europe should be lowered to ensure that there is a level playing field between Europe and the United States. In response to such suggestions, a consortium of interests led by members of the open-source community has campaigned against greater protection.<sup>430</sup>

Despite the widespread calls for reform, to date there has been little change in the scope of protection for computer-implemented inventions in Europe. At best, there have been proposals for the law to be changed to make it clearer and more consistent. Notably, the American approach that protected business method inventions has not found favour at the EPO, the UK IPO, or in any of the Community agencies responsible for legislative change in Europe. The preference for the status quo can be seen in the revision of the EPC that took place in 2000. While it was suggested that ‘computer programs as such’ be deleted from the subject matter excluded from patentable status in Article 52(2)(c), delegates to the Diplomatic Conference voted against the proposal.<sup>431</sup> As a result, Article 52(2)(c) of the EPC 2000 replicates the exclusion of ‘programs for computers’ that was found in Article 52(2)(c) of the EPC 1973.

The UK government came out in support of the status quo. During a consultation process in 2000, respondents were asked to what extent computer programs and Internet

<sup>427</sup> *Bosch/Electronic computer components*, T 164/92 [1995] EPOR 585, 592.

<sup>428</sup> The Board noted that, because the EPO was not a signatory to TRIPS, it was not bound by it. However, on the basis that TRIPS aimed at ‘setting common standards and it acted as an indicator of modern trends, the Board noted that it was the clear intention of TRIPS not to exclude from patentability any inventions, in particular, not to exclude programs for computers’: *IBM/Computer programs*, T 1173/97 [2000] EPOR 219, 224–5. In *Symbian’s Application* [2008] EWCA Civ 1066, Patten J said that the changes made to the language of EPC 2000, Art. 52(2)(c), to bring it into line with TRIPS, Art. 27(1), did not change the law.

<sup>429</sup> The situation in the US has changed as a result of the Supreme Court decision of *Alice Corp. v. CLS Bank* (19 June 2014).

<sup>430</sup> These include EuroLinux and the Association for the Promotion of Free Information Infrastructure (FFII).

<sup>431</sup> M. Delio, ‘Europe Nixes Software Patents’ (23 November 2000) *Wired News*, available online at <<http://www.wired.com>>; EPC 2000, Art. 1, item 17. As the explanatory remarks explained, the EPO Board of Appeal decisions that computer programs producing a technical effect are patentable subject matter meant that the ‘current exception has become de facto obsolete’: *Base Proposal for the Revision of the European Patent Convention* (2000) CA/100/00 e, 37. It was also suggested that Art. 52(2) ought to be abolished altogether. This was not put forward to the Diplomatic Conference for November 2000.

business methods should be patentable. The resulting study found that while there was no consensus about the extent to which software should be patentable,<sup>432</sup> there was support for the ongoing patentability of computer-related inventions with technical effect. It was also clear from the responses that the law in this area was unclear. This led the UK government to conclude that clarification was needed, particularly as to ‘how to define the boundary defining when software is, and is not, part of a technological innovation, so that what is patentable will be clear in specific cases in the future’.<sup>433</sup> The consultation process also revealed that there was widespread opposition to patents for computer-implemented business methods that did not bring about some form of technological innovation.<sup>434</sup> This led the UK government to conclude that ‘those who favour some form of patentability for business methods have not provided the necessary evidence that it would be likely to increase innovation. Unless and until that evidence is available, ways of doing business should remain unpatentable.’<sup>435</sup>

One of the consequences of the decision to retain the status quo in the EPC 2000 was that the debate on the patenting of computer-related inventions shifted to the European Commission and the European Parliament. After a period of consultation, which raised a number of questions about the scope, nature, and impact of patents for computer-related inventions,<sup>436</sup> the Commission’s response took shape, with the publication of the draft Directive on the Patentability of Computer-Implemented Inventions in February 2002.<sup>437</sup> With the possible exception of the exclusion of a ‘patent claim to a computer program, either on its own or on a carrier’,<sup>438</sup> the draft Directive did not expressly alter existing law. For example, business methods, algorithms, and non-technical computer-implemented inventions were excluded from protection. However, given that the proposed Directive used concepts that are alien to British law, there was a chance that the Directive might have brought about a number of unexpected consequences. This is reinforced by the fact that although the Directive was very short (it consisted of six Articles), it lacked a coherent structure.

Faced with widespread criticisms of the draft Directive, particularly from the open-source community, not unsurprisingly the proposal was resoundingly rejected by the European Parliament in July 2005.<sup>439</sup> Given the legislative impasse, attention soon shifted to the possibility of a judicial solution to the perceived problems of the patenting of computer programs and computer-related inventions. In line with this, in 2007 the question of the patentability of computer-related inventions was reopened by the EPO President, who called for public discussion to fill the vacuum left by the rejection of the Directive. However, following the lukewarm response by the Enlarged Board of Appeal in the 2010 decision *President’s Reference/Patentability of programs for computers*,<sup>440</sup> it seems that judicial reform is also unlikely, at least in the short term.

<sup>440</sup> G 3/08 (12 May 2010).

## 8 BIOLOGICAL SUBJECT MATTER

The fourth category of subject matter excluded from patent protection is set out in paragraph 3(f) of Schedule A2 to the Patents Act 1977<sup>441</sup> and Article 53(b) of the EPC 2000 (reproducing Article 53(b) of the EPC 1973). These provide that a patent shall not be granted for ‘any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a microbiological process or other technical process or the product of such a process’.<sup>442</sup>

These provisions fall into two parts. First, they declare that patents should not be granted for ‘animal varieties’, ‘plant varieties’, and ‘essentially biological processes’. The second part of paragraph 3(f)/Article 53(b) goes on to qualify and limit the subject matter that is excluded from patentability. As an exception to the exception, it provides that if an invention is ‘a microbiological process or other technical process or the product of such a process’, the invention may be patented.

Before looking at the exceptions, it might be useful to point out that there is no general bar on the patenting of biological material or biotechnological inventions.<sup>443</sup> Indeed, as the EPC 2000 and the 1977 Act (as revised) make clear, an invention shall not be considered unpatentable solely on the ground that it concerns a product consisting of or containing biological material or a process by which biological material is produced.<sup>444</sup> More specifically, the EPC 2000 and the 1977 Act explicitly state that it is possible to patent inventions for plants and animals, so long as they comply with the general requirements of patentability.<sup>445</sup> The exclusion under Article 53(b) is the denial of patents to the specified subject matter *per se*, rather than as under the morality exclusion in Article 53(a) (discussed below), ‘which is to inventions covering such subject matter whose publication or exploitation must be measured by a moral or other standard’.<sup>446</sup>

### 8.1 ANIMAL VARIETIES

The first category of subject matter excluded from protection by paragraph 3(f)/Article 53(b) comprises those things that qualify as ‘animal varieties’.<sup>447</sup> While the exclusion of plant varieties is usually explained on the basis that when the EPC 1973 was drafted, there was a ban on dual protection under the 1961 International Convention for the Protection

<sup>441</sup> Formerly PA 1977, s. 1(3)(b).

<sup>442</sup> The Biotech. Dir. prompted the introduction of the phrase ‘or other technical process’; Biotech. Dir., Art. 4(1); EPC 1973 Regs, r. 23b(c).

<sup>443</sup> TRIPS, Art. 27(3), allows members to exclude ‘plants and animals other than micro-organisms, and essentially biological processes for the production of plants or animals other than non-biological and microbiological processes’. EPC 2000, Art. 53, provides that European patents shall not be granted in respect of ‘plant or animal varieties or essentially biological processes for the production of plants or animals: this provision shall not apply to microbiological processes or the products thereof’. See EPC 2000, Art. 1, item 18. The TBA said that, when Art. 53(b) was drafted, ‘the knowledge of the potential development in the field of biotechnology was rather limited’: *Lubrizol/Hybrid plants*, T 320/87 [1990] OJ EPO 71. For a comparative study on the patentability of DNA fragments, see EPO, *Trilateral Project B3b: Comparative Study on Biotechnology Patents* (1998). See also J. Funder ‘Rethinking Patents for Plant Innovation’ [1999] EIPR 551.

<sup>444</sup> PA 1977, Sch. A2, para. 1(a)–(b); Biotech. Dir., Art. 3; *Harvard/Transgenic animals*, T 315/03 (2006) OJ EPO 15, 78 (Art. 53(b) excludes only a limited category of animals and not all animals).

<sup>445</sup> PA 1977, Sch. A2, para. 4; EPC 2000 Regs, r. 27; Biotech. Dir., Art. 4(2).

<sup>446</sup> *Harvard/Transgenic animals*, T 315/03 [2006] OJ EPO 15, 56. The reference to publication was removed in EPC 2000, Art. 53(a).

<sup>447</sup> Biotech. Dir., Art. 4(1)(a); V. Di Cerbo, ‘Patentability of Animals’ (1993) 24 IIC 788; U. Kinkeldey, ‘The Patenting of Animals’ (1993) 24 IIC 777.

of New Varieties of Plants (UPOV), the fact that there is no equivalent treaty for animal varieties has led some to question why animal varieties were also excluded. In discussing the rationale for the animal variety exclusion, the Opposition Division at the EPO said that ‘the most obvious reason for this must have been the intention or at least the keeping open of the possibility to create such a law for the protection of animal varieties later on.’<sup>448</sup> A more honest explanation for the exclusion of animal varieties is that they are simply ‘not an appropriate subject matter.’<sup>449</sup> When Article 53(b) of the EPC 1973 was first drafted, the potential scope of the animal variety exclusion was straightforward and uncontroversial. This has changed, however, as patent law has been forced to confront the developments in biotechnology that have taken place since then.

The meaning of ‘animal variety’ was considered at the EPO in the early 1990s in the *OncoMouse* decisions. The claims in question related to a genetically modified non-human mammal (in particular a mouse), which had been modified so that it would be susceptible to cancer. The resulting products (the mice with cancer) were used in cancer research. At first instance, the Examining Division held that the exclusion not only covered groups of animals, but also animals in general; as such, the invention covered an unpatentable animal variety.<sup>450</sup> On appeal, the Technical Board of Appeal (TBA) held that the Examining Division had misconstrued the exclusion which, being an exception to patentability, ought to be construed narrowly.<sup>451</sup> Importantly, the Board said that Article 53(b) did not exclude animals in general. On this basis, the TBA remitted the matter to the Examining Division for reconsideration.

The Examining Division said that animal variety either meant a species or a subunit of a species. The Examining Division acknowledged that while the terms of UPOV were not consistent—the English and French terms (‘animal varieties’ and *racés animales*) meaning ‘subunit of a species’ and the German term (*Tierarten*) meaning ‘species’—it was not necessary to decide which was the authoritative meaning for the purpose of the Convention.<sup>452</sup> This was because the claims in question related to non-human mammals, a category that was neither a species nor a subunit of a species. (In zoological terms, ‘mammals’ are of a higher taxonomic classification than species.) Consequently, the subject matter did not relate to an animal variety and, as such, was not excluded by Article 53(b).

The meaning of ‘animal variety’ was considered by the TBA in its 2006 decision in *Harvard/Transgenic animals*<sup>453</sup> (which is effectively a rerun of the earlier *OncoMouse* decisions). The Board began by noting that the reasoning of the Enlarged Board of Appeal (EBA) in relation to plant varieties in *Novartis* was applicable to the decision as to whether an invention fell within the animal variety exclusion.<sup>454</sup> In *Novartis* (which is discussed in the next section), the EBA held that where a specific plant variety is not individually claimed, the claim will not be excluded from patentability under Article 53(b). This is the case even though it may embrace plant varieties.<sup>455</sup> While the TBA accepted the

<sup>451</sup> *Harvard/OncoMouse* [1991] EPOR 525 (Exam).

<sup>452</sup> EPC 1973, Art. 177(1), says that the English, French, and German versions of the EPC are equally authentic. <sup>453</sup> T 315/03 [2006] OJ EPO 15.

<sup>454</sup> *Novartis/Transgenic plant*, G 1/98 [2000] EPOR 303 (EBA), 319. Whereas ‘G1/98 makes reference to plants and not to animals, its holding can also be transferred to the interpretation of the exclusion of animal varieties in Article 53(b): *Harvard/OncoMouse* [2003] OJ EPO 473, 499 (Opposition Division); *Harvard/Transgenic animals*, T 315/03 [2006] OJ EPO 15 (TBA), 58.

<sup>455</sup> The Opposition Division, which also adopted the reasoning in *Novartis*, said that this meant that, for a claim to be excluded because it was for an animal variety, the claim had to be for a variety *per se*. On this

reasoning of the EBA in *Novartis*, it was faced with the problem that the three official texts of the EPC use different taxonomic terms to refer to the excluded subject matter: the English version refers to ‘animal varieties’; the German uses ‘animal species’; and the French version refers to ‘animal races’.<sup>456</sup> (This was in contrast to the way in which plants are dealt with under Article 53(b), all three official languages referring to ‘plant varieties’.) As the Board said, the fact that the three official texts of the EPC used different taxonomic categories potentially led ‘to the absurd result that the outcome of an Article 53(b) objection depended on the language of the case’.<sup>457</sup> (Because species was a higher taxonomic order, it excluded more than a variety and race.) Faced with this problem, the TBA said that a ‘definition by reference to taxonomical rank would be consistent with the position in relation to plant varieties and in the interests of legal certainty’.<sup>458</sup> While the Board noted that the uncertainty created by these linguistic differences was undesirable, nonetheless it said that it was unnecessary to pursue the matter further. The reason for this was that the claim for ‘transgenic rodents’ was for a taxonomic category that was higher than ‘species’, ‘variety’, and ‘race’. This meant that the patent would not have been caught by either the English, French, or German versions of Article 53(b). The upshot of the decision in *Transgenic animals* is that Article 53(b) of the EPC 1973 (Article 53(b) of the EPC 2000) will only apply where a patent is for a specific animal variety (or species, or race, depending on the language that is used)—that is, it modified the reasoning of *Novartis* to take account of the different taxonomic terms used in the English, French, and German versions of the EPC. Until the problem is rectified, it will pose interesting challenges for those drafting animal patents.

As well as looking at the fate of the applicant’s main request (which was for transgenic rodents), in the *Transgenic Animals* decision the TBA also looked at whether Article 53(b) acted as a bar to the patentability of the auxiliary request, which was restricted to ‘transgenic mice’. Following *Novartis*, the Board said that an objection under Article 53(b) would only arise if ‘one or more claims of the request are to a taxonomic category at least as narrow as an animal species—the broadest of the three taxonomic categories excluded in the three language texts of Article 53(b) EPC’.<sup>459</sup> Because the auxiliary claims did not fall within these criteria, the Board held that the auxiliary request did not fail under Article 53(b).<sup>460</sup>

## 8.2 PLANT VARIETIES

The second form of biological subject matter excluded from protection are ‘plant varieties’.<sup>461</sup> The reason for the exclusion can be traced to the fact that the EPC 1973 was

basis, the Division said that, because the invention was applicable to more than just varieties of mice, the patent was not excluded by Art. 53(b).

<sup>456</sup> While the English text of the EPC 1973 and the EPC 2000 both refer to ‘plant or animal varieties’, the German version refers to ‘plant varieties or animal species’ (*Pflanzensorten oder Tierarten*), while the French refers to ‘plant varieties and animal races’ (*les variétés végétales et les races animales*). The problems created by the fact that the three official texts use three different taxonomic terms—variety, species, and races—was compounded by the way in which EPC 1973 Regs, r. 23c, has been translated.

<sup>457</sup> *Harvard/Transgenic animals*, T 315/03 [2006] OJ EPO 15 (TBA), 60.

<sup>458</sup> *Ibid.*, 58.

<sup>459</sup> *Ibid.*, [13.3.1].

<sup>460</sup> The Board rejected the argument that the transgenic mice constituted a new species (primarily on the basis that it had not seen any evidence to this effect).

<sup>461</sup> PA 1977, Sch. A2, para. 3(f); EPC 2000, Art. 53(b); Biotech. Dir., Art. 4(1)(a). drafted in light of UPOV—a regime established in 1961 to grant property rights in new plant varieties. In order to ensure that plant breeders were not able to obtain patent protection *and* plant variety protection, it was decided that the two conventions should be mutually exclusive: a person could either be given *sui generis* plant breeder's right or patent protection, but not both.<sup>462</sup> Article 53(b) of the EPC 1973 and section 1(3)(b) of the Patents Act 1977 were drafted to give effect to this policy decision.<sup>463</sup> While the principle that the scope of the two regimes should be mutually exclusive was removed when UPOV was revised in 1991, nonetheless the exclusion of plant varieties still exists in both the EPC 2000 and the 1977 Act. Article 4(1) of the Biotechnology Directive confirms that plant varieties are not patentable. It also provides, as do the resulting changes to the 1977 Act and the changes to the EPC Implementing Regulations, that the concept of plant variety is to correspond to the definition used in Article 5 of the Community Plant Variety Regulation.<sup>464</sup>

The scope and operation of this exclusion depends on a number of factors. One is that it is not necessary to claim a 'plant' *per se* to qualify as a plant variety. This is because a plant variety may be represented not only by whole plants, but also by propagating material, such as seeds and other parts of plants that can be propagated.<sup>465</sup> It is also important to note that the question of whether a plant grouping constitutes a 'plant variety' does not depend on how it was obtained: the methods or steps for producing a new plant are not relevant for determining whether it is a variety. As such, it does not matter whether a plant was produced by genetic engineering technology or is the product of classical breeding techniques of crossing and selection;<sup>466</sup> all that matters is whether the application claims a variety. As the Technical Board of Appeal (TBA) said, it is clear that:

[W]hether or not a plant is to be considered to be a plant variety depends only on whether or not it meets the criteria set out in the definition in Rule 26(4) EPC [2000 Regs] (former Rule 23b(4) EPC [1973 Regs]). The method for its production, be it by recombinant gene technology or by a classical plant breeding process, is not relevant for answering this question.<sup>467</sup>

Another important factor that impacts on the scope of the exclusion is the way in which 'plant variety' is defined for the purposes of Article 53(b)/section 1(3)(b). Rule 26(4) of the EPC 2000 Implementing Regulations says that a 'plant variety' means:

any plant grouping within a single botanical taxon of the lowest known rank, which grouping, irrespective of whether the conditions for the grant of a plant variety are fully met, can be:

*Application* [1962] *RPC* 37. For an international overview, see T. Roberts, 'Patenting Plants around the World' [1996] *EIPR* 531.

<sup>462</sup> UPOV, Art. 2(1).

<sup>463</sup> EPC 1973, Art. 53(b), was intended to express a general intention to exclude patent protection for subject matter capable of protection within UPOV: *Ciba-Geigy/Propagating material application*, T 49/83 [1979–85] *C EPOR* 758, [1984] *OJ EPO* 112; *Plant Genetic Systems/Glutamine synthetase inhibitors* (1993) 24 *IIC* 618.

- (a) defined by the expression of the characteristics that result from a given genotype of combination of genotypes,
- (b) distinguished from other plant grouping by the expression of at least one of the said characteristics, and
- (c) considered as a unit with regard to its suitability for being propagated unchanged.

One of the earliest decisions to consider what is meant by the term ‘plant variety’ was *Ciba-Geigy’s Application*.<sup>468</sup> The application in question claimed any plant-propagating material that had been chemically treated so as to make the material resistant to other agricultural chemicals. In deciding that the invention was not a ‘plant variety’, the TBA said that plant varieties were ‘limited to claims to individually characterized plants which would have the detailed taxonomy and the reproductive capacity which is required in general for a plant variety right’.<sup>469</sup> The Board also stressed that a defining feature of a plant variety was that it contained certain features that distinguished the variety in question from other varieties. These distinguishing features needed to be stable enough so that the essential characteristics were passed on through subsequent generations. In so doing, the TBA highlighted the need for homogeneity between different generations. It also added that ‘it is perfectly sufficient for the exclusion to be . . . restricted . . . to cases in which plants are characterized *precisely* by the genetically determined peculiarities of their natural phenotype’.<sup>470</sup>

On the facts, the TBA held that claims for plant-propagating materials that had been chemically treated so as to make the material resistant to other agricultural chemicals were not claims to a ‘plant variety’. The reason for this was that while plant breeding (which is a form of human-induced genetic modification) introduced traits to plants that reappeared in subsequent generations, this did not occur with chemical treatment. As such, the Board held that the claims were not for plant varieties and thus not excluded from the scope of protection.

The definition of ‘plant variety’ for the purposes of Article 53(b) was clarified by the Enlarged Board of Appeal (EBA) in *Novartis*, where it was said that the reference in Rule 26(4)(a) of the EPC 2000 Implementing Regulations to the ‘expression of the characteristics that result from a given genotype or combination of genotypes’ means a reference to the entire constitution of a plant or a set of genetic information.<sup>471</sup> More specifically, the Board said that the concept of a ‘plant variety’ requires plant groupings to be defined by their whole genome, not merely by individual characteristics—that is, to qualify as a plant variety, a plant had to be defined by a multitude of characteristics resulting from a given genotype or combination of genotype.<sup>472</sup> Thus the EBA held that a claim to transgenic plants that were merely characterized by specific recombinant DNA sequences was not a plant variety.

The definition of plant variety developed in *Novartis* was applied in *Plant Bioscience/Broccoli*,<sup>473</sup> where the TBA held that the application in question, which was for an edible

<sup>473</sup> T 83/05 (8 July 2013).

*Brassica* (broccoli) plant with certain defined traits (an increased level of specific glucosinolates), was not a plant variety for the purposes of Article 53(b). As the Board said, a single trait is ‘in general not sufficient to define a plant variety, without providing, apart from an indication of the species, further adequate information about the actual genotype of the plant grouping’.<sup>474</sup> This reasoning was also applied in *State of Israel/Tomatoes II*,<sup>475</sup> where it was held that the claim for a tomato fruit of the species *Lycopersicon esculentum*, which is naturally dehydrated, was not a ‘plant variety’ and thus not excluded by Article 53(b). What was important here was that the claimed tomatoes were not defined by a multitude of characteristics resulting in a given genotype, but only by one particular trait—that is, (natural) dehydration.<sup>476</sup> The Board noted that within the species *Lycopersicon esculentum*, there were thousands of tomato varieties, each with specific and distinct features with different genetic information.

In botany, a plant variety is typically defined by two things. One is that it is a member of a particular species and that, as such, it shares the defined traits of that species. (In turn, the species is defined by reference to the ‘type specimen’ deposited at a specific repository and a published description.) At the same time, the variety is defined in relation to the species as a whole and distinguished from other varieties of that species. Normally, these differences, which may and often are a single trait, are defined by external phenotypical characteristics such as colour of flower, stem length, or leaf shape,<sup>477</sup> rarely in this process is there any reference to the ‘genotype of the plant grouping’. The approach that has been adopted at the EPO, which mixes (external) phenotypical traits with (internal) genomic traits, is an odd blend of approaches. It is also so restricted that it limits the scope of the exclusion to botanical innovations that are protectable under plant variety rights.

This reading of Article 53(b) has been reconfirmed in the way in which the EPO has approached the question of what happens when an application does not claim (or even mention) a specific plant variety *per se*, but nonetheless is broad enough to encompass a variety: what happens, for example, if someone claims a broader taxonomic category (such as a species) that necessarily encompasses all varieties of that species? This question was first considered in *Plant Genetic Systems*.<sup>478</sup> The claims in dispute related to plants, plant cells, and seeds that possessed a foreign gene, which made them resistant to a type of herbicide. Given that modified plants were immune to the application of the weedkiller, farmers were able to spray (modified) crops safe in the knowledge that the weedkiller would only affect the unmodified weeds. Greenpeace objected to the application, arguing, among other things, that the material claimed was a plant variety and thus excluded by Article 53(b).

At first instance, the Opposition Division held that the claims were not restricted to a specifically defined narrow group of plants (such as a variety), but related to a much broader group of plants.<sup>479</sup> As such, the claims were unobjectionable. In overturning this decision, the TBA acknowledged that ‘the concept of plant variety under Article 53(b) refers to any plant grouping within a single botanical taxon [or classification] of the lowest known rank’.<sup>480</sup> On this basis, the Board said that plant cells as such, which modern technology allows to culture much like bacteria and yeasts, ‘cannot be considered to fall under the

<sup>474</sup> *Ibid.*, [16].      <sup>475</sup> T 1242/06 (31 May 2012).      <sup>476</sup> *Ibid.*, [29].

<sup>477</sup> This was acknowledged in *Tomatoes II*, when the Board said that, in some cases, a single trait may be sufficient to distinguish plant groupings: *ibid.*, [30]. Nonetheless, the Board still followed the EBA in focusing on the whole genome.

<sup>478</sup> *Plant Genetic Systems/Glutamine synthetase inhibitors*, T 356/93 [1993] 24 *IIC* 618 (Opposition Division); [1995] *EPOR* 357, [1995] *OJ EPO* 545 (TBA).      <sup>479</sup> [1993] 24 *IIC* 618.

<sup>480</sup> [1995] *EPOR* 357 (TBA), [23].

definition of plant or of plant variety'.<sup>481</sup> Following *Ciba-Geigy*, the Board stressed that stability and homogeneity were important factors in determining whether something was a plant variety. More specifically, the Board noted that a plant variety 'is characterized by at least one single transmissible characteristic distinguishing it from other plant groupings and which is sufficiently homogeneous and stable in its relevant characteristics'.<sup>482</sup>

While the TBA in *Plant Genetic Systems* agreed with much of the reasoning in *Ciba-Geigy*, it disagreed with the way in which the ambit of the exclusion had been interpreted. More specifically, while in *Ciba-Geigy* plant varieties were restricted 'to cases in which plants are characterized precisely by the genetically determined peculiarities of their natural phenotype',<sup>483</sup> the Board in *Plant Genetic Systems* adopted a more expansive reading of the exclusion. In particular, it was willing to extend the exclusion beyond claims that were specifically directed to or characterized as plant varieties, to include claims that encompassed or included a plant variety within their scope. On the facts, the TBA held that what was being claimed was based upon or derived from genetically engineered cells (and that the application required the production of plant varieties to exemplify them). This meant that they were claiming rights over the plant varieties formed by those plants and seeds. As such, they were not patentable.

In summary, the TBA held that while claims relating to plant cells are potentially patentable, claims that 'encompass' or are 'based on' a plant variety are not.<sup>484</sup> (This is subject to the rider that the resulting plants have a distinguishable characteristic that is stable and homogeneous.) Given that plant varieties are frequently used as the starting point for the production of genetically engineered plants,<sup>485</sup> this meant that, in most cases, plants produced as a result of genetic engineering would not have been patentable<sup>486</sup>—a decision that, if followed, would have had important ramifications for the plant-breeding industry.<sup>487</sup> Given this, it is not surprising that the *Plant Genetic Systems* decision was subject to a considerable amount of criticism.<sup>488</sup>

Much of the cause for concern about the impact of the *Plant Genetic Systems* decision on plant genetics has now been alleviated. This is because two subsequent events have effectively overturned the decision: the enactment of the Biotechnology Directive and the decision of the EBA in *Novartis*.

Article 4(2) of the Biotechnology Directive provides that 'inventions which concern plants . . . shall be patentable if the technical feasibility of the invention is not confined to

<sup>481</sup> *Ibid.*, 375.      <sup>482</sup> *Ibid.*

<sup>483</sup> *Ciba-Geigy/Propagating material application*, T 49/83 [1979–85] C EPOR 758, [1984] OJ EPO 112, [4].

<sup>484</sup> On 'essentially derived variety', see UPOV, Art. 14(5).

<sup>485</sup> Most of the reaction was negative: U. Schatz, 'Patentability of Genetic Engineering Inventions in EPO Practice' (1998) 29 *IIC* 2; T. Roberts, 'Patenting Plants around the World' [1996] *EIPR*, 534; M. Llewellyn, 'The Legal Protection of Biotechnological Inventions: An Alternative Approach' [1997] *EIPR* 115.

<sup>486</sup> A. Schrell, 'Are Plants Still Patentable?' [1996] *EIPR* 242, 243.

<sup>487</sup> The President of the EPO, believing there to be a contradiction between *PGS* and *Ciba Geigy* (and also with the *OncoMouse* decision), referred the matter to the EBA. The Board refused to answer the question, which it ruled was improper because there was no conflict between the decisions: *Inadmissible referral*, G 3/95 [1996] EPOR 505, [1996] OJ EPO 169.

<sup>488</sup> As Bostyn explained:

[There] is a difference between a claim embracing a plant variety and a claim to a variety. Every claim to plants will embrace plant varieties, since a plant variety is a plant grouping of the lowest possible rank. When claiming a species, or even a higher rank, it will always embrace plant varieties: all Golden Delicious Apples (variety) are apples (species), but not all apples are Golden Delicious.

See S. Bostyn, 'Patentability of Genetic Information Carriers' [1999] *IPQ* 1, 18. See also R. Crespi, 'Patents and Plant Variety Rights: Is There an Interface Problem?' (1992) 23 *IIC* 173.

a particular plant . . . variety'.<sup>489</sup> Similar provisions have been introduced in the 1977 Act and the EPC 2000.<sup>490</sup> So long as a claim encompasses more than one variety, it is potentially patentable. The upshot of the Directive is that claims to plants will be allowed even if they encompass a plant variety. However, claims specifically directed to particular plant varieties (which are protected by a separate regime) will not be protected. This would appear to require member states to accept claims to genetically modified plants (such as those in *Plant Genetic Systems*) as being patentable.

A similar position was reached by the EBA of the EPO in *Novartis*,<sup>491</sup> which related to plants that were genetically modified to render them resistant to fungi. In relation to the plant variety exclusion, the Board found that 'a claim wherein specific plant varieties are not individually claimed is not excluded from patentability under Article 53(b), even though it may embrace plant varieties'.<sup>492</sup>

The EBA noted that Article 53(b) serves to define the borderline between patent and plant variety protection. It also noted that the extent of the exclusion for patents is the obverse of the availability of plant variety rights<sup>493</sup> and that plant varieties are only granted for specific plant varieties (and not for technical teachings). On this basis, the Board held that in 'the absence of the identification of a specific plant variety in a product claim, the subject matter of the claimed invention is not directed to a plant variety or varieties within the meaning of Article 53(b) EPC'.<sup>494</sup> In short, the Board overturned the *Plant Genetics Systems* decision and held that a claim that encompasses more than one variety is not excluded under Article 53(b). That is, the mere fact that a patent encompasses a plant variety will not mean that the invention falls within the exclusion. Instead, the exclusion will only operate where the patent claims a plant variety *per se* (which should be protected by plant variety protection). As the TBA subsequently said, the core of the reasoning of the EBA was the 'consideration that the exclusion of plant varieties serves only to exclude from patentability those plant inventions which can be protected by plant breeders' rights'.<sup>495</sup>

While the proponents of patent protection for plants will welcome the *Novartis* decision, it gives rise to a potential problem, similar to those that arose when the 'whole contents' approach was first adopted in relation to the patenting of computer programs. This is the problem that patent claims will be dressed up to appear as though they do not fall within the exception.<sup>496</sup> While the jurisprudence on the patentability of computer programs may provide guidance in this area, the different rationales behind the exclusions means that the 'whole contents' and 'technical effect' approaches cannot be directly

<sup>489</sup> Biotech. Dir., Recitals 29–32. Recital 31 states that 'a plant grouping which is characterized by a particular gene (and not its whole genome) is not covered by the protection of new varieties and is therefore not excluded from patentability even if it comprises new varieties of plants'.

<sup>490</sup> PA 1977, Sch. A2, para. 4; EPC 1973 Regs, r. 23c(b).

<sup>491</sup> *Novartis/Transgenic plant*, T 1054/96 [1999] EPOR 123, [1998] OJ EPO (Special edn) 149; R. Nott, 'You Did It: The European Biotechnology Directive at Last' [1998] EIPR 347, 351.

<sup>492</sup> *Novartis/Transgenic plant*, G 1/98 [2000] EPOR 303 (EBA), 319. The EBA gave the analogy of a patent for a copying machine: the fact that the machine could be used for copying counterfeit notes would not mean that the machine was excluded, since the improved properties could be used for other purposes. As we will see, this suggests a particular approach to morality that is not universally accepted.

<sup>493</sup> This was because 'inventions ineligible for protection under the plant-breeder's rights systems were intended to be patentable under the EPC provided they fulfilled the other requirements for patentability': *Lubrizol/Hybrid plant*, T 320/87 [1990] EPOR 173, [1990] OJ EPO 71, [3].

<sup>494</sup> *Novartis/Transgenic plant*, G 1/98 [2000] EPOR 303 (EBA), 319.

<sup>495</sup> *State of Israel/Tomatoes*, T 1242/06 [2008] OJ EPO 523, [38].

<sup>496</sup> *Novartis/Transgenic plant*, T 1054/96 [1999] EPOR 123, 137.

imported into paragraph 3(f) of Schedule A2 to the Patents Act 1977/Article 53(b) of the EPC 2000. It may, however, provide some useful insights into the potential problems that might arise.

### 8.3 ESSENTIALLY BIOLOGICAL PROCESSES

The third type of subject matter excluded from protection are inventions that are regarded as ‘essentially biological processes for the production of animals and plants’.<sup>497</sup> As with the exclusion of animal and plant varieties, the exclusion of essentially biological processes was reconfirmed in the Biotechnology Directive,<sup>498</sup> and by corresponding changes made to the 1977 Act<sup>499</sup> and the EPC 2000. Four aspects of this exclusion are worth emphasizing.

- (i) Because the exclusion only applies to processes, it has no application to product claims or product-by-process claims. Consequently, in the *OncoMouse* litigation,<sup>500</sup> it was irrelevant to the patentability of the invention that the claims included circumstances under which genetically modified rodents reproduced; the offspring of such an ‘essentially biological process’ (if sexual reproduction is such a process) were products and hence fell outside the exclusion.
- (ii) The exclusion only applies where the process is for the *production* of animals or plants. As such, the exclusion will not apply if the process results in the death or destruction of animals or plants.<sup>501</sup> It will also not apply where the invention merely produces information that is used to manage plants or animals.<sup>502</sup>
- (iii) Article 53(b) excludes essentially biological processes for the production of *plants* and *animals*, not plant and animal varieties. As such, Article 53(b) is not limited to processes for the production of plant and animal varieties, but extends instead to the more abstract and open categories ‘plants’ and ‘animals’.<sup>503</sup>
- (iv) The exclusion only applies where the process is ‘essentially biological’. According to the Biotechnology Directive, a process for the production of plants and animals is essentially biological if ‘it consists entirely of natural phenomena such as crossing or selection’.<sup>504</sup> The key question that has arisen in this context is: how much human intervention is needed for a process that involves biological steps not to be classified as an essentially biological process?<sup>505</sup>

<sup>497</sup> PA 1977, Sch. A2, para. 3(f); EPC 2000, Art. 53(b). The Biotech. Dir., Art. 53(b), affirms that essentially biological processes for the production of plants or animals are not patentable. EPC 2000, Art. 53(b), provides that European patents shall not be granted in respect of ‘plant or animal varieties or essentially biological processes for the production of plants or animal: this provision shall not apply to microbiological processes or the products thereof’: EPC 2000, Art. 1, item 18.

<sup>499</sup> PA 1977, Sch. A2, para. 3(f)]. <sup>500</sup> [1990] *OJ EPO* 476, 488.

<sup>501</sup> Cf. *NRDC’s Application* [1961] *RPC* 134; *Swift’s Application* [1962] *RPC* 37.

<sup>502</sup> *Lohmann/Fishy taint*, T 15/10 (14 October 2013), [9].

<sup>503</sup> A plant ‘was an abstract and open definition which embraced an indefinite number of individual entities defined by a part of its genome or by a property bestowed on it by that part’: *Plant Bioscience/Broccoli*, G 2/07 (9 December 2010) (EBA), [6.1.1], citing *Novartis/Transgenic plant*, G 1/98 [2000] *EPOR* 303 (EBA), [3.1].

<sup>504</sup> Biotech. Dir., Art. 2(2).

<sup>505</sup> Earlier drafts of the Directive defined ‘essentially biological’ as: ‘a process in which human intervention consists in [no] more than selecting an available biological material and letting it perform an inherent biological function under natural conditions; ‘a process which, taken as a whole, does not exist in nature and is more than a mere production process shall be patentable; and also ‘a process which, taken as a whole, does not exist in nature and is more than mere breeding process’.

This question was considered in *Lubrizol*,<sup>506</sup> where the Technical Board of Appeal (TBA) had to decide whether a process of producing high-quality hybrids was excluded from patentability on the ground that it was essentially biological. Drawing upon the image of the invention widely used in patent law, the Board said that the question of whether a claim was for an essentially biological process had to be ‘judged on the basis of the essence of the invention taking into account the totality of human intervention and its impact on the result achieved’.<sup>507</sup> Turning to the facts of the case, the Board noted that the process in question was divided into a number of steps. First, parent plants were selected and crossed. The resulting hybrids were then evaluated and suitable hybrids selected. The parent plants of the chosen hybrids were then cloned and, finally, the crossing was repeated. The Board held that while each step might be characterized as biological, the arrangement of steps *as a whole* represented an essential modification of known biological processes. On this basis, the TBA held that the process was not an essentially biological process and, as such, not excluded by Article 53(b).

The question of the degree of technical intervention needed for a process to fall outside the scope of the exclusion was also considered in the *Novartis* decisions. The TBA said that to decide whether a process was ‘essentially biological’, the tribunal must make a value judgement about the extent to which a process should be non-biological before it loses the status of ‘essentially biological’.<sup>508</sup> The Board added that there were three possible approaches that could be taken when answering this question.

- (i) Under the first approach, an invention would be excluded if it included an aspect or step that was biological. To fall outside the exclusion, the claimed processes would have to be exclusively made up of non-biological process steps.<sup>509</sup>
- (ii) The second approach, which was taken from *Lubrizol*, requires the tribunal to weigh up the overall degree of human intervention in the process.<sup>510</sup> Under this approach, the decision regarding whether an invention is essentially biological is made on the basis of the essence of the invention, taking into account the totality of human invention and its impact on the result received.
- (iii) The third option, which was the most liberal, provides that the mere presence of a single artificial (or technical) element in the process would be enough to prevent its being classified as an essentially biological process.<sup>511</sup> The TBA said that the third approach was reflected in Article 2(2) of the Biotechnology Directive.

Neither the TBA nor the Enlarged Board of Appeal (EBA) in *Novartis* provided any direct guidance as to which of these approaches was to be adopted.<sup>512</sup> The issue has now been

<sup>506</sup> *Lubrizol/Hybrid plant*, T 320/87 [1990] EPOR 173, [1990] OJ EPO 71. (These were prior to the introduction of the definition.) See also *Ciba-Geigy/Propagating material application*, T 49/83 [1984] OJ EPO 112 (propagating material not the result of an essentially biological process that involved treatment with chemical agents); *Harvard/OncoMouse* [1989] OJ EPO 451 (Exam) (process for producing transgenic mouse not essentially biological because it involved micro-injection); *Harvard/OncoMouse*, T 19/90 [1990] EPOR 501, [1990] OJ EPO 476, 488 (agreeing that micro-injection is not essentially biological and noting also that sexual reproduction is not necessarily essentially biological).

clarified, however, as a result of a string of decisions in relation to patent applications for broccoli<sup>513</sup> and tomatoes,<sup>514</sup> which clearly rejected options (i) and (iii) and came down in favour of a version of option (ii).

The first of these decisions was the 2007 TBA decision in *Plant Bioscience/Broccoli*.<sup>515</sup> The central claim of the application in question was for a method for the production of broccoli (*Brassica*). This consisted of a number of steps traditionally used in breeding, including the crossing of specific species of broccoli and the subsequent selection of hybrids with certain defined features from those crosses. This was followed by backcrossing and further selection. Importantly, the application also involved the use of molecular markers to help to identify plants with the desired characteristics. It was argued in opposition that the application claimed an essentially biological process and that, as such, it should be excluded under Article 53(b).

As part of its deliberations, the TBA provided a general history of Article 53(b), noting that the drafters regarded ‘biological’ as being in opposition to ‘technical’ and that they had deliberately chosen the adverb ‘essentially’ to replace the narrower term ‘purely’. The Board also noted that the drafters of the legislation intended that the exclusion apply to processes such as the selection or hybridization of existing varieties. This was the case even if, as ‘a secondary feature, “technical” devices were involved (use of a particular type of instrument in a grafting process, or a special greenhouse in growing a plant)’<sup>516</sup>

The Board also highlighted a number of problems with Rule 23(b)(5) of the EPC 1973 Implementing Regulations (now Rule 26(5) of the EPC 2000 Implementing Regulations), which (as we saw above) provides that a ‘process for the production of plants or animals is essentially biological if it consists entirely of natural phenomena such as crossing or selection’. The Board noted that Rule 23(b)(5) says that processes will only be considered to be essentially biological where they consist *entirely* of biological processes for the production of plants. At the same time, the Rule also says that crossing and selection, which clearly involve human (technical) intervention, are examples of natural phenomena. As the Board said, this seems to be contradictory to the extent that ‘the systematic crossing and selection as carried out in traditional plant breeding would not occur in nature without the intervention of man’.<sup>517</sup> The Board then went on to say that Rule 23(b)(5) (EPC 2000 Rule 26(5)) suggests that Article 53(b) should be read narrowly. In particular, the Board said that Rule 23(b)(5) meant that a process that ‘contains an additional feature of a technical nature would be outside the ambit of the process exclusion’.<sup>518</sup> This would not be the case, however, in relation to ‘natural phenomena’ (which covered crossing and selection by way of a legal fiction).<sup>519</sup> The Board noted that on this reading of the exclusion, the use of molecular markers as part of a breeding process (which required the removal and *in vitro* analysis of plant tissues) would lead to the conclusion that the invention would

<sup>519</sup> The Board said that this did not reflect the approach that had been adopted by the boards of appeal prior to the introduction of the rule: see *Novartis/Transgenic plant*, T1054/96 [1999] *EPOR* 123, point 96.

fall outside the ambit of the exclusion. The Board also noted that this narrow reading of Article 53(b) would be contrary to the earlier decisions of *Lubrizol* and *Plant Genetic Systems*.<sup>520</sup> Faced with the uncertainty about the scope of Article 53(b), the TBA in *Plant Bioscience/Broccoli* decided to refer the matter to the EBA for deliberation. In particular, the TBA asked the EBA to consider the question:

Does a non-microbiological process for the production of plants which contains the steps of crossing and selecting plants escape the exclusion of Article 53(b) merely because it contains, as a further step or as part of any of the steps of crossing and selection, an additional feature of a technical nature?<sup>521</sup>

The TBA also asked the EBA to identify the criteria that should be used to determine whether an invention fell within Article 53(b).<sup>522</sup>

Around the same time, the case of *State of Israel/Tomatoes* began to weave its way through the EPO. The application in question was for a method of breeding tomato plants that produced tomatoes with reduced water content. This involved a number of steps, including crossing, collecting, growing, and selection.<sup>523</sup> The fruit was allowed to stay on the vine past the normal point of ripening. The resulting fruit was then screened for reduced water content. The TBA was asked to consider whether this process was excluded under Article 53(b). The Board effectively said that in order to answer this question, it was first necessary to answer another question—namely: what kind of human intervention was required for an application not to be essentially biological?<sup>524</sup> Given that the referral to the EBA in *Broccoli* was still pending, the TBA decided to defer the case until the EBA handed down its decision. The TBA also decided to refer a number of additional questions to the EBA for consideration.

The EBA decided to consider the points of law raised by the TBA in the *Tomatoes* and *Broccoli* decisions in a single consolidated decision.<sup>525</sup> The EBA noted that there was considerable amount of confusion about the meaning of ‘essentially biological’. In particular, there was uncertainty about how the existing jurisprudence was to be read in light of Rule 26(5) of the EPC 2000 Implementing Regulations and Article 2(2) of the Biotechnology Directive. The EBA felt that in light of this uncertainty, it was necessary to review what was meant by ‘essentially biological’.

The Board began by noting the types of approach that should *not* be used to determine whether an application was essentially biological. It said that it was not appropriate to apply the approach used to determine whether an application was excluded as a method of surgery and therapy by Article 52(4), which would have seen the mere presence of one biological feature in a process as a basis on which to conclude that the process as a whole was essentially biological (option (i), discussed above). As the Board said, Article 52(4)

<sup>520</sup> For example, in *Harvard/Transgenic animals*, T 315/03 [2006] OJ EPO 15, the TBA cited EPC 1973 Regs, r. 23b(5), and concluded that it was self-evident that a process that included genetic manipulation did not consist entirely of natural phenomena and was therefore not excluded by EPC 2000, Art. 53(b). Cf. *Novartis/Transgenic plant*, T 1054/96 [1999] EPOR 123, [3]. On the apparent clash of these decisions, see *Plant Bioscience/Broccoli*, T 83/05 [2007] OJ EPO 664, 665.

<sup>521</sup> *Plant Bioscience/Broccoli*, T 83/05 [2007] OJ EPO 644. <sup>522</sup> *Ibid.*, 669.

<sup>523</sup> *State of Israel/Tomatoes*, T 1242/06 (4 April 2008) (*Lycopersicon esculentum*—tomato—plant with a *Lycopersicon species* to produce a hybrid plant).

<sup>524</sup> The Board did not believe that the process of allowing tomatoes to remain on the vine past the point of ripening was ‘technical’, since it was characterized by an abstention, albeit deliberate, from human intervention: *ibid.*, [14].

<sup>525</sup> But with two identical judgments: *State of Israel/Tomatoes*, G 1/08 (9 December 2010); *Plant Bioscience/Broccoli*, G 2/07 (9 December 2010).

clearly requires the claimed process as whole to have a biological essence; ‘the mere presence of one biological feature in a process cannot automatically confer an essentially biological character on the process as a whole’.<sup>526</sup> The Board also rejected an approach based upon that used in relation to Article 52(2)/section 1(2), under which an application would not be caught by Article 53(b) where it included one non-biological (technical) step<sup>527</sup> (option (iii), above).

The EBA then turned to consider the key unanswered question—namely, what test was to be used to determine whether something was essentially biological? The Board said that the legislative history showed that the legislator’s intention when drafting Article 53(b) was to exclude from patentability the kind of plant breeding processes that were conventionally used at that time (namely, crossing and selection). This was despite the fact that these classical breeding methods often used technical devices such as pruning shears, special tools to help with grafting, and special greenhouses for growing plants. As the Board said, ‘while such technical devices may perfectly well be patented themselves, the biological process in which they are used may not’.<sup>528</sup> Given this, the Board concluded that ‘the mere provision of a technical step in a process which is based on the sexual crossing of plants and on subsequent selection did not *necessarily* mean that the claimed invention escaped the exclusion’.<sup>529</sup> The willingness to accept that a process could still be essentially biological when it included technical steps gave rise to the question: how do we distinguish between a process that includes a technical step that is still an essentially biological process and a process that includes a technical step that takes the process outside the scope of the exclusion?

In essence, the way in which this question was answered was to focus on the role played by the technical step in the breeding of the plant or animal. Specifically, it was said that if a technical step modifies or introduces a trait into the genome of a plant or animal, the process will not be essentially biological. This would be the case, for example, where genetic engineering techniques are used to insert or modify one or more genes into a plant or animal. In contrast, where the modification to the genome of the plant or animal is a product of natural processes, and where the technical steps merely serve to enable or assist the performance of that process, the process as a whole will be essentially biological. This is the case, for example, where the technical step includes the use of special greenhouses to grow the plants, the use of specific tools to help with grafting or pollination, or the use of molecular markers to facilitate the selection for the desired properties. While technical means are used in these situations to assist with the breeding process, nonetheless they are ‘characterised by the fact that the traits of the plants resulting from the crossing were *determined* by the underlying natural phenomenon of meiosis’<sup>530</sup>—that is, the traits of the plants (or animals) were primarily the result of natural forces.

As the EPO Guidelines explain, a method of crossing, interbreeding, or selectively breeding ‘say horses involving merely bringing together those animals or their gametes having certain characteristics would be essentially biological and therefore unpatentable’.<sup>531</sup> The situation would remain unchanged even if it were to contain an additional feature of a technical nature, such as the use of genetic molecular markers to select either parent or progeny. In all of these instances, the resulting plant or animal is essentially the result of natural forces. The situation would change, however, in the case of a process in which a gene or trait was inserted into a plant by genetic engineering, which would be

<sup>526</sup> *State of Israel/Tomatoes*, G 1/08 (9 December 2010), [6.2].

<sup>527</sup> *Ibid.*, [6.3].

<sup>528</sup> *Ibid.*, [6.4.2.2].

<sup>529</sup> *Ibid.*, [6.4.2.3].

<sup>530</sup> *Ibid.*

<sup>531</sup> *EPO Guidelines for Examination*, G, 5.4.2.

potentially patentable. In positive terms, this means that to fall outside the process exclusion in Article 53(b), there has ‘to be a technical step which *by itself* introduced or modified a trait in the genome’.<sup>532</sup>

Interestingly, the EPO Guidelines also suggest that a process of treating a plant or animal to improve its properties or yield, or to promote or suppress its growth (such as a method of pruning a tree), would not be an essentially biological process, ‘since it is not based on the sexual crossing of whole genomes and subsequent selection of plants and animals; the same applies to a method of treating a plant characterised by the application of a growth-stimulating substance or radiation’.<sup>533</sup> The same would be true of the treatment of soil by technical means to suppress or promote growth.

While the EBA provided important guidance on how we are to determine whether a technical step is sufficient to take a breeding process outside the scope of Article 53(b), it quickly became apparent that there were further issues that needed to be clarified. This was evident when the dispute involving the tomato application was brought back to the TBA for reconsideration following the finding of the EBA. Following the decision in the EBA, the process claims were deleted from the application; as a result, the claims were limited to product claims directed to tomato fruits or fruit products. As the TBA said in *Tomatoes II*, the removal of the process claims was not surprising given that they would have clearly fallen foul of the process exclusion in Article 53(b). (This was because they did not contain a technical step that, by itself, introduced or modified a trait in the genome.) Nonetheless, the appellants argued that the resulting product claims were still excluded from patentability under Article 53(b). This was on the basis that if the product claims were allowed to stand, it would render the exclusion of essentially biological processes for the production of plants completely ineffective, ‘thereby frustrating the legislators aim not to provide patent protection for the excluded plant breeding processes’.<sup>534</sup>

This argument was based on the well-established principle that the protection conferred by a product claim is absolute.<sup>535</sup> This means that the patent owner has the right to exclude others from making or using the patented product. This is in contrast to a process claim for making a product, which is limited to the use of that process to make that product. The upshot of this, which was at the heart of the appellant’s argument, is that ‘a claim to a product provides the patent proprietor with protection that generally encompasses the protection provided by a patent claim for the process of making the product’.<sup>536</sup> In the case at hand, if the product claims were allowed, this would have meant that the patent owner would be able to prevent others from using the essentially biological plant breeding methods that were the subject matter of the deleted method claims. As the TBA said:

Disregarding the process exclusion in the examination of product claims would have the general consequence that, for many plant breeding inventions, patent applicants and owners could easily overcome the process exclusion of Article 53(b) EPC by relying on product claims providing a broad protection which encompasses that which would have been provided by an excluded process claim.<sup>537</sup>

The Board concluded that this would appear to be at odds with a purposive interpretation of Article 53(b).

<sup>532</sup> *State of Israel/Tomatoes II*, T 1242/06 (31 May 2012), [43] (emphasis added).

<sup>535</sup> *Friction Reducing Additive*, G 2/88, [1990] OJ EPO 93, [5].

<sup>536</sup> *State of Israel/Tomatoes II*, T 1242/06 (31 May 2012), [45].

<sup>537</sup> *Ibid.*, [47].

As we saw above, a similar issue arose in relation to the exclusion of biotechnological inventions that concern the use of human embryos for industrial or commercial purposes. In *Wisconsin Alumni Research Foundation/Use of embryos*,<sup>538</sup> the EBA held that this also forbids the patenting of products that ‘at the filing date could be prepared by a method which necessarily involved the destruction of human embryos from which the products are derived, even the . . . method is not part of the claims’. The Court of Justice reached a similar conclusion in *Brüstle*.<sup>539</sup>

After considering, and dismissing, a number of arguments that were made as to why allowing product claims would not have a negative impact on the process exclusion,<sup>540</sup> the Board said that it had serious concerns that if claims to plant material that is obtained by means of an essentially biological breeding process were to be allowed, it would de facto frustrate the legislator’s intention in framing the process exclusion. The EBA was also concerned that it would also allow the exclusion to be circumvented by skilful claim drafting, ‘thereby diminishing the consistency and persuasiveness of the legislative framework of the EPC as regards patentable subject matter’.<sup>541</sup> Given that these issues were of fundamental importance, the TBA decided to refer a number of questions concerning the standing of product claims directed to plants or plant material to the EBA for consideration.<sup>542</sup>

Not to be outdone, the parties in the *Broccoli* case also brought their dispute back to the TBA for reconsideration following the EBA decision. In light of the EBA finding, the patent application was amended to delete all method claims in the application. The subject matter is now defined as an edible *Brassica* plant, produced according to a particular method. In considering whether the process exclusion contained in Article 53(b) has a negative impact on the permissibility of the respondent’s product claims, the TBA endorsed the comments in *Tomatoes II*. As well as reiterating the questions referred in *Tomatoes II*, the TBA in *Broccoli II* added additional questions for the EBA to consider. Given the approach adopted by the EBA in *Wisconsin Alumni Research Foundation*, it seems likely that the Board will find that product claims that encompass excluded essentially biological breeding processes should not be allowed. If so, the key issue will be how to ensure that any limitations imposed on product claims are tied to the processes excluded in Article 53(b).

#### 8.4 MICROBIOLOGICAL OR TECHNICAL PROCESSES

As we saw earlier, the exclusion of animal varieties, plant varieties, and essentially biological processes from the scope of patentable subject matter is subject to the general qualification that the invention is not ‘a microbiological process or other technical process or the product of such a process’.<sup>543</sup> If an invention is for a microbiological or technical process,<sup>544</sup> it will not be caught by the exclusion. In essence, the qualification

<sup>538</sup> G 2/06 [2009] OJ EPO 306 (EBA), [22].

<sup>539</sup> *Oliver Brüstle v. Greenpeace*, Case C-34/10 (10 March 2011) (ECJ, Grand Chamber).

<sup>540</sup> *Wisconsin Alumni Research Foundation/Use of embryos*, G 2/06 [2009] OJ EPO 306, [53]–[65].

<sup>541</sup> *Ibid.*, [65]. <sup>542</sup> *State of Israel/Tomatoes II*, G 2/12 (pending) (EBA).

<sup>543</sup> PA 1977, Sch. A2, para. 3(f); EPC 1973 Regs, r. 23c(c). EPC 2000, Art. 53(b), refers only ‘to microbiological processes or the products thereof’. See EPC 2000, Art. 1, item 18. TRIPS, Art. 27(b), requires only that microorganisms, non-biological, and microbiological processes be patentable; it does not require that products of microbiological processes be patentable. See also R. Teschemacher, ‘Patentability of Micro-organisms *per se*’ (1982) 13 *IIC* 27; D. Cadman, ‘The Protection of Micro-organisms under European Patent Law’ (1985) 16 *IIC* 311; N. Marterer, ‘The Patentability of Micro Organisms *per se*’ (1987) 18 *IIC* 666.

<sup>544</sup> A microbiological process is defined as ‘any process involving or performed upon or resulting in microbiological material’: Biotech. Dir., Art. 2(2); EPC 1973 Regs, r. 23b(6); PA 1977, Sch. A2, para. 11.

restricts the subject matter excluded by paragraph 3(f) of Schedule A2/Article 53(b) to non-microbiological and non-technical processes. Given that the qualification restricts the scope of the subject matter excluded by paragraph 3(f)/Article 53(b), this means that if it were to be interpreted broadly, it would greatly undermine the impact of the provision as a whole. If this were the case, it would increase the scope of biological subject matter that is patentable.

It should be noted that when the 1977 Act and the EPC 1973 were first enacted, the qualification was limited to ‘a microbiological process or the product of such a process’. This was changed as a result of the Biotechnology Directive to apply to ‘a microbiological process or other technical process or the product of such a process’.

The question of what is meant by a ‘microbiological process’ was considered in *Plant Genetic Systems*,<sup>545</sup> where the Technical Board of Appeal (TBA) said that ‘microbiological processes’ refers to processes in which micro-organisms or their parts are used to make or to modify products. The Board also said that it refers to processes in which new micro-organisms are developed for specific uses. Products of microbiological processes encompass ‘products which are made or modified by micro-organisms as well as new micro-organisms as such’; while cells and parts thereof were said to be microbiological, processes of genetic engineering were not.<sup>546</sup> The extension of the provision to include technical processes largely renders these issues obsolete.

When construing the qualification as enacted (that is, when it was limited to microbiological processes), most of the discussions focused on whether a process that was made up of a mixture of microbiological and technical steps fell within the qualification.<sup>547</sup> For example, when contemplating whether a process that involves a number of different steps is a microbiological process, the TBA in *Plant Genetic Systems* said that a process was not a microbiological process simply because a microbiological step was involved; instead, the process had to be judged as a whole. On the facts of the case, the Board said that while the introductory step of transforming plant cells or tissues with recombinant DNA was microbiological, subsequent steps of regeneration and transformation that played an important role in bringing about the final product were not microbiological processes. When viewed as a whole, the process was best described as a technical process that included a microbiological step, rather than a microbiological process (which would have justified the patenting of the process or a product of the process). As a consequence, the resulting plants were held not to be the product of a microbiological process within the meaning of Article 53(b) (as enacted).<sup>548</sup>

While *Plant Genetic Systems* provides us with some guidance as to the limits of the qualification, its precise scope remains unclear. It seems, however, that this may not matter too much. This is because the changes introduced to the exclusions so that they also include ‘technical processes’ means that the problems of the type discussed in *Plant Genetic Systems* have largely been overcome. Given that genetic manipulation is undoubtedly a technical process, this appears to demand the patentability of genetically modified plants and animals.<sup>549</sup> Because much of the research carried out in relation to biological

<sup>545</sup> *PGS/Glutamine synthetase inhibitors* (1993) 24 IIC 618, [1995] OJ EPO 545 (Opposition Division).

<sup>546</sup> *Ibid.*

<sup>547</sup> The issue of how you ascertain whether a process with a number of steps is a microbiological process is similar to the question whether a process is ‘essentially biological’.

<sup>548</sup> While the point was not discussed at length, it was suggested in *PGS/Glutamine synthetase inhibitors*, T 356/93 [1995] EPOR 357, that a microbiological process was a purer process (with less human intervention) than a process that was essentially biological.

<sup>549</sup> Earlier drafts of the Directive defined microbiological to mean ‘a process carried out with the use of or performed upon or resulting in a micro-organism’, as ‘a process consisting of a succession of steps’.

subject matter involves a degree of human intervention, most of the processes will be captured by the qualification and thus fall outside the scope of the exclusions.<sup>550</sup> By increasing the scope of the qualification to section 1(3)(b)/Article 53(b), the changes initiated by the Biotechnology Directive will minimize the impact that the exclusion has upon the scope of patentable subject matter.

The scope of the subject matter excluded by paragraph 3(f)/Article 53(b) would have been further undermined if the approach suggested by the TBA in *Plant Genetic Systems* had been followed. In that case, the Board suggested that a plant variety that was a product of a microbiological process would not have been caught by the exclusion and thus would have been patentable. This approach was rejected in *Novartis*, when the Enlarged Board of Appeal said that the plant variety exclusion applied irrespective of how the plant varieties were produced. The mere fact that a plant variety was obtained by means of genetic engineering does not give the producers of such plant varieties a privileged position.<sup>551</sup> This reflects the position set out in Recital 32 of the Biotechnology Directive, which says that:

[I]f an invention consists only in genetically modifying a particular plant variety, and if a new plant variety is bred, it will still be excluded from patentability even if the genetic modification is the result not of an essentially biological process but of a biotechnological process.

## 9 IMMORAL INVENTIONS

It is a long-standing principle of patent law that patents should not be granted for immoral inventions. Until recently, the principle was rarely invoked. However, as a result of developments in biotechnology and related attempts to patent the products of that research, in recent years ethical considerations have played a more prominent role in patent law. While these provisions are potentially applicable to all patentable subject matter, more detailed provisions have also been introduced in relation to biotechnological inventions. What is most striking about the interaction of patent law and ethics is how uncomfortable the relationship has been and the difficulties that it has produced.<sup>552</sup>

When the EPC 1973 and the Patents Act 1977 were first drafted, the relevant statutory provisions in relation to immoral inventions were set out in section 1(3)(a) of the Act and Article 53(a) of the Convention.<sup>553</sup> Since then, the law in this area has undergone a

including 'at least one essential step of the process' that is microbiological, and as meaning 'a process involving or performed upon or resulting in microbiological material'. All were abandoned. See M. Llewelyn, 'The Patentability of Biological Material: Continuing Contradiction and Confusion' [2000] *EIPR* 191.

<sup>550</sup> A. Schrell, 'Are Plants Still Patentable?' [1996] *EIPR* 242, 243; O. Mills, *Biotechnological Inventions: Moral Restraints and Patent Law* (rev'd edn, 2010).

<sup>551</sup> *Novartis/Transgenic plant*, G 1/98 [2000] *EPOR* 303 (EBA), 321. This is supported by Biotech. Dir., Recital 32.

<sup>552</sup> L. Bently and B. Sherman, 'The Ethics of Patenting: Towards a Transgenic Patent System' (1995) 3 *Med L Rev* 275.

<sup>553</sup> These are permitted by TRIPS, Art. 27(2), which says that members may exclude:

... inventions, the prevention within their territory of the commercial exploitation of which is necessary to protect *ordre public* or morality, including to protect human, animal or plant life or health or to avoid serious prejudice to the environment, provided that such exclusion is not made merely because the exploitation is prohibited by domestic law.

number of important changes, notably to take account of the Biotechnology Directive.<sup>554</sup> When the Directive was first proposed, it made no reference to the morality of patenting. Over time, however, the Directive became a focal point for public concerns about the ethical and social dimensions of biotechnology generally, as well as specific concerns about the patenting of the products of such activities. In response, the proponents of patenting argued that the patent system was an inappropriate vehicle for dealing with concerns over morality. The reasons for this were said to be that the uses to be made of an invention are not clear at the application stage, that patent examiners are not qualified to deal with ethical questions, and most importantly because patents do not control whether or how an invention is exploited. Instead, it was said that exploitation of biotechnological inventions was best controlled through other regulatory systems.<sup>555</sup> In the end, the Biotechnology Directive took a middle ground, insofar as it provides that inventions shall be unpatentable where their commercial exploitation would be contrary to *ordre public* or morality.<sup>556</sup> The Biotechnology Directive also provided specific examples of types of invention that were unpatentable.<sup>557</sup> These are now mirrored in the 1977 Act<sup>558</sup> and the EPC 2000.<sup>559</sup>

The upshot of these changes is that there are effectively two different types of morality provision that may be applied. The first, and more general, is found in Article 53(a)<sup>560</sup> and section 1(3).<sup>561</sup> These require an assessment ‘as to whether or not exploitation of the invention in question would be contrary to morality or “*ordre public*”’.<sup>562</sup> The Technical Board of Appeal refers to these as the ‘real’ Article 53(a) objections. The second, more specific, morality provisions are found in Rule 28(a)–(d) of the EPC 2000 Implementing Regulations<sup>563</sup> and paragraph 3(b)–(c) of Schedule A2 to the Patent Act 1977.<sup>564</sup> These provide specific guidance as to when an invention will be excluded under Article 53(a)/section 1(3). Rule 28 provides that:

<sup>554</sup> It is likely that the Directive will bring about other changes. For example, Biotech. Dir., Art. 7, states that the Commission’s European Group on Ethics in Science and New Technologies is to evaluate all ethical aspects of biotechnology. While this is unlikely to have a direct impact on patenting, there is a possibility that it may influence attitudes towards ethical issues. This is reinforced by the fact that the Commission is obliged under the Directive to report annually to the European Parliament and Council on the implications of patent law in the field of biotechnology and genetic engineering: Biotech. Dir., Art. 16(3).

<sup>555</sup> For an overview of some of the regulatory regimes, see J. Black, ‘Regulation as Facilitation: Negotiating the Genetic Revolution’ (1998) 61 *MLR* 621.

<sup>556</sup> This is mirrored in the new s. 1(3) and, in turn, reflects EPC 1973, Art. 53 (as enacted). Biotech. Dir., Art. 6(1), goes on to say that exploitation shall not be considered to be contrary to morality simply because it is prohibited by law or regulation. Similar provisions exist in the PA 1977 and the EPC 2000.

<sup>557</sup> Biotech Dir., Art. 6(2). <sup>558</sup> PA 1977, Sch. A2, para. 3(b)–(e).

<sup>559</sup> EPC 2000 Regs, r. 28 (which is the same as EPC 1973 Regs, r. 23d). On the basis that EPC 1973 Regs, rr 23b–e, did not constitute a departure from previous law, it was held that they could be applied to matters that started prior to their enactment on 1 September 1999: *Harvard/OncoMouse* [2003] *OJ EPO* 473, 496 (Opposition Division).

<sup>560</sup> For the background, see EPC 2000, Art. 1, item 18; *Base Proposal for the Revision of the European Patent Convention* (2000) CA/100/00 e, 42.

<sup>561</sup> PA 1977, s. 1(3)(a) (as enacted), was replaced by a new s. 1(3) under the Patents Regulations 2000. The old s. 1(3)(a) provided that a patent should not be granted for ‘an invention the publication or exploitation of which would be generally expected to encourage offensive, immoral or anti-social behaviour’. In contrast, the new s. 1(3) provides that a ‘patent shall not be granted for an invention the commercial exploitation of which would be contrary to public policy or morality’. PA 1977, s. 1(4), states that, for the purpose of s. 1(3), exploitation shall not be regarded as contrary to public policy or morality only because it is prohibited by law in force in the United Kingdom. This replicates the language in Biotech. Dir., Art. 6(1).

<sup>562</sup> *Base Proposal for the Revision of the European Patent Convention* (2000) CA/100/00 e, 51.

<sup>563</sup> Formerly EPC 1973 Regs, r. 23a–d.

<sup>564</sup> PA 1977, Sch. A2, para. 3(b)–(c); EPC 1973 Regs, r. 23d(a)–(d); Biotech. Dir., Art. 6(1).

Under Article 53(a), European patents shall not be granted in respect of biotechnological inventions which, in particular, concern the following:

- (a) processes for cloning human beings;<sup>[565]</sup>
- (b) processes for modifying the germ line genetic identity of human beings;<sup>[566]</sup>
- (c) uses of human embryos for industrial or commercial purposes;<sup>[567]</sup>
- (d) processes for modifying the genetic identity of animals which are likely to cause them suffering without any substantial medical benefit to man or animal, and also animals resulting from such processes.<sup>[568]</sup>

After looking at the general prohibition in Article 53(a)/section 1(3), we will look at each of these specific cases in turn. Before doing so, it is important to note that if an application falls within any of the four types of invention, the application must ipso facto be denied a patent under Article 53(a)/section 1(3). In this situation, there is no need to consider Article 53(a)/section 1(3) any further. However, if an application falls outside the four categories of invention, the application needs to be assessed to determine whether it falls within Article 53(a).<sup>569</sup> That is, a case not falling within Rule 28 does not escape the operation of Article 53(a). The position is presumably the same in the United Kingdom.

## 9.1 INVENTIONS CONTRARY TO *ORDRE PUBLIC* OR MORALITY

Article 53(a) of the EPC 2000 provides that European patents ‘shall not be granted in respect of inventions the commercial exploitation of which would be contrary to “*ordre public*” or morality’. While the UK provisions have changed so that they are more closely aligned to the EPC than was previously the case, the language in section 1(3) is slightly different, in that it provides that ‘a patent shall not be granted for an invention the commercial exploitation of which would be contrary to public policy or morality’.<sup>570</sup>

The role and meaning of the morality exclusion under the EPC (as enacted) was first considered in the 1989 *OncoMouse* decision.<sup>571</sup> The case concerned the patentability of mice that had been genetically modified so that they would develop cancer—a result that the applicants hoped would be useful in cancer research.<sup>572</sup> Initially, the Examining Division declined to consider Article 53(a), taking the view that it was inappropriate for people who were essentially qualified as technicians to consider such an issue.<sup>573</sup> On appeal, the Technical Board of Appeal (TBA) took a very different view.<sup>574</sup> It observed that the genetic manipulation of mammalian animals is ‘undeniably problematical in various

<sup>565</sup> EPC 2000 Regs, r. 28(a) (ex EPC 1973 Regs, r. 23d(a)); PA 1977, Sch. A2, para. 3(b); Biotech. Dir., Art. 6(2)(a).

<sup>566</sup> EPC 2000 Regs, r. 28(b) (ex EPC 1973 Regs, r. 23d(b)); PA 1977, Sch. A2, para. 3(c); Biotech. Dir., Art. 6(2)(b).

<sup>567</sup> EPC 2000 Regs, r. 28(a) (ex EPC 1973 Regs, r. 23d(c)); PA 1977, Sch. A2, para. 3(d); Biotech. Dir., Art. 6(2)(c).

<sup>568</sup> EPC 2000 Regs, r. 28(a) (ex EPC 1973 Regs, r. 23d(d)); PA 1977, Sch. A2, para. 3(e); Biotech. Dir., Art. 6(2)(d).

<sup>572</sup> More accurately, of a mammal into which malignancy-creating genes had been introduced, so that the mammal had an increased probability of developing tumours.

<sup>573</sup> [1989] *OJ EPO* 451 (Exam).

<sup>574</sup> *Harvard/OncoMouse*, T 19/90 [1990] *OJ EPO* 490 (TBA).

respects', particularly in circumstances under which the modifications 'necessarily cause suffering'.<sup>575</sup> Moreover, the release of the mice into the environment might 'entail unforeseeable and irreversible adverse effects'.<sup>576</sup> Consequently, it was necessary to consider the application of Article 53(a).

The TBA, remitting the case to the Examining Division for reconsideration,<sup>577</sup> explained that the application of Article 53(a) 'would seem to depend mainly on a careful weighing-up of the suffering of animals and possible risks to the environment on the one hand, and the invention's usefulness to mankind on the other'.<sup>578</sup> Applying this utilitarian balancing test, the Examining Division held that the subject matter was patentable.<sup>579</sup> It reasoned that finding a cure for cancer was a highly desirable end and that the mouse would assist in achieving that end. In contrast, the Examining Division played down the harm caused by the invention. The Examining Division suggested that given that the research would take place anyway and that it would require vast numbers of mice to locate some that had 'naturally' developed cancer, the invention produced a benefit to mouse-kind in that large numbers of healthy mice would no longer need to be bred and then destroyed.

The utilitarian balancing test adopted in the *OncoMouse* decision was applied in 1991 when the EPO warned the pharmaceutical company Upjohn that it would not accept an application to patent a mouse into which a gene had been introduced that led the mouse to lose its hair. In weighing up the benefit that flowed from the invention (the usefulness of the mice in experiments to cure hair loss) as against the harm suffered by the mice, the EPO asserted that the invention was immoral and thus would not be patentable.<sup>580</sup>

The next occasion when the application of Article 53(a) was considered was by the Opposition Division in *Plant Genetic Systems*.<sup>581</sup> In this case, the opponents (Greenpeace) objected to the patent that had been granted for a genetically engineered plant (which rendered the plants resistant to herbicide) on the grounds that it was inherently immoral and that it created risks to the environment. Following the cost-benefit test suggested in *OncoMouse*, the opponents argued that these risks should be balanced against the benefits likely to accrue from the invention. The Opposition Division refused to apply the utilitarian cost-benefit analysis. On the basis that the patent system was primarily concerned with technical considerations and that it was not competent or qualified to decide ethical issues, the Opposition Division believed that it should not be routinely involved in considering ethical questions. Instead, the Opposition Division said that it was only necessary to consider the exclusion where the invention would be universally regarded as outrageous and where there was an overwhelming consensus that no patent should be granted—that is, it was only necessary to consider ethical questions once a certain ethical threshold had been crossed. The upshot of this is that, in most cases, it would not be necessary to consider the morality of patents.

The *Plant Genetic Systems* decision highlights a further difficulty in relation to the immorality examination. In an attempt to apply the balancing test outlined in *OncoMouse*, the Opposition Division was faced with the problem that it was unable to quantify the objections raised against the patent. This was compounded by the fact that no evidence was submitted to support these claims; instead, the examiners were asked to determine

<sup>575</sup> *Ibid.*, [5]. It has been suggested that the EPO was awaiting the outcome of the Directive before issuing a decision: see CIPA, *Briefing Paper Patentability of Animals* (May 1998), available online at <<http://www.cipa.org.uk/pages/info-papers-animals>>

<sup>576</sup> *Harvard/OncoMouse*, T 19/90 [1990] *OJ EPO* 490, [5].

<sup>577</sup> *Ibid.*

<sup>578</sup> *Ibid.*

<sup>579</sup> *Harvard/OncoMouse*, T 19/90 [1991] *EPOR* 525 (Exam).

<sup>580</sup> *The Independent* (2 February 1992).

<sup>581</sup> [1993] 24 *IIC* 618.

the opposition on the basis of personal philosophy or conviction. The Opposition Division rejected such an approach on the basis that it would produce ‘individualistic’ or ‘arbitrary’ decisions. Moreover, even if it were possible to convert abstractly formulated objections into a more concrete format (for example through the use of opinion poll evidence), the Opposition Division clung to the view that patent law should not be the forum in which such opinions should play a role.

The approach advocated in the *Plant Genetic Systems* decision was adopted by the Opposition Division in the *Relaxin* case.<sup>582</sup> This decision concerned an opposition by the Green Party to the Howard Florey Institute’s patent for the DNA sequences of a naturally occurring substance that relaxes the uterus during childbirth, which is obtained from the human ovary. The Green Party objected to the patent on three grounds: (i) that the use of pregnancy for profit was offensive to human dignity; (ii) that the applicant was involved in patenting life, an activity that was intrinsically immoral; and (iii) that such patenting was equivalent to slavery. In rejecting the Green Party’s objections, the EPO noted that the tissue used in the research was donated during the course of necessary gynaecological operations and thus had not offended ‘human dignity’. Moreover, the Opposition Division said that DNA was not ‘life’; rather, it was a ‘chemical substance which carries genetic code’.<sup>583</sup> The argument that the applicant was ‘patenting life’ was thus misconceived. Finally, the Opposition Division rejected the Green Party’s assertion that such patenting was equivalent to slavery, on the ground that such an assertion misunderstood the nature of a patent. This was because, according to the Opposition Division, a patent does not give the proprietor any rights over a human being; all that a patent monopoly provides is the right to prevent someone from practising the same invention.

As with the *Plant Genetics* decision, the Opposition Division’s decision in *Relaxin* further highlights the problems that confront patent law in accommodating ethical considerations. This was explicitly acknowledged in *Relaxin* when the Opposition Division said that the question of whether ‘human genes should be patented is a controversial issue on which many persons have strong opinions . . . [T]he EPO is not the right institution to decide on fundamental ethical questions.’<sup>584</sup> The case also reveals the difficulties involved in translating the ethical concerns of critics into the language of patent law. Faced with a choice between a scientific understanding of DNA as a chemical substance and the social understanding of DNA as life, the Opposition Division preferred the former interpretation. This prioritization of the scientific view over the Green Party’s approach illustrates the depth of the conflict between the logic of ethical objections and those of patenting, at least as it is currently understood.

The next development in this area came with the decision of the TBA in *Plant Genetic Systems*,<sup>585</sup> where the Board concluded that claims for genetically modified seeds did not contravene Article 53(a). Although this decision, which has attracted many critics,<sup>586</sup> represents a more flexible approach to the incorporation of ethics into patent law, it still highlights the uncertainty and ambiguity that exist in this relationship. The Board said that the concept of morality under the EPC was built upon the belief that some behaviour is right and acceptable, whereas other behaviour is wrong—a belief that was founded on norms deeply rooted in European society and civilization. Noting that patent offices exist ‘at the crossroads between science and public policy’, the Board said that *ordre public* in Article 53(a) covers the protection of public security, the physical integrity of individuals as part

<sup>582</sup> *Howard Florey/Relaxin* [1995] OJ EPO 388 (Opposition Division).

<sup>583</sup> *Ibid.*, [6.3.4].

<sup>584</sup> *Ibid.*, <sup>585</sup> [1995] OJ EPO 545.

<sup>586</sup> J. Straus, ‘Patenting Human Genes in Europe’ (1995) 26 *IIC* 920.

of society, and protection of the environment. On this basis, the TBA said that where the exploitation of an invention was likely to breach public peace or social order (for example through acts of terrorism) or seriously prejudice the environment, the invention would be excluded from patentability under Article 53(a).<sup>587</sup>

The TBA then attempted to clarify the way Article 53(a) was to be interpreted. As well as casting doubts on the value of opinion poll evidence, the Board said that the mere fact that the exploitation of a particular type of subject matter was permitted in some or all of the contracting states would not automatically influence the ethical status of the invention, at least in relation to its patentability. The Board observed that a balancing exercise was not the only way of assessing patentability, although it was useful in situations where actual damage and/or disadvantage existed. The Board added that although the morality provision is to be construed narrowly, it should not be disregarded. This is the case even if it is difficult to judge whether the claimed subject matter is contrary to *ordre public* or morality. Given the explicit wording of Article 53(a), it is difficult to see how the Board could have concluded otherwise.

The scope of Article 53(a) was also considered by the TBA in its 2006 *Transgenic Animals* decision. In this case, the Board was called on to consider whether a patent for transgenic rodents containing an additional cancer gene was excluded from patentability under Article 53. This was an appeal from the 2003 decision of the Opposition Division to maintain the patent in an amended form.<sup>588</sup>

The TBA began by stressing that the words ‘contrary to *ordre public* or morality’ were not concerned with the morality of genetically manipulating a mouse, with the morality of the OncoMouse thereby produced, nor with the patenting of either the OncoMouse or the genetic manipulation method. Instead, the Board stressed that the morality provisions were only concerned with the morality of the publication or exploitation of the OncoMouse or that method.<sup>589</sup> (It should be noted that the EPC 2000 no longer refers to the publication of the invention; instead, it is now limited to the commercial exploitation of the invention.<sup>590</sup>)

The Board reconfirmed that the balancing approach set out in the 1991 *OncoMouse* decision (T 19/90) was the correct approach to be adopted when deciding whether an invention fell within a ‘real’ Article 53(a) assessment. The Board reiterated that, unlike the balancing test mandated under Rule 23d(d) of the EPC 1973 Implementing Regulations (now Rule 28 of the EPC 2000 Implementing Regulations), the ‘T 19/90 test’ allowed a range of factors to be taken into account, including harm to the environment, possible use of non-animal alternatives, possible threats to human evolution, and so on.<sup>591</sup> As we will see below, the applicant’s main request—which claimed ‘transgenic rodents’ and thus embraced all animals within the taxonomic order *Rodentia* including rats, mice,

<sup>587</sup> *EPO Guidelines*, C-V, 3.1, gives the example of a letter-bomb.

<sup>588</sup> *Harvard/OncoMouse* [2003] *OJ EPO* 473 (Opposition Division). In upholding the patent in an amended form, the Opposition Division set out what it saw to be the general principles underlying EPC 2000, Art. 53(a). In particular, it said that Art. 53(a) would only ever apply in exceptional cases. The Division also said that, in assessing whether a patent fell foul of Art. 53(a), it had no intention to apply ‘extreme positions’. By this, it meant that it would not take account of possible abuses of the invention. The Opposition Division said that *ordre public* and morality had to be assessed ‘primarily by looking at laws or regulations which are common to most European countries because these laws and regulations are the best indicators about what is considered right or wrong in a society’: *ibid.*, [9.3].

<sup>589</sup> *Harvard/Transgenic animals*, T 315/03 [2006] *OJ EPO* 15 (TBA), 29. The Board also said that *ordre public* and morality may form the basis of separate objections.

<sup>590</sup> This brings the EPC into line with TRIPS, Art. 27(2), and Biotech. Dir., Art. 6(1).

<sup>591</sup> *Harvard/Transgenic animals*, T 315/03 [2006] *OJ EPO* 15, 54.

squirrels, beavers, and porcupines—was rejected on the basis that it failed the balancing test required under Rule 23d(d) (now Rule 28). Given this, the Board did not need to consider the fate of the main request under Article 53(a). Nonetheless, the Board said that the claims would have failed under the balancing test set out in the *OncoMouse* decision (T 19/90). This was on the basis that the balancing test in conjunction with Article 53(a) was able to take account of more factors than were permissible under Rule 23d(d) (now Rule 28). This meant that additional factors such as the degree of animal suffering and the availability of non-animal methods could also be taken into account. The Board said that when these factors were added to the inevitable harm created by the invention and the fact that there was no evidence that the medical benefits from the invention applied to all rodents, it further tilted the balance against the acceptance of the request.<sup>592</sup>

The fate of the main request under Article 53(a) needs to be contrasted with that of the auxiliary request, which was limited to ‘mice’ rather than ‘rodents’. While it was accepted that the auxiliary invention caused actual suffering to mice, the auxiliary request differed from the main application in that the applicant was able to show that the invention also produced actual medical benefits. As the Board said, this meant that ‘no suffering was envisaged to any animals without a corresponding prospect of benefit’.<sup>593</sup> As such, the Board concluded that the auxiliary request passed the *OncoMouse* (T 19/90) test under Article 53(a). Interestingly, while the Board accepted that additional factors (such as harm to the environment) could be taken into account if they were able to be substantiated,<sup>594</sup> it was highly critical of the arguments made by some of the opponents about the degree of suffering. This was rejected (presumably on the unsubstantiated moral basis) that it was distasteful even to attempt to draw a distinction between acceptable and unacceptable suffering.<sup>595</sup>

## 9.2 INVENTIONS DEEMED TO BE IMMORAL

In addition to the general morality provisions in Article 53(a)/section 1(3), there are a number of specific types of biological invention that are deemed to be immoral or contrary to *ordre public*. These are to be found in Rule 28 of the EPC 2000 Implementing Regulations (ex Rule 23d of the EPC 1973 Implementing Regulations) and paragraph 3 of Schedule A2 to the Patents Act 1977.<sup>596</sup>

### 9.2.1 Processes for cloning human beings

The first type of biological invention that is deemed to fall foul of Article 53(a)/section 1(3) are ‘processes for cloning human beings’.<sup>597</sup> The exclusion of processes for human cloning reflects concerns about eugenics. Human cloning is defined as ‘any process, including techniques of embryo splitting, designed to create a human being with the same nuclear genetic information as another living or deceased human being’.<sup>598</sup> It has been suggested

<sup>592</sup> *Ibid.*, 63. <sup>593</sup> *Ibid.*

<sup>594</sup> Other factors, including the threat to evolution posed by the transgenic mice, the fact that the patent would have encouraged the use of transgenic mice in research, and the more general argument that genetically engineered mice were morally unacceptable to the public, were rejected: *ibid.*, 69–72.

<sup>595</sup> *Ibid.*, 67. The time at which a real Art. 53(a) assessment was to be made was the effective date of the patent (namely, either the filing or priority date), although later evidence may be taken into account so long as it is directed to the position at the relevant date.

<sup>596</sup> The TBA also said that the date at which the application should be assessed is the filing date or the priority date of the patent in question: *ibid.*, 66.

<sup>597</sup> EPC 2000 Regs, r. 28(a) (ex EPC 1973 Regs, r. 23d(a)); PA 1977, Sch. A2, para. 3(b).

<sup>598</sup> Biotech. Dir., Recital 41. See also Biotech. Dir., Recital 40.

that the scope of the exclusion will depend on how ‘human being’ is defined.<sup>599</sup> In particular, ‘human being’ may be defined in such a way as not to include human embryos and embryonic tissue. The UK Intellectual Property Office (IPO) has said that human totipotent cells (which have the potential to develop into an entire human body) would not be patentable ‘because the human body at the various stages of its formation and development is excluded from patentability’.<sup>600</sup> In contrast, the UKIPO is willing to grant patents for human embryonic pluripotent stem cells (which arise from the division of totipotent cells, but do not have the potential to develop into an entire human body). The fact that a number of reports from key scientific bodies, including The Royal Society and the Nuffield Council on Bioethics, supported embryonic stem-cell research was taken as evidence that such research was not contrary to public policy or morality in the United Kingdom.<sup>601</sup> It should be noted that the EPO declared (on the basis of the ‘old’ law) that methods in a cloning process that fused human and pig cells were contrary to morality. As a consequence, the applicants did not pursue the application any further.<sup>602</sup> As such, it seems that even if the cloning of human embryos were not caught by Rule 28(a) (ex Rule 23d(a)), it would fall under the general prohibition in Article 53(a).<sup>603</sup>

### 9.2.2 Processes for modifying the germ line genetic identity of human beings

The second type of biological invention that is deemed to fall foul of Article 53(a)/section 1(3) are ‘processes for modifying the germ line genetic identity of human beings’.<sup>604</sup> The exclusion of such processes (which could alter the reproductive cells that are capable of transmitting genetic material to our descendants) also reflects concerns about eugenics. While somatic cell gene therapy is not caught by the provisions, germ cell line therapy inventions are.<sup>605</sup> It has been suggested that the exclusion of all forms of germ-line therapy is an overreaction. More specifically, it has been said that because it is conceivable that morally unobjectionable applications of germ-line therapy (for example for inheritable diseases such as cystic fibrosis) may arise in the future, the exclusion is ‘retrograde and short-sighted’.<sup>606</sup> As Recital 42 of the Biotechnology Directive points out, the exclusion does not affect inventions for therapeutic or diagnostic purposes that are applied to the human embryo and are useful to it.

### 9.2.3 Uses of human embryos for industrial or commercial purpose

The third type of biological application that is deemed to fall foul of Article 53(a)/section 1(3) are those that claim ‘uses of human embryos for industrial or commercial purpose’.<sup>607</sup> The scope of this exclusion, which has proven to be somewhat controversial,<sup>608</sup>

<sup>608</sup> See A. Plomer and P. Torremans (eds), *Embryonic Stem Cell Patents* (2009).

depends on three factors: what is a *human embryo*; what is a *use* of a human embryo; and what is meant by an *industrial* or *commercial* purpose? We will look at each in turn. Before doing so, it is important to note that technical developments that take place after the filing date (such as the discovery of innocuous ways to make the invention) cannot be taken into account when assessing whether a claim contravenes Rule 28(c) of the EPC 2000 Implementing Regulations.<sup>609</sup>

(i) *What is a human embryo?*

Because the term ‘human embryo’ is not defined in the Biotechnology Directive or in the EPC, it is up to the courts to determine its meaning. One of the first to do so was the Enlarged Board of Appeal in *Wisconsin Alumni Research Foundation/Use of embryos*<sup>610</sup> which held that because the purpose of the exclusion is to protect human dignity and to prevent the commercial exploitation of ‘embryos’, it should not be given a narrow interpretation. This view was echoed in *Oliver Brüstle v. Greenpeace*,<sup>611</sup> where the Court of Justice was called on to consider the fate of a German patent for isolated and purified neural precursor cells produced from human embryonic stem cells (aimed at treating damaged organs). The Court said that, in drafting the Biotechnology Directive, the EU legislature intended to ‘exclude any possibility of patentability where respect for human dignity could thereby be affected’.<sup>612</sup> As a result, the Court said that the concept of ‘human embryo’ within the meaning of Article 6(2)(c) of the Directive must be understood in a wide sense. More specifically, the Court interpreted ‘human embryo’ broadly to include any organism that ‘is capable of commencing the process of development of a human being’.<sup>613</sup> On this basis, it said that any human ovum, as soon as it is fertilized is a ‘human embryo’ (since that fertilization commences the process of development of a human being).<sup>614</sup> The Court also added that a non-fertilized human ovum into which the cell nucleus from a mature human cell has been transplanted was a ‘human embryo’ and thus excluded insofar as it is capable of commencing the process of development of a human being.<sup>615</sup> A non-fertilized human ovum, the division and further development of which have been stimulated by parthenogenesis (a type of asexual reproduction in which the growth and development of embryos occurs without fertilization), insofar as it is capable of commencing the process of development of a human being, was also said to be a ‘human embryo’.<sup>616</sup> This includes cells that are artificially stimulated or manipulated but not fertilized, which are able to trigger the development of a human being (parthenogenesis). In relation to stem cells obtained from a human embryo at the blastocyst stage (that is, five days after fertilization), the Court of Justice sent the matter back to the referring court to determine scientifically whether they are capable of commencing the process of development of a human being (and therefore fall within the concept of ‘human embryo’).<sup>617</sup>

<sup>615</sup> *Ibid.*, [36].

<sup>616</sup> *Ibid.*, [36]. While the UK Human Fertilisation and Embryology Act 1990, s. 1(1) defines ‘embryo’ to include the two-cell zygote and an egg in the process of fertilization, UK courts dealing with patents are bound to follow the Court of Justice, which described the human embryo as an autonomous concept of EU law: *ibid.*, [26].

<sup>617</sup> *Ibid.*, [37].

The definition of human embryo adopted in *Brüstle* has, with one exception, been adopted in the United Kingdom. The one exception is in relation to the Court of Justice's suggestion that a non-fertilized human ovum, the division and further development of which have been stimulated by parthenogenesis, was a 'human embryo'.<sup>618</sup> Doubts about the accuracy of the finding of the Court were raised in *International Stem Cell Corporation v. Comptroller General of Patents*,<sup>619</sup> which concerned applications for parthenotes developed from human embryonic stem cells. Notably, these parthenotes, which were developed without fertilization, are unable to develop into a human.

As Judge Henry Carr QC said the findings of *Brüstle* would prima facie seem to mean that the applications in question were excluded on the basis that they involved the use of a human embryo. However, the International Stem Cell Corporation argued—and the court agreed—that there was an inherent contradiction in *Brüstle*. While the Court of Justice had defined the concept of human embryo as something that was 'capable of commencing the process of development of a human being', this was not the case with a parthenote which, by definition, cannot develop into a viable human being. This is because while a parthenote is capable of developing into a blastocyst-like structure, it cannot develop to term because of the absence of any paternal DNA. The key question here is whether it is enough merely to start the process of development (that is, whether the focus was merely on whether the process had been started), or whether there was also a requirement that the process was able to be completed (that is, whether it also required the completion of the process of development leading to the birth of a viable human being). Judge Henry Carr QC agreed with the International Stem Cell Corporation that if the process of development is not capable of leading to a human being (as the Hearing Officer found to be the case in relation to parthenotes), then it should *not* be excluded from patentability as a human embryo.<sup>620</sup> Judge Henry Carr QC felt that the balance between the need to ensure that patent law supports biotechnological research and the need to respect fundamental principles safeguarding the dignity and integrity of the person was properly struck by excluding from patentability processes of development that are capable of leading to a human being. This was not the case, however, where a process of development that is incapable of leading to a human being is excluded. This was particularly the case in the case of parthenotes, which are not fertilized ova at any stage—the exclusion of which Judge Henry Carr QC equated to an unwarranted exclusion of the fruits of stem cell research from the remit of patent protection.<sup>621</sup> Despite this, Judge Henry Carr QC agreed with the Comptroller that there was insufficient clarity in *Brüstle* about what was meant by 'capable of commencing the process of development of a human being' to warrant a reference to the Court of Justice.<sup>622</sup> We currently await its outcome.

<sup>618</sup> UK IPO, *Practice Notice: Inventions Involving Human Embryonic Stem Cells* (17 May 2012). While human totipotent cells are not patentable, the Office has no objections to the patenting of human embryonic pluripotent stem cells. This reflects the widespread (but not complete) consensus that while totipotent cells should be excluded from patentability, pluripotent cells should not: see *International Stem Cell Corporation v. Comptroller General of Patents* [2013] EWHC 807, [56].

<sup>619</sup> [2013] EWHC 807. More accurately, the case concerned 'parthenogenic activation of oocytes for the production of human embryonic stem cells' and 'for non-fertilised human-ova whose division and further development have been stimulated by parthenogenesis': *ibid.*, [21].

<sup>620</sup> *Ibid.*, [55].

<sup>621</sup> *Ibid.*, [58].

<sup>622</sup> The question referred to the Court of Justice was 'Are unfertilised human ova whose division and further development have been stimulated by parthenogenesis, and which, in contrast to fertilised ova, contain only pluripotent cells and are incapable of developing into human beings, included in the term "human embryos" in Article 6(2)(c) of [the Biotech. Dir.]?': *International Stem Cell Corporation*, Case C-364/13 (pending).

(ii) *What is a use of a human embryo?*

For the most part, the question of what constitutes a ‘use’ of a human embryo is straightforward. For example, in one of the first decisions to consider the exclusion, the Opposition Division at the EPO held that the University of Edinburgh’s controversial human embryo patent—which involved removing stem cells from human embryos, genetically manipulating these cells, and cultivating genetically manipulated embryos from them<sup>623</sup>—did not comply with Rule 23d(c) of the EPC 1973 Implementing Regulations (now Rule 28(c) of the EPC 2000 Implementing Regulations).<sup>624</sup> Here, there was no doubt that the invention involved a prohibited use.

One area where there was some uncertainty was in relation to the question of whether the exclusion is limited to situations where the invention directly involves use of an embryo or whether it also extends to activities that precede the invention. This question was addressed by the Enlarged Board of Appeal (EBA) in *Wisconsin Alumni Research Foundation/Use of embryos*.<sup>625</sup> The application in this case was for a cell culture made from primate embryonic stem cells. It was clear that the application covered human embryonic stem cells. It was also clear that to repeat the invention, the skilled person had to start from spare pre-implantation embryos and that they had to destroy them in the process. Given the importance of the area, the Technical Board of Appeal (TBA) referred a number of questions to the EBA for consideration. The EBA began by noting that the human embryo exclusion specifically refers to inventions (rather than claims). This meant that when deciding whether a patent falls foul of the exclusion, it was possible to look beyond the wording of the claims to the technical teaching of the application as a whole. It was also possible to look at how the invention was to be performed. The Board also noted that it was not the fact of patenting itself that was against order public or morality (although, for some, this is an issue); rather, it was the ‘performing of the invention, which includes a step (the use involving its destruction of a human embryo) that has to be considered to contravene these steps’.<sup>626</sup> In the words of the Board, ‘before human embryonic stem cell cultures can be used, they have to be made’.<sup>627</sup> As the Board noted, to restrict the application of Rule 28(c) to what an applicant had put in their claim would have had the undesired consequence of making avoidance of the patenting prohibition merely a matter of clever drafting of the claims. On the facts, the Board held that because the only way to make the human embryonic stem cell culture claimed in the patent was to use (including the destruction) human embryos, the patent fell foul of Rule 28(c).

A similar approach was adopted in *Oliver Brüstle v. Greenpeace*, where the Court of Justice said that an invention was not patentable where the implementation of the invention requires the destruction of human embryos.<sup>628</sup> This was the case even if the claims did not refer to the use of human embryos. The Court also added that it did not matter if the destruction occurred at a stage long before the implementation of the invention; rather, all that mattered was that the implementation of the invention required the

<sup>623</sup> After amendment, the patent no longer includes human or animal embryonic stem cells, but still covers modified human and animal stem cells other than embryonic stem cells.

<sup>624</sup> Patent EP 695351, granted by EPO December 1999. The patent was allowed to continue in an amended form by the Opposition Division (hearing date 22–24 March 2002). See EPO Press Release, ‘Edinburgh Patent Limited after European Patent Office Opposition Hearing’ (24 July 2002).

<sup>625</sup> G 2/06 [2009] OJ EPO 306. Applied in *Stem Cells/California*, T 552/04 (28 May 2009) (claim 1 was directed to a method of proliferating *in vitro* a clonal population of neural crest stem cells of mammalian origin, which could be prepared only by a method that involved the destruction of human embryos).

<sup>626</sup> *Ibid.*, [29].

<sup>627</sup> *Ibid.*, [22].

<sup>628</sup> *Oliver Brüstle v. Greenpeace*, Case C-34/10 (10 March 2011).

destruction of human embryos. If this were not the case, it would have made the provision redundant by allowing a claim to avoid its application by skilful drafting of the claim.<sup>629</sup> On this basis, the Court held that the patent in issue, which related to neural precursor cells and the processes for their production from embryonic stem cells and their use for therapeutic purposes, was excluded.

Interestingly, the Court said that the Directive not only excludes an invention from patentability where the technical teaching that is the subject matter of the patent requires the prior destruction of human embryos, but also excludes inventions that require the use of human embryos as ‘base material’.<sup>630</sup> This was the case whatever the stage at which these uses took place and even if the description of the technical teaching claimed did not refer to the use of human embryos. The prohibition on the use of human embryos as a ‘base material’ is broader than in *Wisconsin Alumni Research Foundation* (which was limited to situations in which the use resulted in the destruction of human embryos).<sup>631</sup>

The decision of the Court of Justice has—at least in relation to the point about the destruction of human embryos—been adopted by the UK IPO, which has said that it is now UK practice that where the implementation of an invention requires the use of cells that originate from a process that requires the destruction of a human embryo, the invention will be unpatentable.<sup>632</sup> Thus, where the implementation of an invention requires the use of a human embryonic stem cell line, the establishment of which originally required the destruction of a human embryo, the invention will not be patentable. This is not the case, however, in relation to human stem cells that are not derived from human embryos, such as induced pluripotent cells and adult stem cells, which are not caught by the exclusion.

### (iii) *Industrial or commercial purposes*

One of the limitations on the operation of the exclusion is that it only applies when a human embryo is used for *industrial or commercial purposes*. The meaning of this phrase was considered by the Court of Justice in *Brüstle* when considering whether the concept of ‘uses of human embryos for industrial or commercial purposes also covers the use of human embryos for the purpose of scientific research’.<sup>633</sup> While the Court of Justice recognized that scientific research needed to be distinguished from industrial or commercial purposes, it added that the use of human embryos for the purpose of (scientific) research that constitutes the subject matter of a patent application cannot be separated from the patent itself. This was because the ‘grant of a patent implies, in principle, its industrial or commercial application’.<sup>634</sup> Thus use for industrial and commercial purposes also includes use for scientific research.

The exclusion of uses of human embryos for industrial or commercial purposes does not apply to inventions for therapeutic or diagnostic purposes that are applied to a human embryo.<sup>635</sup> This is because, in this situation, the invention is intended to benefit the embryo, rather than to lead to its destruction.<sup>636</sup> Presumably, this would not be the case,

<sup>629</sup> *Ibid.*, [50].      <sup>630</sup> *Ibid.*, [52].

<sup>631</sup> See E. Bonadio, ‘Biotech Patents and Morality after *Brüstle*’ (2012) 34 *EIPR* 433, 442 (‘How far must patent officers and judges dig to find an immoral act upon which an invention is based?’).

<sup>632</sup> IPO Practice Notice, *Inventions Involving Human Embryonic Stem Cells* (17 May 2012).

<sup>633</sup> *Oliver Brüstle v. Greenpeace*, Case C-34/10 (10 March 2011), [41].      <sup>634</sup> *Ibid.*

<sup>635</sup> *Ibid.*, [42]–[43]. Biotech. Dir., Recital 42. See also *Wisconsin Alumni Research Foundation/Use of embryos*, G 2/06 [2009] *OJ EPO* 306, [25].

<sup>636</sup> *Wisconsin Alumni Research Foundation/Use of embryos*, G 2/06 [2009] *OJ EPO* 306, [27].

however, if the invention to be applied to the human embryo involved the destruction of a human embryo.

#### 9.2.4 Processes for modifying the genetic identity of animals

The final category of inventions expressly excluded from protection are ‘processes for modifying the genetic identity of animals which are likely to cause them suffering without any substantial medical benefit to man or animal, and also animals resulting from such processes’, under Rule 28(d) of the EPC 2000 Implementing Regulations (ex Rule 23d(d)) of the EPC 1973 Implementing Regulations) and paragraph 3(e) of Schedule A2 to the 1977 Act.<sup>637</sup> The fact that the provision is limited to the modification of animals means that it will not impact upon animal cloning (such as Dolly the sheep).

In the 2006 decision in *Harvard/Transgenic animals*,<sup>638</sup> the Technical Board of Appeal (TBA) was called on to consider whether a patent for transgenic rodents containing an additional cancer gene was excluded from patentability under Rule 23d(d) (now Rule 28(d)). In looking at this provision, the Board stressed that the balancing test in Rule 23d(d) only applies where suffering to animals is likely. This meant that a ‘likelihood—but no more than a likelihood of such suffering is necessary to trigger the operation of Rule 23d(d)’.<sup>639</sup> While the balancing test in Rule 23d(d) (now Rule 28(d)) was based on the approach adopted in the *OncoMouse* (T 19/90) decision,<sup>640</sup> the tests differed. In particular, although the test in *OncoMouse* balances the suffering of animals against ‘usefulness to mankind’, the test in Rule 23d(d) (now Rule 28(d)) balances the suffering of animals against ‘substantial medical benefit to man or animal’. It is clear from this that the test in *Harvard/Transgenic animals* was broader than the test that was developed in *OncoMouse*. It was also clear that if ‘substantial medical benefit’ is established for the purposes of Rule 23d(d), usefulness to mankind under *OncoMouse* T 19/90 would also be established.<sup>641</sup>

The Board also said that Rule 23d(d) (now Rule 28(d)) requires two matters to be evaluated: (i) whether animal suffering is likely; and (ii) whether likely substantial benefit has been established. While the criteria that need to be met may be different, the Board noted that the standard or level of proof to be applied in relation to the two integers of Rule 23d(d) was the same.<sup>642</sup> Since only a likelihood of suffering needs be shown, other matters such as the degree of suffering or the availability of non-animal alternatives do need to be considered. Evidence need not be limited to that available at the filing or priority date, but evidence available thereafter must be directed to the position at that date.<sup>643</sup>

In applying the test set out in Rule 23d(d) (now Rule 28(d)), the Board stressed that there needed to be a ‘necessary correspondence between suffering and benefit’.<sup>644</sup> This was based on the understanding that Rule 23d(d) provided that a patent should only extend to those animals the suffering of which was balanced by a medical benefit. Taking a hypothetical example, the Board said:

[I]f likely suffering to both cats and lions was established, it would none the less be contrary to Rule 23d(d) EPC [1973 Regs] to allow claims which encompassed both cats and lions when the only established likely medical benefit arose in relation to the use of cats.<sup>645</sup>

The impact that the principal of correspondence is able to play in limiting the scope of what may be patented, which is reminiscent of the requirement for sufficiency of disclosure, is evident from the way in which the TBA dealt with the main and auxiliary requests

<sup>637</sup> This corresponds to Biotech. Dir., Art. 6(2)(d). <sup>638</sup> T 315/03 [2006] OJ EPO 15.

<sup>639</sup> Ibid., 40–1. <sup>640</sup> Ibid. <sup>641</sup> Ibid., 42, 53–4. <sup>642</sup> Ibid., 62. <sup>643</sup> Ibid., 50–1.

<sup>644</sup> Ibid., 47. <sup>645</sup> Ibid.

in *Harvard/Transgenic animals*. The main request considered by the Board was for ‘transgenic rodents’. On the basis that the request embraced all animals within the taxonomic order *Rodentia*, the Board said that ‘suffering will—and must—be present in the case of every such animal—not just mice but also squirrels, beavers, porcupines, and every other rodent’.<sup>646</sup> Applying this logic to the case in hand, the Board noted that no evidence had been produced that showed that there was a likelihood that a substantial medical benefit to man or animal would arise from applying the claimed process to all rodents, or indeed to any animals of the order *Rodentia* apart from mice. That is, there was no evidence that the medical benefits for cancer research that were meant to arise from the invention applied to all rodents. On this basis, the Board held that the likelihood of substantial medical benefit required by Rule 23d(d) had not been substantiated.<sup>647</sup> Given that animal suffering was ‘not just a likelihood but an inevitable consequence of the very purpose of the patent’, the Board concluded that the main request failed the balancing test of Rule 23d(d) and was therefore refused under Article 53(a).

The fate of the main request in *Harvard/Transgenic animals* needs to be contrasted with that of the auxiliary request, which was limited to ‘mice’ rather than ‘rodents’. As with the main request, the Board noted that one of the inevitable consequences of the invention was that it would cause harm and suffering to mice. In contrast to the main claim, however, the applicant was able to produce evidence that showed that the invention (as defined in the auxiliary request) did have medical benefits. On this basis, the Board said that the subject matter of the auxiliary claims (which were limited to transgenic mice) satisfied the test in Rule 23d(d) (now Rule 28(d)). The Board then went on to consider the fate of the auxiliary application under Article 53(a) proper, which, as we saw above, was found not to apply to the claim for transgenic mice.

## NOVELTY

### CHAPTER CONTENTS

1 Introduction	529	4 Is the Invention Novel?	537
2 What is the Invention?	531	5 Discovery of a New Advantage of an Old Thing Used in an Old Way	544
3 What Information is Disclosed by the Prior Art?	531		

### 1 INTRODUCTION

Both the Patents Act 1977 and the 2000 European Patents Convention (EPC 2000) stipulate that for an invention to be patentable it must be ‘new’.<sup>1</sup> An invention is said to be new if it does not form part of the ‘state of the art’.<sup>2</sup> The ‘state of the art’ is defined very broadly to include all matter that is available anywhere in the world before the priority date of the invention. Where an invention is disclosed or ‘anticipated’ by the state of the art, a patent will not be granted or, if it has been granted (because the prior art escaped the attention of the examiner), the patent is liable to be revoked.<sup>3</sup>

Novelty requires that the invention be *quantitatively* different from what has been disclosed previously—that is, the technical information disclosed by the patent must not already be available to the public. In this sense, novelty is different from the requirement that to be patentable an invention must have involved an inventive step (or be non-obvious), which is basically a *qualitative* examination to ascertain whether the contribution is creative enough to warrant a monopoly.

By ensuring that patents are not granted for products or processes that are already known, novelty helps to ensure that patents are not used to stop people from doing what they had already done before the patent was granted.<sup>4</sup> As we will see, this so-called ‘right to work’ argument has been modified as a result of changes in the way in which novelty

<sup>1</sup> PA 1977, s. 1(1)(a); EPC 2000, Art. 52(1) (ex EPC 1973, Art. 52(1)).

<sup>2</sup> PA 1977, s. 2(1); EPC 2000, Art. 54(1) (ex EPC 1973, Art. 54(1)). PA 1977, s. 130(7), provides that s. 2 is framed so as to have, as nearly as practicable, the same effect in the United Kingdom as the corresponding provisions of the EPC.

<sup>3</sup> PA 1977, s. 72(1)(a); EPC 2000, Art. 138(1)(a). Lack of novelty is a ground of opposition at the EPO under EPC 2000, Art. 100(a).

<sup>4</sup> Prior to the 1624 Statute of Monopolies, the Crown granted patents for activities that had already been carried out, one of the most infamous examples being for the buying and selling of playing cards. This meant that those who were already practising the activities could no longer continue to do so. Not surprisingly, such persons were aggrieved. See *Clothworkers of Ipswich Case* (1614) *Godb R* 252, 78 *ER* 147; *Darcy v. Allin* (1602) 74 *ER* 1131. In part, the 1624 Statute of Monopolies was introduced to overcome these problems.

is determined.<sup>5</sup> Another factor that is used to justify the novelty requirement relates to the overall rationale for the grant of patents.<sup>6</sup> More specifically, it is argued that the public is only willing to pay the costs (or monopoly profits) of patenting if they are able to get access to information that would not otherwise have been available to them. To adopt the contract analogy that is often used to justify and explain patents, novelty ensures that the inventor provides the consideration necessary to warrant the patent being granted in the first place.

While the Patents Act 1977 retains many of the basic principles and rationales that have long been a feature of British law on novelty, Britain's entry into the EPC introduced some important changes in the way in which the novelty requirement is applied in the United Kingdom. One of these relates to the fact that the 1977 Act and the EPC operate on the principle of 'objective novelty'—that is an attempt, where possible, to avoid subjective judgements (which are seen to lead to uncertainty).<sup>7</sup> Perhaps the clearest example of this is that both British and European patent law have adopted the principle of 'absolute novelty'.<sup>8</sup> This means that the novelty of an invention is judged against all of the information that is available at the priority date of the invention, irrespective of where the information was released or the form in which it was released.<sup>9</sup>

Given the broad nature of the knowledge base against which the novelty of inventions is assessed, it is not surprising that it has been criticized on the basis that by allowing obscure materials to anticipate, absolute novelty produces harsh results. In its favour, however, absolute novelty is said to provide a 'bright line' test, thus 'avoiding subjectivity and most questions of degree'.<sup>10</sup> Given the sophisticated information tools that are currently available to researchers, there may be good reasons for providing disincentives to prevent the duplication of research that has already been carried out.<sup>11</sup> Another notable change in the post-1977 law is that in determining whether an invention is novel, the courts have placed increased attention on the information function of the patent system. As we will see, this has had important consequences for so-called 'secret' or 'inherent' uses, and their ability to anticipate.

The task of determining whether an invention is novel can conveniently be broken down into three separate questions, as follows.

- (i) What is the invention?
- (ii) What information is disclosed by the prior art?
- (iii) In light of (i) and (ii), is the invention novel—that is, is the invention part of the state of the art?

<sup>5</sup> On the right to work, see *Windsurfing International* [1995] RPC 59, 77; B. Reid, 'The Right to Work' [1982] EIPR 6. With respect to registered designs, see *Falk v. Jacobowitz* (1944) 61 RPC 116, 123.

<sup>6</sup> At the EPO, the purpose of the novelty requirement is to prevent the prior art from being re-patented: *Bayer/Diastereomers*, T 12/81 [1982] OJ EPO 296; [1979–85] EPOR B–308, 312; *Bayer/Amino acid derivatives*, T 12/90 [1991] EPOR 312, 317.

<sup>7</sup> See *Genentech's Patent* [1989] RPC 147, 198 (CA), 203 per Purchas LJ.

<sup>8</sup> Strasbourg, Art. 4. France and Italy already had such a standard.

<sup>9</sup> This is wider than under pre-1977 law, especially as regards the requirement of worldwide novelty. In other ways, it may be narrower, since the pre-1977 condition 'having regard to what was known and used' had no specific requirement that the use make 'the invention' available to the public. Some countries require novelty within the territory, exclude old documents, or confine the state of the art to printed documents. For an argument in favour of a more 'realistic standard', see Note, 'Prior Art in the Patent Law' (1959) 73 *Harv L Rev* 369.

<sup>10</sup> *Milliken Denmark AS v. Walk Off Mat* [1996] FSR 292.

<sup>11</sup> R. Merges, *Patent Law and Policy* (1992), 192–4 (examining the rationale behind the novelty doctrine from the point of view of its impact on search activities).

We will deal with each of these in turn. After doing so, we will look at three specific types of invention and the problems that have arisen when assessing their novelty.

## 2 WHAT IS THE INVENTION?

Before being in a position to determine whether an invention is new, it is first necessary to identify what the alleged invention is.<sup>12</sup> While the way in which an invention is characterized often plays a key role in shaping many aspects of the novelty examination and consequently the fate of many inventions,<sup>13</sup> it has received very little attention.

## 3 WHAT INFORMATION IS DISCLOSED BY THE PRIOR ART?

Once the technical features of an invention have been identified, it is then necessary to ascertain the nature of the information that has been disclosed by the prior art. In order to do this, it is first necessary to ask: what material forms part of the state of the art? Once this has been ascertained (and the prior art that is relevant to the invention in question has been identified), it is then possible to determine the nature of the information (or teaching) that is disclosed by the prior art.

### 3.1 WHAT IS THE STATE OF THE ART?

The state of the art is defined in extremely broad and inclusive terms to include all matter (whether a product or process, information about either, or anything else) that, at the priority date of the application in question, has been made available to the public (whether in the United Kingdom or elsewhere) by written or oral description, by use, or in any other way.<sup>14</sup> There are a number of features of the way in which the state of the art is defined that should be borne in mind.

#### 3.1.1 No geographical limits

There are no geographical limits on where the state of the art must be disclosed. As such, it includes information that is available *anywhere* in the world.

#### 3.1.2 No restrictions on the mode of disclosure

Information will become part of the state of the art irrespective of the way in which it was made available to the public. Consequently, information may become part of the state of the art as a result of written descriptions (such as previously published patents<sup>15</sup> or journal articles<sup>16</sup>),

<sup>12</sup> *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76 (HL), 82; *Evans Medical Patent* [1998] RPC 517.

<sup>13</sup> *Glaverbel v. British Coal* [1994] RPC 443; [1995] RPC 255 (CA); *CIPA*, [2.03].

<sup>14</sup> PA 1977, s. 2(2); EPC 2000, Art. 54(2).

<sup>15</sup> T 877/98 [2001] OJ EPO (Special edition) 3, 20 (a patent becomes part of the public domain on publication in the relevant Official Journal, not upon notification of the decision to grant).

<sup>16</sup> This includes a magazine available to the public one day before the priority date, but not a doctoral thesis that has been placed in a library archive and not yet been indexed: *Research Corporation/Publication*, T 381/87 [1990] OJ EPO 213, [1989] EPOR 138. See also *Exxon Mobil*, T 314/99 (21 June 2001).

through past uses,<sup>17</sup> exhibitions, sales,<sup>18</sup> or by oral communications (although, in the last case, difficult evidential questions may arise<sup>19</sup>). If the information is accessible, then its age, obscurity, duration, language, or location is irrelevant.<sup>20</sup> (As we will see below, limits are imposed in the case of confidential information and inventions disclosed at international exhibitions.) Similarly, there are no minimum requirements on how widely the information must be published for it to be disclosed. Thus a single copy of a document, or the sale of a single item, will be sufficient for the information to become part of the state of the art.<sup>21</sup>

### 3.1.3 Potential, rather than actual, disclosure

Material is factually available (and part of the state of the art) if it is open to or capable of being accessed by the public. As such, there is no need to demonstrate that anyone *actually* had access to the information in question; all that matters is that had they wanted to do so, they could have accessed the information.<sup>22</sup>

### 3.1.4 Priority date

Both the Patents Act 1977 and the EPC provide that the date at which the novelty is to be assessed is the ‘priority date’ of the invention in question.<sup>23</sup> The upshot of this is that the state of the art only includes information that is made available to the public *before* the priority date of the invention in question. While the priority date is normally the date on which an application was filed,<sup>24</sup> in some cases the priority date is earlier<sup>25</sup> (notably where an application is made in a Paris Convention country during the previous 12 months).

In contrast with some other patent regimes,<sup>26</sup> applicants for UK and European patents are not provided with a ‘grace period’—that is, a period prior to filing during which they are able to practise their inventions.<sup>27</sup> Consequently, patents are frequently anticipated

<sup>21</sup> *Fomento v. Mentmore* [1956] RPC 87; *Monsanto (Brignac’s) Application* [1971] RPC 153 (a publication placed in the hands of salesmen was held to have been made available to the public, since there was no fetter on their use of that information). See also *Van Wonterghem*, T 1022/99 (10 April 2001) (sale of object to a single customer). However, supply to a manufacturer is likely to be treated as in confidence: *Strix v. Otter* [1995] RPC 607, 633–4. It should be noted that supply will make the invention available only if it reveals it: *Pall Corp v. Commercial Hydraulics* [1990] FSR 329.

<sup>22</sup> *Japan Styrene Paper/Foam particles*, T 444/88 [1993] EPOR 241. There is no requirement that a person be likely to examine the document: *Hoechst/Polyvinylester dispersion*, T 93/89 [1992] OJ EPO 718, [1992] EPOR 155; *Woven Plastics v. British Ropes* [1970] FSR 47; *Harris v. Rothwell* (1887) 4 RPC 225.

<sup>23</sup> PA 1977, s. 2(1); EPC 2000, Art. 54(2).

<sup>24</sup> PA 1977, s. 5(1); EPC 2000 Regs, r. 40.

<sup>25</sup> The law facilitates this by allowing for priority not only from full filing, but also from early filing: PA 1977, ss 14–15; EPC 2000 Regs, r. 40. On a situation in which early PCT filing is claimed under EPC 1973, Arts 87–88 (now EPC 2000, Arts 87–88), see *Requirement for claiming priority of same invention*, G/98 [2001] OJ EPO 413 (earlier priority could be claimed from an earlier application only if the skilled person could derive the subject matter of the later claim directly and unambiguously from the previous application as a whole).

<sup>26</sup> A grace period is provided by US law—35 USC §102(b)—in which the applicant’s own acts are deemed to fall outside the state of the art.

<sup>27</sup> The Intergovernmental Conference of Member States of the EPO called for the EPO to examine the conditions under which a grace period should be introduced into the EPC. For expert opinions on this, see online at <<http://www.epo.org>> See F. Blakemore, ‘Grace Periods in European Patent Law’ (1998) 106 *Patent World* 18.

and thus rendered invalid for want of novelty as a result of the applicant's own acts and disclosures.<sup>28</sup> The priority date is thus important not only because it is the date when novelty is assessed, but also because it is the date from when inventors are able to exploit their inventions without jeopardizing any potential patents.<sup>29</sup>

### 3.1.5 Material specifically included within the state of the art

While, as a general rule, patent law provides that the state of the art only includes material in the public domain before the priority date of the invention, an exception is made in relation to patent applications that are published after the priority date of the application in suit. More specifically, the relevant laws provide that in addition to the matter published before the priority date of the invention, the state of the art also includes applications for other patents that are published after the priority date of the invention in question, but nonetheless have a priority date earlier than the application in question.<sup>30</sup> The reason why the state of the art is (effectively) backdated in this way is to avoid the possibility of 'double patenting'—that is, of patents being granted to different applicants for the same invention.<sup>31</sup> This potential problem is created by the fact that there is a time lag between the date of filing, which is normally the priority date, and the early publication of the application, when the application becomes part of the state of the art.

### 3.1.6 Material specifically excluded from the state of the art

There are two situations where material in the public domain is not taken into account when assessing novelty of inventions. The first is where the information was obtained unlawfully or was disclosed as a result of a breach of confidence.<sup>32</sup> In a sense, this reaffirms the old principle that material is only available to the public if the recipient is free

<sup>28</sup> See *Fomento* [1956] RPC 87; *Lux Traffic Controls v. Pike Signals* [1993] RPC 107, 134–5; *Research Corporation/Publication*, T 381/87 [1990] OJ EPO 213, [1989] EPOR 138.

<sup>29</sup> *Asahi Kasei Kogyo* [1991] RPC 485 (HL), 529 *per* Lord Oliver. In the United States, experimental use will not invalidate a patent even though the invention was in public use or on sale more than a year before the priority date.

<sup>30</sup> PA 1977, ss 2(3), 130(3); EPC 2000, Arts 54(3), 87(4). The test for novelty under PA 1977, s. 2(3), is the same as under s. 2(2): *SmithKline Beecham plc's Patent* [2003] RPC 114 (CA), 120–2; *Synthon BV v. SmithKline Beecham* [2002] EWHC 1172. Article 54(3) does not treat existing national rights as part of the state of the art, so that a European patent (UK) would be granted at the EPO but not in the United Kingdom where the existing national right would anticipate: *Mobil/Admissibility*, T 550/88 [1992] OJ EPO 117, [1990] EPOR 391 (construing the term 'European patent application' in Art. 54(3) as excluding previous national applications, by reference to Arts 93 and 139); *Woolard's Application* [2002] RPC 39; *Zbinden's Application* [2002] RPC (13) 310 (discussing when a withdrawn application forms part of the state of the art). The effect of this is that will be that the state of the art for a European application or patent now includes all previous European applications irrespective of their designation. The PA 1977 was amended accordingly.

<sup>31</sup> The section, however, may not always avoid double patenting, because the disclosure will anticipate only if it is enabling: *Asahi Kasei Kogyo* [1991] RPC 485 (HL).

<sup>32</sup> PA 1977, s. 2(4)(a)(b); EPC 2000, Art. 55(1)(a) (ex EPC 1973, Art. 55(1)(a)). Relevant examples include disclosure by employees (*Robert Bosch/Electrical machine*, T 1085/92 [1996] EPOR 381), submission of an article to a refereed journal (*Research Corporation/Publication*, T 381/87 [1989] EPOR 138), and disclosures at a meeting with a manufacturer (*Macor Marine Systems/Confidentiality agreement*, T 830/90 [1994] OJ EPO 713; *Telecommunications/Antioxidant*, T 173/83 [1987] OJ EPO 465, [1988] 3 EPOR 133). Cf. *Unilever/Deodorant detergent*, T 585/92 [1996] OJ EPO 129 (early publication by Brazilian Patent Office as a result of lamentable error was unfortunate and detrimental, but not an evident abuse within Art. 55, since evident abuse required state of mind of abuser to be influenced by its specific relationship with the applicant, as with breach of confidentiality). On the timing of the disclosure, see *University Patents/Materials and methods for herpes simplex virus vaccination*, G 3/98 [2001] OJ EPO 62.

in law and equity to divulge its contents.<sup>33</sup> The second situation where information is excluded from the state of the art is where the disclosure was due to or made in consequence of the inventor displaying the invention at an ‘international exhibition.’<sup>34</sup>

It is important to note that the exclusions only apply to disclosures that are made within the six-month period immediately preceding the date when the claim for the invention in question was filed.<sup>35</sup> Any disclosures that are made outside of this period will not be caught by the exceptions and will thus form part of the state of the art for the purposes of assessing novelty.

### 3.1.7 Information on the Internet

One of the criticisms made of the British patent system in the eighteenth and nineteenth centuries was that it was often very difficult to find the relevant patent information, which was often effectively hidden within the chaos of the (then) Patent Office. Similar problems potentially arise today as a result of the rapid increase in the amount of scientific and technical information that is available online—a situation that will only increase with the rapid push towards open-access scientific publishing. As the Technical Board of Appeal (TBA) noted in *Philips*,<sup>36</sup> the size and nature of the Internet poses a number of potential problems, not least of which is the threat of hidden publications—that is, a document made available in theory, but hidden in practice because of its obscure location. This potentially gave authors the power to decide whether or not, and if so, when a document might be used to anticipate a patent. It also potentially undermines legal certainty. The Board said the public policy in preventing hidden publications means that in ‘order to conclude that the document is available to the public’, it is not enough for a document merely to be placed online; rather, it must also be shown that ‘direct and unambiguous access to it by known means and methods is possible.’<sup>37</sup> While the TBA stressed that this question had to be considered on a case-by-case basis, it did say that for a document on the Internet that was accessible only via a specific URL to be disclosed to the public, the document had to: (i) be able to be found with the help of a public web search engine by using one or more keywords all related to the essence of the content of the document, and (ii) remain accessible at that URL for long enough a period of time that a member of the public might ‘have direct and unambiguous access to the document.’<sup>38</sup> Exceptionally, the Board said that the URL may be so ‘straightforward or predictable that it could be readily

<sup>33</sup> *Humpherson v. Syer* (1887) 4 RPC 407; *Bristol Myers Application* [1969] RPC 146; *James Industries’ Application* [1987] RPC 235; T 818/93 and T 480/95 [1997] OJ EPO 20–1; *Robert Bosch/Electrical machine*, T 1085/92 [1996] EPOR 381; *Research Foundation/Translation inhibitor*, T 838/97 (14 November 2001) (oral presentation of an invention to a conference of 100 experts, who were told that the information could not be used without specific authorization, was a private communication that did not form part of the public domain).

<sup>34</sup> PA 1977, s. 2(4)(c); EPC 2000, Art. 55(1)(b) (ex EPC 1973, Art. 55(1)(b)). ‘International exhibitions’ are defined in PA 1977, s. 130, and EPC 2000, Art. 55(1)(b), as relating to the Convention on International Exhibitions signed at Paris in 1928. See A. Serjeant ‘International Exhibitions’ (1985–86) 15 *CIPAJ* 319.

<sup>35</sup> PA 1977, s. 2(4), refers to the period preceding the application date. According to the EBA, under EPC 2000, Art. 55(1), the ‘relevant date is the date of the actual filing of the European patent application; the date of priority is not to be taken into account in calculating this period’: *University Patents*, G 3/98 [2001] OJ EPO 62 (EBA).

<sup>36</sup> *Philips/Public availability of documents on the World Wide Web*, T 1553/06 (26 April 2012); *Philips/Public availability of an email transmitted via the Internet*, T 2/09 (12 March 2012) (information sent via email does not form part of the state of the art).

<sup>37</sup> *Philips/Public availability of documents on the World Wide Web*, T 1553/06 (26 April 2012), [6.5.4].

<sup>38</sup> *Ibid.*, [6.7.3].

guessed'.<sup>39</sup> In this situation, a document available at the URL would form part of the state of the art.

### 3.2 WHAT INFORMATION IS DISCLOSED BY THE PRIOR ART?

The information disclosed by the prior art is restricted to the information that a person skilled in the art is able to derive from the prior art in question.<sup>40</sup> In considering the way in which the prior art is interpreted by a person skilled in the art, it is useful to distinguish between situations where the relevant prior art consists of a document and those where it comprises a product.<sup>41</sup>

#### 3.2.1 Interpreting documents

Documents are interpreted as if they were being read at the date of their publication<sup>42</sup> and not the priority date of the invention or the date of trial. Given that the act of interpretation usually takes place after the date when the document was published, it is important that documents are neither read retrospectively,<sup>43</sup> nor construed in light of events that have taken place since publication (notably the creation of the invention in question). The information available is that which a person skilled in the art would derive from reading the document in light of common general knowledge. In this respect, the skilled person has a limited ability to extend the meaning of the document beyond that which would be provided by a literal reading.<sup>44</sup> In line with this, the person skilled in the art is able to correct obvious mistakes, inconsistencies, or errors that may exist in the documents.<sup>45</sup>

Another important rule of interpretation is that the information must be drawn from a single document. This means that it is not possible to combine together (or 'mosaic') separate items in the prior art. In a similar vein, it is not normally possible to combine elements from within a single document.<sup>46</sup> The only occasion on which it is permissible to combine documents together is where a primary document inevitably leads to a second document. That is, where the person skilled in the art would read different documents as if they were one.<sup>47</sup>

#### 3.2.2 Interpreting products

A number of special rules have been formulated to deal with situations where the prior art consists of a product, such as a drug or a machine, that has been released on the

<sup>39</sup> Ibid., [6.6.6]. <sup>40</sup> See R. Jacob, 'Novelty of Use Claims' (1996) 27 *IIC* 170, 174.

<sup>41</sup> T 270/89 in G. Keller, 'Summary of Some Recent Decisions at the EPO' [1993] *JPTOS* 237.

<sup>42</sup> *General Tire & Rubber v. Firestone Tyre & Rubber* [1972] *RPC* 457; *Minnesota Mining v. Bondina* [1973] *RPC* 491; *Tektronix/Scottky barrier diode* [1995] *EPOR* 384. Cf. questions of sufficiency of disclosure where documents are read at the priority date of the invention.

<sup>43</sup> *Rhone-Poulenc/Taxoids*, T 77/97 [1998] *EPOR* 256.

<sup>44</sup> See *Bayer/Chimeric gene*, T 890/02 [2005] *OJ EPO* 497.

<sup>45</sup> *Toshiba*, T 26/85 [1990] *OJ EPO* 22; *Scanditronix/Radiation beam collimation*, T 56/87 [1990] *OJ EPO* 188, [1990] *EPOR* 352; *ICI/Latex composition*, T 77/87 [1990] *OJ EPO* 280, [1989] *EPOR* 246.

<sup>46</sup> *Draco/Xanthines*, T 7/86 [1985] *EPOR* 65, [1988] *OJ EPO* 381; *Scanditronix/Radiation beam collimation*, T 56/87 [1990] *OJ EPO* 188, [1990] *EPOR* 352.

<sup>47</sup> If the disclosure reveals one part of the product and another disclosure, another element, there is no anticipation: *Bayer/Diastereomers*, T 12/81 [1982] *OJ EPO* 296; [1979–85] *EPOR* B–308; *Texaco/Reaction injection moulded elastomer*, T 279/89 [1992] *EPOR* 294, 298; *Amoco Corporation/Alternative claims*, T 153/85 [1988] *OJ EPO* 1, [1988] *EPOR* 116, 123; *ICI/Latex composition*, T 77/87 [1990] *OJ EPO* 280, [1989] *EPOR* 246, 251.

market.<sup>48</sup> In circumstances where the product is the same as the invention, few problems arise. The task of interpretation becomes more problematic, however, where the technical information necessary to anticipate an invention is not immediately apparent from looking at the product, but can only be obtained if the product is analysed.<sup>49</sup>

It has long been recognized that the information disclosed by a product is not limited to the information that is immediately apparent from looking at the product. Importantly, the information available to the public also includes the information that a skilled person would be able to derive from the product if they were to analyse or examine it.<sup>50</sup> The person skilled in the art is able to make use of the analytical skills and techniques commonly available in the field before the priority date of the invention. This means that if the skilled person works in a field in which reverse engineering is commonly practised, then a machine placed on sale would reveal all of the information that a person skilled in the art would be able to obtain if they were to reverse-engineer the machine.

Any information that is obtained as a result of an analysis undertaken by a person skilled in the art must be obtained without undue burden or without the need to exercise any additional inventive effort.<sup>51</sup> If it were necessary for the person skilled in the art to embark on inventive or exploratory research to reveal the information in question, the information would not form part of the state of the art. The situation is the same where information is so submerged in a prior art document that it cannot be understood by a skilled person using their common general knowledge; in this case, the information would not form part of the state of the art.<sup>52</sup>

The amount of information that is revealed by an examination depends on the type of analysis undertaken.<sup>53</sup> This would vary with things such as the skills of the researchers in question, and the time and money spent on the examination.<sup>54</sup> Given this, the question has arisen as to whether limits should be placed on the type of (hypothetical) analysis that is undertaken. Following the principle of objective novelty, subjective factors such as the cost of carrying out the analysis or the time taken to find the relevant information are *not* taken into account when determining the nature of the information revealed by a product,<sup>55</sup> neither is it necessary that there be particular reasons that prompted the skilled person to examine the composition of the product in the first place.<sup>56</sup> The question is *could*, and not *would*, the product be analysed by the person skilled in the art?

<sup>48</sup> *Quantel v. Spaceward Microsystems* [1990] RPC 83.

<sup>49</sup> See L. Tournroth, 'Prior Use' (1997) 28 IIC 800, 800–1; Paterson, [10–07]. In *Lux Traffic Controls v. Pike Signals* [1993] RPC 107, Aldous J distinguished between cases of prior use in which the public had access to the invention and were able to handle it, and prior uses that allowed the public only to observe the object. The circumstances in which each would anticipate would differ, disclosure being much more likely in cases of handling. This, however, was not conclusive. In *Luchtenberg/Rear-view mirror*, T 84/83 [1979–85] EPOR 793, 796, the TBA accepted that the use of a mirror attached to a car in public for six months might be revealed if all aspects were disclosed. Cf. *Pfennigabsatz* [1966] GRUR 484, 486.

<sup>50</sup> *Thomson/Electron tube*, T 953/90 [1998] EPOR 415.

<sup>51</sup> *Availability to the Public Decision*, G 1/92 [1993] EPOR 241, [1993] OJ EPO 277. Undue burden, however, seems to carry with it a subjective element. In *Packard/Liquid scintillatia*, T 952/92 [1997] EPOR 457, the TBA argued that the reference to 'undue burden' in G 1/92 was *obiter* and that the issue of burden in terms of time or work was irrelevant.

<sup>52</sup> *H. Lundbeck A/S v. Norpharma SpA*, [2001] EWHC 907.  
<sup>53</sup> It also depends on the general nature of the article: *Wesley Jessen Corp. v. Coopervision* [2003] RPC 355, 384 (the skilled addressee would have 'all the information he might require' from a contact lens in the public domain, which was 'not a product of high technical sophistication').

<sup>54</sup> *Novartis/Erythro-compounds*, T 990/96 [1998] EPOR 441, [1998] OJ EPO 489 (disclosure for chemical compounds).

<sup>55</sup> *Packard/Liquid scintillatia*, T 952/92 [1997] EPOR 457.

<sup>56</sup> *Availability to the Public Decision*, G 1/92 [1993] EPOR 241.

#### 4 IS THE INVENTION NOVEL?

Once the invention under examination and the information disclosed by the prior art have been identified, it is then possible to determine whether the invention is new. In many cases, particularly where the prior art and the invention are identical or the prior art leads directly to the patented invention, it will be relatively easy to determine whether an invention has been made available to the public. This task becomes more problematic, however, where there is a gap between the prior art and the invention. The reason for this is that the same thing may be known by the public in a number of different ways: things may be described in terms of what they look like, how they are made, what they do, the problems they solve, what they are made of, how much they cost, and so on.<sup>57</sup> This gives rise to the question: how does a patent need to be described for it to be known by the public? Put differently, how specific must a disclosure be for an invention to be ‘known’ or ‘made available’ to the public?<sup>58</sup> For example, will a chemical invention be anticipated if the formula of the chemical structure of the invention is made available to the public?<sup>59</sup> Or is it necessary for the formula and the means by which the formula is implemented both to be available to the public?

After some uncertainty,<sup>60</sup> it is now clear that an invention will lack novelty if at its priority date it has been ‘made available’ to the public.<sup>61</sup> Drawing upon the principle that patents should only be granted if the public has been provided with useful information, an invention is said to have been made available to the public if there has been an ‘enabling disclosure’.<sup>62</sup> Following the House of Lords’ decision in *Synthon BV v. SmithKline Beecham*,<sup>63</sup> it is clear that ‘enabling disclosure’ consists of two separate requirements that need to be satisfied if an objection of lack of novelty is to succeed. These are the requirements of *prior disclosure* and *enablement*. As Lord Hoffmann said in *Synthon*, it is important to keep in mind that disclosure and enablement are distinct concepts, each of which has to be satisfied and each of which has its own rules. He also stressed that there would

<sup>57</sup> *Merrell Dow Pharmaceuticals v. Norton* [1996] *RPC* 76 (HL), 88. As Lord Hoffmann reminds us, this is essentially an epistemological question: what does it mean for the public to know something so that it can anticipate? The problem is that there is often a marked difference between something being ‘known’ by the general public and something being known for the purposes of patent law; hence Lord Hoffmann’s comments about the specific epistemological basis of patent law. In a similar vein, the TBA said that ‘the concept of novelty must not be given such a narrow interpretation that only what has already been described in the same terms is prejudicial to it . . . There are many ways of describing a substance’: *Bayer/Diastereomers*, T 12/81 [1979–85] *EPOR* B–308, 312; *Hoechst/Thiochloroformates*, T 198/84 [1979–85] *C EPOR* 987, [1985] *OJ EPO* 209.

<sup>58</sup> While this question would have been relatively easy to answer if anticipation had been limited to circumstances in which the disclosure and the invention were identical, it is not necessary that an invention be replicated exactly in the prior art or that it be described in identical terms, for a disclosure to destroy novelty. A mere difference in wording or phraseology will not substantiate a claim to novelty. ‘The term “made available” clearly goes beyond literal or diagrammatical description, and implies a communication, express or implicit, of technical information by other means as well. The inevitability of the outcome requires proof beyond reasonable doubt’: *Allied Signal/Polyolefin fiber*, T 793/93 [1996] *EPOR* 104, 109.

<sup>59</sup> Similarly, would a patent for quinine be anticipated by the fact that Amazonian Indians have known for some time that the spirit of the cinchona bark possessed certain qualities that made it good for treating fevers?

<sup>60</sup> See, e.g., *PLG Research v. Ardon International* [1993] *FSR* 197, 218.

<sup>61</sup> Available ‘carries with it the idea that, for lack of novelty to be found, all the technical features of the claimed invention in combination must have been communicated to the public, or laid open for inspection’: *Mobil Oil/Friction reducing additive*, G 2/88 [1990] *EPOR* 73; *Chemie Linz/Reinforced channels*, T 242/85 [1988] *EPOR* 77.

<sup>62</sup> The same requirement operates in Germany: *Fluoron* [1989] *IIC* 736.

<sup>63</sup> [2006] *RPC* (10) 323.

be a serious risk of confusion if the two concepts were not kept separate. Before looking at what is meant by ‘disclosure’ and ‘enablement’, it is important to note that in some situations, the same disclosure may satisfy both requirements. As Lord Hoffmann said:

[T]he prior art description may be sufficient in itself to enable the ordinary skilled man, armed with general knowledge of the art, to perform the subject matter of the invention. Indeed, when the prior art is a product, the product itself, though dumb, may be enabling if it is ‘available to the public’ and a person skilled in the art can discover its composition or internal structure without undue burden.<sup>64</sup>

In other cases, however, different factors will be used to show disclosure and enablement. The difference between ‘disclosure’ and ‘enablement’ is clear from the facts in *Synthon*. The patent in question identified and claimed a crystalline chemical. The prior art contained both a description of such a product and a recipe for making it. If the skilled person tried to follow the recipe using their ordinary skill and knowledge, they would have failed. The recipe as such was not enabling. But even without it, the skilled man would have been able, with a little trial and experiment, to make the described product. So the prior art satisfied both the ‘necessary result’ and the ‘enablement’ requirements.<sup>65</sup>

#### 4.1 DISCLOSURE

The first point that must be established to show that a patent has been anticipated is that there has been a ‘disclosure’. Under what is sometimes called the ‘reverse-infringement test’, prior art will disclose a patent if it reveals subject matter that, if performed, would necessarily (or inevitably) result in an infringement of the patent.<sup>66</sup> With disclosure, there is no room for experiment. While the person skilled in the art is permitted to draw upon the general knowledge common to the field, the prior art must place that person in a position where they are able to work the invention without the need for further information, or to engage in new experiments, or for some other additional inventive activity.<sup>67</sup> As the Court of Appeal said in *General Tire*,<sup>68</sup> the prior disclosure must have planted the flag on the invention. If it is an inevitable consequence of following the information disclosed in the prior art that the invention is made, the invention will have been disclosed.<sup>69</sup> If the instructions probably, normally, or only sometimes produce the product, however, there will be no anticipation.<sup>70</sup>

The question of whether a disclosure enables the public to work an invention is decided objectively.<sup>71</sup> Drawing upon the principle that patent infringement does not require that

<sup>64</sup> Ibid., [29], citing *Availability to the Public*, G 1/92 [1993] EPOR 241 (EBA), [1.4].

<sup>65</sup> See *Ferag AG v. Muller Martini* [2007] EWCA Civ 15, [10].

<sup>66</sup> *Synthon* [2006] RPC (10) 323 (HL), [22], [24].

<sup>67</sup> *Hills v. Evans* (1862) 31 LJ Ch 457, 45 ER 1195 (HL).

<sup>68</sup> *General Tire v. Firestone* [1972] RPC 457.

<sup>69</sup> See *Inhale Therapeutic Systems v. Quadrant Healthcare* [2002] RPC 419, in which Laddie J reviewed his earlier judgment in *Evans Medical Patent* [1998] RPC 517; *SmithKline Beecham PLC’s Patent (No. 2)* [2003] RPC 607, 631.

<sup>70</sup> On inevitable disclosure, see *General Tire v. Firestone* [1972] RPC 457, 458–6. Inevitably, this has been defined to mean in 99 cases out of 100 (*Fomento* [1956] RPC 87) and ‘tantamount to 100 per cent probability’ (*Allied Signal/Polyolefin fiber*, T 793/93 [1996] EPOR 104). It seems that, at the EPO, the inevitability of the disclosure needs to be satisfied ‘beyond all reasonable doubt’: *Allied Signal*, *ibid.*

<sup>71</sup> *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76 (HL), 88, 89, 90. ‘This does not affect the principle that the prior art directions or information that will inevitably result in the use of a patented process or creation of the patented product invalidates by anticipation’: *ibid.*, 90, 93. See also *Kaye v. Chubb* (1887) 4 RPC 289, 298.

a person needs to know that they are infringing, Lord Hoffmann said that knowledge does not play a role when determining whether there had been a disclosure. Instead, all that matters is that the subject matter described in the prior disclosure is capable of being performed and is such that, if performed, it would result in the patent being infringed. This means that there is no need to show that a member of the public actually worked the invention, nor that they were aware of its existence. In these circumstances, there is no need for the person skilled in the art to know that they are producing the product in question; all that matters is that the prior art discloses information that, if followed, inevitably leads to the invention. To use the analogy often used in this context, ‘if the recipe which inevitably produces the substance is part of the state of the art, so is the substance made by that recipe’.<sup>72</sup> It does not matter that the cook was ignorant of the fact that they were producing the product.

#### 4.2 ENABLEMENT

The second point that needs to be demonstrated to show anticipation is that the disclosure was ‘enabling’. A disclosure will be enabling and thus destroy novelty if the public is given sufficient information to enable the invention to be put into effect. That is, a disclosure will anticipate an invention if it enables the invention to be ‘worked’ or ‘practised’.<sup>73</sup> Enablement means that the ordinary skilled person would have been able to perform the invention, which satisfies the requirement for disclosure.<sup>74</sup> Lord Hoffmann said that the test for enablement of a prior disclosure for the purpose of anticipation was the same as the test for enablement for the purpose of sufficiency. This means that the authorities on sufficiency under section 72(1)(c) of the 1977 Act are applicable to enablement for the purposes of section 2(2) and (3).

As we saw above, for the purpose of disclosure, the prior art must reveal an invention that, if performed, would necessarily infringe the patent.<sup>75</sup> The disclosure must occur without further experiment or undue effort.<sup>76</sup> This is in contrast to the requirement for enablement under which the person skilled in the art is assumed to be willing to make trial-and-error experiments to get the invention to work.<sup>77</sup> Another way in which ‘disclosure’ and ‘enablement’ differ is in terms of the role that the person skilled in the art plays. As Lord Hoffmann said:

[O]nce the meanings of the prior disclosure and the patent have been determined, the disclosure is either of an invention which, if performed, would infringe the patent, or it is not. The person skilled in the art has no further role to play.<sup>78</sup>

<sup>72</sup> *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, [44]. See also *CPC/Flavour concentrates decision*, T 303/86 [1989] EPOR 95; *Bayer/Diastereomers*, T 12/81 [1979–83] EPOR B–308, 312; *Availability to the Public*, G 1/92 [1993] EPOR 241.

<sup>73</sup> *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76, 89. This reiterates the old idea that, in order for a method or use claim to be anticipated, the prior art must provide ‘clear and unmistakable directions to do what the patentee claims to have invented’: *Flour Oxidizing v. Carr* (1908) 25 RPC 428, 457. On this, see *Regeneron v. Genentech* [2012] EWHC 657 (Pat) (disclosure that a compound *might* have a therapeutic effect is not a disclosure that it *has* that therapeutic effect, because there were not clear and unmistakable directions to do what the patentee had invented).

<sup>74</sup> *Ibid.*, [30].

<sup>75</sup> On this, see *SKB v. Apotex* [2005] FSR 23, in which Jacob LJ criticized the practice of ‘litigation chemistry’, i.e. the use of contrived experimental repetitions of the prior art. See also *Mayne Pharma v. Debiopharm* [2006] EWHC 164 (Pat), [10]–[11].

<sup>76</sup> *Synthon* [2006] RPC (10) 323 (HL), [30]. See also *Generics (UK) v. Lundbeck* [2009] UKHL 12 (where a product was available only as a ‘racemate’ and not as a single enantiomer, the single enantiomer was deemed not to be non-enabling and thus not available to the public).

<sup>78</sup> *Ibid.*, [32].

This is in contrast to the inquiry into whether the disclosure was enabling, where the ‘question is no longer what the skilled person would think the disclosure meant but whether he would be able to work the invention which the court has held it to disclose.’<sup>79</sup>

It is very difficult to state with any precision the circumstances in which the prior art will enable an invention to be worked and thus be anticipated.<sup>80</sup> This is because the decision as to whether there has been an enabling disclosure always depends upon the facts of the case in question—that is, the information that is needed for an invention to be ‘worked’ always depends upon the particular invention under examination. As a result, it is impossible to specify in advance that to be novelty-destroying, the prior art must adopt a particular format. It is impossible to predict, for example, the nature of the information that needs to be disclosed for a chemical compound to be worked or practised. This can be seen if we look at the various ways in which chemical compounds can be anticipated. For example, in *Asahi Kasei Kogyo*,<sup>81</sup> the House of Lords held that the disclosure of the formula to a particular chemical compound did not anticipate a patent for that compound.<sup>82</sup> The reason for this was that for a skilled person to be in a position where they could work the invention in question, they not only needed to be given the chemical formulae, but also the means by which the compound could be produced. While on the facts of *Asahi* the formulae may have been non-enabling, as Lord Oliver said, there might ‘be [other] cases where the means of producing the thing will be self evident to the man skilled in the art from the mere Recital of the formula of its composition’<sup>83</sup>—that is, there might be circumstances in which the disclosure of the formula to a chemical compound is sufficient to anticipate the compound. In other instances, in order to anticipate it might be necessary for the prior art to disclose not only the formulae and the means, but also the details of the starting materials.<sup>84</sup>

#### 4.3 SECRET OR INHERENT USE

One of the most important changes that has taken place with the shift to enabling disclosure is in relation to the issue of whether the existence of a previous secret or inherent use is enough to anticipate a subsequent patent. Basically, a secret or inherent use occurs where something is created, usually either accidentally or as an unknown by-product of some process, without the public knowing of its existence. While it was possible for

<sup>79</sup> *Ibid.*

<sup>80</sup> As such, it is not very helpful to attempt to quantify the situations in which a patent can be anticipated. Cf. *Inhale v. Quadrant* [2002] RPC 21, 436; *SmithKline Beecham plc’s Patent (No. 2)* [2003] RPC 607, 630–1 (suggesting that a claim can be anticipated in two ways: if the prior art describes something falling within its scope; and where the inevitable result of carrying out what is described in the prior art falls within the claims).<sup>81</sup> [1991] RPC 485 (HL).

<sup>82</sup> Drawing upon a series of cases decided under the Patents Act 1949, which utilized the reverse-infringement test (such as *Gyogyszeripari’s Application* [1958] RPC 51), it was argued that, because the prior art disclosed the formulae of the chemical compound and there was an indication that the compound had actually been made, the chemical compound lacked novelty. This was the case irrespective of whether the chemical could have been made. In rejecting this line of argument (and, in so doing, finding that *Asahi’s* patent had *not* been anticipated), the House of Lords stressed that, in order for a disclosure to destroy novelty, it needed to be ‘enabling’. As such, the crucial question was whether the prior art provided sufficient information to enable the skilled person to make the chemical compound.

<sup>83</sup> [1991] RPC 485, 536.

<sup>84</sup> *ICI’s Application/Herbicide pyradine*, T 206/83 [1986] 5 EPOR 23, [1987] OJ EPO 5. In other instances, a chemical compound will not be ‘known’ unless the information disclosed in the prior art enables the compound to be prepared or, in the case of a naturally occurring compound, to be separated: *EPO Guidelines*, C-IV, 7.3.

a secret or inherent use to anticipate under the Patents Act 1949, this is no longer the case under the 1977 Act.<sup>85</sup> The position under the 1949 Act was set out in *Bristol-Myers' Application*,<sup>86</sup> where the question arose as to whether Bristol-Myers' patent for an ampicillin compound (an artificial antibiotic derived from penicillin) had been anticipated by the fact that before the priority date of the invention, Beecham had made small quantities of the ampicillin. At the time that the ampicillin was made, Beecham did not know about the invention, nor was it aware of its particular advantages. While the prior art conveyed no relevant information about the product to the general public, nonetheless the House of Lords held that the patent had been anticipated by the secret or uninformative use. The explanation for this was twofold: (i) had the patent been granted, the patentee would have been able to stop another trader from doing what it had done before (the 'right to work' doctrine); and (ii) the test for anticipation was coextensive with the test for infringement. Given that for a defendant to infringe, it was not necessary for them to have realized that what they were doing was an infringing act, such knowledge was therefore equally unnecessary when determining whether the invention was novel (the 'reverse-infringement test').

The question of the status of secret or inherent use under the Patents Act 1977 was considered by the House of Lords in *Merrell Dow v. Norton*.<sup>87</sup> This decision arose from the fact that in 1972 the claimant was granted a patent for the antihistamine terfenadine, a drug used in treating hay fever and other allergies. When terfenadine was taken by patients, it was transformed (or metabolized) in the body to produce a number of different products (metabolites). While terfenadine proved to be very effective in the treatment of hay fever, it had a number of unwanted side effects—notably, it led to heart-related problems in some patients. Because the initial patent was nearing the end of its duration, the claimant isolated and identified the particular metabolite that acted as an antihistamine. It was accepted that prior to this, the specific metabolite that acted as an antihistamine had not been identified. In 1983, the claimant obtained a patent for the newly identified metabolite. More accurately, it obtained a patent for the making of the metabolite with the antihistamine effects within the human body. This carried with it the obvious advantage that while it was useful in the treatment of hay fever, it did not have any of the side effects associated with terfenadine.

After grant of the patent for the metabolic acid, Merrell Dow (the claimant) brought an action against Norton claiming that by supplying terfenadine, the defendant was facilitating the making of the patented metabolite, thus infringing the second patent.<sup>88</sup> The defendants counterclaimed, arguing that the second patent had been anticipated by prior use. The argument for anticipation by use relied on the fact that terfenadine had been made available to and used by volunteers in clinical trials before the priority date of the

<sup>85</sup> The PA 1977 'introduced a substantial qualification into the old principle that a patent cannot be used to stop someone from doing what he has done before. If the previous use was uninformative, then subject to section 64 [which provides a defence for secret use before the priority date] it can': *Merrell Dow v. Norton* [1996] *RPC* 76, 86.

<sup>86</sup> [1975] *RPC* 127. Such an approach would mean that a previous secret use would anticipate a patent even if it were not clear how the invention worked. This is because such a use would give the public the benefit of the old invention even without their knowledge. Under the 1977 Act, it seems that there is nothing to prevent a person from concealing the use of their invention in this manner, although it has been suggested that, in a clear case of fraud, the Patent Office might decline to grant a patent. See H. Frost, 'Why Europe Needs a Sale Bar' [1996] *EIPR* 18; R. Jacob, 'Novelty of Use Claims' (1996) 27 *IIC* 170.

<sup>87</sup> [1996] *RPC* 76 (HL); I. Karet, 'A Question of Epistemology' [1996] *EIPR* 97; V. Vossius, 'Prior Written Disclosure and Public Prior Use under German Law and the EPC' [1994] *EIPR* 130.

<sup>88</sup> This was on the basis that it amounted to a contributory infringement under PA 1977, s. 60(2).

patent. Because the patented metabolite was produced in the livers of the volunteers when they took terfenadine, it was argued that the second patent had been anticipated and was thus invalid.

Lord Hoffmann said that while under the Patents Act 1949 mere uninformative use of this kind would have invalidated the patent, this was no longer the case under the 1977 Act.<sup>89</sup> In rejecting the reverse-infringement test, Lord Hoffmann said that when deciding novelty, the starting point was whether there had been an enabling disclosure of the claimed invention.<sup>90</sup> Importantly, Lord Hoffmann said that while an invention might have been in existence before the priority date through a secret or inherent use, this was not sufficient in itself to destroy novelty. The reason for this was that ‘the use of a product makes the invention part of the state of the art only insofar as that use makes available the necessary information’.<sup>91</sup> While the patented metabolite was inevitably produced in the body of the volunteers when they took terfenadine, this working of the invention was not as a result of information that had been made available to the public. The uninformative consumption of terfenadine, which secretly or inherently produced the metabolite, did not reveal or disclose information that would have allowed either the volunteers or the public more generally to make the metabolite in their bodies. On the basis that the use of terfenadine in the clinical trials conveyed no information that would have enabled anyone to work the invention (it was not enough that it had in fact been made), the House of Lords held that the prior use was not anticipatory.<sup>92</sup>

As Lord Hoffmann said in *Synthon*, problems of confusion between disclosure and enablement were acute in cases such as *Merrell Dow*, where the subject matter disclosed in the prior art is not the same as the claimed invention, but, if performed, will necessarily infringe:

To satisfy the requirement of disclosure it must be shown that there will necessarily be infringement of the patented invention. But the invention which must be enabled is the one disclosed by the prior art. It makes no sense to inquire as to whether the prior disclosure enables the skilled person to perform the patented invention, since *ex hypothesi* in such a case the skilled person will not even realise that he is doing so. Thus in *Merrell Dow* the question of enablement turned on whether the disclosure enabled the skilled man to make terfenadine and feed it to hay-fever sufferers, not on whether it enabled him to make the acid metabolite.<sup>93</sup>

It should be pointed out that the invention in *Merrell Dow* was anticipated by the earlier patent. In the case of anticipation by use, the acts relied upon conveyed no information that would have enabled anyone to work the invention—that is, to make the acid metabolite in the body. In contrast, the earlier patent made information available to the public that enabled it to perform an act, the inevitable consequence of which was that the patented metabolite was produced. The terfenadine specification taught that the ingestion of terfenadine produced a chemical reaction in the body. For the purposes of working

<sup>89</sup> As such, *Bristol-Myer’s Application* [1975] RPC 127 is no longer good law.

<sup>90</sup> ‘The question to be decided is not what may have been “inherent” in what was made available (for example, by a prior written description or in what has previously been used (prior use). Rather it was what has been made available to the public: *Mobil/Friction reducing additive*, G 2/88 [1990] EPOR 73, 88.

<sup>91</sup> Lord Hoffmann emphasized that the invention, which was a piece of information, must have been made available to the public: *Merrell Dow v. Norton* [1996] RPC 76, 86.

<sup>92</sup> This rule applies whether the prior art is a previous application, a previous use, a description, or a set of instructions. The ‘information deriving from a use is governed in principle by the same conditions as is information disclosed by oral or written description’: *Availability to the Public*, G 1/92 [1993] EPOR 241, 243.

<sup>93</sup> *Synthon* [2006] RPC (10) 323 (HL), [33].

the invention in this form, this was a sufficient description of the making of the patented metabolite.

#### 4.4 PRODUCT-BY-PROCESS CLAIMS

As we saw earlier, product-by-process claims are only allowed at the European Patent Office (EPO) only where it is impossible, or at least very difficult, to define the product in any other way.<sup>94</sup> The approach taken towards product-by-process claims manifests itself in the way in which the novelty of such claims are assessed. At the EPO, a product-by-process claim will only be novel if the product itself is novel; novelty cannot be conferred by the process alone. In other words, the EPO ‘does not recognise that novelty can be conferred on a known substance by a novel process for producing that substance’.<sup>95</sup> This means that even if the process claimed is novel, a product-by-process claim will be anticipated (and thus held to be invalid) unless the product itself is also novel.

The approach that has been adopted at the EPO is in contrast to the approach traditionally taken to product-by-process claims in the United Kingdom. While product-by-process claims are only permitted at the EPO in exceptional circumstances, they were traditionally allowed in the United Kingdom. The different approach taken towards product-by-process claims manifested itself in the way in which the novelty of such claims were assessed in the United Kingdom and at the EPO. While the EPO has consistently refused to accept that the novelty of a product-by-process claim can arise from the novelty of the process used (that is, it must flow from the novelty of the product), the approach traditionally followed in the United Kingdom was different. For example, the practice under the Patents Act 1949 and earlier was ‘to treat the fact that a product was made by a new process as sufficient to distinguish it from an identical product which was already part of the state of the art’.<sup>96</sup> The difference between the traditional British approach and the approach adopted at the EPO was made clear when the UK Court of Appeal in *Kirin-Amgen* explicitly rejected the EPO approach, saying that there was:

... no reason why the limitation of claims to products produced by a process could not impart novelty ... If a person invents a new method of extracting gold from rock, he can obtain a claim to the process and as Art 64(2) [of the EPC 1973 and EPC 2000] makes clear, he can also monopolise the gold when produced directly by the process.<sup>97</sup>

That is, a product-by-process claim was valid in the United Kingdom provided that the process itself was patentable. While this may have suggested that new monopolies could be established over old products (such as gold) every time a new process was invented, the protection only applied to products made by that process.

When *Kirin-Amgen* was appealed before the House of Lords in 2005, the Lords overturned the Court of Appeal decision and, in so doing, brought British law into line with practice at the EPO. While Lord Hoffmann accepted that this meant a change in a practice that had existed in the United Kingdom for many years, he thought it was important that the United Kingdom should apply the same law as the EPO and other member

<sup>94</sup> This is where there is no chemical or biological means for distinguishing a product from the prior art.

<sup>95</sup> UK IPO, *Examination Guidelines for Patent Applications relating to Biotechnological Inventions* (September 2002) (*Biotechnology Guidelines*), [13]; *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 31 (CA), [296].

<sup>96</sup> *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 169 (HL), [88].

<sup>97</sup> *Kirin-Amgen* [2003] RPC 31 (CA), [33] (‘I can discern no reason in principle or in practice why a claim to a product made by a certain process could be invalid simply because the product is not novel, if the process is novel, so that a claim to a process would be valid’).

states. In any case, Lord Hoffmann did not think that the adoption of the EPO approach would have much practical importance, since patentees could rely on the process claim and Article 64(2) to receive equivalent protection.<sup>98</sup> The upshot of the House of Lords' decision is that where the product is known a product-by-process claim will be rejected on the basis that it is not novel. The UK Intellectual Property Office (IPO) has accordingly changed its practice and now adopts the view that 'a claim to a product obtained or produced by a process is anticipated by any prior disclosure of that particular product *per se*, regardless of its method of production'.<sup>99</sup>

#### 4.5 BIOTECHNOLOGICAL INVENTIONS

While a number of changes have been made to patent law to accommodate biotechnological inventions, for the most part these are treated in a similar manner to other types of invention. The test for novelty is no exception to this general rule: a biotechnological invention will only be anticipated and thus be invalid where there has been an enabling disclosure.<sup>100</sup> Despite this, questions sometimes arise where biotechnological inventions are based on natural materials. In this context, it is important to note that a natural substance that has been isolated for the first time (such as a polynucleotide sequence) will not lack novelty because it was already present in nature (for example in the human genome). Here, patent law draws a distinction between the invention (the isolated 'artificial' polynucleotide) and the natural substance (the polynucleotide that exists in nature).<sup>101</sup> The artificial nature of the isolated substance provides the requisite difference between the prior art and the invention that is necessary to ensure novelty.

## 5 DISCOVERY OF A NEW ADVANTAGE OF AN OLD THING USED IN AN OLD WAY

In this final section, we move away from the general principles of novelty that have concerned us so far to concentrate on three specific types of invention and the problems that have arisen when assessing their novelty. In particular, we look at the novelty of inventions that relate to medical uses, non-medical uses, and so-called 'selection inventions'.

For many years, the primary goal of the research carried out in many areas of science and technology was the creation of either new products or new uses of old things. On the whole, the fruits of this research have been well served by patent law. This can be seen in the fact that patent law has long recognized both the discovery of new things<sup>102</sup> (such as the

<sup>98</sup> *Kirin-Amgen* [2005] RPC 9, [101]. PA 1977, s. 60(1)(c), which accords to EPC 1973, Art. 64(2) (now EPC 2000, Art. 64(2)), states that protection provided by a claim for a process extends to the product of that process.

<sup>99</sup> UK IPO, *Biotechnology Guidelines*, [14].

<sup>100</sup> See, e.g., *Asahi Kasei Kogyo* [1991] RPC 485; *Genentech's (Human Growth Hormone) Patent* [1989] RPC 613; UK IPO, *Biotechnology Guidelines*, [8]–[11].

<sup>101</sup> *Howard Florey Institute's Application*, T 74/91 [1995] OJ EPO 388. See also D. Schertenleib, 'The Patentability and Protection of DNA-based Inventions in the EPO and the European Union' [2003] *EIPR* 125; EPO/USPTO/JPO, *Trilateral Project 24.1: Biotechnology Comparative Study on Biotechnology Patent Practice—Comparative Study Report* (2001).

<sup>102</sup> Claims for a substance provide protection not only over the thing itself, but also over all subsequent uses.

discovery of aspirin) and the discovery of new ways of using old things<sup>103</sup> (such as the discovery that aspirin rubbed on the skin acts as an effective insect repellent) as being novel.

In the last forty years or so, a number of changes have taken place in the type of research undertaken in various industries. These changes were motivated by a realization that in certain fields (notably in relation to pharmaceutical and biological inventions), the possibility of discovering new things or finding new uses for old things was decreasing. As a result, the focus of research shifted to concentrate on the discovery of new uses (or purposes) of old substances used in old ways. The problem that confronted researchers working in this way was that British patent law traditionally refused to recognize the discovery of a new purpose or advantage of an old thing used in an old way as being novel. This meant, for example, that if someone discovered that as well as being useful in the curing of headaches that the consumption of aspirin also thinned the blood (and was thus useful in preventing blood clots), they would be unable to patent the invention. The reason for this was that the traditional British approach treated a claim to a ‘product for a particular use’ as a claim to the product *per se*, so that the product would lack novelty even if it had previously been employed for a different purpose.<sup>104</sup> The problem that confronted this ‘new’ style of research was that patent law was not willing to recognize ‘novelty of purpose’ as a basis on which an invention could be patented.

One of the notable trends in recent years is the way in which this principle has slowly been undermined. One of the first areas in which the general rule was relaxed was in relation to medical uses.<sup>105</sup> With the EPO leading the way and UK courts following, this was interpreted to include second and subsequent medical uses. While initially seen as an exception that left the general rule intact, the EPO and (arguably) now UK courts have recognized novelty of purpose irrespective of the field of technology.

## 5.1 NEW MEDICAL USES

As we saw earlier, when the EPC 1973 was being drafted, it was decided that methods for treatment of the human or animal body should not be patentable.<sup>106</sup> While the pharmaceutical industry was able to patent new substances,<sup>107</sup> the proposed blanket exclusion of methods of medical treatment presented it with a problem.<sup>108</sup> The reason for this was that a lot of the research then being carried out was not into the creation of new substances or drugs; rather, much of the research focused on the discovery of new uses for old substances, or of new benefits from old substances. As such, the exclusion of methods of medical treatment from the scope of patent protection would have had a dramatic impact upon medical research. To appease the interests of the pharmaceutical industry, special provisions to ‘compensate’ for the exclusion of methods of medical treatment were introduced. Initially these provisions were found in section 2(6) of the 1977 Act (as enacted)

<sup>103</sup> Typically, new uses are claimed as a ‘new method of using the old article’.

<sup>104</sup> See *Adhesive Dry Mounting v. Trapp* (1910) 27 RPC 341.

<sup>105</sup> It is arguable that selection patents, discussed below, were an early exception to the general rule about the non-patenting of novelty of purpose.

<sup>106</sup> PA 1977, s. 4(2); EPC 1973, Art. 52(4). See above at p. 444.

<sup>107</sup> PA 1977, s. 4(3), and EPC 1973, Art. 52(4), leave open the possibility of claims for new substances and compositions. Consequently, while it is not possible to obtain a patent for a method of preventing headaches involving the taking of aspirin, aspirin is patentable *per se*.

<sup>108</sup> When the EPC 1973 and the PA 1977 were enacted, the exclusion of methods of medical treatment was based on the fiction that they were not susceptible to industrial application: PA 1977, s. 4(2); EPC 1973, Art. 52(4). Under EPC 2000 and the revised UK Act, methods of medical treatment are directly excluded: PA 1977, s. 4A(1); EPC 2000, Art. 53(c).

and Article 54(5) of the EPC 1973. As part of the reforms instigated by the EPC 2000, the compensation provisions are now found in section 4A(3) of the 1977 Act and Article 54(4) of the EPC 2000. Section 4A(3) states that:

In the case of an invention consisting of a substance or composition for use in any such method, the fact that the substance or composition forms part of the state of the art shall not prevent the invention from being taken to be new if the use of the substance or composition in any such method does not form part of the state of the art.<sup>109</sup>

Essentially, section 4A(3)/Article 54(4), which permit the patenting of new applications for old substances used in old ways (in a medical context), create a statutory exception to the traditional British view that the mere discovery of purpose could not confer novelty on an invention.<sup>110</sup> In essence, the provisions confer novelty via the new purpose ('the new pharmaceutical use of a known substance'), even though 'the substance itself is known and comprises part of the state of the art'.<sup>111</sup>

### 5.1.1 Second and subsequent medical uses of a known product

When enacted, it was widely believed that section 2(6)/Article 54(5) of the EPC 1973 (replaced by section 4A(3)/Article 54(4) of the EPC 2000) only applied to the discovery of the first medical use of known products—a position supported by a normal reading of the provisions. This reading would have meant that claims for second or further medical uses of products would have lacked novelty.

The question of the scope of Article 54(5) of the EPC 1973 (now Article 54(4) of the EPC 2000) was considered by the Enlarged Board of Appeal (EBA) of the EPO in *Eisai/Second medical indication*.<sup>112</sup> Basing its arguments on the legislative history of the EPC and the principle that exceptions to patentability should be construed narrowly, the Board decided that as well as protecting first uses, Article 54(5) also applied to second and subsequent medical uses. The EBA went on to say, however, that this was conditional on the fact that claims were drafted in a style known as the 'Swiss form of claims'. Basically, this meant that the patent had to claim the 'use of a substance for the manufacture of a medicine for a specified new therapeutic use'.<sup>113</sup> This would mean that if the discovery that the consumption of aspirin was useful in thinning the blood were to be valid, the applicant would have to claim the 'use of aspirin in making a medicament for use in the prevention of blood clots'.<sup>114</sup>

<sup>109</sup> The old PA 1977, s. 2(6), was similar:

[T]he fact that an invention consisting of a substance or composition for use in a method of medical treatment forms part of the state of the art, shall not prevent the invention from being taken to be new, if the use of the substance or composition in any such method does not form part of the state of the art.

This was apparently based on French law: Paterson, [9.61]; R. Singer, *The European Patent Convention* (1995), 167; *Hoffmann–La Roche/Pyrrrolidine derivatives*, T 128/82 [1984] OJ EPO 164, [1979–85] B EPOR 591.

<sup>110</sup> See A. Benyamini, *Patent Infringement in the European Community* (1993), 80ff; G. Paterson, 'The Patentability of Further Uses of a Known Product under the EPC' [1991] *EIPR* 16; G. Paterson, 'Product Protection in Chemistry: How Important for the Protection of an Apparatus, Device or Substance are Statements Made in a Patent as to their Purpose?' (1991) 22 *IIC* 852; G. Paterson, 'Novelty of Use Claims' (1996) 27 *IIC* 179.

<sup>111</sup> A. Horton, 'Methods of Treatment and Second Medical Use' (August 2000) *Patent World* 9.

<sup>112</sup> G 5/83 [1985] OJ EPO 64. See *EPO Guidelines*, C-IV, 4.2.

<sup>113</sup> *Second Medical Indication: Switzerland* [1984] OJ EPO 581. See also *Germany* [1984] OJ EPO 26; *Netherlands* [1988] OJ EPO 405.

<sup>114</sup> Patents have been allowed where the novelty lay in the frequency of drug administration.

One of the notable features of a Swiss claim is that it is directed at the *manufacture* of the known substance. This ensures that the invention is not excluded on the basis that it is a method of medical treatment under section 4(2)/Article 52(4).<sup>115</sup> At the same time, the novelty of a Swiss claim arises from the new therapeutic application (the drug and first medical use already being known).<sup>116</sup> As a result, the focus of the patent shifts, so that the novelty of the invention is not in the known way in which the substance is used, nor in relation to the substance itself; rather, the novelty of the invention is in the new therapeutic use (or purpose) that has been discovered. This is the case even ‘where the process of manufacture does not differ from known processes using the same active ingredients’.<sup>117</sup>

In recognition of the need for the harmonization of patent law, the Patents Court, sitting *en banc* in *Wyeth’s Application*,<sup>118</sup> followed the lead of the EPO and permitted the claims in the Swiss form in the United Kingdom. The finding in *Wyeth’s Application* was confirmed, albeit somewhat reluctantly, by the Court of Appeal in *Bristol-Myers Squibb*.<sup>119</sup> Following this decision, it was clear that section 2(6) of the Patents Act 1977 included second and subsequent medical uses that were drafted in the Swiss form.

Any doubts that there might have been about the standing of second and subsequent medical use claims<sup>120</sup> were put beyond doubt as a result of changes made by EPC 2000. In order to promote certainty across member states, Article 54(5) of the EPC 2000 allows applicants to claim second and further medical uses of known substances or compositions, without having to make a Swiss-type claim.<sup>121</sup> Article 54(5) has been replicated in the United Kingdom in section 4A(4) of the 1977 Act (as amended).

The aim of Article 54(5) of the EPC 2000 and section 4A(4) of the 1977 Act was to eliminate any legal uncertainty over the patentability of further medical uses. In particular, the provisions aimed to put it beyond doubt that applicants were able to claim ‘purpose-related product protection for each further new medical use of a substance or composition already known as a medicine’.<sup>122</sup> One of the consequences of these changes was that applicants were able to claim second medical use inventions more directly. In contrast with the convoluted Swiss claim (‘Use of [known substance X] for the manufacture of a medicament to treat [medical condition Y]’), applicants were able to use a simpler and clearer form of second medical use claim in the form (‘[Substance X] for treatment of [disease Y]’).<sup>123</sup>

The standing of Swiss claims following the changes made by EPC 2000 was considered by the EBA in the 2010 decision *Abbott Respiratory/Dosage regime*.<sup>124</sup> The Board said

<sup>115</sup> As the EBA said in *Eisai*, G 5/83 [1985] *OJ EPO* 64, the Swiss-type of use claim is not prohibited by Art. 52(4) and is capable of industrial application’.

<sup>124</sup> G 2/08 [2010] *OJ EPO* 456, [5.9]–[5.10], [7.1.1]–[7.1.4]; S. Sterckx, ‘Dosage Regime Claims in the EPO: The Dosage Regime/Abbott Hearing’ (2010) 32 *EIPR* 294.

that Swiss claims had been begrudgingly allowed in order to overcome the loophole that existed in the EPC 1973. However, Article 54(5) of the EPC 2000 (as with section 4A(4) of the Patent Act 1977) filled this loophole by allowing claims to the further specific use of a known drug. As a result, the EBA said that there was no longer any reason why the judge-made (praetorian) law should continue to exist. Given this, the Board decided that Swiss-type claims for the second or further medical use of a known substance should no longer be allowed.<sup>125</sup> The UK Intellectual Property Office (IPO) issued a Practice Notice on 26 May 2010, which said that in light of *Abbott* the IPO no longer allows claims in the Swiss format.<sup>126</sup> As a result, any claims in the Swiss format have to be deleted or replaced by claims of the form '[Substance X] for use in the treatment of [disease Y]'.<sup>127</sup>

## 5.2 NON-MEDICAL USES OF KNOWN PRODUCTS: NOVELTY-OF-PURPOSE PATENTS

Shortly after the scope of the medical use exception was clarified, the question arose as to whether patent law should also recognize novelty of purpose in non-medical fields.<sup>128</sup> That is, should patent law recognize the discovery of new applications for old substances used in old ways, irrespective of the field in which the invention was made? This question was particularly important given that a great deal of non-medical research is devoted to the discovery of new applications of known compounds.

The status of novelty-of-purpose patents under the EPC was considered by the EBA in *Mobil/Friction reducing additive*.<sup>129</sup> This decision arose from Mobil's attempt to patent a substance for use as a friction-reducing additive in lubricating oils. The application was opposed by Chevron on the basis that the substance was already known and was already being used to inhibit rust-formation in ferrous metals. In response, Mobil applied to amend its application by limiting it to the use of the substance for reducing friction, saying that its usefulness for this purpose had not previously been known. The question considered by the Board was whether the discovery of a new use of a known substance used in an old way could be patented.

The EBA held that while using an old substance in a new way to achieve a new purpose might be novel, the use of an old substance in an old way to achieve a new purpose would not. In the latter case, the only difference between the discovery and the old use was that it was carried out with a different purpose in mind; the applicant would be doing the same thing with the same substance. Given that on the facts of the case the same substance (the additive) was used in the same way (for example by pouring it into the engine), it might have been reasonable to presume that the attempt to patent its use as a friction reducer (when it was previously thought only to inhibit rust) would have failed. This was not the case.

The reason for this, as the Board went on to say, was that a claim for the use of an old compound in an old way for a new purpose could be interpreted to include 'the function of achieving the new purpose (because this is the technical result)'.<sup>130</sup> In such a case, the

<sup>125</sup> This came into effect at the EPO as of 29 January 2011.

<sup>129</sup> G 2/88 [1990] *EPOR* 73. See also *Bayer's Application*, G 6/88 [1990] *OJ EPO* 114.

<sup>130</sup> *Mobil/Friction reducing additive*, G 2/88 [1990] *EPOR* 73.

fact that the substance achieved the new purpose would be an objective ‘functional technical feature’ of the invention, rather than something that only resided in the mind of the user. In relation to the case in hand, the EBA said that the invention exhibited a functional technical feature in that the substance operated to reduce friction. As such, the Board held that claims for the use of a specified lubricant for the reduction of friction in engines were patentable, even though the lubricant had previously been used as a rust inhibitor. As a result of this decision, it is now clear that the discovery of a new purpose for an old thing used in an old way is potentially patentable at the EPO, irrespective of the technical field in which the invention takes place.<sup>131</sup>

As we will see, a number of criticisms have been made of the *Mobil* decision in the United Kingdom.<sup>132</sup> Nonetheless, it is clear that in Britain it is now possible to patent the discovery of a new purpose for an old thing used in an old way.<sup>133</sup> Unlike pre-1977 law, the mere fact that an invention’s sole point of novelty lies in the discovery of a new purpose no longer means that the application will automatically be disallowed.

The key feature of a novelty-of-purpose claim is the discovery that a known use of a known substance achieves a new purpose. The only aspect of the invention that is novel is the third element—namely, the discovery of the new purpose. The step that facilitated the acceptance of novelty-of-purpose patents was the decision that a previous secret use did not destroy the novelty of a patent. As we explained earlier, under British law before 1977, it was possible for a past secret use to anticipate a later patent. Under the old law, the discovery that a known substance used in a known way could be put to a hitherto unknown purpose would not have been patentable. This was because the new purpose would have been seen as inherent in the existing use of the known substance. The fact that the use was secret would not have affected the fate of the invention.

As we pointed out above, under existing law a previously secret use will no longer destroy the novelty of a later patent.<sup>134</sup> As the EBA said in *Mobil*, the ‘question to be decided is what has been “made available to the public”: the question is not what may have been “inherent” in what was made available’.<sup>135</sup> ‘Under the EPC, a hidden or secret use, because it has not been made available to the public, is not a ground of objection’ to validity of a patent; as such, ‘the question of “inherency” does not arise’ under the EPC (nor under the Patents Act 1977).<sup>136</sup> In so ruling, this opened up the possibility for patent protection to be given to the discovery that a known substance used in a known way could be put to a new purpose. Once this step was taken, deciding the status of a discovery that a known substance used in a known way could be put to a new purpose is relatively straightforward. As the EBA said in *Bayer*, the question to be decided in these circumstances, as with all inventions, is whether the invention has already been made available

<sup>131</sup> The Court of Appeal in *Bristol-Myers v. Baker Norton* [2001] RPC 1 said that a Swiss claim was based on a different logic from that of *Mobil: Ortho/Pharmaceutical prevention of skin atrophy*, T 254/93 [1999] EPOR 1.

<sup>132</sup> See C. Floyd, ‘Novelty under the Patents Act 1977: The State of the Art after *Merrell Dow*’ (1996) 9 EIPR 480; CIPA, [2.21]; A. White, ‘The Novelty Destroying Disclosure’ [1990] EIPR 315; J. Lane, ‘What Level of Protection is Required to Anticipate a Patented Invention by Prior Publication or Use?’ [1990] EIPR 462. These problems are particularly acute in the United Kingdom (and not at the EPO) because the EPO is concerned only with issues of validity, whereas British courts have to deal with validity and infringement.

<sup>133</sup> *Bristol-Myers v. Baker Norton* [2001] RPC 1, 18, [49] per Aldous LJ, noting that *Mobil* had been considered in some detail and applied by the House of Lords in *Merrell Dow* (admittedly on a different point). Aldous LJ said that ‘it is unlikely that [the Court of Appeal] would conclude that [*Mobil*] was wrongly decided when the House of Lords did not so conclude’: *ibid.* See also *ibid.*, [81] per Buxton LJ.

<sup>134</sup> See above at pp. 540–3.

<sup>135</sup> *Mobil/Friction reducing additive*, G 2/88 [1990] EPOR 73 (EBA), 88.

<sup>136</sup> *Ibid.*

to the public.<sup>137</sup> This has been reflected in subsequent case law, which has focused on whether the purpose that has been discovered is actually new.<sup>138</sup>

In those cases in which novelty-of-purpose patents have been accepted, the applicant has been able to show that they have ‘two distinctly different effects, two distinctly different applications or uses of the same substances, which can clearly be distinguished from each other.’<sup>139</sup> For example, in *Mobil* the patent was for the use of an additive as a lubricant, whereas the state of the art revealed use of the same additive as a rust inhibitor. Similarly, in *Bayer* the patent application was directed to the use of a compound as a fungicide, whereas the state of the art described use of the same compound as an agent for influencing plant growth.<sup>140</sup> In both cases, the patent revealed that the known substance used in a known way could be put to a new purpose.

In contrast, in *Robertet/Deodorant compositions*<sup>141</sup> the patent was rejected on the basis that it lacked novelty. The applicants discovered that when used as an active ingredient in a deodorant composition, ‘aromatic esters’ can inhibit esterase-producing micro-organisms on the human skin. The prior art disclosed the use of aromatic esters as an active ingredient in deodorizing products. The Technical Board of Appeal (TBA) rejected the application, saying that all that the patent did was disclose information about an existing purpose—that is, it was an *ex post facto* explanation of what had already taken place. While, in *Mobil* and *Bayer* a new purpose had been discovered, all that had been disclosed in this case was more information about a known purpose. The application was merely more information or an explanation of a past event, rather than the discovery of a new purpose *per se*. As such, it was held not to be novel. A similar conclusion was reached in *Ortho Pharmaceuticals*, in which the TBA said that:

[T]he mere explanation of an effect obtained when using a compound in a known composition, even if the effect was not known to be due to this compound in the known composition, cannot confer novelty on a known process if the skilled person was aware of the occurrence of the desired effect.<sup>142</sup>

The principles used to determine novelty in new-purpose patents are similar to those used for other types of inventions. In other respects, however—notably, in terms of the problems that arise when deciding whether a novelty-of-purpose patent has been infringed—they mark a more radical change of direction. We look at this issue in more detail in our discussions of patent infringement.<sup>143</sup>

### 5.3 PATENTS: GENERIC DISCLOSURE

The third area which we wish to focus on is the novelty of so-called ‘selection patents’. As with methods of medical treatment and novelty-of-purpose patents, selection patents developed in response to a particular problem. This arose from the fact that in some fields, such as organic chemistry, a researcher may discover that a particular combination of molecules produces certain results. In some instances, the researcher then extrapolates

<sup>137</sup> *Bayer/Plant growth regulating agent*, G 6/88 [1990] EPOR 257 (EBA), 265.

<sup>138</sup> In many ways, the reasoning used in relation to new purpose is similar to that used in relation to second and subsequent medical uses. The main difference is that, in this context, there is no need to show manufacture.

<sup>139</sup> *Robertet/Deodorant compositions*, T 892/94 [1999] EPOR 516, 526.

<sup>140</sup> *Bayer/Plant growth regulating agent*, G 6/88 [1990] EPOR 257.

<sup>141</sup> T 892/94 [1999] EPOR 516.

<sup>142</sup> *Ortho/Prevention of skin atrophy*, T 254/93 [1999] EPOR 1, 8. This was reinforced by the fact that the specific purpose in question was also known: *ibid.*, 7.

<sup>143</sup> See above at pp. 622–3.

from this initial discovery to assert that the same qualities will be produced by a range of variants or homologues. This is referred to as a 'generic' or 'general' disclosure. In so doing, the researcher (potentially) discloses an extremely broad range of compounds.

Problems arise when it is subsequently discovered that some of the compounds that were outlined in the generic disclosure are particularly advantageous or have uses other than those that were initially envisaged. Because the compounds have already been made available to the public, the previous generic disclosure appears to prevent subsequent claims being made for individual members of the group.<sup>144</sup> This led to the potential problem that if the generic disclosure were able to anticipate, it would act as a disincentive for further research to be carried out in relation to the materials already disclosed. The question that underpins the doctrine of selection patents is whether, and if so, the extent to which a previous generic disclosure anticipates subsequent inventions in the same field.

In the United Kingdom, the classic answer to this problem was provided by the 1930 decision in *IG Farbenindustrie*.<sup>145</sup> This decision concerned an application to revoke IG Farbenindustrie's patent for a process of manufacturing certain azo and aromatic amine dyestuffs. This was on the ground that in light of a prior disclosure in an expired patent the invention lacked novelty. In response, IG Farbenindustrie claimed that there were potentially millions of combinations of azo and aromatic amine dyestuffs outlined in the expired patent. It also argued that the particular group of dyes that it had selected had peculiar and beneficial properties in that they withstood certain processing techniques required of cotton.<sup>146</sup> Maugham J said that if the compounds in question had previously been made, they would have lacked novelty. If the compounds had not been previously made, however, the patent might be valid if it could be shown that:

- (i) the selection was based on substantial advantage resulting from the use of selected members;
- (ii) all members of the selected class possessed the advantage in question; and
- (iii) if the selection was in respect of a quality of a special character, it could fairly be said to be peculiar to the selected group.

While, on the facts, IG Farbenindustrie's patent was held to be invalid,<sup>147</sup> the decision helped to establish the principle that selection inventions are potentially patentable where it can be shown that the 'inventiveness' of the application lies in a particular selection from a known field. Selection patents:

... enable a valid patent to be obtained for the selection of a product or process from a range of known or obvious products or processes because of surprising and non-obvious advantages over the others ... The selection must be based on a substantial advantage of special character. The selected member or class must have the advantage, and the specification must direct the mind of the skilled reader to the advantage of the selection from the class.<sup>148</sup>

<sup>144</sup> This is exacerbated by the fact that (at least until recently) patent law did not normally allow patents for discoveries of new advantages.

<sup>145</sup> (1930) 47 RPC 289, 322–3. See *Shell Refining and Marketing Patent (Revocation)* [1960] RPC 35, 52; P. Grubb, *Patents in Chemistry and Biotechnology* (1986), 132. While mechanical subject matter does not readily lend itself to the idea of selection, there have been a number of selection patents for mechanical inventions. See *Clyde Nail Russell* (1916) 33 RPC 291, 306 per Lord Parker; *Shell Refining and Marketing Patent (Revocation)* [1960] RPC 35, 54; *EI Du Pont de Nemours (Witsiepe's) Application* [1982] FSR 303, 314; *Hallen v. Brabantia* [1991] RPC 195.

<sup>146</sup> More specifically, the advantage claimed was 'fastness to kier boiling under pressure in caustic liquor'.

<sup>147</sup> This was because the dyestuffs claimed did not have the property that the applicant alleged.

<sup>148</sup> *Boehringer Mannheim v. Genzyme* [1993] FSR 716.

Although Maugham J's judgment was approved in subsequent decisions,<sup>149</sup> a number of issues remained unclear.<sup>150</sup> Many of the uncertainties result from a failure to distinguish clearly between novelty and inventive step. Another reason for the confusion can be traced to the fact that while Maugham J expressly said that the three propositions outlined in his judgment were not meant to be exhaustive, nonetheless they have often been treated as if they were definitive guidelines as to when a selection invention will have been anticipated. Another problem is that it is often forgotten that selection patents are not limited to new uses; they also apply, at least potentially, to the discovery of new substances, new uses for old substances, and new purposes for old substances used in old ways.<sup>151</sup>

Perhaps the greatest uncertainty that exists in relation to selection patents is whether the doctrine has any continued relevance under the Patents Act 1977. In light of recent changes—notably, the shift to enabling disclosure, the consequential move away from secret or inherent use, and the (apparent) acceptance of the discovery of new purposes as conferring novelty—there are good reasons for suggesting that it does not.

To argue that under British law, the doctrine of selection patents should be jettisoned in favour of the more general rules about novelty is not as radical as it may first seem. This is because the issues that arise with selection patents are really no different from the question that Lord Hoffmann said underpinned the novelty examination more generally—namely, how specific must a disclosure be for an invention to be 'known' or 'made available' to the public? (The key difference is that with selection patents the question is rephrased to be: how specific must a generic or general disclosure be for it to destroy the novelty of a subsequent invention that incorporates the prior knowledge?) While Lord Hoffmann wisely answered that it always depends on the invention in question, the doctrine of selection patents has attempted the impossible and tried to stipulate in advance the type of disclosure that is needed to anticipate. Given the futility of this, it may be better if the novelty of selection patents were answered through the general rules about novelty.<sup>152</sup> If this approach were to be adopted, it would mean that a previous generic disclosure would only anticipate a selection invention only if it is enabling—that is, if the disclosure placed a skilled person in a position from which they can 'work' the invention in question.

Arguments of this nature were accepted by the Court of Appeal in *Dr Reddy's Laboratories v. Eli Lilly*.<sup>153</sup> There are a number of notable things about this decision. The first is that Jacob LJ expressly rejected the approach in *IG Farbenindustrie*. As he said, the *IG Farbenindustrie* decision had not been used by the EPO, referred to in the EPO Guidelines for Examination, nor cited in a Board of Appeal decision. As a result, Jacob LJ said the best thing to do is to regard it 'as part of legal history, not as part of the living law'.<sup>154</sup> While these comments were made in relation to obviousness, they apply equally here. This means that generic disclosures will be examined for novelty in the same way as other disclosures.

<sup>149</sup> *Du Pont (Witsiepe's) Application* [1982] FSR 303, 309.

<sup>150</sup> It should be noted that there is some inconsistency in the EPO decisions in this area, e.g. *Pfizer/Penem*, T 1042/92 [1995] EPOR 207 is inconsistent with *Sanofi/Enantiomer*, T 658/91 [1996] EPOR 24.

<sup>151</sup> It is only if this is correct that selection patents provide obvious tactical advantages over patents for 'uses' that the EPO has recently recognized. Moreover, if this were not the case, the requirement demanded (particularly by the EPO) of novelty *per se* rather than mere novelty of use would be unnecessarily stringent.

<sup>152</sup> In *IG Farbenindustrie* (1930) 47 RPC 289, Maugham J argued that the rules applicable to 'selection patent' did not differ from the general rules of patent law—a view that was reaffirmed in *Shell Refining (Revocation)* [1960] RPC 35.

<sup>153</sup> [2009] EWCA 1362, [2010] RPC 9, [37].

<sup>154</sup> *Ibid.*

The second notable thing about *Dr Reddy's Laboratories* is that it clearly states that the mere disclosure of a generic formula or class of compounds does not disclose every possible compound within that class; there also needs to be a clear indication that the substance had actually been prepared. Here, Jacob LJ agreed with the EPO approach which requires an 'individualised description' to anticipate a later compound or class of compounds. In this context, it was important to distinguish between:

... the purely intellectual content of an item of information and the material disclosed in the sense of a specific teaching with regard to technical action. Only a technical teaching of this kind can be prejudicial to novelty. If any such teaching is to apply in the case of a chemical substance, an individualised description is needed.<sup>155</sup>

As a result, when considering anticipation in this situation it is necessary to look for an 'individualised description' of the later claimed compound or class of compounds.

As a result of *Dr Reddy's Laboratories*, British law is now in line with the approach that has been adopted at the EPO, where the rules on selection patents have been treated as being consistent with, rather than an exception to, the general rules about novelty. In these circumstances, a previous generic disclosure will only anticipate a substance if it can be characterized as an enabling disclosure.<sup>156</sup> This can be seen, for example, in *Bayer/Diastereomers*<sup>157</sup>—a decision that concerned an application for the diastereomeric form of a compound, which was useful in treating mycoses (fungal diseases such as ringworm). The problem that confronted the applicants was that a prior patent had disclosed a group of compounds including the compound in question, as well as the method by which the compound could be produced. The TBA rejected the application on the basis that it was lacking in novelty. In so doing, the Board held that the teaching of a prior document was not confined to the detailed information given in the examples of how the invention is carried out; rather, it embraces any information in the claims and description enabling a person skilled in the art to carry out the invention. The TBA stressed that the essential point is what a person skilled in the art could be expected to deduce from the earlier disclosure in carrying out the invention.

<sup>155</sup> *Hoescht/Enantiomers*, T 296/87 (30 August 1988); approved in *Dr Reddy's Laboratories v. Eli Lilly* [2009] EWCA 1362, [30].

## INVENTIVE STEP

### CHAPTER CONTENTS

1 Introduction	554	3 Person Skilled in the Art	559
2 Determining whether an Invention is Obvious	555	4 What is the ‘Invention’?	562
		5 Is the Invention ‘Obvious’?	565

### 1 INTRODUCTION

In this chapter, we focus on the requirement that to be patentable, an invention must involve an ‘inventive step’.<sup>1</sup> An invention is said to involve an inventive step if it is not obvious to a person skilled in the art<sup>2</sup> (the terms ‘inventive step’ and ‘non-obviousness’ are used interchangeably).<sup>3</sup> The question of whether an invention is obvious can arise during examination in the national patent offices, where it is *ex parte*. It can also arise *inter partes* in opposition proceedings at the European Patent Office (EPO), or in revocation proceedings before the Comptroller or the courts. In each case, the onus is on the patent office, the opponent, or the party seeking revocation (as opposed to the applicant or patentee) to establish that the invention is obvious. While the inventive step requirement has long been a key element of patent law, it may become more important in the future. This is a result of changes that have taken place at the EPO, but not in the United Kingdom, in the way in which patentable subject matter is determined. As we explained in Chapter 17, as a result of the *Pension Benefits System* decision,<sup>4</sup> the Technical Board of Appeal has shifted the focus of attention away from subject matter to inventive step. (The Board held that while the claim for an apparatus for controlling a pension benefits system was an invention for the purposes of Article 52(1) of the European Patents Convention of 1973, or EPC 1973—now Article 52(1) of the EPC 2000—it lacked inventive step and thus was not patentable.) While there is a close relationship between the two requirements (particularly as a result of the focus on ‘technical character’ when determining subject matter), it is not clear what the consequences of this shift will be. It is, however, an important change that needs to be followed in the future.

As we will see, deciding where the line should be drawn between inventions that are obvious (or non-inventive) and those that are inventive (or non-obvious) is a difficult task.

<sup>1</sup> PA 1977, s. 1(1)(b); EPC 2000, Art. 52(1) (ex EPC 1973, Art. 52(1)); PCT, Art. 33(3); TRIPS, Art. 27(1). See generally, J. Bochnovic, *The Inventive Step* (1982); H. Ullrich, *Standards of Patentability for European Inventions* (1977).

<sup>2</sup> PA 1977, s. 3; EPC 2000, Art. 56 (ex EPC 1973, Art. 52(1)).

<sup>3</sup> However, a useful proposal (such as the idea to cover an umbrella with water-soluble textile) might be non-obvious, but lack inventive step: R. Singer, *The European Patent Convention* (1995), 181, n. 1; *Exxon/Gelation*, T 119/82 [1979–85] EPOR 566, [1984] OJ EPO 217.

<sup>4</sup> *Pension Benefits Systems Partnership/Controlling pension benefits systems*, T 931/95 [2001] OJ EPO 413.

As well as being one of the most important requirements for patentability, inventive step is also one of the most problematic. Indeed, it has been said that inventive step is ‘as fugitive, impalpable, wayward, and vague a phantom as exists in the whole paraphernalia of legal concepts.’<sup>5</sup> In part, this is because the examination for inventive step is a factual inquiry; to this end, it has frequently been dubbed a ‘question of fact’ or a ‘jury question’ (although juries have not sat in patent cases in the United Kingdom since 1883). The corollary of the factual nature of the inquiry is that precedents should be treated with caution, even those that involve decisions on the same invention. The evaluative nature of the inquiry also means that reasonable people can easily reach different conclusions—thus making it extremely difficult to predict the outcome of an obviousness attack or objection.<sup>6</sup> This has led to accusations of uncertainty and to the arbitrary use of discretion.<sup>7</sup> It also means that on appeal, courts are often reluctant to overturn decisions of the lower courts.

While the novelty examination ensures that there is a quantitative difference between the invention and the state of the existing knowledge, non-obviousness ensures that this difference is of a quality deserving of patent protection.<sup>8</sup> By ensuring that patents are only granted for non-obvious inventions, the requirement that there be inventive step acts as a qualitative threshold that ensures that only meritorious inventions are granted protection. The need to show inventive step as a condition for patentability has been explained on the basis that ‘if every slight difference in the application of a well-known thing [were to be] held to constitute a ground for a patent’, it would lead to an unjustifiable interference with trade.<sup>9</sup> As the Court of Appeal said in *PLG Research v. Ardon International*,<sup>10</sup> the ‘philosophy behind the doctrine of obviousness is that the public should not be prevented from doing anything which was merely an obvious extension or workshop variation of what was already known at the priority date’. In more positive terms, it has been suggested that the obviousness inquiry encourages people to carry out research that might not otherwise be undertaken. More specifically, the fact that patents are *not* granted for obvious inventions is said to encourage speculative or risky research.<sup>11</sup>

## 2 DETERMINING WHETHER AN INVENTION IS OBVIOUS

In order to harmonize the divergent approaches to obviousness that had been adopted in the member states prior to the passage of the EPC, the EPO set out to develop an approach to the

<sup>5</sup> *Harries v. Air King* 183 F.2d. 158, 162 (1950) (Judge Learned Hand). For the position in the United States, see *KSR International v. Teleflex* 127 S. Ct. 727 (2007).

<sup>6</sup> This ‘contributes significantly both to the insecure commercial value of many patents and to the cost of litigating their validity’: W. Cornish, ‘The Essential Criteria for Patentability’ (1983) 14 *IIC* 765, 771.

<sup>7</sup> H. Ullrich, *Standards of Patentability* (1977), 37; J. Schmidt-Szalewski, ‘Non-obviousness as a Requirement of Patentability in French Law’ (1992) 23 *IIC* 725, 737.

<sup>8</sup> While there has been a shift in the theoretical basis of the novelty requirement from a ‘right to work’ to an information-related understanding, such a shift has yet to be recognized in relation to inventive step.

<sup>9</sup> *Harwood v. Great Northern Railway Co.* (1865) 11 *HLC* 654, 682 *per* Lord Westbury. See also *Elias v. Grovesend* (1890) 7 *RPC* 455, 467; *Brugger v. Medic Aid* [1996] *RPC* 635, 653; *VDO Adolf Schindling/Illuminating device*, T 324/94 [1997] *EPOR* 146, 153.

<sup>10</sup> [1999] *FSR* 116, 136. See also *Philips (Bosgra’s) Application* [1974] *RPC* 241 (emphasizing right to work); F. Scherer, *Industrial Market Structure and Economic Performance* (1980), 440.

<sup>11</sup> R. Merges, *Patent Law and Policy* (1992), 411–21; *Société Technique de Pulvérisation (STEP) v. Emson* [1993] *RPC* 513. Cf. *Mölnlycke v. Procter & Gamble (No. 5)* [1994] *RPC* 49; H. Ullrich, *Standards of Patentability* (1997), 103.

assessment of inventive step that was objective, economical, and transparent. In so doing, it also hoped to bring a degree of certainty to the area.<sup>12</sup> As the Chartered Institute of Patent Attorneys (CIPA) *Guide to the Patents Act 1977* says, the approach to inventive step at the EPO has two key characteristics. The first, which we encountered in our discussions about patentable subject matter in Chapter 17, is that it is ‘an “effects-based” approach, so that whether or not a patent is granted ultimately depends on whether there is a new effect, a new function or result flowing from the claimed features.’<sup>13</sup> The second is that the examination for whether there is the requisite inventive step is conducted via ‘the problem-and-solution approach.’<sup>14</sup> This is based on an image of the invention as a solution to a problem. Accordingly, an inventive step is seen as ‘a step from the technical problem to its solution.’<sup>15</sup> As such, rather than asking whether an invention is obvious, the EPO asks whether the solution that an invention provides to the problem being addressed would have been obvious to the person skilled in the art. In more positive terms, this means that for an invention to be patentable, the solution must have been *not* obvious to the person skilled in the art at the priority date of the invention in question. There are a number of subsidiary steps that need to be undertaken when applying the problem-and-solution approach. In particular, it requires the tribunal to: ascertain the technical field of the invention (which is used, amongst other things, to determine the field of expertise of the person skilled in the art); identify the closest prior art in the field; identify the technical problem that can be regarded as solved in relation to the closest prior art; and finally, ascertain whether the technical feature(s) that form the solution claimed could be derived by the skilled person in a manner obvious from the state of the art.<sup>16</sup>

Over the period during which the problem-and-solution approach has been utilized at the EPO, it has proved to be a useful technique for determining inventive step. It is also one that was applied in nearly all situations. Despite this, aspects of the approach were called into question by the Technical Board of Appeal (TBA) in *Alcan/Aluminium alloys*.<sup>17</sup> In this decision, the Board said that while it was often assumed that the problem-and-solution approach was applicable in all situations, it was better seen as one of many possible approaches that could be adopted when assessing inventive step. The TBA said that there was no legal reason why all cases involving inventive step should be shoehorned into a single approach. In situations where the invention broke new ground, the test was inappropriate because there was no close prior art from which to formulate the problem. In these circumstances, the problem-and-solution approach was unnecessarily artificial. Because this approach proceeds on the basis of a search that is made with actual knowledge of the invention, it also suffered from the fact that it was inherently based on hindsight.<sup>18</sup>

Jacob LJ raised similar objections when he said that the key problem lay with the reformulation or retrospective construction of a problem was the weakest part of the problem-and-solution approach. This was particularly the case in those situations where the ‘invention involves perceiving that there is a problem or in appreciating that a known problem, perhaps “put up with” for years, can be solved’.<sup>19</sup>

<sup>12</sup> G. Knesch, ‘Assessing Inventive Step in Examination and Opposition Proceedings at the EPO’ (1994) *epi-Information* 95, 98.

<sup>13</sup> CIPA, [3.03].

<sup>14</sup> This was espoused in the first published decision of the TBA, *Bayer/Carbonless copying*, T 1/80 [1979–85] *B EPOR* 250.

<sup>15</sup> The problem-and-solution approach builds upon an image of research as an activity that sets out to solve particular problems: *ICI/Containers*, T 26/81 [1979–85] *B EPOR* 362, [1982] *OJ EPO* 211.

<sup>16</sup> *Comvik/Two identities*, T 641/00 [2003] *OJ EPO* 319, [5].

<sup>17</sup> T 465/92 [1995] *EPOR* 501.

<sup>18</sup> For a general discussion of need to avoid hindsight, see *Ferag v. Muller Martini* [2007] *EWCA Civ* 15, [13].

<sup>19</sup> *Actavis v. Novartis* [2010] *EWCA Civ* 82, [35]. The Court noted, however, that the problem-and-solution approach worked very well when there was no need to reformulate the problem: *ibid.*, [39]. This was the case

In a sense, what the TBA did in *Alcan* was to align the problem-and-solution approach more closely with the types of research under consideration. By modifying (and narrowing) the circumstances where the test may be applied, the Board has served to strengthen the test. Despite these criticisms, the problem-and-solution approach is consistently applied by the EPO Boards of Appeal to determine whether or not there is the requisite inventive step.

## 2.1 APPROACH IN THE UNITED KINGDOM

Whatever the current state of the law at the EPO, English courts have largely remained isolated from and resistant to the adoption of the problem-and-solution approach.<sup>20</sup> Instead, when considering the way in which an invention is to be interpreted, they have relied on the approach set out in the *Windsurfing* decision.<sup>21</sup> In this decision, the Court of Appeal said that the court must begin by identifying the inventive concept embodied in the patent. The court should then identify the differences that exist between the cited prior art and the alleged invention. Finally, the court should ask whether, viewed without any knowledge of the alleged invention, those differences constitute steps that would have been obvious to the skilled man, or whether they required a degree of invention.<sup>22</sup> In the Court of Appeal decision of *Pozzoli*,<sup>23</sup> Jacob LJ reordered and elaborated on the *Windsurfing* test. While judicial attempts to restructure well-established rules, such as those in *Windsurfing*, are often counter-productive, Jacob LJ's reformulation is useful—particularly insofar as it takes the question of what is the invention more seriously. Under the new approach, which is known as the '*Windsurfing/Pozzoli* approach', the court asks four questions, as follows.

- (i) Who is the notional 'person skilled in the art'? (This involves identifying the relevant common general knowledge of that person.)
- (ii) What is the inventive concept of the claim? (If that cannot readily be identified, the court must construe it.)
- (iii) What, if any, difference exists between the matter cited as forming 'part of the state' of the art and the inventive concept of the claim, or the claim as construed?
- (iv) Viewed without any knowledge of the alleged invention as claimed, do those differences constitute steps that would have been obvious to the person skilled in the art, or do they require any degree of invention?<sup>24</sup>

in *Apimed Medical Honey v. Brightwake* [2011] EWPC2, in which the problem was that honey was runny at room temperature and the purpose of the invention (solution) was to immobilize liquid honey in such a way that it could be maintained at a wound site to act as a therapeutic dressing.

<sup>20</sup> Although these provisions are intended to be applied uniformly throughout the EPC states, inventive step appears to be an area in which British courts have taken little notice of EPC precedents and therefore an area in which harmonization seems at its most embryonic: *Hallen v. Brabantia* [1991] RPC 195, 212; *Hoechst Celanese v. BP Chemicals* [1997] FSR 547, 567, 572.

<sup>21</sup> *Windsurfing International v. Tabor Marine* [1985] RPC 59 (CA), followed in *Lux Traffic v. Pike Signals* [1993] RPC 107; *Hallen v. Brabantia* [1991] RPC 195; *Mannheim v. Genzyme* [1993] FSR 716, 724; *Mölnlycke v. Procter & Gamble (No. 5)* [1994] RPC 49, 115; *PLG Research* [1995] FSR 116; A. Griffiths, '*Windsurfing* and the Inventive Step' [1999] IPQ 160.

<sup>22</sup> For criticism, see J. Claydon, 'The Question of Obviousness in the *Windsurfer* decision' [1985] EIPR 218. See *Unilever v. Chefaro* [1994] RPC 567, 580.

<sup>23</sup> *Pozzoli SpA v. BDMO SA* [2007] EWCA Civ 588.

<sup>24</sup> *Ibid.*, [15]–[19]. For further elaboration, see Jacob LJ in *Nichia Corporation v. Argos* [2007] EWCA Civ 741, [12].

While courts have occasionally reminded us that these questions are only a tool for answering the ultimate statutory question—‘Was the invention obvious?’—and that adherence to any rigid formula can be a mistake,<sup>25</sup> nonetheless the *Windsurfing/Pozzoli* approach is widely and consistently used to determine when an invention is obvious in the United Kingdom.

The decision to use the approach set out in *Windsurfing* rather than the approach used at the EPO was reinforced by the fact that the problem-and-solution approach has been subject to a considerable degree of criticism in the United Kingdom.<sup>26</sup> As well as being criticized for its use of hindsight,<sup>27</sup> the test is also said to be unnecessarily artificial because many inventions are developed without having a problem in mind. Perhaps the most important objection is that while the problem-and-solution approach is presented as being applicable to all types of research, there are situations in which its use is inappropriate. While this approach is sensibly applied to the improvement of existing techniques, it is not easy to formulate a problem for many inventions, particularly in the chemical/pharmaceutical field.<sup>28</sup> As well as being difficult to apply in situations involving the discovery of a new application for an existing technique or product, it is said to be wholly inappropriate where an innovation satisfies a latent need that has never previously been expressed.<sup>29</sup> In the case of so-called ‘problem inventions’, where the solution becomes obvious once the problem has been formulated, the reformulation of the research undertaken in terms of problem and solution ‘is equivalent to emptying the definition of the problem of any substance, and thereby depriving the problem-and-solution approach of any effectiveness’.<sup>30</sup>

In determining obviousness under the Patents Act 1977, British tribunals have tended to utilize the test set out in the *Windsurfing* decision rather than the problem-and-solution approach. In recent years, however, there has been a growing belief that the problem-and-solution approach ought to be used in the United Kingdom.<sup>31</sup> In part, this has been motivated by a realization that the two tests may not be as conceptually different as they first appeared,<sup>32</sup> by the fact that the EPO approach has precursors in UK patent law,<sup>33</sup> and by the fact that the *Alcan* decision goes some way towards resolving some of the criticisms

<sup>25</sup> See, e.g., *Regeneron Pharmaceuticals v. Genentech* [2013] EWCA Civ 93, [68]–[71]; *Conor v. Angiotech* [2008] RPC 28 (HL), [42]; *Generics (UK) v. Daiichi Pharmaceutical Co.* [2009] EWCA Civ 646, [17]; *Medimmune v. Novartis* [2012] EWCA Civ 1234, [34], [177]–[186].

<sup>26</sup> ‘[A]ttempts to force all questions of obviousness into a “problem-solution” approach can lead to trouble, though often the test can be a helpful guide’: *Nichia Corporation v. Argos* [2007] EWCA Civ 741, [22]. Jacob LJ also noted that a similar view has been taken by the US Supreme Court in *KSR International v. Teleflex* 127 SC 1727, 167 L. Ed. 2d. 705 (2007). See also A. White, ‘The Problem-and-solution Approach to Obviousness’ [1986] EIPR 387; J. Beton, ‘Vote of thanks to G. Szabo’ (1987) 16 CIPAJ 361.

<sup>32</sup> CIPA, [3.02]. Descriptions in UK patents often begin by setting out the background of the invention and then explain the particular problem that the invention solves.

<sup>33</sup> See P. Cole, ‘Inventive Step: Meaning of the EPO Problem and Solutions Approach and Implications of the United Kingdom’ [1998] EIPR 214; *Sharp and Dohme v. Boots Pure Drug Company* (1928) 45 RPC 153, 173 (Sir Stafford Cripps); J. Beton, ‘Vote of thanks to G. Szabo’ (1987) 16 CIPAJ 361; S. Avery, ‘Problem and Solution at the EPO: The Primary Consideration’ (1984–85) 14 CIPAJ 166; G. Szabo, ‘Questions on the Problem-and-solution Approach to the Inventive Step’ (1986–87) 16 CIPAJ 351.

that have been made of the EPO approach.<sup>34</sup> Perhaps the strongest support for the use of the problem-and-solution approach comes from the House of Lords' decision in *Biogen v. Medeva*,<sup>35</sup> where Lord Hoffmann said that a 'proper statement of the inventive concept needs to include some express or implied reference to the problem which it required invention to overcome'.

While it is important to keep in mind the different approaches that have been adopted in the United Kingdom and at the EPO, there are enough similarities for them to be dealt with together. Perhaps the best starting point for thinking about whether an invention is obvious is with section 3 of the 1977 Act/Article 56 of the EPC 2000 (ex Article 56 of the EPC 1973), which states that an invention is taken to involve an inventive step 'if it is not obvious to a person skilled in the art, having regard to any matter that forms part of the state of the art'. Stated in this way, the inquiry gives rise to three further questions.

- (i) Who is the 'person skilled in the art', and what skills and knowledge do they have?
- (ii) What is the 'invention' that is being examined?
- (iii) What does it mean to say that something is 'non-obvious'?

We will deal with each in turn.

### 3 PERSON SKILLED IN THE ART

As section 3 of the 1977 Act and Article 56 of the EPC 2000 make clear, obviousness is determined from the standpoint of the average person skilled in the art.<sup>36</sup> This means that when considering whether an invention is obvious, the tribunal views the invention through the eyes of a notional interpreter equipped with the attributes, skills, background knowledge, and qualifications relevant to the field in which they work.<sup>37</sup> The objective nature of the inquiry means that the *actual* process by which the invention came about is irrelevant.<sup>38</sup> As such, it does not matter if an invention arose as a result of years of research by a team of leading experts, or as a chance result by an unskilled person. All that matters is whether the person skilled in the art would consider the invention to be non-obvious.<sup>39</sup>

The skills and qualifications of the person skilled in the art, as well as the resources and equipment that are available to that person, vary according to the particular invention in question.<sup>40</sup> More specifically, the qualities of the skilled person depend on the technical

<sup>34</sup> See *Haberman v. Jackel International* [1999] FSR 683, 683, 699–700; *Dyson Appliances v. Hoover* [2001] RPC 26, [153].

<sup>35</sup> [1997] RPC 1, 45.

<sup>36</sup> Recently described as 'an assembly of nerds with different basic skills, all unimaginative': *Rockwater v. Technip* [2004] RPC (46) 919, [7], [10]. See also *Brugger v. Medic Aid* [1996] RPC 635, 653; J. Bochnovic, *The Inventive Step* (1982), 59; J. Pagenberg, 'The Evaluation of the "Inventive Step" in the European Patent System: More Objective Standards Needed' (1978) 9 IIC 1, 16–17; J. Tresansky, 'PHOSITA: The Ubiquitous and Enigmatic Person in Patent Law' (1991) 73 JPTOS 37.

<sup>37</sup> *Technograph Printed Circuits v. Mills & Rockley (Electronics)* [1972] RPC 346, 355 per Lord Reid; *Polymer Powders/Allied colloids*, T 39/93 [1997] OJ EPO 134, 149; E. Pakuscher, 'Examination for Non-Obviousness: A Response' (1981) 12 IIC 816. The person skilled in the art is not necessarily the same person skilled in the art for performing an invention when it is made: *Schlumberger Holdings Ltd v. Electromagnetic Geoservices AS* [2010] EWCA Civ 819, [61].

<sup>38</sup> *Hoechst Celanese v. BP Chemicals* [1997] FSR 547, 565; *BASF/Metal refining*, T 24/81 [1979–85] B EPOR 354.

<sup>39</sup> For a summary of some of the attributes of the person skilled in the art, see Jacob LJ in *Rockwater v. Technip* [2004] RPC 46, [6]–[12].

<sup>40</sup> *Genentech's Patents* [1989] RPC 147, 278 per Mustill LJ.

field into which the invention falls. Determining the technical field of the invention is made easier by the fact that at the EPO, the patent description should specify the technical field into which the invention falls.<sup>41</sup> Similarly, in the United Kingdom the description begins with a short title that indicates the general subject matter of the invention. The choice of technical field is particularly important in situations where the invention is made up of a mixture of technical and non-technical features. This is particularly the case in relation to computer-related inventions and business-method patents. To date, the tribunals have been careful to ensure that the person skilled in the art has expertise only in technical fields. For example, in *Comvik*,<sup>42</sup> which concerned the invention of a new single-user identity card (SIM card) which dealt with the way in which charges for different types of mobile phone call were organized for digital mobile telephones,<sup>43</sup> the Technical Board of Appeal said that:

[The] skilled person will be an expert in a technical field. If the technical problem is concerned with a computer implementation of a business, actuarial or accountancy system, the skilled person will be someone in data processing, and not merely a businessman, actuary, or accountant.<sup>44</sup>

If the skills base of the expert were extended to include non-technical areas such as business or management skills, it would increase the patentability of business patents and other types of invention that are currently excluded from protection.<sup>45</sup>

The skills attributed to the person skilled in the art will vary depending on what is regarded as normal in the field in which they are deemed to operate. In some cases, the person skilled in the art may have a PhD and a well-established research record;<sup>46</sup> in other cases, they may have no formal academic qualifications and only have 'ordinary' skills.<sup>47</sup> While the person skilled in the art is normally an individual, in situations where research is carried out by groups of researchers, the court will adopt the standpoint of a notional research team.<sup>48</sup>

While the skill and qualities of the notional interpreter vary according to the art in question, one trait that is shared by skilled persons irrespective of the field in which they work is that they are un inventive.<sup>49</sup> It has also been said that the person skilled in the art is 'conservative', in the sense that they would not go against established prejudices, try to enter into sacrosanct or unpredictable areas, or take incalculable risks.<sup>50</sup>

<sup>41</sup> EPC 2000 Regs, rr 42(1)(a), 47(2) (ex EPC 1973 Regs, rr 27(1)(a), 33(2)); *Luminescent Security Fibres/Jalon*, T 422/93 [1997] OJ EPO 24.

<sup>42</sup> *Comvik/Two identities*, T 641/00 [2003] OJ EPO 319, [vi].

<sup>43</sup> 'The inventor's merits resided in realizing the economical and administrative problem for certain subscribers that distribution costs for various categories of calls within one and the same subscription causes extra work': *ibid.*, [vi].

<sup>44</sup> *Ibid.*, [7] (ingenuity of the invention occurred in non-technical fields, which could not contribute to inventive step).

<sup>45</sup> *Pension Benefits Systems*, T 931/95 [2001] OJ EPO 413 (assessment for inventive step was to be carried out from the point of view of a software developer or application programmer).

<sup>46</sup> *Genentech's Patent* [1989] RPC 147, 241.

<sup>49</sup> This has been questioned in relation to the field of biotechnology: *Genentech's Patent* [1989] RPC 147, 214, 279–280. See also *Technograph Printed Circuit* [1972] RPC 346; *Polymer Powders/Allied colloids*, T 39/93 [1997] OJ EPO 134, 149.

<sup>50</sup> *Genentech/Expression in yeast*, T 445/91 [1995] OJ EPO 684.

### 3.1 STATE OF THE ART

In considering whether an invention is obvious, the person skilled in the art has regard to any matter that forms part of the state of the art at the priority date of the invention.<sup>51</sup> With two notable exceptions, the state of the art in an obviousness examination is the same broad concept as is used in a novelty examination (which was discussed in Chapter 18).<sup>52</sup>

The first difference is that patent applications that have priority over the application in suit but have not yet been published, are not included in the state of the art for the purposes of assessing inventive step.<sup>53</sup> The second difference is that when considering whether an invention is non-obvious (but not whether it is novel), it is possible to combine together (or ‘mosaic’) information from different sources. The act of combining documents must be ‘natural and logical’.<sup>54</sup> It must also be a process that an unimaginative skilled person would (as opposed to could) follow.<sup>55</sup> Documents that conflict or are unrelated cannot be combined to demonstrate obviousness.<sup>56</sup>

The state of the art is made up of everything that is made available to the public before the date of filing—irrespective of the language of publication or how widely it has been circulated.<sup>57</sup> The potentially broad nature of the state of the art is restricted by the fact that the prior art is judged through the eyes of a person skilled in the art. On this basis, the courts have accepted that a person skilled in a particular art may place greater emphasis on certain types of information than on others.<sup>58</sup> In more extreme cases, the fact that the person skilled in the art is able to evaluate the prior art may mean that certain types of information are discarded.<sup>59</sup>

The potentially broad nature of the state of the art is further restricted by the fact that the skilled person is only expected to have scrutinized the information available in their own or closely related fields. The impact that this has on the material available to the person skilled in the art can be seen in *Mobius/Pencil sharpener*,<sup>60</sup> which concerned an application for a patent over a hand-operated pencil sharpener with a device that prevented pencil shavings from escaping. The application survived an obviousness attack on the basis of two pieces of prior art: one concerned with pencil sharpeners; the other, with savings boxes. The Technical Board of Appeal held that while the prior art concerning the pencil sharpener represented the closest prior art, it failed to suggest the answer employed in the invention and was thus of no relevance. Given the technological differences between the two fields, the prior art in relation to savings boxes was also of no relevance because it was not in a closely related or neighbouring field. Consequently, the

<sup>51</sup> This date might be critical. For example, in *Biogen v. Medeva* [1995] RPC 25 (CA), it was acknowledged that, because recombinant DNA technology had developed so quickly, the invention would have been obvious by December 1979. As such, it was critical whether Biogen could take advantage of an earlier priority date from December 1978.

<sup>53</sup> *BASF/Metal refining*, T 24/81 [1979–85] EPOR B–354.

<sup>59</sup> Cf. *Brugger v. Medic Aid* [1996] RPC 635, 653 (the ‘court should be wary of uncritical ageism in relation to prior art . . . The fact that a document is old does not, *per se*, mean that it cannot be a basis for an obviousness attack’).

<sup>60</sup> T 176/84 [1986] OJ EPO 50, [1986] EPOR 117.

person skilled in the art would not have utilized the solution set out in the prior art relating to the savings box.<sup>61</sup>

In addition to being confronted with relevant material from the state of the art, the person skilled in the art is also presumed to have the benefit of the ‘common general knowledge’ of the particular art or technical field in question.<sup>62</sup> As well as being a valuable source of information in its own right,<sup>63</sup> the common general knowledge is also important because it enables the notional interpreter to combine different pieces of prior art, and to develop and build upon existing pieces of prior art (so long as they do not do anything inventive). The common general knowledge is also important because it acts as the basis from which documents are interpreted.<sup>64</sup>

The sources from which the notional skilled addressee acquires their general knowledge vary depending on the nature of the technical field in question.<sup>65</sup> Frequently, the tribunal assumes that the common general knowledge is that which can be found in encyclopaedias and standard dictionaries. Where this is the case, care must be taken to avoid a logical fallacy: common general knowledge will be in encyclopaedias, but that does not mean that everything in such works is common general knowledge.<sup>66</sup> Individual patent specifications are not normally regarded as forming part of the common general knowledge.<sup>67</sup> Scientific papers become part of the general knowledge only ‘when it is generally known and accepted without question by the bulk of those who are engaged in the particular art’.<sup>68</sup> Usually, information that is common general knowledge will have been used in some capacity or other. The fact that a concept has not been used does not mean that it is necessarily excluded, but only that it is unlikely to form part of the common general knowledge.<sup>69</sup>

#### 4 WHAT IS THE ‘INVENTION’?

As the Court of Appeal pointed out in the *Windsurfing* decision, when considering whether an invention is non-obvious, the court must identify the inventive concept embodied in the patent.<sup>70</sup> As we saw in relation to patentable subject matter and novelty, the way in which an invention is interpreted may play an important role in determining whether it is patentable. This is also the case with inventive step. As Lord Hoffmann said,

<sup>61</sup> *Kereber/Wire link bands*, T 28/87 [1989] OJ EPO 383, [1989] EPOR 377. *Mobius* was distinguished in *Boeing/General technical knowledge*, T 195/84 [1986] OJ EPO 121, [1986] EPOR 190.

<sup>62</sup> *Hoechst Celanese v. BP Chemicals* [1997] FSR 547, 563; *British Ore Concentration Syndicate v. Mineral Separation* (1909) 26 RPC 124, 138. For a general discussion, see *KCI Licensing v. Smith & Nephew* [2010] FSR 31, [105]–[121].

<sup>63</sup> Sometimes, information may fail to ground an invalidity attack when viewed as part of the prior art, but succeed in so doing once categorized as common general knowledge: *Boeing/General technical knowledge*, T 195/84 [1986] OJ EPO 121.

<sup>64</sup> To qualify as art of the common general knowledge, a fact must be ‘generally known within the relevant art and not merely known to some people but not others’; in addition, ‘requirements of quality and reliability must be satisfied’: *Omnipharm v. Merial* [2011] EWHC 3393. On this, see CIPA, *Guide to the Patents Act 1977: First Supplement* (May 2013), [3.11].

<sup>65</sup> *Mars II/Glucomannan*, T 112/92 [1994] EPOR 249.

<sup>66</sup> See *General Tire and Rubber v. Firestone Tyre & Rubber* [1972] RPC 457, 482.

<sup>67</sup> *British Acoustic Films v. Nettlefordfold Productions* (1936) 53 RPC 221, 250.

<sup>68</sup> *Beloit v. Valmet* [1997] RPC 489, 494.

<sup>69</sup> *Windsurfing International* [1985] RPC 59. The importance of the way in which an invention is interpreted is illustrated in *Genentech’s Patents* [1989] RPC 147. See also B. Reid, ‘Biogen in the EPO: The Advantage of Scientific Understanding’ (1995) 2 EIPR 98.

<sup>70</sup> *Beloit v. Valmet* [1997] RPC 489, 494.

before you can apply the test for obviousness stated in section 3 of the 1977 Act and ask whether the invention involves an inventive step, 'you first have to decide what the invention is'.<sup>71</sup> As we explained earlier, one of the consequences of *Pension Benefits Systems* is that it places greater emphasis on the requirement that there must be an inventive step. In particular, it places more emphasis on the way in which the invention is characterized—that is, on the way in which the 'inventive concept' is determined.

At the EPO, the task of identifying the invention is achieved via the problem-and-solution approach. More specifically, based on an image of the invention as a solution to a problem, to identify the 'thing' that must be non-obvious, it is necessary to identify the particular problem that the invention addresses. As with most aspects of the obviousness inquiry, this is understood from an objective point of view at the priority date of the invention.<sup>72</sup> The task of having to identify the problem that the invention solves is made easier by the fact that the EPC 2000 Implementing Regulations provide that 'the description should disclose the invention as claimed in such terms that the technical problem (even if not expressly stated as such) and its solution can be understood'.<sup>73</sup>

While, in many cases, it is possible to rely upon the problem that is disclosed in the patent application, in some cases the patent application cannot be used to provide an objective statement of the problem.<sup>74</sup> In situations where the problem is not properly set out in the application, the EPO may reformulate the problem.<sup>75</sup> In these circumstances, the nature of the problem is determined from the differences between the closest prior art<sup>76</sup> and the invention (which is seen in terms of its effects rather than its structure).<sup>77</sup> This may refer to the need to achieve the same kind of result, an improved result (for example a quicker, stronger, or cheaper result), or a different result from that which is achieved by the existing art.<sup>78</sup>

As we explained earlier, English courts have largely remained resistant to the problem-and-solution approach. While there have been criticisms of the problem-and-solution approach in the United Kingdom, there has been relatively little discussion of what alternative approach ought to be adopted.<sup>79</sup> It seems that British tribunals distil the 'invention' from

<sup>71</sup> *SABAF SpA v. MFI Furniture Centres* [2005] *RPC* 10 (HL), [24]. In particular, it was necessary to decide whether you were dealing with one or two or more inventions. The House of Lords said that it was not appropriate to combine separate inventions and then ask whether the combination would have been obvious: *ibid.*, [28].

<sup>72</sup> The problem that the applicant is required to specify should be a technical as opposed to a commercial one: *Esswein/Automatic programmer*, T 579/88 [1991] *EPOR* 120.

<sup>73</sup> EPC 2000 Regs, rr 42(1)(c), 47 (ex EPC 1973 Regs, rr 27(1)(c)), 33(2)).

<sup>74</sup> The problem might need to be reformulated in the light of information revealed by the search report, or the documents relied upon in opposition or appeal proceedings, if these represent a closer state of the art than that originally mentioned. Similarly, the technical problem might need to be reformulated in light of experiments that reveal that the claim is too broad: *Polymer Powders/Allied colloids*, T 39/93 [1997] *OJ EPO* 134, 144ff.

<sup>75</sup> *Phillips Petroleum/Passivation of catalyst*, T 155/85 [1988] *EPOR* 164, 169; *Sperry/Reformulation of the problem*, T 13/84 [1986] *EPOR* 289.

<sup>76</sup> *IBM/Enclosure for data-processing apparatus*, T 9/82 [1997] *EPOR* 303; *Bayer/Thermoplastic moulding composition*, T 68/83 [1979–85] *C EPOR* 71; G. Knesch, 'Assessing Inventive Step in Examination and Opposition Proceedings at the EPO' (1994) *epi-Information* 95 ('the crucial question is whether the man skilled in the art would really have chosen that document as the starting point').

<sup>77</sup> *Pegulan/Surface finish*, T 495/91 [1995] *EPOR* 517.

<sup>78</sup> It seems that this was derived from practices in Germany, but differs in that the EPO problem-and-solution approach is 'effects centred': *CIPA*, [3.21]. On the approach in Germany, see J. Pagenberg, 'Examination for Non-obviousness: A Critical Comment on German Patent Practice' (1981) 12 *IIC* 1.

<sup>79</sup> Cf. *Generics (UK) v. Daiichi Pharmaceutical Co.* [2009] *EWCA Civ* 646, [17]–[21]. Interestingly, *CIPA*, [3.04], suggests that much of the controversy in the United Kingdom in relation to the problem-and-solution

the specification (presumably read purposively from the perspective of the relevant person skilled in the art).<sup>80</sup> It is important to recall that in *Biogen v. Medeva*,<sup>81</sup> Lord Hoffmann said that a ‘proper statement of the inventive concept needs to include some express or implied reference to the problem which it required invention to overcome’. More pertinently, in *Cipla v. Glaxo*,<sup>82</sup> Pumfrey J said that he was ‘not persuaded that’ the structured approach to obviousness at the EPO was ‘substantially different from the *Windsurfing* approach subject to one qualification’—namely, that, unlike the case in the United Kingdom, the EPO will only consider obviousness on the basis of the closest prior art. Given the importance of this issue, it warrants more attention. This view was reiterated by the Court of Appeal in *Generics (UK) v. Daiichi Pharmaceutical*,<sup>83</sup> when Jacob LJ disagreed with the suggestion that the *Pozzoli/Windsurfing* approach was different from the EPO’s problem-and-solution approach saying that the ‘problem/solution approach only applies at stage 4 [of the *Pozzoli/Windsurfing* approach]. The first three stages must be carried out at least implicitly as much as for the problem/solution approach as for any other.’<sup>84</sup>

One question that arises in this context concerns the way inventions that are made up of a mixture of technical and non-technical features are to be characterized. While it is legitimate for there to be a mix of technical and non-technical features when deciding patentable subject matter under section 1(2)/Article 52(1),<sup>85</sup> this is *not* the case when deciding whether there is an inventive step. As the Technical Board of Appeal said in *Comvik*, non-technical factors are not relevant when deciding whether there was inventive step. This means that where an invention consists of a mixture of technical and non-technical characters, the non-technical features should be ignored.<sup>86</sup>

This approach, which is actually a method of construing the claim to determine the technical features of the claimed invention, allows separating the technical from the non-technical features of the claimed invention even if they are intermingled in a mixed-type claim.<sup>87</sup>

The exclusion of non-technical features (which echoes the approach currently taken to subject matter in the United Kingdom) has important consequences for the fate of computer-related inventions (particularly those in relation to business and economics). Given that in many cases, the real innovations will be in solving managerial or business problems rather than in relation to information technology *per se*, the exclusion of non-technical features means that the inventive step is judged against standard computer technology. As *Pension Benefits Systems* and *Comvik* showed, one of the consequences of this is that such inventions are now excluded at the EPO on the basis that they lack inventive step. While UK courts have been highly critical of the way inventions are characterized for the purposes of an obviousness inquiry at the EPO, the approach outlined in *Comvik* and *Pension Benefits* has been adopted in subsequent decisions at the EPO.<sup>88</sup> This divergence in the way the invention

approach is because of a misunderstanding: in the United Kingdom, it is generally understood to refer to a real-world problem; at the EPO, it usually relates to an artificially constructed problem.

<sup>80</sup> *Brugger v. Medic Aid* [1996] RPC 635, 656 (the inventive concept must be characterized in light of the claims and must apply to all embodiments in the claim).

<sup>81</sup> [1997] RPC 1, 45. Lord Hoffmann identified the ‘inventive concept’ differently at different stages of his analysis. <sup>82</sup> [2004] EWHC 477, [43]–[45]. <sup>83</sup> [2009] EWCA Civ 646. <sup>84</sup> *Ibid.*, [20].

<sup>85</sup> *Kock & Sterzel/X-ray apparatus*, T 26/86 [1988] OJ EPO 19.

<sup>86</sup> Non-technical meaning ‘features relating to non-inventions within the meaning of Article 52(2): *Comvik/Two identities*, T 641/00 [2003] OJ EPO 319, [4].

<sup>87</sup> *Ibid.*, [7], following *Pension Benefits Systems*, T 931/95 [2001] OJ EPO 413.

<sup>88</sup> *Hitachi/Auction method*, T 258/03 [2004] OJ EPO 575, 583, 588; *Man/Provision of product-specific data*, T 1242/04 [2007] OJ EPO 421, 430.

is construed for the purpose of deciding inventive step must be seen in conjunction with the different approaches to patentable subject matter discussed earlier.<sup>89</sup> When seen in this broader perspective, it seems that while the tribunals in the United Kingdom and at the EPO may have adopted different approaches, in most cases they seem to lead to the same result.

## 5 IS THE INVENTION ‘OBVIOUS’?

Once the person skilled in the art and the invention have been identified, it is then possible to consider whether the invention is non-obvious.<sup>90</sup> While the question of whether an invention is non-obvious is widely regarded as one of the most difficult questions in a difficult area of law, in some ways it is not that different from other questions that the courts are required to consider, such as whether a contractual term is fair or whether evidence is relevant to an issue. In other ways, however, the task of determining whether a particular invention is non-obvious is not only different, but also more problematic. One reason for this is that in patent law, the tribunals are frequently required to pass judgment on complex and novel technologies. While in deciding whether a person acted negligently, judges may be able to rely on their background experience and knowledge, there may be little to guide them when they are forced to consider, for example, the inventiveness of a genetic modification. These problems are exacerbated by the fact that questions about the obviousness of an invention may arise some time after the invention was made. It also means that the way in which inventive step is determined will change as a technical field develops. For example, while in the 1980s the futuristic nature of molecular biology meant that the threshold for inventiveness was easily crossed, advances over the last few decades or so mean that the criteria will be harder to satisfy. In particular, as more ‘is known about the various genomes and the function of the constituent genes, the more difficult it will be to establish an inventive step for any isolated gene’.<sup>91</sup>

While ascertaining whether an invention is obvious is a difficult task, it is made easier by the fact that the question is asked from the perspective of the person skilled in the art. Although a non-specialist may find it difficult to assess whether an invention is obvious, a person who has knowledge of the area—particularly of what is regarded as normal progress in the field—will find it much easier to judge whether something is inventive. The task of determining whether an inventive step is present is also made easier by the fact that the courts invariably draw upon the evidence of experts. While experts are not able to take the place of the court in making the final decision as to whether an invention is obvious, they play an important role in providing the court with a sense of what would be normal in the field (and thus what would be unexpected and inventive).<sup>92</sup> However helpful these factors may be, it still leaves us with the question: what does it mean to say that an invention is ‘obvious’?<sup>93</sup>

<sup>89</sup> *Aerotel v. Telco Holdings* [2007] 1 All ER 225, [27], [105]–[106], *Pozzoli* [2007] EWCA Civ 588, [21].

<sup>90</sup> Where the problem-and-solution approach is followed, this question becomes whether the solution that an invention provides to the problem being addressed would have been obvious to the person skilled in the art.

<sup>91</sup> UK IPO, *Examination Guidelines for Patent Applications relating to Biotechnological Inventions* (September 2002) (*‘Biotechnology Guidelines’*), 8–9.

<sup>92</sup> *Hoechst Celanese v. BP* [1997] FSR 547, 563; *British Westinghouse v. Braulic* (1910) 27 RPC 209 (Fletcher Moulton LJ); *Brugger v. Medic Aid* [1996] RPC 635, 661.

<sup>93</sup> While the *Windsurfing* decision and the ‘problem-and-solution approach’ provide guidance as to how the invention is to be interpreted, they provide no assistance in determining whether an invention is obvious.

### 5.1 MEANING OF ‘INVENTIVE STEP’

One of the things on which courts and commentators regularly agree is that the qualitative and factual nature of the inquiry means that it is not possible to reduce obviousness to a precise verbal formula<sup>94</sup>—that is, it is not possible to define either ‘inventive step’ or ‘non-obvious’ in a meaningful or helpful way. While it may not be possible to formulate a test that enables us to predict with accuracy whether an invention will be regarded as obvious, it is possible to offer general guidance as to some of the factors that have shaped obviousness inquiries in the past.<sup>95</sup>

An important factor that has influenced decisions as to whether an invention is obvious is the extent to which the notional researcher would have had to exercise choice in the inventive process. In situations where there is no opportunity or need for an inventor to enter into and shape the research process—that is, where there is ‘no real choice’ or ‘the skilled man is in an inevitable “one-way street” ’<sup>96</sup>—the invention is likely to be obvious. In these situations, there is little or no scope for a researcher to act in a technically creative way. The converse of the need for choice is that there is a possibility that the research will fail. Where the research involves no risk or uncertainty—that is, where the results are predictable or likely—the invention is more likely to be obvious and thus unpatentable.

In a sense, the focus on the degree of choice or control exercised by the notional inventor builds upon the idea of invention as a process whereby the inventor (as creator) engages with nature to produce something new. More specifically, it builds upon a model of the invention as a process in which the inventor is actively involved with, and ultimately shapes, the final product. It presumes that there is a degree of human intervention in the production of the invention. In situations where there is no real need nor opportunity for a researcher to make decisions about the shape and nature of the research, there is no real potential for ‘human intervention’ and, as such, no inventiveness. This is the case, for example, where an invention results from the application of a known technique to a known problem, or where it was obvious to try the technique in question.<sup>97</sup> It is also the case where the person skilled in the art is ‘directly led as a matter of course’ to the invention.<sup>98</sup>

The mere fact that the notional researcher must have exercised a degree of choice and control over the research process is not in itself enough for the final product to be non-obvious. Put differently, while the exercise of (mental) labour and effort is a necessary condition for an invention to be non-obvious, it is not a *sufficient* condition. In order for an invention to be non-obvious, it needs to be shown that the way in which the choice is exercised is technically creative—a notion that changes not only across technologies (both in terms of how it is expressed and also the amount of ingenuity involved), but also over time.

A number of different factors have been taken into account when determining whether an invention is technically creative. At a general level, a distinction is drawn (similar to the distinction drawn in copyright law between ‘sweat of the brow’ and creativity) between the exercise of routine skills (the results of which are non-patentable) and inventive skills

<sup>94</sup> *John Manville’s Patent* [1967] RPC 479, 493 *per* Diplock LJ. Singer suggests 13 subtests: R. Singer, *The European Patent Convention* (1995), 182–3.

<sup>95</sup> The inquiry was said to be based on myriad factors, which ‘divide broadly into matters technical and matters historical’: *Saint-Gobain Pam SA v. Fusion Provida* [2004] All ER (D) 44, [19].

<sup>96</sup> *Rider/Simethicone tablet*, T 2/83 [1984] OJ EPO 265, [6]. See also *Hallen v. Brabantia* [1991] RPC 195 (CA).

<sup>97</sup> For a discussion of ‘obvious to try’, see *Generics (UK) v. H. Lundbeck* [2007] RPC 729, [70]ff; *Actavis v. Merck* [2007] EWHC 1311 (Ch), [42].

<sup>98</sup> *Olin Mathieson v. Biorex* [1970] RPC 157.

(the results of which are). This is based upon the idea that inventions that are based on laboratory techniques, are routine, or which follow ‘plainly or logically from the prior art’<sup>99</sup> do not contribute anything to ‘the real advancement of the arts’<sup>100</sup> and, as such, are not worthy of protection.

The courts have also taken care to ensure that only *technical* factors are taken into account when determining inventive step. To this end, it was held that the fact that a particular route was not tried for some time because it was believed that the outcome would not get regulatory approval did not make it a route that was not ‘obvious to try’.<sup>101</sup> Equally, while the activities of a manager or accountant might play an important role in shaping the research process, their input is not regarded as ‘technical’ and, as such, is not taken into account when deciding whether an invention is non-obvious.<sup>102</sup> This was exemplified in the *Pension Benefits Systems* decision when the Technical Board of Appeal said that ‘the improvement envisaged by the invention [which was for a computer apparatus for controlling a pension-benefits system] is an essentially economic one, i.e. lies in the field of economy, which, therefore cannot contribute to inventive step’.<sup>103</sup> As such, the claimed subject matter lacked inventive step. While the level of inventiveness required must be more than the mere application of time, money, and effort,<sup>104</sup> the courts have acknowledged that ‘in practice what is technically feasible is unlikely to be wholly isolated from what is commercially feasible’.<sup>105</sup> This means that in some cases, commercial and technical considerations may be so inextricably linked that commercial factors may be relevant when considering whether a contribution is technical.<sup>106</sup>

## 5.2 SPECIFIC APPLICATIONS

Given that decisions about the obviousness of an invention are closely linked to the facts of each case, it may be helpful to look at the way in which inventive step has been approached in a number of different circumstances.<sup>107</sup>

### 5.2.1 Technique or avenue for research

In some situations, the inventive step may lie in the technique or the avenue of research that is followed. In these circumstances, an invention will be obvious if a person skilled in the art *would* (rather than *could*) have taken the route in question.<sup>108</sup>

<sup>99</sup> *EPO Guidelines*, C-IV, 9. <sup>100</sup> *Atlantic Works v. Brady*, 107 US 192 (1883) (Justice Bradley).

<sup>101</sup> *Richardson Vicks Patent* [1995] RPC 568, 579–80.

<sup>102</sup> *Genentech’s Patent* [1989] RPC 147 (CA), 237 per Mustill LJ.

<sup>103</sup> *Pension Benefits Systems*, T 931/95 [2001] OJ EPO 413, [7].

<sup>104</sup> *Wiederhold/Two component polyurethane lacquer*, T 259/85 [1988] EPOR 209; *Medtronic/Defibrillator*, T 348/86 [1988] EPOR 159; *American Cyanamid (Dann’s Patent)* [1971] RPC 425, 451.

<sup>105</sup> *Ward Building v. Hodgson* SRIS/C/47/97 (23 May 1997) (Robert Walker J).

<sup>106</sup> If ‘the intellectual horizon of practical research and innovation is in part set by the economic milieu, commercial realities cannot necessarily be divorced from the kinds of practical outcome which might occur to the law’s skilled addressee as potentially worthwhile’: *Dyson Appliances v. Hoover* [2002] RPC 465 (CA), 493 per Sedley LJ; see also Arden LJ at 494–5. Applied by Aldous LJ in *Panduit v. Band-It* [2002] EWCA Civ 465, [49].

<sup>107</sup> For discussions focusing on biotechnological inventions, see EPO/USPTO/JPO, *Trilateral Project 24.1: Biotechnology Comparative Study on Biotechnology Patent Practice—Comparative Study Report* (2001); D. Schertenleib, ‘The Patentability and Protection of DNA-based Inventions in the EPO and the European Union’ [2003] *EIPR* 125; UK IPO, *Biotechnological Guidelines*, [17]–[30].

<sup>108</sup> *Rider/Simethicone tablet*, T 2/83 [1984] OJ EPO 265; *Genentech/Expression in yeast*, T 455/91 [1996] EPOR 85.

The person skilled in the art is assumed to have tried all avenues that have a good prospect of producing valuable results.<sup>109</sup> Factors that might in reality mean that one route is tried before another—such as low cost, easy availability of starting materials, or the likely time before the outcome of an experiment is known—are ignored, since they are not pertinent to whether or not the route is technically obvious. As Laddie J explained in *Brugger v. Medic Aid*:

[I]f a particular route is an obvious one to take or to try, it is not rendered any less obvious from a technical point of view merely because there are a number, and perhaps a large number, of other obvious routes as well.<sup>110</sup>

The position is the same if the route to an invention requires the person to take a succession of obvious steps.<sup>111</sup>

In order for a particular avenue of research to be obvious, there is no need for a researcher to be 100 per cent certain that the chosen route will lead to a particular result; thus ‘a route may still be an obvious one to try even if it is not possible to be sure that taking it will produce success, or sufficient success to make it commercially worthwhile’.<sup>112</sup> All that needs to be shown for an invention to be obvious is that there was a reasonable expectation of success, or that there was an expectation that the avenue of research ‘might well produce a useful desired result’.<sup>113</sup> In *John Manville’s Patent*,<sup>114</sup> Diplock LJ said that an invention would be obvious if the ‘person versed in the art would assess the likelihood of success as sufficient to warrant actual trial’. The test of ‘expectation of success’ cannot be applied in all situations. While the test is useful where predictable methods are relied on to solve technical problems (for example methods of genetic engineering, such as cloning and expressing DNA sequences), as the Technical Board of Appeal noted, the test is not useful where an invention depends on random techniques (such as mutagenesis). Where the outcome of a process depends on random events, luck, or chance, the Board said that it was not appropriate to attempt to evaluate the expectation of success: ‘Under these circumstances, as for example in a lottery game, the expectation of success always ranges irrationally from nil to high, so that it cannot be evaluated in a rational manner based on technical facts.’<sup>115</sup>

The inventiveness of a particular avenue of research can arise in a number of different ways.<sup>116</sup> In some fields, an avenue of research will not be obvious to try because the person skilled in the art considers the whole field to be unpredictable.<sup>117</sup> In other circumstances, the inventive step might arise from the fact that the research overcomes ‘prejudices in

<sup>109</sup> *American Cyanamid v. Ethicon* [1979] RPC 215, 266–7.

<sup>110</sup> [1996] RPC 635, 661.

<sup>111</sup> *VDO Adolf Schindling/Illuminating device*, T 324/94 [1997] EPOR 146. The number of alternative routes may be relevant, for if there is only one route, then even an unexpected result might be treated as being obvious: *Rider/Simethicone*, T 2/83 [1984] OJ EPO 265.

<sup>112</sup> *Brugger v. Medic Aid* [1996] RPC 635, 660.

<sup>113</sup> *Olin v. Mathieson Biorex* [1970] RPC 157, 187.

<sup>114</sup> [1967] RPC 479, followed under the 1977 Act in *Brugger v. Medic Aid* [1996] RPC 635, 661. See also *Chiron Corporation v. Murex Diagnostics* [1996] RPC 535, 557.

<sup>115</sup> *DMS/Astaxanthin*, T 737/96 (9 March 2000), [11]. Patentees argued that there was no reasonable expectation of achieving the solution offered by the patent. The Board rejected this test because it was not possible to make reasonable predictions about the possibility of success since the success of the invention depended on chance events (mutagenesis).

<sup>116</sup> A distinction is drawn between an exercise of ingenuity and a voyage of discovery: see *Beechams Group (Amoxycillin) Application* [1980] RPC 261 (CA) (Buckley LJ).

<sup>117</sup> *Genentech/Expression in yeast*, T 455/91 [1995] OJ EPO 684.

the art<sup>118</sup>—that is, it breaks with current views about an area of research. The decision to follow a particular line of research may be inventive where it had previously been thought that the area was either exhausted or fruitless. Similarly, the decision to follow a line of research may be inventive where all recent developments have exploited a different avenue.<sup>119</sup> As the EPO Guidelines explain:

[As] a general rule, there is inventive step if the prior art leads the person skilled in the art away from the procedure proposed by the invention. This applies in particular where a skilled person would not even consider carrying out experiments to determine whether these were alternatives to the known way of overcoming a real or imagined technical obstacle.<sup>120</sup>

Similarly, if a document in the prior art suggests that the route in question is unlikely to work but the patentee successfully took the route, it is likely that the invention will be patentable. In this context, it is important to keep in mind the comment by Lord Hoffmann that the mere fact that scientific opinion might have thought that something was ‘perfectly useless’ does not mean that practising it, or having the idea of making a preparation to do so, necessarily amounts to an inventive step. If this were allowed, it would lead to the paradoxical situation in which ‘anyone who adopted an obvious method for doing something which was widely practised, but the best scientific opinion thought was pointless, could obtain a patent’.<sup>121</sup>

A particular line of research will also be inventive where it would not have been pursued by the person skilled in the art. It is important to show as well that the research was selected for technical reasons; factors such as the cost of the research are not taken into account. In this context, it is interesting to note that, in *Biogen v. Medeva*,<sup>122</sup> the evidence suggested that, whereas a person less skilled in the art might have regarded the route as being obvious, a person skilled in the art would consider it so beset by obstacles as not to be worth trying.<sup>123</sup>

### 5.2.2 Overcoming obstacles

In some cases, the ingenuity and skill needed for an invention to be non-obvious lies not so much in the identification of a research problem or in reaching the final goal as it does in the way in which the obstacles and problems that arise en route to reaching the final goal are overcome.<sup>124</sup> Where unforeseeable difficulties exist, the outcome will be non-obvious if the route chosen to overcome those difficulties is inventive.<sup>125</sup> However, where the obstacles are overcome through tenacity, sound technique, or trial and error, the outcome remains obvious.<sup>126</sup>

<sup>118</sup> J. Schmidt-Szalewski, ‘Non-obviousness as a Requirement of Patentability in French Law’ (1992) 23 *IIC* 725, 735–6.

<sup>119</sup> If a particular route has not been considered for commercial reason, such a prejudice is irrelevant: see *Brugger v. Medic Aid* [1996] *RPC* 635.

<sup>120</sup> *EPO Guidelines*, C-IV, Annexe 4; *Mobay/Nethylenebis*, T 2/81 [1982] *OJ EPO* 394 (documents revealed a prejudice or general trend pointing away from the invention).

<sup>121</sup> *Ancare New Zealand Ltd’s Patent* [2003] *RPC* 139, 143 *per* Lord Hoffmann; [2002] *UKPC* 8 (PC).

<sup>122</sup> [1997] *RPC* 1. See also *Hoechst Celanese v. BP* [1997] *FSR* 547.

<sup>123</sup> *Raleigh Cycle v. Miller* (1946) 63 *RPC* 113; *Phillips Petroleum/Passivation of catalyst*, T 155/85 [1989] *EPOR* 164.

<sup>124</sup> *John Manville’s Patent* [1967] *RPC* 479.

<sup>125</sup> *Unilever/Chymosin*, T 386/94 [1997] *EPOR* 184, 194.

<sup>126</sup> *Genentech’s Patent* [1989] *RPC* 147 (CA), 276.

### 5.2.3 Selection of the problem

In some cases, the non-obvious nature of an invention may lie in the problem that has been selected, or in the selection of the goals to be pursued.<sup>127</sup> In situations where the inventiveness lies in the way in which the problem to be solved is chosen, for the resulting invention to be non-obvious, the perception of the problem must be beyond the capability of the person skilled in the art.<sup>128</sup> In *Boeing/General technical knowledge*,<sup>129</sup> the patent application related to a mechanism for extending a high-lift device (similar to a crane); the problem to be solved was how this could be done without using long cables. The solution developed by the applicant involved using short cables and pulleys. The Examining Division rejected the application on the basis of two pieces of prior art: one from the aircraft-engineering field; the other, a patent application directed at no specific field. The Technical Board of Appeal stated that inventiveness could not be found in the perception of the problem, since the overcoming of recognized drawbacks and the achievement of consequent improvements must be considered as the normal task of a skilled person.

### 5.2.4 Unexpected result

Another situation where the pursuit of an obvious route may result in a non-obvious invention is where the outcome is, in some important way, unexpected. If a route is obvious to try in response to a known problem, but the particular route chosen produces unexpected advantages, the result might be inventive. This is because the person skilled in the art would not associate the avenue of research with the final result.<sup>130</sup> Where the route taken merely produces a result of the sort that was expected, but more cheaply or efficiently, it is unlikely to be inventive. While an invention would be obvious where the skilled worker would think that there was a reasonable expectation of success, this would not be the case where the skilled worker required skills beyond the common general knowledge.<sup>131</sup>

### 5.2.5 Selection inventions

Particular problems arise where a patent is sought for a compound or class of compounds that are a selection from a broader class previously disclosed by a prior document. As we noted earlier, the patentability of the so-called 'selection inventions' in the United Kingdom was traditionally determined using the criteria set out in *IG Farbenindustrie AG's Application*.<sup>132</sup> However, following the Court of Appeal's 2010 decision in *Dr. Reddy's Laboratories (UK) v. Eli Lilly*,<sup>133</sup> *IG Farbenindustrie* is no longer followed in the United Kingdom. Instead, the question to be asked now is: does the invention make a technical contribution or is it merely an arbitrary selection? If the latter, the invention is obvious. This approach is based on the approach that has been developed by the Enlarged Board of

<sup>127</sup> Buckley LJ said 'it will suffice if it is shown that it would appear to anyone skilled in the art but lacking in inventive capacity that to try the step or process would be worthwhile . . . Worthwhile to what end? It must, in my opinion, be shown to be worth trying in order to solve some recognized problem or meet some recognized need': *Beecham/Amoxycillin* [1980] *RPC* 261, 290–1. For a discussion of the approach to take to 'obvious to try', see *Medimmune v. Novartis Pharmaceuticals* [2012] *EWCA Civ* 1234, [90]–[93].

<sup>128</sup> *Rider/Simethicone*, T 2/83 [1984] *OJ EPO* 265. With problem inventions, dangers of hindsight are particularly pronounced: *Bonzel v. Intervention (No. 3)* [1991] *RPC* 553.

<sup>129</sup> T 195/84 [1986] *OJ EPO* 121.

<sup>130</sup> *Rider/Simethicone*, T 2/83 [1984] *OJ EPO* 265. The discovery of an as-yet-unrecognized problem may give rise to patentable subject matter and, as an unexpected bonus, might be interpreted as a solution of an as-yet-unknown problem.

<sup>131</sup> *Omnipharm v. Meril* [2011] *EWHC* 3393 (Pat).

<sup>132</sup> (1930) 47 *RPC* 289.

<sup>133</sup> *Dr. Reddy's Laboratories (UK) v. Eli Lilly* [2009] *EWCA* 1362, [40]–[60].

Appeal at the EPO:<sup>134</sup> a ‘selection from the prior art which is purely arbitrary and cannot be justified by some useful technical property is likely to be held to be obvious because it does not make a real technical advance’.<sup>135</sup> As the UK Intellectual Property Office (IPO) *Manual of Patent Practice* states, the ‘unknown technical effect (ie advantage gained or disadvantage avoided) relied upon to justify a selection should be clearly identified or otherwise made plausible (eg discernable from tests provided in the application) in the specification at the time of filing’.<sup>136</sup> In order for a selection to be considered inventive, the UK IPO requires an applicant to show that:

- (i) the selection is not arbitrary and is justified by a hitherto unknown technical effect;
- (ii) the technical effect that justifies the selection of the group is one that can be fairly assumed to be produced by substantially all of the selected members; and
- (iii) the technical effect has been indicated in the specification as filed.<sup>137</sup>

### 5.3 SECONDARY EVIDENCE

While the question of whether an invention is obvious is ultimately decided by the tribunals, at times they have been willing to accept so-called ‘secondary evidence’ that supports a claim that an invention is non-obvious.<sup>138</sup> In effect, secondary evidence is evidence that acts as virtual proof that the invention involved an inventive step. That is, it provides a basis from which it can be inferred that the invention is non-obvious.

While supporters of secondary evidence argue that it makes decision making simpler and adds a degree of realism to the inquiry,<sup>139</sup> there is a growing consensus of opinion against placing too much reliance on it.<sup>140</sup> As Laddie J warned, secondary evidence ‘must not be permitted, by reason of its volume and complexity, to obscure the fact that it is no more than an aid in assessing the primary evidence’.<sup>141</sup> The growing suspicion about secondary evidence may reflect the fact that, with the increased specialization of the patent courts, the judges are happier to make technical judgments.<sup>142</sup> It also reflects a desire to keep the cost of patent litigation down, with secondary evidence seen as adding unnecessarily to the time and cost of litigation. With these general reservations in mind, we will now outline some of the forms of secondary evidence that have been used as proof of the non-obviousness of inventions.

<sup>134</sup> *Agrevo/Triazoles*, T 939/92 OJ EPO 309; *Wyeth/Dopamine agonists*, T 133/01 (30 September 2003) (a selection would be obvious if it did not make a real technical advance).

<sup>142</sup> Cf. A. Cambrosio, P. Keating, and M. MacKenzie, ‘Scientific Practice in the Courtroom’ (1990) 37 *Soc Probs* 275.

### 5.3.1 Closeness to prior art

One factor that has been used to indicate that an invention is obvious is its proximity to the prior art. If, for example, an invention combines two documents from neighbouring fields, it is likely to be obvious. In a famous case, the Court of Appeal held that a design for a sausage machine that merely combined a better way of cutting sausages with an existing filler was obvious.<sup>143</sup> It would be possible, however, for elements from different areas to be combined in a non-obvious way. Similarly, where a patent application is for a 'new use' that is analogous to the existing known uses of the thing, it is unlikely to be inventive. The use of a substance to reduce friction when it was already known that the substance operated as a rust inhibitor was held not to be analogous.<sup>144</sup>

### 5.3.2 Comparative efforts

The efforts of researchers working in the same field as the inventor have also been used as evidence to support non-obviousness.<sup>145</sup> If a number of people working in the same field were pursuing the same goal, the fact that the inventor was the only person to solve the problem successfully might imply inventiveness. This is on the basis that the corresponding failure of others indicates that the solution was not obvious. On the other hand, if other researchers were to make the same invention shortly after the applicant, this might imply that the invention was obvious.<sup>146</sup>

The courts have emphasized that evidence of comparative effort should be treated with caution. In order to be of any value, the comparative inventors must have been working from the same prior art as that cited in the non-obviousness inquiry. They must have also been pursuing the same goal and working for some time. If different starting points were used, no inference can be drawn as to the obviousness of the invention from their relative activities. As Laddie J said, the fact that 'a particular researcher working from an unpleaded piece of prior art, arrived at the invention in suit is of no assistance to the court'.<sup>147</sup>

### 5.3.3 Long-felt want

A related form of evidence that is used to support claims for inventive step is evidence that the invention satisfies a 'long-felt want'. The logic of this is straightforward: if people had been trying to solve a particular problem for many years and the solution had been obvious, someone would already have invented it.<sup>148</sup> Given the existence of a long-felt want, the fact that no one had previously developed the invention means that the invention must have been non-obvious. While long-felt want may indicate inventiveness, there might be other reasons why a development was not made earlier.<sup>149</sup> As such, it is necessary to be careful when inferring non-obviousness from a long-felt want: the need must have been known about for some time; there must have been an interest in developing the field;

<sup>147</sup> *Hoechst Celanese v. BP* [1997] FSR 547, 565.

<sup>148</sup> See *Brugger v. Medic Aid* [1996] RPC 635, 654; *Frisco-Findus/Frozen fish*, T 90/89 [1991] EPOR 42; *Air Products/Removal of hydrogen sulphide*, T 271/84 [1987] OJ EPO 405, [1987] EPOR 23.

<sup>149</sup> *Brugger v. Medic Aid* [1996] RPC 635, 654–5.

and the materials and information that form the basis of the solution must have been known and available.<sup>150</sup>

#### 5.3.4 Commercial success

In some situations, the fate of an invention after grant may provide evidence that suggests that the invention is non-obvious. For example, if an invention proves to be commercially successful or is widely copied by or licensed to competitors, it might be inferred that the invention involved a leap beyond what previously existed. As Tomlin J said in *Parkes v. Cocker*:

When it has been found that the problem had awaited solution for many years and that the device is in fact novel and superior to what had gone before and has been widely used and indeed in preference to alternative devices, it is practically impossible to say that there is not present that scintilla of invention necessary to support the patent.<sup>151</sup>

Evidence about the fate of an invention after grant that is introduced to prove inventive step needs to be treated with caution.<sup>152</sup> This is because there may be a number of reasons other than the non-obvious nature of an invention that explain the reaction of the market or competitors to the invention. For example, a competitor might have taken out a licence from a patentee to avoid threats of litigation, rather than because they regarded the patentee's invention as based on a significant technical advance. Similarly, commercial success might be attributable to factors such as advertising, distribution, marketing, or business acumen rather than to technical advance. For evidence of the fate of an invention after grant to be of value, it must suggest a link between the success of the product and the product's patented features.<sup>153</sup> As a result, commercial success will rarely be of significance unless it can be shown that there is evidence of a previous need for a solution to the particular problem, that the relevant prior art had been published for some time, and, most importantly, that the commercial success was attributable to the technical features of the invention.<sup>154</sup> It has also been suggested that the ability to rely on commercial success depends on being able to isolate what it is that has contributed to the success. As such, it has been suggested that commercial success would only ever be applicable for simple inventions.<sup>155</sup>

#### 5.3.5 The belief and conduct of the inventor

While the factual nature of the obviousness inquiry, which requires the court to pass judgment on the relative 'inventiveness' of the patent, may seem to suggest that the views of the inventor would be critical, as Jacob LJ said, such evidence is at best secondary evidence, which must be kept firmly in place. This helps to protect against the inventor who 'may have thought that what he did was little short of, or actually [was], a work of genius—that he was a latter-day Edison'.<sup>156</sup>

## INTERNAL REQUIREMENTS FOR PATENTABILITY

### CHAPTER CONTENTS

1 Introduction	574	3 Claims	583
2 Sufficiency of Disclosure	574	4 Improper Amendments	587

### 1 INTRODUCTION

In this chapter, we turn our attention away from the external criteria for patentability (subject matter, novelty, and inventive step) to focus on the internal criteria for patentability (so named because they focus on the way in which the patent is drafted). First, we consider the requirement of sufficiency of disclosure, which is the requirement that the invention be disclosed in a manner that is clear and complete enough for it to be performed by a person skilled in the art.<sup>1</sup> Second, we look at the form and content of the claims. In particular, we look at the requirements that the claims be clear and concise, be supported by the description, and relate to one invention.<sup>2</sup> Finally, we look at the requirement that the patent must not be amended in such a way that it acquires additional subject matter or extends the protection conferred by the patent.<sup>3</sup>

### 2 SUFFICIENCY OF DISCLOSURE

In determining how the scope of protection is to be determined, patent law has had to juggle a number of conflicting demands. On the one hand, it is necessary to ensure that patents offer sufficient rewards to encourage organizations to become involved in the patent process in the first place. To do this, the protection must be robust enough to ensure that competitors are unable to circumvent the patent, for example, by making minor changes to the invention. It is also important that the scope of protection coincides with the invention as disclosed in the patent. As Aldous LJ said:

I do not believe that the patent system should be used to enable a person to monopolise more than that which he has described in sufficient detail to amount to an enabling disclosure. If it was, it would stifle research.<sup>4</sup>

<sup>1</sup> PA 1977, ss 14(3), 72(1)(c); EPC 2000, Art. 83 (ex EPC 1973, Art. 83).

<sup>2</sup> PA 1977, s. 14(5)(c); EPC 2000, Art. 84 (ex EPC 1973, Art. 84).

<sup>3</sup> PA 1977, s. 76(2)–(3); EPC 2000 Regs, r. 136(1)–(2) (ex EPC 1973, Art. 123(2)–(3)).

<sup>4</sup> *American Home Products v. Novartis Pharmaceuticals* [2001] RPC 159 (CA), 179.

It is also important that the information disclosed in the patent is useful. It makes little sense to reward someone for disclosing their invention with a patent if a key element of the invention is missing, or if members of the public have to undertake additional or onerous research before they are in a position to reproduce the invention. In this section, we look at one of the most important rules used to regulate the scope of patent protection and, in so doing, help to resolve such issues.<sup>5</sup> This is the requirement that the patent application disclose the invention in a manner that is clear enough and complete enough for it to be performed by a person skilled in the art<sup>6</sup>—usually referred to as the ‘requirement for sufficiency of disclosure’. Failure to comply with the requirement for sufficiency gives rise to an objection before grant and is also a ground for revocation once a patent has been granted.<sup>7</sup>

In recent years, there have been a number of attempts to categorize the sufficiency examination according to the nature of the disclosure and the type of invention in question.<sup>8</sup> However, the Court of Appeal in *Kirin-Amgen* dismissed these efforts, saying that there is only one ground for sufficiency set out in the Patents Act 1977 (and the European Patents Convention 2000, or EPC 2000)—namely, that the specification must enable the invention to be performed.<sup>9</sup> This viewpoint has subsequently been confirmed by the House of Lords and then the Supreme Court on a number of occasions. This means that the test for sufficiency is the same whether the claimed invention is a class of chemical compounds, a DNA sequence, or a simple mechanical invention: in all cases, the disclosure in the specification must enable a person skilled in the art to manufacture the invention.<sup>10</sup> In Lord Hoffmann’s words, there must be an ‘enabling disclosure’.<sup>11</sup>

The question of whether the invention has been adequately disclosed is assessed as of the date of filing.<sup>12</sup> While the onus of establishing that an invention has been sufficiently disclosed initially falls upon the applicant/patentee, at trial the obligation is on the defendant to establish that the claims were insufficient.<sup>13</sup> It is not enough for a defendant merely to allege that a patent has not been disclosed in a way that enables the invention to be performed by a person skilled in the art.<sup>14</sup> Instead, a patent can only be challenged on the basis that the invention is not sufficiently disclosed if there are ‘serious doubts which

<sup>5</sup> See B. Domeij, ‘Patent Claim Scope: Initial and Follow-on Pharmaceutical Inventions’ [2001] *EIPR* 326.

<sup>6</sup> PA 1977, ss 14(3), 72(1)(c); EPC 2000, Art. 83 (ex EPC 1973, Art. 83).

<sup>7</sup> PA 1977, s. 72(1); EPC 2000, Art. 100 (ex EPC 1973, Art. 100).

<sup>8</sup> See Neuberger J’s attempt to divide the insufficiency examination into ‘classic insufficiency’ (where the teaching of the patent does not support that which the teaching specifically purports to deliver) and *Biogen* insufficiency (where claims are cast more widely than the teaching of the patent enables): *Kirin-Amgen v. Roche Diagnostics* [2002] *RPC* 1, [300].

<sup>9</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2003] *RPC* 31 (CA), 65; H. Sheraton and A. Sharples, ‘The Court of Appeal puts *Biogen* Insufficiency back where it Belongs’ [2002] *EIPR* 596. This issue was not addressed when the matter went to the House of Lords.

<sup>10</sup> *Biogen v. Medeva* [1997] *RPC* 1 (HL), 47 *per* Lord Hoffmann; *Asahi Kasei Kogyo* [1991] *RPC* 485 (HL), 536 *per* Lord Oliver, 547 *per* Lord Jauncey of Tullichettle; *Pharmacia Corporation v. Merck* [2002] *RPC* 775 (CA), 800.

<sup>11</sup> It is not helpful to talk of ‘*Biogen* insufficiency’, ‘classical insufficiency’, or ‘excessive claim breadth’, because these are merely different factual situations that give rise to different questions. For an attempt to break sufficiency down in these terms, see *Eli Lilly v. Janssen Alzheimer Immunotherapy* [2013] *EWHC* 1737 (Pat), [248]–[254].

<sup>12</sup> *Biogen v. Medeva* [1997] *RPC* 1 (HL), 53–4 *per* Lord Hoffmann; *Kirin-Amgen v. Transkaryotic Therapies* [2003] *RPC* 31 (CA).

<sup>13</sup> *Pharmacia v. Merck* [2002] *RPC* 775 (CA), 798.

<sup>14</sup> PA 1977, ss 14(3), 72(1)(c); EPC 2000, Art. 83 (ex EPC 1973, Art. 83).

are substantiated by verifiable facts'.<sup>15</sup> In the absence of evidence to this effect, the patent will be upheld.<sup>16</sup>

Underpinning the sufficiency requirement is the idea that a patentee should only receive protection for what they have disclosed to the public. In essence, this requires the court to compare what was claimed with what was disclosed. More specifically, as the Technical Board of Appeal at the European Patent Office (EPO) said, it requires the court to compare the extent of the patent monopoly as defined by the claims with the technical contribution to the art made by the patent.<sup>17</sup> In thinking about how this question is addressed, it is helpful to break it down into a number of subsidiary steps. First, it is necessary to determine the extent of the patent monopoly as defined by the claims. Second, it is then necessary to identify what is disclosed by the patent, which, as we will see, requires the court to identify the 'technical contribution' made by the invention. Once these two parameters have been identified, it is then possible to ask whether the technical contribution has been clearly and completely disclosed in the patent. We will look at each in turn.

## 2.1 WHAT IS THE EXTENT OF THE PATENT MONOPOLY?

In order to determine whether an invention has been sufficiently disclosed, it is first necessary to ascertain what has been claimed.<sup>18</sup> This process is essentially the same process as is used to determine the scope of protection as discussed in Chapter 22.

## 2.2 WHAT IS THE 'TECHNICAL CONTRIBUTION'?

Once the scope of the monopoly has been ascertained, it is then necessary to determine the 'technical contribution' made by the invention. The potential importance of this preliminary inquiry can be seen from the decision of *Generics (UK) v. H. Lundbeck*, which concerned a patent for a chemical product—namely, an enantiomer (escitalopram) of a racemate (citalopram). At first instance, Kitchin J held that the claims in question were invalid for insufficiency.<sup>19</sup> This was in contrast with the Court of Appeal<sup>20</sup> and the House of Lords, which found the claims to be valid.<sup>21</sup> The different findings in this case were directly attributable to the way in which the relevant technical contribution was identified. For Kitchin J, the technical contribution was determined by identifying the elements of the invention that contributed to its inventive step: the two methods of isolating the enantiomer that the patentee had discovered.<sup>22</sup> The Court of Appeal and the House of Lords, however, held that the relevant contribution was the invention (or product) *itself* and not, as Kitchin J had held, the inventive step that underpinned the invention (which

<sup>15</sup> The mere fact that a claim is broad is not in itself a ground for considering the application as not complying with the requirement for sufficient disclosure in EPC 1973, Art. 83 (now EPC 2000, Art. 83): *Harvard/OncoMouse*, T 19/90 [1990] OJ EPO 476. <sup>16</sup> T 9182/89 [1991] OJ EPO 391.

<sup>17</sup> *Exxon/Fuel Oils*, T 409/91 [1994] EPOR 149, [3.3] (emphasis added).

<sup>18</sup> The test is conducted on the basis of the specification as a whole, including the description and the claims: *Eli Lilly v. Human Genome Sciences* [2012] EWCA Civ 1185, [11], citing Kitchin J in the same case at first instance ([2008] EWHC 1903 (Pat), [239]).

<sup>19</sup> *Generics (UK) v. H. Lundbeck* [2007] RPC 729 (Pat).

<sup>20</sup> *Generics (UK) v. H. Lundbeck* [2008] RPC (19) 439 (CA).

<sup>21</sup> *Generics (UK) v. H. Lundbeck* [2009] UKHL 12.

<sup>22</sup> The problem for the patentee was that what had been claimed (the enantiomer made by *any* method) was greater than what had been disclosed (only two ways of making the enantiomer). Drawing on *Biogen* that a class of products could be enabled only if the person skilled in the art could perform or work the invention in respect of all members of the class, Kitchin J held that the claims were insufficient.

was the method of making the product). In reviewing the first-instance judgment, the Law Lords said that the problem with Kitchin J's judgment was that he had confused inventive step with invention. As Lords Walker and Neuberger explained, 'technical contribution' is different from 'inventive concept': inventive concept is concerned with the identification of the core (or kernel, or essence) of the invention, whereas the inventor's technical contribution to the art is concerned with the *evaluation* of its inventive concept—that is, how far forward it has carried the state of the art.<sup>23</sup> The mistake that Kitchin J had made was to focus on the elements of the invention that contributed to its inventive step—the method of isolating the enantiomer—rather than on what had been claimed—namely, the enantiomer as a product. As we will see below, the finding that the technical contribution was a product *per se* has important consequences for the type of information needed for a patent to satisfy the requirements of sufficiency.

The upshot of this is that when determining what the relevant technical contribution is, it is important to focus on the invention as claimed, and not the features or qualities that make that invention 'inventive' or, presumably, novel.

### 2.3 HAS THERE BEEN A CLEAR AND COMPLETE DISCLOSURE?

Once the scope of the monopoly and the relevant technical contribution have been identified, it is then necessary to ask whether the invention-as-claimed is disclosed in a manner that is clear enough and complete enough for it to be performed or carried out by a person skilled in the art. This is done to ensure that the claim does not 'exceed the technical contribution to the art embodied in the invention'.<sup>24</sup> This means, for example, that if an invention is a compound that reduces pain, the specification must contain sufficient information to enable compounds with that attribute to be manufactured.<sup>25</sup> It also means that the scope of the monopoly must coincide with (or be less than) the technical contribution made by the invention.

Sufficiency is decided by the court judged through the eyes of a person skilled in the art. As the Patents Act 1977 and the EPC 2000 make clear, the specification must be disclosed in such a way that it can be performed by *the person skilled in the art*. The notional skilled person employed in this context is similar to the notional interpreter used to assess inventive step. One difference is that whereas for the purposes of evaluating inventive step the skilled person has only knowledge of the prior art, for the purpose of evaluating sufficiency of disclosure the skilled person has knowledge of the prior art *and* of the invention as disclosed.<sup>26</sup>

In recognition of the fact that many (if not most) patents require some degree of fine-tuning before they can be put into practice, the patent specification does not need to

<sup>23</sup> *Generics (UK) v. H. Lundbeck* [2009] UKHL 12, [30] *per* Lord Walker.

<sup>24</sup> *Biogen v. Medeva* [1995] RPC 1 (HL), 25, 51. <sup>25</sup> *Pharmacia v. Merck* [1997] RPC 1 (CA), 798.

<sup>26</sup> *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 120; *Schlumberger Holdings v. Electromagnetic Geoservices* [2010] EWCA Civ 819, [61]. For the purposes of determining sufficiency of disclosure, the person skilled in the art is non-inventive, is able to make use of common general knowledge, and is able to perform non-inventive experiments. The notional interpreter 'is not to be expected to exercise any invention nor any prolonged research or inquiry or experiment. He must, however, be prepared to display a reasonable degree of skill and common knowledge of the art in making trials and to correct obvious errors in the specification if a means of correcting them can readily be found': *Mentor v. Hollister* [1993] RPC 7, 13. See also *Valensi v. British Radio Corporation* [1973] RPC 337; *Edison & Swan Electric Light v. Holland* (1889) 6 RPC 243. While the skilled reader is presumed to have access to everything in the state of the art, this does not mean that they also have *knowledge* of everything in the state of the art: *EPO Guidelines*, C-IV, 9.6.

spell out every specific detail necessary for an invention to be performed.<sup>27</sup> In line with this, it has been accepted that in putting an invention into practice the skilled person is able to make use of common general knowledge,<sup>28</sup> to engage in routine laboratory tests, to correct obvious errors in the specification,<sup>29</sup> and does not have to be told what is self-evident.<sup>30</sup> There are, however, two important limitations on the types of activity that the person skilled in the art can legitimately be called upon to engage in when implementing the invention. The first is that if the person skilled in the art needs to use any inventive skill when putting the invention into practice, the invention will not have been disclosed sufficiently and, as such, will be invalid.<sup>31</sup> The second limitation is that the invention must be able to be reproduced without ‘undue burden’.<sup>32</sup> ‘Undue burden’ is a catch-all phrase that covers activities that the courts deem to be onerous.<sup>33</sup> This has been the case, for example, where the patent required the skilled person to undertake lengthy experiments before they are able to perform the invention,<sup>34</sup> or where the reproduction of the invention depended on a ‘stroke of luck’.<sup>35</sup> Rejecting the argument that timescale should not be taken into account when assessing sufficiency, Jacob LJ said that:

[P]atents are meant to teach people how to do things. If what is “taught” involves just too much to be reasonable for all the circumstances including the nature of the art, then the patent cannot be regarded as an “enabling disclosure”. That is the basic concept behind the requirement of sufficiency and one that lies at the heart of patent law . . . The setting of a gigantic project, even if merely routine, will not do.<sup>36</sup>

It is important to note that the information that has to be disclosed for a person skilled in the art to perform an invention always varies depending on the nature of the invention and the circumstances of the case.<sup>37</sup> In some situations, the mere disclosure of a formula

<sup>27</sup> *Valensi v. British Radio Corp.* [1973] RPC 337, 375; *Mentor v. Hollister* [1993] RPC 7, 12.

<sup>28</sup> *Genentech/t-PA*, T 923/92 [1996] EPOR 275, 302.

<sup>29</sup> *Air Products/Redox catalyst*, T 171/84 [1986] OJ EPO 95, [1986] EPOR 210.

<sup>30</sup> *Biogen v. Medeva* [1995] RPC 1 (HL), 25, 98; *Chiron v. Organon (No. 12)* [1994] FSR 153, 185.

<sup>31</sup> *Mentor v. Hollister* [1993] RPC 7, 12; *Valensi v. British Radio Corp.* [1973] RPC 337, 377; *Wacker-Chemie*, T 931/91 (20 April 1993).

<sup>32</sup> *Unilever/Cleanser composition*, T 226/85 [1988] EPOR 18, [1988] OJ EPO 336; *MedImmune v. Novartis Pharmaceuticals* [2011] EWHC 1699 (Pat), [458]–[484]; *Sandvik Intellectual Property v. Kennametal* [2011] EWHC 3311 (Pat), [106]–[124]; *Hospira v. Novartis* [2013] EWHC 516 (Pat), [182].

<sup>33</sup> The ‘whole subject-matter which is defined in the claim should be enabled without undue burden by the teaching of the patent specification’: *Weyershauser/Cellulose*, T 727/95 [2001] OJ EPO 1, [7]; *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 119 (in which the TBA said the ‘claims need to provide instructions which are sufficiently clear for the skilled person to reduce them to practice without undue burden, i.e. with no more than a reasonable amount of experimentation and without applying inventive skill’). The person skilled in the art should not be called upon to make a prolonged study of matters that present some initial difficulty: *Valensi v. British Radio Corp.* [1973] RPC 337; *Badische Anilin v. Société Chimique* (1898) 15 RPC 359.

<sup>34</sup> *DSM NV’s Patent* [2001] RPC 675, 712–16 (cloning, sequencing, and recombinant expression of the gene for phytase from fungus held to be extremely broad and unworkable, because the skilled person would have had to depart from the patent and to experiment over what may have been a long period of time to achieve the desired goal); *Icos Corporation/Seven transmembrane receptor* [2002] OJ EPO 293 (OD), 300 (disclosure of a predicted function of a protein in combination with a method of verification of this function was insufficient because the skilled person was required to test millions of available compounds). Cf. *Bayer Crop Science/Safeners*, T 1020/98 [2003] OJ EPO 533, 542 (the actual time taken was not relevant when deciding whether a claim could be performed if clear and concise).

<sup>35</sup> *Weyershauser/Cellulose*, T 727/95 [2001] OJ EPO 1, [10].

<sup>36</sup> *Halliburton Energy Services v. Smith International (North Sea)* [2006] EWCA Civ 1715, [17]–[18].

<sup>37</sup> Sufficiency is ‘highly sensitive to the nature of the invention’: *Kirin-Amgen v. Hoechst Marion Roussel* [2004] UKHL 46, [200]; *H. Lundbeck A/S v. Generics (UK) Ltd and ors* [2008] EWCA Civ 311, [35]; *Mentor Corporation v. Hollister* [1993] RPC 7, 12; *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 120.

may be sufficient for the invention to be performed or worked.<sup>38</sup> In other cases, it may be necessary for both the formula and the starting materials (or means) to be disclosed before a person skilled in the art can put the invention into practice. While the question of whether a specific invention has been adequately disclosed always depends on the particular facts in hand, it may be helpful to highlight three types of invention or claims that give rise to particular problems. These are representative claims, product claims, and biological inventions.

### 2.3.1 Representative claims

As we explained earlier, it is accepted practice for patents to be granted for extremely large classes of compounds, DNA sequences, and the like.<sup>39</sup> This is particularly the case in relation to chemical and biotechnological inventions, for which patents may claim hundreds of thousands (sometimes millions) of compounds. The test for whether a patent for a large class of compounds has been sufficiently disclosed is the same test as is used to examine a patent for a simple mechanical device. So long as the patent equips a person skilled in the art with the means to perform the invention without undue burden<sup>40</sup> or the need to use inventive skills,<sup>41</sup> the invention will be sufficiently disclosed. This is subject to the rider that the applicant must be able to show that the specification discloses a principle of general application that is shared by all members in the class. As Lord Hoffmann explained in *Biogen*, if 'the invention discloses a principle capable of general application, the claims may be in correspondingly general terms'.<sup>42</sup> This means that if the patentee has disclosed something 'which is common to the class, he will be entitled to a patent for all products of that class . . . even though he has not made more than one or two of them'.<sup>43</sup>

The information needed for a patent over a class of compounds to be disclosed sufficiently differs depending on the type of invention in question. In some situations, this might include details about the relationship between the chemical structure and the activities that the chemicals perform.<sup>44</sup> In other cases, knowledge of an appropriate DNA sequence might provide the skilled person with enough information to rework the invention.<sup>45</sup> Another example is offered by the *Genentech* decision<sup>46</sup> in which the applicants invented a general principle that enabled plasmids to control the expression of polypeptides in bacteria. Because there was no reason to believe that the invention would not

<sup>38</sup> *Merck/Starting compounds*, T 51/87 [1991] OJ EPO 177.

<sup>39</sup> '[M]ost claims are generalizations from one or more particular examples. The extent of generalization permissible is a matter which the examiner must judge in each particular case in the light of the relevant prior art': *EPO Guidelines*, C-III 6.2. See K. Luzzatto, 'The Support and Breadth of Claims to New Classes of Chemical Compounds' [1989] *Patent World* 21.

<sup>40</sup> *Unilever/Cleanser composition*, T 226/85 (17 March 1987).

<sup>41</sup> *Wacker-Chemie*, T 931/91 (20 April 1993).

<sup>42</sup> *Biogen v. Medeva* [1997] RPC 1 (HL), 49. In so doing, Lord Hoffmann rejected a line of cases that had suggested that a single disclosure of one way of making the product was sufficient to disclose the invention, i.e. the so-called 'one way' rule derived from *Molnlycke v. Proctor and Gamble (No. 5)* [1992] FSR 549 and *Chiron Corporation v. Organon Teknika (No. 3)* [1994] FSR 202 (which is based on a misreading of *Genentech I/Polypeptide expression*, T 292/85 [1989] EPOR 1). On this, see R. Freeland and G. Blachman, 'The Law of Insufficiency: Is *Biogen* Still Good Law?' (2009) 31 *EIPR* 478, 479.

<sup>43</sup> *Biogen v. Medeva* [1997] RPC 1 (HL), 49 *per* Lord Hoffmann. A principle of general application 'means an element of the claim which is stated in general terms. Such a claim is sufficiently enabled if one can reasonably expect the invention to work with anything that falls within the general term': *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 169 (HL), [112].

<sup>44</sup> See *Monsanto v. Merck* [2000] RPC 709, [7].

<sup>45</sup> *Weyershauser/Cellulose*, T 727/95 [2001] OJ EPO 1.

<sup>46</sup> *Genentech/Polypeptide expression*, T 292/85 [1989] EPOR 1.

work equally well with any plasmid, bacterium, or polypeptide, the patent for more general claims was granted. Problems arise, however, if the patentee is unable to show that there is something that unifies the general class. This would be the case, for example, where a patentee discovers:

. . . a new product which has the beneficial effect but cannot demonstrate that there is a common principle by which that effect will be shared by other products of the same class[;] he will be entitled to a patent for that product but not for that class: even though some may turn out to have the same beneficial effect.<sup>47</sup>

In the absence of a unifying principle, the claim will be for a generalized description of a large number of compounds, rather than a true class.<sup>48</sup>

The criteria which a patentee must comply with to ensure that a patent over a class of compounds satisfies the sufficiency requirement are relatively clear. The same cannot be said, however, when the onus shifts to the defendant to show that such a patent is insufficient. In particular, there are doubts about the evidence that a defendant needs to produce to show that a class of compounds has not been disclosed in a manner that is clear enough and complete enough for it to be made by a person skilled in the art. Is it enough, for example, for an opponent to show that of a class of 1,000 compounds, one compound cannot be manufactured? If not one, how many?<sup>49</sup>

There is no easy answer to this question. In part, the answer will depend on the invention in question, the prior art in the field, and how developed the relevant discipline is.<sup>50</sup> Having said this, it is possible to make some general comments as to how insufficiency is calculated. The first and most straightforward point, which flows from the fact that the onus is on the defendant to show that claims are insufficient,<sup>51</sup> is that a patent will be upheld if the defendant fails to provide evidence showing that at least one of the claims cannot be performed.<sup>52</sup> The courts have also stressed that when carrying out experiments to test whether the invention is insufficient and thus invalid, the defendant should select representative samples, rather than samples that are likely to fail. This follows from the fact that the person skilled in the art will be motivated by a desire to succeed, not to fail.<sup>53</sup> The courts have also suggested that where a defendant introduces experimental evidence

<sup>47</sup> *Biogen v. Medeva* [1997] RPC 1 (HL), 49 per Lord Hoffmann; *AHP v. Novartis* [2001] RPC 159 (CA), 176; *Pharmacia v. Merck* [2002] RPC 775 (inability to point to any characteristic that unified an otherwise unpredictable class of chemical compounds meant that the claims were insufficient and thus invalid).

<sup>48</sup> *Monsanto v. Merck* [2000] RPC 709, [67]; approved on appeal in *Pharmacia v. Merck* [2002] RPC 799 (CA). See also *Biogen v. Medeva* [1997] RPC 1 (HL), 47 ('may claim every way of achieving a result, when it enables only one way and it is possible to envisage other ways of achieving that result which makes no use of the invention'), drawing on *Genentech I/Polypeptide expression*, T 292/85 [1989] OJ EPO 275.

<sup>49</sup> *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 119 (the essential features of the claimed invention must be capable of being performed); *Exxon/Fuel oils*, T 409/91 [1994] EPOR 149; *Sumitomo/Vinyl chloride resins*, T 14/83 [1984] OJ EPO 105; *Unilever/Stable bleaches*, T 226/85 [1989] EPOR 18.

<sup>50</sup> The tribunals seem to have taken a more relaxed approach in relation to biotechnological inventions than chemical inventions.

<sup>51</sup> *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 31 (CA), 71.

<sup>52</sup> The importance of this can be seen in *Kirin-Amgen*, *ibid.*, in which the absence of any evidence from the defendant that a single DNA sequence could not be worked meant that the ground of insufficiency was not established. Allowance is made for situations in which a few minor or marginal embodiments cannot be made to work: *Filtration/Fluid filter cleaning system*, T 126/89 [1990] EPOR 292; *Sumitomo/Vinyl chloride resins*, T 14/83 [1984] OJ EPO 105.

<sup>53</sup> *British Thomson-Houston v. Corona Lamp Works* (1922) 39 RPC 49, 89; followed in *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 31 (CA), 70-1.

that casts doubts over the sufficiency of a patent, it may hinder the patentee's case if they do not provide experimental evidence to the contrary.<sup>54</sup>

### 2.3.2 Product claims

Following the House of Lords' decision of *Biogen v. Medeva*, there was some uncertainty about the level of information needed for a product claim to satisfy the requirement of sufficiency of disclosure. As we explained earlier, one of the notable things about a product claim is that it not only covers the article or substance in question *per se*, but also extends to include the right to control how the product is made or used.<sup>55</sup> In this context, the question arose: was it necessary, following the approach in *Biogen*, for a patentee to disclose all of the different ways in which the product was made (and, in so doing, ensure that the scope of the monopoly coincided with what was disclosed)? Or was it sufficient for them merely to disclose the product (and one way of making the product)? After some confusion, following *Generics (UK) v. H. Lundbeck*,<sup>56</sup> it is now clear that there is no need for a patentee to disclose all of the ways in which a product might be made that fall within their control. So long as the patentee discloses one way of creating the product, they will disclose the product. As Lord Hoffmann LJ said, 'when a product claim satisfies section 1 of the 1977 Act, the technical contribution to the art is the product and not the process by which it is made, even if the process was the only inventive step',<sup>57</sup> and importantly, with an 'ordinary product claim, the product is the invention. It is sufficiently enabled if the specification and common general knowledge enable the skilled person to make it. One method is enough.'<sup>58</sup> As such, a patent for a product would be sufficiently enabled if the patent discloses at least one way of making it. While with product-by-process claims, it is necessary to disclose every way of making the product, with product claims, so long as the patent discloses (at least) one way in which to make the product in question, it would be sufficiently disclosed.<sup>59</sup>

It is important to ask, as Kitchin J did at first instance in *Generics (UK) v. H. Lundbeck*, whether the sufficiency requirement is doing its job properly in relation to product claims. The concern here is that with product claims, there is a potential discrepancy between what is invented and what is protected—a concern, as Jacob LJ said in the Court of Appeal, that the patentee gets 'more than he deserves'.<sup>60</sup> While Hoffmann LJ in *Lundbeck* was sympathetic to Kitchin J's 'instinctive reaction to the inherent breadth of a product claim',<sup>61</sup> he was not willing to accept that the requirement of sufficiency of disclosure could be used as a means to overcome the potential problem with *per se* claims—namely, that while they may disclose only one way of making a product, they

<sup>54</sup> In *Pharmacia v. Merck* [2002] RPC 775 (CA), 806, Aldous LJ said that the 'patentees had ample opportunity to do experiments in reply to demonstrations that the compounds were not representative. They had equipment and the knowledge to do the experiments, but failed to do them.' See also *AgrEvo/Triazoles*, T 939/92 [1996] OJ EPO 309, [2.5.4].

<sup>55</sup> On the difference between product claims and product-by-process claims, see *Generics (UK) v. H. Lundbeck* [2009] UKHL 12, [22]–[25]. <sup>56</sup> *Ibid.*

<sup>57</sup> *Biogen v. Medeva* [1997] RPC 1 (HL), 49 *per Hoffman LJ*; *Generics (UK) v. H. Lundbeck* [2008] RPC (19) 439 (CA), [35] *per Hoffman LJ*. For discussion, see *Generics (UK) v. H. Lundbeck* [2009] UKHL 12 (HL), [14].

<sup>58</sup> *Generics (UK) v. H. Lundbeck* [2008] RPC (19) 439 (CA), [27] *per Hoffman LJ*.

<sup>59</sup> Arguably this would also apply to the situation in which the claim is to a product of a known goal, the properties of which are known, but which no one knows how to make. If the patentee finds, at minimum, one way of making the product, the claim would be sufficiently disclosed: *Kawasaki Steel Corporation*, T 595/90 [1994] OJ EPO 695. On this, see A. Batteson, 'Lundbeck v. Generics: "Biogen Insufficiency" Explained' (2009) 31 EIPR 51, 52.

<sup>60</sup> *Generics (UK) v. H. Lundbeck* [2008] RPC (19) 439 (CA), [57].

<sup>61</sup> See *Generics (UK) v. H. Lundbeck* [2007] EWHC 1040, [2007] RPC (32) 720 (Pat), [27].

are given control over the product and, as such, over all ways of making that product. Given that this undermines a core principal of patent law (namely, that the patentee receives protection only for what they have invented and disclosed) and that it is highly unlikely that this issue will be resolved at the legislative level, this is an area in which judicial creativity may be warranted.

### 2.3.3 Biological inventions

As we saw earlier, one of the problems that confronted applicants in their attempt to patent biological invention, whether it be new plants, micro-organisms, or the products of modern biotechnological research, was the concern that they would not be able to describe their new creations in such a way that the inventions would satisfy the requirement for sufficiency of disclosure. The reason for this is that where an invention depends on the use of living materials such as microorganisms or cultured cells, or where the invention is for a new type of plant or animal, it may be impossible to describe the invention so that the public is able to make the invention.<sup>62</sup> Following a practice started in the United States in the 1930s (which borrowed directly from taxonomic practices),<sup>63</sup> the EPC 2000<sup>64</sup> and the Patents Act 1977<sup>65</sup> addresses this problem by providing that if an invention involves biological material that cannot be described in a way that enables the invention to be carried out by a person skilled in the art, the applicant must deposit a sample of this biological material at a ‘recognized institution’ (or depositary).<sup>66</sup> These issues were also addressed in the Biotechnology Directive.<sup>67</sup> The application must contain such relevant information as is available on the characteristics of the biological material.<sup>68</sup> If an applicant intends to rely upon deposit as a way of satisfying the requirement for sufficiency of disclosure, it is important that the patent makes specific reference to the deposit; failure to do so may mean that the deposit cannot be relied upon.<sup>69</sup>

The extent to which an applicant needs to rely upon a deposit to satisfy the requirement for sufficiency depends on the nature of the invention in question. The material deposit is not mandated for biological inventions; it is an option that may be relied upon if needed. While it is more likely that traditionally bred plants will need to be deposited, this is not necessarily the case for many of the outcomes of molecular biology, which are able to be described in a way that enables the invention to be replicated by a person skilled in the art. This can be seen, for example, in the *Wisconsin Alumni Research Foundation/Stem cell* decision,<sup>70</sup> where the Technical Board of Appeal was called upon to consider whether in the absence of a reference to a deposit and of specific examples, the description contained sufficient information to enable the skilled person to prepare the claimed human embryonic stem-cell cultures without excessive burden or undue experimentation.<sup>71</sup> The Board accepted that the skilled person would have been in a position to prepare and grow

<sup>62</sup> In *American Cyanamid (Dann)’s Patent* [1971] RPC 425, the House of Lords held that there was no obligation on a patentee under the PA 1949 to supply the microorganism to the public.

<sup>63</sup> See A. Pottage and B. Sherman, *Figures of Invention* (2010). <sup>64</sup> EPC 2000 Regs, r. 31.

<sup>65</sup> PA 1977, s. 125A, introduced by CDPA 1988, Sch. 5, para. 30.

<sup>66</sup> Recognized depositary institutions include all international depositaries under the 1977 Treaty on the International recognition of the Deposit of Micro-organisms (the ‘Budapest Treaty’) (modified in 1980). This established minimum requirements for maintaining an international depositary for microorganisms (the United Kingdom joined on 29 December 1988). In December 2013, there were 79 contracting parties to the Treaty, with 42 international depositary authorities (IDAs).

<sup>67</sup> Biotech. Dir., Arts 13–14; implemented in the United Kingdom by the Patents (Amendment) Rules 2001 (SI 2001/1412). <sup>68</sup> EPC 2000 Regs, r. 31(1)(b); PA 1977, s. 125A; PA Rules, r. 13 (1), Sch. 1.

<sup>69</sup> *Wisconsin Alumni Research Foundation/Stem cell*, T 1374/04 [2007] OJ EPO 313, [10].

<sup>70</sup> *Ibid.* <sup>71</sup> *Ibid.*

human embryonic cell lines and, as such, that the invention complied with Article 83 of the EPC 1973 (now Article 83 of the EPC 2000).

### 3 CLAIMS

The claims play a crucial role in the patent system, not least because they define the scope of protection.<sup>72</sup> Given this, it is not surprising that there are a number of restrictions on how the claims are drafted. Here we focus on the requirements in section 14(5)(c)/Articles 82 and 84 that the claims must be clear and concise (clarity), be supported by the description, and relate to one invention or group of inventions. Before looking at these in more detail, it is necessary to make some comments about the consequences of non-compliance with these provisions.

As we mentioned earlier, non-compliance with the requirement for sufficiency of disclosure gives rise to an objection before grant.<sup>73</sup> It is also a ground for revocation after grant. This is because insufficiency is specifically listed as a ground for revocation in section 72(1).<sup>74</sup> One of the notable features of the revocation provisions is that they do not mention any of the criteria listed in section 14(5)(c) or its EPC equivalents as the basis on which a patent may be revoked. (Because unity of invention has traditionally only ever arisen before grant, these discussions are limited to the requirements that the claims be ‘clear and concise’ and that they be ‘supported by the description’.<sup>75</sup>) On a strict reading, this suggests that while non-compliance with section 14(5)(c)/Articles 82 and 84 will be a basis on which a patent will not be granted, non-compliance is *not* a ground for revocation once a patent has been granted. This strict reading was followed when the matter first came before the courts in the United Kingdom, where it was held that while failure to comply with section 14(5)(c) could be objected to prior to grant, it was not a ground on which a patent could be challenged after grant.<sup>76</sup>

This question was revisited by the House of Lords in *Biogen v. Medeva*, in which Lord Hoffmann said that:

[The] substantive effect of section 14(5)(c), namely that the description should, together with the rest of the specification, constitute an enabling disclosure, is given effect by section 72(1)(c). There is accordingly no gap or illogicality in the scheme of the Act.<sup>77</sup>

A similar position was adopted at the EPO, where it was said that:

Although Art. 84 is not open to objection under the terms of Art. 100 EPC [1973], it may nevertheless constitute a proper ground for revoking a patent if objections to either clarity or support arise out of amendments to the patent as granted.<sup>78</sup>

These rulings suggest that while failure to comply with Article 14(5)(c) is not a ground that could be *directly* argued against after grant, the requirements that the claims be ‘clear

<sup>72</sup> PA 1977, s. 14(5)(a). <sup>73</sup> PA 1977, s. 14(3); EPC 2000, Art. 100 (ex EPC 1973, Art. 100).

<sup>78</sup> *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 119. EPC 1973, Arts 84 and 100, are the same under EPC 2000, Arts 84 and 100.

and concise' and that they be 'supported by the description' could *indirectly* be taken into account when deciding insufficiency. In effect, it was suggested that the section 14(5)(c) requirements could be subsumed, after grant, within section 14(3)/section 72(1).

This reading of *Biogen* was thrown into doubt by the Court of Appeal decision in *Kirin-Amgen*,<sup>79</sup> where the Court considered whether the section 14(5)(c) requirements could indirectly be taken into account via section 14(3) to revoke a patent. This was triggered by the argument that there were problems in the way in which claims had been drafted (namely, that there was no standard against which the named recombinant polypeptide could be tested). The Court of Appeal began by reiterating the line taken pre-*Biogen* that while clarity and support were relevant when assessing whether to grant a patent, they were not express grounds for revocation under section 72(1).<sup>80</sup> (The Court noted that this was also the position under the EPC.) Because of this, the only way in which the claims could have been revoked in the circumstances was on the basis that they were insufficient. Following *Biogen*, the Court of Appeal said that the test for whether claims were insufficient under section 72(1)(c) was whether the disclosure was enabling. On the facts, the Court said that while the claims may have lacked clarity, nonetheless the person skilled in the art could still implement the invention—that is, because the invention could be performed without undue effort, there had been an enabling disclosure. As such, the claims were not insufficient. The Court also said that that it believed that the defendant's challenge was not an attack on the basis of insufficiency; rather, it was 'an attack of lack of clarity dressed up to look like insufficiency'.<sup>81</sup> In relation to the suggestion that the section 14(5)(c) criteria of clarity and support might indirectly be raised to undermine a patent after grant, the Court of Appeal said that 'the fact that a claim is not clear or is not supported by the specification is likely to be irrelevant'.<sup>82</sup> The Court also added that it could 'see no reason to stretch s72(1)(c) to seek to cover issues of lack of clarity of claiming as patentees will not be able to establish infringement of unclear claims'.<sup>83</sup>

The nature of the relationship between clarity and sufficiency, and the role that these concepts are able to play after grant, were also raised when *Kirin-Amgen* was heard by the House of Lords.<sup>84</sup> Lord Hoffmann began by noting that at first instance, the judge had held that lack of clarity had made the specification insufficient. He also noted that the Court of Appeal disagreed, saying that failure to specify which product the skilled person needed to use to make the invention was 'lack of clarity dressed up to look like insufficiency'. In reinstating the judge's finding at first instance that the claim in question was invalid for lack of sufficiency, Lord Hoffman said:

[I]f the claims says that you must use an acid, and there is nothing in the specification or context to tell you which acid, and the invention will work with some acids but not with others but finding out which ones work will need extensive experiments, then that in my opinion is not merely lack of clarity; it is insufficiency. The lack of clarity does not merely create a fuzzy boundary between that which will work and that which will not. It makes it impossible to work the invention at all until one has found out what ingredient is needed.<sup>85</sup>

In so ruling, the House of Lords in *Kirin-Amgen* not only reinstated the decision at first instance, but also clarified that clarity and lack of support continue to have a role to play in deciding questions of validity after grant.

### 3.1 CLARITY

During the nineteenth century, when anti-patent feelings were at their peak, many patents were struck down because they contained trivial errors in grammar or spelling. While patent law is no longer as harsh as it once was, it still demands that the public should not be left in any doubt as to the subject matter covered by a particular patent. Because the claims demarcate the scope of the monopoly, if the claims are unclear or not concise, the extent of protection cannot easily be discerned. This would lead to the undesirable situation that third parties would not be able to determine whether they were infringing the patent.<sup>86</sup> To ensure that this does not occur, patent law requires that the claims be clear and concise.<sup>87</sup> While clarity may not be an issue that can be used to challenge a patent after grant, it has been suggested that where a claim contains a vague and ambiguous term, it is less likely that the courts will find that there has been an infringement.<sup>88</sup> The requirement that the claims be clear and concise has been important in relation to structural and functional claims.<sup>89</sup>

Claims will be clear and concise if the skilled person is able to understand the language used.<sup>90</sup> The requirement that the claims be clear and concise applies to 'the choice of category of claims, to the terminology and also to the number and order of the claims'.<sup>91</sup> While claims should be internally consistent and free from contradiction, most of the problems tend to arise as a result of the use of relative or imprecise terms. Where this occurs, the test is whether the skilled person would have had difficulty in understanding the language used when read in light of common general knowledge.<sup>92</sup> Because the skilled addressee reads the claims, this means that words and phrases that might not be understood outside the field of the invention may still be clear and concise.

The mere fact that a claim is very broad or takes a long time to understand does not necessarily diminish its clarity. As the Technical Board of Appeal said, there is no basis in the Article 84 clarity requirement 'for objecting that a claim is not simple but complex and hence takes too long to understand, as complexity is not tantamount to lack of clarity of a claim'.<sup>93</sup> All that Article 84 requires is that the claims 'define the subject matter for which protection is sought clearly and unambiguously for the skilled person'.<sup>94</sup> In contrast with the requirement for sufficiency of disclosure (where length of time may impose an undue burden on the public), the actual time required to determine whether a given compound falls within the scope of a claim 'does not really matter as long as the claim itself is clear'.<sup>95</sup> In reaching this position, the Board stressed that there was no justification for imposing quantitative criteria (such as the amount of time taken to understand a claim) on what is essentially a qualitative requirement that the claims be clear and concise.

The parameters of the invention may be defined by quantitative criteria (such as size, weight, volume, temperature) or qualitative criteria. While, in most cases, applicants will use precise

<sup>86</sup> Another reason why the claims need to be clear and concise is because they will invariably be translated into another language. If a claim were not formulated in clear and precise terms, it would undermine the translation process and also cast doubts on 'foreign' patents.

<sup>94</sup> *Ibid.*, 542–3.

<sup>95</sup> *Ibid.*, 542.

measurements to define their inventions, applicants may confine their descriptions to general relationships between component parts in which nothing turns on finite limits.<sup>96</sup> Relative terms such as ‘thin’, ‘fat’, and ‘slow’ are admissible, but only if they have a generally recognized meaning in the field. Where no unequivocal generally accepted meaning exists in the relevant art, this casts uncertainty over the subject matter covered by the claim. On this basis, it was held that use of the term ‘substantially pure’ (the sole feature designated to distinguish the subject matter of a chemical invention), which had no clear and unequivocal meaning, meant that the patent was unclear and thus not in conformity with Article 84.<sup>97</sup>

### 3.2 SUPPORTED BY THE DESCRIPTION

The second requirement imposed on the claims is that they ‘must be supported by the description’.<sup>98</sup> This helps to ensure that there is a correlation between what is invented and what has been claimed. The requirement that the claims must be supported by the description reflects the ‘general legal principle that the extent of the patent monopoly as defined in the claims, must correspond to the technical contribution to the art’.<sup>99</sup> The requirement that the claim be supported by the description plays an important role in ensuring that the scope of the protection provided to the patentee does not exceed or differ from the invention disclosed in the patent.<sup>100</sup> By ensuring that the claims (which shape the scope of the legal monopoly) are supported by the description (which provides the necessary technical information), patent law enables potential users to ascertain without undue burden or the need for inventive activity whether their planned commercial use is likely to infringe the patentee’s monopoly.<sup>101</sup>

The approach that is used to decide whether the claims are supported by the description is similar to the approach that is used to decide whether the specification has been disclosed sufficiently.<sup>102</sup> As is the case with the requirement for sufficiency of disclosure, a description that outlines one way of performing the claimed invention may support broader claims. This would be the case, for example:

... where the disclosure of a new technique constitutes the essence of the invention and the description of one way of carrying it out enables the skilled person to obtain the same effect of the invention in a broad area by use of suitable variants of the component features.<sup>103</sup>

As with sufficiency of disclosure, a single embodiment can only ever justify a broader claim if the class as a whole shares a common principle.<sup>104</sup> In other cases, more technical details and more than one example may be necessary to support claims of a broad scope.<sup>105</sup>

<sup>96</sup> *No-Fume v. Pitchford* (1935) 52 RPC 231.

<sup>97</sup> *Albany/Pure terfenadine*, T 728/98 [2001] OJ EPO 319, [3.3].

<sup>98</sup> PA 1977, s. 14(5)(c); EPC 2000, Art. 84 (ex EPC 1973, Art. 84).

<sup>99</sup> *CIRD Galderma*, T 1129/97 [2001] OJ EPO 273, 287.

<sup>100</sup> *Exxon/Fuel oils*, T 409/91 [1994] EPOR 149, 154; *Mycogen/Modifying plant cells*, T 649/92 [1998] EPOR 114, 118.

<sup>101</sup> *Oxy/Gel-forming composition*, T 246/91 [1995] EPOR 526, 531.

<sup>102</sup> The phrase ‘supported by matter disclosed’ is also used in PA 1977, s. 5(2) (to establish whether priority from an earlier application is acceptable). A description would not support claims for the purpose of s. 14(5)(c) unless the specification were to contain sufficient material to constitute an enabling disclosure under s. 14(3): *Biogen v. Medeva* [1997] RPC 1 (HL), 47 per Lord Hoffmann; *Asahi Kasei Kogyo* [1981] RPC 485 (HL), 535–6 per Lord Oliver. A similar approach was adopted by the TBA in *Mycogen/Modifying plant cells*, T 649/92 [1998] EPOR 114, 119.

<sup>103</sup> *Mycogen*, T 694/92 [1998] EPOR 114, 120.

<sup>104</sup> *Mölnlycke AB v. Procter & Gamble* [1992] FSR 549, 600, based on *Genentech I/Polypeptide expression*, T 292/85 [1989] OJ EPO 275 and applied in *Chiron v. Organon (No. 3)* [1994] FSR 202, 241–2.

<sup>105</sup> This is the case where the achievement of a given technical effect by known techniques in different areas constitutes the essence of the invention and there are serious doubts as to whether the said effects can

One situation in which claims may not be supported by the description is where the breadth of the claims extends beyond the technical contribution provided by the invention.<sup>106</sup> This might occur, for example, where the patent claims results that cannot be performed from the information in the claims. This would be the case where the patent claims the making of a wide class of products, but only enables one of those products to be made and fails to disclose a principle that enables the making of other products. Similarly, a patent may lack support where it claims every way of achieving a particular result, but only enables one way of making the product, and it is possible to envisage other ways of achieving that result that do not make use of the invention.<sup>107</sup>

### 3.3 UNITY OF INVENTION

As well as being clear, concise, and supported by the description, the claims must also relate ‘to one invention or to a group of inventions which are linked as to form a single inventive concept’.<sup>108</sup> The requirement that there be unity of invention, which ensures that applications only contain a single invention or a single group of inventions, plays an important administrative role. It also helps to minimize some of the problems that might otherwise arise in the application of the substantive tests for patentability if a patent were to contain a number of distinct inventions.<sup>109</sup> For two or more inventions to appear in the same patent, there must be a single inventive concepts that links them together. This might occur, for example, if there were an expectation in the art that the various inventions will behave the same way. Importantly, the unifying factor that links the different inventions must be an inventive concept and not some other feature of the invention.<sup>110</sup>

## 4 IMPROPER AMENDMENTS

The final internal requirement for patentability which we look at here concerns the extent to which patents can be amended. As we saw earlier, a number of restrictions are placed on the way in which patents can be amended.<sup>111</sup> In this section, we wish to concentrate on those amendments that throw the validity of the patent into doubt. There are two important limits on the way in which patents may be amended. The first is that an application must not be amended in such a way as to bring in subject matter that extends beyond the content of the

readily be obtained for the whole range of applications claimed: *Mycogen/Modifying plant cells*, T 649/92 [1998] EPOR 114, 120; *Xerox/Amendments*, T 133/85 [1988] OJ EPO 441, 448.

<sup>106</sup> *Biogen v. Medeva* [1997] RPC 1 (HL), 50–1 per Lord Hoffmann (‘whether the claims cover other ways in which they might be delivered: ways that owe nothing to the teaching of the patent or any principle which it disclosed’).

<sup>107</sup> *Mycogen/Modifying plant cells*, T 694/92 [1998] EPOR 114, 120.

<sup>108</sup> PA 1977, s. 14(5)(d); PA Rules, r. 22; EPC 2000, Art. 82 (ex EPC 1973, Art. 82); EPC 2000 Regs, r. 44 (ex EPC 1973 Regs, r. 30).

<sup>109</sup> *Exxon*, T 314/99 (21 June 2001) (three different embodiments covered by the claim did not belong to the same single general inventive concept; while lack of unity could not be raised in opposition, it was held that the inventiveness of the claim as a whole was denied in the event that only one of the embodiments was obvious).

<sup>110</sup> *Draenert/Single general inventive concept*, W 6/90 [1991] OJ EPO 438. For the problems that this presents for gene patents, see D. Schertenleib, ‘The Patentability and Protection of DNA-based Inventions in the EPO and the European Union’ [2003] *EIPR* 125, 128–9.

<sup>111</sup> For a discussion on the role of disclaimers in amending patents at the EPO, see *PPG/Disclaimer*, G 1/03 [2004] OJ EPO 413.

application as filed. The second restriction is that amendments after grant must not extend the protection conferred by the patent.

The restrictions placed on the ability for patents to be amended have been criticized on the basis that the rules have been applied too rigorously.<sup>112</sup> It has been said that this denies legitimate inventors the protection they deserve and encourages loose filing.<sup>113</sup> Another problem with the law in this area is that there has been very little discussion about the principles on which the restriction of amendment is based. As Staughton LJ observed:

[The] problem is not that the technology in this case is obscure or recondite, but that the law as to added matter is . . . A clear and precise test is not to be found in the Patents Act. Those who are engaged in the important business of inventing and manufacturers too, are to my mind entitled to more precise guidance as to how they should conduct their affairs. But they must seek it from Parliament, or from an international convention.<sup>114</sup>

#### 4.1 RESTRICTIONS ON AMENDMENTS THAT ADD MATTER

The first limit is that an application must not be amended in such a way as to bring in subject matter that extends beyond the content of the application as filed.<sup>115</sup> Failure to comply with these requirements opens the patent up to the possibility of revocation.<sup>116</sup> Consequently, applicants are confined by the scope of the description of the invention that is set out in the application. This ensures that patentees are not permitted to extend the patent so as to claim an invention developed after the priority date.<sup>117</sup> It also ensures, as the Technical Board of Appeal said, that applicants are not able to improve their position by adding subject matter not disclosed in the application as filed, giving them ‘an unwarranted advantage and possibly being detrimental to the legal security of third parties relying on the contents of the application as filed’.<sup>118</sup>

As the Enlarged Board of Appeal said, a patent may only be amended ‘within the limits of what a skilled person would derive directly and unambiguously using common general knowledge and seen objectively and relative to the date of filing, from the whole of these documents as filed’.<sup>119</sup>

While it is permissible for a patentee to claim the same invention in a different way, patentees are not able to amend their application so as to protect an inventive concept that was not disclosed in the original application.<sup>120</sup> The purpose of the restrictions on amendment is to stop patentees from inserting information after filing that enables them to support their claims.<sup>121</sup> As Aldous LJ said, this means that if a feature was omitted from a claim that the

<sup>112</sup> *Protoned BV's Application* [1983] FSR 110.

<sup>113</sup> R. Krasser, ‘Possibilities of Amendment of Patent Claims during the Examination Procedure’ (1992) 23 *IIC* 467, 471.

<sup>114</sup> *AC Edwards v. Acme Signs* [1992] RPC 131 (CA), 147.

<sup>115</sup> PA 1977, s. 76(2); EPC 2000, Art. 123(2) (ex EPC 1973, 123(2)); *EPO Guidelines*, C-VI; CPC, Art. 57(1). Despite obvious similarities, PA 1977, s. 76, is not listed in PA 1977, s. 130(7), as being framed so as to have as nearly as practicable the same effect as the corresponding provision of the Convention. Nevertheless, the UK courts have referred to EPO decisions.

<sup>116</sup> *B & R Relay's Application* [1985] RPC 1. PA 1977, s. 72(1)(d) renders it a ground for revocation that the matter disclosed in the specification of the patent extends beyond that disclosed in the application as filed.

<sup>117</sup> *AC Edwards v. Acme Signs* [1992] RPC 131 (CA), 147.

<sup>118</sup> *British Biotech/Heterocyclic compounds*, T 684/96 [2000] EPOR 190, 197.

<sup>119</sup> G 2/10, citing G 3/89 and G 11/91 (described as the ‘gold standard’ on added matter). See also *Abbott Laboratories v. Medinol Limited* [2010] EWHC 2865 (Pat), [251]–[253]; *Brigade (BBS-TEK) v. Amber Valley* [2013] EWHC 16, [74]–[89].

<sup>120</sup> *Southco v. Dzus Fastener Europe* [1990] RPC 587, 618. Consequently, amendment of a claim from ‘handle’ to a ‘rotatable actuating means’ would be read as not extending the disclosure.

<sup>121</sup> *Vector Corporation v. Glatt Air Techniques* [2007] EWCA Civ 805, [2007] All ER (D) 297, [3].

specification had made clear was essential, or if a feature were added that had not been disclosed in the application as filed, the amendment would add matter.<sup>122</sup> It is permissible to add information that explains, rather than expands, the scope of the claims. In this situation, the amendments ‘harm no one and assist the public.’<sup>123</sup>

The basic issue is whether the amended patent contains any additional (technical) material that was not disclosed in the original application.<sup>124</sup> Basically, this requires the tribunal to compare the application as filed (the description, any claims, or drawings,<sup>125</sup> but not the abstract<sup>126</sup> or priority documents) with the amended application to determine whether the amended application contains any additional matter.<sup>127</sup> The crucial question here is ‘whether a skilled person would on looking at the amended specification, learn anything about the invention which he could not learn from the application as filed’.<sup>128</sup> As has been noted at the EPO, the issues that arise here are conceptually similar to those that arise in relation to the requirement for novelty. In both cases, the issue is whether something ‘new’ has been added: in the case of novelty, the invention must be new; in the case of amendment, the amended application must not contain anything new.<sup>129</sup> Under this approach, the test is whether a skilled person could derive any information in the amended patent that was not already in the application as filed.<sup>130</sup>

Unlike the position after grant, there is no reason *per se* to object to the broadening of the claims prior to grant.<sup>131</sup> This is because it is immaterial whether the amendment widens or narrows the monopoly claimed. The only restriction is the general one that prevents patentees from altering their claims in such a way that they claim a different invention from that which is disclosed in the application.<sup>132</sup> If the application as filed described the insertion of cancer genes in mice and flagged the potential application of the invention to other mammals, there is no reason why the claim should not be expanded to cover cats, dogs, or mammals in general.<sup>133</sup> The broadening of claims is legitimate as long as there is no new matter

<sup>122</sup> *Texas Iron Works Patent* [2000] RPC 207 (CA), 246–7.

<sup>123</sup> *Vector Corporation v. Glatt* [2007] EWCA Civ 805, [3].

<sup>124</sup> ‘Clearly the function of this provision is to prevent the addition of subject matter to a patent application after the date of filing. In contrast the reformulation of the same subject matter . . . would be permissible’: *Xerox/Amendments*, T 133/85 [1988] OJ EPO 441, 449. See also *Milliken Denmark AS v. Walk Off Mats* [1996] FSR 292.

<sup>125</sup> *Amp/Connector*, T 66/85 [1989] EPOR 283, [1989] OJ EPO 167; cf. *Sulzer/Hot gas cooler*, T 170/87 [1990] EPOR 14, [1989] OJ EPO 441.

<sup>126</sup> *Bull/Identification system*, T 246/86 [1989] OJ EPO 199; *Abbott Laboratories v. Medinol* [2010] EWHC 2865 (Pat). The documents are looked at through the eyes of the notional skilled addressee: *Siegfried Demel v. Jefferson* [1999] FSR 204, 214.

<sup>127</sup> *Bonzel v. Intervention (No. 3)* [1991] RPC 553, 574; *Mölnlycke AB v. Procter & Gamble (No. 5)* [1994] RPC 49 (CA). Aldous J held that ‘matter’ included both structural features and inventive concepts: *Southco v. Dzus Fastener Europe* [1990] RPC 587, 616. However, this has proved to be controversial: see *AC Edwards v. Acme Signs* [1992] RPC 131, 144. For a more sympathetic reading, see *Sara Lee Household & Body Care v. Johnson Wax* [2001] FSR 261, following *Metal-Fren/Friction pad assembly*, T 582/91 [1995] EPOR 574.

<sup>128</sup> *Sudarshan v. Clariant Produkte* [2013] EWCA Civ 919, [62].

<sup>129</sup> *EPO Guidelines*, C-VI, 5.4, 7.2, 9; *Shell/Lead alloys*, T 201/83 [1984] OJ EPO 401; *General Motors/ Electrodes*, T 194/84 [1990] OJ EPO 59, 65. It is different from the requirement that the claim be supported by the description, since support may justify broadening where novelty would not: *Xerox/Amendments*, T 133/85 [1988] OJ EPO 441, 450. In the United Kingdom, the courts have referred to the novelty test employed at the EPO as a useful test, but one that should be applied with caution: *Edwards v. Acme* [1992] RPC 131, 644.

<sup>130</sup> *British Biotech/Heterocyclic compounds*, T 684/96 [2000] EPOR 190, 197; *Advanced Semi-Conductor Products*, G 1/93 [1994] OJ EPO 541.

<sup>131</sup> *Spring Foam v. Playhut* [2000] RPC 327, 337–8.

<sup>132</sup> *Southco v. Dzus Fastener Europe* [1990] RPC 587, 615.

<sup>133</sup> Broadening is permissible where there is a basis for a claim lacking the feature in the application as filed: *Amp/Connector*, T 66/85 [1989] EPOR 283.

introduced. However, if the description as filed only mentioned mice, then such broadening of the claims would add subject matter and thus be invalid.<sup>134</sup>

A simple illustration of the way in which the courts determine whether the amendment has introduced additional matter is provided by *Ward's Application*,<sup>135</sup> which concerned an application for a patent for the packaging of flowerpots. The specification as filed referred to the packaging of a number of articles nested one within another. It also referred to nested flowerpots or similar containers. The Examiner objected to subsequent amendments that added references to plant pot bases on the basis that they extended the content of the application. Mr Bridges, in the Patent Office, concurred, saying that the question was whether:

... the amendment ... resulted in the specification disclosing matter which extends beyond that disclosed in the specification as filed ... matter must not be disclosed which extends, in the sense of enlarging upon the original disclosure, i.e. which increases the specificity or particularization of that disclosure.<sup>136</sup>

On the basis that plant pot bases are recognizably different from plant pots, the specification breached section 76(3)(a).<sup>137</sup>

While the question of whether an amended application contains additional subject matter always depends on the facts of the case, it may be helpful to outline some of the more common scenarios that may arise. It is not normally possible to amend a patent application where the description was insufficient.<sup>138</sup> As Lord Hoffmann said in *Biogen v. Medeva*, the application may not add new matter to make an insufficient application sufficient.<sup>139</sup> At the EPO, applicants are prohibited from removing matter from a claim that appeared to be essential in the original application.<sup>140</sup> This is because if the feature that is being removed was essential in the original application, then the amended feature introduces novel subject matter.<sup>141</sup> The prohibition on removing essential features does not prevent an amendment that introduces an essential feature that was previously described as non-essential.<sup>142</sup>

Often, a patentee may wish to narrow the ambit of the patent. This usually occurs where a search reveals that some of the examples of prior art fall within the claims as originally filed or where subsequent experimentation reveals that some of the examples listed in the claims as filed do not work. Here, an applicant may amend the claim by disclaiming the examples.<sup>143</sup> While increasing the specificity of a claim, for example by narrowing it from mammals to mice, does not generally introduce new matter, it should not automatically be assumed that this is the case. The reason for this is that if the narrowing of the claims adds a technical feature (or something inventive), it will not be permissible.<sup>144</sup> However, if

<sup>134</sup> *Edwards v. Acme Signs* [1992] RPC 131.

<sup>135</sup> [1986] RPC 50. <sup>136</sup> *Ibid.*, 54.

<sup>137</sup> For a more structured approach, see *European Central Bank v. Document Security Systems* [2007] EWHC 600 (Pat).

<sup>138</sup> *Edwards v. Acme Signs* [1992] RPC 131, 147.

<sup>139</sup> *Biogen v. Medeva* [1997] RPC 1 (HL), [81].

<sup>140</sup> This will be so if the feature was essential in the original disclosure, is indispensable in the light of the technical problem, or the removal requires other features to be modified: *Alza/Infuser*, T 514/88 [1990] EPOR 157, 161–2; adopted in *Southco v. Dzus Fastner Europe* [1992] RPC 299 (CA), 324 per Nicholls LJ, 327 per Staughton LJ.

<sup>141</sup> See *Alza/Infuser*, T 514/88 [1990] EPOR 157, 161–2.

<sup>142</sup> *Hymo/Water-soluble polymer dispersion*, T 583/93 [1997] EPOR 129. The rule against the removal of essential features may explain the criticized decision in *Protoned BV's Application* [1983] FSR 110. See D. Stanley, 'Euphemism v. Pragmatism of the Implication of Added Subject Matter' (1988) 17 CIPAJ 108; G. Dworkin, 'Implied Added Subject Matter: An Academic Overview' (1990–91) 20 CIPAJ 340.

<sup>143</sup> *Sulzer/Hot gas cooler*, T 170/87 [1989] OJ EPO 441; *Mölnlycke AB v. Procter & Gamble (No. 5)* [1994] RPC 49, 135.

<sup>144</sup> If a limiting feature is not disclosed in the application as filed or otherwise derivable therefrom, it will violate EPC 1973, Art. 123(2) (now EPC 2000, Art. 123(2)): *Advanced Semiconductor/Limited features*, G 1/93 [1994] OJ EPO 541, [1995] EPOR 110, 114.

the limitation merely excludes protection for part of the subject matter of the application as filed, this would not give any unwarranted advantages to the applicant and, as such, is *prima facie* allowed.

#### 4.2 AMENDMENTS THAT EXTEND THE SCOPE OF PROTECTION

In recognition of the fact that third parties may modify their behaviour in light of the patent as published, restrictions are placed on the degree to which the scope of protection conferred by the patent can be altered after grant.<sup>145</sup> To this end, section 76(3)/Article 123(3) provide that amendments after grant must not extend the protection conferred by the patent. That is, after the patent has been granted, a patentee may not amend the scope of the claims so as to extend the monopoly beyond that covered by the claims as granted.<sup>146</sup> Failure to comply with these provisions opens the amended patent up to the possibility of revocation.<sup>147</sup>

The limits imposed on amendments that extend the scope of the patent operate in a similar way to the prohibition on amendments that introduce additional subject matter (discussed above). The provisions will not operate where claims are narrowed.<sup>148</sup> Perhaps the most notable situation in which amendments have been allowed under this head is where they contain changes to the types of claim employed.<sup>149</sup> Thus it is normally permissible to amend a claim from a compound to a use, since the claim to a use is narrower than the claim to the compound. Amendments of this type commonly arise where the patent application has been drafted on the basis that the compound was *new per se*, whereas it turns out that the compound was already within the state of the art, but the use was not.<sup>150</sup>

<sup>145</sup> *Leland/Light source*, T 187/91 [1995] EPOR 199, 202–3.

<sup>146</sup> PA 1977, s. 76(3), says that no amendment of the specification of a patent shall be allowed under PA 1977, ss 27(1), 73, or 74, if it results in the specification disclosing additional matter or extends the protection conferred by the patent. PA 1977, s. 72(1)(e), provides for the revocation of patents on the ground that the protection conferred by the patent has been extended by an amendment that should not have been allowed. EPC 2000, Art. 123(3) (ex EPC 1973, Art. 123(3)), makes it clear that amendments of claims after grant (unlike those before) must not extend the scope of protection. The acceptance of post-grant amendments is subject to the discretion of the Comptroller or court, which have tended to employ that discretion to deny amendments to those whose behaviour is not perceived to have been innocent.

<sup>147</sup> While it would be possible to allow widening amendments that are prospective only, it might be thought that a person should be able to rely on the patent in its state as granted rather than to have to check constantly to see whether it has been altered.

<sup>148</sup> *Strix v. Otter* [1995] RPC 607; *Mobil/Friction reducing additive*, G 2/88 [1990] OJ EPO 93, 100–1.

<sup>149</sup> In *Philips Electronic's Patent* [1987] RPC 244, the patentee was permitted to add an omnibus claim to a European patent (UK) on the ground that it did not extend the scope of protection.

<sup>150</sup> *Moog/Change of category*, T 378/86 [1988] OJ EPO 386 (an amendment of a process claim to include a claim to the apparatus for carrying out the process was allowed); cf. *Telectronics/Cardiac pacemaker*, T 82/93 [1996] OJ EPO 274 (change from a method of operating a device—a pacemaker—to the device itself was not allowed, because the latter claim extended the subject matter to cover the situation in which the pacemaker was ready for use, not only when it was being used).

## OWNERSHIP

### CHAPTER CONTENTS

1 Introduction	592	3 Determining who is Entitled to Grant	596
2 Entitlement to Grant	593		

### 1 INTRODUCTION

Ownership plays a key role in shaping the way the rights and responsibilities that flow from the grant of a patent are organized. The owner or, as the Patents Act 1977 prefers, the proprietor of a patent is able to exploit and control the use that is made of a patent.<sup>1</sup> They are also able to make decisions about when and the conditions under which a patent can be assigned, licensed, or mortgaged.<sup>2</sup> The owner of the patent is also the person who is able to sue for infringement.<sup>3</sup>

The question of who is the owner of a patent is closely connected to the question of who is entitled to be granted the patent. This is because the chain of ownership begins with the person entitled to grant of the patent: they are treated as first owner (or proprietor) of the patent. It is important to note at the outset that the right to be granted a patent, which is the central focus of this chapter, is primarily given to the inventor or joint inventors. This presumption may be overridden in a number of situations—notably, in relation to employee inventions and where the right to the patent has been transferred to a third party.

While a particular individual or group of individuals might *initially* have been given the right to be granted the patent, it does not necessarily follow from this that they will also be the owner of the patent. One reason for this is that the person entitled to grant of the patent may have assigned their rights in the patent to someone else. Alternatively, the patent may have been transferred to a third party as a result of death or insolvency. Consequently, in ascertaining ownership, it is necessary to discover who was initially entitled to the grant of the patent, and thereafter whether there has been an effective transfer of the patent to another person.

<sup>1</sup> 'Proprietor' is not defined in the 1977 Act.

<sup>2</sup> Under the 1977 Act, applications for a patent are also capable of being owned.

<sup>3</sup> The PA 2004 amended PA 1977, s. 36(3), to clarify that co-owners are able to seek, amend, and revoke a patent if they act jointly, and have not contracted out of this requirement. See further *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of Responses and the Government's Conclusions* (November 2003), [115]–[124].

## 2 ENTITLEMENT TO GRANT

Given the consequences that flow from the ownership of a patent, it is not surprising that disputes often arise over who is properly entitled to be granted a particular patent. Questions about who is properly entitled to be granted a patent can arise both during and after the grant of a patent, and may even be heard prospectively—that is, before any application has been made for a patent. In practice, however, most disputes tend to be heard after the patent has been granted.<sup>4</sup>

When the European Patents Convention 1973 (EPC 1973) was being drafted, it was decided that matters relating to the ownership of patents were better dealt with by the national courts or tribunals, than under the EPC.<sup>5</sup> As a result, the European Patent Office (EPO) only has a limited procedural role in determining disputes over entitlement.<sup>6</sup> The upshot of this is that while the processes by which patents are granted in the United Kingdom and the EPO are very similar, the procedures by which a UK patent and a European patent (UK) may be challenged are somewhat different. As such, we will deal with them separately.

### 2.1 UK PATENTS

The starting point for determining who is properly entitled to the grant of a British patent is set out in section 7(4) of the 1977 Patents Act.<sup>7</sup> This creates a rebuttable presumption that the patent applicant is the person who is entitled to be granted the patent. The grounds on which this presumption may be rebutted, with which we deal below,<sup>8</sup> are set out in section 7(2). If none of these grounds can be established, the applicant will be treated as the proprietor of the patent. The significance of the presumption should not be underestimated: because the evidence about entitlement is often inconclusive,<sup>9</sup> the presumption frequently operates to maintain the status quo.<sup>10</sup> This is particularly the case where the court has to rely upon witness testimony.<sup>11</sup>

<sup>4</sup> This is because if an issue is raised during the application under PA 1977, s. 8(1), but has not been determined by the time of grant, the dispute is usually continued as if it were a dispute as to the entitlement of a granted patent (i.e. as if it were a PA 1977, s. 37, application). See PA 1977, s. 9; *Goddin & Rennie's Application* [1996] RPC 141.

<sup>5</sup> This was because disputes about entitlement potentially raise questions about legal personality, contract, equity, and labour law, rather than patent law.

<sup>6</sup> This issue was reopened in European Commission, *Green Paper on the Community Patent* (1997) COM (97) 314 final, in which, after noting that the application of these different rules has an impact on research work and management, the Commission asked respondents to indicate whether they thought that 'existing differences between member states laws on employees' inventions impacted on innovation and employment conditions and/or the freedom to provide services and/or the conditions of competition? Are they such as to justify harmonization at Community level?' See also European Commission, *Comparative Study of Employees' Inventions Law in Member States of the European Communities* (1977).

<sup>7</sup> In answering the question, 'who is the proprietor of the 'patent?', a useful starting point is the patent itself. This is because PA 1977, s. 13(2), provides that anyone who makes an application must state who the inventor is, or if the inventor is not applying, on what basis they are applying. See T. Gold, 'Entitlement Disputes: A Case Review' [1990] *EIPR* 382.

<sup>8</sup> See above at pp. 423–4 and below at section 3.

<sup>9</sup> In part, this is because it is often difficult to determine the precise point in time and the circumstances under which an invention was created. The reason for this is, as Lord Wilberforce said, that 'it is often difficult to fix the point or points in a continuous line of discovery at which an invention has been made': *Beecham Group v. Bristol Laboratories International* [1978] RPC 521, 567.

<sup>10</sup> On the importance of the presumption, see *Staeng's Patent* [1996] RPC 183; *Viziball's Application* [1988] RPC 213.

<sup>11</sup> *Fireworks Fire Protection and Watermist v. Andrew James Cooke*, BL O/275/13 (23 July 2013).

Prior to the grant of a patent for an invention, anyone may ask the Comptroller whether they are entitled to be granted (alone or with other persons) a patent for that invention.<sup>12</sup> They may also ask the Comptroller to determine whether they have or would have any rights in or under any patent so granted. While these issues will normally be referred to the Comptroller, if the Comptroller considers that the question involves matters that would be better dealt with by the court, the Comptroller may refer the matter to the courts for consideration.<sup>13</sup>

The question of who is properly entitled to a UK patent may also be raised after grant. Any person claiming a proprietary interest in a patent may ask the Comptroller to clarify who is the true proprietor of the patent, whether the patent should have been granted to the person to whom it was granted, or whether any right in or under the patent should be transferred or granted to another person.<sup>14</sup>

### 2.1.1 Possible remedies

Where it has been decided that the wrong person has applied for a patent or a patent has been granted to the wrong person, the Comptroller has a number of options available. In deciding what action to take, it has been said that the main aim should be ‘to reach a solution which would provide a reasonable opportunity for the patent to be exploited should there be a demand for it’<sup>15</sup>—a goal that reflects a desire to see that the invention enters the commercial domain, rather than a concern with recognizing entitlements.

Where a successful entitlement challenge has been made in relation to a patent application, the Comptroller can refuse, amend, or transfer the application.<sup>16</sup> If the application is refused and the person properly entitled to apply decides to submit a new application, they may be able to avail themselves of the wrongful applicant’s priority date.<sup>17</sup> The Comptroller also has jurisdiction to reach more creative solutions. For example, they may grant the patent to one co-inventor, but order that the other co-inventor be given a non-exclusive, non-assignable licence, perhaps with payment of a royalty.

Where a patent has been granted, an order may be made directing that the person referring the issue to the tribunal shall be listed as the proprietor of the patent. Alternatively, the Comptroller may grant a licence to the claimant or revoke the patent on the ground that it was granted to the wrong person.<sup>18</sup> If it is decided that the patent should be revoked, the Comptroller may order that the person who made the application (or their successor in title) may make a new application for a patent. It is important to note that no order may be made to transfer the patent or to permit the reapplication if the reference was made two

<sup>12</sup> PA 1977, s. 8(1). <sup>13</sup> PA 1977, s. 37(8).

<sup>14</sup> PA 1977, s. 37(1). See *Paxman v. Hughes* [2005] All ER (D) 255 (the Comptroller has wide discretion to grant licences to third parties); *Hughes v. Paxman* [2007] RPC 34 (the Comptroller has the jurisdiction to grant licence under s. 37(1) on the application of one co-proprietor).

<sup>15</sup> *Goddin & Rennie’s Application* [1996] RPC 141, [23]. The factors that were considered relevant in this case included whether either of the joint inventors wished to exploit the patent themselves and the feasibility of their agreeing to license third parties.

<sup>16</sup> PA 1977, s. 8(2)(c). PA 1977, s. 8(2)(a), suggests that, where it is decided that the referent was the sole inventor, it will probably be ordered that the application shall proceed in the name of that person. Alternatively, if it is found that the invention was made jointly, the likely order is that the application will proceed jointly.

<sup>17</sup> PA 1977, s. 8(3). <sup>18</sup> That is, to a person not entitled under PA 1977, ss 7(2), 36, or 72(1)(b); EPC 2000, Art. 138 (1)(e). While lack of entitlement is a ground of revocation, it appears that the right to demand revocation is available only to a person ‘initially entitled’ to the patent and not to someone to whom that right has been transferred: *Dolphin Showers and Brueton v. Farmiloe* [1989] FSR 1; *Henry Brothers v. Ministry of Defence* [1997] RPC 693. It remains unclear whether a declaration under PA 1977, s. 37, is required prior to an action for revocation under PA 1977, s. 72.

years from the date of the grant. This exclusion does not apply, however, if the proprietor of the patent knew that they were not entitled to the patent.<sup>19</sup>

## 2.2 EUROPEAN PATENTS (UK)

As we mentioned above, the EPO only has a limited procedural role in determining disputes over entitlement. For the purposes of proceedings before the EPO, the applicant is deemed to be entitled to exercise the European patent, leaving issues of entitlement to be determined in national fora. As a result, the EPO only takes account of questions of entitlement if a decision has been made by an appropriate national court to the effect that a person other than the applicant is entitled to the patent. This means that questions relating to the ownership of European patents (UK)<sup>20</sup> both before and after grant<sup>21</sup> may be heard by the British Comptroller<sup>22</sup> or courts.<sup>23</sup>

In order to prevent a proliferation of ownership proceedings in different member states (and to prevent forum shopping), a Protocol to the EPC was formulated ('The Protocol on Jurisdiction and Recognition in Respect of the Right to a Grant of a European Patent').<sup>24</sup> The Protocol provides that questions about entitlement are only to be heard by one member state. The Protocol also establishes rules to determine which nation has jurisdiction to hear ownership disputes.<sup>25</sup> In the absence of an agreement between the claimant and the applicant stating the jurisdiction that is to operate, the Protocol provides that questions about entitlement are to be determined by the tribunals (and the law) of the country of which the applicant is resident (or in which the applicant has their place of business). If the applicant is not an EPC member state, ownership is decided by the tribunal of the country of the claimant.<sup>26</sup> Consequently, a UK court would decline to hear a case concerning a dispute between a French claimant and a German applicant, or between a British claimant and a French applicant. It would, however, consider disputes between a German claimant and a British applicant, and between a British claimant and an American applicant.

### 2.2.1 Possible remedies

Once a national tribunal has made a determination as to entitlement, the EPO will take appropriate action. In these circumstances, Article 61 of the EPC 2000 provides that three courses of action are available: prosecution of the application in the applicant's home state; the filing of a new application; or a request that the application be refused.<sup>27</sup>

<sup>19</sup> Protection for third parties in these situations is offered by PA 1977, ss 37(6)–(7), 38(1), (3)–(4).

<sup>20</sup> PA 1977, ss 12(1), 77(1)(b). See *Norris's Patent* [1988] RPC 159; *Canning's US Application* [1992] RPC 459 (concerning international patent applications); *Kirin-Amgen/Erythropoietin*, T 412/93 [1995] EPOR 629 (questions of entitlement could not be considered in opposition proceedings).

<sup>21</sup> It seems that the issue of jurisdiction will be determined in accordance with the general rules of the Brussels Convention and that Art. 16(4), which requires issues relating to the validity and registration of patents to be dealt with by the tribunals of the country from which the patent issued, has no applicability. See *Duijnste v. Goderbauer* [1985] FSR 221, [1985] 1 CMLR 220.

<sup>22</sup> PA 1977, s. 37(8). For a discussion of the principles by which the Comptroller should exercise the discretion conferred by PA 1977, s. 12(2), see *Luxim Corporation* [2007] EWHC 1624.

<sup>23</sup> PA 1977, s. 82, provides for rules as to UK jurisdiction over disputes as to ownership of European patents. See *Kakkar v. Szelke* [1989] FSR 225.

<sup>24</sup> It also provided for the recognition of their decisions by other member states. See G. le Tallac, 'The Protocol on Jurisdiction and the Recognition of Decisions in Respect of the Right to the Grant of a European Patent (Protocol on Recognition)' (1985) 16 IIC 318, 356.

<sup>25</sup> These are reflected in PA 1977, ss 82 and 83.

<sup>26</sup> *Latchways/Unlawful applicant*, G 3/92 [1995] EPOR 141.

### 3 DETERMINING WHO IS ENTITLED TO GRANT

While the Patents Act 1977 provides that anyone is entitled to apply for a patent,<sup>28</sup> section 7(2) goes on to say that patents should only be granted to a limited category of people.<sup>29</sup> These provisions are the basis on which issues of entitlement are determined. As Lord Hoffmann said in *Yeda*,<sup>30</sup> section 7(2) and (3) provide an exhaustive code for determining who is entitled to the grant of a patent. This means that the question of whether a person is entitled to grant is solely dependent on them being able to show that they had been the actual inventor. In so ruling, the House of Lords rejected the argument that to prove entitlement, it was not enough for a person (A) to show that A and not the person (B) named on the patent was the actual inventor. In particular, the House of Lords rejected Jacob LJ's comment in *Markem*<sup>31</sup> that '[A] must be able to show that in some way B was not entitled to apply for the patent, either at all or alone. It follows that A must invoke some other rule of law'—typically by virtue of contract or breach of confidence—'to establish his entitlement—that which gives him title, wholly or in part, to B's' application.' The upshot of *Yeda* is that the decision as to whether a person is properly entitled to grant of a patent turns solely on who came up with the inventive concept—a question at which we look shortly.

The starting point for determining issues of entitlement and ownership is section 7(2)(a). This provides that the right to be granted a patent is *primarily* given to the inventor or joint inventors. This focus upon the inventor follows the common practice whereby the creator is accorded the privileged status of first owner of intellectual property rights. Although the process of invention is frequently presented as being less creative than the production of literary or artistic works, patent law bears many of the marks of the romantic author. It is, at the very least, based on a model of an individual inventor—a matter emphasized in the 1977 Act by the requirement that the inventor be the 'actual deviser' of the invention.<sup>32</sup>

The assumption that the inventor is the person who is properly entitled to grant of the patent can be overridden in two situations. The first of these is set out in section 7(2)(b). This states that the presumption in favour of the inventor as owner does not apply where it can be established that at the time the invention was made, another person was entitled to the invention by virtue of (i) any enactment or rule of law, (ii) any foreign law, treaty, or international convention, or (iii) an enforceable term of any agreement entered into with the inventor before the making of the invention. Although the precise meaning of the section is unclear,<sup>33</sup> it is widely accepted that it deals with employee inventions caught by section 39.

<sup>28</sup> PA 1977, s. 7(1).

<sup>29</sup> As we saw earlier, PA 1977, s. 7(4), creates a rebuttable presumption that the person who applies for a patent is the person who is entitled to grant of a patent. The grounds on which this presumption may be rebutted are set out in PA 1977, s. 7(2), which exhaustively sets out the parties to whom a patent may be granted.

<sup>30</sup> *Rhone-Poulenc Rorer International Holdings v. Yeda Research and Development Co. Ltd* [2007] UKHL 42, [2007] All ER (D) 373, [18].

<sup>31</sup> *Markem Corp. v. Zipher* [2005] RPC (31) 761 (CA), [79]. For similar statements by Jacobs LJ (which were also expressly rejected by the House of Lords in *Yeda*), see *University of Southampton's Applications* [2006] RPC 21 (CA, [8]).

<sup>32</sup> PA 1977, s. 7(3).  
<sup>33</sup> Rather oddly, it would not appear to cover the position of an employee who was a joint inventor with someone who was not also an employee, since the employer would not then be a person who, at the time of the making of the invention, was entitled to the *whole* of the property. It might have been assumed that such an anomaly would have been capable of being rectified by the use of express agreements between those concerned. However, the clause entitling a person to a patent as a result of being the beneficiary of 'an enforceable agreement entered into with the inventor before the making of the invention' is uncertain in scope

The second situation where the presumption that the inventor is the owner is overridden is set out in section 7(2)(c). This states that a patent may be granted to ‘the successor or successors in title of any persons or persons mentioned in section 7(2)(a) or (b)’. This provision allows for the rights in the invention to be transferred to third parties. In all cases, it is important to note that in certain situations, the registered proprietor may be able to rely upon the equitable rules of proprietary estoppel to prevent or limit the transfer of a patent under section 7(2).<sup>34</sup>

While section 7(2) potentially covers a broad array of situations, in practice, questions relating to entitlement to grant tend to fall into two general areas: (i) inventors and joint inventors; and (ii) employee inventions. We will deal with each of these in turn.

### 3.1 INVENTORS AND JOINT INVENTORS

Being named as the inventor or joint inventor of a new product or process often carries with it a number of rewards. In addition to the prestige that is associated with being named as the creator of a new invention,<sup>35</sup> a lot flows from the presumption that patents are granted *primarily* to the inventor or joint inventors.<sup>36</sup> Given this, it is not surprising that the tribunals are often called upon to decide who is properly entitled to be named as inventor or joint inventor of a given invention.<sup>37</sup> Problems in this field tend to group together in two areas.

The first arises where someone claims that they, and not the named inventor, are the ‘actual deviser’ of the patented invention.<sup>38</sup> Problems also arise where an individual claims that their contribution to the invention has not been properly recognized.<sup>39</sup> In both situations, the courts are required to identify the ‘inventive’ elements of the invention. In turn, the courts are required to consider whether the claimant was responsible for the development of some or all of those elements.<sup>40</sup> In some cases, the courts have been willing to divide an invention up into parts, allocating responsibility for different claims to different inventors. In one case, the court emphasized that the appropriate way of determining who was the inventor was not to divide up the elements of a claim and

too: see *Goddin & Rennie’s Application* [1996] RPC 141. Because the provision excludes from its remit ‘equitable interests’, it is arguable that it would not cover a contractual agreement made prior to invention that a person was to assign their rights, because such an agreement creates a mere equitable right to the patent. However, such a pedantic interpretation seems to render redundant the provision relating to agreements, as well as to contradict the obviously desirable policy of encouraging the formation of such agreements allocating ownership.

<sup>34</sup> See *Rhone-Poulenc Rorer International Holdings v. Yeda Research and Development Co. Ltd* [2007] UKHL 42, [2007] All ER (D) 373, [22].

<sup>35</sup> Inventors are entitled to be named on the patent, even if they are not entitled to the patent: PA 1977, s. 13; EPC 2000, Arts 62 and 81 (ex EPC 1973, Arts 62 and 81). If the inventor is not designated, the application is treated as having been withdrawn: EPC 2000, Art. 90(5) (ex EPC 1973, Art. 91); EPC 2000 Regs, r. 60.

<sup>36</sup> PA 1977, s. 7(2)(a); EPC 2000, Art. 60(1). For a useful overview of the steps involved in determining whether parties were jointly entitled to an application, see *Minnesota Mining and Manufacturing Companies’ International Patent Application* [2003] RPC 28.

<sup>37</sup> See *IDA v. University of Southampton* [2006] EWCA Civ 145, [44] (noting that there has been a recent rash of entitlement cases before the Comptroller and that these cases were particularly apt for mediation).

<sup>38</sup> ‘Inventor’ is defined in PA 1977, s. 7(3), to mean the ‘actual deviser’ of the invention. Joint inventors are construed accordingly.

<sup>39</sup> PA 1977, s. 10. For the application of PA 1977, s. 7, see *Cinpres Gas Injection v. Melea* [2008] EWCA Civ 9. On US law, see W. Fritz Fasse, ‘The Muddy Metaphysics of Joint Inventorship: Cleaning up after the 1984 Amendments to 35 USC’ (1992) 5 *Harv JL & Tech* 153.

<sup>40</sup> For an analysis of this in the United States, see *Mueller Brass v. Reading Industries* 352 F. Supp. 1357, 1372–3 (ED Pa. 1972), aff’d without opinion, 487 F.2d. 1395 (3d Cir. 1973).

ask who devised each; rather, it was necessary to interpret the claim so as to ascertain the essential inventive concept and then determine who contributed that concept.<sup>41</sup>

### 3.1.1 What is an inventive contribution?

In order to determine whether someone is entitled to be called an ‘inventor’ or ‘joint inventor’ under the 1977 Act, it is necessary to know what has been invented.<sup>42</sup> The courts have stressed that a person will not be regarded as an inventor merely because they have contributed to the claims: instead, to qualify as an inventor, a person needs to show that they have contributed to the ‘inventive concept’.<sup>43</sup> As Lord Hoffmann explained in *Yeda*,<sup>44</sup> the reason why it was not enough for someone to show that they had contributed to the claims was because the claims might include non-patentable integers derived from the prior art. The task of determining whether someone has contributed an inventive concept is a difficult one, not least because the process of invention is often a complex process. As Lord Hoffmann went on to say, the complexity can be attributed in some cases to the fact that ‘the inventive concept is a relationship of discontinuity between the claimed invention and the prior art. Inventors themselves will often not know exactly where it lies.’<sup>45</sup> While certain contributions (such as the posing of the problem to be solved or the answering of those problems) are usually treated as being inventive, other contributions (such as the supply of the test tubes used in the experiments) would usually be regarded as being non-inventive. In between these two extremes there are a range of other types of contribution that are more difficult to categorize. The question that arises here is which of the various contributions that are made to the production of an invention ought to be recognized as being inventive (or technically creative) and which ought not.<sup>46</sup> This is a particularly complex issue, not least because what is considered to be inventive not only changes over time,<sup>47</sup> but also changes between different areas of science and technology.<sup>48</sup> Given this, and the fact that the definition of inventor offered in the 1977 Act offers little guidance in this regard,<sup>49</sup> perhaps the best way to approach this issue is by example.

It is commonly accepted that where a person has done something that helps to solve a particular problem or to answer a particular question, this will be regarded as an inventive contribution. As such, if it can be shown that an individual has done something

<sup>41</sup> *Henry Brothers v. Ministry of Defence* [1997] RPC 693.

<sup>42</sup> *Henry Brothers v. Ministry of Defence* [1999] RPC 442 (CA), 449 per Robert Walker LJ (observing, at 452, that the ‘whole question of co ownership called for clarification’).

<sup>43</sup> *GE Healthcare v. Perkin Elmer* [2006] EWHC 214 (Pat), [146]. ‘The task of the court is to identify the inventive concept of the patent or application and identify who devised it’: *Stanelco Fibre Optics v. Biopress Technology* [2005] RPC 319, [12]. See also *Rhone-Poulenc Rorer International Holdings v. Yeda Research and Development Co. Ltd* [2007] UKHL 42. <sup>44</sup> *Ibid.*, [20] per Lord Hoffman. <sup>45</sup> *Ibid.*

<sup>46</sup> The task of determining who is the inventor or joint inventor is similar to the non-obviousness inquiry. However, in contrast with the non-obviousness inquiry, which is determined ‘objectively’, the idea of inventorship carries a ‘subjective’ component. This arises because the inquiry can be undertaken even when no application has been made for a patent: PA 1977, s. 8(1)(a). See *Viziball’s Application* [1988] RPC 213; *Goddin & Rennie’s Application* [1996] RPC 141.

<sup>47</sup> For example, it is no longer possible to obtain a patent (as it was for a long time) merely for being the ‘importer’ of an invention: *Edgeberry v. Stephens* (1691) 1 WPC 35, 1 HPC 117.

<sup>48</sup> The question who should be recognized as creators in intellectual property law is an important and often contentious issue. Over time, the law has witnessed many occasions on which interest groups have attempted to argue that they are creative enough to warrant the protection offered by intellectual property law. While these struggles may not be as visible in patent law as in other areas of intellectual property law, patent law is no exception to this general statement.

<sup>49</sup> Inventor is defined in PA 1977, s. 7(3), as the ‘actual deviser’.

that helps to solve a problem, it is likely that they will be treated as an inventor or joint inventor. While the answering of a problem is, in some ways, the archetypal inventive contribution, it is by no means the only type of contribution that is recognized as being inventive. For example, the perfection or improvement of a solution may also be regarded as an inventive contribution. Improvement of an existing device or process might itself provide for a patentable invention, in which case one would expect the patent to belong to the person who made the improvements (irrespective of the ownership of the starting invention). However, in practice, the process of devising a patent may incorporate a series of elements, some of which are mere improvements of an initial breakthrough. In those circumstances, the question arises as to whether these later contributions are sufficient for their author to become a joint inventor.<sup>50</sup>

The generation of the idea or avenue for research—that is, the formulation of the problem to be addressed—has also been treated as being inventive.<sup>51</sup> For example, in *Staeng's Patent*,<sup>52</sup> it was held that a person (A) was a joint inventor of a new method of securing electric cables where it was unlikely that the main inventor (B) would have turned his mind to the question without having been prompted by A. In this case, the (then) Patent Office was influenced by the fact that the principal inventor, who did not work in the field, was only alerted to the possibility of the improvement by A.

In other cases, however, the mere posing of a question to be answered (or the recognition of the problem to be solved) will *not* be treated as an inventive contribution. The reason for this is that in some circumstances, particularly in the biotechnology industry, particular goals are commonly known (this is illustrated by the fact that a number of different companies often pursue the same goal).<sup>53</sup> In these circumstances, the decision to pursue a particular goal is unlikely to be treated as being sufficiently creative for it to be recognized as an inventive contribution.

### 3.1.2 What is a non-inventive contribution?

Just as certain types of contribution are normally considered to be inventive, so other types of contribution are not. Thus where a party has only contributed 'unnecessary detail' to an invention, they will not be treated as an inventor;<sup>54</sup> so too merely recognizing a potential application of a general idea was said not to be an inventive contribution.<sup>55</sup> It also seems that managerial and entrepreneurial contributions, such as the provision of money, facilities, materials, support staff, and the like, will not be regarded as inventive contributions (although the provider of such contributions may obtain the right to apply for a patent).<sup>56</sup>

<sup>50</sup> In *Allen v. Rawson* (1845) 1 CB 551, 135 ER 656, Earle J said that, where a person collaborated in the elaboration of a 'main principle' and in so doing made valuable accessory discoveries, these were the property of the inventor of the original principle. The applicability and scope of this principle is, however, unclear: *Goddin & Rennie's Application* [1996] RPC 141.

<sup>51</sup> It was said in *Staeng's Patent* [1996] RPC 183, 189, that 'blowing the fire, rather than igniting it' can be sufficient for the contributor to be considered as the 'deviser' of the resulting invention.

<sup>52</sup> [1996] RPC 183. Under German law, the formula for calculating compensation for use of employee inventions gives equal weighting to those who 'elucidate' the problem and those who 'devise' the solution. See V. Schmieid-Kowarzik, 'Employee Inventions under German Law' (1972) 54 *JPTOS* 807.

<sup>53</sup> See *Genentech v. Wellcome* [1989] RPC 147 (CA).

<sup>54</sup> *IDA v. University of Southampton* [2006] EWCA Civ 145, [39].

<sup>55</sup> *Fireworks Fire Protection and Watermist v. Andrew James Cooke*, BL O/275/13 (23 July 2013), [51]. A delay in raising inventorship as an issue was a possible factor to suggest that a person was not an inventor: *ibid.*, [67]–[70].

<sup>56</sup> *Morgan v. Hirsch*, 728 F.2d. 1449, 1452 (Fed. Cir. 1984) (claimant confused entrepreneurship with inventorship); *Minnesota Mining & Mfg Co's Appn* [2008] RPC (28) 541, 556 (a party whose contribution was to identify or to draw attention to some prior art could qualify as an inventor in the appropriate circumstances).

Another type of contribution that seems to be excluded from what may be labelled as an inventive contribution is the supply of crucial starting materials.<sup>57</sup> In a celebrated American case, doctors at the UCLA Medical Center extracted a cell line from the spleen of the patient (and plaintiff) John Moore, who was being treated for hairy-cell leukaemia. The cell line formed the basis of an invention that the university subsequently patented. The Supreme Court of California held that Moore had no proprietary interests in the invention (or patent).<sup>58</sup> More specifically, the Court held that he had no property rights in either the genetic information encoded in his cells or the cells themselves. In so ruling, the Court noted that everyone's genetic material contains information for the manufacture of lymphokines and, as a result, that Moore's cell line was 'no more unique to Moore than the number of vertebrae in the spine'.<sup>59</sup> The Court contrasted the mundane nature of the source materials with the skills of the researchers, noting that the 'adaptation and growth of human tissues and cells in culture is difficult—often considered an art'.<sup>60</sup> From the view of one commentator, the case illustrates the pervasive influence of the 'author construct', which leads intellectual property law to privilege certain kinds of contribution: the material basis of intellectual property is disregarded, while the researchers who manipulate that material are prioritized.<sup>61</sup>

A related issue arises in relation to bioprospecting. This is the practice whereby pharmaceutical firms, typically from the developed world, employ the knowledge of indigenous groups to identify the medicinal properties of local plants, which are then synthetically reproduced. Perhaps one of the best-known examples of this is the US patent, which has subsequently been revoked, directed to the medicinal application of turmeric in wound healing (a practice that has been known about in India for centuries).<sup>62</sup> In an attempt to argue that indigenous peoples should be compensated for the use that is made of their knowledge, the question has been raised as to whether the contribution of indigenous knowledge (such as the identification of starting materials) ought to be recognized as an 'inventive' contribution to the resulting synthetic drugs. As the law is currently formulated, it seems that the provision of information is unlikely to amount to co-inventorship.<sup>63</sup> The main reason for this is that the contribution of knowledge about a plant's whereabouts or uses, especially when the information is already in the public domain,<sup>64</sup> is unlikely to be seen as an essential part of the structure and composition

<sup>57</sup> Cf. the novelty examination, during which the fact that prior art fails to disclose the starting materials may mean that the prior art does not destroy novelty. See above at pp. 540–3.

<sup>58</sup> *Moore v. Regents of the University of California*, 793 P.2d. 479 (Cal. 1990), cert denied, 111 S. Ct. 1388 (1991). It was accepted that Moore had a cause of action for breach of fiduciary duty or lack of informed consent. For some of the many commentaries, see T. Dillon, 'Source Compensation for Tissues and Cells used in Biotechnical Research: Why a Source Shouldn't Share in the Profits' (1989) 64 *Notre Dame L Rev* 628; B. Edelman, 'L'Homme aux cellules d'or' (1989) 34 *Recueil Dalloz Sirey* 225; B. Edelman, 'Le Recherche biomédicale dans l'économie de Marché' (1991) 30 *Recueil Dalloz Sirey* 203; B. Hoffmaster, 'From the Sacred to the Profane' (1992) 7 *IPJ* 115.

<sup>59</sup> *Moore v. Regents of the University of California* 111 S. Ct. 1388 (1991), [7]. <sup>60</sup> *Ibid.*

<sup>61</sup> J. Boyle, 'A Theory of Law and Information: Copyright, Spleens, Blackmail, and Insider Trading' (1992) 80 *Cal L Rev* 1413, 1516.

<sup>62</sup> See M. Uniyal, 'Trade: Biopirates Stake Claim to Southern Knowledge', *Inter Press Service* (29 August 1996).

<sup>63</sup> M. Huft, 'Indigenous Peoples and Drug Discovery Research: A Question of Intellectual Property Rights' (1995) 89 *Nw UL Rev* 1678, 1728; M. Blakeney, 'Access to Genetic Resources: The View from the South' (1997) 3 *Bioscience L Rev* 94, 99.

<sup>64</sup> Whether because the information is known within the community or because it has been documented by ethnobiologists. The classic anti-malarial drug, quinine, is derived from the bark of South American cinchona trees, the extract from which was first used to treat fever by the indigenous peoples of Peru in

of a synthetically produced drug. As a result, many now accept that the goal of providing proper rewards to indigenous communities is better served by other means (such as by the international recognition of a *sui generis* right or by mandated contractual benefit-sharing arrangements).

In order for a contribution to an invention to rise to the level of joint inventorship, the contribution must be concrete and specific rather than vague or general.<sup>65</sup> Having said this, the courts have said that to qualify as an inventor, there was no need for a person to show that they have (to use the American concept) brought about ‘a reduction to practice’. Thus it was said that a person who comes up with and communicates an idea consisting of all of the elements in the claim, ‘even though it is just an idea at that stage’, will normally be treated as an inventor.<sup>66</sup> In contrast, if an inventor instructs an assistant or employee to carry out specific tests, it is unlikely that the assistant will be treated as a joint inventor. This is because the carrying out of instructions is likely to be seen as a process of execution rather than creation. For the purposes of determining ownership between employers and employees, a person who merely contributes advice or other assistance in the making of an invention is not an inventor.<sup>67</sup> Outside the employer–employee context, such contributions are also likely to be treated as non-inventive unless it can be shown that the advice or assistance was in some way inventive.<sup>68</sup> It is also clear that if a person’s contribution is limited to applying common general knowledge, their contribution will not be regarded as inventive.<sup>69</sup>

While there has been little guidance as to the amount of mental labour that a person must contribute to an invention for them to qualify as a joint inventor, there may be grounds for arguing that where a person only makes a minor contribution to an invention, they should not be treated as a joint inventor. The reason for this is that joint inventors are sometimes able to control the ability of the other joint inventors to obtain or maintain a patent<sup>70</sup>—a power that might not be justified if the contribution is particularly small.<sup>71</sup> It should also be noted that in contrast with copyright law,<sup>72</sup> there is no explicit requirement in patent law that for a person to be recognized as a co-inventor, the parties must have collaborated. Having said this, it is clear that where two persons independently create the same invention, they will not be treated as co-inventors: the first to file is the person entitled to the patent.<sup>73</sup>

### 3.2 EMPLOYEE INVENTIONS

Although the romantic image of the amateur inventor plays an important role in shaping the way we think about patent law, it has long been recognized that many inventions are made by professional researchers who are employed to invent, often by large

the eighteenth century: see Huft, ‘op. cit.’, 1700. See the observations of Lord Hoffmann in *Merrell Dow v. Norton* [1996] RPC 76, 88.

<sup>65</sup> It has been suggested that the ‘conceptual specificity of a person’s contribution’ is a critical factor in deciding whether or not they are joint inventor: R. Harris, ‘Conceptual Specificity as a Factor in Determination of Inventorship’ (1985) 67 *JPTOS* 315; *Garrett v. United States*, 422 F.2d. 874, 881 (Ct. Cl. 1970).

<sup>66</sup> *Stanelco v. Biopress* [2005] RPC 319, [14].

<sup>67</sup> PA 1977, s. 43(4); *Allen v. Rawson* (1845) 1 CB 551, 135 ER 656; *Smith’s Patent* (1905) 22 RPC 57.

<sup>68</sup> *Staeng’s Patent* [1996] RPC 183.

<sup>69</sup> *IDA v. University of Southampton* [2006] EWCA Civ 145, [35]. <sup>70</sup> PA 1977, s. 36.

<sup>71</sup> A co-inventor who refuses to apply for a patent can have any such patent that has been granted to a co-inventor revoked. <sup>72</sup> CDPA 1988, s. 11.

<sup>73</sup> The other inventor being left with such *in personam* defences as they can establish.

corporations<sup>74</sup>—a situation that has expanded rapidly with the growth of so-called ‘big science’ in the last fifty years or so.<sup>75</sup> Patent law recognizes the financial interests of such employers by providing that in certain circumstances, it will be the employer rather than the employee who will be the owner of inventions made by employees. In this way, patent law retains the romantic model of the inventor in name, but allocates the important monopoly rights to the commercial interests that support and maintain the research.<sup>76</sup>

When the EPC 1973 was being drafted, it was decided that questions relating to ownership of employee inventions were a matter that were better dealt with by national laws rather than the Convention.<sup>77</sup> While the EPC—as with the Community Patent Convention and the Patent Cooperation Treaty—makes no provision in relation to employee inventions, when the Patents Act 1977 was drafted, the (then) Labour government took the opportunity to regulate the position of employee inventors. In so doing, it effectively codified an area that prior to the enactment of the Act was primarily dealt with by case law.<sup>78</sup>

There are two notable features of the Patents Act 1977 relating to employee inventions. The first, which is the focus of the remainder of this chapter, is that sections 39–43 of the Patents Act provide detailed guidance as to the way in which ownership disputes between employers and employees should be determined. The second notable feature of the Act, which is dealt with in Chapter 23, is that employees are provided with a right of fair reimbursement (or compensation) where their inventions belong to their employers.

In deciding whether an invention made in the course of employment should belong to the employee or the employer, patent law had to balance a range of competing interests. On the one hand, a desire to protect and promote freedom of labour, particularly for activities carried on outside the scope of employment, lent support to those who favoured employee ownership. These arguments were supported by the long-standing principle that the inventor is the first owner of a patent. Militating against this, however, was the powerful, and ultimately more influential, argument that where someone is employed to do something (such as to invent), the employer and not the employee should be the owner of the resulting products (or inventions).

Disputes between employers and employees over who is entitled to apply for a patent or, if a patent has already been granted, who is the rightful initial owner of the patent are governed by section 39 of the 1977 Act. Section 39 provides a ‘complete code’ for

<sup>74</sup> Cf. S. Cherenky, ‘A Penny for their Thoughts: Employee-Inventors, Preinvention Assignment Agreements, Property, and Personhood’ (1993) 81 *Cal L Rev* 595; J. Hughes, ‘The Personality Interest of Artists and Inventors in Intellectual Property’ (1998) 16 *Cardozo AELJ* 81.

<sup>75</sup> See P. Galison and B. Hevly (eds), *Big Science: The Growth of Large Scale Research* (1992).

<sup>76</sup> For a comparative position, see H. Parker, ‘Reform for Rights of Employed Inventors’ (1984) 57 *S Cal L Rev* 603, 615ff; V. Schmied-Kowarzik, ‘Employee Inventions under German Law’ (1972) 54 *JPTOS* 807; J. Joviczyk, ‘Employee Inventions’ (1989) 20 *IIC* 847.

<sup>77</sup> As such, national laws are free to determine ownership issues between employer and employee. All that the EPC 2000 does is specify which national law should operate. See European Commission, *Green Paper on the Community Patent* (1997) COM (97) 314 final, [4.3], explaining that there are great differences between member states’ rules governing inventions by employees: that, in some member states, the question is dealt with in general terms by patent law (e.g. in France and the United Kingdom); in others, a specific law has been enacted (as in Germany and Sweden). Other laws distinguish between ‘permanent’, ‘temporary’, and ‘occasional’ inventive roles, with different rules for determining ownership of the patent in each case. Other laws, such as the German Act, contain a long series of provisions relating to the remuneration of employees with an inventive role and lay down the precise method for calculating additional remuneration.

<sup>78</sup> PA 1977, ss 39–43, apply only to inventions made after 1 June 1978. See J. Phillips and M. Hoolahan, *Employee Inventions in the UK* (1982); W. Cornish, ‘Rights in Employee Inventions: The UK Position’ (1990) 21 *IIC* 290; W. Cornish, ‘Rights in University Inventions’ [1992] *EIPR* 13.

determining entitlement.<sup>79</sup> Following the common law position, the 1977 Act provides that an invention belongs to an employer in two situations.<sup>80</sup> Employee inventions that fall outside these two categories belong to the employee.<sup>81</sup>

- (i) The first situation where an employee invention belongs to the employer is set out in section 39(1)(a). This provides that an invention will belong to the employer where the invention was made in the course of the employee's normal or specifically assigned duties *and* the invention was made in circumstances under which an invention might reasonably have been expected to have resulted from the carrying out of those duties.
- (ii) The second situation where an employee invention belongs to an employer is set out in section 39(1)(b). This provides that in certain circumstances, an employee's position and status within an organization will be such that they will be taken to be under a 'special obligation to further the interests of the employer's undertaking'. Thus, where an employee occupies a senior managerial or administrative position, any inventions that they produce belong to their employer.

### 3.2.1 Employer ownership of employee inventions

Before looking at the way that the ownership of employee inventions is allocated under the Patents Act 1977, it is necessary to take account of a number of preliminary points.

(i) *Made in the course of employment* In order for section 39 to come into play, it is necessary to show that the invention was made by an 'employee' who was 'mainly employed' in the United Kingdom.<sup>82</sup> For the most part, showing that an invention was made in the course of employment is unlikely to present any major difficulties. Problems may arise, however, in situations where inventions are made by consultants, academics, visitors to universities, students, researchers on secondment, home-workers, and company directors.<sup>83</sup> While 'employee' and 'employer' are both defined in section 130 of the Act, this provides little guidance in these grey areas. In order to determine whether a particular inventor is in an employment relationship, a range of different factors are taken into account.<sup>84</sup> These include the relevant National Insurance and tax arrangements, the way in which the relationship is described by the parties, and the provision of materials, as well as the control and responsibility that is exercised by the parties in question.

(ii) *'Inventions'* Another notable feature of section 39 is that it refers to 'inventions' rather than to 'patented inventions' (or some similar phrase). One of the consequences of this is that the section will operate to resolve issues of ownership irrespective of whether a patent application has been filed or a patent granted. It has also been suggested that

<sup>79</sup> *Fireworks Fire Protection and Watermist v. Andrew James Cooke*, BL O/275/13 (23 July 2013), [71]–[74], citing *French v. Mason* [1999] FSR 597, [13]. As such, PA 1977, s. 39, excludes the operation of other rules of law (such as law of constructive trust).

<sup>80</sup> PA 1977, s. 39(1)(a)–(b). Because the sections are not necessarily mutually exclusive, an employee may be caught by either subsection (a) or (b): *Memco-Med's Patent* [1992] RPC 403, 406.

<sup>81</sup> PA 1977, s. 39(2). PA 1977, s. 39(3), which was introduced by the CDPA 1988, provides that, where an employee is entitled to the patent, they may 'use material in support of the application in which the employer owns copyright or 'design'. For the common law position in the United States, see *United States v. Dubilier Condenser Corp.*, 289 US 178 (1933), amended by 289 US 706 (1933).

<sup>82</sup> PA 1977, s. 43(2).  
<sup>83</sup> See *CIPA*, [39.06]; B. Sherman, 'Governing Science: Patents and Public Sector Research in the United Kingdom' (1995) 26 *IIC* 15.

<sup>84</sup> *O'Kelly v. Trusthouse Forte* [1984] QB 90; *Lee Ting Sang v. Chung Chi-Keung* [1990] 2 AC 374 (PC); *CIPA*, [39.06]. For a discussion on equivalent provisions in copyright, see Chapter 5, section 3.

the fact that the section refers to inventions may mean that the section extends beyond patentable subject matter to include things such as suggestion schemes.<sup>85</sup>

(iii) *Onus of proof* While evidential and procedural matters are often overlooked in discussions about patent law, decisions relating to the onus and standard of proof play an important role in shaping the way in which patent law operates in practice. Although the standard of proof in this context is clear enough—it is the civil standard of balance of probabilities—there is some uncertainty as to whether the onus of proof falls upon the employer or the employee. Given that the inventor is presumed to be the owner of the patent and that section 39 provides exceptions to this, it would seem reasonable to expect that the onus of proof falls upon the employer to establish that a particular employee invention belongs to them as a result of section 39(1)(a) or (b). Militating against this, however, is the fact that in a number of cases, the Comptroller has presumed that the onus of proof falls upon the person who is putting the question of entitlement in issue.<sup>86</sup> Because this approach concentrates on the person who makes the application, rather than on the relative bargaining powers of the parties, if it is not an untenable position, then it certainly is an undesirable one.<sup>87</sup>

(iv) *It is not possible to diminish the rights of employees by contract* In order to protect an employee whose inferior bargaining position may lead them to sign their statutory rights over to their employer, section 42 of the 1977 Act provides that any term in a contract of employment<sup>88</sup> that diminishes the rights of an employee in any invention shall be unenforceable against the employee.<sup>89</sup> The scope of the section is limited by the fact that it does not apply in relation to an employee's duty of confidentiality.<sup>90</sup> It is also limited in that section 42 does not seem to prohibit contracts dealing with inventions created after an employee leaves employment.<sup>91</sup> The reason for this is that while such contracts may appear to fall within the terms of section 42, the section probably has no application because the inventions will have been made when the inventor was no longer in employment.<sup>92</sup> The exact scope of the provision, and the degree to which it modifies the common law rules in this area, remain unclear.

With these initial points in mind, we now turn to look in more detail at the two situations in which employee inventions will belong to an employer.

### 3.2.2 Persons employed to invent

The first situation in which an employee invention belongs to an employer is set out in section 39(1)(a). This provides that an invention made by an employee will belong to their

<sup>85</sup> In other contexts, it has been held that 'invention' encompasses unpatentable subject matter: *Viziball's Application* [1988] RPC 213.

<sup>86</sup> *Ibid.* See also *Staeng's Patent* [1996] RPC 183.

<sup>87</sup> *CIPA*, [39.07]. In *Greater Glasgow Health Board's Application* [1996] RPC 207, in which an employee agreed to allow the employer to proceed with a patent application pending a decision, Jacob J said that it would be unfortunate if anything were to turn on the question of onus of proof.

<sup>88</sup> The provisions apply to contracts of employment, as well as to contracts made between employees and third parties either at the request of the employer or in pursuance of the employee's contract of employment. The section applies both to contracts made before and after the 1977 Act came into force.

<sup>89</sup> PA 1977, s. 42(2).

<sup>90</sup> On the question of employee's duty to disclose inventions and its relationship with PA 1977, s. 44, see *CIPA*, [42.02]. More generally, see J. Turner, 'Pre-invention Assignment Agreement Breach: A Practical Alternative to Specific Performance or Unqualified Injunction' (1997) 5 *JIPPL* 631.

<sup>91</sup> In the United States, these are called 'holdover' or 'trailer clauses'. See M. B. Hershovitz, 'Unhitching the Trailer Clause: The Rights of Inventive Employees and Their Employers' (1995) 3 *JIPPL* 187.

<sup>92</sup> Even if these were not invalidated by s. 42, they would be subject to the doctrine of restraint of trade: see *Electrolux v. Hudson* [1977] FSR 312.

employer if the invention was made in the course of the employee's normal or specifically assigned duties *and* the circumstances in which the invention was made were such that 'an invention might reasonably have been expected to result from the carrying out of those duties'.

(i) *Scope of an employee's duties* In order to determine whether an employee invention belongs to the employer by virtue of section 39(1)(a), it is necessary to determine the scope and nature of an employee's duties. It is then necessary to ascertain whether the invention was made by the employee carrying out those duties.

The job description and the contract of employment are often used as a way of determining the precise nature of an employee's normal duties.<sup>93</sup> There has also been a willingness to look beyond the formal legal arrangement of the contract of employment to the activities that are *actually* undertaken by the employee.<sup>94</sup> Once the scope of an employee's normal duties has been ascertained, it is relatively easy to determine whether an employee has been assigned any additional duties.

Once the duties of the employee have been ascertained, it is then necessary to determine whether the invention was made 'in the course of those duties'. The factors to be considered here include when and where the invention was made, the facilities used by the employee, and the relationship between the invention and the field in which the employer operates.<sup>95</sup> So long as it can be shown that the activity in question falls within the general scope of employment, this is unlikely to present any major problems.

(ii) *Duties that can be expected to result in an invention* As well as establishing that the invention was made in the course of an employee's normal or special duties, the second limb of section 39(1)(a) provides that it is also necessary to show that the invention was made in circumstances under which an invention might reasonably have been expected to result from the carrying out of such duties.

One of the notable aspects of the second limb of section 39(1)(a) is that it requires that *the* invention be made in circumstances under which *an* invention might reasonably be expected to result from the carrying out of the employee's duties. The question of what is meant by 'an invention' in this context was considered by Falconer J in *Harris's Patent*,<sup>96</sup> where he said that 'an invention' did not mean *any* invention, nor did it mean 'the precise invention that was made'. While Falconer J's comments are useful in telling us what the phrase does not mean, it offers little positive guidance as to what it does mean.<sup>97</sup> One possibility is that it could be construed to mean an invention of the same description or type as the invention in suit.<sup>98</sup>

<sup>93</sup> *Staeng's Patent* [1996] RPC 183, 198 (the job description will normally be decisive).

<sup>94</sup> *LIFFE Administration and Management v. Pinkava* [2007] RPC 667 (CA), stressing that while the employment contract was an important starting point, the duties of an employee often evolved over time. In *Harris's Application* [1985] RPC 19, there was no evidence as to the contract of employment and Falconer J looked at what was actually done. See also *Greater Glasgow* [1996] RPC 207, 222. It should be noted that most of the cases begin, at least as a starting point, with the job description. See also *Fireworks Fire Protection and Watermist v. Andrew James Cooke*, BL O/275/13 (23 July 2013).

<sup>95</sup> In *Staeng's Patent* [1996] RPC 183, it was suggested that any invention that was useful to the employer would automatically fall within the employee's duties; cf. *Greater Glasgow* [1996] RPC 207, 222. See P. Chandler, 'Employee's Inventions: Invention and Ownership' [1997] EIPR 262.

<sup>96</sup> *Harris's Application* [1985] RPC 19, [25].

<sup>97</sup> In this context, it is interesting to note that PA 1977, s. 40(7), speaks of 'inventions of the same description'. In *Harris's Application* [1985] RPC 19, 29, Falconer J said that the phrase an 'invention might reasonably have been expected to result from the carrying out of the duties' refers to 'an invention which achieves, or contributes to achieving, whatever was the aim or object to which the employee's efforts in carrying out his duties'.

<sup>98</sup> Another aspect of PA 1977, s. 39, that is unclear is that the section provides that the invention must be made in circumstances in which it might reasonably be 'expected'. It is unclear who it is that ought to expect the invention: the employee, the employer, or, most probably, an objective third party?

An important factor that is often relied upon when deciding whether there was an expectation that the carrying out of the employee's duties would lead to an invention is the extent to which the employee was engaged to invent or design.<sup>99</sup> Inventions that are made by an employee whose duties are limited to mechanical, routine, or non-creative tasks will ordinarily remain with the employee.<sup>100</sup> This can be seen in *Harris's Patent*,<sup>101</sup> an ownership dispute between Reiss, which manufactured valves under licence from Sistag, and Harris, who worked as a manager for Reiss. The particular issue in dispute was whether Reiss or Harris owned rights in a valve, invented by Harris, which controlled the flow of dust through ducts. A number of factors led the court to its finding that the invention belonged to Harris. These included the fact that Harris's normal duties were limited to the non-inventive tasks of sales and after-sales service. Importantly, in dealing with customer problems, Harris's role was limited to non-creative or routine application of known engineering practices. The fact that Reiss had no research laboratory, was not involved in research and development, and always referred major technical problems to Sistag for solution reinforced the conclusion that Harris had not been employed to design or invent. Indeed, when Harris made suggestions to Reiss as to how the valves could be improved, Reiss turned them down. Given that it was not part of the employer's business to solve design problems in valves, it could hardly have been a part of Harris's duties.<sup>102</sup>

Where a person is employed to invent or design, there will ordinarily be an expectation that the carrying out of the employee's duties would lead to an invention and, as such, that any inventions that are made will belong to their employer. This is the case even if the creative aspect of an employee's duties forms only a small part of an employee's overall duties. For example, in *Staeng's Patent*,<sup>103</sup> it was held that while an employee was primarily engaged in marketing, the fact that his job description also assigned to him the creative role of using discussions with customers to generate ideas for new products, as well as thinking of novel uses for existing products, meant that any inventions that he made belonged to his employer. As yet, it is unclear how small the creative contribution of an employee's duties needs to be for section 39(1)(a) not to apply.

### 3.2.3 Special obligations

The second situation where an invention made by an employee will belong to their employer is set out in section 39(1)(b). While section 39(1)(a) primarily deals with people who are employed to invent or design, section 39(1)(b) is concerned with inventions that are made by managerial or administrative employees. More specifically, section 39(1)(b) provides that in certain circumstances, an employee's position within an organization is such that they are deemed to be under a special obligation to further the interests of their employer. While the normal or special duties of an employee may not require them to invent or design, this is overridden by the fact that their seniority effectively places them under a legal obligation not to compete with the firm.<sup>104</sup> This fiduciary principle, which is

<sup>99</sup> Presumably, the status of the employee, a factor normally limited to PA 1977, s. 39(1)(b), would influence whether an invention would be 'expected'. It was said in *Greater Glasgow* [1996] RPC 207 that this was to be judged in terms of the circumstances in which the invention in suit was made and not the general circumstances of employment.

<sup>100</sup> *Ibid.*, 222. It was said that a duty to treat patients did not impose a general duty to invent new ways of diagnosing and treating patients. <sup>101</sup> [1985] RPC 19.

<sup>102</sup> *Ibid.*, 32. See also *Fireworks Fire Protection and Watermist v. Andrew James Cooke*, BL O/275/13 (23 July 2013), [75]–[97]. <sup>103</sup> [1996] RPC 183.

<sup>104</sup> In many circumstances, this implied duty of good faith meant that an employee was under a duty to assign the patent to the employer: *Patchett v. Sterling* [1955] RPC 50; *British Syphon v. Homeword* [1956] RPC

embodied in section 39(1)(b), means that if an employee who occupies a senior position within an organization produces an invention and it can be shown that the invention was made in the course of the duties of the employee, the invention will belong to the employer.

Whether an employee is under a ‘special obligation’ largely depends upon the position that the employee occupies within an organization and the responsibilities that flow from that position. Employees who occupy senior positions, such as senior executives, directors, and managers, are treated as alter egos of their employers and are, as such, under a ‘special obligation to further the interests of the employer’s undertaking’.<sup>105</sup> In contrast, fewer obligations are imposed on less senior employees, such as sales managers or marketing managers.<sup>106</sup> The difficult issue here is deciding at what point within the hierarchy of an organization section 39(1)(b) ceases to apply: how junior must an employee be for them to retain the inventions that they produce?

We are able to gain some guidance as to where this line is to be drawn if we compare *Harris’s Patent*, in which the employee was held not to be under a special obligation, with *Staeng*, in which section 39(1)(b) applied. As we saw earlier, *Harris’s Patent* turned on the question of whether an invention made by Harris belonged to Harris, as an employee, or Reiss, as employer. As well as failing under section 39(1)(a), section 39(1)(b) was also held not to apply. This was because while Harris was called a ‘manager’, when the court looked at what Harris actually did, it found that he had no power to hire, fire, or agree holiday dates, never attended board meetings (even when his department was being discussed), and had limited financial control. As such, the court found that Harris did not owe a ‘special obligation’ to his employer; rather, it found that he was only under an obligation to do the best that he could to effect sales of the valves and related customer aftercare service. Consequently, the court concluded that because Harris was not under a special obligation, the invention in question belonged to Harris. In contrast, in *Staeng’s* case, the employee operated at a very senior level: he attended board meetings; he often acted in a similar capacity to the directors; he had some control over budgetary matters (such as the product range); he was party to the company’s profit-bonus scheme; and he had discretion whether to solve problems himself or to pass them on to others. From this basis, the court concluded that *Staeng* was under a special obligation under section 39(1)(b). As such, the invention that he made belonged to his employer.<sup>107</sup>

330. The statutory rule may be stricter than the common-law position—on which, see *Worthington Pumping Engine Company v. Moore* (1903) 20 RPC 41.

<sup>105</sup> *Ibid.*, 46. It was said in *Harris’s Application* [1985] RPC 19 that pre-1977 cases offered guidance as to the extent and nature of an employee’s obligations to further the interest of the employer’s undertakings.

<sup>106</sup> *Ibid.*, 37–8.

<sup>107</sup> For a comparison of these decisions, see *Fireworks Fire Protection and Watermist v. Andrew James Cooke*, BL O/275/13 (23 July 2013), [100]–[114].

## INFRINGEMENT

### CHAPTER CONTENTS

1 Introduction	608	3 Scope of Protection	626
2 Types of Infringing Activity	609	4 Defences to Proceedings for Infringement	635

### 1 INTRODUCTION

Patent infringement is a notoriously complex area of law.<sup>1</sup> In part, this is a consequence of the evidential nature of the inquiry, which often makes it difficult to generalize beyond the particular case in hand. Another factor that has added to this complexity (while simultaneously enhancing the effectiveness of the patent system) is that it has long been accepted that the scope of the patent monopoly should not be limited to situations where the infringing act takes place in relation to a product or process that is exactly the same as the patented invention. While extending the scope of the monopoly beyond a strict reading of the claims may have satisfied the law's desire to protect the equity of the patent, it generated a new question: how broadly can the patent be read? Similarly, when it was agreed that not all of an invention needed to be taken for a patent to be infringed, the question arose: how much of the invention needs to be taken? The difficulties that these questions generate further accentuate the problems that arise in understanding patent infringement.<sup>2</sup>

The complexity of the topic is also a consequence of Britain's entry into the European Patent Convention. When the EPC 1973 was drafted, it was decided that questions about the infringement of patents issued by the European Patent Office (EPO) were better dealt with by national courts.<sup>3</sup> Nonetheless, the close relationship between validity and infringement has meant that decisions at the EPO (particularly in relation to novelty) have impacted on the British law of infringement. These transitions have proved to be all the more problematic because of the absence of a common tribunal dealing with infringement.

<sup>1</sup> It is also potentially a very costly process. In one case, it was suggested that it cost £250,000 for a two-day trial in the county court and about £112,000 for the Court of Appeal: *Warheit v. Olympia Tools* [2003] FSR 6.

<sup>2</sup> See A. Benyamini, *Patent Infringement in the European Community* (1993).

<sup>3</sup> Infringement proceedings can be also brought before the Comptroller so long as both parties consent: PA 1977, s. 61(3). The suggestion that the 1977 Act be amended to remove the need for the consent of both parties was not adopted in the proposals for reform of the 1977 Act: see *Consultation on the Proposed Patents Act (Amendment) Bill: Summary of Responses and the Government's Conclusions* (November 2003), [115]–[124].

As we mentioned above, this situation will change if the unitary patent package is implemented. One of the notable features of the unified patent package is that questions of infringement will no longer be the exclusive domain of national courts, nor of national law. Currently, infringement of European patents is a matter for national courts to be decided on the basis of the Patents Act 1977. Under the Agreement on a Unified Patent Court<sup>4</sup> (the ‘UPC Agreement’), however, this will shift to the unitary patent courts (which will also have exclusive authority in relation to the infringement of the proposed new ‘unitary patent’). In line with this, the UPC Agreement also sets out the relevant law rules to be used when deciding whether a bundled or a unitary patent is infringed.<sup>5</sup> The UPC Agreement also provides a series of defences that will apply (including acts done for private and non-commercial purpose, acts done for experimental purposes, situations in which biological material is used for the purpose of breeding or discovering and developing new plant varieties, the pharmaceutical preparation of medicines, certain on-farm uses of patented plants and animals, and certain uses in relation to patented computer programs, such as decompilation and interoperability).<sup>6</sup> While UK courts will still have jurisdiction over national patents issued by the UK Intellectual Property Office (IPO), the Patents Act 1977 will need to be modified to ensure that UK law complies with the infringement provisions for European bundle patents and unitary patents under the UPC Agreement.

Despite its complex and often uncertain nature, determining patent infringement can be separated into three tasks.

- (i) First, it is necessary to determine the types of activity that constitute an infringement.
- (ii) Next, it is necessary to ascertain whether the activity complained of falls within the scope of the patent monopoly.
- (iii) Finally, it needs to be determined whether the defendant is able to make use of any of the defences that are available to them.

Each of these tasks will be dealt with in turn.

## 2 TYPES OF INFRINGING ACTIVITY

It is important to note at the outset that patent law draws a general distinction between direct and indirect infringement. The main difference between them is that *direct* infringement involves some immediate engagement with the patented product or process,<sup>7</sup> whereas *indirect* infringement applies where a person facilitates the act of infringement<sup>8</sup>—in effect, patent law’s version of aiding and abetting. Before looking at direct and indirect infringement in more detail, it is important to note that to infringe, the activity must be carried out without the consent of the patentee (that is, the activity must not be covered by licence),<sup>9</sup> must occur within the United Kingdom,<sup>10</sup> and must take place during the duration of the patent.<sup>11</sup>

<sup>4</sup> *Agreement on a Unified Patent Court* [2013] OJ C 175/1 (20 June 2013).

<sup>5</sup> UPC Agreement, Arts 25, 26 (the right to prevent direct and indirect uses of the invention in certain situations). <sup>6</sup> *Ibid.*, Art. 27(a)–(l). <sup>7</sup> PA 1977, s. 60(1).

<sup>8</sup> PA 1977, s. 60(2); CPC, Art. 26. The PA 1977 also contains provisions in relation to contributory infringement. <sup>9</sup> See below at pp. 644–5.

<sup>10</sup> The United Kingdom includes the Isle of Man and the territorial waters of the United Kingdom: PA 1977, s. 132(2), (3).

<sup>11</sup> A patentee may sue only with respect to acts that occur after publication of the application and then only if the patent has been granted. PA 1977, s. 62(3), introduces certain qualifications where the patent

## 2.1 DIRECT INFRINGEMENT

For a patentee to succeed in an infringement action, they must show on the balance of probabilities that the defendant performed one of the activities that falls within the patent owner's control.<sup>12</sup> The primary rights given to a patent owner are set out in section 60(1) of the 1977 Act. As we will see, section 60(1) covers a wide array of activities, from the making or using of a product or a process, through to the sale or import of the product. As a result most, if not all, commercially valuable activities fall within the owner's control.

The rights given to an owner differ depending on whether the patent is for a product, a process, or a product obtained directly from a process. With the exception of the situation in which an infringer uses a process or 'offers a process for use' under section 60(1)(b), direct infringement takes place irrespective of the knowledge of the defendant. This means that liability is absolute in relation to a patent for a product, or where a product has been obtained directly from a patented process. As such, there is no need for a patentee to show that the defendants knew that they were infringing. In these cases, independent, accidental, or unintentional creation of the same invention will infringe.

## 2.2 PATENT FOR A PRODUCT

The owner of a patent for a *product* is given the right to make, dispose of, offer to dispose of, use, import, or keep the product, whether for disposal or otherwise.<sup>13</sup> It is important to note that in this context, liability is absolute: the knowledge of the defendant is not relevant when deciding whether they have carried out one of the activities within the owner's control.<sup>14</sup> While intention to infringe is not relevant to the determination of liability, *mens rea* might play a significant role in relation to the remedies granted by the court.<sup>15</sup>

Three different rationales are usually given to explain why patent liability is absolute.<sup>16</sup> The first is that the principle is necessary to allow patentees full enjoyment of their monopoly rights.<sup>17</sup> This is often said to be more pressing because of the onerous nature of the validity requirements imposed on patent applicants. When thinking about assertions of this nature, it is important to remember that property rights are never absolute and that the rights recognized in patents are no exception to this.<sup>18</sup> For example, patents are limited in terms of duration, scope of operation, subject matter, and types of activity that are protected. As such, there is little, if anything, in this argument that demands that infringement ought to be absolute.

application is amended after publication. PA 1977, s. 62(2), deals with the position where the patentee fails to renew the patent promptly. For considerations of duration and SPCs, see below at pp. 680–1.

<sup>12</sup> PA 1977, s. 60(1)–(2); CPC, Arts 25–8. <sup>13</sup> PA 1977, s. 60(1)(a).

<sup>14</sup> *Schenck v. Universal Balancing* [2012] EWHC 1920, [86].

<sup>15</sup> PA 1977, s. 62(1). See further Chapter 48, section 5.

<sup>16</sup> The following cases are usually cited in support: *Proctor v. Bennis* (1887) *RPC* 333, 356–7 (no real justification given); *Curtis v. Platt* (1863) 3 *Ch D* 135, 140n; *Valensi v. BRC* [1972] *FSR* 273, 306 (adds nothing); *Stead v. Anderson* (1847) 2 *WPC* 151, 156; *Wight v. Hitchcock* (1870) *LR* 37, 47 (argument based on a version of parallel importing: 'if the law were otherwise . . . another might by merely crossing the Channel, and manufacturing abroad, and selling for far less than the original price . . . wholly deprive the patentee of the benefit of the invention'); *Walton v. Lavater* (1860) 8 *CB (NS)* 162, 186, 29 *LJ (CP)* 275, 279; *Betts v. Neilson* (1865) 34 *LJ (Ch)* 537; *Elmslie v. Boursier* (1869–70) *LR* 9 *Eq* 217.

<sup>17</sup> *Lishman v. Erom Roche* (1996) 68 *CPR (3d)* 72, 77 (FCTD).

<sup>18</sup> See R. Gordon, 'Paradoxical Property', in J. Brewer and S. Staves (eds), *Early Modern Conceptions of Property* (1995), 95. 'See also Lord Irvine of Lairg, 'The Law: An Engine for Trade' (2001) 64 *MLR* 333, 346:

[P]atents do not create wholly controlled monopolies. They confer on their owners the narrower benefit of exclusive commercial exploitation for a duration limited to twenty years. Even during

A second explanation offered as to why the intention of the defendant is not relevant when determining whether someone has infringed can be traced to the so-called ‘reverse-infringement test’, which is sometimes used to determine whether an invention is novel.<sup>19</sup> Under this test, which is based on a belief that the novelty examination is a mirror of the test for infringement, the court asks the following hypothetical question: if the disclosure were to be made or take place after grant, would it infringe the patent (if granted)? If so, then the disclosure is anticipatory.<sup>20</sup> The next step in the argument is to remind us that when considering whether information in the public domain anticipates an invention, the intention of the person who made that information public is irrelevant (that is, novelty is decided objectively). On the basis that novelty and infringement are mirrors of each other and that novelty is determined objectively, it is therefore suggested that infringement should also be decided objectively. While the reverse-infringement test was approved in the United Kingdom in a number of decisions under the Patents Act 1977,<sup>21</sup> it has become clear that it is no longer the test to be applied to determine whether an invention is novel.<sup>22</sup> Instead of determining novelty by asking whether, if the disclosure had been made after grant, it would infringe the patent (if granted), the focus of the ‘new’ law is upon novelty in its own right. In any case, while the test may have brought conceptual clarity to the novelty examination, it offers little real guidance when considering whether intention should be a factor taken into account when deciding infringement.

A third argument in support of the principle that the intention of the defendant is irrelevant in deciding infringement focuses on the existence of the patent register and the information function performed by the patent system more generally. Here, the potential harm that third parties might endure as a result of infringement being absolute is mitigated by the fact that as part of the patent process, the invention is made available to the public. More specifically, it is argued that because information about the patented invention is in the public domain, third parties are able to access the information and subsequently alter their behaviour (or license the patent), and thus avoid infringing the patent. While this rationale *might* carry some weight in relation to mechanical inventions, it is not as easily applied to biological inventions. This is because the rationale for strict liability is based on an image of the invention as something inert, static, and (largely) immutable. In the case of mechanical inventions (in which it is the behaviour of the defendant that determines whether they infringe), would-be defendants are able to modify their conduct to ensure that they do not do so. However, in the case of (some) biological inventions, which are dynamic and active, there may be very little (if anything) that a defendant can do to avoid infringing. Given that the infringement might be traced to the action of the invention (rather than the defendant), this may be the case even if the defendant had known about the patented invention.

The potential problems that arise in relation to biological inventions were highlighted by the Canadian decision *Monsanto v. Schmeiser*,<sup>23</sup> in which a farmer was successfully sued for infringing Monsanto’s patent for glyphosate-resistant plants, when patented

the currency of the patent, members of the public are free to conduct experiments on the patented invention.

<sup>19</sup> See, e.g., *Robert Alfred Young and Robert Neilson v. Rosenthal* (1884) *RPC* 29, 31–3.

<sup>20</sup> The classic statement is provided by Sachs LJ in *General Tire & Rubber v. Firestone Tyre & Rubber* [1972] *RPC* 457, 485–6.

<sup>21</sup> See, e.g., *PLG Research v. Ardon International* [1993] *FSR* 197, 218.

<sup>22</sup> Arguably, the test never did state the law accurately, since the carrying out of instructions that might (rather than inevitably would) lead to the invention was not thought to be an anticipation, although clearly, on some occasions after grant, it would amount to infringement.

<sup>23</sup> [2004] 1 *SCR* 902, [2004] *SCC* 34.

plants were found growing on his property. Importantly, it was held that the principle of strict liability meant that it did not matter whether the defendant farmer had planted the infringing plants or whether, as he claimed, the plants were there as a result of conduct outside his control (including cross-field breeding by wind or insects, seed blown from passing trucks with loose tarpaulins, seed dropped from farm equipment, and seed that had escaped when a neighbour dropped a bag of Monsanto's seed from his truck); all that mattered was that there had been an unauthorized use of the patented invention. The decision is important since it highlights the possibility of, and some of the problems associated with, what could be called 'passive infringement' of biological inventions. This is the fact that farmers, through no fault of their own, may be liable for patent infringement when a patented plant 'invades' their property and cross-pollinates with one of their plants. (Similar problems could arise with genetically modified animals.) The possibility of passive infringement has important ramifications for the traditional farming practice whereby seeds saved from one year's harvest are used to sow crops in the following year. Even if this does not occur, the mere possibility of passive infringement of biological inventions will increase the pressure on farmers to obtain licences to use patented inventions of this nature. It is, however, a problem that could easily be remedied through the introduction of a defence for passive infringement.

### 2.2.1 The right to make the product

Perhaps the most important right given to the owner of a patent for a product is the exclusive right to 'make' the product. Few problems have arisen in determining what is meant by the right to make a product. One exception to this is where the defendant repairs or modifies the patented product. Patent law has long recognized that purchasers of patented products should be able to repair and modify those products. As Lord Hoffmann said in *United Wire*,<sup>24</sup> 'repair is one of the concepts (like modifying or adapting) which shares a boundary with "making" but does not trespass on its territory'. He added that:

[A]s a matter of ordinary language, the notions of making and repair may well overlap. But for the purposes of the statute, they are mutually exclusive. The owner's right to repair is not an independent right conferred upon him by licence, express or implied. It is a residual right, forming part of the right to do whatever does not amount to making the product.<sup>25</sup>

At the same time, however, patent law has been keen to ensure that while a person who obtains a patented product is able to repair or modify the product, they may not go so far as to make the product anew.<sup>26</sup> In these circumstances, the question arises: how much of a product is a person able to repair or modify before they infringe the owner's right to make the product? To put it another way: when does the legitimate act of repair or modification switch to become the illegitimate making of the patented product?

These questions were recently considered at length by the Supreme Court in *Schütz v. Werit*.<sup>27</sup> This was an infringement action brought by Schütz in relation to a patent

<sup>24</sup> *United Wire v. Screen Repair Services* [2000] 4 All ER 353 (HL), 358.

<sup>25</sup> *Ibid.* Prior to this decision, the right to repair had sometimes been based on the idea of implied licence: *Solar Thomson Engineering v. Barton* [1977] RPC 537, 555; *British Leyland v. Armstrong* [1986] RPC 279, 358, 361–2; cf. *Canon v. Green Cartridge Co.* [1997] FSR 817, 822; *Hazell Grove v. Euro League Leisure* [1995] RPC 529, 537–41.

<sup>26</sup> *Solar Thomson Engineering v. Barton* [1977] RPC 537; *Sirdar Rubber v. Wallington Weston* (1907) 24 RPC 537; *British Leyland v. Armstrong* [1986] RPC 279, 376.

<sup>27</sup> [2013] UKSC 16. See B. Whitehead, 'Manufacture or Repair: The Final Word—*Schütz v. Werit* (2013) 35 EIPR 42.

Fig. 22.1 Intermediate bulk container

Source: Courtesy of Schütz Ltd

for an intermediate bulk container—that is, a device used to transfer large quantities (around 1,000 litres) of liquids (such as chemicals, soft drinks, or cosmetics). The patent consisted of two parts: the large plastic bottle, which held the liquid; and the metal cage, which protected the bottle in transit and storage (see Fig. 22.1).<sup>28</sup> The novel and inventive part of Schütz’s patented intermediate bulk container was the particular way in which the cage was made. One of the notable things about intermediate bulk containers is that it was often necessary to replace the plastic containers, either because the bottle had become damaged or because they contained residue of a toxic material. Many secondary organizations, known as ‘reconditioners’, undertake this work. This usually consists of them removing the old bottles, repairing the cage if needed, and putting in a new bottle (either of the same type as that which had been removed or a different one). Delta and Werit worked in the reconditioning industry. Delta purchased second-hand intermediate bulk containers that had been made by Schütz. Delta replaced the plastic bottles made by Schütz with new bottles that it had bought from Werit. The resulting reconditioned intermediate bulk containers were a mixture of the old Schütz cage and a new Werit bottle. Schütz objected to this, arguing that, in producing the reconditioned intermediate bulk container, Werit and Delta had infringed its exclusive right to ‘make’ the patented invention.

<sup>28</sup> There was a third part of the invention—the pallet on which the container sat—but this was not considered in the decision.

In considering this issue, the Supreme Court was called upon to determine how much of a product a person could modify before they infringed the owner's right to make the product. Lord Neuberger stressed that the answer to this question depended on how 'make' was interpreted. He also emphasized the 'somewhat slippery nature of the meaning of the word, and the very important role which context plays in determining whether a particular activity involves "making" an article'.<sup>29</sup> Thus while placing a Schütz bottle in a Schütz cage would clearly have been a 'making', replacing the detachable lid would not.<sup>30</sup> What, then, of the situation in which someone placed a Werit bottle in a Schütz cage?

In answering this question, Lord Neuberger began by critically examining some of the approaches that had previously been used to determine whether, in replacing part of an article, a person had repaired or made the article. One approach that has been used to answer this question focuses on the inventive concept of the patented article. Under this approach, if the defendant's activities were to relate to the inventive part of the patented article, they would infringe. Conversely, if their conduct were limited to replacing the non-inventive parts of the article, they would be engaged in non-infringing repair. Thus if a patented product were to relate to the invention of a pool table with a novel and inventive coin-operating system, it would almost certainly be legitimate for a person to replace the cloth on the pool table. Under this approach, it would probably not be legitimate, however, for them to replace an old coin-operating system with a new one, since it is likely that this would be an essential component of the invention.<sup>31</sup> This is the approach that was adopted by Floyd J at first instance in *Schütz v. Werit*,<sup>32</sup> who held that the reconstituted bulk containers were non-infringing because the defendant had only replaced the non-inventive plastic bottle and not the inventive part, which was the cage. Using the inventive part of the invention as a touchstone for determining whether someone has 'made' the patented invention has the advantage of providing certainty (although it may be difficult to determine the inventive element of the invention in some cases).

While Lord Neuberger was willing to accept that the question of whether a defendant had replaced the inventive part of an article was a factor to be taken into account when deciding whether a particular activity constituted a making of the article, he stressed that it was wrong to use the inventive concept as a single touchstone for deciding whether, in replacing or modifying part of an article, a person had repaired or made the article. Specifically, Lord Neuberger was critical of the 'oversimplified approach' adopted by Floyd J at first instance, who had said the 'correct approach is to ask whether, when the part in question is removed, what is left embodies the whole of the inventive concept of the claim'.<sup>33</sup>

Lord Neuberger was also critical of approaches that used the relative importance of the part that had been replaced to the article as a whole to determine whether the article had been made or repaired. Under this approach, if the part replaced was a material part of the article as a whole, it would be a making. In contrast, where the part in question was an immaterial part of a product, it was less likely for a court to hold that a person has made a patented product.<sup>34</sup> Lord Neuberger rejected this approach, saying that the 'mere fact that an activity involves replacing a constituent part of an article does not mean that the activity involves "making" of a new article rather than constituting a repair of the original

<sup>29</sup> *Schütz v. Werit* [2013] UKSC 16, [53].

<sup>30</sup> *Ibid.*, [58].

<sup>31</sup> *Hazell Grove v. Euro League Leisure* [1995] RPC 529. In *United Wire v. Screen Repair Services* [2001] RPC (24) 439 (HL), the inventive concept lay in the frame (which was retained) and not in the wire (which was replaced).

<sup>32</sup> *Schütz v. Werit* [2010] EWHC 660 (Pat).

<sup>33</sup> *Schütz v. Werit* [2013] UKSC 16, [196] *per* Lord Neuberger.

<sup>34</sup> *United Wire v. Screen Repair Services* [2001] RPC (24) 439.

article'.<sup>35</sup> Thus if an original Schütz intermediate bulk container was reusable except for the detachable lid, which had been damaged, Lord Neuberger said that it 'could not be plausibly contended that the replacement of the lid constituted "making" the claimed article, even though the [intermediate bulk container] would be unusable without the new 'lid'.<sup>36</sup>

It is important to note that Lord Neuberger did not reject out of hand the use of the inventive concept or the relative importance of the part taken as tools for determining whether replacing part of an article constituted a making of the article. Instead, what he objected to were situations in which these factors were treated as the *only* factor to be taken into account. Drawing upon the idea that 'making' was to be decided contextually, Lord Neuberger said that it was important to focus on a range of factors, which would vary from case to case. On the facts before him, Lord Neuberger found that placing a Werit bottle in a Schütz cage did not constitute a 'making' of the patented article and, as such, was non-infringing. In reaching this conclusion, Lord Neuberger drew on a number of factors, including the fact that the bottle was a free-standing replaceable part of the patented article and that it had no connection to the claimed 'inventive' part of the intermediate bulk containers—namely, the metal cage. Another important factor was that the bottle had a much shorter life expectancy than the metal cage. It was also important that the bottle could not be described as the main component of the article. Lord Neuberger also said that it was important that apart from replacing the bottle and undertaking very minor repairs, Delta did not undertake any additional work on the bulk container.

In light of *Schütz v. Werit*, the question of whether something is 'made' or whether it is merely repaired or modified is decided by looking at the facts of the case as a whole. This will include quantitative factors, such as the amount of the product that is repaired and the relative life expectancy of the part that is being replaced. It will also include qualitative considerations, such as whether the inventive part of the patented invention has been replaced and the relative importance of the part of the patented product that has been repaired. While the test for determining whether someone has made a patented article takes account of a wide range of factors, there are limits. For example, it does not matter who carries out the work,<sup>37</sup> nor how a party views or markets its products (such as claiming that it is 're-manufactured').<sup>38</sup> While the courts now need to take a more holistic approach when deciding whether something has been repaired or made, it seems that this is unlikely to lead to different results.<sup>39</sup>

Where purchasers of a patented article are entitled to repair the product:

[They] must be entitled to carry out what is a genuine repair whether it is economical to do so or not, and whether the part repaired or replaced in the course of what is truly a repair is crucial to the function of the patented article or not.<sup>40</sup>

It also seems that if the repaired article does not work as well or as safely as the original product, this will not affect the decision as to whether the repair is legitimate.<sup>41</sup>

<sup>35</sup> *Schütz v. Werit* [2013] UKSC 16, [50].

<sup>36</sup> *Ibid.*, [58].

<sup>37</sup> *Ibid.*, [46].

<sup>38</sup> *Ibid.*, [47].

<sup>39</sup> See, e.g., *Nescafé v. Dualit* [2013] EWHC 923 (Pat), [200]–[205], in which it was held that owners of Nespresso coffee machines did not 'make' the patented system when they purchased non-Nespresso capsules for their Nespresso machines. Here, what was important was the fact that the machines and the capsules had an independent commercial experience; purchasers of the machine had an expectation that they could purchase capsules from wherever they wanted; the capsules did not embody the inventive element of the patent; and the owner of the machine did nothing that could be described as repairing, let alone making.

<sup>40</sup> *Solar Thomson Engineering v. Barton* [1977] RPC 537, 555.

<sup>41</sup> *Ibid.*, 556–7; *Dellareed v. Delkin Developments* [1988] FSR 329; approved in *Hazell Grove v. Euro League Leisure* [1995] RPC 529, 541.

### 2.2.2 The right to dispose of the product

Another important right given to the owner of a product patent is the right to sell (or vend) the product. The right to sell, which is part of the general right to dispose of the invention,<sup>42</sup> includes the sale of individual articles.<sup>43</sup> It also applies where the patented product is sold to people who intend to use the article in non-infringing activities (such as sale to a person who intends to use the article for experimental purposes).<sup>44</sup> A patent owner's right to dispose of a product will be infringed where a person supplies the product in kit form. As with all infringement actions, the kit must fall within the scope of the claims.<sup>45</sup> If the kit partially falls outside the claims, a patentee will have to rely on indirect or contributory infringement to prevent sale of the kits.<sup>46</sup> These matters are discussed below.<sup>47</sup>

*Implied licences and exhaustion*<sup>48</sup> A patent owner's ability to control the way patented products are disposed of is limited by the common law doctrine of implied licence and the doctrine of exhaustion as developed under Community law.<sup>49</sup> According to the doctrine of implied licence, in the absence of any limitation to the contrary, where the patentee sells a patented product, the patentee is unable to rely on the patent to prevent the resale of the article. This is because the sale of a product carries with it an implied licence to keep, use, and resell the product.<sup>50</sup> However, where there is an express limitation, it will bind those who receive the goods with notice of the limitation—unless the limitation contravenes Article 28 or 81 EC (ex Articles 30 and 85 of the Treaty of Rome).

Under the doctrine of exhaustion,<sup>51</sup> a patentee is unable to use a patent to prevent the further disposal of an article that has been placed on the market in the European Economic Area (EEA) with the patentee's consent.<sup>52</sup> Consequently, an express limitation on further disposal of a patented article will contravene Article 28 and thus be void if

<sup>42</sup> *Gerber Garment v. Lectra* [1995] RPC 383. An 'offer' to dispose of a product in this context is not the same as 'offer' in contract law: *ibid.*, 411. See also *Musion Systems v. Activ8-3d* [2011] EWPC 12, [46]–[48]. To be an infringing act, an 'offer to dispose' must be made in the United Kingdom and propose disposal within the United Kingdom: *Kalman v. PCL Packaging* [1982] FSR 406. For issues relating to joint tortfeasance where the joint tortfeasor is located outside the jurisdiction, service out of the jurisdiction, and actions for infringement of foreign patents, see below at pp. 1208–9.

<sup>43</sup> *Hadley Industries v. Metal Sections and Metsec (UK)* (unreported, 13 November 1998) (Pat).

<sup>44</sup> *Hoffman La Roche v. Harris Pharmaceuticals* [1977] FSR 200 (under the PA 1949).

<sup>45</sup> *Rotocrop v. Genbourn* [1982] FSR 241; *Furr v. CD Truline (Building Products)* [1985] FSR 553, 565; A. Benyamini, *Patent Infringement in the European Community* (1993), 68–74 (suggesting that kits are dealt with as direct infringements unless they lack one or more essential elements).

<sup>46</sup> *Rotocrop v. Genbourn* [1982] FSR 241, 258–9. <sup>47</sup> See below at pp. 626–7.

<sup>48</sup> As Lord Hoffmann said, the difference between an implied licence and exhaustion is that 'an implied licence may be excluded by express contrary agreement or made subject to conditions, while the exhaustion doctrine leaves no patent rights to be enforced': *United Wire v. Screen Repair Services* [2001] RPC (24) 439, [68]–[69].

<sup>49</sup> For an overview, see *HTC Corporation v. Nokia Corporation* [2013] EWHC 3247, [151]–[169].

<sup>50</sup> *Betts v. Willmott* (1871) 2 Ch LR 6; *Incandescent Gas Light Co. v. Cantelo* (1895) 12 RPC 262; *National Photograph Co. of Australia v. Menck* [1911] AC 336. While the common law has tended to adopt an implied licence approach, there is some evidence that this case law may be being reinterpreted as part of an 'exhaustion of rights' principle like that found within European law. In *Canon v. Green Cartridge* [1997] FSR 817, 822, Lord Hoffmann said that the notion of 'a general implied licence to use the patented product at all, which is sometimes used to explain why mere user does not infringe the patentee's monopoly . . . is perhaps better regarded as a consequence of the exhaustion of the patentee's rights in respect of the particular article when it is sold'.

<sup>51</sup> See above at pp. 12–15.

<sup>52</sup> The doctrine of exhaustion has been held inapplicable to products made under a compulsory licence: *Merck v. Stephar*, Case C-187/80 [1981] ECR 2063.

it prevents import into or resale in another member state.<sup>53</sup> However, such a limitation might enable a UK patentee to prevent export to Australia, or perhaps further disposal within the United Kingdom.<sup>54</sup>

### 2.2.3 The right to import the product

The patentee has the right to control the import of products that fall within the scope of the product. It seems that where the patented product is passively imported (that is, where the patented product is of no importance as far as any question of carriage is concerned), the patent will not be infringed.<sup>55</sup> As Tomlin J said: 'I cannot think . . . that the employment of a patented cutting blow-pipe or a patented hammer in the manufacture of some part of a locomotive would necessarily render the importation of the locomotive an infringement.'<sup>56</sup> A person will infringe where they deal with the patented product in the course of trade or for the purposes of profit.<sup>57</sup> Because an importer must have a legal and beneficial interest in the infringing goods, foreign parties will not infringe where they transfer their interests in the infringing object outside the United Kingdom (although they might be liable as a joint tortfeasor).<sup>58</sup> As with the right to dispose of the product, the patentee's right to prevent import is limited by the common law principle of implied consent and by the doctrine of Community exhaustion.

### 2.2.4 The right to keep the product

The patentee's monopoly also includes situations where an infringer keeps the product, whether for disposal or otherwise. The scope of this right was considered in *SKF v. Harbottle*,<sup>59</sup> where the court was called upon to decide whether the storage of a product in a London warehouse fell within the meaning of 'keep' in section 60(1) of the Patents Act 1977. This decision arose from the fact that British Airways, which was in the process of transporting an antihistamine drug called Cimetidine from Italy to Nigeria, stored 20 kg of the drug in a warehouse in London. While the drug was being stored, a patent infringement action was brought by the UK patentees (SKF) against the owner and importer of the drug, Harbottle. British Airways was joined as co-defendant in the infringement action on the basis that it had infringed the owner's right to keep the product. Finding in favour of British Airways, the court held that the act of passively storing a patented drug in a warehouse in London could not be construed as the 'keeping of a product' within the meaning of section 60(1). While declining to arrive at a definitive meaning of the term 'keep', the court was strongly influenced by the 'very much more limited' terms employed in Article 29(a) of the Community Patent Convention (CPC), where the

<sup>53</sup> If the CPC comes into force, PA 1977, s. 60(4), will come into effect (see CPC, Art. 81). On the scope of PA 1977, s. 60(4), see *Dellareed v. Delkin* [1988] FSR 329, 347.

<sup>54</sup> *Roussel Uclaf SA v. Hockley International* [1996] RPC 441 (for a limited licence applied to sales of a patented product outside the EEA to be effective, notice of it must be brought to the attention of every person down the chain of supply).

<sup>55</sup> See *SABAF SpA v. MFI Furniture Centres* [2005] RPC 10 (HL), [40]–[46] (on the definition of 'importer').

<sup>56</sup> *Wilderman v. Berk* (1925) 42 RPC 79, 88.

<sup>57</sup> This is the case irrespective of whether the ultimate destination is the United Kingdom or elsewhere: *Hoffmann-La Roche v. Harris Pharmaceuticals* [1977] FSR 200 (under the PA 1949).

<sup>58</sup> *SABAF v. Meneghetti* [2003] RPC 264 (CA), 284–5. As the Italian defendants passed legal title in the 'infringing' article (which was subsequently imported into the United Kingdom) to another party in Italy, it could not be said that they imported the goods into the United Kingdom, although they did organize and pay for the haulage of the articles. In so finding, the Court of Appeal expressly disregarded *Waterford Wedgwood v. David Nagli* [1988] FSR 92 (re-import under TMA 1994).

<sup>59</sup> [1980] RPC 363; M. Howe, 'Infringing Goods and the Warehouseman' [1979] EIPR 287.

equivalent wording refers to ‘stocking’ a patented product. On this basis, it was said that ‘keep’ implied ‘keeping in stock’ rather than acting as a custodian.

Despite the approach adopted in *Harbottle*, a broader interpretation of the right to keep a product was adopted in *McDonald v. Graham*.<sup>60</sup> In this case, the patentee asserted that the defendant (a marketing consultant who had been introduced to the patentee), who retained certain articles (and later made them available to a third party), had infringed their right to ‘keep’ the patented product. In response, the defendant argued that the materials had not been kept ‘for disposal or otherwise’. The Court of Appeal held that the defendant had kept the product ‘in the sense of keeping them in stock for the purposes of his business in order to make use of them as and when it would be beneficial to him to do so’.<sup>61</sup> As such, the patent had been infringed.

In circumstances where the patentee has placed the product on the market, a person will be free from liability under the implied licence theory. However, if no such licence is implied, liability for mere possession or use is absolute (irrespective of knowledge or intent).

### 2.2.5 The scope of protection for biotechnological inventions

In the lead-up to the Biotechnology Directive,<sup>62</sup> questions arose about the scope of protection for biotechnological inventions. The issues were dealt with by Articles 8–10 of the Directive. The Patents Act 1977 has been amended to take account of these provisions.<sup>63</sup> The scope of protection of product patents for biological material is dealt with in Articles 8(1) and 9 of the Directive.

Article 8(1) provides that the protection conferred by a patent on biological material (possessing specific characteristics) extends to any biological material derived from that biological material by propagation or multiplication in an identical or divergent form. This would apply, for example, to inventions for herbicide-resistant plants and genetically manipulated animals.<sup>64</sup> For the derivative biological material to be covered by the patent, it must possess the same characteristics as the patented biological material. This means that a patent for a genetically modified animal would extend to include future generations (so long as they retain the ‘specific characteristics’ of the ‘original’ animal).<sup>65</sup>

Article 9 (which is mirrored in the United Kingdom in paragraph 9 of Schedule A2 to the Patents Act 1977)<sup>66</sup> deals with the scope of protection for a product that contains genetic information. More specifically, it provides that the protection conferred on a patent containing or consisting of genetic information shall extend to all material, save as provided in Article 5(1),<sup>67</sup> in which the product is incorporated and in which the genetic information is contained or performs its function.

In recent years, there has been a growing concern about the nature of the protection granted to biotechnological inventions, particularly in relation to product patents granted for genes, DNA sequences, and the like. The main problem with product patents in this context is that they give the patentee control over subsequent uses of the product, even for uses that they did not envisage or know about. For example, if a research team were to discover that the ABC gene caused acne, it might be possible for them to obtain a product patent

<sup>60</sup> [1994] *RPC* 407.      <sup>61</sup> *Ibid.*, 431.      <sup>62</sup> See above at pp. 389–90.

<sup>63</sup> Patents Regulations 2000 (SI 2000/2037), regs 8–10, were said to be declaratory of the (then) existing law.

<sup>64</sup> S. Bostyn, ‘The Patentability of Genetic Information Carriers’ [1999] *IPQ* 1, 28.

<sup>65</sup> *Ibid.*      <sup>66</sup> Introduced by Patents Regs 2000.

<sup>67</sup> Biotech. Dir. Art. 5(1)/PA 1977, Sch. A2, para. 3(a), states that the human body at the various stages of its formation and development, and the elements thereof (including gene sequences), cannot be patented.

over the isolated ABC gene. If another research team were subsequently to discover that the ABC gene also played a role in the development of skin cancer, this would be covered by the earlier product patent. One objection to a situation such as this is that the reward granted to the patentee outweighs the benefits that flow from their disclosure. Another related problem is that product patents may stifle research into new uses of a patented product. While special defences have been introduced to minimize the impact of product patents for biological inventions,<sup>68</sup> many commentators believe that further action is necessary. One solution that has been suggested is that the scope of protection for gene patents should be limited to the use that is actually disclosed in the patent.<sup>69</sup> To continue with the example mentioned above, this would mean that the initial patent would only be granted for the ABC gene insofar as it triggers acne. In this situation, the protection reflects the disclosure. The more limited protection also means that the patent would not act as a disincentive for others to look for other uses of the ABC gene. It has been suggested that this proposal is supported by Recital 25 of the Biotechnology Directive insofar as it limits product claims to the parts of the product that are essential to the invention—that is, it restricts the scope of DNA-product patents based on their disclosed function.<sup>70</sup> Another more radical suggestion, which harks back to the way in which chemical inventions were treated in the early part of the twentieth century, is to limit gene patents to process claims—that is, product production would simply not be available for gene-based inventions.

### 2.3 PATENTS FOR A PROCESS

The owner of a patent for a process is given the right to use the process or to offer it for use in the United Kingdom.<sup>71</sup> This is subject to the proviso that the right is only infringed where it can be shown that the defendant knew, or it would have been obvious to a reasonable person in the circumstances that the unauthorized use of the process would be an infringement of the patent. It is important to note that in contrast with the rights given to owners of patents for products (discussed above) and the rights given to patents for products derived from processes (discussed below), liability for infringement of a patent for a process is *not* absolute—that is, liability depends upon the owner proving that the defendant knew, or that it would have been obvious to a reasonable person in the circumstances, that the unauthorized use of a process would be an infringement of the patent. In essence, the owner of a patent for a process is given the right to practise the invention or to put the invention into effect. For the most part, there have been few problems in interpreting this provision (although discovering how a defendant makes a particular product may be one).<sup>72</sup> Problems may arise, however, in relation to patents for ‘novelty of use’ claims, which are discussed below.

#### 2.3.1 Direct products of patented processes

It has long been accepted that where a patent is granted over a process, the protection includes both the process in question and the products that flow from that process. This

<sup>68</sup> See below at pp. 639–40.

<sup>69</sup> See D. Schertenleib, ‘The Patentability and Protection of DNA-based Inventions’ [2003] *EIPR* 125, 136–8; A. White, ‘Gene and Compound *per se* Claims: An Appropriate Reward?’ [2001] 6 *Bioscience L Rev* 239; P. Jacobs and G. Van Overwalle, ‘Gene Patents: A Different Approach’ [2001] *EIPR* 505.

<sup>70</sup> Where the claimed DNA sequences ‘overlap only in parts which are not essential to the invention, each sequence will be considered as an independent sequence in patent law terms: Schertenleib, *op. cit.*, 136.

<sup>71</sup> PA 1977, s. 60(1)(b).

<sup>72</sup> For some of the problems that arise in proving infringement of a process patent where the process is carried out overseas, see *Nutrinova Nutrition Specialties & Food Ingredients v. Sanchem UK* [2001] *FSR* 797.

principle is now to be found in section 60(1)(c) of the Patents Act 1977, which provides that a person infringes a process patent if they dispose of, offer to dispose of, use, import, or keep any product derived from that process.<sup>73</sup> This protection is particularly important where no claim has been made to a product as such. It is also important where the process is carried on outside the United Kingdom and a product derived from that process is imported into the United Kingdom.<sup>74</sup> As we have already looked at the way these terms are construed, there is no need to examine them again.

The protection given to process patents is potentially very wide. In part, this is because where a range of different products flow from a single process, all of the products fall within the remit of the patent. It is also because the scope of protection not only includes the products that flow from the process, but also the products that are based upon the products that flow from the process—that is, the derivatives of the derivative. To ensure that the scope of the monopoly is kept within justifiable limits, an important restriction is placed on the products that are protectable by process patents. This has been done by stipulating that for protection to arise, there must be a direct *relationship* between the process and the product in question.<sup>75</sup>

The question of what is meant by a ‘direct’ relationship was considered by the Court of Appeal in *Pioneer Electronics v. Warner Music*.<sup>76</sup> This action arose when the claimant argued that its process patent for a method of manufacturing compact discs had been infringed after the defendant imported optical discs into the United Kingdom that were a by-product of the patented process. While there was no doubt that the imported discs had been derived from the patented invention, it was unclear whether there was a ‘direct’ relationship between the process patent and the imported discs.

After considering the way equivalent provisions were interpreted in other European jurisdictions, the Court of Appeal concluded that ‘directly’ meant ‘without intermediary’. More specifically, Nourse LJ said that when the Patents Act 1977 stipulated that for protection to arise, there had to be a direct relationship between the process and product, this meant that there were no material or important steps that intervened between the process and the product in question. In situations where material and important steps did intervene, the process patent could not be used to control the use that was made of the product. This situation would only change if it could be shown that the intervening steps were immaterial or trivial.

The process patent for the production of the master discs was not infringed when the final discs were imported into the United Kingdom. The reason for this was that a number of important and material steps separated the product from the process. A key factor in the finding of non-infringement was that the production of the master discs was only an initial stage in the production of the final optical discs. The master discs were used to produce ‘mothers’, which in turn were converted into ‘sons’, which subsequently acted as the basis from which the moulding of the final discs took place. While the patented invention may have acted as a platform that aided in the production of the final discs, because there were a number of important and material steps that separated them, there was not a direct relationship and thus no infringement. The requirement that there be a direct relationship is in accord with the general logic of patent law. While a product may draw upon a process patent, if the product only comes into existence as a result of material steps

<sup>73</sup> CPC, Art. 25(c); EPC 2000, Art. 64(2) (ex EPC 1973, Art. 64(2)). <sup>74</sup> *CIPA*, [60.06].

<sup>75</sup> PA 1977, s. 60(1)(c). For the common-law position, see *Saccharin Corp v. Anglo Continental Chemical* (1900) 17 *RPC* 307.

<sup>76</sup> [1997] *RPC* 757 (CA). See H. Hurdle, ‘What is the Direct Product of a Patented Process?’ [1997] *EIPR* 322; F. Russell and H. Hurdle, ‘What is the Direct Product of a Patented Process?’ [1995] *EIPR* 249.

that occur outside the process, the products are no longer derivative; rather, they are new products that warrant separate patent protection. If patentees were able to regulate the use that was made of such products, this would extend the ambit of the monopoly beyond the scope of the invention disclosed in the patent.<sup>77</sup>

The question of what is meant by a direct relationship was also considered in *Monsanto v. Cargill*.<sup>78</sup> In this case, Monsanto argued that by importing into the United Kingdom a cargo of soybean meal produced in Argentina, Cargill had infringed Monsanto's patent for Round Up Ready soybeans—the main claim being for 'a method of producing genetically transformed plants'. There was no doubt that the soybean meal imported into the United Kingdom (or at least a substantial part of it) was produced from Round Up Ready soybeans in Argentina. In deciding whether the method claims in the patent had been infringed, the court had to consider whether the soybean meal had been 'directly obtained' from the process in question under section 60(1)(c). Pumfrey J said that the phrase 'directly obtained by means of the process' means the 'immediate product of the process, or where the patented process is an intermediate stage in the manufacture of some ultimate product, that product, but only if the product of the intermediate process retains its identity'.<sup>79</sup> Following *Pioneer Electronics v. Warner Music*, Pumfrey J said that a product that is derived from a patented process will be directly obtained so long as the product retains its essential characteristics. However, where a product has 'lost its identity and become something else', it will not be directly obtained. As Pumfrey J noted, intermediate processes in chemical cases often suffer this fate.

In considering whether the method claim in Monsanto's patent had been infringed by the importing of the soybean meal, Pumfrey J said that the method claim consisted of the isolation and insertion of a recombinant DNA molecule with prescribed characteristics into the genome of a plant cell. The DNA molecule was inserted into one original plant, which was named and identified in the patent as the parent of all Round Up Ready plants in Argentina. Pumfrey J noted that the transformation of the original plant had occurred many generations ago and that since then, soybeans had been grown by seedsmen or retained by farmers for planting. After some generations, the harvested beans were processed into the meal that had been imported in the United Kingdom. Pumfrey J was willing to accept that all of the Round Up Ready soybean plants in Argentina were lineal descendants of the original plant and also that the 'huge mountain of soybean meal' could be described as the ultimate product of the original transformation of the parent plant. Pumfrey J was unable to accept, however, that the soy meal was the ultimate product of the original transformation of the parent plant—a phrase that he reserved for the original transformed plant. On this basis, Pumfrey J held that the imported soybean meal was not 'directly obtained' for the purposes of section 60(1)(c) and, as such, did not infringe. In so doing, Pumfrey J rejected Monsanto's argument that the product retained its essential characteristics when it was made into meal. In rejecting the hereditary nature of the relationship between the Round Up Ready sequence (as inserted in the parent plant) and the soybean meal, Pumfrey J said that Monsanto's argument confused the 'informational content of what passed between the generations (the Round Up Ready genomic sequence) with the product, which is just soybean meal with no special intrinsic characteristics from one of the generations of plants'.<sup>80</sup> As well as clarifying what it means for a product

<sup>77</sup> If a 'patentee wants appropriate cover . . . they should secure a product-by-process claim': *Report of the Committee to Examine the Patent System and Patent Law* (Cmnd. 4407, July 1970) (the Banks Committee), [297].

<sup>78</sup> *Monsanto Technology LLC v. Cargill International SA* [2008] FSR (7) 153, [34]–[35].

<sup>79</sup> *Ibid.*

<sup>80</sup> *Ibid.*, [38].

to be directly obtained, the decision is also important in that it provides some insight into the approach that UK courts may take towards the infringement of biological inventions.

### 2.3.2 Direct products of biotechnological processes

The question of the scope of protection for patents for biotechnological processes is dealt with in Article 8(2) of the Biotechnology Directive. A similar provision now exists in the Patents Act 1977 as a result of amendments made in July 2000.<sup>81</sup> Article 8(2) provides that:

The protection conferred by a patent on a process that enables a biological material to be produced possessing specific characteristics as a result of the invention shall extend to biological material directly obtained through that process and to any other biological material derived from the directly obtained biological material through propagation or multiplication in an identical or divergent form and possessing those same characteristics.

As with the protection given to product patents for biological materials, the derived material must possess the same characteristics as the 'original' material. It should be noted that the protection under Article 8(2)/paragraph 8 of Schedule A2 to the Patents Act 1977 is limited to material 'directly obtained' from the patented process. It seems that 'directly obtained' would be construed in a way similar to how a 'direct' relationship was construed in *Monsanto v. Cargill*<sup>82</sup> and *Pioneer Electronics v. Warner Music*<sup>83</sup> (discussed above).

## 2.4 NOVELTY-OF-USE CLAIMS

For the most part, when determining whether a defendant has carried out one of the activities within the patentee's control, the key question is the way in which the language of the patent is construed. One situation in which problems may arise, however, is in relation to patents for a new use of a known substance used in an old way, which have been recognized at the EPO and in the United Kingdom.

The decision to accept novelty-of-use patents has met with considerable resistance in the United Kingdom.<sup>84</sup> As Lord Hoffmann said in *Merrell Dow*,<sup>85</sup> the Board's decision in *Mobil* has been criticized on the 'ground that a patent for an old product used in an old way for a new purpose makes it difficult to apply the traditional UK doctrine of infringement'. The problem with novelty-of-use claims is that it may be difficult to ascertain when a product is being used in the relevant way. Unless use claims are confined to uses of products that are distinct, it seems that a patentee of an invention that consists of a new use must demonstrate that the infringer intended to produce the particular effect.<sup>86</sup>

The reason why the recognition of use claims is incompatible with the traditional UK doctrine of infringement can be traced to the fact that the infringement of a patent turns exclusively on the physical conduct of the defendant. A person will infringe if, for example, they manufacture or sell the patented invention without permission. In so doing,

<sup>81</sup> PA 1977, Sch. A2, para. 8 (introduced by Patents Regs 2000).

<sup>82</sup> [2007] EWHC 2257, [34]–[35]. <sup>83</sup> [1997] RPC 757 (CA).

<sup>84</sup> To 'hold that every new use of an old composition may be the subject of a patent upon the composition would lead to endless confusion and go far to destroy the benefits of our patent laws': *In re Thuau* 135 F.2d. 344 (CCPA 1943).

<sup>85</sup> *Merrell Dow Pharmaceuticals v. Norton* [1996] RPC 76 (HL), 92. In *Mobil*, it was said that the analogous problems concerning infringement would arise in relation to second and subsequent medical uses: *Mobil/Friction reducing additive*, G 2/88 [1990] EPOR 73, 89.

<sup>86</sup> For consideration of the position of the supplier of the substance, see indirect infringement below at pp. 624–5.

the alleged infringer's state of mind is irrelevant; it does not matter whether the alleged infringer knew that they were dealing with the patented product. In most cases, this presents few problems. For example, because claims to a new use of an old thing will be physically different from previous uses of the same thing, the earlier use can continue to be performed without infringing the subsequent patent. Problems may arise, however, in relation to novelty-of-use patents. This is because, for infringement purposes, the discovery that a known product used in a known way can be put to a new purpose is physically identical to the previous use, the only difference between the two uses being in the mind of the user. Given that the physical acts protected by a novelty-of-use patent would be the same as the steps taken during the previous use, when someone uses an old substance in an old way, there is no obvious way of telling whether they are using the substance to achieve the old purpose or whether they are using the substance to achieve the new purpose. As Lord Hoffmann said:

[L]iability for infringement is, as I have said, absolute. It depends upon whether the act in question falls within the claims and pays no attention to the alleged infringer's state of mind. But this doctrine may be difficult to apply to a patent for the use of a known substance in a known way for a new purpose. How does one tell whether the person putting the additive into his engine is legitimately using it to inhibit rust or infringing by using it to reduce friction?<sup>87</sup>

The problem raised by novelty-of-use patents is that while the only feature that enables a novelty-of-use patent to be distinguished from the previous use is the purpose for which it is used (which exists in the mind of the user), the purpose of the alleged infringer is not taken into account when determining whether a patent has been infringed; all that matters is whether the physical act of infringement has taken place. The consequence of this is that a patent granted for the discovery of a new purpose of an old thing used in an old way could prevent someone from doing what they had done before—thus denying the user their previous right to work.<sup>88</sup>

While it has been suggested that these problems are based on an artificial distinction,<sup>89</sup> the inherent conflict between the physical nature of infringement and the mental nature of novelty-of-use patents gives rise to real problems in the United Kingdom that will need to be resolved if such patents are allowed. If novelty-of-use patents are not to impinge upon the legitimate (existing) activities of others,<sup>90</sup> it may be necessary to limit the scope of the monopoly (possibly to the making, using, and commercial supply of the thing for the specified use) or to modify the defence of prior use.<sup>91</sup>

<sup>87</sup> *Merrell Dow v. Norton* [1996] RPC 76 (HL), 92. See also *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [2001] RPC 1 (CA), [49] (Aldous LJ said that it was unlikely that the Court of Appeal would suggest that *Mobil* was wrongly decided when the House of Lords 'did not so conclude').

<sup>88</sup> 'New use patents raise vexing questions about the patentee's right to prevent others from selling the old compound': *Dawson Chemical Co. v. Rohm & Haas Co.*, 448 US 176 (1980).

<sup>89</sup> Paterson, [10–31].

<sup>90</sup> In response to arguments of this type, the EBA in *Mobil* offered the following unhelpful advice: '[T]here is a clear distinction between the protection which is conferred and the rights which are conferred by a European patent.' While the 'protection conferred by a patent is determined by the terms of the claims (Art. 69(1) EPC [1973]) and in particular by the categories of such claims and their technical features . . . [i]n contrast, the rights conferred on the proprietor of a European patent (Art. 64(1) EPC [1973; now EPC 2000, Art. 64(1)]) are the legal rights . . . [conferred] upon the proprietor': *Mobil/Friction reducing additive*, G 2/88 [1990] EPOR 73, 80–1.

<sup>91</sup> See below at pp. 638–9.

## 2.5 INDIRECT INFRINGEMENT

In addition to the prohibited activities set out in section 60(1), the Patents Act 1977 also provides that a patent is infringed where a person contributes to, but does not directly take part in, the infringement.<sup>92</sup> This is particularly important where the maker or user is difficult to detect (for example where the manufacture or use occurs in private) or they are not worth suing. Section 60(2) states that a person infringes a patent where they supply or offer to supply any means relating to an essential element of the invention for putting the invention into effect.<sup>93</sup> Thus a patent for a glue that is produced by combining two chemicals A and B may be infringed by a person who supplies either A or B to a person who then manufactures the glue.<sup>94</sup> The question of what it means for an online invention to be put into effect in the United Kingdom was considered by the Court of Appeal.<sup>95</sup> The patent in question was for a gaming system consisting of a host computer, terminal computers, and software that operates the system. The invention enabled end-users on terminal computers to engage in interactive gaming with the host computer. The defendant, William Hill, operated an online gaming system for punters in the United Kingdom. British punters were supplied with a computer program (either via CD or downloaded from the net) that transformed their computer into a terminal computer of the defendant's system. The claimant argued that when the defendant's system was in use, it infringed its patent. The defendant argued that it did not infringe the patent because its host computer was located abroad and not in the United Kingdom (in Antigua, and then in Curaçao in the Netherlands Antilles). Aldous LJ said that it was 'not straining the word "use" to conclude that the UK punter will use the claimed gaming system in the United Kingdom, even if the host computer is located in, say, Antigua'.<sup>96</sup> Focusing on the way in which the end-user related to the invention, Aldous LJ said that a punter who used the William Hill system would be using the whole system as if it were in the United Kingdom. The punter would, in substance, use the host computer in the United Kingdom, it being irrelevant to the punter where it was situated. Aldous LJ concluded that in supplying the computer program in the United Kingdom, the defendant intended to put the invention into effect in the United Kingdom and, as such, infringed the claimant's patent.<sup>97</sup>

For indirect infringement to take place, three criteria must be satisfied. First, the proprietor of the patent must establish that the means supplied by the defendant relate to an essential element of the invention.<sup>98</sup> A person will also indirectly infringe where they supply a number of the essential components of a patented invention. This would occur, for example, where a patent is for an oil lamp (which is made up of a vessel holding the oil,

<sup>92</sup> PA 1977, s. 60(2); CPC, 26(1); *Dow Chemical v. Spence Bryson* [1982] FSR 598, 628–30 (inducing or procuring infringement by persuading infringer to adopt process, teaching how to operate it). See Chapter 47, section 3.

<sup>93</sup> The 'means in question' must contribute to implementing the technical teaching of the invention; there is no need to show that the feature in question 'served to distinguish the subject matter of the claim from the prior art ie was novel in its own right': *Nescafé v. Dualit* [2013] EWHC 923 (Pat), [170] (following the German BGH decision of *Impeller Flow Measure* Case X ZR 48/03).

<sup>94</sup> The policy of expanding the patentee's monopoly to cover contributory infringement seems to conflict with the policy underpinning the rules preventing a patentee from requiring licensees to utilize particular suppliers. On these, see below at pp. 647–8. The connection is recognized in US jurisprudence, where the Supreme Court has observed that the 'doctrines of contributory infringement and patent misuse have long and interrelated histories': *Dawson Chemical Co. v. Rohm & Haas Co.*, 448 US 176 (1980).

<sup>95</sup> *Menashe Business Mercantile v. William Hill Organization* [2003] RPC 575 (CA).

<sup>96</sup> *Ibid.*, 584–5, upholding Jacob J's first-instance decision—[2002] RPC 951—but for different reasons.

<sup>97</sup> *Menashe Business Mercantile v. William Hill Organization* [2003] RPC 57.

<sup>98</sup> *Hazell Grove v. Euro League Leisure* [1995] RPC 529, 541.

a burner and wick, an outer glass container, and a chimney) and the defendant supplied all of the parts other than the chimney.<sup>99</sup>

Second, the supplier must know, or it must be obvious to a reasonable person in the circumstances, that the means are both ‘suitable’ for and are ‘intended’ to be used in putting the invention into effect.<sup>100</sup> It is important to note that the Court of Appeal has said that the reference to ‘intention’ in section 60(2) is not linked to any specific person (such as the supplier, the direct customer, or the ultimate users). Instead, the inquiry is whether the means and the circumstances surrounding it being offered or supplied ‘are such that some ultimate users will intend to use or adapt the “means” so as to infringe’.<sup>101</sup> The Court of Appeal has also said that the knowledge requirement will be satisfied if ‘at the time of supply or offer of supply, the supplier knows, or it is obvious in the circumstances, that ultimate users will intend to put the invention into effect’.<sup>102</sup> The imposition of a knowledge requirement, which is construed objectively, ensures that parties who do not knowingly benefit from the misuse of a patent are not caught as indirect infringers. As Jacob LJ said, the section is ‘clearly intended to apply to, among other things, products which are perfectly capable of being used in a manner which will not constitute a direct infringement within s. 60(1)’.<sup>103</sup>

Third, in recognition of the fact that there might be legitimate reasons why a person supplies or offers to supply something that enables the means for putting the invention into effect, section 60(3) provides that the supply of a staple commercial product will not constitute an indirect infringement under section 60(2).<sup>104</sup> The meaning of ‘staple commercial product’ is not clear, although it might be assumed that it covers basic products that are readily available.<sup>105</sup> The staple commercial product exemption does not apply where the product is specifically supplied for the purpose of *inducing* an infringement.<sup>106</sup>

### 2.5.1 Novelty-of-use claims

Given the difficulty in establishing direct liability in relation to novelty-of-use patents (discussed earlier), indirect liability may take on a greater significance. Taking the example of a patent for the use of a substance in oil as a lubricant, where it was previously known that the substance inhibited rust, it would seem that a defendant would infringe if they supplied the oil to people and advertised it as a lubricant. However, a person would not infringe if they were to continue to supply the oil as a rust inhibitor. While it might be known that the oil could be used as a lubricant, it would be difficult to prove that the defendant ‘intended’ that the oil be used in this way (as is required under section 60(2)). In these circumstances, secondary factors may be helpful, such as the documentation that accompanies the product, which might indicate the way in which the product was expected to be used.<sup>107</sup> It would be more difficult to determine whether a defendant indirectly infringes where they supplied

<sup>99</sup> See *Wallace v. Holmes*, 29 F.Cas. 74 (No. 17, 100) (CC Conn. 1871).

<sup>100</sup> For the pre-1977 position, see *Dunlop v. Moseley* (1904) 21 RPC 274.

<sup>101</sup> *Grimme Maschinenfabrik v. Derek Scott* [2010] EWCA Civ 1110, [107]. <sup>102</sup> *Ibid.*, [131].

<sup>103</sup> *Ibid.*, [102].

<sup>104</sup> In *Pavel v. Sony SRIS* CC/14/93 (22 March 1996), the (then) Patents County Court defined staple commercial product as meaning ‘products of regular kind needed daily and generally available’.

<sup>105</sup> A. Benyamini, *Patent Infringement in the European Community* (1993), 234–5.

<sup>106</sup> *Furr v. Truline (Building Products)* [1985] FSR 553, 565.

<sup>107</sup> It has been said that German case law supports the view that, in this form, there is direct infringement, either because a use claim is seen as primarily a product claim and this amounts to sale of the product, or because such an act is an offering of a process for use: see A. Benyamini, *Patent Infringement in the European Community* (1993), 84–90 (advocating direct infringement approach). See further A. Horton, ‘Methods of Treatment and Second Medical Use’ (August 2000) *Patent World* 9, 12.

the oil saying that it acted both as a rust inhibitor and a friction reducer. The liability of the defendant would also be uncertain if they were to supply the oil saying that it acted as a rust inhibitor, where it was widely known that the oil could also be used to reduce friction. In these circumstances, the likelihood of the user using the oil as a lubricant is high, but not certain. Jacob J, who has expressed doubts about the role of novelty-of-use claims, has called for these issues to be considered in detail by the European Patent Office whenever it gives further consideration to claims for uses.<sup>108</sup> So far, these pleas have fallen on deaf ears.

## 2.6 ADDITIONAL LIABILITY

In addition to the rights set out in sections 60(1) and 60(2), patentees are also able to make use of a limited number of provisions that exist outside the Patents Act 1977. These provisions will be particularly important where a party acts in such a way as to undermine the value of a patent, yet the activities fall outside of the scope of section 60(1) or (2).

Perhaps the most important non-statutory mechanism available to a patent owner is the concept of joint tortfeasance.<sup>109</sup> This provides that even if a party does not fall within the scope of section 60, the patentee can enjoin the third party as a joint tortfeasor if it can be shown that they have acted in a ‘common design’ with a party who is liable for a statutory tort of infringement under section 60 (and that they jointly inflicted damage on a patentee).<sup>110</sup> For a party to be liable as a joint tortfeasor, they must be ‘so involved in the commission of the tort as to make himself liable for the tort’.<sup>111</sup>

It has also been suggested that the law of restitution provides patentees with an additional ground on which to found liability. More specifically, it has been argued that independently of the rights set out in the 1977 Act, the law also recognizes unjust enrichment as a separate cause of action. Proposals of this type were considered and rejected in *Union Carbide Corporation v. BP Chemicals*,<sup>112</sup> where Jacob J said that the law of restitution could *not* be used to supplement the law of patents to the extent of providing a cause of action for unjust enrichment. Jacob J did say, however, that there might be cases in which the strict rights set out in section 61 of the 1977 Act might not limit what a court could do in furtherance of the policy of patent law—but what this policy is and what it might mean in this context was left unclear.

## 3 SCOPE OF PROTECTION

Once it is clear that a defendant has carried out one of the activities listed in section 60 of the 1977 Act, it is then necessary to consider whether, in so doing, they fall within the scope of the patent. This requires the court to compare the patented invention with the defendant’s alleged infringing process or device. Where the two are identical, the defendant will clearly infringe. Likewise, where the claimant’s invention and the alleged infringing product are very different, there will be no infringement. It is also clear that a defendant will infringe where they incorporate the patented invention into a larger process or product. This is the case even if the addition improves upon the patented invention. It is also clear that the defendant will infringe where they supply a patented product in parts or in kit form.<sup>113</sup>

<sup>108</sup> *Bristol-Myers Squibb v. Baker Norton Pharmaceuticals* [1999] RPC 253, 280.

<sup>109</sup> See *CIPA*, [60.24]. <sup>110</sup> See further below at pp. 1209–10.

<sup>111</sup> *Celem SA v. Alcon Electronics* [2006] EWHC 3042 (Pat), [33]. <sup>112</sup> [1998] FSR 1.

<sup>113</sup> *Rotocrop v. Genbourne* [1982] FSR 241.

A defendant will not infringe, however, if the consumer needs to exercise inventive skill in putting the kit together.<sup>114</sup>

While these situations are relatively unproblematic, problems arise where there is only a slight difference between the patented invention and the defendant's alleged infringing product. This would be the case, for example, if, rather than adding to the patented invention, a defendant were to alter or omit to include part of the patented invention in their product or process, and on this basis argue that their invention falls outside the scope of the monopoly.<sup>115</sup> Problems also arise where a defendant changes one aspect of an invention, or uses a different means to reach the same end result as the patented invention. In these situations, the decision as to whether a defendant infringes largely turns on the way in which the scope of protection is determined.<sup>116</sup>

### 3.1 DETERMINING THE SCOPE OF PROTECTION

The starting point for determining the scope of protection is section 125 of the Patents Act 1977, which corresponds to Article 69 of the EPC 2000 (ex Article 69 of the EPC 1973).<sup>117</sup> This provides that the extent of the protection conferred by a patent shall be 'taken to be that specified in a claim of the specification of the application or patent, as the case may be, as interpreted by the description and any drawings contained in that specification'.

The approach that is taken to claim interpretation will vary depending on the case in hand. Thus, in some cases, the courts will be called upon to construe a specific word or phrase: what did the patentee mean by 'vertical', 'mammalian', or 'average molecular weight'? In other cases, the courts may be called on to identify the material elements or the essence of an invention. The way in which claims are interpreted will also vary depending on the type of invention in issue, the most straightforward situation being mechanical inventions, while chemical and biological inventions are often more problematic.<sup>118</sup> Given this diversity, it is not surprising that over time, a number of rules, from the very general to the very specific, have been developed to provide guidance as to how patent claims should be interpreted. At the same time, there have also been several judicial attempts to synthesize these rules into a set of discreet guidelines or principles. Notably, this includes Lord Diplock's celebrated judgment in *Catnic v. Hill and Smith*,<sup>119</sup> Hoffmann J's judgment in *Improver v. Remington*,<sup>120</sup>

<sup>114</sup> *Virgin Atlantic v. Delta* [2010] EWHC 3094 (Pat, [135]) (a claim to a product consisting of a number of parts was not infringed by the manufacture, disposal, etc. of an incomplete kit of parts in circumstances in which (i) the missing part/s were obtained by the defendant's customers themselves, and (ii) the assembly was carried on outside the relevant territory).

<sup>115</sup> A related situation arises where a defendant supplies most, but not all, of the patented invention in kit form.

<sup>116</sup> For a summary of the approach to be taken in construing patent claims, see *Mayne v. Pharmacia* [2005] EWCA Civ 137, [5], which is a restatement of the summary made by Jacob LJ in *Rockwater v. Technip France SA* [2004] RPC (46) 919, [41], following the qualified approval of *Rockwater* by Lord Hoffmann in *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 169.

<sup>117</sup> While the EPC 1973 version said that the scope of protection 'shall be determined by the terms of the claims', Art. 69(a) of the EPC 2000 simply says that the scope 'shall be determined by the claims'.

<sup>118</sup> Where a patent for a mechanical invention such as a door lintel or a hair removal device is infringed, there are unlikely to be any doubts about the parameters of either the invention or the alleged infringing device. In these situations, the main question is whether they are the 'same'. This is not the case, however, with complex biotechnological and chemical inventions. See G. Thomson and L. Kempton. 'Construction Issues in Pharmaceutical and Biotech Cases' [2002] EIPR 591; P. Cole 'Pioneering Pays—or Does It?' [2000] EIPR 534, 540.

<sup>119</sup> [1982] RPC 183.

<sup>120</sup> [1990] FSR 181, 189. Hoffmann J said that Lord Diplock's judgment in *Catnic* could be reduced to three questions, known as the 'Improver questions': *Improver* [1990] FSR 181. (i) Does the variant have a material

*Mayne v. Pharmacia*,<sup>121</sup> the House of Lords' decision in *Kirin-Amgen*,<sup>122</sup> and most recently the Court of Appeal in *Virgin v. Premium Aircraft*.<sup>123</sup> While some of these, such as the test in *Catnic*, have stood the test of time, others, such as the so-called 'Improver questions', have not fared so well. While these judicial summaries are for the most part useful, they all tend to suffer from the problem that no matter how strenuously a judge may stress that the summary is meant to function only as a guide, they all eventually get treated as algorithmic rules to be applied rather than guides to aid interpretation,<sup>124</sup> which only serves to complicate things. With this cautionary point in mind, we will now attempt to set out some of the more important factors that shape the way in which patent claims are interpreted:<sup>125</sup> the idea that the claims should be construed 'purposively'; and the Protocol on the Interpretation of Article 69 EPC. We will look at each in turn.

### 3.1.1 Purposive interpretation

The fundamental principal that underpins claim interpretation is the idea that the claims should be construed 'purposively'. This means that rather than constricting the meaning of a claim to a literal or strict meaning, it was necessary to interpret claims from the perspective of the person skilled in the art.<sup>126</sup> As Lord Hoffmann said in *Kirin-Amgen*, the key question to ask was:

[W]hat would a person skilled in the art have understood the patentee to have used the language of the claim to mean? . . . Everything else . . . was only guidance to a judge trying to answer that question.<sup>127</sup>

We can get a sense of the impact that a purposive interpretation can have on the way in which claims are interpreted from the celebrated 1982 House of Lords' decision of *Catnic v. Hill and Smith*.<sup>128</sup> In *Catnic*, the House of Lords was called upon to decide whether in manufacturing the steel lintels, the defendants had infringed the claimant's patent for galvanized steel lintels. (A lintel is a load-bearing beam that spans open spaces, such as doors and windows, in cavity walls.) While it was evident that the defendant's lintel and the patented invention (see Fig. 22.2) were very similar, one issue remained unclear.

effect on the way in which the invention works? If yes, the variant is outside the claim. If no, (ii) would this (i.e. that the variant has no material effect) have been obvious to a reader skilled in the art at the date of the publication of the patent? If no, the variant is outside the claim. If yes, (iii) would a reader skilled in the art nevertheless have understood from the language of the claim that strict compliance with the primary meaning was an essential requirement of the invention? If yes, the variant is outside the claim.

<sup>121</sup> [2005] EWCA Civ 137. <sup>122</sup> *Kirin-Amgen v. Hoechst Marion Roussel Ltd* [2005] RPC 169.

<sup>123</sup> [2009] EWCA Civ 1062, [5]–[6]. This summary has been repeated in a number of decisions, including *ConvaTec v. Smith & Nephew* [2012] EWCA Civ 520, and a string of patent court decisions, such as *Microsoft v. Motorola Mobility* [2012] EWHC 3677 (Pat).

<sup>124</sup> The 'cases show a tendency for counsel to treat the Protocol questions as legal rules rather than guides which will in appropriate cases help to decide what the skilled man would understand the patentee to mean': *ibid.*, [52]. <sup>125</sup> For a detailed commentary, see *CIPA*, [125.04]–[125.27].

<sup>126</sup> *Catnic v. Hill and Smith* [1982] RPC 183 (HL), 241. For the application of the purposive interpretation to '1%' and '25%' in the phrase 'the agent being present in a concentration between 1% and 25% of the total volume of treatment', see *Smith & Nephew v. ConvaTec Technologies* [2013] EWHC 3955 (Pat), [79] (finding that 1 per cent extended to 0.95 per cent, while 25 per cent extended to 25.5 per cent).

<sup>127</sup> *Catnic v. Hill and Smith* [1982] RPC 183 (HL), 241. As Lord Hoffmann said in *Kirin-Amgen v. Hoechst Marion Roussel Ltd* [2005] RPC 169, the only compulsory factor to be taken into account when determining the extent of protection conferred by a European patent—namely, the rules as set out in EPC 2000, Art. 69, and its Protocol.

<sup>128</sup> [1982] RPC 183. Although *Catnic* was decided under the PA 1949, it is still relevant under the 1977 Act. In *PLG Research v. Ardon* [1993] FSR 197, 309, the Court of Appeal argued that *Catnic* was no longer good law under the 1977 Act. However, the promotion of Aldous LJ to the appellate court led to an immediate reversal

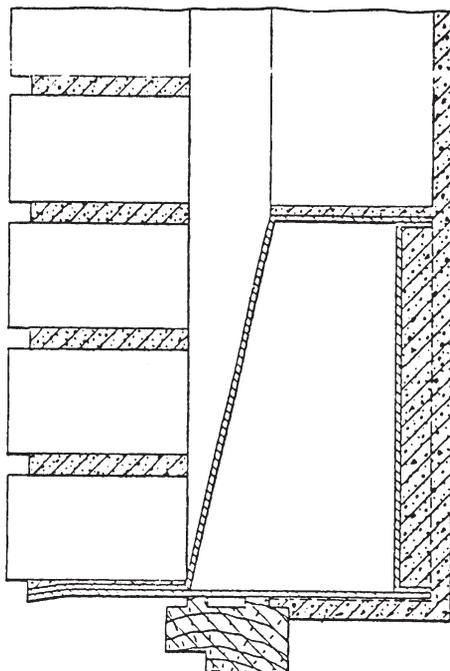

Fig. 22.2 Claimant's lintel

Source: *Catnic v. Hill and Smith* [1982] RPC 183

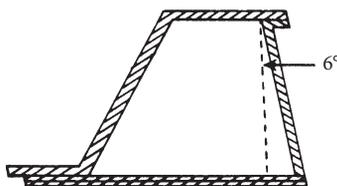

Fig. 22.3 Defendant's lintel

Source: *Catnic v. Hill and Smith* [1982] RPC 183

This arose from the fact that while the patent specified that the rear side of the lintel should be 'vertical', the defendant's lintel (see Fig. 22.3) was at an angle of  $84^\circ$ . In order to determine whether the claimant's patent had been infringed, the House of Lords had to decide whether a claim that specified that the rear support be vertical encompassed a lintel whose rear support was not 'precisely' vertical.

While a literal reading of the claims would have limited the claimant's patent to lintels at  $90^\circ$  (and thus to a finding of non-infringement), Lord Diplock said that the patent ought to be construed *purposively*. A purposive interpretation demands that the claims are to be read through the eyes of the person skilled in the art and that the purpose or function of the invention be borne in mind when the patent is interpreted.<sup>129</sup> This meant that when deciding whether 'vertical' included lintels at an  $84^\circ$  angle, the person skilled in the art

of this view. This has been confirmed in a range of subsequent decisions, including *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 9, [48]. See, e.g., J. Turner, 'Purposive Construction: Seven Reasons Why *Catnic* is Wrong' [1999] *EIPR* 531; cf. the critical response by M. Franzosi, 'In Defence of *Catnic*' [2000] *EIPR* 242.

<sup>129</sup> *Kastner v. Rizla* [1995] RPC 585.

would take into account the function or purpose of the invention. On reading the patent, it was decided that the person skilled in the art would have understood that the reason why the patent specified that the rear support member was to be ‘vertical’ related to the load-bearing capacity of the lintel. An important factor in the finding that the patent had been infringed was that a 6° movement away from 90° only led to a 0.6 per cent reduction in the load-bearing capacity of the lintel. This meant that the defendant’s lintel effectively performed the same purpose or function as the claimant’s lintel.

There are a number of things to keep in mind when thinking about a purposive approach to claim interpretation. One of which is that while the patent specification is read from the perspective of the person skilled in the art, the question of the construction of the claims is ultimately a matter for the court. In some cases, the courts will draw on external assistance to help it to determine the meaning of a claim. In some cases, a court can hear expert evidence on the meaning of technical terms.<sup>130</sup> Controversially, the prosecution history—that is, information exchanged between the applicant and the relevant patent office during the grant of the patent—has also been used to interpret the claims.<sup>131</sup>

One of the defining features of a purposive approach to claim interpretation is that it is often defined in opposition to a literal approach to interpretation (although, as we will see, this is not always the case). One of the problems with this is that it sometimes leads people to treat the expression ‘purposive interpretation’ as ‘a vague description of some kind of divination which mysteriously penetrates beneath the language of the specification.’<sup>132</sup> While a purposive interpretation may allow the courts to extend the scope of the claims beyond that which would be allowed by a literal reading, this does not mean that a purposive approach is an open-ended and unconstrained process. Indeed, there are a number of factors that shape the way in which purposive interpretation is applied, one of which is the fact that the person skilled in the art is presumed to proceed on the basis that the purpose of the specification:

... is both to describe and demarcate the invention—a practical idea which the patentee has had for a new product or process—and not to be a textbook in mathematics or chemistry or a shopping list of chemicals or hardware.<sup>133</sup>

It will also be presumed that the patentee is attempting to describe something that is new, with all of its attendant problems. It is also presumed that the skilled person will read the

<sup>130</sup> *Glaverbel SA v. British Coal Corporation* [1995] RPC 269.

<sup>131</sup> In *Kirin-Amgen v. Hoechst Marion Roussel Ltd* [2005] RPC 169, [35] Lord Hoffmann indicated that the British courts generally do not look at so called ‘prosecution history’:

The courts of the United Kingdom, the Netherlands and Germany certainly discourage, if they do not actually prohibit, use of the patent office file in aid of construction. There are good reasons: the meaning of the patent should not change according to whether or not the person skilled in the art has access to the file and in any case life is too short for the limited assistance which it can provide.

Despite such an authority, counter-examples exist: *Furr v. CD Truline (Building Products)* [1985] FSR 553, 560–4; *Rohm and Haas v. Collag* [2002] FSR 445, 457–8 (letter to EPO held to contain objective information that was of assistance in resolving aspects of the specification that were unclear); *Wesley Jessen v. Coopervison* [2003] RPC 355, 382 (prosecution history at the EPO, which showed that application was changed from pattern to dots to avoid prior art, was used to limit ‘dots’ to mean ‘small roundish marks’ and nothing else). Cf. *Glaverbel v. British Coal (No. 2)* [1993] RPC 90. For the position of prosecution history estoppel in the United States, see *Festo Corporation v. Shoketsu Kinzouku Kogyo KK*, 535 US 722 (2002), [2003] FSR 10 (patentee bound by representations made at US patent office).

<sup>132</sup> *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 9 (HL), [33].

<sup>133</sup> *Ibid.*, [33]–[34].

patent specification as a whole,<sup>134</sup> and will draw upon the description and drawings to interpret the claims.<sup>135</sup>

A lot will turn on the skill and expertise that is attributed to the person skilled in the art, which will always vary depending on the invention in question. The person skilled in the art is presumed to read the specification ‘with common general knowledge of the art available at the time of its publication’.<sup>136</sup> It is also presumed that the notional skilled reader would be aware, and take account, of the drafting conventions by which the patent and its claims were framed.<sup>137</sup> They are also presumed to be aware of the language conventions that have developed over time, which ascribe particular meanings to words such as ‘comprising’ and ‘suitable for’. One question that has arisen is: what knowledge should the person skilled in the art be presumed to have about the invention in question? Should they, for example, be presumed to know how the defendant’s invention works? Or should the skilled person simply be presented with the invention, with no additional explanations or instructions? The way in which this issue is resolved is important, since the more information given to the skilled person, the more likely it is that they will change the way they construe the claims. In *Kirin-Amgen*, the Court of Appeal proceeded on the basis that the skilled addressee would know about the existence of the alleged infringing product, but would not know whether it worked or that it had a material effect on the way in which the invention works.<sup>138</sup>

It is sometimes assumed that purposive interpretation offers greater protection to patentees than a more literal reading of the claims may provide and, in turn, that the two styles of interpretation are opposites. However, this is not necessarily the case.<sup>139</sup> The reason for this is that while the use of a purposive style of interpretation often means that the scope of the monopoly is broader than that which would arise if the claims were to be interpreted literally, purposive interpretation does not necessarily require that the claims be read broadly or indeed in the patentee’s favour. All that the purposive approach requires is that the court interprets patents through the eyes of the person skilled in the art, while taking into account the purpose of the invention—nothing more, nothing less. How broadly claims will be read in any particular case *always* depends on the approach undertaken by the person skilled in the art in the case in hand, which in turn is influenced by the purpose of the invention and the way in which the claims are drafted.<sup>140</sup>

The potential for a purposive interpretation to limit the scope of the claims was highlighted by Lord Diplock in *Catnic* when he said that there may be good reasons why a person skilled in the art would read the patent claims literally, thus restricting the scope of the monopoly.<sup>141</sup> The most obvious reason is the desire to avoid a piece of prior art that would otherwise anticipate the patent. In this sense, it provides fairness to the patentee and also

<sup>134</sup> *EMI v. Lissen* (1939) 56 RPC 23; *Glaverbel SA v. British Coal Corporation* [1995] RPC 255, 269. The statement of the problem that the invention is intended to solve may be particularly influential: *Minnesota Mining & Manufacturing Co. v. Plastus Kreativ AB* [1997] RPC 737 (CA); *SEB v. De’Longhi* [2002] EWHC 1556, [2] (when one encounters a word of degree, the problem is to ascertain its function in the claim so as to obtain a handle on its meaning).

<sup>135</sup> PA 1977, s. 125; EPC 2000, Art. 69 (ex EPC 1973, Art. 69). In *Rosedale v. Carlton Tyre* [1960] RPC 59, the Court of Appeal used the drawings and descriptions in determining that ‘holes’ did not have to be round.

<sup>136</sup> *Hoechst Celanese Corporation v. BP Chemicals* [1999] FSR 319 (Aldous LJ). On common general knowledge, see *Beloit Technologies v. Valmet Paper Machinery* [1997] RPC 489, 494.

<sup>137</sup> *Virgin Atlantic Airways v. Premium Aircraft Interior* [2009] EWCA Civ 1062, [15], citing *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 9, [34].

<sup>138</sup> *Kirin-Amgen* [2003] RPC 31(CA), 63.

<sup>139</sup> See *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 9, [34]–[35]; *3M v. Plastus* [1997] RPC 737, 747; *Auchinloss v. Agricultural and Veterinary Supplies* [1997] RPC 649.

<sup>140</sup> See above at p. 627.

<sup>141</sup> *Catnic v. Hill & Smith* [1982] RPC 183. See also *3M v. Plastus* [1997] RPC 737, 747.

a degree of certainty for third parties.<sup>142</sup> Another reason why the person skilled in the art might think that the patentee intended to confine the scope of the claims relates to the language or types of parameter used by the patentee. Where specific numerical ranges or technical terms (such as ‘helical spring’) are used, a person skilled in the art might be inclined to think the choice of wording deliberate,<sup>143</sup> so too where a patentee claims a numerical range, such as ‘8–35’. In this case, the courts are more likely to restrict the claims accordingly (although there might be contextual reasons why a person skilled in the art would read the term more broadly).

### 3.1.2 The Protocol on the Interpretation of Article 69 EPC

One of the problems that confronted the drafters of the EPC 1973 was that some member states—notably, the United Kingdom and Germany—approached the task of interpreting patent claims differently. While the British were said to favour a strict, literal reading of the claims, it was suggested that in Germany, the claims simply acted as a guide for determining the scope of protection. Given the potentially important role that claim interpretation plays in determining the scope of protection, if these different styles of interpretation were allowed to continue under the EPC, it would have undermined the aim of a standardized pan-European patent system. In an attempt to overcome these (perceived) differences and to harmonize the way in which patents are interpreted across member states, the Protocol on Interpretation of Article 69 of the EPC 1973 was introduced to provide guidance as to how patent claims should be interpreted.<sup>144</sup> The Protocol was replicated in EPC 2000 in a slightly modified form.<sup>145</sup>

There are two notable features of the Protocol under EPC 2000. The first is that it stipulates the standpoint of interpretation that should *not* be adopted when interpreting a patent. In particular, it says that the courts should not read the claims literally. The Protocol also says that the claims should not be used as a mere guide to interpretation; instead, it says somewhat cryptically, that the courts should adopt a position in between these extremes.<sup>146</sup> The second, more positive, feature of the Protocol is that it says that the courts should interpret the claims in a way that combines a fair protection for the patentee with a reasonable degree of certainty for third parties.<sup>147</sup>

## 3.2 REPLACEMENT OF PART OF AN INVENTION WITH AN EQUIVALENT PART

It is long-standing rule in British patent law that it is not necessary for every element of a patented invention to be taken for it to be infringed; rather, for an infringement to take

<sup>142</sup> See H. Dunlop, ‘Court of Appeal Gets to Grips with the Protocol’ [2003] *EIPR* 342, 345.

<sup>143</sup> *Improver Corp. v. Remington* [1989] *RPC* 69, in which Hoffmann J interpreted the term ‘helical spring’ to be one that would be understood by a person skilled in the art as being confined, so that it did not include a functional equivalent made out of rubber.

<sup>144</sup> On the Protocol generally, see B. Sherman, ‘Patent Claim Interpretation: The Impact of the Protocol on Interpretation’ (1991) 54 *MLR* 499. See the Protocol on the Interpretation of Article 69 EPC (‘Protocol on Art. 69’), as revised by the Act Revising the Convention on the Grant of European Patents (EPC) (Munich) (29 November 2000) MR/3/00 Rev, 1e (the ‘EPC Revision Act’), Art. 2, item 2.

<sup>145</sup> The new Protocol includes, in Art. 2, provision in relation to equivalents.

<sup>146</sup> Protocol on Art. 69, Art. 1.

<sup>147</sup> On the background, see *American Home Products v. Novartis Pharmaceuticals* [2000] *RPC* 547, 557. A third notable feature of the Protocol, at which we look below, is that it explicitly allows for the doctrine of equivalents: Protocol on Art. 69, Art. 2.

place, a defendant must take all of the *material* or *essential* elements of the invention.<sup>148</sup> Correspondingly, the fact that a defendant fails to take an immaterial or non-essential part of the patented invention will not allow them to escape liability for infringement. This ensures that patentees' interests are not undermined by defendants who dress up infringing inventions to appear as though they fall outside the scope of the patent monopoly.<sup>149</sup> If the court finds that the variant has a material effect on the way in which the invention works, this is the end of the matter; there is no infringement. However, if the court finds that the variant does not have a material effect on the way in which the invention works, the court then goes on to ask the hypothetical question: would this (that is, the fact that the variant has no material effect) have been obvious to a reader skilled in the art at the date of the publication of the patent?<sup>150</sup> If not, the variant is outside the claim.

While it is well settled that for there to be an infringement, the defendant must deal with all of the material elements of the invention, one issue that was uncertain for many years under the 1977 Act was whether a person will infringe when they replace a material element of an invention with something that is functionally equivalent. Prior to the passage of the Patents Act 1977, under the so-called 'doctrine of equivalents', the courts held that elements of an invention were the same not only when they were identical, but also when they were functionally equivalent.<sup>151</sup> This meant that 'there may be infringement even if the accused product falls outside the meaning of the words of the claim when understood in context'.<sup>152</sup> As Thomas Webster wrote in 1851, 'the question is, whether that which may have been done, though different in form and configuration, is not a geometrical, mechanical or chemical equivalent; whether, though the form be changed, the same result be not attained'.<sup>153</sup>

Despite its long tradition, doubts have been raised as to whether the doctrine of equivalents is still applicable under the 1977 Act. The reason given for this is that neither Article 69 of the EPC 1973<sup>154</sup> nor the Protocol (under EPC 1973) made any specific reference to the doctrine of equivalents.<sup>155</sup> While this is undoubtedly the case, it is wrong to assume

<sup>148</sup> There has been little discussion about how the material elements of the invention are to be determined. Presumably, the courts ought to construe the patent purposively from the perspective of a reasonable person skilled in the art. The terms 'essence', 'pith and marrow', 'substantial', 'material', and 'essential' have been used interchangeably. All boil down to the same point: that, for an infringement action to be successful, it is necessary for the essence or core of a patented invention to be 'taken'. See *Clark v. Adie* (1877) 2 App Cas 315 (Lord Cairns).

<sup>149</sup> Albeit that the question is turned inside out. Instead of stating that the material aspects of an invention must be taken for there to be an infringement, the first 'Improver question' requires the court to find that the variant does not have a material effect on the way in which the invention works. This is supported by Arden LJ's comment that the 'variant must be immaterial, obvious, and consistent with the language of the patent': *Pharmacia v. Merck* [2002] RPC 775 (CA), 830.

<sup>150</sup> Hoffmann J followed *Catnic* [1982] RPC 183, 243, and said that the second question was to be judged as of the date when the specification was published. However, this was not followed in *American Home Products v. Novartis Pharmaceuticals* [2001] RPC 159 (CA), 172 (date of the patent). Similarly, in *Kirin-Amgen v. Transkaryotic Therapies* [2003] RPC 31 (CA), the Court looked at evidence from the filing date of the patent. See H. Dunlop, 'Court of Appeal Gets to Grips with the Protocol' [2003] EIPR 342, 349 (arguing that the 'second question is judged at the filing date of the application (or the priority date if this is claimed and relied upon)').

<sup>151</sup> See *Kirin-Amgen v. Hoechst Marion Roussel* [2005] RPC 9, [36]ff; *Van der Lely v. Bamfords* [1963] RPC 61 (HL); *Rodi & Weinenberger v. Showell* [1969] RPC 367 (HL); *Beecham Group v. Bristol Laboratories* [1978] RPC 153.

<sup>152</sup> *Celltech* [2003] FSR 433, 436. See generally M. Franzosi, 'Equivalence in Europe' [2003] EIPR 237.

<sup>153</sup> T. Webster, *The Subject Matter of Letters Patent for Inventions and the Registration of Designs* (1851), 83.

<sup>154</sup> *Beloit Technologies v. Valmet Paper Machinery* [1995] RPC 705, 720; *Celltech* [2003] FSR 433 436 (no express provision in Europe for doctrine of equivalents).

<sup>155</sup> PA 1977, s. 125.

from this that the doctrine of equivalents therefore had no place in British law; rather, following the widely shared view that a purposive style of interpretation is the approach that ought to be adopted under the Protocol, the question of whether the doctrine of equivalents has any continued relevance under the 1977 Act ought to be decided purposively on the facts of individual cases. This means that whether the replacement of a part of an invention with something that is functionally equivalent constitutes an infringement ought to depend on the way in which the person skilled in the art views the patent in question.<sup>156</sup> Such an approach would not only be consistent with the current jurisprudence in other EPC countries, by focusing upon the function or purpose that invention is to perform (which is what the doctrine of equivalents demands), but also would follow the spirit rather than the letter of the Protocol—the very point that Lord Diplock was making in the *Catnic* decision.

In many ways, it seemed that the uncertainty about the status of the doctrine of equivalents was answered by the EPC 2000. In affirming the continued role of the doctrine of equivalents, Article 2 of the Protocol on Interpretation of Article 69 in the EPC 2000 reads that for ‘the purposes of determining the extent of protection conferred by a European patent, due account shall be taken of any element which is equivalent to an element specified in the claims’.<sup>157</sup> As a result, it seemed clear that the doctrine of equivalents needs to be taken into account when deciding whether a patent has been infringed.

Any hope that the EPC 2000 might have resolved the uncertainty about the status of ‘equivalents’ under British law was quashed by the House of Lords in *Kirin-Amgen*,<sup>158</sup> when Lord Hoffmann said that the amendment changed nothing; the provision only made it clear that equivalents need to be considered, not that there is a ‘doctrine of equivalents’ allowing a court to extend protection beyond that covered in the claims (as interpreted by the person skilled in the art). As Lord Hoffmann said:

[It] seems to me that both the doctrine of equivalents in the United States and the pith and marrow doctrine in the United Kingdom were born of despair. Since the *Catnic* case we have article 69 which, firmly shuts the door on any doctrine which extends protection outside the claims. I cannot say that I am sorry because . . . American patent litigants pay dearly for results which are no more just or predictable than could be achieved by simply reading the claims.<sup>159</sup>

Whatever doubts there might have been about the relevance of Lord Hoffmann’s views on the impact of the changes in the EPC 2000, it is now widely thought that the doctrine of equivalence no longer has a place in British patent law. More accurately, it is believed that the function of the doctrine of equivalents is now performed by the purposive approach to interpretation. Thus while the Court of Appeal may have been able to say without hesitation in 2009 that ‘there is no general “doctrine of equivalents”’,<sup>160</sup> nonetheless it also accepted that a purposive interpretation could ‘lead to a conclusion that a technically trivial or minor difference between an element of a claim and the corresponding element of the alleged infringement nonetheless falls within the meaning of the element when read purposively’.<sup>161</sup> In a strange (literal) reading, this is said not to be because there is a doctrine of equivalents; rather, it is because it is the fair way to read the claims in context<sup>162</sup>—a doctrine of equivalents in all but name?

<sup>156</sup> In *Eli Lilly v. Novopharm* [1966] *RPC* 1, 21, the FCC said that, because the Court was entitled to adopt a purposive approach in construing the claims and the essential parts thereof, this obviated the need to resort to the doctrine of equivalents.

## 4 DEFENCES TO PROCEEDINGS FOR INFRINGEMENT

Once the claimant has proved that the defendant has performed an activity that falls within the scope of the patent monopoly, the obligation then shifts to the defendant to show that the activity is exempted from liability by one of the defences to patent infringement that are available. There has been surprisingly little discussion about the defences to patent infringement actions and the policies that inform them.<sup>163</sup> At a general level, the exceptions balance the interests of patentees against the interests of other groups, such as competitors, previous users, traders, users, and non-profit-making bodies, as well as teaching and research establishments. In some cases, the defences operate to overcome the market failure that occurs where a patentee declines to license a socially beneficial use because of the transaction costs involved. It should be noted that if the unitary patent package is implemented, the defences will need to be revisited. With these general points in mind, we now turn to look at some of the more important defences that may exempt a defendant from liability.

### 4.1 PRIVATE NON-COMMERCIAL USES

Section 60(5)(a) of the 1977 Act provides that acts that are done privately *and* for non-commercial purposes do not infringe.<sup>164</sup> The private use exception is usually explained on the basis that while private uses may increase scientific knowledge and thus be socially beneficial, high transaction costs may mean that they are unlikely to be licensed.<sup>165</sup> Another factor in favour of the defence is that private non-commercial uses do not pose much of a threat to the patent monopoly. While private uses need not be secret or confidential, they must be ‘for the person’s own use’.<sup>166</sup> Where an activity has both commercial and non-commercial benefits, it is necessary to ascertain the subjective intention of the user. If the infringer were motivated by commercial interests, the defence would not apply. However, if the subjective purposes were non-commercial, the defendant could rely on the immunity. This is the case even if the resulting information has a commercial benefit.<sup>167</sup>

### 4.2 EXPERIMENTAL USES

Section 60(5)(b) provides immunity for acts done for experimental purposes relating to the subject matter of the invention.<sup>168</sup> This defence gives effect to a number of related policies, the most obvious being that the patent monopoly should not be allowed to inhibit scientific developments. It is likely that the experimental use defence will become

<sup>163</sup> D. Gilat, *Experimental Use and Patents* (1995); R. Eisenberg, ‘Patents and the Progress of Science: Exclusive Rights and Experimental Use’ (1989) 56 *U Chi L Rev* 1017; J. Karp, ‘Experimental Use as Patent Infringement’ (1991) 100 *Yale LJ* 2169. <sup>164</sup> CPC, Art. 31.

<sup>165</sup> See D. Gilat, *Experimental Use and Patents* (1995), 25. The US courts have occasionally employed the principle of *de minimis non curat lex* (‘the law does not concern itself with trifles’): e.g. *Finney v. United States* 188 *USPQ* 33 (CCTD 1975).

<sup>166</sup> *SKF Laboratories v. Evans Medical* [1989] *FSR* 513, 518; *McDonald v. Graham* [1994] *RPC* 407.

<sup>167</sup> *SKF Laboratories v. Evans Medical* [1989] *FSR* 513.

<sup>168</sup> CPC, Art. 27(b). See W. Cornish, ‘Experimental Use of Patented Inventions in European Community States’ (1998) 29 *IIC* 735. T. Cook, *A European Perspective as to the Extent to which Experimental Use and Certain Other Defences to Patent Infringement Apply to Differing Types of Research* (2006).

increasingly important as patenting (especially in relation to biotechnology) enters the traditional domains of ‘pure’ scientific research carried out within the universities.<sup>169</sup>

To a large extent, the scope of the defence depends on the way in which ‘experimental purpose’ is defined.<sup>170</sup> If it can be shown that the purpose of the activity was to discover something unknown or to test a hypothesis, it would be regarded as an experiment.<sup>171</sup> An act will also be experimental where a person is attempting to discover whether the patented invention works.<sup>172</sup> This may occur, for example, where a party is thinking whether to license a patent or they believe that the patent is invalid on grounds of insufficiency. Given the public interest in determining whether a monopoly has been validly granted, it is desirable that competitors undertake this kind of policing task. In the absence of an experimental use defence, such acts might require the licence of the patentee, which in the circumstances may not be forthcoming.<sup>173</sup>

If the purpose of the activity is to prove something that is already known, to demonstrate to a third party that the product works in the way in which the maker claims, or to obtain official approval for a product,<sup>174</sup> these would not be regarded as acts done for experimental purposes.<sup>175</sup> In one case, it was held that trials that were carried out to obtain safety clearances and to gather information to support an attempt to gain approval for a new use of a patented product (to be used once the patent had expired) were for commercial, rather than scientific, purposes.<sup>176</sup> While the issue has yet to be considered in any detail, it seems that if there is a commercial motive behind the experimental use, it is more likely to fall outside the scope of the exception.<sup>177</sup> Where an act is done for a number of purposes—such as establishing confidence in the market, generating income, and gathering information—the courts look to the ‘preponderant purpose’ for the activity to decide whether the activity falls within the exemption.<sup>178</sup> In *CoreValve v. Edwards Lifesciences*,<sup>179</sup> the court held that clinical

<sup>169</sup> E. Barash, ‘Experimental Uses, Patents and Scientific Progress’ (1997) 91 *Nw UL Rev* 667 (recommending expansion of experimental-use defence for non-profit research).

<sup>170</sup> The ‘purposes for which tests or trials are carried out may in some cases be mixed and in some cases may be difficult to discern’: *Monsanto v. Stauffer Chemical* [1985] *RPC* 515 (CA), 542.

<sup>171</sup> *Ibid.*, 515.

<sup>172</sup> The decision of the SCC in *Micro-Chemicals v. Smith Kline and French InterAmerican* (1971) 25 *DLR* 79, 89 (that use by a defendant to establish that it could manufacture a quality product in accordance with the specification was not an infringement) was explicitly approved by Dillon LJ in *Monsanto v. Stauffer* [1985] *RPC* 515, 538. Trials directed to discovering whether something that is known to work in certain conditions will work in different conditions could fairly be regarded as experiments: see above p. 616; D. Gilat, *Experimental Use and Patents* (1995), 20.

<sup>173</sup> The situation is analogous to the criticism-or-review defence in copyright law, which is based on the idea that criticism would be stifled if the law were to require a prospective critic to obtain a licence from the copyright owner before criticizing the work.

<sup>174</sup> *Auchinloss v. Agricultural and Veterinary Supplies* [1999] *RPC* 397, 405.

<sup>175</sup> *Monsanto v. Stauffer* [1985] *RPC* 515 (CA), 542.

<sup>176</sup> *Ibid.*, 515; *Auchinloss v. Agricultural and Veterinary Supplies* [1997] *RPC* 649, [1999] *RPC* 397 (CA). Another situation in which a person may wish to rely on the defence is where they test someone else’s patented invention for the purposes of obtaining regulatory approval, either by providing data or samples to the relevant authority. In *Upjohn v. Kerfoot* [1988] *FSR* 1, Whitford J held that the mere application for a marketing authorization in respect of a medicinal product, even when accompanied by test results, did not constitute an infringement of the patent, since it did not amount to use of the patent. In the United States, such samples are permitted under the Drug Price Competition and Patent Term Restoration Act 1984, 35 *USC* §271. The European Commission argued that a similar Canadian provision, which permits making and stockpiling of the drug up to six months prior to the expiry of the patent, contravened TRIPS. The matter was referred to the WTO on 12 November 1998. See WTO, *Canada: Patent Protection of Pharmaceutical Products—Report of the Panel* (17 March 2000) WT/DS114/R.

<sup>178</sup> *Corevalve v. Edwards Lifesciences* [2009] *EWHC* 6 (Pat), [79].

<sup>179</sup> *Ibid.*

trials were not exempted by section 60(5)(b) because the main purpose was to ‘generate immediate revenue of a substantial character’. The standing of commercial research will undoubtedly become more pressing given the growing trend for public sector agencies that have traditionally relied upon the defence, such as universities, to commercialize their research results.<sup>180</sup> So far, there has been no consideration given to the question of whether a person who tests an invention to improve it, to invent around the patent, or to invent something else falls within the defence.<sup>181</sup> However, the German Supreme Court has held that experiments to discover the most appropriate form that a patented product should take to alleviate a specific disease fell within the experimental use defence under German law.<sup>182</sup>

Once it has been shown that a use has been carried out for an experimental purpose, it is then necessary to show that the experiment relates to the subject matter of the patent.<sup>183</sup> This means, for example, that a person who wished to test a cure for cancer that they had developed by applying it to a genetically modified mouse could not rely on the defence against a claim by the patentee of the mouse. If the law were otherwise, the patentees of diagnostic test kits would never receive any remuneration because all uses of the kit would be experimental.<sup>184</sup> Where a researcher wishes to use patented processes or products to test other subject matter, they would need to obtain a licence.<sup>185</sup>

In addition to the experimental use defence, researchers may also be able to rely on the more specific, but related, medical regulatory use defence. This defence, which is set out in the Medicines (Marketing Authorisations etc.) Amendment Regulations 2005,<sup>186</sup> provides a defence for an act done in conducting a study, test, or trial that aims to produce medicinal products for either human<sup>187</sup> or veterinary use.<sup>188</sup> In line with this, it is proposed that section 65 be amended to allow clinical trials, field trials, and health technology assessments to be carried out without infringing a patent.<sup>189</sup> The proposed new section 60(5)(d) will clarify that activities that are carried out for the purposes of obtaining regulatory approval or health technology assessment for drugs fall within the scope of section 60(5)(b) of the Patents Act 1977. The proposed new provisions will not cover commercial uses of patented medical products.<sup>190</sup> The proposed new section is designed to deal with the patent-related problems that arise because of the fact that, in order to obtain regulatory approval to market a new drug product, companies must undertake trials to demonstrate to the regulatory authorities that the product is safe and effective. It is hoped this will encourage companies to conduct clinical trials in the United Kingdom.

<sup>180</sup> For the approach taken in the United States in this situation, see *Madey v. Duke University* 64 USPQ 2d 1737 (Fed. Cir. 2002) (Duke University could not rely on experimental-use defence because of the commercial nature of the university, among other things).

<sup>181</sup> *McDonald v. Graham* [1994] RPC 407 (‘no doubt the defendant would be right to submit that supplying a patented article to a designer with a request that he design a non-infringing equivalent would be, in principle, an unobjectionable use of the article if the article were a “franked” article, but the defendant used infringing articles which he was well aware were not supposed to be in his possession at the material time’).

<sup>189</sup> The draft Legislative Reform (Patents) Order 2014, cl. 2, proposing to introduce new PA 1977, s. 60(5)(d)(g). It is proposed that the new statutory instrument will come into effect on 1 October 2014.

<sup>190</sup> UK IPO, *Explanatory Documents on The Legislative Reform (Patents) Order 2014* (2014), [1.20].

### 4.3 PRIOR USE

As we saw earlier, one of the changes brought about by the 1977 Act was that novelty was redefined to exclude inventions that had been ‘made available to the public’. As a result, secret third-party use does not destroy novelty.<sup>191</sup> One of the consequences of this is that the rights conferred by a patent might cover secret activities carried out by a third party prior to grant.<sup>192</sup> In recognition that it would be wrong if patents were allowed to be used to prevent a person from carrying on an activity that they were doing prior to grant (the so-called ‘right to work’ doctrine), section 64(1) provides previous users with a personal defence.<sup>193</sup>

There are a number of points to note about the defence. The first is that it only applies where the previous acts were committed in the United Kingdom (or possibly the EEA).<sup>194</sup> Given that the novelty standard is worldwide, this raises the possibility that a person carrying out an activity in Japan, which is then patented by another person in the United Kingdom, will not be able to practise the invention in the United Kingdom.

It is also important to note that the defence is only available where the acts were carried out in good faith. Although the notion of good faith has yet to be interpreted by the courts, this might prevent a member of a research team from relying on the prior-use defence where they left the research team contrary to an understanding between them. Similarly, if a former employee was preparing to use trade secrets obtained while in employment to compete with their ex-employer, the ex-employee would not be able to rely on the preparatory acts as a defence to patent infringement actions.<sup>195</sup>

The prior use defence is only available where the defendant has done the acts or, before the priority date of the patent, made ‘serious and effective preparations’ to do an act that would be infringing if it were carried out after the grant of the patent. It has been said that the preparations ‘must be so advanced as to be about to result in the infringing act being done’.<sup>196</sup> The defence allows a past user to continue to do the same act after the patent has been granted. While it is not necessary for a defendant to show unbroken use, they must show a clear link or a ‘chain of causation’ between the previous use and the infringing use.<sup>197</sup> Because the ‘past secret use’ defence is a personal defence, the continued use must be by the same person (or partner). The exact scope of the act is therefore crucial. The defence is not available to a defendant who does a thing that is wholly different in nature. This would mean, for example, where the previous use was in relation to a process, that

<sup>191</sup> This reinforces the policy that the patent should be granted to the first to file and disclose the invention rather than the first to invent. See P. Hubert, ‘The Prior User Right of H.R. 400: A Careful Balancing of Competing Interests’ (1998) 14 *Santa Clara Computer & High Tech LJ* 189; Symposium (1996) 36 *IDEA* 345.

<sup>192</sup> Paris, Art. 4(B), leaves such matters to the domestic legislation of contracting states. See R. Rohrback, ‘Prior User Rights: Roses or Thorns?’ (1993) 2 *U Balt IPJ* 1; N. Marterer, ‘The Prior User’s Right’ (1990) 21 *IIC* 521; A. Monotti, ‘Balancing the Rights of the Patentee and Prior User of an Invention: The Australian Experience’ [1997] *EIPR* 351.

<sup>193</sup> *Helitune v. Stewart Hughes* [1991] *FSR* 171, 206.  
<sup>194</sup> The latter modification may be required to prevent the provision being contrary to Art. 28 EC (ex Art. 30 of the Treaty), as interpreted in *EC Commission v. United Kingdom*, Case C-30/90 [1993] *RPC* 283, [1992] 2 *CMLR* 709, [1992] *ECR* I-829. There is no Community harmonization of this issue. See L. Osterborg, ‘Towards a Harmonized Prior User Right within the Common Market Patent System’ (1981) 12 *IIC* 447; J. Neukom, ‘A Prior Use Right for the Community Patent Convention’ [1990] *EIPR* 165; J. Neukom, ‘A Prior Use Right for the Community Patent Convention: An Update’ [1991] *EIPR* 139.

<sup>195</sup> Subject to the ‘springboard principle’, the action for breach of confidence might not be available once the employee’s patent is published, so it is important that the ex-employee cannot rely on the s. 64 defence. See below at pp. 1150–1.

<sup>196</sup> *Lubrizol Corporation v. Esso Petroleum* [1998] *RPC* 727 (CA), 770; *Helitune* [1991] *FSR* 171 (serious and effective preparations required more than general research into the same field).

<sup>197</sup> *Hadley Industries v. Metal Sections* (unreported, 13 November 1998) (Pat).

the previous user would not be able to use the defence for acts carried out (after grant) in relation to products of the process.<sup>198</sup> It is important to note that some variation is allowed between the previous use and the alleged infringing act;<sup>199</sup> the difficult question is: how much of a variation is possible?

If the act or preparations were done in the course of business, the previous user has the right to authorize the doing of the act by their business partners at that time. They also have the right to assign that right or to transmit it on death to any person who acquires the part of the business in the course of which the act was done or the preparations were made.<sup>200</sup> Importantly, the defence does not extend to include licensees.<sup>201</sup>

#### 4.4 DEFENCES FOR BIOTECHNOLOGICAL INVENTIONS

As a part of the regime dealing with biotechnological inventions, three new defences to the infringement of patents for biotechnological inventions have been formulated. These are set out in Articles 10 and 11 of the Biotechnology Directive and in changes made to the Patents Act 1977 by the Patents Regulations 2000.

##### 4.4.1 Exhaustion of biological patents

Article 10/paragraph 10 of Schedule A2 provide that the protection conferred by a patent<sup>202</sup> shall not extend to biological material obtained from the propagation or multiplication of biological material placed on the market by the owner of the patent (or with their consent) where the multiplication or propagation necessarily results from the application for which the biological material was marketed. This is subject to the proviso that the material obtained is not subsequently used for other types of propagation or multiplication.

In effect, Article 10 introduces a specific form of exhaustion for biological patents. For the patent rights to be exhausted under Article 10, it is necessary to establish that the multiplication or propagation (which potentially infringes the patent) is ‘an incident of what might be called the true purpose of the sale’.<sup>203</sup> The upshot of this is that a person who used a patented yeast to make beer would, on its face, infringe the patent in the yeast. This is because the process of making the beer necessarily involves the multiplication of the yeast. However, if the patented yeast was sold in a home-brew shop for the purpose of beer making, Article 10 (and its British equivalent) would provide the defendant with a ‘defence’. Nonetheless, if the defendant was to propagate the yeast and offer it for sale, the defence would not apply.<sup>204</sup> The defence will allow farmers to sow a patented seed, and to harvest and sell the resulting crop (for example to sell the wheat for flour); they will not be permitted, however, to sell the seed to other farmers for the purpose of propagating new crops.<sup>205</sup>

##### 4.4.2 Farmers’ privilege

In the debates surrounding the Biotechnology Directive, one of the fears raised was that patent protection of biological inventions would have a negative impact

<sup>198</sup> Ibid.

<sup>199</sup> *Helitune v. Stewart Hughes* [1991] FSR 171, 206; *Lubrizol v. Esso Petroleum* [1992] RPC 281, 295; [1998] RPC 727 (CA).

<sup>200</sup> PA 1977, s. 64(2), provides an equivalent to exhaustion when a previous user disposes of the product. The person who acquires the product is entitled to deal with the product in the same way as if it had been disposed of by a sole registered proprietor.

<sup>201</sup> PA 1977, s. 64(3).  
<sup>202</sup> As set out in Biotech. Dir. Arts 8 and 9; PA 1977, Sch. A2, paras 7–9. These were discussed above at pp. 618–19.

<sup>203</sup> See S. Bostyn, ‘Patentability of Genetic Information Carriers’ [1999] *IPQ* 1, 30.

<sup>204</sup> Ibid.

<sup>205</sup> R. Nott, ‘You Did It: The European Biotechnology Directive at Last’ [1998] *EIPR* 347, 349.

on traditional farming practices. In particular, it was feared that patent protection would mean that farmers would not be able to use the seeds that they harvested from their crops to resow in future, nor would they be able to breed patented animals. The potential problem was that sowing and breeding carried out in relation to a patented product would infringe. To remedy problems of this sort, Article 11(1) and (2) of the Biotechnology Directive provide farmers with specific defences. These provisions have been mirrored in section 60(5)(g) and (h) of the Patent Act 1977, introduced under the Patents Regulations 2000.

Section 60(5)(g) provides a defence where a farmer uses the product of their harvest for propagation or multiplication by them on their farm after there has been a sale or other form of commercialization of plant-propagating material to the farmer by the patent owner for agricultural use. In effect, the defence enables farmers to save seeds from one year's crop to sow crops in the following year. The defence in section 60(5)(g) only applies to the plant species and groups set out in paragraph 2 of Schedule A1 to the Patent Act 1977. This covers various types of fodder plant, cereal, potato, and oil and fibre plant. In situations where a farmer successfully relies on the defence in section 60(5)(g), the farmer must pay the relevant rights holder equitable remuneration.<sup>206</sup> The remuneration must be 'sensibly lower than the amount charged for the production of the protected material of the same variety on the same area with the holder's authority'.<sup>207</sup> The need to pay equitable remuneration does not arise if a farmer can prove that they are a 'small farmer'.<sup>208</sup> Where requested, the rights holder and the farmer must supply each other with certain information.<sup>209</sup> The use of the defence is subject to a number of other restrictions (such as ability of the farmer to move protected material from their farm).

Section 60(5)(h) provides farmers with a defence in relation to the breeding of animals. More specifically, it provides that 'the use of an animal or animal reproductive material by a farmer for an agricultural purpose . . . of breeding stock or other animal reproductive material which constitutes or contains the patented invention' is non-infringing. The farmer's defence for the breeding of animals is potentially very broad. In part, the scope of the defence will depend on how the phrase 'use for an agricultural purpose' is construed. The Act tells us that 'use for an agricultural purpose' includes situations in which the animal or animal reproductive material is made available for the purposes of pursuing the farmer's agricultural activity; it does not include 'sale within the framework, or for the purposes of a commercial reproduction activity'.<sup>210</sup>

It will be interesting to see what impact these defences have upon farming practices. It will also be interesting to see how the biotechnology industry responds to these defences. It has been suggested that defences such as those provided in section 60(5)(g)–(h) may act as a stimulus for the development of techniques such as terminator genes or special hybrids that operate to ensure that seeds will not regeminate.<sup>211</sup>

<sup>206</sup> PA 1977, Sch. A1, para. 3(1) (introduced by Patents Regs 2000).

<sup>207</sup> PA 1977, Sch. A1, para. 3(3) (introduced by Patents Regs 2000), says that a remuneration will be sensibly lower if it would be 'sensibly lower within the meaning of Art. 14(3) third indent of the Council Regulation on Community plant variety rights'.

<sup>208</sup> PA 1977, Sch. A1, para. 4(1)–(2) (introduced by Patents Regs 2000). A 'small farmer' is defined via Art. 14(3), third indent of the Council Regulation on Community plant variety rights.

<sup>209</sup> PA 1977, Sch. A1, paras 5–11 (introduced by Patents Regs 2000).

<sup>210</sup> PA 1977, s. 60(6B)(a)(b). Sale is defined to include any other form of commercialization: PA 1977, s. 60(6C).

<sup>211</sup> Nott, 'You Did It' [1998] *EIPR* 347, 349 n. 27.

#### 4.5 MISCELLANEOUS DEFENCES

A number of other exceptions to infringement exist. Section 74(1)(a) expressly provides that the validity of a patent may be put in issue by way of a defence to proceedings for infringement. This is the most commonly used defence: an alleged infringer will normally argue that the patent is invalid because the invention lacks novelty or is obvious. A particular example of this is the so-called ‘*Gillette* defence’,<sup>212</sup> where a defendant attempts to demonstrate that the infringing activity was being carried out in public before the priority date of the patent, thus forcing the patentee either to require the patent to be interpreted so as to exclude the activity or to accept that the patent covers the activity and is therefore invalid (for want of novelty).

A defence is available where a person in a pharmacy makes an extempore preparation of a medicine in accordance with a prescription.<sup>213</sup> A defence also exists where products or processes are used on ships, aircraft, hovercraft, or vehicles that have temporarily or accidentally entered UK airspace or waters.<sup>214</sup> The Crown has a broad immunity from infringing the exclusive rights of patentees.<sup>215</sup> The Crown may use an invention without obtaining a licence in advance, so long as it pays compensation. More specifically, the defence permits ‘any government department and any person authorized in writing by a government department’ to do certain acts,<sup>216</sup> in return for which the department must provide payment,<sup>217</sup> including ‘compensation’ for loss of profits.<sup>218</sup> In some cases, the doctrines of exhaustion of rights and implied licence, reviewed above, also (effectively) provide defences to accusations of infringement.

Prior to the passage of the Competition Act 1998, section 44 of the 1977 Act provided a defence where a patentee imposed a requirement on a licensee:

... to acquire from the licensor or his nominee, or prohibit him from acquiring from any specified person, or from acquiring except from the licensor or his nominee, anything other than the product which is the patented invention or (if it is a process) other than any product obtained directly by means of the process or to which the process has been applied.

The defence was available to any person against whom the licensor brought an infringement action.<sup>219</sup> Section 44, which was widely criticized, was repealed by the Competition Act 1998.<sup>220</sup>

<sup>212</sup> A defence that is based on the arguments before the House of Lords in *Gillette Safety Razor Company v. Anglo-American Trading Company Ltd* [1913] 30 RPC 465 (HL). <sup>213</sup> PA 1977, s. 60(5)(c).

<sup>214</sup> PA 1977, s. 60(5)(d)(e). See *Stena Rederi v. Irish Ferries* [2003] RPC 668 (CA). A ship that sailed between Dublin and Holyhead in the United Kingdom three or four times a day (each visit, the ship was in UK waters for about three hours), was held to have temporarily entered the United Kingdom. Here, ‘temporarily’ meant ‘transient’ or ‘for a limited period of time’, rather than the frequency of the visits. See further R. Sharma and H. Forrest, ‘A Lifeline for Infringing Ships’ [2003] *EIPR* 430. <sup>215</sup> PA 1977, s. 55.

<sup>216</sup> Listed in PA 1977, s. 55(1)(a)–(e).

<sup>217</sup> PA 1977, s. 55(4). An exception, in which case no royalty need be paid, operates under PA 1977, s. 55(3).

<sup>218</sup> PA 1977, s. 57A.

<sup>219</sup> PA 1977, s. 44(3).

## EXPLOITATION

### CHAPTER CONTENTS

1 Introduction	642	4 Limits on Non-exploitation:	
2 Modes of Exploitation	643	Compulsory Licences	650
3 Limits on Exploitation	647	5 Compensation for Use	656

### 1 INTRODUCTION

As forms of personal property,<sup>1</sup> patents and patent applications may be assigned, licensed, or mortgaged, and they may devolve by operation of law (notably through death or bankruptcy).<sup>2</sup> One of the consequences of this is that patents have become part of the commercial currency; they can be traded, exploited, and included on the balance sheet of companies. As such, patent exploitation is a central aspect of the patent system. The importance of the way in which patents are exploited has taken on a new significance in recent years, as increased attention is given to the question of how innovative modes of exploitation might be used to achieve non-commercial goals, such as improving food security and the accessibility of science, particularly for biotechnological research.<sup>3</sup>

The terms and conditions that control the way in which patents are exploited are usually determined contractually by the parties: patent law merely provides a framework within which parties are able to manoeuvre. Where parties have agreed upon the way a patent is to be exploited, the law has been reluctant to interfere with the sanctity of the contract. There are some situations, however, in which this is not the case. Apart from the general vitiating factors of contract law (such as unreasonable restraint of trade), special provisions exist in the Patents Act 1977 in relation to co-owners,<sup>4</sup> employee inventions, and (at least until recently) certain types of contractual terms. Competition law, both domestic and European, also places important limits upon the nature and content of transactions entered into by a patentee. In recognition of the fact that non-use of a patent may produce undesirable consequences, in certain situations the law may order a patent owner to grant a licence to work the invention. Where this occurs, it is often necessary for the tribunal to set the rates of remuneration that should be paid to the proprietor.

This chapter is divided into four parts. First, we consider the various ways in which patents may be exploited. We then look at some of the limits that are imposed on the way

<sup>1</sup> PA 1977, s. 30(1).      <sup>2</sup> PA 1977, s. 30(3).

<sup>3</sup> J. Hope, *Bio Bazaar: Biotechnology and the Open Space Revolution* (2008); S. Dusollier, 'Sharing Access to Intellectual Property through Private Ordering' (2007) 82 *Chi-Kent L Rev* 1391; J. D'Silva, 'Pools, Thickets and Open Source Nanotechnology' (2009) 31 *EIPR* 300.

<sup>4</sup> PA 1977, s. 36(3), (7).  
© L. Bently and B. Sherman 2014

in which patents are exploited to minimize any possible anti-competitive effects. We then examine situations in which compulsory licences are available (for example where a patent is not used or is underused). Finally, we look at the compensation payable where the patent is used via a compulsory licence, as well as when an employer or the Crown uses the invention.

## 2 MODES OF EXPLOITATION

In this section, we examine some of the ways patents are exploited. After considering the situation in which patentees exploit the patent themselves, we look at some of the more common forms of voluntary uses—namely, assignment and licence. We then turn to consider situations where the patent is exploited by way of a compulsory licence or a licence as of right.

### 2.1 EXPLOITATION BY THE OWNER

In many cases, the owner of a patent may decide to manufacture or use the patented invention themselves. While in most cases self-exploitation presents few legal problems, difficulties may arise when the patent is owned by a number of different parties. The most significant issue that arises here is whether one co-owner is able to practise the invention without the consent of the other co-owners. In some cases, the conditions of use will be dealt with contractually between the parties. As well as setting out the way each of the co-owners is able to exploit the patent, ideally such a contract should also specify the obligations that the parties have to each other. In situations in which there is no contract between co-owners of a patent,<sup>5</sup> the Patents Act 1977 declares that each of the co-owners is ‘entitled to operate under the patent themselves’<sup>6</sup>—that is, each owner is permitted to use and benefit from their undivided share of the patent. This means that a joint owner with a 1 per cent interest can work the patent on their own to the detriment of the other owners. The possibility for opportunistic behaviour that this presents is limited by the fact that a joint owner cannot license others to use the patent without the permission of the other co-owners.<sup>7</sup>

### 2.2 ASSIGNMENT

A common way in which patented products and processes are exploited is for the owner to assign their interests to another party. An assignment is a transfer of ownership of the patent (or application). As a result of an assignment, an assignee stands in the shoes of the assignor and is entitled to deal with the patent as they see fit. In contrast to a licence

<sup>5</sup> A patent may be co-owned where the invention is a product of joint inventorship, or as a result of dealings with a patent that was initially solely owned, such as an assignment to two persons.

<sup>6</sup> PA 1977, s. 36. The PA 2004 amended PA 1977, s. 36(3), to clarify that co-owners are able to seek, amend, and revoke a patent if they act jointly and have not contracted out of this requirement. Disputes between co-owners may be resolved via PA 1977, s. 37. See R. Merges and L. Locke, ‘Co-ownership of Patents: A Comparative and Economic View’ (1990) 72 *JPTOS* 586.

<sup>7</sup> *Henry Brothers v. Ministry of Defence* [1997] *RPC* 693; cf. M. Anderson, ‘Applying Traditional Property Laws to Intellectual Property Transactions’ [1995] *EIPR* 236, 240.

(where the licensor retains an interest in the patent), once a patentee has assigned the patent, they no longer have any interest in, or responsibility to maintain, the patent.<sup>8</sup>

For an assignment to be valid, it must be in writing and signed by or on behalf of all of the parties to the transaction.<sup>9</sup> Where the patent or application is owned by more than one party, for the assignment to be valid, all of the co-owners must consent to the assignment.<sup>10</sup> While assignments need not be registered to be valid, certain advantages flow from registration, and we review these below.<sup>11</sup>

### 2.3 VOLUNTARY LICENCES

Another common way in which patents are exploited is by licence. A licence provides a party with permission to do an act that would otherwise be prohibited. Licences may be made orally or in writing,<sup>12</sup> and may be express or implied.<sup>13</sup> Where a patent is owned jointly, all of the co-owners must provide their consent for the licence to be valid.<sup>14</sup> In contrast with an assignment, no proprietary interest is passed under a licence.<sup>15</sup>

Licences may take many forms—from a one-off permission, through to an exclusive licence. An exclusive licence is an agreement under which the owner of a patent not only grants the licensee permission to use the patented technology, but also promises that they will not grant any other licences, nor exploit the technology themselves. The legal consequence of this is that an exclusive licence confers rights upon the licensee to the exclusion of all others, including the licensor.<sup>16</sup>

While the grant of an exclusive licence is very similar to an assignment,<sup>17</sup> an exclusive licence does not need be made in writing.<sup>18</sup> Indeed, as with other licences, an exclusive licence may be made orally or in writing,<sup>19</sup> and may be express or implied.<sup>20</sup> While a 'bare licensee' acquires the right not to be sued in relation to the acts set out in the licence, an exclusive licence confers powers on the licensee that are equivalent to those of the proprietor. Undoubtedly the most significant of these is that exclusive licensees can sue infringers in their own right; they do not need to persuade the proprietor to take action on their behalf.<sup>21</sup>

<sup>8</sup> It seems that an assignor comes under a personal disability in that they may not challenge the validity of the assigned patent: *Chambers v. Crichley* (1864) 33 *Beav* 374 (assignor prohibited from challenging validity of patent on basis of non-derogation from grant). But see A. Robertson, 'Is the Licensee Estoppel Rule Still Good Law? Was It Ever?' [1991] *EIPR* 373.

<sup>9</sup> PA 1977, s. 30(6). Differently worded, but largely equivalent, provisions for Scotland are set out in PA 1977, s. 31. An oral assignment might take effect as an agreement to assign and be enforceable in equity: *Stewart v. Case* (1891) 8 *RPC* 259; (1892) 9 *RPC* 9.

<sup>10</sup> PA 1977, s. 36(3), (7). For a situation in which the (then) Patent Office ordered an assignment of a patent where one of seven co-owners was opposed to the agreement, see *Florey's Patent* [1962] *RPC* 186.

<sup>11</sup> See below at p. 646.

<sup>12</sup> *Crossley v. Dixon* (1863) 10 *HLC* 293.

<sup>13</sup> See *Morton-Norwich v. Intercen and United Chemicals (No. 2)* [1981] *FSR* 337. A voluntary and exclusive licence is granted 'under' and not 'in' a patent, therefore PA 1977, s. 30(6), does not apply: *Instituform v. Inliner* [1992] *RPC* 83; *CIPA*, [30.05].

<sup>14</sup> PA 1977, s. 36(3), (7).

<sup>15</sup> *Allen & Hanbury v. Generics* [1986] *RPC* 203, 246. A licence itself can be dealt with: PA 1977, s. 30(4)(a).

<sup>16</sup> Cf. *Peaudouce SA v. Kimberly Clark* [1996] *FSR* 680, 690–1.

<sup>17</sup> There are a number of differences between an assignment and an exclusive licence. For example, while an assignment of a patent must be in writing, an assignment of an exclusive licence need not: *Instituform v. Inliner* [1992] *RPC* 83. In addition, note the weak position of the exclusive licensee in relation to the compulsory licence-of-right provisions operating in relation to the extension of patent terms: *Kaken Pharmaceutical Patent* [1990] *RPC* 72.

<sup>18</sup> Cf. the position in relation to copyright: CDPA 1988, s. 92 (exclusive licences must be in writing); *Morton-Norwich v. Intercen and United Chemicals* [1981] *FSR* 337.

<sup>19</sup> *Crossley v. Dixon* (1863) 10 *HLC* 293.

<sup>20</sup> *Morton-Norwich* [1981] *FSR* 337.

<sup>21</sup> PA 1977, s. 67. The proprietor is made party to the proceedings, if necessary by joining them as a defendant.

Non-exclusive licences, which are a very common way of exploiting patents, take many forms. An important example of a non-exclusive licence are the licences that patent holders who participate in standard-setting arrangements give to users of the standards allowing use of the patent on 'fair, reasonable and non-discriminatory terms' (FRAND). Such licences are particularly important in the information and communication technologies sector. One example would be the mobile telephone standards established by the European Telecommunication Standardization Institute (ETSI). ETSI will only consider the adoption of a patented technology as part of a standard if the patentee can show that they license the technology on FRAND terms. Another emerging licensing practice is the grant of 'open licences' allowing subsequent researchers to use patented material on the condition that they apply similar terms to any improvements. One example of such a licence is that offered in the field of agricultural biotechnology, known as the 'Biological Innovation for Open Society agreement'. A similar approach has been adopted in relation to so-called 'humanitarian' licences, which allow a patentee to exploit their innovations in developed countries, but not in developing countries. Such clauses are increasingly being used by philanthropic funding agencies, particularly where the research is conducted by public-private consortiums.

## 2.4 MORTGAGES

Like other forms of property, patents may be mortgaged (or assigned as security for a debt).<sup>22</sup> This can be a useful technique to enable patentees to raise the funds necessary to exploit the patented invention. In this context, a mortgage is achieved by way of an assignment of the patent by the patentee-mortgagor to the mortgagee-lender. This is subject to a condition that the patent will be reassigned to the mortgagor when the debt is repaid (or, as the law says, 'on redemption'). It is important that the assignment reserves for the mortgagor a right to continue practising the invention. This is probably best achieved by the reservation of an exclusive licence. Alternatively, a patent can be used as security by way of a legal charge, in which case there is no assignment.<sup>23</sup> In this case, the chargee gains certain rights over the patent as security.

In order to be valid, a mortgage must be in writing and signed by the parties.<sup>24</sup> Where there are joint proprietors, all of them must consent to the mortgage.<sup>25</sup> A mortgage need not be registered to be valid, but there are advantages to registration, which are reviewed below.

## 2.5 TESTAMENTARY DISPOSITIONS

Because a patent is personal property, it is capable of passing on the death of the proprietor either by will or via the rules of intestacy. Co-owners hold patents as tenants in common (rather than as joint tenants).<sup>26</sup> This means that if a co-proprietor dies, their share passes along with the rest of the estate, rather than accruing to the other co-owners. In devolving the patent, the personal representative must sign a written consent.<sup>27</sup>

<sup>22</sup> A mortgage includes a charge for securing money or money's worth: PA 1977, s. 130(1). See M. Bezant and R. Punt, *The Use of Intellectual Property as Security for Debt Finance* (1997); D. Townend, *Using Intellectual Property as Security* (1996); M. Henry, 'Mortgages of Intellectual Property in the United Kingdom' [1992] *EIPR* 158.

<sup>23</sup> Charges are included within the definition of mortgage in PA 1977, s. 130.

<sup>24</sup> PA 1977, s. 30(6). <sup>25</sup> PA 1977, s. 36(3).

<sup>26</sup> On an attempt to alter this (which failed), see *Florey's Patent* [1962] *RPC* 72.

<sup>27</sup> PA 1977, s. 30(6)(b).

## 2.6 REGISTRATION OF INTERESTS AND TRANSACTIONS

There is no need for transactions to be registered in order for them to be valid. Nonetheless, the Patents Act 1977 provides that assignments, mortgages, licences, sub-licences, and certain equitable interests may be registered.<sup>28</sup> While non-registration will not affect the validity of transactions made in relation to a patent, there are two reasons why a transaction should be registered.

The first is that registration gives the registrant priority against anyone who has an earlier unregistered right, subject to the proviso that the registrant had no notice of the earlier right.<sup>29</sup> In so doing, registration helps to allocate priorities between the parties who have interests in a patent. The act of registration enables a person with an interest to secure priority over those who engage in subsequent transactions. The effect of this can be illustrated as follows.

- (i) On 1 July 2014, X assigns their patent to Y. On 1 August 2014, X licenses the patent to Z. At the time of the licence, Y had not registered the assignment, nor did Z have any knowledge of the assignment to Y. On being informed by Y of their interest, Z registered their licence on 1 September 2014. In this case, Y is bound by Z's licence.
- (ii) On 1 July 2014, X grants an exclusive licence to Y, which Y duly registers on 15 July 2014. On 1 August, X grants another licence to Z. Y can sue Z if Z attempts to exercise the 'rights' that they were purportedly granted.
- (iii) X grants a mortgage of their patent to Y. Z, aware that Y has not registered the mortgage, obtains an exclusive licence from X, which Z immediately registers. Y's mortgage binds Z.

The second reason why registration is advisable is because in the case of assignments and exclusive licences, non-registration may affect a party's right to costs.<sup>30</sup> This is because a proprietor or exclusive licensee who does not register within six months of the transaction cannot claim costs in relation to actions for infringements that occurred within the period prior to registration.<sup>31</sup> Given that an infringement action might relate to acts of a defendant that occur during a period extending both before and after registration, courts will be faced with some difficult questions of apportionment.

## 2.7 LICENCES OF RIGHT

A patentee who is willing to license the technology to all comers may take advantage of the facility that allows them to put a note on the register that licences are to be available as of right.<sup>32</sup> Once a 'licences of right' note is entered on the register, anyone is able to apply for a licence and establish the scope of the licence that they desire (whether it be to manufacture, sell, or import the invention). There are two reasons why a patentee might want to render a patent subject to licences as of right: (i) the endorsement of a licence of right acts as an advertisement that the owner of the patent is willing to grant licences to

<sup>28</sup> PA 1977, ss 32–3.

<sup>29</sup> The relevant date on which to assess whether the registrant knew of the right is the date on which the later registrant acquired their interest. Both the fact of registration and the knowledge of the party are assessed at the time of the transaction (which is registered), not the date of registration.

<sup>30</sup> A previous incarnation of the section, which prevented the patentee from claiming damages or an account of profits for the relevant period, was described as intended to protect infringers: *Mölnlycke AB v. Procter & Gamble* [1992] FSR 549, 606–10.

<sup>31</sup> PA 1977, s. 68.

<sup>32</sup> On the history, see *Allen & Hanbury v. Generics* [1986] RPC 203, 246.

parties who wish to exploit the invention; and (ii) such an endorsement halves the renewal fees payable.

One of the consequences of making licences available as of right is that the patentee is no longer able to dictate who can exercise the patent, nor control the terms of such licences. The terms of any licence are set by the parties or, if they cannot agree, by the Comptroller. The courts have accepted that they have a wide discretion in the determination of terms.<sup>33</sup> When deciding the terms under which the licences should be exercised, the courts have taken into account the guidelines provided for the grant of compulsory licences.<sup>34</sup> A patentee who has previously rendered a patent subject to 'licences of right' can apply to the Comptroller for cancellation of the entry. If accepted, the patentee must repay the balance of the renewal fees owing. Applications to remove the entry may be opposed.<sup>35</sup>

## 2.8 COMPULSORY LICENCES

The final mode of exploitation worth noting is the compulsory licence. A compulsory licence is a licence compulsorily imposed on the patentee. In contrast to a licence of right, which is usually initiated voluntarily, the decision as to whether a compulsory licence should be granted, and if so, the terms on which it is to be granted, is made by the relevant tribunals. We deal with the situations in which compulsory licences may be granted in more detail below.<sup>36</sup>

# 3 LIMITS ON EXPLOITATION

A number of limits are imposed on the ability of the patent owner to exploit the invention. When a patent owner exploits an invention, they must comply with the general laws and regulations. These require patent owners to respect the rights of other patentees, and to comply with health and safety, environmental regulation, product liability, and criminal laws.<sup>37</sup> While these non-economic restrictions on patent exploitation should not be neglected, our particular concern here is with the potentially anti-competitive effects of patent exploitation. There are three areas of law that minimize the potential for patent misuse—namely, British patent law, British competition law, and European competition law.

## 3.1 BRITISH PATENT LAW

For most of its long history, patent law has used various techniques to minimize the potential for abuse that a patent monopoly confers. These have included rules prohibiting the use of certain terms in patent licences,<sup>38</sup> as well as provisions permitting the use of patented inventions by third parties where the patent was being underused or misused by the patentee. Despite this long tradition, it was recently decided that it was more appropriate for the potential abuse of patents to be regulated by competition law than by patent

<sup>33</sup> *Cabot Safety Corp.'s Patent* [1992] RPC 39. In that case, the tribunal made decisions about to whom the licence should be granted.

<sup>34</sup> PA 1977, s. 50. See, e.g., *Smith Kline & French Laboratories (Cimetidine) Patents* [1990] RPC 203, 250.

<sup>35</sup> PA 1977, s. 47. <sup>36</sup> See below at pp. 650–6. <sup>37</sup> Biotech. Dir., Recital 14.

<sup>38</sup> PA 1977, ss 44 and 45 (now repealed).

law. This farming out of patent regulation took place when the draconian provisions of sections 44 and 45 of the Patents Act 1977 were repealed by section 70 of the Competition Act 1998.

### 3.2 BRITISH COMPETITION LAW

The introduction of the Competition Act 1998 marked an important change in the way British law regulated anti-competitive behaviour.<sup>39</sup> The Act establishes a system that parallels European competition law. It does this by enacting a prohibition (the ‘Chapter I prohibition’) that is equivalent to Article 101 of the Treaty on the Functioning of the European Union (TFEU) (ex Article 81 EC and Article 85 of the Treaty). Section 2 of the 1998 Act prohibits agreements that may affect trade within the United Kingdom and have as their object or effect the prevention, restriction, or distortion of competition within the United Kingdom.<sup>40</sup> An agreement will not be caught by section 2 if it falls within any individual exemption or under a ‘block exemption’ that may be made under section 6.<sup>41</sup> While the details of the British exemptions to section 2 have yet to be finalized, an agreement is deemed to be exempt from the national prohibition if it is exempt from the Community prohibition. This is also the case with licences that fall within the terms of the 2014 Technology Transfer Block Exemption Regulation (TTBER 2014),<sup>42</sup> but which are not subject to Article 101 TFEU because they do not affect trade between member states.<sup>43</sup>

### 3.3 EUROPEAN COMPETITION LAW

The key provision of European competition law affecting patent licences and exploitation agreements is Article 101 TFEU (ex Article 81 EC). This provides that all agreements that affect trade between member states and which have the object or effect of distorting competition within the common market shall be void.<sup>44</sup> However, under certain conditions, agreements falling within Article 101(1) may be exempt from Article 101 as a result of Article 101(3). Whether a transaction is exempt depends either on an individual assessment (now made by the tribunal *ex post*) or on whether the transaction falls within the scope of a block exemption.<sup>45</sup> The most important block exemption for patent licences is TTBER 2014 and the related 2014 Technology Transfer Guidelines. Although the effect of TTBER 2014 on patent licences is considered in detail in specialist texts, we will briefly outline here its scope and application to a few typical patent licence terms.

<sup>39</sup> S. Rose, A. Clark, and M. Burdon, ‘A New UK Competition Law: More Restrictions on Restrictions’ (January 1997) *Patent World* 27.

<sup>40</sup> Conduct that amounts to the abuse of a dominant position in a market within the United Kingdom or a part thereof is also prohibited—known as the ‘Chapter II prohibition’.

<sup>41</sup> Competition Act 1998, ss 4–11.

<sup>42</sup> Council Regulation No. 316/2014 of 21 March 2014 on the application of Article 10(3) of the Treaty on the Functioning of the European Union to categories of technology transfer agreements [2014] *OJ L* 93/17 (28 March 2014).

<sup>43</sup> Competition Act 1998, s. 10. See Office of Fair Trading, *Intellectual Property Rights: A Draft Competition Act 1998 Guideline* (November 2001), 18, n. 2. (Revised draft Guidelines have yet to be published.)

<sup>44</sup> A licence term was held to be ‘incompatible with EC Art. 81 [Art. 101 TFEU] if it sought to regulate the commercial market by controlling not only what was made with the licensed technology but also the use which was made of it thereafter’: *Intel Technologies v. Via Technologies* [2003] *FSR* 574, 600.

<sup>45</sup> Organizations have to determine for themselves whether their agreements come within the block exemptions.

TTBER 2014, which replaced TTBER 2004,<sup>46</sup> came into effect on 1 May 2014. There are a number of notable features of the 2014 Regulation, the first of which is its scope. Unlike some early competition laws (pre-2004), which applied to patent licensing, know-how licensing agreements, and to mixed patent and know-how licensing agreements, ‘technology transfer agreement’ is defined under TTBER 2014 to include agreements that relate to patents, utility models, design right, semiconductor chip rights, supplementary protection certificates (SPCs), plant breeders rights, and software copyright.<sup>47</sup>

Although the primary target of the 2014 Regulation is anti-competitive licences, it also applies to licences that are dressed up as assignments or where some of the risk associated with the exploitation remains with the assignor.<sup>48</sup> TTBER 2014 only applies if the Research and Development (R&D) Block Exemption Regulation<sup>49</sup> or the Specialization Agreements Block Exemption Regulation<sup>50</sup> are not applicable. A notable feature of TTBER 2014 is that it treats agreements differently depending on whether the parties are ‘competing undertakings’ or ‘non-competing undertakings’. ‘Competing undertakings’ are defined as undertakings that compete on the relevant technology market and/or the relevant product market.<sup>51</sup> Other undertakings are dealt with on the basis that they are non-competing. Another notable feature of the 2014 Regulation is that it imposes a threshold that parties must not cross if they are to benefit from the block exemption. In particular, if the combined market share of the parties exceeds 20 per cent for competing undertakings 30 per cent for non-competing undertakings, the Regulation says that the agreement will fall outside the scope of the immunity conferred by the block exemption.<sup>52</sup> Failure to remain below these market ceilings does not mean that agreements are illegal *per se*; rather, it simply means that their compliance with Article 81(3) TFEU is judged on a case-by-case basis.

While TTBER 2014 does not contain a ‘white list’ of permitted terms, it does contain a series of ‘hardcore restrictions’ (that is, a ‘black list’).<sup>53</sup> If an agreement contains a clause that has been blacklisted, it will fall outside the scope of the block exemption and thus carry the risk that the agreement (or at least part of the agreement) is void. An activity not covered by the hardcore restriction is exempted. Any provision not covered by one of the hardcore restrictions will be covered by the ‘safe harbour’ provisions.

The 2014 reforms made a number of changes to the hardcore restrictions previously recognized in TTBER 2004 (that is, the practices deemed to be so serious that they can never be automatically exempted). Notably, the Commission removed passive sales restrictions protecting a licensee from passive sales from other licensees into its exclusive territory

<sup>46</sup> Council Regulation No. 1/2002 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [2003] *OJ L* 1/1 (4 January 2003); Commission Notice: Guidelines on the application of Article 81 EC to technology transfer agreements [2004] *OJ C* 101/02 (27 April 2004). The TTBER 2004 and 2004 Guidelines expired on 30 April 2014. On the TTBER 2004, see M. Hansen and O. Shah, ‘The New EU Technology Transfer Regime’ [2004] *ECLR* 1. For background, see European Commission, *Draft Regulation on the Application of Article 81(3) of the Treaty to Categories of Technology Transfer Agreements* (2013) C(2013) 921 draft. This grew out of European Commission, *Technology Transfer Block Exemption Evaluation Report* (December 2001).

<sup>47</sup> TTBER 2014, Art. 1(1)(a). <sup>48</sup> TTBER 2014, Art. 1(1)(c).

<sup>49</sup> Commission Regulation (EC) No. 2659/2000 of 29 November 2000 on the application of Article 81(3) of the Treaty to categories of research and development agreements [2000] *OJ L* 304/3 (5 December 2000).

<sup>50</sup> Commission Regulation (EU) No. 1218/2010 of 14 December 2010 on the application of Article 101(3) of the Treaty on the Functioning of the European Union to certain categories of specialisation agreements [2010] *OJ L* 335/43 (18 December 2010).

<sup>51</sup> TTBER 2014, Art. 1(1)(e), (j), and (k) (which also defines ‘relevant technology market’ and ‘relevant product market’).

<sup>52</sup> TTBER 2014, Art. 3(1)–(3). <sup>53</sup> TTBER 2014, Arts 4–5.

during the first two years of an agreement between non-competitors from the automatic exemption of TTBER 2014. All exclusive grant-backs—that is, provisions that require the licensee to license back to the licensor on an exclusive basis, and not even use itself, its own improvements to the licensed technology—are excluded from the safe harbour provisions and, as such, require an individual assessment.<sup>54</sup> Termination clauses that allow the licensor to terminate the agreement if the other party challenges the validity of the licensed technology also now fall outside of the safe harbour of TTBER 2014. Different standards apply depending on whether the parties to an agreement are in competition with each other. For ‘competing undertakings’, the blacklisted terms include those that restrict a party’s ability to set prices, limit output or sales, allocate markets or customers, or restrict the licensee’s ability to exploit its own technology or to carry out research and development.<sup>55</sup> For ‘non-competing undertakings’, the blacklisted terms include those that restrict a party’s ability to set prices, restrict the territory in which or the customers to whom the licensee may sell, or restrict sales to end-users.<sup>56</sup>

#### 4 LIMITS ON NON-EXPLOITATION: COMPULSORY LICENCES

Another way in which patents can be misused is if the owner uses the patent to prevent the product from being manufactured or if demand for the product is being met from some other source. In contrast with trade mark law, there is no obligation on a patentee to work, or to intend to exploit, the invention. However, provisions exist in the form of compulsory licences that allow people other than the patent owner to exploit the invention in situations where the patentee is either unable or unwilling to do so.<sup>57</sup>

Compulsory licensing provisions were first introduced into British patent law at the end of the nineteenth century. These were motivated by a fear that large (often foreign) organizations that were in a dominant market position might buy up patents and decline to exploit them. There was also a concern that technical progress might be impeded by the holder of a basic patent who refused to license people to make improvements to patented inventions. In addition, there was a perceived risk that patents might be used to prevent the adequate supply of essentials, such as food or medicine. While few applications are made for compulsory licences, it would be wrong to conclude from this that the provisions are of little effect. This is because the threat of such licences being granted may stimulate the patentee into working or voluntarily licensing the patent. Compulsory licences have become a topic of debate recently, primarily as a result of discussions at the World Trade Organization (WTO) about access to medicines in developing countries. As we saw earlier, in August 2003 the WTO member states agreed to allow pharmaceutical products to be produced under compulsory licence for export to developing countries.<sup>58</sup> Following the introduction of the new EU regulation giving effect to the Doha Declaration,<sup>59</sup> the UK government changed national legislation in 2007 to permit the

<sup>54</sup> This is in contrast to the TTBER 2004, which distinguished between severable and non-severable improvements, and excluded from the safe harbour only exclusive grant-back obligations concerning severable improvements. The TTBER 2014 covers non-exclusive grant-backs.

<sup>55</sup> TTBER 2014, Art. 4(1). <sup>56</sup> TTBER 2014, Art. 4(2).

<sup>57</sup> See, e.g., C. Fauver, Comment, ‘Compulsory Patent Licensing in the US: An Idea Whose Time Has Come’ (1988) 8 *Nw J Intl L & Bus* 666.

<sup>58</sup> See above at pp. 398–401.

<sup>59</sup> See below at p. 656.

granting of compulsory licences for patented medicines to allow export to countries with public health problems.<sup>60</sup>

Under the Paris Convention, members of the Paris Union are able to provide for compulsory licences ‘to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent, for example, failure to work’.<sup>61</sup> The ability to grant compulsory licences was curtailed by Article 31 of the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS). British law on compulsory licences was amended in 1999 to take account of TRIPS.<sup>62</sup> As we will see, these changes have restricted the circumstances in which compulsory licences are available. One of the changes brought about by the TRIPS amendments is that the grounds on which a compulsory licence will be granted depend on whether the patent is owned by a WTO proprietor.

The Patents Act 1977 distinguishes between five general situations in which compulsory licences can be granted:

- (i) the various grounds set out in section 48 (which in turn distinguishes between patents with WTO owners and patents with non-WTO owners);
- (ii) following a report of the Competition Commission (now, the Competition and Markets Authority);
- (iii) for Crown use;
- (iv) in relation to biotechnological inventions; and
- (v) for licences granted on public health grounds.

Before looking at these in more detail, it is necessary to make some preliminary comments.

#### 4.1 COMPULSORY LICENCES UNDER SECTION 48

The general conditions under which a compulsory licence may be issued are set out in section 48 of the Patents Act 1977 (as amended). As we mentioned above, the 1977 Act was amended in 2007 to take account of provisions in TRIPS in relation to compulsory licences. One of the consequences of these changes is that a different approach is taken depending on whether a WTO proprietor or a non-WTO proprietor owns the patent. As we will see, the grounds on which compulsory licences will be granted are more onerous in the case of WTO owners than that of non-WTO owners.<sup>63</sup> Given the number of members of the WTO, it is unlikely that the more generous provisions will be used very often.

In both cases, a compulsory licence granted under section 48 is not available until three years after the grant of the patent.<sup>64</sup> This gives patentees a reasonable amount of time within which to exploit the invention or to arrange for others to do so.<sup>65</sup>

##### 4.1.1 Compulsory licences in relation to WTO proprietors

The relevant grounds on which a compulsory licence will be granted in relation to a patent owned by a WTO proprietor are set in section 48A. Before looking at the grounds on

<sup>60</sup> UK IPO, *TRIPS and Essential Medicines* (November 2003). <sup>61</sup> Paris, Arts 5A(2) and 5(4).

<sup>62</sup> Patents and Trade Marks (WTO) Regulations 1999 (SI 1999/1899) (in force 29 July 1999).

<sup>63</sup> A proprietor is a WTO proprietor if they are a national of, or domiciled in, a country that is a WTO member, or they have a real and effective industrial or commercial establishment in such a country: PA 1977, s. 48(5)(a)–(b). <sup>64</sup> PA 1977, s. 48(1) (as amended by SI 1999/1899). See PA 1977, s. 48B(2).

<sup>65</sup> Paris, Art. 5. In some cases, three years may be too little, so the Comptroller may reject an application for compulsory licences if it is considered that the patentee ought to be given more time in which to attempt to exploit the patent themselves.

which such a licence will be granted, it is important to note that, as with all compulsory licences, the onus is on the applicant for a licence to establish a case that the grounds relied upon apply on its face.<sup>66</sup> It is also important to note that a compulsory licence (for a WTO patent) will not be granted unless the applicant has made efforts to obtain a licence from the proprietor on reasonable commercial terms and conditions, and can establish that their efforts have not been successful within a reasonable period.<sup>67</sup> In addition, compulsory licences are not available if the patented invention is within the field of semiconductor technology.<sup>68</sup>

A compulsory licence may be granted where:

- (i) demand in the United Kingdom for a patented product is not being met on reasonable terms;<sup>69</sup>
- (ii) the owner's failure to license a patent on reasonable terms has a blocking effect on later improvements<sup>70</sup> (in which case, the Comptroller must be satisfied that the proprietor of the patent for the later invention is 'able and willing to grant to the proprietor of the patent concerned and his licensees a licence under the patent for the other invention on reasonable terms'<sup>71</sup>);
- (iii) the owner's failure to license a patent on reasonable terms unfairly prejudices the 'establishment or development of commercial or industrial activities in the UK';<sup>72</sup> or
- (iv) as a consequence of limitations imposed on the grant of licences under the patent, on the disposal or use of the patented product, or on the use of the patented process, the manufacture, use, or disposal of materials not protected by the patent, or the establishment or development of industrial activities in the United Kingdom is unfairly prejudiced.<sup>73</sup>

The power vested in the Comptroller to grant a compulsory licence under section 48 is discretionary. Section 50 provides a list of 'purposes' and 'factors' that the Comptroller ought to take into account when exercising this discretion.<sup>74</sup> The recognized purposes are that:

- (i) it is in the public interest to work an invention in the United Kingdom;<sup>75</sup>
- (ii) an invention should be worked 'without undue delay' and 'to the fullest extent that is reasonably practicable';<sup>76</sup>
- (iii) the patentee should receive 'reasonable remuneration having regard to the nature of the invention';<sup>77</sup> and
- (iv) the interests of the person who has worked the invention ought not to be unfairly prejudiced.<sup>78</sup>

<sup>66</sup> *Monsanto's CCP Patent* [1990] FSR 93, 98. <sup>67</sup> PA 1977, s. 48A(2).

<sup>68</sup> PA 1977, s. 48A(3). <sup>69</sup> PA 1977, s. 48A(1)(a).

<sup>70</sup> PA 1977, s. 48A(1)(b)(i). It may be possible in such cases to claim that licences should be made available by the European Commission to prevent abuse of a dominant position contrary to Art. 82 EC. Laddie J's suggestion in *Philips Electronics v. Ingman* [1998] 2 CMLR 1185 that *Magill* might have no application to patents was rejected in *Intel v. Via* [2003] FSR 574. See above at pp. 15–17, and p. 303.

<sup>71</sup> PA 1977, s. 48A(4). <sup>72</sup> PA 1977, s. 48 A(1)(b)(ii). <sup>73</sup> PA 1977, s. 48A(1)(c).

<sup>74</sup> *Monsanto's CCP Patent* [1990] FSR 93, 97. <sup>75</sup> PA 1977, s. 50(1)(a).

<sup>76</sup> PA 1977, s. 50(1)(a). <sup>77</sup> PA 1977, s. 50(1)(b).

<sup>78</sup> PA 1977, s. 50(1)(c).

The factors that the Comptroller is directed to take into account include the nature of the invention, the time that has elapsed since the grant of the patent, and the measures taken by the proprietor or exclusive licensee to make full use of the patent.<sup>79</sup>

The grant of a compulsory licence in relation to a patent with a WTO owner is subject to the further restrictions that the licence should:

- (i) not be exclusive;
- (ii) not be assigned except to a person to whom there is also assigned the part of the enterprise that enjoys the use of the patented invention, or the part of the goodwill that belongs to that part;
- (iii) predominantly be for the supply of the market in the United Kingdom;
- (iv) include conditions entitling the proprietor of the patent concerned to remuneration that is adequate in the circumstances of the case, taking into account the economic value of the licence; and
- (v) be limited in scope and in duration to the purpose for which the licence was granted.<sup>80</sup>

In addition, the Act provides that compulsory licences should not be assigned except to a person to whom the patent for the other invention is also assigned.<sup>81</sup>

#### 4.1.2 Compulsory licences in relation to non-WTO owners

In the case of an application for a compulsory licence made in respect of a patent whose proprietor is not a WTO proprietor,<sup>82</sup> the relevant grounds are set out in section 48B of the 1977 Act.<sup>83</sup> These are where:

- (i) the patented invention is not being commercially worked in the United Kingdom, or is not being worked to the fullest extent that is reasonably practicable<sup>84</sup> (under which head a compulsory licence will not be granted if the patented invention is being commercially worked in a country that is a member state of the WTO and demand in the United Kingdom is being met by import from that country);<sup>85</sup>
- (ii) the demand for a patented product in the United Kingdom is not being met on reasonable terms, or is being met to a substantial extent by import from a country that is *not* a member state of the WTO;<sup>86</sup>
- (iii) the patented invention is prevented or hindered from being commercially worked in the United Kingdom by the import (from a country that is not a member state) of a patented product, a product obtained directly by means of a patented process, or to which the process has been applied;<sup>87</sup>

<sup>79</sup> PA 1977, s. 50(2).

<sup>80</sup> PA 1977, s. 48A(6)(a)–(e); TRIPS, Art. 31. See M. Blakeney, *Trade-related Aspects of Intellectual Property: A Concise Guide* (1996), 88–93.

<sup>81</sup> PA 1977, s. 48A(5).

<sup>82</sup> A proprietor is a WTO proprietor if they are a national of, or domiciled in, a country that is a WTO member, or they have a real and effective industrial or commercial establishment in such a country: PA 1977, s. 48(5)(a)–(b).

<sup>83</sup> For discussions under the law prior to the 1999 amendments, see *Penn Engineering & Manufacturing Corp. Patent* [1973] *RPC* 233; *Monsanto's CCP Patent* [1990] *FSR* 93, 100.

<sup>84</sup> PA 1977, s. 48B(1)(a). <sup>85</sup> PA 1977, s. 48B(3).

<sup>86</sup> PA 1977, s. 48B(1)(b). These changes overcome the problem identified in *EC v. UK and Italy*, Case C-30/90 [1993] *RPC* 283. See M. Hodgson, 'Changes to UK Compulsory Patent Licensing Laws' [1992] *EIPR* 214.

<sup>87</sup> PA 1977, s. 48B(c).

- (iv) the owner's failure to license a patent on reasonable terms means that:
  - a market for the export of any patented product made in the United Kingdom is not being supplied;<sup>88</sup> or
  - the working or efficient working in the United Kingdom of any other patented invention that makes a substantial contribution to the art is prevented or hindered;<sup>89</sup> or
  - it unfairly prejudices the establishment or development of commercial or industrial activities in the United Kingdom;<sup>90</sup> or
- (v) as a consequence of limitations imposed on the grant of licences under the patent, on the disposal or use of the patented product, or on the use of the patented process, the manufacture, use, or disposal of materials not protected by the patent, or the establishment or development of industrial activities in the United Kingdom is unfairly prejudiced.<sup>91</sup>

In deciding whether to grant a patent, the Comptroller must take into account the factors set out in section 50. The only additional limit in relation to non-WTO-owned patents arises where an application is made on the ground that the patented invention is not being commercially worked in the United Kingdom, or is not being so worked to the fullest extent that is reasonably practicable. In these cases, if, for any reason, there has been insufficient time since the publication of the patent to enable the invention to be so worked, the Comptroller may adjourn the application for a period to allow the invention to be worked.

#### 4.2 COMPETITION COMMISSION (NOW COMPETITION AND MARKETS AUTHORITY)

The third situation in which compulsory licences may be made available is where a report of the Competition Commission—now the Competition and Markets Authority (CMA)<sup>92</sup>—concludes that an undesirable monopolistic situation exists or an anti-competitive practice is operating against the public interest.<sup>93</sup> The provision gives the appropriate minister the power to respond to the report by applying to the Comptroller to have the patent endorsed as a licence as of right. The application may be opposed.

#### 4.3 CROWN USE

A special form of compulsory licence exists for the benefit of the Crown.<sup>94</sup> The elaborate provisions contained in sections 55–59 entitle any government department and any person authorized in writing by a government department to do certain acts,<sup>95</sup> in return

<sup>88</sup> PA 1977, s. 48B(d)(i). This is subject to the proviso that a compulsory licence granted under this head should not contain such provisions as appear to the Comptroller to be expedient for restricting the countries in which any product concerned may be disposed of or used by the licensee: PA 1977, s. 48B(4).

<sup>89</sup> PA 1977, s. 48B(1)(d)(ii). The Comptroller must be satisfied that the proprietor of the patent for the other invention is able and willing to grant to the proprietor of the patent concerned and their licensees a licence under the patent for the other invention on reasonable terms: PA 1977, s. 48B(5).

<sup>90</sup> PA 1977, s. 48B(1)(d)(iii). <sup>91</sup> PA 1977, s. 48B(1)(e).

<sup>92</sup> The Competition Commission was abolished on 1 April 2014 and some of its functions transferred to the CMA under ERR 2013, s. 26.

<sup>93</sup> PA 1977, s. 51; see TRIPS, Arts 8, 31(k), 40.

<sup>94</sup> For background, see *Pfizer Corporation v. Ministry of Health* [1965] AC 512.

<sup>95</sup> Listed in PA 1977, s. 55(1)(a)–(e).

for which the department must provide payment<sup>96</sup> (including ‘compensation for loss of profits’).<sup>97</sup> In contrast with the compulsory licences described above, there is no requirement that the department needs to apply to the Comptroller (or any other authority) before acting.<sup>98</sup> The Crown use of a patent is only legitimate where it is done by or with authorization of ‘a government department’,<sup>99</sup> and ‘for the services of the Crown’. This is defined to include the supply of anything for foreign defence purposes, the production of specified drugs and medicines, and certain purposes relating to the production or use of atomic energy.<sup>100</sup> Disputes relating to the exercise, terms, or payment for Crown uses are referable to the court.<sup>101</sup>

#### 4.4 BIOTECHNOLOGICAL INVENTIONS

One of the features of the packages of reforms initiated by the Biotechnology Directive is that it introduces a new regime for compulsory licensing and cross-licensing of biotechnological inventions. In essence, the new scheme attempts to manage the interrelationship between patent protection for biological inventions and plant variety protection. A similar scheme was introduced into the United Kingdom on 1 March 2002 by the Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002.<sup>102</sup>

The 2002 Regulations introduced two new forms of compulsory licence in the United Kingdom. The first of these is set out in regulation 3.<sup>103</sup> This provides that where a person is unable to acquire or exploit a plant breeder’s rights or a Community plant variety right without infringing a prior patent, they are able to apply to the Comptroller of Patents for a non-exclusive compulsory licence to use the invention. This is subject to the requirement that the applicant pay an appropriate royalty and that the holder of the patent be entitled to a cross-licence to use the protected variety on reasonable terms.<sup>104</sup> In order for a compulsory licence to be granted under regulation 3, the applicant must show that they have unsuccessfully applied to the holder of the patent to obtain a licence. They must also show that the new plant variety in relation to which they wish to acquire or exploit the plant breeder’s rights or Community plant variety right ‘constitutes significant technical progress of considerable economic interest in relation to the invention protected by the patent’.<sup>105</sup> It seems that the latter requirement may impose limitations on the grant of compulsory licences for biotechnological inventions. In part, this will depend on how the ‘significant technical progress’ and ‘considerable economic interest’ are interpreted.

The second compulsory licence is set out in regulation 11.<sup>106</sup> This provides that where the holder of a patent for a biotechnological invention is unable to exploit the invention without infringing prior plant breeders’ rights, the patent owner is able to apply to the Controller of Plant Variety Rights for a non-exclusive compulsory licence to use the protected plant variety.<sup>107</sup> This is subject to the requirement that the patent owner pay an appropriate royalty and

<sup>96</sup> PA 1977, s. 55(4). An exception where no royalty needs to be paid operates under s. 55(3). Payment may have to be made to others: *Patchett’s Patent* [1963] RPC 90. <sup>97</sup> PA 1977, s. 57A.

<sup>98</sup> There is a duty to inform the proprietor that the department is using the invention.

<sup>99</sup> With recent trends to roll back the state, determining what is a government department is not always easy. In many cases, consultation of relevant legislation may be of assistance. See *Dory v. Sheffield Health Authority* [1991] FSR 221.

<sup>100</sup> PA 1977, s. 56(2). <sup>101</sup> PA 1977, s. 58. <sup>102</sup> SI 2002/247.

<sup>103</sup> Based on Biotech. Dir., Art. 12(1).

<sup>104</sup> Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002 (SI 2002/247), reg. 7(1)–(5). <sup>105</sup> *Ibid.*, reg. 3(2)(c); Biotech. Dir., Art. 12(3)(a).

<sup>106</sup> Biotech. Dir., Art. 12(2).

<sup>107</sup> The applicant must also comply with the Plant Breeders’ Rights Regulations 1998 (SI 1998/1027), established under reg. 23.

that the holder of the plant breeder's rights be entitled to a cross-licence to use the patented invention on reasonable terms.<sup>108</sup> For a compulsory licence to be granted under regulation 11, the applicant must show that they made an unsuccessful application to the holder of the patent or plant variety right to obtain a licence. As with the compulsory patent licence, an applicant for a compulsory plant variety licence is subject to the onerous requirement that the biotechnological invention protected by the patent 'constitutes significant technical progress of considerable economic interest in relation to the plant variety protected by the prior plant breeders' rights'.<sup>109</sup> It seems that this second requirement may impose considerable limitations on the grant of compulsory licences for biotechnological inventions.

In relation to prior Community plant variety rights that restrict the ability of patentees to exploit their invention in the United Kingdom, the patentee must first apply to the Community Plant Variety Office for a 'compulsory exploitation right'.<sup>110</sup> Where such a right is granted to a patentee for a biotechnological invention who could not otherwise exploit their invention in the United Kingdom without infringing the prior Community plant variety right, the patentee is entitled to apply to the Comptroller of Patents for a cross-licence to use their biotechnological invention in the United Kingdom.<sup>111</sup>

#### 4.5 COMPULSORY LICENCES FOR PUBLIC HEALTH

In order to follow through on commitments made at the Doha round of TRIPS to minimize the negative impact of patent law on access to medicines in developing countries, the European Commission introduced a new regulation in 2006 that allows for the compulsory licensing of patents relating to the manufacture of pharmaceutical products for export to countries with public health problems.<sup>112</sup> In effect, this allows for the grant of compulsory licences in relation to patents, and supplementary protection certificates (SPCs) for the sale and manufacture of pharmaceutical products intended for export to 'eligible importing countries in need of such products to address public health problems'.<sup>113</sup> To be 'eligible', a country must either be regarded by the United Nations as a 'least-developed country', have notified the TRIPS Council of its intention to use the system as an importer, or be listed by the Organisation for Economic Co-operation and Development (OECD) as a low-income country.<sup>114</sup> To accommodate these changes in the United Kingdom, section 128A was introduced into the Patents Act 1977 as of 17 December 2007.<sup>115</sup>

### 5 COMPENSATION FOR USE

In the vast bulk of cases, the amount that is paid for the use of a patent is largely left to the market and the negotiating skills of the parties. In a number of exceptional circumstances, however, the Comptroller or court may be called upon to determine the amount

<sup>108</sup> Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002, reg. 11(1), (2)(b).

<sup>109</sup> *Ibid.*, reg. 11(c); Biotech. Dir., Art. 12(3)(a)–(b). <sup>110</sup> Biotech. Dir., Art. 12(3).

<sup>111</sup> Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002, reg. 15.

<sup>112</sup> Regulation (EC) No. 816/2006 of the European Parliament and of the Council of 17 May 2006 on compulsory licensing of patents relating to the manufacture of pharmaceutical products for export to countries with public health problems [2006] *OJL* 157/1 (9 June 2006). <sup>113</sup> *Ibid.*, Art. 1.

<sup>114</sup> *Ibid.*, Art. 4(a)–(c).

<sup>115</sup> The Patents (Compulsory Licensing and Supplementary Protection Certificates) Regulations 2007 (SI 2007/3293).

payable for use of the patent. The question of the compensation payable arises in relation to employer use of employee inventions, compulsory licences, licences of right, and Crown use. In each case, the tribunal has to make difficult qualitative judgments about the value of the patent and how the profits that have been or might be made are to be allocated. In due course, international agreements may require that the contributions of indigenous groups are compensated where their knowledge and resources are used to develop pharmaceuticals.<sup>116</sup>

## 5.1 COMPENSATION FOR EMPLOYER USE

While the fate of a creator's relationship with their creations is normally left to the vagaries of contract law and the negotiating skills of the creator, intellectual property law occasionally recognizes that creators have residual interests in their creations.<sup>117</sup> One of the most notable examples of this is found in section 40(1) and (2) of the Patents Act 1977, which provides employee-inventors with a statutory right to compensation where their inventions are exploited by their employer.<sup>118</sup>

The compensation provisions apply when an invention made by an employee is owned by the employer by virtue of section 39(1)(a) or (b) and it can be shown that the patented invention is of outstanding benefit to the employer.<sup>119</sup> The compensation provisions also apply where an employee invention has been assigned to or exclusively licensed by the employer and it can be shown that the remuneration that the employee received from the transaction was inadequate. In both of these situations, inventors have a statutory right of compensation.<sup>120</sup> Awards for compensation will only be made if it is 'just' to do so.<sup>121</sup>

While these provisions may appear to provide employee-inventors with a potentially valuable source of income, they have mostly been construed in such a way as to provide little direct benefit to employees. Whether the compensation scheme provides indirect benefits to employees, for example acting as an impetus for the introduction of in-house compensation schemes, is another matter.<sup>122</sup>

Applications for compensation can be made to the Comptroller or the court during the life of the patent and up to one year after the patent has expired. In recognition of the fact that the fate of a patented invention may change over time, if an initial application for compensation is rejected, employees can reapply for compensation at a later stage.<sup>123</sup> After some initial uncertainty,<sup>124</sup> it is now clear that the onus of proving that the patent is of outstanding benefit to the employer falls upon the employee.<sup>125</sup>

In order to protect employees, the 1977 Act provides that contractual terms that attempt to undermine the employee's right to compensation are unenforceable.<sup>126</sup> In recognition of the fact that unequal bargaining power might be mitigated by collective

<sup>116</sup> CBD, Art. 15(7).

<sup>117</sup> The most obvious examples are to be found in copyright law, where the creator's personality interests are protected by moral rights, and their financial interests by the *droit de suite* and unwaivable rights to remuneration.

<sup>118</sup> See A. Chandler, 'Employee Inventions: Outstanding Compensation?' [1992] *J Bus L* 300; K. Witherspoon, 'Employee Inventions Revisited' (1993) 22 *ILJ* 119, 131; J. Hughes, 'The Personality Interest of Artists and Inventors in Intellectual Property' (1998) 16 *Cardozo AELJ* 81, 138.

<sup>119</sup> PA 1977, s. 40(1). <sup>120</sup> PA 1977, s. 40. <sup>121</sup> PA 1977, s.40(1) and (2)(d).

<sup>122</sup> The regime places an onus on an employer to keep detailed records. PA 1977, s. 59(2), specifies that personnel records of inventors should be kept for at least one year after the patent has ceased to have effect.

<sup>123</sup> PA 1977, s. 41(7).

<sup>124</sup> Cf. *GEC Avionics' Patent* [1992] *RPC* 107, 112.

<sup>125</sup> *Memco-Med's Patent* [1992] *RPC* 403.

<sup>126</sup> PA 1977, s. 42(2).

action, provision is made for collectively bargained schemes to override the individual claim machinery. Thus section 40(3) states that any employee who is a member of a trade union that has a ‘relevant collective agreement’ with the employer is unable to bring a claim for compensation.<sup>127</sup> For the provision to apply, the collective agreement must provide for the payment of compensation in respect of inventions of the same description as made by the employee.<sup>128</sup>

### 5.1.1 Compensation where an invention automatically belongs to employer

The first situation where employees are entitled to apply for compensation is set out in section 40(1). This states that where an employee has made an invention belonging to the employer via section 39(1), the employee may be entitled to compensation. For an award for compensation to be made, the applicant must show that:

- (i) they have made an invention belonging to the employer that has been patented;
- (ii) the invention *or* the patent for it is of benefit to the employer;
- (iii) the benefit is outstanding; and
- (iv) it is *just* that the employee be awarded compensation.

We will deal with each of these in turn.

(i) *The applicant has made a patented invention owned by the employer* In order to qualify for compensation, an employee must show that they were the inventor, or actual deviser, of the invention in question. The test here is the same as determining whether someone is initially entitled to grant of a patent or is a joint inventor (discussed above). It is not enough for a person to show that they merely contributed to the invention (in a non-inventive way); rather, to be eligible for compensation, they must show that they came up with the inventive concept.<sup>129</sup>

(ii) *‘The invention or the patent is of benefit to the employer’* As a result of changes made in 2004, the benefits that flow to the employer can come either from the invention or from the patent that is taken out for the invention in question.<sup>130</sup> Extending the remit of the section beyond benefits that are derived from a patent (which was the way section 40(1) was originally drafted) broadens the scope of the provision. To date, there has been little to suggest that employee-inventors have derived much from the new provisions.

Determining the level of benefit that an employer has derived from an invention or a patent is a complex task.<sup>131</sup> The valuation of the benefit must be in light of all of the available evidence as to what the patent has achieved and may reasonably be expected to achieve.<sup>132</sup> The process of calculation is made somewhat easier as a result of ‘benefit’ having been construed to mean ‘money or money’s worth’.<sup>133</sup> This means that non-financial benefits, such as the prestige that flows from a patent, are excluded from the equation. Section 40 does not require the court to value the benefit precisely. As Floyd J said in *Kelly and Chiu v. GE Healthcare*,<sup>134</sup> the test is a qualitative one. Where a patent is still in force, the courts have been reluctant to speculate on what *future* or *potential* benefits

<sup>127</sup> PA 1977, s. 40(3) and (6). <sup>128</sup> PA 1977, s. 40(3).

<sup>129</sup> *Kelly and Chiu v. GE Healthcare* [2009] EWHC 181 (Pat), [9]–[11]. <sup>130</sup> PA 2004, s. 10.

<sup>131</sup> *British Steel’s Patent* [1992] RPC 117, 121. The calculation may take into account the benefits received under foreign patents and equivalent rights (such as utility models): PA 1977, s. 43(4); *GEC Avionics’ Patent* [1992] RPC 107, 111.

<sup>132</sup> *Kelly and Chiu v. GE Healthcare* [2009] EWHC 181, [56].

<sup>133</sup> PA 1977, s. 43(7). <sup>134</sup> [2009] EWHC 181, [22].

might be, preferring to focus instead on the *actual* benefits.<sup>135</sup> This point was emphasized by the examiner in *British Steel's Patent*<sup>136</sup> when he said that while the benefits that were expected to flow from a patent were relevant when considering whether an award was 'just', they were not relevant when deciding whether the benefit from the patent was outstanding.<sup>137</sup> The examiner also declined to consider any benefits that might have accrued had the employer exploited the invention to its full potential. This was said not to have been germane in the circumstances because the relevant benefit was actual rather than potential.

Over time, a number of guiding principles have been developed to assist tribunals when calculating the benefit. For example, in *Memco-Med's Patent*,<sup>138</sup> the court said that it was useful 'to examine what the employer's position would have been if the patent had never been granted, in comparison with the actual position'. It has also been suggested that the courts should speculate as to what an employee would have paid an independent contractor for the invention.<sup>139</sup> The benefit derived from the patent is not diminished by the possibility that a different invention might have produced a similar benefit, although this might have some bearing on whether the tribunal considers the benefit to be outstanding.<sup>140</sup> The courts have also stressed that the patent must be the cause of the benefit, although it does not have to be the only cause.<sup>141</sup>

However helpful these principles may be, the courts have tended to rely upon more concrete information when calculating benefit. Thus, where a licence has been granted for use of the patent, the licence fee or assignment income is taken as an indication of the patent's benefit to the employer.<sup>142</sup> Where a patent has been included on the balance sheet of an organization, this would presumably also provide a similar basis from which the benefits could be calculated. Another important piece of information that has been used to determine benefit is the employer's sales figures. This is particularly relevant where employers exploit or manufacture the patented invention themselves.<sup>143</sup> While sales figures, licence fees, and the like provide a useful basis from which to calculate the benefit that an employer has derived from a patent, they cannot be relied upon to provide an exact figure. The reason for this is that while the existence of a patent over a manufactured product will frequently influence sales, the number of products sold (as with the licence or assignment fees that are paid for use of the patent) may be a consequence of a range of factors—such as the advertising and marketing campaigns used to sell the product.<sup>144</sup>

Given that sales figures and licence fees may be influenced by an array of factors other than the patented invention, when they are being used to calculate benefit, it is necessary to isolate the *net* benefits that flow from the patent to the employer from any other contributing factors. *British Steel's Patent*<sup>145</sup> offers another useful example of the care

<sup>135</sup> Future benefits can be taken into account only when they may reasonably be expected to come about. In *GEC Avionics' Patent* [1992] RPC 107, 115, 'options' were held to be too tentative.

<sup>136</sup> [1992] RPC 117. See also *Kelly and Chiu v. GE Healthcare* [2009] EWHC 181, [22].

<sup>137</sup> *British Steel's Patent* [1992] RPC 117, 127. <sup>138</sup> [1992] RPC 403, 413.

<sup>139</sup> See *British Steel's Patent* [1992] RPC 117, 128. <sup>140</sup> *Ibid.*, 127.

<sup>141</sup> *Kelly and Chiu v. GE Healthcare* [2009] EWHC 181, [60]. See A. Odell-West, 'Kelly v. GE Healthcare: Employee Innovations in Health Care' (2010) 32 *EIPR* 449.

<sup>142</sup> *GEC Avionics' Patent* [1992] RPC 107, 108.

<sup>143</sup> The particular problem that arises in these situations is that there is no readily identifiable benchmark against which benefit can be measured.

<sup>144</sup> Whether an employer can circumvent the provision by deciding not to patent, but to utilize another form of protection such as confidentiality agreements, remains unclear. PA 1977, s. 43(4), defines 'references to a patent' as covering 'a patent or other protection'—arguably including confidentiality.

<sup>145</sup> [1992] RPC 117.

that needs to be taken when calculating the net benefit that flows to an employer from a patent. The particular accounting problem that arose in this case stemmed from the fact that a number of technical obstacles had to be overcome before the patented invention could be put into practice. In this situation, the examiner accepted that in calculating the net benefit that flowed to the employer, it was necessary to subtract the costs that the employer had incurred in moving the invention from its initial conception to a practical profitable reality.

The care that needs to be taken in using sales figures as an indicator of benefit was also highlighted in *Memco-Med's Patent*,<sup>146</sup> in which Aldous J was called upon to resolve a remuneration dispute over a patented invention that detected when someone was near lift doors and prevented the doors from closing on them. In response to the argument that high sales of the patented detection device was evidence that the employer had derived high levels of benefit from the patent, the court found that the high sales were attributable more to the price and quality of the product and to the fact that the manufacturer had a long and established relationship with the purchaser, than to the patent itself.<sup>147</sup> From this basis, the court concluded that the benefit that flowed to the employer from the patent was minimal.

(iii) *Is the benefit 'outstanding'?* Once the level of benefit that an employer has derived from a patent has been calculated, it is then necessary to determine whether it is 'outstanding'. It has been suggested that the reason why compensation is only awarded where the benefit is outstanding is that the employees making a claim under section 40(1) would already have received some remuneration for the invention as part of their salary package.<sup>148</sup> While 'outstanding' is not defined in the Act, it has been likened to 'significant or substantial' and to 'something special', and said to require 'something out of the ordinary'.<sup>149</sup> In *GEC Avionics' Patent*,<sup>150</sup> an application for compensation was rejected on the ground that although the patent conferred some benefit, the employer achieved similar benefits in relation to products not involving the invention.

Whether a patent is of outstanding benefit to an employer depends on the circumstances of the case in question. The only guidance that the Act provides is that the 'size and nature of the employer's undertakings' ought to be taken into account when determining whether a patent is of outstanding benefit.<sup>151</sup> The provision has been interpreted in such a way that where an employee works for a large corporation, it is virtually impossible for that employee to produce anything that could be classified as 'outstanding'.<sup>152</sup> For example, in *GEC Avionics*, the patent enabled the employer to secure a \$US72 million contract, with a \$US10 million US profit. However, because GEC had entered into contracts of a similar size not involving the invention, the examiner held that the patent did not provide an outstanding benefit to the employer.<sup>153</sup>

Given that the benefit is looked at in relation to the size of the activities of the employer, it is important to ascertain the scope of the relevant undertaking. While it has been said that the size of the employer's undertakings could be either the whole or a division of the employer's business,<sup>154</sup> the reported decisions have not provided any guidance as to how

<sup>146</sup> [1992] RPC 403.

<sup>147</sup> *Ibid.*, 417. There is a presumption that sales from non-patented goods are not attributable in any way to the patent: *GEC Avionics' Patent* [1992] RPC 107, 114. <sup>148</sup> *Ibid.*, 115.

<sup>149</sup> *Kelly and Chiu v. GE Healthcare* [2009] EWHC 181 (Pat), [60]. In *British Steel's Patent* [1992] RPC 117, 122, the examiner suggested that the term implied a 'superlative'. See also *Memco-Med's Patent* [1992] RPC 403, 414. <sup>150</sup> [1992] RPC 107. <sup>151</sup> PA 1977, s. 40(1).

<sup>152</sup> *British Steel's Patent* [1992] RPC 117. <sup>153</sup> *GEC Avionics' Patent* [1992] RPC 107, 115.

<sup>154</sup> *Memco-Med's Patent* [1992] RPC 403, 414.

this issue is to be resolved. Nevertheless, the consequences are clear. In *British Steel's Patent*, an employee-inventor claimed compensation in relation to a patent taken out by his employer for a valve that had been described in the employer's publicity and the press as 'revolutionary' and as 'vital cost-saving technology'. While the employee asserted that the employer had benefited from the patent to the tune of £5 million per year, the employee was only able to prove a benefit of between £100,000 and £500,000 per year. In any case, the court rejected the application on the ground it was not outstanding. In so doing, the Comptroller defined the undertaking as the undivided totality of British Steel's operation. Thus neither the proven benefit<sup>155</sup> nor the claimed benefit were outstanding when compared with British Steel's turnover of £4,900 million and a profit of £593 million.<sup>156</sup>

(iv) *Is it just that compensation should be awarded?* For compensation to be awarded, as well as establishing that the patent is of outstanding benefit to the employer, employees must also show that it is 'just' that they be awarded compensation.<sup>157</sup> The decision as to whether an award for compensation is just is based on the same factors that are taken into account when deciding whether the patent provides the employer with an outstanding benefit. As a result, it is difficult to imagine situations where a patent is of outstanding benefit to the employer and it is not also just for the employee to receive compensation. It may be that the requirement that the award ought to be just enables the tribunal to make more qualitative judgments. For example, where an employee works for a small firm and is already well compensated under their contract of employment, the tribunal may consider that a further award would place an unfair burden upon the employer.<sup>158</sup> The requirement that the award be just may also be used as a way of introducing general equitable principles to reject applications where the employee acted in a way that is contrary to their duty of fidelity.<sup>159</sup>

### 5.1.2 Compensation where an employee-invention has been assigned to an employer

The second situation where an award for compensation may be made to an employee is set out in section 40(2) of the 1977 Act. This provides that additional compensation may be paid where the initial entitlement to an invention lay with an employee, but the employee assigned or licensed the invention to the employer. Here, the employee must demonstrate that the remuneration for the transaction is inadequate in comparison with the remuneration derived by the employer from the patent. They must also show that it is just that additional compensation be paid.

To determine whether compensation is payable under section 40(2), it is necessary to ascertain the benefit that the employee derived from the contract with their employer and the benefit that the employer derived from the patent. Once these two figures have been calculated, it is then necessary to determine whether the remuneration was adequate. This appears to require the court to estimate what remuneration might have been achieved in a market transaction between a willing seller and purchaser. However, given that an

<sup>155</sup> The proven benefit in money or money's worth to the employer of the patented invention represented no more than 0.01 per cent of turnover or 0.08 per cent of profits. Even on the most favourable interpretation of the facts, the benefit was not even equivalent to 1 per cent.

<sup>156</sup> *British Steel's Patent* [1992] *RPC* 117, 126. In *Garrison's Patent*, BL O/44/97, a benefit of 2–3 per cent of the total turnover of a small company manufacturing snooker cues was held not to be outstanding.

<sup>157</sup> PA 1977, s. 40(1).

<sup>158</sup> In *Memco-Med's Patent* [1992] *RPC* 403, 411, it was said that, because of the duties of the employee, 'it would need some quite exceptional benefits to flow from the patent for it to be just that an award should be made'.

<sup>159</sup> See *CIPA*, [40.04].

employee who makes an application under section 40(2) will have had an opportunity to bargain with their employer, it is unlikely that the tribunal will hold that remuneration is inadequate in circumstances where it would not treat the benefit as outstanding.

### 5.1.3 Calculating the amount of compensation

Once it has been decided that compensation should be awarded to the employee, the question arises: how much? Section 41(1) directs that the award should secure for the employee a ‘fair share’ of the benefit that the employer has derived.<sup>160</sup> Compensation may be awarded as a lump sum or in periodic payments.<sup>161</sup> There is a power to vary the amount at a later stage.<sup>162</sup> In determining the compensation to be awarded, the court or Comptroller is directed to take account of an array of factors.<sup>163</sup> In *British Steel*, the examiner said that the question was similar to the question that arose when determining the royalty payable in licence-of-right proceedings. The relevant considerations included the size of the benefit that had been and was likely to be derived from the patent, and the salary and awards that the employee had already received. In that case, these would have included a £10,000 *ex gratia* payment from British Steel and an MBE. In other cases, the tribunal might take account of the contribution made by other people, such as co-inventors, other employees, and the employer.

We can get a sense of how the courts construe the provisions in section 41 from *Kelly and Chiu v. GE Healthcare*,<sup>164</sup> where the court found that the patent delivered, at minimum, £50 million benefit to the employer. Based on all of the factors set out in section 41, the court felt that 3 per cent of the value of the benefit to the employer represented a just and fair award to the claimants. Based on different contributions made by the claimants to the development on the invention, one employee was awarded £1 million, while the other was awarded £500,000.

## 5.2 COMPENSATION FOR COMPULSORY LICENCES AND LICENCES AS OF RIGHT

Another situation where the tribunals may be called upon to determine the compensation that ought to be paid for the exploitation of a patent is where the patent is subject to a compulsory licence or a licence as of right. In these circumstances, the principal goal is to ensure that the owner of the patent receives reasonable remuneration for the use that is made of the invention.<sup>165</sup>

Three techniques have been used to reach an appropriate sum. These are commonly referred to as the ‘comparable royalties’, ‘costs’, and ‘profits available’ approaches.

(i) *Comparable royalties* The ‘comparable royalties’ test is regarded as ‘by far the best and surest approach’.<sup>166</sup> It involves utilizing evidence from comparable licences to estimate what would have been agreed by the parties. The kinds of evidence used will vary from evidence relating to standard royalty rates for patented products in a particular field,<sup>167</sup> through to the actual examples of licence agreements voluntarily entered into by the patentee. In deciding whether a situation is comparable, the most important factor is the nature of the patentee’s invention: if the patentee’s invention is unusual and the comparator licence covered the same invention, it is likely to offer a useful comparison

<sup>160</sup> For the meaning of ‘that person’ in PA 1977, s. 41(2), see *Shanks v. Unilever* [2010] EWCA Civ 1283, [34] (‘the actual assignee with its actual attributes’). <sup>161</sup> PA 1977, s. 41(6).

<sup>162</sup> PA 1977, s. 41(7), (9)–(11). <sup>163</sup> PA 1977, s. 41(4)–(5).

<sup>164</sup> [2009] EWHC 181, [173]–[207]. <sup>165</sup> *SKF Cimetidine* [1990] RPC 203 (CA), 236.

<sup>166</sup> *Ibid.* <sup>167</sup> *Cabot Safety* [1992] RPC 39, 61; *Chiron Corp. v. Murex Diagnostics* (No. 13) [1996] FSR 578.

(although it may be necessary to make adjustments in relation to market size and other terms in the licence).<sup>168</sup> If the invention is unusual and the licence that is used as a basis for comparison relates to a different product, it is likely to be of little value (even if the size of the market is similar).<sup>169</sup>

(ii) *Costs* Where no comparable licence exists, the terms are calculated by the so-called ‘costs’ approach.<sup>170</sup> Under this approach, the tribunal tries to assess the value of the patent in terms of a return on costs. This involves an examination of the patentee’s expenditure on research and development, promotional expenditure, and an appropriate annual increase. The idea behind this approach is that the patentee should receive a fair and reasonable return for their financial outlay. Once the costs have been calculated, it is necessary to determine what an appropriate increase would be. This may be done by looking at the average annual return that the patentee makes on other inventions.<sup>171</sup>

(iii) *Profits available* The third approach, which is called the ‘profits available’ approach, is used as a last resort.<sup>172</sup> The approach requires the tribunal to determine the profit that the applicant will make (if licensed), and then to divide the available profits between the patentee and the licensee. One problem with this approach is that it will often be difficult to decide how to split the profits.<sup>173</sup> It has been said that the ‘profits available’ approach is particularly dubious because it gets matters the wrong way round: it ‘makes the licensee’s reasonable remuneration the measure of what is an appropriate royalty instead of the patentee’s reasonable remuneration.’<sup>174</sup> There is also a danger that it might leave the patentee with no royalty at all.<sup>175</sup> Despite these problems, it has been acknowledged that ‘some assistance may often be derived from looking at what are the expected profits, if only as a cross-check on the end result.’<sup>176</sup>

### 5.3 COMPENSATION FOR CROWN USE OF PATENTS

Where an invention is used for the services of the Crown, the government department concerned is required to inform the proprietor of the patent and negotiate to pay such terms as may be agreed. In the absence of an agreed rate, the matter is determined by the courts, who following the approach taken in compulsory licence proceedings, attempt to second-guess what a willing licensor and licensee would have agreed.<sup>177</sup> At the very minimum, given Article 31 of TRIPS, the court should give the patentee adequate remuneration taking into account the economic value of the authorization. The Patents Act 1977 says that the patentee should be awarded compensation to cover ‘loss of profit’—that is ‘any loss resulting from his not being awarded a contract to supply the patented product, or . . . to perform the patented process or supply a thing made by means of the patented process’.<sup>178</sup> In determining the loss, the court takes account of the profit that would have been made on such a contract and the extent to which any manufacturing or other capacity was underused.<sup>179</sup>

<sup>168</sup> *Cabot Safety* [1992] RPC 39. <sup>169</sup> *Research Corp.’s (Carboplatin) Patent* [1990] RPC 663, 701.

<sup>170</sup> See *Geigy SA’s Patent* [1964] RPC 391; *SKF Cimetidine* [1990] RPC 203, 253.

<sup>171</sup> Where the outcome of comparison and PA 1977, s. 41, are in conflict, the comparability figure is generally preferred: *American Cyanamid Co.’s (Fenbufen) Patent* [1990] RPC 309.

<sup>172</sup> *SKF Cimetidine* [1990] RPC 203, 244.

<sup>173</sup> *Ibid.*, 230. See also *American Cyanamid Fenbufen* [1990] RPC 309, 338; *Cabot Safety* [1992] RPC 39, 63.

<sup>174</sup> *SKF Cimetidine* [1992] RPC 39.

<sup>175</sup> *Research Corp.’s (Carboplatin) Patent* [1990] RPC 663, 700.

<sup>176</sup> *SKF Cimetidine* [1992] RPC 39, 257. <sup>177</sup> *Patchett’s Patent* [1967] RPC 237, 247, 253.

<sup>178</sup> PA 1977, s. 57A, reversing the Court of Appeal decision in *Patchett’s Patent* [1967] RPC 237, 246, 250, 257.

## RIGHTS RELATED TO PATENTS

### CHAPTER CONTENTS

1 Introduction	664	3 Supplementary Protection Certificates	675
2 Plant Varieties	664		

### 1 INTRODUCTION

In this chapter, we examine two areas of law that are related to but do not traditionally form part of patent law. The first and oldest of the two regimes is the system of plant variety protection. This gives protection to the breeders of new varieties of plants. We then go on to look at supplementary protection certificates (SPCs), which currently operate in the United Kingdom to extend the length of patent protection. In essence, the SPC scheme was introduced to compensate owners for time lost while they were waiting to get regulatory approval to market their patented products.

### 2 PLANT VARIETIES

While the value of new plant varieties has long been recognized in the United Kingdom, a system of protection was only introduced in 1964. (In contrast, a system of protection existed in the United States from 1930.<sup>1</sup>) In part, this was because of the belief that the development of new varieties was part and parcel of traditional farming practices rather than a distinct activity of breeders (which required separate protection). Moreover, for much of the twentieth century, the leading breeders' organizations were publicly funded institutions that did not prioritize intellectual property protection.<sup>2</sup> However, during the Second World War, the desire to improve agricultural yields became a matter of national significance. In addition, by the 1950s it had become clear that the few private seed firms

<sup>1</sup> See B. Greengrass, 'The 1991 Act of the UPOV Convention' [1991] *EIPR* 466; M. Llewelyn, 'The Legal Protection of Plant Varieties in the European Union: A Policy of Consensus or Confusion?' [1997] 2 *Bioscience L Rev* 50; M. Llewelyn, 'European Plant Variety Protection: A Reactionary Time' [1999] *Bioscience L Rev* 211. On the US Plant Patent Act of 1930, see A. Pottage and B. Sherman, 'Organisms and Manufactures: On the History of Plant Inventions' (2007) 31 *Melb U L Rev* 539.

<sup>2</sup> See P. Palladino, 'Science, Technology, and the Economy: Plant Breeding in Great Britain, 1920–1970' (1996) 49 *Econ Hist Rev* 116 (reporting that 83 per cent of wheat grown by British farmers in the 1990s was derived from seeds grown in publicly financed plant-breeding centres).

that operated in the United Kingdom were losing ground to foreign competitors—and the lack of property protection was seen as one possible cause.<sup>3</sup>

The production of successful varieties is thought to be highly desirable insofar as it increases yields resistance to pests and disease, and the sheer number and diversity of varieties.<sup>4</sup> While the breeding of new varieties takes a considerable amount of time and is often very costly,<sup>5</sup> once a variety is made available to the public, it can readily be duplicated.<sup>6</sup> Indeed, one of the features of plant varieties is that they produce their own reproductive material. Consequently, it was thought that it would be ‘equitable to give plant breeders the opportunity of a fair reward for their work, effort, and investment in breeding, and to grant them protection against unauthorized exploitation.’<sup>7</sup> It was also intended ‘to provide plant breeders with an incentive to produce improved varieties of a wide selection of plant species to the benefit of farmers, growers, and private gardeners.’<sup>8</sup>

However, in the same way as agriculture was long seen as being non-industrial (and thus outside the remit of patent law), so too the results of plant breeding were not thought to be appropriate subject matter for patent protection. In part, this was because prior to the acceptance of Mendelian theories of genetics, the production of varieties was seen more as an art than as a scientifically informed activity.<sup>9</sup> This was reinforced by the fact that there were technical problems in describing plant varieties in a way that met the requirements of patent law. However, the most significant reason why plant varieties were thought to be inappropriate subject matter for patent protection was that new plant varieties were unlikely to satisfy the inventiveness threshold of patents: most breeds were obvious. Consequently, it was decided that the protection needed could best be provided by a *sui generis* system tailored to the characteristics of plant varieties and the needs of breeders, growers, and traders.

The United Kingdom first adopted a system of plant variety protection in 1964. This was in response to the report of the Committee on Transactions in Seeds<sup>10</sup> and to the International Convention for the Protection of New Varieties of Plants (UPOV), originally formulated in 1961.<sup>11</sup> The Plant Varieties and Seeds Act 1964 was substantially amended in 1978 and 1991 to take into account revisions of UPOV.<sup>12</sup> In 1997, it was repealed and

<sup>3</sup> See *ibid.*, 131 (another alleged cause was lack of capital).

<sup>4</sup> *Ibid.* (describing a doubling in yields of cereals and potatoes and attributing half of this gain to genetic improvements). See the benefits listed by the British Association of Plant Breeders, cited in G. Dworkin, ‘The Plant Varieties Act 1983’ [1983] *EIPR* 270, n. 3.

<sup>6</sup> CPVR, Recital 5. For criticism of plant variety rights (PVRs), particularly from a developing country perspective, see P. Mooney, *Seeds of the Earth: A Private or Public Resource?* (1979); S. Verma, ‘TRIPS and Plant Variety Protection in Developing Countries’ [1995] *EIPR* 281; V. Shiva, ‘The Seed of Our Future’ [1996] *Development Journal* 4. For a defence against some of these attacks, see G. Dworkin, ‘The Plant Varieties Act 1983’ [1983] *EIPR* 270. <sup>7</sup> Dworkin, *op. cit.*, 271. <sup>8</sup> *Ibid.*

<sup>9</sup> Many of these themes are explored in P. Palladino, ‘Between Craft and Science: Plant Breeding, Mendelian Genetics, and British Universities 1900–1920’ (1993) 34 *Technol & Cult* 300.

<sup>10</sup> *Report of the Committee on Transactions in Seeds* (Cmd. 1092, 1960). See P. Murphy, ‘Plant Breeders’ Rights in the United Kingdom’ [1979] *EIPR* 236; M. Llewelyn, ‘The Legal Protection of Biotechnological Inventions: An Alternative Approach’ [1997] *EIPR* 115, 117.

<sup>11</sup> UPOV had 71 members as of 11 April 2014. For a discussion of the early history, see UPOV, *The First Twenty-Five Years of the International Convention for the Protection of New Varieties of Plant* (1986).

<sup>12</sup> UPOV was also modified on 10 November 1972 and revised in 1978. The 1991 version came into force in April 1998. For commentary, see B. Greengrass, ‘UPOV and the Protection of Plant Breeders: Past Developments, Future Perspectives’ (1989) 20 *IIC* 622; N. Byrne, *Commentary on the Substantive Law of the UPOV* (1991).

replaced by the Plant Varieties Act 1997.<sup>13</sup> In 1994, the European Community adopted a Community Plant Variety Regulation (CPVR), which made it possible, from 27 April 1995, for breeders to apply for a single Community wide right for varieties.<sup>14</sup> Community plant variety rights have uniform effect within the territory of the Community.<sup>15</sup> The grant of a Community right leads to the suspension of any equivalent national rights that may exist.<sup>16</sup> Because the international, regional, and national systems are similar, we will look at them together.

## 2.1 PROCEDURE FOR GRANT

As with patents, plant variety rights arise as a result of a process of registration. The initial application is made to a relevant granting authority: either the UK Plant Variety Rights Office in Cambridge; or the Community Plant Variety Office (CPVO) in Angers in France.<sup>17</sup> Anyone may apply for national rights irrespective of their nationality. However, a person may only apply for a Community right if they are a national of, or domiciled in, a country that is a member of UPOV.<sup>18</sup> As well as identifying the botanical taxon, the applicant must also provide the name of the breeder, a provisional designation for the variety, a technical description of the variety, the geographical origin of the variety, details of any previous commercialization of the variety, and information about applications made in respect of the variety.<sup>19</sup> In some cases, a colour photograph of the variety must also be supplied. An applicant must select a name for the variety.<sup>20</sup> Provision is made for objections by third parties.<sup>21</sup> Fees are payable.<sup>22</sup>

The CPVO examines the application in three stages.

- (i) First, there is a formal examination.<sup>23</sup>
- (ii) This is followed by a substantive examination, whereby the Office examines the application to ensure that it relates to appropriate subject matter (that is, a variety),

<sup>13</sup> In force 8 May 1998: Plant Varieties Act 1997 (Commencement) Order 1998 (SI 1998/1028); Plant Breeders' Rights Regulations 1998 (SI 1998/1027). The four major changes are that: the regime extends to all genera and species; the rules on previous exploitation are liberalized to allow market testing; there is a simplified system of rights pending grant; and breeder's rights are strengthened. The plant breeders' regime falls under the control of Defra rather than BIS. For an introductory guide, see MAFF, *UK Plant Breeders' Rights Handbook 1998* (1998). The 1964 Act had previously been amended by the Plant Varieties Act 1983, which was intended to enable UK ratification of the 1978 revision of UPOV.

<sup>14</sup> See M. Llewelyn and M. Adcock, *European Plant Intellectual Property* (2006); P. van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997); J. Sanderson, 'Reconsidering Plant Variety Rights in the European Union after *Monsanto v. Cefetra*' (2012) 34 *EIPR* 387.

<sup>15</sup> CPVR, Art. 2.

<sup>16</sup> CPVR, Art. 92; PVA 1997, s. 11(3). The Regulation is otherwise 'without prejudice' to the rights of member states to grant national rights. While there is no 'approximation directive', the common need to satisfy the requirements of UPOV and good sense have produced a high level of harmonization. Most EU member states have a parallel national system, with the exception of Greece and Luxembourg.

<sup>17</sup> See <<http://www.cpvo.fr>> Neither system is heavily used: in 1994, there were 582 UK applications and 419 grants of PVRs; in 1998, 238 applications and 139 grants. The number of applications has steadily increased at the Community level. In 2013, there were 2,706 Community PVR applications: CPVO, *CPVO Statistics* (2014).

<sup>18</sup> CPVR, Art. 12. The Commission may extend qualification to nationals and domiciliaries of other countries that provide corresponding protection.

<sup>19</sup> PVA 1997, s. 3(2); CPVR, Art. 50.

<sup>20</sup> PVA 1997, s. 18(2)(a); CPVR, Art. 50(3).

<sup>21</sup> CPVR, Art. 59.

<sup>22</sup> The Plant Breeders' Rights (Fees) (Amendment) Regulations 1999 (SI 1999/1089). The application fee is £275, but the tests fees and renewal fees vary according to the species involved, e.g. tests are £745 for cereals, but only £120 for roses, while renewals are £435 for cereals and £70 for roses.

<sup>23</sup> CPVR, Art. 53.

that the variety is new, and that the applicant is the person entitled to plant breeders' rights.<sup>24</sup> The Office also considers the suitability of the name proposed for the variety and takes account of a host of considerations, including previous registrations.<sup>25</sup>

- (iii) The third stage is the technical examination of the characteristics of the variety. At this stage, the CPVO examines the application to ensure that the variety is distinct, uniform, and stable,<sup>26</sup> requirements sometimes referred to as 'DUS'.<sup>27</sup> An applicant must supply propagating material that the Office can use to test DUS by planting and growing the variety.<sup>28</sup> The tests may be carried out at more than one site. In most cases, DUS tests will take between one and three years.<sup>29</sup> As a result, it may be some years between application and grant.<sup>30</sup> Indeed, the crop is grown throughout the period of the monopoly, and if it becomes apparent that the variety does not satisfy the requirements of the Act, grant is liable to be revoked.<sup>31</sup>

## 2.2 SUBJECT MATTER

All three systems of plant variety protection cover varieties of 'all plant genera and species', from ornamental roses, to vines, potatoes, and wheat.<sup>32</sup> Section 1(3) of the Plant Variety Act 1997 defines a variety as:

... a plant grouping within a single botanical taxon of the lowest known rank, which grouping ... can be—

- (a) defined by the expression of the characteristics resulting from a given genotype or combination of genotypes,
- (b) distinguished from any other plant grouping by the expression of at least one of those characteristics, and
- (c) considered as a unit with regard to its suitability for being propagated unchanged.<sup>33</sup>

A botanical 'taxon' means a 'group' of plants; the requirements that it be of the lowest known rank is to make it clear that protection could not be granted for a 'family', 'genus', or 'species', which are groups higher in the taxonomical classification system.<sup>34</sup>

<sup>24</sup> CPVR, Art. 54.      <sup>25</sup> CPVR, Art. 63.      <sup>26</sup> UPOV, Art. 5; CPVR, Art. 6; PVA 1997, s. 4(2).

<sup>27</sup> CPVR, Art. 55.

<sup>28</sup> For the United Kingdom, this work is mainly carried out by the National Institute of Agricultural Botany (NIAB), the Scottish Agricultural Science Agency (SASA), and the Department of Agriculture and Rural Development for Northern Ireland (DARDNI). See also UPOV, Art. 12; CPVR, Arts 53–5.

<sup>29</sup> Usually one year for ornamentals, three for herbage varieties and trees, and two years for other species.

<sup>30</sup> Provisional protection is provided: UPOV, Art. 13; CPVR, Art. 95; PVA 1997, s. 5(1). The fact that a PVR has been tested in other UPOV member states (Australia, New Zealand, the United States, and South Africa) did not oblige the Community Office to accept the test reports. This was on the basis that the 'Community system is independent—and different from their systems': *Prophyl v. CPVO*, Case A 3/2003 (4 June 2004) (CPVO BA), [1].

<sup>31</sup> CPVR, Arts 20–1; PVA 1997, ss 21–2.

<sup>32</sup> CPVR, Art. 5 (all botanical genera and species, including, among others, hybrids between genera and species); PVA 1997, s. 1(2).

<sup>33</sup> CPVR, Art. 5(2); PVA 1997, s. 1(3). See further *Van Den Bout and Ten Hoopen*, A 1/2002 (1 April 2003) (CPVO BA), 5.

<sup>34</sup> A wild rose is in the species '*carolina*', which is in the genus '*rosa*', which is in the family '*rosaceae*', which is in the order '*rosales*', which is in the class 'dicotyledons', which is in the subphylum '*angiospermae*', which is in the phylum '*spermatophyte*', which finally is in the kingdom 'plants'.

## 2.3 VALIDITY

In order to be protected, the variety must be ‘new’. It is also necessary for the variety to be ‘distinct’, ‘uniform’, and ‘stable’.<sup>35</sup>

### 2.3.1 Novelty

The requirement that the variety be new is nowhere near as onerous as the worldwide novelty requirement in patent law. A variety is new if there has been no sale or disposal of propagating or harvested material within the territory (under the Plant Variety Act 1997, the United Kingdom; under the case of the CPVR, the European Union) more than one year prior to the application. The novelty of a variety may also be lost if there has been a sale or disposal outside the relevant territory either, in the case of trees and vines, more than six years before the application date, or for other plants, more than four years prior to the application date.<sup>36</sup>

Three features of the novelty requirement should be noted. The first is that novelty is not lost by previous use (for example growth) of the variety, but only by previous sale or disposal. As such, a plant can be grown in someone’s garden for years prior to application and an application will still succeed. In part, this reflects the desire to reward the discovery as much as the breeding of new varieties. Indeed, it seems that the applicant can still obtain a plant variety right even if they have given away propagating or harvested material, as long as this was not ‘for the purposes of exploiting the variety’.

The second notable feature is that the novelty provisions allow for substantial ‘grace periods’—that is, they allow for periods during which the applicant can commercialize the plant prior to grant without prejudicing the application. As a result, a person can sell vines outside the United Kingdom for up to six years before they need apply for a plant variety right.

Third, and perhaps most significantly, the only disposals or sales taken into account when considering the novelty of a particular variety are those made *by the applicant themselves or with their consent*.<sup>37</sup> Sales of material by third parties who have independently developed the same variety will not destroy the novelty of the variety. In such circumstances, priorities are accorded to the first to apply.<sup>38</sup> However, no protection is given to the independent developer via prior user’s rights. In such circumstances, a monopoly may be granted to a person over an activity or trade that someone else was doing already.

### 2.3.2 Distinct, uniform, and stable

As well as being novel, to be the subject of plant breeders’ rights, the variety must also be ‘distinct’, ‘uniform’, and ‘stable’.<sup>39</sup> These are referred to as the ‘DUS’, or ‘agro-technical’, requirements.

<sup>35</sup> UPOV, Art. 5; CPVR, Art. 6; PVA 1997, s. 4(2).

<sup>36</sup> UPOV, Art. 6; CPVR, Art. 10; PVA 1997, Sch. 2, para. 4. See also *Agriculture and Agri-Food Canada v. CVPO*, Case A 1/2007 (15 December 2007) (CPVO BA) (farm catalogues offering to make a plant available to the public for fruiting trials were held to be commercial disposal).

<sup>37</sup> See A. Christie, ‘The Novelty Requirement in Plant Breeders’ Rights’ (1988) 19 *IIC* 646; cf. P. van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997), 15.

<sup>38</sup> PVA 1997, Sch. 2, Pt II, para. 5.

<sup>39</sup> UPOV, Art. 5; CPVR, Art. 6; PVA 1997, s. 4(2). If a variety is not uniform, it is ‘impossible to judge the distinctness criterion because the variety is not precisely defined and the official plant material does not have the status of a variety within the meaning defined by CVPO’: *Rogalski v. CVPO*, A 9/2011 (17 January 2012), [2.3.1].

(i) *Distinct* A variety is 'distinct' if it is 'clearly distinguishable by one or more characteristics which are capable of a precise description from any other variety whose existence is a matter of common knowledge at the time of application'.<sup>40</sup> Distinctiveness may arise through visible differences in outward appearance, such as height, size of leaves, leaf colour, or in the ears of cereals. It may also arise through physiological differences associated with the variety's particular chemical or biological structure, such as resistance to disease,<sup>41</sup> or ability to withstand certain conditions.<sup>42</sup> Any difference will suffice;<sup>43</sup> there is no need for the distinguishing feature to confer any particular aesthetic or economic advantage. Distinctness is a comparative test and may require the claimed variety to be compared with similar varieties. The variety must only be compared with 'other' varieties and not with examples of 'itself'.<sup>44</sup> In practice, the comparison is made with the varieties of the same species in the Office's 'reference collection'. The reference collection is made up of those varieties for which rights already exist or are being sought. The types of characteristic and the extent of the deviation necessary for a variety to be distinct will vary with the grouping concerned. Moreover, the characteristics needed for a variety to be distinct may be different for each comparison (for example variety A might differ from variety B by being higher, but differ from variety C by being hardier).<sup>45</sup>

(ii) *Uniform* A variety is 'uniform' if 'it is sufficiently uniform in those characteristics' that make it distinct.<sup>46</sup> This means that nearly all examples of the variety must bear the characteristics that make the plant distinct. During the early stages of the breeding process, a proportion of the plants grown may not bear the relevant characteristics. Where this is the case, it may be necessary to undertake further breeding to eradicate deviant strains. However, there comes a point at which uniformity requires effort that is out of proportion to the improvement in uniformity gained by the removal of deviants. Consequently, it is not necessary for a variety to be completely uniform. This means that a variety will still be uniform even if a few of the plants that are grown do not exhibit the critical characteristics. To this end, the CPVO has stated that a variety is sufficiently uniform if there is:

... the degree of uniformity a capable breeder skilled in the art can reasonably be expected to achieve having regard generally to the nature of plant material and more particularly to the biological possibilities of the species in which he is working including its mode of reproduction, and to any special features of the variety under consideration.<sup>47</sup>

(iii) *Stable* A variety is 'stable' if the characteristics that make it distinct 'remain unchanged after repeated propagation'.<sup>48</sup> The idea is that while a first generation might be distinct and uniform, when a second generation is grown, a large number of deviants

<sup>40</sup> UPOV, Art. 7; CPVR, Art. 7 (clearly distinguishable by reference to the expression of characteristics that results from a particular genotype or combination of genotypes); PVA 1997, Sch. 2, para. 1.

<sup>41</sup> *Maris Druid: Spring Barley* [1968] FSR 559 (resistance to mildew accepted as a characteristic).

<sup>42</sup> Under the 1964 Act, these two types of distinctiveness were referred to as 'morphological' and 'physiological'.

<sup>43</sup> It seems that a mere modification of genetic structure that is not revealed or expressed in the variety will not make it distinct: P. van der Kooij, *Introduction to the EC Regulation on Plant Variety Protection* (1997), 16.

<sup>44</sup> *Ibid.*

<sup>45</sup> For an illustration (although under the differently worded provision in the 1964 Act), see *Daehnfeldt v. Controller of Plant Varieties* [1976] FSR 95.

<sup>46</sup> UPOV, Art. 8; CPVR, Art. 8; PVA 1997, Sch. 2, para. 2. For an example illustrating the difficulties of determining uniformity in tests in which variants can arise through 'out-pollination' from nearby crops and spontaneous mutants, see *Moulin Winter Wheat* [1985] FSR 283.

<sup>47</sup> *Zephyr: Spring Barley* [1976] FSR 576, 579.

<sup>48</sup> UPOV, Art. 9; CPVR, Art. 9; PVA 1997, Sch. 2, para. 3.

appear (resulting from residual ‘heterozygosity’). This requires an assessment to be made of the inherent capability of the variety to remain true to its original characteristics. As with the testing of uniformity, deviants that appear as a result of pollination by nearby crops are ignored.

## 2.4 OWNERSHIP

The person entitled to the grant of plant breeders’ rights is the person who breeds the plant variety, or who discovers and develops it.<sup>49</sup> As the Board of Appeal at the CPVO has said, ‘“breeding” . . . does not necessarily imply inventing something totally new but includes the planting, selection and growing on of pre-existing material and its development into a finished ‘variety’.<sup>50</sup> In a different decision, the Board said that ‘discover’ means that ‘somebody comes across a variety either by search or chance, being conscious of the fact that it is a new variety, which was unknown to him before and which in his opinion is unknown to other persons as well’.<sup>51</sup> Where the breeding, discovery, and development occur in the course of a person’s employment, the employer is presumed to be the person entitled to grant of the plant breeder’s rights.<sup>52</sup> Plant breeder’s rights are property rights and, as such, are assignable, although the 1997 Act forbids a separate assignment of rights in the protected variety and rights in ‘dependent’ varieties. The Community right cannot be assigned other than for the Community as a whole. Where this occurs, the assignment must be in writing and should be entered in the register kept by the CPVO.<sup>53</sup>

## 2.5 DURATION

The duration of rights varies with the type of plant concerned: UPOV requires members to provide a minimum duration of 20 years for most plants, and a minimum of 25 years for trees and vines.<sup>54</sup> However, the European and UK systems go further than these minima, protecting potatoes, trees, and vines for 30 years, and other genera and species for 25 years.<sup>55</sup> Throughout the period for which the grant operates, rights holders should ensure that they are in a position to produce propagating material to the Office.<sup>56</sup> A national right will become ineffective on grant of a Community right for the same variety.<sup>57</sup>

## 2.6 RIGHTS AND INFRINGEMENT

A valid plant breeder’s right gives the proprietor (initially, the breeder or discoverer) a number of rights.<sup>58</sup> While these rights are primarily in relation to the commercialization

<sup>49</sup> PVA 1997, s. 4(3); UPOV, Art. 1(iv); CPVR, Art. 11(1). The fact that rights are available to ‘discoverers’ has sometimes proved controversial: see G. Dworkin, ‘The Plant Varieties Act 1983’ [1983] *EIPR* 270, 272.

<sup>50</sup> *Sakata Seed Corporation, A 17/2002* (3 April 2003) (CPVO BA), 8–9.

<sup>51</sup> *Keith Kirsten Horticulture International v. CPVO, A 1/2004*, (16 December 2004) (CPVO BA), 6. Thus ‘it was possible that one and the same variety is discovered by two or more persons independently, on different moments on the same spot, or on different spots’: *ibid.*

<sup>52</sup> PVA 1997, s. 4(4); UPOV, Art. 1(iv). As far as the CPVR is concerned, entitlement shall be determined in accordance with the national law applicable to the employment relationship in the context of which the variety was bred, or discovered and developed. <sup>53</sup> CPVR, Arts 2 and 23(2).

<sup>54</sup> UPOV, Art. 19.

<sup>55</sup> CPVR, Art. 19; Council Regulation (EC) No. 2470/96 of 17 December 1996 (extending protection for a further five years for potatoes); PVA 1997, s. 11. <sup>56</sup> PVA 1997, s. 16. <sup>57</sup> CPVR, Art. 92(1).

<sup>58</sup> CPVR, Art. 11; PVA 1997, s. 4(3)–(5). The rights are assignable: CPVR, Art. 23; PVA 1997, s. 12.

of propagating material, they may also apply to harvested material and to derivative varieties.<sup>59</sup> The rights given to breeders are more limited than in the cases of patentees.<sup>60</sup> Moreover, it should be noted that as with other intellectual property rights, these are negative. It is also important to note that, with the exception of ornamentals and fruit, the breeder must gain relevant regulatory approval before a variety is marketed.<sup>61</sup>

### 2.6.1 Propagating material

The fundamental right conferred on a proprietor of a plant breeder's right is the exclusive right to authorize certain acts in relation to 'propagating material' (referred to in the 1997 Act as 'reproductive material';<sup>62</sup> and in the Community Regulation as 'variety constituents'). In particular, a plant breeder is given the rights to produce or reproduce the material, to 'condition' the material for the purposes of propagation, and to sell, offer for sale, stock, export, or import the material.<sup>63</sup> While 'propagating material' is not defined, it includes seeds for sowing, seed potatoes, seedlings, bulbs, rhizomes, grafts, and the like. The nature of plant material and breeding technology is such that a variety can be propagated from a much wider array of plant material than has traditionally been the case, including material such as cut blooms. Consequently, material will be treated as propagating material if it is intended to be used as a propagating material. Obviously, a person will infringe the fundamental right if, for example, they sell seeds, produce cuttings, or import bulbs. However, if such a person (who has legitimately grown the plant) sells beans for canning, grain for milling, or blooms or rose bushes for personal use, and these are subsequently used for propagation, it is unlikely that the vendor will be liable. In these cases, the user will be liable because they will have reproduced or 'conditioned' the material for the purposes of propagation.

### 2.6.2 Harvested material

In most cases, the rights conferred in relation to the exploitation of propagating material also apply to harvested material obtained through the *unauthorized* use of propagating material (for example crops of wheat grown from unauthorized seed). 'Harvested material' is defined to include entire plants and parts of plants.<sup>64</sup> As such, it will encompass things such as cut blooms from flowers.<sup>65</sup> An exception to this right arises where, prior to harvest, the rights holder has had a reasonable opportunity to exercise their rights in relation to the unauthorized use of the propagating material.<sup>66</sup>

The plant breeder's rights also extend to any product that is made directly from such harvested material (such as flour made from wheat), which falls within the categories prescribed by the ministers.<sup>67</sup> Certain procedures and presumptions operate to assist the

<sup>59</sup> UPOV, Art. 14; CPVR, Art. 13; PVA 1997, ss 6–7.

<sup>60</sup> *Report of the Committee on Transactions in Seeds* (Cmd. 1092, 1960), [141].

<sup>61</sup> They must pass tests of value for cultivation and use, i.e. of yield, quality, and disease resistance. Once this is done, the variety is entered on the National List: Seeds (National Lists of Varieties) Regulations 1982 (SI 1982/844), as amended (no seed of the major agricultural and vegetable species may be marketed in the United Kingdom unless the variety is on a UK National List or in the EC Common Catalogue). See J. Harvey, 'UK Plant Breeders' Rights and the European Seed Regime' [1990] *Patent World* 22.

<sup>62</sup> For a discussion of definitional problems, see G. Dworkin, 'Plant Breeders' Rights: The Scope of United Kingdom Protection' [1982] *EIPR* 11, 12.

<sup>63</sup> PVA 1997, s. 6; UPOV, Art. 14(1)(a); CPVR, Art. 13(2). Although these rights are limited within EC law: *Re the Plant Royalty Bureau* [1979] *FSR* 644 (Commission investigation on restriction of exports).

<sup>64</sup> PVA 1997, s. 6(6)(b). <sup>65</sup> The scheme under Sch. 3 to the 1964 Act has been abolished.

<sup>66</sup> PVA 1997, s. 6(3).

<sup>67</sup> PVA 1997, s. 6(4). The provision applies only if no relevant consent has been gained in relation to dealing with the propagating material and the right holder has not had a reasonable opportunity to enforce

holder of plant breeder's rights in proving that harvested material and products made directly from such material were obtained through unauthorized use of propagating material. The rights holder may issue an information notice to a defendant requesting certain information as to the source of specified material. If the recipient fails to provide the relevant information within a particular time, the material is presumed to have been obtained by way of an unauthorized use.<sup>68</sup>

### 2.6.3 Derivative varieties

The plant breeder's rights extend beyond the registered variety to cover varieties that are 'dependent' on the protected variety. 'Dependent varieties' include varieties the production of which requires the repeated use of the protected variety, as well as 'essentially derived' varieties.<sup>69</sup> A variety is deemed to be 'essentially derived' where it is predominantly derived from the initial variety. In addition, the variety must retain the expression of the essential characteristics that result from the genotype of the initial variety and, at the same time, be clearly distinguishable from the initial variety.

### 2.6.4 Naming rights

Registration is conditional on the applicant providing a suitable name for the variety. This prevents the confusion that would otherwise arise if a number of different names were to be used to describe the same variety.<sup>70</sup> Once approved, anyone who sells or markets propagating material is obliged to use that name. This duty, breach of which is punishable under criminal law,<sup>71</sup> applies to the proprietor as much as to the public at large.<sup>72</sup> The duty subsists indefinitely—that is, even after expiry of plant breeders' rights.<sup>73</sup> The proprietor of a British plant variety right is also able to control the wrongful use of that name. As a result, the right holder may bring an action against anyone who uses the name of a protected variety in marketing material of a *different* variety within the same class, or uses a name so nearly resembling the registered name that it is likely to deceive or cause confusion.<sup>74</sup>

## 2.7 EXCEPTIONS

One important feature of the plant variety system is the careful way in which the competing interests of developers, users, and other interested parties have been accommodated through the use of exceptions and compulsory licences.<sup>75</sup> UPOV permits members of the European Union to impose various restrictions on the operation of the monopoly.<sup>76</sup>

those rights, e.g. where the wheat was produced in a country that did not recognize plant breeders' rights. It will also operate only as regards varieties prescribed in regulations by the ministers. For background, see J. Rooker (Minister for Agriculture, Fisheries and Food), Hansard (HC) 24 June 1997, cols 692–4.

<sup>68</sup> PVA 1997, ss 14–15; Plant Breeders' Rights (Information Notices) (Extension to European Community Plant Variety Rights) Regulations 1998 (SI 1998/1023).

<sup>69</sup> PVA 1997, s. 7; UPOV, Art. 14(5); CPVR, Art. 13(5). On essential derivation, see J. Rooker, Hansard (HC) (24 June 1997), cols 693–4. See also J. Sanderson, 'Essential Derivation, Law and the Limits of Science' (2006) 24 *Law in Context* 34.

<sup>71</sup> PVA 1997, s. 19. Failure to use the name is a crime punishable by a fine. See also UPOV, Art. 20(7).

<sup>72</sup> UPOV, Art. 20; CPVR, Art. 63. For a discussion of CPVR, Art. 63(3), see *Vegetal-Progress v. Giovanni Ambrogio*, A 4/2004, (18 July 2005) (CPVO BA), 5–8.

<sup>74</sup> PVA 1997, s. 20(2).

<sup>75</sup> Users are represented largely through the National Farmers Union; breeders are represented by the British Society of Plant Breeders.

There are certain limitations that parallel those in the European Patents Convention (EPC). Acts done privately and for non-commercial purposes, and acts done for experimental purposes, are non-infringing.<sup>77</sup> Moreover, acts done for the purpose of breeding or discovering and developing other varieties do not infringe plant breeders' rights. There are also the customary rules relating to Community exhaustion of rights where material is 'disposed of to others by the holder or with his consent'.<sup>78</sup>

As regards certain varieties, farmers are authorized to use 'in the field, on their own holding' the product of a harvest that they have obtained by planting a variety.<sup>79</sup> Small farmers are permitted to use such saved seed without payment, whereas others must provide equitable remuneration.<sup>80</sup> Remuneration is required in relation to lists of fodder plants (such as vetch and clover), cereals, and potatoes, as well as oil and fibre plants such as rape.<sup>81</sup>

## 2.8 COMPULSORY LICENCES

Compulsory licences may be granted by the Controller in certain circumstances two years after grant of plant breeder's rights.<sup>82</sup> The first condition is that the holder of a plant breeder's right has either unreasonably refused to grant a licence or has proposed an unreasonable term for such a licence.<sup>83</sup> It has been said that this is a heavy burden to discharge.<sup>84</sup> The Controller must also be satisfied that such licences are needed to ensure that the variety is available to the public at reasonable prices, is widely distributed (although not necessarily that demand is fully met),<sup>85</sup> or is maintained in quality. The applicant must be intending to exploit the rights and be in a position to do so.<sup>86</sup> The Controller sets the terms of the licence as they think fit, having regard to the desirability of securing reasonable remuneration to the plant breeder, but the licence must not be an exclusive licence. The Controller can require the plant breeder to supply propagating material to the holder of the licence.

As we saw above, a new regime for compulsory licensing and cross-licensing of biological innovations was introduced into the United Kingdom in 2002. In essence, the new scheme attempts to manage the interrelationship between patent protection for biological inventions and plant variety protection.<sup>87</sup>

<sup>77</sup> CPVR, Art. 15; PVA 1997, s. 8. <sup>78</sup> CPVR, Art. 16; PVA 1997, s. 10.

<sup>79</sup> CPVR, Art. 14(2); PVA 1997, s. 9. On the importance of these sorts of provisions for developing countries, see S. Verma, 'TRIPS and Plant Variety Protection in Developing Countries' [1995] *EIPR* 281, 286.

<sup>80</sup> CPVR, Art. 14(3); PVA 1997, s. 9(3)–(4). Small farmers are further defined: Plant Breeders' Rights (Farm Saved Seed) (Specified Information) Regulations 1998 (SI 1998/1026).

<sup>81</sup> CPVR, Arts 14, 29; Commission Regulation No. 1768/95 of 24 July 1995 implementing rules on the agricultural exemption provided for in Article 14 (3) of Council Regulation (EC) No. 2100/94 on Community plant variety rights [1995] *OJ L* 173/14 (25 July 1995). Collections of remuneration for farm saved seed began in autumn 1996. For a discussion on the information that a farmer needs to supply in this context, see *Raiffeisen-Waren-Zentrale Rhein-Main v. Saatgut-Treuhandverwaltungs*, Case C-56/11 (15 November 2012) (ECJ, First Chamber). For the way in which compensation is calculated, see *Geistbeck v. Saatgut-Treuhandverwaltungs*, Case C-509/10 (5 July 2012) (ECJ, First Chamber).

<sup>82</sup> CPVR, Art. 29 (compulsory exploitation rights); PVA 1997, s. 17; Plant Breeders' Rights Regulations 1998 (SI 1998/1027), reg. 10 (compulsory licences operate only two years after grant); *Cama Wheat* [1968] *FSR* 639, 643 (explaining that plant breeders should have complete control at the first introduction of a variety when seed supplies may be limited and demand uncertain). <sup>83</sup> PVA 1997, s. 17(1).

<sup>84</sup> *Cama Wheat* [1968] *FSR* 639, 644.

<sup>85</sup> *Ibid.*, 645 (where the breeder's licensee supplied 2,000 tons of seed, a refusal to license the applicant to sell 30 tons did not result in the seed not being 'widely distributed'). <sup>86</sup> PVA 1997, s. 17(2)(b)–(c).

<sup>87</sup> Patents and Plant Variety Rights (Compulsory Licensing) Regulations 2002 (SI 2002/247). See above at pp. 655–6.

## 2.9 RELATIONSHIP TO THE PATENT SYSTEM

The plant breeders' rights system was initiated because of the belief that plant varieties fell outside the types of creation that were traditionally considered to be patentable.<sup>88</sup> Nonetheless, when the EPC 1973 was formulated, a specific exclusion was placed in the definition of patentable subject matter to avoid the possibility of dual protection.<sup>89</sup> For most of the history of the operation of the EPC, it was thought that the patent and plant variety systems were mutually exclusive. Indeed, the 1961 version of the UPOV seemed to require that members allow either patenting or *sui generis* protection, but not both.<sup>90</sup>

However, developments in techniques for modifying plants, such as somatic cell hybridization and genetic engineering more generally, have thrown the relationship of mutual exclusivity into doubt. This has been reinforced by the fact that biotechnology companies have attempted to use the patent system to obtain protection for their innovations (for example claims directed to plant cell strains or to groups of plants at a taxonomical level higher than a 'variety').<sup>91</sup> Such attempts increase the possibility of overlap with the plant breeders' system. As a result of the 1991 revision of the UPOV, the patent and plant variety systems are no longer mutually exclusive.<sup>92</sup> This increased the possibility for overlap between the regimes. Since the patent system allows for stronger (although not longer) protection, the possibility of overlap has resulted in increased attempts to obtain patent protection for plant-related products.<sup>93</sup> Some commentators have called for the removal from the EPC of the exclusions relating to plant varieties, thereby leaving choice between the patent and plant breeders' regime to the applicant.<sup>94</sup> However, others have asserted that the scope of breeder's rights regimes should be extended and developed to protect plant biological material more generally.<sup>95</sup> At the same time, frustration with what are seen as overly broad exceptions in the plant breeders' rights systems has led some breeders to resort to technological measures, such as the controversial terminator technology (which renders plants sterile), to protect their research. The use of genetic use restriction technologies (GURTs) poses a direct threat to the plant variety systems. While plant variety rights are granted only to botanical innovations that satisfy certain criteria, are limited in time, and provide a number of exceptions to protect breeders and farmers, this is not the case with genetically based protection regimes. Although it may be some

<sup>88</sup> Most importantly, it was seen not as being capable of meeting the requirements of sufficient disclosure. For an international overview, see T. Roberts, 'Patenting Plants around the World' [1996] *EIPR* 531.

<sup>89</sup> EPC 1973, Art. 53(b); *Ciba-Geigy/Propagating material application*, T 49/83 [1979–85] *C EPOR* 758, [1984] *OJEP* 112 (legislator did not wish to afford patent protection under the EPC to plant varieties within 1961 Convention); *Plant Genetic Systems/Glutamine synthetase inhibitors*, T 356/93 [1995] *EPOR* 357 ('the purpose of Art. 53(b) EPC . . . is to draw an appropriate dividing line between plant variety and patent law'; it is 'important that no grey area in which protection is not given exists between the above two systems').

<sup>90</sup> UPOV 1961, Art. 2(1). <sup>91</sup> See Chapter 17, section 8.

<sup>92</sup> Recital 8 states that the definition of plant variety is not intended to alter definitions applicable in relation to other intellectual property rights, especially in the patent field.

<sup>93</sup> A. Christie, 'Patents for Plant Innovation' [1989] *EIPR* 394; S. Crespi, 'Patents and Plant Variety Rights: Is There an Interface Problem?' (1992) 23 *IIC* 168; J. Funder, 'Rethinking Patents for Plant Innovation' [1999] *EIPR* 551.

Cook, *Plant Variety Rights: An Outmoded Impediment? A Seminar Report* (1998), Cook argues that the 'option' to protect plants by *sui generis* rights in TRIPS, Art. 27(3), should be removed.

<sup>95</sup> B. Greengrass, 'UPOV and the Protection of Plant Breeders' (1989) 20 *IIC* 622; M. Llewellyn, 'The Patentability of Biological Material: Continuing Contradiction and Confusion' [2000] *EIPR* 191; Llewellyn and Cook, *op. cit.*

time before GURTs are put to work, if they are implemented they are likely to shape the way in which intellectual property deals with biological inventions in the future.

### 3 SUPPLEMENTARY PROTECTION CERTIFICATES

Supplementary protection certificates (SPCs) are intellectual property rights that are based on and similar in nature to patents. The SPC operates to extend patent protection where it has not been possible for the patent proprietor to take full advantage of their patent rights over the period of the grant. In particular, it compensates an owner who has not been able to market the patented product because of delays in obtaining regulatory approval.<sup>96</sup> The need for additional protection arose because, since the 1970s, the systems for regulatory approval have become lengthier and more rigorous. For example, in 1990 the average period for approval of medicines was 12 years. Such delays may erode the time in which the patent owner is able to market their inventions under the protection of the patent monopoly.

Following a proposal by the Commission in 1990 (which has proved to be an important document in interpreting the legislation),<sup>97</sup> two Council regulations were passed creating new rights related to patents for ‘medicinal products’ (in 1992)<sup>98</sup> and ‘plant protection products’ (in 1996).<sup>99</sup> Following a series of amendments to the 1992 Regulation on medicinal products, a new Regulation for the Protection of Medicinal Products was introduced in 2009.<sup>100</sup> Because this merely codified previous changes, the case law under the 1992 regulations is still relevant. As such, in this section we focus on the 1996 SPC Plant Protection Products (PPP) Regulation and the 2009 SPC Protection for Medicinal Products (PM) Regulation.

<sup>96</sup> The relevant regulatory authorities are the Medicines Control Agency, the Veterinary Medicines Directorate, the European Agency for the Evaluation of Medicinal Products, and the Pesticides Safety Directorate.

<sup>97</sup> European Commission, *Proposal for a Council Regulation (EEC) Concerning the Creation of a Supplementary Protection Certificate for Medicinal Products* (April 1990) COM (90) 101 final. The United States introduced ‘patent term restoration’ in 1984 and Japan, in 1987. In 1991, France and Italy introduced so-called ‘certificates of complementary protection’: see P. Kolker, ‘The Supplementary Protection Certificate: The European Solution to Patent Term Restoration’ [1997] *IPQ* 249. For a review of the operation of the SPC system, see D. Culey, *Extending Rewards for Innovative Drug Development: A Report on Supplementary Certificates for Pharmaceutical Products* (2007).

<sup>98</sup> Council Regulation (EEC) No. 1768/92 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products [1992] *OJ L* 182/1 (the ‘SPC (MP) Reg.’). The Spanish unsuccessfully challenged the SPC (MP) Reg. on the grounds that the Community did not have competence to legislate a new patent right and that intervention could not be justified by reference to the need to harmonize laws for the internal market: *Spain v. Council of the European Union*, Case 350/92 [1995] *ECR I*-1985, [1996] *FSR* 73. Note also the Canadian complaint, WTO/DS 153.

<sup>99</sup> Council Regulation (EC) No. 1610/96 of the European Parliament and of the Council of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products [1986] *OJ L* 198/30 (the ‘SPC (PPP) Reg.’).

<sup>100</sup> Council Regulation (EC) No. 469/2009 of the European Parliament and of the Council of 6 May 2009 concerning the creation of a supplementary protection certificate for medicinal products [2009] *OJ L* 152/1 (the ‘SPC (PM) Reg.’). The Commission announced in June 2008 that it was considering codification of the regulations relating to SPCs: European Commission, *Proposal for a Regulation Concerning the Supplementary Protection Certificate for Medicinal Products (Codified Version)* (June 2008) COM(2008) 369 final.

The SPC is characterized as a supplementary right distinct from a patent in order to avoid the conflict that might otherwise occur with the maximum term under Article 63 of the EPC 2000. Because SPCs operate at the interface between the patent system and the system for regulatory approval, the availability, scope, and duration of protection is defined by concepts drawn from each system, coupled with the key hybrid concept of a ‘product’. More specifically, under the systems for regulatory approval, approval is granted to the marketing of highly specifically defined products: ‘medicinal products’ or ‘plant protection products’. These are usually defined by reference to their chemical or other ingredients and, for example, by their physical form or intended mode of delivery.<sup>101</sup> In contrast, a patent is likely to be much broader in its coverage, extending perhaps to a chemical *per se* or a combination of chemicals, a method of production, or—at its narrowest—a new medical use of a known product. The effect of this is that a single patent may cover a range of individual medicinal or plant protection products. The key mediating concept between these two regimes is the ‘product’ (which is the ‘active substance’ for a plant protection product, or the ‘ingredient’ in the case of medicinal products, for which approval was gained).<sup>102</sup> For example, if marketing approval were sought for ‘aspirin in 500 mg tablet form to be sold in packets of not more than sixteen tablets’, the ‘active ingredient’ would be aspirin. In most cases, the product includes derivatives, such as salts or esters.

### 3.1 AVAILABILITY

In order to receive an SPC, a person must apply to the national patent office and not the European Patent Office (EPO).<sup>103</sup> The application must be made within six months of receipt of authorization to market the medicinal or plant protection product.<sup>104</sup> At the time of application, the applicant must be the proprietor of a basic patent that is in force. Applications lodged outside the six-month period<sup>105</sup> will not be accepted.<sup>106</sup> Taking into account third-party observations,<sup>107</sup> the national patent office assesses whether an SPC should be granted (that is, whether the patent covers the product<sup>108</sup> and whether appropriate authorizations exist);<sup>109</sup> there is no reinvestigation into the validity of the patent.

<sup>101</sup> SPC (PM) Reg., Art. 1(a), replacing SPC (MP) Reg., Art. 1(a); SPC (PPP) Reg., Art. 1(1).

<sup>102</sup> SPC (PM) Reg., Art. 1(b), replacing SPC (MP) Reg., Art. 1(b) (defining ‘product’); SPC (PPP) Reg., Art. 1(8) (defining ‘product’), 1(3) (defining ‘active substance’), 1(2) (defining ‘substances’).

<sup>103</sup> From 17 December 2007, this is done by virtue of PA 1977, s. 128B and Sch. 4A, introduced by The Patents (Compulsory Licensing and Supplementary Protection Certificates) Regulations 2007 (SI 2007/3293), and the Patent Rules 2007 (SI 2007/3291), r. 116(1)–(5). See generally, UK IPO, *Supplementary Protection Certificates for Medicinal Products and Plant Protection Products: A Guide for Applicants* (December 2007).

<sup>104</sup> SPC (PM) Reg., Art. 7, replacing SPC (MP) Reg., Art. 7; SPC (PPP) Reg., Art. 7; *Yamannouchi Pharmaceuticals v. Comptroller-General* [1997] RPC 844 (ECJ). A valid authorization does not include a mere authorization of clinical trials: *British Technology Group SPC Application* [1997] RPC 118.

<sup>105</sup> Calculated from the date of grant of authorization and not the date of publication of grant in the relevant Official Gazette: *Abbott Laboratories’ SPC Application*, BL O/302/02 (25 July 2002).

<sup>106</sup> *Hässle AB v. Ratiopharm*, Case C-127/00 (11 December 2003) (ECJ), [80]–[89] (‘Where a mistake has been committed regarding the date of first marketing authorisation in the Community . . . the certificate must be declared invalid’).

<sup>107</sup> On this, see *BASF AG’s SPC Application* [2000] RPC 1. Documents are usually open to public inspection within 14 days of being filed. Observations should be made in writing.

<sup>108</sup> If a patent is granted for a combination of ingredients, but a certificate relates to one of the ingredients only, no certificate should be granted: *Centacor SPC Application* [1996] RPC 118. Whether a patent for a product would cover its salts or esters will be a matter of interpretation of the patent claims, applying principles explained at pp. 627–32: see *Takeda Chemical Industry’s Application* [2003] EWHC 649 (Pat).

<sup>109</sup> *BTG SPC Application* [1997] RPC 844 (ECJ) (refusing an SPC because no relevant authorization).

It should be noted that the relevant authorization must be the *first* authorization.<sup>110</sup> This means that if a patent is granted for a new process of making an old product, an existing authorization relating to the old product will probably mean that no certificate will be available.<sup>111</sup> A product that is placed on the market in the Community as a medicinal product for human use *before* undergoing a relevant marketing authorization is not able to be protected under an SPC.<sup>112</sup> The first authorization must be a marketing authorization in accordance with the relevant European directives and not some other authorization required by national law (as is required to determine the pricing of medicines).<sup>113</sup> For pharmaceutical products, the relevant directive is the Directive on Medicinal Products for Human Use.<sup>114</sup> For veterinary products, it is the Veterinary Medical Products Directive.<sup>115</sup> It is only possible for the person who applies for the first marketing authorization to apply for an SPC; it is not possible for a person to apply for an SPC based on a marketing authorization obtained by a third party when the two people have no connection with each other.<sup>116</sup>

One question that has arisen is whether when Article 3(b) says ‘first authorisation to place *the product* on the market as a medicinal product’, it means any product that contains the active ingredient or is limited to products that are covered by the basic patent. While the Court of Appeal was clearly in favour of the latter reading, not least because to conclude otherwise would have undermined the very purpose of the SPC scheme, nonetheless it asked the Court of Justice to clarify the meaning of ‘product’ in Article 3.<sup>117</sup> The Court of Justice effectively agreed with the Court of Appeal, holding that the mere existence of an earlier marketing authorization for a product does not:

... preclude the grant of an SPC for a different application of the same product for which an [marketing authorization] has been granted, provided that the application is within the limits of the protection conferred by the basic patent relied upon for the purposes of the application of the SPC.<sup>118</sup>

If a patentee applies for an SPC, but is unable to submit the appropriate marketing authorization (for example because it was granted to the patentee’s licensee and that person refuses to cooperate), the national patent office may contact the relevant authority.<sup>119</sup> However, the office will first require the applicant to provide evidence of the patentee’s inability to supply the authorization, as well as Official Gazette information that will enable it to verify the identity of the product and the date of authorization.<sup>120</sup> Once an SPC is granted, the relevant authority may demand an annual fee to maintain it in force. In

<sup>110</sup> SPC (PM) Reg., Art. 7, replacing SPC (MP) Reg., Art. 7; SPC (PPP) Reg., Art. 3(1)(d).

<sup>111</sup> *BASF AG’s SPC Application* [2000] *RPC* 1 (an attempt to claim that the certificate related to a different product that necessarily had certain impurities resulting from the particular patent process was rejected).

<sup>112</sup> *Generics (UK) v. Synaptech*, Case C-427/09 [2012] *RPC* (4) 70 (ECJ), [33]; *Synthon BV v. Merz Pharma*, Case C-195/09 [2012] *RPC* (3) 37 (ECJ).

<sup>113</sup> *Hässle v. Ratiopharm*, Case C-127/00 (11 December 2003) (ECJ), [58]–[59]. It is not possible to rely on an emergency marketing authority issued under Art. 8(4) of Directive 91/414/EEC of 15 July 1991 concerning the placing of plant protection products on the market [1991] *OJ L* 230/1 (19 August 1991) as the basis for a SPC: *Sumitomo Chemical v. Deutsches Patent-und Markeamt*, Case C-210/12 (12 October 2013), [38].

<sup>114</sup> 2001/83/EC [2001] *OJ L* 311/119 (which repealed and replaced Directive 65/65/EEC).

<sup>115</sup> 2001/82/EC [2001] *OJ L* 311/1 (which repealed and replaced Directive 81/851/EEC).

<sup>116</sup> *Eli Lilly v. Human Genome Sciences* [2012] *EWHC* 2290, [3]–[5].

<sup>117</sup> *Neurim Pharmaceuticals (1991) v. The Comptroller-General of Patents* [2011] *RPC* 19 (CA).

<sup>118</sup> *Neurim Pharmaceuticals (1991) v. The Comptroller-General of Patents*, Case C-130/1 (19 July 2012) (ECJ).

<sup>119</sup> *Biogen v. SmithKline Beecham Biologicals SA* [1997] *RPC* 833.

<sup>120</sup> See (then) Patent Office, *Supplementary Protection Certificates for Medicinal Products and Plant Protection Products: A Guide for Applicants* (1997), SPM 8.04.1.

addition to £600 paid at the start date, in the United Kingdom an owner must pay £1,300 for the second year, £2,100 for the third, £3,000 for the fourth, and £4,000 for the fifth and final year.<sup>121</sup>

An SPC will not be granted where it extends beyond the scope of the underlying patent. This is because as Jacob J said, the SPC system is ‘not a system for providing protection for different monopolies.’<sup>122</sup> Thus an application for an SPC for a combination of two active ingredients was rejected because the patent only covered one of the ingredients.<sup>123</sup> In certain circumstances, there may be more than one basic patent relating to a particular product. This can be seen, for example, if we consider the situation in which A applied in 2000 for a patent for substance X and B applied in 2003 for a patent for use of substance X in making a pharmaceutical preparation for use in thinning blood. If authorization were given to B to market the pharmaceutical preparation in 2010, A would be entitled to a certificate lasting five years and B, a certificate lasting two years.<sup>124</sup> However, the mere existence of a second patent will not, of itself, justify the grant of a certificate. If, in the same example, A had received authorization to market the substance as a cure for headaches in 2006, A would be entitled to a certificate for one year, but B would not be entitled to any certificate. This is because the authorization in 2010 was not the first authorization relating to the product. The existence of B’s 2003 patent is of no special significance.

### 3.2 SUBJECT MATTER

The protection provided by an SPC extends to the ‘product’ covered by the authorization and any use of the product as a medicinal (etc.) product that has been authorized before expiry of the SPC.<sup>125</sup> The product is defined as the ‘active substance’ (in the case of plant protection) or the ‘ingredient’ (in the case of medicinal products) for which approval was gained.<sup>126</sup> For example, if A had applied for a patent for aspirin on 1 January 1990 and been granted marketing authorization for sale of aspirin in tablet form as a treatment for headaches on 1 January 1996, and A had then obtained an SPC, the SPC would not only cover sale in tablet form, but also any subsequent authorizations of the same product that were obtained before the expiry of the patent in 2010. Thus if A later gets marketing authorization for sale of aspirin in capsule form as a treatment for headaches in 1999, the SPC that would operate from 2010 to 2011 would also cover that use. It is clear that ‘product’ means the active ingredient or combination of ‘active ingredients’ or ‘active substance’ of a medicinal (etc.) product.<sup>127</sup> This means that the concept of a ‘product’ cannot include the therapeutic use of an active ingredient protected by a basic patent.<sup>128</sup>

<sup>121</sup> SPC (PM) Reg., Art. 12, replacing SPC (MP) Reg., Art. 12; SPC (PPP) Reg., Art. 12; Patents Rules 2007, r. 116(4)(b); Patents (Fees) Rules 2007 (SI 2007/3292), r. 6(2).

<sup>122</sup> *Takeda Chemical* [2003] EWHC 649, [12].

<sup>123</sup> *Ibid.*, [11]–[12]. Jacob J rejected an attempt to use a version of the reverse-infringement test to determine whether a patent covers a ‘product’ saying that ‘the fact that the combination might infringe the . . . patent simply because one component infringes is irrelevant’: *ibid.*, [12].

<sup>124</sup> See section 3.4 below for how these periods are calculated.

<sup>125</sup> SPC (PM) Reg., Art. 4, replacing SPC (MP) Reg., Art. 4; SPC (PPP) Reg., Art. 4. The product is the ‘active substance’ (for a plant protection product) or ‘ingredient’ (in the medicinal product) for which approval was gained.

<sup>126</sup> SPC (PM) Reg., Art. 1(b), replacing SPC (MP) Reg., Art. 1(b) (defining ‘product’); SPC (PPP) Reg., Art. 1(8) (defining ‘product’), 1(3) (defining ‘active substance’), and 1(2) (defining ‘substances’).

<sup>127</sup> *Massachusetts Institute of Technology*, Case C-431/04 [2006] ECR I-4089, [19], [21], [23], and [24].

<sup>128</sup> *Yissum Research and Development Company*, Case C-202/05 [2007] ECR I-2839, [16]–[20].

In *Medeva v. Comptroller-General*,<sup>129</sup> the Court of Justice said that the scope of the SPC is limited to the active ingredients that are identified in the wording of the claims of the basic patents.<sup>130</sup> As the Court said, ‘Art 3(a) of the Regulation precludes the grant of a SPC relating to active ingredients which are not specified in the wording of the claims of the basic patent’.<sup>131</sup> In so doing, the Court rejected the so-called ‘infringement test’, which is based on the idea that the concept of a product corresponded to substances of a medicinal product that directly infringed the patent. As a result, the issue for national courts is to determine which active ingredients are specified in the wording of the claims. The problem here, however, is that it is not clear what the Court of Justice meant when it said that the active ingredient must be ‘specified or identified in the claims’. This is because, as the Court of Appeal said, the ambit of ‘specified’ potentially extends from express naming through to description, and necessary implication to reasonable interpretation. While the Court did not explore where the line is to be drawn on that scale, it did say that ‘there must be some wording indicating that [the active ingredients] are included in the claims’.<sup>132</sup> It has also been said that because the Court of Justice said that the product must be specified in the *wording of the claims*, this pointed to a test that was ‘more demanding than merely requiring that the product be within the scope of the claim, although it is not clear how much more demanding’.<sup>133</sup> It also seems that there is a narrower test for process claims than for product claims. This is a result of the *University of Queensland* decision,<sup>134</sup> where the Court of Justice required the ‘product to be identified in the wording of the claim as the product deriving from the process in question’.

The important question of how to determine the active ingredient in a basic patent was considered by the Court of Justice in *Eli Lilly v. Human Sciences*.<sup>135</sup> Stressing that an SPC can only be granted in relation to active ingredients that are specified in the basic patent (and the key role played by the claims for that purpose), the Court said that this does not mean that the ingredient necessarily had to be described in a specific way (particularly, that it had to be described structurally rather than functionally). Following basic principles, the Court said that the task of determining the active ingredient in the basic patent was to be done by interpreting the claims as required by Article 69 EPC 2000 and the Protocol on Interpretation. Given that the Court of Justice does not have jurisdiction to interpret the EPC (the European Union not being a Convention member), the question of whether the ‘claims relate, implicitly but necessarily and specifically, to the active ingredient in question’ (using broad functional language) was to be determined by the national court.

Given that a basic patent may cover a number of different products, it is possible to obtain different SPCs for each of the different products. This is on the condition that each of the products is covered by the basic patent and the product meets the necessary requirements for SPCs.<sup>136</sup> It is not possible, however, where a basic patent covers a family of compounds, for a patentee to obtain a new SPC whenever they place a new medical

<sup>129</sup> C-322/10 [2012] RPC 25.

Comptroller-General of Patents, Designs and Trade Marks*, Case C-518/10 [2011] ECR I-12209 (adopting a broader non-literal reading of the claims).

<sup>133</sup> *Novartis Pharmaceuticals v. Medimmune* [2012] EWHC 181, [56].

<sup>134</sup> *University of Queensland v. Comptroller-General of Patents, Designs, and Trade Marks*, Case C-630/10 [2011] ECR I-12231, [41].

<sup>135</sup> Case C-493/12 (12 December 2013).

<sup>136</sup> *Georgetown University v. Octrooicentrum Nederland*, Case C-484/12 (12 December 2013), [30].

product on the market containing the principle active ingredient in the basic patent coupled with another active ingredient not protected by the patent. The situation would change, however, if a combination consisting of an innovative active ingredient in respect of which an SPC had already been granted and another active ingredient was subject to a new basic patent.<sup>137</sup>

### 3.3 LIMITS

The rights granted under an SPC are subject to the same limitations and obligations as applied to the basic patent.<sup>138</sup> An SPC will therefore be subject to licences of right if the patent would have been subject to such a licence prior to its expiry.<sup>139</sup>

### 3.4 DURATION

The SPC comes into operation at the expiry of the patent. This is subject to the requirement that the patent is maintained until the end of its potential term.<sup>140</sup> If the patent is permitted to lapse, is declared to be invalid, or is revoked, the SPC will not come into effect. The duration of an SPC will vary depending on the length of time it took to receive regulatory approval. The maximum period for an SPC is five years. The period is ascertained by calculating the difference between the date of application for the basic patent and the date of the grant of the first authorization, less five years. This means that if a patent application was made in 1998 and authorization was granted in 2007, the relevant certificate should last for four years. However, because there is a maximum duration of five years, if the authorization was granted in 2010, the duration of the SPC would be five years. The average term of the SPCs granted in the United Kingdom in 2000 was just over three years.<sup>141</sup> Amendments effected to encourage investigation into diseases affecting children can lead to a six-month addition to the certificate (even where no paediatric indication is achieved).<sup>142</sup>

The duration of the SPC is formulated in such a way as to ensure harmonization within Europe regarding the date of the *expiry* of all national SPCs. Consequently, although for the purposes of an application the relevant authorization is the first national authorization, for the purposes of calculating the duration of the SPC, the relevant authorization is the first *Community* authorization.<sup>143</sup> For example, if A applies for a patent for aspirin on 1 January 2003 and gets marketing authorization for the sale of aspirin in the

<sup>137</sup> *Actavis Group v. Sanofi*, Case C-443/12 (12 December 2013).

<sup>138</sup> SPC (PM) Reg., Art. 5, replacing SPC (MP) Reg., Art. 5; SPC (PPP) Reg., Art. 5.

<sup>139</sup> PA 1977, s 128B and Sch. 4A, para. 1(2); *Research Corps SPC* [1994] *RPC* 667. On terms, see *Research Corps SPC (No. 2)* [1996] *RPC* 320.

<sup>140</sup> SPC (PM) Reg., Art. 13, replacing SPC (MP) Reg., Art. 13; SPC (PPP) Reg., Art. 13.

<sup>141</sup> B. Domeij, *Pharmaceutical Patents in Europe* (2000), 268.

<sup>142</sup> Regulation (EC) No. 1901/2006 of the European Parliament and of the Council of 12 December 2006 on medicinal products for paediatric use [2006] *OJ L* 378/1 (27 December 2006), Arts 7, 8, 36, 52. For a discussion, see *W I Du Pont De Nemours v. UK Intellectual Property Office* [2009] *EWCA Civ* 966; *Merck's SPC Extension Application*, BL O/035/09 (6 February 2009); *Dr Reddy's Laboratories v. Warner-Lambert* [2011] *EWHC* 3715 (Pat); U. Resse et al., 'The Legal Scope and Content of the Right to SPC Extension under the Paediatric Regulation 1901/2006' (2010) 32 *EIPR* 146.

<sup>143</sup> This would include relevant EEA authorizations, e.g. in Iceland, Norway, and Liechtenstein. The question of the status of the first authorization as the basis for calculating duration was considered by the Court of Justice in *Novartis*, Case C-207/03 (21 April 2005), on referral from *Novartis AG and University College London's SPC Application*, BL O/044/03 (12 February 2003).

United Kingdom on 1 January 2010, but had already received marketing authorization in Portugal on 1 January 2009, the UK SPC will only last for one year. If national regulatory procedures are particularly quick in other member states, UK SPCs may not be available to compensate owners for the loss of the opportunity to exploit the patent in the United Kingdom. To a number of commentators this is unfair, since the patent owner suffers delays, but gets no compensation.<sup>144</sup>

In calculating the duration of the SPC, it does not matter that the first authorization was for a different mode of delivery or a different use. For example, if A applies for a patent on 1 January 2003, and receives authorization for use in animals on 1 January 2009 and for use in humans on 1 January 2011, the relevant certificate would only subsist for one year. No separate certificate would be issued based on the later authorization.<sup>145</sup>

# PART III

# LEGAL REGULATION OF DESIGNS

## 1 INTRODUCTION

Designs play an important, but often neglected, part in our lives. As well as influencing the appearance of the clothes that we wear, the shape of the chairs in which we sit, and the surfboards that we ride, design also influences the decisions that we make as consumers—why it is that we choose one toothbrush over another.<sup>1</sup> The practice of design covers a variety of domains ranging from industrial design,<sup>2</sup> urban planning, graphic design, and stage design, through to costume design, fashion design, product design, and packaging design.<sup>3</sup> In reflection of this diversity, the role played by design varies greatly. In some cases, an object may be designed for frivolous or trivial reasons; in other cases, the way in which an object is designed may play an important role in how effectively the designed article works. Whatever role design performs, it is widely recognized to be a time-consuming, costly, and valuable activity. Given that the art of designing is concerned with the nature and appearance of objects, one of the notable aspects of designing is that the results are readily copied. Not surprisingly, therefore, intellectual property protection plays an important role in regulating the creation and use of designs. While technological developments such as the photocopier, tape recorder, video recorder, and digital technologies—which changed both where copying occurred and who did the copying—played a key role in shaping copyright law over the last century, design law has for the most part escaped unscathed from such changes. While new technologies have delivered new ways of creating designs, these have been readily accommodated within the existing legal frameworks. The spectre of readily accessible 3D-printing technologies, which effectively allows three-dimensional objects to be recreated in the home, seems set to change this situation. While the long-term impact will depend on a range of factors, such as the cost of copiers and the strength of the three-dimensional copies, it seems that 3D-printers

<sup>1</sup> For emphasis in legal commentaries on designs as marketing instruments, see A. Kur, 'The Green Paper's Design Approach: What's Wrong with It' [1993] *EIPR* 374, 376; F.-K. Beier, 'Protection for Spare Parts in the Proposals for a European Design Law' (1994) *25 IIC* 840, 841. A UK IPO report suggests that £33.5 billion was spent in the United Kingdom on design in 2008: see J. Haskel and A. Persole, *Design Services, Design Rights, and Design Life Lengths in the UK* (2011), i.

<sup>2</sup> C. Woodring, 'A Designer's View on the Scope of Intellectual Property Protection' (1996) *24 AIPLA QJ* 309 (defining industrial design as 'the professional service of creating and developing concepts and specification that optimize the function, value, and appearance of products and systems for the mutual benefit of user and manufacturer').

<sup>3</sup> V. Papanek, *Design for the Real World: Human Ecology and Social Change* (1984), 3–4 (defining design as 'the planning and patterning of any act towards a desired, foreseeable end').

are set to change the landscape in which design law operates.<sup>4</sup> As the Hargreaves Report noted: ‘Digital technology is altering the nature of design. It has radically altered the way in which many designs are produced, and the development of fabrication through “3D printing” can be expected to have a substantial impact.’<sup>5</sup>

Over time, a number of different areas of intellectual property, such as trade marks,<sup>6</sup> passing off,<sup>7</sup> and the law of breach of confidence,<sup>8</sup> have been used to protect designs. In the next six chapters, we concentrate on those areas of intellectual property law more commonly used to protect designs:

- (i) the UK registered design system established by the Registered Designs Act 1949 (modified in 2001 to comply with the Designs Directive);
- (ii) the Community registered design system;
- (iii) the unregistered Community design system;
- (iv) copyright protection provided by the Copyright, Designs and Patents Act 1988 (CDPA 1988); and
- (v) UK unregistered design right protection, which was established by Part III of the CDPA 1988.

## 2 NORMATIVE BASIS OF DESIGN PROTECTION

It is a notable feature of the commentary on the legal protection of designs that very little consideration has been given to the question of why we protect designs.<sup>9</sup> Rather, it is assumed that the general arguments that justify the protection of works by copyright or inventions by patents, whether based on instrumental philosophies or ethical beliefs, are equally applicable to designs.

These assumptions are, no doubt, often warranted: the design process involves investment of time and money,<sup>10</sup> and successful designs can and are readily copied. Those who favour ethical arguments of a reap-and-sow nature argue that design protection is required

<sup>4</sup> See S. Bradshaw, A. Bowyer, and P. Haufe, ‘The Intellectual Property Implications of Low-Cost 3D Printing’ (2010) 7(1) *SCRIP* 5.

<sup>5</sup> I. Hargreaves, *Digital Opportunity: A Review of Intellectual Property and Growth* (2011), [7.10].

<sup>6</sup> *Philips Electronics BV v. Remington Consumer Products* [1998] *RPC* 283. It seems that, in light of harmonization, words can be protected as designs, and this raises the issue of the relation of design law to trade mark law and practical questions as to whether a person is better off registering a logo as a design (or relying on unregistered design right in a logo) rather than a trade mark: Musker, 14; C.-H. Massa and A. Strowel, ‘Community Design: Cinderella Revamped’ [2003] *EIPR* 68, 77. Indeed, it might be noted that the effect of the *Arsenal* litigation (see pp. 1047–8) led to an increase in the number of UK design registrations. On the extent to which overlap between the new designs law and trade marks should be seen as a concern, see A. Kur, ‘Protection of Graphical User Interfaces under European Design Legislation’ (2003) 34 *IIC* 50, 60–2 (arguing that these concerns are exaggerated and observing that the possibility of such overlap has long existed in Germany without raising problems).

<sup>7</sup> *Benchairs v. Chair Centre* [1974] *RPC* 429. But cf. *Hodgkinson & Corby and Roho v. Wards Mobility Services* [1995] *FSR* 169.

<sup>8</sup> For recent examples, see *Carflow Products v. Linwood Securities* [1996] *FSR* 424; *Valeo Vision SA v. Flexible Lamps* [1995] *RPC* 205.

<sup>9</sup> J. Lahore, ‘The Protection of Functional Designs: The Amended Proposal for a European Designs Directive’ (1997) 1 *IPQ* 128, 132 (registering surprise at lack of analysis of benefits of design protection).

<sup>10</sup> Apparently, the development costs for the outer appearance of the Ford Sierra in the 1980s amounted to US\$140 million, or 20 per cent of the total cost: M. Levin, ‘Recent Developments in Nordic Design Protection’ (1988) 19 *IIC* 606.

to prevent second-comers reaping where they have not sown. Those who cling to a utilitarian approach argue that protection is necessary to provide sufficient incentives to encourage investment in the design process.<sup>11</sup> It is notable that the legal protection of designs has rarely been justified by reference to the natural rights of individual designers in their creations. This reflects a commonly held assumption that designs are less creative than artistic works because designing is subject to a number of inevitable constraints.<sup>12</sup> For example, the potential scope for the design of a table is constrained by our existing idea of a table, the functions that it must perform, the need for it to be comfortable, its cost, and the possibilities presented by available materials.<sup>13</sup>

The erroneous but widely held view that designers are somehow less creative than artists and authors has not only shaped the discussions justifying the legal protection of designs, it has also served to marginalize the role that the designer plays within design law.<sup>14</sup> There are two main reasons for this. The first is that designing is seen as being less creative than authorship: designers are seen to be more constrained by the market, by the laws of physics, by the needs of users, and by fashion.<sup>15</sup> As a result, the designer is seen to have less of an intimate relationship with their design than an artist has with their creations.<sup>16</sup> The second reason is that designing is rarely undertaken by an individual; usually, a designer will be part of a team, will be given a design brief, and will be asked to develop a number of possible solutions. A design that reaches the marketplace will often be the product of many individuals, not only one, and the role of the draughtsman in the design process may by no means be the most significant.<sup>17</sup> As a consequence, design law is more concerned with designs as assets<sup>18</sup> and their effects on the market than with the individuals who create the designs.<sup>19</sup> It has

<sup>11</sup> *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401, 418. The CDR, Recital 7, states that ‘enhanced protection for industrial design not only promotes the contribution of individual designers to the sum of Community excellence in the field, but also encourages innovation and development of new products and investment in their production’. See also *In the Matter of Morton’s Design* (1900) 17 RPC 117, 121 per Farwell J (the purpose of the design portion of the Act is the same as the patent portion of it); *Allen West & Co. v. British Westinghouse Electric & Manufacturing Co.* (1916) 33 RPC 157, 162 (design protection was said to be ‘primarily to advance our industries and keep them at a high level of competitive progress’); *Dart Industries v. Décor Corporation* (1989) 15 IPR 403.

<sup>12</sup> R. Denicola, ‘Applied Art and Industrial Design’ (1983) 67 *Minn L Rev* 707, 741–3, and n. 165; J. Reichman, ‘Design Protection in Domestic and Foreign Copyright Law’ [1983] *Duke LJ* 1143, 1160, 1220–1, 1235.

<sup>13</sup> Moreover, there is a tendency to place greater emphasis on the potential social costs that the legal protection of designs cause to competitors of the proprietors of such right. As designs are applied to ‘articles’, it is feared that any impediments placed on the reproduction of the design will also interfere with free competition for the article itself. One commentator describes this as the ‘two-market conundrum’, which arises because designs operate to render articles desirable both as (useful) articles and as attractive objects: Reichman, *op. cit.*

<sup>14</sup> Some 87 per cent of companies have their own design departments: OHIM, *Prospective Study about the Design Registration Demand at the European Union Level: Executive Summary* (May 2002), 7.

<sup>15</sup> The Designs Directive and CDR specifically acknowledge that the designer’s freedom may be limited: see Designs Dir., Arts 5(2), 9(2), and Recital 13; CDR, Arts 6(2), 10(2), and Recital 14.

<sup>16</sup> Indeed, the designer is referred to as ‘developing’ rather than ‘creating’ a design: Designs Dir., Recital 13; CDR, Art. 14(2), Recital 14. The requirement of ‘creation’, however, is employed in framing an exception to the unregistered Community design: see CDR, Art. 19(2). And cf. the French version, which uses the terms ‘le créateur’ and ‘l’élaboration du dessin ou modèle’.

<sup>17</sup> The CDR, Recital 7, does recognize the role of individual designers, but sees the more significant benefit from ‘enhanced protection for industrial designs’ as the encouragement of ‘innovation and the development of new products and investment in their production’. The CDR explicitly refers to teamwork: CDR, Art. 18.

<sup>18</sup> Designs Dir., Recital 15, and CDR, Recital 11, both attribute the need to protect design features of modular products by reference to the fact that such features ‘present a major marketing asset’.

<sup>19</sup> CDR, Recitals 8, 15 (although CDR, Recital 24, contemplates that the Community system might be used by individual designers).

also focused on designs rather than designers. This can be seen in the fact that protection commences either from the date on which the design was first made available (for unregistered Community designs) or registered (for national registered designs and registered Community designs), rather than that on which the design was created, in the absence of moral rights for designers (or, in the case of the right to be named on the register, the practical impossibility of using such a right),<sup>20</sup> in the fact that duration is not linked to the life of the author, and in the relatively insignificant position of the designer in determining entitlement.

### 3 BRITISH HISTORY

While the story of how designs came to be protected in intellectual property law is a long and important one, we must deal with it here in outline. The story starts in 1839,<sup>21</sup> when, out of a desire to improve the aesthetic quality of industrially manufactured goods, Parliament introduced a registered design system.<sup>22</sup> Under this system, if an applicant submitted representations of a new and original design for an article of manufacture, the law would grant a monopoly over the design for up to three years. This registration system seemed to operate successfully for the rest of the century, with many thousands of designs being registered.<sup>23</sup> Insofar as there were problems with the design system, they largely concerned the relationship between the design system and the patent system in the protection of useful mechanical devices, and these problems seemed to disappear with improvements in the administration of the patent system.

However, just as the popularity of the registered design system reached a peak at the turn of the twentieth century, issues were raised about the relationship between design law and the copyright system. In large part, these questions arose as copyright law was expanded and rationalized to give effect to the Berlin revision of the Berne Convention of 1908. These reforms not only created the possibility of many designs being protected by copyright law for the first time (especially on the basis of the design drawings that were artistic works), they also threatened the viability of the registration system. This was because copyright offered a system of protection that was automatic (no longer requiring registration), potentially longer, and (in some respects) stronger.

The initial response of the legislature was to draw a boundary between designs, which required registration, and artistic works (such as works of artistic craftsmanship), which were protected under the copyright system. As a result, the Copyright Act 1911 included a provision excluding from copyright protection works that were ‘capable’ of being registered as designs and which were intended to be used as the basis for multiplication by an industrial process. Later statutes employed different techniques to regulate the boundary between copyright and design. In one way or another, all of these proved to be

<sup>20</sup> European Commission, *Green Paper on the Legal Protection of Industrial Design* (June 1991), III/F/5131/91-EN (henceforth ‘EC Green Paper’), [7.1.4], stating that a moral right ‘hardly appears to be desirable and probably also not practical’.

<sup>21</sup> Prior to this, the Calico Printers Acts 1787 and 1794 conferred protection upon new and original patterns for linens, cotton, calico, and muslins *automatically*.

<sup>22</sup> Copyright of Designs (Registration) Act 1839. While design law was one of the first areas of modern intellectual property law to take shape, over time it has been eclipsed by copyright and patent law. This has led to the (inaccurate) claim that designs law is the stepchild of patents and copyright. See Sherman and Bently, chs 3, 4, 163–6, 210–12.

<sup>23</sup> L. Bently, ‘Requiem for Registration? Reflections on the History of the UK Registered Design System’, in A. Firth (ed.), *Perspectives in Intellectual Property, Vol. I: The Prehistory and Development of Intellectual Property* (1997), 1.

unsatisfactory. Perhaps the most bizarre consequence of the last such attempt to establish a boundary was that designs that were unregistrable because they were ‘dictated by function’ received longer protection than those that were registered. Such protection was widely referred to as ‘industrial copyright’.

In response to these failings, the CDDA 1988 fashioned a new ‘design–copyright interface’. It did so by modifying the Registered Designs Act 1949 so that registration was confined to aesthetic designs, adding important defences to copyright infringement (sections 51 and 52), and establishing a new unregistered design right regime.

## 4 INTERNATIONAL FLEXIBILITY

While the United Kingdom pursued its own ideas as how best to protect designs, other countries took different approaches. Some placed emphasis on copyright; others, on unfair competition law; others, on registration.<sup>24</sup> There was little consensus and consequently few international norms could be agreed.<sup>25</sup> The Paris Convention contains provisions on national treatment and the priority dates of design applications, but nothing of substance on registered design protection.<sup>26</sup> The Berne Convention is only a little more prescriptive. While ‘applied art’ is included in the subject matter covered by the Convention,<sup>27</sup> countries of the Berne Union are given free rein with regard to the scope of protection and to whether any formalities may be required.<sup>28</sup> The only specific requirement in relation to designs in the Berne Convention is that if special protection is not granted, then such works shall be protected as artistic works. Even the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) only has two articles on designs.<sup>29</sup> Design laws are allowed to vary on a national basis.

Not surprisingly, the variation in national design protection across Europe was seen to present a problem for the European Union and in particular the internal market.<sup>30</sup> In 1991, the Commission issued a Green Paper laying out a scheme to tackle the problems raised by the enormous variation in national designs laws.<sup>31</sup> The Green Paper was notable for its

<sup>24</sup> J. Reichman, ‘Design Protection in Domestic and Foreign Copyright Law’ (1983) 32 *Duke LJ* 1143; H. Cohen Jehoram, ‘Designs Law in Continental Europe and Their Relation to Copyright Law’ [1981] *EIPR* 235; C. Fellner, *The Future of Legal Protection for Industrial Design* (1985), ch. 6.

<sup>25</sup> A. Kingsbury, ‘International Harmonisation of Designs Law: The Case for Diversity’ (2010) 32(8) *EIPR* 382.

<sup>26</sup> Paris, Arts 2 and 4C(1). Indeed, until the Lisbon revision of 1958, the Convention did not even require countries of the Paris Union to protect industrial designs: Paris, Art. 5*quinquies*. This does not specify how protection is to be conferred, so that compliance may be achieved through copyright or unfair competition rather than *sui generis* designs law. <sup>27</sup> Berne, Art. 2.

<sup>28</sup> Berne, Art. 2(7). Under Berne, Art. (7)(4), applied art should be protected for a minimum period of 25 years.

<sup>29</sup> TRIPS, Arts 25 and 26. This requires members to provide protection for independently created industrial designs that are new or original. More specifically, it provides that the owner of a protected industrial design shall have the right to prevent third parties from making, selling, or importing articles bearing or embodying the design for at least ten years. Certain limited exceptions are permitted. See Gervais, [2.240]–[2.250]; A. Kur, ‘TRIPS and Design Protection’, in Beier and Shricke.

<sup>30</sup> *Keurkoop BV v. Nancy Kean Gifts BV*, Case 144/81 [1982] *ECR* 2853; *Consorzio Italiano della Componentistica de Ricambio per Autoveicoli 8 Maxivar v. Regie Nationale des Usines Renault*, Case 53/87 [1988] *ECR* 6039; *AB Volvo v. Erik Veng (UK)*, Case 238/87 [1988] *ECR* 6211.

<sup>31</sup> European Commission, *Green Paper on the Legal Protection of Industrial Design* (June 1991), III/F/5131/91–EN. For useful accounts of national laws prior to harmonization, see B. Gray and E. Bouzalas, *Industrial Design Rights: An International Perspective* (2001).

advocacy of a ‘designs’ approach—treating designs as a distinct field of law rather than as a branch or extension of copyright or patents. The Green Paper advocated a three-pronged approach, involving harmonization of national registered designs law, the establishment of a Community registered design system, and the introduction of an unregistered Community design right. It seemed that this would require the passage of two pieces of Community legislation—namely, a directive to harmonize national law and a regulation to establish the two Community-wide rights. Following consultation, two Proposals were published.<sup>32</sup> The Commission decided to start with the directive, it being understood that the regulation—where relevant—would be substantively the same. Following criticisms of the initial proposal, in particular in the European Parliament, an amended Proposal for a Directive was published in 1996.<sup>33</sup> Although there were a number of significant amendments for designs generally, the legislative process was dogged by the issue of the appropriate form of protection for car spare parts. Ultimately, as is explained in Chapter 26, differences could not be resolved. Consequently, in the so-called ‘standstill plus’ compromise, the Directive left the question to member states. Once the Directive was adopted in July 1998, the Commission’s focus returned to the regulation. Amended proposals were published in 1999 and 2000, and the Regulation was adopted in December 2001.

The Directive attempts to harmonize the features of national registered design systems that most obviously affect the functioning of the internal market.<sup>34</sup> It refers to this as ‘limited approximation’ rather than as full-scale harmonization.<sup>35</sup> Harmonization was required in relation to the ‘conditions for obtaining registration’, the rights of the design owner, the term of protection, and grounds on which the registration can be invalidated.<sup>36</sup> In contrast, issues of procedure and remedies were left to member states.<sup>37</sup> The Designs Directive also allows member states to protect designs by other regimes such as (national) unregistered design rights or competition law.<sup>38</sup> The Directive requires that member states do not treat the existence of registered design protection as pre-empting protection by copyright, a regime referred to as ‘cumulation of copyright’.<sup>39</sup> The Directive was to be implemented by 28 October 2001, and the British government did so by amending the Registered Designs Act 1949 from 9 December 2001.<sup>40</sup>

The Community Design Regulation established a Community-wide system of registered design protection with a Community Design Office based at the Office for Harmonization in the Internal Market (OHIM) in Alicante, Spain. This became operational on 1 April 2003.<sup>41</sup> Like the Community trade mark, the vision that drives the registered Community design is the replacement of national design systems (which, even if

<sup>32</sup> For commentaries, see: A. Horton, ‘European Designs Law and the Spare Parts Dilemma: The Proposed Regulation and Directive’ [1994] *EIPR* 52; F.-K. Beier, ‘Protection for Spare Parts in the Proposals for a European Design Law’ (1994) 25 *IIC* 840.

<sup>33</sup> See G. Dinwoodie, ‘Federalized Functionalism: The Future of Design Protection in the European Union’ (1996) 24 *AIPLA QJ* 611; T. Margoni, ‘Not for Designers: On the Inadequacies of EU Design Law and How to Fix It’ (2013) 4(3) *JIPITEC* 225.

<sup>35</sup> Designs Dir., Recitals 1, 3, 5.

<sup>36</sup> Designs Dir., Recitals 9, 10; CDR, Recitals 17, 21.

<sup>37</sup> Designs Dir., Recitals 5, 6.

<sup>38</sup> Designs Dir., Art. 16, Recital 7; CDR, Recital 31.

<sup>39</sup> Designs Dir., Art. 17, Recital 8; CDR, Recital 32.

<sup>40</sup> Perhaps not surprisingly (although no doubt rather annoyingly), the UK legislature has implemented the Directive into UK law by way of statutory instrument and, on occasion, has decided to alter the wording. We can be relatively certain that the UK courts will ignore these modifications and rely, where appropriate, on the Directive itself. Even the UK IPO has been irritated by the redrafting: *Design Practice Notice: Component Part of Complex Product Visible in Normal Use* (7 January 2003) DPN 1/03.

<sup>41</sup> The substantive provisions are aligned with those in the Directive: CDR, Recital 9. The constitutional validity of the Registered Designs Regulations 2001 (which implemented the Directive in the United Kingdom) was upheld by the Court of Appeal in *Oakley Inc v. Animal Ltd and ors* [2006] *Ch* 337. See M. Howe, ‘*Oakley Inc. v. Animal Ltd: Designs Create a Constitutional Mess*’ (2006) 28(3) *EIPR* 192.

harmonized, present the possibility of national rights owned by different people) with a unified system for obtaining a Community design with uniform effect throughout the entire Community.<sup>42</sup> The registered Community design is acquired by an application to OHIM, but there is no substantive examination. A registered Community design can last for up to 25 years and confers an ‘absolute monopoly’ on the proprietor. The validity of the designs can be challenged in proceedings at the Community Design Office,<sup>43</sup> or by way of a defence to an infringement action in a Community design court.<sup>44</sup>

The registered Community design is supplemented by the unregistered Community design right, available under the Community Design Regulation since 7 March 2002.<sup>45</sup> The unregistered Community design right is intended to provide short-term protection for those industries (such as clothing manufacture) for which registration is not appropriate—primarily because designs are of value for only a limited period of time.<sup>46</sup> Unregistered Community designs are also intended to provide temporary protection while proprietors consider whether a design is worth registering.

An unregistered Community design right arises automatically when a design that is novel and has an ‘individual character’ is first made available in the Community.<sup>47</sup> The protection lasts for three years from the date on which the design was first made available.<sup>48</sup> Unlike the registered Community design (which protects against independent creation), the unregistered Community design right only protects against copying. The right is enforced by an action in a national Community design court. It is at this stage that the validity of the right may be challenged.

## 5 UK REFORM: THE INTELLECTUAL PROPERTY ACT 2014

After years of complaint by designers, lawyers, and academics, the UK government has recently turned its attention to the topic of design law. While the reforms, which have been described as piecemeal, do not provide the wide-ranging review that is clearly needed, they do provide make some needed changes. The trigger for the reform was the 2011 Hargreaves Review of intellectual property and growth, which was a review of the impact of digital technologies on intellectual property law and policy, with a particular emphasis on growth and innovation. While, tellingly, the terms of reference for the Hargreaves Review did not explicitly mention design law, nonetheless the report did look at the impact of digital technologies on the law. The key recommendation of the Review was that the UK Intellectual Property Office (IPO) should conduct a further review of design law and policy.<sup>49</sup> Following the government’s acceptance of this recommendation, the UK IPO launched a ‘call for evidence’ in 2011 to identify areas where reform was

<sup>42</sup> CDR, Recital 1.      <sup>43</sup> CDR, Art. 25.      <sup>44</sup> CDR, Arts 24, 25.

<sup>45</sup> The aim of the unregistered Community design right is to strengthen the competitive position of European industries (not to complete the internal market): EC Green Paper, [4.3.9].

<sup>46</sup> J. Reichman, ‘Design Protection and the New Technologies: The US Experience in a Transnational Perspective’ (1989) *19 U Balt L Rev* 6, 23.

<sup>47</sup> It is the first Community-wide right to be available automatically.

<sup>48</sup> V. Saez, ‘The Unregistered Community Design’ [2002] *EIPR* 585, 588 (thereby avoiding problems with using creation as the key date).

<sup>49</sup> I. Hargreaves, *Digital Opportunity: A Review of Intellectual Property and Growth* (2011), ch. 7. See HM Government, *The Government Response to the Hargreaves Review of Intellectual Property and Growth* (August 2011).

needed.<sup>50</sup> This was followed by a consultation process that sought feedback on a number of proposed reforms.<sup>51</sup> While most of the initial proposals were adopted, a number of initial suggestions were not. One of the most important was the suggestion that the UK unregistered design right should be abolished.<sup>52</sup> Despite a number of problems with the UK unregistered design right, it was decided to retain a modified unregistered design right, not least because there was evidence that because it was used as a safety net by British companies, it was ‘a very useful protection for industry’. Another initial suggestion that was not taken up was the idea that the design legislation should be amended to state explicitly that design protection does not apply for general concepts and ideas.<sup>53</sup> Eventually, the remaining recommendations were included in the Intellectual Property Bill 2013–14, which was introduced into the House of Lords on 9 May 2013. After a number of revisions, the Intellectual Property Act 2014 was given royal assent on 14 May 2014.

In relation to *UK registered designs*, the new Act removes the requirement that an applicant for a design needs to be the owner, changes the rules in relation to ownership of commissioned designs, removes the rule prohibiting the UK IPO from registering an interest in a registered design unless it is satisfied that the same interest applies to any associated unregistered designs, and introduces a right of prior use into UK law. Changes have also been made to allow the United Kingdom to become a signatory state to the Hague System for the International Registration of Design. The new Act also introduces changes that ensure that businesses that have permission to use a Community registered design are able to defend themselves against accusations of infringement of UK artistic copyright.

A number of changes have also been made in relation to the *UK unregistered design right*, including amending the definition of design to prevent rights holders from using a very small part (or ‘aspect’) of their design as the basis for a claim that a third party is infringing their design. Changes have also been made that clear up some of the uncertainty in relation to the requirement that unregistered design right must not be commonplace in the relevant design field, that simplify the rules in relation to who can qualify as owner of unregistered design right, and which remove the rule that said that UK rights were automatically owned by commissioners, to make the designer the initial owner of commissioned designs. A number of new exceptions have also been introduced. We will look at each of these changes in the relevant sections below.

## 6 PLAN OF DISCUSSION

The effect of the combination of British and European law is to create a system of design protection that is multi-layered, complex, and lacking in logic. The United Kingdom affords

<sup>50</sup> This was followed by UK IPO, *IPO Assessment of the Need for Reform of the Design Intellectual Property Framework* (December 2011) and, subsequently, another consultation process: UK IPO, *Consultation on the Reform of the UK Designs Legal Framework* (July 2012). For a summary of responses, see UK IPO, *Consultation on the Reform of the UK Designs Legal Framework: Summary of Responses* (December 2012).

<sup>51</sup> UK IPO, *The Consultation on the Reform of the UK Designs Legal Framework Government Response* (April 2013).

<sup>52</sup> UK IPO, *Consultation on the Reform of the UK Designs Legal Framework* (2012), [4.2] (noting that the United Kingdom is alone in retaining unregistered design right alongside the Community unregistered design right).

<sup>53</sup> *Ibid.*, [4.18]–[4.22]. For response, see UK IPO, *Consultation on the Reform of the UK Designs Legal Framework: Summary of Responses* (December 2012), [22]–[24]; UK IPO, *The Consultation on the Reform of the UK Designs Legal Framework Government Response* (April 2013), [35]–[37].

registered protection to virtually all new designs and unregistered protection to most three-dimensional designs that are not commonplace. There is also the possibility of copyright protection for designs for three-dimensional artistic works, patterns, and surface decoration. In addition to these national schemes, there are two further layers of Community protection that arise either by registration (and last for up to 25 years) or automatically on publication of the design (and last for three years thereafter). To summarize, there are currently five different ways to protect a design.<sup>54</sup> These are via:

- (i) a UK registered design;
- (ii) a registered Community design right;
- (iii) an unregistered Community design right;
- (iv) copyright protection of design drawings for artistic works (such as sculptures), two-dimensional designs, and surface decoration; and
- (v) a UK unregistered design right.

Since the substantive law dealing with UK registered designs, registered Community designs, and unregistered Community designs are virtually identical, we will look at them together over the next four chapters. In the next chapter (Chapter 25), we look at the way in which design rights arise—whether, in the case of UK registered designs and registered Community designs, by registration, or, in the case of unregistered Community designs, automatically. In the following two chapters, we look at the criteria which UK registered designs, registered Community designs, and unregistered Community designs need to comply with to be valid. In Chapter 26, we examine the subject matter requirement that there be a ‘design’. In Chapter 27, we explore the concepts of ‘novelty’, ‘individual character’, and other aspects of validity. In Chapter 28, we consider who is entitled to apply for a design registration, and the rules relating to ownership and exploitation. We also look at infringement and exceptions in the three harmonized systems. In Chapters 29 and 30, we consider the two other main forms of protection for designs in the United Kingdom: in Chapter 29, we examine UK copyright law as it applies to designs; in Chapter 30, we look at the UK unregistered design right.

#### *A note on language*

As was noted earlier, the United Kingdom implemented the Designs Directive in 2001 by amending the Registered Designs Act 1949. One development that is helping to simplify this complex area of law is that a custom has developed in the United Kingdom whereby counsel and the courts refer directly to the Regulation and the Designs Directive rather than to the 1949 Act.<sup>55</sup> Where possible, we will follow this practice.

<sup>54</sup> There are many other legal and non-legal techniques. Here, we focus on the major legal mechanisms.

<sup>55</sup> See, e.g., *Dysan v. Vax* [2010] EWHC 1923, [9] per Arnold J (also noting, at [10], that the provisions in the Designs Directive were to be construed in the same way as the provisions in the Community Designs Regulation).

## HOW DESIGN PROTECTION ARISES IN THE UNITED KINGDOM AND THE EUROPEAN UNION

### CHAPTER CONTENTS

1 Introduction	693	5 Community Unregistered Design Right	702
2 Decision to Register	693	6 Which Avenue to Choose?	704
3 Applying to Register in the United Kingdom	695		
4 Applying to Register at the Office of Harmonization in the Internal Market	699		

### 1 INTRODUCTION

This chapter is concerned with the way UK registered designs, registered Community designs, and unregistered Community designs come into being. The chapter is not concerned with copyright protection of designs nor with the UK unregistered design right, which are examined in Chapters 29 and 30. While the bulk of the chapter focuses on design registration, it also looks at the conditions that need to be satisfied for an unregistered Community design right to come into being. An understanding of the process by which a design comes into being is critical to understanding design law generally, not least because it has a direct bearing on the substance of design protection.

### 2 DECISION TO REGISTER

The decision whether to register a design is primarily a question of business strategy.<sup>1</sup> The critical issue is whether the advantages of registration outweigh the disadvantages,

<sup>1</sup> For some empirical work, see OHIM, *Prospective Study about the Design Registration Demand at a European Union Level: Executive Summary* (May 2002), available online at <<http://oami.europa.eu/en/design/pdf/3830000.pdf>> Although we set out some factors that would be taken into account by someone deciding whether to register or not, often there will be an established practice in a particular sector.

particularly when compared to alternative modes of protection. This will depend upon a range of factors, including the type of design in question, the cost of the design, the importance of monopoly protection, the likelihood of a competitor independently creating a similar design,<sup>2</sup> and the scope of the potential market. While registration has been popular in the electronics and furniture industries, the textile and fashion industries have tended to rely more on unregistered design right.<sup>3</sup>

One of the features of the UK and Community registration systems is that designs registration process is virtually automatic. There is no examination to see whether the application complies with the requirements for protection and no possibility for third-party opposition or intervention during the registration process; instead, there is only a formal review of the application. The simplified procedures are ‘intended to keep to a minimum the formalities and other procedural and administrative burdens, as well as the cost to applicants, thereby making registration more readily available to small-and-medium sized enterprises and to individual designers’.<sup>4</sup>

The registration systems confer a number of benefits on the design proprietor. First, registration provides some certainty, which justifies further investment in exploitation of a design. The certainty largely derives from filing and the manner in which this establishes priority over later designs.<sup>5</sup> The second advantage of registration is that the rights conferred on the proprietor tend to be stronger than unregistered rights. This is true of the European harmonized national systems and Community designs. Unregistered rights (copyright, the unregistered Community design, and the UK unregistered design right) are only infringed where the user of the design has copied the design. The registered rights enable proprietors to object to use of a design even where the design is independently created by a third party.<sup>6</sup> A third advantage is that the registered system potentially provides protection for 25 years, whereas the unregistered design rights tend to be shorter: unregistered Community design rights last for only three years, while the UK unregistered design right only last for ten years from marketing. (The exception is copyright which, to the extent that it protects designs, lasts for 25 years.)

As a result, a prudent designer or design owner will need to take a range of factors into account when deciding whether to register a design. These include the likelihood that someone will copy or independently create a similar design, the difficulty of proving copying, the intended (and likely) markets for the design, and the likely longevity of the design. If automatic protection is deemed to be wanting, the design proprietor will need to consider whether the advantages of registration are sufficient to justify the cost of registration. As we will see, much has been done, particularly at the Office of Harmonization in the Internal Market (OHIM), to make the system cheaper and administratively more attractive. The expense of registering a design is nothing like the expense associated with patenting.

Designers also have a choice as to where they register a design. Although the Designs Directive harmonized the salient substantive features of the design registration systems in member states, it left procedure to national law. As we have already intimated, this has

<sup>2</sup> This question is much disputed. In European Commission, *Green Paper on the Legal Protection of Industrial Design* (June 1991), III/F/5131/91-EN (henceforth ‘EC Green Paper’), [4.3.9], the European Commission saw the risk of independent creation as slight.

<sup>3</sup> Especially in the light of the House of Lords’ decision in *Designers Guild v. Williams* [2000] 1 WLR 2416.

<sup>4</sup> *Federation Cynologique Internationale v. Federacion Canina Internacional de Perros de Pura Raza*, Case C-561/11 (15 November 2012), Opinion of Advocate General Mengozzi, [26].

<sup>5</sup> EC Green Paper, [6.2.4.2].

<sup>6</sup> EC Green Paper, [6.4.2]–[6.4.4].

resulted in divergences in the protection available in different member states. These differences will affect decisions as to whether to apply to register in the United Kingdom, to apply for a bundle of national registrations, to apply for a single Community registration, or to apply for a combination of national and Community registrations. Important differences include: how ‘design’ is defined (whether by reference to a deposit or graphic representations, and the extent to which written delimitations on what is protected are allowed); whether the systems allow for single applications for multiple designs;<sup>7</sup> whether the systems allow registrations in secret or deferral of publication and with what consequences;<sup>8</sup> whether the systems permit applications relating to designs that do not identify a product; how the systems define priority; whether the systems provide for substantive examination, and if so, as to which potential grounds of objection;<sup>9</sup> whether the systems carry out a search of existing designs, and if so, how rigorous the search is; whether the systems demand declarations by the applicant to the effect that they believe the design to be new and have individual character, or that they intend to apply the designs to products; and whether the system allows for opposition.<sup>10</sup>

### 3 APPLYING TO REGISTER IN THE UNITED KINGDOM

National registered design protection in the United Kingdom is acquired by applying to the Designs Registry at the UK Intellectual Property Office (IPO). The registration process is governed by the Registered Designs Act 1949, (modified in 2001 to comply with the Designs Directive). In this section, we look at some of the key features of the registration process in the United Kingdom. Before doing so, it should be noted that the Intellectual Property Act 2014 makes changes that allow the United Kingdom to give effect to the Hague Agreement concerning the International Registration of Industrial Designs.<sup>11</sup> The Hague Agreement enables the owner of an industrial design to obtain protection in a number of countries by filing a single application with the World Intellectual Property Organization (WIPO), in one language and with one fee. While the European Union is a member of the Hague Agreement, at time of writing the United Kingdom is not. When United Kingdom joins the Hague Agreement, UK businesses will be able to use it to enable more targeted country-specific protection.

<sup>7</sup> Prior to harmonization, the Benelux countries and Germany allowed applications containing up to 50 designs, while France and Italy permitted up to 100. In contrast, the United Kingdom required each application to relate to a single article or set of articles.

<sup>8</sup> Prior to European harmonization, many countries allowed for deferral, although the periods differed: in Scandinavia, deferral was for six months only; in the Benelux countries, for 12 months; in Austria, for 18 months; and in France, for three years.

<sup>9</sup> Article 14 of the Swedish Act No. 2002: 570, amending the Design Protection Act No. 1970: 485 (requiring examination as to whether the application relates to a design, and whether the design is immoral or a misuse of a protected emblem, proprietorship, classification, representations). Prior to harmonization, some form of substantive examination took place in Austria, Portugal, and Scandinavia: see Suthersanen, 327, 337, 357.

<sup>10</sup> Article 18 of Swedish Act No. 2002: 570 (allowing opposition for two months).

<sup>11</sup> IP Act 2014, s. 8, the enactment of which will introduce new RDA 1949, s. 15ZA (enabling the Secretary of State to make necessary changes).

### 3.1 APPLICATION

Section 1(1) of the Registered Designs Act 1949 states that '[a] design may . . . be registered under this Act on the making of an application for registration'.<sup>12</sup> To bring UK registration into line with Community practice, since 1 October 2006 applicants have been able to incorporate any number of new designs into a single application (in contrast with previous practice, which limited applicants to one design per application).<sup>13</sup> Previously, the application to the Design Registry in the UK IPO had to be made by the person claiming to be the owner of the design.<sup>14</sup> On the basis that this created unnecessary delays in the registration process, the Intellectual Property Act 2014 removed the requirement that an applicant needed to be the owner of the design.<sup>15</sup>

The application should include two identical representations of the design (including, if desired, an explanatory description), a statement as to the product to which the design is to be applied, and (if desired) a 'partial disclaimer' identifying the features of the appearance for which protection is sought.<sup>16</sup> The applicant, or their representative, also needs to sign a declaration to the effect that 'the owner believes that the design is new and has individual character'. The fee is £60 per application (which includes a fee for publication). The cost of applying to register additional designs in the same application is £20 per additional design.

### 3.2 REPRESENTATIONS

Undoubtedly, the most significant part of the application are the 'representations' of the design or 'specimens',<sup>17</sup> and any partial disclaimer indicating that the design is only for the appearance of part of a product.<sup>18</sup> The representations can be conceived as the positive claims, from which the disclaimer excludes matter, so that in combination they define the property. The interaction between representations and disclaimer is likely to play a key role in determining whether a design is validly registered and whether it is infringed.

The procedural rules that control the representations play an important role in defining what can be registered as a design. In order for the representations to define a property that is not itself visible, the UK rules permit the inclusion of a 'brief description explaining the representation' on the front of the first sheet of each representation or specimen.<sup>19</sup>

<sup>12</sup> The UK registration process was modified on implementation of the Directive to reduce differences between the national process and that at the OHIM. In particular, 'statements of novelty' were abolished, as was the requirement that the applicant specify an 'article' to which the design was to be applied. Substantive examination based on a previous search was removed in 1999 even before harmonization made it desirable.

<sup>13</sup> The Regulatory Reform (Registered Design) Order 2006 (SI 2006/1974) changed the RDA 1949 to allow for multiple applications.

<sup>14</sup> RDA 1949, s. 3(2). If unregistered design right subsists, the applicant should be that person.

<sup>15</sup> RDA 1949, s. 3(2), repealed by IP Act 2014, s. 6(2).

<sup>16</sup> The IP Act 2014 allows applicants to include more information about the design, including who is the designer, whether the design was made public before the design was applied for, and whether the applicant is willing to license the design.

<sup>17</sup> It is for the Registrar to decide whether specimens are acceptable, by reference, amongst other things, to ease of mounting: RDR, r. 21.

<sup>18</sup> RDR, rr 15 (partial disclaimer), 17 (representations). It should be noted that the register may be rectified under RDR, r. 20, and if a design has been declared partially invalid, such a declaration should appear on the register.

<sup>19</sup> Note to Form 2A, which adds that 'any such description shall not be taken to limit the scope of protection conferred by registration of a design'.

This can be used to specify the material from which the design is made, to identify a colour (for example using the Pantone system),<sup>20</sup> or to specify dimensions if they are important. In a German case decided before harmonization, a description was utilized to explain that bright appearance of the stand for a lampshade resulted from illumination from within.<sup>21</sup> Such descriptions should also be permitted under UK practice.

Although these descriptions are important, for the most part they concern marginal cases. A much more important element is the ‘partial disclaimer’, which should appear on the representations and thus be available to the public.<sup>22</sup> There seems to be no reason why the partial disclaimer should not identify a part of the designed product by stating, for example, that ‘protection is sought for the head of the toothbrush, the handle being disclaimed’.<sup>23</sup> Alternatively, especially in cases in which the representation includes a photograph of the designed product, it may be appropriate to disclaim aspects of appearance of the whole product (such as ‘protection is sought for the shape of the toothbrush, the materials, colours, words and patterns being disclaimed’), or a particular aspect of part of the product (such as ‘protection is sought for the shape and texture, but not colour, of the handle of the toothbrush’).

If there is no disclaimer, a tribunal will treat the full contents of the representation as the design.<sup>24</sup> While this may mean that the design might be valid, it might also make it easier for competitors to avoid infringement by altering or adding features so as to give a different overall impression (while perhaps still taking the features that embodied the registered proprietor’s primary design investment). Imagine, for example, that an application relates to a toothbrush and the design investment went into developing a bend in the brush. The applicant submitted a photographic representation of the brush, including multicoloured bristles, coloured plastic stem, and COLGATE logo, but failed to disclaim the colours, the bristles, logo, or the colour of the stem. A competitor could foreseeably reproduce the bend in the brush, apply a different logo, make the brush out of blue plastic with white bristles, and thus make a product that creates a different ‘overall impression’ on an informed user. (Of course, in an extreme case, it might be that the bend would be such a striking feature that even the competitor’s version would be regarded as creating the same overall impression.)

### 3.3 IDENTIFICATION OF THE PRODUCT

Although applicants for registration in the United Kingdom have to identify the product which they intend to apply the design to,<sup>25</sup> the significance of this should be made clear: design protection is *not* limited to the particular product mentioned in the registration<sup>26</sup> and, as a corollary, a design may lack novelty in the face of the design of a different product.<sup>27</sup> The identification of a product in the application is primarily procedural:<sup>28</sup>

<sup>20</sup> Verbal techniques could also usefully clarify colour, because ‘subtle shades of colour do not photograph or reproduce well’: Musker, 15.

<sup>21</sup> F.-K. Beier and P. Katzenberger, ‘Letter from the Federal Republic of Germany’ [1975] *Industrial Property* 246 (describing a German case in which this was permitted).

<sup>22</sup> RDA 1949, s. 22(1); RDR, rr 15(2), 67.

<sup>23</sup> UK IPO, *Designs Practice Note 2/03: Applying to Register Part of a Product* (January 2003).

<sup>24</sup> As was the practice formerly: *Kestos v. Kempat and Vivien Fitch Kemp* (1935) 53 *RPC* 139, 150.

<sup>25</sup> RDR, r. 14.

<sup>26</sup> See *Grupo Promer Mon Graphic SA v. OHIM*, Case T-9/07 (12 May 2010) (General Court, Fifth Chamber) (the ‘Metal Rappers’ case), [54]–[60].

<sup>27</sup> RDR, r. 14(3).

<sup>28</sup> It is also financial, since designs for lace and textile products are cheaper, and will affect whether the designs can be inspected.

it enables the design to be classified, searches to be made, and so on. Thus if a person designs a motif for use on wallpaper and identifies the product as wallpaper, the protection granted by registration is not limited to wallpaper: the use of the motif by a third party on curtain fabric and duvet covers would infringe. Equally, a design for a 'whistling kettle' might be rejected in the face of an identical design for a 'kettle', while a toy car might infringe the registered design of a full-scale automobile. While the primary role of the designed product is procedural (and, as such, does not directly affect the scope of protection), it may have some indirect consequences. For example, it is unlikely that a registered design for the shape of a chair would be infringed by its use on the shape of a table, because an informed user would be unlikely to find that the two designs give rise to the same impression. Where the appearance of the product and the nature of the product are inseparably connected, the product will matter. As we will see, the product which a design is ultimately linked to (which may be different from the product indicated in the application)<sup>29</sup> also plays an important role in identifying who the notional 'informed user' is and the degree of design freedom available—factors that shape questions of validity (notably novelty and individual character), as well as the scope of protection.

### 3.4 GROUNDS FOR REFUSAL AND EXAMINATION

A design application can only be refused on certain specified grounds.<sup>30</sup> In order to bring the UK system into line with OHIM practice, from 1 October 2006 the grounds for refusal in the United Kingdom were greatly restricted.<sup>31</sup> The Registrar *may* refuse to register a design if the application fails to comply with rules made under the Act,<sup>32</sup> and *must* do so if the application has not been made by the person claiming to be the proprietor of the design and, where relevant, the owner of a UK unregistered design right.<sup>33</sup> In addition, the Registrar *must* refuse an application if it does not comply with the definition of design,<sup>34</sup> if the design is dictated by function,<sup>35</sup> if it is contrary to public policy or morality,<sup>36</sup> or if the application is for an emblem mentioned in Schedule A1 to the Registered Designs Act 1949.<sup>37</sup> The Registrar *no longer* has the power to refuse registration on the grounds that the design lacks novelty or individual character. As a result of these changes, from 1 October 2006 the Registrar no longer examines applications for novelty and individual character (as had been past practice), effectively ending substantive examination in the United Kingdom. These issues can only now be addressed in invalidity proceedings or as a counterclaim in proceedings for infringement.<sup>38</sup> One of the consequences of the United Kingdom ending substantive examination of designs is that it increased the importance of post-grant challenges to the validity of designs.

<sup>29</sup> On this, see *Grupo Promer Mon Graphic SA v. OHIM*, Case T-9/07 (12 May 2010), [54]–[60], in which the General Court found that the relevant class of products was for 'pogs', 'rappers', and 'tazos', rather than the more general category 'promotional items for games'.

<sup>30</sup> RDA 1949, s. 3A (as amended).

<sup>31</sup> RDA 1949, s. 1A (repealed by the Regulation Reform (Registered Designs) Order 2006).

<sup>32</sup> RDA 1949, s. 3A(2). In many cases, refusal can be avoided and the Registrar can ask the applicant to amend the application. RDA 1949, s. 1(1), refers to applications to register 'a design' and, in stark contrast with the approach of the OHIM, the UK Registry operates a rule of one design per application. If an applicant mistakenly submits an application relating to more than one design, the examiner may raise a 'divide out' request, under s. 3B(3), leaving the original application as a 'parent' and treating additional designs as 'child' applications: UK IPO, *Designs Practice Note 3/03: Divide Outs* (March 2003).

<sup>33</sup> RDA 1949, ss 3A(3), (2)(3), 14.

<sup>34</sup> RDA 1949, ss 3A(4)(a), 1(2).

<sup>35</sup> RDA 1949, ss 3A(4), 1C.

<sup>36</sup> RDA 1949, ss 3A(4), 1D.

<sup>37</sup> RDA 1949, s. 3A(4)(c) and Sch. 1A.

<sup>38</sup> RDA 1949, ss 11ZA(1), 11ZB.

### 3.5 REGISTRATION AND PUBLICATION

On registration, the applicant is issued with a certificate and the design is open to inspection.<sup>39</sup> Registration gives the proprietor the exclusive rights set out in section 7 of the 1949 Act and described in Chapter 28. Registration is treated as being made as of the date of application (despite a typical three-month processing period).<sup>40</sup> As part of the reform of design law that took place in 2006, the Registrar is now required to open all new designs to public inspection<sup>41</sup> (thus ending the previous practice, which limited public access in relation to registered designs for textiles, wallpaper, or lace for two or three years<sup>42</sup>). As part of the reform of design law brought about by the Intellectual Property Act 2014, changes have been made to allow documents to be viewed online.<sup>43</sup> Under the 2006 regime, applicants were able to defer publication for 12 months; to bring UK law into line with European law, this has been changed by the 2014 Act to allow delay in publication for up to 30 months.

## 4 APPLYING TO REGISTER AT THE OFFICE OF HARMONIZATION IN THE INTERNAL MARKET

Registered Community design protection is acquired directly by application to the Office of Harmonization in the Internal Market (OHIM) at Alicante or indirectly through the offices of member states.<sup>44</sup> The procedure is governed by the Community Design Regulation<sup>45</sup> and the Community Design Implementing Regulation,<sup>46</sup> as supplemented by OHIM's *Examination Guidelines: Community Designs*.<sup>47</sup> From 1 January 2008, applicants have also been able to make use of the international registration system for industrial designs (established under the Hague Agreement and administered by WIPO) to obtain registration of a Community design.<sup>48</sup>

### 4.1 APPLICATION

The application, which must be signed, should include a request for registration, the name and address of the applicant (and their representative, if one is used), a representation of the design, an indication of the products in relation to which the design is intended to be used,<sup>49</sup>

<sup>39</sup> RDA 1949, ss 18, 22 (as amended); RDR, r. 67.      <sup>40</sup> RDA 1949, s. 3C.

<sup>41</sup> RDA 1949, s. 22(1).

<sup>42</sup> RDA 1949, s. 22(2) (repealed by Regulatory Reform (Registered Designs) Order 2006); RDR, r. 69.

<sup>43</sup> IP Act 2014, s. 9(2), introduces a new RDA 1949, s. 22(1)(aa). Section 9(3)–(6) makes consequential changes to RDA 1949, s. 22(5)–(6).

<sup>44</sup> CDR, Art. 35(1); Community Design (Fees) Regulations 2002 (SI 2002/2942) (UK charge: £15); M. Schlotelburg, 'The Community Design: First Experience with Registrations' [2003] *EIPR* 383.

<sup>45</sup> Council Regulation (EC) No. 6/2002 on Community designs [2002] *OJ L* 3/1 (5 January 2002).

<sup>46</sup> Commission Regulation (EC) No. 2245/2002 of 21 October 2002 implementing Council Regulation (EC) No. 6/2002 on Community designs [2002] *OJ L* 341/28 (17 December 2002).

<sup>47</sup> The Guidelines are available online at <<http://oami.europa.eu/en/office/aspects/pdf/ExamGuidelines.pdf>>

<sup>48</sup> The Hague Agreement Concerning the International Deposit of Industrial Designs 1999 allows applicants to make a single application to WIPO for a number of countries.

<sup>49</sup> CDR, Art. 36(2); CDIR, Art. 1(d). The indication of product should indicate clearly the nature of the product and OHIM requests applicants to utilize the 'Euro-Locarno List', which takes Locarno's 32 classes and elaborates in the region of 4,000–5,000 products: CDIR, Art. 1(d).

any relevant declaration of priority, a specification regarding languages,<sup>50</sup> and payment of the registration fee of €230. The application *may* also include a description, a request for deferment of publication, an indication as to classification, and citation of the designer.<sup>51</sup> Of these elements, the most important are the representation of the design<sup>52</sup> and the description. If an application fails to include the necessary data, the Office will not accord a filing date.<sup>53</sup>

## 4.2 REPRESENTATIONS

The representation should consist of a ‘graphic or photographic reproduction of the design in black and white or colour’.<sup>54</sup> (In contrast with the United Kingdom, where the Registrar may accept specimens, which can be mounted in the register, specimens can only be accepted at OHIM for registrations for which deferred publication is requested, since the process of publication in the Community Designs Bulletin by definition demands that the design be represented.)<sup>55</sup> Each representation must consist of at least one ‘view’ and may involve a maximum of seven views.<sup>56</sup> The Guidelines point out that since the representation is the means to specify the features of design for which protection is sought, ‘it is of the utmost importance that it is clear and complete and that nothing regarding the design is left to conjecture’.<sup>57</sup> The Guidelines further suggest techniques for delimiting the representation: dotted lines, for example, to indicate elements for which no protection is sought; ‘boundaries’ or ‘colouring’ (of black-and-white representations) to identify features for which protection is sought.<sup>58</sup> An official at OHIM has even said that ‘the selection of the means for representing a design is equivalent to the drafting of the claims in a patent: including features means claiming them’.<sup>59</sup> Thus the choice of the representations is up to the applicant; it is for the applicant to ensure that the features for which protection is sought can be distinguished clearly (although it is possible that, in some extreme cases, such as where the representations are obscured during fax transmission,<sup>60</sup> the application might not be given a filing date or might be rejected on the ground that it does not disclose a design).

The representation should only cover one design. Where registration is for a repeating pattern, ‘the representation of the design shall show the complete pattern and a sufficient portion of the repeating surface’.<sup>61</sup> Where registration consists of a ‘typographic typeface’, the representation should include the complete alphabet and all of the Arabic numerals, as well as five lines of text.<sup>62</sup>

The representation may also contain a single description per design not exceeding 100 words explaining the representation of the design or specimen.<sup>63</sup> However, this should not refer to novelty, individual character, or the technical value of the design. The description at OHIM is used both positively to explain aspects of the representation and negatively to

<sup>50</sup> The application can be made in any of the official languages of the Community, but must specify a second language from one of the five languages of the Office (Spanish, German, French, English, and Italian).

<sup>51</sup> CDIR, Art. 1(2). <sup>52</sup> CDR, Art. 36(1)(c); CDIR, Art. 1(c). <sup>53</sup> CDIR, Art. 10.

<sup>54</sup> CDIR, Art. 4.

<sup>55</sup> Alternatively, a specimen can be supplied (but only in relation to two-dimensional designs and where publication is deferred): CDIR, Art. 5(1). This facility seems to be made available to those who need time deciding whether to proceed to full registration, and presumably the submission of a specimen is regarded as minimizing the costs of securing protection to such undecided designers.

<sup>56</sup> CDIR, Art. 4(2). <sup>57</sup> OHIM, *Examination Guidelines: Community Designs*, [4.4].

<sup>58</sup> *Ibid.*, [11.4].

<sup>59</sup> M. Schlotelburg, ‘The Community Design: First Experience with Registrations’ [2003] *EIPR* 383, 385.

<sup>60</sup> OHIM, *Examination Guidelines*, [4.6.2]. <sup>61</sup> CDIR, Art. 4(3). <sup>62</sup> CDIR, Art. 4(4).

<sup>63</sup> CDIR, Art. 1(2)(a); CDR, Art. 36(3a); EC Green Paper, [8.6.7].

disclaim features for which protection is not desired. A description might say, for example, that ‘features depicted in broken lines are not claimed’ or that ‘protection is sought for the encircled features’.<sup>64</sup> (A distinct facility is provided for ‘partial disclaimers’ to be added after registration.<sup>65</sup>)

### 4.3 MULTIPLE DESIGNS

In order to make the system as cheap and attractive as possible, particularly to those industries producing large numbers of short-lived designs,<sup>66</sup> several designs may be combined in one application.<sup>67</sup> Multiple applications are permitted so long as the designs are intended to be applied to products within the same class of the Locarno Convention, and even that restriction does not apply in the case of ornamentation.<sup>68</sup> Where an application includes a number of designs, the application may be divided.<sup>69</sup> The process of using a single application for multiple designs has proved to be very popular.

### 4.4 SECRET DESIGNS AND DEFERRED PUBLICATION

Provision exists for the registration of secret designs, which can remain unpublished for 30 months.<sup>70</sup> This is seen to be desirable because publication can ‘destroy or jeopardise the success of a commercial operation involving the design’.<sup>71</sup> The OHIM deferred publication procedure, which is available in relation to all designs, can occur earlier if the applicant so requests.<sup>72</sup> In cases in which deferred publication is sought, an applicant does not have to prepare representations and may prefer to submit five copies of a specimen of each design (although these must be two-dimensional if they are to comply with practical requirements).<sup>73</sup> A request for deferment is required and a small fee has to be paid (€40), followed by the normal publication fee (€120) when the design is finally published. Protection during the period of deferred publication is, however, limited to situations in which the design proprietor can prove that there was copying of the design.

### 4.5 DESIGNER’S ATTRIBUTION

Another feature of the Community system worth noting is the designer’s ‘moral’ right of attribution—that is, the designer (or the design team) has the right to be ‘cited as such before the Office and in the register’.<sup>74</sup> It is rather strange that the procedural rules then state that the application may—but need not—mention the designer.<sup>75</sup> Perhaps this might be to enable the designer to remain anonymous, if they so wish, but the effect is to leave unstated exactly how issues of citation are to be resolved.<sup>76</sup> Pending the formulation of

<sup>64</sup> M. Schlotelburg, ‘The Community Design: First Experience with Registrations’ [2003] *EIPR* 383, 385.

<sup>65</sup> CDIR, Art. 18. <sup>66</sup> CDR, Recital 25.

<sup>67</sup> CDR, Art. 37, Recital 25; CDIR, Art. 2; EC Green Paper, [4.3], [8.7.1]. Fees are reduced for the second to the tenth designs; further reductions are available per design for the 11th design onwards.

<sup>68</sup> CDIR, Art. 2(2). OHIM, *Examination Guidelines*, [8.3], states that ‘ornamentation’ is ‘an additional and decorative element capable of being applied to the surface of a variety of products without affecting their contours’.

<sup>69</sup> CDIR, Art. 10(3). <sup>70</sup> CDR, Art. 50; CDIR, Art. 1(2)(b).

<sup>71</sup> CDR, Recital 26; EC Green Paper, [8.11.3].

<sup>72</sup> CDIR, Arts 15–16; EC Green Paper, [8.11.1] (explaining that deferred publication is desirable in the automobile industry, as well as the textile industry). <sup>73</sup> CDIR, Art. 5.

<sup>74</sup> CDR, Art. 18. However, if the design is a result of teamwork, the citation of the team may replace that of the individual designers. <sup>75</sup> CDIR, Art. 1(2)(d).

<sup>76</sup> Musker, 119–20.

specific rules by the Commission, existing legal procedures will need to be employed. In the case of a designer who has not been named by the legitimate proprietor, the most obvious way in which to enforce their right would be to bring an action against OHIM. Conflicts between teams and individuals would probably need to be resolved before national Community design courts, seeking a declaration as to who has the right to be cited as the designer before the Office and in the register. Such a declaration could then be the basis of a further action against OHIM. These procedural difficulties remove much of the significance of the designer's right to be cited.

#### 4.6 GROUNDS FOR REFUSAL AND EXAMINATION

OHIM does not conduct a substantive examination (for example as to subject matter, novelty, or individual character).<sup>77</sup> This is to minimize the procedural burdens on applicants, and to make protection cheaper and more readily available.<sup>78</sup> The idea is that examination is difficult, expensive, and inconclusive, and it is better that the validity of a given design be decided on the basis of an *inter partes* dispute (and thus disputes only over those designs with a significant market value).<sup>79</sup> Nevertheless if, on a formal examination, the Office 'notices' that the design does not satisfy the definition of design in Article 3a of the Community Design Regulation, or is contrary to public policy or accepted principles of morality, it shall notify the applicant, and, if the applicant fails to remedy the objection, OHIM shall refuse the application.<sup>80</sup> OHIM cannot, however, refuse obviously old designs.<sup>81</sup>

#### 4.7 REGISTRATION AND PUBLICATION

As long as the application meets the formal requirements, the Office is obliged to register the design and (except in cases of deferred publication) publish it in the Community Design Bulletin.<sup>82</sup> The published design registration includes the representations, indication of the product, and the name of the designer, but not any description lodged with the application.<sup>83</sup>

### 5 COMMUNITY UNREGISTERED DESIGN RIGHT

One of the distinguishing features of the unregistered Community design right is that it is not dependent on registration; instead, it arises automatically when certain conditions

<sup>77</sup> CDIR, Art. 11. A formal examination is conducted: CDR, Art. 45; CDIR, Art. 10. See also *Celaya Empananza y Galdos Internacional SA v. Proyectos Integrales de Balizamientos SL*, Case C-448/10 [2012] ECDR 17 (ECJ, First Chamber), [43] (describing the examination as an 'essentially formal, expeditious check'); cf. the *ex officio* examination of trade marks by OHIM.

<sup>78</sup> CDR, Recitals 18, 24. See also European Commission, *Explanatory Memorandum: Amended Proposal for a Council Regulation (EC) on Community Design* [2000] OJ C 248E, 3; Musker, 173.

<sup>79</sup> EC Green Paper, [2.3.4], [4.3.10]–[4.3.11]. A suggestion that the OHIM provides an optional examination facility was not taken up: EC Green Paper, [8.9.1].

<sup>80</sup> CDR, Art. 47; CDIR, Art. 11. OHIM, *Examination Guidelines*, [5.1], states that:

[C]ompliance with the definition of a design is subject to examination. Failure to comply with the definition constitute[s] a ground for non-registrability . . . Whether the product is actually made or used, or can be made or used, in an industrial or handicraft manner, shall not be examined.

<sup>81</sup> Musker, 177 (noting no basis on which to refuse obviously old designs or ones owned by others).

<sup>82</sup> CDR, Arts 48, 49, and 73; CDIR, Art. 13. The publication fee is €120.

<sup>83</sup> CDIR, Art. 14.

are satisfied. For a claimant to establish that they are the holder of an unregistered Community design right, they must do two things: (i) they must show that the design was initially made available to the public within the Community; and (ii) they must indicate what constitutes the individual character of their Community design. Once established, the onus falls on the defendant to contest the validity of the design either as a plea or a counterclaim in an infringement action. In the case of unregistered Community designs, jurisdiction to determine invalidity is confined to Community design courts, whether on an application for a declaration of invalidity or as a counterclaim to an infringement action.<sup>84</sup> As a preliminary matter, however, claimants first need to outline their design. This means that the claimant's pleadings are particularly important. As courts dealing with the UK unregistered design right have noted, this allows claimants to limit their claim to those parts of an article that have been copied—thus increasing their chances of a successful infringement action.<sup>85</sup>

To establish the existence of an unregistered Community design, the claimant must show that the design was first made available to the public within the Community.<sup>86</sup> If, as often will be the case, the question of the existence of the unregistered Community design arises in an infringement action, the claimant will also have to prove that the prior disclosure occurred within three years of the alleged infringement. It is clear that an unregistered Community design right cannot arise from a disclosure that occurs outside of the Community; the initial disclosure *must* occur within the Community.<sup>87</sup> If a design is initially disclosed outside of the Community, this not only means that the design will not be protected as an unregistered Community design, but also undermines the possibility of registering the design (because of a lack of novelty). In this situation, the only real option is for an applicant to rely upon the one-year grace period that is provided for in limited situations (discussed in Chapter 27).<sup>88</sup>

The second thing that a claimant must do to establish the existence of an unregistered Community design is 'to indicate what constitutes the individual character of their Community design'.<sup>89</sup> This means that, as well as setting out their design, a claimant also has to indicate those elements of the design that 'create a different overall impression on an informed user from any design that has been previously made available to the public'.<sup>90</sup> In *Karen Millen v. Dunnes Stores*,<sup>91</sup> the Irish High Court rejected the defendant's argument that to establish the existence of an unregistered Community design right, a claimant needed to *prove* that the design has individual character (rather than the much easier requirement of merely *indicating* what the individual character was). The Court rejected this argument on the basis that because the unregistered Community design was meant

<sup>84</sup> CDR, Arts 24, 25. Pending designation of such courts, the matter could be dealt with in the High Court or Patents County Court (now the Intellectual Property Enterprise Court, or IPEC).

<sup>85</sup> See *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289, 422; *Fulton v. Totes Isotoner* [2004] RPC (16) 301, [34]; *Virgin Atlantic Airways v. Premium Aircraft Interiors Group* [2009] EWHC 26, [27]–[28].

<sup>86</sup> CDR, Art. 11.

<sup>87</sup> To provide certainty, in May 2004, the Commission introduced CDR, Art. 110a(5). This provides that, '[p]ursuant to Article 11, a design which has not been made public within the . . . Community shall not enjoy protection as an unregistered Community design'. See also the decision of the German BGH, *Gebäckpresse* ['Pastry Press'] I ZR 126/06 [2009] GRUR 79. On this, see A. Gartner, 'Bundesgerichtshof (Pastry Press): The disclosure of designs outside the European Community' [2010] EIPR 181.

<sup>88</sup> One question that needs clarification is whether, to establish the existence of an unregistered Community design, a claimant must also prove that the design has been disclosed in a way that could reasonably have become known in circles specialized in the sector concerned (as per CDR, Art. 11(2)). See Stone, 302–3 (arguing that it may).

<sup>89</sup> CDR, Art. 85(2). <sup>90</sup> CDR, Art. 6.

<sup>91</sup> [2007] IEHC 449. See also *Bailey v. Haynes* [2006] EWPC 5, [53]–[54].

to provide designs with a short market life with protection without the burden of registration, this would have imposed a greater burden on claimants to unregistered designs than was imposed on parties who made use of registered designs. While this seems to be the correct approach, the Irish Supreme Court has made a request for a preliminary ruling from the Court of Justice on this issue. In particular, the Irish Supreme Court has asked:

Is a Community design court obliged to treat an unregistered Community design as valid for the purposes of Article 85(2) of the Regulation where the rights holder merely indicates what constitutes the individual character of the design, or is the right holder obliged to prove that the design has individual character?<sup>92</sup>

This question is important because if a higher standard of proof is imposed on claimants, it will take away one of the key advantages of the unregistered right—namely, the option of a relatively cheap and easy way of protecting designs with a short market life (such as fashion).

## 6 WHICH AVENUE TO CHOOSE?

The registered Community design right and the UK registered design right can exist cumulatively<sup>93</sup> or as alternatives. If only one form of registration is wanted, the registered Community design may be preferable to a UK registered design (and other national rights) for a number of reasons, including that it is a Community-wide right, it is cheaper,<sup>94</sup> it is administratively more convenient (for example because of the possibility of making a single application with multiple designs), or because it offers the benefits of deferred publication. However, in some circumstances national registration may be preferable to a registered Community design. Local protection may be preferred because in some countries—but not the United Kingdom—local protection may enable the proprietor to obtain a registration for, and protection over, spare parts. Many of the reasons for choosing the UK system over the Community scheme that existed in the past—notably the benefits of substantive examination and, for the textile industries, the United Kingdom's (temporarily) closed register (with full monopoly rights)—no longer exist. Given that registration in the United Kingdom no longer offers many substantial advantages over a Community registration, it is not surprising that the opening of OHIM in April 2003 prompted a notable decline in the number of UK applications. Since it was opened, the number of registrations at OHIM have steadily increased (and are continuing to do so at the rate of 75,000 per year), with more than 690,000 designs registered at the end of 2013.<sup>95</sup> It seems that this trend is likely to continue in the future.

<sup>92</sup> *Karen Millen v. Dunnes Stores*, Case C-345/13 (pending). <sup>93</sup> CDR, Art. 95.

<sup>94</sup> OHIM charges a fee of €230 for registration and €120 for publication. In the case of multiple applications, the basic fee must be paid only for the first design; thereafter, for the second to tenth designs, the fee is halved (to €115), and if the application contains 11 or more designs, the registration fee is reduced to €50. In the United Kingdom, the fee is £60 per application (except if the design is for lace or consists substantially of stripes or checks to be applied to textiles, in which case it is £35).

<sup>95</sup> OHIM, 'Statistics', available online at <<https://oami.europa.eu/ohimportal/en/the-office>> In comparison, total UK design applications for 2002 numbered 9,505 and there were 9,192 registrations. By 2005, the number of designs registered had dropped below 4,000. For analysis of UK registered design applications from 1989 to 2005, see Gowers Review, 43. Between 2009 and 2012, the numbers stood at just over 4,000 per year.

## SUBJECT MATTER: THE REQUIREMENT THAT THERE BE A DESIGN

### CHAPTER CONTENTS

1 Requirements for Protection	705	3 Exclusions: What is <i>not</i> a Design	715
2 What is a Design?	706		

### 1 REQUIREMENTS FOR PROTECTION

Prior to harmonization (and with one or two exceptions, notably in Scandinavia), most European countries set a low threshold that needed to be satisfied for a design to be protected—asking only that the design meet some standard of local novelty.<sup>1</sup> An advantage of a low threshold is that it allows protection for different designs. However, a disadvantage of making protection readily available is that the protection conferred is necessarily very limited. If design protection is permitted at a low threshold and protection is strong, this could lead to unwarranted interference with the development of subsequent designs. To prevent this, it has been common to match a low threshold with weaker rights. Such an approach is frustrating for the developers of highly innovative designs because it means that they will often find it difficult to establish infringement.<sup>2</sup>

Initially, the European Commission proposed to reinvigorate design protection by setting the threshold of protection at a higher level.<sup>3</sup> The Commission planned to protect fewer designs, but proposed that the protection that was granted was to be worth having.<sup>4</sup> To this end, a Green Paper proposed that designs should be only protected if they possessed ‘distinguishing character’.<sup>5</sup> After consultation, it was accepted that the idea was

<sup>1</sup> European Commission, *Green Paper on the Legal Protection of Industrial Design* (June 1991), III/F/5131/91–EN (henceforth the ‘EC Green Paper’), [2.3.7], 18. See M. Franzosi commentary, in Franzosi, 46; M. Levin commentary, in Franzosi, 64–5.

<sup>2</sup> M. Levin commentary, in Franzosi, 67. It was a common complaint that, prior to harmonization, the UK registered design system rarely produced a monopoly worth having.

<sup>3</sup> Fellner, [6.017]; cf. M. Franzosi commentary, in Franzosi, 58–9 (a halfway standard).

<sup>4</sup> EC Green Paper, [5.5.6.3]; ‘Official Commentary on Regulation’, in Franzosi, 56.

<sup>5</sup> Even in the EC Green Paper, the Commission proposed that this was to be assessed using a limited prior art. More specifically, it proposed that design should be protected only ‘if the design is distinct to designs known to the circles specialised in the sector concerned’ and that the design ‘distinguishes itself from any other design known to such circles . . . through the overall impression it displays in the eyes of the relevant public’: EC Green Paper, 5.

impractical and likely to cause confusion with trade marks—‘distinguishing character’ being similar (in English, at least) to the concept of distinctive character in Article 3(1)(b) of the Trade Marks Directive.<sup>6</sup> Moreover, in the course of consultation and during the legislative process,<sup>7</sup> it came to be accepted that a higher threshold would not work well for some industries, such as textiles.<sup>8</sup> In order to accommodate the differing needs of different industries and the cyclical nature of fashion, a new formula was employed. This is now captured in the requirements for validity that are set out in Article 25(1) of the Community Design Regulation.

### 1.1 REQUIREMENTS FOR VALIDITY

In order to be valid,<sup>9</sup> UK registered designs, Community registered designs, and unregistered Community designs need to satisfy a number of different criteria.<sup>10</sup> These are that:

- (i) there must be a ‘design’;
- (ii) the design must be ‘new’;
- (iii) the design must have ‘individual character’;
- (vi) the applicant or right holder must be entitled to the design; and
- (v) the design must not conflict with earlier relevant rights (which include earlier design applications, trade mark rights, copyright, and rights relating to certain types of emblem).

In this chapter, we focus on the first of these criteria—namely, the requirement that there must be a design. We then turn in Chapter 27 to look at the remaining requirements for validity—namely, novelty, individual character, and the question of whether an applicant or rights holder was entitled to grant, as well as conflict with earlier rights.

## 2 WHAT IS A DESIGN?

The scope of the design system is delimited at the most basic level in the way the subject matter that is able to be protected is defined.<sup>11</sup> In design law, this is reflected in the basic requirement of validity—that is, that there must be a ‘design’. For the purposes

<sup>6</sup> M. Franzosi commentary, in Franzosi, 59, n. 50; M. Levin commentary, in Franzosi, 68 (the change ‘has its real grounds in a translation problem’, noting that the German word *Eigenart* remains).

<sup>7</sup> The threshold included in the original proposal to the effect that the design must ‘differ significantly’ from previous designs was further reduced by removal of the adverb ‘significantly’ in the European Parliament: see Musker, 30. Note, however, that Designs Dir., Recital 13, left in ‘differs clearly’—‘a small difference [that] may be “clear” but not “significant”’: Musker, 31.

<sup>8</sup> R. Posner commentary, in Franzosi, 6; M. Franzosi commentary, in Franzosi, 62. The Scandinavians favoured a high threshold; the automobile industry was opposed to such a standard: F.-K. Beier, ‘Protection for Spare Parts in the Proposals for a European Design Law’ (1994) 25 *IIC* 840, 852–5.

<sup>9</sup> Similar to the situation in relation to registered designs, once an unregistered Community design has been found to exist, the obligation falls upon defendant to challenge its validity.

<sup>10</sup> In *Grupo Promer v. OHIM and PepsiCo*, Case T-9/07 (18 March 2010), [30], the General Court held that the grounds for invalidity in CDR, Art. 25(1), were exhaustive and, in line with this, that the bad faith of the rights holder was not a ground for invalidity.

<sup>11</sup> If an application for a UK registration does not relate to a design, it should be refused: RDA 1949, s. 1A(1)(a). If it comes to be registered, such a design can be declared invalid: RDA 1949, s. 11ZA(1). In the case of an application to register a Community Design, the fact that the design does not ‘correspond to the definition under Article 3(a)’ constitutes a ground for non-registrability: CDR, Art. 47(1)(a). It is also a

of UK registered designs, registered Community designs, and unregistered Community designs, the definition of ‘design’ is identical. Article 3(a) of the Community Design Regulation defines a design as ‘the appearance of the whole or part of a product resulting from the features of, in particular, the lines, contour, colours, shape, texture and/or materials of the product itself and/or its ornamentation’.<sup>12</sup> This definition is exceedingly broad—broader than the definitions previously used in many member states.<sup>13</sup>

There are three key elements to this definition of design which we will look at in turn—namely, appearance, features, and product.

## 2.1 APPEARANCE

The first thing to note about the way ‘design’ is defined is that it focuses on the *appearance* of products. While this directs attention to the look of products, there is no requirement that a design needs to be attractive, decorative, ornamental, or aesthetically pleasing; nor is there anything that limits protection to aesthetic designs: it is possible to protect functional designs, so long as some consideration is given to the look of the design.<sup>14</sup> ‘Appearance’ is defined very broadly. It includes moving designs (such as symbols or lines moving across computer screens); it may extend to include microscopic designs not visible to the naked eye (which would have important ramifications for nanotechnology);<sup>15</sup> and while single colours are unlikely to be registrable, complex patterns and combinations may.<sup>16</sup>

For the most part, the focus on the appearance of products is straightforward. One question that remains unclear, however, is whether the focus on the appearance of products means that protection is confined to visual features or whether the definition is broad enough to encompass materials, textures, smells, and sounds that are perceived by senses other than the eye. The reference to ‘texture’ and ‘materials’ in Article 3(a) of the Regulation implies that touch may be an important attribute of a design. This suggests that a conventional style of clothing might be protected when it is made of a new material with a distinct texture (as LYCRA once was).<sup>17</sup> Equally, the weight and flexibility of materials might be an important part of the design. Whatever merit there might be in recognizing (and rewarding) the non-visual aspects of design,<sup>18</sup> it seems that design law

ground for invalidity, under CDR, Art. 25(1)(a), and this can be raised against registered and unregistered Community designs.

<sup>12</sup> Designs Dir., Art. 1(a); CDR, Art. 3(a); RDA 1949, s. 1(2).

<sup>13</sup> Previous British law (RDA 1949, as amended by the CDPA 1988) had defined designs as ‘features of shape, configuration, pattern or ornament applied to an article by an industrial process, being features which in the finished article appeal to and are judged by the eye’. It also required that the article be one for which appearance was material—that is, that persons acquiring the article took appearance into account when deciding which article to acquire.

<sup>14</sup> No aesthetic criteria are applicable: Designs Dir., Recital 14; CDR, Recital 10. See also European Commission, *Explanatory Memorandum to the Proposal for a Regulation for a Council Regulation (EC) on Community Design* [2000] OJ C 248E/3, [8.2]; M. Levincommentary, in Franzosi, 83.

<sup>15</sup> A ‘design is something that is discernable or recognizable (not necessarily to the naked eye): *A Fulton v. Totes Isotoner (UK)* [2004] RPC (16) 301, [31].

<sup>16</sup> ‘It goes without saying that a colour in itself or a material as such are not eligible for protection’: ‘Official Commentary of Proposal for Regulation’, in Franzosi, 36. See further Stone, 33.

<sup>17</sup> M. Franzosi commentary, in Franzosi, 41 (‘all those . . . elements of the product which may be perceived by the human eye or by touch’). It was not the Commission’s initial intention that the definition be limited to aspects perceptible by the eye: EC Green Paper, [5.4.7.2] (referring to the texture of textiles).

<sup>18</sup> Designs Dir., Recital 11, speaks of protection ‘for those design features of a product, in whole or in part, which are shown visibly in an application’. Nonetheless, it does not require that protected features be

is fixated on the visual appearance of objects.<sup>19</sup> As such, it seems that texture and feel will only be protected insofar as they form part of the visual appearance of a product—that is, they will only be protected when they can be seen. In line with this, sounds, smells and taste have been held to fall outside the definition of design because they do not relate to the appearance of products.<sup>20</sup>

While the internal features of products—but not ‘complex products’, which are subject to special rules discussed below—such as the inside of a suitcase may be protected so long as the features can be represented,<sup>21</sup> questions have arisen about *when* a design needs to be visible. This is particularly important for designs that are only visible after a product has been purchased. Here, the question arises: does a design have to be visible at the time of purchase or is it acceptable that hidden features are revealed during normal use of the product? What would be the case, for example, if a design for the inside of a chocolate were visible only when it is eaten? While it has been argued that there is nothing in the Regulation that restricts designs to those aspects of appearance that are visible at the time of purchase,<sup>22</sup> the Polish Supreme Administrative Court has held that an application to register a design of an ice cream, which consisted of a ball-shaped, uncut solid, which contained filling that was not visible until the ice cream was eaten, was not registrable as a design. This was because ‘all features of the product appearance or its parts that give it a certain image of the design had to be present at the time’ that the product was purchased.<sup>23</sup>

## 2.2 FEATURES

According to the definition of design used in the Community Design Regulation and the Designs Directive, the appearance that is protected must result from the *features* of a product.<sup>24</sup> The definition of design provides a non-exhaustive list of characteristics that can produce the requisite appearance, including lines, contours, shape, texture, or materials. This is a broad list that covers most types of design including aspects of conventional

solely or fully comprehended and appreciated from the visible representation: *Lindner Recyclingtech GmbH v. Franssens Verkstöder AB*, Case R 690/2007-3 (22 October 2009) (OHIM, Third Board of Appeal), [34] (‘Community design law is concerned with the visual appearance of products’); *Gimex International Groupe Import v. The Chill Bag Co Ltd* [2012] EWPC 31, [25].

<sup>19</sup> For arguments that ‘appearance’ is limited to the visual, see Musker, 12 (it is questionable whether the word is appropriate to any sense other than sight). The equivalent terms in the Directive are *l'apparence d'un produit* (French), *la apariencia* (Spanish), *l'aspetto* (Italian), and *Erscheinungsform* (German). This is consistent with the requirement in Recital 13 that the design be protected only if it has individual character, a determination to be made by reference to an ‘informed user *viewing* the design’, and with the requirement in Recital 11 that protection corresponds to the features ‘shown *visibly* in an application’. This provision was included as part of a compromise justifying rejection of parliamentary amendments that designs were to protect only ‘outwardly visible’ features: see H. Speyart, ‘The Grand Design’ [1997] *EIPR* 603, 605–6. See above pp. 696–7.

<sup>20</sup> See *Eli Lilly*, Case R-120/2001-2 (4 August 2003) (OHIM Board of Appeal). On this, see Stone, 32.

<sup>21</sup> Patent Office, *Legal Protection of Designs: A Consultation Paper on the Implementation in the United Kingdom of EC Directive 98/71/EC* (February 2001), 4, [3].

<sup>22</sup> Stone, 37ff.

<sup>23</sup> K. Maciaszek, ‘Poland: Are the Designs within an Ice-Cream to be Registered as an Industrial Design?’ [2012] *EIPR* 656, 658, citing *Przedsiębiorstwo Produkcji Lodow v. Patent Office* (20 March 2007). Stone criticized this decision on the basis that protection extends to stocking, importing, making, and various other uses of the design: Stone, 38. It could be said that, in these situations, the ‘hidden’ design would still not be visible.

<sup>24</sup> Although some commentators have suggested that design law can protect the ‘cachet’ or ‘coolness’ of a product, insofar as such cachet arises from images associated with a product, it cannot be treated as an aspect of appearance that ‘results from’ the identified features.

graphic design, industrial design, product and packaging design, and fashion design.<sup>25</sup> In the case of a mobile phone, for example, it would include the overall shape, the arrangement of buttons, the positioning of the earpiece and screen, the colour of the screen, the lettering, and the numbering. In the case of an item of clothing, such as a shirt, it would include the shape of the collar, the proportions, pattern, embroidered features (such as buttonholes), and potentially also the colours.

### 2.3 PRODUCT

The third notable feature of the way ‘design’ is defined is that it focuses on the appearance of *products* or *parts of products*. ‘Product’ is defined exhaustively and very broadly in Article 3(b) of the Regulation as ‘any industrial or handicraft item, including inter alia parts intended to be assembled into a complex product, packaging, get ups, graphic symbols and typographical typefaces, but excluding computer programs’.<sup>26</sup> This definition is very broad, covering items such as clothes, fabric, furniture, electrical goods, and motor vehicles. It also includes packaging, get-up, graphic symbols, and typefaces. It does not, however, extend to computer programs, which are expressly excluded. The reference to *part of a product* allows someone to claim the design of aspects of a product, such as a handle of a cup or the spout of a teapot. ‘Part of a product’ needs to be distinguished from a ‘component part of a complex product’ which, as we will see, needs to satisfy different criteria to be valid.

#### 2.3.1 Products associated with copyright

One question that has arisen is whether paintings, drawings, or buildings are ‘products’ within the meaning of the Directive and Regulation. If so, it seems that a number of types of work typically protected by copyright might also be protectable as designs—either through national or Community registration, or automatically (as unregistered Community designs) after being made available to the public.<sup>27</sup> In turn, this creates the possibility of monopoly protection over designs for up to 25 years.

(i) *Paintings* For a painting to be protected as a design, it would have to be able to be classified as a ‘handicraft item’. A preliminary question here is whether a painting is an ‘item’ for the purposes of Article 3(b). Under old British case law on registered designs, where the definition of registrable design included ‘pattern and ornament . . . applied to an article’, it was held that the article had to have a distinct existence from the design—so that a design of a football pools coupon was not registrable because the design *was* the article.<sup>28</sup> The fact that graphic symbols are listed as ‘items’ in Article 3(b) seems to suggest, however, that the Community definition of design does not require a distinction to be drawn between product and design. Thus it seems that a painting could be an item for the purposes of Article 3(b). Next, it is necessary to ask: is a painting an *industrial or handicraft* item? Presumably, it could be argued that a painting is neither, because painting is non-industrial and is artistic rather than handicraft. While this would mean

<sup>25</sup> M. Franzosi commentary, in Franzosi, 40 (‘as neutral and broad as possible in order to cover any marketing value attached to the form or shape of a product’).

<sup>26</sup> Designs Dir., Art. 1(b); RDA 1949, s. 1(3); CDR, Art. 3(b).

<sup>27</sup> One could also protect such works when copyright has lapsed if they have previously not been widely published.

<sup>28</sup> *Re Littlewood’s Pools* (1949) 66 *RPC* 309. British law also excluded many items from the definition of ‘article’ and thus from the design regime, through RDR, r. 26 (relating to articles of primarily a literary or artistic character).

the design of a painting would fall outside the definition of a design and thus would prevent design law from duplicating the protection conferred by copyright, tribunals are likely to find it difficult to draw a boundary between art and handicraft.<sup>29</sup>

(ii) *Buildings* One of the stumbling blocks to using design law to protect the efforts of architects is the uncertainty about whether the objects to which the design is applied—namely, buildings and structures—fall within the definition of a product. Again, the issue here is whether a building could be classified as an ‘industrial or handicraft item’. Under old case law, it had been held that building was not an ‘industrial process’ and, as such, that a design for a petrol filling station was unregistrable.<sup>30</sup> If followed, this would suggest that buildings and structures are not ‘industrial items’, and thus not products for the purposes of Article 3(b). This would be consistent with the fact that infringement is defined in such a way to suggest that the Directive and Regulation had portability in mind.<sup>31</sup> However, it should be observed that some commentators have taken a different view, arguing that environmental designs, whether internal or external, are protectable.<sup>32</sup> One factor that may be relevant here is that the Euro-Locarno Classification System, which was specially designed for classification of designs by the Office of Harmonization in the Internal Market (OHIM), includes houses, buildings, and buildings (transportable) in Class 25, ‘Building Units and Construction Elements’.<sup>33</sup>

(iii) *Computer programs* Article 3(b) of the Regulation specifically excludes computer programs from the definition of a product.<sup>34</sup> Consequently, the appearance of computer programs are unable to be protected by a UK registered design, a registered Community design, or an unregistered Community design right. Determining what this exclusion covers may prove to be tricky. One possible construction is that the appearance of a computer program is the appearance of the source or object code and thus that this is not capable of protection. Such a construction, which has been favoured by a number of commentators, would exclude from design protection the sort of material that is covered by copyright under the Software Directive. However, such a construction would not exclude the effects of running the program in a computer: the user interface or images that appear on the computer screen might be protected individually or in the overall appearance.<sup>35</sup>

<sup>29</sup> See Stone, 44 (noting that the OHIM has accepted more than 300 registered Community designs for ‘sculptures’, more than 70 of which are ‘paintings’).

<sup>30</sup> *Collier & Co.’s Application* (1939) 54 RPC 253. <sup>31</sup> Musker, 18.

<sup>32</sup> C.-H. Massa and A. Strowel, ‘Community Design: Cinderella Revamped’ [2003] *EIPR* 68, 71 (giving examples of amusement parks and gardens).

<sup>33</sup> Under the Locarno Agreement Establishing an International Classification for Industrial Designs 1968, which is administered by WIPO and open to members of the Paris Union.

<sup>34</sup> At one stage, the Commission said that this was because computer programs ‘cannot be designed’: European Commission, *Explanatory Memorandum to the 1993 Proposal for a Council Regulation on the Legal Protection of Designs* [1994] *OJ C* 29/20, COM(1993) 342 final. Franzosi disagreed, stating that ‘[i]n reality this is not completely correct’: M. Franzosi commentary, in Franzosi, 43. However, it should be noted that the Commission continues by saying that:

[It] may be useful, however, to state explicitly that the copyright protection provided under the umbrella of the aforementioned Directive cannot be supplemented or reinforced by a protection of the ‘look and feel’ of a computer program by way of design protection.

<sup>35</sup> See Patent Office, *Legal Protection of Designs* (February 2001), [4] (stating that the exclusion covers the programs themselves, i.e. the lines of code and the functionality); Musker, 16 (‘the exclusion of screen displays seems either unnecessary or harmful’, so that the scope of the exclusion should be confined to what is protected by copyright); A. Kur, ‘Protection of Graphical User Interfaces under European Design Legislation’ (2003) 34 *IIC* 50 (arguing that the exclusion may apply to the visual appearance generated by a computer program in its entirety, but not to individual graphic elements). Note also *Bezpečnostní Softwarová Asociace—Svaz Softwarové Ochrany v. Ministerstvo Kultury*, C-393/09 [2011] *FSR* (18) 465 (ECJ).

Indeed, Article 3(b) of the Regulation refers to ‘graphic symbols’ as products and it is widely accepted that this includes computer icons.<sup>36</sup> Insofar as they can be reduced to the form needed to meet the procedural requirements of national or Community law, it is possible to protect certain aspects of web design.<sup>37</sup> However, it is may be difficult to represent dynamic effects and sound effects visibly in the application.<sup>38</sup>

### 2.3.2 Corporeal and biological products

In an era during which there is widespread interest in the medical and cosmetic design of the human body, it might be asked whether designs for things such as body parts, tattoos, artificial limbs, and genetically modified animals (such as a scarlet-coloured cat) can be protected. The Euro-Locarno Classification System includes artificial eyes, limbs, and teeth in Class 24, and hairpieces in Class 28, suggesting that the appearance of prosthetics and wigs are designs. As such, there seems little reason not to treat these as ‘industrial items’. Tattoos are probably not designs, since it is unlikely that the courts would think it acceptable to call the human body an ‘industrial or handicraft item’.<sup>39</sup> (However, were a tattoo design to be registered as a painting, if this were possible, it might be an infringement of a registered design right to apply the image to a body, because this might amount to using the design.<sup>40</sup>)

Given that plant breeding, particularly of ornamental plants, is often concerned with the appearance of plants, whether as a whole or elements thereof such as flowers and leaves, the question might also be asked: to what extent can new types of plant be protected as designs? A key stumbling block here is that design protection is only available for ‘human-created, manufactured items’.<sup>41</sup> Another related problem is that plants are not usually seen as industrial items. One of the lessons to be drawn from the gradual inclusion of biological innovations into other areas of intellectual property (notably patents) is that it has been accompanied by a reconfiguration of basic concepts.<sup>42</sup> At this stage, it seems unlikely that this will occur in design law; instead, it seems that plants (along with animals) will not be regarded as ‘industrial items’ and thus not be classified as products. Indeed, this seems to be the approach adopted at OHIM, which rejected a Polish application on the basis that ‘the representation showed a real animal’.<sup>43</sup> The upshot of this is that while it may be possible to register plastic moulds used to grow heart-shaped strawberries (or rectangular watermelons), it would not be possible to register the design of the resulting heart-shaped strawberry itself (see Fig. 26.1).

### 2.3.3 Semiconductor chip products

It is worth noting that the design of the surface features (or topographies) of semiconductor chips falls within the ambit of the definition of design. Member states must therefore protect topographies as registered designs. Topographies are also protectable by

Third Chamber) (graphic user interface is not software protected under the Software Directive, but may be a graphic work protected by copyright).

registered Community designs and automatically by unregistered Community designs. This raises difficulties because member states are already obliged by the 1986 Chip Directive<sup>44</sup> to protect chip topographies that are the result of the creator's own intellectual effort and are not commonplace. As if this accumulation of different modes of protection were not inconvenient enough, the registered design system has important variations from those operating under the Chip Directive. For example, where the Chip Directive works on the basis of reciprocity, national treatment principles apply to registered designs under the Paris Convention.<sup>45</sup> Similarly, the rules on ownership are different.<sup>46</sup> Thankfully, it is unlikely that the chip industry will take advantage of design protection.

### 2.3.4 Complex products

As indicated, the Community Design Regulation allows for the protection of designs of 'parts intended to be assembled into a complex product'.<sup>47</sup> A 'complex product' is defined as 'a product which is composed of multiple components which can be replaced

<sup>44</sup> Council Directive 87/54/EEC of 16 December 1986 on the legal protection of semiconductor products [1986] *OJL* 24/36 (27 January 1987).

<sup>45</sup> Cf. Chip Dir., Recital 6 (on the extension of protection to persons outside the Community). See below pp. 804–5.

<sup>46</sup> Chip Dir., Art. 3(2) (allowing, but not requiring, member states to allocate ownership to employer 'where a topography is created in the course of the creator's employment', or to a commissioner); CDR, Art. 14(3) (allocating ownership to employer, but only where 'developed by an employee in the execution of his duties or following the instructions given by his employer'). Given that topographies might also be protected by patents, utility models, or copyright, the domain seems to be absurdly overregulated.

<sup>47</sup> Designs Dir., Art. 1(b); RDA 1949, s. 1(3); CDR, Art. 3(b). As a result, it seems that the rule in *R v. R DAT, ex p Ford* [1995] *RPC* 167 has been reversed.

permitting disassembly and reassembly of the product'.<sup>48</sup> The meaning of this phrase is important because component parts of complex products need to meet a special standard of novelty and individual character before they can be protected—namely, the only features of a 'complex product' that are taken into account when determining novelty and individual character are those features that are visible during 'normal use'.<sup>49</sup> It is also important because they are subject to special (as yet unharmonized) limitations.<sup>50</sup>

In 2003, the UK Designs Registry suggested that a complex product was something that consisted of a number of parts, one of which will need maintenance, service, or repair during the life of the complex product (usually a product with mechanical, electrical, and/or electronic features, such as a motor car).<sup>51</sup> This approach, which would have limited the scope of complex products, has not been followed. Instead, the courts and tribunals have adopted a more straightforward approach. As well as including complex technical objects such as cars,<sup>52</sup> machines for shredding materials for recycling,<sup>53</sup> and lawnmowers,<sup>54</sup> a number of less technical objects have also been found to be 'complex products'. These include a skirting board made up of several components, which could be taken apart and put back together if, for example, the cables behind the skirting board needed to be changed or the floor refurbished,<sup>55</sup> a window blind system with a number of component parts (including the head rail, plastic ends, pulley, and track),<sup>56</sup> and a fireplace.<sup>57</sup> In these cases, two things were important: (i) that the final product was made up of a number, presumably at least two, component parts; and (ii) that the final product was able to be disassembled and reassembled. The latter point means that where a final product (which is made up of a number of component parts) is put together in such a way that it cannot subsequently be taken apart and reassembled (presumably without unreasonable effort), it will not be a complex product.

Many products will be classified as complex products: nearly anything bought from stores such as Ikea, where the final product (such as a bookshelf, bed, or chair) is sold in parts to be put together by consumers using Allan keys and screwdrivers would qualify. It seems that the chief hurdle for something to be classified as a complex product is the requirement that the final product must be able to be disassembled and reassembled. Thus wire mesh that was designed to act as reinforcement in concrete was held not to be a component part of a complex product, the reason being that once the wire was put to its normal

<sup>48</sup> Designs Dir., Art. 1(c); RDA 1949, s. 1(3); CDR, Art. 3(c). The British implementation of Art. 1(c), contained in s. 1(3), as amended, redefined 'complex product' to mean 'a product which is composed of at least two replaceable component parts permitting disassembly and reassembly of the product'.

<sup>49</sup> CDR, Art. 4(2).

<sup>50</sup> Designs Dir., Arts 3(3), 14; RDA 1949, ss 1B(10), 7A(5); CDR, Arts 4(2), 110.

<sup>51</sup> UK IPO, *Designs Practice Notice 1/03: Component Part of Complex Product Visible in Normal Use* (7 January 2003).

<sup>52</sup> *Estrella Dominguez Martinez v. BMW*, Case ICD 8701 (22 May 2013) (Invalidity Division) (component part was the wheels).

<sup>53</sup> *Lindner Recycling v. Franssons Verkstader*, Case R 690/2007–3 (22 October 2009) (Board of Appeal) (component part was the chaff cutters).

<sup>54</sup> *Kwang Yang Motor v. OHIM*, Case T 10/08 (9 September 2011) (GC), [20]–[21] (component part was the internal combustion engine).

<sup>55</sup> *Profile Vox v. Cezar Przedsiębiorstwo*, Case R 442/2011–3 (15 April 2013) (Third Board of Appeal), [30].

<sup>56</sup> *Louwer-Lite v. Harris Parts* [2012] EWPC 53, [23] (component part was the headrail of the window blind).

<sup>57</sup> *Euro Fire v. Tarnavva*, Case R 316/2008–3 (14 October 2009) (Board of Appeal) (component part was the fireplace inserts).

use and encased in concrete, it could not be disassembled and reassembled.<sup>58</sup> The situation is similar for products such as ice creams and chocolates, which, although they may be made up of a number of subsidiary parts that are combined together, are often difficult to disassemble into the component parts and cannot (usually) be reassembled after they have been broken open.<sup>59</sup>

One question that has arisen is whether a component part includes a part that is exhausted and disposed of such as a printer cartridge. The UK Designs Registry has indicated that consumable items that are intended to be ‘used up’ are not ‘component parts’; it prefers the test that, absent the part, the item would not be seen as a complete product.<sup>60</sup> A laser printer would be seen as a complete product without its cartridge (although it would not function), so the cartridge is not a component part (although the printer may be a complex product). However, the Design Registry said that:

Parts which are not ‘used up’ in the same sense as consumables but which might require replacement from time to time in order to enhance the performance of the complex product (e.g. parts of engines such as spark plugs) are considered to be component parts and so may face objections to registration.<sup>61</sup>

The Design Registry’s definition has limited authority and its formulation and/or application is difficult to support. To say that a part is a component only if, absent the part, the item would not be seen as a complete product raises the question of when an item would be seen as a complete product: is a car a complete product without its hubcaps, tyres, wing mirrors, fenders, seats, fan belt, or spark plug?

The question also arises whether, when Article 3(b) of the Regulation defines a product as ‘any industrial or handicraft item’, it excludes combinations of more than one item from being protected. For example, is design protection available for a suite of furniture or a kitchen design made up of a number of units? It is clear that it is possible to register each unit individually—‘including . . . parts intended to be assembled into a complex product’—and it is implicit that if the individual units form a ‘complex product’, the unit as a whole can be registered. But what if the whole is not a ‘complex product’? While the European Commission contemplated the registration of kitchen designs in its Green Paper, it is unclear whether they would be considered to be complex products under Article 1(c) of the Regulation.<sup>62</sup> Probably, the critical question is whether the combination of items results in something that can, in itself, be called ‘an item’. This, in turn, will depend on whether the component elements are attached or linked to one another, whether the design value of the whole is greater than the sum of its parts, and whether there is a distinct market for the combination.<sup>63</sup> If the totality can be called ‘an item’, it should be registrable.

<sup>58</sup> *Drahtwerk Plochingen v. AVI Alpenländische Verundulungs-Industries*, Case ICD 3218 (16 February 2007) (Invalidity Division). See further Stone, 47–8.

<sup>59</sup> K. Maciaszek, ‘Poland: Are the Designs within an Ice-Cream to be Registered as an Industrial Design?’ [2012] *EIPR* 656, 658, citing *Przedsiębiorstwo Produkcji Lodow v. Patent Office* (20 March 2007).

<sup>60</sup> UK IPO, *Designs Practice Notice 1/03: Component Part of Complex Product Visible in Normal Use* (7 January 2003).

<sup>62</sup> EC Green Paper, [5.4.1]–[5.4.2].

<sup>63</sup> Former German law required that there be ‘unity of design’ before such combinations could be protected: see *Bernhard Pflug GmbH v. Interlücke KG*, Case 1 ZR 35/73 (1976) *IIC* 270, in which the BGH held that furniture belonging to a ‘furniture program’ could be protected in its entirety. The ensemble comprised a bed, chest of drawers, shelf units, and corner elements, which were intended to be used together and regarded by the public as a unity.

### 3 EXCLUSIONS: WHAT IS NOT A DESIGN

Three types of design are excluded from the very broad definition of design:<sup>64</sup>

- (i) designs dictated solely by technical function;
- (ii) designs for products that must be produced in a specific way to enable them to connect to another product; and
- (iii) designs that are contrary to morality.

We will examine each in turn.

#### 3.1 FUNCTIONAL FEATURES

Article 8(1) of the Regulation (which corresponds to Article 7(1) of the Designs Directive) states that a design ‘shall not subsist in features of appearance of a product which are solely dictated by its technical function’.<sup>65</sup> Recital 13 of the Directive explains that this exclusion aims to prevent technological innovation from being hampered.<sup>66</sup> The exclusion of designs solely dictated by technical function also aims to prevent design rights from being used to obtain ‘monopolies over technical solutions without meeting the more stringent conditions laid down in patent law’.<sup>67</sup>

It is notable that Article 8(1) does not say that these features are not designs; rather, it says that a design right shall not subsist in features that are solely dictated by technical function. This means that it is possible to register (or to obtain protection for) a design that includes functional features. A design will only be excluded in totality where the design as a whole was dictated by function. If a design includes functional features falling within Article 8(1), these are not taken into account for the purposes of assessing novelty or individual character.<sup>68</sup> In addition, there is no infringement of a design where a person reproduces the functional features (because no design right subsists in them).

##### 3.1.1 Technical function

Although Article 8(1) excludes features dictated by technical function,<sup>69</sup> we are not given any guidance about what ‘technical’ means in this context.<sup>70</sup> The exclusion of technical features achieves three related goals. First, by preventing features necessary to achieve a technical function from being protected, the Regulation leaves the protection

<sup>64</sup> If an application for a UK registration is confined to excluded matter, it should be refused: RDA 1949, ss 1A(1)(b), 1C, 1D. If it comes to be registered, such a design can be declared invalid: RDA 1949, s. 11ZA(1). In the case of an application to register a Community design, the fact that the design is contrary to public policy or accepted principles of morality constitutes one of only two grounds for non-registrability: CDR, Art. 47(1)(b). The other exclusions can be raised only as grounds for invalidity, under CDR, Art. 25(1)(b), against both registered and unregistered Community designs.

<sup>65</sup> RDA 1949, s. 1C(1); CDR, Art. 8(1). <sup>66</sup> CDR, Recital 10.

<sup>67</sup> *Lindner Recyclingtech v. Franssons Verkstader*, Case R 690/2007–3 [2010] *ECDR* 1, [28].

<sup>68</sup> Designs Dir., Recital 14; CDR, Recital 10.

<sup>69</sup> This limitation was probably required because TRIPS, Art. 25(1), permits members only to provide that protection shall not extend to ‘designs dictated essentially by technical or functional considerations’.

<sup>70</sup> For the meaning of ‘technical’ in patent law see pp. 460–3. See also C.-H. Massa and A. Strowel, ‘Community Design: Cinderella Revamped’ [2003] *EIPR* 68, 72 (‘technical function’ may extend further to cover ‘economic or marketing constraints’); F.-K. Beier, ‘Protection for Spare Parts in the Proposals for a European Design Law’ (1994) 25 *IIC* 840, 851 (contrasting technical function with aesthetic functionality).

of those features to patent law (and, where exists, utility model protection).<sup>71</sup> It thereby prevents applicants from gaining protection for technical features at a lower cost and without having to comply with the standards of inventiveness demanded by patent law.<sup>72</sup>

Second, by leaving features necessary to achieve a technical function unprotected, the law enables different people to reproduce and utilize features of shape that are necessary to achieve a particular function. In so doing, it ensures that there is potential for competition in functional products.

Third, the exclusion recognizes that in situations where a shape is dictated by function, a designer has no design freedom and, as such, is unable to contribute any relevant design effort. In this situation, a designer should not be able to benefit from design protection.<sup>73</sup> If such a person makes a contribution, it is as an inventor and not as a designer.<sup>74</sup>

### 3.1.2 When is a feature solely dictated by technical function?

One issue that has bedevilled Article 8(1) jurisprudence is the question: what does it mean to say that features are ‘solely dictated’ by technical function?<sup>75</sup> While a number of different approaches have been adopted over the last decade or so, two stand out. The first, which is known as the ‘multiplicity of forms’ approach (and which has been widely employed in member states), provides that a design will only be dictated by technical function where the designer was unable to exercise any control whatsoever over the final shape of the article. Under this approach, the exclusion only applies if the technical function cannot be achieved by any other configuration; if the designer has a choice between two or more alternative configurations, the form is *not* dictated by the function. If a designer has a choice between two (or more) different forms (even if both are functional), the resulting design will not fall foul of Article 8(1).<sup>76</sup> In positive terms, the ‘multiplicity of forms’ approach says that a functional design may be eligible for protection if it can be shown that the same technical function could be achieved by a different form.

The operation of the approach can be seen in the UK Court of Appeal decision of *Landor & Hawa International Ltd v. Azure Designs Ltd*,<sup>77</sup> where the Court had to consider whether the design of rigid or shell suitcases, which were fitted with an expandable section (that enabled the size of the suitcase to be increased), fell within the ambit of Article 8(1) of the Regulation. In deciding whether the claimant’s design for an expandable

<sup>71</sup> EC Green Paper, [5.4.6.1].

<sup>72</sup> This is often referred to as the ‘channelling function’. How effective Art. 7(1) is in achieving the function will depend on how robustly it is interpreted, but certainly there are dangers that, with a narrow interpretation, the Community designs regime may be viewed as an attractive means by which to protect technical products, insofar as examination is limited and protection can last up to 25 years—five years longer than patent law: Beier, *op. cit.*, 851 (‘design protection . . . finds its natural limits when it comes to technical–functional features for which no design alternative exists’).

<sup>73</sup> EC Green Paper, [5.4.6.2].

<sup>74</sup> Musker was opposed to the exclusion altogether, seeing little harm in protecting technical contributions by a broad design law: Musker, 41–3.

<sup>75</sup> The French language version refers to *les caractéristiques de l'apparence d'un produit qui sont exclusivement imposé par sa fonction technique*; the German to *die ausschließlich durch dessen technische Funktion bedingt sind*. Compare the parallel discussion in the context of exclusion from trade marks under TMD, Art. 3(1)(e), at pp. 914–18.

<sup>76</sup> *Landor & Hawa International Ltd v. Azure Designs Ltd* [2007] FSR (9) 181, [2006] ECDR (31) 413.

<sup>77</sup> *Ibid.*

suitcase was solely dictated by the technical function and thus excluded, the Court of Appeal asked whether the design was ‘driven without options’—that is, the Court looked at whether, in creating the design in question, the designer exercised a degree of choice. On the facts of the case, the Court found that because the designer had exercised choice in many aspects of the design—including ‘the spatial position of the constituent elements (big piping/zip/normal piping, zip/big piping) and the presence of the piping elements themselves’—this introduced ‘an essentially non-functional and even capricious element to the final appearance of the ensemble’.<sup>78</sup> As such, the design was not excluded on the basis that it was solely dictated by function.

The alternative approach—which has now been adopted in the United Kingdom and at OHIM—has its origins in the 1971 English decision of *Amp v. Utilux*,<sup>79</sup> where the House of Lords was called on to interpret section 1(3) of the (pre-harmonized) Registered Designs Act 1949, which is very similar to Article 8(1) of the Regulation. In this case, the House of Lords held that a product’s configuration is solely dictated by its technical function if every feature of the design was determined by technical considerations.<sup>80</sup> Under this approach, a design will be solely dictated by function and thus excluded if a product was created without any consideration for how it looks—that is, if the product was developed purely with functional considerations in mind. This is the case even if the function could be performed by other shapes (which is not the case with the ‘multiplicity of forms’ approach). It is only where aesthetic considerations are completely irrelevant that the features of design will fall foul of Article 8(1). As the OHIM Board of Appeal said in *Linder Recyclingtech*, this is not ‘tantamount to introducing a requirement of aesthetic merit into the legislation’; instead, it simply recognizes that:

[W]hen aesthetics are totally irrelevant, in the sense that no one cares whether the product looks good, bad, ugly or pretty, and all that matter is that the product functions well, there is nothing to protect under the law of designs.<sup>81</sup>

The ‘multiplicity of forms’ (mandatory) approach has been widely criticized, primarily because it undermines the policy aim of Article 8(1)—namely, to prevent design law (rather than patents) from being used to monopolize functional designs.<sup>82</sup> After some uncertainty,<sup>83</sup> these criticisms have been accepted and there is now a consensus in the United Kingdom<sup>84</sup> and at OHIM<sup>85</sup> in favour of the approach in *Amp v. Utilux*. This means that Article 8(1) will only deny protection to features of a product’s appearance that were chosen *exclusively* for the purpose of designing a product that performs its function. This is opposed to features that were chosen, at least to some degree, for the purpose of

<sup>78</sup> *Ibid.*, [32] (citing Judge Fysh QC). <sup>79</sup> [1971] FSR 572 (HL).

<sup>80</sup> See *Dyson v. Vax* [2010] EWHC 1923 (Pat), [23]–[31] *per* Arnold J.

<sup>81</sup> *Linder Recyclingtech GmbH*, Case ICD 3150 (3 April 2007) (OHIM, Invalidity Division), [35].

<sup>82</sup> See *Dyson v. Vax* [2010] EWHC 1923 (Pat), [23]–[31]; *Linder Recyclingtech GmbH*, Case ICD 3150 (3 April 2007) (OHIM, Invalidity Division), [35]. The extent to which the mandatory approach excludes features will often depend on the level of abstraction from which the product is considered.

<sup>83</sup> In the United Kingdom, support for the ‘multiplicity of forms’ approach came from *Landor & Hawa International Ltd v. Azure Designs* [2007] FSR 9. For discussion of alternative approaches, see Stone, 64–5.

<sup>84</sup> In *Dyson v. Vax* [2010] EWHC 1923 (Pat), [23]–[31], Arnold J declined to follow the English Court of Appeal in *Landor* (on the basis that it was *obiter*). Instead, he followed the approach of the OHIM Board of Appeal in *Linder Recyclingtech*. See also *Samsung Electronics v. Apple* [2012] EWHC 1882 (Pat), [36]–[38] (following Arnold J in *Dyson*).

<sup>85</sup> *Linder Recyclingtech GmbH*, Case ICD 3150 (3 April 2007) (OHIM, Invalidity Division), [28]–[36]; *ACV Manufacturing NV v. AICSA* [2012] ECDR 13, [24]; *Nordson Corporation v. UES AG*, Case R 211/2008–3 (29 April 2010) (OHIM, Third Board of Appeal), [26]–[35]. Cf. Stone, 70 (suggesting yet another approach at OHIM).

enhancing the product's visual appearance. The question of why certain features were chosen is decided objectively: it is not necessary to 'determine what actually went on in the designer's mind when the design was being developed'; rather, the 'matter must be assessed from the standpoint of a reasonable observer who looks at the design and asks himself whether anything other than purely functional consideration could have been relevant when the specific features were chosen'.<sup>86</sup>

### 3.2 INTERCONNECTIONS

The second type of design that is expressly excluded are designs for products that must be produced in a specific way to enable them to connect to another product. As Article 8(2) of the Regulation (which corresponds to Article 7(2) of the Designs Directive) states:

[A design] shall not subsist in features of appearance of a product which must necessarily be reproduced in their exact form and dimensions in order to permit the product in which the design is incorporated or to which it is applied to be mechanically connected to or placed in, around or against another product so that either product may perform its function.

The reasoning behind the exclusion seems to be that while the harmonized definition of design includes the appearance of parts of products, features that enable mechanical parts to be connected together should not be protected because this might enable the proprietor of a design for a particular article to prevent competition in a secondary market.<sup>87</sup> For example, protection of the design of the external ports of a laptop could operate to allow the designer to control the sale of keyboards; protection of the design of the parts of a laser printer could allow the designer to control the sale of printer cartridges; and a design right over a pod-based coffee machine could enable the designer to control sale of the coffee pods used.

The provision is similar to the 'must fit' exclusion recognized in the British law of unregistered designs (discussed in Chapter 30).<sup>88</sup> However, given differences in wording, it is unlikely that the case law on the 'must fit' exclusion will be of much assistance in the application of Article 8(2) of the Regulation. One reason for this is that while the British Act excludes features that 'enable' connections, Article 7 sets a more taxing requirement before the exclusion comes into play: the features 'must necessarily be reproduced in their exact form and dimensions'.<sup>89</sup> Where the shape of a designed artefact merely influences the shape of another product—for example where one must fit inside another, but need not correspond exactly to the internal dimensions—the European exclusion would not come into play. Another reason is that the European provision is confined to features that must be reproduced so that the design-protected product can be '*mechanically* connected to, or placed in, around or against another product'. The Recitals to the Directive and Regulation reiterate that the exclusion is targeted at 'mechanical fittings', but do not clarify whether the

<sup>86</sup> *Linder Recyclingtech GmbH*, Case ICD 3150 (3 April 2007) (OHIM, Invalidity Division), [36].

<sup>87</sup> Designs Dir., Recital 14, and CDR, Recital 10, state that 'the interoperability of products of different makes should not be hindered by extending protection to the design of mechanical fittings'. See also EC Green Paper, [5.4.10.1].

<sup>88</sup> CDPA 1988, s. 213(3)(b) ('Design right does not subsist in . . . features of shape and configuration of an article which . . . enable the article to be connected to, or placed in, around or against another article so that either article may perform its function'). See below pp. 786–9.

<sup>89</sup> Although in one case the British courts held that 'enablement' required such a level of exactitude: see *Amoena v. Trulife* [1995] *EIPR-D* 346.

adverb ‘mechanically’ applies where the product is ‘placed in, around or against’ another product (or whether ‘placement’ might be regarded, necessarily, as ‘mechanical’).<sup>90</sup> While the connection of an exhaust pipe to the chassis of a car might be regarded as a classic example of a ‘mechanical’ fitting, it is less clear whether the fitting of a lampshade to a table lamp, a filter to a coffee maker, or a candle to a candelabrum would be regarded as mechanical.<sup>91</sup> Given that the term ‘mechanical’ is often used in contrast to ‘electrical’, the possibility also arises that electrical fittings can be the subject of design protection, although the distinction has nothing to recommend it on policy grounds. Yet another difference between the interconnection and ‘must fit’ exclusions is that the only interconnections covered by the exclusion in Article 8(2) are those that relate to other products—that is, ‘industrial or handicraft items’. This would certainly not cover interconnections to parts of the human body, such as to the eye by a contact lens, as the British ‘must fit’ exclusion has done.

### 3.2.1 Modular products

The interconnections exclusion is subject to an express derogation. Article 8(3) states that, notwithstanding the interconnections exclusion in Article 8(2), ‘design right shall . . . subsist in a design serving the purpose of allowing multiple assembly or connection of mutually interchangeable products within a modular system’.<sup>92</sup> Recital 15 purports to justify the saving on the basis that ‘the mechanical fittings of modular products may nevertheless constitute an important element of the innovative characteristics of modular products and present a major marketing asset and therefore should be eligible for protection’. The real explanation for the exclusion is that it was a product of lobbying by the Danish government, keen that the key features of LEGO bricks should remain protectable (although, since LEGO, with its stud and tube coupling system, has been available to the public since 1958, there can be very few regimes in which the basic design protection has not lapsed). Other examples of modular design system include MECCANO construction sets, modular seating systems, and shelving arrangements.<sup>93</sup>

## 3.3 DESIGNS THAT ARE CONTRARY TO MORALITY OR PUBLIC POLICY

According to Article 9 of the Regulation, ‘design right shall not subsist in a design which is contrary to public policy or to accepted principles of morality’. This exclusion corresponds to equivalent provisions in European patent and trade mark law, and previous provisions under many national design systems.<sup>94</sup> Importantly, this exclusion operates as a ground for refusal of registration (both at national and Community levels) and as a ground for invalidity.<sup>95</sup> Aldous J stated that the test was not whether a section of the public would be offended; rather, the test is whether the moral principles of right-thinking members of the public would think it very wrong for the law to grant protection.<sup>96</sup> While

<sup>90</sup> The limitation of the exclusion to mechanical connection was not in the initial proposal in the EC Green Paper.

<sup>91</sup> Cf. R. Durie, ‘European Community Design Law’, in B. Gray and E. Bouzalas (eds), *Industrial Design Rights: An International Perspective* (2001), 75, 91 (giving example of television set and stand as a mechanical interface).

<sup>92</sup> RDA 1949, s. 1C(3); CDR, Art. 8(2), Recital 11.

<sup>93</sup> Patent Office, *Legal Protection of Designs* (February 2001), [24].

<sup>94</sup> Prior to amendment to implement the Directive, RDA 1949, s. 43(1), had stated that nothing in the Act should be construed as ‘authorising or requiring the Registrar to register a design the use of which would, in his opinion, be contrary to law or morality’.

<sup>95</sup> RDA 1949, ss 1A(1)(b), 1D, 11ZA(1); CDR, Arts 47(1)(b), 25(1)(b). <sup>96</sup> [1991] *RPC* 89, 103–4.

the appearance of objects does not usually give rise to moral considerations, it has been suggested that a textile design that utilized a swastika,<sup>97</sup> or a functional design for landmines or man-traps, might fall within the exclusion.<sup>98</sup> Given that the Directive 'does not constitute a harmonization of national concepts of public policy or accepted principles of morality',<sup>99</sup> one can expect that some designs would be considered immoral in some countries, but not others. It is unlikely that many designs will be excluded from protection in the United Kingdom on the basis that they are immoral or against public policy. In the pre-harmonization case of *Masterman's Design Application*,<sup>100</sup> the Court (on appeal) allowed the application to register a design for a male Highlander doll, which when its sporran was lifted revealed its genitals (see Fig. 26.2).

<sup>97</sup> EC Green Paper, [8.9.2]. A swastika on the packaging of a board game about the Second World War would presumably not cause offence.

<sup>98</sup> Musker, 52 (design of landmines).

## FOUNDATIONS FOR INVALIDITY: NOVELTY, INDIVIDUAL CHARACTER, AND RELATIVE GROUNDS

### CHAPTER CONTENTS

1 Introduction	721	3 Individual Character	736
2 Novelty	721	4 Relative Grounds for Invalidity	743

### 1 INTRODUCTION

In Chapter 26, we looked at the first of the criteria which a design needs to comply to be valid—namely, the requirement that there be a ‘design’. In this chapter, we look at the other criteria which a design—whether a national registered design, a registered Community design, or an unregistered Community design—must comply with in order to be valid.<sup>1</sup> These are that:

- (i) the design must be ‘new’;
- (ii) the design must have ‘individual character’;
- (iv) the applicant or the right holder must be entitled to the protected design; and
- (v) the design must not conflict with earlier relevant rights (which include earlier design applications, trade mark rights, copyright, and rights relating to certain types of emblem).

We will look at each of these in turn.

### 2 NOVELTY

In order to be valid, national registered designs, registered Community designs, and unregistered Community designs must be novel or new. A design is new if no identical

<sup>1</sup> Designs Dir., Art. 11 (listing four mandatory grounds, and three optional ones); RDA 1949, ss 3A (grounds for refusal), 11ZA (grounds for invalidity), Sch. A1 (emblems); CDR, Art. 25 (listing seven grounds of invalidity).

design, or design the features of which only differ in immaterial details, has been made available to the public before the date of application (or, in the case of unregistered Community designs, the date on which the design was first made available to the public).<sup>2</sup> This is a historical or objective test that requires the design to be compared with the body of existing material. As such, it can be contrasted with copyright's originality test, which is a psychological or subjective test that focuses on the relationship between the creator and the creation. To assess whether a design is new, we need to ask three questions:

- (i) What is the design that is being examined?
- (ii) What material is the design to be compared with? In patent jargon: what is the state of the art?
- (iii) What difference needs to exist between a design and the state of the art for the design to be new?

We will look at each question in turn.

## 2.1 WHAT IS THE DESIGN?

In many cases, the preliminary question 'what is the design?' will play an indirect but important role in determining whether a design is novel. The question of what a design is in any particular case is always a matter for the court to decide on the basis of the representations. While the definition of design is very broad, there are a number of types of design that are excluded. Three are of interest here. The first, which was discussed in Chapter 26, are those features of a design that are solely dictated by function. The second, which was also discussed in Chapter 26, are those features that must be produced in a specific way to enable them to connect to another product. The third type of design that is excluded relates to component parts of complex products—which are subject to the requirement that the only aspects of the design that will be recognized are those features that are visible in normal use. This requirement is discussed below. It is important to note that in all three situations, a design may be valid although certain features are excluded. The design as a whole will only be invalid if all of the features are either dictated by function, if all of the features of a product must be produced in a specific way to enable that product to connect to another product, or if none of the features of a component part of a complex product are visible when in normal use.

Once the excluded features of a design have been clarified, the next step is to interpret the representations. While in most cases this will be straightforward, in some instances there is an art to reading a representation that may not be apparent to the uninitiated.<sup>3</sup> Thus, in one decision, it was held that star-shaped patterns in the representation of the design of plastic fruit punnets did not mean that the designs actually had a visible star-shaped series of lines on the base; instead, the lines were taken to represent a slight dome in the base (see Fig. 27.1).<sup>4</sup> In cases like this, the physical manifestations of the design will undoubtedly be important.

<sup>2</sup> RDA 1949, s. 1B(2); Designs Dir., Art. 4; CDR, Art. 5(2). If priority is claimed, the relevant date is the priority date.

<sup>3</sup> Where a prior right has been registered in black and white, the tribunals proceed on the basis that it is intended to be used in different colour schemes: *Geobra Brandstätter v. Shantou Wanshun Toys Industrial*, Case R 1702/2010–3 (12 July 2011) (Third Board of Appeal), [18].

<sup>4</sup> *Sealed Air v. Sharp Interpack* [2013] EWPC 23, [22]–[23].

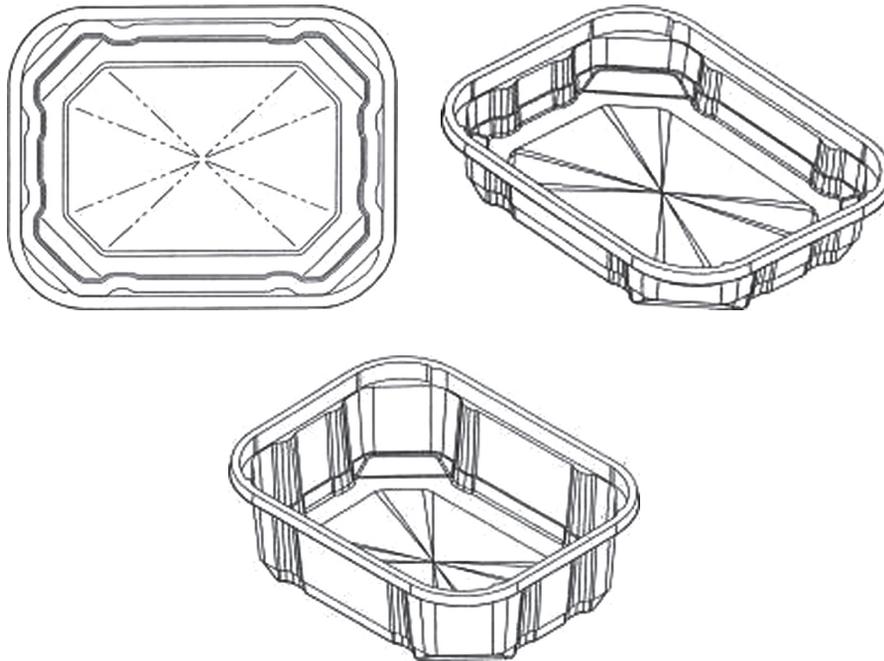

Fig. 27.1 Design representation of plastic fruit punnets in *Sealed Air v. Sharp Interpack*

Source: Courtesy of Sealed Air Corporation

While the representations provide the foundation for determining what the design is, the representations may include other elements that help to identify the features for which protection is sought. This may include a ‘description’ not exceeding 100 words explaining the representation of the design or the specimen.<sup>5</sup> Although Article 1(2)(a) of the Community Design Implementing Regulations states that the description ‘shall not contain statements as to the purported novelty or individual character of the design or its technical value’, the description may be useful in ascertaining what the design is. (Rather than say that ‘the novel part of the design is the pattern’, the applicant should say that ‘the design for which protection is sought is the pattern, the shape of the teapot being disclaimed’.<sup>6</sup>) It is also permissible for applicants to include a partial disclaimer in their application where they disclaim part of the design.<sup>7</sup> Another technique that delimits the scope of what is protected is the use of dotted lines in an application. In some instances,

<sup>5</sup> Such statements are not published in the Community Designs Bulletin—CDIR, Art. 14(2)(d)—and need not even be included in the register—CDIR, Art. 69(2)(o)—but a person wishing to challenge the validity of the design can inspect the file under CDIR, Art. 74, or request the Office to communicate the description to them under r. 75. The statement will no doubt be in the language of filing, which can be any of the official languages of the Community, but will have been translated, under CDR, Art. 98(2), into one of the five languages of the office.

<sup>6</sup> Musker, 156–8, with useful examples.

<sup>7</sup> See *Green Lane Products v. PMS International* [2008] EWCA Civ 358, [31], citing Lewison J in *Green Lane Products v. PMS International* [2007] EWHC 1712 (Pat), [31] (a disclaimer limits the scope of the design rather than the design’s application to certain product classes); RDR, rr 15 (partial disclaimer), 17 (representations). It should be noted that the register may be rectified under RDR, r. 20, and if a design has been declared partially invalid, such a declaration should appear on the register. See Musker, 157:

[D]isclaimers are allowed after an invalidity action and it would therefore seem sensible to allow them on filing, to forestall unnecessary invalidity actions . . . However, disclaimers may not be acceptable as ‘statements’, or may be ineffective, in view of paragraph 6.

dotted lines are used to exclude features of a design for which no protection is sought.<sup>8</sup> In other cases, dotted lines are used to indicate those portions of a design that not visible to a particular view (such as the presence of a border on a screen of an iPad<sup>9</sup>). It is unfortunate that dotted lines are used to indicate both what is not protected and also what cannot be seen (but may be claimed). While each design must be understood on its own merits, it would make it easier to read the representations if there were more consistency.<sup>10</sup>

It has long been the practice for the courts to look at a physical embodiment of a registered design, where one exists, to help them to determine what a design is.<sup>11</sup> While the physical manifestations of the design are often used as helpful concrete examples of a registered design, it is important that the physical object actually corresponds to the design that has been registered. Thus, for example, in one of the many decisions between Samsung and Apple, the court stressed that Apple's iPad should not be confused with the design that Apple had registered, which differed slightly from the product that was marketed.<sup>12</sup>

While the rules about the types of design that are excluded (such as features dictated solely by function) apply equally to UK registered designs, Community registered designs, and unregistered Community designs, there is an obvious difference between registered and unregistered designs. This is that in the case of unregistered Community designs, none of the bureaucratic aids that are used to determine the scope of a registered design are available to assist the court in identifying the unregistered design in question. As we already noted, the question of the novelty of an unregistered Community design only arises before a Community design court, either in infringement or invalidity proceedings. In such cases, the court will have to examine the appearance of the article in issue to determine whether the design is novel and has individual character. In an infringement action, the procedural rules of the member state where the action is commenced will require the claimant to identify the design that they allege has been infringed. In principle, however, there seems no reason why a person should not claim a collection of features as a design, as well as each of the features individually.

### 2.1.1 Component parts of complex products: visibility in use

We have already observed that the European reforms were forged amidst strenuous lobbying by the automobile manufacturing industry on the one side and spare parts manufacturers on the other. As we saw in Chapter 26, one of the outcomes of this messy compromise was that features dictated solely by function, along with features that function as 'interconnections', are excluded from design protection. A further limitation, which we look at here, is found in Article 4(2) of the Community Design Regulation. This provides that:

- A design applied to or incorporated in a product which constitutes a component part of a complex product shall only be considered to be new and to have individual character:
- (a) if the component part, once it has been incorporated into the complex product, remains visible during normal use of the latter; and

<sup>8</sup> *Sphere Time v. OHIM*, Case T-68/10 (14 June 2011) (General Court). In *Kohler Mira v. Bristan Group* [2013] EWPCC 2, [23], Judge Birss said that there were other possible ways of reading dotted lines.

<sup>9</sup> *Samsung v. Apple* [2012] EWHC 1882 (Pat), [11].

<sup>10</sup> The pronouncements by the OHIM Board of Appeal have been more emphatic about highlighting the function of the dotted lines being used to indicate elements for which no protection is sought: See, e.g., *Svedbergs i Dalstorp v. Gofab Design*, Case R 91/2010-3 (24 January 2011) (Third Board of Appeal), [16]–[17].

<sup>11</sup> *The Procter & Gamble Company v. Reckitt Benckiser* [2007] EWCA 936, [12].

<sup>12</sup> *Samsung v. Apple* [2012] EWHC 1882, [8].

(b) to the extent that those visible features of the component part fulfil in themselves the requirements as to novelty and individual character.<sup>13</sup>

There are a number of things to note about the so-called ‘visibility in use’ exclusion, which excludes ‘under the bonnet’ or non-visible spare parts from the remit of design protection.<sup>14</sup> One of these is that the exclusion only applies to ‘component parts’ of ‘complex products’, which were discussed in Chapter 26. Where a design is applied to a component part of a complex product, the novelty of the design (along with its individual character) is decided on the basis of those features of the design that are visible in ‘normal use’; all other features are ignored. Article 4(3) of the Regulation defines ‘normal use’ as ‘use by the end-user, excluding maintenance, servicing, or repair work’.<sup>15</sup> The decision about the nominal end-user is important because it determines the perspective from which a complex product is viewed and what is to be considered ‘normal use’. As is evident from the many cases in which Article 4(2) has arisen, the fact that the design is limited to those features that are visible in normal use makes it harder to establish that a design is new (or has individual character). It also correspondingly limits the scope of what is protected.<sup>16</sup>

The impact of the exclusions can be seen, for example, in *Kwang Yang Motors*<sup>17</sup>—a decision of the General Court, which concerned the design for an internal combustion engine that was held to be a component part of a complex product (namely, a lawnmower) (see Fig. 27.2). In determining the aspect of the engine that formed part of the design, the General Court had to answer two subsidiary questions: who was the end-user and what was the normal use of a lawnmower? The General Court found that the end-user was the person who used the mower to cut lawns and that normal use was the cutting of lawns. More specifically, the General Court said that during normal use, a lawnmower was placed on the ground with the user standing behind it. Importantly, this was the perspective (literally) from which the visible features of the product were to be determined. As a result, the design was limited to those aspects of the engine that a person standing behind the lawn mower would see—namely, the top upper side of the engine. Importantly, it was this feature of the engine that had to be novel (and also show individual character).<sup>18</sup>

Another example of the way in which the ‘visibility in use’ exclusion limits the ambit of what a design is can be seen from a decision of the Office of Harmonization in the Internal Market (OHIM) Board of Appeal involving the design of skirting boards.<sup>19</sup> The skirting boards in issue were made up of different component parts: end and corner pieces, and boards that fitted into these pieces. A feature of the skirting boards was that the component parts could be disassembled and reassembled if the cables behind the board

<sup>13</sup> Designs Dir., Art. 3(3); CDR, Art. 4(2); RDA 1949, s. 1B(8).

<sup>14</sup> See G. Dinwoodie, ‘Federalized Functionalism: The Future of Design Protection in the European Union’ (1996) 24 *AIPLA QJ* 611, 680.

<sup>15</sup> RDA 1949, s. 1B(9); CDR, Art. 4(3), Recital 12 (‘those component parts which are not visible during normal use of a product, or to those features of such part which are not visible when the part is mounted, or which would not, in themselves, fulfil the requirements as to novelty and individual character; whereas features of design which are excluded from protection for these reasons should not be taken into consideration for the purpose of assessing whether other features of the design fulfil the requirements for protection’). On the legislative history, see B. Posner commentary, in Franzosi, 7.

<sup>16</sup> *Euro Fire v. Tarnavva*, Case R 316/2008–3 (14 October 2009) (Third Board of Appeal), [26] (the fireplace insert was limited to the front sides of the insert, since this was the only part visible).

<sup>17</sup> *Kwang Yang Motors v. OHIM*, Case T-11/08 (9 September 2011) (GC).

<sup>18</sup> *Ibid.*, [21]–[22].

<sup>19</sup> *Cezar Przedsiębiorstwo Produkcyjne Dariusz Bogdan Niewinski v. Poli-eco Tworzywa Sztuczne*, Case R 1512/2010–3 (8 November 2012) (Third Board of Appeal).

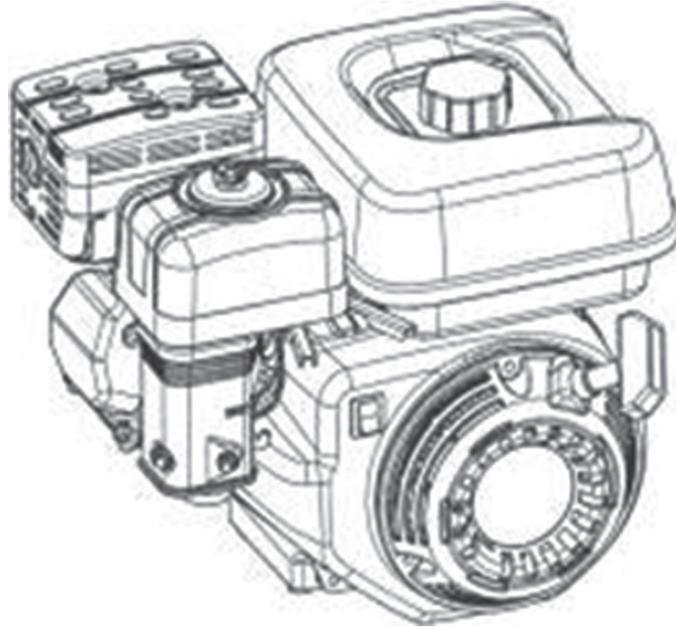

Fig. 27.2 Image of internal combustion engine in *Kwang Yang Motors*

Source: Courtesy of Kwang Yang Motors

needed to be replaced or if the floor needed to be repaired. As component parts of a complex product the question arose: what was normal use of the skirting board? The Board of Appeal held that the end-users of the skirting board were not the builders who install the boards, but those people who use the rooms in which the boards are mounted. For these end-users, normal use consists of the boards being mounted to the wall. As such, normal use did not include situations where the skirting boards were either being installed or disassembled to allow for repair or refurbishment.<sup>20</sup> As a result, the perspective from which the design was assessed was when the skirting board was fixed to the wall. This meant that the design was limited to the external appearance of the top and front walls of the skirting board.<sup>21</sup> Because the novel aspect of the design lay in features that were not visible when the boards were attached to the wall, not surprisingly the design was found to lack novelty.<sup>22</sup>

While the decision of the tribunals have been fairly consistent in the way in which they have approached the visibility-in-use exclusion, in *Lindner Recyclingtech*<sup>23</sup> the Board of Appeal construed the phrase ‘remains visible during normal use’ in such a way as to narrow the operation of the exclusion. The design in question was for a ‘chaff cutter’ (a metal

<sup>20</sup> Ibid., [24]–[26].

<sup>21</sup> *Profile Vox Sp zoo Spólka Komandytowa v. Cezar Przedsiębiorstwo Produkcyjne Dariusz Bogdan Niewinski*, Case R 442/2011–3 (15 April 2013) (Third Board of Appeal), [31]–[33].

<sup>22</sup> In the case of a design for ‘wheels for motor vehicles’, which were held to be component parts of a complex product (i.e. a car), it was agreed that the part that was visible during normal use was the front face of the wheel and, as such, that the design did not include the side of wheel: *Estrella Domínguez Martínez v. BMW*, ICD 8701 (22 May 2013) (Invalidity Division), [19]–[20].

<sup>23</sup> *Lindner Recyclingtech v. Franssons Verkstäder*, Case R 690/2007–3 (22 October 2009) (Third Board of Appeal).

cylinder with knives attached), which was a component part of a complex product—namely, a machine for shredding used paper, cardboard, plastic, and glass for recycling purposes. Given that the chaff cutters were a component part of a complex product, the question arose: what aspects of the chaff cutter were visible in normal use? The problem here was that when the recycling machines were being used, it was difficult to see the chaff cutters. This was a consequence of safety regulations which prohibited direct access to the rotating parts of the shredder (and which required the cutters to be covered), of the fact that when the cutters were in use, they rotated at high speed making them difficult to see, and of the fact that when the machines were in operation, the cutters were largely covered by the material being shredded. In a decision that has important ramifications for designs for moving parts, the Board of Appeal held that despite these considerations, Article 4(2)(a) of the Community Design Regulation:

... does not require a component part to be clearly visible at every moment of use. It is sufficient if the whole of the complement part can be seen some of the time in such a way that all its essential features can be comprehended.<sup>24</sup>

One of the notable features of the way ‘normal use’ is defined in Article 4(3) of the Regulation is that it specifically excludes ‘maintenance, servicing, or repair work’. This gives substance to the exclusion, which might otherwise have been undermined by the claim that normal users include car and bike enthusiasts who spend their weekends dismantling, cleaning, fine-tuning, and reassembling their vehicles. We can infer that normal use includes getting into and out of a vehicle and putting things in the boot, as well as driving or being a passenger. Changing the oil or adjusting the points are almost certainly maintenance. The protectable parts of a car would include the internal features, such as the seats, gearstick, handbrake, steering wheel, and rear-view mirrors, as well as the external features, such as the bonnet, boot, doors, hubcaps, wipers, and wing mirrors. The designs for things such as radiators (which are usually only seen when the car is being repaired) will not be registrable.<sup>25</sup> If a part is visible in normal use, those parts must be novel and have individual character to be protectable. It should be noted that where a component part of a complex product remains visible in use, a special defence exists in Article 110 of the Regulation, which allows a third party to repair the complex product.<sup>26</sup>

## 2.2 WHAT IS THE PRIOR ART?

Once the design has been identified, it is then necessary to ascertain what the relevant prior art is for the design in question.

### 2.2.1 The date on which the state of the art is assessed

Since the prior art changes as new designs are published, it is crucial to work out the relevant date when the prior art is to be assessed.

(i) *British and Community registrations* Similar rules apply to Community and UK registrations. A design application or registration is assessed for novelty against designs made

<sup>24</sup> Ibid., [21].

<sup>25</sup> H. Speyart, ‘The Grand Design: An Update on the E.C. Design Proposals, Following the Adoption of a Common Position on the Directive’ (1997) 19 *EIPR* 605, 609, argues that the exclusion is unnecessary, for such designs will be functional or made up of interconnections.

<sup>26</sup> See below pp. 763–5.

available to the public before the filing date for the application for registration, or if priority is claimed, the date of priority.<sup>27</sup> The most important mechanism for claiming priority relates to a claim based on an earlier application to a ‘Convention country’ made not more than six months before the UK filing.<sup>28</sup> In the case of a Community application, priority may also be claimed from an earlier exhibition. However, in contrast to the British position, the Community Design Regulation allows applicants to claim priority from the date of disclosure at an officially recognized international exhibition.<sup>29</sup> Since there are very few such exhibitions, the difference in the approach taken by the UK Designs Registry and OHIM is unlikely to be important.<sup>30</sup>

(ii) *Unregistered Community designs* In the case of unregistered Community designs, novelty is assessed at the date on which the design was first made available to the public.<sup>31</sup> This is also the date from which the three-year term of protection commences.

### 2.2.2 The contents of the state of the art

The state of the art consists of all designs made available to the public before the relevant date. Taken alone, this would create a state of the art that was comparable to that used in patent law—that is, without geographical or temporal limits. As we will see, however, this broad definition is subject to a number of exceptions. A design is deemed to have been made available to the public ‘if it has been published following registration or otherwise, or exhibited, used in trade or otherwise disclosed’.<sup>32</sup> The definition is very broad,<sup>33</sup> disclosure of a design by any means, anywhere in the world will—subject to the limits below—form part of the prior art against which a design’s novelty will be assessed. As Arnold J said, ‘any disclosure which makes the design public in any part of the world will suffice’.<sup>34</sup> Typically, a design will be made available in one of two ways. First, a representation of the design will include pictures, photographs, drawings, graphic representations, or sketches of the design. A design may also be made available to the public in a physical form, for example the sale of a chair would disclose the design. Reflecting design law’s focus on the appearance of things, it is highly unlikely that a written description will ever count as a relevant disclosure for the purposes of determining novelty.

Although the legislation starts by defining the state of the art broadly, it then excludes certain matters—namely, disclosures that derive from obscure events (the ‘safeguard

<sup>27</sup> Designs Dir., Art. 4; RDA 1949, s. 14; CDR, Arts 38 (date of filing), 41 (right of priority). For speculation as to whether priority might be claimed from a patent application, see Musker, 169. For the Community position, see CDR, Arts 41–44; CDIR, Art. 8. On exhibition priority, see CDIR, Art. 9.

<sup>28</sup> RDA 1949, s. 14(1). The Convention countries are identified by way of an Order in Council under RDA 1949, s. 13. See Designs (Convention Countries) Order 1994 (SI 1994/3219) (listing 129 countries) and amended by SI 1995/2988 (adding ten Paris accessions and 20 WTO countries) and SI 2000/1561 (adding 12 further countries). As regards the Community design right, a six-month priority is accorded to applications for design right or for utility model protection made in a state that is party to the Paris Convention or the WTO Agreement, or which accords an equivalent right of priority. <sup>29</sup> CDR, Art. 44.

<sup>30</sup> As we will see, in both the United Kingdom and at the OHIM, the exposure of a design at an exhibition by the applicant or with their consent during the 12 months preceding an application will not invalidate an application, because of the grace period. The inability to claim priority from the exhibition is of significance only if a third party who independently develops the design tries to register in the period between exhibition and application. Such cases are likely to be quite rare. <sup>31</sup> CDR, Art. 5(1)(a).

<sup>32</sup> Designs Dir., Art. 6; RDA 1949, s. 1B(5)(a); CDR, Art. 7(1).

<sup>33</sup> This includes technical catalogues (even though it did not include prices). See *Watt Drive Antriebstechnik v. Nanotechnologija*, Case R 1053/2012–3 (25 February 2013) (Third Board of Appeal), [13]–[18].

<sup>34</sup> *Magmatic v. PMS* [2013] EWHC 1925 (Pat), [33], not discussed on appeal: [2014] EWCA Civ 181. An incorrectly registered design forms part of the state of the art: *Cheng-Kang Chu v. Fitness Brands*, Case R 346/2012–3 (21 February 2013) (Third Board of Appeal), [17].

clause’), disclosures that are confidential, disclosures that are a consequence of a breach of confidence, and disclosures by the applicant within the grace period.<sup>35</sup> We will look at each in turn.

(i) *The safeguard clause* The first exclusion is found in Article 7(1). This provides that the prior art does not include events that could not reasonably have become known in the normal course of business to the circles specialized in the sector concerned operating within the Community, before the date of filing of the application for registration, or if priority is claimed, the date of priority.<sup>36</sup> This is a safeguard clause that aims to prevent designs from being rendered invalid on the basis of obscure disclosures. The clause was promoted by the fear that a broadly defined state of the art might lead to claims of invalidity based on the citation of obscure prior art, such as that in museums. In principle, the safeguard clause applies to a wide range of obscure disclosures; these could be very old disclosures, geographically remote disclosures, or disclosures made to a very narrowly defined group of people. In positive terms, the safeguard clause allows for the protection of designs that, while previously disclosed as a matter of objective fact, have been lost or have not been available to the design market within the Community. In negative terms, the provision enables monopolies to be granted over designs that are not really new and possibly are not even original in a copyright sense.<sup>37</sup>

The onus of proving that a disclosure could not reasonably have been known falls upon the party relying on the exception. Typically, this will be the design proprietor defending a design’s alleged invalidity in the face of a disclosure presented by the applicant. Once it is shown that the disclosure relied upon is obscure, the onus shifts to the other party.<sup>38</sup> It should be noted that the safeguard clause does not ask whether ‘the design’ could reasonably have become known, but whether ‘the event’—that is, the exhibition, use in trade, or publication that disclosed the design—could reasonably have become known.

In applying the safeguard clause, tribunals are asked to speculate on the normal behaviour of a specific group of people: the circles specialized in the sector concerned. As such, the first question that we need to ask is: what is the ‘sector concerned’? In many cases, this will be unproblematic, because the earlier design and the design in issue will relate to the same sector (for example where a design for a chair had been disclosed at an exhibition in Japan and the issue was whether a similar design registered at OHIM after the exhibition was novel). However, it is easy to foresee more complex situations: where the earlier design was a painting exhibited in a small art gallery and the later design is an application of a similar image to a teapot, is the relevant design sector painters or ceramic designers? Some commentators have argued that the ‘sector concerned’ must be the sector to which the earlier design belongs (here, painters),<sup>39</sup> while others have argued that the sector will be determined by the prior art in question. Yet another approach was raised by the European Commission, which suggested that the relevant sector was determined by the

<sup>35</sup> Designs Dir., Art. 6; RDA 1949, s. 1B(6); CDR, Art. 7.

<sup>36</sup> Designs Dir., Art. 6(1); RDA 1949, s. 1B(6)(a); CDR, Art. 7(1). This is a reversal of the Max Planck Institute’s original proposal of a relative novelty requirement according to which designs were assessed against other products ‘made accessible to interested business circles in the EC’.

<sup>37</sup> In TRIPS terms, this seems unproblematic, because TRIPS, Art. 25, merely requires members to protect designs that are new or original, but does not say that members should not protect designs that are neither new nor original: see Tritton (‘just permissible as the agreement can be argued to be permissive in this respect’); Musker, 23–4 (if one takes TRIPS as mandating particular requirements, ‘one would struggle to find any country in compliance with TRIPS’).

<sup>38</sup> *Magmatic v. PMS* [2013] EWHC 1925 (Pat), [41], not discussed on appeal: [2014] EWCA Civ 181.

<sup>39</sup> See Musker, 36.

goods which the design was applied to.<sup>40</sup> The question of how the relevant sector is to be determined was discussed by the Court of Appeal in *Green Lane Products*,<sup>41</sup> who held that ‘the relevant sector is the sector that consists of or includes the sector of the alleged prior art. It is not limited to the sector specified in the application for registration.’ In contrast, the Board of Appeal at OHIM has reached the opposite conclusion.<sup>42</sup> For example, in a decision involving the design of Croc shoes, the Board held that the sector concerned was the one concerned with the challenged design—that is, footwear, and particularly boat or beach footwear, or more generally leisure footwear. In determining the sector concerned, the Board held that the product which the design was associated with was important; here, the fact that the design represented a boat or leisure clog shaped the way the relevant sector was identified.<sup>43</sup>

Once we have identified the relevant sector for the design in question, we then need to identify who ‘the circles specialized in the sector’ are. It has been said that ‘the circle’ extends beyond designers working in the field to include all individuals who conduct trade in relation to products in that sector including those who design, make, advertise, market, distribute, or sell such products in the course of trade in the Community.<sup>44</sup> In line with this, it has also been suggested that circles includes experts and all of the businesses involved in the trade (including importers).<sup>45</sup> This approach was confirmed by Advocate-General Wathelet, who suggested that ‘circles specialized in the sector concerned’ should be construed very broadly to include all operators that take part in the trade of the goods at issue, including designers, advertisers, producers, distributors, wholesalers, and retailers.<sup>46</sup>

Once the circles specialized in the sector have been identified, it is then necessary to determine whether the events ‘could reasonably have become known in the normal course of business’. In effect, this requires a tribunal to speculate on normal practices within the specific sector. It is always important to keep in mind that the question of what could become known in any particular case always depends on what is normal in the sector in question. Thus the mere fact that the disclosure took place in a remote location is not of itself enough; the relevant question is always whether the disclosure could reasonably have become known in the normal course of business.<sup>47</sup> This also means that it is not appropriate to speak generally—as the Board of Appeal did when considering whether a patent available on the US Patent and Trademark Office (USPTO) website was an obscure disclosure for the purposes of a design for an umbrella<sup>48</sup>—about the quality of innovation or design in the United States or about the strong trade links between the United States and the European Union; all that matters is the practice of the umbrella

sector and whether, objectively,<sup>49</sup> the design could be known in the Community. It has been suggested that in the context of a validity challenge to a design of a garden pavilion, prior exhibition in a company showroom in China did not of itself qualify as a disclosure that could reasonably have become known in the normal course of business.<sup>50</sup> The situation would have been different, however, if the presentation had been made at an international fair in China attended by European professionals of the sector in question. In the same decision, Advocate-General Wathelet said that communication to a single operator in the Community (a sample of a garden pavilion was sent to a Belgian firm before the design had been registered) was not sufficient to conclude that the design had become known in the relevant circles. This was because of the language of the Community Design Regulation and the Designs Directive which speak in the plural, of ‘circles specialized’.<sup>51</sup> While the quality of contemporary search engines means that online disclosures outside of the Community will usually mean that the design will be treated as being known to relevant circles within the Community,<sup>52</sup> it is possible to imagine situations in which this is not the case.

In most instances, the obscurity of a design will be a product of where, how, or the parties to whom the design is disclosed. In some situations, the potential obscurity of a design may arise because of *when* it was disclosed. When the Community law was being developed, there was a desire to ensure that very old designs were excluded from the relevant prior art.<sup>53</sup> Because this did not make it into the Directive or Regulation, very old designs will be treated the same as any other design: their relative obscurity will depend on whether the design could reasonably be known at the priority date.

The tribunals have adopted a liberal approach when considering whether a disclosure would be something that could be known to the interested circles in the Community.<sup>54</sup> As a result, the concern that the safeguard clause might have transformed the broad, objective novelty notion into a peculiar and complex form of local novelty has not eventuated.<sup>55</sup> The approach taken to the safeguard clause can be seen, for example, in a decision in relation to a design for children’s ride-on suitcase (known as the ‘Rodeo’). In a challenge to the novelty of the design, the question arose as to whether disclosure of a concept board at the 1998 BASF/Institute of Materials Designs Awards that showed the product in use was an obscure disclosure. It was agreed that the relevant sector was the suitcase sector. The question here was whether as a result of the awards ceremony, the design of the Rodeo could reasonably have become known in the normal course of business to circles specializing in suitcases within the Community. The court found that the disclosure was not obscure and that it formed part of the relevant prior art for the design in question. This was because while the Designs Awards were for plastics, the Awards were well known in the field of product design in the United Kingdom. This was reinforced by the fact that the theme of the 1998 Awards was luggage.<sup>56</sup> In another decision, the Board of Appeal found that the sale in Florida and Colorado of 10,000 pairs of Crocs shoes made according to the challenged design could reasonably have reached the relevant circles in the Community.

<sup>55</sup> Musker, 61 (‘parochial novelty’).

<sup>56</sup> *Magmatic v. PMS* [2013] EWHC 1925 (Pat), [54], not discussed on appeal: [2014] EWCA Civ 181.

This was because of the volume of sales, the fact that shoes were design items that would have been proudly worn in public, because the commercial success of clogs would have attracted the attention of competitors, and the fact that the sales occurred 10 months prior to registration—an ‘eternity in the field of fashion’.<sup>57</sup>

(ii) *Confidential disclosure* The provisions dealing with confidential disclosures are more straightforward. A disclosure made under conditions of confidentiality will *not* make the design available to the public.<sup>58</sup> One potential difficulty is that the legislation is silent as to when conditions of confidentiality will exist. The law of confidence has hitherto been treated as a matter of national law.<sup>59</sup>

(iii) *Disclosures in breach of confidence* A related but distinct exclusion from the ‘state of the art’ applies ‘if a design for which protection is claimed . . . has been made available to the public as a consequence of an abuse in relation to the designer or his successor in title’.<sup>60</sup> The most obvious example of such an abuse is a breach of confidence, such as where an employee publishes the design. This exclusion is subject to the limitation that the disclosure must have taken place in the 12 months preceding the priority date.

(iv) *Grace period* The most important of the exclusions from the state of the art is the grace period. This excludes from consideration the designer’s own disclosures in the 12-month period preceding the priority date.<sup>61</sup> The purpose of the grace period is to allow applicants to test their designs in the marketplace before deciding whether to register or to rely upon the protection given to unregistered designs.<sup>62</sup> It should be noted that the grace period not only applies to disclosures by the designer, but also to disclosures by their successor in title ‘or a third person as a result of information provided or action taken by the designer or his successor in title’.<sup>63</sup> The reference to disclosures by ‘a third person as a result of information provided or action taken by the designer’ is ambiguous. It may be interpreted to encompass the activities of a third party who copies a design made available by the designer and places imitations (or variations) on the market. The third-party disclosure may be ‘as a result of’ the action of the designer, in that it could not have occurred without the designer’s disclosure. A narrower and more natural construction of the phrase ‘as a result of action’ might confine the limitation to disclosures that have been initiated or authorized by the designer, for example publication by authorized advertisers or exhibition by distributors. While this latter interpretation might seem to raise doubts over the usefulness of the grace period, it should not be forgotten that the state of the art is defined elsewhere to exclude disclosures that have been made ‘as a consequence of an abuse in relation to the designer’. If a third party has made illegitimate or unauthorized copies of the design available, these are made available as a consequence of ‘an abuse’, the abuse being an infringement of the designer’s unregistered Community design.

While the grace period has been widely welcomed, two limitations are worth observing. The first is that the grace period only exempts a designers’ own action from invalidating their own later application for registration; it does not backdate the application to the time of initial disclosure, nor establish priority over an independent design. Consequently,

<sup>57</sup> *Ibid.*, [64]–[70]. <sup>58</sup> Designs Dir., Art. 6; RDA 1949, s. 1B(6)(b); CDR, Art. 7.

<sup>59</sup> British law has failed to decide, conclusively, whether implicit obligations of confidentiality are to be assessed by subjective or objective criteria: see below p. 1161.

<sup>60</sup> Designs Dir., Art. 6(3); RDA 1949, s. 1B(6)(e); CDR, Art. 7(3).

<sup>61</sup> Designs Dir., Art. 6(2), RDA 1949, s. 1B(6)(c)–(d), CDR, Art. 7(2)(b). Musker refers to this as creating ‘a regrettably long period of uncertainty for competitors’: Musker, 38. Existing national laws had sometimes been even more generous: see French Intellectual Property Code, art. L.511–6 (no time limit). However, Germany had given six months only.

<sup>62</sup> CDR, Recital 20; EC Green Paper, [4.3.2]–[4.3.6].

<sup>63</sup> RDA 1949, s. 1(b), (6)(d); Designs Dir., Art. 6(2)(a); CDR, Art. 7(2)(a).

a design application by A will still be invalidated by disclosures of identical designs by third parties in the 12 months between A's first disclosure and application for registration. The second limitation is that the grace period only applies to disclosures of 'a design for which protection is claimed'. On a literal reading, this would be unfortunate for an applicant who had been market-testing a design that differed either in immaterial details, or in material details which were nonetheless insufficient to create a different overall impression on an informed user: in these cases, it must have been the legislative intention that the designer's own (or authorized) actions would not invalidate a later application (albeit for a non-identical design). Such a result could be achieved, albeit artificially, by saying the 'design for which protection is claimed' is that in the representations *and all others that would create the same overall impression on an informed user*. A designer could then argue that insofar as their own previously disclosed variations would infringe the Community registered design if published by a third party after the date of registration, they are 'designs for which protection is claimed'.

### 2.3 ARE THE DESIGNS IDENTICAL?

Once we have ascertained the nature of the design in question and the relevant prior designs, we then need to decide whether the design in question is novel. Article 5 of the Regulation (which corresponds to Article 4 of the Directive) states that a design is new if no identical design has been made available to the public before the priority date. According to Article 5(2), designs will be identical if their features only differ in 'immaterial details'.<sup>64</sup>

In most situations, determining whether two designs are identical will be straightforward. In this context, it is important to note that the point of comparison is the physical form (or appearance) of the designs. It does not matter if the ideas or concepts that lie behind the designs are the same; all that matters is whether the tangible physical forms (or appearance) of the designs are identical.<sup>65</sup> It is also important to recall that when undertaking the novelty examination, we are comparing *appearance* not function, nor (at least in most cases) the products to which the appearance is applied. In making the assessment, we should recall that appearance not only includes lines, contours, and shapes, but also colours, texture, and materials. The appearance of a red plastic teapot may therefore not be identical to a red crockery teapot, even if the shape and size are identical, and an orange-coloured leather football of standard size may not be identical to a conventional white-lacquered leather football of the same size. The issue here is whether the appearance is precisely the same. In these cases, novelty will often depend on the way the design is represented. This can be seen, for example, in two related cases before the Invalidity Division, which concerned the novelty of a registered design for a sponge that consisted of a thick white layer and a thin yellow layer. In one decision, where the design was represented in colour, it was held that the design was novel.<sup>66</sup> In contrast, in another decision, it was held that the design for the same sponge, this time represented in black and white, lacked novelty.<sup>67</sup> In both cases, the prior art was the same: the fate of the designs turned on the way they were represented.

<sup>64</sup> Rather strangely, the Green Paper contrasts this with a 'creative independent development': EC Green Paper, [5.5.5.4].

<sup>65</sup> *Rolawn v. Turfmech Machinery* [2008] RPC (27) 663, [79]; EC Green Paper, [5.4.3.1]–[5.4.3.4] (design law does not protect the idea or overall concept).

<sup>66</sup> *Bümag v. Procter & Gamble*, ICD 1741 (15 May 2006) (Invalidity Division) (also held to have individual character).

<sup>67</sup> *Ibid.*, 1758 (also lacked individual character).

The main difficulty that arises in this context is determining whether, when two designs differ slightly, the difference is immaterial. In a process not unlike the children's game of 'spot the difference', tribunals begin by identifying the points of difference between the prior art and the registered design. Once this is done, they then need to decide whether the identified differences are material. In most cases, there is little guidance from the tribunal as to why they have decided that differences are immaterial or not. In the many challenges to the validity of Community registered designs that have been raised to date, a very strict approach has been adopted, requiring almost exact similarity between the registered design and the prior art for the design to be declared invalid. A key consideration is whether the point of difference contributes to the overall appearance of the product. It has been said that immaterial details are 'details that are not immediately perceptible and that they would not therefore produce differences, even slight, between . . . designs'.<sup>68</sup> This is reflected in the suggestion that the definition would exclude differences that are only noticeable when 'conducting a close forensic analysis'.<sup>69</sup> As the Board of Appeal said, a 'detail is "immaterial" if it does not invest in the project as such, but is "outside" or accessory to it'.<sup>70</sup>

Perhaps the best way in which to get a sense of how the question of whether a difference is immaterial might be decided is by looking at some examples. In a decision that concerned a design for the shape of wine glasses with sealed lids, the point of difference between the registered design and the prior design lay in the shape of the stem of the wine glasses: the shape of the stem was faceted (or angular) in the registered design, while it was round in the prior design.<sup>71</sup> The Invalidity Division held that because the faceted stem was 'easily recognisable' and 'contributed to the appearance of the product', the difference was not immaterial. In a decision concerning the design of a helicopter, it was held that the differences between the prior design and the contested design—the bottom of the windshields and the shape of the bottom of the doors were different—were material differences and, as such, that the design was novel (see Fig. 27.3).<sup>72</sup> In another case, it was held that differences between the registered design for a golf tee and the prior art (a 1925 patent)—namely, the angle or splaying of the bristles, and the spike and shoulder of the tee—were material differences and, as such, that the prior art did not anticipate the design (see Fig. 27.4).<sup>73</sup>

One question that arises is the perspective from which the point of difference should be addressed. The legislation does not explain to whom the differences must be immaterial, and the other provisions of the Regulation and Directive point to various candidates: the designer; the design expert; the consumer; the informed user; and relevant circles.<sup>74</sup> While the General Court said that this should be addressed from an objective point of view,<sup>75</sup> it still leaves this question open (although the Court did suggest that it would not include the informed user). No doubt, the issue will rarely arise, and variations from previously disclosed designs will probably either be material to all of the potential candidates or to

<sup>68</sup> *Erich Kastenholtz v. OHIM*, Case T 68/11 (6 June 2013) (GC, [37]).

<sup>69</sup> *Re Registered Designs 40015559 and 4001666 in the name of Central Vista* [2009] ECDR (21) 363.

<sup>70</sup> *Antrax v. The Heating Company*, Case R 1451/2009-3 (2 November 2010) (Third Board of Appeal) (an immaterial detail may be 'the presence of a sign printed on a template, such as a product code or brand quality').

none of them. But there might be variations of detail that a design expert might notice, which a consumer would not.<sup>76</sup> And there might be minor differences of appearance that might be regarded by the designer as crucially important, which are of no consequence to a consumer. Whatever uncertainties may exist in relation to the novelty examination, they are unlikely to be significant, primarily because the novelty requirement will almost always be overshadowed by the more exacting inquiry into individual character.

### 3 INDIVIDUAL CHARACTER

As well as complying with the definition of design and the requirement that the design be novel, to be valid a design must also possess ‘individual character’.<sup>77</sup> The test of individual character is whether ‘the overall impression [the design] produces on the informed user differs from the overall impression produced on such a user by any design which has been made available to the public’.<sup>78</sup> This has been described as ‘the overall dominant and decisive criterion’<sup>79</sup> and is the most difficult aspect of any design to judge.<sup>80</sup>

One of the notable things about the test for individual character is that it mirrors the test used to determine the scope of design protection and thus infringement. This is reflected in Article 10(1) of the Regulation, which states that ‘the scope of the protection conferred by a Community design shall include any design which does not produce on the informed user a different overall impression’. Although individual character looks back in time (from the design in question to relevant designs in the prior art), whereas infringement looks forward (from the design in question to subsequent designs), nonetheless the concepts used are the same. As a result, the comments in this section apply equally when determining the scope of protection and whether there has been an infringement. It also means that cases in one area are relevant in the other.

Questions have been raised about whether the requirement for individual character is consistent with Community obligations under the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS), which obliges members to provide protection of ‘independently created industrial designs that are new or original’.<sup>81</sup> This is because, at first blush, individual character looks like an additional, and therefore illegitimate, hurdle. One attempt to justify the individual character standard argues that individual character can be equated with the independent creation standard,<sup>82</sup> although this

<sup>76</sup> EC Green Paper, [5.5.5.3].

<sup>77</sup> Designs Dir., Art. 3(2); RDA 1949, s. 11ZA(1)(b); CDR, Art. 4(1). Recital 9 of the Directive explains that the needs of the internal market require the adoption of ‘a unitary definition of the notion of design and of the requirements as to novelty and individual character with which registered design rights must comply’. In the other four official languages of the Office, individual character is: *présente un caractère individuel* (French), *carácter singular* (Spanish), *un carattere individuale* (Italian), and *Eigenart* (German).

<sup>78</sup> Designs Dir., Art. 5.

<sup>79</sup> M. Levin commentary, in Franzosi, 69. There are some potential precursors in national law: the French Intellectual Property Code, art. L.511–3, allowed design registration where ‘any industrial article . . . differs from similar articles, either by a distinctive and recognisable configuration affording it novelty or by one or more external effects giving it an individual and new appearance’, although apparently the jurisprudence has been inconsistent. Musker refers to the German requirement of *Eigentümlichkeit*, under its old design law, but notes that this is not the term used in the Directive, where *Eigenart* is used: Musker, 29–30.

<sup>80</sup> UK IPO, *Designs Practice Note 4/03: Requirement of Novelty and Individual Character* (24 June 2003) (‘a much broader and more difficult test than the simple novelty test’).

<sup>81</sup> TRIPS, Art. 25(1).

<sup>82</sup> Suthersanen, 437, n. 65 (‘arguably, the concept of “individual character” under the EC designs law may be a re-formulation of the “independently created” criterion’).

is unconvincing. A preferable approach is to see individual character as being equivalent to ‘significant difference’: Article 25 of TRIPS permits members to provide that ‘designs are not new or original if they do not significantly differ from known designs or combinations of known design features’. Viewed in this manner, TRIPS can also help us to define the limits of the ‘individual character’ inquiry.

As with the novelty examination, to determine whether a design has individual character, it is necessary to compare the design in question with relevant designs in the prior art. A key difference, however, is that with individual character, the perspective from which the evaluation is made is explicit—namely, that of the informed user. The task of determining whether a design has individual character can be broken down into a number of subsidiary questions, as follows.

- (i) What is the design in question?
- (ii) What is the relevant prior art?
- (iii) Who is the informed user?
- (iv) Does the design have individual character?

We will look at each in turn.

### 3.1 WHAT IS THE DESIGN IN QUESTION?

The first task that must be undertaken when considering whether a design has individual character is to clarify what the design in question is. This is done in the same way as with novelty examination, discussed above.

### 3.2 WHAT IS THE RELEVANT PRIOR ART?

Once the design in question has been clarified, it is then necessary to determine the design(s) with which the challenged design is to be compared. It is important to note that to determine whether a design has individual character, it is necessary to compare the challenged design with relevant prior designs and *not* with the design corpus (that is, with a ‘hypothetical amalgam of a number of prior designs’<sup>83</sup>). While the informed user will be aware of the design corpus, as with the novelty examination the examination is always with specific designs. The question of whether a particular design forms part of the prior art for the purposes of individual character is the same as with the novelty inquiry that was discussed above.

### 3.3 WHO IS THE INFORMED USER?

One of the notable features of the inquiry into individual character is that it is undertaken from the perspective of the ‘informed user’—a fictitious character used to set the standard by which the designs are judged.<sup>84</sup> As well as setting the benchmark for deciding individual character (and thus infringement), the notional informed user is also used when deciding whether an application is in conflict with earlier rights (discussed below).<sup>85</sup>

<sup>83</sup> Stone, 170, citing the Irish High Court in *Karen Millen v. Dunnes Stores* [2007] IEHC 449, [83].

<sup>84</sup> In the other four official languages of the Office: *l'utilisateur averti* (French); *usuario informado* (Spanish); *utilizzatore informato* (Italian); *informierten Benutzer* (German). The Green Paper had originally proposed a test of distinctive character to be determined by the relevant public or ordinary consumer: EC Green Paper, [5.5.6.2].

<sup>85</sup> In *Samsung v. Apple* [2012] EWHC 1882 (Pat), [189], Judge Birss highlighted the importance of the standard, saying that, when he first compared the Samsung and Apple tablets, he ‘was struck how similar

The decision about who the fictitious informed user is, and the attributes and knowledge that they have, is important.<sup>86</sup> This is because the more knowledge and experience an informed user has of a product, the more likely it is that small differences will lead to a conclusion that the design gives rise to a different overall impression. In contrast, where the informed user has less knowledge, they are more likely to conclude that that designs are the same.

The informed user is not an expert in the sector who would know too much and identify every difference;<sup>87</sup> thus they are neither a designer, technical expert,<sup>88</sup> or manufacturer, or a seller of the products in which the designs are incorporated.<sup>89</sup> While the informed user is not an expert, they are also not the ‘real’ or ‘average consumer’ (who might be too ready to see individual character).<sup>90</sup> Instead, the informed user is a regular user of articles of the same sort as the registered design.<sup>91</sup> As the Court of Justice said in *PepsiCo*,<sup>92</sup> the concept of the informed user refers ‘not to a user of average attention, but to a particularly observant one, either because of his personal experience or his extensive knowledge of the sector in question’. We also know that the informed user uses the product in which the design is embodied in accordance with the purpose for which it was intended, and that they are reasonably discriminatory in that they show a relatively high degree of attention when they use the product.<sup>93</sup> The informed user also has some awareness of the existing designs in the sector,<sup>94</sup> ‘without knowing which aspects of that product are dictated by technical function’.<sup>95</sup> The informed user is someone who ‘habitually purchases and uses’ the products in question, who has ‘become informed on the subject by browsing through catalogues, or making telephone inquiries, visiting the relevant stores, downloading information from the Internet’.<sup>96</sup>

### 3.4 DOES THE DESIGN HAVE INDIVIDUAL CHARACTER?

Once we have identified the design in question, the prior designs which the challenged design is to be compared with, and the attributes of the informed user, the next step is to ask whether, in light of this, the design has individual character. In other words, we need

they looked’. However, once he educated himself and was able to look at the designs from the perspective of the informed user, the way in which he looked at the tablets changed considerably.

<sup>86</sup> Occasionally, the tribunals have worked on the basis that there is more than one informed user. Thus, in *Grupo Promer Mon Graphic v. OHIM-PepsiCo*, Case T-9/07 [2010] ECR II-981, the GC worked on the basis that the informed users of the rapper were a 5–10-year-old child and a marketing manager. It is unclear how these two differ.

<sup>87</sup> They were not the ‘person skilled in the art’ in patent law (whose ‘nerd-like’ attributes were said to be too technical): *Woodhouse v. Architectural Lighting Systems* [2006] ECDR 11, [50].

<sup>88</sup> *Shenzhen Taiden Industrial v. OHIM*, Case T 153/08 [2010] ECR II-02517, [47].

<sup>96</sup> *Hook of Sweden v. Jukka Heininen*, Case R 650/2012–3 (19 February 2013) (Third Board of Appeal), [23].

to ask: does the overall impression that the design produces on the informed user differ from the overall impression produced on such a user by any design that has been made available to the public? To do this, the informed user will be presumed to compare the registered design with existing designs. While ‘individual character’ might suggest that the test is whether the design has a ‘personality’ of its own, this is not what is required by the definition; instead, it merely focuses on the impression made by the registered design on the notional informed user and whether that differs from the impression made by the existing designs. Ultimately, the decision as to whether a design has individual character is a factual question that will depend on the circumstances of the case.

Given that the test for individual character is a comparative test, the question arises: how different does a design have to be for it to have individual character? After some confusion,<sup>97</sup> it is now clear that a design will have individual character if the overall impression that the design produces on the informed user *differs* from the overall impression produced by designs that have previously been made available to the public. When examining the designs for individual character, it is also important to keep in mind that the informed user will focus on the *appearance* of the designs.<sup>98</sup> As such, the informed user is not concerned with the motivations of the parties,<sup>99</sup> how the design features were formed,<sup>100</sup> how the designed article behaves,<sup>101</sup> or that a design is a poor quality imitation;<sup>102</sup> all that matters is the overall impression given by the appearance of the designs in question.

It is important to note that the informed user’s impression of the designs needs to be determined in light of the way the product at issue is used, ‘in particular on the basis of the handling to which it is normally subject on that occasion’.<sup>103</sup> This means that in many cases, the informed user will make a direct side-by-side comparison between the goods. However, where this is impractical or uncommon in the sector concerned, it will be necessary to:

... envisage a comparison which, although not based exclusively on vague recollection, as in the field of trade marks, may none the less be made over a period of time and at different locations, so far as it is required in the specific case.<sup>104</sup>

<sup>97</sup> In *Procter & Gamble* [2007] EWCA Civ 936, [19], on the basis of Designs Dir., Recital 13, Jacob LJ said that a higher standard should be imposed—namely, that the impression given by the design must ‘clearly differ’ from the impression produced on them by the ‘existing design corpus’. Jacob LJ subsequently admitted that he was wrong and that all that had to be shown was that there was a difference: *Dyson v. Vax* [2011] EWCA 1206, [34].

<sup>98</sup> But cf. the Austrian court, cited with approval by Jacob LJ in *Procter & Gamble* [2011] EWCA Civ 1206, [34], in which the Court noted that the FEBREZE sprayer fits the hand differently from the AIRWICK sprayer: *ibid.*, [61].

<sup>99</sup> *Pepsico v. Grupo Promer Mon-Graphic*, Case R 1003/2005–3 (27 October 2006) (Third Board of Appeal), [23] (the fact that the appellant was acting in bad faith and copied the design was irrelevant; the question is not whether the design was copied, but whether it produced the same overall impression).

<sup>100</sup> *HK Ruokatalo Group Oyj v. Heinonen*, ICD 1964 (12 September 2006) (‘meat foodstuffs’). In this case, it did not matter that the stripes on the surface of the meat were formed by grooves and ridges pressed into the raw meat (as was the case with the CRD) or whether the stripes were burnt onto the surface of the meat by frying them in a pan with ridges. The informed user was not concerned with how the stripes were formed; what mattered was that the resulting surface pattern was the same.

<sup>101</sup> The behaviour of dolls in use was not part of the appearance of the product and thus not to be taken into account in the assessment of the overall product: *Aktiebolaget Design Rubens Sweden v. Advokatfirman Vinge KB*, ICD 461 (20 December 2005), [11].

<sup>102</sup> *J. Choo (Jersey) v. Towerstone* [2008] EWHC 346 (Ch) (the quality of a copy was not relevant for infringement).

<sup>103</sup> *Shenzen Taiden Industrial v. OHIM*, Case T-153/08 [2010] ECR II–02517 (GC, Second Chamber).

<sup>104</sup> *PepsiCo*, Case C-281/10P (12 May 2011) (Opinion of Advocate General), [52].

Thus, in an action concerning the design for streetlights, which were often 8–10 metres off the ground, the question arose: should the comparison be side-by-side or from a distance? Should the designs be viewed at night or during the day? Rejecting the way in which the designs were actually sold as the basis by which the designs should be evaluated, the court said that the informed user would have in mind the visual impact of the street light *in situ*—during the daytime and a little distance from the base of the pole upon which the light is suspended.<sup>105</sup>

What matters is what strikes the mind of the informed user *when* the design is carefully viewed, not what sticks in the user's mind *after* it has been carefully viewed. While the test of imperfect recollection makes sense in trade mark law, where the main rationale for the protection is to prevent consumer confusion or deception, this is not the case with design protection; instead, the goal of design law is to protect the design *as a design*. What matters is the overall impression created by the design: will the informed user 'buy it, consider it, or appreciate it for its *individual character*? That involves the user looking at the article, not half-remembering it.<sup>106</sup>

When an informed user compares the challenged design with existing designs, they are interested in the 'overall impression', which is to be contrasted with the idea of detailed dissection.<sup>107</sup> While it is appropriate to consider similarities and differences between the respective designs, 'what matters is the overall impression produced on the informed user by each design having regard to the design corpus and the degree of freedom of the designer'<sup>108</sup>—or, as the Court of Appeal put it, 'the two designs must . . . be considered globally'.<sup>109</sup>

Because the notion of 'overall impression' can be apt to mislead, it is helpful to remind ourselves that the design can lie in the appearance of the whole or part of a product, and that design protection exists irrespective of the product to which the design is applied. Given this, it is not surprising that one issue that has arisen is the specificity at which the comparison between the designs should be made. As Jacob LJ said, the 'level of generality to which the court must descend is important',<sup>110</sup> given that the more general the level of comparison, the more likely it is that the design will lack individual character (although this may not be the case with very novel designs). While the informed user is attentive to detail, they will not undertake a detailed and specialist appraisal; rather, the informed user will show a relatively high degree of attention when using the designs.

The question of the way designs are interpreted will always depend on the nature of the design in question. In some cases (for example with Apple products), this may mean that an important feature of the design is the lack of ornamentation.<sup>111</sup> In other cases,

<sup>105</sup> *Woodhouse v. Architectural Lighting Systems* [2006] ECDR 11, [52]. See also *Louver-Lite v. Harris Parts* [2012] EWPC 53, [29] (the 'informed user will be able to encounter [the headrail of a window blind] as free standing items and see them side by side but will always think about them in the overall context that what really matters is the appearance of the product in use when fixed to a ceiling').

<sup>106</sup> *Procter & Gamble* [2007] EWCA Civ 936, [27] (emphasis in original).

<sup>107</sup> The European Commission, from the start, proposed that the threshold be determined by 'a synthetic approach, letting the design act on him as a whole and comparing this impression with the one produced by a similar design': EC Green Paper, [5.5.8.2].

<sup>108</sup> *Magmatic v. PMS International* [2013] EWHC 1925 (Pat); *Procter & Gamble* [2011] EWCA Civ 1206, [3]; *Dyson v. Vax* [2011] EWCA Civ 1206, [8]; *Samsung v. Apple* [2012] EWHC 1882 (Pat), [28].

<sup>109</sup> *Magmatic v. PMS International* [2014] EWCA Civ 181, [46]–[54] (agreeing with the reasoning of Arnold J at first instance, but overturning the decision on the basis of the way in which he applied the relevant legal principles to the facts at hand).

<sup>110</sup> *Procter & Gamble* [2007] EWCA Civ 936, [35(vii)].

<sup>111</sup> *Samsung Electronics (UK) v. Apple* [2012] EWCA Civ 1339, [2013] FSR 9, [15]–[16].

however, ornamentation may play a key role in influencing the overall visual impression created by a design.<sup>112</sup>

One factor that plays an important role when evaluating overall impression is the degree of freedom that the designer had in developing the challenged design.<sup>113</sup> As the General Court said:

[The] greater the designer's freedom in developing the challenged design, the less likely it is that minor differences between the designs at issue will be sufficient to produce a different overall impression on an informed user. Conversely, the more the designer's freedom is restricted in developing the challenged design, the more likely minor differences between the designs at issue will be sufficient to produce a different overall impression on an informed user.<sup>114</sup>

The upshot of this is that minor differences between designs will have little impact on the overall impression in situations where the designer had considerable freedom.<sup>115</sup> In contrast, 'the more the designer's freedom in developing the contested design is restricted, the more likely minor differences between the design at issue will be sufficient to produce a different overall impression on the informed user'.<sup>116</sup>

The notion of 'design freedom' refers to the various constraints a designer would be under when developing the appearance of a product,<sup>117</sup> including constraints created by the fact that the product needs to perform a particular function<sup>118</sup> and statutory requirements applicable to the product.<sup>119</sup> A designer's freedom may also be constrained by the need to incorporate features common to the product<sup>120</sup> and by economic considerations (such as the need for the item to be inexpensive).<sup>121</sup> It seems, however, that constraints imposed by the expectation of the market and by fashion will not be taken into account (although it is an issue that could

<sup>112</sup> *Magmatic v. PMS International* [2014] EWCA Civ 181, [47].

<sup>113</sup> See J. Cornwell, 'Dyson and Samsung Compared: Functionality and Aesthetics in the Design Infringement Analysis' (2013) 35(5) *EIPR* 273.

<sup>114</sup> *Kwang Yang Motors v. OHIM*, Case T-10/08 (9 September 2011) (GC), [33]; applied in *BS Studio v. Naturkram Giot*, Case R 991/2011-3 (27 September 2012) (Third Board of Appeal), [28].

<sup>115</sup> Thus 'if the designer enjoys a high degree of freedom in developing a design, that reinforces the conclusion that the designs which do not have significant differences produce the same overall impression in an informed user': *Kwang Yang Motors v. OHIM*, Case T-10/08 (9 September 2011) (GC), [33]; applied in *BS Studio v. Naturkram Giot*, Case R 991/2011-3 (27 September 2012) (Third Board of Appeal), [28].

<sup>116</sup> *Grupo Promer Mon Graphic v. OHIM-PepsiCo*, Case T-9/07 [2010] ECR II-981 (GC), [72]-[76]; *Erich Kastenholtz v. OHIM*, Case T 68/11 (6 June 2013) (GC), [62].

<sup>117</sup> RDA 1949, s. 1B(4); Designs Dir., Art. 5(2).

<sup>118</sup> In the case of the design of a rug, other than the need to be reasonably flat to fulfil their purpose, in all other respects—particularly shape, colour, and the materials used—the designer's freedom was almost unlimited: *BS Studio v. Naturkram Giot*, Case R 991/2011-3 (27 September 2012) (Third Board of Appeal), [29]. A designer of door handles had almost unlimited freedom since 'handles can take any combination of colours, patterns, shapes and materials'; the only limitation was that the handle had to have a grip and be able to be mounted onto a door: *Neves & Fihos v. Alcides de Sá Pinto Castro*, Case R 1083/2011-3 (31 October 2012) (Third Board of Appeal), [37].

<sup>119</sup> *Procter & Gamble* [2007] EWCA Civ 936, [29]; *Grupo Promer Mon Graphic v. OHIM-PepsiCo*, Case T-9/07 [2010] ECR II-981 (GC), [67].

<sup>120</sup> *Ibid.*, [70]. The designer's freedom in designing a children's toy known as a 'rapper' or 'tazo', which were small, flat, or slightly curved discs made of plastic or metal, was severely restricted, 'since he had to incorporate those common features in his design for the product in question'. Clearly, the decision about the nature of the product in issue is crucial.

<sup>121</sup> *Gimex International Groupe Import Export v. The Chill Bag Company* [2012] EWPC 31, [66]; *Dyson v. Vax* [2010] EWHC 1923 (Pat), [34], upheld on appeal [2011] EWCA Civ 1206.

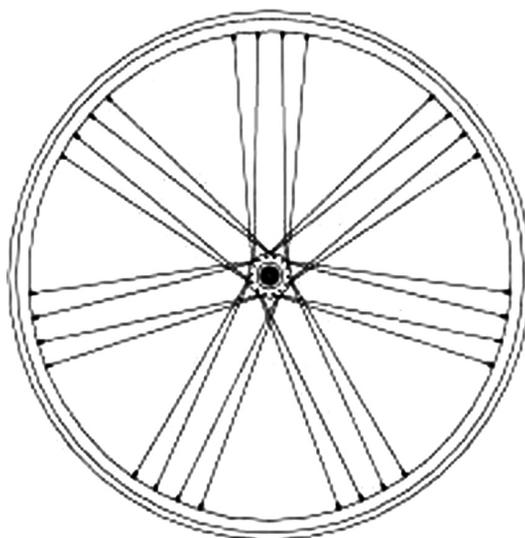

Fig. 27.5 Bicycle wheel

Source: *Rodi Comercial SA v. Soldatini Andrea*, ICD 0271 (30 August 2005)

do with some clarity).<sup>122</sup> Because the test is an objective one, this means that the constraints actually imposed on the designer are not relevant.<sup>123</sup>

When evaluating a design, the informed user will focus on those aspects of the design (if any) where the designer was able to express themselves and, in so doing, imbue the design with ‘individual character’. This means that where a designer has little opportunity to express themselves (that is, where they have little design freedom), even relatively small differences will suffice to create a different overall impression.<sup>124</sup> (It should be noted that the scope of protection available is correspondingly limited.) In contrast, where the designer has considerable freedom, the same small differences are unlikely to create a different overall impression on the informed user. We can get a sense of the way design freedom impacts on the way in which individual character is assessed in the series of OHIM decisions in relation to designs of bike wheels. On the basis of the functional limitations facing the designer of bike wheels and the high number of existing designs,<sup>125</sup> it was held that the informed user would appreciate that the designer would not be able to exercise much freedom when creating a new shape for a wheel. On this basis, it was said that:

<sup>122</sup> Both mentioned in EC Green Paper, [5.5.8]. Trends in communication equipment favouring small, flat rectangular devices was not relevant to the examination of individual character: *Shenzhen Taiden Industrial v. OHIM*, Case T-153/08 (22 June 2010) (GC), [58]; cf. *Samsung v. Apple*, ICD 8720 (13 May 2013) (Invalidity Division), [63] (holding that, where the market is saturated with designs, the informed user will be more sensitive to differences between products).

<sup>123</sup> While certain elements (such as fuel tank, vent, etc.) must be present in an internal combustion engine, the designer had considerable freedom in where and how the elements were placed (appearance was not determined by technical considerations). As such, the designer had a high degree of freedom: *Kwang Yang Motors v. OHIM*, Case T-10/08 (9 September 2011) (GC), [36]–[37].

<sup>124</sup> *Grupo Promer Mon Graphic v. OHIM-PepsiCo*, Case T 9/07 [2010] ECR II-981 (GC), [62]. A photograph of the rapper can be seen in the case report. See also CDR, Recital 14.

<sup>125</sup> Specifically, that the degree of freedom that the designer is able to exercise is limited by the ‘requirement that such a wheel has to be laced with the spokes between the hub and the rim in order to support the rim and transfer the weight of the rider to the rim’: *Rodi Comercial SA v. Soldatini Andrea*, ICD 0271 (30 August 2005), [27].

[T]he informed user will pay more attention to the features where the designer was not limited in his creativity, such as the pattern of distribution of the spokes around the hub and between the hub and the rim, including . . . the distances and angles among the spokes, the angles among the spokes and the hub flange and among the spokes and the rim, the limitations on the freedom [and so on].<sup>126</sup>

Focusing on these features of the designs (the distribution of the spokes), the Invalidity Division held that the design had individual character and was thus valid (see Fig. 27.5).<sup>127</sup>

## 4 RELATIVE GROUNDS FOR INVALIDITY

Design law contains a number of other grounds for refusal or invalidity that we have yet to discuss. Two of these are mandatory; three, optional. We can call these ‘relative grounds’ for invalidity because they concern conflicts between the rights of the putative design proprietor and other competing claims. The ‘relative’ nature of these grounds for objection is reflected in the fact that the Community Design Regulation regulates who is entitled to rely on them.<sup>128</sup>

### 4.1 APPLICANT OR RIGHT HOLDER IS NOT ENTITLED TO DESIGN RIGHT

The Directive requires that design registrations be treated as invalid ‘if the applicant for or the holder of design right is not entitled to it under the law of the Member State concerned’.<sup>129</sup> This ground may only be invoked by the person who is appropriately entitled.<sup>130</sup> As we will see in the next chapter, the Directive says nothing about ownership of designs, leaving this matter to national law. In the United Kingdom, ownership in the first instance vests in the designer, or their employer or commissioner. The British implemented the relative ground for refusal or invalidity in two ways. First, if an application is made to the UK Designs Registry by a person who does not ‘claim to be’ the proprietor of the design and, where relevant, the owner of a UK unregistered design right, the Registrar is required to refuse the application.<sup>131</sup> Second, a registration may be declared invalid on the ground that the registered proprietor is not the proprietor of the design.<sup>132</sup> In normal circumstances, however, the person properly entitled is much more likely to seek rectification of the register, so that they are entered thereon as the proprietor.<sup>133</sup>

The Community Design Regulation implements the same ground for objection purely as a ground for invalidity. Before applying, the person truly entitled must previously have obtained a court decision to that effect. This should be done in a national court, usually in the jurisdiction where the registered proprietor is domiciled.

<sup>126</sup> Ibid., [27].      <sup>127</sup> Ibid.      <sup>128</sup> Designs Dir., Art. 11(5)–(6).

<sup>129</sup> Designs Dir., Art. 11(1)(c).      <sup>130</sup> Designs Dir., Art. 11(3).

<sup>131</sup> RDA 1949, ss 3A(3), 3(2), and 3(3). Rather oddly, given the wording of the Directive, this is not dependent upon the real design owner objecting.

<sup>132</sup> RDA 1949, s. 11ZA(2).      <sup>133</sup> RDA 1949, s. 20.

## 4.2 CONFLICTS WITH EXISTING DESIGNS

The Directive requires member states to refuse registrations or to treat them as invalid in cases where:

... the design is in conflict with a prior design which has been made available to the public after the date of filing of the application or if priority is claimed, the date of priority, and which is protected from a date prior to the said date by a registered Community design or an application for a registered Community design or by a design right of the Member State concerned, or by an application for such a right.<sup>134</sup>

This ground can be invoked by the applicant for, or the holder of, the conflicting right, or if the member state elects, the appropriate authority of the member state on its own initiative.<sup>135</sup> Essentially, the conflicts provision requires member states to operate a 'first to file' system to determine priority between registrants in cases where the earlier application was not published by the priority date of the later application. The earlier application might not have been published by the time of the later application for a number of reasons, including because the earlier application was outside the Community but was the basis of a later application to a national registry of a member state (or OHIM) claiming priority,<sup>136</sup> or because there was deferred publication of the earlier Community registration. The fact that the Directive is satisfied that this ground would only be capable of being invoked by the right holder implies that the policy behind this ground of invalidity is not to avoid 'double design registration' in cases where two individuals come up with similar designs in close succession. Indeed, the effect of the provision leaves it open to member states to decide whether to allow two (or more) such proprietors to have rights over identical designs.

The UK Registered Designs Act 1949 implements the conflicts as a ground for invalidity that can only be invoked by the registered proprietor or applicant.<sup>137</sup> The relevant earlier designs are ones 'protected by virtue of a registration under this Act or the Community Design Regulation or an application for such registration'. It does not include, as it might have done,<sup>138</sup> earlier UK unregistered designs published after the date of application. In contrast, the Community Design Regulation only recognizes conflict with a previous design as the basis of an invalidity action.<sup>139</sup> Like the United Kingdom, it limits the relevant earlier designs to earlier Community applications and registrations, and earlier applications and registrations for a 'registered design right of a Member State'.<sup>140</sup> If the invalidity action is before OHIM, the only person who is permitted to invoke this ground is the applicant for or holder of the earlier right. If the invalidity action is before a Community design court on the basis of a counterclaim in infringement proceedings, it seems that the appropriate authority of the member state may invoke the ground on its own initiative.

There is a 'conflict' where the later registration lacks novelty or individual character when compared with a prior design. Building of the logic that sees individual character as

<sup>134</sup> Designs Dir., Art. 11(1)(d). <sup>135</sup> Designs Dir., Art. 11(1)(d), (4), (6).

<sup>136</sup> For example, A applies in the United States on 1 January 2003; B applies for registration of an identical design in the United Kingdom on 1 May 2003; A applies in the United Kingdom on 31 May, claiming priority from its earlier US registration, and that application is published on 15 August 2003. In such circumstances, B's application is in conflict with A's, and A's is earlier. So A has a ground for invalidity. A's is a prior design and has been made available after B's filing, but is protected from before.

<sup>137</sup> RDA 1949, ss 11ZA(1), 11ZB(3)–(4). <sup>138</sup> EC Green Paper, [6.5.2.2].

<sup>139</sup> See, e.g., *Servicios de Distribucion e Investigacion v. Solo*, Case ICD 396 (20 September 2005); *Burberry v. Duran-Corretjer & Partners*, Case ICD 1568 (8 February 2006).

a mirror of the scope of protection, the General Court held that a design will be ‘in conflict with a prior design, taken into consideration the freedom of the designer in developing the . . . design, that design does not produce on the informed user a different overall impression from that produced by the prior design relied on’.<sup>141</sup> The concepts here have been discussed above.

### 4.3 CONFLICTS WITH DISTINCTIVE SIGNS

Article 25(1)(e) of the Regulation (which corresponds to Article 11(2)(a) of the Directive) provides that a design will be invalid ‘if a distinctive sign is used in a subsequent design, and Community law or the law of the member state concerned governing that sign confers on the right holder of the sign the right to prohibit such use’.<sup>142</sup> This provision covers conflicts with trade mark rights. Thus if a person tries to register the design of a football shirt with a purple body, yellow collar, orange arms, blue cuffs, and bearing the Arsenal club crest (being a registered trade mark for clothing), such a registration could be declared invalid (even though, in other respects, it might be novel and have individual character). The General Court provided some guidance about the scope of this provision when it said that Article 25(1)(e) of the Regulation does not ‘necessarily presuppose a full and detailed reproduction of an earlier distinctive sign in a subsequent Community design’.<sup>143</sup> Given that the public ‘only retains an imperfect memory of a registered mark’, this means that even though the design may lack ‘certain features of an earlier distinctive sign or may have different, additional features, this may constitute “use” of that sign, particularly where the omitted or added features are of secondary importance’.<sup>144</sup> The upshot of this it is sufficient if the design and trade mark are similar; there is no need for them to be identical for Article 25(1)(e) to apply. In *José Manuel Baena*,<sup>145</sup> the Court of Justice said that when considering whether an earlier right holder has the ‘right to prohibit the use of the sign’, it was necessary to compare the overall impression of the design and the overall impression on the informed user—that is, the approach to be adopted here is the same as the approach that is used when determining individual character, conflict with an earlier design, and infringement. As such, the discussion above about individual character is applicable here. The scope of Article 25(1)(e) can be seen from the decision of the General Court in *José Manuel Baena* (approved by the Court of Justice), which concerned a possible conflict between a design of a figure for caps, T-shirts, etc. and an earlier mark. The General Court said that the differences between the trade mark and the design, particularly when focusing on the ‘fundamental characteristics’ that will be remembered by the user (namely, the facial expressions), were enough to create a different overall impression on the informed user. As such, the design was declared invalid (see Fig. 27.6).<sup>146</sup>

<sup>141</sup> *Grupo Promer v. OHIM-PepsiCo*, Case T 9/07 [2010] ECDR 7, [52].

<sup>142</sup> RDA 1949, s. 11ZA(3).

<sup>145</sup> *Herbert Neuman (OHIM) v. José Manuel Baena Grupo*, Joined Cases C-101/11 P and C-102/11 P (18 October 2012), [57], citing with approval the GC in *Baena Grupo v. OHIM: Herbert Neuman*, Case T-513/09 [2010] ECR II-00289, [20]–[22]. See also *Rackzek v. Śnieżka-Invest*, Case R 1148/2010–3 (7 November 2011) (Third Board of Appeal).

<sup>146</sup> *Baena Grupo v. OHIM: Herbert Neuman*, Case T-513/09 [2010] ECR II-00289 (GC), discussed, but not re-examined, by the Court of Justice in *Herbert Neuman (OHIM) v. José Manuel Baena Grupo*, Joined Cases C-101/11 P and C-102/11 P (18 October 2012), [57].

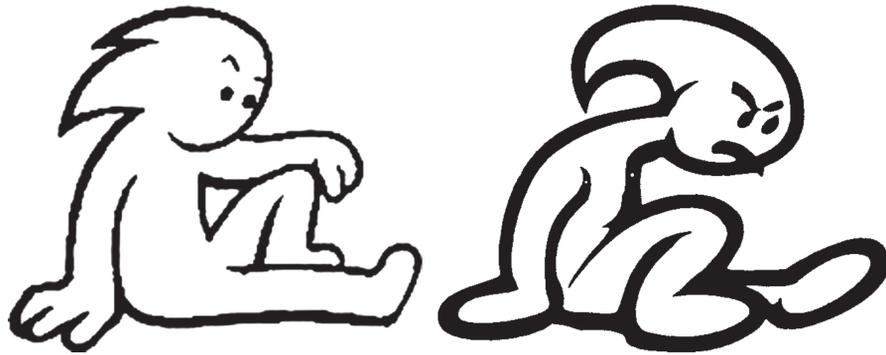

Fig. 27.6 Registered design and prior trade mark in *José Manuel Baena*

Source: *Beifa Group v. OHIM- Schwan-Stabilo Schwanhäußler*, Case T-148/08 (12 May 2010) (General Court)

As well as basing an attack on registered trade marks, an earlier right holder may be able to rely on analogous regimes protecting ‘distinctive signs’,<sup>147</sup> which could include passing off and, possibly, protected designations of origin (PDOs) and protected geographical indications (PGIs). In some circumstances, this ground may be capable of being used by famous personalities to prevent the registration of designs for merchandise bearing their name, signature, or image. This is important, since no other ground of objection are available.<sup>148</sup> Presumably the same approach will adopted here as is used when considering conflict with earlier trade marks.

#### 4.4 CONFLICTS WITH EARLIER COPYRIGHT PROTECTED WORKS

Article 21(1)(f) of the Regulation (which corresponds to Article 11(2)(a) of the Directive) provides that a design will be invalid ‘if the design constitutes an unauthorised use of a work protected under the copyright law of a Member State’.<sup>149</sup> This ground may only be invoked by the ‘holder’ of the copyright.<sup>150</sup> An obvious example of a case where this would occur is if a design for a T-shirt was based upon an unpublished painting.<sup>151</sup>

#### 4.5 CONFLICTS WITH PROTECTED BADGES

Finally, the Regulation (and Directive) provide that a design will be invalid if it constitutes improper uses of items listed in Article 6*ter* of the Paris Convention, as well as ‘badges,

<sup>147</sup> Whether all signs that are registered as trade marks, being not exclusively ‘descriptive’ or ‘devoid of distinctive character’, can be said to be ‘distinctive signs’ will, no doubt, have to be resolved in due course.

<sup>148</sup> Cf. art. 4(4)(b) of the Swedish Act No. 2002:570 amending the Design Protection Act 1970:485, which states that design right shall not subsist if the design ‘contains, without authorization, another person’s portrait or anything that can be perceived as another person’s family name, artistic name or similar name, unless the portrait or the name obviously relates to a person who is long deceased’.

<sup>149</sup> RDA 1949, s. 11ZA(4). This refers to the ‘owner’ of copyright, which almost certainly would be taken to include exclusive licensees—CDPA 1988, s. 101(2)—but not the owner of moral rights. It is expected that other countries will interpret the ‘holder’ of the right to include the author.

<sup>150</sup> CDR, Art. 25(1)(f), (3). For application, see *Erich Kastenholz v. OHIM- Qwatchme A/S*, Case T-68/11 (6 June 2013) (GC); *Viejo Valle v. Établissements Coquet*, Joined Cases T-556/11 and T-567/11 (23 October 2013) (GC, Second Chamber).

<sup>151</sup> If the painting were well known, the design would probably lack novelty, although this depends upon whether a painting is a design, i.e. ‘the appearance of a product’.

emblems and escutcheons . . . which are of particular public interest in the Member State concerned'.<sup>152</sup> Article 6*ter* requires members of the Paris Union to refuse or invalidate the registration of trade marks that are, or which contain, prohibited emblems—such as armorial bearings, flags and other state emblems, official signs and hallmarks of countries of the Union, or those of intergovernmental organizations. With the exception of flags, these insignia have to be notified to the World Intellectual Property Organization (WIPO). The Directive allows for this ground to be raised by 'the person or entity concerned by the use' (such as an official representative of the state concerned), or if a member state so chooses, an 'appropriate authority' of the member state may invoke this ground *ex officio*.<sup>153</sup>

The United Kingdom has treated this as a ground for refusal,<sup>154</sup> as well as invalidity.<sup>155</sup> Schedule A1 to the 1949 Act elaborates the emblems concerned. The domestic ones include royal arms, the Crown, 'a representation of Her Majesty or any member of the Royal Family', the Union Flag, flags of the home nations, and coats of arms granted by the Crown. The Community Design Regulation treats conflicts with protected badges as a ground for invalidity.

## OWNERSHIP, EXPLOITATION, AND INFRINGEMENT: UK REGISTERED DESIGNS, REGISTERED COMMUNITY DESIGNS, AND UNREGISTERED COMMUNITY DESIGNS

### CHAPTER CONTENTS

1 Initial Entitlement	748	4 Infringement	754
2 Assignment and Licences	751	5 Exceptions and Defences	759
3 Duration	753		

This chapter deals with issues key to the operation of UK registered designs, registered Community designs, and unregistered community designs; namely, ownership, exploitation, and infringement.

### 1 INITIAL ENTITLEMENT

The question of who is initially entitled to a design is a key issue in design law. In the pre-harmonized era, most European countries awarded the rights to the designer or their employer, but the rules differed in their details (for example whether all designs created by an employee in the course of employment belonged to the employer or only those that could be expected to result from the employee carrying out their duties). Consequently, a registered design right in country A might have vested in the designer, while in country B it belonged to the designer's employer. Harmonization would thus have reduced the potential for a national design right to vest in different people—a situation that, as we have seen, can produce barriers to the free movement of goods made to particular designs. However, it was probably thought unlikely that such barriers would arise in practice, because subtle differences in the national laws of member states could (and would) be rectified by express contractual dealings between the designer and their employer. For example, an employer

© L. Bently and B. Sherman 2014

wanting to obtain protection in a number of European countries through national registration could readily enter into an agreement with the designer assigning (or affirming the employer's ownership of) worldwide rights. While the Designs Directive deals with entitlement in relation to Community registered and unregistered designs, it does not deal with the question of who is entitled to a national registered design, so this remains a matter of national law. Given this, we will look at the national position and the position in relation to Community registered and unregistered designs separately.

### 1.1 ENTITLEMENT UNDER THE UK REGISTERED DESIGNS ACT 1949

The initial owner of a UK registered design (or as the Registered Designs Act 1949 prefers, the 'original proprietor') is the designer—that is, the author of the design.<sup>1</sup> The author of a design is defined as 'the person who creates it'.<sup>2</sup> The person who creates a design is the person who gives the design its specific form and appearance.<sup>3</sup> There is case law prior to harmonization that suggests that a person is not a creator if all that they have done is to bring a design into the United Kingdom from overseas (despite the fact that it may be 'new' in the Community).<sup>4</sup> Nor is a person who is given the right to register,<sup>5</sup> or the exclusive right to distribute a design in the United Kingdom, a creator.<sup>6</sup>

There are two exceptions to the general principle that the initial owner of a UK registered design is the designer. First, where a design is created by an employee in the course of employment, the employer is treated as the original proprietor.<sup>7</sup> The second limited exception applies to commissioned designs. Prior to the enactment of the Intellectual Property Act 2014, all designs created in pursuance of a commission were owned by the commissioner.<sup>8</sup> In order to bring UK law into law with Community design law, the Act removes the exception in relation to commissioned works,<sup>9</sup> so that commissioned designs are now owned by the designer. It should be noted that the 2014 Act does not apply where (i) the design was created before the operation of the Act, or (ii) the commissioning contract was entered into before the commencement of the Act.<sup>10</sup> In these limited

<sup>1</sup> RDA 1949, s. 2(1).

<sup>2</sup> RDA 1949, s. 2(3). RDA 1949, s. 2(4), defines the author of a computer-generated design as 'the person by whom the arrangements necessary for the creation of the design are made'.

<sup>3</sup> *A. Pressler & Co v. Gartside & Co.* (1933) 50 RPC 240 (Luxmoore J).

<sup>4</sup> *Lazarus v. Charles* (1873) LR 16 Eq 117 (importer not entitled to register under s. 5 of the 1842 Act); cf. *Barker v. Associated Manufacturers (Gowns and Mantles)* (1933) 50 RPC 332, 337 (possible to obtain registration of a design that was used by the Ancient Egyptians 6,000 years ago, if it had not been previously used in the United Kingdom).

<sup>5</sup> *Jewitt v. Eckardt* (1878) 8 Ch D 404; *Re Guiterman's Registered Design* (1886) 55 LJ Ch 309.

<sup>6</sup> In *Neville v. Bennett* (1898) 15 RPC 412, it was held that where one person selected an idea for a design from existing Persian designs, which was then rendered into a workable design by someone else, they were joint designers. This suggests that the process of selecting the basic design was considered a relevant act of creation, a proposition that seems difficult to reconcile with the 'import' cases.

<sup>7</sup> RDA 1949, ss 2(1B), 44; *Coffey's Registered Designs* [1982] FSR 227 (suggesting that the employer is the first proprietor only where employment carries with it a duty to make the design for the benefit of the employer).

<sup>8</sup> RDA 1949, s. 2(1A), to be repealed under IP Act 2014, s. 6(1). Where a person requests a design and agreement is that the designer will have exclusive distribution in some places, the commissioner is the proprietor: *Breville Europe v. Thorn EMI Domestic Appliances* [1995] FSR 77.

<sup>9</sup> IP Act 2014, s. 6(1), omits RDA 1949, s. 2(1A), and makes corresponding changes to s. 2(1B).

<sup>10</sup> While this is not directly dealt with by the 2014 Act, this would seem to be the case on the basis of the transitional arrangements for commissioned unregistered designs: see IP Act 2014, s. 2(3), and p. 795 below. It is also in line with transitional arrangements previously used in registered design law in this area.

situations, the old law will still apply: the commissioner will be the owner of the design. In all other cases, designs created in pursuance of a commission will be initially owned by the designer. As such, the designer will normally be the first owner of any design right in a design, unless it is created in the course of employment.

## 1.2 ENTITLEMENT: THE COMMUNITY PROVISIONS

Registered and unregistered Community designs vest in the designer or their successor in title.<sup>11</sup> There is no further guidance as to who is the ‘designer’. However, it is clear that the first person to disclose a design to the public is not, for that reason, the designer. Provision is made for the designer (or person entitled) to make a claim as to ownership of an unregistered Community design that has been ‘disclosed or claimed by . . . a person who is not entitled to it’. The Community Design Regulation recognizes the possibility of joint design where ‘two or more persons have jointly developed a design’.<sup>12</sup>

As with the United Kingdom, an exception is made to the general rule that Community designs vest with the designer where the design is made by an employer. (Notably, no equivalent provision exists for commissioned designs). Article 14(3) of the Regulation provides that where a design is ‘developed by an employee in the execution of his duties or following instructions given by his employer, the right to the Community design shall vest in the employer, unless otherwise agreed or specified under national law’.<sup>13</sup> The Court of Justice has clarified that Article 14(3) only applies to ‘employers and employees’, and that it does not extend to include other relationships, such as designs that have been produced as a result of a commission.<sup>14</sup>

Four points should be noted about Article 14(3). First, in contrast to the British provision, which ascribes rights to an employer where a design ‘is created by an employee in the course of employment’, Article 14(3) refers to both ‘the execution of his duties’ and ‘following instructions’. The difference can be demonstrated by means of an example of a situation in which a person is employed as an administrator, but the employer specifically requests the employee to design the cover of a brochure. It seems that under UK law, the employee might be the owner, because the design was not created ‘in the course of employment’;<sup>15</sup> if Article 14(3) applies, the employer would be the owner, since the design was made ‘following instructions given by his employer’. Although it is not easy to think of many situations that would fall within one provision but not the other, the divergence in terminology is unfortunate.<sup>16</sup>

Second, in its British form no provision is made for ‘agreements to the contrary’.<sup>17</sup> In contrast, the Regulation allows for variation from the provision ‘where it is agreed or

<sup>11</sup> CDR, Art. 14(1).      <sup>12</sup> CDR, Art. 14(2).

<sup>13</sup> CDR, Art. 14(3). The designer has a right to be named on the register—CDR, Art. 18—unless waived, under CDR, Art. 36(3)(e).

<sup>14</sup> *Fundacion Española para la Innovación de la Artesanía (FEIA) v. Cul de Sac Espacio Creativi SL*, Case C-32/08 [2009] ECR I-0561, [2010] RPC 405, [49].

<sup>15</sup> Possibly, the design would be treated as having been commissioned.

<sup>16</sup> It is copied from the Software Directive: European Commission, *Green Paper on the Legal Protection of Industrial Design* (June 1991), III/F/5131/91-EN (henceforth ‘EC Green Paper’), [7.2.3].

<sup>17</sup> This leaves unclear whether the normal rules on transfer must be complied with if an employee is to be made owner. If a court sees the rule on employers as a statutory variation of the orthodox rule that the designer is the owner, it may take the view that the retention of the rights in the design by the designer is not a ‘transfer’ and so need not comply with the normal formalities. However, if a court wishes to emphasize the evidential importance of the transfer formalities, it may insist that any variation from the statutory rule is a transfer. See *Ultraframe (UK) v. Eurocell Building Plastics* [2005] RPC 36, an unregistered design right case, discussed below at p. 768.

specified under national law'. Such an agreement would not necessarily have to comply with the rules on formalities for transfer, only those for agreements.

Third, the reference in the Regulation to specification under national law seems to enable member states to have their own rules about the allocation of rights to designs made by employees, and for these to override the Community rules.

Finally, the Community rules say nothing about commissioners and thus leave the initial rights with the designer: a commissioner who wishes to own design right must secure their prospective rights by assignment.

The person named on a Community registered design is 'deemed to be the person entitled'.<sup>18</sup> Although this is put in categorical terms, it is a presumption that can be rebutted. Provision is explicitly made for claims to be recognized as 'the legitimate holder of the Community design' and for the change in ownership to be entered on the Register.<sup>19</sup> In the absence of a provision giving the Office of Harmonization in the Internal Market (OHIM) the power to decide, the matter must be for the relevant national courts, with jurisdiction governed by the Brussels Convention.<sup>20</sup> The effect is that the action should usually be brought in the state in which the defendant, the current proprietor, is domiciled.<sup>21</sup> The Regulation does, however, provide a limitation period for such actions. In general, an incorrect ascription of rights can be rectified for up to three years following the publication of the registered Community design. However, this limitation is not applicable where the registrant has acted in bad faith. Alternatively, a Community design may be declared invalid 'if, by virtue of a court decision, the right holder is not entitled to the Community design under Article 14'.<sup>22</sup>

Prior to the enactment of the Intellectual Property Act 2014, the effect of these differences was to create a possible distinction between the person entitled under national design law and the person entitled to the Community design right—and thus to produce two different right holders with equivalent rights. For example, in the United Kingdom a commissioner of a design was entitled to national design right,<sup>23</sup> whereas under the Community regime such rights belong to the designer.<sup>24</sup> As was mentioned above, this anomaly is now rectified by the new Act, which removes the provisions in relation commissioned designs in the United Kingdom. As a result, UK law is now the same as Community provisions: the first owner of a commissioned design is the designer, subject to any contractual assignments.

## 2 ASSIGNMENT AND LICENCES

### 2.1 ASSIGNMENT AND LICENCES IN THE UNITED KINGDOM

The proprietor of a design may assign or mortgage the design, or license others to make articles bearing it.<sup>25</sup> Assignments should be made in writing, as should licences.<sup>26</sup> As a chose in action, design right may be assigned either in law or equity. For design right to be assigned in equity, it is necessary to show 'sufficient expression of an intention to assign in the context of a transaction from which it can be inferred that the property

<sup>18</sup> CDR, Art. 17.

<sup>19</sup> CDR, Art. 15. Third parties whose activities are affected by such changes in the register are protected by the availability of licences upon reasonable terms: CDR, Art. 16. <sup>20</sup> CDR, Art. 79.

<sup>21</sup> This follows from *Duijnste*, Case C-288/92 [1985] 1 CMLR 220. <sup>22</sup> CDR, Art. 25(1)(c).

<sup>23</sup> RDA 1949, s. 2(1A), repealed under IP Act 2014, s. 6(1). <sup>24</sup> CDR, Art. 14(1).

<sup>25</sup> RDA 1949, s. 19. <sup>26</sup> *Jewitt v. Eckardt* (1878) 8 Ch D 404.

was intended to pass.<sup>27</sup> No provision exists for the assignment of future designs, and it is probably necessary for the original proprietor to register and then execute the relevant dealing.<sup>28</sup> An offer of exclusivity in distribution is not an assignment, because it is not a grant of the ‘right to apply’ the design to a product.<sup>29</sup> Neither an exclusive licensee nor the sole distributor of a design has a right of action against an infringer; this right belongs to the proprietor alone.<sup>30</sup>

### 2.1.1 Registration of transactions

Information concerning assignments and other transactions of registered designs is maintained at the UK Designs Registry.<sup>31</sup> Any person who becomes entitled to an interest in a registered design should apply to the Registrar to have their interests entered on the register.<sup>32</sup> The interests that can be entered include assignments, mortgages, co-ownership, and licences, but not beneficial interests relating to trusts.<sup>33</sup> A strong incentive exists to register such a transaction: any document in respect of which no entry has been made in the register may not be admitted as evidence of such title ‘unless the court otherwise directs’.<sup>34</sup> Moreover, a transferee of a registered design will take subject to any interests that have been registered<sup>35</sup>—the position in relation to unregistered interests, it seems, being governed by the general law. There are two notable effects here: first, licences, as interests that would not bind a purchaser under the general law (being non-proprietary), acquire a proprietary character as a consequence of registration; and second, equitable interests—such as an equitable charge on the design—will bind a purchaser with notice, but in the absence of registration, not one without notice. Until recently, the UK Intellectual Property Office (IPO) would not register an interest in a registered design unless it was satisfied that the same interest applied to any associated unregistered designs.<sup>36</sup> On the basis that this created uncertainty and was out of step with Community design law, the Intellectual Property Act 2014 removed this requirement.<sup>37</sup>

## 2.2 ASSIGNMENT AND LICENCES: COMMUNITY PROVISIONS

As Community design rights are unitary in nature, they can only be transferred for the Community as a whole.<sup>38</sup> While it is possible to license a Community design in different parts of the Community, the rights cannot be assigned or surrendered in different member states. While the Regulation does not establish the rules relating to transfers, leaving those to member states, it does provide a scheme for deciding which member states’ rules apply. The basic rule is that national laws of the member state in which the holder has their seat or domicile apply. So if a design proprietor is British and she assigns an unregistered Community design to a French citizen, British laws govern the transaction. If the French owner assigns the design to a Spaniard, the rules that operate are French.

### 2.2.1 Registration

In the case of registered Community designs, an additional requirement is that the transfer be entered in the register. Pending an entry, the successor in title may not invoke

<sup>27</sup> *Victor Ifejika v. Charles Ifejika Lens Care* [2010] EWCA Civ 563, [26]. <sup>28</sup> *Ibid.*

<sup>29</sup> *Leary Trading Co.’s Designs* [1991] RPC 609.

<sup>30</sup> *Oren & Tiny Love v. Red Box Toy Factory* [1999] FSR 785, 800 (speculating as to whether an exclusive licensee could be registered as a proprietor); *Woolley v. Broad* [1892] 9 RPC 208.

<sup>31</sup> RDA 1949, s. 17(1)(b). <sup>32</sup> RDA 1949, s. 19(1). <sup>33</sup> RDA 1949, s. 17(2).

<sup>34</sup> RDA 1949, s. 19(5). <sup>35</sup> RDA 1949, s. 19(4).

<sup>36</sup> RDA 1949, s. 19(3A), repealed under IP Act 2014, s. 9(1). <sup>37</sup> *Ibid.*

<sup>38</sup> CDR, Arts 1(3), 27.

the rights ‘arising from the registration of’ the Community design.<sup>39</sup> The same is true of grants of registered Community designs as security.<sup>40</sup>

### 2.2.2 Licences

A licence may be granted for the whole or part of the Community.<sup>41</sup> Any licence relating to part of the Community will need to be scrutinized to ensure it does not breach Article 101 of the Treaty on the Functioning of the European Union (TFEU) (ex Article 81 EC and Article 85 of the Treaty). Licences may be exclusive or non-exclusive: an exclusive licensee may bring proceedings for infringement, but a licensee needs the consent of the proprietor to do so. Licences can be entered in the register. The effect of this is likely to depend on the law of the member state of the proprietor,<sup>42</sup> but registration may well be a prerequisite for the licence to bind a third-party transferee of the Community registered design. This would be so in the case of a transfer governed by British law.<sup>43</sup>

## 3 DURATION

Because the subject matter covered by design law is so wide, calculating an optimal period of protection was difficult. While some designs will be the product of considerable investment, others are the result of minimal effort. Some designs will have a very brief commercial life, whereas other design classics might last much longer.<sup>44</sup> While it was not possible to tailor the duration to suit all of the different types of design, a different approach was taken to registered designs to that provided for unregistered designs.

### 3.1 NATIONAL AND COMMUNITY REGISTERED DESIGNS

Upon registration, national and Community registered designs are protected for five years from the date of filing. Registered designs can be renewed (in five-year periods) for up to a maximum of 25 years.<sup>45</sup> In contrast to the position in relation to copyright, the harmonization of which was ‘upwards’, the 25-year period was not the longest provided under existing law: France had previously protected registered designs for 50 years.<sup>46</sup> The Commission could claim some international consensus for the 25-year period (an easier course than justifying the term by reference to economic or philosophical arguments):<sup>47</sup> the term corresponds to the minimum period of copyright protection for works of applied art under the Berne Convention.<sup>48</sup>

### 3.2 UNREGISTERED COMMUNITY DESIGNS

Unregistered Community designs are protected for three years from the date when the design was first made available to the public within the Community.<sup>49</sup> The period was

<sup>39</sup> CDR, Art. 28(b).      <sup>40</sup> CDR, Art. 29.      <sup>41</sup> CDR, Art. 32.      <sup>42</sup> See CDR, Art. 33.

<sup>43</sup> RDA 1949, s. 19(4). A court might direct otherwise to prevent the statute being used as an instrument of fraud.      <sup>44</sup> EC Green Paper, [4.3.16]–[4.3.18], [6.3].

<sup>45</sup> CDR, Art. 12; Designs Dir., Art. 10.

<sup>46</sup> French Intellectual Property Code, L 513(1). The Benelux countries had 15 years; Germany, 20 years; the United Kingdom, 25 years; Italy, as single period of 15 years; Scandinavia, 15 years; Austria, 15 years; Spain, 20 years; Portugal, 25 years.

<sup>47</sup> CDR, Recital 16, refers to the term as ‘corresponding to the foreseeable market life of their products’.

<sup>48</sup> TRIPS, Art. 26(3), requires only a ten-year term.      <sup>49</sup> CDR, Art. 11.

chosen by the Commission in preference to the two-year term suggested by the Max Planck Institute.<sup>50</sup> It is notable that the period starts irrespective of whether or not the making available was lawful; thus disclosures in breach of confidence or as a consequence of industrial espionage or theft can trigger an unregistered Community design coming into being. The onus is on the claimant to prove subsistence of unregistered Community design and thus to demonstrate when the design was first made available within the Community.

## 4 INFRINGEMENT

In this section, we look at infringement of national registered designs, registered Community designs, and unregistered Community designs. With a limited number of exceptions, which are detailed below, the approach taken to infringement is the same for UK registered designs, registered Community designs, and unregistered Community designs.

### 4.1 RIGHT TO ‘USE’ THE DESIGN

One of the defining features of intellectual property law is that protection is never absolute. The rights are limited in terms of jurisdiction, duration, and scope. One of the most important limitations is that the rights holder is only ever granted the ability to control the intangible property in certain limited ways. Thus while a copyright owner in a book can stop someone from reproducing the book, they cannot stop them from reading the book. Design law is no different. Design owners—whether of national registered designs, registered Community designs, or unregistered Community designs—are given the exclusive right *to use* the design and to prevent a third party not having the owner’s consent from using it.<sup>51</sup> ‘Use’ is defined to cover, in particular, ‘the making, offering, putting on the market, importing, exporting or using of a product in which the design is incorporated or to which it is applied, or stocking such a product for those purposes.’<sup>52</sup> This is a very broad (and open-ended) definition that would seem to cover most situations that a design owner might want to control. Thus it may be that the list includes the marketing of a complete kit, which when made up, constitutes the design, on the basis that this is ‘putting on the market . . . a product . . . to which [the design] is applied.’<sup>53</sup> If not, such an activity is likely to infringe on the basis that it is a ‘use’ of the design, even though it is a form of use that has not been explicitly listed.<sup>54</sup>

<sup>50</sup> EC Green Paper, [6.3.1.2]. The Commission wanted the unregistered Community design to be valuable to industries that change their designs after a limited number of years.

<sup>51</sup> Designs Dir., Art. 9, and CDR, Art. 10, deal with ‘scope of protection’. In turn, Designs Dir., Art. 12, and CDR, Art. 19, deal with the rights conferred by design right.

<sup>52</sup> Designs Dir., Art. 12; RDA 1949, s. 7(1); CDR, Art. 19. The UK provisions formerly covered ‘exposing for sale or hire’ rather than offering, because such exposure fell short of an offer: see Fellner, [5.151]. Although this has been deleted, the same act will almost certainly be covered, either as ‘stocking’ or ‘use’.

<sup>53</sup> Designs Dir., Art. 12(1); RDA 1949, s. 7(2)(a); CDR, Art. 19(1).

<sup>54</sup> Formerly such acts were explicitly dealt with by RDA 1949, s. 7(4), with ‘kit’ being defined as ‘a complete or substantially complete set of components intended to be assembled into an article’. Would the sale of a computer program that enabled a printer to employ a particular design-protected font be treated as use of a product into which the design is incorporated? The answer seems to be that such ‘indirect use’ is not covered by the harmonized and Community regimes, although it might well be by national rules on

An important question will be whether ‘use’ is limited to activities of the same sort as those listed (*ejusdem generis*), which relate to the manufacture and distribution of *products*. The better view is that it should be limited in this way, especially given that the definition of design is broad enough to encompass subject matter previously the preserve of copyright and trade mark law. For example, if a cartoon character has been registered as a design, the question might arise as to whether the design is ‘used’ when the cartoon is broadcast for reception on television or placed on a website. In Spain, prior to the harmonization directive, the broadcasting of a design was held to be non-infringing,<sup>55</sup> and such a conclusion under the harmonized and Community regimes would be welcome. Recital 21 of the Regulation states that the right ‘should also extend to trade in products embodying infringing designs’, and supports a view that the meaning of ‘use’ is to be confined to ‘trade in products’.<sup>56</sup> On this basis, ‘use’ would not cover broadcasting.

#### 4.2 PROTECTION FOR THE USE OF ANY PRODUCT

The second point to note is that infringement is not confined to dealings with the same product which the design had been applied to or which is mentioned in the application; instead, the rights are infringed by the use of *any* product in which the design is incorporated or to which it is applied. Once a design is registered, it is not only protected in relation to the products specified in the application, but also in relation to *any* product in which the design is used.<sup>57</sup> So a wallpaper design might be infringed by making curtains bearing a similar pattern and a design for a car by making a toy version of it.<sup>58</sup> It also does not matter if the purpose or use of the product changes. Thus an application for the design for a spiky ball that specified use as ‘flat iron and washing, cleaning and drying equipment’ (when placed with wet clothes in a tumble dryer, the ball improved the drying process) was not limited to use as a laundry ball. Instead, the registration prevented third parties from using the designed product irrespective of whether it was used as a massage ball, dog toy, Christmas decoration, or ‘anything else that an ingenious marketer can think of’.<sup>59</sup> This was a dramatic change for UK registered designs law, which formerly confined the scope of infringement to use of substantially the same design on the article for which the design had been registered.<sup>60</sup> As such, it made registration much more attractive and saved design proprietors from having to register a design for articles which they did not intend to apply the design to, but to which they suspected competitors might apply their design.<sup>61</sup>

One problem raised by the legal separation of designs from their use in relation to a particular product relates to the treatment of ‘books’ (and other communication media) as products. It seems safe to proceed on the assumption that books constitute ‘industrial

joint tortfeasance: for the position in the United Kingdom, see pp. 1208–10. See D. Ohlgart commentary, in Franzosi, 137–8.

<sup>55</sup> Cf. *Heirs to Eduardo MS v. Television Espanola en Canarias SA*, discussed by L. Gimeno, ‘Spain: Design Right’ [1997] *EIPR D* 216.

<sup>56</sup> The definition of ‘design’, however, indicates clearly that the appearance of graphic symbols is to be protected. In this respect, confining use to use on material products, rather than immaterial media such as the web, seems unduly limiting. The effect of this narrow construction is also to exclude web design from the field of designs law.

<sup>57</sup> *Green Lane Products v. PMS International* [2007] *EWHC* 1712, [12].

<sup>58</sup> See J. Wessel, ‘Germany: Registered Designs’ [1996] *EIPR D* 200, discussing *BMW v. Carrera* (unreported).

<sup>59</sup> *Green Lane Products v. PMS International* [2007] *EWHC* 1712, [12].

<sup>60</sup> *Best Products v. Woolworth & Co.* [1964] *RPC* 226; *Bourjis v. British Home Stores* (1951) 68 *RPC* 280.

<sup>61</sup> See J. Phillips commentary, in Franzosi, 94.

or handicraft items' and so are products—otherwise, the regime would fail to protect designs of book covers. If this is the case, design law may now be a potential tool of censorship. For example, if a design has been registered for a cartoon figure to be applied to wallpaper, the depiction of the design in a book may constitute a 'use' of the design by its application to a product. Indeed, in one German case the owner of a Community design right in the shape of a train succeeded in bringing an action against a trader who used an image of the train on its brochure.<sup>62</sup> Although, as we will see, a 'citation' defence exists, it is subject to certain limitations (in particular, it only applies to acts of reproduction not distribution) and so may not adequately protect free speech interests. It would be preferable for tribunals to interpret the statute so as to avoid having to look for such an exception in the first place.<sup>63</sup>

### 4.3 ABSOLUTE AND QUALIFIED PROTECTION

One of the key differences between an infringement action in relation to a registered design (whether at national or Community level) and an infringement action in relation to an unregistered Community design relates to the conduct of the defendant. More specifically, it relates to the question of whether infringement might occur, as in patent law, irrespective of whether a defendant has copied or even seen the protected subject matter, or whether a claimant needs to prove, as in copyright, copying as part of their action. In reflection of the different goals of the registered and unregistered design protection, different standards are applied.

#### 4.3.1 Independent creation: registered national and Community designs

Reflecting the Commission's view that registered designs should be 'an efficient and strong right, sought after by industry',<sup>64</sup> the protection conferred on registered national designs and registered Community designs is 'absolute': the rights are exclusive (akin to patents), rather than qualified rights of the sort given by copyright that only control the use of reproductions of the registered designs. Because protection extends to independent creations, it does not matter whether a defendant copied a registered design; all that matters is that they used the design (and that the designs are the 'same'). As a result, the proprietor of a registered design does not need to be concerned about whether the defendant copied the design or arrived at the design independently.

#### 4.3.2 Copying: unregistered Community designs and unpublished Community registered designs

In contrast to registered national designs and registered Community designs, the rights conferred by unregistered Community designs are confined to situations where the defendant copied the protected design.<sup>65</sup> As such, proof of copying is an essential element

<sup>62</sup> BGH I ZR 56/09 (KG) *Intercity-Express (ICE)* (7 April 2011).

<sup>63</sup> This might be done by focusing on the informed user of the product in question, whose particular interests might well lead them to have quite a different interpretation of the design than that of the informed user of the product for which it was initially used: *Gimex International Export v. The Chill Bag Co.* [2012] *EWPC* 31, [115] (informed user of chill bags would notice differences in prior-art bag, which was not used or usable as a chiller bag).

<sup>64</sup> EC Green Paper, [6.4.4]. The CDR, Recital 21, states that such a right 'is consistent with its greater legal certainty'. The position before harmonization had not been uniform. Whilst most countries conferred a full monopoly, some, such as Germany, required derivation to be proved. See Suthersanen, 201.

<sup>65</sup> CDR, Art. 19(2), (3). It had been proposed that liability should turn on bad faith, but this was rejected. See Musker, 122; V. Saez, 'The Unregistered Community Design' [2002] *EIPR* 585, 586–7.

in an infringement action involving an unregistered Community design. It should be noted that the situation is the same for registered Community designs that are yet to be published; proof of copying is also necessary in an infringement action involving an unpublished registered Community design.<sup>66</sup>

The decision to make copying an element of an infringement action of unregistered Community designs and registered designs yet to be published is based on the belief that it would be wrong to stop a third party from using a design that they had developed in circumstances under which they could not have ascertained that the design was already protected.<sup>67</sup> In the absence of a means by which users could be placed on notice of earlier rights, a person should only be prevented from using a design if they have copied that design from the claimant. The design proprietor must prove copying on the balance of probabilities and it is for a given Community design court to rely on its own rules of evidence.<sup>68</sup>

The question of whether a design has been copied is a question of fact. In some cases, this can be easily proved. In the majority of cases, however, it will be difficult to show actual copying. To overcome this problem, the courts have been willing to infer copying from the circumstances of the case: relevant factors have included similarities between the designs, evidence of the defendant's access to the claimant's work, and the plausibility of independent creation. Thus, in *J Choo v. Towerstone*,<sup>69</sup> the UK High Court said that when the claimant's and defendant's bags were viewed side-by-side, the 'inference of copying' was 'overwhelming'. This was because the 'likelihood that these two designs could have been arrived at independently, given the large number of identical features in a design field as free as the present one, seems to me to be truly fanciful'.<sup>70</sup> Article 19(2) of the Regulation elaborates that use:

... shall not be deemed to result from copying the protected design if it results from an independent work of creation by a designer who may reasonably be thought not to be familiar with the design made available to the public by the holder.

Although the Regulation clearly imposes a requirement of copying for unregistered Community designs and for registered Community designs yet to be published, it is silent on two further matters. First, it does not state whether copying can be indirect as well as direct. Second, it does not state whether a person who sells a product to which the design has been applied is liable for infringement even though that person was ignorant of the fact that the product carried a design that had been copied from a protected design. On a literal reading, in both situations 'the contested use results from copying the protected design' and falls outside the clause clarifying when a use 'shall not be deemed to result from copying'. Nevertheless, it does seem harsh to hold a secondary infringer liable in the absence of any *mens rea*, and at least one commentator has asserted that the relevant Article can be interpreted in accordance with general principles to avoid such an outcome.<sup>71</sup>

<sup>66</sup> CDR, Art. 19(3). Article 50 allows for deferred publication for up to 30 months. On this, see Stone, 257–8, 321–2.

<sup>67</sup> Although this would be the case in the United Kingdom for secret designs.

<sup>68</sup> *H. Gautzsch Großhandel v. Münchener Boulevard Möbel Joseph Duna*, Case C-479/12 (5 September 2013) (Opinion of Advocate-General Wathelet), [69]–[71]. While the determination of burden of proof is, in principle, a matter for national law, the Advocate-General said that the issue affects the substance of the right and is therefore governed by European law. See D. Ohlgart commentary, in Franzosi, 121–2, arguing that the rules as to evidence in such cases are Community rules.

<sup>69</sup> [2008] EWHC 346 (Ch).

<sup>70</sup> *Ibid.*, [23].

<sup>71</sup> D. Ohlgart commentary, in Franzosi, 124–6; Musker, 122.

#### 4.4 SAME OVERALL IMPRESSION ON THE INFORMED USER

One of the key questions that arises in an infringement action is whether the allegedly infringing design is the ‘same’ as the design in question. In the peculiar language of Community design law, designs will be the same (and thus infringe) when they create the ‘same overall impression’ on the informed user. As Article 10(1) of the Regulation states, the scope of protection ‘includes any design which does not produce on the informed user a different overall impression’.<sup>72</sup> As we mentioned earlier, the test for whether a design is infringing is a mirror of the test to determine individual character.<sup>73</sup> The concepts used and the questions asked are, subject to a temporal difference, identical (or very nearly so).<sup>74</sup> As such, there is no need to repeat what was said above. All of the comments made in relation to the inquiry into individual character apply equally here. Having said this, there are a number of additional points about design infringement that should be noted.

The first point to note is that the date on which the overall impression of the allegedly infringing design will be compared with the overall impression of the design in question is the date of registration, not the date of infringement.<sup>75</sup> This may be important when determining the design corpus and the freedom of the designer. Presumably, the logic would be the same for unregistered designs, in which case the relevant date would be the date when the design was first made available to the public within the Community. It is also important to note that when comparing the defendant’s allegedly infringing design with the claimant’s design, matter added by the defendant will be ignored. This is because when comparing designs, the informed user will ignore aspects of the design that are considered to be optional accessories, such as a trailer attached to a (protected) toy cement truck<sup>76</sup> or the heel strap on a shoe.<sup>77</sup> While these additions might justify the defendant registering a new design (for the additions individually), they would not be taken into account when deciding whether the design was identical or produced a different overall impression on an informed user. It should also be noted that in this context at least, size does not seem to matter. Thus it does not matter whether the alleged infringing design is the same size as the design in question: ‘It could be half the size or a hundred times the size. Use of the design is prohibited.’<sup>78</sup>

Following a logic that is widely applied in intellectual property law, the ideas or concepts that lie behind a design are not protected; instead, protection is limited to the tangible physical form (or appearance) of the design that is embodied either in an

<sup>72</sup> Designs Dir., Art. 9(1); RDA 1949, s. 7(1); CDR, Art. 10(1). But cf. TRIPS, Art. 26, requiring that protection extend to use of a design that ‘is a copy, or substantially a copy, of the protected design’.

<sup>73</sup> *Celaya Emparanza y Galdos Internacopnal SA v. Proyectos Integrales de Balizamientos SL*, Case C-448/10 [2012] ECDR 17 (ECJ, First Chamber), [52].

<sup>74</sup> One difference is that the informed user is referred to certain factors in the context of the assessment of individual character that are not mentioned in relation to the scope of protection. Specifically, the informed user is to have regard to the existing design corpus, the product, and the industrial sector: Designs Dir., Recital 13. To date, these have not led to any notable differences.

<sup>75</sup> *Dyson v. Vax* [2010] EWHC 1923 (Pat), [42]–[45]. The scope of the rights are determined objectively: *Celaya Emparanza y Galdos Internacional SA v. Proyectos Integrales de Balizamientos SL*, Case C-448/10 [2012] ECDR 17 (ECJ, First Chamber), [55].

<sup>76</sup> *Geobra Brandstätter v. Shantou Wanshun Toys Industrial*, Case R 1701/2010–3 (12 July 2011) (Board of Appeal), [26]–[28].

<sup>77</sup> *Crocs v. Holey Shoes Holdings*, Case R 9/2008–3 (26 March 2010) (Board of Appeal), [102]–[103].

<sup>78</sup> *Green Lane Products v. PMS International* [2007] EWHC 1712, [12]. Presumably, there might come a point at which a product is either so very small or very large that it *might* produce a different overall impression on the notional informed user.

article or a design document.<sup>79</sup> It is also important to note that a design that solely claims shape will only infringe by making a product (or dealing with a product made) to that shape. This means that a design for a three-dimensional product, such as the design of an automobile, would not be infringed by use on two-dimensional products, such as posters or tablemats. This is because in this context, the design—that is the shape—has not been ‘applied’ to the poster or tablemat. For the same reason, a book featuring images of the designs will not infringe, although, as we already observed, this may not be the case if the designer not only claimed shape, but also features of colour, line, or pattern.

Although protection is not limited to the product for which the design was registered, there are substantive limits to the principle of the ‘irrelevance of the product’. This is particularly the case where the design comprises the shape of a three-dimensional item. In such cases, the design and product will be inseparable, so that use of a similar design for a different product will usually fail to produce the same overall impression on the informed user. This can be seen if we consider two designs which are intended to be complementary, such as a dining table and a sideboard. Each may be made out of similar materials (say, oak), use simple lines, and give off a chunky, although not inelegant, appearance—yet it would be difficult in such a situation for an informed user to say that the two designs produced the same ‘overall impression’, because one design has drawers, cupboards, and handles, whereas the other has a flat top and four legs. The designs may be in the same ‘style’, but the *appearance* of the two products will differ. Where the appearance of the product and the nature of the product have an inseparable connection, the product will matter.<sup>80</sup>

## 5 EXCEPTIONS AND DEFENCES

The Directive and Regulation provide for, and the UK Act implements, certain ‘limitations of the rights conferred’ by a UK registered design, a Community registered design, and unregistered Community designs.<sup>81</sup> Three of these relate specifically to ships and aircraft, and need not be discussed here;<sup>82</sup> four others merit at least a brief discussion.<sup>83</sup> Article 20(1) of the Regulation (which corresponds to Article 13(1) of the Directive) states that:

The rights conferred by a design right upon registration shall not be exercised in respect of:

- (a) acts done privately and for non-commercial purposes;
- (b) acts done for experimental purposes;

<sup>79</sup> *Rolawn v. Turfmech Machinery* [2008] *RPC* (27) 663, [9]; EC Green Paper, [5.4.3.1]–[5.4.3.4] (design law does not protect the idea or overall concept).

<sup>80</sup> However, the former Benelux position that a change in the function of the product will take it outside the scope of protection, even if appearance is the same, can no longer be good law.

<sup>81</sup> TRIPS, Art. 26(2), permits ‘limited exceptions . . . provided that such exceptions do not unreasonably conflict with the normal exploitation of protected industrial designs and do not unreasonably prejudice the legitimate interests of the owner of the protected design, taking account of the legitimate interests of third parties’.

<sup>82</sup> *Designs Dir.*, Art. 13(2); RDA 1949, s. 7A(2)(d)–(f); CDR, Art. 20(2).

<sup>83</sup> It is not a defence to an action to rely on a later registration. See *Celaya Emparanza y Galdos Internacional SA v. Proyectos Integrales de Balizamientos SL*, Case C-448/10 [2012] *ECDR* 17 (ECJ, First Chamber). For a similar conclusion in relation to trade marks, see pp. 1061–2.

- (c) acts of reproduction for the purposes of making citations or of teaching provided that such acts are compatible with fair trade practice and do not unduly prejudice the normal exploitation of the design, and that mention is made of the source.<sup>84</sup>

The Directive and Regulation also contain provisions on exhaustion of rights and the repair of complex products. In addition, the UK Act and the Regulation contain other specific limitations. We will look at all of these in turn.

### 5.1 ACTS DONE PRIVATELY AND FOR NON-COMMERCIAL PURPOSES

Designs law has traditionally been concerned with uses of designs in trade.<sup>85</sup> However, since the delineation of rights is not restricted to commercial uses, Article 20(1)(a) of the Community Design Regulation specifically excludes acts done privately and for non-commercial purposes.<sup>86</sup> The meaning of ‘private’ and ‘non-commercial’ was discussed in relation to section 60(5)(a) of the Patents Act 1977,<sup>87</sup> and there is no reason to suppose that a different construction will be placed on the exception to national registered design or Community designs (whether registered or unregistered Community designs).

### 5.2 ACTS DONE FOR EXPERIMENTAL PURPOSES

The next limitation on the scope of the rights relates to acts done for experimental purposes. This defence corresponds to the exception available under section 60(5)(b) of the Patents Act 1977, and the related case law will provide useful guidance on the scope of this limitation.<sup>88</sup> Given that it is possible to protect designs informed by functional considerations (but not those features ‘dictated by function’), the inclusion of the defence seems warranted,<sup>89</sup> although its use may be rare. Imagine, for example, a company trying to discover the optimal shape of a car chassis in terms of air resistance: the company might create five designs for testing, one of which falls within the design proprietor’s protection. Such tests would be non-infringing.

### 5.3 ACTS OF REPRODUCTION FOR CITATION AND TEACHING

The next exclusion relates to acts of reproduction undertaken for the purposes of making citations or for teaching. This is on the condition that the ‘acts of reproduction’ are compatible with ‘fair trade practice’, that they ‘do not unduly prejudice the normal exploitation of the design’, and that mention is made of the source.<sup>90</sup> The defence recognizes that the breadth

<sup>84</sup> Designs Dir., Art. 13(1); RDA 1949, s. 7A(2)(a)–(c), (3); CDR, Art. 20(1). The curious phrasing in terms of a prohibition on exercise of the rights is difficult to account for and has not been adopted in the UK implementation.

<sup>85</sup> EC Green Paper, [6.4.7.2].

<sup>86</sup> TRIPS, Art. 26(1), requires rights to be granted only over acts that are undertaken for commercial purposes.

<sup>87</sup> See p. 635 above.

<sup>88</sup> See pp. 635–7 above. One difference worth observing between the PA 1977 provision and that in relation to designs is that the exempted experimental purposes are not restricted to ones relating to the ‘subject matter’ of the design; in principle, a design may be employed for experiments that do not relate to the design itself.

<sup>89</sup> Cf. D. Ohlgart commentary, in Franzosi, 143 (‘there is no reason for a design-developer to base his design work on somebody else’s protected design’).

<sup>90</sup> CDR, Art. 20(1)(c); Designs Dir., Art. 13(1)(c); RDA 1949, s. 7A(2)(a)–(c), (3).

of the harmonized design law means that design protection potentially inhibits a range of activities that had hitherto only been subject to copyright law.<sup>91</sup> As we have seen, the reproduction of the image of a three-dimensional design in a book or newspaper will probably not infringe because the later use would create a different overall impression on the informed user of the book. However, it is not possible to be completely confident even in such a situation<sup>92</sup>—and even less so about the reproduction of designs comprising other features. For example, a cartoon character or logo may be protected as a Community or national design, and this may give the design proprietor the right to prevent the sale of products, such as books and newspapers, which the design is applied to. The citation defence allows such uses in the specified circumstances (namely, that such acts are compatible with fair trade practice, that they do not unduly prejudice the normal exploitation of the design, and that mention is made of the source). A book about cartoons, logos, or a company that makes the products or the designer thereof (for example a book about Terence Conran or Phillip Starck), might be able to reproduce the designs in the book.

There are a number of elements to the defence. The first is that it only applies to reproductions for *the purposes of teaching and citation*. A school teacher of carpentry or metalwork may want to demonstrate how to produce certain design-protected features, and this exception makes such acts non-infringing. Equally, a teacher of intellectual property law might want to reproduce logos as part of the process of teaching when a design or figurative trade mark is infringed. The defence is also likely to be important in schools of art and design.<sup>93</sup> There seems to be no reason why ‘teaching’ should be limited to the activities of educational establishments. As such, so it might also include demonstrations for apprentices in the private sector, it is important that the overall purpose is educational. Thus the defence did not apply where an image of a design-protected train was reproduced in an advertising brochure, because ‘advertising was not a form of citation—the use in the brochure was solely for marketing purposes, and therefore unlawful’.<sup>94</sup>

Another limitation on the defences is that it is confined to ‘acts of reproduction’. On one construction, dealings in products involving reproductions are not covered. This would seem to be unobjectionable, because there is no reason to allow a teacher or student to sell the designed product. Despite this, the defence could be undermined by the fact that it is limited to reproductions. Perhaps, one way around this is to interpret the prohibition on the design proprietor exercising rights ‘in respect of’ reproductions broadly, so that selling a book featuring a reproduction of a design is seen as an activity ‘in respect of’ the act of reproduction.<sup>95</sup> Although limitations on rights are usually interpreted narrowly under European intellectual property law, a broader interpretation seems to be justified here, given that the defence is subject to further limitations, to which we should now turn.

The citation and teaching defence is subject to a rather strange version of the three-step test, which we have already encountered in the Berne Convention, and which has been extended through the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS) to designs and patents. However, in contrast to the TRIPS provision,

<sup>91</sup> The French term *illustration* and German term *Zitierung* confirm a broad understanding of citation as quotation or illustration.

<sup>92</sup> Especially given the decision of the BGH in *Deutsche Bahn v. Fauhofer Gesellschaft*, Case I ZR 56/09 (7 April 2011) [2012] GRUR (BGH), 1117.

<sup>93</sup> EC Green Paper, [6.4.7.3].

<sup>94</sup> Stone, 331, citing *Deutsche Bahn v. Fauhofer Gesellschaft*, Case I ZR 56/09 [2012] GRUR (BGH) (7 April 2011), 1117.

<sup>95</sup> D. Ohlgart commentary, in Franzosi, 144, favours a broad construction to cover any form of use of the protected design.

which states that limitations should not ‘unreasonably conflict with the normal exploitation’ or ‘unreasonably prejudice the legitimate interests of the owner’,<sup>96</sup> the citation defence specifies that the acts should be ‘compatible with fair trade practice’ and ‘not unduly prejudice the normal exploitation of the design’. A third condition—namely, that ‘mention is made of the source’—is also added. This has been described as the grant of ‘a moral right of paternity on the Community design holder.’<sup>97</sup> Because it is not clear whether ‘the source’ is the manufacturer, designer, or design proprietor, a cautious user might be advised to mention all three.

#### 5.4 EXHAUSTION

Although importation is specifically included in the list of prohibited uses, Community exhaustion applies under the Directive and, for Community designs, under the Regulation.<sup>98</sup> This is Community exhaustion only and occurs when the product has been ‘put on the market in the Community by the holder of the Community design or with his consent’. The implication is that member states may not provide for international exhaustion, because such a provision would undermine the internal market objectives of the Directive. For discussion of the merits of such a position, see Chapter 41.

#### 5.5 ACTS COMMITTED BEFORE REGISTRATION (UNITED KINGDOM ONLY)

In relation to UK registered designs (but not Community designs), a limitation applies to acts committed before the date when registration was granted. The date from when the first five-year monopoly commences is the application date.<sup>99</sup> However, since applications are not open for inspection until registration, it would have been unfair to allow a design proprietor to sue in relation to acts that occur between application and registration. (This is contrary to the position in trade mark and patent law.) Such a limitation is not clearly permissible under the Directive, although one commentator has suggested that member states are free to provide for defences (and, since the Community Design Regulation contains a prior use defence that is not provided for in the Directive, this may be correct).<sup>100</sup> Certainly, the impact of this defence is unlikely to be of important significance given that most registrations occur within three months of the application, and if the design has been made available to the public, the design proprietor will be able to rely on the protection offered by unregistered Community designs (if not, they may be able to rely on copyright or a UK unregistered design right).

#### 5.6 CROWN USE (UNITED KINGDOM ONLY)

Although there is nothing in the Directive permitting it,<sup>101</sup> the United Kingdom has retained certain provisions relating to ‘Crown use’.<sup>102</sup> No equivalent provision exists in

<sup>96</sup> TRIPS, Art. 26(2). <sup>97</sup> D. Ohlgart commentary, in Franzosi, 144.

<sup>98</sup> Designs Dir., Art. 15; RDA 1949, s. 7A(4); CDR, Art. 21. <sup>99</sup> RDA 1949, s. 3C(1).

<sup>100</sup> Musker, 67. As we will see, the Commission is still working to harmonize the market in spare parts.

<sup>101</sup> Nevertheless, the CDR implies, by recognizing a similar derogation, that the provisions of the Directive are not exhaustive on such matters: see CDR, Art. 23 (which allows member states to permit use of Community design by or for the government, but only to the extent that the use is ‘necessary for essential defence or security needs’).

<sup>102</sup> RDA 1949, s. 12, Sch. 1.

the Directive or Regulation. The ‘Crown use’ defence allows any government department and any person authorized in writing by such a department to use a UK registered design ‘for the services of the Crown’. A classic example is the use of a design for a gun, nuclear missile, or mask suitable for use in the case of an attack with chemical or biological weapons. Compensation should be paid to the design proprietor or exclusive licensee, on the basis of lost profits.<sup>103</sup> If the sum cannot be agreed, it may be determined by a court.<sup>104</sup> From 1 October 2005, the UK Community Designs Regulations<sup>105</sup> also allow for Crown use of Community designs (with a similar scheme for compensation as that for for UK registered design).

### 5.7 REPAIR OF COMPLEX PRODUCTS: SPARE PARTS

As we have seen, the question of how harmonized design law was to treat car spare parts was a highly politicized and troubling issue. Given this, it is perhaps not surprising that the European legislature was unable to formulate an acceptable set of laws relating to spare parts that would allow their manufacture for the purposes of ensuring competition in the spare parts market. However, a compromise was reached to the effect that the existing laws in member states should be maintained or possibly ‘liberalized’, pending further work by the Commission.<sup>106</sup> After the adoption of the Directive, the Commission consulted with manufacturers of original parts and spare parts, with the aim of arriving at a voluntary agreement that provided fair and reasonable remuneration.<sup>107</sup> Given that (in the words of the Commission) the parties were completely opposed, it is not surprising that the voluntary agreement failed. In light of this breakdown, the Commission undertook a study on the possible options for harmonizing the aftermarkets in spare parts.<sup>108</sup> While the study focused on the automotive sector, the subsequent proposals applied to any sector in which replacement and repair of complex products occurs. Drawing upon this study, the Commission decided that ‘the option to exclude design protection in the aftermarket for spare parts is the only effective one to achieve an internal market’.<sup>109</sup> To this end, in 2004 the Commission proposed that the Directive be amended so as to introduce what is, in effect, a right of repair. If adopted, the new provision would have provided that ‘protection as a design shall not exist for a design which constitutes a component part of a complex product . . . for the purposes of repair of that complex product so as to restore its original appearance’.<sup>110</sup> To alleviate concerns about quality control and safety, member states would also have been obliged to ensure that consumers were duly informed about the origin of spare parts. While the proposal to end design protection for spare parts has

<sup>103</sup> RDA 1949, Sch. 1, para. 2A. <sup>104</sup> RDA 1949, Sch. 1, para. 3.

<sup>105</sup> (SI 2005/2339), Sch. 5, reg. 5. For an overview of the fate of spare parts in the United Kingdom, see *Dyson v. Qualtex* [2006] RPC 31 (CA), [3]ff.

<sup>106</sup> Designs Dir., Recital 19. Article 18 of the Directive required the Commission to submit an analysis of the consequences of the provisions of the Directive for Community industry by 2004 and to propose any necessary changes by 2005. As we will see, the Commission is still working to harmonize the market in spare parts.

<sup>107</sup> Parliament finally accepted the Council’s request that this provision should not be incorporated into the text after receiving assurances from Commissioner Mario Monti that the Commission would issue a declaration referring to such a consultation exercise and that this would appear in the Official Journal along with the text of the Directive.

<sup>108</sup> European Commission, *Proposal for Directive of the European Parliament and the Council amending Directive 98/71/EC on the legal protection of designs* (September 2004) COM (2004) 582 final, 6–7.

<sup>109</sup> *Ibid.*, 7. See J. Strauss ‘Design Protection for Spare Parts Gone in Europe?’ (2005) 27(11) *EIPR* 391.

<sup>110</sup> *Ibid.*, [3].

been subject to considerable criticism, in November 2007, the Commission's proposal received the approval of the Legal Affairs Committee. Despite this, the Commission's proposal has not been adopted. Given the fate of earlier proposals, it seems that there are still a number of important obstacles that need to be overcome before we see any change in this area.<sup>111</sup> The upshot is that we are left with the provisions in the Regulation and equivalent provisions in national law. It is to this topic that we now turn.

As we have seen, one of the concerns that arose during the consultations on the proposed Community design law was that design law should not be able to be used by original manufacturers to monopolize the aftermarkets in spare parts. This was particularly the case where the owner of a product had no realistic alternative but to replace the part with one of the same design if the original part were to become damaged.<sup>112</sup> While the provisions in relation to complex products, interconnections, and functionality (which were discussed above) went some way toward ensuring that many spare parts would not be protected (and thus that competition in the production of such spares was possible), there were still some spare parts that were able to be protected. In particular, where designs were visible in use, but not dictated by function, or designed so as to enable objects to be connected together, they would often fall outside those exclusions and, as such, would be protected in principle. This would be the case, for example, for components parts such as car doors, body panels, bumpers, and windows. In order to 'avoid the creation of captive markets in certain spare parts',<sup>113</sup> Article 110 of the Regulation (which has been taken to be the same as the differently worded Article 14 of the Directive)<sup>114</sup> was introduced. This states that 'protection as a Community design shall not exist for a design which constitutes a component part of a complex product used . . . for the purpose of the repair of that complex product so as to restore its original appearance'.<sup>115</sup> The British implementation assumed (probably correctly) that absolute exclusions were not permitted under the Directive, deleted the previous exclusion of so-called 'must match' features,<sup>116</sup> and replaced it with an exception in section 7A(5) of the Registered Design Act 1949, as amended. This states that the right in a registered design of a component part (which may be used for the purpose of the repair of a complex product so as to restore its original appearance) is not infringed by the use for that purpose of any design protected by the

<sup>111</sup> For a history, see *Bayerische Motoren Werke Aktiengesellschaft v. Round and Metal* [2012] EWHC 2099 (Pat), [18]ff. <sup>112</sup> *Ibid.*, [78].

<sup>113</sup> *Explanatory Memorandum to the Proposal for a Regulation on the Council Regulation on the Community Design* (December 1993) COM (93) 342 final.

<sup>114</sup> Designs Dir., Art. 14, states that:

Member States shall maintain in force their existing legal provisions relating to the use of the design of a component part used for the purpose of the repair of a complex product so as to restore its original appearance and shall introduce changes to those provisions only if the purpose is to liberalize the market for such parts.

The Council had previously sought to allow a 'free for all', i.e. giving the member states carte blanche to introduce or change national legal provisions in this area: see H. Speyart, 'The Grand Design' [1997] *EIPR* 603, 609. Parliament had wanted a harmonized system of fair and reasonable remuneration for right holders covering any use of the design of a component part in the repair of a complex product.

<sup>115</sup> See F.-K. Beier, 'Protection for Spare Parts in the Proposals for a European Design Law' (1994) 25 *IIC* 840, 868–9 (considering whether the limitation to three years in a previous proposal was compatible with TRIPS).

<sup>116</sup> RDA 1949, s.1(1)(b)(ii), prior to amendment, excluded from protection 'features of shape and configuration of an article which are dependent upon the appearance of another article of which the article is intended by the author of the design to form an integral part'. Such an exclusion continues to exist for the UK unregistered design right under CDPA 1988, s. 213(3)(b)(ii), and is discussed in Chapter 30, pp. 786–91 below.

registration. Section 7(2) indicates that ‘use’ for these purposes includes making and putting a product on the market in which the design is incorporated.<sup>117</sup>

While there was some initial concern about the wording of Article 110(1) of the Regulation, as Arnold J said in *BMW v. Round and Metal*,<sup>118</sup> the wording of the provision is reasonably clear. The defendant in this case, the aptly named Round and Metal, imported and sold replica alloy wheels for cars, including replica wheels for BMWs. BMW argued that, in importing and selling the replica wheels, the defendant had infringed the registered designs that BMW had in the wheels. In response, the defendants argued that Article 110(1) provided Round and Metal with a valid defence. Arnold J clarified that Article 110(1) operates as an exception to the right conferred on the design owner (and not as a limitation on what could be protected in the first place). As such, the onus of proof was on a defendant to show that the exception applies.<sup>119</sup> Arnold J also held that the exception only applies to component parts that are dependent on the appearance of the complex product.<sup>120</sup> This meant that the defence allows the replacement of parts that ‘must match’ the overall design of the product. The test here was whether a consumer has some ‘realistic choice’ in what they replace a part with. Thus while body panels, bumpers, and windows would be covered, it was held that the replica wheels for cars were not covered, because the ‘replacement of wheels of one design with wheels of a different design [was] a perfectly realistic option.’<sup>121</sup> The key question here is: what level of choice must a consumer be able to exercise for the defence to kick in? It seems that, where a consumer has some choice in what part they use, the defence will not apply. Thus although BMW only sold wheels that were ‘sympathetic to the design of each model of car’, nonetheless the consumers still had a range of different types of wheel to choose from. As such, the replica wheels were *not* dependent on the appearance of the complex product.

Article 110(1) only applies to component parts that are used ‘for the *purpose of the repair* of that complex product’. This requires us to ask: how was the component part normally used in practice? Was it normally used to repair a complex product when the part was broken, damaged, or worn? Or was it used for another purpose, such as upgrading the complex product (improving its appearance)?<sup>122</sup> In *BMW v. Round and Metal*, it was held that the replica wheels were not normally used for the purpose of repairing cars, but for the purpose of upgrading them. As such, the replica wheels were not used for the purpose of repair. This was based on the facts that the replica wheels were normally sold in sets of four and that there was no evidence that customers regularly took advantage of the price differential when replacing damaged wheels to purchase a set of four replica wheels instead of a single BMW wheel (which was more expensive than the four replica wheels).

It is important to note that the defence only applies where the part is used to restore the complex product to its ‘*original appearance*’. ‘Original appearance’ has been taken to mean the appearance of the complex product when it was sold by the manufacturer. In *BMW*, this was not limited to the appearance when the car left the factory, but also included parts fitted by authorized dealers.<sup>123</sup>

<sup>117</sup> While this is a genuine attempt at compliance, it is difficult to see how it can be said to ‘liberalize’ the market. Following the practice common in the United Kingdom, we will refer here, as we have done elsewhere to the language of the Regulation rather than the RDA 1949.

<sup>118</sup> *Bayerische Motoren Werke Aktiengesellschaft v. Round and Metal* [2012] EWHC 2099 (Pat), [76].

<sup>119</sup> *Ibid.*, [51].

<sup>120</sup> *Ibid.*, [57]. The defendants argued that this was not the case because the rider ‘upon whose appearance the design is dependent’ (which is in CDR, Art. 110(1), and Designs Dir., Art. 14) does not appear in CDR, Recital 13, and Designs Dir., Recital 19.

<sup>121</sup> *Bayerische Motoren Werke Aktiengesellschaft v. Round and Metal* [2012] EWHC 2099 (Pat), [78].

<sup>122</sup> *Ibid.*, [73]. <sup>123</sup> *Ibid.*, [74].

### 5.8 PRIOR USE

Article 22 of the Regulation confers a right for a third party to continue activities that they were doing, or preparing to do, before the priority date.<sup>124</sup> This provision, which parallels section 64 of the Patents Act 1977, recognizes that a person who has secretly been using a design would be unfairly prejudiced by the grant of monopoly rights over that design to someone else. To benefit from the right, the user must establish that before the priority date ‘he has in good faith commenced use within the Community, or has made serious and effective preparations to that end’.<sup>125</sup> The ‘user right’ is inapplicable if the design being used has been copied from the registered Community design.<sup>126</sup> The right allows the previous user to ‘exploit the design for the purpose for which its use had been effected, or for which serious and effective preparations had been made’,<sup>127</sup> before the priority date. The previous user will therefore not be able to expand their activities into other arenas, for example by applying the design to new articles. The right is a personal right, in the sense that it cannot be exploited by way of licensing and can only be transferred as part of the business.

One of the changes made by the Intellectual Property Act 2014 is to introduce a right of prior use into UK law. The new provision, which is similar to Article 22 of the Regulation, permits a person who, before the application date, used a registered design in good faith or made serious and effective preparations to continue to do so.<sup>128</sup>

### 5.9 FREEDOM OF EXPRESSION

One question which we have touched in passing is the increased potential for design law to censor behaviour and to limit free speech. The exceptions provided in the Directive and Regulation, which seem to have been modelled on patent law, fail to provide sufficient flexibility to accommodate free speech concerns. Consequently, it has already proved necessary for at least one national court to refer to the European Convention for Human Rights (ECHR) to resolve this oversight. The case, *Plesner v. Louis Vuitton*,<sup>129</sup> involved a painting by the artist Nadja Plesner called *Simple Living*, which consisted of an African child holding a pink Chihuahua and a Louis Vuitton handbag (see Fig. 28.1). The painting, which was a reference to Paris Hilton, was intended to highlight the situation in Sudan. Like much of Plesner’s work, it also aimed to highlight the difference between luxury and affluence, and poverty and famine. *Simple Living* was a central part of Plesner’s work: the image appeared in subsequent paintings, on T-shirts, posters, and invitations to art exhibitions, and as an ‘eye-catcher’ to advertise her work (see Fig. 28.2). Louis Vuitton objected to the fact that Plesner had incorporated its Community design-protected pattern on the handbag into the painting.<sup>130</sup>

In early 2011, the District Court of The Hague issued an *ex parte* injunction against Plesner and her gallery, prohibiting the defendants from ‘further infringement of Vuitton’s registered design’. Plesner appealed to the District Court of The Hague, which

<sup>124</sup> CDR, Recital 23. At least the Benelux countries had such a rule prior to harmonization.

<sup>125</sup> CDR, Art. 22(1).

<sup>126</sup> Although if varied sufficiently, such a copied design might not infringe.

<sup>127</sup> CDR, Art. 22(2). <sup>128</sup> IP Act 2014, s. 7, introduces a new RDA 1949, s. 7B.

<sup>129</sup> *Nadja Plesner Joensen v. Louis Vuitton Malletier*, Case 389526/KG ZA 11–294 (4 May 2011) (District Court of The Hague). An English translation of the case is appended to L. Guibault, ‘The Netherlands: Darfurnica, Miffy and the Right to Parody!’ (2011) *JIPITEC* 236.

<sup>130</sup> Louis Vuitton applied the registered design for graphic symbols, known as the ‘Multicolor Canvas Design’, to a handbag known as the ‘Audra’.

lifted the injunction. The Court held that Plesner's right to freedom of expression under Article 10 ECHR outweighed Louis Vuitton's right to the protection of property (including its designs rights) under Article 1 of the first Protocol of the ECHR.<sup>131</sup> The Court based its decision on the fact that Plesner's right to express her opinion through her art was 'high in a democratic society's priority list', that she had no intention to free-ride on Louis Vuitton's reputation for commercial purpose, and Louis Vuitton's considerable reputation implied that it 'must accept critical use . . . to a stronger degree than other rights holders'.<sup>132</sup> This is a potentially very important decision, not least because it highlights the important role that human rights might play in design law in the future. The decision is also important in that it raised the question of the proper role of design law. This is because, as the Court noted, Louis Vuitton based its action against Plesner on the potential damage to its reputation.<sup>133</sup> As the Court said, however, the main objective of design law is to protect the appearance of products. While the Court left open the question of whether design law might also extend to the protection of the reputation of a design or the right holder, it seems that this is something that should be beyond the reach of design law.

## COPYRIGHT PROTECTION FOR DESIGNS

### CHAPTER CONTENTS

1 Introduction	769	3 Limitations on the Use of Copyright	773
2 Subsistence of Copyright in Designs	770	4 Section 52 and its Demise	777

### 1 INTRODUCTION

The fourth regime that can be employed for the protection of designs is copyright law. The relationship between designs and copyright has been the focus of a great deal of attention over the last 100 years, and different countries have attempted to draw lines between the two forms of protection in a number of different ways. France, classically, allowed for the cumulation of registered design protection with that offered by copyright under the so-called theory of ‘unity of art’. In contrast, Italy attempted to make the two regimes mutually exclusive. Although the British position varied through the twentieth century, the Copyright, Designs, and Patents Act 1988 (CDPA 1988) sought to limit the operation of copyright in much of the design field—particularly three-dimensional designs, covered by the new ‘unregistered design right’.

Community harmonization of designs only deals partially with the interface between designs and copyright. While Article 17 of the Designs Directive and Article 96(2) of the Community Designs Regulation require member states to adopt a policy of cumulation of copyright, they leave it to member states to determine ‘the extent to which, and the conditions under which, such protection is conferred, including the level of originality required’. This was understood to mean that ‘no design should be denied protection under copyright law for the ‘sole’ reason that it has been registered either at national or at Community level’.<sup>1</sup>

This failure to harmonize the degree of protection afforded to designs through the copyright law of member states inevitably detracted from the goal of harmonization and has rightly been criticized.<sup>2</sup> Perhaps recognizing this, in *Flos v. Semararo*,<sup>3</sup> the Court of Justice indicated that member states are obliged to protect all original designs (not only

<sup>1</sup> European Commission, *Green Paper on the Legal Protection of Industrial Design* (June 1991) 111/F/5131/91-EN (henceforth ‘EC Green Paper’), [11.3.4], point (a).

<sup>2</sup> L. Bently, ‘The Shape of Things to Come: European Design Law’, in P. Coughlan (ed.), *European Initiatives in Intellectual Property* (1993), 63, 86–7; D. Musker, *Community Design Law: Principles and Practice* (2002), 80 (‘requiring copyright protection, yet not harmonizing it, is a curious strategy’).

<sup>3</sup> *Flos SpA v. Semararo Case e Famiglia SpA*, Case C-168/09 (27 January 2011) (ECJ, Second Chamber). The decision related purely to a transitional issue peculiar to Italian law.

registered designs) by copyright. They also added that this implicitly precludes the possibility of imposing conditions on acquisition. Importantly, the Court stated that:

[T]he second sentence [of Article 17 of the Designs Directive] cannot be interpreted as meaning that Member States have a choice as to whether or not to confer copyright protection for a design protected by a design right registered in or in respect of a Member State if the design meets the conditions under which copyright protection is conferred.<sup>4</sup>

In essence, conditions on ‘the extent’ of protection could not prevent its ‘existence’. Moreover the Court added that ‘the extent’ of protection could not cover ‘term’ because term had already been harmonized by the Term Directive.<sup>5</sup> Even if the designs had not been registered, as appeared to be the case with the ‘Arco’ lamp design at the centre of the litigation, the Court stated that:

It is conceivable that copyright protection for works which may be unregistered designs could arise under other directives concerning copyright, in particular Directive 2001/29, if the conditions for that directive’s application are met, a matter which falls to be determined by the national court.<sup>6</sup>

Moreover, the Court’s reasoning not only explicitly prohibits limitations on the term of protection afforded by such copyright, but implicitly disallows limitations that cabin the scope of the rights conferred or regulate the relationship with other protection regimes. In so doing, the Court virtually deleted Article 17 of the Designs Directive.<sup>7</sup>

The United Kingdom responded to the *Flos* decision by repealing section 52 of the CDPA 1988, which limited the term of protection of copyright for mass-produced designs to 25 years.<sup>8</sup> However, the United Kingdom continues to retain limitation on copyright for designs in sections 51 and 53 of the 1988 Act.

In this chapter, we consider first the conditions under which copyright law might protect designs, before examining those limitations. We then reflect upon the demise of section 52.

## 2 SUBSISTENCE OF COPYRIGHT IN DESIGNS

Copyright can provide protection for designs by two routes: either directly, by protecting the form and decoration of articles as artistic works (in particular as sculptures, engravings, or works of artistic craftsmanship); or indirectly, through the protection that copyright confers on the author of a preliminary document on which a design is based. In the latter situation, the design document will normally be protected as a graphic work, but may be protected, exceptionally, as a literary work.

### 2.1 PROTECTION OF THE DESIGN ARTICLE AS AN ARTISTIC WORK

In order for an article embodying a design to qualify for copyright protection as an artistic work, it must fall within the terms of section 4 of the CDPA 1988.<sup>9</sup> The most obvious

<sup>4</sup> *Ibid.*, [36].      <sup>5</sup> *Ibid.*, [39].      <sup>6</sup> *Ibid.*, [34].

<sup>7</sup> For critical comment, see L. Bently, ‘The Return of Industrial Copyright?’ [2012] *EIPR* 654.

<sup>8</sup> ERR 2013, s. 74. At time of writing, this has yet to be brought into operation and the government is consulting on transitional measures.

<sup>9</sup> CDPA 1988, s. 4. See Chapter 3, especially pp. 72–85.

ways in which designs might be protected are as engravings, sculptures, or works of artistic craftsmanship. In each case, only some designs will qualify as artistic works and hence get copyright protection, and exactly which designs will do so is very difficult to predict with any precision.

### 2.1.1 As an engraving

In some cases, it will be possible to argue that features of surface decoration (even functional ones) amount to engravings. Indeed, as we saw in Chapter 3, in *Wham-O v. Lincoln Industries*,<sup>10</sup> the New Zealand Court of Appeal held that both the mould from which a frisbee was pressed and the frisbee itself were engravings. However, we cannot assume from this decision that all surface designs will be protected by copyright as engravings. For example, the Australian Federal Court declined to hold the drive mechanism of a lawnmower to be an engraving, on the basis that no consideration of policy or other approach ‘could justify straining the English language so far as to call the moulds engravings’.<sup>11</sup>

### 2.1.2 As a sculpture

Many designs for the shape of three-dimensional artefacts will be susceptible to protection by copyright as ‘sculptures’. In *Breville Europe v. Thorn EMI Domestic Appliances*,<sup>12</sup> Falconer J held that scallop-shaped moulds for toasted sandwich makers were sculptures; in *Wham-O*,<sup>13</sup> the New Zealand Court of Appeal held that a wooden model prototype for a plastic frisbee was a sculpture (see Fig. 3.4 at p. 75). However, not all designed artefacts will be sculptures. For example, the plastic Frisbees themselves, which were created by injecting plastic into a mould, were said not to be sculptures. Moreover, Laddie J signalled that the term ‘sculpture’ will not be construed broadly so as to encompass designs for products where the main considerations are achieving a functional effect: in *Metix UK v. G.H. Maughan*,<sup>14</sup> Laddie J said that to constitute a sculpture, the maker must be concerned with shape and appearance rather than only with achieving a precise functional effect. The Supreme Court approved Laddie J’s approach in *Lucasfilm v. Ainsworth*<sup>15</sup> (which is discussed in Chapter 3).

### 2.1.3 As a work of ‘artistic craftsmanship’

Designs may also be protected by copyright if they are taken to be ‘works of artistic craftsmanship’.<sup>16</sup> Although, in *George Hensher v. Restawhile Upholstery*,<sup>17</sup> the House of Lords rejected a claim that the prototype of an upholstered chair was a work of artistic craftsmanship, a significant body of designed artefacts may nevertheless fall within the category. In this respect, it should be observed that the decision admits that a work can be a work of artistic craftsmanship even though it is a utilitarian article. More significantly, despite *Hensher*, there is room to argue that a work may qualify as a work of artistic craftsmanship even though it is intended to be mass-produced. Although Lord Reid and Viscount Dilhorne suggested that craftsmanship implied ‘hand made’,<sup>18</sup> Lord Simon

<sup>10</sup> [1985] RPC 127.

<sup>11</sup> *Greenfield Products v. Rover-Scott Bonnar* (1990) 17 IPR 417 (FCA) (Pincus J) (the term ‘engraving’ has to do with marking, cutting, or working the surface, usually the flat surface, of an object).

<sup>12</sup> [1995] FSR 77, 94. <sup>13</sup> *Wham-O v. Lincoln Industries* [1985] RPC 127.

<sup>14</sup> [1997] FSR 718, 722.

<sup>15</sup> *Lucasfilm v. Ainsworth* [2008] EWHC 1878 (Ch), [141]; aff’d on point [2009] EWCA Civ 1328, [87]; aff’d [2011] UKSC 39, [2012] 1 AC 208. See pp. 76–8.

<sup>17</sup> [1976] AC 64. <sup>18</sup> *Ibid.*, 77 per Lord Reid, 84 per Viscount Dilhorne.

concluded that ‘craftsmanship’ in the statutory phrase cannot be limited to handicraft; nor is the word ‘artistic’ incompatible with machine production.<sup>19</sup>

### 2.1.4 *Infopaq*, *BSA*, and their implications

As we noted in Chapters 3 and 4, the case law of the Court of Justice may demand a rather different approach to copyright subject matter and the originality inquiry than the UK courts have hitherto adopted: *BSA*<sup>20</sup> suggests that it may not be appropriate to operate a closed list of subject matter, so that any original work—in that case, a graphic user interface—falling within the Berne Convention must be protected; *Infopaq*<sup>21</sup> suggests that the threshold of protection for all such (authorial) works is the European standard of the author’s intellectual creation. The implications for UK law are that: (i) narrow interpretation of the list of subject matter in sections 1–4 of the CDPA 1988, such as ‘sculpture’, may be inappropriate if the effect is to exclude from protection ‘works’ within the Berne Convention; and (ii) it is no longer appropriate to adopt qualitative thresholds, such as ‘artistry’, when assessing whether a work is protected—the only question being whether the work is the author’s own intellectual creation. In turn, *Flos v. Semararo* can be read as confirming that the freedom apparently reserved to member states in the Designs Directive and Community Design Regulation no longer exists, at least insofar as it relates to the ‘the conditions under which, such protection is conferred, including the level of originality required’.<sup>22</sup>

## 2.2 INDIRECT PROTECTION

Although some designs will benefit from copyright protection as artistic works, many more will benefit from copyright protection indirectly—that is, through the copyright in the documents that were prepared in the process of devising the finished design. These may be protected as drawings or as literary works.

### 2.2.1 Design drawings

Copyright protection for designs may arise through the creation of preliminary drawings for the design—that is, through the creation of two-dimensional graphic works on which the final article is based. Because these works are protected irrespective of artistic quality, this is the most common way copyright is used to protect designs for articles. As copyright protection extends to three-dimensional reproductions of two-dimensional works and also includes indirect, as well as direct, reproductions, a person who replicates a three-dimensional design will infringe the rights in the two-dimensional drawing. For example, if copyright exists in a drawing for an exhaust pipe or a LEGO brick, reproduction of the manufactured exhaust pipe or LEGO brick would infringe (subject to what will be said later).<sup>23</sup>

As noted in Chapter 4, the relevant standard of originality is the *Infopaq* standard of the author’s own intellectual creation. Compared with the British position hitherto, the effect is likely to preclude protection of some very simple design documents. Thus, for

<sup>19</sup> *Ibid.*, 90; *Coogi Australia v. Hysport International* (1998) 41 IPR 593 (FCA).

<sup>20</sup> *Bezpečnostní softwarová asociace*, Case C-393/09 [2010] ECR I–13971 (ECJ, Third Chamber).

<sup>21</sup> *Infopaq International v. Danske Dagblades Forening*, Case C-5/08 [2009] ECR I–6569 (ECJ, Fourth Chamber).

<sup>22</sup> *Flos SpA v. Semararo Case e Famiglia SpA*, Case C-168/09 (27 January 2011) (ECJ, Second Chamber), [35].

<sup>23</sup> See, classically, *British Leyland v. Armstrong* [1986] RPC 279.

example, older cases that recognized that drawings of a rivet, bolt or screw,<sup>24</sup> washers,<sup>25</sup> pulley wheels,<sup>26</sup> spare parts for vacuum cleaners,<sup>27</sup> and exhaust pipes<sup>28</sup> were protectable must now be regarded as dubious. As Christine Fellner explained, the protection in such cases had largely been justified on the basis that a technical draftsman had put in an hour or two of work.<sup>29</sup> It seems unlikely that the requirement of an ‘own intellectual creation’ would be met by such efforts: it is no longer sufficient that labour and skill has been expended; there must be real creative freedom. Moreover, where technical requirements limit that freedom, it will be difficult to establish originality. The worst excesses of what was called ‘industrial copyright’ seem paradoxically to have been removed by the Court of Justice.<sup>30</sup>

### 2.2.2 Protection of designs as literary works

Copyright law may also protect certain design documents as ‘literary works’. This is the case, for example, in relation to a knitting pattern which describes a series of stitches to be employed to create a pullover of a particular style. The protection offered by copyright in this context is very limited. While the copyright owner is able to control reproduction of the pattern, the owner is probably not able to prevent the production of pullovers made to the pattern. The reason for this is that because the pattern and the pullover are not objectively (or visually) similar (as is required to establish infringement of copyright), these are not reproductions.<sup>31</sup> While the courts have sometimes suggested that infringement of copyright in literary works ought to be expanded,<sup>32</sup> as yet there have been no circumstances where a court has held that a written description of a design has been reproduced by the making of articles embodying the design.

## 3 LIMITATIONS ON THE USE OF COPYRIGHT

The CDPA 1988 sought to limit the role of copyright protection of designs, while offering tailor-made protection under the UK unregistered design right.<sup>33</sup> Section 51 plays a critical role here.

### 3.1 SECTION 51

Section 51 of the 1988 Act states that copyright is not infringed by making an article from a design document, or a model that records or embodies a design where the design is for ‘anything other than an artistic work or a typeface’. The upshot of this is that copyright in a blueprint for a three-dimensional industrial design (such as an exhaust pipe) will not be

<sup>24</sup> *British Northrop Ltd v. Texteam Blackburn Ltd* [1973] FSR 241, 255 per Megarry J.

<sup>25</sup> *Ocular Sciences Ltd v. Aspect Vision Care Ltd and ors* [1997] RPC 289, 421 per Laddie J.

<sup>26</sup> *Solar Thomson Engineering Co Ltd v. Barton* [1977] RPC 537 (CA), 558.

<sup>27</sup> *Hoover plc v. George Hulme (Stockport) Ltd* [1982] FSR 565, 571–2 per Whitford J.

<sup>28</sup> *British Leyland Motor Corporation v. Armstrong Patents Co. Ltd* [1986] RPC 279, [1986] AC 577.

<sup>29</sup> C. Fellner, *Industrial Design Law*, (1995), [1.023], 9.

<sup>30</sup> L. Bently, ‘The Return of Industrial Copyright?’ [2012] *EIPR* 654, 654–6.

<sup>31</sup> *Brigid Foley v. Elliott* [1982] RPC 433 (Sir Robert Megarry VC) (referring to the guide as comprising ‘words and numerals’); cf. *Autospin (Oil Seals) v. Beehive Spinning* [1995] RPC 683.

<sup>32</sup> But cf. *Moon v. Thornber* [2012] EWPC 37, [98]–[99] per Birss J; see also above at p. 146.

<sup>33</sup> *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 723 (intention of the legislature that copyright protection be removed from ‘ordinary functional commercial articles’).

infringed where a person makes articles (here, exhaust pipes) that embody the drawing. The section provides immunity from copyright liability because the blueprint is a ‘design document’, and the exhaust pipes are ‘articles made to the design’ or copies thereof.

Section 51, however, is not intended to remove all protection from such design drawings; rather, by limiting the role of copyright in relation to three-dimensional designs (as we will see in Chapter 30), section 51 opens up a corresponding space for the operation of unregistered design right. This is because, according to section 236, if the making of an article to a design drawing is an infringement of copyright, then it is not an infringement of unregistered design right.<sup>34</sup> However, if there is a defence to infringement of copyright in the design document, there *may be* an infringement of unregistered design right. Judicial interpretation of section 51 will consequently be critical in defining the relative roles of copyright and unregistered design right in the protection of designs: if the defence is construed broadly, then unregistered design right has a greater role; if the defence is construed narrowly, then the role of copyright dominates.<sup>35</sup>

There are three critical elements to the operation of section 51:

- (i) there must be a ‘design document’;
- (ii) the design document must be ‘for something other than an artistic work’; and
- (iii) the defence only applies where the defendant has made an article to the design or copied an article made to the design.

We consider each in turn.

### 3.1.1 Design documents

Section 51 only applies where there is either a ‘design document’ or a ‘model recording or embodying a design’. A ‘design document’ means ‘a record of a design, whether in the form of a drawing, a written description, a photograph, data stored in a computer or otherwise’.<sup>36</sup> It covers design documents that are both literary and graphic works.

It should be noted that in this context, ‘design’ has a particular and restricted meaning—that is, ‘any aspect of the shape or configuration (whether internal or external) of the whole or part of an article, other than surface decoration’.<sup>37</sup> Thus the exception does not affect copyright in any decorative feature that will be applied in two dimensions to industrial articles.<sup>38</sup> It does, however, affect three-dimensional applications embodying the shape or configuration of an article. The term ‘configuration’ has also been held to encompass the arrangement of features (resistors, diodes, etc.) on a circuit diagram.<sup>39</sup> As we will see, this definition

<sup>34</sup> *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 65 (copyright and unregistered design right described as mutually exclusive); cf. *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728, 744, [60]–[68] *per* Etherton J (discussing how CDPA 1988, s. 51, demarcates the relationship between copyright and unregistered design right, but observing that it seeks to achieve more than that and refusing to accept propositions in *Wilkinson v. Woodcraft*).

<sup>35</sup> *Mackie v. Behringer* [1999] RPC 717, 723 (approving broad construction of ‘design’, so as to ensure protection by design right not copyright).

<sup>36</sup> CDPA 1988, s. 51(3). <sup>37</sup> *Ibid.*

<sup>38</sup> On the meaning of ‘surface decoration’, see *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, discussed in the context of unregistered design right below at pp. 783–5. But cf. *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728 (copying of design for sweater, including colourways, protected by s. 51 defence); *Abraham Moon & Sons Ltd v. Thornber* [2012] EWPC 37 (copyright in designs for fabric related to ‘surface decoration’, so s. 51 gave no defence); *Flashing Badge Co. v. Groves* [2007] EWHC 1372 (examining Court of Appeal’s decision in *Lambretta Clothing* and concluding that s. 51 defence inapplicable to design for surface decoration of flashing badges).

<sup>39</sup> *Mackie v. Behringer* [1999] RPC 717, 722–3.

corresponds to the definition of ‘design’ used for the purposes of unregistered design right. It is unclear how important the intention of the designer is in determining whether the contents of a document constitute a ‘design’. While still unsettled, it seems that something is only a ‘design’ if it is intended by its creator, at the outset, to be a ‘design’.<sup>40</sup>

Section 51 also applies to ‘models’—that is, to three-dimensional prototypes—so, for example, the wooden prototype for a frisbee could not be relied upon to claim copyright infringement in the reproduction of mass-produced frisbees.

### 3.1.2 ‘For something other than an artistic work’

Section 51 only applies where the design or model ‘is for something other than an artistic work or a typeface’. Consequently, there is no defence where the design document or model embodies a design ‘for an artistic work’. This means, for example, that a sketch of the sitter for a portrait sculpture or a plan for a building will not be caught by the defence, since they are designs for artistic works.<sup>41</sup>

The section once again raises the question of what is an artistic work. Section 4(1) states that artistic work means a graphic work, photograph, sculpture, work of architecture, or work of artistic craftsmanship. This means that a design drawing for a chair will be a design for an artistic work if the chair is treated as a work of artistic craftsmanship. Moreover, given that the 1988 Act protects ‘sculptures’ and ‘engravings’ as artistic works irrespective of any artistic quality, it is uncertain which industrial objects would fall within these concepts. However, in *Lucasfilm v. Ainsworth* the courts found that designs for helmets for the Stormtroopers in *Star Wars IV* (Fig. 3.5, p. 77 above) were not designs for artistic works, because the helmets were not sculptures or works of artistic craftsmanship. As such, the defence was applicable.<sup>42</sup>

### 3.1.3 Making articles to the design (or copying articles)

The section 51 defence only applies where a person makes an article that corresponds to the ‘design’ or makes ‘a copy’ of ‘an article made to the design’. The upshot of this is that the section appears to allow a person to make articles (such as exhaust pipes) to the design, or to copy an article (such as an exhaust pipe) that has been made to the design. The defence does not apply, however, where a person merely photocopies a design document, which remains an infringement of copyright.<sup>43</sup>

It has been suggested that the section 51 defence also provides a defence to a person who makes a two-dimensional copy of a (three-dimensional) article that has been made to a design document. In *BBC Worldwide v. Pally Screen Printing*,<sup>44</sup> the BBC brought an action for infringement of copyright in the children’s television characters, the Teletubbies. These characters were played by actors wearing costumes, and the defendants sold T-shirts bearing pictures of children’s television characters. The claimant sought summary judgment, asserting infringement of copyright in the drawings upon which the characters’ costumes were based. The defendants sought to resist summary judgment, on the basis that there was an arguable defence under section 51. While the defendants

<sup>40</sup> *BBC Worldwide v. Pally Screen Printing* [1998] FSR 665, 672 (design must have been for something other than an artistic work from the outset).

<sup>41</sup> *Ibid.*, 672 (emphasizing that if the drawings of the Teletubbies had been prototypes for a cartoon series, the s. 51 defence could not have applied).

<sup>42</sup> *Lucasfilm v. Ainsworth* [2008] EWHC 1878 (Ch), [141]; aff’d on point [2009] EWCA Civ 1328, [87]; aff’d [2011] UKSC 39, [2012] 1 AC 208.

<sup>43</sup> *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728, [65] per Etherton J.

<sup>44</sup> [1998] FSR 665, 672.

admitted that they had derived the characters from the television broadcast (and thus, indirectly, from the documents), they alleged that the T-shirts were copies (albeit in two dimensions) of the costumes which, in turn, were articles made to design drawings. Laddie J said that while he did not find the defendants' case 'terribly attractive', it was arguable. Summary judgment was consequently refused.<sup>45</sup>

### 3.1.4 The impact of *Flos*

As noted, the Court of Justice's decision in *Flos*<sup>46</sup> suggests that designs, whether registered or not, may be 'works' protected under the Information Society Directive. As will be recalled, Article 2 of that Directive harmonizes the reproduction right in such works, and Article 5 contains an exhaustive list of permissible limitations on that right. There is no exception that corresponds to section 51 of the CDPA 1988. Does this mean that section 51 must be repealed? Lobbyists for the designs industry have suggested that it does.<sup>47</sup>

The answer to this question depends on three matters: first, on whether section 51 is a limitation on the harmonized 'reproduction right' or the unharmonized 'adaptation right'; second, on whether, if section 51 implicates 'reproduction' rather than adaptation, it 'limits' that right rather merely 'defines it'; and third, whether, if it limits the reproduction right, some other justification might be found outside Article 5 of the Information Society Directive. It will probably take a number of decisions of the Court of Justice before we have a clear answer.

## 3.2 SECTION 53 (ACTS DONE ON THE BASIS OF RIGHTS IN THE REGISTERED DESIGN)

Section 53 deals with the situation where the ownership of copyright and the proprietorship of a registered design (or registered Community design) are vested in different people.<sup>48</sup> This may occur by means of voluntary transactions or as a result of the fact that the principles by which ownership of copyright are determined differ from those relating to registered designs.<sup>49</sup> Section 53 effectively provides a defence to a person who relies on permission from the registered design proprietor but has failed to gain the authorization of the copyright owner. More specifically, section 53 states that copyright in an artistic work is not infringed by anything done 'pursuant to an assignment or licence' made by the proprietor of the registered design. The idea behind the section is to protect a person who transacts with the registered proprietor by giving that person immunity from copyright infringement.

The defence is qualified, however: it only applies where the person claiming the immunity has acted in good faith in reliance upon the registration and without notice of proceedings for cancellation or rectification of the design (if they exist). In normal circumstances, the registered design displaces the copyright as far as third parties need be concerned. As soon as the legitimacy of the registration becomes questionable, however,

<sup>45</sup> Affirmed in *Mackie v. Behringer* [1999] RPC 717, 723–4.

<sup>46</sup> *Flos SpA v. Semararo Case e Famiglia SpA*, Case C-168/09 (27 January 2011) (ECJ, Second Chamber).

<sup>47</sup> See, e.g., *Memorandum submitted by The Alliance Against IP Theft* (29 June 2012) ERR 22, to the Public Bill Committee on the Enterprise and Regulatory Reform Bill. On the legal issues, see L. Bently, 'The Return of Industrial Copyright?' [2012] *EIPR* 654, 668–9.

<sup>48</sup> CDPA 1988, s. 53, as modified by IP Act 2014, s. 5, to make the provision applicable to registered Community designs.

<sup>49</sup> But note that this is now changed as a result of IP Act 2014, ss 2 and 6, which remove the principle of commissioner ownership from the law of registered and unregistered designs.

the copyright regains its force. The acts of the registered proprietor do not fall within the scope of the defence.

## 4 SECTION 52 AND ITS DEMISE

As noted, the United Kingdom formerly operated an exception (section 52), that limited the term of copyright to 25 years as regards artistic works that were used as the basis for designs that were put into mass production. In so doing, section 52 was intended to prevent copyright from providing a longer term of protection for industrially exploited designs than would be gained via registration. In this section, we consider the scope of the section, its repeal, and some transitional problems.

### 4.1 SCOPE OF OLD SECTION 52

Section 52 was never unproblematic. It operated where the artistic work had been exploited (by or with the licence of the copyright owner) by making ‘by an industrial process’ and marketing articles that were copies of the work. An article was said to have been ‘made by an industrial process’ if more than 50 articles were made (whether or not by hand), all of which were copies.<sup>50</sup> However, certain articles (specified in delegated legislation) did not fall within the scope of the section.<sup>51</sup> The excluded articles included some sculptures, medals, and ‘printed matter primarily of a literary and artistic character’ such as greeting cards. The division frequently seemed arbitrary: an artistic work used as a design for a book jacket remained protected for the full copyright term; a label for a paint tin was subject to the defence.<sup>52</sup> Moreover, section 52 operated to reduce the duration of copyright to 25 years from the first legitimate marketing of articles that were copies of the copyright work by providing a defence to an action for copyright infringement.<sup>53</sup> The defence allowed a person to make articles of any description that corresponded to the artistic work. This meant that if the artistic work had been applied to teapots, 25 years from the first marketing of the teapots, it would no longer be an infringement of copyright to apply the same work to pillowcases. However, the defence left the copyright intact where the design was applied to things other than articles—so that, after 25 years of marketing the teapot, it was still an infringement to photograph the artistic work (in its unapplied state). Anything might, however, have been done in relation to an article which the artistic work had been applied to without infringing copyright in the work.

### 4.2 REPEAL

The defence in section 52 was repealed by the Enterprise and Regulatory Reform Act 2013.<sup>54</sup> The justification for doing so was European harmonization—in particular the view that as a result of *Flos v. Semararo*, what was (in effect) a limitation on the term of copyright was no longer permissible in relation to designs. It seems that significant pressure had been

<sup>50</sup> CDPA 1988, s. 52(4)(a); Copyright (Industrial Process and Excluded Articles) (No. 2) Order 1989 (SI 1989/1070).

<sup>51</sup> CDPA 1988, s. 52(4)(b); Copyright (Industrial Process, etc.) Order 1989.

<sup>52</sup> *Gary Fearn's t/a Autopaint International v. Anglo-Dutch Paint and Chemical Co. Ltd* [2007] EWHC 955 (Ch) (labels for paint tins were not articles of primary literary and artistic character).

<sup>53</sup> CDPA 1988, s. 52(2). The author’s moral right of integrity is left intact, while CDPA 1988, s. 79(4)(f), denies the author the right of paternity.

<sup>54</sup> ERR 2013, s. 74.

brought to bear on the UK government from lobbyists in the design field, particularly rights holders in furniture. The effect of repeal is that the term of protection by copyright is now the regular term of life plus 70 years, except for works created before 1957.<sup>55</sup>

#### 4.3 TRANSITION

In October 2013, the UK IPO began consulting on transitional provisions associated with the repeal of section 52.<sup>56</sup> Issues include how long those with stocks of goods made at a time when it was legal to make such goods will be given to sell off those goods, but also the position of users of existing two-dimensional images of out-of-copyright designs.

<sup>55</sup> In the case of works created before 1957, which were registrable as designs, no copyright protection existed, and the 1956 and 1988 Acts did not alter the position: CDPA 1988, Sch. 1, para. 6.

5 Infringement	796		

### 1 INTRODUCTION

The fifth way in which designs may be protected is by way of the UK unregistered design right. The UK unregistered design right, which is governed by Part III of the Copyright Designs and Patents Act 1988 (CDPA 1988),<sup>1</sup> was developed as part of the reconceptualization of the way designs were protected in Britain in the 1980s. Prior to 1988, the boundary between the UK registered design system and the copyright system was placed under pressure as a result of the decision that non-registrable designs—such as the design of car exhaust pipes—could be protected by copyright (so-called ‘industrial copyright’). In an attempt to remedy the bizarre situation whereby unattractive designs were protected by copyright but attractive ones were not, the unregistered design right was introduced to provide short-term, automatic protection for functional designs.<sup>2</sup> In so doing, the new right was meant to provide ‘limited protection against unfair misappropriation of time skill and effort expended by the author of the design in the creation of the work’.<sup>3</sup> Consequently, it was decided to limit the registered system to designs for articles for which appearance mattered, and copyright to the protection of two-dimensional designs or designs for artistic works. As we noted in the previous chapter, the protection given

<sup>1</sup> *Guild v. Eskandar* [2003] FSR 23, [8] (‘a new, wholly statutory right’). The right was modelled on principles enunciated in Directive 87/54/EEC of 16 December 1986 on the legal protection of semiconductor chips [1986] OJ L 24/36 (27 January 1987), upon which the Semiconductor Products (Protection of Topography) Regulations 1987 (SI 1987/1497) were based. See A. Christie, *Integrated Circuits and Their Contents: International Protection* (1995), ch. 4.

<sup>2</sup> *Fulton v. Totes Isotoner (UK)* [2003] RPC 499, [71] (‘a medley of political and practical compromise’).

<sup>3</sup> *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461, 480 per Mummery LJ. In *Landor and Hawa International Ltd v. Azure Designs Ltd* [2006] ECDR 413, [11], Neuberger LJ described the function of the system as the rewarding of ‘imagination and inventiveness’.

to the proprietor of an unregistered design is intended to dovetail with the protection conferred by the copyright system in respect of design drawings for three-dimensional designs.

The logic of that division has been undermined both by the harmonization of European registered design law, which covers functional as well as aesthetic designs, and by the establishment of the unregistered Community design, which covers a broader field than the UK unregistered design right, albeit for a shorter period of time. While academics and policymakers might raise questions about whether there are any good reasons for maintaining the UK unregistered design right, a knowledge of this *sui generis* right remains essential for understanding the current law of designs.

## 2 SUBSISTENCE OF THE UK UNREGISTERED DESIGN RIGHT

As with copyright, unregistered design rights arise automatically on the creation of a design. An important preliminary step in any litigation in respect of an unregistered design right is that the ‘claimant must identify with precision each and every “design” he relies upon’.<sup>4</sup> This is particularly important given that as we will see, the definition of design (currently) allows claimants to assert design right in ‘aspects’ of a larger article. It should be noted that one of the changes made by the Intellectual Property Act 2014 is to amend the definition of design to remove the reference to ‘aspects’ of a design. We discuss this in more detail below.

One of the consequences of extending the definition of design to include aspects of a design is that it allows claimants to claim a design right in different aspects of an article. One of the consequences of this is that questions of subsistence and infringement need to be considered separately for each aspect relied upon.<sup>5</sup> Another consequence is that the right is capable of generating complex and potentially oppressive legal claims. It is not uncommon for claimants to plead that they are entitled to protection for multiple designs corresponding to individual features (say, feature A–feature E) of their product (which are also present in the defendant’s allegedly infringing article), and also any combination of two or more of those features. For example, if the claimant’s product is a table, then ‘feature A’ might be the shape of the leg, ‘feature B’, the foot of the leg, ‘feature C’, the shape of the edge of the table, ‘feature D’, the shape of the top of the table, and so on. In many cases, a defendant is thus confronted with a claim that covers a huge number of different designs. If a claimant were to identify five features and claim all combinations of two or more of those features, the claim would, in fact, cover 25 designs.

Another consequence of extending the definition of design to include aspects of a design is that it allows claimants to trim the right to match what they believe a defendant has copied.<sup>6</sup> As Laddie J noted, the fact that design protects parts and aspects of a design means that a proprietor can choose to assert design right in the whole or any part of

<sup>4</sup> *Dyson v. Qualtex* [2006] RPC 769, [62]; *Albert Packaging v. Nampak Cartons & Healthcare* [2011] EWPC 15 (Pat), [14]–[15]. See generally S. Clark, ‘Design Rights All Wrapped up’ (2012) 34 EIPR 343.

<sup>5</sup> *Albert Packaging v. Nampak Cartons & Healthcare* [2011] EWPC 15 (Pat).

<sup>6</sup> See *Bailey (t/a Elite Anglian Products) v. Haynes (t/a RAGS)* [2007] FSR (10) 199, [18]; *Ocular Sciences v. Aspect Vision Care (No. 2)* [1997] RPC 289; *Virgin Atlantic v. Premium* [2009] EWHC 26 (Pat), [27]–[29]; *A Fulton v. Totes Isotoner (UK)* [2003] EWCA Civ 1514 (enables design owners to manipulate their claims by cropping the scope of the design).

their product: ‘If the design is said to reside in the design of a teapot, this can mean that it resides in the design of the whole pot, or in a part such as the spout, the handle or the lid.’<sup>7</sup> The existing definition of design potentially creates a ‘basket of rights in an existing design’ that allows design owners to establish easily that a competing design infringes theirs by basing a claim on a very small and cropped part of an article. This allows design owners to say that another design infringes theirs, even though the overall appearance of that article is not very similar.

One of the changes that the 2014 Act made was to amend the definition of design to prevent existing rights holders from using a very small part of their design as the basis for a claim that a third party is infringing. This has been effected by removing the reference to ‘any aspect’ of a design in the definition of a design.<sup>8</sup> As a result, a UK unregistered design will now be defined, as in EU law, to mean ‘the design of the shape or configuration (whether internal or external of the whole or part of an article)’. This limits protection to new designs and parts of designs. While the government suggested that this would reduce the tendency for design owners to overstate the breadth of their unregistered design right, the fact that the definition of design will still extend to part of an article means that it will still be possible to crop an article to enhance a claim for infringement.

Given this, it seems that even with the removal of the reference to aspects of a design, if design right is not to be abused, the courts will need to develop rules to ensure that the scope of litigation is limited (by requiring the claimant to identify what they regard as their best case), and that there is a level of correspondence between what is created and what is ‘claimed’. To some extent, the courts have begun to do this. Building on the concept of a design and a number of the doctrinal rules (including the definitions of ‘design’ and ‘designer’, and the exclusion of methods of construction), it has been held that design protection is limited to specific aspects of shape and configuration, rather than ‘improperly wide abstract ideas or principles.’<sup>9</sup> Based on this, it has been said that the UK unregistered design right ‘does not protect ideas, but only the actual physical manifestation of them’,<sup>10</sup> and that the right cannot exist until there is an embodiment of the design in an article or a design document. This has been taken to mean that it is not possible to claim design right in abstract ideas or design concepts. Thus it was not possible to claim design right in the ‘concept of a mower which has arms folding back on themselves at the mid-way point’.<sup>11</sup>

In order to establish the existence of a UK unregistered design right, it is necessary to show (i) that there is a design, (ii) which falls outside the exclusions from design right, (iii) which is ‘original’, and (iv) which qualifies for protection in the United Kingdom. We will deal with each requirement in turn.<sup>12</sup>

## 2.1 ‘A DESIGN’

In order for a design to be protected as a UK unregistered design right, it is necessary to show that there is a ‘design’. In this context, ‘design’ (currently) means ‘the design of any aspect of the shape or configuration (whether internal or external) of the whole or part of any article’.<sup>13</sup> As noted above, the Intellectual Property Act 2014 amended this definition

<sup>7</sup> *Ocular Sciences v. Aspect Vision Care* [1997] *RPC* 289.

<sup>8</sup> IP Act 2014, s. 1(1), (2), amending CDPA 1988, ss 51 and 213(2).

<sup>9</sup> *Sealed Air v. Sharp Interpack* [2013] *EWPC* 23 (Pat), [91].

<sup>10</sup> *Rolawn v. Turfmech Machinery* [2008] *EWHC* 989 (Pat), [79]–[84]. <sup>11</sup> *Ibid.*, [84].

<sup>12</sup> See *Dyson v. Qualtex* [2006] *RPC* 769, [14], in which Jacob LJ is scathing in his criticism of s. 213, which he describes as having only one virtue: its brevity. In other respects, it is badly drafted and there is no clear indication of what is intended.

<sup>13</sup> RDA 1949, s. 1(2).

by removing the reference to ‘any aspect of’ a design.<sup>14</sup> As a result, a design is defined as ‘the design of the shape or configuration (whether internal or external) of the whole or part of an article’.

The subject matter of the UK unregistered design right is more limited than the harmonized registered design systems, insofar as the UK unregistered design right does not protect most two-dimensional features.<sup>15</sup> In many other respects, however, the subject matter of UK unregistered design rights is as broad as UK registered designs, Community registered designs, and unregistered Community design rights. In particular, it should be noted that the UK unregistered design right protects designs that are not aesthetic; in fact, there is no requirement that the design features need to be visible to the naked eye.<sup>16</sup> Indeed, in one case, it was held that detailed dimensions of the shape of contact lenses could be a design despite the fact that the lenses would appear identical to any normal observer and could only be distinguished with the aid of sophisticated measuring equipment.<sup>17</sup> The definition of designs for a UK unregistered design right also extends to designs that are purely functional.<sup>18</sup> One of the leading cases, for example, concerned the internal features of a farming machine used to separate the solid and liquid parts of slurry.<sup>19</sup>

A key feature of the definition of design is that it only applies to the *shape or configuration* of articles (or parts thereof). ‘Shape and configuration’ has the same meaning for unregistered designs as it previously did (prior to EU harmonization) for registered designs.<sup>20</sup> Configuration includes ‘the relative arrangement of parts or elements of an article’, so that the way in which different components of a medical kit are layered within a polythene pack amounts to configuration.<sup>21</sup> It is clear that this does not limit designs to three-dimensional shapes. As Jacob LJ said, ‘you can have 2D features of shape or configuration, e.g. one produced by cutting one out from a piece of paper’.<sup>22</sup> There is no reason why a design should ‘not subsist in what people would ordinarily call a flat or 2-dimensional thing—for instance a new design for a doily would have shape and could in principle have [unregistered design right] in it’.<sup>23</sup> Having said this, the courts have also

<sup>14</sup> IP Act 2014, s. 1(1), (2), amending CDPA 1988, ss 51 and 213(2).

<sup>15</sup> The courts have speculated as to whether ‘configuration’, in contrast to shape, is not confined to three-dimensional characteristics. See *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 722–3 (holding that ‘configuration’ should be broadly construed to cover circuit diagrams); *Baby Dan SA v. Brevi* [1999] FSR 377, 383 (‘configuration’ implies some form of arrangement of elements, e.g. the ribbing arrangement of a hot-water bottle); *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2003] RPC 728, [48] (there is nothing to suggest that configuration is not confined to three-dimensional aspects of an article); *Dyson v. Qualtex* [2006] RPC 769, [74] (cutting pattern out of piece of paper is ‘configuration’). It was held that design right did not protect stitching on mobile phone cases: *Parker v. Tidball* [1997] FSR 680, 696. But cf. *Fulton v. Grant Barnett* [2001] RPC 257, [78] (stitching on case for umbrella treated as protected in case in which it produced accentuated rectangular character).

<sup>16</sup> To some extent, this may be true of registered designs, Community registered, and unregistered designs.

<sup>17</sup> *Ocular Sciences v. Aspect Vision Care* [1997] RPC 289; *Fulton v. Totes Isotoner (UK)* [2003] RPC 499, [30] (‘unregistered design right extends beyond the visually appreciable to other aspects of the design of an article’).

<sup>18</sup> *Fulton v. Grant Barnett* [2001] RPC 257, [34]. But quite how significant depends on what the EU tribunals make of the ‘dictated by function’ standard.

<sup>19</sup> *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461. See also *Dyson v. Qualtex* [2006] RPC 769, [26] (‘UDR can subsist in aspects of detail’).

<sup>20</sup> *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2005] RPC 6, [15].

<sup>21</sup> *Magmatic v. PMS International* [2013] EWHC 1925(Pat), [81]; *CliniSupplies v. Park* [2012] EWHC 3452 (Ch), [36]–[53]. Having reviewed the case law, Arnold J concluded that while the matter was not entirely free from doubt, Pumfrey J’s broad interpretation of ‘configuration’ in *Mackie Design v. Behringer Specialised Studio Equipment* [1999] RPC 717, 721–23, represented the law.

<sup>22</sup> *Dyson v. Qualtex* [2006] RPC 769, [74].

<sup>23</sup> *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2005] RPC 6, [24].

made it clear that patterns (such as a patchwork quilt) and articles coloured in a novel way would not fall within the definition of ‘shape’ or ‘configuration’ and, as such, would not be protected.<sup>24</sup>

Unregistered design right protects designs for ‘articles’. The term is not defined further, but needs to be contrasted with the concept of ‘products’ that is used in relation to UK registered designs, Community registered designs, and unregistered Community designs.<sup>25</sup> The UK unregistered design right applies to designs for whole articles, as well as parts of articles. This means that an article may embody a number of different designs. In the case of a teapot, for example, an unregistered design right could reside in the shape of the whole pot, or in a part, such as the spout, the handle, or the lid.<sup>26</sup> For designs made *prior* to the commencement of section 1 of the 2014 Act,<sup>27</sup> the main limitation is that the design must be of *an aspect* of the whole or part of the article—which means a ‘discernible or recognizable’ part of the article.<sup>28</sup> As we noted above, the Act removes the reference to ‘any aspect of’ a design from the definition of a UK unregistered design.<sup>29</sup> This means, at least for designs created after the commencement of the Act, that the differences have been reduced.

## 2.2 EXCLUSIONS

In order for a design to be protected by the UK unregistered design right, it is necessary to ensure that it does not fall within the list of excluded features contained in section 213 of the CDPA 1988. This provides that unregistered design right does not subsist in ‘surface decoration’, ‘methods or principles of construction’, or features that ‘must fit’ or ‘must match’.<sup>30</sup>

### 2.2.1 Surface decoration

Section 213(3)(c) provides that unregistered design right does not subsist in features of ‘surface decoration’. As Jacob LJ explained in *Dyson v. Qualtex*,<sup>31</sup> the exclusion of ‘surface decoration’ is related to its inclusion within ‘ordinary’ copyright law. This led Jacob LJ to suggest that the exclusion is confined to ‘that which can fairly be described as a decorated surface’.<sup>32</sup> It is clear that surface decoration covers the application of colour in two

<sup>24</sup> Thus it was held that mere choice of different colours for a standard track top was not an aspect of ‘shape or configuration’: *ibid.*, [29].

<sup>25</sup> It is possible that the shape and configuration of buildings may be protected by unregistered design right. For similar argument as to whether buildings are ‘products’ in relation to the harmonized definition of designs, see p. 710.

<sup>26</sup> *Ocular Sciences v. Aspect Vision Care* [1997] *RPC* 289, 422; *Fulton v. Totes Isotoner (UK)* [2004] *RPC* (16) 301 (CA) (part of a cloth case for portable umbrella).

<sup>27</sup> See p. 781.

<sup>28</sup> *Dyson v. Qualtex* [2006] *RPC* 769, [23]. A photograph of the Dyson wand can be seen in the case report.

<sup>29</sup> IP Act 2014, s. 1(1), (2), amending CDPA 1988, ss 51 and 213(2).

<sup>30</sup> An initial problem with the drafting of s. 213 should be observed. This arises from the fact that while the nature of unregistered design right and the way in which the right is infringed are defined in relation to ‘designs’, the exclusions relate to ‘design rights’. A literal construction of s. 213 would produce the nonsensical result that it would be possible for an infringement to take place in relation to subject matter excluded from the scope of protection: *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] *FSR* 63. This problem has been avoided in relation to the exclusion of ‘surface decoration’. This was done by incorporating the exclusion of ‘surface decoration’ into the meaning of ‘design’: *ibid.*, 72 (relying on the definition of design in CDPA 1988, s. 51(3)). It is hoped that similar strategies can be applied to the other exclusions. The reasoning employed in *Mark Wilkinson Furniture* would not resolve the problem for ‘must fit’ or ‘must match’ features.

<sup>31</sup> [2006] *RPC* 769, [76]. Although there may be rare situations in which a design may fall between the gaps of the two regimes.

<sup>32</sup> *Ibid.*, [81].

dimensions (such as stripes on a shirt),<sup>33</sup> but is not confined to two-dimensional features (strictly defined). This means, for example, that surface decoration would include both where ‘a surface is covered with a thin layer and where the decoration, like in Brighton rock, runs throughout the article’.<sup>34</sup> In some situations, ‘surface decoration’ may be three-dimensional; there is no need for it to be ‘essentially flat’. As such, it includes both ‘decoration lying on the surface of the article (for example, a painted finish) and decorative features of the surface itself (for example, beading or engraving)’.<sup>35</sup> Consequently, in *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)*,<sup>36</sup> Jonathan Parker J held that the painted finish, V-grooves, and cock-beading on the kitchen furniture the claimant had created was surface decoration and thus not protectable. Other features, such as cornices, quadrants, and handle were not surface decoration and, as such, were protected by unregistered design right (see Fig. 30.1).

**Fig. 30.1** The plaintiff’s kitchen

<sup>33</sup> *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2005] RPC 6 (CA), [30] (over-arm stripes on sleeves of track top were surface decoration; mere juxtaposition of colours, not ‘configuration’). <sup>34</sup> *Ibid.*

<sup>35</sup> *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 73.

<sup>36</sup> *Ibid.* Cited with approval by Jacob LJ in *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2005] RPC 6, [31]. See also *Jo Y Jo v. Matalan Retail* [2000] ECDR 178 (embroidery on ladies’ garments was surface decoration, but other aspects of knitted cardigans, such as the choice of knit or fabric and edging, were not).

In other cases, three-dimensional features may not be regarded as decoration but as part of the overall shape and configuration: ultimately, the court has to make a value judgment. So, in *A. Fulton v. Grant Barnett*,<sup>37</sup> Park J took the view that although stitching on the seams of a rectangular umbrella case existed ‘in a small third dimension’, it was not excluded as surface decoration because it gave the case its ‘box-like character’. On the basis that unregistered design right was developed to protect functional designs, it has been suggested that surface features that have ‘significant function’ would not be excluded on the ground that they were surface decoration. Thus the Court of Appeal in *Dyson* held that because the ribbing on the handle of a vacuum cleaner functioned to provide grip, it was not excluded as surface decoration (see Fig. 30.2).<sup>38</sup>

In situations where a design feature is both functional *and* decorative, the courts have said that a subsidiary functional purpose does not take the design aspect out of the exemption if the primary purpose is surface decoration. As Mann J said in *Dyson*, this will limit the scope of the exception, because if an item of decoration has a functional purpose:

[I]t will be difficult to say that functional purpose is sufficiently subsidiary to make the feature surface decoration . . . I think that the subsidiary purpose of beading that is used to conceal a joint can also fairly be described as decorative.<sup>39</sup>

<sup>38</sup> *Dyson v. Qualtex* [2004] EWHC 298 (Ch), [2005] RPC 19.

<sup>39</sup> *Ibid.*, [38]. For a situation in which a design with both a decorative and functional feature was held to be surface decoration, see *Helmet Integrated Systems v. Mitchell Tunnard* [2006] FSR 41, [99]–[101] (concerning the scalloping on the visor of a firefighter’s helmet).

### 2.2.2 Methods of construction

Section 213(3)(a) provides that unregistered design right does not subsist in ‘a method or principle of construction’.<sup>40</sup> The provision, which is to be construed narrowly, does not preclude a design from being protected merely because it has a functional purpose.<sup>41</sup> The exclusion of methods of construction from the remit of protection, which has its origins in now-repealed (that is, pre-harmonization) British registered designs law,<sup>42</sup> confines design protection to shape, rather than to the ideas or principles underlying a shape. In so doing, it ensures that protection does not exist in the method by which a shape is produced, as opposed to the shape itself.<sup>43</sup> That is, it ensures that designers are unable to obtain patent-style protection over the way in which articles of a particular style are made.<sup>44</sup> In some cases, the courts have suggested that section 213(3)(a) not only excludes the methods or processes by which a shape is produced (as opposed to the shape itself), but also excludes underlying ideas from being protected. It has also been suggested that section 213(3)(a) ensures that design protection is limited to physical manifestations of an idea, rather than to abstract design proposals.<sup>45</sup> In this sense, the exclusion in section 213(a) has been construed to operate, in effect, like a design law version of the idea expression dichotomy.

The application of the exclusion can be seen in *A. Fulton Co. Ltd v. Grant Barnett*,<sup>46</sup> which concerned a claim to unregistered design right in rectangular umbrella cases, where the rectangular shape was created in part by the use of stitching. While Park J accepted that the stitching used in making the umbrella cases was a technique, he was happy to protect the shape produced by that method. Accordingly, it appears that the exclusion only bites where the protection of the shape would prevent others from using the method. That is, where the use of a method can only result in one shape or configuration.<sup>47</sup> In contrast, in *Bailey v. Haynes*<sup>48</sup> Fysh J held that a claim for infringement of unregistered design right in the shape of stitching of micromesh bags for fishing bait failed because the claim related to a method of construction. The judge seems to have been influenced by the fact that there were no dimensional limitations on the pattern of threads being claimed (see Fig. 30.3).

### 2.2.3 ‘Must fit’

Section 213(3)(b)(i) of the 1988 Act provides that ‘design right does not subsist in . . . features of shape or configuration of an article which . . . enable the article to be connected

<sup>40</sup> CDPA 1988, s. 213(3)(a).

<sup>41</sup> *Landor & Hawa International v. Azure Designs* [2007] FSR (9) 181 (CA), [10].

<sup>42</sup> *Clinisupplies v. Park* [2012] EWHC 3453 (Ch), [55]–[56]; *JCM Seating Solutions v. James Leckey Designs* [2002] EWHC 3218 (Ch), [29].

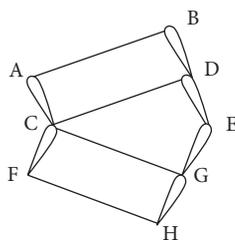

<sup>43</sup> *Landor & Hawa International v. Azure Designs* [2006] FSR 427 (PCC), 433 (explaining that while the language was ‘a little opaque’, it would be wrong in principle to attempt to define it further as opposed to applying it, but leaving unclear whether a shape that was the best way of achieving a function would be excluded from protection); decision upheld on appeal: [2006] EWCA 1285.

<sup>44</sup> *Bailey v. Haynes* [2007] FSR (10) 199, [62].

<sup>45</sup> *Albert Packaging v. Nampak Cartons & Healthcare* [2011] EWPC 15, [14]–[15] (‘the more abstract the definition, the more likely it is that the design will be excluded’); *Landor & Hawa v. Azure* [2006] EWCA 1285, [13]; *Rolawn v. Turfmech Machinery* [2008] EWHC 989 (Pat), [91], [92], [96]; *Virgin Atlantic Airways v. Premium Aircraft Interiors* [2009] EWHC 26 (Pat), [24].

<sup>46</sup> [2001] RPC 257.  
<sup>47</sup> *Ibid.*, [70]; cf. *Parker v. Tidball* [1997] FSR 680, 696 (claimant claimed design right in mobile phone cases; the judge excluded stitching in seams as a method of construction). Copinger, [13]–[55], sees the different results as attributable to the fact that, in *Fulton*, the seam was intended to produce a design feature, whereas in *Parker* the seam was an unintended result of a method of construction. Perhaps it would be easier simply to regard the remarks in *Parker* as *obiter*, the stitching not being shape or configuration.

to, or placed in, around or against, another article so that either article may perform its function'. This is known as the 'must fit' exclusion (although the courts have stressed that it is important to apply the statutory language, rather than the language of the epithet).<sup>49</sup> This exclusion (along with the 'must match' exclusion) is intended to minimize the significance of unregistered design right in the protection of spare parts (particularly for cars). It has been said that the exclusion should be interpreted 'purposively' and 'should not be given a breadth which would take it far beyond what it was intended to achieve'.<sup>50</sup> There are a number of notable aspects of the exclusion.

(i) *The article* The first is that the exclusion specifies that designs are excluded to the extent that they enable an *article* to be connected (etc.) to another *article*. In this context, *article* has been interpreted very broadly as being synonymous with the word 'thing'.<sup>51</sup> Following from this, it has been held that 'article' not only includes machines and objects, but also includes the human body. Thus it has been held that the aspects of the shape of contact lenses that enable the lenses to fit the eyes of their users, or the aspects of the shape of a mobile telephone that enable it to fit the hand of a person holding the phone, fall outside the scope of unregistered design right.<sup>52</sup>

(ii) *Integrated parts* Where two articles are joined together to make a single article, the 'must fit' exception not only applies to the parts as separate articles, but also to the interfaces that become elements of the integrated whole.<sup>53</sup> However, this view has the potential to produce odd results (apparently, for example, that there would be no unregistered design right in the wing of an aeroplane). Consequently, in *Baby Dan v. Brevi*,<sup>54</sup> Judge David Young QC preferred the view that when units are assembled, unregistered design right may subsist in

<sup>49</sup> See *Dyson v. Qualtex* [2006] RPC 769, [27]. <sup>50</sup> *Fulton v. Grant Barnett* [2001] RPC 257, [73].

<sup>53</sup> *Electronic Techniques (Anglia) v. Critchley Components* [1997] FSR 401, 417–19.

<sup>54</sup> [1999] FSR 377, 382.

the whole; whereas when design right is asserted in the parts, protection is confined to parts of the design other than the ‘must fit’ features.

(iii) *No need for designer to have intention to fit* The ‘must fit’ exclusion operates where the shape of an article enables it to be attached or connected to another article. In assessing whether an article must fit another article, the designer’s intention is irrelevant. This is because ‘the subsection does not require that the designer should know that the features enable the interface, it is sufficient if they do so in fact.’<sup>55</sup>

(iv) *Closeness of fit* Features are only excluded as ‘must fit’ features if they ‘enable’ one article to fit with another article.<sup>56</sup> Perhaps the most important question is how closely shapes need to correspond to each other for the feature of one article to enable the articles to be connected.<sup>57</sup>

In *Amoena v. Trulife*,<sup>58</sup> Judge Sumption QC suggested that the provision should be read very narrowly. In particular, he said that the ‘must fit’ exclusion was ‘concerned with a . . . precise correspondence between two articles, as with a rigid plug and socket, where the functional requirement that one article should fit in or against another displaces original design work’. Consequently, the design of breast prostheses was not excluded under the ‘must fit’ exception, because while the prostheses were shaped so that they fitted into bras, the shape of the bra would only *influence*, rather than *determine*, the details of the design; the prostheses were highly flexible and pliable, so that they would fit a number of different bras. However, other High Court decisions have taken a different approach, suggesting instead that features may fall within the ‘must fit’ exclusion even though other shapes might do equally well. For example, in *Ocular Sciences* Laddie J said:

There is . . . nothing in the provision which requires the feature to be the only one which would achieve the proper interface. If a number of designs are possible each of which enables the two articles to be fitted together in a way which allowed one or other or both to perform its function, each falls within the statutory exclusion.<sup>59</sup>

Consequently, Laddie J held that the shape of the claimant’s soft contact lenses was not protected because evidence showed that it enabled the lenses to fit onto the eyeball. This approach was approved by Judge Englehart QC in *Parker v. Tidball*,<sup>60</sup> where he held that features of mobile phone casings, which permitted use of the phone while inside the case, were excluded on the basis that they were ‘must fit’ features. This was despite the fact that the function that the shape performed could have been achieved by a number of other designs.<sup>61</sup>

<sup>55</sup> *Ocular Sciences v. Aspect Vision Care (No. 2)* [1997] RPC 289, 424–8 (features of the claimants’ lenses were excluded even though they were chosen without the fit requirement in mind).

<sup>56</sup> The term can be contrasted with three related notions: the notion in the ‘must match’ exclusion that the appearance of one article must be ‘dependent’ on that of another, and the two exclusions in the registered design arena of features ‘dictated’ by function, and features that ‘must necessarily be reproduced in their exact form and dimensions’ to enable functional connection to another product. See below at pp. 715–18, and above at pp. 789–91. Elements that enable parts to fit together to ‘look nicer’ are not within the exception: *Ultraframe v. Fielding* [2003] RPC 435, [80].

<sup>57</sup> For a discussion about whether parts need to touch and how this issue applies to the ‘must fit’ exemption, see *Dyson v. Qualtex* [2006] RPC 769, [37]–[38].

<sup>58</sup> (Unreported, 25 May 1995) Jonathan Sumption QC, Deputy Judge of Ch D, SRIS C/72/95; *Fulton v. Grant Barnett* [2001] RPC 257, [75] (emphasizing importance of exactness, so that a rectangular umbrella case was not excluded because it had to accommodate a rectangular umbrella handle; ‘any case of the same approximate dimensions would do that’).

<sup>59</sup> *Ocular Sciences v. Aspect Vision Care (No. 2)* [1997] RPC 289, 424–8. <sup>60</sup> [1997] FSR 680.

<sup>61</sup> *Ibid.*, 694; cf. *Dyson v. Qualtex* [2006] RPC 769, [29], in which Jacob LJ said that ‘the actual decision may be questionable’.

While the ‘must fit’ exclusion may apply where the ‘article’ that the design must fit is part of the human body, this does not mean that the ‘exclusion must apply to every design which in some way fits the human body . . . such as a handle or seat’.<sup>62</sup> As with other designs, the key question is whether the design ‘enables’ one article to fit with another article. Thus, in a decision involving design right in a sling and a portable frame from which the sling could be hung for use during sexual activities involving bondage, the question arose whether the sling was excluded because of the ‘must fit’ exclusion. It was held that while the sling was designed to support a person’s body, at most ‘the user would lie on the sling or parts of it’.<sup>63</sup> This meant that none of the features of the sling were ‘dictated by the need to fit the user’, nor did they ‘connect’ with the user. As such, the design was not excluded by section 213(3)(b)(i).

(v) *Enabling an article to perform its function* The ‘must fit’ exclusion only applies to features of shape or configuration that enable the article to be connected to, or placed in, around, or against, another article *so that either article may perform its function*. Applying this provision, the Court of Appeal in *Dyson* held that, insofar as holes in the handle of the wand of a vacuum cleaner (so-called ‘bleed holes’) enabled the handle to be placed against a flat surface (such as a stair carpet), the holes allowed the handle to perform its function as a vacuum-cleaner handle. As such, the bleed holes fell within the exception and thus were not protected.<sup>64</sup>

#### 2.2.4 ‘Must match’

Section 213(3)(b)(ii) of the 1988 Act excludes from unregistered design right features of shape or configuration of an article that are dependent upon the appearance of another article of which the article is intended by the designer to form an integral part.<sup>65</sup> As with the ‘must fit’ exclusion, the idea behind this exclusion was to limit the protection afforded to spare parts, particularly for cars.

(i) *Appearance* The ‘must match’ exclusion is only concerned with the *appearance* of objects. This is to be contrasted with the ‘must fit’ provision, which concerns the interconnection of parts so that either can perform their *function*. If we consider a classic example such as a car door, there will probably be both ‘must fit’ and ‘must match’ features: the ‘must fit’ features will enable the door to fit into the chassis and the handle to fit onto the door; the ‘must match’ features will relate to the general shape of the door, in particular any styling features that must match the rest of the car in order to be of an acceptable appearance.

(ii) *‘Dependent’ upon the appearance of another article* The ‘must match’ exclusion only operates where designs are ‘dependent’ upon the appearance of another article. The fact that designs are aesthetically linked to (or dependent upon) the appearance of the article as a whole lies at the heart of the rationale for the ‘must match’ exclusion.

A part will be dependent and thus unprotected if it is *not* possible for it to be replaced with a different part without radically altering the appearance or identity of the vehicle as a whole. A Mercedes-Benz with a Volkswagen roof is no longer a Mercedes-Benz, but a cannibalized mismatch. Where the owner of a complete article is obliged to replace a worn, damaged, or missing component with an identical component to maintain the appearance of the article, the part will be dependent. Where a part is dependent, the

<sup>62</sup> *UWUG v. Derek Ball* [2013] EWPC 35, [29].      <sup>63</sup> *Ibid.*, [30].

<sup>64</sup> *Dyson v. Qualtex* [2006] RPC 769, [42]–[43].

<sup>65</sup> Prior to reform of the registered design system, the ‘must match’ exclusion also operated in this context: see L. Bently and B. Sherman, *Intellectual Property Law* (1st edn, 2001), 590–2.

maker of the spare part has to produce a part that looks exactly like the original or it is unable to be sold. The maker has no design freedom. Consequently, parts such as the main body panels, doors, bonnet lids, and so forth will probably be treated as being ‘dependent’ on the appearance of the car as a whole.<sup>66</sup>

In contrast, a part will be independent and therefore able to be protected, if it can be replaced by a part with a different shape and configuration in such a way that it does not alter the appearance of the article as a whole. If it is possible to substitute a part with another part with a different shape and configuration, while leaving the general shape and appearance of the vehicle unaffected, the part will not be dependent. One of the defining aspects of an independent part is that while it (necessarily) contributes to the appearance of the vehicle, it is *subsidiary* to the overall shape—that is, it can be replaced without ‘radically altering’ the appearance of the vehicle (or article) as a whole. As Jacob LJ said in *Dyson v. Qualtex*,<sup>67</sup> ‘if there is, as a practical matter, design freedom for the part, then there is no dependency’.

For example, a steering wheel may be replaced with an alternative wheel of a sportier design while leaving the general appearance of the vehicle unchanged. Likewise, an owner might choose to substitute seats with more comfortable seats. Although the owner of a car might wish the component to blend in with the general style of the vehicle, such items would *not* be dependent on the appearance of another article. This reflects the goal of the ‘must match’ exclusion, which is to ‘protect spare parts to the extent that they have features of shape and configuration which do not have to be copied in order to fit or to match aesthetically’.<sup>68</sup>

(iii) *‘Dependence’ does not require the other article to exist* The ‘must match’ exclusion only prevents protection of those features of an article that must match those of another article. One shape can be dependent upon another article even though the latter may not yet exist. The provision requires the court to assume the existence of another article and decide whether the shape or configuration of the article depicted in the design is dependent on the appearance of the other article.<sup>69</sup>

(iv) *Defining the ‘other’ article* Another notable aspect of the ‘must match’ exclusion is that design features are only excluded where they are dependent on the shape of ‘another article’. This gives rise to the difficult question of what is meant by ‘another article’—an issue that was discussed under the old law of registered designs in *In re Ford Motor Co. & Iveco Fiat SpA*.<sup>70</sup> In that case, it was agreed that there were basically two ways of construing the phrase in the context of a part for a car: ‘another article’ could mean the vehicle as a whole minus the part in question<sup>71</sup>—known as the ‘n–1’ approach; alternatively, ‘another article’ could mean the whole car including the part in question. While the decision is not altogether clear (nor convincing in its reasoning), the Registered Design Appeal Tribunal ultimately favoured the latter approach.<sup>72</sup> On appeal, the High Court confirmed that in relation to spare parts, ‘other article’ meant the vehicle as a whole.<sup>73</sup>

<sup>66</sup> See *In Re Ford Motor Co. & Iveco Fiat SpA* [1993] RPC 399 (a pre-harmonization registered designs case). The question was not considered by the House of Lords: *R v. Registered Designs Appeal Tribunal, ex p Ford* [1995] RPC 167. For unregistered design right cases, see *Fulton v. Grant Barnett* [2001] RPC 257, 279–80 (particular shape of umbrella case claimed held not dependent on shape of umbrella); *Ultraframe UK v. Fielding* [2003] RPC 435, [79] (parts of conservatory roof assembly system that gave ‘consistent theme’ were not ‘dependent’).<sup>67</sup> [2006] RPC 769, [63].

<sup>68</sup> 494 Hansard (HL), 1 March 1988, col. 110 (Lord Beaverbrook).

<sup>69</sup> *Valeo Vision SA v. Flexible Lamps* [1995] RPC 205 (a registered design case).

<sup>70</sup> [1993] RPC 399.

<sup>71</sup> *Ibid.*, 411.

<sup>72</sup> *Ibid.*, 412, 420.

<sup>73</sup> In *Dyson v. Qualtex* [2005] RPC 19, [55], Mann J also rejected the ‘n–1’ approach stating that, as a matter of logic, if ‘article 1 is intended by the designer to form an “integral part” of article 2, then article 2 must comprise article 1’.

(v) *Integral part* The exclusion only operates where the features relate to an article that forms an ‘integral part’ of another article. A part is integral if it is essential to the overall design or look and feel of the article. As such, it excludes inessential parts (the extras), such as a toolkit or a car jack. Because most articles or parts of articles that are non-integral will also be independent, it seems that it adds little to the scope of the provision.

The provision is important, however, insofar as it helps to clarify that although a particular item may not stand alone, this does not necessarily mean therefore that the item forms part of another article. While articles such as cups and saucers, or knives and forks may fit together, this does not necessarily mean that they fall within the scope of the exclusion.<sup>74</sup> For example, while an article such as a cup might need to match a saucer, it is unlikely that the designer would have intended the cup to form an ‘integral part’ of the saucer.

In order for an article to be treated as an integral part of another article, the designed article in question must be subservient to the appearance of the other article. As such, where the articles play an equal part in the overall product, the design will not fall within the scope of the exclusion. This can be seen, for example, in relation to a unit in a range of kitchen cupboards, which was held not to be an article that formed an integral part of another article; instead, it was seen as one of a ‘series of matching articles none of which forms an integral part of another’.<sup>75</sup>

### 2.3 ORIGINALITY

Unregistered design right only subsists in ‘original’ designs. A design is not ‘original’ if, at the time of its creation, it is ‘commonplace in the design field in question’.<sup>76</sup> Deciding whether a design is original involves two stages. First, it is necessary to decide whether the design is original in the copyright sense—that is, in the sense that the design originated with the designer and was not slavishly copied from an existing design.<sup>77</sup> Second, if the tribunal is satisfied that the design is original, it is then necessary to determine if the design is ‘commonplace in the field in question’.

The concept of ‘commonplace designs’ is peculiar to this right. In *Farmers Build v. Carier Bulk Materials Handling*,<sup>78</sup> the Court of Appeal said that it would be wrong to attempt any further definition of what ‘commonplace’ meant; rather, the Court preferred to look at the term in light of its legislative history and purpose. Given that unregistered design right is intended to protect functional designs, only provide relatively weak protection, and include safeguards excluding the protection of spare parts, Mummery LJ concluded that it would be wrong to interpret ‘commonplaceness’ broadly. Instead, he said that its purpose was ‘to guard against situations in which even short-term protection for functional designs would create practical difficulties’.<sup>79</sup> Consequently, once it is shown that the design was not copied, all that is required is that the design must be different in

<sup>74</sup> *In re Ford Motor Co. & Iveco Fiat SpA* [1993] RPC 399, 419.

<sup>75</sup> *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 73.

<sup>76</sup> CDPA 1988, s. 213(4).

<sup>77</sup> *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461, 481; *Fulton v. Grant Barnett* [2001] RPC 257, [42] (must have been consciously designed rather than arising accidentally); cf. *Guild v. Eskandar* [2003] FSR 23, [44]–[56] (recognizing that an accidental feature could contribute to originality of design because it was perpetuated on purpose, but holding in the circumstances that the design lacked originality).

<sup>78</sup> [1999] RPC 461, 479; *Dyson v. Qualtex* [2006] RPC 769, [98] (‘a far from easy concept’).

<sup>79</sup> *Farmers Build v. Carier Bulk Materials Handling* [1999] RPC 461, 481; *Scholes Windows v. Magnet* [2000] FSR 432, 443; *Fulton v. Grant Barnett* [2001] RPC 257, [50] (commonplace to be interpreted narrowly rather than widely).

some respects from other designs, so that it can be fairly and reasonably described as ‘not commonplace’. This second inquiry itself has three stages.

(i) *Design field* The first stage is to decide what is the design field. This is an important stage of the inquiry because the broader the design field, the more likely it is that a particular design will be held to be commonplace. One of the questions that has arisen in this context relates to the geographical scope of the design field. In particular, there has been uncertainty as whether the design field is limited to the United Kingdom, the European Union, or a wider area. In order to resolve this uncertainty, the Intellectual Property Act 2014 amended section 231(4) of the 1988 Act to specify the relevant geographic area. Specifically, the revised definition provides that ‘a design is not “original” . . . if it is commonplace in a qualifying country in the design field in question: and qualifying country has the meaning given in section 217(3)’.<sup>80</sup>

It has been suggested that the courts should adopt a reasonably broad approach when deciding what the appropriate design field is.<sup>81</sup> What matters is the type of design with which ‘a notional designer of the article concerned would be familiar’.<sup>82</sup> A similar approach was adopted by the Court of Appeal in *Scholes Windows v. Magnet*.<sup>83</sup> In this case, the defendant argued that the claimant’s design for decoratively shaped window frames made in unplasticated PVC was commonplace. The defendant said that the assessment of whether a design was commonplace should be made by considering traditional window designs for wooden frames. The claimant disputed this, arguing that the design field was for ‘PVC window designs’. The Court of Appeal rejected that view. It said that while the words ‘design field’ bear their ‘ordinary and natural meaning’, the bounds of which are issues ‘of fact and degree’, the definition of ‘design’ in this context relates to shape and configuration, rather than materials or the nature and purpose of the article. Consequently the design field is not to be defined by reference to limitations of this sort. In the case in hand, therefore, the design field was that of window frames generally.<sup>84</sup>

(ii) *Design of other articles in the field* The second stage of the inquiry requires the court to examine the design of other articles in the same field, including any allegedly infringing articles. When considering this issue, it is important to bear in mind that a design that is commonplace in a design field will ‘be ready to hand’, rather than something that ‘has to be hunted for and found at the last minute’.<sup>85</sup> The Court of Appeal in *Scholes* emphasized that the courts should be concerned with those designs in the field at the time when the design issue was created.<sup>86</sup> This may include old designs, even if they are no longer available for purchase, if such designs were still available to be viewed by designers and interested members of the public. Consequently, the claimant’s design in

<sup>80</sup> IP Act 2014, s. 1(3) (only for unregistered designs created after the commencement of the section).

<sup>81</sup> *Lambretta Clothing Co. Ltd v. Teddy Smith (UK)* [2005] RPC 6, [45].

<sup>82</sup> *Ibid.*, [30]. This is similar to the reading that is given to ‘design field in question’ in the Semiconductor Products Directive (which is where the phrase was taken from): *ibid.*, [46].

<sup>83</sup> [2002] ECDR 196, [2002] FSR 172. See also *Ultraframe (UK) v. Eurocell Building Plastics* [2005] RPC 36, [54]ff (what matters is the kind of material that would be well known to designers of articles of the type in question).

<sup>84</sup> In a case concerning designs of kitchen cabinets, the court held that the design field was ‘fitted kitchen furniture’ rather than ‘cabinetry generally’, because kitchen furniture was ‘a discrete design field, with its own particular problems and characteristics’: *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 74. Presumably, *L. Woolley Jewellers v. A & A Jewellery* [2003] FSR 255 (treating design field as ‘coin-mounted jewellery design’) and *Spraymiser & Snell v. Wrightway Marketing* [2000] ECDR 349, 363 (defining field as ‘the design of wooden configurable figures of the human form’) defined the field too narrowly.

<sup>85</sup> *Ultraframe (UK) v. Eurocell Building Plastics* [2005] RPC 36.

<sup>86</sup> *Scholes Windows v. Magnet* [2000] FSR 432, esp. [45].

*Scholes* was considered in light of the continued presence of Victorian sash windows in the built environment in 1994 (the date when the claimant's design was created).<sup>87</sup> Other decisions have suggested that the issue of 'commonplaceness' is concerned primarily, and possibly exclusively, with designs that were available in the United Kingdom. As a result, designs only available in foreign countries or are in other ways 'obscure' are unlikely to be taken into account.<sup>88</sup>

(iii) *Similarity of the designs* Finally, the court should examine the design in question to determine how similar it is to designs in the same field.<sup>89</sup> The closer the similarities, the more likely it is that the design will be commonplace.<sup>90</sup> This is because if different designers have independently come up with similar designs, but each is given protection, practical difficulties of proof of copying and enforcement arise. These are precisely the difficulties that the requirement that the design not be commonplace was meant to avoid. If, however, there are aspects of the claimant's design that are not found in the field in question, the design is probably not commonplace.<sup>91</sup>

'Commonplaceness' is a question of fact on which little further guidance can be provided. However, two observations are worth making. The first relates to the question of whether a collection of commonplace designs can give rise to design that is protected. In what has been described as the legal form of *Gestalt*—in which the whole is more than the sum of its individual parts—it has been held that unregistered design right can exist in 'an assembly of individual commonplace parts'.<sup>92</sup> The second is that the test for whether a design is commonplace seems to operate more harshly against decorative designs than against functional ones. This is because in the case of decorative designs, there is likely to be a larger reservoir of existing designs in the field. This can be seen by comparing *Farmers Build* with the *Scholes Windows* case. In *Farmers Build*,<sup>93</sup> the Court of Appeal held various components of the slurry separator (such as the hopper design), as well as the combination of elements, to be original and protected. In part, this was because slurry separators were relatively new machines and there were not many comparators. Consequently, the (albeit visually unexceptional) functional differences between some of the claimant's parts and those of comparators meant that the claimant's design was not commonplace. In *Scholes Windows*,<sup>94</sup> however, the claimant's design was in the crowded field of window frame design where the requirement that the design should not be commonplace posed more of a hurdle. The design—a design of a PVC window frame that was intended to evoke a traditional Victorian sash window—was held to be similar to existing

<sup>87</sup> Old designs will not necessarily remain present in the field—whereas sash windows have a long life, umbrellas break and are quickly thrown away: *Fulton v. Totes Isotoner (UK)* [2003] *RPC* 499, [83].

<sup>88</sup> *Fulton v. Grant Barnett* [2001] *RPC* 257, [52] (an obscure piece of prior art does not render commonplace); *Fulton v. Totes Isotoner (UK)* [2003] *RPC* 499, [73], [78] per Judge Michael Fysh QC (Australian and Japanese examples irrelevant; this is not a novelty inquiry); upheld on appeal: *A. Fulton v. Totes Isotoner* [2004] *RPC* (16) 301 (CA). But cf. *Guild v. Eskandar Ltd* [2001] *FSR* 645 (design field described as 'global one of ladies' luxury fashion' as opposed to the 'sensual/philosopher' market proposed by the defendant); *Spraymiser & Snell v. Wrightway Marketing* [2000] *ECDR* 349, 364 (comparison with US design).

<sup>89</sup> The court usually looks at the designs through the eyes of the customer: *Fulton v. Totes Isotoner* [2003] *RPC* 499, 509; *Scholes Windows v. Magnet* [2002] *ECDR* 196, [49]–[50] (expressly rejecting suggestion that comparison should be from the point of view of a designer who is an expert in the field).

<sup>90</sup> Although where similarities that existed between a design and one already in the field were a result of the fact that both designs were modelled on the human form, the court held the later design not to be commonplace, because of differences in the detail of the features: *Spraymiser & Snell v. Wrightway Marketing* [2000] *ECDR* 349.

<sup>91</sup> For a discussion of the fate of well-known designs in this context, see *Dyson v. Qualtex* [2006] *RPC* 769, [100]ff.

<sup>92</sup> *Ultraframe v. Eurocell Building Plastics* [2005] *RPC* 36 (CA), [64]–[66].

<sup>93</sup> [1999] *RPC* 461, 484.

<sup>94</sup> [2000] *FSR* 432; aff'd on appeal [2002] *ECDR* 196, 205.

window designs and not to be sufficiently different to lift it out of the ordinary run of such designs.<sup>95</sup>

## 2.4 QUALIFICATION

Unregistered design right is only available in a design that meets one of the following criteria:<sup>96</sup>

- (i) the designer is a ‘qualifying person’—namely, a citizen or subject of, or an individual habitually resident in, a ‘qualifying country’ (the United Kingdom, the European Union, a country to which the relevant Part of the 1988 Act ‘extends’, or a ‘designated country’);
- (ii) the designer has been commissioned by or is employed by a ‘qualifying person’;<sup>97</sup> or
- (iii) the design has been first marketed by a ‘qualifying person’ in the United Kingdom, the European Union, or a country to which the Part ‘extends’.<sup>98</sup>

Because of the limited scope of these provisions, many foreign designs will not qualify for protection in the United Kingdom.<sup>99</sup>

One of the goals of the Intellectual Property Act 2014 was to overcome some of these shortfalls by simplifying the existing provisions. For designs created after the commencement of the relevant sections, the new Act relaxes the qualification requirement to anyone of *any* nationality, provided that either:

- (i) the designer is habitually resident in a qualifying country (the European Union and other nominated countries); or
- (ii) the organization or person who employed the designer to create the design was either ‘formed under the law of the UK or another qualifying country’, or has a place of business in a qualifying country at which ‘substantial business activity is carried on’.<sup>100</sup>

## 3 OWNERSHIP

Unregistered design right initially vests in the designer (subject to two exceptions).<sup>101</sup> The designer is the person who creates the design.<sup>102</sup> The case law has yet to develop, although

<sup>95</sup> *Scholes Windows v. Magnet* [2000] FSR 432, 442. See also *Sales v. Stromberg* [2006] FSR 89, [58] (design of decorative pendants, although simple geometric shapes common in rock art and ‘native American culture’, was original and not commonplace in field of complementary medical devices, including ones that were ornamental and decorative devices).

<sup>96</sup> CDPA 1988, s. 218. However, if the design was created in pursuance of a commission or in the course of employment, then it must qualify by that route or by first marketing.

<sup>97</sup> CDPA 1988, s. 219. A design that was commissioned or made in the course of employment cannot qualify via the s. 218 route (designer a ‘qualifying individual’).

<sup>98</sup> CDPA 1988, s. 255, allows for orders ‘extending’ the Part of the Act to the Channel Islands, the Isle of Man, or any colony, while s. 256 allows for orders to be made ‘designating’ countries as enjoying reciprocal protection. See Design Right (Reciprocal Protection) Order 1989 (SI 1989/1294) (designating countries such as Anguilla, Bermuda, Hong Kong, and New Zealand).

<sup>99</sup> *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 724.

<sup>100</sup> IP Act 2014, s. 3, amending CDPA 1988, ss 217(1)(4), 218(2),(4), 219, and 220 (only for designs created after the commencement of s. 3).

<sup>101</sup> CDPA 1988, s. 215(1).

<sup>102</sup> CDPA 1988, s. 214.

it seems that neither a person who provides an idea for a product,<sup>103</sup> nor a person who merely executes instructions, will be regarded as a creator.<sup>104</sup> As with copyright, it seems that the creator is the person who gives the expressive form—the shape and configuration—to the design.<sup>105</sup>

There are two exceptions to the general principle of first ownership. The first relates to designs created in the course of employment—which are owned by the employer.<sup>106</sup> Prior to the enactment of the Intellectual Property Act 2014, all designs created in pursuance of a commission were owned by the commissioner.<sup>107</sup> In order to bring UK law into law with Community design law, the 2014 Act removes the exception in relation to commissioned works, so that commissioned designs are now owned by the designer. It should be noted that the 2014 Act does not apply where (i) the designs was created before its coming into force, or (ii) where the commissioning contract was entered into before the Act came into force.<sup>108</sup> In these limited situations, the old law will still apply: the commissioner will be the owner of the design. In all other cases, designs created in pursuance of a commission will be initially owned by the designer. As such, the designer will always be the first owner of any design right in a design, unless it is created in the course of employment.<sup>109</sup> Hopefully, these changes will overcome the problem that arose from the fact that the old rules on ownership of commissioned designs were different from those in copyright law. This created an unfortunate situation where the copyright in design drawings was able to vest in one person (the designer), whereas unregistered design right in the design embodied therein was able to vest in another (the commissioner).<sup>110</sup>

## 4 DURATION

Unregistered design right lasts for 15 years from creation,<sup>111</sup> or if the design was ‘made available’ within five years of creation, ten years from the date of such marketing.<sup>112</sup> The maximum period

<sup>103</sup> *Spraymiser & Snell v. Wrightway Marketing* [2000] ECDR 349 (person who provided the idea of an articulated, reconfigurable, wooden figure that could be put to various uses, e.g. a magazine rack or plant stand, was not the designer).

<sup>104</sup> *Fulton v. Grant Barnett* [2001] RPC 257 (mould makers or stitchers working pursuant to instructions held not to be designers).

<sup>105</sup> *Spraymiser & Snell v. Wrightway Marketing* [2000] ECDR 349 (the designer was the person who developed the wooden figure—albeit with the assistance of a person who was commissioned to help him—who knew precisely how he wanted the figure to look).

<sup>106</sup> CDPA 1988, s. 215(3). See *Ultraframe UK v. Fielding* [2004] RPC (24) 479 (CA) (managing director not employee, or commissioned, but held unregistered design right on trust for company under fiduciary principles); *Fulton v. Grant Barnett*, [2001] RPC 257, 281 (director of the claimant company was held to be an employee).

<sup>107</sup> CDPA 1988, ss 215(2), 263 (amended by IP Act 2014, s. 2). See *Spraymiser & Snell v. Wrightway Marketing* [2000] ECDR 349, 365 (where a person did not charge to create a prototype in the hope of being remunerated from the process of mass production, the design was nevertheless made for money’s worth).

<sup>108</sup> IP Act 2014, s. 2(3).

<sup>109</sup> IP Act 2014, s. 2(1), amending CDPA 1988, s. 215(1) and (3), and deleting s. 215(2). IP Act 2014, s. 2(2), makes consequential changes to CDPA 1988, ss 213(5)(a), 218, 219(1)–(3), 220, and 263–4.

<sup>110</sup> *APPS v. Weldtite Products* [2001] FSR 703, 730.

<sup>111</sup> More specifically, from the end of the year in which the design was ‘first recorded in a design document, or an article was first made to the design, whichever first occurred’.

<sup>112</sup> CDPA 1988, s. 216(1). See *Dyson v. Qualtex* [2006] RPC 769 (CA), 802–3 (Jacob LJ) complaining that ‘the provision is not well-thought out’, but affirming Mann J’s view that something can be made available only if it exists, so that advanced orders would not necessarily suffice). Making available for sale, on any scale,

of protection is therefore 15 years. The dual system of protection means that designers have a reasonable period in which to interest manufacturers or purchasers before they market the design.<sup>113</sup> The right is subject to licences of right ‘in the last five years of the design right term.’<sup>114</sup>

## 5 INFRINGEMENT

### 5.1 RIGHTS

The owner of unregistered design right has the exclusive right to reproduce the design for commercial purposes, among other things by making articles to that design.<sup>115</sup> Reproduction of a design by making articles to that design is defined to mean ‘copying the design so as to produce articles exactly or substantially to that design’,<sup>116</sup> or making a design document recording the design for the purpose of enabling such articles to be made. The owner of unregistered design right also has an ‘authorization right’—that is, a right to authorize someone else to do any of the acts.<sup>117</sup> Since this is likely to be treated in the same way as the concept of ‘authorization’ in copyright law, the reader is referred back to Chapter 6.

The owner of unregistered design right can also object to various acts of secondary infringement. These concern commercial dealings with infringing articles: importing infringing articles into the United Kingdom; possessing such articles for commercial purposes; selling the articles; and exposing them for sale. These will often be of great importance because the primary act will frequently take place abroad (where labour and material costs are lower). As with secondary infringement of copyright, there is a *mens rea* requirement—namely, that the alleged infringer ‘knows or has reason to believe’ that the article is infringing.<sup>118</sup> The concept of ‘reason to believe’ has been interpreted in the same way as the equivalent copyright provisions,<sup>119</sup> and thus the reader is referred back to Chapter 8 for further analysis.

Once it is clear that the defendant’s activities fall within the scope of the protected rights, it is necessary to show that there has been ‘substantive’ infringement. The three key elements of substantive infringement are (i) derivation, (ii) so as to produce articles, (iii) which are substantially similar in design.

### 5.2 DERIVATION

In order for a UK unregistered design right to be infringed, it must be copied. As a result, to show infringement it is necessary to demonstrate a causal connection between the

was relevant for the section to apply; there was no need to show that a particular level of sales for term to begin: *Victor Ifejika v. Charles Ifejika and Lens Care* [2011] *EWPC* 31, [128].

<sup>113</sup> Fellner, [3.046]–[3.053].

<sup>114</sup> CDPA 1988, s. 237. For an application of the licence of right and some of the complications that arise, see *NIC Instruments Licence of Right (Design Right) Application* [2005] *RPC* 1; *Penny Hydraulics v. Reid Lifting*, BL O/101/11 (11 March 2011). This has potential ramifications for assessing damages: see CDPA 1988, s. 239. On this, see Neuberger LJ in *Ultraframe v. Eurocell* [2005] *RPC* 36 (CA), [103]ff.

<sup>115</sup> CDPA 1988, s. 226(1).

<sup>116</sup> CDPA 1988, s. 226(2).

<sup>117</sup> CDPA 1988, s. 226(3).

<sup>118</sup> CDPA 1988, s. 233(2), limits the damages in a situation in which the defendant acquired the infringing goods innocently. The test of innocent acquisition, as defined in s. 233(3), was said to be ‘an objective test’: *Badge Sales v. PMS International Group Ltd* [2006] *FSR* 1, [8].

<sup>119</sup> *Baby Dan SA v. Brevi* [1999] *FSR* 377, 392; *Fulton v. Grant Barnett* [2001] *RPC* 257 (knowledge of the existence of a registered design); *Fulton v. Totes Isotoner* [2003] *RPC* 499, 530–1 (inference of knowledge based on knowledge of Fulton’s action against Barnett in separate litigation).

two designs. It is not enough to show that the designs are similar. In some cases, this will be unproblematic: there will be direct proof of copying. Often, this will occur where the alleged infringer was supplied by the claimant of design right, but decided (for whatever reason) to start manufacturing similar designs.<sup>120</sup> Occasionally, there will be evidence that the defendant's designer used the claimant's design as 'inspiration'.<sup>121</sup> However, in many cases, there will be no direct proof of derivation, and proof of copying will depend on proving 'access' and 'similarity'.<sup>122</sup> Often, the court will compare the designs and ask: do the similarities between the designs 'call for an explanation'?<sup>123</sup> The mere fact that designs are the same does not necessarily mean that the design has been copied: in the field of functional design, substantial similarity may be an inevitable consequence of the functional nature of the design and not a result of copying.<sup>124</sup>

The way in which the courts determine whether a design has been copied can be seen in *Amoena v. Trulife*,<sup>125</sup> where the defendant began to market PVC breast prostheses similar to ones that the claimant had been selling during the previous year. Jonathan Sumption QC (now Lord Sumption) dismissed Amoena's allegation of infringement of unregistered design right on the ground that it had failed to prove that Trulife had copied the design. Although the defendant would have had access to the claimant's product and had produced a similar product comparatively swiftly, Judge Sumption said that he was unable to infer copying merely from the fact that the form of the designs was the same. The reason for this was that a number of design constraints limited the range of possible forms that the design could take. As such, it was reasonable to conclude that the similarity could be explained on grounds other than copying. In designing breast prostheses, a designer needed to emulate the appearance of a breast in a bra, take into account the shape and size of scarring left by a mastectomy, as well as consider surgical practices. The judge concluded that 'designers pursuing similar objectives determined by bra design, surgical practice and stocking requirements are quite likely to arrive at designs which have a great deal in common'. While such similarities might have been the result of copying coupled with the deliberate introduction of differences, the two designs were not so similar that this was the only explanation—or even the most inherently probable. The degree of similarity was capable of being explained on the basis that two designers had independently sought to achieve the result suggested to them by the design of the bra and the location of the scars produced by current surgical methods.

### 5.3 COPIED SO AS TO PRODUCE THE SAME 'ARTICLES'

In order to infringe unregistered design right, it is necessary to show that the defendant copied the design so as to produce *articles* exactly or substantially similar to the protected

<sup>120</sup> *Baby Dan SA v. Brevi* [1999] FSR 377, 387 (the defendant's design retained certain functional features of the claimant's design, even though in the defendant's design these features were not necessary to achieve the function); *Parker v. Tidball* [1997] FSR 680; *Farmers Build v. Carrier Bulk Materials Handling* [1999] RPC 461, 466.

<sup>121</sup> It has been suggested that similar fact evidence, i.e. evidence of a defendant having mimicked a claimant's products a number of times in the past, may be of some use in deciding infringement (although the court stressed that such evidence would be of only minor probative value and would require wide-ranging investigations): *Mattel Inc v. Woodbro (Distributors)* [2004] FSR 12, [14], [21]–[22].

<sup>122</sup> *Farmers Build v. Carrier Bulk Materials Handling* [1999] RPC 461, 481. Compare *Fulton v. Grant Barnett* [2001] RPC 257 (inference of copying by manufacturer in Taiwan drawn from multiplicity of similarities), with *Guild v. Eskandar* [2003] FSR 23 (no copying proven).

<sup>123</sup> *Albert Packaging Ltd and ors v. Nampak Cartons & Healthcare Ltd* [2011] EWPC 15 (PCC), [153].

<sup>124</sup> *Virgin Atlantic v. Premium* [2009] EWHC 26 (Pat), [35], citing *Farmers Build* [1999] RPC 461.

<sup>125</sup> (Unreported, 25 May 1995) Jonathan Sumption QC, Deputy Judge of Ch D, SRIS C/72/95.

design. Two questions arise in relation to this requirement. First, is there infringement where a defendant uses the design on different articles? Second, in the case of designs for parts of articles, is the comparison to be made between the parts themselves or between the part claimed and the whole of the defendant's alleged infringement?

### 5.3.1 Application to different articles

As with UK registered designs, Community registered designs, and unregistered Community designs,<sup>126</sup> it seems that a UK unregistered design right will be infringed where a substantially similar design is used on other articles. In *Electronic Techniques v. Critchley Components*,<sup>127</sup> Laddie J said that since unregistered design right is 'presumably intended to reward and encourage design effort, it seems unlikely that the effort should only be protected and rewarded if the infringer happens to use the design on precisely the same type of article'. However, Laddie J added an important qualification to the general proposition that unregistered design right is infringed by use of the design on other articles. He said that this did not mean that the nature of the defendant's article was irrelevant:

It may be that a design applied to certain articles has a different impact to the same design applied to other articles. In such cases it may well be that the design, in the context of other features of shape and configuration of the article itself, may be viewed differently to the same or a similar design in a different context.<sup>128</sup>

### 5.3.2 The test with partial designs

The fact that the definition of infringement refers to the use of the claimant's design in relation to articles rather than to parts of articles has posed particular problems where the claimant's design is for part of an article. This is because although design right subsists in 'the design of any aspect of the shape or configuration . . . of the whole or part of any article', infringement occurs where the defendant is shown to have copied 'the design so as to produce *articles* exactly or substantially to that design'. The statutory provisions are thus inconsistent. The 'linguistic mismatch between the subsistence of design right and the right it confers' was considered in *Virgin Atlantic v. Premium*,<sup>129</sup> where it was said that:

[It] must obviously have been Parliament's intention that if design right subsisted in part of an article (e.g. the teapot spout) the right would be infringed by incorporating a copy of that spout in another teapot, even if the infringing spout is not itself a whole article.<sup>130</sup>

This seems to be a sensible way of resolving the drafting problems in the 1988 Act.

## 5.4 SUBSTANTIAL SIMILARITY

In order to infringe a UK unregistered design right, it must be shown that the defendant copied the design so as to produce articles that are exactly the same as or *substantially similar* to the claimant's design.<sup>131</sup> This is a somewhat different test from that for copyright infringement, where (as we saw in Chapter 8) the focus is on whether the defendant has reproduced a 'substantial part' of the claimant's work. In the case of designs, we

<sup>126</sup> See above at pp. 754–9. <sup>127</sup> [1997] FSR 401, 418.

<sup>128</sup> Ibid. See above pp. 754–9. <sup>129</sup> [2009] EWHC 26 (Pat).

<sup>130</sup> Ibid., [31]. See also *Dyson v. Qualtex* [2006] RPC 769, [113]–[114] (seeming to suggest the comparison is of relevant parts); cf. *Parker v. Tidball* [1997] FSR 680, 691.

<sup>131</sup> CDPA 1988, s. 226(2).  
© L. Bently and B. Sherman 2014

are concerned with overall similarity, not only appropriation of part of an article.<sup>132</sup> It is important to recall that what is protected from copying in design right cases is the design, meaning the physical manifestation of the design; it is not some underlying physical abstraction or idea.<sup>133</sup>

In cases where the design is for the appearance of an article, the question of whether the designs are the same is determined through the eyes of the relevant customer.<sup>134</sup> Substantial similarity is a matter of overall impression and, as such, the courts often find it difficult to explain why they reached a particular conclusion.<sup>135</sup> In one case, it was suggested that the question is whether a consumer looking at the two designs side-by-side would say that they are made to substantially the same design.<sup>136</sup> However, a visual test is inappropriate where the design features lie in details that cannot be seen by the eye. It will be recalled that in *Ocular Sciences*, Laddie J accepted the claimant's argument that each of its lenses, although only differing from its neighbour's in fine dimensional details, might constitute a separate design.<sup>137</sup> Indeed, Laddie J observed that the designs were protectable despite the fact that a member of the public would not be able to distinguish the design of one lens in a particular range from another in the same range by mere visual inspection. If protection is to be meaningful, the question of whether the articles copied were exactly or substantially the same as the protected design should not simply be a question of visual similarity.

A visual test is also inappropriate where the features of shape or configuration protected by unregistered design right are functional.<sup>138</sup> In these circumstances, the question should be whether the defendant's design embodies a form that is similar (taking into account the way in which the form operates to achieve the function). Although it was not necessary to decide the point, this was the approach taken by Pumfrey J in his discussion in *Mackie Designs* of what would amount to infringement of the unregistered design right in a circuit board.<sup>139</sup> The question of similarity would not be one of visual comparison of the shapes and colours from the point of view of someone unversed in electronics but a comparison through the eyes of someone versed in electronics, and interested in the functioning of the circuit, of the units, their order, and interconnections.

## 6 DEFENCES: THE RELATIONSHIP BETWEEN THE UNREGISTERED DESIGN RIGHT AND COPYRIGHT

When the unregistered design was introduced, the key defence available was the special defence in relation to overlap with copyright. This was found in section 236 of the CDPA 1988, which states that 'it is not an infringement of design right in the design to

<sup>132</sup> *L. Woolley Jewellers v. A & A Jewellery* [2003] FSR 255, 261.

<sup>133</sup> *Rolawn v. Turfmech Machinery* [2008] EWHC 989, [81].

<sup>134</sup> *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1998] FSR 63, 75; *Fulton v. Totes Isotoner* [2003] RPC 499, 528. <sup>135</sup> *Ultraframe UK v. Fielding* [2003] RPC 435, [85].

<sup>136</sup> *Fulton v. Grant Barnett* [2001] RPC 257, 283.

<sup>137</sup> *Ocular Sciences v. Aspect Vision Care (No. 2)* [1997] RPC 289.

<sup>138</sup> *Cf. C. & H. Engineering v. Klucznik* [1992] FSR 421, 428 (applying visual test to functional design).

<sup>139</sup> *Mackie Designs v. Behringer Specialised Studio Equipment (UK)* [1999] RPC 717, 723; *Mark Wilkinson Furniture v. Woodcraft Designs (Radcliffe)* [1988] FSR 63.

do anything which is an infringement of copyright in that work'.<sup>140</sup> Consequently, to the extent that there is dual protection, copyright pre-empts unregistered design right. However, as we have seen, section 51 severely limits the impact of copyright protection in this area. This is because where copyright and unregistered design right both exist, section 51 provides a defence so that making an article to the design does not infringe copyright, but might nevertheless still infringe unregistered design right. An exhaust pipe produced indirectly from design drawings would not infringe copyright in those drawings; it would, however, infringe unregistered design right as regards those features of the exhaust pipe that are not excluded as 'must fit' or 'must match' features.<sup>141</sup>

The Intellectual Property Act 2014 introduced a number of new exceptions for infringement of unregistered design right.<sup>142</sup> A new section 244A of the 1988 Act provides that:

Design right is not infringed by—

- (a) an act which is done privately and for purposes which are not commercial;
- (b) an act which is done for experimental purposes; or
- (c) an act of reproduction for teaching purposes or for the purpose of making citations provided that—
  - (i) the act of reproduction is compatible with fair trade practice and does not unduly prejudice the normal exploitation of the design, and
  - (ii) mention is made of the source.

A new section 244B also creates exceptions for acts carried out in overseas ships and aircraft. Because these new exceptions are based on the exceptions for registered designs, readers should refer to Chapter 28.

## 7 SYNTHESIS

The legal protection of designs is a complicated matter. As a result, it may be helpful to conclude with some simple examples.

**Example 1** *A has designed a double-barrelled syringe, which he marketed. It is registered as a design in the United Kingdom and at OHIM. A similar syringe has subsequently appeared on the UK market, where it is being sold by X.*

First, we should consider the validity of A's national or registered Community designs. Both regimes afford protection to the 'appearance of . . . a product'.<sup>143</sup> One question will be whether the features are 'solely dictated by its technical function'.<sup>144</sup> Parts of the handle might be excluded as 'mechanical interconnections'<sup>145</sup>—where an exact fit is required with the plunger. A more difficult hurdle will be whether the design is new and has individual character.<sup>146</sup>

On the assumption that the registrations are valid, we would need to decide whether X infringes. X is using a design by selling articles bearing it.<sup>147</sup> There is no need to prove that

<sup>140</sup> CDPA 1988, s. 236.

<sup>141</sup> However, where a design comprises surface decoration as well as configuration, the division of the creative elements amongst two forms of protection may have undesirable effects: *Jo Y Jo v. Matalan* [2000] ECDR 178, 200.

<sup>142</sup> IP Act 2014, s. 4.

<sup>143</sup> Designs Dir., Art. 1(a); CDR, Art. 3(a); RDA 1949, s. 1(2).

<sup>144</sup> Designs Dir., Art. 7; RDA 1949, s. 1C(1); CDR, Art. 8.

<sup>145</sup> Designs Dir., Art. 7(2).

<sup>146</sup> Designs Dir., Art. 3(2); RDA 1949, s. 1B; CDR, Art. 4.

<sup>147</sup> Designs Dir., Art. 12; RDA 1949, s. 7(1); CDR, Art. 19.

the design was copied. The critical issue will be whether X's design produces a different overall impression on an informed user. If it does, there is no infringement.<sup>148</sup>

If A can prove copying, he will also be able to rely on unregistered Community design at least for the period of three years from the date on which the design was made available.<sup>149</sup>

A will not be able to rely on copyright. The syringe is not itself an artistic work.<sup>150</sup> The drawings, if any exist, are designs for something 'other than an artistic work'. It is not an infringement to make articles to the design or copy articles made to the design.<sup>151</sup>

A may be able, however, to rely on a UK unregistered design right. This protection would arise automatically as regards features of shape and configuration.<sup>152</sup> Surface decoration (such as the measure) would not be protected. Parts of the handle might be excluded on the grounds that it must fit both the syringe barrel and, possibly, the hand of the user.<sup>153</sup> If the shape is 'not commonplace', it may be protected.<sup>154</sup> (It is conceivable that the syringe might lack 'individual character' and yet be not commonplace.) Assuming that the syringe is protected, A will need to prove X is dealing in 'infringing articles'—that is, articles made without A's permission, by copying A's design (directly or indirectly), and which are articles made substantially to the design.<sup>155</sup> Whether the articles are 'substantially to [the] design' is a matter of impression and only in a few cases would the result differ from that based on the registered design. A will also need to prove that X is either a primary infringer, or knows or has reason to believe the articles are infringing articles. The defence in section 236 will not apply, because making articles to the design is not an infringement of copyright.

**Example 2** *B has designed a steering wheel for a new car and has retained her preliminary drawings. The steering wheel is of a conventional circular design and characterized by having four radiating spokes in the shape of a 'CND' sign. B is about to commence production.*

B may be able to obtain a UK registered design or a registered Community design for the shape of the steering wheel. The design relates to the appearance of a product, which includes 'parts intended to be assembled into complex products'.<sup>156</sup> The main question will be whether the design is new and has individual character. For parts to be used in complex products, the Community-based regimes require the part to be visible in use—which should not be a problem for steering wheels.<sup>157</sup> The fact that the design is known as a 'CND' symbol might be thought to raise issues of novelty. However, the design of the symbol is two-dimensional, whereas the three-dimensional version is different—it will have spatial presence, texture, and weight. The design would almost certainly produce, on an informed user, a different impression to, say, a CND sticker. However, a registration might be declared invalid as an infringement of copyright.<sup>158</sup> Pending an application for registration, B benefits from the grace period for 12 months, and if she chooses not to register, from the unregistered Community design right for three years from making the design available.

B will be able to rely on copyright in any design drawings. However, such copyright will not enable her to prevent anybody from replicating the steering wheel.<sup>159</sup>

<sup>148</sup> Designs Dir., Art. 9; RDA 1949, s. 7; CDR, Art. 10.

<sup>149</sup> CDR, Art. 11.

<sup>150</sup> CDPA 1988, s. 4. It is not a sculpture: *Metix v. Maughan* [1997] FSR 718.

<sup>151</sup> CDPA 1988, s. 51.

<sup>152</sup> CDPA 1988, s. 213.

<sup>153</sup> CDPA 1988, s. 213(3)(b)(i); *Ocular Sciences v. Aspect Vision Care (No. 2)* [1997] RPC 289.

<sup>154</sup> CDPA 1988, s. 213(4). <sup>155</sup> CDPA 1988, ss 228 (defining infringing article), 226.

<sup>156</sup> Designs Dir., Art. 1(b); RDA 1949, s. 1(3); CDR, Art. 3(c).

<sup>157</sup> Designs Dir., Art. 3(3); CDR, Art. 4(2); RDA 1949, s. 1B(8).

<sup>158</sup> Designs Dir., Art. 11(2)(a); RDA 1949, s. 11ZA(4); CDR, Art. 25(I)(f).

<sup>159</sup> CDPA 1988, s. 51.

B will be able to rely on the UK unregistered design right insofar as the steering wheel is a shape, which is original and not commonplace. Unregistered design right will not protect ‘must fit’ nor ‘must match’ features.

**Example 3** *C has developed a design for a door handle shaped like an eagle’s head. C has original drawings and preliminary clay models.*

C could register the design at a national or Community level, and will also have protection automatically (for three years from making available the design) by virtue of the unregistered Community design right. There may be issues as to whether the door handle is new and has individual character.

C could rely on copyright protection in the drawings and the clay model, if the latter were treated as a ‘model for the purposes of sculpture’.<sup>160</sup> The mass-produced version of the handle is unlikely to be treated as a sculpture.<sup>161</sup> It could nevertheless be a work of artistic craftsmanship.<sup>162</sup> The extent of copyright protection will depend on the application of section 51 of the 1988 Act. If the design is a work of artistic craftsmanship, full protection would apply—either based on direct infringement of the work, or indirect infringement via the sculpture or drawings. If the door handle is an artistic work, then the design drawing is a design document for an artistic work; thus the section 51 defence does not apply. If the door handle is not an artistic work, the question arises whether the drawings, on which the sculpture was based, are designs for an artistic work, or whether they will be treated as designs for the door handle (a non-artistic work).

C could also attempt to rely on unregistered design right as regards the shape of the handles. However, according to section 236 of the 1988 Act, there will be no infringement of unregistered design right insofar as there is an infringement of copyright. The operation of unregistered design right is therefore significant only if there is no infringement of copyright.

**Example 4** *D, an artist, produces an abstract painting (in the style of Mondrian), which is widely exhibited. It is later applied by E to ties, with D’s consent. Y has now made trays bearing the painting.*

E can apply to register the design for the tie at national or Community level. The application relates to the appearance of a product. The first issue that will need to be addressed is whether the design of the tie is new, given the existence of the painting. The Community-based regime provides no clear answer: whether an identical design has been made available depends, first, on whether the painting itself counts as a design. Is a painting the appearance of ‘a product’—namely, the canvas?<sup>163</sup> Assuming that the painting is a design, has it been made available? Making available includes exhibition, so it seems that the painting has been made available.<sup>164</sup> Is the design of the tie identical to the design of the painting? Would the change in size, texture, and possibly colours (as well as the very nature of the product) be such that the design of the tie differs only in ‘immaterial details’?<sup>165</sup> Does the design have individual character? If not, can the use of the artistic work within the previous 12 months be ignored on the basis of the grace period?<sup>166</sup> Here, the hurdle is that the painting was made available by D, rather than the design of the tie by E—a situation that does not fall easily into the exclusion.

<sup>160</sup> Cf. *J & S. Davis (Holdings) v. Wright Health Group* [1988] RPC 403.

<sup>161</sup> *Lucasfilm v. Ainsworth* (2011) UKSC 39.

<sup>162</sup> *Coogi Australia v. Hysport International* (1998) 41 IPR 593 (FCA).

<sup>163</sup> RDA 1949, s.1(B)(2); Designs Dir., Art. 4; CDR, Art. 5(2).

<sup>164</sup> RDA 1949, s. 1B(5)(a); Designs Dir., Art. 6; CDR, Art. 7(1).

<sup>165</sup> RDA 1949, s. 1B(2); Designs Dir., Art. 4; CDR, Art. 5(2).

<sup>166</sup> RDA 1949, s. 1B(6); Designs Dir., Art. 6(2); CDR, Art.7(2)(b).

If the painting is not a design, it would seem that the design for the tie is a new design. This would mean that E would obtain monopoly rights as regards use of the tie on any product. E consequently could bring an action against Y and the issue would be whether the design produced a different overall impression on an informed user. Would the design on a tray give a different impression from the design on a tie? If E had registered the design without D's permission, D could invalidate the registration on the ground that it infringed E's copyright.<sup>167</sup> This ground would not, however, be available to Y.

D can rely, as against E or Y, on copyright in the painting. This is infringed where anybody applies the work to an artefact, because that amounts to reproduction of the work.<sup>168</sup> Section 51 has no application (because the painting was not a design 'for' anything, being simply an artistic work).<sup>169</sup> It is difficult to see how E could claim any copyright in the tie.

Neither D nor E can rely on unregistered design right. The design is not a shape.<sup>170</sup>

**Example 5** *F, an artist, creates an abstract sculpture, which is exhibited in Holland Park. Z is thinking of selling paperweights in a similar shape.*

F may attempt to register the design of the sculpture at national or Community level. The critical question will be whether a sculpture is a product—that is, 'an industrial or handicraft item'.<sup>171</sup> It seems improbable that the UK Designs Registry, OHIM, or the courts will refuse to register such things, but they will require that F specify a product (and identify its place in the Euro-Locarno Classification System).<sup>172</sup> If this has occurred, Z's use of a similar design will infringe if the resemblance is such that it does not produce a different overall impression.

F could rely on copyright, a sculpture being one of the 'artistic works' enumerated in section 4 of the CDPA 1988 and protected 'irrespective of artistic quality'. F will thus be able to bring an action against Z on the ground that Z has infringed by reproducing the sculpture or by issuing copies of it to the public.<sup>173</sup> However, F will need to prove that Z made the paperweights by copying the sculpture. If Z bought the paperweights from a third party, F will need to prove that the paperweights are copies of the sculpture, and that Z knew, or ought reasonably to have been aware, that these were infringing copies.<sup>174</sup>

F may have unregistered design right if the sculpture is treated as the design of the shape of an article. However, F will not be able to use unregistered design right against Z because of section 236: '[I]t is not an infringement of design right in the design to do anything which is an infringement of the copyright in that work.'

**Example 6** *G has produced a photograph and proposes to make birthday cards bearing the image.*

G can register, either nationally or at OHIM. The design relates to the appearance of a product and will obtain protection for up to 25 years. It will also benefit from an unregistered

<sup>167</sup> RDA 1949, s. 11ZA(4); Designs Dir., Art. 11(2)(a); CDR, Art. 25(1)(f), (3). <sup>168</sup> CDPA 1988, s. 17.

<sup>169</sup> In any case, the painting is not a 'design', a term that relates to shape and configuration.

<sup>170</sup> CDPA 1988, s. 213. <sup>171</sup> RDA 1949, s. 1(B)(2); Designs Dir., Art. 4; CDR, Art. 5(2).

<sup>172</sup> RDA 1949, s. 3(2).

<sup>173</sup> CDPA 1988, ss 17, 18. If F permits the exploitation of the sculpture by the making of more than 50 articles (which are copies of the sculpture) and marketing them, F's ability to restrain further uses of the sculpture after 25 years from such marketing may be compromised: s. 52(2). Although Copyright (Industrial Process and Excluded Articles) (No. 2) Order 1989 (SI 1989/1070), art. 3(1)(a), excludes 'sculptures' from the operation of CDPA 1988, s. 52, it does so only for sculptures 'other than casts or models used or intended to be used as models or patterns to be multiplied by any industrial process'. The better view is that F's copyright is unaffected if F sells multiple copies of the sculpture as a sculpture, but CDPA 1988, s. 52, comes into play if F permits the sale of articles modelled on the sculpture.

<sup>174</sup> CDPA 1988, s. 23.

Community design right for three years from the first making-available of the design.

G cannot rely on a UK unregistered design right: there is no shape or configuration.

G can rely on copyright. The photograph is an original artistic work. Section 51 does not apply.

## 8 SEMICONDUCTOR TOPOGRAPHIES

A special form of legal protection based on unregistered design right, which has been described as being ‘clearly rather esoteric’,<sup>175</sup> has been created to afford protection for the layouts of semiconductor chips (which are colloquially known as ‘computer chips’, or ‘silicon chips’). This section briefly explains this *sui generis* right.<sup>176</sup>

When the question of the protection for the designs of semiconductor chips arose in the 1980s, it was widely assumed in the United States that copyright protection would not be available (or, if available, would not be adequate) given that the design of semiconductor chips is essentially functional. As a result, in 1984, the United States passed a Semiconductor Chip Protection Act introducing a *sui generis* protection regime. Because the United States was only prepared to recognize the claims of foreign designers of semiconductor chips where the country of origin recognized the rights of US chip designers, the European Commission decided to adopt an equivalent system of protection. Consequently, the Semiconductor Chip Directive was adopted, in December 1986, requiring member states to bring into effect protection for semiconductor topographies.<sup>177</sup> In the United Kingdom, this was initially implemented by means of the Semiconductor (Protection of Topography) Regulations 1987<sup>178</sup>—an instrument that was later repealed and replaced by the Design Right (Semiconductor Topographies) Regulations 1989.<sup>179</sup>

### 8.1 UK SCHEME

Semiconductor topographies are now protected in the United Kingdom as unregistered designs, with certain modifications. Protection is afforded to the pattern(s) fixed, or intended to be fixed, in or upon a layer or layers of a semiconductor product. A semiconductor product is defined as:

... an article the purpose, or one of the purposes, of which is the performance of an electronic function and which consists of two or more layers, at least one of which is composed of semi-conducting material and in or upon one or more of which is fixed a pattern appertaining to that or another function.<sup>180</sup>

The prerequisite of design right protection—namely, that the design be ‘original’ and ‘not commonplace’—applies equally to topographies. Protection is provided against copying,

<sup>175</sup> UK IPO, *The Consultation on the Reform of the UK Designs Legal Framework Government Response* (April 2013), [6].

<sup>176</sup> As noted in Chapter 26, chips are also now protectable by registered Community design, national registered design, and the unregistered Community design right.

<sup>177</sup> Directive 87/54/EEC of 16 December 1986 on the legal protection of semiconductor chips [1986] *OJ L* 24/36 (27 January 1987).

<sup>178</sup> SI 1987/1497.

<sup>179</sup> SI 1989/1100.

<sup>180</sup> *Ibid.*, reg. 2(1).

but there is a defence for private reproduction for non-commercial aims and generous provision is made for reverse engineering.<sup>181</sup>

While the concept of 'qualifying country' is confined to the United Kingdom or another member state of the European Economic Area (EEA), the notion of 'qualifying person' includes citizens, subjects, habitual residents, and bodies corporate listed in Schedule 1 to the 1989 Regulations. Consequently, if a design for a topography is commissioned by a 'qualifying person' who is also the first owner of design right, is created by a designer who is a 'qualifying person',<sup>182</sup> or the first marketing of a topography is by a 'qualifying person' in Europe, the design qualifies for protection in the United Kingdom. The countries listed include Australia, the United States, Japan, and others.<sup>183</sup>

<sup>181</sup> Ibid., reg. 8; cf. Software Dir., Arts 4 and 6.

<sup>182</sup> The commissioner/employer and the designer routes are mutually exclusive, so that a commissioner or employer who is not a 'qualifying person' cannot claim the benefit of the designer being a 'qualifying individual'; rather, if the commissioner or employer was first owner, it must be qualified. However, if the designer was first owner pursuant to an agreement to that effect, then the designer must qualify.

<sup>183</sup> For a lengthier exposition of these very complex requirements, see A. Christie, *Integrated Circuits and their contents: International Protection* (1995), 67–71.

# PART IV

## TRADE MARKS AND PASSING OFF

This part of the book is concerned with two related forms of intellectual property—namely, the common law of passing off and the statutory regime that protects registered trade marks found in the Trade Marks Act 1994. These regimes regulate certain signs or symbols, usually words or pictures,<sup>1</sup> when used in trade in connection with particular goods or services. Classic (or infamous) examples include *MARLBORO* for cigarettes, *APPLE* for computers, the ‘golden arches’ in the shape of an *M* for restaurant services, and the ‘swoosh’ or rounded tick symbol for (*NIKE*) sports clothing. These two legal regimes transform signs into forms of property. In so doing, they enable the proprietors to prevent other traders from using the signs on the same or similar goods or services. Both forms of legal protection are available simultaneously. Under the law of passing off, the sign must have been used in trade so as to have acquired a reputation. In the case of the statutory regime, the sign must have been registered, either at the UK Trade Mark Registry or at the EU trade mark office—that is, the Office of Harmonization in the Internal Market (OHIM). These forms of legal protection underpin the enormous value of some of these brands. In 2013, the brand valuation agency Interbrand calculated that 100 brands are now worth over US\$3.9 billion each, the most valuable, *APPLE*, *GOOGLE*, and *COCA-COLA*, being worth in the region of \$98, \$93, and \$79 billion each, respectively.<sup>2</sup>

<sup>1</sup> Marks are often referred to according to the nature of the sign. A ‘word’ mark is a registration of a word alone (irrespective of its depiction). A ‘figurative’ mark is usually made up of a visual image, such as a picture. Marks that have both figurative and verbal elements are commonly referred to as ‘composite’ marks. As we will see, there are new possibilities to register ‘three-dimensional marks’, ‘colour marks’, and ‘sensory marks’ (such as sounds or smells).

<sup>2</sup> See <<http://www.interbrand.com>> There are important differences between the legal rights conferred by trade mark law and the more nebulous commercial notion of a ‘brand’: see J. Davis, ‘Between a Sign and a Brand’, in Bently, Davis, and Ginsburg.

## INTRODUCTION TO PASSING OFF AND TRADE MARKS

### CHAPTER CONTENTS

1 History	809	4 International and Regional Dimensions	819
2 Costs of Trade Marks	813	5 Challenges	823
3 Justifications for the Legal Protection of Trade Marks	814		

This chapter has three aims. First, it provides a brief history of the development of the law in this area. Second, it considers the ways in which legal protection of signs and symbols are justified. Third, the chapter provides an introduction to the international and regional framework that informs and constrains this area of the law in the United Kingdom.

### 1 HISTORY

Most accounts of the history of trade marks tend to focus on two intertwined themes: one is a history of the social practices and understandings attached to the activity of applying marks to goods; the other, a positivist history of trade marks law. These two histories are often conflated in a way that suggests that the law inevitably evolves with, or ought to reflect the changes in, the nature and function of marks.<sup>1</sup> While acknowledging that many developments in trade marks law have been made in response to changes in the functions that marks perform, we would prefer to keep the histories separate to avoid any implication that a change in the function of marks requires corresponding action by the legislature or judiciary to alter (typically, to expand the scope of legal protection afforded by) trade mark law.

#### 1.1 HISTORY OF MARKS

In the earliest times, traders applied marks to their goods to indicate ownership. These are called ‘proprietary’ or ‘possessory’ marks. For example, farmers commonly branded cattle and earmarked sheep as a way of identifying their livestock. In a similar way, merchants also marked their goods before shipment, so that, in the event of a shipwreck, any

<sup>1</sup> F. Schechter, *The Historical Foundations of the Law Relating to Trade Marks* (1925); T. Drescher, ‘The Transformation and Evolution of Trademarks: From Signals to Symbols to Myth’ (1992) 82 *TM Rep* 301, 309–21; *Scandecor Development AB v. Scandecor Marketing AB* [2002] *FSR* (7) 122, 128–38 *per* Lord Nicholls.

surviving merchandise could be identified and retrieved. From medieval times, marks were used for a slightly different purpose within guild structures. Guilds were trade organizations that had control over who could make certain goods or provide certain services. They were also concerned to ensure that the goods were of a satisfactory quality. In order to be able to identify the source of unsatisfactory goods, the guilds required their members to apply identifying marks or signs to the goods.<sup>2</sup>

With the demise of the guilds, it was no longer obligatory for traders to apply particular marks or signs to goods. However, with the growth of regional (as opposed to local) trading and the rise of factory production that accompanied the Industrial Revolution, many traders applied marks to the goods that they manufactured.<sup>3</sup> Moreover, with the growth of mass media and the reading public, traders started to advertise their goods by reference to these marks.<sup>4</sup> In turn, purchasers of goods started to rely on the signs that the goods bore as truthful indications of the source of the goods. Importantly, they began to use them to assist their purchasing decisions. Over time, as consumers started to realize that some marks indicated a particular manufacturer—and, in turn, goods of a certain standard—the nature of the mark changed from being a source of liability to become an indicator of quality.

Another important change in the role played by marks took place around the beginning of the twentieth century. During this period, trade marks changed from being indicators of origin (and thus signs from which consumers could assume consistency of quality) to become valuable assets in their own right.<sup>5</sup> Thus it is said that some marks, by virtue of their distinctiveness or appeal, were able to convey some sort of emotional allure to potential consumers. Literally, the sign attracted custom, not as a result of some idea or assumption of origin or quality, but as a result of a so-called ‘advertising’ quality.<sup>6</sup> Indeed, the mark *itself* (reinforced by advertising) gave rise to a desire for the product that was distinct from a desire based on a belief that the product would be of a particular quality. The trade mark served more as a marketing tool and less as a means of identifying a product’s source or sponsorship. This change in the function of trade marks has been described as a transformation from ‘signals’ to ‘symbols’.<sup>7</sup> As signals, trade marks trigger an automatic response and serve to identify the maker of the product. In contrast, as ‘symbols’, trade marks evoke a broader set of associations and meanings. Here, they are used to identify the product or to give the product an identity. In so doing, ‘the mark became a symbol, a poetic device, a name designed to conjure up product attributes whether real or imagined’.<sup>8</sup>

More recently, trade marks have taken on new roles.<sup>9</sup> In one commentator’s words, marks have come to take on a ‘mythical status’.<sup>10</sup> In their mythical form, trade marks help to provide consumers with an identity—for example as a FERRARI or VOLVO driver, or BUDWEISER or BUDVAR drinker. When the consumer purchases a product bearing a mark, they purchase an ‘experience envelope’ that helps to construct their identity. The

© L. Bently and B. Sherman 2014

conception of trade mark as ‘myth’ can be seen in the increased attention given to ‘brands’. While the definition of brands varies in both marketing and legal analysis,<sup>11</sup> it normally extends beyond a word or device mark to encompass the personality, style, or aura associated with a particular product. For those who would have us believe in the ontological status of brands, COCA-COLA is more than a product, a reputation for quality, and a mark; instead, it is an image and a way of life, which is instituted through the presentation, marketing, advertising, and packaging (as well as the production) of the product.<sup>12</sup>

## 1.2 HISTORY OF THE LEGAL PROTECTION OF MARKS

The history of the legal protection of trade marks has been less well charted than most areas of intellectual property, and the early developments are particularly obscure. It seems that the courts first began to protect ‘marks’ at the behest of traders in the sixteenth century.<sup>13</sup> Acknowledging that such signs operated as an indication of source, the courts held that if another trader were allowed to use the same sign, this would allow a fraud to be committed on the public. Initially, protection was provided by the common law courts.<sup>14</sup> The idea was that if a trader had already used a mark, the deliberate use of the same mark by another trader would amount to a form of deceit. After some hesitation, from the early nineteenth century, the courts of Chancery used the action for ‘passing off’ to protect a trader who had developed a reputation or ‘goodwill’ through use of a particular sign or symbol. (This included the protection against innocent misrepresentations.) The passing off action is still available today.<sup>15</sup> Passing off has always required a trader to establish that there had been a misrepresentation that deceived consumers. In effect, this meant that the action was always concerned with confusion as to source. Even though the scope of the passing off action has since expanded, because the action has always maintained the requirement of misrepresentation, it has not developed into a general action for misappropriation of intangible value or unfair competition of the type recognized by other European legal systems.

A system for registration of marks was first introduced in 1875.<sup>16</sup> The impetus for this came more from foreign sources, as well as from domestic pressure. With increasing interest in international recognition of industrial property rights, foreign traders were unconvinced that British law provided them with the same level of protection against the misuse of their signs that foreign laws afforded to British traders in similar circumstances. When the registration system was initially adopted, registration had a rather limited role: the system allowed for the registration of a limited range of marks that the Registry subjected to examination prior to their entry on the register.<sup>17</sup>

For an analysis of the US history, see R. Bone, ‘Hunting Goodwill: A History of the Concept of Goodwill in Trademark Law’ (2006) 86 *Boston U L Rev* 549; M. McKenna, ‘The Normative Foundation of Trademark Law’ (2007) 82 *Notre Dame L Rev* 1839.

<sup>16</sup> L. Bently, ‘The Making of Modern Trade Marks Law: The Construction of the Legal Concept of Trade Mark (1860–1880)’, in Bently, Davis, and Ginsburg.

<sup>17</sup> It was soon accepted that the registered trade marks system was a statutory supplement to the common law doctrine of passing off: *Great Tower v. Langford* (1888) 5 *RPC* 66; *Faulder v. Rushton* (1903) 20 *RPC* 477. Protection remains cumulative: TMA 1994, s. 2.

Trade mark registration brought with it a number of benefits. The most obvious was that it reduced the difficulties of proving goodwill and distinctiveness that arose in a passing off action.<sup>18</sup> In addition, registration brought with it the possibility of a sign being protected prior to use. Other advantages of registered trade marks over passing off developed later—most notably, when the Trade Marks Act 1938 permitted the assignment of marks separately from the goodwill of the business.<sup>19</sup> Despite this, passing off remained valuable insofar as the criteria of registrability were restrictive, the process of registration was inappropriate or unnecessarily onerous, and the rights granted were broader.<sup>20</sup>

Perhaps the most vexing question that has arisen has been that of determining the appropriate scope of protection. In reflection of its relationship with passing off, the Trade Marks Act 1875 worked on the assumption that trade marks operated to indicate origin.<sup>21</sup> However, as we just observed, around the beginning of the twentieth century, marks began to function in other ways—notably, as a ‘silent salesman’ that could sell products irrespective of consumer understandings about origin or associated quality. The recognition of the changed function of trade marks was soon coupled with a claim that trade mark proprietors *deserved* stronger protection to reflect the new ways in which marks were being understood. One of the most important advocates for greater protection was Frank Schechter, who is also the leading historian of trade marks.

Schechter radically asserted that modern trade marks law should have a single rational basis.<sup>22</sup> More specifically, Schechter proposed that ‘the preservation of the uniqueness of a trade mark should constitute the only rational basis for its protection’.<sup>23</sup> For Schechter (and his cohort of followers), marks should be protected as a species of property. Importantly, this would mean that the owner would be protected when the marks were used on dissimilar goods as well as similar goods. Schechter argued that trade marks law was no longer adequate if it was wedded to a prerequisite of consumer confusion. The reason for this was that:

[T]he real injury in all such cases . . . is the gradual whittling away or dispersion of the identity and hold upon the public mind of the mark or name by its use upon non-competing goods. The more distinctive or unique the mark, the deeper its impress upon the public consciousness, and the greater its need for its protection against vitiation or dissociation from the particular product in connection with which it has been used.<sup>24</sup>

Schechter’s article soon became ‘a talisman to members of the trademark bar who [sought] to expand the protection available to their clients’.<sup>25</sup> In fact, its impact was not confined to the Bar. Today, many commentators treat the subsequent period as one during which Schechter’s insights came to fruition. In particular, the arguments that he made for expansion have gradually been acknowledged and implemented in national law (even if in a much distorted fashion). Notable examples include the expansion of the rights given to a trade mark proprietor to include: certain uses of marks on *dissimilar* goods, even where

consumers appreciate that there is no connection; the recognition by the Court of Justice that trade marks protect their holders not only from damage to the mark as an indicator of origin, but also in respect of the other ‘functions’ (which it recognizes as the quality, advertising, investment, and communication functions);<sup>26</sup> the recognition of signs as assets;<sup>27</sup> and the gradual abandonment of various restrictions on dealings with marks.<sup>28</sup>

## 2 COSTS OF TRADE MARKS

One of the major charges against the protection of trade marks is that trade marks are monopolies and that monopolies are inefficient.<sup>29</sup> In most situations, the characterization of trade marks as monopolies is unhelpful. As one commentator has noted, ‘[m]onopoly is merely an ugly word used by people to put a curse on any kind of property they do not like’.<sup>30</sup> In any case, trade marks are not properly treated as monopolies. This is because, in contrast with patents, design right, and copyright, a trade mark does not normally give exclusive control over the sale of particular goods or services; rather, it merely provides control over the use of the sign in connection with goods or services. Trade marks do not create monopolies<sup>31</sup> unless the sign is treated in combination with the goods or services as a product in its own right.<sup>32</sup> As one commentator pointed out, a trade mark ‘quite simply, is not a monopoly in the underlying good, and no product market has ever been defined as narrowly as a single brand’.<sup>33</sup>

Even if the charge that a trade mark is a monopoly has little to be said for it, this does not mean that trade marks law does not impose certain costs that require justification. Indeed, the grant of exclusive rights over certain signs has a number of social costs.<sup>34</sup> Probably the most obvious is that it restricts other people (most importantly, other traders) from using the same or a similar sign. As the scope of the subject matter of trade mark rights has expanded to cover shapes, to avoid infringement a trader may need to design different packaging or shapes for goods. As the rights conferred by trade mark law expand, the costs increase for traders, even if they are not trading in the same or a similar field—that is, the costs of developing suitable marks, searching registers, and

<sup>26</sup> See in particular Chapter 40, pp. 1049–58. The influence of reasoning by reference to functions is not, however, confined to cases of use of identical marks on identical goods, but also appears in other contexts. See, e.g., pp. 978 (discussing relative grounds), 1010–11 (the discussion of ‘without due cause’), and 1253–4 (grant of EU-wide injunctive relief).

<sup>27</sup> *Lego v. Lemelstrich* [1983] FSR 155; *Mirage Studios v. Counter-Feat Clothing* [1991] FSR 145. See below at pp. 857, 867.

<sup>28</sup> With increasingly less attention being paid to the role of the consumer: J. Davis, ‘To Protect or Serve? European Trade Mark Law and the Decline of the Public Interest’ [2003] *EIPR* 180.

<sup>29</sup> N. Economides, ‘The Economics of Trademarks’ (1988) 78 *TM Rep* 523, 532.

<sup>30</sup> E. Rogers, ‘The Social Value of Trade Marks and Brands’ (1947) 37 *TM Rep* 249, 249.

<sup>31</sup> While this proposition is true for arbitrary word and device marks, it is less obviously so for three-dimensional marks. Reflecting these concerns, the law excludes shapes from registrability where the shape has some non-trade mark value to consumers. See pp. 914–25.

<sup>32</sup> See, e.g., P. Behrendt, ‘Trademarks and Monopolies: Historical and Conceptual Foundations’ (1961) 51 *TM Rep* 853.

<sup>33</sup> J. Swann and T. Davis, ‘Dilution: An Idea Whose Time Has Gone—Brand Equity as Protectable Property, the New/Old Paradigm’ (1994) 84 *TM Rep* 267, 272.

<sup>34</sup> W. Landes and R. Posner, ‘The Economics of Trademark Law’ (1988) 78 *TM Rep* 267, 268–9 (referring, among other things, to the costs of transferring marks, enforcing them, and from the restriction on others from using similar marks).

(where necessary) negotiating with owners of related marks. This is particularly so for new entrants.

To a large extent, the way in which the ‘harm’ caused by trade marks is evaluated depends on the way in which signs and language are viewed. If we take the view that the number of suitable signs is infinite and the inherent value of all signs is fairly consistent, then the cost of adopting a different sign from one already used or protected by another trader should not be that great. If, however, we take the view that some signs are better than others and that the pool of available marks is limited, then the costs to other traders of one trader being granted ownership of a particular mark may be significant. As the better marks are used up, a trader will have to invest more and more money in establishing and building suitable associations with their signs. Business practices suggest that many traders consider that the choice of trade symbols is an important one and that some signs are better than others. This explains why firms such as Standard Oil spend so much time and money developing marks such as EXXON. It also explains why so many marks are selected for their ‘suggestive’ or ‘allusive’ qualities.<sup>35</sup>

More expansive trade mark protection, which gives a trade mark holder the ability to control non-trade mark uses or uses of similar marks in relation to dissimilar goods, imposes further costs.<sup>36</sup> Some such regulations may even restrict free speech.<sup>37</sup> To the extent that the law confers power over words and symbols, it places some of the ability to make and control meaning in private hands. Some obvious examples include the use of these laws to control the connotations of the word ‘Olympics’, the name ‘champagne’, or the name ‘Barbie’. As such, intellectual property laws:

... play a fundamental role in determining what discourses circulate in the public realm and achieve dominance, and how these “languages” are spoken, while providing both enabling conditions and limiting obstacles for those who seek to construct identities and compel recognition.<sup>38</sup>

### 3 JUSTIFICATIONS FOR THE LEGAL PROTECTION OF TRADE MARKS

In this section, we ask the question: why should we protect trade marks? In contrast with commentaries on copyright and patents, this topic has received relatively little attention. One possible reason for this is that the negative impact of trade mark rights is less obvious. Another reason is that, for much of the last fifty years, the flourishing of brands has been equated with the success of capitalism (in terms of increasing consumer choice).<sup>39</sup>

<sup>35</sup> J. Cross, ‘Language and the Law: The Special Role of Trade Marks, Trade Names and other Trade Emblems’ (1997) 76 *Neb L Rev* 95.

<sup>36</sup> See G. von Graevenitz et. al., *Trade Mark Cluttering: An Exploratory Report* (2012).

<sup>37</sup> And thus raise issues under Art. 10 ECHR: see *WWF-World Wide Fund for Nature v. World Wrestling Federation Inc.* [2004] FSR (10) 161 (CA), [65]. On free speech and marks, see R. Dreyfuss, ‘Expressive Genericity: Trademarks as Language in the Pepsi Generation’ (1990) 65 *Notre Dame L Rev* 397; C. Geiger, ‘Trademarks and Freedom of Expression’ (2007) 38 *IIC* 371; R. Burrell and D. Gangjee, ‘Trade Marks and Freedom of Expression: A Call for Caution’ (2010) 41 *IIC* 544 (warning against reaching for the tools associated with ‘freedom of expression’ too quickly).

<sup>38</sup> R. Coombe, ‘Tactics of Appropriation and the Politics of Recognition in Late Modern Democracies’ (1993) 21 *Political Theory* 411, 414–5.

<sup>39</sup> E. Rogers, ‘The Social Value of Trade Marks and Brands’ (1947) 37 *TM Rep* 249, 253.

However, blind faith in the value of trade marks is difficult to sustain and the time is ripe for a more open and critical examination of the justifications for protecting trade marks.<sup>40</sup>

A number of different rationales have been used to justify trade mark protection. As we will see, there have been few problems in justifying the protection given to signs and symbols insofar as they operate as indicators of origin (to identify the origin or ownership of goods to which the mark is affixed), or as guarantees of quality (to signify that all goods bearing the mark are of a certain quality).<sup>41</sup> However, more problems have arisen in justifying the extensive protection that is currently granted to marks.

### 3.1 CREATIVITY

The arguments that are used to justify copyright, design right, and patents, which focus on the protection of labour and personality (whether as recognition of a right, as a reward, or as an incentive) are difficult to apply to trade marks. This is because, while some trade marks may be invented, novelty is not a prerequisite to protection. These differences have not prevented some commentators from trying to extend the idea of ‘creation’ to encompass trade marks. This has been done by claiming that a trader creates goodwill as much as an author creates a work, that a trade mark must be created to be protected in the sense of being either invented, or by virtue of the fact that a new association has been created between the mark and a product—that is, a new meaning.

Nevertheless, attempts to justify trade marks or goodwill as creations are weak, in part because while the associations between the mark and a source of goodwill may be instigated and nurtured by the trader, they are as much created by the customers and the public.<sup>42</sup>

Perhaps the most plausible argument made along these lines sees trade marks as a reward for investment. This argument was summed up by Justice Breyer of the US Supreme Court when he said that trade marks law helps ‘to assure a producer that it (and not an imitating competitor) will reap the financial, reputation-related rewards associated with a desirable product’.<sup>43</sup> In so doing, trade marks law thereby encourages:

... the production of quality products . . . and simultaneously discourages those who hope to sell inferior products by capitalising on a consumer’s inability quickly to evaluate the quality of an item offered for sale. It is the source-distinguishing quality . . . that permits it to serve these basic purposes.<sup>44</sup>

In the same vein, the European Commission recently claimed that the ‘mark works . . . as an engine of innovation’.<sup>45</sup> Others have pointed out that such claims are premised on a number of unverified assertions. For example, it is not clear that the grant of trade mark owners encourages ‘quality’ products, and it is not at all obvious that businesses will not vary the quality of the products that they sell from time to time in order to maximize profits.<sup>46</sup>

### 3.2 INFORMATION AND ‘SEARCH COSTS’

Perhaps the most convincing, and certainly the most prevalent,<sup>47</sup> of the arguments for the protection of trade signs is that they operate in the public interest insofar as they increase the supply of information to consumers and thereby increase the efficiency of the market. These arguments highlight the fact that trade marks are a shorthand way of communicating information that purchasers need in order to make informed purchasing choices. By ‘preventing others from copying a source-identifying mark’, trade marks law reduces:

... the customer’s costs of shopping and making purchasing decisions ... for it quickly and easily assures a potential customer that this item—the item with this mark—is made by the same producer as other similarly marked items that he or she liked (or disliked) in the past.<sup>48</sup>

The information provided by trade marks is particularly important in relation to goods that a consumer cannot judge merely through inspection (known as ‘experience goods’). Where the quality and/or variety of goods is not readily apparent, trade marks enable consumers to choose the product with the desired features. Trade marks also encourage firms to maintain consistent quality and variety standards, and to compete over a wide quality and variety. Consequently, it has been said that:

[The] primary reason for the existence and protection of trade marks is that they facilitate and enhance consumer decisions and ... they create incentives for firms to produce products of desirable qualities even when these are not observable before purchase.<sup>49</sup>

The idea that trade mark protection is necessary and desirable to minimize consumer ‘search costs’ has not gone without criticism. First, while generally supportive of search costs theory, Professors Dogan and Lemley point out that reducing search costs is not an end in itself; rather, more competitive markets are the ultimate goal.<sup>50</sup> Thus trade mark rights should not, for example, be provided over product shapes if the effect of doing so is to prevent competition (even if search costs are increased for some). Second, the economist Jonathan Aldred has attacked many of the assumptions on which search cost theory is based.<sup>51</sup> For example, he has probed the assumption that trade marks provide consumers with information, suggesting that the only real information of which consumers can be confident when they see a trade mark is that the trade mark owner is being paid some share of the cost of the product!<sup>52</sup> Aldred is also critical of the assumption that trade mark

<sup>47</sup> B. Beebe, ‘Semiotic Analysis of Trademark Law’ (2004) 51 *UCLA L Rev* 621, 623–4 (Chicago ‘search costs’ analysis is the theory of trade marks most widely adhered to in the United States). See also S. Dogan and M. Lemley, ‘A Search-costs Theory of Limiting Doctrines in Trademark Law’, in G. Dinwoodie and M. Janis (eds), *Trademark Law and Theory: A Handbook of Contemporary Research* (2008), ch. 3. Significantly, their arguments would suggest that many aspects of European trade mark law, which does not possess the same limitations as US law, is inconsistent with search costs theory. See further pp. 1072–6 (comparative advertising), 1097 (assignment in gross), and 1055–7 (trade mark use).

<sup>52</sup> See also G. Lastowka, ‘The Trademark Function of Authorship’ (2005) 85 *BULR* 1171, 1191.

owners will not vary the quality of the products, noting that, even taking a profit-maximizing approach, there may be many occasions on which it is in the trade mark owner's interest to reduce the quality of the goods. The trade mark owner may, for example, know that there is no long-term future for the market in the particular goods and thus take the view that there is no need to preserve the 'repute' of the mark. In these situations, trade marks do worse than increase consumer search costs.

In some respects, it is impossible, when assessing the protection of trade marks, to divorce considerations about trade marks from considerations about advertising. This is because '[t]rade symbols are a species of advertising: their special characteristics are brevity and continuity in use, both of which are essential to their symbolic function'.<sup>53</sup> If trade marks function as a vehicle for advertising, one obvious question is whether we value advertising.<sup>54</sup> In a very influential article, American academic Ralph Brown tied the legitimacy of trade mark protection to advertising.<sup>55</sup> He said that:

[A]dvertising depends on the remote manipulation of symbols, most importantly of symbols directed at a mass audience through mass media or imprinted on mass-produced goods. The essence of these symbols is distilled in the devices variously called trade marks, trade names, brand names or brand symbols.<sup>56</sup>

Importantly, Brown drew a distinction between what he called 'informational' and 'persuasive' advertising: 'From the point of view of the economic purist, imparting information is the only useful function of advertising.'<sup>57</sup> However, most advertising was 'persuasive advertising' and was socially unjustifiable. This was because it added costs and effectively insulated traders from competition: 'By differentiating their products in order to carve out a separate market in which demand, price, and output can be manipulated . . . The main drive of advertising is to facilitate this latter form of control.'<sup>58</sup> Brown was sceptical about the idea that, in buying brands, consumers were buying the associations, intangible allure, etc. Given his negative view of persuasive advertising, Brown argued that the task of the courts in trade marks cases was to 'pick out, from the tangle of claims, facts and doctrines they are set to unravel, the threads of informative advertising, and to ignore the persuasive'.<sup>59</sup>

Brown argued that, in addition to being justified insofar as trade marks were used to indicate source and quality, trade mark protection was also justified where it supported the informational aspect of advertising. For Brown, the advertising or persuasive function of marks is 'of dubious social utility. There seems little reason why the courts should recognize or protect interests deriving from it.'<sup>60</sup> He considered likelihood of confusion to be the 'universal judicial touchstone'.<sup>61</sup> Because persuasive, rather than informational, advertising can lead to distortion of incentives in a competitive economy,<sup>62</sup> in order to justify a corresponding extension of protection, these costs need to be shown to be worth sacrificing to some greater goal.

Attempts have, however, been made to justify protection of trade marks against uses on dissimilar goods that are non-confusing by reference to the 'search costs' theory. In one US case, Judge Posner developed the idea of 'imagination costs', arguing that the 'search costs' of consumers included the time taken to recall the associations and meaning of

<sup>62</sup> N. Economides, 'The Economics of Trademarks' (1988) 78 *TM Rep* 523, 533.

a mark.<sup>63</sup> For Posner, these costs might justify protecting the ‘uniqueness’ of a mark. Others, such as Rebecca Tushnet, have drawn on empirical work to demonstrate that such ‘imagination costs’ are, in fact, trivial.<sup>64</sup> The better view is that a ‘search costs’ theory would justify only a relatively narrow field of protection for trade mark holders.

### 3.3 ETHICAL JUSTIFICATIONS

Ethical arguments have also been used to justify the trade marks regime.<sup>65</sup> The main ethical argument for the protection of trade marks is based on the idea of fairness or justice. In particular, it is said that persons should not be permitted ‘to reap where they have not sown’.<sup>66</sup> More specifically, it is said that, by adopting another trader’s mark, a person is taking advantage of the goodwill generated by the earlier trader. Through this agricultural metaphor, the justification for protecting trade marks is linked to the broader arenas of the protection of traders against ‘unfair competition’ and ‘unjust enrichment’.<sup>67</sup>

While classic cases in which a trader uses someone else’s trade mark on identical goods are clearly objectionable under the principle that a person should not reap where they have not sown, the principle has also been used to justify more extensive protection. For example, it is said that one objection to ‘comparative advertising’ is that, even though it does not confuse consumers, it takes advantage of the reputation that the earlier trader has built up. Similarly, one of the objections that are made to marks being used on dissimilar goods (for example the ROLLS ROYCE café) is that it takes advantage of the repute of the earlier mark. ‘Reap–sow’ arguments thus have the potential to justify very broad protection of trade marks.

Problems arise from such attempts to use the principle that a person should not reap where they have not sown to justify more extensive forms of protection. The first problem is that it is not always easy to determine what the trade mark owner has sown: the mere selection of signs and symbols from the public domain seems a meagre basis on which to found such a claim (especially against a trader who is not aware that a mark may be registered). Also, it is not obvious that we should necessarily treat the associations that develop in the minds of the public as something of value that the trade mark owner has nurtured.<sup>68</sup>

Second, it is often unclear whether another person is reaping from the cultivated soil of the trade mark owner or has obtained their fruits from the uncultivated commons. Although the causal link can be substantiated in cases of misrepresentation leading to confusion, it is difficult to justify protection where consumers are not ‘confused’.<sup>69</sup>

Third, and more generally, the law does not penalize every case of reaping without sowing (for example copying an unpatented business idea).<sup>70</sup> Indeed, copying has been

<sup>63</sup> *Ty Inc. v. Perryman*, 306 F.3d 509, 511 (7th Cir. 2002) (Posner J).

<sup>64</sup> R. Tushnet, ‘Gone in 60 Miliseconds’ (2008) 86 *Texas L Rev* 507.

<sup>65</sup> S. Dogan and M. Lemley, ‘Trademarks and Consumer Search Costs on the Internet’ (2004) 41 *Hous L Rev* 777, 799, n. 84.

<sup>66</sup> Also referred to as ‘free-riding’, the argument can be put, and refuted, in economic terms as well as ethical ones: see R. Burrell and D. Gangjee, ‘Because You’re Worth It: L’Oréal and the Prohibition on Free Riding’ (2010) 73 *MLR* 282.

<sup>69</sup> *Ibid.*, 472.

<sup>70</sup> R. Burrell and D. Gangjee, ‘Because You’re Worth It: L’Oréal and the Prohibition on Free Riding’ (2010) 73 *MLR* 282, 289–90.

described as the lifeblood of competition. As such, the onus falls on the advocates of the reap-sow principle to provide guidance as to the other factors that trigger the legal operation of the principle.<sup>71</sup>

Other ethical arguments have also been used to justify trade mark protection.<sup>72</sup> For example, it is sometimes argued that the misuse of trade marks is justified by reference to moral norms that treat 'truth-telling' as a core 'good' (rather than as necessary for the maintenance of efficient markets).<sup>73</sup> Under this approach, it is argued that the law ought to allow a person who suffers harm as a result of lying to bring an action against the liar. Misrepresentations of the source of goods are equivalent to lying or deception and are simply 'wrong'.<sup>74</sup> While arguments of this sort would justify a law of trade marks and passing off in some form, they would not appear to justify the protection of one trade mark owner against the innocent adopter of a mark, nor against uses that the public would not understand as indicating a business connection with the owner. As such, they would support only a very narrowly confined law of trade marks.<sup>75</sup>

Another ethical argument that could justify broader protection has recently been proffered by Michael Spence.<sup>76</sup> He has argued that justifications for protecting freedom of expression, grounded in notions of autonomy, might be used to explain why third parties should not be permitted to use trade marks in certain ways. Spence draws an analogy between misuse of trade marks and 'compelled' speech: if a person uses someone else's trade mark on goods (or in any way), that use implicates the expressive autonomy of the trade mark owner insofar as the third party's speech is understood as communicating a message from the trade mark owner (for example 'I made these goods').<sup>77</sup> What is useful about Spence's argument is that both trade mark owner and user might be viewed as having claims grounded in speech rights, the conflicting interests thus being rendered 'commensurable'. However, while this kind of balancing is the sort of activity that the judiciary have already been compelled to undertake in the context of the protection of privacy, it is hard to imagine either judges or traders supporting such a radical rethinking of trade mark principles.

## 4 INTERNATIONAL AND REGIONAL DIMENSIONS

Trade marks have always been connected to particular geographical conditions. Indeed, one impetus for legal recognition of marks has been the decline of the local economy, which meant that consumers became dissociated from the source of the goods.<sup>78</sup> It is

<sup>71</sup> For discussion of the extent to which Lockean arguments can justify trade mark protection, see D. Scott, A. Oliver, and M. Ley Pineda, 'Trade Marks as Property: A Philosophical Perspective', in Bently, Davis, and Ginsburg, ch. 13.

<sup>72</sup> W. Howarth, 'Are Trademarks Necessary?' (1970) 60 *TM Rep* 228 (business morality).

<sup>73</sup> Cf. J. Cross, 'Language and the Law: The Special Role of Trade Marks, Trade Names and other Trade Emblems' (1997) 76 *Neb L Rev* 95, 111.

<sup>74</sup> B. Pattishall, 'Trade Marks and the Monopoly Phobia' (1952) 42 *TM Rep* 588, 600.

<sup>75</sup> M. Spence, 'Passing Off and the Misappropriation of Valuable Intangibles' (1996) 112 *LQR* 472, 480.

<sup>76</sup> M. Spence, 'The Mark as Expression/The Mark as Property' (2005) 58 *CLP* 491; M. Spence, 'An Alternative Approach to Dilution Protection: A Response to Scott, Oliver and Ley Pineda', in Bently, Davis, and Ginsburg, ch. 14.

<sup>77</sup> Spence characterizes this in terms of the 'freedom from compulsion to subsidise a message with which the person from whom the subsidy is sought chooses not to be associated': Spence, *ibid.*

<sup>78</sup> B. Paster, 'Trademarks: Their Early History' (1969) 59 *TM Rep* 551, 551-2.

therefore not surprising that further changes in the geographical aspects of trade have prompted alterations in trade mark law. These have largely taken two forms. First, growth in international trade led to the establishment of international systems of registration, thereby enabling traders to gain protection swiftly and cheaply in all relevant markets. Second, changes in international trade prompted the establishment of international minimum standards of protection.

#### 4.1 INTERNATIONAL REGISTRATION

Traders who operate on more than a local level will wish to protect their marks on a transnational basis. Various mechanisms have been developed to assist in this regard. The earliest of these was the Paris Convention of 1883, which requires members to apply the principle of national treatment—that is, it requires members to treat foreign nationals of contracting states as they would their own nationals.<sup>79</sup> This ensures the possibility for foreign protection of trade marks. This is further facilitated by provisions that give registrants in one country a short period of priority,<sup>80</sup> and provisions obliging national offices to register any trade mark that has been registered in its country of origin.<sup>81</sup>

While the Paris Convention was of some assistance to transnational traders, it failed to create a mechanism for the international application for marks. However, the Madrid Agreement on the International Registration of Marks of 1891 and the Madrid Protocol of 1989 provide just such mechanisms. Under these arrangements, after making a ‘home registration’ or ‘home application’, an individual or company may apply to the Bureau of the World Intellectual Property Organization (WIPO) for an international registration. The Bureau passes the application on to relevant national trade mark offices. If the office of the contracting party does not refuse the application within a limited time, it is treated as registered. The simplification of the process of international registration has obvious advantages for trade mark owners. While the United Kingdom long resisted invitations to join the Madrid Agreement<sup>82</sup> (mainly on the ground that the Agreement worked unfavourably against those who first registered in the United Kingdom, where examination of all applications is required), the United Kingdom is now a party to the Protocol.<sup>83</sup>

While the Madrid Agreement and Protocol provide useful simplified mechanisms for obtaining national registrations, they necessarily result in the proprietor holding a portfolio of national marks, each of which needs to be managed, licensed, and enforced separately. In contrast, the Community trade mark, which became fully operational on 1 April 1996, confers on a trade mark owner a single legal right that operates throughout the European Union. Such rights are acquired by the filing of a single application for a Community trade mark with the Office for Harmonization in the Internal Market (Trade Marks and Designs) (OHIM), which is located at Alicante in Spain. As of October 2013, the OHIM had received more than 1.2 million applications and has registered over 962,000 marks.<sup>84</sup> The EU registration system has also been linked to the Madrid Protocol: international applications can be based on Community marks, and the applicants under the Madrid Protocol can themselves designate the European Union.

<sup>79</sup> Paris, Art. 2. The Trademark Law Treaty, signed on 28 October 1994, is a limited agreement relating mostly to prosecution procedure. <sup>80</sup> Paris, Art. 4.

<sup>81</sup> Paris, Art. 6*quinquies* (the *telle-quelle* obligation).

<sup>82</sup> The United Kingdom has now acceded to the Madrid Agreement by way of the Protocol. See below.

<sup>83</sup> See below at pp. 907–10. <sup>84</sup> See below at pp. 902–7.

## 4.2 INTERNATIONAL STANDARDS

There has been relatively little action, either at the international or regional level, on the protection of *unregistered* marks. The most important provision is Article 10*bis* of the Paris Convention, which obliges member countries to assure ‘effective protection against unfair competition’, which, in turn, is defined as any ‘act of competition contrary to honest practices in industrial or commercial matters’.<sup>85</sup> UK law has not expressly implemented this provision, presumably on the assumption that the existing rules relating to passing off and malicious falsehood (as well as registered marks) already deal with it adequately.

In part, this lack of international standardization of the laws protecting unregistered trade marks can be explained by the fact that if a business operates on a transnational level, it typically will have the resources to protect its interests via registration. As a result, the protection of unregistered marks tends to be a matter of concern only for small enterprises; hence it has not prompted activities at the diplomatic level. Moreover, the forms and conditions for protection of unregistered marks vary widely, very much reflecting local legal principles. (In the United Kingdom, the main form of protection is through the judge-made law of passing off.)

That said, the geographical expansion in the operations of many businesses has given rise to a form of opportunism, against which international action has been taken. More specifically, the Paris Convention has been revised to prevent the pre-emptive adoption of such marks by interlopers in countries in which the ‘proprietor’ has not yet commenced marketing. Article 6*bis* of the Paris Convention imposes an obligation to recognize and protect well-known marks even where they have not been registered.<sup>86</sup> The concept of ‘well-known marks’ (as distinct from distinctive marks, marks with a reputation, and famous marks) is left undefined and has been contested.<sup>87</sup> Article 16(2) of the Agreement on Trade Related Aspects of Intellectual Property Rights 1994 (TRIPS) indicates that, in assessing whether a mark is well known, members shall take account of the knowledge of the trade mark in the relevant sector of the public, including knowledge in the member concerned that has been obtained as a result of the promotion of the trade mark.<sup>88</sup> UK law gives effect to its obligation to recognize a special category of ‘well-known trade marks’ by means of a specific statutory provision.<sup>89</sup> This is examined further in Chapter 34.

In relation to registered marks, TRIPS provides by far the most detailed international prescription of the substantive rules relating to their protection. Article 15 defines the protectable subject matter expansively, to include, for example, service marks. It also prohibits discrimination as to registrability based on the nature of the goods and services to which a trade mark is to be applied. Article 16 requires recognition of certain rights, in particular over the use of an identical or similar mark on identical or similar goods or services where such use would result in a likelihood of confusion (although not extending to dilution).<sup>90</sup> Articles 17 and 18 provide, respectively, for limited exceptions to the rights conferred by a

<sup>85</sup> TRIPS, Art. 39, requires member states to protect undisclosed information under Paris, Art. 10(2).

<sup>86</sup> Paris, Art. 6. See TMA 1994, s. 52(2).

<sup>90</sup> TRIPS, Art. 16 (likelihood of confusion).

trade mark,<sup>91</sup> and for the potentially indefinite registration of marks on the basis of renewable terms each of a minimum of seven years. Article 19 limits the circumstances in which registrations may be revoked for non-use, Article 20 prevents certain conditions being imposed on the use of marks,<sup>92</sup> and Article 21 prohibits the compulsory licensing of marks.<sup>93</sup> The significance of these standards for UK law is mainly in the restrictions that they place on potential future developments, most obviously the adoption of plain packaging regulations for tobacco products.

### 4.3 REGIONAL HARMONIZATION

It is impossible to understand current UK law without reference to regional harmonization matters. The most significant of these is the European Trade Marks Directive.<sup>94</sup> As we explained in Chapter 1, disparities among the trade mark laws of individual member states (which gave trade mark owners different rights in different circumstances) were thought to impede the free movement of goods and freedom to provide services, and to distort competition within the European Union.<sup>95</sup> In response, the Trade Marks Directive (adopted in 1988 and codified two decades later) was designed to approximate ‘those national provisions of law which most directly affect the functioning of the internal market’.<sup>96</sup> The Directive therefore harmonized the general ‘conditions for obtaining and continuing to hold a registered trade mark’, and the rights conferred by a trade mark.<sup>97</sup> In certain areas, however, it was decided that harmonization was not necessary. Consequently, member states are given discretion to decide whether to adopt certain of the rules provided for in the Directive. For example, there are certain optional grounds for refusing to register or invalidating a trade mark.<sup>98</sup> The Directive also leaves to the member states matters such as the procedure concerning the registration, revocation, and invalidity of trade marks.<sup>99</sup>

In addition to the Trade Marks Directive, the European legislature also adopted a Regulation establishing a Community Trade Mark (soon to be renamed the ‘European trade mark’, or ‘European Union trade mark’).<sup>100</sup> Adopted in 1994, this established the OHIM as

<sup>91</sup> The scope of Art. 17 was considered by the WTO Dispute Body when considering whether the EU Geographical Indications Regulation, discussed in Chapter 43, violated TRIPs insofar as it gave primacy to the freedom of users of a protected geographical indication over prior trade mark holders: *US v. EC*, WTO DS 174/R (15 March 2005), [7.638]–[7.688].

<sup>92</sup> TRIPs, Art. 20. This provision is at the centre of the ongoing debate over the legitimacy of laws that regulate the use of marks on tobacco products. Five countries have brought proceedings against Australia alleging infringement of TRIPs: WTO DS 434, *Ukraine v. Australia*; WTO DS 435, *Honduras v. Australia*; WTO DS 441, *Dominican Republic v. Australia*; WTO DS 454, *Cuba v. Australia*; and WTO DS 467, *Indonesia v. Australia*. See T. Voon and A. Mitchell, ‘Face off: Assessing WTO Challenges to Australia’s Scheme for Plain Tobacco Packaging’ (2011) 22(3) *Pub L Rev* 218. The progress of these proceedings is set out online at <<http://www.dfat.gov.au/trade/negotiations/disputes/index.html>>

<sup>93</sup> TRIPs, Art. 21.  
<sup>94</sup> Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the laws of the Member States relating to trade marks [2008] *OJ L* 299/25 (8 November 2008).

<sup>95</sup> TM Dir., Recital 3. <sup>96</sup> TM Dir., Recital 3; codified as Directive 2008/95/EC.

<sup>97</sup> TM Dir., Recital 7, Arts 5, 6, and 7. See *David West, trading as Eastenders v. Fuller Smith* [2003] *FSR* (44) 816, [69] *per Arden LJ*.

<sup>98</sup> TM Dir., Arts 3(2), 4(4), and 5(2). These optional provisions must be implemented in full or not at all: *Adidas-Salomon AG and Adidas Benelux BV v. Fitnessworld*, Case C-408/01 [2004] 1 *CMLR* (4) 448 (ECJ), [20].

<sup>99</sup> TM Dir., Recitals 4–6.  
<sup>100</sup> Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark [1994] *OJ L* 011/1 (14 January 1994), as amended. The renaming is proposed in European Commission, *Proposal for a Regulation amending Council Regulation (EC) No. 207/2009 on the Community Trade Mark* (March 2013) COM(2013) 161 final, Art. 1, Recital 2, and *Explanatory Memorandum*, [5.1]. The European Parliament has indicated that ‘European Union’ might be a preferable description to ‘European’.

an agency that could grant trade marks with EU-wide effect. The conditions that an applicant must meet to be granted a trade mark, as well as the rights conferred by such marks, correspond in general to the rules in the Directive, but whereas some matters were left in the Directive to the discretion of member states, the EU regime was necessarily obliged to adopt particular positions on those issues. Since it opened in 1996, OHIM has received more than 1.25 million trade mark applications and has registered more than 1 million marks.<sup>101</sup> Following a review of the operation of the EU system,<sup>102</sup> draft legislation is before the European legislature that would modify both the Regulation and Directive in a number of respects.<sup>103</sup> The most important of the proposed changes will be referred to in the chapters that follow.

While there has thus been almost complete ‘Europeanization’ of *registered* trade mark law, it is notable that there has been comparatively little activity in relation to unfair competition law (at least insofar as it concerns rights of business, as opposed to consumers). The primary exception is a Directive on Misleading and Comparative Advertising, which harmonizes the circumstances under which comparative advertising is permissible.<sup>104</sup> While the European Union has adopted a more general Directive on Unfair Competitive Practices, this is restricted to business-to-consumer practices.<sup>105</sup> In due course, this might be made the basis of full harmonization of unfair competition law as it affects businesses.<sup>106</sup>

Finally, we should note that the Union has a number of initiatives dealing with ‘protected designations of origin’ (PDOs) and ‘protected geographical indications’ (PGIs) for wines, spirits, agricultural products, and food. These are considered in Chapter 43.

## 5 CHALLENGES

The advent of electronic commerce and the possibility of direct sales of goods over the Internet has brought with it new questions for trade marks. Initially, questions arose about the relationship between trade marks and domain names. This issue attracted a lot of attention, both at the national and international levels, and UK law has responded to

<sup>104</sup> See below at pp. 1072–6.

<sup>105</sup> Implemented in the United Kingdom by the Consumer Protection from Unfair Trading Regulations 2008 (SI 2008/1277). See generally H. Collins (ed.), *The Forthcoming EC Directive on Unfair Commercial Practices* (2004); G. Howells, H. W. Micklitz, and T. Wilhelmsson (eds), *European Fair Trading Law: The Unfair Commercial Practices Directive* (2006); S. Weatherill and U. Bernitz (eds), *The Regulation of Unfair Commercial Practices under EC Directive 2005/29: New Rules and New Techniques* (2007); J. Glöckner, ‘The Scope of Application of the UCP Directive’ (2010) 41 *IIC* 570. On the potential for this to develop into a business-to-business regime, see C. Wadlow, ‘The Emergent European Law of Unfair Competition and its Consumer Law Origins’ [2012] *IPQ* 1.

<sup>106</sup> Directive 2005/29/EC of the European Parliament and of the Council of 11 May 2005 concerning unfair business-to-consumer commercial practices in the internal market and amending Council Directive 84/450/EEC, Directives 97/7/EC, 98/27/EC and 2002/65/EC of the European Parliament and of the Council and Regulation (EC) No. 2006/2004 of the European Parliament and of the Council [2005] *OJ L* 149/22 (11 June 2005).

these pressures through existing legal regimes, rather than attempted to promulgate new statutes. Where a domain name is used to trade in the same sphere as an existing trade mark owner, the courts have found little difficulty in employing the laws of passing off and registered trade marks.<sup>107</sup> Moreover, these laws have often been applied somewhat generously to enable existing businesses to prevent opportunistic 'cyber-squatting'.<sup>108</sup>

There has also been an international response of an interesting sort: the establishment by the Internet Corporation for Assigned Names and Numbers (ICANN) of a Uniform Domain Name Dispute Resolution Policy (UDRP).<sup>109</sup> ICANN's policy and procedures are incorporated into a subscriber's Internet registration agreement, so that if a person makes a complaint to ICANN,<sup>110</sup> the registrant is required to submit to a mandatory administrative proceeding.<sup>111</sup> Proceedings begin only where a complainant asserts that:

- (i) the domain name is identical or confusingly similar to a trade mark or service mark in which the complainant has rights (including 'common law' marks);<sup>112</sup>
- (ii) the registrant has no rights or legitimate interests in respect of the domain name;<sup>113</sup> and
- (iii) the domain name has been registered and is being used in bad faith.<sup>114</sup>

In the proceedings, the complainant must prove each of these three elements. The cost of the proceedings is borne by the complainant. The remedies available are the cancellation of the domain name or the transfer of the domain name registration to the complainant.

By early 2014, more than 47,000 cases had been referred for resolution under the UDRP (the vast majority resulting in transfer of ownership of the domain name to the applicant), some 27,000 to WIPO and 20,000 to the National Arbitration Forum (NAF).<sup>115</sup>

<sup>107</sup> There are, of course, real problems about jurisdiction where a foreign trader uses a similar name on a website run from overseas and who targets a different market.

<sup>108</sup> See below at pp. 850–1, 871–2.

<sup>109</sup> Approved by ICANN, 24 October 1999: see <<http://www.icann.org>> For introductory overviews to the rules and case law, see L. Helfer and G. Dinwoodie, 'Designing Non-national Systems: The Case of the Uniform Dispute Resolution Policy' [2001] 43 *WMLR* 141; A. Engel, 'International Domain Disputes: Rules and Practice of the UDRP' [2003] *EIPR* 351; W. Bettink, 'Domain Name Dispute Resolution under the UDRP: The First Two Years' [2002] *EIPR* 344; D. Hancock, 'An Assessment of ICANN's Mandatory Uniform Dispute Resolution Policy in Resolving Disputes over Domain Names' (2001) 3 *JILT*; A. Kur, *UDRP Study* (2002), available online at <<http://www.ip.mpg.de>>

<sup>110</sup> Dispute resolution services are offered by WIPO, the National Arbitration Forum (NAF), and others.

<sup>111</sup> It applies to generic top-level domain names (e.g. '.com', '.net', '.org'). WIPO also provides dispute resolution services for 33 country-code domains. Nominet operates a similar policy for '.uk' domains, including '.co.uk' and '.plc.uk': see <<http://www.nic.uk>> Nominet does not control some other second-level domains, such as '.ac.uk' and '.gov.uk'.

<sup>112</sup> *Bennett Coleman & Co. v. Steven Lalwani* [2000] WIPO D2000–0014/15 (panelist, Prof. Cornish). It was on the basis of common law rights that author Jeanette Winterson was held entitled to *jeanettewinterson.com*: *Winterson v. Hogarth* [2000] *ETMR* 783. Note WIPO, *Final Report of the WIPO Internet Domain Name Process* (1999), [169]–[204], rejecting the extension of the UDRP to embrace personality rights (other than to the extent to which they are protected as trade marks, either through registration or at common law). For comment, see B. Isaac, 'Personal Names and the UDRP: A Warning to Authors and Celebrities' (2001) 12 *Ent L Rev* 43.

<sup>113</sup> While the respondent's ownership of the same mark will usually do, in at least one case the panel ignored this (a Tunisian registration for Madonna): *Madonna Ciccone v. Dan Parisi* [2000] WIPO D2000–0847 (12 October 2000).

<sup>114</sup> Most obviously, by selling it at a price exceeding the registration cost.

<sup>115</sup> The success rate for applicants using WIPO panels is 82 per cent. The WIPO case law can be found online at <<http://www.wipo.int/amc/en/domains/search/>> The NAF case law is available online at <<http://domains.adrforum.com/decision.aspx>>

Perhaps surprisingly, the number of disputes has not diminished since the launch of the UDRP, suggesting that this is not merely a transitional phenomenon. Many of the new complaints relate to registrations of variants of trade marks, which registrants hope to use to earn advertising revenue from 'click-through programs'. This practice, known as 'typo-squatting', is regarded as falling within the scope of the policy.<sup>116</sup>

Alongside technological challenges, the wider recognition of brands has provided further fuel for those with expansionist tendencies. One particular campaign that has rumbled on in the United Kingdom for at least two decades would offer 'brand owners' broader control over imitation (especially in relation to 'look-alikes' and 'me-toos').<sup>117</sup> Successive governments have resisted the lobbyists, but during the committee stage of the Intellectual Property Bill 2013–14, David Willets announced a review to examine whether there is a need to give businesses a private right of action to help to protect brand owners from lookalikes.<sup>118</sup>

<sup>116</sup> See, e.g., the NAF decision of July 2007 in *Webkinz v. Texas International Property Associates* (relating to *Webkinzz.com*, *Webkniz.com*, and *Weblinz.com*).

<sup>117</sup> Gowers Review, [5.82]–[5.88]. See, e.g., *European Parliament Resolution on a More Efficient and Fairer Retail Market* (2010) 2010/2109 (INI), [31], describing 'parasitic copying' as an 'unacceptable practice which should be addressed without delay'; P Johnson, J. Gibson, and J. Freeman, *The Impact of Lookalikes: Similar Packaging in Fast Moving Consumer Goods* (2013) (offering an overview and pointing to possible extension of a rights of action to businesses to enforce the obligations under the Unfair Commercial Practices Directive).

## PASSING OFF

## CHAPTER CONTENTS

1 Introduction	826	3 Scope of Goodwill	844
2 Requirement of Goodwill	828	4 Ownership of Goodwill	845

## 1 INTRODUCTION

The oldest of the modern legal regimes for the protection of trade symbols is the action for passing off.<sup>1</sup> In essence, the action allows trader A to prevent competitor B from passing their goods off as if they were A's. Lord Langdale MR summed up the rationale for the passing off action in *Perry v. Truefitt*<sup>2</sup> when he said:

A man is not to sell his own goods under the pretence that they are the goods of another man; he cannot be permitted to practise such a deception, nor to use the means which contribute to that end. He cannot therefore be allowed to use names, marks, letters or other indicia, by which he may induce purchasers to believe, that the goods which he is selling are the manufacture of another person.<sup>3</sup>

While the early history of passing off is unclear,<sup>4</sup> it is widely thought that an action of this sort was first recognized in the Elizabethan case of *JG v. Samford*.<sup>5</sup> It is also generally acknowledged that the common law roots of the action are found in the torts of deceit and misrepresentation,<sup>6</sup> with the strictures of the common law action being mollified in a number of Chancery cases in the early nineteenth century.<sup>7</sup> The modern or classic formulation of the action (usually classified as a tort) emerged in the second half of the

<sup>1</sup> The pre-modern regimes included guild regulation, heraldry, and cutlers' marks: see Sherman and Bently, 166–8.

<sup>2</sup> (1842) 6 *Beav* 66, 49 ER 749. <sup>3</sup> *Ibid.*, 752.

<sup>4</sup> W. Morison, 'Unfair Competition and Passing Off' (1956) 2 *Sydney L Rev* 50, 53; *Henderson v. Radio Corporation Pty* (1960) [1969] *RPC* 218, 236.

<sup>5</sup> (Unreported, 1584), first cited as a precedent in *Southern v. How* (1617) *Cro Jac* 468, 79 ER 400. See the discussion in F. Schechter, *The Historical Foundations of the Law Relating to Trade Marks* (1925), 10.

<sup>6</sup> For a discussion of the common law in the late eighteenth century, see L. Bently, 'Singleton v. Bolton: The First Common Law Trade Mark Case?' (2014) 47 *U Cal Davis L Rev* 969. The first report of a common law case in which the claimant succeeded seems to be *Sykes v. Sykes* (1824) 3 B & C 543, 107 ER 834.

<sup>7</sup> In particular, Equity judges abandoned the requirement of bad faith in *Millington v. Fox* (1838) 3 *My & Cr* 338, 40 ER 956. Quite what became of the common law action is unclear. There is some authority for the view that it was abolished by the legislature when registration was introduced, because that prohibited any action based on an unregistered mark. Passing off, in contrast, survived because the basis of the action was not the mark itself, but the trader's goodwill. For arguments that there remains a common law action based on fraud, without a requirement of goodwill, see Gummow J in *10th Cantanae Pty v. Shoshama Pty* (1989) 10 *IPR* 289; *ConAgra Inc. v. McCain Foods (Australia) Pty* (1992) 23 *IPR* 193.

nineteenth century. In its classic form, the basis of the action was the existence of a ‘misrepresentation’. Typically, a misrepresentation occurs where a person says or does something that incorrectly suggests that the goods or services they are selling are the goods or services of the claimant. In order to justify injunctive relief, the courts believed that it was necessary for the action to be based on a property right. For some time, it was suggested that this property right was located in the name or symbol employed.<sup>8</sup> This approach was rejected in the early twentieth century, when it was said that the basis of equitable intervention was the property in ‘goodwill’.<sup>9</sup> The concept of goodwill, which will be examined in detail below, remains a prerequisite for a successful passing off action today.

It is important to recognize that the modern action, if it can be called a single action,<sup>10</sup> has moved beyond the classic case.<sup>11</sup> Indeed, as a result of adapting to changes in the commercial environment, the tort now extends beyond the sale of goods to cover services, beyond pretences concerning the origin of goods to cover pretences concerning their quality, and beyond simple pretences that the goods are those of another trader to cover pretences that the goods have been licensed by another trader.<sup>12</sup> As a result, the tort continues to play a central role in the legal regulation of trade behaviour.<sup>13</sup> The common law nature of the action also gives it a flexibility that makes it attractive in situations that are not covered by the statutory regimes. This is particularly important where business practices change and the legislature is slow to respond.<sup>14</sup>

With these developments, it has become increasingly difficult to state the law of passing off with any clarity or precision. Indeed, it has been said that the law ‘contains sufficient nooks and crannies to make it difficult to formulate any satisfactory definition in short form’.<sup>15</sup> The difficulty in formulating a precise and accurate statement of the law has not been made any easier by the fact that the most recent authoritative statements of the law, which are found in the House of Lords’ decisions in *Warnink v. Townend* (sometimes called the ‘Advocaat’ decision),<sup>16</sup> and *Reckitt & Colman v. Borden* (the ‘Jif’ lemon

<sup>8</sup> L. Bently, ‘From Communication to Thing: Historical Aspects of the Conceptualisation of Trade Marks as Property’, in G. Dinwoodie and M. Janis (eds), *Trademark Law and Theory: A Handbook of Contemporary Research* (2008).

<sup>9</sup> *Spalding v. Gamage* (1915) 32 RPC 273, 284.

<sup>10</sup> Phillips and Coleman have argued that passing off is better seen as a family of actions, each with particular characteristics: J. Phillips and A. Coleman, ‘Passing Off and the Common Field of Activity’ (1985) 101 *LQR* 242, 244–5. Despite the strength of this argument, the courts have continued to treat passing off as a unitary action, only occasionally distinguishing ‘classic’ passing off, from ‘extended’ passing off. See, e.g., *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 127 (distinguishing between ‘extended’ and ‘classic’ passing off and describing the question of whether it is the same tort as ‘a matter of semantics’). Note also *British Diabetic Association v. Diabetic Society* [1996] FSR 1, 11 per Robert Walker J (warning against the assumption that principles from one set of facts can be applied to very different facts).

<sup>11</sup> *Arsenal FC plc v. Reed (No. 2)* [2003] RPC 39, [70] per Aldous LJ.

<sup>12</sup> However, the law of passing off has not expanded into a tort of unfair competition. See Chapter 34, section 3.

<sup>13</sup> *Cadbury Schweppes Pty v. Pub Squash Co.* [1981] RPC 429, 490 per Lord Scarman (the tort ‘is no longer anchored in its early nineteenth-century formulation’); cf. *Hogan v. Koala Dundee* (1988) 12 IPR 508 (FCA), 517 per Pincus J (little progress in English law beyond the traditional notion of passing off). See also M. Shuilleabháin, ‘Common Law Protection of Trade Marks: The Continuing Relevance of Passing Off’ (2003) 34(7) *IIC* 722.

<sup>14</sup> Passing off also operates as a basis for relief where a trader has failed to register a mark. The law relating to passing off also retains a role within the registered trade mark system. As will be seen at pp. 1012–13, it is not possible for a person to register a sign as a trade mark if the use of that sign would amount to passing off.

<sup>15</sup> *ConAgra v. McCain Foods (Australia) Pty* (1992) 23 IPR 193 (FCA), 247.

<sup>16</sup> *Erven Warnink BV v. Townend (J.) & Sons* [1979] AC 731. The case contains two different formulations of the requirements for the action. Lord Diplock laid down five ‘characteristics’ that must be present to create a valid cause of action in passing off: (i) a misrepresentation, (ii) made by a trader in the course of trade, (iii) to prospective customers of that trader or ultimate consumers of goods or services supplied by that trader,

decision),<sup>17</sup> are in very different terms.<sup>18</sup> Having said that, it is possible to formulate a general statement regarding the elements of the action. In order to succeed in an action for passing off, a claimant must establish that:

- (i) the claimant has ‘goodwill’ (see below);
- (ii) the defendant made a ‘misrepresentation’ that is likely to deceive the public (Chapter 33); and
- (iii) the misrepresentation damages the goodwill of the claimant (Chapter 34).

Before turning to examine goodwill in more detail, two caveats are in order. The first is that each of the three elements must be shown to have existed or occurred at the time when the conduct which the claimant objects to took place (as opposed, for example, to the time of proceedings).<sup>19</sup> The second point to note is that the three elements are inter-related. As a result, the same facts may be important in proving goodwill, deception, and/or damage. Consequently, the courts may dismiss an action for lack of misrepresentation where it might as easily involve a lack of goodwill.<sup>20</sup> The interrelationship is also important because developments in one area, such as misrepresentation, may impact on another area, such as damages. This can be seen, for example, with the recent recognition of dilution as a form of damage, which has thrown into doubt the need for the defendant’s misrepresentation to cause confusion or deception.<sup>21</sup>

## 2 REQUIREMENT OF GOODWILL

The first factor that needs to be proved to establish an action for passing off is goodwill.<sup>22</sup> The mere fact that consumers are confused about the source of a product or service is not enough for a trader to bring a successful passing off action against another trader with whom their products are being confused.<sup>23</sup> Before a trader is able to bring an action, they must show that they have goodwill in relation to the product or service in question.

(iv) which is calculated to injure the business or goodwill of another trader (in the sense that this is a reasonably foreseeable consequence), and (v) which causes actual damage to a business or goodwill of the trader by whom the action is brought or (in a *quia timet* action) will probably do so: *ibid.*, 742. Lord Fraser also set out five requirements: (i) that the claimant’s business consists of, or includes, selling in England a class of goods to which the particular trade name applies; (ii) that the class of goods is clearly defined and that, in the minds of the public, or a section of the public, in England, the trade name distinguishes that class from other similar goods; (iii) that, because of the reputation of the goods, there is a goodwill attached to the name; (iv) that the claimant, as a member of the class of those who sell the goods, is the owner of goodwill in England that is of substantial value; and (v) that the claimant has suffered, or is really likely to suffer, substantial damage to their property in the goodwill by reason of the defendant selling goods that are falsely described by the trade name to which the goodwill is attached: *ibid.*, 755–6.

<sup>17</sup> [1990] 1 WLR 491.

<sup>18</sup> In the latter case, Lord Oliver reduced the elements of the action to three—reputation, deception, and damage: *ibid.*, 499.

<sup>19</sup> *J. C. Penney v. Penneys* [1975] FSR 367; *Barnsley Brewery Co. v. RBNB* [1997] FSR 462, 470; *Chocosuisse Union des Fabricants Suisse de Chocolat v. Cadbury* [1999] RPC 826, 836, 846; *Interlotto (UK) Ltd v. Camelot Group plc* (2003) EWHC 1256 (Ch) (Laddie J); (2003) EWCA Civ 1132, [7].

<sup>20</sup> See, e.g., *Chivers & Sons v. Chivers & Co.* (1900) 17 RPC 420.

<sup>21</sup> *Harrods v. Harrodian School* [1996] RPC 697.

<sup>22</sup> *Star Industrial Co. v. Yap Kwee Kor* [1976] FSR 217, 223; *Warnink v. Townend* [1979] AC 731, 742, 755–6.

<sup>23</sup> *HFC Bank v. Midland Bank* [2000] FSR 176, 182–3.

Goodwill is a form of intangible property that is easy to describe, but difficult to define. It is that ineffable thing, that magnetism, which leads customers to return to the same business or to buy the same brand. In *IRC v. Muller & Co.'s Margarine*, Lord Macnaghten said that:

[Goodwill] is the benefit and advantage of the good name, reputation, and connection of a business. It is the attractive force that brings in custom. It is the one thing which distinguishes an old-established business from a new business at its first start. The goodwill of a business must emanate from a particular centre or source. However widely or extended or diffused its influence may be, goodwill is worth nothing unless it has power of attraction sufficient to bring customers home to the source from which it emanates. Goodwill is composed of a variety of elements. It differs in its composition in different trades and in different businesses in the same trade. One element may preponderate here and another element there.<sup>24</sup>

As Lord Macnaghten stressed, for goodwill to exist, there must be some 'causative' impact upon customer behaviour. Goodwill is the attractive force that 'brings in' custom. The goodwill must have a 'power of attraction sufficient to bring customers home to the source from which it emanates'.<sup>25</sup> One consequence of this is that just because a trader has started business does not necessarily mean that there will be goodwill. This is because consumers might use the business—that is, purchase the goods or services—because it is conveniently located or simply because it is there. For goodwill to exist, customers must be buying the goods or using the services as a result of the reputation that the business has developed.<sup>26</sup>

## 2.1 MANIFESTATIONS OF GOODWILL

The law of passing off is concerned with goodwill when it manifests itself in certain ways. Passing off is usually concerned with the signs or badges that are understood as indicating that a product or service emanates from a particular trade source. These badges can take a variety of forms. Typically, passing off is concerned with the goodwill that arises in relation to the name, symbol, or logo that has been employed by a trader and thus has come to be associated with the business. For example, it is clear that there is goodwill associated with the name MARKS & SPENCER, and the NIKE 'swoosh' or tick. In these situations, the law is relatively straightforward. However, the courts have recognized that goodwill may arise in a number of other situations. These include goodwill associated with the packaging, get-up, or trade dress of products, and advertising style. In this section, we will limit our discussions to some of the less straightforward situations.

### 2.1.1 Goodwill in descriptive words

While goodwill is typically developed through the use of words such as NIKE, MARLBORO, or ROLLS-ROYCE to distinguish one trader's goods or services from those of its competitors, in some circumstances goodwill may come to be associated with words that initially were capable of being understood as descriptive of the goods themselves.<sup>27</sup> For example,

<sup>24</sup> *IRC v. Muller & Co.'s Margarine* [1901] AC 217, 224 per Lord Macnaghten. Although a tax case, it has been frequently employed in passing off cases and the Court of Appeal has said that 'no one, judge or jurist, has yet improved' on it as a description: *Scandecor Development AB v. Scandecor Marketing AB* [1999] FSR 26, 41.

<sup>25</sup> *IRC v. Muller & Co.'s Margarine* [1901] AC 217, 224 per Lord Macnaghten.

<sup>26</sup> *HFC Bank v. Midland Bank* [2000] FSR 176, 183.

<sup>27</sup> In between the category of invented or coined words and descriptive words, are many allusive or quasi-descriptive terms. The courts will be willing to protect these terms soon after they are used in trade: see,

FRUIT PASTILLES might be taken to be a description of a product delivered in pastille form, which tastes of or is made from fruit. However, most children (and adults) in the United Kingdom will understand the words as indicating a particular brand of sweet confectionary, in fact made by Rowntree's. Consequently, such words have become the manifestation of the goodwill that Rowntree's owns in the sweets. (Other familiar examples include TREETs—no longer designating a special indulgence but a confectionary made by Cadbury's—and EVIAN—no longer designating a place but a brand of water.)

While it is possible for a descriptive term to become associated with a claimant, the courts are extremely reluctant to allow a person to obtain a monopoly in descriptive words.<sup>28</sup> In part, this is because policy considerations favour allowing other traders to make use of words that are part of the common stock-in-trade. It is also because in relation to descriptive words, it will be more difficult for a trader to show that the words indicate source, rather than what they ordinarily describe. In short, the more descriptive the words of the goods or services that the trader sells, the more difficult it will be to establish the existence of goodwill attaching to those words.

For a trader to show that they have goodwill in a descriptive word, they need to show that the word has become 'distinctive in fact' or has taken on a 'secondary meaning'.<sup>29</sup> This can be seen, for example, in *Reddaway v. Banham*,<sup>30</sup> where the House of Lords acknowledged that the claimant's use of the term CAMEL HAIR to describe its belting (which was in fact substantially made out of hair from camels) had acquired a secondary meaning amongst those who purchased it for use in their machinery. Other examples of (largely) descriptive words that acquired secondary meaning include: OVEN CHIPS for potato chips to be cooked in the oven rather than fried;<sup>31</sup> FLAKED OATMEAL;<sup>32</sup> MALTED MILK;<sup>33</sup> and MOTHERCARE for clothing for expectant mothers and children.<sup>34</sup>

For a trader to show that they have goodwill in a descriptive word, the trader needs to demonstrate that the words have acquired a secondary meaning not only of goods or services of that description, but also specifically of the goods or services of which they are the source.<sup>35</sup> It is also necessary to show that descriptive terms are distinctive of one source.<sup>36</sup> Thus where two publishers are competing to launch magazines with a title such as LEISURE NEWS, it is unlikely that either will be able to bring a passing off action until the magazine has been in the marketplace for a sufficient period of time to build up a public association between the name and a particular source.<sup>37</sup> As Farwell J said, the name should:

e.g., *Phones4U Ltd v. Phone4u.co.uk Internet Ltd* [2006] EWCA Civ 244, [24]–[25], [30]–[34] (first-instance judge had wrongly held that there was no goodwill in PHONES4U because it was descriptive, even though turnover was £42 million and it held 19 per cent of the market); *Knight v. Beyond Properties Pty Ltd* [2007] FSR 34 (goodwill in MYTHBUSTERS for children's books as a result of sales numbering in the thousands).

<sup>28</sup> *Spalding v. Gamage* (1915) 32 RPC 273, 284; *Cellular Clothing Co. v. Maxton & Murray* [1899] AC 326, 339.

<sup>29</sup> See Wadlow (2011), [8–073], 683–4. Acquisition of secondary meaning is discussed in the context of registered marks at pp. 954–60.

<sup>30</sup> [1896] AC 199 (HL) (reversing the Court of Appeal decision that the defendant should not be liable for telling the simple truth). <sup>31</sup> *McCain International v. County Fair Foods* [1981] RPC 69.

<sup>32</sup> *Parsons v. Gillespie* [1898] AC 239 (PC).

<sup>33</sup> *Horlick's Malted Milk Co. v. Summerskill* (1916) 33 RPC 108.

<sup>34</sup> *Mothercare v. Penguin Books* [1988] RPC 113, 115.

<sup>35</sup> Secondary meaning is essential not only where the name describes the product, but also where it embodies a reference to quality. For example, THE HIT FACTORY was descriptive of a quality of the claimant's recording studio and, in the absence of a demonstration of secondary meaning, could not form the basis of a passing off action: *Peter Waterman v. CBS* [1993] EMLR 27. <sup>36</sup> *Ibid.*

<sup>37</sup> *Marcus Publishing v. Leisure News* [1990] RPC 576, 584.

... have to the whole of the trade and to all persons who have any knowledge of the article in question the sole meaning sought to be attached to it by the plaintiffs—that is to say, the original primary meaning must have been eliminated from the dictionary of persons who deal in this article in the trade and all other persons whom it may concern to know it.<sup>38</sup>

In proving secondary meaning, it will be common for a claimant to submit evidence of things such as the length of use and the amount of money spent on advertising.<sup>39</sup> It will certainly be easier to find that a name is distinctive and thus protected where a trader has used the name separately rather than in conjunction with another sign that designates source.<sup>40</sup> Moreover, distinctiveness will be acquired more readily if the sign is not exclusively descriptive, as was the case with FARM FLUID for farm disinfectant.<sup>41</sup> A trader may acquire secondary meaning in a descriptive phrase through public adoption rather than their own action.<sup>42</sup> In these cases, the most important evidence is evidence of the trade or public.

On the whole, the association must be in the mind of the general public, so that it is not normally legitimate ‘to slice the public into parts’.<sup>43</sup> However, in *Starbucks (HK) Ltd v. British Sky Broadcasting Plc*<sup>44</sup> Arnold J held that there might be goodwill amongst a distinct segment of the population, such as the Chinese-speaking community. The Court of Appeal saw no problem with such an approach.

Similar principles apply to geographic words and personal names. In general, the adoption of a geographic term or a personal name will not prevent another trader from using the same designation.<sup>45</sup> In certain circumstances, however, secondary meaning can attach to such signs. For example, in *Montgomery v. Thompson*<sup>46</sup> the claimant had operated a brewery in the small town of Stone in Staffordshire for more than 100 years. Over time, its beer had become widely known as STONE ALE. The defendant, who had recently established a brewery in Stone, was prevented from using the term STONE to describe its beer.<sup>47</sup> Similarly, it was held by the Court of Appeal that the term SWISS CHOCOLATE had come to be understood by a significant section of the public to mean, and to mean only, chocolate made in Switzerland and that this was understood as being of a particular quality.<sup>48</sup>

Words, once distinctive, may later lose their ability to indicate source. In such cases, a passing off action will no longer be available. A classic example is LINOLEUM, which is the name used for a floor covering made of solidified oil. The floor covering had been the

<sup>38</sup> *Chivers v. Chivers* (1900) 17 RPC 420, 430 per Farwell J (in the context of personal names); Wadlow (2011), [8–73]–[8–85], 683–92.

<sup>39</sup> Such factors, of themselves, will not give rise to recognition. Advertisement distinguished from trade is nothing: *Chivers v. Chivers* (1900) 17 RPC 420, 431 per Farwell J (describing the act of advertising as an atrocious disfigurement of the fairest landscape in the kingdom); *Burberrys v. Cording* (1909) 26 RPC 693 (slip-on).

<sup>40</sup> *McCain v. County Fair* [1981] RPC 69 (oven chips used with MCCAIN’s). See more generally at pp. 958–60.

<sup>41</sup> *Antec International v. South Western Chicks (Warren)* [1997] FSR 278, [1998] FSR 738, 743–4.

<sup>42</sup> *Edge & Sons v. Gallon & Son* [1900] RPC 557; *Peter Waterman v. CBS* [1993] EMLR 27.

<sup>43</sup> *Ibid.* (rejecting arguments that it was sufficient that the claimant’s recording studio was known as THE HIT FACTORY to popular music press and the ‘non-pompous end of market’, when other sectors treated the phrase as referring to others).

<sup>44</sup> *Starbucks (HK) Ltd v. British Sky Broadcasting Plc* [2013] EWCA Civ 1465, [42]. See comments relating to spillover reputation and the territorial location of goodwill: *ibid.*, [86].

<sup>45</sup> *Chivers v. Chivers* (1900) 17 RPC 420. <sup>46</sup> [1891] AC 217.

<sup>47</sup> See also *My Kinda Town v. Soll* [1983] RPC 407 (CHICAGO PIZZA); *CPC (United Kingdom) v. Keenan* [1986] FSR 527 (OXFORD marmalade, OXBRIDGE marmalade).

<sup>48</sup> *Chocosuisse v. Cadbury* [1999] RPC 826, 832.

subject of a patent and, during that time, the claimant was its only manufacturer. After expiry of the patent, other manufacturers began to make and sell the floor covering under the name LINOLEUM. Fry J refused to prevent competitors using this term on the basis that it had become generic. That is, the public had begun to use the term to refer to the product generally, without connoting the source of manufacture.<sup>49</sup>

### 2.1.2 Goodwill associated with packaging, get-up, and trade dress

A person may acquire goodwill through use of particular packaging or ‘get-up’ for their products.<sup>50</sup> For example, in *Reckitt & Colman*,<sup>51</sup> since the 1950s, the claimant had sold lemon juice in plastic containers that resembled a lemon in size, shape, and colour. The House of Lords held that if the defendant went ahead with its plans to use plastic lemons that were very similar to the claimant’s, the defendant would be passing their juice off as the claimant’s. This was because the evidence indicated that the claimant had succeeded in persuading the public that lemon juice sold in plastic lemon-sized containers had been manufactured by them. It made no difference that the claimant’s juice was labelled JIF and the defendant’s REALEMON, because purchasers did not look closely at the labels.

The protection that passing off provides over trade dress, get-up, and the packaging of goods is particularly important where consumers identify products by their external features rather than by words. This will be the case where goods are sold in foreign-language markets where little attention is likely to be paid to the words,<sup>52</sup> or where the goods are sold to people who are illiterate.<sup>53</sup> Get-up is also more likely to be an identifying feature in the case of common household goods,<sup>54</sup> rather than goods that are bought under professional supervision.<sup>55</sup>

In order to establish that the claimant has goodwill associated with the get-up or packaging of a product (and thus that copying of the product may amount to passing off), a claimant must be able to prove that the public recognizes that the get-up is distinctive of the claimant’s goods or services.<sup>56</sup> In practice, a claimant may experience a number of difficulties in establishing such an association, particularly where the claim relates to the shape rather than the packaging of a product. More specifically, it may be difficult to show that consumers care at all about the trade origin of a product. Moreover, it may be difficult to establish that consumers understand the functional features of a product as indicating source.

The need to show that the public regard a particular feature of a product as indicating source will prove to be particularly difficult where the product feature in question performs some function. While there is no public policy exception to the passing off action for ‘functional features’ and no requirement that features of get-up be ‘capricious’,<sup>57</sup> it

<sup>49</sup> *Linoleum Manufacturing Co. v. Nairn* (1878) 7 Ch D 834, 836.

<sup>50</sup> J. Evans, ‘Passing Off and the Problem of Product Simulation’ (1968) 31 *MLR* 642; Wadlow (2011), [8.132]–[8.165], 725–49; *Edge v. Nicholls* [1911] AC 693 (washing soap sold in a calico bag with a stick attached). For the possibility of design protection for the shapes of articles and limitations of such protection, see at pp. 706–08, 712–14, 763–5, 773–7, 780–94.

<sup>51</sup> [1990] *RPC* 341, 406.

<sup>52</sup> *Modus Vivendi v. Keen (World Marketing)* [1996] *EIPRD* 82 (sale of butane gas by defendant in similar get-up in China); *Johnston v. Orr Ewing* (1882) 7 *App Cas* 219, 225.

<sup>53</sup> *Edge v. Nicholls* [1911] AC 693. <sup>54</sup> *United Biscuits (UK) v. Asda Stores* [1997] *RPC* 513.

<sup>55</sup> *Hodgkinson & Corby v. Wards Mobility Services* [1995] *FSR* 169.

<sup>56</sup> However, while it is clear that imitation of get-up or packaging may constitute a misrepresentation, this does not mean that in all cases it will do so: *Reckitt & Colman* [1990] *RPC* 341, 406.

<sup>57</sup> *Hodgkinson & Corby v. Wards Mobility Services* [1995] *FSR* 169, 177. However, the House of Lords in *Reckitt & Colman* [1990] *RPC* 341 did indicate that such imitation of get-up might not amount to a

will be very difficult for a trader to demonstrate that the public view functional or non-capricious features of an article as indicating source. As Jacob J said in *Hodgkinson & Corby v. Wards Mobility Services*,<sup>58</sup> the claimant must prove a misrepresentation, which will be hard where there is no manifest badge of trade origin. This is because people tend to buy things for what they are and what they do, rather than out of interest in their origin. Accordingly, Jacob J found that a defendant who produced cushions that were used to help alleviate bed sores had not passed them off as the claimant's. This was the case even though the claimant's cushions were memorable and striking, and the defendant's cushions were similar in appearance.

### 2.1.3 Advertising style

A trader may also attempt to establish that they have goodwill associated with particular advertising techniques or slogans, and thus that a defendant is liable for passing off where they use techniques or slogans that are similar to those used by the claimant. In *Cadbury Schweppes v. Pub Squash*,<sup>59</sup> the claimant produced a lemon-flavoured soft drink called SOLO. As a part of its marketing campaign in Australia, the claimant launched a series of television advertisements, which featured 'ruggedly masculine and adventurous men' drinking SOLO. The defendant promoted its lemon-flavoured soft drink with a similar campaign. While the Privy Council rejected the passing off claim, Lord Scarman said that there was no reason *in principle* why the claimant could not have acquired goodwill associated with a particular advertising style. The reason for this was that:<sup>60</sup>

[T]he tort is no longer anchored as in the early nineteenth-century formulation to the name or trade mark of a product or business. It is wide enough to encompass other descriptive material, such as slogans or visual images, which radio, television or newspaper advertising campaigns can lead the market to associate with the plaintiff's product, provided always that such descriptive material has become part of the goodwill of the product.<sup>61</sup>

While the Privy Council recognized that passing off may protect a claimant's advertising campaign, it seems that claimants will have difficulties in demonstrating that the public associates a specific style of advertising with a particular source.<sup>62</sup>

### 2.1.4 Use of image, likeness, or voice

Finally, it is worth observing that in principle there is no reason why goodwill might not also arise through the use of a celebrity's image,<sup>63</sup> likeness, or voice.<sup>64</sup> Whether this is the case will always be a question of fact. In particular, it will depend on whether the public believe that there is a relevant connection between the celebrity and the goods or services in issue. It should be noted that, unlike the position in many continental jurisdictions<sup>65</sup>

misrepresentation when it was the only way in which to present the product. Lord Oliver noted that the association of the plastic shape with the claimant arose because 'there is nothing in the nature of the product sold which inherently requires it to be sold in the particular format': *ibid.*, 416.

<sup>58</sup> [1995] FSR 169. <sup>59</sup> [1981] RPC 429. <sup>60</sup> *Ibid.*, 490. <sup>61</sup> *Ibid.*

<sup>62</sup> For further consideration of advertisements, see the cases discussed by Wadlow (2011), [8-227]-[8-230], 793-5. <sup>63</sup> *Henderson v. Radio Corporation* (1960) [1969] RPC 218.

<sup>64</sup> *Sim v. H. J. Heinz Co.* [1959] 1 WLR 313.

<sup>65</sup> W. van Caenegem, 'Different Approaches to the Problem of Celebrities against Unauthorized Use of Their Image in Advertising' [1990] *EIPR* 452.

and in several US states,<sup>66</sup> British law does not recognize a general right of publicity or personality.<sup>67</sup>

## 2.2 ‘TRADER OPERATING IN TRADE’

As we indicated earlier, in order to demonstrate goodwill, a claimant must be a trader and operate in trade. We will look at each of these in turn.

### 2.2.1 The claimant must be a ‘trader’

For a claimant to be in a position to show that they have the goodwill necessary to sustain a passing off action, they must show that they are engaged in a very general sense in a business or commercial activity. The upshot of this is that the action is not available where one person changes their name to that of another, or calls their cat, boat, or house by the same name as that of their neighbour (however inconvenient or confusing that may be).

For the most part, the requirement that the claimant be in a trade has presented few problems. This is because the courts have been quite generous when deciding whether someone is engaged in business.<sup>68</sup> For example, the courts have recognized authors,<sup>69</sup> performers,<sup>70</sup> unincorporated associations,<sup>71</sup> and charities<sup>72</sup> as businesses that potentially give rise to goodwill.

The courts have only occasionally rejected a claimant’s claim to passing off because of a lack of business status. One instance where a passing off action was denied was in *Kean v. McGivan*,<sup>73</sup> where the claimant claimed the exclusive right to the name SOCIAL DEMOCRATIC PARTY. The Court of Appeal refused relief on the basis that the claimant was involved in a non-commercial activity. This was because the claimant was a small northern-based political party, whose commercial activities were limited to the hiring of halls for meetings. If the claimant had been one of the major political parties, which received and spent large sums of money, however, the Court might well have held that they were engaged in a trade. It should be noted that the decision in *Kean v. McGivan* has been distinguished by the Court of Appeal in *Burge v. Haycock*,<sup>74</sup> where a lobbying organization known as the ‘Countryside Alliance’ (best known for campaigning in support of fox hunting) was granted injunctive relief to prevent the defendant, a former

<sup>66</sup> O. Goodenough, ‘The Price of Fame: The Development of the Right of Publicity in the United States’ [1992] *EIPR* 55, 90.

<sup>67</sup> In H. Beverley-Smith, A. Ohly, and A. Lucas-Schloetter, *Privacy, Property and Personality: Civil Law Perspectives on Commercial Appropriation* (2005), 222–3, the authors argued that *Von Hannover* may require recognition of a right to identity:

Following the ECHR’s reasoning, Article 8 of the Convention arguably imposes an obligation on the member states to protect individuals against any misappropriation of their personal indicia in advertising or merchandising. A free speech defence will only be available in exceptional cases.

The authors argued that the jurisprudence ‘will inevitably force English law to confront the issue of how best to develop a remedy for appropriation of personality’: *ibid.*, 225. See below p. 1167.

<sup>68</sup> ‘The word “trade” is widely interpreted’: *Kean v. McGivan* [1982] *FSR* 119, 120 *per* Ackner LJ.

<sup>69</sup> *Alan Clark v. Associated Newspapers* [1998] *RPC* 261, 269.

<sup>70</sup> *Henderson v. Radio Corporation* (1960) [1969] *RPC* 218; cf. *Kaye v. Robertson* [1991] *FSR* 62 (Kaye, an actor, not a trader in relation to story about accident).

<sup>71</sup> *British Legion v. British Legion Club (Street)* (1931) 63 *RPC* 555, 562.

<sup>72</sup> *British Diabetic Association* [1996] *FSR* 1, 5.

<sup>73</sup> [1982] *FSR* 119. The defendants were a high-profile breakaway group from the Labour Party, known as the ‘Gang of Four’. In due course, the defendants’ Social Democrats merged with the Liberal Party to form the Liberal Democrats.

<sup>74</sup> [2001] *EWCA Civ* 900.

member of the right-wing British National Party, from standing in a parish council election under the banner of the Countryside Alliance. Distinguishing *Kean* on the basis that it was ‘a decision on its particular facts’,<sup>75</sup> the Court of Appeal said that the right to protect goodwill did not depend on the precise legal status of an entity (such as whether it was a charity or a political party); instead, all that mattered was they had established goodwill.<sup>76</sup>

A further situation where the requirement that the claimant be a trader has been problematic is where an action for passing off is brought by a trade association. If the trade association does not manufacture or sell any particular product, it will be unable to bring a passing off action against a defendant who has merely passed off their products as those of the members of the trade association.<sup>77</sup> However, where a trade association organized exhibitions, it could own goodwill through its members, which would form the basis for an action in passing off. In such a case, the action would have to be commenced by a member of the association acting in a representative capacity.<sup>78</sup>

### 2.2.2 The claimant must be trading

Once it has been shown that a claimant is engaged in a trade activity, there will usually be few problems in establishing that they have the goodwill necessary to sustain a passing off action. Traders, however, have experienced problems in establishing goodwill in three situations: (i) before they have started trading; (ii) after trading has ended; and (iii) where the trader is situated overseas. We will deal with each in turn.

#### (i) Pre-trading goodwill

Given that goodwill ‘has no independent existence apart from the business to which it is attached’,<sup>79</sup> difficult questions arise when a person is setting up a business. In these circumstances, the question may arise: at what point can a person claim to have goodwill? Is there any way in which a trader who is about to launch their business, and who has spent time and money on advertising and marketing, can prevent a competitor from taking advantage of their pre-launch publicity?

The traditional position is that before a passing off action can be brought, trading must actually have commenced.<sup>80</sup> This can be seen, for example, in *Maxwell v. Hogg*.<sup>81</sup> Maxwell proposed to launch a magazine called BELGRAVIA in October 1866. As a part of the pre-launch publicity, in August and September of 1866 Maxwell advertised the forthcoming launch of BELGRAVIA in a magazine run by Hogg. On 25 September 1866, Hogg issued a magazine also called BELGRAVIA. Despite noting that this was hardly fair and candid dealing, the court held that Maxwell could not restrain Hogg from using the

<sup>75</sup> *Ibid.*, [69] *per* Hale LJ.

<sup>76</sup> *Ibid.* The Court cited *Holy Apostolic & Catholic Church of the East (Assyrian) Australia New South Wales Parish Association v. Attorney General (New South Wales)* [1989] 18 NSWLR 291, 294 (Court of Appeal of New South Wales) (no reason why a religious organization should not have the same protection over the goodwill in its name as is afforded to commercial organizations).

<sup>77</sup> A trade consortium may sue in its own name, but cannot bring a representative action: *Consorzio del Prosciutto di Parma v. Marks & Spencer* [1991] RPC 351. See also *Chocosuisse v. Cadbury* [1999] RPC 826, 843–4. The Court of Appeal did acknowledge, however, that it might be convenient if a trade association were able to sue on behalf of its members in such circumstances.

<sup>78</sup> *Artistic Upholstery v. Art Forma (Furniture)* [1999] 4 All ER 277, 286–7.

<sup>79</sup> *Star Industrial v. Yap Kwee Kor* [1976] FSR 217, 223; *IRC v. Muller* [1901] AC 217, 223.

<sup>80</sup> The period of time and the types of activity that are needed to generate goodwill will vary from case to case: *Stannard v. Reay* [1967] RPC 589 (three weeks’ trade under the name ‘Mr Chippy’ was sufficient to establish goodwill on the Isle of Wight).

<sup>81</sup> (1867) LR 2 Ch App 307.

same name. This was because a declaration of intention to use a name did not secure any protection.

In contrast, where there has been substantial pre-launch publicity, claimants have occasionally succeeded in gaining interim relief prior to the launch of their products. In *Allen v. Brown Watson*,<sup>82</sup> the publisher of a book entitled *My Life and Loves* by Frank Harris, which had been widely advertised prior to publication, was granted an interim injunction against the defendant, who proposed to publish an abridged version also called *My Life and Loves* by Frank Harris.<sup>83</sup> Similarly, in *BBC v. Talbot Motor Co. Ltd.*,<sup>84</sup> the BBC had publicized its forthcoming traffic information service named CARFAX, which required motorists to have special car radios fitted or conventional ones adapted. The BBC was granted an interim injunction preventing the defendant from selling spare parts for vehicles under the name CARFAX. Sir Robert Megarry V-C noted that, '[a]lthough that scheme has not yet been launched, that does not prevent the BBC from having built up goodwill in it which is entitled to protection.'<sup>85</sup> While these authorities represent individual victories based on pre-launch publicity, they have not established conclusively that the courts will recognize goodwill prior to trading. In part, this is because the cases were interim,<sup>86</sup> aspects of the reasoning are unconvincing,<sup>87</sup> and neither really turned on a demonstration of goodwill.<sup>88</sup>

Other cases exhibit a more hard-line approach, holding that while pre-launch advertising and publicity assists in the acquisition of goodwill, it is necessary for a trader to have customers for them to demonstrate that they have goodwill. This can be seen, for example, in *My Kinda Bones v. Dr Pepper's Stove Co.*<sup>89</sup> where the claim to goodwill was based exclusively on pre-launch publicity. While the court refused to strike out the claimants' action on the ground that their case was not 'manifestly unarguable', nonetheless Slade J said that he thought that the claimants' prospects of success were very doubtful. The reason for this was that there was a requirement that 'a substantial number of customers or potential customers must at least have had the opportunity to assess the merits of those goods or services for themselves'.<sup>90</sup> Slade J added that customers 'will not have sufficient opportunity to do this until the goods or services are actually on the market'.<sup>91</sup>

While it might be inappropriate to protect a trader who has only made preparations to launch a product, fewer objections can be made about a trader being able to rely on passing off where they have engaged in widespread pre-launch advertising. This is because in these circumstances, competitors are likely to be aware of the claimant's intention to use the name in a business context. Consumers are also more likely to expect a product with specific associations.

While the law in this area is unclear, it is important to note that even if there is no pre-launch goodwill, if goods or services are placed on the market after extensive

<sup>82</sup> [1965] RPC 191.

<sup>83</sup> However, the claimant's book had been published by the time of the hearing.

<sup>84</sup> [1981] FSR 228. <sup>85</sup> *Ibid.*, 233.

<sup>86</sup> But, in *BBC v. Talbot*, the court was considering the parties' prospects of success, not merely whether there was a serious question to be tried.

<sup>87</sup> For example, *BBC v. Talbot* may have misunderstood *Allen v. Brown Watson* [1965] RPC 191. See Wadlow (2011), [3-069]—[3-070], 152-3.

<sup>88</sup> Wadlow explains that, in 'reality, neither *Allen v. Brown Watson* nor *BBC v. Talbot* actually turned on the existence of goodwill', because both Allen and the BBC had long-established businesses: Wadlow (2011), [3-070], 152-3.

<sup>89</sup> [1984] FSR 289 (concerning restaurants selling spare ribs, both to be called 'rib shack').

<sup>90</sup> *Ibid.*, 303. *BBC v. Talbot* meant that it was not impossible to argue the case.

<sup>91</sup> *Ibid.*, 299. See also *Marcus Publishing v. Leisure News* [1990] RPC 576.

preparatory publicity, goodwill may well be generated after a very short time.<sup>92</sup> It is also important to recognize that different businesses have different relationships with their customers. For example, the launch of a radio programme requires very little, if any, active involvement by the public. Indeed, the Court of Appeal has argued that even before a service is launched, a business may generate goodwill through publicity and advertising. In *Starbucks v. BSB*,<sup>93</sup> the claimant sought to prevent the defendant from using the sign NOW TV for its Internet broadcast service. Rejecting the claim, the Court of Appeal said:

It was insufficient for a passing off action for Now TV simply to be planned. It was necessary either to have or promote and publicise or advertise a customer base here in order to establish a goodwill protectable by law. The preparations did not establish a goodwill in the sense of acquiring a protectable exclusive right created by the attraction of custom in this country.<sup>94</sup>

While the reasoning implies that goodwill could arise even before a service is accessible, it was not necessary to decide whether this was the case on the facts.

Finally, it is worth noting that other jurisdictions have been more flexible in recognizing the rights of traders based upon pre-launch publicity than has been the case in the United Kingdom.<sup>95</sup>

*(ii) Goodwill after trading ends*

Given that goodwill is directly linked to the existence of a business, it follows that once a business ceases to trade that the goodwill starts to wither away.<sup>96</sup> As Lord Macnaghten said in *Commissioners of Inland Revenue v. Muller & Co.'s Margarine*,<sup>97</sup> goodwill 'cannot subsist by itself. It must be attached to a business. Destroy the business and the goodwill perishes with it.' Nevertheless, in recognition of the commercial reality that businesses may recede, change hands, or close temporarily, the courts have held that goodwill is an asset that does not dissipate immediately a business ceases to operate. As a result, when trading stops, 'elements remain which may perhaps be gathered up and revived again'.<sup>98</sup> Whether goodwill continues to exist depends on two matters: first, whether the public retains relevant associations between the sign and a particular trader; and second, whether there is evidence of an intent to resume the business.

In contrast with the law relating to registered marks, which adopts a rule that the mark is revocable after five years,<sup>99</sup> the continued survival of repute (without the support of a business) will simply depend on the facts. Relevant factors include the extent of the original reputation, the existence of continuing promotion or other activities, the nature of the goods, and the nature of the mark.<sup>100</sup> If the extent of the goodwill is small, it will likely wither quickly;<sup>101</sup> if there is nationwide familiarity with a trade mark, the reputation may

<sup>92</sup> *My Kinda Bones v. Dr Pepper's Stove Co.* [1984] FSR 289.

<sup>93</sup> [2013] EWCA Civ 1465. <sup>94</sup> *Ibid.*, [105].

<sup>95</sup> *Pontiac Marina Private v. Cdl. Hotels International* [1998] FSR 839, 861 (Court of Appeal for Singapore); *Turner v. General Motors* (1929) 42 CLR 352 (Australia); *Windmere Corp. v. Charlescraft Corp.* (1989) 23 CPR (3d) 60 (Canada).

<sup>96</sup> Wadlow (2011), [3–220]–[3–230], 243–8. <sup>97</sup> [1901] AC 217, 224. <sup>98</sup> *Ibid.*

<sup>99</sup> In the context of registered marks, five years' non-use, without due cause, is treated as a ground for revocation: see Chapter 39, section 2.

<sup>100</sup> *Knight v. Beyond Properties* [2007] FSR 34, [68]; *Jules Rimet Cup Ltd v. Football Association Ltd* [2007] EWHC 2376 (Ch), [2008] FSR 10.

<sup>101</sup> *Knight v. Beyond Properties* [2007] FSR 34 (author of MYTHBUSTER books had goodwill in 1996, but by 2003 this was not more than trivial).

remain for many decades.<sup>102</sup> Moreover, it may be that some goods remain in the public eye, for example where films or television programmes are re-run, records played,<sup>103</sup> or vintage cars are repaired and restored.

The trader must intend to resume business. If a trader assigns their goodwill to a third party, that is taken to be an indication that they did not intend to resume business.<sup>104</sup> Intention to resume business may be evident from the trader's acts or may be inferred from the fact that trading was brought to an end by outside forces.<sup>105</sup> In *Ad-Lib Club v. Granville*,<sup>106</sup> for example, the claimant was forced to shut its nightclub ('The Ad-Lib Club') because of noise problems. Pennycuik V-C granted an interlocutory injunction against the defendant who, four years later, announced that they were going to open a disco under the same name. This was because the public still associated the name with the club and, because the claimant had been seeking an alternative venue since the club had closed, there was no reason to think that they had abandoned the business. In the 'World Cup Willie' case,<sup>107</sup> Deputy Judge Roger Wyand QC held that even though the Football Association had not used the 'World Cup Willie' device for 40 years and had allowed its trade mark registrations to lapse, the circumstances did not indicate that the Association had no intention to resume use of the sign. This was because since the sign related to the World Cup, the Football Association was not able to contemplate reusing it until it became a realistic prospect that England would host the event again.

### (iii) Foreign traders

The next situation where questions about the existence of goodwill arise is in relation to foreign traders.<sup>108</sup> Where a business located in a foreign country acquires an international reputation, this may lead the foreign trader to set up business in the United Kingdom. In this case, the UK-based business will normally have goodwill. In many situations, however, something short of this may occur. For example, the foreign business may merely have an agent in the United Kingdom, or only respond to orders taken directly from customers in the United Kingdom. Alternatively, a trader may only have a reputation that connects them with England and Wales, but no place of business or customers to speak of in those countries. In these circumstances, the question arises: can a foreign trader rely on passing off to protect their interests in the United Kingdom? The case law, which is by no means conclusive, appears to distinguish between three situations. We will deal with each in turn.

(a) *Evidence of business activity* If the claimant can demonstrate a trading link with the United Kingdom, they will normally succeed in establishing goodwill. The courts have been generous when considering whether a foreign trader has a sufficient trade presence and, consequentially, goodwill in the United Kingdom. It is clear that there is no

<sup>102</sup> *Jules Rimet Cup Ltd v. Football Association Ltd* [2007] EWHC 2376 (Ch), [2008] FSR 10 (Football Association retained goodwill in the mascot device from 1966 World Cup despite 40 years of inactivity).

<sup>103</sup> Compare with *Knight v. Beyond Properties* [2007] FSR 34 (rejecting argument that children's books 'remain on the shelves'); *Sutherland v. V2 Music Ltd* [2002] EMLR 568 (funk band using name 'Liberty', which was reasonably well-known in mid-1990s, retained sufficient goodwill, so that pop group formed in 2001 under same name was passing itself off).

<sup>104</sup> *Star Industrial v. Yap Kwee Kor* [1976] FSR 256 (PC).

<sup>105</sup> *A. Levey v. Henderson Kenton (Holdings)* [1974] RPC 617 (closure for two years of claimant's department store, because of fire, coupled with notices saying that reopening, held to maintain goodwill).

<sup>106</sup> [1971] FSR 1, [1972] RPC 673.

<sup>107</sup> *Jules Rimet Cup Ltd v. Football Association Ltd* [2007] EWHC 2376 (Ch), [2008] FSR 10.

<sup>108</sup> For consideration of the extent to which a UK claimant can sue for passing off committed abroad, see p. 831.

need to have a registered business in the United Kingdom. The generous approach taken by the courts can be seen, for example, in *Sheraton*.<sup>109</sup> In this case, the claimant company, which ran a chain of high-class hotels, but at the time had none in England, was granted an interim injunction to prevent the defendant from using the name, 'Sheraton Motels'. The court held that although the claimant did not have any hotels in the United Kingdom at that time, the fact that bookings for its hotels abroad were frequently made both through an office that Sheraton maintained in London and through travel agencies was sufficient to entitle it to relief.

(b) *No business activity, but customers* The second situation where a foreign trader may attempt to claim goodwill is where they have customers in the United Kingdom.<sup>110</sup> The law on this point is unclear. In the first instance, there is a line of cases that suggest that, for a foreign trader to establish goodwill in the United Kingdom, they must show *both* that they have customers *and* that they carry on business in the United Kingdom. This can be seen in the *Crazy Horse* decision.<sup>111</sup> In this case, the claimant was proprietor of the CRAZY HORSE SALOON in Paris. The defendant opened a place of the same name in London. Pennycuik J refused to grant an interlocutory injunction to restrain the defendant from using the CRAZY HORSE SALOON name in London. While the claimant had distributed leaflets in England advertising the saloon, there was no evidence that there were English customers of the Paris saloon (at least in the sense of persons who made bookings in the United Kingdom). The judge explained that:

[A] trader cannot acquire goodwill in this country without some sort of user in this country. His user may take many forms and in certain cases very slight activities have been held to suffice . . . I do not think that the mere sending into this country by a foreign trader of advertisements advertising his establishment abroad could fairly be treated as a user in this country.<sup>112</sup>

The *Crazy Horse* decision has been criticized by commentators and distinguished by the courts in the so-called 'soft line' of cases.<sup>113</sup> In this second line of cases, it was held that if a foreign business can demonstrate that it has customers in the United Kingdom (other than foreign customers who have merely moved here),<sup>114</sup> it is likely that the court will treat this as sufficient to establish goodwill. That is, it is not necessary for the business to establish that it carries on business in the United Kingdom (in any formal sense). For example, in *Athlete's Foot Marketing Association Inc. v. Cobra Sports*,<sup>115</sup> an American retailer selling shoes under the name ATHLETE'S FOOT sought to prevent a UK business from using the same name in the UK. While the American firm had a reputation in the United Kingdom

<sup>109</sup> *Sheraton Corporation v. Sheraton Motels* [1964] RPC 202.

<sup>110</sup> There is some authority to the effect that this is insufficient to justify a passing off action, but the preponderance of authority now appears to be to the contrary.

<sup>111</sup> *Bernadin v. Pavilion* [1967] RPC 581. <sup>112</sup> *Ibid.*, 584.

<sup>113</sup> The terms 'hard' and 'soft' were characterizations used in *Athlete's Foot* [1980] RPC 343, 349. See also *Baskin-Robbins Ice Cream v. Gutman* [1976] FSR 545, 548; *Maxim's v. Dye* [1978] 2 All ER 55, 59.

<sup>114</sup> Customers on US forces bases who bought Budweiser beer from PX stores were excluded from consideration in *Anheuser-Busch v. Budejovicky Budvar Narodni Podnik* [1984] FSR 413, even though sales numbered 65 million bottles per annum. However, in *Jian Tools for Sales v. Roderick Manhattan Group* [1995] FSR 924, Knox J treated as relevant customers resident in the United Kingdom who had been influenced by foreign advertising and ordered goods from the US business: these were customers on the open market. But note the Trade Mark Registry's approach in cases under TMA 1994, s. 5(4): *In re Speciality Retail Group's Application (Suit Express)* (5 April 2000) SRIS O/124/00, [42] ('it is doubtful whether an overseas retail outlet that UK residents have used casually whilst on business or holiday abroad can be said to be in business here merely because those customers returned here after doing business with the retailer whilst abroad').

<sup>115</sup> [1980] RPC 343.

at the relevant time, it had not yet conducted business in the United Kingdom. Moreover, the claimant was unable to demonstrate that a single person in England and Wales had purchased its shoes. In considering whether the claimant had goodwill, Walton J said ‘it does not matter that the plaintiffs are not at present actually carrying on business in this country, provided they have customers here’, the reason being that:

[N]o trader can complain of passing off as against him in any territory . . . in which he has no customers, nobody who is in a trade relation with him. This will normally . . . be expressed by saying that he does not carry on any trade in that particular country (obviously, for present purposes, England and Wales) but the inwardness of it will be that he has no customers in that country: no people who buy his goods or make use of his services (as the case may be) there.<sup>116</sup>

Given that the claimant had no customers in the United Kingdom, the court held that they did not have the goodwill necessary to sustain the passing off action.

Perhaps the most formidable critique of the approach adopted in the *Crazy Horse* decision was offered in *Peter Waterman v. CBS*.<sup>117</sup> In this case, CBS was proposing to refurbish studios in London and call them THE HIT FACTORY. The claimant, who ran a recording business nicknamed THE HIT FACTORY, brought an action to stop CBS from using the same name. Based on the running of a recording studio in New York, which was also called THE HIT FACTORY, CBS responded by arguing that it had goodwill in the United Kingdom that was at the very least concurrent with any goodwill of the claimant. Browne-Wilkinson V-C held that the claimant failed to establish the distinctiveness of THE HIT FACTORY and that, as such, consideration of the defendant’s position was unnecessary. Nevertheless, Browne-Wilkinson V-C went on to review the authorities on the issue of whether the English courts will protect a foreign trader in the United Kingdom.

Browne-Wilkinson V-C began by noting that the essence of goodwill is the ability to attract customers and potential customers to do business with the owner of the goodwill. Consequently, any interference with the trader’s customers is an interference with their goodwill. Browne-Wilkinson V-C added that prior to the *Crazy Horse* decision, there was nothing in the authorities inconsistent with that view. For the Vice-Chancellor, that case law merely required the use of the name and the presence of customers in this country. To the extent that the *Crazy Horse* decision required that the trader had conducted some business (however slight) in England and Wales, Browne-Wilkinson V-C said that the case was wrongly decided.<sup>118</sup> The judge took the view that the presence of customers in this country was sufficient to constitute the carrying on of business here. This is the case whether or not there is a place of business in England and Wales, or services are provided there. On this basis, Browne-Wilkinson V-C held that since the defendant’s New York recording studio had a *substantial number* of customers in England, it would have been entitled to protect its name in the United Kingdom against third parties.

While the Court of Appeal has affirmed that there is goodwill in England where a business has ‘customers’ in England, it has also recognized that determining when this is the case is not altogether straightforward. In the *Hotel Cipriani* decision,<sup>119</sup> the claimant

<sup>116</sup> *Ibid.*, 350. See also *SA des Anciens Etablissements Panhard et Levassor v. Panhard Levassor Motor Co.* (1901) 18 RPC 405.

<sup>117</sup> [1993] EMLR 27.  
<sup>118</sup> For Browne-Wilkinson V-C, if the foreign trader uses their name for the purposes of trade in the United Kingdom, the piracy of that name is an actionable wrong wherever the goodwill is located. Browne-Wilkinson V-C acknowledged that there is binding authority to the effect that the basis of claim must be a goodwill situated in England.

<sup>119</sup> *Hotel Cipriani SRL v. Cipriani (Grosvenor Street)* [2008] EWHC 3032 (Ch), [2009] FSR (9) 209 (Arnold J); [2010] ECWA Civ 110, [2010] RPC (16) 485.

operated a hotel in Venice under the name HOTEL CIPRIANI. ‘Cipriani’ was the name of the Italian family that ran the hotel. The defendant, another member of the Cipriani family, opened a bar in Grosvenor Square, London, called BAR CIPRIANI. On being sued, the defendant denied that the claimant had goodwill in England. At the same time, the defendant also argued that they had goodwill in England as a consequence of the bar that they operated in Venice. At first instance, Arnold J rejected these arguments, finding that the claimant had goodwill because bookings for the hotel were made from England. Arnold J also found that the operation of the bar in Venice did not confer concurrent goodwill on the defendants. While the Court of Appeal affirmed Arnold J’s decision, Lloyd LJ indicated that in light of the development of e-commerce, which meant that hotels could be booked through websites from anywhere in the world, it might be appropriate to review the requirement for direct bookings in relation to the question of goodwill in services.<sup>120</sup>

In a further decision of a differently constituted Court of Appeal, the desirability of relaxing the requirements that must be met to establish passing off was called into question. In *Starbucks (HK) v. British Sky Broadcasting*,<sup>121</sup> Mummery LJ affirmed the holding of Arnold J that the claimant had no goodwill in the designation NOW TV in relation to its Internet broadcast service, which originated in Hong Kong. This was so even though the service was accessed by Chinese speakers in the United Kingdom. The Court stressed that the claimant could not rely upon the fact that its service was accessed by residents in England to show that the existence of goodwill in England;<sup>122</sup> instead, the claimant had to ‘establish by evidence the existence of the claimed goodwill within the jurisdiction of the court’.<sup>123</sup> For the Court of Appeal, technological developments and changing practices did not justify changing the rules on foreign traders.

(c) *Mere reputation* The third situation where the question of whether a foreign trader has goodwill in the United Kingdom arises is where the claimant merely has a reputation, but no customers as such in the United Kingdom. This might be the case where there is ‘spillover’ advertising, or where the product becomes known through films, television, or via the Internet.<sup>124</sup> Given that it is necessary for a foreign trader to have customers in the United Kingdom for them to establish goodwill (or, on a more extreme view, customers and business), it would seem reasonable to assume that where a foreign trader merely has a reputation in the United Kingdom, they would not be able to prove that they had the goodwill necessary to sustain a passing off action.

The case law on this point is unclear. On the one hand, there is authority that supports the conclusion that a foreign trader who only has a reputation in the United Kingdom may nonetheless still be able to show that they have goodwill. Indirect (and inconclusive) support for this comes from the cases dealing with pre-trading goodwill, which were discussed above.<sup>125</sup> More direct support for this approach comes from the 1976 decision in *Maxim’s v. Dye*.<sup>126</sup> The claimant in this case was the world-famous restaurant in Paris known as MAXIM’S. In 1970, the defendant opened a restaurant in Norwich also called MAXIM’S. In considering whether the claimants were entitled to protect their reputation, even though they were not running any business in England, Graham J held that the claimants did have sufficient goodwill to bring a passing off action. After noting that globalization was making the ‘world grow smaller’, Graham J said that the true legal position was that the ‘existence and extent of the claimants’ . . . goodwill [in their business] in

<sup>120</sup> *Ibid.*, [124].      <sup>121</sup> [2013] EWCA Civ 1465.      <sup>122</sup> *Ibid.*, [103].      <sup>123</sup> *Ibid.*

<sup>124</sup> *In re Readmans Ltd’s Application (Luxor)* (30 January 2002) SRIS O/039/02 (mere existence of Internet site accessible from United Kingdom does not give rise to goodwill).

<sup>125</sup> See pp. 835–7.

<sup>126</sup> [1978] 2 All ER 55.

every case is one of fact however it may be proved and whatever it is based on'.<sup>127</sup> Graham J added that the claimants' existing goodwill in the UK, 'which is derived from and is based on a foreign business . . . may be regarded as prospective but none the less real in relation to any future business which may be later set up by the plaintiff in this country'.<sup>128</sup>

In another line of decisions, however, the UK courts have made it clear that where a trader only has reputation in the United Kingdom, they will *not* have the goodwill necessary to justify an action for passing off.<sup>129</sup> This can be seen, for example, in the *Budweiser* case.<sup>130</sup> In this decision, Anheuser-Busch, an American company that manufactured BUDWEISER beer, sued the Czech brewers, Budejovicky Budvar, for passing off. The Czech brewers began selling their boutique beer in England under the name BUDWEISER BUDVAR in 1973.<sup>131</sup> While, at this time, the claimant's sales of BUDWEISER were confined to stores on US Air Force bases, the beer was widely known throughout the United Kingdom. The Court of Appeal rejected the claimant's claim on the basis that there was no goodwill in the United Kingdom. Because the beer sold on the Air Force bases was not available for general purchase, the Court held that these sales were to be ignored.<sup>132</sup> In rejecting the action, the Court supported the view that mere reputation alone would not justify an action for passing off.

The requirement that for a foreign trader to have goodwill they must be able to show that they have customers in the United Kingdom has been criticized by those who consider the geographical division of goodwill to be out of step with the commercial reality of globalized trade.<sup>133</sup> Support for this criticism comes from the fact that a number of comparable jurisdictions have recognized the international character of goodwill. The Full Federal Court of Australia in *ConAgra v. McCain Foods (Australia)*,<sup>134</sup> has perhaps gone the furthest in this regard. In this case, Lockhart J said that:

[The] real question is whether the owner of the goods has established a sufficient reputation with respect to his goods within the particular country in order to acquire a sufficient level of consumer knowledge of the product and attraction for it to provide custom which, if lost, would likely result in damage to him. This is essentially a question of fact.<sup>135</sup>

In the *Peter Waterman v. CBS* case, Browne-Wilkinson V-C commented on the need for passing off to be adapted to modern business environments in this way:

The changes in the second half of the twentieth century are far more fundamental than those in nineteenth-century England. They have produced worldwide marks, worldwide goodwill and brought separate markets into competition with the other. Radio and television with their attendant advertising cross national frontiers. Electronic communication via satellite produces virtually instant communication between all markets. In terms of travel time, New York by air is as close as Aberdeen by rail. This has led to the development of the international reputation in certain names, particularly in the service fields, for example Sheraton Hotels, Budget Rent A Car . . . In my view, the law will fail if it does

<sup>127</sup> *Ibid.*, 59, quoting from *Baskin-Robbins Ice Cream v. Gutman* [1976] FSR 545, 548.

<sup>128</sup> *Maxim's v. Dye* [1978] 2 All ER 55, 60.

<sup>129</sup> *Athlete's Foot* [1980] RPC 343; *Jian Tools v. Roderick Manhattan Group* [1995] FSR 924.

<sup>130</sup> *Anheuser-Busch v. Budvar* [1984] FSR 413.

<sup>131</sup> 'Budweis' is the old German name of the town in which the Czech beer is brewed.

<sup>132</sup> In *Anheuser-Busch v. Budvar* [1984] FSR 413, 462, Oliver LJ defined the question as follows: 'How far is it an essential ingredient of a successful claim in passing off that the plaintiff should have established in this country a business in which his goods or services are sold to the general public on the open market?'

<sup>133</sup> A. Coleman, 'Protection of Foreign Business Names and Marks under the Tort of Passing off' [1986] LS 70, 76; F. Mostert, 'Is Goodwill Territorial or International?' [1989] EIPR 440.

<sup>134</sup> (1992) 23 IPR 193, 234.

<sup>135</sup> *Ibid.*, 234.

not try to meet the challenge thrown up by trading patterns which cross national and jurisdictional boundaries due to a change in technical achievement.<sup>136</sup>

Despite these comments and his liberal interpretation of the case law, the Vice Chancellor was not prepared to abandon the requirement that to establish goodwill, a foreign trader must have customers in the United Kingdom. This reluctance to allow an action based merely on reputation may have been grounded in a fear that if such a prerequisite was abandoned, it would enable claimants with an international reputation to enforce a worldwide monopoly without any guarantee that they would ever expand into the domestic market.<sup>137</sup> In addition, it has been pointed out that too-ready recognition of rights of foreign traders may render it difficult for domestic traders to find marks that can be lawfully used in the United Kingdom.<sup>138</sup> Moreover, as Mummery LJ observed in *Starbucks (HK) v. BSB*, there are real dangers with changing rules that govern when property rights, such as goodwill, arise:

On the whole it is more in the interests of consistency, when dealing with claims to exclusivity in the intangible, to stay anchored to reasonably clear, firm and established legal rules rather than to drift off into an open sea of uncertainty and speculation. Experience shows that judicial game-changing in a property rights environment is a recipe for uncertainty, confusion and injustice where the common expectation is for certainty, clarity and predictability.<sup>139</sup>

(d) *Well-known marks* Whatever the criticisms and prospects for further development, the Trade Marks Act 1994 provides foreign traders who lack local goodwill with a potential remedy.<sup>140</sup> Section 56, which gives effect to Article 6bis of the Paris Convention,<sup>141</sup> states that:

The proprietor of a trade mark which is entitled to protection under the Paris Convention as a well-known trade mark is entitled to restrain by injunction the use in the United Kingdom of a trade mark which, or the essential part of which, is identical or similar to his mark, in relation to identical or similar goods or services, where the use is likely to cause confusion.

Importantly, this provision applies to a proprietor of a 'well-known' trade mark 'whether or not that person carries on business, or has any goodwill, in the United Kingdom'. (In fact, if the proprietor is a national of the United Kingdom, they will not benefit from the provision.<sup>142</sup>) The key limitation in section 56 is not goodwill; rather, it is whether the

<sup>136</sup> *Waterman v. CBS* [1993] EMLR 27.

<sup>137</sup> In Australia, this objection has been met by emphasizing the need for a claimant to show damage, diversion of trade that it is about to commence, or the tarnishment of reputation: *ConAgra v. McCain* (1992) 23 IPR 193, 235.

<sup>138</sup> *In re Tara Jarmon's Application (Tara Jarmon)* (7 September 1999) SRIS O/311/99, [36].

<sup>139</sup> *Starbucks (HK) v. BSB* [2013] EWCA Civ 1465, [103].

<sup>140</sup> This remedy is less attractive than passing off in three obvious respects: (i) TMA 1994, s. 56, is available only if the mark is 'well known'; (ii) s. 56 results only in injunctive relief rather than compensation or restitution; and (iii) s. 56 does not extend to dissimilar goods, whereas passing off might. Note, however, that many of the limitations on registrability of trade marks (e.g. s. 3(2)), and statutory defences to infringement of registered marks (ss 11–12), do not appear to apply to the s. 56 action.

<sup>141</sup> Trademark Law Treaty, Art. 16, and TRIPS, Art. 16(2), require application of Paris, Art. 6bis, to service marks.

<sup>142</sup> See TMA 1994, s. 55(1)(b); *Jules Rimet Cup Ltd v. Football Association Ltd* [2007] EWHC 2376, [73] per Wyand QC. Nor need the proprietor of a well-known mark have registered the mark in a Convention country: *In re Sharif's Application (Advanced Health Products)* (23 March 2000) SRIS O/112/00, [52].

mark is ‘well known’. It seems that a number of considerations will be taken into account when deciding whether a mark is well known. These include: trade recognition and public recognition in the United Kingdom;<sup>143</sup> the inherent distinctiveness of the mark; the duration and extent of any use (whether in the United Kingdom or neighbouring territories), or promotion or advertising (especially in territories covered by the same media); sales made abroad to British residents (such as those on holiday); and the value of the goodwill.<sup>144</sup> It seems that this evidence must point to a high level of recognition amongst the relevant consumers in the United Kingdom. In *General Motors v. Yplon SA*,<sup>145</sup> the Advocate-General described the protection afforded to well-known marks under the Paris Convention as ‘exceptional’ and therefore concluded that it ‘would not be surprising . . . if the requirement of being well-known imposed a relatively high standard for a mark to benefit from such exceptional protection’.

Rather surprisingly, section 56 has rarely been relied upon by foreign traders. One case in which the claimant did succeed was the *Hotel Cipriani* case, where Arnold J found that the claimant’s hotel was a well-known mark in the United Kingdom.<sup>146</sup>

### 3 SCOPE OF GOODWILL

Once it has been decided that the claimant has goodwill, the next question to consider is its scope. This is an important question, because it may influence whether the defendant’s representation amounts to a passing off.<sup>147</sup> While similar inquiries take place with other forms of intellectual property, there is one important difference which relates to the territorial scope of the property. For example, when considering whether a patent has been infringed, the question of the geographical scope of the protection is not an issue. This is because the patent operates throughout the whole of the United Kingdom. This is not the case, however, in relation to an action for passing off where the territorial or geographical scope of the goodwill must first be ascertained. Despite the apparent dominance of nationwide firms and franchises, there are many businesses that only trade in a small and relatively confined area. In these circumstances, the way in which the physical limits of

<sup>143</sup> TRIPS, Art. 16(2), requires that account be taken of the knowledge of the trade mark in the relevant sector of the public, including knowledge that has been obtained as a result of the promotion of the trade mark. WIPO, *Joint Recommendation Concerning Provisions on the Protection of Well Known Marks* (2000) refers to: (i) the degree of knowledge or recognition of the mark in the relevant sector of the public; (ii) the duration, extent and geographical area of any use of the mark; (iii) the duration, extent and geographical area of any promotion, advertising, and publicity; (iv) the duration and geographical area of any registrations; (v) previous recognition by authorities of the well-known status of the mark; and (vi) the value associated with the mark. These factors were cited and applied by Arnold J in *Hotel Cipriani v. Cipriani* [2008] EWHC 3032, [2009] FSR (9) 209, [237]–[239].

<sup>144</sup> For an example of such an assessment at the OHIM, see *Maurice Emram v. Guccio Gucci SpA*, Case R 620/2006–2 (3 September 2007) (OHIM, Second Board of Appeal).

<sup>145</sup> Case C-375/97 1999] ECR I-5421, [33] (Advocate-General Jacobs). A mark is only well known in a member state if it is well known in a substantial part of that state, as opposed to only in a city or its surrounding area: *Alfredo Nieto Nuño v. Leonci Monlleó Franquet*, Case C-328/06 (22 November 2007) (ECJ), Second Chamber).

<sup>146</sup> *Hotel Cipriani v. Cipriani* [2008] EWHC 3032, [239].

<sup>147</sup> *Associated Newspapers Ltd v. Express Newspapers* [2003] FSR 51, [23] (considering whether repute of the *Mail* was limited to papers that were sold or whether it extended to free papers); *Boxing Brands v. Sports Direct International* [2013] EWHC 2220 (Ch) (use of QUEENSBERRY as name of a boxing club in Bedford gave rise to goodwill, but that goodwill would not support a passing off claim against a person selling clothing under the mark QUEENSBERRY).

the goodwill are determined may be crucial to the success or otherwise of a passing off action.<sup>148</sup>

#### 4 OWNERSHIP OF GOODWILL

In principle, the owner of goodwill is the business that generates it. While goodwill will normally be owned by a single trader or business, the courts have recognized that a group of traders may share goodwill in a name or feature of a product that they have in common. Where the singularity of a product is shared by a group of traders (normally in a specific region), they may share goodwill in the identifying feature: the name, image, logo, etc. The courts have recognized shared goodwill in relation to CHAMPAGNE,<sup>149</sup> SHERRY,<sup>150</sup> SCOTCH WHISKY,<sup>151</sup> ADVOCAT,<sup>152</sup> SWISS CHOCOLATE,<sup>153</sup> VODKA,<sup>154</sup> and GREEK YOGHURT.<sup>155</sup>

Problems arise, however, where a number of different people, companies, or businesses cooperate in the making and distribution of a product. In these circumstances, the courts are forced to decide whether the goodwill is individually or jointly owned, and if so, by whom.

The difficulties in deciding how the ownership of goodwill is to be ascribed have become all the more problematic with the expansion of international trade, the globalization of markets, and the growth of multinational corporations.<sup>156</sup> In such cases, it is common for a firm in one country to expand into another through a subsidiary, distributor, agent, or licensee. In the absence of a carefully formulated contract dealing with the relationships between the parties, difficult questions can arise as to ownership of the goodwill generated by the actions of the local distributor and foreign supplier. This is especially the case when the arrangements between the parties end. This can be seen, for example, in *Scandecor Development v. Scandecor Marketing*.<sup>157</sup> In this case, a Swedish art-poster business founded in the 1960s was rearranged so that a subsidiary, Scandecor Marketing (the defendant), had responsibility for marketing the claimant's products in the United Kingdom. The claimant supplied poster products for sale. The defendants also sold ancillary products, such as calendars and cards, not supplied by the claimant and over which the claimant had no control. The defendant's marketing occasionally referred to the fact that it was connected with the world's largest poster company. In the 1980s, the claimant was taken over. The new owners terminated the agreement with the defendant. After further negotiations failed, the claimant demanded that the defendant stop using the SCANDECOR mark.

At first instance, Lloyd J held that the goodwill was shared between the claimant and defendant, effectively finding two different, yet connected, forms of goodwill: a

<sup>148</sup> *Evans v. Eradicure* [1972] RPC 808; *Levey v. Henderson-Kenton* [1974] RPC 617; *Associated Newspapers* [2003] FSR 51, [29] (a trader's reputation in Birmingham might be different from that in London).

<sup>149</sup> *Bollinger v. Costa Brava Wine Co.* [1960] Ch 262; *Taittinger v. Allbev* [1994] 4 All ER 75 (champagne companies able to prevent use of elderflower champagne).

<sup>150</sup> *Vine Products v. Mackenzie* [1969] RPC 1.

<sup>151</sup> *John Walker & Sons v. Henry Ost* [1970] 2 All ER 106.

<sup>152</sup> *Erven Warnink BV v. Townend (J.) & Sons* [1979] AC 731.

<sup>153</sup> *Chocosuisse v. Cadbury* [1998] RPC 117.

<sup>154</sup> *Diageo North America Inc. & Anor v. Intercontinental Brands (ICB)* [2010] EWCA Civ 920.

<sup>155</sup> *Fage UK Ltd v. Chobani UK* [2013] EWHC 630 (Ch).

<sup>156</sup> *Scandecor Development v. Scandecor Marketing* [1999] FSR 26 (CA), 38–9.

<sup>157</sup> [1998] FSR 500, [1999] FSR 26 (CA); not considered by the House of Lords.

distributor's goodwill and a publisher's goodwill. The Court of Appeal rejected that view, holding instead that the goodwill belonged to the defendant. The Court of Appeal observed that where the goodwill originates from a common source overseas, but then expands and is developed by different companies in different territories, it is necessary to analyse the effect of the changes occurring from time to time in the control and ownership of the businesses that generate the goodwill.<sup>158</sup> Reviewing that history, the Court of Appeal noted that the contact with customers had been largely through the defendant. The Court also denied that there was any 'rule of law or presumption of fact that the goodwill generated by the trading activities of a wholly owned subsidiary company belongs to the parent company'.<sup>159</sup> Instead, 'what matters is who retailers identified as the person carrying out the trading activities in the local territory'.<sup>160</sup> In this respect, the Court of Appeal placed less emphasis than Lloyd J had done on the fact that the defendant had occasionally referred to the international scope of its activities. The evidence showed that the customers treated the supplier—that is, the defendant—as being more significant than the publisher.

There have also been considerable problems in determining ownership of goodwill in association with bands. This is particularly problematic when band members leave, form new groups, and reuse or modify the original name, or where disbanded groups regroup (often with a differently configured membership). In these circumstances, the question of who owns the goodwill in the name of a band (or indeed any collective) will depend on the relationship that the members have with each other. As Laddie J said in *Byford v. Oliver*,<sup>161</sup> which was a dispute between former members of the heavy metal band SAXON about ownership of the goodwill in the band name, many of the problems that arise in this context could be avoided if the band members were to enter 'into a partnership agreement which expressly provide[s] for the partnership to continue on the departure of one or more of the members'.<sup>162</sup> Laddie J also said that it would be advisable to ensure that the agreement 'expressly confirmed the rights of the continuing and expressly limit[ed] the rights of departing partners to make use of the partnership name and goodwill'.<sup>163</sup> In the absence of such an agreement, ownership will depend on the nature of the relationship between the members. Thus if the band members were partners, but had no agreement about how the rights in the name were to be dealt with, the name (as an asset of the partnership) would be dealt with along with the other assets of the partnership. In this situation, members would not own the name or the goodwill built up under it; they would, however, have an interest in the realized value of the partnership assets (which would include the goodwill in the name). If, however, the band members performed together as independent traders, it is likely that each member would acquire a 'discreet interest in the name and the reputation which they could use against third parties but not against each other'.<sup>164</sup> Where there is no contractual or other arrangement governing the relationship between and among members—where the band is an unincorporated association of individuals—the 'goodwill and reputation built up and acquired by the group' belongs 'to the

<sup>158</sup> The Court of Appeal in *Scandecor Development v. Scandecor Marketing* [1999] FSR 26, 42, accepted that, in an appropriate case, it is legally and factually possible for a business based overseas to acquire goodwill in this country by the supply of its products or services through a subsidiary, agent, or licensee. Whether or not that occurs must depend on the facts of the particular case. Cf. *Habib Bank v. Habib Bank AG Zurich* [1981] 2 All ER 650 (international parent may retain international goodwill); *Gromax Plasticulture v. Don & Low Nonwovens* [1999] RPC 367.

<sup>159</sup> *Scandecor Development v. Scandecor Marketing* [1999] FSR 26, 43. <sup>160</sup> *Ibid.*, 45.

<sup>161</sup> [2003] EWHC 295, [2003] FSR 39 (Ch). <sup>162</sup> *Ibid.*, [26]. <sup>163</sup> *Ibid.*, [26].

<sup>164</sup> *Ibid.*, [19]. See also *Gill v. Frankie Goes to Hollywood Ltd* [2008] ETMR 4.

“last man standing”’.<sup>165</sup> In this situation, the key issue will be whether any of the band members have abandoned their rights.

#### 4.1 GOODWILL AS PROPERTY

Goodwill is a form of property that is transmissible by assignment, on death, or by operation of law.<sup>166</sup> There are no formalities laid down for assignment of goodwill *inter vivos*. However, it is relatively settled that goodwill cannot be assigned in ‘gross’—that is, separately from the business to which it is attached.<sup>167</sup>

<sup>165</sup> *Eric Burdon v. John Steel* (9 September 2013) SRIS O-369-13, [8]–[9] (in relation to the band name THE ANIMALS); *Powell v. Turner* [2013] EWHC 3242 (IPEC) (WISHBONE ASH).

<sup>166</sup> *Artistic Upholstery v. Art Forma (Furniture)* [1999] 4 All ER 277, 286 (goodwill is property in context of assignment, nationalization, bankruptcy, and can be owned by unincorporated association through its members). In circumstances in which the relationship is purely personal, as with a barrister or conductor, goodwill will be regarded as inalienable: see *Newman v. Adlem* [2006] FSR 16, [26] *per* Jacob LJ (holding the rule inapplicable to the goodwill of a funeral director).

<sup>167</sup> *Barnsley Brewery Co. v. RBNB* [1997] FSR 462, 469.

## MISREPRESENTATION

### CHAPTER CONTENTS

1 Introduction	848	4 Is the Misrepresentation Deceptive?	859
2 Nature of the Defendant's Representation	849	5 Providing Deceptive Means or Instruments of Fraud	871
3 What Type of Suggestive Conduct is Actionable?	851		

### 1 INTRODUCTION

The second element of the passing off action, which we consider in this chapter, is the requirement that there be a misrepresentation.<sup>1</sup> Historically, the need for a misrepresentation, which is one of the factors that distinguishes passing off from a law of unfair competition, is explained by the fact that the passing off action grew out of the common law action for deceit.<sup>2</sup> Typically, a misrepresentation occurs where the defendant says or does something that indicates (expressly or impliedly) that the defendant's goods or services derive from (or are otherwise economically connected with) the claimant. Initially, liability for passing off was limited to situations where the defendant's actions gave rise to the suggestion that their goods or services had come from the claimant. That is, that there was confusion as to the source of the goods. Over time, however, the action has expanded to include representations that relate to the quality of the goods or services, and to representations that suggest that there is a connection between the claimant and the defendant.

This chapter is divided into four parts. First, we consider the type of conduct that forms the basis of the defendant's misrepresentation. Second, we look at the types of suggestion that are actionable. Third, we look at the requirement that, for a statement to be a misrepresentation, it must be likely to cause confusion. Fourth, we note that a passing off action can not only be brought against a person who carries out the misrepresentation, but also against someone who provides the means that enables the misrepresentation to occur.

<sup>1</sup> In *Spalding v. Gamage* (1915) 32 RPC 273, 284, Lord Parker referred to false representation by the defendant as 'the basis of a passing-off action'.

<sup>2</sup> See J. Phillips and A. Coleman, 'Passing off and the Common Field of Activity' (1985) 101 LQR 242, 243, for a comparison of passing off with deceit.

## 2 NATURE OF THE DEFENDANT'S REPRESENTATION

There are no formal restrictions on the types of representation that are actionable. Indeed, as Lord Parker said in *Spalding v. Gamage*,<sup>3</sup> it is 'impossible to enumerate or classify all the possible ways in which a [trader] may make the . . . representation relied upon'. So long as the representation confuses the public in a relevant way, the means by which this comes about is irrelevant. Having said this, it may be helpful to consider some of the more important points about the types of conduct that might constitute a misrepresentation.

### 2.1 DEFENDANT'S STATE OF MIND

In deciding whether a misrepresentation has taken place, the key concern is with the *consequences* of the defendant's actions and the effect that these have upon the public, rather than the state of the defendant's mind. As such, to succeed in a passing off action, there is no need for the misrepresentation to be conscious, deliberate, intentional, or fraudulent.<sup>4</sup> It also does not matter whether the misrepresentation was made deliberately or innocently. Similarly, the fact that a statement is true does not matter, so long as the defendant's actions or representations generate the requisite confusion in the mind of the public.

A misrepresentation is actionable even if it is unintentional or can be explained on what seem to be legitimate grounds.<sup>5</sup> For example, if a person trades under their own name, they might still be passing off their goods as those of the claimant.<sup>6</sup> For example, in *Parker Knoll v. Knoll International*,<sup>7</sup> the defendant, Hans Knoll, established a furniture manufacturing business that he called KNOLL INTERNATIONAL. Another firm of furniture makers, established by the defendant's uncle, already traded as PARKER KNOLL. Despite dicta to the effect that individuals have a 'natural and inherent right' to use their own name,<sup>8</sup> the House of Lords denied that a person was entitled to use their own name to indicate that their goods are the goods of another. Consequently, their Lordships granted an injunction.<sup>9</sup> Given that there is no defence where a person uses their own name, it is not surprising that there is no defence where someone changes their name or uses a nickname.<sup>10</sup>

### 2.2 FORM OF THE MISREPRESENTATION

The courts have been very flexible in deciding whether a defendant has made the requisite misrepresentation. The flexible nature of the misrepresentation is reflected in the fact that

<sup>3</sup> (1915) 32 RPC 273, 284.

<sup>4</sup> *HFC Bank plc v. Midland Bank plc* [2000] FSR 176, 181. But there are advantages for a claimant who can show that use was deliberate: *Irvine v. Talksport* [2002] FSR 943.

<sup>5</sup> *Montgomery v. Thompson* [1891] AC 217, 220.

<sup>6</sup> G. Kodilinye, 'Passing off and the Use of Personal Names' (1975) 26 NILQ 177; Wadlow (2011), [9-068]-[9-088], 839-51.

<sup>7</sup> [1962] RPC 265; *NAD Electronics Inc v. NAD Computer Systems* [1997] FSR 380, 392; *Reed Executive v. Reed Business Information* [2004] RPC 767, [109]-[112].

<sup>8</sup> *Marengo v. Daily Sketch* (1948) 65 RPC 242.

<sup>9</sup> G. Kodilinye, 'Passing off and the Use of Personal Names' (1975) 26 NILQ 177, preferring Lord Denning's dissenting speech to those of the majority, argues that the case, 'far from laying down any coherent principles, seems to have thrown the law into even greater confusion than before'.

<sup>10</sup> *Biba Group v. Biba Boutique* [1980] RPC 413, 420.

the misrepresentation can arise through the use of words or actions. We will look at each of these in turn.

(i) *Words* The commonest form of misrepresentation involves the use of words, whether oral or written. In some cases, this will occur where the defendant makes a statement that links them either explicitly or implicitly to the claimant. Often, the defendant will use a name that is identical or very similar to the trade name used by the claimant. Thus, in *Taittinger v. All Bev*,<sup>11</sup> the Court of Appeal held that, by calling their drink ELDERFLOWER CHAMPAGNE, the defendants had made a misrepresentation that they were part of the group of CHAMPAGNE producers. One of the consequences of the fact that words are able to form the basis of a misrepresentation is that passing off may prevent a person from calling their book, film, record, or band by the same name or title as that used by someone else.<sup>12</sup>

(ii) *Action* In some cases, the relevant misrepresentation may be implied from the action of the defendant. Perhaps the clearest example of this is where the defendant manufactures their goods to look like the claimant's. It will also occur if a customer asks a trader to supply them with someone else's goods, but the trader instead supplies the customer with their own goods: this would be an actionable misrepresentation.<sup>13</sup> Indeed, in some circumstances where a trader knows that a consumer is susceptible to a particular understanding concerning the origin of goods or services,<sup>14</sup> that trader must 'take such care as will prevent his chosen marketing method from conveying any misrepresentation to the effect that there is such a connection'.<sup>15</sup> A misrepresentation can also occur where the defendant places their product in close proximity to that of the claimant. For example, in *Associated Press v. Insert Media*,<sup>16</sup> the court held that by inserting advertisements inside the claimant's newspaper after the paper had been delivered to newsagents, the defendant passed the inserts off as if they were the claimant's. The position might have been different, however, if the two products were delivered at the same time. It does not seem likely that where products are placed side-by-side on a supermarket shelf that this would amount to a misrepresentation.

Another situation where the action of a defendant may give rise to an actionable misrepresentation is in relation to the adoption of domain names used on the Internet. This can be seen in *British Telecommunications v. One in a Million*,<sup>17</sup> which was one of the earliest British cases to deal with the practice of 'cyber-squatting'. The defendant in this case was a dealer in Internet domain names who had secured domain name registration for prestigious names such as 'virgin.com' and 'tandy.com'. The domain names were registered without the consent of the organization that owned the goodwill in the names. The

<sup>14</sup> For example, where one trader has previously had a monopoly over the goods and the junior trader is one of the first competitors.

<sup>15</sup> *BSB v. Sky Home Services* [2007] *FSR* 14, [82] (the defendant was offering warranty contracts relating to Sky equipment in circumstances under which it was aware that many consumers considered it to have been authorized to do so by Sky).  
<sup>16</sup> [1991] *FSR* 380.

<sup>17</sup> [1998] 4 *All ER* 476. For criticism, see M. Elmslie, 'The *One in a Million* Case' [1998] *Ent L Rev* 283, 284 (questioning the conclusion reached that no evidence of how users view the register was given in the case). See also *French Connection v. Sutton* [2000] *ETMR* 341.

defendant's aim was either to sell the names that they had registered to the owners of the goodwill (using the blocking effect of the registration to negotiate for a better price),<sup>18</sup> or to sell them to other people (such as collectors). The Court of Appeal held that the act of registering names such as 'marksandspencer.co.uk' amounted to an actionable misrepresentation. This was particularly the case where the name denoted a particular trader and no one else. Aldous LJ explained that:

[The] placing on a register of a distinctive name such as 'marksandspencer' makes a representation to persons who consult the register that the registrant is connected or associated with the name registered and thus the owner of the goodwill in the name.<sup>19</sup>

This decision, which is not without its critics, has important ramifications for the legal regulation of the Internet.<sup>20</sup>

### 3 WHAT TYPE OF SUGGESTIVE CONDUCT IS ACTIONABLE?

In the previous section, we looked at the various types of conduct that constitute misrepresentation. In this section, we turn to look at the *consequences* that flow from that conduct. In so doing, it is important to note that in order to promote the sale of their products or services, a trader might act or make statements that are suggestive of a number of things. For example, trader A might act in such a way that the public comes to believe that trader A's products are cheaper than those of trader B or that they are better for the environment. Trader A might also suggest that their goods are very suitable to be used in connection with those of trader B. Equally, trader A might suggest that their goods are similar to or better than those of trader B. While trader A's conduct in each of these cases may harm trader B, this does not mean that trader B will succeed in a passing off action. This is because passing off only protects against certain types of suggestion. In this section, we examine the types of suggestive conduct that are actionable.

#### 3.1 MISREPRESENTATION AS TO SOURCE

The traditional form of misrepresentation occurs where the defendant's actions give rise to a suggestion that the defendant's goods or services are those of the claimant. That is, the defendant somehow suggests that the claimant is the 'source' of the goods.<sup>21</sup> Such a misrepresentation is objectionable because it confuses the public and attempts to ride on the back of the claimant's reputation.

A misrepresentation as to source occurs, for example, where the defendant suggests that they are the manufacturer, marketer, or retailer of the product. It also occurs where the defendant uses a word or name that the public associates with the claimant's business. In both of these situations, the defendant's conduct gives rise to the suggestion that their

<sup>18</sup> For example, the defendants offered to sell the domain name 'burgerking.co.uk' to Burger King for £25,000.

<sup>19</sup> *One in a Million* [1998] 4 All ER 476, 497.

<sup>20</sup> *Phones4U Ltd v. Phone4u.co.uk Internet Ltd* [2006] EWCA Civ 244, [2007] RPC 5; *Tesco Stores Ltd v. Elogicom Ltd* [2006] EWHC 403 (Ch), [2007] FSR (4) 83. See the discussion of ICANN at pp. 1236–7 below.

<sup>21</sup> It is irrelevant that the customers are not actually familiar with the source: *Birmingham Vinegar Brewery v. Powell* [1897] AC 710, 715; *Edge v. Nicholls* [1911] AC 693; *United Biscuits (UK) v. Asda Stores* [1997] RPC 513. This is referred to as the 'anonymous source' doctrine.

goods emanate from the claimant. The representation may also give rise to a suggestion that the goods or services of the claimant and the defendant are related. For example, in *Kimberley Clark v. Fort Sterling*,<sup>22</sup> as a part of the defendant's campaign to promote the NOUVELLE toilet roll, the defendant offered to placate customers who had brought NOUVELLE but were dissatisfied with it, by replacing NOUVELLE with ANDREX toilet paper. The claimant, who owned the goodwill in ANDREX, objected. The court held the offer to be a misrepresentation, because it was likely to lead purchasers into thinking that NOUVELLE was a product from the ANDREX stable, or that ANDREX was in some way behind the promotion.

### 3.2 MISREPRESENTATION AS TO QUALITY

The courts have also recognized that a misrepresentation may occur where a defendant makes a representation about the quality of the claimant's goods. The objection here is not so much to the fact that the defendant is riding on the back of the claimant's reputation (although this may occur) as it is to the negative impact that the defendant's actions have upon the claimant's goodwill. This can be seen in *Spalding v. Gamage*.<sup>23</sup> In this case, the claimant, who manufactured and sold footballs, brought a passing off action against the defendants, who had obtained some of the claimant's old disused stock and sold them as if they were new and improved footballs. Lord Parker held that this was a misrepresentation. The reason for this was that:

[The] proposition that no one has the right to represent his goods as the goods of somebody else must, I think . . . involve as a corollary the further proposition, that no one, who has in his hands the goods of another of a particular class or quality, has a right to represent these goods to be the goods of that other of a different quality or belonging to a different class.<sup>24</sup>

The extension of the passing off action to include representations about the quality of the claimant's goods may enable a trader to control the parallel importing of their goods. This has been particularly important where a trader places goods of one quality on a foreign market under a particular sign and goods of a different quality on the UK market under the same sign. In these circumstances, the trader may be able to use passing off to prevent goods marketed abroad from being imported into the United Kingdom. In *Colgate-Palmolive v. Markwell Finance*,<sup>25</sup> the claimants were all members of an international group of companies, which marketed toothpaste in different countries. While the external appearance of the toothpaste tube that was sold in different countries was very similar (the mark and get-up were the same), the quality of the contents varied from country to country. For example, the COLGATE toothpaste sold in Brazil was of a lower quality than that which was available in the United Kingdom. This was because the Brazilian toothpaste used a number of cheaper raw materials, such as local chalk, instead of the better quality ingredients that were used in the United Kingdom. Colgate UK, a wholly owned subsidiary of Colgate US, instigated an action to prevent Markwell from importing lower-quality COLGATE toothpaste, which had been sold in Brazil, into the United Kingdom. Markwell argued that Colgate UK had no right to rely upon the reputation for superior quality toothpaste that it had in the United Kingdom, when the COLGATE trade marks and the get-up were used as worldwide presentation for different quality toothpaste. Markwell also argued that Colgate US must have foreseen that different quality

<sup>22</sup> [1997] FSR 877.

<sup>23</sup> (1915) 32 RPC 273.

<sup>24</sup> *Ibid.*, 284.

<sup>25</sup> [1989] RPC 497.

toothpaste would circulate around the world. In effect, what Markwell argued was that it was Colgate, and not Markwell, that had made the relevant misrepresentation.

Applying *Spalding v. Gamage*, the Court of Appeal held that traders who placed the same mark on distinct classes of articles were entitled to bring a passing off action against a person who resold the inferior goods in circumstances that constituted a false representation that the goods were of the superior class and thereby damaged the trader's reputation.<sup>26</sup> Given that the defendant had made a misrepresentation to consumers in the United Kingdom as to the character and quality of the Brazilian toothpaste, it was irrelevant that the goods were originally produced and sold by a subsidiary of Colgate US.

Another situation where the courts have recognized misrepresentation of the quality of goods is in relation to the so-called 'extended form' of passing off, which was first recognized by Danckwerts J in *Bollinger v. Costa Brava Wine Co.*<sup>27</sup> As we explained earlier, this case recognized that a class or group of traders may share goodwill in a name (or some other indicator) that is distinctive of a particular class of goods. In particular, it was recognized that champagne producers who made sparkling wine with grapes from the Champagne region of France using the *chamenois* process had goodwill in the name CHAMPAGNE. It was also recognized that individual members of the class of traders were able to bring an action against anyone who uses the distinctive name in relation to products of a different quality. On this basis, French champagne houses have been able to stop other traders who do not make drinks with those characteristics, for example producers of the drinks SPANISH CHAMPAGNE OR ELDERFLOWER CHAMPAGNE, from using the term 'champagne'.<sup>28</sup> The House of Lords approved this line of authority in *Warnink v. Townend*.<sup>29</sup> In so doing, they granted relief to a producer of egg-based alcoholic drink ADVOCAT. The action has subsequently been used by the producers of PARMA HAM (albeit unsuccessfully) and SWISS CHOCOLATE.<sup>30</sup> The specifics of the action, which has a number of idiosyncratic characteristics, are considered below.<sup>31</sup>

### 3.3 MISREPRESENTATION THAT THE CLAIMANT HAS CONTROL OR RESPONSIBILITY OVER THE GOODS OR SERVICES

The courts have also recognized that a misrepresentation may occur where the defendant's conduct gives rise to the suggestion that the claimant has some type of control or responsibility over the defendant's goods or services. In *British Legion v. British Legion Club (Street)*,<sup>32</sup> Farwell J held that an organization formed to assist First World War veterans called the 'British Legion' could rely on passing off to prevent the words 'British Legion Club (Street)' from being used to describe a local social club. This was because members of the public would have thought that the social club was:

... either a Branch of the plaintiff association, or at any rate that it was a club in some way amalgamated with or under the supervision of the plaintiff association for which the plaintiff association had in some way made itself responsible.<sup>33</sup>

<sup>26</sup> *Ibid.*, 514 *per* Slade LJ, 529 *per* Lloyd LJ; cf. *Champagne Heidsieck v. Buxton* [1930] 1 Ch 330, which was distinguished because, on the facts, resale in COLGATE carried with it a misrepresentation as to quality: *ibid.*, 513

<sup>27</sup> [1960] RPC 16. See above at pp. 845, 878–84.

<sup>28</sup> *Taittinger v. Allbev* [1993] FSR 641 (elderflower champagne). But not BABYCHAM: *H.P. Bulmer and Showerings v. J. Bollinger SA* [1978] RPC 79.

<sup>29</sup> *Erven Warnink BV v. Townend (J) & Sons (Hull)* [1979] AC 731, 742.

<sup>30</sup> *Consorzio del Prosciutto di Parma v. Marks & Spencer* [1991] RPC 351 and *Consorzio del Prosciutto di Parma v. Asda Stores* [1988] FSR 697 (parma ham); *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1999] RPC 826.

<sup>31</sup> See below at pp. 878–84.

<sup>32</sup> (1931) 63 RPC 555. <sup>33</sup> *Ibid.*, 564.

It should be noted that the mere fact that a defendant suggests that they are somehow connected to the claimant will not necessarily amount to passing off. This is because the connection will only be relevant if the defendant's misrepresentation suggests that the claimant has some type of control or responsibility over the goods or services in question. The nature of the connection that is necessary to sustain a misrepresentation was considered in *Harrods v. Harrodian School*.<sup>34</sup> In this case, the famous London department store was refused an injunction to prevent a preparatory school known as 'The Harrodian Club', which was built on the site of the former Harrods club, from calling itself the 'Harrodian School'.<sup>35</sup> (Harrods claimed that Harrodian was the adjectival form of Harrods.) In the Court of Appeal, Millett LJ explained that:

[T]he relevant connection must be one by which the plaintiffs would be taken by the public to have made themselves responsible for the quality of the defendant's goods or services . . . It is not in my opinion sufficient to demonstrate that there must be a connection of some kind between the defendant and the plaintiff, if it is not a connection which would lead the public to suppose that the plaintiff has made himself responsible for the quality of the defendant's goods or services. A belief that the plaintiff has sponsored or given financial support to the defendant will not ordinarily give the public that impression.<sup>36</sup>

The *Harrods* decision places an important limit on the scope of passing off, particularly in relation to sponsorship.<sup>37</sup> For example, it seems that if a trader was to adopt the logo of the Diana Memorial Fund, this would not amount to passing off. This is because the public would most probably take this to mean that the trader had made a donation to the Diana Fund, rather than that the Fund had any control over the trader's business.<sup>38</sup>

### 3.3.1 Personality merchandising

The expansion of passing off to include situations in which the defendant makes a representation that the claimant has some type of control or responsibility over their goods or services helps to ensure that the action continues to be relevant in the modern commercial environment. It has also given rise to the possibility that celebrities may be able to utilize passing off to control the use that is made of their images or other personal indicia. This is potentially very important given that personality merchandising—that is, the practice whereby celebrities use their names and images to endorse and associate themselves with products and services—has become a common feature of modern marketing and that, at present, UK law refuses to recognize a right of personality.<sup>39</sup>

Despite the flexible nature of the passing off action, it has provided limited protection against traders who appropriate aspects of someone else's personality.<sup>40</sup> In *Lyngstrad v. Annabas Products*,<sup>41</sup> the pop group ABBA complained that the defendant was selling paraphernalia that bore the name and image of the group. Refusing to grant relief, Oliver J

<sup>34</sup> [1996] *RPC* 697; H. Carty, 'Passing off at the Crossroads' [1996] *EIPR* 629, taking the view that Millett LJ's restrictive approach is less in line with existing authorities than Sir Michael Kerr's dissenting judgment.

<sup>35</sup> In so doing, the Court of Appeal criticized *Bulmer v. Bollinger* [1978] *RPC* 79, 117, in which Goff LJ said that the connection must 'lead people to accept them on the faith of the plaintiff's reputation'.

<sup>36</sup> [1996] *RPC* 697, 712–13. <sup>37</sup> *Irvine v. Talksport* [2002] *FSR* 943.

<sup>38</sup> B. Isaac, 'Merchandising or Fundraising? Trade Marks and the Diana, Princess of Wales Memorial Fund' [1998] *EIPR* 44 (use of Diana logo not an indication of source, but rather an indication that the user has given the fund financial support).

<sup>39</sup> H. Beverley-Smith, *The Commercial Appropriation of Personality* (2002). On protection of non-pecuniary or dignitary interests through the law of confidence, see pp. 1140–1.

<sup>40</sup> For other impediments, in particular, the difficulty with demonstrating damage, see below at pp. 873–6.

said that he did not think anyone could reasonably imagine that the pop stars had given their approval for the paraphernalia. He also added that the defendants were not doing 'anything more than catering for a popular demand among teenagers for effigies of their idols'.<sup>42</sup>

The courts in Australia have adopted a more generous approach to the application of passing off to personality and character merchandising. For example, in *Henderson v. Radio Corporation*,<sup>43</sup> the defendants reproduced a picture of the claimants, who were ballroom dancers, on one of their record covers. The Supreme Court of New South Wales held that in so doing the defendants had made a misrepresentation that there was a 'connection' between the claimants and the defendants. This was because 'the class of persons for whom the record was primarily intended would probably believe that the picture of the respondents on the cover indicated their recommendation or approval of the record'.<sup>44</sup>

An even more liberal approach was adopted by the Federal Court of Australia in *Hogan v. Koala Dundee*,<sup>45</sup> where Pincus J said that it was no longer necessary to show misrepresentation to prove passing off. In this case, the claimant, who was the writer and star of the film *Crocodile Dundee*, brought an action against two tourist shops that sold clothing, hats, and T-shirts that were 'of a particularly Australian nature'. The basis of the claimant's complaint was that the defendants had used the name DUNDEE and had also used an image of a koala bear, which, like the hero in the claimant's film *Crocodile Dundee*, was dressed in a sleeveless shirt, wore a bush hat with teeth in the band, and carried a knife. The Court granted the claimant relief, denying that there was a need for a misrepresentation. It grounded the decision on the basis of 'wrongful appropriation of a reputation, or, more widely wrongful association of goods with an image properly belonging to an applicant'.<sup>46</sup>

However, in a second *Crocodile Dundee* case, *Hogan v. Pacific Dunlop*,<sup>47</sup> the full Federal Court reverted to the conventional position that to succeed in a passing off action, the claimant must show that there has been a misrepresentation. Here, the claimant advertised shoes by reference to a particular scene (the knife scene) in the film *Crocodile Dundee*. The Federal Court of Australia said that there was a misrepresentation 'involving use of the image or indicium in question to convey a representation of a commercial connection between the plaintiff and the goods and services of the defendant, which connection does not exist'.<sup>48</sup>

English cases have stuck to the view that passing off requires a misrepresentation. They have also held that while the public does not need to believe that the personality made the goods or services, the public must have thought that the personality endorsed them. As a result, while labelling a product with the words 'official' or 'approved by' a particular personality would probably be treated as a misrepresentation, the unauthorized use of a celebrity's image on an advertisement might or might not.<sup>49</sup> In a similar vein, in the *Elvis Presley* decision,<sup>50</sup> Laddie J said that the public would not assume that the use of the words ELVIS, ELVIS PRESLEY, or the signature ELVISLY YOURS on toiletries and perfumes indicated any connection with Elvis's estate. This was because when people buy such articles, they probably do not care one way or the other who made, sold, or licensed them. Similarly, it has been said that people buying stickers showing the Spice Girls are unlikely to believe that the stickers were published by the band or that the quality of the stickers

<sup>42</sup> Ibid.      <sup>43</sup> [1969] RPC 218.      <sup>44</sup> Ibid., 232.

<sup>45</sup> (1988) 12 IPR 508.      <sup>46</sup> Ibid., 520.      <sup>47</sup> (1989) 12 IPR 225.

<sup>48</sup> Gummow J, at first instance.      <sup>49</sup> *Elvis Presley Trade Marks* [1997] RPC 543, 558.

<sup>50</sup> Ibid.

was authorized by them. This was because the traders who supplied the merchandise were merely responding to a demand ‘for effigies and quotes of today’s idols.’<sup>51</sup>

A somewhat more sympathetic approach to the protection of a celebrity’s image can be seen in the decision of Laddie J in *Irvine v. Talksport*.<sup>52</sup> In this case, a Formula 1 racing driver, Eddie Irvine, brought an action against Talksport for using his image on a promotional brochure (used to attract advertising to the radio station). The brochure comprised a picture of Irvine, that had been modified so that he was listening to a radio bearing the Talksport logo. Irvine brought an action for passing off and Laddie J found in his favour. Laddie J reviewed the cases on personalities and passing off, and held that they indicated that a person might be able to utilize passing off to prevent a misrepresentation by a trader that its products or services had been endorsed by the personality. (In so doing, the judge made it clear that endorsement was a narrower notion than merchandising.) On the facts before him, Laddie J found that Talksport’s brochure had given the impression that Irvine had endorsed the radio station. In particular, Laddie J was impressed by evidence from an associate of Irvine that he sought a free radio from the racing driver, an act that indicated that he believed Irvine had done a deal with the radio station. The Court of Appeal affirmed Laddie J’s decision, emphasizing in particular that the actual image of Irvine listening to the radio gave an impression of endorsement.<sup>53</sup> At best, the case indicates that British courts will be sympathetic to any unauthorized use of a personality’s image or likeness that wrongfully implies endorsement of a trader’s products.

This view was echoed by Birss J in *Robyn Rihanna Fenty v. Arcadia Group Brands*.<sup>54</sup> This was a passing off action brought by Rihanna, who was described by the court as a ‘world famous pop star’ with a ‘cool, edgy image’, against Topshop, the well-known fashion retailer, for selling a T-shirt with a large picture of her on it. Birss J began by reiterating that English law did not recognize a general right for a person, famous or otherwise, to control the reproduction of their image. As a result, Rihanna had to show passing off, which required her to show goodwill, misrepresentation, and damage. As is often the situation in cases involving personalities, the main issue was whether, in selling the T-shirt with the picture of Rihanna on it, Topshop had made a misrepresentation about trade origin. As Birss J stressed, ‘selling a garment with a recognisable image of a famous person is not, in and of itself, passing off’; instead, to constitute passing off, ‘a false belief engendered in the mind of the potential purchaser must play a part in their decision to buy the product’.<sup>55</sup> While there was nothing on the swing tag or the other labelling to suggest that Rihanna had authorized the garment, nonetheless Birss J found that there had been a misrepresentation. In a judgment that reflects a changing and much more realistic attitude about the knowledge of customers about merchandising and endorsement (at least among the 13–30 age group that Rihanna appealed to), Birss J found that a substantial number of the customers who brought the T-shirt would have thought that it ‘was an authorised product . . . approved by Rihanna herself’.<sup>56</sup>

<sup>51</sup> *Halliwell v. Panini SpA* (6 June 1997) (Lightman J), echoing *Lyngstrad v. Annabas Products* [1977] FSR 62 and refusing the claimant an *ex parte* injunction demanding no further sale of the albums without a disclaimer.

<sup>52</sup> [2002] FSR 943. The decision has been regarded by some as marking a shift in judicial attitudes to personality merchandising; see H. Carty, ‘Advertising, Publicity Rights and English Law’ (2004) *IPQ* 209, 240 (describing the case as ‘a radical re-alignment of the tort, at least where image rights are concerned’).

<sup>53</sup> *Irvine v. Talksport* [2003] FSR 619 (CA).

<sup>54</sup> [2013] EWHC 2310 (Ch).

<sup>55</sup> *Ibid.*, [36].

<sup>56</sup> *Ibid.*, [72].

### 3.3.2 Misrepresentations in character merchandising

Character merchandising involves the application of images of cartoon and other fictional characters to merchandise. While the Australian approach has not been followed in the United Kingdom in relation to personality merchandising, it has been more enthusiastically applied to character merchandising. For example, in *Mirage Studios v. Counter-Feat Clothing*,<sup>57</sup> the defendants were found liable for passing off when they applied the claimant's characters, the Teenage Ninja Mutant Turtles, to their clothing. Browne-Wilkinson V-C explained that:

[T]he critical evidence in this case was that a substantial number of the buying public now expects and knows that where a famous cartoon or television character is reproduced on goods, that reproduction is the result of a licence granted by the owner of the copyright or owner of other rights in the character.<sup>58</sup>

As a result, he concluded that sale of the merchandise involved two misrepresentations: first, a (mis)representation to the public that the goods were 'genuine' (that is, that the drawings were the claimants' drawings); and second, a misrepresentation that the goods were licensed.<sup>59</sup> Browne-Wilkinson V-C went on to say that he regarded the Australian authorities as 'sound'.<sup>60</sup>

While the *Ninja Turtle* case has received a mixed reaction,<sup>61</sup> the indications are that the English courts will treat the decision as being limited to its particular facts.<sup>62</sup> As we have seen, the decision has not been extended to personality merchandising cases; nor does it appear to extend to the use of names, as opposed to the use of copyright images.<sup>63</sup> This is because, in the case, the judge distinguished a number of authorities on the ground that they were concerned with the licensing of names in which no copyright subsists, rather than the copyright material.<sup>64</sup> Moreover, even where the merchandising is protected by copyright, the courts have subsequently indicated that to succeed in a passing off action, the claimant must show that the public understood that the goods were licensed *and* that they bought the merchandise on that basis. This can be seen in *BBC Worldwide v. Pally Screen Printing*.<sup>65</sup> The BBC owned copyright and merchandising rights to the popular children's characters known as the Teletubbies. The defendants printed pictures of the Teletubbies on various items such as T-shirts. In response to the BBC's action for passing off, Laddie J explained that to succeed:

[T]he plaintiffs will need to show that they have built up the necessary reputation so that members of the public would look at this type of artwork and consider it to represent the plaintiffs or products made with the plaintiffs' approval. It seems to me that it is quite possible that members of the public will look at T-shirts bearing this artwork and think no more than it is artwork bearing illustrations of well-known television characters without having any regard whatsoever to the source of supply and without having any regard as to

<sup>57</sup> [1991] FSR 145. <sup>58</sup> *Ibid.*, 155.

<sup>59</sup> The reference to 'genuineness' was interpreted by Laddie J as perhaps referring to the creator of the character or his successors: *Elvis Presley* [1997] RPC 543, 553.

<sup>60</sup> The authorities did not, however, include the two *Dundee* cases. For a comparison of English and Australian law, see S. Burley, 'Passing off and Character Merchandising' [1991] EIPR 227, 228.

<sup>61</sup> Wadlow (2011), [7–163], 544, is critical of the decision. More approving sentiments can be found elsewhere: J. Holyoak, 'United Kingdom Character Rights and Merchandising Rights Today' [1993] *J Bus L* 444, 451 (in general arguing that character merchandising is now adequately protected).

<sup>62</sup> *Elvis Presley* [1997] RPC 543, 553. <sup>63</sup> *Nice and Safe Attitude v. Piers Flook* [1997] FSR 14, 21.

<sup>64</sup> See, e.g., *Wombles v. Womble Skips* [1977] RPC 99; *Tavener Rutledge v. Trexapalm* [1975] FSR 179. He also asserted that *Lyngstrad v. Annabas Products* [1977] FSR 62 could be distinguished on that basis.

<sup>65</sup> [1998] FSR 665.

whether or not these T-shirts were put out with the sanction of or under the aegis of the plaintiffs.<sup>66</sup>

Laddie J refused to grant the BBC summary judgment against the defendants because it was ‘not unforeseeable’ that the defendants might succeed.

### 3.4 REVERSE PASSING OFF

‘Reverse’, or ‘inverse’, passing off is the name given to the situation where a trader tries to claim the benefit of another trader’s goods or service to enhance their own reputation.<sup>67</sup> In the classic passing off action, the defendant’s misrepresentation gives rise to a suggestion that the defendant’s goods or services are those of the claimant. However, with reverse passing off, the defendant’s misrepresentation gives rise to the suggestion that the defendant is the source of the claimant’s goods or services (or is somehow responsible for the quality of the claimant’s goods or services). That is, instead of the defendant pretending that their goods are the claimant’s, the defendant claims the claimant’s goods as their own.

It is not clear whether reverse passing off amounts to an actionable wrong.<sup>68</sup> In principle, it depends on whether the standard requirements of the ‘classic trinity’ are met. The problem here is in establishing misrepresentation and damage. If a person merely resells the goods of another trader, this will not usually amount to a misrepresentation. This is the case even if they have added a new sign to the goods. Moreover, given that the claimant-manufacturer will have already placed the goods on the market, it is difficult to see where the damage lies. Although a defendant may derive benefit where they resell the goods, this does not in itself harm the manufacturer. In some circumstances, however, the activities of the reseller may cross into the realm of passing off. A good example of this is where a person represents the claimant’s goods as their own, but subsequently supplies their own goods. For example, in *Bristol Conservatories v. Conservatories Custom Built*,<sup>69</sup> both the claimant and the defendant were engaged in the business of designing and selling conservatories. The defendant’s salesmen showed potential customers photographs of the claimant’s conservatories. In so doing, they led customers to believe that the conservatories were examples of the defendant’s own design and craftsmanship. The defendant’s application to strike out the statement of claim as disclosing no reasonable cause of action was successful at first instance. This decision was, however, overturned by the Court of Appeal. The Court of Appeal held that the defendant had made a misrepresentation that its goods were of the same quality as the claimant’s. The Court added that because the claimant’s goodwill was ‘asserted and demonstrated as the photographs were shown’, it did not matter that the customer might not have known of the claimant. The damage caused was the diversion of sales from the claimant to the defendant. The Court of Appeal took the view that it did not matter that there was no confusion because the misrepresentation ‘left no room for confusion’. Whether it is helpful to categorize the case as one of reverse passing off is a matter of debate.<sup>70</sup>

<sup>66</sup> *Ibid.*, 674.

<sup>68</sup> H. Carty, ‘Inverse Passing off: A Suitable Addition to Passing off?’ [1993] *EIPR* 370.

<sup>69</sup> [1989] *RPC* 455, 464–5. See also *Boehringer Ingelheim KG v. Swingward Ltd* [2004] *EWCA Civ* 129, [55]–[58].

<sup>70</sup> Wadlow (2011), [7–205], 571 (not a nominate tort in its own right, but a further example of an actionable misrepresentation to which the normal principles apply); J. Drysdale and M. Silverleaf, *Passing off: Law and Practice* (1995), [4.14] (doubting that the concept of reverse passing off is of any value).

### 3.5 COMPARATIVE ADVERTISING

‘Comparative advertising’ is the term used to describe advertisements in which the goods or services of one trader are compared with the goods or services of another trader. To show the advertiser’s wares in a favourable light, comparative advertisements usually emphasize differences in things such as price, value, durability, or quality.<sup>71</sup> The question of whether a person engaged in comparative advertising is liable for passing off depends on the nature of the comparison. In some situations, the comparison will not be treated as a misrepresentation. For example, in *Bulmer v. Bollinger*,<sup>72</sup> Goff LJ said that there is no actionable passing off ‘if one says that one’s goods are very suitable to be used in connection with the plaintiffs’. Equally, for a defendant to say that their goods are similar to or better than the claimant’s does not amount to passing off.

In other circumstances, however, comparative advertising may be treated as a misrepresentation. For example, in *McDonald’s Hamburgers v. Burger King*,<sup>73</sup> Burger King advertised its hamburgers in the London Underground with the slogan ‘It’s Not Just Big Mac’. Opinion poll evidence indicated that members of the public treated these as advertisements for a Burger King hamburger called ‘Big Mac’, or as an improved version thereof. The evidence also indicated that people were likely to respond to the advertisement by going to Burger King restaurants and ordering a ‘Big Mac’. Consequently, Whitford J held that the advertisement was a misrepresentation. In *Kimberley Clark v. Fort Sterling*,<sup>74</sup> the defendant promoted its NOUVELLE toilet roll with an offer to placate dissatisfied customers by replacing their NOUVELLE with ANDREX toilet roll. The NOUVELLE packaging said, prominently, ‘Softness guaranteed (or we’ll exchange it for Andrex ®)’; the claimant, who owned the ANDREX brand, claimed that the defendant’s promotion amounted to passing off. The court agreed, holding that this was a misrepresentation because it was likely to induce purchasers into thinking that NOUVELLE was another product ‘from the ANDREX stable or that ANDREX is in some way behind the promotion’.<sup>75</sup>

## 4 IS THE MISREPRESENTATION DECEPTIVE?

As we explained earlier, in deciding whether a misrepresentation has taken place, the key concern is not with the state of the defendant’s mind; instead, it is with the *consequences* of the defendant’s actions and the effect that these have upon the public. In particular, the claimant must show that the defendant’s actions either have confused or are likely to confuse the public or a substantial part thereof. That is, to succeed in a passing off action, the claimant must show that the defendant’s misrepresentation is *deceptive*.<sup>76</sup> Lord Jauncey made this clear in *Reckitt & Colman Products v. Borden*<sup>77</sup> when he said that one of the prerequisites of a successful passing off action was that ‘the misrepresentation has deceived or is likely to deceive and that the plaintiff is likely to suffer damage by such deception. Mere confusion which does not lead to a sale is not sufficient.’

<sup>71</sup> For the position of comparative advertising under the registered trade marks regime and non-legal regulation, see below at pp. 1046, 1072–6.

<sup>72</sup> [1978] RPC 79, 117. <sup>73</sup> [1986] FSR 45. <sup>74</sup> [1997] FSR 877. <sup>75</sup> *Ibid.*, 885.

<sup>76</sup> *Phones4U* [2006] EWCA Civ 244 (Jacob LJ) (contrasting ‘confusion’ and ‘deception’); *Hodgkinson & Corby v. Wards Mobility Services* [1995] FSR 169, 175; *Nice and Safe v. Flook* [1997] FSR 14, 20; *Barnsley Brewery Company v. RBNB* [1997] FSR 462, 467 (confusion but no deception).

<sup>77</sup> [1990] RPC 341, 417.

The question of whether the misrepresentation is deceptive is a question of fact that requires the court to predict how the public will interpret the defendant's actions.<sup>78</sup> It does not matter that the defendant's representation is true, honest, or legitimate if it deceives the public. Equally, it does not matter if the defendant uses their own name, a relevant geographical name, or a descriptive term, if it is used in a way that was deceptive.<sup>79</sup>

In deciding whether the misrepresentation is deceptive, a number of different questions may arise. While the nature and relative importance of each will vary from case to case, these include the following.

- (i) Who must be deceived?
- (ii) How many people must be deceived?
- (iii) When must the deception occur?

After looking at these questions, we will consider the types of evidence that may be used by the courts in this context. We will then look at some of the factors that may be taken into account in deciding whether the misrepresentation is deceptive.

#### 4.1 WHO MUST BE DECEIVED?

The question of whether the misrepresentation operates to deceive the public is largely looked at by the courts through the eyes of the general public.<sup>80</sup> However, where the goods or services are not marketed to the general public, the courts consider the impact that the misrepresentation has upon that part of the public for whom the product or services were intended. Although there are dicta to the effect that the appropriate part of the public is the defendant's customers, the better view is that the 'relevant public' should vary according to the type of misrepresentation being alleged. Thus where the allegation is that the defendant has made a misrepresentation that suggests that the claimant is the source of the defendant's goods, and that the goods of the claimant and the defendant are similar, the court would consider the impact that the misrepresentation has upon the claimant's customers.<sup>81</sup> Where the parties' goods or services are different, so that some other type of connection is being alleged, the court will focus on customers who are familiar with the claimant's activities, but who are in the market for goods and services of the defendant. This kind of approach was adopted in *Harrods v. Harrodian School*,<sup>82</sup> where the relevant public was described by Millett LJ as 'affluent members of the middle class who live in London, shop at Harrods and wish to send their children to fee-paying schools'.

The attributes and skills of the notional customer will vary depending on the facts in question.<sup>83</sup> Indeed, as Lord Oliver said in *Reckitt & Colman*,<sup>84</sup> the 'customers have to be taken as they are found'. In some cases, the relevant public might be quite discerning.

<sup>78</sup> This is a 'jury question': *Harrods v. Harrodian School* [1996] RPC 697, 717; *Neutrogena Corporation v. Golden Ltd* [1996] RPC 473, 482.

<sup>79</sup> *Montgomery v. Thompson* [1891] AC 217, 220.

<sup>80</sup> *Marengo v. Daily Sketch* (1948) 65 RPC 242, 250.

<sup>81</sup> *Okotoks Ltd v. Fine & Country Ltd (formerly Spicerhaart Ltd)* [2012] EWHC 2230 (Ch), [75]. Hildyard J holding that:

[T]he expressions 'the public' or 'people' connote customers or purchasers (actual or prospective) of the claimant or others with whom the claimant has business relations. For these purposes, the expressions 'the public' or 'people' connote customers or purchasers (actual or prospective) of the claimant or others with whom the claimant has business relations.

See further *Okotoks Ltd v. Fine & Country Ltd* [2013] EWCA Civ 672.

<sup>82</sup> [1996] RPC 697, 716. <sup>83</sup> *Reckitt & Colman (Products) v. Borden* [1990] RPC 341, 423.

<sup>84</sup> *Ibid.*, 415–16.

For example, in a decision involving a passing off action between two banks, it was said that ‘potential customers wishing to borrow large sums of money from a bank could reasonably be expected to pay rather more attention to the details of the entity with whom they were doing or seeking to do business.’<sup>85</sup> In other situations, however, the notional customer might be careless and uninterested—for example supermarket shoppers, who apparently spend less than 10 seconds examining each purchase. A defendant cannot escape liability by arguing that customers would not have been misled if they were ‘more literate, careful, perspicacious, wary or prudent’.<sup>86</sup> While the attributes and skills of the notional customer may vary depending on the facts in question, the court will not take account of situations where the notional customer does not care one way or another about the goods that they are buying.<sup>87</sup> If customers are indifferent to the goods that they are purchasing, a claimant will be unable to show that the defendant’s misrepresentation was deceptive. This is because in these circumstances, the misrepresentation has no impact upon the relevant consumers.<sup>88</sup>

#### 4.2 HOW MANY PEOPLE MUST BE DECEIVED?

The next question to consider is how many people must be deceived? It is clear that for an action to succeed, it is not necessary for a claimant to show that *all* of the consumers in the relevant section of the public were deceived by the misrepresentation. As Jacob J said, ‘there is passing off even if most of the people are not fooled most of the time but enough are for enough of the time’.<sup>89</sup> But what is ‘enough’? The courts’ response to this has been that a ‘substantial’ part of the public must be confused. As Falconer J said in *Lego*,<sup>90</sup> passing off only arises if there is a ‘real risk that a substantial number of persons among the relevant sections of the public will in fact believe that there is a business connection between the plaintiff and the defendant’.

This, in turn, gives rise to the further question: what is meant by a ‘substantial’ part of the relevant group? There is no clear answer to this question. For the most part, the courts have defined the term negatively. Thus it is clear that ‘substantial’ does not mean either a large proportion or a majority of the public.<sup>91</sup> For example, in the *Chocosuisse* case, those people confused into thinking that a chocolate bar called SWISS CHALET was made from

<sup>85</sup> *HFC Bank v. Midland Bank* [2000] FSR 176, 185.

<sup>86</sup> *Reckitt & Colman v. Borden* [1990] RPC 341, 415–16; *Clark v. Associated Newspapers* [1998] RPC 261, 271.

<sup>87</sup> As Lightman J said in *Clark v. Associated Newspapers* [1998] RPC 261, 271, ‘no claim lies if they are indifferent or careless as to who is the author’. See also *Politechnika Ipari Szovetkezet v. Dallas Print Transfers* [1982] FSR 529.

<sup>88</sup> This explains Foster J’s exclusion from consideration of a ‘moron in a hurry’: *Morning Star Co-operative Society v. Express Newspapers* [1979] FSR 113. See also *Newsweek v. BBC* [1979] RPC 441, 447 (test is whether ordinary, sensible members of the public would be confused; not sufficient that the only confusion would be to a very small unobservant section of society). The Court of Appeal has employed the touchstone of the notional consumer developed in European trade marks law, i.e. confusion is to be assessed from the point of view of the consumer who is reasonably well informed, reasonably observant, and reasonably circumspect: *Asprey & Garrard v. WRA (Guns) Ltd* [2002] FSR 487, [35].

<sup>89</sup> *Neutrogena Corp. v. Golden Ltd* [1996] RPC 473, 481.

<sup>90</sup> *Lego v. Lemelstrich* [1983] FSR 155, 188. See also *Reed Executive v. Reed Business Information* [2004] RPC 767, 797, [111]; *Phones4U* [2006] EWCA Civ 244, [17]; *Knight v. Beyond Properties Pty Ltd* [2007] FSR 34, [80].

<sup>91</sup> *Neutrogena v. Golden Ltd* [1996] RPC 473 (claimant had only 0.25 per cent of the market, but it was held that a substantial number of members of the public would be misled into thinking the defendant’s products were those of the claimant).

Swiss chocolate were fewer than those who had not been deceived. Nevertheless, this was substantial enough to amount to a passing off.<sup>92</sup> The Court of Appeal has said that references to ‘more than *de minimis*’ and ‘above a trivial level’, which had been used in some cases, were best avoided.<sup>93</sup> Beyond these comments, the courts have been unwilling to give much guidance as to what ‘substantial’ entails.

#### 4.3 WHEN MUST THE DECEPTION OCCUR?

One issue that remains largely unexplored in English law relates to the question: at what point of time must the public be misled? The way in which this question is answered depends on the facts of the case. In most cases, the answer is straightforward: the confusion must occur at the time of purchase. This can be seen in *Bostik v. Sellotape GB*.<sup>94</sup> The claimant in this case manufactured and sold a blue reusable adhesive called BLU-TAK. To compete with the claimant, the defendants launched a blue-coloured adhesive called SELLOTAK, which was sold in a similarly sized wallet to that of BLU-TAK. Except for being approximately the same size, the competing products were ‘wholly different in appearance’. As a result the claim for passing off rested entirely on the colour of the tack. The court held that the defendant had not passed its product off as BLU-TAK when it sold blue adhesive putty. The reason for this was that the defendant’s blue adhesive putty was not visible at the point of sale.

In other cases, the relevant time to consider whether consumers were deceived is the point in time when the product is consumed or used, rather than when it is purchased. For example, in relation to an action for passing off brought in relation to the authorship of a newspaper story, it was said that the relevant time to consider whether the public is confused is when the person reads the story, rather than when the newspaper was purchased.<sup>95</sup> Post-sale confusion may also be significant in other environments. This may be the case, for example, with designer goods such as clothes or kitchen equipment, where the manufacturer’s label is often visible long after purchase.<sup>96</sup>

One question that remains unresolved is whether there is passing off where a defendant’s misrepresentation causes immediate confusion, but that confusion vanishes by the time the consumer makes the decision whether to purchase the defendant’s goods or engage the defendant’s services. This will be a realistic scenario as regards transactions that are preceded by lengthy formalities, etc., such as those involving financial services. In *HFC Bank v. Midland Bank*,<sup>97</sup> it seemed that a number of customers had mistakenly gone to Midland because it was using the name HSBC, which was similar to HFC. However, in no case did customers do business with Midland without first having been disabused of the error. Lloyd J accepted that to amount to passing off, the deception must be more than momentary or inconsequential,<sup>98</sup> but beyond that declined to venture a view. Subsequent

<sup>92</sup> *Chocosuisse v. Cadbury* [1999] RPC 177, 143, aff’d by the Court of Appeal on the basis that the conclusion was not one that could be regarded as ‘perverse’: [1999] RPC 826 (CA), 838.

<sup>93</sup> *Neutrogena v. Golden Ltd* [1996] RPC 473, 494.

<sup>94</sup> [1994] RPC 556. See also *Julius Sämaan Ltd v. Tetrosyl Ltd* [2006] FSR 42, [118] per Kitchen J (no passing off where air freshener shaped like a Christmas tree was sold in different packaging and at a higher price than the claimant’s pine tree).

<sup>95</sup> *Clark v. Associated Newspapers* [1998] RPC 261, 271; *Marengo v. Daily Sketch* (1948) 65 RPC 242, 250.

<sup>96</sup> *Chelsea Man Menswear v. Chelsea Girl* [1987] RPC 189, 204 (Slade LJ, when considering risk of damage, observed that labelled garments can readily move about the country with their wearers).

<sup>97</sup> [2000] FSR 176, 186, 202; cf *Phones4U* [2006] EWCA Civ 244, [21] (*HFC* was a case ‘on its facts’).

<sup>98</sup> See also *Cadbury Schweppes Pty Ltd v. Pub Squash* [1980] UKPC 30, [1981] 1 WLR 193; *Woolley v. Ultimate Products* [2012] EWCA Civ 1038, [4] per Arden LJ (‘The misrepresentation must be more than

cases seem to have taken a broader view of the sorts of confusion encompassed by passing off to include so-called ‘initial interest confusion’ (or ‘switch selling’). In *Fine and Country v. Otokoks*, Hildyard J observed:

Damage may occur even if deception is dispelled before the moment of purchase (or other commitment), if the claimant’s goodwill is nonetheless harmed; and dispelled deception is actionable accordingly. Thus damage caused by passing off may successfully be claimed if a customer is deceived into going into one shop thinking it to be another if it can be established that, but for the deception, he or she might have gone in to the claimant’s shop.<sup>99</sup>

Arnold J reached a similar conclusion in *Och-Zif Management Europe v. OCH Capital*,<sup>100</sup> noting that it did not necessarily matter that a defendant had ceased to be misled by the time a transaction was concluded: if a ‘defendant successfully induces the public to do business with him by making a misrepresentation then it ought not to matter that the falsity of the representation would become apparent at some stage’.

Even if such deception is treated as sufficient to give rise to passing off, it remains necessary for a claimant to show a likelihood of damage. In *Knight v. Beyond Properties*,<sup>101</sup> Richards J considered that there was no deception where the defendant called its television programme *Mythbusters*. The claimant had written and sold children’s books under the name MYTHBUSTERS, and the judge acknowledged that some people who had read the books might initially have wondered whether the programme was from the same source. However, he did not think that the initial confusion (which would have quickly been dispelled by the content of the programmes, which were directed at ‘lads and dads’) was such as to cause the claimant any damage.

#### 4.4 EVIDENCE OF CONFUSION

While the question of whether there is a likelihood of confusion is ultimately decided by the court,<sup>102</sup> the courts frequently base such decisions on evidence introduced by the parties. Four types of evidence have been commonly used, often in combination: evidence of actual confusion of consumers; trade evidence; expert evidence; and survey evidence. Processes of proof in trade mark and passing off cases have received quite some judicial scrutiny of late.<sup>103</sup> The courts have been especially concerned to keep the costs of proceedings down by ensuring that only evidence that has some probative value is led. This means that in future, courts will probably focus less on survey evidence, in particular.<sup>104</sup>

transitory: it is not sufficient that a purchaser is misled initially but his misunderstanding is dispelled before any material step is taken. In this case, for example, trade purchasers who were confused as to HENLEYS watches checked the position with Mr Woolley so that any misrepresentation to them was not operative’); *Newsweek v. BBC* [1979] RPC 441, 449.

<sup>99</sup> *Fine and Country v. Otokoks* [2012] EWHC 2230 (Ch), [91].

<sup>100</sup> [2010] EWHC 2599 (Ch), [2011] FSR 11, [156], citing Wadlow (2004), [7–39]; approved and applied in *Doosan Power Systems Ltd v. Babcock International Group* [2013] EWHC 1364 (Ch), [166], [178].

<sup>101</sup> [2007] FSR 34, [80]–[84].

<sup>102</sup> *North Cheshire & Manchester Brewery v. Manchester Brewery* [1899] AC 83, 86; *Mothercare v. Penguin Books* [1988] RPC 113, 116. The court must not surrender its own independent judgment to any witness or number of witnesses: see *Spalding v. Gamage* (1915) 32 RPC 273, 286–7 per Lord Parker. But note that it is the court’s (rather than the judge’s personal) judgment as to whether it would be deceived that is relevant: *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 136.

<sup>103</sup> *Marks & Spencer plc v. Interflora Inc.* [2012] EWCA Civ 1501, [2013] 2 All ER 663; *Interflora Inc v. Marks & Spencer plc* [2013] EWCA Civ 319.

<sup>104</sup> A court might be more amenable to survey evidence in a passing off case because the question to be answered is different from that in a trade mark infringement action: *Marks & Spencer plc v. Interflora Inc.* [2012] EWCA Civ 1501, [26]–[34].

As Lewison LJ said, ‘the classic way in which passing off cases are decided’ is by reference to ‘the evidence of the live witnesses and [the judge’s] own independent assessment’.<sup>105</sup>

While there is no requirement that to succeed in a passing off action, the claimant must show evidence of actual deception, evidence that people have actually been misled will be highly significant.<sup>106</sup> The lack of such evidence may also be probative, but only where the products have been on the market for some time.<sup>107</sup> If, after a lengthy period of time, there is no evidence of actual confusion, this will weigh against a claimant, primarily because it suggests that there is no confusion.<sup>108</sup> However, before inferring a lack of confusion from this, it is important to note that a lack of evidence of confusion might arise for other reasons. For example, it may simply be because the relevant consumers have not been found or are not willing to come forward.

The courts have also been willing to accept expert evidence in relation to matters about which the court is ignorant and needs to be informed. Often, this involves information about the particular trade involved and includes evidence of things such as the class of people, how the goods are displayed or purchased, the numbers sold,<sup>109</sup> and the amount of attention that average shoppers give to the appearance of products at the point of purchase.<sup>110</sup> Thus, in deciding whether the public was deceived into thinking that a chocolate bar called SWISS CHALET was made from Swiss chocolate, the Court of Appeal made extensive use of the expert evidence of the person responsible for selecting products (notably the chocolate) for Marks & Spencer.<sup>111</sup> In another decision, the court went so far as to admit expert evidence as to whether consumers were likely to be deceived.<sup>112</sup> Although this is the very question that the court itself must determine, and therefore one on which evidence is not normally admitted, Browne-Wilkinson V-C saw no good reason why the court should not be assisted by experts in making that judgment.

It has long been commonplace for the courts to admit and rely upon survey evidence when deciding whether the public is deceived by a misrepresentation.<sup>113</sup> The courts have been careful to scrutinize the nature of the survey.<sup>114</sup> To this end, the courts frequently hear evidence from experts criticizing the methodology of the survey undertaken. The courts also scrutinize the survey to take account of issues such as who was interviewed, the questions asked, and whether or not the interviewees were prompted.<sup>115</sup> Following the Court of Appeal decision in *Interflora v. Marks & Spencer*,<sup>116</sup> however, the use of such evidence must now be justified. As Lewison LJ explained, a judge should not admit survey

<sup>105</sup> *Fine & Country v. Okotoks* [2013] EWCA Civ 672, [75].

<sup>106</sup> *Harrods v. Harrodian School* [1996] RPC 697, 716. See also *Marks & Spencer plc v. Interflora Inc.* [2012] EWCA Civ 1501, [136], [137(i)]; *Marks & Spencer plc v. Interflora Inc.* [2013] EWCA Civ 319, [10], [20] (evidence of real-world confusion, in the sense of spontaneous reaction to the allegedly infringing sign, could be of real value).

<sup>107</sup> *Phones4U* [2006] EWCA Civ 244, [41]–[47].

<sup>108</sup> *Kimberley Clark* [1997] FSR 877, 887–9. See also *Antec International v. South-Western Chicks (Warren)* [1998] FSR 738, 745.

<sup>109</sup> *Slazenger & Sons v. Feltham & Co.* (1889) 6 RPC 531, 534.

<sup>110</sup> *Kimberley Clark* [1997] FSR 877, 884. <sup>111</sup> *Chocosuisse v. Cadbury* [1999] RPC 826, 836.

<sup>112</sup> *Guccio Gucci SpA v. Paolo Gucci* [1991] FSR 89, 91; *Sodastream v. Thorn Cascade Co.* [1982] RPC 459, 468.

<sup>113</sup> It seems that the problem of survey evidence being excluded because it is hearsay has been avoided. This has been achieved by treating surveys as situations that do not involve proof of the truth of the opinion stated, so much as its existence: *Lego v. Lemelstrich* [1983] FSR 155, 178–9. See, e.g., Wadlow (2011), [10–031]–[10–035], 888–90. In any case, hearsay evidence is admissible in civil cases: Civil Evidence Act 1995, s. 1.

<sup>114</sup> *Imperial Group PLC v. Phillip Morris* [1984] RPC 293 (the Whitford Guidelines); *Interflora Inc. v. Marks & Spencer plc* [2012] EWCA Civ 1501, [61] per Lewison LJ.

<sup>115</sup> *Mothercare v. Penguin* [1988] RPC 113, 117 per Dillon LJ. Even when flawed, some courts sometimes still find surveys to be ‘qualitatively valuable’, although others find surveys unhelpful: *Kimberley Clark* [1997] FSR 877, 886–7.

<sup>116</sup> [2013] EWCA Civ 319.

evidence unless satisfied that the survey is likely to be of real value and that the likely value of the evidence justifies the cost.<sup>117</sup> It seems that it will rarely be so.<sup>118</sup>

#### 4.5 FACTORS TO BE TAKEN INTO ACCOUNT IN DECIDING WHETHER THE MISREPRESENTATION IS DECEPTIVE

In deciding whether a defendant's misrepresentation is deceptive, the court will take a number of factors into consideration, including:

- (i) the strength of the public's association with the claimant's sign;
- (ii) the similarity of the defendant's sign;
- (iii) the proximity of the claimant's and defendant's fields of business;
- (iv) the location of the claimant's and defendant's businesses;
- (v) the characteristics of the market;
- (vi) the intention of the defendant;
- (vii) whether the defendant has made a disclaimer; and
- (viii) whether the defendant is attempting a parody or satire.

We will consider these in turn. It is important to note that the relative importance of each of these will vary according to the facts in question and that the various factors are often closely interrelated.

##### 4.5.1 The strength of the claimant's sign

One factor that will influence a court when deciding whether a misrepresentation is deceptive is the relative strength of the claimant's sign. If the claimant's mark is highly distinctive, the courts are more likely to find that the use of similar marks in a different field of trading is likely to cause confusion. The classic example of this is provided by the *Lego* case,<sup>119</sup> where it was held that the claimant's mark LEGO for children's toys was so strong that confusion resulted from use of the name on coloured plastic garden equipment.

Where a mark or sign is less distinctive, slight differences between the claimant's and the defendant's marks, or between their fields of trading, may mean that there is no passing off. Where a claimant has adopted a descriptive word as a mark, a defendant may be able to avoid passing off by changing the word slightly.<sup>120</sup> Thus where a claimant used the term FURNITURELAND, the court refused to hold a furniture retailer liable for passing

<sup>117</sup> *Ibid.*, [26].

<sup>118</sup> *Zee Entertainment Enterprises Ltd v. Zeebox Ltd* [2013] EWHC 1644 (Ch) (rejecting an application to adduce survey evidence of the views of UK's Asian community, bearing in mind the costs of the survey—£150,000 out of total expected costs of £1 million—its probative value, and that inferences the court would be able to draw from other 'primary' evidence). But note Birss J's view that a survey may be useful in 'an intrinsically weak passing off case': *ibid.*, [54].

<sup>119</sup> *Lego v. Lemelstrich* [1983] FSR 155, 187; *Antec International v. South-Western Chicks (Warren)* [1998] FSR 738, 747.

<sup>120</sup> *Office Cleaning Services v. Westminster Window and General Cleaners* (1946) 63 RPC 39. In *Phones 4u Ltd v. Phone4u.co.uk. Internet Ltd* [2007] RPC 5, [21], Jacob L explained that:

[T]here are cases wherewhat at first sight may look like deception and indeed will involve deception, is nonetheless justified in law. I have in mind cases of honest concurrent use and very descriptive marks. Sometimes such cases are described as 'mere confusion' but they are not really—they are cases of tolerated deception or a tolerated level of deception.

off for using the name FURNITURE CITY.<sup>121</sup> In contrast, BUSINESSPLAN BUILDER for software was held to be sufficiently similar to BIZPLAN BUILDER to constitute passing off. This was because BIZPLAN BUILDER was not wholly descriptive, the words ‘Biz’ and ‘Business’ were virtually interchangeable, and the capital ‘P’ and the style of script were common to both.<sup>122</sup>

#### 4.5.2 The similarity of the signs

Another factor that may influence the court when considering whether a misrepresentation deceives the public is the similarity of the signs. It is important to note that the approach adopted by the courts in deciding whether the signs are similar always depends on the facts in hand. As such, the points below should be treated as providing no more than general guidance.

In deciding whether two signs are similar enough to cause confusion, the marks are rarely looked at side-by-side. Instead, the courts tend to ask the hypothetical question: if a person was to see the signs separately, would they mistake the defendant’s product for that of the claimant? When deciding whether signs are similar, the courts also tend to look at the signs as a whole and in the context in which they are used. The impact that this has upon the scope of passing off can be seen, for example, in *Wagamama v. City Centre Restaurants*.<sup>123</sup> The claimant in this case ran a chain of Japanese restaurants called WAGAMAMA. Laddie J held that the defendant was liable for passing off when the defendant used the name RAJAMAMA for its chain of Indian restaurants. The judge was influenced by the similar form (the shared second half) of the word, which might give an impression of similarity and connection. This was important in an area in which it was common for recommendations to be made orally and in which recollections were imperfect.

The fact that signs are looked at as a whole has important ramifications where only part of the claimant’s sign or mark is appropriated. Where this occurs, the likelihood of there being a passing off depends on the relative distinctiveness of the element that is different. It also depends on the importance that consumers place on the part when purchasing the product in question. For example, where the distinctive feature of the claimant’s get-up for water bottles was that the bottles were cobalt blue and were made in a particular shape, it was held that the defendant was not liable for passing off when it sold water in cobalt-blue bottles of a very different shape.<sup>124</sup> This can be usefully contrasted with *Reckitt & Colman*<sup>125</sup> which, as we saw earlier, was a passing off action in relation to the get-up of lemon-juice containers. While the shape, colour, and size of the two containers were the same, the labels on the two products were different. Nonetheless, the courts held that there had been passing off. This was because the labels were only a minor part of the get-up and not an element to which a customer would pay particular regard.

In judging the similarity of signs, the courts sometimes emphasize the ‘idea of the mark’—that is, they do not focus on the detail of the mark so much as the general idea that it conveys. For example, in one case the shared idea of ‘seabirds’ was a significant factor in holding that the defendant had passed its PUFFIN biscuits off as those of the claimant,

<sup>121</sup> *Furnitureland v. Harris* [1989] FSR 536, 539–40; *Associated Newspapers Ltd v. Express Newspapers* [2003] FSR 51 (the *Mail* and the *London Evening Mail*); *Evegate Publishing Ltd v. Newsquest Media (Southern) Ltd* [2013] EWHC 1975 (Ch), [170]–[177] (no deception of consumers of the magazine *South-East Farmer* as a result of the publication of *The Southern Farmer*).

<sup>122</sup> See also *Jian Tools for Sales v. Roderick Manhattan Group* [1995] FSR 924.

<sup>123</sup> [1995] FSR 713; *Neutrogena v. Golden Ltd* [1996] RPC 473.

<sup>124</sup> *Ty Nant Spring Water v. Simon Feeney Associates* (28 April 1998), Scott VC refusing interlocutory injunction where both used bottles of the same colour (cobalt blue).

<sup>125</sup> *Reckitt & Colman v. Borden* [1990] RPC 341, 423.

who sold its biscuits under the name PENGUIN.<sup>126</sup> Given the type of audience in question and the similarity of the get-up, the court held that a substantial number of customers would have been deceived into incorrectly thinking that the biscuits were produced by the same manufacturer.

#### 4.5.3 The proximity of the claimant's and the defendant's fields of business

For some time, it was thought that to succeed in a passing off action, the claimant and defendant had to share 'a common field of activity'. Thus where a radio presenter's name was used for a breakfast cereal, it was held that there was no passing off. This was because the fields of radio presentation and the sale of breakfast cereals did not overlap.<sup>127</sup> However, even at its inception, the need to show a common field of activity was difficult to reconcile with a number of earlier decisions.<sup>128</sup> It has since been reinterpreted,<sup>129</sup> diluted,<sup>130</sup> and ultimately declared to be heretical.<sup>131</sup> If a claimant can demonstrate a misrepresentation and likelihood of damage to their goodwill, they will succeed; there is no additional requirement that they need to establish a common field of activity.

Having said this, it is clear that the ability to demonstrate a 'common field of activity' will greatly assist a claimant's action for passing off. This is because if two traders share a common field of activity, it will be easier for a court to hold that there is a misrepresentation that is likely to deceive the public and thus cause damage to the claimant.<sup>132</sup> Indeed, the abandonment of the requirement for a common field of activity has meant that a comparison of the trade activities of the parties is a factor that is taken into account in determining the likelihood of deception. The similarity of the fields also interacts with other factors, such as the distinctiveness of the claimant's sign.

The courts have adopted a liberal approach when deciding whether the claimant and defendant operate in the same field. For example, in one decision the use of CARFAX for spare parts for motor vehicles was held to be likely to amount to a passing off, given the claimant's plans to launch a traffic information service under the same name.<sup>133</sup> Similarly, a claimant who used the name MARIGOLD for household rubber gloves was granted an injunction to prevent the defendant from using the mark on toilet tissue.<sup>134</sup> The court was confident that a customer—or, more specifically a 'housewife'—who was familiar with the claimant's gloves would expect toilet roll sold under the same name to be a product of the same business. In a trade mark case, however, the Registry took the view that the owner of the EVER READY mark for batteries would not be able to succeed in a passing off

<sup>126</sup> *United Biscuits v. Asda* [1997] RPC 513. <sup>127</sup> *McCulloch v. May* (1948) 65 RPC 58.

<sup>128</sup> See, e.g., *Eastman Photographic Materials Co. v. John Griffiths Cycle Corp.* (1898) 15 RPC 105 (cameras and bicycles); *Walter v. Ashton* [1902] 2 Ch 282 (*The Times* newspaper and bicycles); as argued by J. Philips and A. Coleman, 'Passing Off and the Common Field of Activity' (1985) 101 LQR 242 and accepted by Millett LJ in *Harrods v. Harrodian School* [1996] RPC 697, 714.

<sup>129</sup> In the 'Abba' case, *Lyngstrad* [1977] FSR 62, Oliver J interpreted *McCulloch* as merely requiring a 'real possibility of confusion'.

<sup>130</sup> *Lego v. Lemelstrich* [1983] FSR 155.

<sup>131</sup> *Mirage v. Counter-Feat* [1991] FSR 145, 157 per Browne-Wilkinson V-C (referring to the common field of activity theory as discredited); *Harrods v. Harrodian School* [1996] RPC 697; *Irvine v. Talksport* [2002] FSR 943.

<sup>132</sup> *Nice and Safe v. Flook* [2002] FSR 943, 21 per Robert Walker J ('the *Lego* case, though it illustrates a relaxation of the common field of activity concept does not mark its extinction. It must still be very relevant to the likelihood of deception'); *Oasis Stores' Trade Mark Application* [1998] RPC 631, 644 (where the fields of activity are far apart, the burden of establishing a likelihood of confusion or deception will be significantly greater).

<sup>133</sup> *BBC v. Talbot* [1981] FSR 228.

<sup>134</sup> *LRC v. Lila Edets* [1972] FSR 479.

action against a person who used the same words for condoms.<sup>135</sup> Consequently, the mark was registerable for condoms.

#### 4.5.4 The location of the claimant's and defendant's businesses

Goodwill is recognized as being local and, in principle, there is no actionable misrepresentation where a person uses the sign in a different geographical area. This can be seen from the decision of *Bignell v. Just Employment Law Ltd.*<sup>136</sup> In this case, the claimant was a solicitor specializing in employment law, who had practised for about ten years in Guildford under the name JUST EMPLOYMENT. The defendant was a Scottish company, incorporated in 2004 as Just Employment Law Ltd (JEL). When the defendant ran a radio campaign on Capital Radio, a number of listeners contacted Bignell's office on the assumption that it was his firm's advertisement, whereupon he sued JEL, alleging passing off. There was no evidence of anyone contacting the defendant in the belief that it had anything to do with the claimant's firm. Deputy Judge Engelhart QC dismissed the claim, finding that Bignell's goodwill was inherently local.<sup>137</sup> The claim for passing off failed, because there was no actual damage, only some confusion, which was to be expected from two such similar names. However, the court left open the possibility that incidental passing off might occur if JEL were to open an office and solicit work near Guildford.

#### 4.5.5 The characteristics of the market

In deciding whether a misrepresentation is deceptive, the courts take account of 'the background of the type of market in which the goods are sold, the manner in which they are sold, and the habits and characteristics of purchasers in that market'.<sup>138</sup>

The characteristics of the market have a particularly pronounced impact on decisions as to whether two signs are similar. Where consumers are well informed or particularly attentive to detail,<sup>139</sup> small differences between signs may be sufficient to avoid a finding of deception. For example, the defendant's use of *Mother care/Other care* as a title for its book was held not to be a misrepresentation that the book was connected with the shop MOTHERCARE.<sup>140</sup> As Bingham LJ explained, the claimant's lettering was not employed, the words were not spelled as one word, the PENGUIN mark was liberally used on the books, and no one who was familiar with the claimant's literary output could see any similarity of style, content, or format. Bingham LJ added that reasonably literate people would not see the title as an indication that the contents bore any reference to the claimant. The better the consumer's memory for detail, the closer the marks must be to cause deception.

Ultimately, the level of detail remembered by the consumer will depend on the goods or services in question. While there may be exceptions, the courts do not normally assume that consumers have a perfect memory of the goods in question. Instead, they tend to assume that the notional consumers have a vague and hazy memory of the goods or services—that is, it is often assumed that consumers have 'imperfect recollection'. Consequently, where a defendant adds laudatory or commonplace words such as 'International' or 'Super' to a name, this will not mean that they will be able to escape

<sup>135</sup> *Oasis Stores' Trade Mark Application* [1998] RPC 631 (in the context of TMA 1994, s. 5(4)).

<sup>136</sup> [2007] EWHC 2203 (Ch), [2008] FSR 125. <sup>137</sup> *Ibid.*, 145–7.

<sup>138</sup> *Reckitt & Colman v. Borden* [1990] RPC 341, 415–16.

<sup>139</sup> Although evidence as to consumer behaviour might reveal that, even with elite goods, consumers are oddly inattentive: *Guccio Gucci v. Gucci* [1991] FSR 89.

<sup>140</sup> *Mothercare v. Penguin* [1988] RPC 113, 121–2.

liability.<sup>141</sup> The reason for this is that while the addition of the prefix may mean that the signs are not identical, nonetheless they may be similar enough to deceive a consumer with a hazy and imperfect memory. It is usually assumed that consumers pay little attention to detail in purchasing cheap necessities in supermarkets.<sup>142</sup> It will also usually be assumed that non-English-speaking audiences will pay little attention to verbal or textual, as opposed to visual references.<sup>143</sup>

#### 4.5.6 The intention of the defendant

It is well established that it is not a prerequisite to liability that the claimant be able to show that the defendant intended to pass their goods off as those of the claimant.<sup>144</sup> However, it will assist a claimant if they can show that a defendant has acted fraudulently.<sup>145</sup> In these circumstances, the likelihood of deception is more readily inferred. This is because the defendant is assumed to have achieved their goal.<sup>146</sup> Occasionally, a similar attitude has been taken to a defendant who makes a conscious decision to live dangerously and use a sign as close to that of the claimant as is legally possible.<sup>147</sup>

#### 4.5.7 Disclaimers

Because the representation is to be viewed in context, it is sometimes possible for a defendant to correct any misunderstandings that their actions may potentially create.<sup>148</sup> For example, a defendant was able to avoid what would otherwise have been passing off by placing the word 'sliced' in front of the claimant's distinctive designation 'Parma ham'. This was held to be sufficient to counteract the potential misrepresentation.<sup>149</sup>

It is a question of fact whether a defendant succeeds in correcting any misunderstandings the public may have as a result of their misrepresentation.<sup>150</sup> The relative effectiveness of a disclaimer depends on a number of things. To be effective, a disclaimer must be as 'bold, precise and compelling as the trade description itself and must be as effectively brought to the notice of any person to whom the goods may be supplied'.<sup>151</sup> In effect, the disclaimer must negate the misrepresentation. The precise form that the disclaimer needs to take will depend upon the nature of the misrepresentation. In the old case of *Edge v. Nicholls*,<sup>152</sup> the claimant produced distinctive calico bags. The defendant produced a calico bag with a similar get-up to the claimant's, to which it added a label saying NICHOLLS. The disclaimer was ineffective because consumers of the goods (being the 'poorer classes') relied on the get-up, rather than the name of the product.

<sup>141</sup> *Pontiac Marina* [1998] FSR 839 (Court of Appeal of Singapore); *Antec International* [1998] FSR 738, 745.

<sup>142</sup> *Kimberley Clark* [1997] FSR 877, 884.

<sup>143</sup> *Modus Vivendi v. Keen (World Marketing)* [1996] EIPR D-82.

<sup>144</sup> *Chocosuisse v. Cadbury* [1998] RPC 117, 137.

<sup>145</sup> *Burberrys v. Cording* (1909) 26 RPC 693, 701.

<sup>146</sup> *Slazenger v. Feltham* (1889) 6 RPC 531, 538; *Irvine v. Talksport* [2003] FSR 619. In *Parker Knoll v. Knoll International* [1962] RPC 265, 290, Lord Devlin questioned the basis of the rule, stating: '[I]t is not easy to see why the defendant's own estimate of the effect of his representation should be worth more than anybody else's. It seems probable that the rule is steeped in history rather than in logic.' *Slazenger* was applied by the Court of Appeal in *L'Oréal v. Bellure* [2008] RPC 9.

<sup>147</sup> *United Biscuits v. Asda* [1997] RPC 513.

<sup>148</sup> *Chivers v. Chivers* (1900) 17 RPC 420.

<sup>149</sup> *Consorzio Parma v. Marks & Spencer* [1991] RPC 351, 371 *per* Nourse LJ, 374 *per* Balcombe LJ, and 379 *per* Leggatt LJ.

<sup>150</sup> The public can be surprisingly easily confused, e.g. confusing 'elderflower champagne' with champagne: *Taittinger v. Allbev* [1993] FSR 641.

<sup>151</sup> *Norman v. Bennett* [1974] 1 WLR 1229, 1232 (a case on the Trade Descriptions Act 1968); *Clark v. Associated Newspapers* [1998] RPC 261, 272; cf. *Allen v. Redshaw* [2013] EWPC B1, [35]-[41] (disclaimer ineffective).

<sup>152</sup> [1911] AC 693.

The point in time at which the disclaimer is communicated to the consumer will also influence whether or not it is effective. As a general rule, the disclaimer must reach the relevant consumer before the misrepresentation brings about the requisite damage. Thus a disclaimer will be ineffective where customers have already been lured into examining the defendant's product as a result of the defendant's use of the claimant's name. Another case exemplifying the importance of the timing of the disclaimer is *Associated Newspapers v. Insert Media*.<sup>153</sup> It will be recalled that by placing advertising inserts inside the claimant's newspaper without its permission or knowledge, the defendant was held to be liable for passing off. In response, the defendant indicated that it would be prepared to include on its inserts a statement to the effect that the material did not appear with the approval or knowledge of the newspaper publishers. Browne-Wilkinson V-C said that this would not nullify the misrepresentation. The reason for this was that:

[The] inclusion in the insert of a disclaimer of that kind would be most unlikely to come to the attention of a person reading the advertisement contained on the insert. It is just inappropriate in this field for the matter to be corrected by a disclaimer which is unlikely to come to the attention of the reader and may well confuse him further if it does come to his attention.<sup>154</sup>

A disclaimer may also fail for the simple reason that it is likely to become detached from the misrepresentation and, as a result, will be unable to nullify the misrepresentation.<sup>155</sup>

#### 4.5.8 Parody

One area in which special considerations may apply is where the defendant sets out to parody or satirize the claimant's goods or services (or some more general target).<sup>156</sup> In these cases, the owner of the goods that have been parodied may bring a passing off action. The key problem here is that for a parody or satire to be effective, the audience needs to understand that the defendant's aim is to ridicule the original. If a parody is effective, there will normally be no misunderstanding and hence no possibility of confusion. This can be seen from *Miss World v. James St Productions*.<sup>157</sup> The claimants in this case, who were the proprietors of goodwill in the 'Miss World' beauty contest, sought to prevent the showing of a film entitled *Miss Alternative World*, which was described as a spoof of the Miss World pageant, with sado-masochistic overtones.<sup>158</sup> The Court of Appeal declined to intervene on the ground that there was no danger that ordinary members of the public would be confused.

However, any confidence that parody will not amount to passing off must now be shaken by the *Alan Clark* case.<sup>159</sup> It will be recalled that in this decision, the politician and author Alan Clark wished to prevent the *Evening Standard* from publishing a satirical column called 'Alan Clark's Secret Diaries' that bore Clark's name and photograph.<sup>160</sup> The main issue was whether Clark could establish that there had been a misrepresentation or a 'false attribution'.<sup>161</sup> In turn, this required Clark to establish that a substantial number of

<sup>153</sup> [1991] 3 All ER 535.      <sup>154</sup> Ibid., 542.

<sup>155</sup> In *Reckitt & Colman v. Borden* [1990] RPC 341, 423 per Lord Jauncey, the label was not effective to prevent misrepresentation because it would easily be detached from the product.

<sup>156</sup> For consideration of parody in the context of copyright and trade mark infringements, see Chapters 8 and 36. For reflections, see M. Spence, 'Intellectual Property and the Problem of Parody' (1998) 114 LQR 594.

<sup>157</sup> [1981] FSR 309.      <sup>158</sup> Ibid., 310.

<sup>159</sup> *Clark v. Associated Newspapers* [1998] RPC 261.      <sup>160</sup> See Fig. 10.1, p. 281 above.

<sup>161</sup> Clark also based his claim on CDPA 1988, s. 84 (false attribution of authorship). On this, see p. 281 above. It is interesting to note that the constituents of false attribution in s. 84 were treated as different from those under the law of passing off, with s. 84 requiring consideration.

readers of the *Evening Standard* had been, or were likely to have been, misled in a manner that was more than momentary and inconsequential. Looking at the column and having regard to the evidence of the witnesses, Lightman J held that a substantial body of readers would be misled. The counter-messages (or disclaimers) that appeared on the column, such as the use of the word ‘secret’ and the statement that ‘Peter Bradshaw imagines how the great diarist might record’, were said not to be sufficiently forthright to counteract the suggestion that the claimant was the author of the column. As one commentator rightly observed, as a result of this decision ‘[t]he author of even the most obvious parody cannot assume that his work is [not] a misrepresentation under the law of passing off’.<sup>162</sup>

## 5 PROVIDING DECEPTIVE MEANS OR INSTRUMENTS OF FRAUD

It is important to note that an action for passing off can not only be brought against a person who carries out the act of misrepresentation, but also against someone who provides the means or facilities that enable the passing off to take place in the first place. This can be seen, for example, in *Lever v. Goodwin*,<sup>163</sup> where the claimant sought relief against a defendant who had been selling soap in a similar get-up. In the circumstances, while consumers might have been deceived by the similarity of the get-up, the defendant did not sell the soap directly to the public; instead, they only sold the soap to retail buyers, who, in turn, sold the soap to members of the public. The problem for the claimant was that the retailers were not deceived about the origin of the goods: they knew exactly what they were purchasing. The defendant argued that because they did not sell the soap directly to the public and because the retailers were not confused, they were not liable for passing off. Chitty J, whose judgment was approved on appeal, denied that a defendant could escape liability in this way. What a manufacturer did in these circumstances, he explained, was to put ‘an instrument of fraud’ into the retailer’s hands. In these circumstances, it was necessary to ask: has the defendant ‘knowingly put into the hands of the shopman . . . the means of deceiving the ultimate purchaser’?<sup>164</sup> On the facts, Chitty J found that it had.

A more recent example of this variant of the passing off action is provided by the *One in a Million* decision.<sup>165</sup> In this case, the Court of Appeal held that persons who registered and dealt in Internet domain names such as ‘marksandspencer.co.uk’ were likely to be restrained. This was on the basis that they were ‘equipped with or intending to equip another with an instrument of fraud’.<sup>166</sup> Aldous LJ said that a ‘name which will, by reason of its similarity to the name of another, inherently lead to passing off is an instrument of fraud’.<sup>167</sup> Even if a name does not inherently lead to passing off, Aldous LJ said that it may

<sup>162</sup> See M. Spence, ‘Intellectual Property and the Problem of Parody’ (1998) 114 *LQR* 594, 599.

<sup>163</sup> (1887) 4 *RPC* 492, 498. <sup>164</sup> *Ibid.*

<sup>165</sup> [1998] 4 *All ER* 476. For criticism of the reasoning, see M. Elmslie, ‘The *One in a Million* Case’ [1998] *Ent L Rev* 283, 285; C. Thorne and S. Bennet, ‘Domain Names: Internet Warehousing—Has Protection of Well-known Names on the Internet Gone too Far?’ [1998] *EIPR* 468 (referring to *One in a Million* as ‘a policy decision rather than a straight application of the law of passing off’). See also H. Carty, ‘Passing off and Instruments of Deception’ [2003] *EIPR* 188, arguing that the doctrine requires (i) circulation of (ii) an instrument (iii) calculated to deceive and that, in *One in a Million*, there simply was no instrument of deception. Carty prefers the view that the decision is to be justified as a case of threatened passing off, or threatening to authorize another’s passing off. However, the case has been followed: *Phones4U* [2006] *EWCA Civ* 244, [27]; *Tesco v. Elogicom* [2006] *EWHC* 403, [41]–[50].

<sup>166</sup> *One in a Million* [1998] 4 *All ER* 476, 493. <sup>167</sup> *Ibid.*

nevertheless be an instrument of fraud. In deciding whether this is the case, the court should consider ‘the similarity of the names, the intention of the defendant, the type of trade and all the surrounding circumstances’.<sup>168</sup> Aldous LJ added that if the court concludes ‘that the name was produced to enable passing off, is adapted to be used for passing off, and, if used, is likely to be fraudulently used, an injunction will be appropriate’.<sup>169</sup>

On the facts, it was held that the domain names in question were ‘instruments of fraud’. This was because any ‘realistic use of them as domain names would result in passing off’.<sup>170</sup> Because the value of the names lay in the threat that they would be used in a fraudulent way, the Court held that the ‘registrations were . . . made for the purpose of appropriating the respondent’s property, their goodwill, and with an intention of threatening dishonest use by them or another’.<sup>171</sup>

In contrast, in *French Connection v. Sutton*<sup>172</sup> Rattee J refused to grant summary judgment to French Connection (UK) against a defendant who had registered ‘fcuk.com’. The judge reasoned that, in contrast to the examples in *One in a Million*, the defendant might succeed in establishing a defence at trial—namely, that the domain name was not registered with a view to passing off, but for ‘use by himself of what he thought would be a useful internet and email name’. According to Rattee J, this was not an ‘incredible’ argument, because the letters FCUK were widely used by Internet users as an alternative to the word ‘fuck’, usually to access sites containing pornographic material. As is clear from this, much will turn on when a court is willing to infer potential legitimate use of the name. In particular, it is not easy to predict whether a so-called ‘typo-squatter’, who registers a name that is similar to that of a well known business (for example ‘tescp.com’), in the hope of attracting visitors who mistype the name of that business (‘tesco.com’), will face liability under the ‘instruments of fraud’ doctrine. The registrant might intend to collect revenue by forwarding such traffic to Tesco’s own site, or may have other goals.

<sup>168</sup> Ibid.      <sup>169</sup> Ibid.      <sup>170</sup> Ibid., 497.

<sup>171</sup> Ibid., 498. See also *Reality Group v. Chance* [2002] FSR 13 (where the claimant sought to stop the defendant’s alleged ‘blocking registration’ of a Community trade mark, Patten J referred to *One in a Million* when refusing to strike out).

<sup>172</sup> [2000] ETMR 341. For other cases in which passing off has been used to prevent use of websites in trade, see *Easyjet Airline Co. v. Dainty* [2002] FSR 6; *Bonnier Media v. Smith (GL)* [2002] ETMR 86.

## DAMAGE

### CHAPTER CONTENTS

1 Heads of Damage	873	3 Unfair Competition	884
2 Extended Passing off	878		

The third and final element that a claimant must prove to sustain a passing off action is that they have suffered, or are likely to suffer, damage as a result of the defendant's misrepresentation.<sup>1</sup> After looking at the third limb of the passing off action, we turn away from the classic passing off action to consider the notion of extended passing off and then unfair competition.

### 1 HEADS OF DAMAGE

There are four types of damage that have been recognized by the courts in connection with misrepresentation: loss of existing trade and profits; loss of potential trade and profits; damage to reputation; and dilution.<sup>2</sup> In each case, there must be more than trivial or minimal damage.<sup>3</sup> Where the damage to reputation relates to future losses, the damage must also be reasonably foreseeable.<sup>4</sup>

#### 1.1 LOSS OF EXISTING TRADE AND PROFIT

One of the most common forms of damage is where the misrepresentation diverts trade and thus profit from the claimant to the defendant. This will occur where the misrepresentation generates confusion about the source or origin of the goods or services. In this situation, the damage is self-evident: it is the loss of profit on the sale of goods or services that the claimant suffers. This type of damage will only occur where the claimant and the defendant deal in similar goods or services or operate in similar fields.

#### 1.2 LOSS OF POTENTIAL TRADE AND PROFIT

The courts have also recognized that a claimant may incur damage where the misrepresentation leads to a loss of future profit. This will occur, for example, where a defendant

<sup>1</sup> A requirement of damage is specified in both Lord Diplock and Lord Fraser's fifth 'probanda'—*Erven Warnink v. Townend* [1979] AC 731, 742, 756—and the third branch of Lord Oliver's classic trinity.

<sup>2</sup> Wadlow (2011), ch. 4; H. Carty, 'Heads of Damage in Passing off' [1996] *EIPR* 487.

<sup>3</sup> Lord Fraser's reference, in *Erven Warnink v. Townend* [1979] AC 731, 756, to 'substantial' damage was reinterpreted in this way by Peter Gibson LJ in *Taittinger SA v. Allbev* [1993] FSR 641, 664.

<sup>4</sup> Not 'hypothetical' or 'far-fetched': *Mothercare v. Penguin Books* [1988] RPC 113, 116.

trades in a field or geographical area into which the claimant intends to expand in the future. In this situation, the damage suffered arises as a result of the potential trade that is lost rather than the existing trade that is diverted.<sup>5</sup>

Importantly, the loss of potential profits includes the loss of a chance to expand into a new field. This can be seen, for example, in *Lego v. Lemelstrich*,<sup>6</sup> which was an action brought by Lego, the well-known manufacturer of children's building blocks, against Lemelstrich, who sold brightly coloured plastic garden sprinklers marketed under the name, LEGO. On the basis that Lego's reputation extended beyond children's toys to include garden sprinklers, Falconer J found that the defendant's use of the LEGO name in relation to garden equipment was likely to damage Lego's goodwill. Given that the LEGO goodwill extended to garden equipment, the claimant would have had the potential to use its name to operate in the field of garden equipment, or to have licensed or franchised other traders in that field.

### 1.3 LOSS OF LICENSING REVENUES

Loss of future profit may also include situations where the defendant's conduct undermines the claimant's ability to license their own mark and thus brings about a loss of potential licensing revenues. The recognition of the loss of future licensing revenue as a relevant form of damage may enable celebrities to use passing off to prevent the misappropriation of their image or personality. (Without this form of damage, celebrities face the problem that if they had not already licensed their image, they would have difficulties in proving the requisite damage.) In *Mirage Studios v. Counter-Feat Clothing*,<sup>7</sup> Browne-Wilkinson V-C held that the creators of the Teenage Mutant Ninja Turtles (fictitious cartoon characters), suffered damage when the defendant licensed others to reproduce the cartoon characters on clothing. This was because they would lose the royalties that would otherwise have been paid to them to use the images. This line of reasoning has been criticized on the basis of its circularity.<sup>8</sup> The reasoning is said to be circular because a person is only entitled to licensing revenue if they have the legal ability to control the use that is made of their image (etc.). In turn, this only arises where the unauthorized use amounts to passing off. While this criticism may be technically correct, it overlooks the fact that parties may enter into licensing schemes even though there is no legal requirement to do so.<sup>9</sup> Despite doubts about the impact of passing off on character and personality merchandising, it remains a profitable business. As long as the courts only recognize damage through loss of royalties where licensing is likely to take place, it is difficult to see that the circularity objection carries much force.

This must be contrasted with *Stringfellow v. McCain*.<sup>10</sup> The defendant in the case manufactured a new brand of long, thin oven-ready chips called STRINGFELLOWS. The television advertisements for the defendant's chips featured a choreographed disco number set in a kitchen, with a boy and his two sisters singing 'Stringfellows from McCains'. The claimant was the owner of a well-known nightclub called STRINGFELLOW'S. The London nightclub consisted of a restaurant and a 'discotheque', the latter being described in the decision as a place 'where people move their bodies in strange ways to even stranger

<sup>5</sup> *LRC v. Lila Edets* [1973] RPC 560 (use on toilet tissue of same name, in a similar style, as claimant used for household gloves and nappies caused damage because claimant was planning to move into the field).

music.<sup>11</sup> The claimant argued that the defendant's misrepresentation was likely to prejudice his future chances of exploiting the goodwill associated with the name STRINGFELLOW'S. The court refused to grant relief on the ground that it was unlikely that the misrepresentation would cause Stringfellow any damage. While Stringfellow might have been able to exploit his name (for example through the establishment of franchises), Slade LJ did not find that the television advert prejudiced his ability to do so. In part, Slade LJ was influenced by the fact that there was no evidence that Stringfellow had any intention to exploit his name. Stephenson LJ said that in a case such as this, there must be clear and cogent proof of actual damage or real likelihood of damage. Along with Slade LJ, he said that where there is a tenuous overlap between the fields of activity of the protagonists, he doubted whether damage in the form of loss of future franchising or merchandising revenue was ever recoverable.<sup>12</sup>

#### 1.4 DAMAGE TO REPUTATION

The courts have also recognized that damage may occur where the misrepresentation has a negative impact on the claimant's reputation.<sup>13</sup> This form of damage is particularly important where the misrepresentation is made in respect of non-competing goods or services. While the claimant may not lose any trade, the misrepresentation may nonetheless have a negative impact upon the claimant's reputation. This is particularly so where the claimant deals in high-quality goods or services. As we explained above, damage from loss of existing or potential trade arises where the public is confused about the origin of the goods or services; in contrast, damage to reputation arises where the defendant's misrepresentation leads the public to believe that the goods or services of the claimant and the defendant are somehow related. The resulting damage arises from the negative impact that this has upon the claimant's reputation. As Warrington LJ explained:

[To] induce the belief that my business is a branch of another man's business may do that other man damage in various ways. The quality of goods I sell, the kind of business I do, the credit or otherwise which I enjoy are all things which may injure the other man who is assumed wrongly to be associated with me.<sup>14</sup>

Another example of the way reputation may be damaged is offered by *Associated Newspapers v. Insert Media*.<sup>15</sup> The claimant in this case was the publisher of two national newspapers. The defendant arranged with retail newsagents to have advertising materials inserted into the papers, without the publisher's knowledge or consent. The Court of Appeal held that since there was a real risk that the publisher would be thought to be responsible for the accuracy and honesty of the inserts, there was an obvious, appreciable risk of loss of goodwill and reputation by the publisher.

One situation where damage to reputation may be important is where the claimant deals in high-quality goods and the defendant acts in a way that undermines that reputation. This would be the case, for example, where the defendant trades under the same name as the claimant, but in a market in which the claimant would never operate. In these

<sup>11</sup> *Ibid.*, 504.      <sup>12</sup> *Ibid.*, 546–7.

<sup>13</sup> But cf. *Harrods v. Harroldian School* [1996] *RPC* 697, 718 ('damage to reputation without damage to goodwill is not sufficient to support an action for passing off', so that even if the school had a poor reputation, it would not rub off on the department store).

<sup>14</sup> *Ewing v. Buttercup Margarine Co.* [1917] 2 *Ch* 1, 14. Applied by Laddie J in *Associated Newspapers v. Express Newspapers* [2003] *FSR* 51, [46], and by Mann J in *Sir Robert McAlpine Ltd v. Alfred McAlpine* [2004] *EWHC* 630, [2004] *RPC* (36) 711, [4]–[45].

<sup>15</sup> [1991] *FSR* 380.

circumstances, the defendant's misrepresentation would not impact upon the claimant's sales. The reason for this is that the claimant would never have made the sales in the first place. Nonetheless, the courts have recognized that the defendant's conduct may damage the claimant's reputation. This can be seen, for example, in *Annabel's Berkeley Square v. Schock*,<sup>16</sup> where a well-known London club called 'Annabel's' was granted relief to prevent the defendant from trading as 'Annabel's Escort Agency'. The court accepted that the defendant's use of the name 'Annabel's' could have tarnished and thus undermined the claimant's reputation.

Another situation in which a misrepresentation may damage a claimant's reputation is in relation to the unauthorized use of the name, image, or likeness of a celebrity. Where the name or image of a celebrity is used without permission and the celebrity can show that the public (incorrectly) thought that they had endorsed the use of their image, this may damage the celebrity's reputation. This would be the case, for example, if the picture of a sports star who has a reputation for healthy living was used to advertise a brand of cigarettes. Damage to reputation may also be important in relation to character merchandising. For example, in *Mirage Studios v. Counter-Feat Clothing*,<sup>17</sup> the claimants brought an action against the defendant for licensing the reproduction of images of Teenage Mutant Ninja Turtles on T-shirts and clothing. Browne-Wilkinson V-C said that since the public 'associates the goods with the creator of the characters, the depreciation of the image by fixing the Turtle picture to inferior goods and inferior materials may seriously reduce the value of the licensing right'.<sup>18</sup> A similar approach was adopted by the Supreme Court of New South Wales in *Henderson v. Radio Corporation*.<sup>19</sup> It will be recalled that in this case, the unauthorized use of a photograph of two ballroom dancers on a record cover was held to be a misrepresentation that the dancers had endorsed the product. On the basis that the 'wrongful appropriation of another's professional or business reputation is an injury in itself', the Court found that the misrepresentation had caused the requisite damage. This was because it had deprived the dancers of the right to bestow recommendations at will.<sup>20</sup> Whether this is really a case of damage to reputation or a loss of an opportunity to profit is, however, questionable.

### 1.5 DILUTION

The final form of damage recognized by the courts is where the misrepresentation dilutes the claimant's goodwill. This occurs where the defendant's misrepresentation causes the claimant's sign to become familiar or commonplace and, as a result, undermines the ability of the sign to summon up particular goods or values. That is, the defendant's misrepresentation dilutes the pulling power or goodwill of the claimant's sign. Importantly, this applies where the public is not confused about the source or origin of the goods, or where it is unlikely that the reputation will be damaged.

The notion of damage through dilution was acknowledged in English law in *Taittinger v. Allbev*.<sup>21</sup> The claimant was a member of a group of producers from the Champagne district, who made a naturally sparkling wine that had long been known in the United Kingdom as 'champagne'. Notably, the claimant's champagne was produced by a process of double fermentation from grapes grown in the Champagne district. The claimant

<sup>16</sup> [1972] RPC 838. See also *British Medical Association v. Marsh* (1931) 48 RPC 565.

<sup>17</sup> [1991] FSR 145. <sup>18</sup> *Ibid.*, 156. <sup>19</sup> [1969] RPC 218. <sup>20</sup> *Ibid.*, 236.

<sup>21</sup> [1993] FSR 641. A number of earlier cases had referred to a trader's interest in maintaining the exclusivity of their signs: *Lego v. Lemelstrich* [1983] FSR 155; *Dalgety Spillers Food v. Food Brokers* [1994] FSR 504; *Peter Waterman v. CBS* [1993] EMLR 27.

brought an action against the producer of a non-alcoholic sparkling beverage called ELDERFLOWER CHAMPAGNE that was produced in England. At first instance, it was held that the claimant had goodwill in ‘champagne’ and that the labelling of the defendant’s product amounted to a misrepresentation. However, the court found that while a small number of people might be confused by the defendant’s misrepresentation, the claimant had not established that there was any real likelihood of serious damage if the defendant continued to sell its product as ELDERFLOWER CHAMPAGNE.

The Court of Appeal overturned the first-instance decision, finding that the defendant was liable for passing off. While the Court of Appeal agreed with the judge’s findings at first instance in relation to goodwill and misrepresentation, it disagreed as to the question of damage. In particular, the Court held that the defendant’s use of ‘champagne’ had caused the requisite damage to sustain a passing off action. Importantly, the Court found that the relevant injury to the champagne house’s goodwill occurred under a head of damage not considered at first instance: the damage arose from the fact that there would have been a blurring or erosion of the uniqueness associated with the name ‘champagne’, which would have debased the claimant’s reputation. The use of the name ‘champagne’ for the elderflower drink brought about ‘a gradual debasement, dilution or erosion of what is distinctive’.<sup>22</sup> This was because, as Cross J explained in another context:

[I]f people were allowed to call sparkling wine not produced in Champagne ‘Champagne’ even though preceded by an adjective denoting the country of origin, the distinction between genuine Champagne and ‘champagne-type’ wines produced elsewhere would become blurred; that the word ‘Champagne’ would come gradually to mean no more than ‘sparkling wine’ and that part of the plaintiff’s goodwill which consisted in the name would be diluted and gradually destroyed.<sup>23</sup>

The explicit recognition of dilution as a form of damage was greeted enthusiastically by many commentators, especially in light of similar extensions in trade mark law.<sup>24</sup> However, the status of dilution as a head of damage in passing off has subsequently been thrown into doubt by *Harrods v. Harrodian School*.<sup>25</sup> In this decision, Millett LJ said that while:

. . . erosion of the distinctiveness of a brand name has been recognized as a form of damage to the goodwill of the business with which the name is connected in a number of cases, particularly in Australia and New Zealand . . . unless care is taken this could mark an unacceptable extension of the tort of passing off.<sup>26</sup>

Millett LJ also said that he had problems with an action based on confusion that recognized a distinct head of damage that did not depend on confusion.<sup>27</sup> On the facts, Millett LJ held that it was highly unlikely that as a result of the defendant’s activities, the Harrods name would lose its distinctiveness or become a generic term to refer to shops that sold luxury goods. As such, the passing off action failed.<sup>28</sup>

As a result of the *Harrods* decision, there is now some uncertainty over the extent to which dilution will be recognized as a distinct head of damage. One view treats dilution

<sup>22</sup> *Taittinger v. Allbev* [1993] FSR 641, 670, 674, 678 (‘singularity and exclusiveness of the description Champagne’).

<sup>25</sup> [1996] RPC 697.

<sup>26</sup> *Ibid.*, 715–16.

<sup>27</sup> See Wadlow (2011), [4–050], 287–89.

<sup>28</sup> Sir Michael Kerr, in a dissenting judgment, applied the dilution doctrine from *Taittinger v. Allbev* [1993] FSR 641.

as an appropriate form of damage only in extended passing off cases.<sup>29</sup> Other authorities, however, have been willing to accept dilution in the context of classic passing off. In *British Telecommunications v. One in a Million*,<sup>30</sup> the Court of Appeal held that people who registered and dealt in Internet domain names, such as ‘marksandspencer.co.uk’, were liable for passing off. This was because ‘registration of the domain name including the words Marks & Spencer is an erosion of the exclusive goodwill in the name which damages or is likely to damage Marks & Spencer’.<sup>31</sup> Similarly, in *Sir Robert McAlpine Ltd v. Alfred McAlpine plc*,<sup>32</sup> Mann J held that the defendant was guilty of passing off when it decided to rebrand itself as MCALPINE. While the two McAlpine forms had been long established as ‘Robert McAlpine’ and ‘Alfred McAlpine’, and shared goodwill in the ‘McAlpine’ name, the decision to use the surname by itself would blur the distinctive character of Sir Robert McAlpine’s mark. ‘Once the prefix goes,’ the judge explained, ‘there is scope for a greater amount of elbowing (or blurring, or diminishing, or erosion) . . . to which Robert has not consented.’<sup>33</sup>

## 2 EXTENDED PASSING OFF

As should be clear by now, the classic passing off action contains a host of subcategories and sub-rules. The courts have developed one variant, known as ‘extended passing off’, which deserves special attention. The extended form of passing off was first recognized by Danckwerts J in the *Bollinger* decision,<sup>34</sup> in which the claimants, who were champagne producers, brought a successful action to prevent the defendant from calling its product SPANISH CHAMPAGNE. The action for extended passing off represents a radical departure from the classic form, which is based on misrepresentation as to source.<sup>35</sup> As Laddie J said in *Chocosuisse*,<sup>36</sup> although extended passing off grew from passing off roots, it displays marked differences from the classic form of the cause of action. These differences are best looked at in terms of the three elements of the action: goodwill; misrepresentation; and damage.

### 2.1 GOODWILL

The first point to note about extended passing off is that it recognizes that a class or group of traders may share goodwill in a name (or some other indicator) that is distinctive of a particular class of goods, such as ADVOCAT, CHAMPAGNE, SCOTCH WHISKY, VODKA, OR

<sup>29</sup> *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 127 (damage by dilution only in case of famous yet descriptive marks). Carty advocates caution in extending the heads of damage: H. Carty, ‘Heads of Damage in Passing off’ [1996] EIPR 487. See also H. Carty, ‘Passing off at the Crossroads’ [1996] EIPR 629, 631; H. Carty, ‘Dilution and Passing off: Cause for Concern’ (1996) 112 LQR 632.

<sup>31</sup> [1998] 4 All ER 476, 497.

<sup>32</sup> [2004] RPC (36) 711, [43], [49]. <sup>33</sup> *Ibid.*, [49].

<sup>34</sup> *Bollinger v. Costa Brava Wine Co.* [1960] RPC 16.

<sup>35</sup> See S. Naresh, ‘Passing off, Goodwill and False Advertising: New Wine in Old Bottles’ (1986) 45 CLJ 97, 98.

<sup>36</sup> *Chocosuisse Union des Fabricants Suisses de Chocolat v. Cadbury* [1998] RPC 117, 124; on appeal, Chadwick LJ focused on two differences—the shared nature of the goodwill and the fact that the class of traders was capable of continued expansion: [1999] RPC 826, 830.

GREEK YOGHURT. This can be seen, for example, in the *Bollinger* decision,<sup>37</sup> in which the claimants were members of a group of producers from the Champagne district in France, who made a naturally sparkling wine that had long been known in the United Kingdom as ‘champagne’. The claimant’s champagne was produced by a process of double fermentation from grapes grown in the Champagne district. The claimant brought a passing off action against the defendant for selling a product called SPANISH CHAMPAGNE. The claimant did so on the basis that because the defendant’s drink was made in Spain and/or from grapes grown in Spain, it did not qualify to be called ‘champagne’. Danckwerts J reviewed the cases concerning geographical expressions as trade descriptions and the cases on shared goodwill. He said that passing off would restrain a trader who sought to attach to their product a name or description with which they have no natural association, ‘so as to make use of the reputation and goodwill which has been gained by a product genuinely indicated by the name or description’.<sup>38</sup> Danckwerts J added that it did not matter ‘that the persons truly entitled to describe their goods by the name and description are a class producing goods in a certain locality, and not merely one individual’.<sup>39</sup> In essence, the court recognized that the claimant, along with the other members of the class, had the requisite goodwill in the name ‘champagne’. This was because the name—CHAMPAGNE—indicated a sparkling wine that came from the Champagne district in France, was made by a particular method, and was made only from grapes sourced from the Champagne region. As such, champagne had a distinctive reputation that could only be used by producers from that region.

The extended form of passing off was approved and elaborated on in *Warnink v. Townend*.<sup>40</sup> In this decision, the House of Lords held that extended passing off was not confined to drinks or to indications of geographical origin; instead, the action applied equally where any product had a particular characteristic or quality. In this case, the claimant produced ADVOCAT, a drink manufactured from eggs and a spirit called ‘brandewijn’. The defendant sold its drink, made out of eggs and wine, under the name ‘advocaat’. The House of Lords held that this amounted to passing off. Previous case law had been confined to cases in which a particular product had been manufactured in a particular way using ingredients from a particular geographical source, such as champagne or Scotch whisky.<sup>41</sup> In *Warnink*, no such geographical connection was claimed; instead, the claimant based its case on the association that existed between the name—ADVOCAT—and a particular product with particular ingredients—namely, a drink manufactured from eggs and brandewijn.<sup>42</sup>

Lord Fraser said that it was not necessary that the class of traders should be defined by reference to the locality in which the product was produced; instead, the crucial thing was that the name was distinctive of a particular class of goods. He added that the name must

<sup>37</sup> *Bollinger v. Costa Brava Wine* [1960] RPC 16. See also *Vine Products v. Mackenzie* [1969] RPC 1 (sherry—wine produced by the solera process in the province of Jerez de la Frontera in Spain); *John Walker & Sons v. Henry Ost* [1970] RPC 489 (Scotch whisky—blended whisky distilled, but not necessarily blended, in Scotland); *Taittinger v. Allbev* [1993] FSR 641 (champagne); *Consorzio del Prosciutto di Parma v. Marks & Spencer* [1991] RPC 351 and *Consorzio del Prosciutto di Parma v. Asda Stores* [1988] FSR 697 (Parma ham).

<sup>38</sup> *Bollinger v. Costa Brava Wine* [1960] RPC 16, 31–2. <sup>39</sup> *Ibid.* <sup>40</sup> [1979] AC 731.

<sup>41</sup> For example, in *Bollinger v. Costa Brava Wine* [1960] RPC 16, ‘champagne’ was taken to refer to a drink made from grapes from the Champagne region, which was produced by the champenois process. In *Walker v. Ost* [1970] RPC 489, ‘Scotch whisky’ referred to a blended whisky, the ingredients of which were all whiskies distilled in Scotland.

<sup>42</sup> See also *Diageo North America Inc. and anor v. Intercontinental Brands (ICB)* [2010] EWHC 17 (Ch), [155] (evidence established that the ‘alcohol-consuming public in the UK, and in particular the vodka consuming public, have come to regard the term “vodka” as denoting a particular class of alcoholic beverage’).

have a ‘definite meaning’, so that its use in relation to a different product was a misrepresentation.<sup>43</sup> In a similar vein, Lord Diplock said that the name must denote ‘a product endowed with recognizable qualities which distinguish it from others of inferior reputation that compete with it in the same market’.<sup>44</sup>

Lord Fraser’s sentiment that the crucial thing in relation to extended passing off was that the name was distinctive of a particular class of goods was echoed in *Chocosuisse v. Cadbury*,<sup>45</sup> in which Laddie J recognized that the Swiss Chocolate Industry Association had collective goodwill in the term ‘Swiss chocolate’. The Swiss body argued that by introducing a chocolate product called SWISS CHALET, Cadbury had made a misrepresentation to the public that the product was made of Swiss chocolate. Laddie J (whose judgment was affirmed by the Court of Appeal) said that for a claimant to succeed, it was necessary for them to show that ‘a significant part of the public took the words “Swiss chocolate” to indicate a particular group of products having a discrete reputation as a group’.<sup>46</sup> On the evidence, he held that it had: a significant part of the public understood the words ‘Swiss chocolate’ to denote a group of products of distinctive reputation for quality. The fact that the public could not define what those distinctive features were was of little relevance.<sup>47</sup>

In many ways, the concept of goodwill recognized in extended passing off is similar to that recognized in the so-called ‘classic’ action. Indeed, as Lord Justice Patten said in *Diageo v. Intercontinental Brands*:

[The] classic and extended forms of passing-off are not different torts but are simply convenient labels to describe the two most obvious situations in which the law will intervene to render actionable the misappropriation of established goodwill by a seller based in a misrepresentation by him as to the nature and province of his own goods.<sup>48</sup>

In line with this, the courts have made it clear that the shift away from the name and reputation of the seller (classic passing off) to the reputation associated with a product (which is a defining feature of extended passing off) does not change the fundamental principal that the claimant needs to show goodwill in the name.<sup>49</sup> That is, they need to show that the ‘trade name has a pulling power that brings in custom, so that reputation and goodwill can properly be said to be enjoyed by all producers within the class which use that name for their product’.<sup>50</sup> To establish the requisite goodwill, it is necessary to show that ‘a significant section of the public believe that the trading name denoted a sufficiently defined and distinctive class, with the requisite pulling power’.<sup>51</sup> The relevant time for testing whether the use of a particular name or get-up has the reputation and goodwill necessary to found an extended passing off claim is the moment when the alleged offending product first appears in the market.<sup>52</sup>

In establishing goodwill, it is not enough for a claimant merely to show that a trade name is descriptive of the geographical location where the product was manufactured.<sup>53</sup> At the other extreme, it is not necessary for a claimant to show that the goods or services have a reputation for being luxury goods or goods of ‘higher quality or cachet’. That is, there is no ‘legal requirement that the distinctiveness of the claimant’s mark should also be a badge

<sup>43</sup> *Erven Warnink v. Townend* [1979] AC 731, 754.      <sup>44</sup> *Ibid.*, 744.      <sup>45</sup> [1998] RPC 117.

<sup>51</sup> *Ibid.*, [127]–[132].

<sup>52</sup> *Ibid.*, [81]. The manner in which the alleged offending product is marketed and sold is relevant only to the question of misrepresentation: *ibid.*

<sup>53</sup> *Ibid.*

of quality'.<sup>54</sup> Nor is it necessary for a claimant to show that the place or country of origin imposed strict regulations as to the mode of manufacture of the product in question.<sup>55</sup> There is also no need for a claimant to be able to show that consumers are knowledgeable about the manufacturing processes typical of the product in question.<sup>56</sup> Instead, all that matters with extended passing off is that there is goodwill in the name.

While the shared goodwill that underpins the extended passing off action is similar to goodwill that is jointly owned by a number of parties, there are a number of differences. One important difference relates to who can control the goodwill where it is jointly owned. Where classic goodwill is owned jointly, each owner cannot prevent other owners from using the particular sign; all joint owners, however, may prevent others from using the sign. By contrast, the goodwill recognized by extended passing off differs in that other traders may participate in the shared goodwill without the consent of existing owners.<sup>57</sup>

In determining whether a claimant has the requisite goodwill to bring an extended passing off action, a distinction is drawn between establishing the distinctiveness of the descriptive term in the minds of the public and establishing who is entitled to use the term. This distinction was brought out clearly in the *Chocosuisse* decision.<sup>58</sup> Acknowledging that different manufacturers who called their chocolate 'Swiss chocolate' employed very different recipes, the Court of Appeal said that this did not prevent them from collectively acquiring a reputation for quality. Equally, it did not matter that the public did not know or appreciate the identifying characteristics of the class.<sup>59</sup> All that was required was that the designation 'Swiss chocolate' was taken by a significant section of the public to indicate a particular group of products (chocolate made in Switzerland) having a discrete reputation distinct from other chocolate.<sup>60</sup>

Despite the assistance provided by the *Chocosuisse* case, a number of issues are unclear in relation to the operation of collective goodwill. One issue that is uncertain relates to the question: how extensive must the trade of an individual be for them to participate in the collective goodwill? In other words, what does an individual trader need to do to establish that they are a member of a class? According to *Warnink v. Townend*,<sup>61</sup> the mere fact that a person has begun to trade in relation to a particular product does not mean that they are therefore entitled to share in the extended goodwill. As Lord Diplock noted:

As respects subsequent additions to the class, mere entry on to the market would not give any right of action for passing off; the new entrant must have himself used the descriptive term long enough on the market in connection with his own goods and have traded successfully enough to have built up a goodwill for his business.<sup>62</sup>

This requirement was doubted at first instance in *Chocosuisse*.<sup>63</sup> There, Laddie J said that the courts would allow a joint action by new users without inquiring into how extensive their trade had been. The Court of Appeal made no comment on this issue when affirming Laddie J's decision.

A second question that remains unclear is exactly how the courts are to define the class of persons who are to participate in the goodwill. In many cases, this will be

<sup>54</sup> *Diageo North America Inc. and anor v. Intercontinental Brands (ICB)* [2010] EWCA Civ 920, [29].

<sup>55</sup> *Fage UK Ltd v. Chobani UK* [2013] EWHC 630 (Ch), [125]. <sup>56</sup> *Ibid.*, [126].

<sup>57</sup> As Lord Diplock noted in *Erven Warnink v. Townend* [1979] AC 731, 744, the size of the class of traders will influence the scope of the goodwill.

<sup>58</sup> [1998] RPC 117 (Laddie J); [1999] RPC 826 (CA). See also *Bulmer v. Bollinger* [1978] RPC 79, 119.

<sup>59</sup> [1999] RPC 826, 849. <sup>60</sup> *Ibid.*, 832. <sup>61</sup> [1979] AC 731.

<sup>62</sup> *Ibid.*, 744. Lord Fraser said that '[a] new trader who begins to sell the genuine product would become a member of the class when he had become well enough established to have acquired a substantial right of property in the goodwill attached to the name': *ibid.*, 754.

<sup>63</sup> *Chocosuisse v. Cadbury* [1998] RPC 117.

uncontroversial, because the reputation will have arisen in relation to a discrete class of traders who are themselves subject to regulatory control. However, the potential for difficulty of definition can be seen from the *Chocosuisse* case. There, the claimants had proposed a definition of the class based on the recipes used to manufacture Swiss chocolate.<sup>64</sup> However, Laddie J rejected this on the ground that it excluded a number of those who were already using the designation and were represented by the Association. Instead, Laddie J took the defining feature of ‘Swiss chocolate’ to be that the chocolate was made in Switzerland, according to Swiss food regulations. However, on appeal, the Court of Appeal held that the group of traders entitled to use the goodwill was that identified by the claimant—that is, those who made chocolate in Switzerland, other than those who made chocolate with vegetable fat as an ingredient.<sup>65</sup> Since none of the claimants supplied a product with such added fat, nor wished to do so, Chadwick LJ said that he saw no reason to define the product in less precise terms. Since, on either view, Cadbury’s chocolate was not entitled to share in the goodwill (as it was made in England), the finding did not matter. However, had the dispute been with a Swiss producer of chocolate who added vegetable matter, the Court would have been called on to locate its own basis for defining the product.

A third question relates to the extent to which the participants in the shared goodwill can modify the criteria by which the class is defined. If the majority of champagne makers were to decide to abandon the double fermentation process, perhaps because it was discovered to be unhealthy, would they then be able to exclude others who continued to do so from using the term ‘champagne’?

## 2.2 MISREPRESENTATION

In establishing misrepresentation in an extended passing off action, the critical factor is what the public understands about the way the name is used. As with classic passing off, this is a question of fact. Although extended passing off and classic passing off both require the claimant to show that there has been a misrepresentation, there are important differences between the way in which this is approached in the two actions. In relation to extended passing off, ‘protection is given to a name or word that has come to mean a particular product rather than a product from a particular trader’.<sup>66</sup> It follows from this that the descriptiveness of the term will not be sufficient to defeat the action. Moreover, there will be no misrepresentation if the defendant uses the distinctive term accurately; rather, the misrepresentation ‘lies in marketing the goods in a way which will lead a significant section of the public to think that those goods have some attribute or attributes which they do not truly possess’.<sup>67</sup> Thus, in the situation in which UK customers believed that the phrase ‘Greek yoghurt’ meant that the yoghurt was made in Greece, it was held that the defendant’s use in the United Kingdom of the term ‘Greek yogurt’ to describe yoghurt made in the United States ‘plainly involve[d] a misrepresentation’.<sup>68</sup>

Another difference between the classic and extended actions relates to the use that the owner of the goodwill can make of the distinctive name. In conventional passing off, a trader can change the quality of the goods or services that they offer under a particular sign. However, in extended passing off, an existing user is not able to use the ‘sign’ on products for which it is not a correct designation.<sup>69</sup> Thus an individual champagne

<sup>64</sup> *Ibid.*, 133–5. <sup>65</sup> [1999] *RPC* 826, 840.

<sup>66</sup> *Chocosuisse v. Cadbury* [1998] *RPC* 117, 125. See also on appeal: [1999] *RPC* 826, 832.

<sup>67</sup> *Ibid.*, 837. <sup>68</sup> *Fage UK Ltd v. Chobani UK* [2013] *EWHC* 630, [136].

<sup>69</sup> The points are all drawn from Laddie J’s analysis in *Chocosuisse v. Cadbury* [1998] *RPC* 117, 124–6.

producer would not be able to use ‘champagne’ to describe another product. Each trader within the class, however, is able to use their own trade name in association with the distinctive name shared by the class of traders. This will not prejudice their right to share in the goodwill associated with the product. Thus there is no problem with Bollinger using its name in association with champagne, nor with Warninck using its name in relation to advocaat.

### 2.3 DAMAGE

A final feature of the extended form of passing off worth observing is the treatment of damage. The most relevant form of damage is the reduction of the distinctiveness of the descriptive term—that is, *dilution*. While doubts have been raised about the ongoing relevance of dilution in the classic passing off action, it seems that it will continue to operate in relation to extended passing off.<sup>70</sup> Thus, in *Fage v. Chobani*<sup>71</sup> it was held that the ‘loss of distinctiveness in the description Greek yoghurt as meaning (inter alia) yoghurt made in Greece occasioned by the introduction into the market of Greek yoghurt made in the USA’ was obvious. While likelihood of damage remains a prerequisite of extended passing off, it is not essential for a claimant to demonstrate that they would have been damaged individually.<sup>72</sup>

### 2.4 ACTIONS RELATED TO EXTENDED PASSING OFF

It is worth observing that the use that is made of names that designate the geographical origin or quality of goods is regulated by a number of regimes other than passing off. For example, a person’s ability to use an incorrect designation of origin or quality may lead to criminal liability under consumer protection laws such as the Consumer Protection from Unfair Trading Regulations 2008<sup>73</sup> (and formerly the Trade Descriptions Act 1968).<sup>74</sup> The European Council and Parliament has also adopted a number of regulations dealing with ‘protected designations of origin’ (PDOs) and ‘protected geographical indications’ (PGIs) for wines, spirits, agricultural products, and food. These are discussed in Chapter 43.

Finally, it is worth noting that marks that designate the geographical origin or quality of goods can be registered in the United Kingdom as ‘certification’ or ‘collective’ trade marks,<sup>75</sup> or as Community collective marks.<sup>76</sup> Certification marks indicate that the goods

<sup>70</sup> Ibid., 126–7, 143. <sup>71</sup> [2013] EWHC 630, [140].

<sup>72</sup> *Erven Warnink v. Townend* [1979] AC 731, 756. <sup>73</sup> SI 2008/1277.

<sup>74</sup> In general, these do not impose statutory duties that give rise to civil liability: *Bollinger v. Costa Brava Wine* [1960] RPC 16, 34 (claim under the Merchandise Marks Acts 1887–1953). But see Consumer Protection from Unfair Trading Regulations 2008, regs 3 (unfair practices include misleading action), 5(2)(a) (misleading action defined as action that contains false information likely to mislead average consumer as to matter in reg. 5(4)), 5(4) (relevant misleading information includes information as to ‘main characteristics’ of the product), and 5(5)(p) (main characteristics includes geographic origin). Note also reg. 5(3)(a) (misleading by using distinguishing marks of competitor).

<sup>75</sup> Certification marks are permitted, but not required, under the TM Dir., Art. 15. The British system, which dates back to 1902, is found in TMA 1994, s. 50 and Sch. 2. For overviews, see Kerly, ch. 12; J. Belson, ‘Certification Marks, Guarantees and Trust’ [2002] 24(7) *EIPR* 340; N. Dawson, *Certification Trade Marks: Law and Practice* (1988); Annand and Norman (1994), ch. 13. Collective marks are also permitted, but not required, under the TM Dir., Art. 15. The United Kingdom’s collective mark system is relatively new, having been established under TMA 1994, s. 49 and Sch. 1: see generally Kerly, ch. 12. For British procedures, see UK IPO, *Trade Marks Registry Work Manual*, ch. 4.

<sup>76</sup> CTMR, Art. 64. See Annand and Norman (1998), ch. 11. There is no Community certification mark.

or services meet certain standards.<sup>77</sup> This mechanism has been used to protect products such as ‘Stilton’ cheese.<sup>78</sup> In turn, collective marks serve to distinguish the goods or services of the members of relevant associations.

### 3 UNFAIR COMPETITION

In the final part of the chapter, we consider the principles of unfair competition and their relevance in the United Kingdom. Many countries—but not the United Kingdom—have granted protection well beyond the confines of passing off under the more general rubric of unfair competition law. At its broadest, unfair competition provides general, open-textured rules against competitive acts that contravene trade mores. For example, the 1909 German Act against Unfair Competition declares that ‘anyone who for the purpose of competition commits acts in the course of trade that infringe honest practice is liable to incur injunctions or damages’.<sup>79</sup> It should be noted that generalized rules of this nature are not confined to civil law jurisdictions: the United States has recognized a notion of unfair competition in its case law.<sup>80</sup> It should also be noted that despite many years of trying, as Patten LJ said, there is in the United Kingdom ‘no general law against unfair competition’.<sup>81</sup>

The notion of unfair competition law is enshrined in international conventions. Notably, Article 10*bis* of the Paris Convention obliges member countries to assure ‘effective protection against unfair competition’ which, in turn, is defined as any ‘act of competition contrary to honest practices in industrial or commercial matters’. Article 10*bis*(3) then specifies three particular acts that will be treated as being unfair:

- (i) all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor;
- (ii) false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor;
- (iii) indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods.<sup>82</sup>

In some countries, the protection offered by unfair competition extends beyond the level specified in the international provisions to include dilution of another trader’s indications (a form of ‘free-riding’), slavish imitation, and misleading advertising.<sup>83</sup>

<sup>77</sup> TMA 1994, s. 50.

<sup>78</sup> *Stilton Trade Mark* [1967] RPC 173.

<sup>79</sup> *Gesetz gegen den unlauteren Wettbewerb* (UWG), §1. See W. Rowland, ‘Unfair Competition in West Germany’ (1968) 58 *TM Rep* 853; V. Knight, ‘Unfair Competition: A Comparative Study of its Role in Common Law and Civil Systems’ (1978) 53 *Tul L Rev* 164; A. Kamperman Sanders, *Unfair Competition Law: The Protection of Intellectual and Industrial Creativity* (1997), ch. 1; P. Kaufman, *Passing off and Misappropriation* (1986) (discussing Netherlands, West Germany, France, and the United States).

<sup>80</sup> The earliest recognition of a general doctrine of unfair competition in the United States occurred in the famous Supreme Court decision in *International News Service v. Associated Press*, 248 US 215 (1918). The doctrine has been characterized as having had a ‘sickly growth’: see J. Adams, ‘Unfair Competition: Why a Need is Unmet’ [1992] *EIPR* 259.

<sup>81</sup> *Diageo v. Intercontinental* [2010] *ETMR* 57, [24].

<sup>82</sup> Wadlow (2011), ch. 2 (reviewing history of Paris, Art. 10*bis*, and considering the impact of TRIPS).

<sup>83</sup> WIPO, *Protection against Unfair Competition* (1994).

### 3.1 UNFAIR COMPETITION FOR THE UNITED KINGDOM?

During the 1970s and 1980s, courts in the United Kingdom were developing passing off in a way that looked as if it was evolving into a general tort of wrongful trading.<sup>84</sup> In particular, the developments associated with extended passing off were seen by many as heralding the judicial recognition of unfair competition. For example, in *Vine Products*,<sup>85</sup> Cross J said that the Spanish champagne case was not a passing off action, but a ‘new fangled tort called unfair competition’. Moreover, in *Warnink v. Townend*<sup>86</sup> Lord Diplock characterized passing off, along with conspiracy to injure a person in their trade and slander of title, as separate labels that had been attached to particular forms of ‘unfair trading’. He also noted that the forms of unfair trading ‘will alter with the ways in which trade is carried on and business reputation and goodwill acquired’.<sup>87</sup>

While it seemed in the 1970s and 1980s that British law was on the verge of acknowledging a general action for unfair competition,<sup>88</sup> the judicial tendency was subsequently reversed.<sup>89</sup> In *Cadbury Schweppes v. Pub Squash*,<sup>90</sup> the Privy Council made it clear that there is no cause of action for misappropriation as such.<sup>91</sup> There, it will be recalled, relief was denied to the claimant against the defendant who had imitated aspects of the claimant’s advertising campaign for its SOLO soft drink. This was despite the fact that the court acknowledged that the defendant had set out in a deliberate and calculated fashion to take advantage of the claimant’s past efforts. Lord Scarman explained that the claimant had failed to establish a misrepresentation. He also added that, while passing off was a developing body of law:

[It] is only if the plaintiff can establish that a defendant has invaded his ‘intangible property right’ in his product by misappropriating descriptions which have become recognized by the market as distinctive of the product that the law will permit competition to be restricted. Any other approach would encourage monopoly. The new, small man would increasingly find his entry into an existing market obstructed by the large traders already well known as operating in it.<sup>92</sup>

The implications of the case were that the courts had gone far enough in *Warnink v. Townend* and that the Lords were not interested in developing passing off into a tort of unfair competition.<sup>93</sup>

The approach taken by the Privy Council was echoed by a strong judgment of the Court of Appeal in the 2008 decisions of *L’Oréal SA v. Bellure*,<sup>94</sup> a case in which the defendant was selling smell-alike perfumes in packaging that, by adopting some of the features of the fine fragrance brand packaging, indicated to consumers that the smells were

<sup>84</sup> For the position before that, see W. Morison, ‘Unfair Competition at Common Law’ (1951–53) 2 *UWA L Rev* 34; W. Cornish, ‘Unfair Competition: A Progress Report’ (1972) 12 *JSPTL* 126.

<sup>85</sup> *Vine Products v. Mackenzie* [1969] *RPC* 1, 28. <sup>86</sup> [1979] *AC* 731, 740. <sup>87</sup> *Ibid.*

<sup>88</sup> G. Dworkin, ‘Unfair Competition: Is the Common Law Developing a New Tort?’ (1979) *EIPR* 295, 244.

<sup>89</sup> A. Kamperman Sanders, *Unfair Competition Law* (1997), 202. <sup>90</sup> [1981] *RPC* 429.

<sup>91</sup> The lack of clarity, if any, arises from the Privy Council’s decision not to consider the ‘unfair competition’ argument that the claimant had raised, on the grounds that it had been ‘withdrawn’. See G. Dworkin, ‘Passing off and Unfair Competition: An Opportunity Missed’ (1981) 44 *MLR* 564, 567 (optimistically saying that it was not clear what decision might have been reached on this point—but that the tenor is enough to suggest that the Privy Council was not about to develop such a tort).

<sup>92</sup> [1981] *RPC* 429, 496.

<sup>93</sup> J. Adams, ‘Is There a Tort of Unfair Competition? The Legal Protection of Advertising Campaigns and Merchandising’ [1985] *J Bus L* 26, 32; J. Lahore, ‘The *Pub Squash* Case: Legal Theft or Free Competition?’ [1981] *EIPR* 54; S. Ricketson, ‘Reaping without Sowing: Unfair Competition and Intellectual Property Rights in Anglo-Australian Law [1984] *UNSWLJ* 1, 30. <sup>94</sup> [2008] *ETMR* 1.

equivalent. Having struggled with its trade mark infringement claims and failed in its passing off argument, the claimant tried to persuade the Court that this was a form of unfair competition that the law should prohibit. Jacob LJ was unimpressed, arguing that recognition of such a rule unnecessary, undesirable, and inappropriate. It was *unnecessary* because the United Kingdom's international obligations under Article 10*bis* of the Paris Convention required no more than a prohibition on deceptive conduct.<sup>95</sup> It was *undesirable* because it was a basic rule that competition was 'not only lawful but the main-spring of the economy',<sup>96</sup> because there were real difficulties in formulating a clear and rational line between that which is fair and unfair,<sup>97</sup> and because the tort would create unnecessary uncertainty.<sup>98</sup> Moreover it was *inappropriate* for the courts, at least at the level of the Court of Appeal, to step in 'and legislate into existence new categories of intellectual property rights'.<sup>99</sup>

In the last few years, the question of whether the United Kingdom should recognize a tort of unfair competition has been reopened. In particular, it has been argued that rather than pretending to find goodwill, misrepresentation, and damage where there is not really any, the courts should be honest about what they are really doing—which is objecting to free-riding.<sup>100</sup> In contrast, others have come out in defence of the existing approach, saying that the courts should stick to the three core requirements—namely goodwill, misrepresentation, and damage. In line with this, these commentators are also critical of decisions that deviate from the traditional approach (such as *Irvine*, which assumed damage).<sup>101</sup> While much ink has been spilled debating the merits of unfair competition law, it is unlikely that British judges will develop the existing regimes into a generalized action for unfair competition. Moreover, the domestic legislature has been reluctant to legislate in this field, either generally or in response to specific issues (such as look-alike brands).<sup>102</sup> Because this is an area of law in which it will be difficult to reach commonly agreed principles, European harmonization also appears unlikely in the near future although, in the longer term, European harmonization of consumer protection law may pave the way for the introduction of a parallel regime of business regulation.<sup>103</sup> For the time being, then, those who complain about unfair competitive practices will have to continue to bring their grievances under existing causes of action.

<sup>95</sup> *Ibid.*, [147] ('Moreover, even if the United Kingdom is in derogation, it has been so for over 80 years without complaint. It is not a matter for the judges').

<sup>96</sup> *Ibid.*, [140]. <sup>97</sup> *Ibid.* <sup>98</sup> *Ibid.*, [160]. <sup>99</sup> *Ibid.*, [141].

<sup>101</sup> H. Carty, 'Passing off: Frameworks of Liability Debated' [2012] *IPQ* 106. For a more flexible approach, see C. Wadlow, 'Passing off at the Crossroads Again' [2011] *EIPR* 447.

<sup>102</sup> See, e.g., the Copyright and Designs Bill 2000: Hansard (HL) (17 March 2000), cols 1885*ff*. But the Gowers Review, [5.82]–[5.88], was supportive of brand owners who object to copycat packaging, and asked the government to monitor changes and to consult on appropriate changes should they be found to be ineffective.

<sup>103</sup> The Unfair Commercial Practices Directive requires member states to prohibit certain forms of commercial practice, but is concerned explicitly with business-to-consumer, rather than business-to-business, practices. Nevertheless, Recital 8 states that 'the Commission should carefully examine the need for Community action in the field of unfair competition beyond the remit of this Directive and, if necessary, make a legislative proposal to cover these other aspects of unfair competition'.

# TRADE MARK REGISTRATION

## CHAPTER CONTENTS

1 Introduction	887	4 International Filing	907
2 Registration in the United Kingdom	888	5 Deciding which Route to Take	910
3 Registration of Community Trade Marks	902		

## 1 INTRODUCTION

In this chapter, we look at the process by which registered trade marks come into being. While registering a trade mark is a costly and time-consuming process, it confers on the proprietor certain exclusive rights to use a particular sign in relation to specified commercial activities. In contrast with the law of passing off, registration enables traders to protect their marks before they are put on the market. Registration is also advantageous in that, once a mark is registered, there is a presumption, although not a guarantee, that the registration is valid. A third advantage to registering a trade mark is that it reduces the possibility of disputes and confers on the trade mark proprietor increased certainty, in so far as the registration determines the scope of the property protected as a trade mark. The process of registration attempts to delineate what sign is protected and in which commercial spheres it is to be protected. The register, which is open to the public, also acts as an important source of information.<sup>1</sup>

There are three possible routes that UK traders might take to register a trade mark: national; Community; or international. A national registration system for trade marks has existed in the United Kingdom since 1875. The UK Trade Marks Registry, which is based in Newport in Wales, provides successful applicants with rights in the United Kingdom in relation to the sign as registered. Registration at the EU level involves a single application to the Office for Harmonization in the Internal Market (OHIM), which is based in Alicante in Spain. A successful application to the OHIM results in the grant of a single trade mark that operates throughout the European Union.<sup>2</sup> A person

<sup>1</sup> TMA 1994, s. 63(3)(a). For a sceptical view of the public benefits of registration, see R. Burrell, 'Trade Mark Bureaucracies', in G. Dinwoodie and M. Janis (eds), *Trademark Law and Theory: A Handbook of Contemporary Research* (2008), ch. 4.

<sup>2</sup> With the expansion of the Community by ten new states on 1 May 2004, and the further expansion to encompass Bulgaria and Romania from 1 January 2008 and Croatia on 1 July 2013, the protection afforded by existing applications and registrations was automatically extended to cover the new territories. Transitional arrangements clarify that earlier rights in those states cannot be relied upon to found objections to the validity of a Community mark granted before (or, in the case of Bulgaria and Romania, one year before) accession. However, the proprietors of such existing rights in accession states are permitted to continue using

can apply for both a Community trade mark (CTM) and a national registration, and—in contrast with the position in relation to European patents (UK), the grant of which leads to the revocation of an equivalent domestic patent—both, if granted, may subsist.

In contrast with registration at a national or community level, the international filing systems merely facilitate the acquisition of national marks. International registration, which is administered by the International Bureau of the World Intellectual Property Organization (WIPO) at Geneva, will be carried out either under the 1891 Madrid Agreement<sup>3</sup> and the 1989 Madrid Protocol. The main advantage of the international system is administrative: instead of traders having to file separate applications in the countries in which they would like protection, the international system enables traders to obtain protection in a number of different jurisdictions via a single application.

While there has been a degree of standardization of trade mark procedure at both the regional and international levels, there are many important differences between the three regimes. In particular, although the procedures and documentation needed for national, regional, or international applications are similar, there are significant variations in the way in which applications are examined.<sup>4</sup>

## 2 REGISTRATION IN THE UNITED KINGDOM

A registration system for trade marks was introduced in the United Kingdom in 1875. Earlier attempts to introduce a registration system had been resisted on the basis that it would have been complicated, expensive, and unnecessary.<sup>5</sup> Eventually, the benefits of registration were seen to outweigh the potential disadvantages. In particular, it was

such signs and are rendered immune from liability for infringing the Community trade marks. For a useful explanation, see OHIM, *Communication No. 5/03 of the President of the Office of 16 October 2003 Concerning the Enlargement of the European Union in 2004* (2004); OHIM, *Communication No. 2/06 of the President of the Office of 19 June 2006 Concerning the Enlargement of the European Union in 2007* (2006); OHIM, *Communication No. 4/12 of the President of the Office on 12 December 2012 Concerning the Enlargement of the European Union to Croatia* (2013).

<sup>3</sup> For example, under TM Dir., Recital 5, procedural matters are left to member states. Despite this, the Court of Justice has been happy to rule on what is ‘graphic representation’ and on the need for a full *a priori* examination on absolute grounds, as well as the inappropriateness of certain types of disclaimer: see *Ralf Sieckmann v. Deutsches Patent- und Markenamt*, Case C-273/00 [2002] ECR I-11737; *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 [2004] ECR I-1619; *CIPA v. Registrar of Trade Marks (IP Translator)*, Case C-307/10 (19 June 2012) (ECJ, Grand Chamber). See further *Génesis v. Boys Toys SA*, Case C-190/10 (22 March 2012) (ECJ, First Chamber); *Strigl v. Deutsches Patent- und Markenamt*, Case C-90/2011 (26 January 2012), [AG24]–[AG26] (AG Jääskinen) (disclaimers).

<sup>4</sup> For example, under TM Dir., Recital 5, procedural matters are left to member states. Despite this, the Court of Justice has been happy to rule on what is ‘graphic representation’ and on the need for a full *a priori* examination on absolute grounds, as well as the inappropriateness of certain types of disclaimer: see *Ralf Sieckmann v. Deutsches Patent- und Markenamt*, Case C-273/00 [2002] ECR I-11737; *Koninklijke KPN Nederland NV v. Benelux-Merkenbureau*, Case C-363/99 [2004] ECR I-1619; *CIPA v. <sup>5</sup> See, e.g., W. Hindmarch, giving evidence to the Select Committee on Trade Marks Bill and Merchandise Marks Bill, ‘Report, Proceedings and Minutes of Evidence’ (1862) 12 PP; A. Ryland, *Trade Marks Registration: Essential to Successful Litigation* (1862).

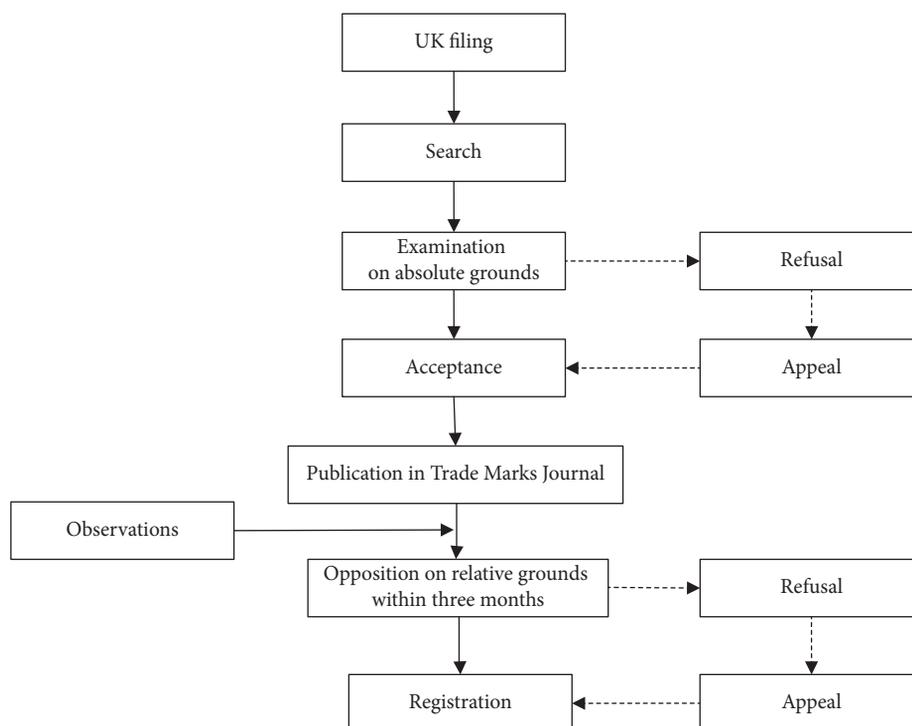

Fig. 35.1 Registering a trade mark in the United Kingdom

thought that a registration system would help to reduce the difficulties that traders faced in proving reputation (which was necessary to sustain an action for passing off). It was also thought that a trade mark registry would enable third parties to discover whether other traders had claimed the right to use a particular sign and, where necessary, to locate the proprietor of the sign. The introduction of a registration system also helped to relieve the pressure that foreign powers were exerting on the British government to introduce a registration system for trade marks.

It is common for applicants to use trade mark attorneys in the drafting and processing of applications. While ‘trade mark agents’ (as they used to be called) emerged in the United Kingdom late in the nineteenth century, the professional association that governs them, the Institute of Trade Mark Attorneys (ITMA), was not formed until 1934.<sup>6</sup> While few restrictions were placed on who could act as a trade mark attorney until recently, the Trade Marks Act 1994 now places limits on the use of the title ‘registered trade mark agent’.<sup>7</sup>

The registration process in the United Kingdom can be divided into four stages: (i) the filing of the application; (ii) examination; (iii) publication, observation, and opposition; and (iv) registration (see Fig. 35.1).

<sup>6</sup> See <<http://www.itma.org.uk>>

<sup>7</sup> TMA 1994, ss 82–6; Institute of Trade Mark Attorneys Order 2005 (SI 2005/240). The profession is regulated by the Intellectual Property Regulation Board, known as ‘IPReg’: see <<http://www.ipreg.org.uk>> At end of 2012, there were 639 registered trade mark attorneys (compared with 1,745 patent attorneys): IPReg, *Annual Report 2012* (2013), 3.

## 2.1 FILING OF THE APPLICATION

Any person (natural or legal) can apply for the registration of a trade mark. Section 32 of the 1994 Act provides that an application for a trade mark must contain:

- (i) a request for registration, including the name and address of the applicant;<sup>8</sup>
- (ii) a statement of the goods or services for which the mark is to be registered;<sup>9</sup>
- (iii) a representation of the mark;<sup>10</sup> and
- (iv) a declaration that the mark is being used or that there is a bona fide intention to use the mark.<sup>11</sup>

The filing date of the application (which is the date from which things such as duration are calculated) is the date on which (i)–(iii), but not (iv), are provided to the Registrar.<sup>12</sup> It may be possible to claim a priority date from an earlier application elsewhere.<sup>13</sup> This may be important where there are independent conflicting applications for the same trade mark.

### 2.1.1 The statement (or specification) of the goods or services

A trade mark application must define the goods and services for which protection is sought.<sup>14</sup> The statement shapes the scope of the rights in the registered mark. In *CIPA v. Registrar of Trade Marks (IP Translator)*,<sup>15</sup> the Court of Justice indicated that the specification ‘must be formulated with sufficient clarity and precision to enable the relevant competent authorities and economic operators to be able to determine, on that basis alone, the extent of protection sought or conferred’. While applicants may be tempted to submit broad statements covering a wide range of goods and services, it should be noted that a broadly defined statement might have to be limited during the process of registration in order to avoid an objection to the validity of the mark,<sup>16</sup> and might later have to be confined to the goods or services for which the registrant can demonstrate actual use.<sup>17</sup>

The Court of Justice stated in *Postkantoor*<sup>18</sup> that national registries may not accept marks ‘subject to the condition that they do not possess a particular characteristic’, such as allowing PENGUIN for ‘books (other than books about penguins)’. This was said to be because third parties would not be aware of the condition and might refrain from selling goods under the mark. The distinction appears not to be one between defining categories positively or negatively,<sup>19</sup> but between ‘characteristics’ and ‘subcategories’. It seems that a subcategory is defined by reference to the nature, purpose, or function of the goods (or services), whereas a characteristic pertains to some specific quality or feature that can be present or not without altering the nature, function, or purpose of the

<sup>8</sup> TMA 1994, s. 32(2)(a)–(b).      <sup>9</sup> TMA 1994, s. 32(2)(c).      <sup>10</sup> TMA 1994, s. 32(2)(d).

<sup>11</sup> TMA 1994, s. 32(3).      <sup>12</sup> TMA 1994, s. 33. See *Ty Nant Spring Water* [2000] *RPC* 55, 60–1.

goods/services.<sup>20</sup> A specification for ‘luxury shoes’ (or shoes ‘other than luxury shoes’) would thus be impermissible as referring to style or quality,<sup>21</sup> but ‘children’s shoes’ would be allowed, because children’s shoes identifies features of size (that is, nature, purpose, and function) and ‘dress shoes’ would also be permitted for similar reasons.

### 2.1.2 Classification

Section 34 of the 1994 Act provides that goods and services shall be classified for the purposes of registration according to a ‘prescribed system of classification’.<sup>22</sup> The classification system, which is based in the international system adopted at Nice in 1957, has 34 classes of goods and 11 classes of service.<sup>23</sup> It is possible for an application to relate to a number of classes.<sup>24</sup> The Registrar, whose decision is final, resolves any doubts over how the goods and services are to be classified.<sup>25</sup>

The purpose of the classification process is primarily administrative—namely, to facilitate searching for earlier competing marks.<sup>26</sup> In contrast with the specification, which helps to define the boundaries of trade mark protection, the way in which a mark is classified does not ordinarily impact upon substantive matters such as the scope of the rights given to the trade mark owner. Thus the fact that a mark is used by a competitor on goods or services in a different class from those of the registered proprietor does not necessarily mean that it is not being used on ‘identical’ or ‘similar’ goods or services (which is the test for infringement). Having said that, there are some situations in which the way in which a mark is classified *might* impact on the scope of the proprietor’s rights. This will be the case where, in their statement of the goods and services, an applicant makes reference to the classes used at the Registry<sup>27</sup>—that is, where applicants tie the list of goods or services claimed to the bureaucratic categories used at the Trade Marks Registry.

Can the class headings or classes be used in formulating the specification? In *CIPA’s Application (IP Translator)*,<sup>28</sup> the Chartered Institute of Patent Attorneys applied to register ‘IP Translator’ for various services, using the general terms of the heading of Class 41 of the Nice Classification—that is, ‘Education; providing of training; entertainment; sporting and cultural activities’. On the basis that the reference to the class headings should be understood as an application for ‘all services in Class 41’, which would include translation services, the Registry rejected the application on the ground that the mark was descriptive of those services. CIPA appealed and the Appointed Person (AP) referred a number of questions to the Court of Justice.

The Court answered that use of class heading was permissible, provided that the effect was to define the goods or services clearly and precisely.<sup>29</sup> Where it is unclear whether

<sup>28</sup> *CIPA v. Registrar of Trade Marks (IP Translator)*, Case C-307/10 (19 June 2012) (ECJ, Grand Chamber).

<sup>29</sup> The OHIM and national offices have identified a number of class headings that do not meet the criteria, including ‘goods of common metal not included in other classes’ (a heading from Class 6) and ‘repair’ (a heading in Class 37).

the application is intended to cover all goods and services within a class, or only those in the normal meaning of the class headings, the applicant must indicate what precisely is intended.

Although the OHIM response to the decision was that registrations relating to class headings should be retrospectively understood as applications for the whole class,<sup>30</sup> the AP has highlighted (in the decision when the *IP Translator* case returned to the United Kingdom) the Court's statement that the specification must be sufficiently precise to indicate the extent of protect 'on that basis alone'.<sup>31</sup> Consequently, the AP has suggested that a process must now be adopted that enables registrants to clarify what was intended one way or the other (although this must not expand the scope of protection).<sup>32</sup> Because CIPA indicated that it had not intended to encompass translation services, its appeal was allowed and the application was remitted for further processing.<sup>33</sup>

### 2.1.3 Representation of the sign

The trade mark applicant is also required to provide a representation of the sign and, before an application is accepted, that representation must be 'adequate'.<sup>34</sup> This reflects the fact that the trade mark registration system is built around a notion of 'representative registration'<sup>35</sup>—that is, rather than depositing an actual sample of the mark, applicants are required to deposit a representation of the mark.<sup>36</sup> This representative registration has a number of rationales (as well as having some significant effects).<sup>37</sup> One function of the representation (which might be called the 'property' function and is analogous to the role of patent claims) is to define the scope of the trade mark owner's rights and delineate with a degree of precision exactly what sign is protected. A second function of graphic representation (which might be called the 'information function') is to enable publicity to be given to the fact that an applicant is seeking registration, the publicity being provided by publication in the *Trade Marks Journal*. In particular, it helps to ensure that third parties are able to search the register, to ascertain things such as the scope of existing marks, and to determine whether a fresh application conflicts with earlier marks. A third and related function of the graphic representation requirement (which might be called the

<sup>30</sup> OHIM, *Communication No. 2/12 of the President of the Office of 20 June 2012* (2012) (indicating that previous registrations and applications that used class headings would be assumed to have been intended to include all goods or services in the class). Applications to OHIM made after the *IP Translator* decision are interpreted literally.

<sup>31</sup> *In re CIPA's Application*, O/197/13 (2 May 2013) (AP, Geoffrey Hobbs QC).

<sup>32</sup> See now UK IPO, *Lists of Goods/Services and the Use of Class Headings* (2013) PAN 03/13, explaining that applicants will be required to confirm in their applications that they intend the natural and ordinary meaning of the terms to be used. Note also European Trade Mark and Design Network, *Common Communication on the Implementation of IP Translator* (February 2014).

<sup>33</sup> According to Hobbs QC, the Registrar would be required to record formally that the words of identification used in the statement were not intended to cover anything that did not fall within the natural and ordinary meaning of those words as written and recorded in the application.

<sup>34</sup> The furnishing of a representation of the mark is one of the few elements necessary to obtain a filing date. The applicant is given two months in which to remedy any inadequacies.

<sup>35</sup> Sherman and Bently, 180–93. See M. Handler and R. Burrell, 'Making Sense of Trade Mark Law' [2003] *IPQ* 388; Kerly, 13, [2–022]:

Any registration system is going to be an imperfect way of capturing all the attributes of trade marks which operate in the market. The best that can be achieved is to have a registration system which records the most concrete attributes of each trade mark.

<sup>36</sup> The Community system employs a more restrictive interpretation of what counts as 'graphic representation'. CTMIR, r. 3(2), specifies that, when a mark is not a word mark, but a three-dimensional, colour, or other type of mark, and when a filing is not electronic, a 'reproduction' of the mark must be submitted on a sheet of paper.

<sup>37</sup> *Ralf Sieckmann v. Deutsches Patent-und Markenamt*, Case C-273/00 [2002] *ECR* I-11737, [48]–[49].

‘administrative function’) is to make the bureaucratic dealing with the sign—its classification and comparison with other signs—more manageable.

While each of these functions demands different things, in effect, for a graphic representation to be adequate, it must achieve all three goals. As the Court of Justice held in *Ralf Sieckmann*,<sup>38</sup> a graphic representation is one that utilizes images, lines, or characters. In order to render a sign registrable as a trade mark, the graphic representation must be clear, precise, self-contained, easily accessible, intelligible, durable, and objective (known as the ‘*Sieckmann* criteria’). While the *Sieckmann* case is useful in that it articulates criteria that a graphic representation must meet, it remains difficult to say in particular situations whether a representation is *sufficiently* stable, durable, objective, or intelligible to satisfy the criteria. It seems that a representation is not sufficiently intelligible if it is intelligible only to a few, or to a limited section, of the population (such as with a chemical formula). In the *Libertel* case,<sup>39</sup> reviewed below, Advocate General Léger indicated that a representation was sufficiently accessible and intelligible if it did not require excessive efforts to be taken for the public to understand it. Moreover, in *Shield*,<sup>40</sup> the Court noted that accessibility and intelligibility did not require ‘immediate’ intelligibility, but only that intelligibility should be ‘easy’, so that a music score would suffice as a representation of sound.

There are a number of different techniques that applicants may use to represent their marks graphically. These include words and images (such as line drawings and photographs). With the vast majority of marks, the process of graphic representation is straightforward: ‘word marks’ are written, and device or ‘figurative’ marks are represented by pictures.<sup>41</sup> However, difficulties arise because, as we will see, since the Trade Marks Act 1994 liberalized the definition of marks, it is now possible to register various ‘exotic’ marks, such as sounds, shapes, colours, smells, gestures, etc. In these cases, graphic representation can be more problematic.<sup>42</sup> The particular mode of description that is used will vary according to the type of mark in question.

(i) *Shape and appearance of products* It has been held that a verbal description of a shape or packaging—such as ‘vacuum packing’ or ‘a chewy sweet on a stick’—will rarely ever be satisfactory because it will not convey the precise appearance of the sign; rather, design drawings or photographs will be necessary.<sup>43</sup> An attempt to protect the appearance of tiles for the board game SCRABBLE by use of the description, a ‘three-dimensional ivory-coloured tile on the top surface of which is shown a letter of

<sup>38</sup> Ibid.

<sup>39</sup> *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2003] ECR I-3793, [AG71].

<sup>40</sup> *Shield Mark BV v. Joost Kist*, Case C-283/01 [2003] ECR I-14313, [2005] 1 CMLR (41) 1046, [63].

<sup>41</sup> It should be noted that certain conventions surround the registration of marks. First, word marks are regarded as covering the word in any form, so that graphic or stylistic variations are regarded as falling within the scope of the rights. In contrast, figurative marks are taken to be limited to the specific representation. However, even in the case of a figurative mark, colour is presumed not to be an element of a trade mark unless the application contains a statement to that effect and specifies the colour: TMR, r. 5(3); CTMIR, r. 3(5). Similar rules operate under Madrid, Art. 3, and Madrid Prot., Art. 3(3). In principle, a figurative mark registered in black and white is protected against the use of the same sign irrespective of the colour used. See further *Faber Chimica v. OHIM—Nabersa (Faber)*, Case T-211/03 [2005] ECR II-1297 (CFI, Second Chamber), [33]–[40].

<sup>42</sup> Given the extensive jurisprudence, it is perhaps worth noting that, since it opened in 1996, over 99 per cent of the applications to OHIM relate to word or figurative marks, less than 0.5 per cent to shapes, and less than 0.05 per cent to colours.

<sup>43</sup> Likewise, an application that includes a representation of a three-dimensional image will not be treated as relating to the three-dimensional form unless the application contains a statement to that effect: TMR, r. 5(2); CTMIR, r. 3(4).

the Roman alphabet and a numeral in the range 1 to 10' was said to lack clarity, precision, and objectivity.<sup>44</sup>

(ii) *Colours* One area in which trade mark law has long had problems is in relation to colour marks. Indeed, the reason why colour marks initially were not registrable was because the technology did not exist to enable colour marks to be reprinted in the *Trade Mark Journal*.<sup>45</sup> In *LibertelGroep BV v. Benelux-Merkenbureau*,<sup>46</sup> the Court of Justice considered the extent to which trade marks comprising a single colour could be registered. In this case, the applicant had sought to register the colour orange for telephone books in Class 9 and telecommunication services in Classes 35–8. While the Court clearly accepted that simple colours could be represented graphically, it stated that an assessment was required—in light of the facts of the case and the mode of representation proposed by the applicant—as to whether the seven *Sieckmann* criteria would be met. The Court held that a mere sample of a colour would not satisfy those requirements, because the exact shade of colour on paper cannot be protected from the effects of the passage of time. Equally, the Court said that a verbal description would not normally satisfy the conditions. However, the Court reiterated that it was necessary to decide whether a given description was satisfactory on the particular facts. Finally, the Court noted that a designation using an internationally recognized identification code *might* be considered to constitute a graphic representation, adding that such codes are precise and stable. Moreover, the use of a sample, verbal description, and international code—in combination—*might* satisfy the seven *Sieckmann* criteria.<sup>47</sup>

*Libertel* clearly prohibits member states from operating a *per se* exclusion of simple colours from registrability. More seriously, however, the decision may be read as precluding the operation of procedural rules specifying that only certain forms of graphic representation are adequate. For example, while the Community Trade Mark Implementing Regulations specify that an applicant who wants to register a colour mark must submit a 'reproduction', the OHIM recommends that applicants add a reference to an international code.<sup>48</sup> Similarly, while the United Kingdom previously treated samples of colours as acceptable, following *Libertel* colour samples on paper are no longer treated as graphic representations, but a written description coupled with the relevant code from an internationally recognized colour identification system will be regarded as acceptable.<sup>49</sup> Other applications are to be assessed on their facts to decide whether the applicant has graphically represented the sign in such a way as to satisfy the *Sieckmann* criteria.

In *Heidelberger Bauchemie*,<sup>50</sup> the Court of Justice addressed the related issue of the graphic representation of two colours. The reference concerned an application to register blue and yellow for various goods including adhesives, solvents, and paints, the application indicating that the colours would be used 'in every conceivable form'. The Court held that, in the case of a sign consisting of two or more colours, designated in the abstract and without contours, a graphic representation would be sufficiently clear and precise only if the application specified that the colours would be 'systematically arranged by associating the colours

<sup>44</sup> *JW Spear & Son Ltd, Mattel Inc v. Zynga Inc.* [2012] EWHC 3345 (Ch), [48] (not intelligible), aff'd [2013] EWCA Civ 1175, [32].

<sup>48</sup> CTMIR, r. 3(2). See OHIM, *Communication No. 6/03 of the President of the Office of 10 November 2003 Concerning Colour Marks* (2003), recommending that applications relating to colour include a designation from an internationally recognized identification code while simultaneously observing that some shades might not be catered for by such coding systems.

<sup>49</sup> UK IPO, *Libertel: Graphical Representation of Colour Marks Filing Requirements* (October 2003) PAN 3/03. This practice is reiterated in UK IPO, *Graphical Representation* (May 2007) PAN 2/07.

<sup>50</sup> Case C-49/02 [2004] ECR I-6129.

concerned in a predetermined and uniform way'.<sup>51</sup> In contrast, the Court said that the mere juxtaposition of two or more colours, without shape or contours, or a reference to two or more colours 'in every conceivable form', did not exhibit the qualities of precision and uniformity. The Court thereby indicated that the application in question would not satisfy the requirements of Article 2 of the Trade Marks Directive. Applying these principles, the Court of Appeal has held that the Trade Marks Registry should have rejected Cadbury's application for 'the colour purple (Pantone 2685C), . . . applied to the whole visible surface, or being the predominant colour applied to the whole visible surface, of the packaging of the goods'. The notion of purple being the 'predominant colour' introduced a multitude of possibilities, and these were not capable of graphical representation in a manner that satisfied the *Sieckmann* criteria.<sup>52</sup>

In contrast, it seems that an application might succeed if it specifies the colours, and explains their distribution on the product and in relation to each other, for example by stating that the colour blue, comprising 50 per cent of the surface area, runs horizontally above the colour red, forming a striped whole.<sup>53</sup>

(iii) *Smells* After a period of uncertainty in which the OHIM rather surprisingly held that a verbal description of a smell was sufficient,<sup>54</sup> in *Ralf Sieckmann*, the Court of Justice indicated that a smell will not be adequately graphically represented by a verbal description because it will not be 'sufficiently clear, precise or objective'.<sup>55</sup> Sieckmann had sought to register the smell of cinnamon as a trade mark in Germany and, as well as providing a verbal description, had also attempted to represent the mark by way of a chemical formula and a sample. The Court also indicated that these other mechanisms would not meet the requirements of the Trade Marks Directive: a deposit of a sample is not a graphic representation, but in any case would not be sufficiently durable or stable; and a chemical formula (although probably a representation of a chemical rather than an odour) would not be sufficiently intelligible, clear, or precise. While the Court has not ruled out the possibility of there ever being an acceptable graphic representation of a smell,<sup>56</sup> other possible techniques—such as through chromatography or so-called 'digital noses'—would not seem to satisfy the requirement of intelligibility. Even accepting a degree of variation between different countries and forums in the application of concepts such as 'intelligibility', it is unlikely that there will be many (if any) national or Community marks granted for smells.<sup>57</sup>

(iv) *Sounds* In *Shield Mark BV v. Joost Kist*,<sup>58</sup> the Court considered the application of the graphic representation requirement to sounds. The case concerned two marks: the first nine notes of the melody for Beethoven's 'Für Elise' and the crowing of a cock, both for advice and services in the field of intellectual property and marketing. The applicant had used musical notation (including the instructions to be played on the piano) and onomatopoeic representation ('kukelekuuuuu'), as well as a verbal description ('the crowing of a cock'). The Hoge Raad asked the Court whether

<sup>57</sup> *Eden SARL v. OHIM*, Case T-305/04 [2005] ECR II-4705, [2006] ETMR (14) 181, [33].

<sup>58</sup> Case C-283/01 [2003] ECR I-14313.

such marks were registrable as trade marks, and if so, whether the requirement of graphic representation of a sound was met by a note bar, a description in words, a voice picture or sonogram, a sound carrier, a digital recording that can be listened to via the Internet, or a combination of these.<sup>59</sup> The Court stated that a score that comprised a stave with a clef, musical notes, and rests, the form of which indicates relative values, and, where necessary, accidentals (sharp, flat, etc.) would satisfy the seven *Sieckmann* requirements.<sup>60</sup> This was so even though not everyone can read music: the requirement is ‘intelligibility’, not ‘immediate intelligibility’.<sup>61</sup> In contrast, the mere verbal description of sounds (of the type involved in the case) lacked clarity and precision.<sup>62</sup> The Court held that onomatopoeic representation was problematic for two reasons: first, because ‘there is a lack of consistency’ between the onomatopoeia itself and the sound; and second, because perceptions of an onomatopoeia are individual (and hence subjective), or at least culturally determined (in English, for example, such a sound would be represented as ‘cock-a-doodle-doo’). Consequently, ‘a simple onomatopoeia cannot without more constitute a graphical representation of the sound or noise of which it purports to be a phonetic description’.<sup>63</sup> Although the Court declined to comment on whether a digital recording or a sonogram would suffice,<sup>64</sup> the Board of Appeal of the OHIM has indicated that sound spectrograms or sonograms that depict pitch, progression over time, and volume, may constitute an appropriate way of representing sounds such as the ‘roar of a lion’. The Board thought that the fact that a person would need a certain amount of training before they could read a sonogram was no impediment, observing that the same is true of musical notation.<sup>65</sup> However, a later Board of Appeal at OHIM expressly took a contradictory position, holding that a sound spectrogram of Tarzan’s yell was not a sufficient graphic representation.<sup>66</sup> The latter decision is certainly more faithful to the *Sieckmann* and *Shield* rulings, holding the spectrogram to be neither self-contained (as it needs technical means to concert into sound) nor easily accessible.

(v) *Tastes* Following the earlier facilitative case law of the OHIM as regards registration of smells, Eli Lilly applied to register the taste of artificial strawberry in respect of pharmaceuticals. This application was initially rejected on the ground that the mere verbal description was not sufficiently precise, but ultimately the examiner based her objection on lack of distinctiveness. Rejecting an appeal, the OHIM Board of Appeal affirmed the examiner’s finding that the taste was not distinctive, but added that, following *Sieckmann*, a verbal description would not be acceptable as a graphic representation of a gustatory sign.<sup>67</sup>

(vi) *Reform* Following the Max Planck Study on the functioning of the Community trade mark,<sup>68</sup> the European Commission has concluded that ‘[t]he requirement of

Yarvorsky, ‘Ministry of Sound: The OHIM and the Tarzan Yell’ [2008] *Ent L Rev* 63. Note that, under CTMIR, r. 3(6), the OHIM accepts applications for sound marks that are *accompanied by* ‘an electronic file containing the sound’.

<sup>67</sup> *Eli Lilly/The taste of artificial strawberry flavour*, R120/2001-2 [2004] ETMR (4) 59 (OHIM Board of Appeal) See further J. C. Ginsburg, ‘“See Me, Feel Me, Touch Me, Hea[r] Me” (and maybe smell and taste me too): I Am a Trademark—A U.S. Perspective’, in Bently, Davis, and Ginsburg, ch. 4.

<sup>68</sup> Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010).

“graphic representability” is out of date. It creates a great deal of legal uncertainty around the representation of certain non-traditional marks, such as mere sounds.<sup>69</sup> It therefore proposes to abandon the ‘graphic’ requirement, so as to allow for the use of ‘sound files’, but to retain the *Sieckmann* requirements that the mark be represented in a manner that enables the competent authorities and the public to determine the precise subject of the protected afforded to its proprietor.<sup>70</sup>

(vii) *Classification of marks* In 2013, the United Kingdom became a party to the Vienna Agreement Establishing an International Classification of the Figurative Elements of Marks. This agreement, like that on the classification of goods and services, is administrative. The UK Trade Marks Registry is required to code components of figurative marks according to a complex taxonomy. The idea is that this will assist in searching these marks when it is sought to discover conflicting marks.

#### 2.1.4 Bona fide intention to use

A UK application must also contain a declaration that the mark is being used, or that there is a bona fide intention to use the mark.<sup>71</sup> According to section 3(6) of the 1994 Act, a trade mark shall not be registered if or to the extent that the application is made in bad faith.<sup>72</sup> While we examine this ground of invalidity in detail later,<sup>73</sup> the declaration operates to warn the applicant that the register is intended to confer rights only on persons who genuinely intend to use the particular mark in trade; it is not to be used for bogus applications in order to get in the way of opponents, blocking registrations or ghost registrations.<sup>74</sup> In addition, the Registry has used the objection to induce applicants to restrict the specifications to a more limited range of goods and services. Although it makes less use of section 3(6) to limit specifications than it did when the 1994 Act first came into force, so as to bring the UK approach more closely into line with that at the OHIM, the Registry will refuse to accept very broad applications such as those ‘for all goods or services’ in a particular class.

#### 2.1.5 Series of marks

It is possible to register a series of marks in a single registration, thereby saving expense.<sup>75</sup> A ‘series of marks’ is defined as ‘a number of trade marks that resemble each other as to their material particulars and differ only as to matters of a non-distinctive character not substantially affecting the identity of the trade mark’.<sup>76</sup> The application should include a separate representation of each mark in the series.<sup>77</sup> Individual marks may be deleted from the series at any time.

<sup>69</sup> European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COD(2013) 162 final, ‘Explanatory Memorandum’, point 5.

<sup>70</sup> Proposed Amendment to TM Dir., Art. 3.

<sup>71</sup> TMA 1994, s. 32(3). This is not required by the OHIM.

<sup>72</sup> Pursuant to optional provision in TM Dir., Art. 3(2)(d); there is no corresponding provision in CTMR, Art. 26. But note CTMR, Art. 51(1)(b).

<sup>73</sup> See below at pp. 967–8.

<sup>74</sup> See *Origins v. Origin Clothing* [1995] FSR 280, 285 per Jacob J.

<sup>75</sup> The practice is explained in UK IPO, *Applications to Register a Series of Trade Marks* (2003) PAN 1/03 following the decision of the AP in *Logica’s Trade Marks*, SRIS O/068/03 (5 March 2003) (holding that LOGICA followed by various domain name suffixes did not resemble each other as to their material particulars). See also *In re Digeo Broadband Inc.’s Trade Marks* [2004] RPC (32) 639 (Digeo plus domain name suffixes not a series).

<sup>76</sup> TMA 1994, s. 41.

<sup>77</sup> TMR, r. 21(1).

## 2.2 EXAMINATION

Once the filing process has been completed, the Registrar conducts a search<sup>78</sup> and an examination of the application<sup>79</sup> to ensure that the proposed mark satisfies various requirements set out in the Act. In particular, the Registrar will ensure that the application complies with section 1(1) and that none of the absolute grounds for refusal apply.<sup>80</sup> Since 1 October 2007, the Registrar will not object to registration on ‘relative grounds’.<sup>81</sup> The Court of Justice has indicated that this examination of the absolute grounds is to be taken seriously.<sup>82</sup> The applicant is required to respond and, if they fail to do so, the application will be refused.<sup>83</sup> In some situations, in which the objection pertains to only some of the goods or services to which the application relates, a process of reformulation of the specification is called for. So, for example, an application that relates to motor vehicles and bicycles might be objectionable in relation only to motor vehicles. Reformulation may be done by the applicant voluntarily, or by the Registrar, although the extent to which the Registrar can impose different wording is controversial.<sup>84</sup>

If the Registrar has no valid objections to the application, it will be *accepted*. The Registrar does not have a general discretion to reject applications: if an application satisfies the requirements set out in the Act, it must be accepted.<sup>85</sup> Acceptance of the application is not the same as registration. It merely marks the end of the *ex parte* procedure—registration occurs only after the period for opposition has elapsed.

## 2.3 PUBLICATION, OBSERVATIONS, AND OPPOSITION

Once an application has been accepted by the Registrar, it is published in the *Trade Marks Journal*.<sup>86</sup> In the three-month period following publication, there is an opportunity for third parties to comment on the application. This will either take the form of ‘observations’ on, or ‘oppositions’ to, the application. Any person may make observations to the UK Registry, which will be forwarded on to the applicant.<sup>87</sup> It seems that third-party observations may prompt the Registry to reconsider the registrability of an application. Alternatively, a proprietor of an earlier mark or right may formally oppose the registration.<sup>88</sup> This must be lodged within three months of the publication of the application and should specify the grounds for opposition. Where an opposition is made, it sets in play a procedural process that is structured to encourage the parties to reach an amicable

<sup>78</sup> TMA 1994, s. 33(2). <sup>79</sup> TMA 1994, s. 33.

<sup>80</sup> In addition (and in contrast to the OHIM), the Registrar may object to the application on the basis that the applicant does not have a bona fide intention to use the mark.

<sup>81</sup> Trade Mark (Relative Grounds) Order 2007 (SI 2007/1976), made under TMA 1994, s. 8, bringing UK procedure into line with that at the OHIM; followed by the Trade Marks (Earlier Trade Marks) Regulations 2008 (SI 2008/1067). For background, see Patent Office, *Future of Official Examination on Relative Grounds* (2001).

<sup>86</sup> TMA 1994, s. 38; TMR, rr 12, 65. TMA 1994, s. 67(2), prohibits the Registrar from issuing details prior to publication.

<sup>87</sup> TMR, r. 15.  
<sup>88</sup> TMA 1994, s. 34(2). The original TMA 1994, s. 38(2), which states that any person may oppose, must be read in light of Trade Mark (Relative Grounds) Order 2007 (SI 2007/1976), art. 2.

settlement, but, failing such, may lead to a hearing and a determination by the Registrar.<sup>89</sup> A ‘fast-track opposition’ procedure was introduced in 2013.<sup>90</sup>

## 2.4 CHANGING THE APPLICATION AS FILED

While applicants should take great care in the way in which they draft their applications, for a variety of reasons, an applicant may wish to make alterations to the application as filed. This may be in response to the results of the examination, to third-party observations and oppositions, or to changes in circumstances. There are a number of ways in which an application may be changed, the most common being by way of amendment, division, merger, or disclaimer.<sup>91</sup> Before looking at these, it should be noted that many of these changes, such as amendment, may occur either before or after grant. Other techniques, such as disclaimers, may be included in the initial application or added later.

### 2.4.1 Pre-grant amendment

Section 39 of the 1994 Act provides that an applicant may amend the application, at any time, in such a way as to restrict the goods or services covered by the application. Applications may also be amended to correct the name or address of the applicant,<sup>92</sup> to alter errors of wording or copying, or to correct obvious mistakes.<sup>93</sup> Such amendments are permissible only where they do not substantially affect the identity of the mark or extend the goods or services covered by the application.<sup>94</sup> So, for example, it was stated in the *Polo* case that it is permissible to limit an application for ‘sugar confectionery’ to one for ‘mint-flavoured compressed confectionery’.<sup>95</sup> However, the Court of Appeal held that, in the case of shape registrations, in which the identity of the goods and the mark may be linked, it is not permissible to attempt to amend the *mark* being registered by amending the *goods* for which registration is sought. So it was not permissible to amend a shape mark by adding a reference to the colour and size of the goods.<sup>96</sup> An amendment that affects the representation or specification must be published and an opportunity provided for objections.<sup>97</sup>

The failure to allow amendment of the representation, except as to the name or address of the owner, is a remarkably restrictive feature of the trade mark system, with potentially significant consequences. If a mark is registered in monochrome (and thus for all colours), it is conceivable that it might be opposed on the basis of an earlier colour mark or subject to revocation for non-use in relation to certain specified colours. The owner will not be able to amend the mark so that it relates only to colours some distance from the opponent’s mark or to avoid the objection for non-use. It seems strange that limitations should not be permitted, as they are in patent law, where the effect is to narrow the scope

<sup>89</sup> TMR, r. 13.

<sup>90</sup> Trade Mark (Fast Track Opposition) Amendment Rules 2013 (SI 2013/2235).

<sup>91</sup> TMA 1994, s. 37(3).

<sup>92</sup> TMA 1994, s. 39(2). According to a Practice Notice, the Registry takes the view that correcting the name of a proprietor is a serious matter. <sup>93</sup> CTMR, Art. 44.

<sup>94</sup> The Court of Appeal has held that an amendment to change the classification was impermissible: *Altecnic’s Application* [2002] RPC (34) 639. <sup>95</sup> *Nestlé Trade Mark* [2005] RPC (5) 77, [40].

<sup>96</sup> *Ibid.*, [41].

<sup>97</sup> TMA 1994, s. 39(3); TMR, r. 18. A request to restrict a specification may not be made conditionally: *Sensornet* [2007] RPC (10) 185, [64]–[65], following CFI authorities on CTMR, Art. 44, such as *Ellos v. OHIM*, Case T-219/00 [2002] ECR II-753, [58]–[63].

of the claim. Nor do disclaimers appear to offer an alternative route.<sup>98</sup> The registrant must simply reapply for a new mark in the more limited form.<sup>99</sup>

#### 2.4.2 Division

It is also possible for an applicant to transform a single application into several ‘divisional applications’.<sup>100</sup> At any time before registration, an applicant may request that their application be divided into two or more separate applications, with each relating to different goods or services. The main reason for dividing an application up in this way is to isolate the problematic parts of an application. In so doing, it increases the chances of the uncontroversial parts being registered. Divided applications have the same filing date as the original application. Where division occurs after the application has been published, any objections to the original application apply to each of the divisional applications.

#### 2.4.3 Merger

A corresponding facility exists for the *merger* of separate applications. Applicants will normally merge marks to simplify a trade mark portfolio and to save on fees. Merger occurs only if the applications are for the same mark, and have the same application date, and have the same proprietor.<sup>101</sup> If two or more marks have already been registered, those registrations can also be merged so long as they are in respect of the same trade mark. If one of the registrations is subject to a disclaimer or limitation, the merged registration is restricted accordingly. Similarly, if they bear different dates, the date applicable for the merged registration is the latest date.

### 2.5 DISCLAIMERS

Section 13 of the 1994 Act enables applicants (or the proprietor) to disclaim any right to the exclusive use of specified elements of the trade mark. Applicants are also able to agree that the rights conferred by the registration shall be subject to a specified territorial or other limitation.<sup>102</sup> Where the registration of a trade mark is subject to a disclaimer or limitation, the rights conferred on the proprietor are restricted accordingly.<sup>103</sup> Use of disclaimers may assist an applicant in overcoming a potential objection to registration,<sup>104</sup> but will not enable the applicant to alter the nature of the mark that is registered. Thus an attempt to limit the (three-dimensional) sign in an application relating to confectionery by restricting its size and colour was held by the Court of Appeal not to be a disclaimer of any *right*.<sup>105</sup>

The practices relating to disclaimers expose the limitations of the registration system as an effective mechanism for defining the boundaries of intangible property rights.<sup>106</sup>

<sup>98</sup> *Swizzel Matlow's Application* [1999] RPC 879; *Robert McBride Ltd's Trade Mark Application* [2004] RPC (19) 343; *Nestlé Trade Mark* [2005] RPC (5) 77.

<sup>99</sup> DTI, *Reform of Trade Marks Law* (Cm. 1203, 1990), [4.09]. <sup>100</sup> TMA 1994, s. 41; TMR, r. 19.

<sup>101</sup> TMR, r. 20.

<sup>102</sup> The Registrar cannot impose a disclaimer: *Patron Calvert Cordon Bleu* [1996] RPC 94, 103.

<sup>103</sup> *General Cigar Co. Inc. v. Partagas y Cia SA* [2005] FSR (45) 960 (considering effect in opposition proceedings); *Phones4U Ltd v. Phone4u.co.uk Internet Ltd* [2006] EWCA Civ 244, [2007] RPC (5). See also *Strigl v. Deutsches Patent- und Markenamt*, Case C-90/2011 (26 January 2012), [AG24]–[AG26] (AG Jääskinen) (acknowledging that disclaimers are part of the procedural matters left to member states).

<sup>104</sup> See, e.g., *Diamond T* (1921) 38 RPC 373; *Laura Ashley's Trade Mark* [1990] RPC 539, 549.

<sup>105</sup> *Nestlé Trade Mark* [2005] RPC (5) 77 (the ‘Polo’ case).

<sup>106</sup> Kerly, 233, [8–145] (describing use of disclaimers as ‘very patchy’). See also Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 74–7 (stating that the UK Registry does not use disclaimers).

The courts have recognized that disclaimers are of limited value because they appear only on the register and do not follow goods into the market.<sup>107</sup> Consequently, because consumers and competitors would normally be unaware that aspects of a mark had been disclaimed, often a disclaimer will not save a mark from objection.<sup>108</sup>

## 2.6 REGISTRATION

In the absence of an effective opposition, the Registrar should register the trade mark.<sup>109</sup> The registration is then published in the *Trade Marks Journal*.<sup>110</sup> The date of registration of the trade mark is deemed to be the date of filing the application.<sup>111</sup> This is the date from which matters such as duration are calculated<sup>112</sup> and the rights of the proprietor are enforceable against third parties.<sup>113</sup> While registration in the United Kingdom lasts for an initial ten years, trade marks may be renewed for further ten-year periods.<sup>114</sup> One characteristic that distinguishes trade marks from other forms of intellectual property is that there is no maximum period of protection. So long as they are renewed, trade marks can potentially last forever. As with patents and designs, the reason why renewal is required is to ensure that the only marks that are on the Register are those in which proprietors have some interest.<sup>115</sup> Proprietors are normally provided with some leeway for late renewal<sup>116</sup> and, in certain circumstances, are able to restore lapsed registrations.<sup>117</sup> Generally, alteration of registered marks is not permitted.<sup>118</sup> The Registrar may, however, allow the proprietor's name or address to be altered. This is permissible only where the alteration does not 'substantially affect the identity of the mark'.<sup>119</sup>

## 2.7 TRADE MARK SYMBOL

Although the trade mark symbols™ and ® are used widely, there is no legal requirement that proprietors use these symbols to indicate that a mark has been registered. Criminal liability does, however, exist for anyone who uses these symbols, the word 'registered', or any other word or symbol that suggests that a mark is registered when, in fact, it is not.<sup>120</sup>

## 2.8 VALIDITY AND REVOCATION

Once a mark is registered, there is a presumption, although not a guarantee, that the registration is valid.<sup>121</sup> As with all forms of registered intellectual property, it is possible for trade marks to be withdrawn after they have been registered. This may be because the

<sup>107</sup> *Granada Trade Mark* [1979] RPC 303, 308.

<sup>108</sup> Moreover, in composite marks, the disclaimer may mean that it is no infringement to use only the disclaimed component, but the disclaimed component is still one element of the composite whole: *ibid.*, 306. Consequently, matter that is disclaimed is not necessarily disregarded when questions of possible confusion are being decided. Cf. *Paco/Paco life in colour* [2000] RPC 451, 467. <sup>109</sup> TMA 1994, s. 40.

<sup>110</sup> TMR, r. 16. <sup>111</sup> TMA 1994, s. 40(3).

<sup>112</sup> TMA 1994, s. 42. But note TMA 1994, s. 46(1)(a), calculating period of non-use from 'the date of completion of the registration procedure'.

<sup>113</sup> TMA 1994, s. 9(3), explains that the rights have effect from the date of registration, i.e. filing, but no infringement proceedings may be begun before the date on which the mark is in fact registered and no criminal liability is incurred for acts done before the date of publication of the registration. This has no parallel in the TM Dir.: see *Interlotto UK Ltd v. Camelot plc* [2004] RPC (9) 186, [19]–[20].

<sup>114</sup> TMA 1994, s. 42; CTMR, Art. 47; Madrid Prot., Art. 7(1).

<sup>115</sup> TMA 1994, s. 43(2); TMR, r. 27. <sup>116</sup> TMA 1994, s. 43(3).

<sup>117</sup> TMA 1994, s. 43(5); TMR, r. 30. <sup>118</sup> TMA 1994, s. 44.

<sup>119</sup> TMA 1994, s. 64; TMR, r. 38. <sup>120</sup> TMA 1994, s. 95. See below at p. 1269.

<sup>121</sup> TMA 1994, s. 72.

mark should not have been registered in the first place, or because changes in circumstances mean that it should no longer be registered. The grounds on which a registered mark may be challenged by third parties are set out in sections 46 and 47 of the 1994 Act. Section 46(1) sets out the grounds on which a mark may be *revoked*—that is, (i) where it has not been used for five years, (ii) where, as a result of the way in which it has been used, it has lost its distinctiveness, or (iii) where, as a result of the way in which it has been used, the further use of the mark has become likely to ‘mislead the public’. In addition, a mark that should never have been registered can be declared invalid under section 47. A registration will be liable to be declared invalid where it should not have been registered on absolute grounds because of a potential objection under section 3 (for example because it lacks distinctiveness) and where relative grounds for refusal existed under section 5. These issues are dealt with in later chapters.

### 3 REGISTRATION OF COMMUNITY TRADE MARKS

Registration at the Community level involves the filing of a single application with the Office of Harmonization in the Internal Market (OHIM), which is based in Alicante in

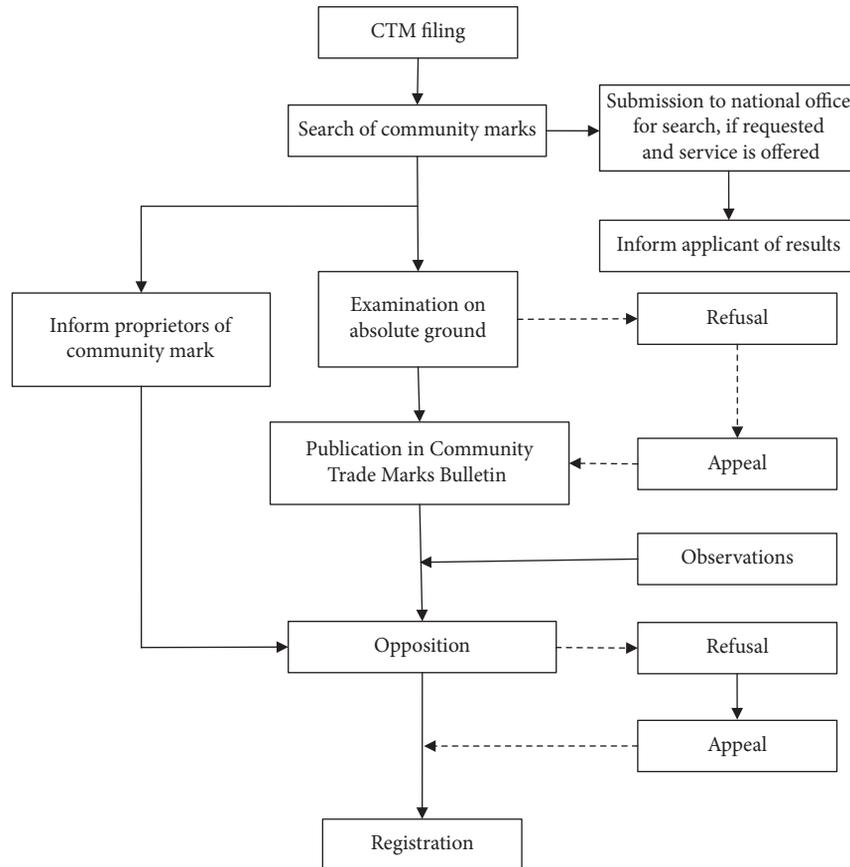

Fig. 35.2 Registering a Community trade mark

Spain.<sup>122</sup> The OHIM began receiving applications on 1 April 1996.<sup>123</sup> In contrast with the procedure for European patents, during which the European Patent Office (EPO) issues a series of national patents, a successful application to the OHIM results in the grant of a single trade mark that operates for the whole of the European Union.<sup>124</sup> The main benefit of the Community system is that it enables traders to protect their marks throughout the European Union on the basis of a single application, rather than having to file separate applications in each of the member states.

While the procedure at the OHIM differs in certain respects from the procedure at the UK Trade Marks Registry, there is close similarity between the two regimes. As is the case with the UK Registry, traders who wish to have their signs protected as Community trade marks (CTMs) often rely upon the expert advice of trade mark agents/attorneys. Legal representation before the OHIM is more strictly prescribed than in the United Kingdom. Although legal representation is not required in all cases,<sup>125</sup> businesses that are not domiciled and do not have their principal place of business in the Community must be represented before the OHIM. Representation before the OHIM can be undertaken only by a legal practitioner qualified in a member state or a professional representative recognized by the OHIM.<sup>126</sup> To be duly recognized, a representative must be a national of a member state with a place of business in the Community. In addition, they must be entitled to act as an agent before the trade marks office of the member state in which that business is located.<sup>127</sup>

### 3.1 APPLICATION

The application for a CTM, which can be made by anyone,<sup>128</sup> may be made directly to the OHIM in Alicante or to a national registry, which is obliged to forward the application to the OHIM within two weeks (see Fig. 35.2).<sup>129</sup>

An application for a CTM may be filed in any of the official languages of the Community. The applicant should also specify a second language in which opposition proceedings may be conducted.<sup>130</sup> As in the United Kingdom, an application for a CTM must include: a request for registration; the name and address of the applicant; a list of the goods or services for which the mark is to be registered; and a representation of the mark.<sup>131</sup> The date of filing is the date on which these documents are furnished to the OHIM. As in the United Kingdom, it may be possible to claim a priority date from an earlier application elsewhere.<sup>132</sup>

Three slight differences are worth observing. First, as regards the goods or services for which a mark is registrable, it seems that the OHIM is more generous, permitting

<sup>122</sup> CTMR, Art. 2.

<sup>123</sup> Strictly speaking, that was the date of opening and applications could be submitted from 1 January 1996.

<sup>124</sup> CTMR, Art. 1(2).

<sup>125</sup> CTMR, Art. 92(1).

<sup>126</sup> CTMR, Arts 92(2), 93.

<sup>127</sup> CTMR, Art. 93(2).

<sup>128</sup> Prior to 2004, only a limited class of people was able to apply for a CTM under the CTMR, Art. 5 (as enacted). At that time, an applicant had to be a national of, or domiciled in an EC state, or a country that is party to Paris or the WTO, or be a national of a state that accords reciprocal protection. This was regarded as imposing an 'excessively complex exercise' and was therefore abolished by Council Regulation No. 422/2004 of 19 February 2004 amending Regulation (EC) No. 40/9 on the Community trade mark [2004] *OJ L 70/1* (9 March 2004).

<sup>129</sup> CTMR, Art. 25(2). There are now around 100,000 applications a year to the OHIM (compared with 40,000 per year to the UK IPO). Total registrations at the OHIM now exceed the 1 million mark.

<sup>130</sup> CTMR, Art 119; CTMIR, r. 1(j). The second language must be English, French, German, Italian, or Spanish.

<sup>131</sup> CTMR, Art. 26; CTMIR, r. 1.

<sup>132</sup> CTMR, Arts 29–31.

applications, for example, relating to ‘all goods in class x’. Moreover, existing applications relating to class headings are now assumed to have been intended to cover all goods or services in the relevant class. Second, and related, there is no requirement that an applicant state that they intend to use the mark(s).<sup>133</sup> Third, practices as to graphic representation differ slightly. These have already been discussed.

### 3.2 SENIORITY AT OHIM

Applicants who seek registration of a CTM may claim the seniority of earlier national registrations of the same mark of which they are the proprietor.<sup>134</sup> Seniority can be claimed either before or after registration of the CTM.<sup>135</sup> To apply for seniority, an applicant must be able to show that the earlier national mark is for the same sign, the same goods and services, and has the same proprietor as the CTM.<sup>136</sup>

The effect of a seniority claim is that, even though the national registration ceases to exist (because of lack of renewal or because it was surrendered),<sup>137</sup> the proprietor of the CTM continues to have the same rights as if the national mark had continued to be registered.<sup>138</sup> Effectively, it allows the CTM owner to let the national registration lapse without being prejudiced in any way.<sup>139</sup> As the Board of Appeal at the OHIM said, seniority is a useful way of encouraging proprietors of national marks to use the Community system and thereby consolidate the management of their national marks.<sup>140</sup> As a result of its popularity, problems have occurred in processing seniority claims and many have been let through without formal examination.<sup>141</sup>

### 3.3 EXAMINATION

Once the filing process has been completed, the application is then examined. Initial examination at the OHIM is restricted to an inquiry as to whether the application complies with the absolute grounds for refusal.<sup>142</sup> The absolute grounds for refusal will apply to the mark across the whole Community, even if they arise in only one member

<sup>133</sup> The applicant’s good faith is presumed: *pelicantravel.com v. OHIM*, T 136/11 (13 December 2012) (GC, Fifth Chamber), [57].

<sup>134</sup> CTMR, Art. 34. <sup>135</sup> CTMR, Art. 35.

<sup>136</sup> CTMR, Art. 34(1) (so-called ‘triple-identity rule’). The OHIM examines only the question of identity of signs: OHIM, *Communication No. 2/00 of the President of the Office of 25 February 2000 Concerning the Examination of Seniority Claims* (2000). On identity of signs, see *Shang v. OHIM (justing)*, Case T-103/11 (19 January 2012) (GC, Fifth Chamber); *Langguth Erben v. OHIM (MEDINET)*, Case T-378/11 (20 February 2013) (GC, Fifth Chamber), appealed as *Langguth Erben v. OHIM*, Case C-412/13P (later black-and-white mark not identical to earlier version in gold); *International Business Machines Corp/Thinkpad*, R10/1998-2 (15 July 1998), [15]. On identity of the specification, see OHIM, *Communication No. 1/97 of the President of the Office of 17 June 1997 Concerning the Examination of Seniority Claims* (1997). On identity of proprietorship, see *BatMark, Inc./Viceroy*, R 5/97-1 [1998] *ETMR* 449.

<sup>137</sup> CTMR, Art. 34(2); *Allied Telesyn Inc. v. Rapier 1 Ltd*, O-170-07 (13 June 2007) (AP Hobbs QC).

<sup>138</sup> There is no obligation on the Community office to treat the Community mark as valid just because seniority is claimed for an identical national mark: *Develey Holdings GmbH v. OHIM*, T-129/04 [2006] *ETMR* (85) 1190. <sup>139</sup> CTMR, Art. 34(2).

<sup>140</sup> *BatMark, Inc./Viceroy*, R 5/97-1 [1998] *ETMR* 449, 455-6.

<sup>141</sup> Examination of seniority claims, which was suspended, has now resumed, but is confined to comparison of marks: OHIM, *Communication No. 2/00 of the President of the Office of 25 February 2000 Concerning the Examination of Seniority Claims* (2000).

<sup>142</sup> CTMR, Arts 36-7; CTMR, r. 11. Absolute grounds are set out in CTMR, Art. 7(1). One difference between the CTM and UK law is that the United Kingdom will examine whether the application is in bad faith, whereas, under the CTMR, this is only a ground for invalidity (not refusal).

state.<sup>143</sup> Where the application fails to comply with the absolute grounds for refusal, the application may be amended or withdrawn.<sup>144</sup> The Office may request that the applicant disclaim any exclusive right in a particular element.<sup>145</sup>

While the OHIM does not examine applications to see if the relative grounds for refusal apply, it does provide third parties (and applicants) with some assistance. In particular, the OHIM searches the Community register for similar marks and, if requested to do so by the applicant, asks member states that participate in the search system to do the same.<sup>146</sup> These national searches are returned to the OHIM within two months and a cumulative search report is dispatched to the applicant.<sup>147</sup> The results of the OHIM search are also sent to the owners of any rival CTM registrations that are found.<sup>148</sup> The search, however, does not lead to an examination on relative grounds; instead, it is left up to the holders of prior rights to bring opposition proceedings<sup>149</sup> or, if the mark has been registered, cancellation proceedings.<sup>150</sup>

### 3.4 PUBLICATION, OBSERVATIONS, AND OPPOSITION

Once an application has successfully been examined, it will then be published in the Community Trade Marks Bulletin.<sup>151</sup> Publication takes place one month after the applicant is provided with the search report. At the same time, the application file, which is previously closed, is opened up for public inspection.<sup>152</sup>

Following publication, there is an opportunity for third parties to make ‘observations’ on and ‘opposition’ to the proposed registration of the application. While a CTM covers the whole of the European Union, a single objection to the application can result in the entire application being refused. Third parties may make ‘observations’ explaining why the trade mark should not be registered under Article 7 of the CTM Regulation (which are the absolute grounds for refusal). Although the Regulation states that the observations are to be communicated to the applicant, ‘who may comment on them’, the OHIM has indicated that, where observations raise serious doubts about registrability, the Office will re-examine the application.<sup>153</sup>

Within three months of publication, the application may be *opposed* on relative grounds.<sup>154</sup> As in the United Kingdom, only a limited set of persons is entitled to bring

<sup>143</sup> CTMR, Art. 7(2). <sup>144</sup> CTMR, Arts 37(3), 44; CTMIR, r. 13.

<sup>145</sup> CTMR, Art. 37(2); *Technopol v. OHIM*, Joined Cases T-425/07 and T 426/07 (19 November 2009) (CFI, Second Chamber), [19] (“The function of those “disclaimers” is to make apparent the fact that the exclusive rights of the proprietor of a mark do not extend to the non-distinctive elements of that mark. In that way, applicants may know that the non-distinctive elements of a registered mark in respect of which a disclaimer is made remain available for use’). The Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 74–7, is unconvinced as to the usefulness of disclaimers and proposes that these powers be deleted. The proposed amendments contained in European Commission, *Proposal for a Regulation of the European Parliament and of the Council amending Council Regulation (EC) No. 207/2009 on the Community Trade Mark* (March 2013) COM(2013) 161 final, however, leave Art. 38 unamended.

<sup>146</sup> CTMR, Art. 38; CTMIR, r. 10. Those offices that participate are Czech Republic, Denmark, Finland, Greece, Hungary, Lithuania, Romania, and the Slovak Republic. <sup>147</sup> CTMIR, r. 5a.

<sup>148</sup> CTMR, Art. 37(7). <sup>149</sup> CTMR, Art. 42. <sup>150</sup> CTMR, Art. 52.

<sup>151</sup> CTMR, Art. 39; CTMIR, r. 12. See also CTMR, Arts 87 (register open to public inspection) and 89 (explaining CTM Bulletin).

<sup>152</sup> Prior to publication, the file cannot be inspected without an applicant’s consent: CTMR, Art. 88.

<sup>153</sup> CTMR, Art. 40(2); OHIM, *Communication No. 02/09 of the President of the Office of 09/11/2009 Concerning Third Party Observations* (2009); *Durferrit GmbH v. OHIM*, T-244/01 [2003] ECR II–1589, [73].

<sup>154</sup> CTMR, Art. 41; CTMIR, r. 15. For analysis of the grounds, see Chapter 38. The opposition must be in one of the languages of the Office: English, French, German, Italian, or Spanish. See F. Gevers and D. Tatham, ‘Opposition Procedure in the Community Trade Mark System’ [1998] *EIPR* 22.

opposition proceedings—namely, the proprietors of earlier trade marks and their licensees, the proprietors of trade marks, and the proprietors of earlier marks or signs.<sup>155</sup> Once an opposition is accepted, the OHIM notifies the applicant and a ‘cooling-off period’ of up to 24 months ensues.<sup>156</sup> If the parties have not resolved the conflict (for example through a delimitation agreement allowing the registration), the ‘adversarial’ process begins. The opponent will be asked to substantiate the existence of an earlier right and, where this consists of a mark granted more than five years previously, the applicant may request the opponent prove use of its mark.<sup>157</sup> In response, the applicant is entitled to make observations on the opponent’s evidence and grounds of opposition. Ultimately, the matters are decided by the OHIM.<sup>158</sup> In contrast to the process in the United Kingdom, oral hearings will occur only rarely. While it was anticipated that oppositions at the OHIM would be very common, it seems that they affect only about a fifth of all applications.<sup>159</sup> Most oppositions are resolved within the cooling-off period, with only about a third leading to an office decision.<sup>160</sup>

If an application to the OHIM is rejected or withdrawn, it may be converted back into a series of national applications, which retain the filing date used at the OHIM.<sup>161</sup> Conversion is not possible, however, in those member states to which the grounds for refusal of the CTM relate.<sup>162</sup> As with UK applications, it is possible for an application for a CTM to be changed or amended after it has been lodged. While the way in which this is done at the OHIM is similar to the techniques used in the United Kingdom,<sup>163</sup> one important difference is that whereas disclaimers are used voluntarily by UK applicants, they are imposed (or rather ‘requested’) by the OHIM ‘as a condition’ of registration.<sup>164</sup> Despite this, the examination guidelines at the OHIM suggest that disclaimers will be used infrequently.<sup>165</sup>

### 3.5 REGISTRATION

In the absence of an effective opposition, the mark will be registered.<sup>166</sup> The date of registration is the filing date, which is the date from which matters such as duration are calculated.<sup>167</sup> As regards the CTM, a proprietor is entitled only to ‘reasonable compensation’ for acts occurring between publication of the application and publication of the registration.<sup>168</sup> Registration at the OHIM lasts for ten years.<sup>169</sup> A CTM may be renewed for further periods of ten years.<sup>170</sup> Alteration of registered marks is generally not permitted.<sup>171</sup>

<sup>155</sup> CTMR, Art. 41. <sup>156</sup> CTMIR, r. 18.

<sup>157</sup> CTMR, Art. 42(2); CTMIR, r. 22. <sup>158</sup> CTMR, Art. 42(5).

<sup>159</sup> As of May 2014, OHIM had published 1,103,790 applications and there had been 233,257 oppositions: OAMI, *Statistics of Community Trade Marks* (April 2014), available online at <[https://oami.europa.eu/tunnel-web/secure/webdav/guest/document\\_library/contentPdfs/about\\_ohim/the\\_office/SSC009-Statistics\\_of\\_Community\\_Trade\\_Marks-2014\\_en.pdf](https://oami.europa.eu/tunnel-web/secure/webdav/guest/document_library/contentPdfs/about_ohim/the_office/SSC009-Statistics_of_Community_Trade_Marks-2014_en.pdf)>

<sup>160</sup> As of May 2014, 208,914 oppositions had been resolved, 67,210 by decision and 141,704 by some other means: *ibid.*

<sup>161</sup> CTMR, Art. 112; CTMIR, r. 44. <sup>162</sup> CTMR, Art. 112(2)(b).

<sup>163</sup> CTMR, Arts 37(3), 43. <sup>164</sup> CTMIR, r. 1(3).

<sup>165</sup> OHIM, *Manual of Trade Mark Practice*, available online at <<https://oami.europa.eu/ohimportal/en/manual-of-trade-mark-practice>>, Part B (‘Examination’), section 4 (‘Absolute grounds for refusal and Community collective marks’), [1.10.1] (stating that ‘examiners should not have recourse to this provision automatically when the mark contains elements that are not distinctive’). On the division of CTM applications, see CTMR, Art. 44.

<sup>166</sup> CTMR, Art. 45; CTMIR, r. 23. <sup>167</sup> CTMR, Art. 46. <sup>168</sup> CTMR, Art. 9(3).

<sup>169</sup> CTMR, Art. 46.

<sup>170</sup> CTMR, Art. 47. To date, it seems that about 40 per cent of marks registered at the OHIM have been renewed.

<sup>171</sup> CTMR, Art. 48; CTMIR, r. 25.

As in the United Kingdom, it is possible for a CTM to be revoked or declared invalid after it has been registered—and this may occur either as a counterclaim in proceedings in a CTM court, or by application to the Cancellation Division of the OHIM.<sup>172</sup>

## 4 INTERNATIONAL FILING

The third way in which UK traders are able to protect their marks is via the international filing systems established under the 1891 Madrid Agreement and the 1989 Madrid Protocol. It should be noted at the outset that international registration does not lead to something such as an ‘international mark’, so much as it does facilitate the acquisition of national marks. The main advantage of international registration is that instead of trade mark holders having to file a series of applications in each of the jurisdictions in which they would like protection, they are able to obtain protection in a range of jurisdictions with a single application.

### 4.1 MADRID AGREEMENT

The oldest international filing system is the 1891 Madrid Agreement.<sup>173</sup> Under the Agreement—to which the United Kingdom is *not* a party—it is possible to register a trade mark at a national level and then to apply to have the mark recognized by the WIPO in Geneva as an ‘international registration’. Despite it being over 100 years old, only a relatively small number of countries have signed up to the Agreement.<sup>174</sup>

To apply for international registration, the applicant must have a trade mark registered in its country of origin, which must be a contracting state of the Agreement. Applications must be in French and include: the name and address of the applicant; information about the registration in the country of origin; a reproduction of the mark; and a statement of the goods and services to which the mark is applied.<sup>175</sup> The application should also nominate the countries of the Agreement in which the applicant wishes the mark to be protected.<sup>176</sup> The Madrid Agreement can be used only by a person or business that has headquarters or a real and effective establishment in a country that is a party to the Agreement. Given that the United Kingdom is not a party to the Madrid Agreement, UK businesses will be able to take advantage of the system only if they have a base outside the United Kingdom.<sup>177</sup>

Once the national office of the country of origin is satisfied that the application is complete, it sends the international application to the WIPO International Bureau in Geneva. On receiving the international application, the Bureau examines the application to ensure that it complies with various formalities; there is no substantive examination of the application. An application that satisfies the procedural requirements is immediately registered.<sup>178</sup>

<sup>172</sup> As of May 2014, there had been some 9,200 cancellation requests and 4,449 marks had been surrendered or cancelled, although only 1,361 of those were cancelled as a consequence of an application for cancellation: OAMI, *Statistics of Community Trade Marks* (April 2014), available online at <[https://oami.europa.eu/tunnel-web/secure/webdav/guest/document\\_library/contentPdfs/about\\_ohim/the\\_office/SSC009-Statistics\\_of\\_Community\\_Trade\\_Marks-2014\\_en.pdf](https://oami.europa.eu/tunnel-web/secure/webdav/guest/document_library/contentPdfs/about_ohim/the_office/SSC009-Statistics_of_Community_Trade_Marks-2014_en.pdf)>. This seems a relatively small figure, given that registrations are fast approaching the 1 million mark.

<sup>173</sup> Madrid Agreement Concerning the International Registration of Marks of 14 April 1891, as revised.

<sup>174</sup> The Madrid Agreement covers only 56 countries (as of December 2013). The United States and Japan are not members. <sup>175</sup> Madrid, Art. 3(2). <sup>176</sup> Madrid, Art. 3*bis*.

<sup>177</sup> G. Souter, ‘The Rights of Nationals of Non-Madrid Union Countries to Own International Registrations’ [1995] *EIPR* 333. <sup>178</sup> Madrid, Art. 3(4).

The registration date is the date on which the International Bureau receives the completed application.

The Bureau then sends applications to the national offices nominated by the applicant. Article 4 of the Agreement provides that, from the date of the international registration, the application is to be treated in each of the designated countries as if it had been filed directly at that country's national office.<sup>179</sup> Upon receipt of the international registration, the national offices have the opportunity to reject the application. Registration under the Madrid Agreement lasts for 20 years and is renewable for further 20-year periods.<sup>180</sup>

One of the major problems with the Madrid Agreement is that it provides for the possibility of a 'central attack'.<sup>181</sup> This means that if, within five years from the date of international registration, the mark is declared invalid or otherwise lost in the country of origin, *all of the* national registrations that are based upon it are also lost. At the end of the five-year period, the opportunity for central attack ends. From this point, the non-country of origin registrations are not dependent upon the fate of the mark in the country of origin.

## 4.2 MADRID PROTOCOL

The Madrid Protocol<sup>182</sup> was established in 1989 to provide an alternative mechanism to the Madrid Agreement for the international filing of marks. In particular, it was hoped that it would overcome some of the perceived shortcomings of the Agreement that led to its membership being so small.<sup>183</sup> Given that there are, at time of writing, 91 parties to the Protocol (as distinct from 56 to the Agreement), the Protocol has been a success, at least in this regard. While the Protocol and the Agreement are similar there are, as we will see, some important differences. The United Kingdom became a party to the Madrid Protocol on 1 December 1995<sup>184</sup> and the Protocol became operational on 1 April 1996. The European Union joined with effect from 1 October 2004.<sup>185</sup> The system established under the Protocol is run by WIPO in Geneva.

### 4.2.1 Application

In order to apply for international registration for a mark under the Protocol, an application for registration must have been made in a country that is party to the Protocol.<sup>186</sup> The existing registration or application provides the 'national basis' that grounds the Protocol application. Applications for international registration are filed in the office in which

<sup>179</sup> Madrid, Art. 4.      <sup>180</sup> Madrid, Arts 6–7(1).      <sup>181</sup> Madrid, Art. 6.

<sup>182</sup> Protocol Relating to the Madrid Agreement Concerning the International Registration of Marks (as signed at Madrid on 28 June 1989).

<sup>183</sup> I. Kaufman, 'Madrid Agreement: Will Reform Proposals Attract More Members?' [1990] *EIPR* 407; G. Kunze, 'The Madrid System for the International Registration of Marks as Applied under the Protocol' [1994] *EIPR* 223. For an assessment, see E. McDermott, 'Measuring the Merits of Madrid' [2008] 177 *Managing IP* 62.

<sup>184</sup> In order to give effect to its obligations under the Protocol, the United Kingdom has passed delegated legislation in the form of the Trade Marks (International Registration) Order (SI 1996/714), as amended by SI 2000/138.

<sup>185</sup> The Madrid Protocol allows for accession by intergovernmental organizations: Madrid, Art. 14. The authority to join was conferred by Council Regulation (EC) No. 1992/2003 of 27 October 2003 amending Regulation (EC) No 40/94 on the Community trade mark to give effect to the accession of the European Community to the Protocol relating to the Madrid Agreement concerning the international registration of marks adopted at Madrid on 27 June 1989 [2003] *OJ L* 296/1 (14 November 2003).

<sup>186</sup> Madrid, Art. 2(1).

the national basis was filed;<sup>187</sup> WIPO will not accept applications that are filed directly with it.<sup>188</sup> For British traders, this would normally be the UK Trade Marks Registry. International applications governed exclusively by the Protocol may be in either English or French (although the office of origin may restrict the applicant's choice to one of these languages).

An international application can also be based upon an application or a registration at an 'intergovernmental organization',<sup>189</sup> and a Council Decision has now enabled the OHIM to take advantage of this possibility.<sup>190</sup> Since the autumn of 2004, both applicants and holders of Community Trade Marks (CTMs) have been able to apply for international protection of their marks through the filing of an international application under the Protocol. Conversely, holders of international registrations under the Madrid Protocol can apply for protection of their marks as a CTM.<sup>191</sup>

The national office or OHIM examines the international application to ensure that the international application corresponds to the basic application or registration—that is, that it is for the same mark, has the same owner as, and covers the same goods and services as the 'basic application'.<sup>192</sup> An application for international registration must also designate the countries in which the mark is to be protected. Although this should be done at the application stage, further countries may subsequently be added.<sup>193</sup>

Once it is satisfied that the formalities have been complied with, the national office will then forward the application to WIPO, which examines the application to ensure that it complies with the Protocol. Once it is satisfied that an application is in order, the International Bureau then places the mark on the International Register of Trade Marks, advertises the mark, and passes on details of an application to each of the designated countries listed in the application.<sup>194</sup> As with the Madrid Agreement, the application is treated in each of the designated countries as if it had been filed directly at that country's national office.<sup>195</sup> Each designated country then examines the application against its own criteria for registration.<sup>196</sup> Any refusal can be based only on the grounds that would apply under the Paris Convention.<sup>197</sup>

Countries normally have up to 12 months within which to notify WIPO of any objections.<sup>198</sup> However, in accordance with a special provision, the United Kingdom has declared that the time limit to notify a refusal of protection is 18 months.<sup>199</sup> Where a refusal to protect results from an opposition to the granting of protection, such refusal may be notified after the expiry of the 18-month time limit. Such a refusal is notified to WIPO, which then sends notification of the refusal to the international registrant, who is able to contest, amend, and appeal the decision.<sup>200</sup> Where a national registry fails to notify WIPO of a decision to refuse registration within the relevant time limit,

<sup>187</sup> On fees, see Madrid, Art. 8.      <sup>188</sup> Madrid, Art. 2(2).      <sup>189</sup> Madrid, Art. 14(1)(b).

<sup>190</sup> Council Regulation (EC) No. 1992/2003, op. cit. See J. Weberndorfer, 'The Integration of the OHIM into the Madrid System' [2008] *EIPR* 216.

<sup>191</sup> CTMR, Arts 146, 151ff.

<sup>192</sup> Madrid, Art. 3(1); CTMIR, r. 103. A country can insist that, insofar as it is designated, the applicant must indicate a bona fide intention to use the mark. The United Kingdom has such a requirement and, in *Red Bull v. Sun Mark* [2012] *EWHC* 1929 (Ch), [113]ff, [126]ff, [167]–[174], the Court treated the international requirement as having a similar significance to a statement made under TMS s. 32(3) when assessing whether the application had been made in bad faith.

<sup>194</sup> Madrid, Art. 3(2). The WIPO advertises an applicant's mark in the WIPO Gazette of International Marks.

<sup>195</sup> Madrid, Art. 4.

<sup>196</sup> In the case of the OHIM, the CTMR (as amended), Art. 154, provides for examination on absolute grounds.

<sup>198</sup> Madrid, Art. 5(2).

<sup>199</sup> Madrid, Art. 5(2)(b)–(c).

<sup>200</sup> Madrid, Art. 5(6).

the mark is deemed to be protected as if it had been registered by the authorities of that country.<sup>201</sup>

Registration under the Protocol lasts for ten years,<sup>202</sup> with the possibility of being renewed for further ten-year periods.<sup>203</sup> Where a mark that is the subject of a national or regional registration is the subject of a later international registration and both registrations stand in the name of the same person, the international registration is deemed to replace the national or regional registration, without prejudice to any rights acquired by virtue of the latter.<sup>204</sup> This occurs only if all of the goods and services listed in the national or regional registration are also listed in the international registration in respect of the said contracting party. Rights in all of the countries can then be renewed by a single transaction.

#### 4.2.2 Central attack

Under the Madrid Agreement, the fate of the international registration (and all of the subsidiary registrations made under it) depends on the fate of the trade mark registered in the country of origin: if it is lost, all of the other registrations are also lost. While an international registration under the Protocol is vulnerable to a central attack (most obviously where the basic application is refused by the national authority),<sup>205</sup> the consequences of a successful attack are not as drastic as they are under the Agreement. As we saw above, a successful attack under the Agreement means that all of the national registrations made in pursuance of the international registration are also lost. Where a central attack is successful under the Protocol, however, it is possible to transform the international registration into a series of national or regional applications.<sup>206</sup> Under this provision, if, within three months of cancellation, the person who was the holder of the international registration files an application for the registration of the same mark with the office of any of the designated territories, that application shall be treated as if it had been filed on the date of the international registration. This takes place, however, only if the goods and services listed in the application correspond to the list of goods and services contained in the international registration. The fresh application must comply with the requirements of the applicable law.

## 5 DECIDING WHICH ROUTE TO TAKE

Because of the interaction between these systems, an applicant is faced with a complex array of possible avenues through which to acquire trade mark protection. The most obvious of the existing routes are by:

- (i) application directly to the United Kingdom;
- (ii) application to a Paris Convention country, then to the United Kingdom;<sup>207</sup>
- (iii) application to the OHIM leading to a CTM;
- (iv) application to a Paris Convention country, then to the OHIM;
- (v) application to a Paris Convention country, then international registration designating the United Kingdom;

<sup>201</sup> Madrid, Art. 4(1)(a).

<sup>202</sup> Madrid, Art. 6(1).

<sup>203</sup> Madrid, Art. 7(1).

<sup>204</sup> Madrid, Art. 4*bis*.

<sup>205</sup> Madrid, Art. 6(3).

<sup>206</sup> Madrid, Art. 9*quinquies*.

<sup>207</sup> Under the 'telle quelle' provision contained in Paris, Art. 6*quinquies*, a member of the Paris Union is obliged to accept for registration any trade mark that has been duly registered in its country of origin.

- (vi) application to a Paris Convention country, then international registration designating the OHIM; or
- (vii) application to the OHIM, followed by an international application.<sup>208</sup>

Decisions to register, and the choice of routes, are likely to involve commercial judgments as to the likely markets in which protection is desired compared with the cost of obtaining registrations for such territories. Probably the most significant factor determining choice of application process is the cost. If trade mark protection is required in several countries, it may be cheaper to use the Community trade mark or the Madrid Protocol than to make national applications in each country.<sup>209</sup> As well as savings in office fees, associated savings can be achieved by using the Madrid Protocol in terms of lower costs of trade mark agents. There are also obvious advantages to the OHIM or Madrid in terms of the simplicity of completing the OHIM or Madrid forms rather than numerous national forms in various national languages. One of the advantages with the regional and international systems lies in the fact that they avoid the obligations to submit applications in the language of each country where protection is sought. Moreover, in the long term, maintenance of regional or international marks will be easier, requiring only one renewal at each instead of several. Finally, the application of the substantive or procedural law might be perceived as being more favourable at the OHIM than in the local registry.<sup>210</sup>

That is not to suggest there may not be reasons (especially for small enterprises) to use national registration systems. It may be difficult to find appropriate marks to operate in all countries: trade mark lawyers love to tell anecdotes about word marks adopted in one country and transported to another without considering what the mark suggests in that territory. Moreover, it is foreseeable that valid marks will be harder to obtain at the OHIM than in some national registries, given the broader field in which the mark has to operate. Words that are distinctive in the United Kingdom may lack distinctiveness at the Community level (for example because the word is a description in a foreign language or indicates a geographical origin). In addition, the number of similar marks in use or already registered, which form the potential basis for opposition, is likely to be substantially greater for Community marks than for national marks. One consequence of this will be that those who are seeking protection quickly might prefer to seek national registrations, rather than to begin with a filing to the OHIM, because of the substantial risk that the mark will be rejected or prove invalid at the Community level.

<sup>208</sup> From 1 October 2004.

<sup>209</sup> As of December 2013, the basic application fee for an online application for a CTM is €900, the cost of designating the EC in an international application is 1,111 Swiss francs, which is around €900, whereas the UK national fee for an online application is £170. See Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 46.

<sup>210</sup> The OHIM permits broad specifications.

## SUBJECT MATTER

### CHAPTER CONTENTS

1 Introduction	912	4 Capacity to Distinguish	925
2 What is a Sign?	912	5 Protection of Service Marks for Retail Services	926
3 Capable of Being Represented Graphically	925		

### 1 INTRODUCTION

The first requirement that a sign must satisfy to be validly registered or, if it is already registered, to ensure that it is not subsequently declared invalid is that it must conform to the definition of a trade mark in section 1(1) of the Trade Marks Act 1994/Article 4 of the Community Trade Mark Regulation (CTMR). In particular, it is necessary to show that there is (i) a sign, (ii) which can be represented graphically, and (iii) which is capable of distinguishing the goods or services of one undertaking from those of other undertakings. Failure to comply with any of these requirements means that the sign will not be registered; this is one of the absolute grounds for refusal set out in section 3(1)(a). Alternatively, if a mark is incorrectly registered, the registration of the mark may be declared invalid under section 47(1).

Before looking at these three elements in more detail, it is important to recall that the requirement that the sign must possess the qualities of a trade mark that are set out in section 1(1)/Article 4 is only the first of three general limitations that are placed on what can be registered as a trade mark. In addition, it is also necessary to ensure that the mark is not excluded by one of the absolute grounds for refusal found in section 3/Article 7.<sup>1</sup> It is also necessary to show that the mark is not excluded by any of the relative grounds for refusal found in section 5/Article 8.<sup>2</sup>

### 2 WHAT IS A SIGN?

For a trade mark to be validly registered, it is necessary to show that it consists of a 'sign'. No statutory definition is given as to what is meant by this term. Indeed, one of the notable features of the current law is that there are very few *a priori* restrictions placed on what may be registered as a trade mark.<sup>3</sup> The starting point for considering what may be

<sup>1</sup> See Chapter 37.      <sup>2</sup> See Chapter 38.

<sup>3</sup> The new definition of what constitutes a trade mark is to be contrasted with the restrictive definition formerly found in TMA 1938, s. 68.

protected as a sign is section 1 of the 1994 Act, which provides a non-exhaustive list of the types of sign that may be protected as trade marks. These include words (including personal names), designs, letters, numerals, or the shape of goods or of their packaging.<sup>4</sup> Although all of the matters referred to in section 1 of the Act are visually perceptible, the Court of Justice has held that the concept of a sign is not limited to visually perceptible matter; as a result, both sounds and smells have been held to fall within the notion of a sign.<sup>5</sup> Given this holding, it may be that the scope of trade marks extends to encompass even gestures or tastes.

The more open style of approach adopted under the new trade mark regime has been welcomed by trade mark owners. It has also been welcomed because of the fact that, by increasing the features of products that may indicate source, it benefits consumers from different cultural backgrounds and with varying standards of literacy.<sup>6</sup> Some, however, have questioned whether the potential problems that are raised by some of the more exotic marks are justified by the benefits that they confer on their owners.<sup>7</sup>

Although it is clear that the concept of a 'sign' is broad, it is not without limits. In two cases, the Court of Justice has indicated that attempts to register must be refused if the subject was not a 'sign' for the purposes of trade mark law. The first occasion related to an attempt to register a combination of colours (blue and yellow) howsoever they were applied to articles or packaging.<sup>8</sup> The Court held that while a colour *could be* a sign, it was not necessarily so: in many situations, colour is simply a property or characteristic of a thing. According to the Court, in order to prevent trade mark law from being used by one trader to obtain an unfair advantage over other traders, an applicant for a colour mark must establish that the colour in question is seen as a 'sign'. Unfortunately, the Court of Justice provided little guidance on how an applicant was to establish (or an office to assess) the semiotic status of a colour or colour combination. If the requirement is that the applicant must show that consumers see the colour combination as indicating origin, the requirement seems to add nothing over the demand that the mark be not devoid of distinctive character. The second case, *Dyson Ltd v. Registrar of Trade Marks*,<sup>9</sup> concerned an attempt to register as a trade mark the idea of having a transparent collection bin on a vacuum cleaner. According to the Court of Justice, this was a mere property of the product and the protection of anything so unspecific would provide an unfair advantage to the trader who registered it, because he would be able to prevent other manufacturers from selling vacuum cleaners with transparent collection bins. This application therefore, said the Court, did not relate to a 'sign'. While the result in the latter case seems correct, the reasoning seems somewhat problematic.<sup>10</sup> It has nevertheless been thought by

<sup>4</sup> In response to a reference from Germany, the Court has held that the concept of 'a sign' can encompass the appearance of a shop that offers retail services: *Apple v. German Patent Office*, Case C-421/13 (10 July 2014) (ECJ, Third Chamber).

<sup>5</sup> *Ralf Sieckmann v. Deutsches Patent-und Markenamt*, Case C-273/00 [2002] ECR I-11737, [43]–[44]; *Shield Mark BV v. Joost Kist*, Case C-283/01, [2003] ECR I-14313.

<sup>6</sup> G. Dinwoodie, 'Reconceptualising the Inherent Distinctiveness of Product Design Trade Dress' (1997) 75(2) *NC L Rev* 471, 561.

<sup>7</sup> B. Elias, 'Do Scents Signify Source? An Argument against Trade Mark Protection for Fragrances' (1992) 82 *TM Rep* 475 (arguing that such extension is misguided).

<sup>8</sup> *Heidelberger Bauchemie*, Case C-49/02 [2004] ECR I-6129. Similar remarks had been made in *Libertel Groep BV v. Benelux-Merkenbureau*, Case C-104/01 [2003] ECR I-3793, [27].

<sup>9</sup> Case C-321/03 [2007] ECR I-687. A photograph of the bin can be seen in the case report and also at Fig. 30.2, p. 785.

<sup>10</sup> It is not clear when a trade mark gives an 'unfair advantage', or what this has to do with whether the subject matter is a 'sign'. It may be that the real objection in both cases is that the applicant is applying for a category of signs and that the trade mark system requires an individual application be made in relation to

the Court of Appeal to be sufficiently clear to be applied (without any further reference being required) in two cases heard together, *Nestlé v. Cadbury*<sup>11</sup> and *Spear v. Zynga*.<sup>12</sup> In *Nestlé*, the Court of Appeal reversed the decision of the UK Trade Marks Registry and HH Judge Birss QC, and held that Cadbury's application for 'the colour purple (Pantone 2685C), . . . being the predominant colour applied to the whole visible surface, of the packaging of the goods' should not have been accepted as it referred to a 'multitude of permutations, presentations and combinations of the subject matter of the registrations'.<sup>13</sup> For the same reason, in *Spear*, the Court affirmed Arnold J's decision invalidating the registration of a 'three-dimensional ivory-coloured tile on the top surface of which is shown a letter of the Roman alphabet and a numeral in the range 1 to 10', on the grounds that it potentially covered many signs.

## 2.1 LIMITS ON THE REGISTRATION OF SHAPES

While, in extending trade mark protection to the shape of goods, trade mark law took account of the realities of consumer buying habits, it also gave rise to a problem: that trade mark rights could operate to limit competition in ways that were contrary to the public interest. In order to avoid such undesirable effects, section 3(2)/Article 7(1)(e)<sup>14</sup> provide a 'preliminary obstacle' to registration<sup>15</sup>—namely, that a sign shall not be registered as a trade mark if it consists exclusively of a shape that:

- (i) results from the nature of the goods themselves;
- (ii) is necessary to obtain a technical result; or
- (iii) gives substantial value to the goods.

It should be noted at the outset that the precise scope of much of section 3(2) remains unclear. So far, only section 3(2)(b) has been the subject of detailed consideration by the Court of Justice (in *Philips Electronics v. Remington*<sup>16</sup> and *Lego Juris v. OHIM*<sup>17</sup>). Before looking at each of the exclusions in detail, it is worth noting four features that they have in common.

(i) The exclusions seem generally to be understood as aimed at promoting competition. In *Phillips v. Remington*, the Court of Justice referred to Article 3(1)(e) in general as being:

. . . intended to prevent the protection conferred by the trade mark right from being extended . . . , so as to form an obstacle preventing competitors from freely offering for sale products incorporating such technical solutions or functional characteristics in competition with the proprietor of the trade mark.<sup>18</sup>

each. Would there have been any possible objection to Dyson applying to register the transparent bin of a particular model of a vacuum cleaner?

<sup>11</sup> *Société des Produits Nestlé SA v. Cadbury UK Ltd* [2013] EWCA Civ 1174, reversing [2012] EWHC 2637 (Ch).

<sup>12</sup> *JW Spear & Son Ltd, Mattel Inc v. Zynga Inc.* [2012] EWHC 3345 (Ch), aff'd [2013] EWCA Civ 1175, [32].

<sup>13</sup> *Société des Produits Nestlé SA v. Cadbury UK Ltd* [2013] EWCA Civ 1174, [51].

<sup>14</sup> TM Dir., Art. 3(1)(e); cf. TRIPS, Art. 15(1).

<sup>15</sup> *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case 299/99 [2002] ECR I-5475. But this description did not preclude the OHIM from rejecting an application on this basis after it had already reviewed distinctiveness: *Bang & Olufsen v. OHIM*, Case T-508/08, [2011] ECR II-6975 (General Court, Eighth Chamber), [40].

<sup>16</sup> *Koninklijke Philips Electronics NV v. Remington Consumer Products*, Case 299/99 [2002] ECR I-5475.

<sup>17</sup> *Lego Juris A/S v. OHIM*, Case C-48/09P [2010] ECR I-8403 (ECJ, Grand Chamber).

<sup>18</sup> Case C-299/99 [2002] ECR I-5475, [2002] 2 CMLR 5, [78].

The ‘natural, functional or ornamental’ shape of goods is a feature that consumers might value in their own right, and thus a feature in relation to which (absent any other intellectual property protection) there should be competition.<sup>19</sup> In this respect, section 3(2) plays a similar role to that played in US trade mark law by the doctrines of ‘mechanical functionality’ and ‘aesthetic functionality’.<sup>20</sup>

(ii) The exclusions apply only to ‘shapes’. Although this might seem a significant limitation, the courts have interpreted it flexibly. The Court of Justice has held that it applies to packaging of products that have no intrinsic shape of their own (such as liquids or granules).<sup>21</sup> Moreover, the General Court has held that figurative marks that depict products may be treated as ‘shapes’. In *Yoshida v. OHIM*,<sup>22</sup> the General Court considered whether the exclusion might apply to a figurative mark representing the handle of a kitchen knife (Fig. 36.1). The Court found that Article 7(1)(e) made ‘no distinction between three-dimensional shapes, two-dimensional shapes, or two-dimensional representations of three-dimensional shapes’.<sup>23</sup> This, perhaps, reflects the fact that there seems no good reason why the ‘competition policy’ should not, in fact, be equally applied to such marks.<sup>24</sup> However, the Court went on to hold that the assessment should be made purely in relation to the shape as represented and that no account was to be taken of how the product actually appeared in the marketplace. That latter finding, but not the former, was set aside by the Seventh Chamber of the Court of Justice.<sup>25</sup>

(iii) To be excluded, the sign must consist ‘exclusively’ of an excluded ‘natural, functional or ornamental’ shape. In *Lego*,<sup>26</sup> the Court of Justice reinterpreted this by asking

<sup>19</sup> Ibid., [AG16] (AG Colomer); *Linde AG, Windward Industries, Rado Watch Co. Ltd*, Joined Cases C-53/01, 54/01, 55/01 [2003] ECR I-3161, [AG29] (AG Colomer); *Bang & Olufsen v. OHIM*, Case T-508/08 [2011] ECR II-6975 (GC, Eighth Chamber), [65]–[66] (on Art. 7(1)(e), third indent); cf. the Court of Appeal in *Philips v. Remington* [1999] RPC 809, 822, which had expressed the view that TMA 1994, s. 3(2)(b) and (c), had distinct, if parallel, objectives of preventing overlap respectively with the patent regime and the design regime. Note also Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 72, [2.32], arguing that this rationale can explain Art. 7(1)(e)(i) and (ii), but not (iii). Of the latter, it remarks that ‘the legal objective . . . is unclear, and case law . . . is scarce and obscure’. The Study proposes the repeal of CTMR, Art. 7(1)(e)(iii). Nevertheless, the Commission’s proposal leaves it intact: European Commission, *Proposal for a Directive of the European Parliament and of the Council to Approximate the Laws of the Member States Relating to Trade Marks* (March 2013) COD(2013) 162 final.

<sup>20</sup> It is perhaps reassuring that US scholars have recognized similar difficulties with its jurisprudence: see M. McKenna, ‘(Dys)Functionality’ (2011) 48 *Hous L Rev* 823.

<sup>21</sup> *Henkel’s Application*, Case C-218/01 [2004] ECR I-1725, [35], [37].

<sup>22</sup> *Yoshida v. OHIM*, Case T-416/10 (8 May 2012) (GC), aff’d *Pi-Design AG v. Yoshida*, Case C-340/12P, (6 March 2014) (ECJ, Seventh Chamber), [51]. In contrast, the English Court of Appeal has held that the shape exclusions do not operate in relation to two-dimensional device marks representing excluded three-dimensional shapes: *Koninklijke Philips Electronics NV v. Remington Consumer Products* [2006] FSR (30) 537, [94]–[100]; cf. *Philips v. Remington* [1998] RPC 283, 290 per Jacob J; *Julius Sämaan Ltd v. Tetrosyl Ltd* [2006] FSR (42) 849, [93] per Kitchin J. Note also *Storck/OHIM*, Case C-25/05 P [2006] ECR I-5739, 5755, [29] (CTMR, Art. 7(1)(b), case law on shapes was deemed equally applicable to application to register a two-dimensional image of sweets).

<sup>23</sup> *Yoshida v. OHIM*, Case T-416/10 (8 May 2012) (GC), [24].

<sup>24</sup> Or indeed, all marks: see Max Planck Institute, *Study on the Overall Functioning of the Community Trade Mark System* (2010), 72, [2.30]–[2.31]; cf. *Koninklijke Philips Electronics NV v. Remington Consumer Products* [2006] FSR (30) 537, [94] (competition policy does not apply in the case of abstract representations of shapes).

<sup>25</sup> *Pi-Design AG v. Yoshida*, Case C-340/12P (6 March 2014) (ECJ, Seventh Chamber), [51], [61].

<sup>26</sup> *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403 (ECJ, Grand Chamber); cf. *Koninklijke Philips v. Remington*, Case 299/19 [2002] ECR I-5475, [2002] 2 CMLR 5. In *Koninklijke Philips v. Remington* [2006] FSR (30) 537 (CA), [36]; [2005] FSR (17) 35, [28] (Rimer J stating that it was common ground that the inclusion of the word ‘functional’ in [83], [84] and [86] in the phrase ‘essential functional features’ was an error on the part of the Court of Justice).

instead whether the ‘essential characteristics’ of the shape fall within the exclusions. The effect of this is that the addition of trivial features to a shape that is otherwise excluded will not render the sign registrable.<sup>27</sup> In contrast, a shape is not excluded if there is a ‘major’ non-excluded element.<sup>28</sup>

In determining which characteristics are ‘essential’ and which are ‘trivial’, the Court of Justice has offered some guidance. In *Lego*, the Court indicated that the essential characteristics were the ‘most important elements of the sign’.<sup>29</sup> Precisely what those were had to be assessed on a case-by-case, so that it was not possible to say that the question always had to be answered from the perspective of the average consumer;<sup>30</sup> rather, in one case, it might be appropriate for a tribunal to conduct a straightforward visual analysis, while in another the tribunal should consider the views of experts. In the case of section 3(2) (b) (and possibly section 3(2)(c)), the tribunal might take account of data relating to other intellectual property rights, the protection of which has previously been obtained.

The fact that the exclusions apply only where the sign applied for consists ‘exclusively’ of the excluded features, even when interpreted liberally, leaves open at least two difficulties. First, what happens if some features of a shape are excluded under one exclusion and the remainder under another? Is the mark registrable because, when viewed from the perspective of each exclusion, the sign cannot be said to be ‘exclusively’ natural, functional, or ornamental? Bearing in mind the policy goal of the exclusions, the answer must be ‘no’: for a sign to be registrable, it must not subsist exclusively of matter covered by any of the three exclusions. The matter has been referred to the Court of Justice by the Dutch Hoge Raad in relation to a child’s high-chair (Fig. 36.2), some features of which appear to be ‘natural’ while others are ‘ornamental’,<sup>31</sup> and by the English and Welsh High Court, in relation to the shape of a chocolate bar (Fig. 36.3), all features of which are said to be excluded, but some as ‘natural’ shapes and others as ‘functional’.<sup>32</sup>

A further problem concerns the *consequences* of a finding that a sign does not comprise ‘exclusively’ excluded matter. There is a real danger that if excluded features form a substantial part of a registered sign, such a competitor might be treated as having used a ‘similar sign’ (and thus perhaps as infringing).<sup>33</sup> As we will see in Chapter 40, there is no

<sup>27</sup> *Lego Juris v. OHIM*, Case C-48/09P [2010] ECR I-8403 (ECJ, Grand Chamber), [52]. See *Koninklijke KPN Nederland NV v. Benelux-Merkenbureaus*, Case C-363/99 [2005] 2 CMLR (10) 184, 209, [AG70]–[AG74]; *DKV Deutsche Krankenversicherung v. OHIM*, Case C-104/00 P [2002] ECR I-7561, [AG51]–[AG54].

exception permitting a competitor to utilize freely the excluded aspects of a registered shape, even if they do so honestly (nor, indeed, do current reform proposals include such an exception).<sup>34</sup> In contrast, US law offers just such a defence.<sup>35</sup>

(iv) Perhaps most importantly, these objections cannot be overcome by showing that the sign is recognized as distinctive. The Court of Justice thus stated that if the shape

<sup>34</sup> Although it might be said that such features are inherently non-distinctive, so that the proposed extension of the descriptiveness exception (currently in s. 11(2)(b)) to allow for use of non-distinctive elements of a registered mark would offer a defence. See below p. 1069.

<sup>35</sup> US Trademark Act of 1946, §33(b)(8), 15 USC §1115(b)(8).
